SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass. post-office as second-class mail matter.*

## Items of Interest.

### National.

In a monograph on "The Conditions of the United States," issued by the Bureau of Statistics, it is stated that our area has grown from 827,844 square miles in 1800 to 3,025,600 square miles in 1902, exclusive of Alaska and the islands of the sea. The population per square mile was 3.6 in 1810, and 26.1 in 1902. The total wealth has grown from $7,000,000,000 in 1850 to an estimated $94,000,000,000 in 1900, and the per capita wealth from $307 in 1850 to $1,235 in 1900. In 1800 the public debt was $15 per capita; in 1840 it had fallen to 21 cents per capita; in 1852 it was $2.67 per capita; in 1861, before the beginning of the war, $2.74, and then mounted rapidly until it became $76.98 per capita in 1865, gradually falling again after the war to $38.27 per capita in 1880, $14.22 in 1890, $12.64 in 1893, $13.60 in 1896, and $12.97 in 1902.

The National Negro Business League, of which Mr. Booker T. Washington is president, held its third annual session at Richmond, Va., August 25, 26, and 27. The League was organized in Boston two years ago for the dual purpose of bringing before the public the progress which the negro is making in business, in every part of the country, and of stimulating and encouraging business enterprises among the colored people. In both of these objects it has proved eminently successful. One of the most interesting features of the meeting was the large photographic exhibit, comprising pictures of negro business men and of their places of business all over the country.

It is said that the American occupation and influence are being felt in many ways throughout the island of Porto Rico, and is more especially noticeable in the schools. The people are anxious to learn, and education is looking up all over the island. Everybody on the island is anxious to learn English, which is coming into use more and more every day. It is now being taught in all the schools, and the coming generation will be able to speak and read the language as well as their native Spanish.

A monument has just been erected on the site where Coronado turned back to Mexico after his fruitless search for the seven golden cities in the province of Quivera. The purpose of the monument is to commemorate the discovery of Kansas by Coronado and the rediscovery of the site of Quivera by J. V. Brower of St. Paul, Minn.

### Foreign.

In commenting on present conditions in China, the *London Times* says: "The testimony of the missionaries of all societies at the present moment is that never were the Chinese so willing to accept Christian literature or so likely to profit by it as at the present moment. The Religious Tract Society is overwhelmed with applications for help."

Ali Ben Hamud, officially to be known as Seyyid Ali, has been proclaimed Sultan of Zanzibar under British protection. Although but seventeen, the boy sultan has already married his cousin, a princess of the royal house who is not yet twelve. He was educated in England.

### Industrial and Commercial.

The value of skilled labor is very well illustrated by the increase in the value of iron products through the agency of labor alone. Carroll D. Wright, of the Labor Bureau, says that 75 cents' worth of iron ore when turned into bar iron is worth $5. If you make it into horseshoes it is worth $10, or if into table-knives $180. Seventy-five cents' worth of iron ore manufactured into needles is worth $6,800, and when converted into some kinds of fancy buttons it is worth about $30,000. If the iron is made into watch-springs the product is worth ten times more than the buttons, and when turned into hair-springs it will sell for the enormous sum of $400,000. All that great enhancement of value is of course due to the labor expended upon it.

The German Society of Mechanical Engineers has offered a prize for the best designed unit of equipment for an express train. The specifications require that the train shall be capable of conveying one hundred passengers and their baggage, with personal comfort, and of maintaining for three consecutive hours a speed of seventy-five miles an hour without stopping for water or fuel, and at a minimum expenditure for motive power. In order to meet the factor of air resistance, it is said, the whole engine and train from pilot to rear platform will have to be enveloped in a shell of sheet steel, jointed so as to secure flexibility in passing curves.

As a result of the recent decision of Congress to leave the building of the new trans-Pacific cable to private enterprise, the work will be immediately begun by the Commercial Pacific Cable Company. It is specifically stated that while the United States Government does not incur any expense or responsibility, it will have at its discretion command of all facilities. The new cable will run from San Francisco, a distance of 2,413 miles, to Honolulu, thence to the Midway Islands and Guam, another 2,293 miles, and then to Manila, another 1,360 miles, thus connecting with a cable to Hongkong and all points on the Asiatic continent.

One of the largest coils of wire rope ever made was turned out by a Brooklyn company recently. It measured 17,700 feet, or over three miles, without a break, and weighed 22,030 pounds. It is for use in a bituminous coal mine, was made of forty-two strands of crucible cast steel, took sixteen days to manufacture, and was valued at $2,300.

It is announced that before many weeks have passed, the gigantic task of tunneling the Blue Ridge mountains in the vicinity of Buena Vista will have been started. This is a great undertaking, as it will require drilling through the very base of the mountain for a distance of more than two miles.

Of all the silks sold in the United States, $26,000,000 worth is imported and $107,000,000 worth home made. The domestic silk industry employs 24,000 men, 36,000 women, and 6,000 children in 483 mills, with $81,000,000 capital.

### General.

We have a lady superintendent of Indian schools in Wyoming, Miss Estelle Reel, and this is one of her many clever ideas. She is trying, so we are told, to encourage the old Indians to preserve their ancient arts,—the making of baskets that will hold water, and blankets that are waterproof,—which are in danger of becoming extinct. There is still an old squaw here and there, who knows how to make these fine old things, and Miss Reel wants to place them in the schools as instructors to the Indian girls. This makes the old Indians feel that they are still useful, and that the whites have some respect for their native industries, and it is in line with the latest developments in arts and crafts, and as fine, in its way, as the hand-made books and furniture and tapestries that are now so fashionable.

The number of letters handled by the British postoffice last year was 2,451,500,000. All kinds of mail matter being considered, there was a total of 3,919,000,000 pieces handled, an increase of over five per cent from the previous year and a number sufficient to make an average of more than ninety-five pieces of mail matter in a year for every unit of the population.

Roughly speaking, in the United States about 8,000,000,000 pieces of postal matter of all kinds pass through the mails in a year, and this is more than double the showing made by the British postoffice. As our population is not quite double that of the British empire, we have, therefore, a greater average per individual of mail matter handled in this country than has Great Britain.

Grim Newgate Jail, where William Penn, Defoe, and many other famous men have been imprisoned, and the place of so many tragedies in English history, is being torn down. It is said that the task before the house-breakers is a severe one,—one of the toughest ever tackled,—for Newgate Jail was built as a fortress, and is probably one of the strongest buildings in the metropolis, scarcely excepting the Tower. It will probably take at least a year to demolish the jail, and at some parts it will be necessary to use explosives. Englishmen will probably be glad to see its ancient walls give way to a new structure which will stand for more civilized and merciful methods of punishment.

The German census of the fruit-trees of that country reveals some interesting facts. It shows that to every square mile of territory there was an average of 332 plum-trees, 251 apple-trees, 119 pear-trees, and 104 cherry-trees, or 806 trees of these four varieties to the square mile. In relation to population, for every hundred inhabitants of the empire there were 123 plum-trees, 93 apple, 45 pear, and 38 cherry-trees, or in all 299 of these fruit-trees for each hundred inhabitants, practically three trees for each person.

The late William Still of Philadelphia, one of its most distinguished citizens, was born a slave, but worked out his freedom by his own efforts, and rose to be one of the best educated and most prominent of his race. His fortune is estimated at more than three-quarters of a million, the foundation of which was laid in the coal business. He was a trustee of Storer College at Harper's Ferry, and an active member of the Society for Improving the Condition of the African Race.

The international exhibition now being held at Cork, Ireland, is attracting considerable attention and favorable comment throughout the empire. As might have been expected, the beautiful scenery of Ireland is mentioned as one of the strong attractions for tourists from abroad.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Selected Articles.

### Mrs. Stowe's Brunswick Home.

BRUNSWICK is the site of Bowdoin College, the best-known and best-equipped seat of learning in the Pine Tree State, which in proportion to its population has given to the world more than its share of literary men and women. . . .

To this college, Professor Stowe came after a faithful service of seventeen years in Lane Seminary, Cincinnati.

The Titcomb house where the Stowes resided still stands upon Federal Street, one of the most beautiful streets in the village—one which commands a fine view of the Androscoggin River as it silently joins the waters of Merry-meeting Bay into which also flows the Kennebec, and from which a new river issues, as it were, although the new stream goes by the name of the Kennebec and is the river which has made my own native town, Bath, famous throughout the world as a ship-building city. It is hard to find anywhere among quiet scenery any more delightful view than that of the Androscoggin River, the bay, and the many islands discernible from Federal Street; and a few miles below Bowdoin College one of the finest pleasure grounds in New England, Merry-meeting Park, has been laid out.

Many of the Brunswick inhabitants remember the days of Mrs. Stowe. One resident said to me, "Mrs. Stowe's daughters were the first girls in the village to skate." Such an innovation made quite a commotion among the young people, but this is nothing to be wondered at. It is but a few years since ladies did not ride bicycles.

During Mrs. Stowe's early Brunswick days her son Charley was born. How many difficulties the mother must have met at this time can be best seen from one of her letters.

"I have employed my leisure hours in making up my engagements with newspaper editors. I have written more than anybody, or I myself, would have thought. I have taught an hour a day in our school, and I have read two hours every evening to the children. The children study English history in school, and I am reading Scott's historic novels in their order. To-night I finish 'The Abbot;' I shall begin 'Kenilworth' next week; yet I am constantly pursued and haunted by the idea that I don't do anything. Since I began this note I have been called off at least a dozen times; once for the fishman, to buy a codfish; once to see a man who had brought me some barrels of apples; once to see a book-man; then to Mrs. Upham to see about a drawing I promised to make for her; then to nurse the baby; then into the kitchen to make a chowder for dinner; and now I am at it again, for nothing but deadly determination enables me ever to write; it is rowing against wind and tide."

Always associated with the Titcomb house in connection with the writing of "Uncle Tom's Cabin," will be the "church on the hill," as the Brunswick Congregationalist Church is called. This stands at the edge of the campus and serves in a sense as the college church. The part it plays in the genesis of the great book, I give in the words of the introduction to the illustrated edition of "Uncle Tom's Cabin:"—

"The first part of the book ever committed to writing was the death of Uncle Tom. This scene presented itself almost as a tangible vision to her mind while sitting at the Communion table in the little church in Brunswick. She was perfectly overcome by it, and could scarcely restrain the convulsion of tears and sobbings that shook her frame. She hastened home and wrote it, and, her husband being away, she read it to her sons ten and twelve years of age. The little fellows broke out into convulsions of weeping, one of them saying through his sobs, 'Oh mamma, slavery is the most cursed thing in the world.' From that time the story can less be said to have been composed by her than imposed upon her."

From a sketch in *The Church Standard.*
By ALICE MAY DAYTON.

### The New Rice-farming in the South.

THE story of the "rice belt," which extends four hundred miles through southern and central Louisiana and south-eastern Texas, from the banks of the Mississippi to beyond the Brazos River, varying in width from twenty to fifty miles, is not unlike the story of wheat-growing Kansas. Here also is the prairie, with its scrubby vegetation which pastured the few herds of cattle and ponies owned by the natives, who little realized its possibilities. In fact, the great natural reservoir which lies beneath was only discovered by accident, after the pioneer Western settlers, by some freak of fortune, had ventured into the country, determined to discover what elements of wealth lay beneath the sod. Just as clusters of cabins in Kansas and Nebraska have become towns and cities, and tract after tract of range land has been converted into an inland sea of waving grain by the tide of humanity flowing out upon the plains from the East, so this Southern soil has been taken up and is being changed from one of the great waste places of the continent into a center of productiveness.

Since the pioneers in this movement located in the belt eighteen years ago, 350,000 acres have been reclaimed for rice culture, and 50,000 acres yearly are being added,—not extensive when contrasted with the wheat and corn fields, but representing, acre for acre, far greater outlay in money and effort, for every square foot must be irrigated during the growing season, necessitating a network of canals aggregating fully twelve hundred miles, to say nothing of the labor involved in walling the fields to hold the water, all of which the wheat or corn planter avoids. To go further into statistics, the thirty thousand rice growers have invested $20,000,000, represented by their lands, canals, and machinery; yet their operations have been confined to a few corners of the land believed to be productive. The statistician has estimated that four million acres have a natural supply of water to be obtained by piercing the earth's crust to the reservoir beneath, or from the streams intersecting the country. The area under cultivation already yields two million barrels, requiring ten thousand cars to transport it to market. It supplies two-thirds of the quantity consumed in the United States.

Modern ideas and systematic methods attend the culture

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

of the grain from seedtime until it leaves the field to be sorted and prepared for the market. The grower may till fifty or five thousand acres, but about each tract the bank of earth is carefully thrown up by the ditching plough, frequently "tamped" on the inside with spade and shovel to prevent leakage. The horse drill and cultivator can be used in seeding, while furrows are turned as in an ordinary field intended for wheat or oats. Water flows upon the shoots when a few inches out of ground, and until harvest time in early autumn, the country is turned into a series of lakes, for the plant roots must be continuously submerged, three, or perhaps four months, to a depth of two or three inches. Every acre is a great sponge absorbing fourteen to fifteen thousand gallons every twenty-four hours, yet when the grain nears maturity, and the water is drained from it, evaporation is so rapid that the farming machines can pass over the fields without difficulty in a few days. Then the scene is strikingly typical of harvest time in Kansas or the Dakotas. No less than five thousand harvesters, actually doing the work of two hundred thousand men, sweep through the mile after mile of golden stalks, for by a few alterations the mechanism which cuts and binds the sheaves of wheat ready for the stack without human aid, has come to the assistance of the rice growers. The steam thresher following, converts the chaff and straw into mammoth stacks, pouring the white kernels into a hundred bags in a day.

The tendency toward economical and intensive farming is everywhere apparent,—it is not how great an area can be cultivated, but how much it can be made to yield. Realizing the outlay for transportation and commission in sending the rice to a distance to be prepared for market, mills have been built in sight of the fields, which clean, polish, and separate the cereal into its marketable grades. But the greatest economic factor is this wonderful subterranean sea, which, scientists say, contains a water supply that cannot fail. These "waters under the earth" are held in gravel strata, having a foundation of hard clay, which the well-borer's tools reach at distances ranging from one hundred to two hundred feet below the surface. To fill the canals from well and stream one of the most extensive pumping systems in the world has been constructed,—five hundred plants distributed throughout the district. A single station filling one of the larger canals could serve the needs of a city, as it lifts sixty thousand to seventy-five thousand gallons a minute the thirty or forty feet to the conduit level. The canals reaching the larger rice fields range from twenty to thirty miles in length, sustaining a volume of water one hundred feet in width and five to six feet in depth. From the main or feed channels are excavated branches which connect directly with the fields. During the flooding season these arteries of nourishment enhance the artistic effect of what is in truth an attractive landscape, gleaming like ribbons of silver in the sunlight and presenting a striking contrast to the masses of luxuriant green which later turns to gold. It is a picture which pleases the æsthetic and the material sense alike, for it is a picture of plenty and prosperity only to be appreciated by one who has spent a day or a week in the rice belt.

Stimulated by their success, the aim of these ambitious agriculturists is to place the American rice belt in as dominant a position as the corn, wheat, and cotton belts. "As the South regulates the price of cotton in the world's market, the day will come when we shall dictate the rice market as well," is the universal sentiment. Although readily disposing of the bulk of their staple at home, they have already entered Europe; and with an opportunity to sell on equal terms with their Oriental competitors, they are sanguine of attaining their object. The claim that this prairie land will produce grain at a lower cost than even Asiatic fields is well founded by comparing the average yield per acre and the time and labor required. The Japanese is content to till his plat at one-sixth of the wages paid the laborer in Louisiana and Texas, but one American with his irrigation system and machinery can cultivate a hundred acres in a year where his Eastern competitor, depending upon natural flooding and hand tools, can work but three-fourths of an acre. Every rice expert is familiar with this fact, and it is one of the sources of the general optimism that prevails. No one can predict the limit of future success.

The coöperation so apparent throughout the territory is another feature of interest. Everywhere is to be found an interdependence, so to speak. The producer is not merely the landowner and farmer, but a stockholder in the irrigation company, while he patronizes another company, harvesting and threshing his crop, that represents an alliance of his neighbors. As he accumulates a surplus he becomes part owner of one of the adjacent rice mills. If a bank is chartered in the neighboring town, he subscribes to its stock, perhaps takes a partnership in one of the mercantile enterprises. Thus are his interests so diversified that the general prosperity is of as vital importance to him as the extent of the harvest itself. The economy of this plan is at once apparent in a reduction of expenses in raising and preparing the crop for market.

### Fashions in Physic.

The changing fashions in remedies may be the result of rapidly changing fashions in diseases and the frequent appearance of new diseases, which may, after all, in some cases be only old diseases with new and more formidable names. If man during his long stay on this planet, with his tendency to take disease and the opportunities presented for doing so, has not tried them all, he has been singularly negligent. It will be remembered that half a century ago the liver was the chief seat of all diseases, and the blue pill was the favorite remedy for nearly every ailment. A little later fever and ague was shaking everybody, and Peruvian bark was in universal demand. But we hear nowadays as little about biliousness or the breakbone fever as we do about mercury or quinine. Who that has come to years of discretion does not recall how he was dosed every spring in his childhood with sulphur and cream of tartar, through the summer with heroic doses of thoroughwort, through the fall with paregoric, and through the winter with that diabolical compound, senna and salts? Who now hears of any one of these medicines? What child of spirit would consent to take them? What parent would have the courage to suggest them?

As a matter of fact, the good old diseases under which our forbears used to stagger and still live to an unreasonable old age are rapidly disappearing. It is possible that in the back districts cases of "rheumatiz" and "shocks" may be found among old men, and old ladies may still have "neurology" and "lumbager," and both may raise their favorite herbs for remedies in their kitchen gardens. But the good old fashions in diseases and remedies have mostly passed away. Since the discovery of the microbe the world has given up most of its old diseases and taken on new ones with polysyllabic names, more fitting to the intellectual advancement of the day. King Edward has much to answer for in giving appendicitis royal approval. English journals already affirm it is rapidly on the increase since his operation, and there are few Englishmen so disloyal as not to admit they have it when so notified by their physicians. It naturally follows that a change of diseases requires change in methods and remedies. It requires considerable celerity even for an up-to-date doctor to keep up with changes.

### The Great Cork Forests of Spain.

The cork forests of Spain cover an area of 620,000 square miles, producing the finest cork in the world. These forests exist in groups and cover wide belts of territory, those in the region of Catalonia and part of Barcelona being considered the first in importance. Although the cork forests of Estremadura and Andalusia yield cork of a much quicker growth and possessing some excellent qualities, its consistency is less rigid, and on this account it does not enjoy the high reputation which the cork of Catalonia does.

In Spain and Portugal, where the cork-tree or *Quercus suber*, is indigenous, it attains to a height varying from thirty-five to sixty feet and the trunk to a diameter of thirty to thirty-six inches. This species of the evergreen oak is often heavily caparisoned with wide-spreading branches clothed with ovate oblong evergreen leaves, downy underneath, and the leaves slightly serrated. Annually, between April and May, it produces a flower of yellowish color, succeeded by acorns. Over thirty thousand square miles in Portugal are devoted to the cultivation of cork-trees, though the tree actually abounds in every part of the country.

The methods in vogue in barking and harvesting the cork in Spain and Portugal are virtually the same. The barking operation is effected when the tree has acquired sufficient strength to withstand the rough handling it receives during the operation, which takes place when it has attained the fifteenth year of its growth. After the first stripping the tree is left in this juvenescent state to regenerate, subsequent strippings being effected at intervals of not less than three years; and under this process the tree will continue to thrive and bear for upward of one hundred and fifty years.

### Conservation of the Moments.

Are not the moments the tiny joints in the harness through which the darts of temptation pierce us? Only give us time, we think, and we should not be overcome. Only give us time, and we could pray and resist, and the devil would flee from us! But he comes all in a moment; and in a moment—an unguarded, unkept one—we utter the hasty or exaggerated word, or think the un-Christlike thought, or feel the un-Christlike impatience or resentment. It is generally a moment—either an opening or a culminating one—that really does the work.

The view of moments seems to make it clearer that it is impossible to serve two masters, for it is evident that the service of a moment cannot be divided. If it is occupied in the service of self, or any other master, it is not at the Lord's disposal; He cannot make use of what is already occupied. . . . While we cannot realize the infinite love which fills eternity, and the infinite vistas of the great future are "dark with excess of light" even to the strongest telescopes of faith, we see that love magnified in the microscope of the moments, brought very close to us, and revealing its unspeakable perfection of detail to our wondering sight. But we do not see this as long as the moments are kept in our own hands. We are like little children closing our fingers over diamonds. How can they receive and reflect the rays of light, analyzing them into all the splendors of their prismatic beauty, while they are kept shut up tight in the dirty little hands? Give them up; let our Father hold them for us, and throw His own great light upon them, and then we shall see them full of fair colors of His manifold lovingkindness; and let Him always keep them for us, and then we shall always see His light and His love reflected in them. And then, surely, they shall be filled with praise, the praise that is the tone, the color, the atmosphere in which they flow; none of them away from it or out of it.

FRANCES RIDLEY HAVERGAL.

### Commendatory Criticism.

Editor of *The Herald.*

I have just finished reading an article by an Episcopalian minister, Rev. Kenneth Mackenzie, on Christian Science, and I cannot refrain from seeking this means of expressing publicly my appreciation of the manifest Christian spirit which pervades his entire treatment of the subject. His testimony regarding what he knows personally of Christian Science healings, and of its influence on the lives of those who have accepted it, is most remarkable indeed, coming as it does from a conscientious and scholarly gentleman who conceives it to be his duty to warn the public against Christian Science. I here quote from his article in his own language, to wit:—

"The religious assumptions of Christian Science are further set forth in that their houses of meeting are called churches. As Mrs. Eddy herself is styled 'Our Mother,' so the edifice over which she presides is the 'Mother Church.' That this Mother Church is justly conceded to be the most beautiful building in New England, costing over $220,000, and that other equally pretentious erections are being raised in the principal cities of our land, is satisfactory evidence to thinkers that Christian Science is not an ephemeral fad.

"And the fruits of this teaching are seen in the lives of men and women who, unfortunately, have seen only the dry dogmatism of orthodox Christianity. We are fond of a word recently created. We speak of a man as being 'brainy.' Just such men and women are embraced in the fold of Christian Science. They find an intellectual exercise, coupled with sufficient faith; a high ideality wedded to unmistakable experience. This was not true when they were members of the churches which they have abandoned. The healings of Christian Science are not delusions of diseased minds, as we would understand the statement. I speak guardedly here, with a view to what must be said in a later chapter. I am personally acquainted with some who have been wonderfully raised up to health, after years of invalidism. They are as healed in their bodies as they know they are filled when they have eaten a hearty meal. It seems needless to dwell upon this. The man who simply grins at Christian Science as a harmless hobby, is either guilty of superficiality or to be pitied for his ignorance.

"But Christian Science does more for its votaries than heal their bodies. The creed of this sect, if they will allow the word, is three-fold: First, the restoration of the Christian healing of the Apostolic Church; second, the establishment of Christianity upon a scientific and practically demonstrable basis; third, the metaphysical and spiritual interpretation of Christ's teachings, representing a general and world-wide reaction against materialism and externalism in religion. With such a showy appeal to the loosely attached membership of our churches, the wonder is that more are not leaving for this new field of thought and experience; for the enthusiastic Christian Scientist mingles in society with this declaration, 'I have found these things true, and I am a changed person.' Not only do we hear from our friends the testimony, 'Whereas I was once burdened with a body racked with pain and bowed down with weakness, I am now unconscious of the presence of my body. I seem to be lifted above all sense of physical feeling.' But they say also, 'I am in perfect rest of soul. Not a care invades my life. I dwell in spiritual equipoise. I am as unconscious of sin and sin's suggestions as I am of a physical body.' I have heard one declare, 'I never knew my Bible until now. It has become a new book to me, full of life and beauty.' Not infrequently do we meet ardent Christian Scientists who spend from three to seven hours a day over the Bible, with the book Science and Health at hand for interpretation. Christian Scientists are noted

Digitized by Google

for peace, sweetness, humility, patience, and abounding love. All the graces of the Christian life, which were frozen up during their nominal profession of Christianity, have bloomed into beauty and fragrance.

"The attempt to legislate against Christian Science will never succeed. If it were philosophy, there might be some chance, but its tendrils are reaching down into the lives of the people with such a grasp as to create martyrs. And it is fast being embraced by the very law-makers and law-interpreters of the land. Even the physicians, who might be expected to war against it most violently, are many of them looking with consideration upon a system which accomplishes the very work they have undertaken to do. And while there is positive antagonism between the materialism of therapeutics and the metaphysics of Christian Science, the wise doctor will discover some cases in his practice upon which the principles of Christian Science will work more effectually than drugs.

"Very likely the admissions which have been made will not be acceptable to some of my readers, because they seem to favor the errors of this cult. But I have conceded only what is true.

"Orthodoxy has built hospitals, but Christian Science pleads that it can liberate mankind from the bondage of disease without experimental treatment and poisonous drugs. While nominal Christians are walking the earth careworn and dejected, with no living hold upon God, burdened with the present, in perplexity about the future, and with only a vague hope of the great hereafter, these votaries of an alien faith bound through life with elastic step, radiant countenances, jubilant spirits, winning everywhere they go the envious appeals of those who would grasp the secret they possess."

Nowhere in his article does Rev. Mackenzie qualify any of the things here quoted from him, yet he is evidently very much in earnest in warning the people to beware of this faith, or cult, which he is pleased to call Christian Science, and right lustily does he appeal to the people to be loyal to the Church and its traditions. His plan of attack is that pursued by the enemies of Christian Science, generally. It is this: To embrace theosophy, spiritualism, hypnotism, etc., along with Christian Science, in one article as if they belonged to a common brotherhood, and by attacking the others with more or less success, and by quoting copiously from their literature to show what wrong things they have said about the Bible and orthodoxy, imply that Christian Scientists have likewise been saying and doing these wrong things, and thereby seek to prejudice the public mind against Christian Science, as if it were any more responsible for what these cults say or do than brother Mackenzie's own church. There is an absolute, fundamental, and irreconcilable difference between Christian Science and all these cults (theosophy, spiritualism, hypnotism, etc.); while there is no such difference between it and the cardinal doctrines of the orthodox churches. Indeed, Christian Science is but the logical outgrowth of what these churches have been teaching for the centuries past—it is but a higher step in the process of spiritual growth or evolution, which they have, indeed, made possible. Dr. Mackenzie's only effort to account for the good works which he admits Christian Science is doing, is, or appears to be, a suggestion that probably the devil has been especially endowed with power to do these things in order more effectually to lead astray the people, and, if possible, deceive the very elect. But this graceless wight, the orthodox devil, I think was never known to engage extensively in good works, and the people will hardly be satisfied with this way out of the doctor's dilemma.

"And many of them said, He hath a devil, and is mad: why hear ye him? Others said, These are not the words of him that hath a devil. Can a devil open the eyes of the blind?"

L. H. JONES.

In *Lexington* (Ky.) *Herald.*

## Hourly Benefits of Christian Science.

MANY have a belief that the principal, if not the exclusive purpose of Christian Science, is to heal bodily ills. The writer started out to investigate Christian Science with a view of being healed physically; but, in the early stages of his experience with this new science, he lost all interest in the physical healing and became deeply engrossed in its spiritual aspects. He was gradually relieved of physical disease as he became imbued with the thought of this Science, but this was without any special effort to be healed. Mrs. Eddy has said in her little book, "Rudimental Divine Science," "Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin."

We will agree that a normal, clear, and harmonious mental condition is essential to good judgment, quick and proper decision. We oftentimes hear it said, I am not myself to-day and I do not see the proper thing to do. One needs to be guided by divine intelligence, by that intelligence which is perfect and absolutely correct, in order to be right in deportment, and we have the Scriptural promise, "I will guide thee with mine eye." It is readily understood that our best decisions and movements are not the outcome of confusion or of a dull, stupid, mental condition. We perceive most clearly in our moments of peace and harmony, and the Scriptures teach, "Thou wilt keep him in perfect peace, whose mind is stayed on thee."

It is demonstrable that those who dwell much upon the fact that the divine Mind directly rules and governs all things, and who repudiate in their own consciousness the vacillating, uncertain, human will, see most clearly and are enabled to act most wisely in the every-day affairs of life.

The effects of Christian Science in respect to clarifying the mind and steadying human consciousness is always marvelous to those who avail themselves of the practice of this Science upon themselves and others. When Jesus said, "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you," he evidently had this in mind, that if we seek to be governed and controlled by divine Intelligence we shall be followed by success in every legitimate way, that whatever else we need will follow the practice of being governed and ruled by divine Mind. The first requisite to health, harmony, and normal prosperity is to be submissive to the will of God, to be intelligently guided. Man must work out his own salvation, not only from sin and disease but from the trials and tribulations, the mistakes and distresses, the wants and adversities of this present life, and the Scriptures declare, "It is God which worketh in you both to will and to do of His good pleasure." When God is recognized in all human affairs, great will be the prosperity and rapid will be the progress of mankind. It is the mission of Christian Science to bring this condition to pass, to bring about that state wherein all things are done under the light, and therefore intelligently and correctly.

## For Good and Against Evil.

*Mr. Editor:*—The Church of Christ, Scientist, is not "aggressive" towards any Christian denomination or any persons, but is enlisted in an "aggressive" warfare solely against the impersonal foes of mankind; namely, sin, sorrow, and sickness. To such foes Christian Science grants no quarter, makes no excuse and knows no pardon.

It should be understood that Christian Science, while it is now represented by a denomination with distinct churches and separate organization, is nevertheless no sect, in the generally accepted sense of the term. Mrs. Eddy has truly said in her work entitled "No and Yes," p. 18:—

"Science is not the Shibboleth of a sect or the cabalistic insignia of philosophy; it excludes all error and includes all Truth. More mistakes are made in its name than this period comprehends."

With a growing and truly scientific understanding of the nature of God, and man, and the universe, there is coming also wonderful power of mental, moral, and physical regeneration to bless mankind. These beneficent results are for all who will sincerely search for the Truth. . . .

The transforming and refining influence of Christian Science is exceedingly patent upon those who come to it for help. It should not be taken for granted that because Christian Scientists as a whole present a well-clothed and well-to-do appearance, that they have always been fortunate in their worldly affairs. Many of them have known poverty in the past, and some were completely destitute when the teachings of Christian Science were first brought to their attention. But whoever knows the pauperizing and paralyzing effect of fear and worry upon human conduct, can realize the advantage which must arise, even from an economic point of view, when the paralysis of fear is removed, and the natural capabilities of man reassert themselves. Christian Scientists come from every walk of life, and from different environments of education. They bring to their faith all manner of prejudices and shortcomings, but in so far as the poor have learned to seek first the kingdom of heaven, they find that their heavenly Father takes care of them in His own way, in accordance with His promises.

How the practical application of Christian Science works for success in daily affairs is indicated by Mrs. Eddy in her "Miscellaneous Writings," p. 204:—

"By purifying human thought, this state of mind permeates with increased harmony all the minutiæ of human affairs. It brings with it wonderful foresight, wisdom, and power; it unselfs the mortal purpose, gives steadiness to resolve, and success to endeavor."

No wonder that those who come to Christian Science for help find a power for good to be applied, not only to their spiritual wants, but also to their business enterprises and occupations.

W. D. M'CRACKAN.

## Announcements.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Photographs.

A series of photographs were taken on the day of the Communion Service showing a large body of Christian Scientists entering Mechanics Hall. These photographs can only be obtained direct from the photographer, Elmer Chickering, 21 West Street, Boston, size 13x16.

Mr. Chickering's prices are as follows:—

Where the pictures are packed for express, the price will be $1.00 apiece for the pictures, and 25 cents for packing, making $1.25.

In lots of six-where they can be packed all in one bundle, the price will be $1.00 apiece, and no charge for packing.

In lots of twelve the price will be 85 cents apiece, and no charge for packing where they are shipped in one bundle.

In lots of twenty-five, the price will be 75 cents apiece, and no charge for packing where shipped in one bundle.

The above prices are based on finishing from one, two, or three different negatives.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL.

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## "Be Ye Faithful."

RECOGNITION of the central fact of the universe; namely, God, that He is all and that He is Mind, carries with it the further recognition that all action is the activity of Mind, and that nothing can be really accomplished except as Mind is reflected.

We have found, in human affairs, that the outcome of our larger enterprises is predicated upon the quality of thought put into them, and if the thought be right, the outcome is right. In the same way we must know that daily living, if successful and harmonious, must be the result of daily prayer, daily communion with God. Such prayer is not that *our* will be done, but that we may know the will of the Father which is already done, and that we may reflect His wisdom and omnipotence in all our undertakings. We are at times inclined to forget that man's God-given dominion extends to the smallest, and seemingly least important, items that make up the daily life of the individual, and to believe that familiar and habitual actions can be performed properly and beneficially without the exercise of the same omnipotent guidance required in larger, more important, and unusual affairs; but in this we are mistaken.

The human inclination to accept certain conditions and occurrences as inevitable, and their results as something to be borne with equanimity and without protest, is not in accord with the ideal, and is not conducive to growth. The mental protest must be immediate, emphatic, and conclusive.

The infinitesimal detail of existence is none too small for the exercise of our understanding of God. Jesus said, "But the very hairs of your head are all numbered." M.

## The Parable.

IN the teaching of our Master the parable was a significant and predominant feature. Why? Because, first, the people were very familiar with it. Figurative story-telling is a distinct characteristic of the East. Further, it placed the Master in close touch with their every-day life. It showed his sympathy for that which to them was very near and dear. Jesus was too great a philosopher to think that he could stand afar off and teach. He knew that love is interest, and that obedience is the response to the love that expresses itself in interest; that obedience is the fruitage of successful teaching.

Again parabolic teaching is on a sliding scale. It adjusts itself to the growth and comprehension of the student. The most superficial interpreter gets from it a lesson in Truth, if only in husbandry, as in the parable of the sower, while in its grander flights the possibilities of this method of instruction grow magnificent, as in "The Prodigal Son," from which one may read the loving forgiveness of mere human, paternal affection, or rejoice in the revelation of the ever-presence of that divine Love whose abundance is unmeasured,—Love that meets the prodigal at the very impulse of turning to the one Father-Mother, God.

Through the lens of Christian Science the parables of the Nazarene are resplendent with light and life. S.

## What Shall be the Remedy?

IN referring to the great anthracite coal strike now in progress, *The Outlook* has emphasized a thought which is coming home to the great body of the people as never before, perhaps, in the history of our country. It says:—

"The time is fast coming when the public will not stand off and suffer while the two other parties in interest endeavor to settle their disputes. That public, the third party in all these strikes, is not a mere onlooker; it represents the determining force, the power that rules. It not only has its rights, but it has an authority which neither of the other parties can for a moment resist if it is exercised. The public means to be patient and the public has been patient; but it will not much longer permit these vast disturbances which affect its peace and interfere with its prosperity. . . . It will impose a just and equitable method of settlement upon both the other parties, unless they accept such a method for themselves."

It is manifest that the well-being of hundreds of thousands should be held paramount to the not wholly unselfish interests of operators and workmen. The sense of justice is one of the foundation stones of our communal life and its authority must be enforced, but this will not end the conflict. The personal interest of the workman is at war with the personal interest of the operator, and now a third factor is added, the personal interest of the public. In working out the problem humanity will legitimately assert that the more important interest shall rule, but this means simply the coercion of two other interests. It does not end the war, for the sense of divided interest still remains, and so long as it remains its reassertion is assured. Error ceases its activity for ill, not when it is coerced, but when it is destroyed.

To the Christian Scientist the one solution of these problems is revealed. He knows that in its exigency and ignorance humanity must do the best it can, but he knows also that the human sense of justice springs largely from a concept of personal interests which can be invaded. He knows furthermore that there are no opposing interests among God's ideas, no warring forces in the realm of the real, and that all these expressions of human sense must, with all other seemings, find their Saviour at Bethlehem. Christ, Truth, is the only Saviour, and the word comes to every unideal thought and condition to-day, as it came of old, "Look unto me, and be ye saved, all the ends of the earth," for "There is none other name under heaven given among men, whereby we must be saved." The methods and means which assert the reality of the manifestations of evil, can never remove them; they cannot heal, for they have no Christ in them.

While recognizing the value of improved beliefs, and working incidentally for their advancement, every true Scientist will devote his chief attention to that realization and demonstration of Good, which annuls the presence and power of evil, and so dispels its phenomena in himself, and ultimately in all the world. W.

AN esteemed contemporary has recently well said that,

"Many of our church methods and practices which have grown venerable with age, need to be treated as Hezekiah treated the brazen serpent that Moses had made. When he found that the Israelites were worshiping it he broke the venerable relic in pieces and called it a thing of brass. Undoubtedly that made a great sensation, and many thought that Hezekiah was destroying religion, whereas he was really purifying it and saving it. (2 Kings, 18 : 4.)

"We must be careful not to attach too much weight to the assumption that what has lasted a long time is right and wise. There is a certain presumption in its favor, but it is not controlling against the conclusions of fresh examination. We have no continuing city here. Our best plans and methods are but the tents of a night, and we make the

Digitized by Google

best use of them by being willing to abandon them at short notice when better ones are to be had. New occasions do not teach new principles, but they certainly teach new duties."

To recognize Principle as the one abiding thing, is what the world, and especially the religious world, greatly needs to learn. The forms and creeds which have been shaped by a sense which is more or less human, and therefore more or less imperfect, must give place to the clearer vision of the advancing years. New presentations of Truth are not to be tested by the question of conformity to past interpretations and authorities, however venerable, but by practical demonstration of their adequacy to solve our problems and advance the spiritual life. "By their fruits ye shall know them."

## An Appeal for Fair Judgment.

We are permitted to use the following letter from a Christian Scientist to a member of his family:—

*Dear Brother:*—I regret that you still feel impelled to speak in such condemnatory terms of Christian Science. Your concept of it certainly merits no tolerance, but this concept is a distortion of the truth and it indicates that you have not profited by all your opportunities to know the facts. Your information has evidently been gathered for the most part from its detractors, and your judgment of it is formed, I should say, from hearsay, from the observation of certain people who, evidently, are not fair representatives of it, and from a prejudice which, I think, is fully as vigorous as was mine. The formation and maintenance of an opinion on such a basis is injudicial, brother, and no less discreditable to you, as a Christian minister, than it was to me, during the years of my pronounced antagonism to this movement. In a kindred way Christianity has always been subject to the caricature and contempt of those who were in many respects very good men. Marcus Aurelius was one of them and Ingersoll another, and the intervening number has been legion. They all made the mistake which you and I have repeated after nineteen centuries of history.

Over against the dozen "queer ones" you name, who may have made themselves ridiculous, as well as the Cause which they perhaps sincerely meant to honor, I could easily find you twelve thousand and more, wholesome, intelligent people, who would witness both in word and in their lives, that Christian Science has come to them to deepen and quicken their spiritual sense, to intensify their love for the Bible and for all that is good, beautiful, and true, to clarify their concept of God and beget an altogether new and more helpful sense of His abiding nearness, to increase their love for the Master, and their sincere desire to be entirely subject to the Mind that was in him. They would witness that through their knowledge of the truth as illumined and explained in Christian Science, they have acquired a spiritual supremacy over the world, the flesh, and the devil, never before known, have been freed from fear and physical bondage, and have entered into the joy of the Lord, so that their hearts are gladder, their homes happier, their influence more stimulating and cheering to others. They would say to you that, applying the Master's test, and judging the tree by its fruits, they are led to entertain the highest regard for the teaching of Christian Science, and the deepest love for the one who brought its blessings to their door.

Now, brother, if these witnesses have not been heard by you it is surely not their fault. Their testimony is on record, and it is impressing those who are willing to hear it throughout the world, and leading thousands to test the truth of Christian Science for themselves and so prove, as each may, beyond the possibility of a doubt, that Jesus was speaking to every believer when he said, "Lo, I am with you alway." "Heal the sick, raise the dead." "Freely ye have received, freely give."

You have been seeking in your ministry to effect precisely the results I have named and to which Christian Scientists are witnessing that they have attained. Wherefore, then, do you condemn them and their apprehension of Truth? Do you *know* that they are wrong in their understanding of the Word, and you right? Can you prove it by the test which the Master imposed on all? If not, why condemn? why not say, I do not know, I have not carefully investigated the subject.

Brother, is it the kind and Christian thing, and can you name any precept of Jesus which authorizes you to ignore the testimony of the multitude who have been blessed through Christian Science, and form your opinions and express your judgment upon the statements of detractors such as you name?

You have friends who have been earnest students of this subject for years. They have enjoyed unusual opportunities to know the facts about it; have you attached any value to their testimony, or sought to avail yourself of their assistance in your effort to establish a safe basis of judgment, and have you carefully read, in the spirit of a truth-seeker, the text-book of Christian Science? If not, would it not be better to withhold judgment, and especially in view of the Master's explicit injunction that we "judge not"?

We may not be able to agree with many who are just as sincere as are we, just as earnest in their effort to follow Christ, but wherefore condemn and cast out? The world is wide and there is much to be done. Shall we join the "rabble" and stone successful and inoffensive workers because they do not use our machinery or pursue our methods?

Brother, the only basis of unity is demonstration: "by their fruits ye shall know them." Opinions and theories about Truth have a passing value, perchance, but they are not the appointed standard of comparison, as you very well know. In the measure of our spiritual apprehension of Truth its work will be effected through us. The faith that is undemonstrable is but a theory, however serviceable in its day, and it will ultimately be so ranked.

He is a Christian who so knows God as to be able to do His works. This is the standard of Christian Science, and it commends itself to the thoughtful and the unprejudiced, everywhere. In brotherly Love abiding,

## Cradle Song.

Rose and gold and blue of the skies,
Face and curls and innocent eyes,
Sleep, my little one, dream and drowse
All the birds sit still in the boughs,
The dark blue spaces with stars are sown—
Sleep, my blessing, my love, my own,
Sleep!

Gold and blue and rose of the West,
To the palace of sleep, step in, sweet guest!
The sun-spark sinks like a rosebud furled,
And rose-lights ruddy the restful world;
The ponds are as pitchers of rosy fire—
Sleep, my blossom, my heart's desire,
Sleep!

Blue and rose and gold of the morn,
You shall wake and laugh when the night's outworn,
When dreams go home in the dawning cold,
Suffused with splendor of streaming gold,
Golden head on your pillow so white—
Sleep, my treasure, my soul's delight,
Sleep!

## Among the Churches.

### From Poughkeepsie, N. Y.

It is anticipated that First Church of Christ, Scientist, will break ground in a short time on their handsome lot on Market Street, for their chapel which, when the church proper is constructed, will be used for the Sunday School and meetings of the other organizations of the church.

*The Poughkeepsie* (N. Y.) *Enterprise.*

### Free Reading Rooms.

In the establishing of free reading rooms, which are at the disposal of the general public from 9 A.M. to 5 P.M. each day except Sunday, First Church of Christ, Scientist, of this city has inaugurated a laudable enterprise. While the purpose of the reading room is entirely religious in its signification, and all Christian Science literature is daily on sale, the use of the rooms is by no means limited to the members of the church and their friends, but is open to all sects and denominations, and is a haven of rest for the wayfaring ones in the world's great army of restless investigators.—*Fort Wayne* (Ind.) *Sentinel.*

### A Word from Warsaw, Ind.

On Sunday evening, July 20, 1902, a Christian Science service was held at Warsaw, Ind., the lesson being "Truth." There is no regular church organization at Warsaw, but at the invitation of friends of the movement thirty-six came together, of whom eighteen were gentlemen, and half of the people in attendance were representatives of the Jewish faith.

After the service a testimonial meeting was held, during which some splendid testimonies were given as to the benefits received from Christian Science treatment.

ISIDOR JACOB.

### From Hurley, S. Dak.

Christian Science was first introduced to us in the spring of 1895, by a practitioner who did wonderful healing, and placed before us Mrs. Eddy's book, "Science and Health with Key to the Scriptures." Some eight families became interested, regular services were commenced at once, and were held in a dwelling-house for two years. Then feeling that a public place would be more suitable, a hall was rented, which we occupied for three years, when opportunity was offered us to occupy a larger hall, which we may purchase as soon as we can. We also use this hall for a reading room. We organized as a Society in 1898 and as a church in 1901, with fourteen charter members. We have not gained many in numbers, but our services are more largely attended than formerly. We feel that we are slowly but surely progressing.—MRS. CARRIE BUKER, *Clerk.*

### The Work in West Pullman, Ill.

On February 22, 1900, the Christian Science Society of West Pullman, Ill., was organized with a membership of sixteen, who up to this time had been members and regular attendants of First Church of Christ, Scientist, Chicago, Ill.

For some time there had been a desire among the local Scientists, as well as others who were becoming interested, for services here, and it was felt that much good would result in our obeying this call for the Truth.

A hall was rented and our first service held on March 18, 1900. Since that time our membership has increased to thirty with an attendance at the Sunday morning services of about seventy.

The Wednesday evening testimonial meetings have been quite well attended, and many helpful demonstrations given of the power of Truth and Love over error.

The Sunday School has thirty-one members who are much interested in the work.

A building fund was started last year which is steadily growing. The Sunday School contributed fifty dollars to the fund last Christmas.

Two lectures have been given under the auspices of the society, the first by Judge Ewing, the second by Mr. Kimball. Both were well attended and resulted in a kindlier feeling towards Christian Science here.

A new and modern hall has recently been built in a very desirable location which we have secured for our services, and it is needless to say that we rejoice in this demonstration of progress. We trust that our next move will be into a church building of our own.

We have had many trials, many problems to work out, much error to overcome, but we have tried to stand together in the unity of Truth and Love and to know that divine Principle governs us and will show us the right way.

For the help given us by our friends of First Church of Christ, Scientist, Chicago, through its trustees and directors, who gave us the most loving counsel and advice, we are indeed most grateful; and to our loving Leader who through her devotion, labor, and love has enabled us to know and partake of the truth that makes men free, we bring a tribute of sincere gratitude and love, praying that we may through obedience and faithfulness prove by our works that we are worthy to be called Christian Scientists.

HELEN NELSON, *Clerk.*

### Progress in Colorado Springs, Col.

The members of First Church of Christ, Scientist, of Colorado Springs, have felt for some time past, the urgent need of having their reading rooms down town, and more centrally located; but it was very difficult to get a suitable place, since but seldom anything is offered for rent in the business portion of the town.

A little more than a month ago two beautiful rooms on the ground floor, nicely adapted to our wants and in the most desirable location, were suddenly and unexpectedly vacated, and our committee promptly secured them, and on most favorable terms.

The announcement was then made, that the members of the church, and the friends of Christian Science, had the privilege of contributing to the furnishing and equipment of the rooms. Most freely and generously the offerings, and gifts poured in, and we have the most beautiful, cosy, and comfortable rooms we could desire. We moved in July 26, as the need for the rooms seemed great, but the formal opening did not take place until August 12, an account of which, taken from the *Colorado Springs Gazette* of August 13, I enclose. With hearts overflowing with gratitude, we thankfully acknowledge the leadings of divine Love in this beautiful demonstration.

MARY E. M. JOHNSON, *Clerk.*

Following are excerpts from the very full newspaper report referred to:—

"Occupying the center of the main apartment is a long library table scattered with the latest books and periodicals relating to the Science. Artistically arranged about the sides are bookcases, desks, and settees."

"Quantities of lovely cut flowers had been sent in by members of the church and congregation to do honor to the happy occasion."

"The interest in the Cause is increasing rapidly, as it is everywhere, and the time seemed ripe for the opening of the new rooms."

## From Our Contributors.

### Love.

EVELYN SYLVESTER.

LOVE! How often is this sweet, this sacred word misapplied! It would seem to have as many interpretations as there are individuals in the universe. But there must be some exact, some scientific definition, and as a Christian Scientist understands the term, it is explicitly defined in the text, "God is love," and he recognizes nothing less pure as either real or permanent.

The Christian Scientist knowing that God is all, is necessarily certain that Love must be all; hence his chief aim is to learn how best to express this Love in his life, and how to annihilate every unlike quality that seems to exist there. He knows that when he expresses this divine Love perfectly he has nothing left to desire, for "Love is the fulfilling of the law."

What shall be the quality of our love, and how can we best express the reflection of the Love that is God?

Our thought naturally turns to the mother-love as an example of that which is purest and holiest. Robert Browning believed that the love of husband and wife is the highest type of love, while many feel that no purer affection exists than between brother and sister; but none of these, as such, exemplify the highest qualities of love, for certain elements of selfishness may and do enter all these relationships, rendering them less than perfect.

Jesus answered our question by a simple statement: "Greater love hath no man than this, that a man lay down his life for his friends." Let us ponder these words.

Life is God. Obviously we cannot let go our grasp on the Infinite,—and if we could, where would be the gain to our friends? Clearly we must seek some more spiritual interpretation of this text. Jesus rose from the dead to prove that he had never sacrificed his Life. What was it that he had laid down? What but material sense, or the belief in a life apart from God? His followers found it difficult to entertain his spiritual concept of Life; consequently he had to illustrate his own teachings. He had declared that "Whosoever liveth and believeth in me shall never die," and so he proved, even to their mortal sense, the unreality of death. Evidently it is not this mortal life that a man is told to "lay down" in order to prove his love for his friends.

This, then, is our answer: a man must sacrifice his *sense of self* daily, in order to show his love for his friends. He must destroy all afflictive, human sense of unmerited censure, misconstrued motives, misunderstood aspirations. Despite the rebuff of unselfish desire, perchance the scorn of kindly endeavor, he must love all actively and only.

We may think this hard, impossible even; but a moment's consideration will convince us that what makes this seemingly difficult, is self-love, that quality which Science and Health declares "is more opaque than a solid body." We cannot lay down our life for a friend, while loving self; i.e., the belief of a self apart from God.

The fruits of self-love are self-justification and the thousand errors following in its wake. We are hurt when somebody slights us; angry when somebody chides us; rebellious when somebody condemns us. But what is it that is hurt, angry, rebellious? Can God be touched by these conditions? No. And when we reflect Him, neither shall we. Unjust criticism we shall endure in silence, for "Love suffereth long, and is kind;" in the prosperity and advancement of others we shall rejoice, for "Love envieth not;" the gifts of God we shall quietly and meekly accept, for "Love vaunteth not itself, is not puffed up." On all occasions we shall endeavor to "walk in the Spirit," for Love "doth not behave itself unseemly." We shall make no effort to coerce or lead others except as God leads them through us, for Love "seeketh not her own" will or way. We shall neither resent nor retaliate the offence of mortal mind, for Love "is not easily provoked." We shall always look for good in everybody, remembering that Love "thinketh no evil." We shall be glad for the furtherance of God's cause, no matter what the individual cost may be, for Love "rejoiceth in the Truth." Indeed, we shall be ready to bear all things, believe all things, hope all things, endure all things, since "Love *never* faileth."

When self-love is thus annihilated we shall cease to cry, "I want to be loved!" We shall be so engaged in loving others that we shall forget whether they love us or not. Not to *be* loved, but *to love*, will be our most earnest prayer.

And who is benefited by this destruction of the old self? Not God, surely; He needs not our sacrifice. Nor yet our fellow-men; we may have smoothed for them the rough way or sweetened the bitter cup, but it is really one's self that fully reaps the joy that springs from a life of self-conquest.

Then "Beloved, let us love one another: for love is of God." Let us not forget that God is expressed through His ideas. Shall the Holy Spirit be grieved from our hearts because we are unwilling to reflect Him? Now is the time to let Love shine in our hearts and on our faces; now is the time to forget all past wrongs, seem they great or small. While cherished as realities they steal just so much from our ability to keep the two commandments "on which hang all the law and the prophets."

### The Rebuilding of Human Consciousness.

W. C.

ONE of the first demands made upon the student of Christian Science is the acquisition of a new habit of thought respecting man. His previous ideas relative to himself have been largely material, and to lose sight of this old self in consciousness, and see and think of himself only as a reflection of Mind, is the task set before him.

St. Paul in counseling the Ephesians said: "If so be that ye have heard him, and have been taught by him, as the truth is in Jesus: that ye put off concerning the former conversation the old man, which is corrupt according to the deceitful lusts; and be renewed in the spirit of your mind; and that ye put on the new man, which after God is created in righteousness and true holiness." The problem thus presented is the realization of the true self in consciousness, the putting off of the old man and the putting on of the new.

"It doth not yet appear what we shall be" in the fulness of the spiritual life, for we are all more or less under bondage to a sense of limitation, but that real life of the spirit is the child of both aspiration and of promise, and as we "press toward the mark for the prize of the high calling of God," we shall advance the more rapidly as we make sure of our steps.

One of the most important of these progressive steps is the habit of asserting the truth respecting the body over against every seeming consideration that is abnormal or imperfect. At present our conception of the spiritual man comes far short of the image and likeness of God, but to hold steadily the thought of perfection, that every real thing is, and must ever be, right and orderly, since it has its being in the immediate consciousness of God, this leads on to that perfect understanding which is life.

Only as we entirely lose consciousness of a limited material body can we realize a complete spiritual freedom. If, therefore, we are tempted to declare that we have a cold, and mortal sense says, "I cannot breathe through my nose," we will immediately assert and maintain God's perfection, and our consequent freedom as His image and likeness. All truth can know is Truth's creation, which is and must ever remain ideal. Discords and nothingness

Digitized by Google

will then appear only to disappear, and we have nothing further to do with the claimant. If the tempter asserts that other organs are affected, immediately the Truth is asserted and persistently held until through these manifold overcomings, the new birth of spiritual sense is accomplished, and there appears in consciousness, the new spiritual man, free and effective to do God's will, and the old man with the deceitful lusts is put off forever.

The student of Christian Science will no longer fear the approach of the temptation of discord, when he has learned to know its nothingness. For this our "light affliction, which is but for a moment, worketh for us a far more exceeding and eternal weight of glory." He can now recognize the significance of the Apostle James's admonition, "My brethren, count it all joy when ye fall into divers temptations; knowing this, that the trying of your faith worketh patience. But let patience have her perfect work, that ye may be perfect and entire, wanting nothing."

## Faithfulness in the Little Things.

FREDERICK MANN.

If Christian Scientists do not watch the "little things," but allow them to pass undiscovered, these "little things" become avenues for error to effect its work later on, and they will then wonder why it is that they are having "such a hard time." They never will know why it is, until they awaken to the fact that they have not been working from Principle.

A Christian Scientist cannot serve both God and his own will; he must surrender his will to the divine Will. The reason we are in trouble sometimes is because we are not bringing our lives up to our profession, and we do not always notice the "little" errors of which we are guilty. It is well to remind ourselves of these things, and that often.

There is always a cause for discordant human conditions, and almost always the cause is with us. The old thought, or the "old man," is still so strongly to the front in all we do or try to do, that we must watch and pray without ceasing, to be able to do all our work scientifically. Many of us are not careful enough, and as a result of our laziness in this respect, error is continually holding us in discord. The best way to get out of work is to do it, not talk about it or worry over it, but do it and get it out of the way, and be ready for the next demand. It is the fretting about what we have to do which makes it hard, not the work itself. Work should and will make us happy and useful, and keep us free from error.

Another of our weak points is revealed in "gossip." As Christian Scientists, we have no time for idle words. Hear Jesus' words, "I say unto you, That every idle word that men shall speak, they shall give account thereof in the day of judgment. For by thy words thou shalt be justified, and by thy words thou shalt be condemned." We know that this "judgment-day" is here and now. We are told in Science and Health (p. 291), that "No final judgment awaits mortals; for the judgment-day of Wisdom comes hourly and continually." "These are the things that ye shall do; Speak ye every man the truth to his neighbor; execute the judgment of truth and peace in your gates."

Again, promptness and punctuality must be very carefully observed in our work; otherwise we are disobedient and are leaving avenues open for error that will later show itself in sickness and discord. We should meet promptly every obligation, and never disappoint those with whom we have to do; our word should always be as good as our bond. This is not new, but Christian Scientists should be shining examples in their lives and in their dealings with all. I speak from experience; for many times as I am about my work, I am delayed or hindered because the one with whom I have business is not "at his post." A Christian Scientist should always be worthy of confidence in these things. Promptness and punctuality cannot be overlooked by us, they mean so much to our success. We need not expect permanent success if we give no heed to them, and should not complain, if we reap what we have sown. We cannot win harmony or success, for we are not honest or consistent; we have not been "faithful" over the little things.

Again; we are not grateful enough for the blessing we have received and are receiving every day. It is not a question of verbal expression, but of daily living in keeping with such expression. Our Leader says (Science and Health, p. 3): "Are we really grateful for the good already received? Then we shall avail ourselves of the blessings we have, and thus be fitted to receive more. Gratitude is much more than a verbal expression of thanks. Action expresses more gratitude than speech." Gratitude, made manifest in "action" is a good deed. Let us with a grateful heart look to God, that we may be worthy of freedom from unpleasant conditions.

Untiring effort to be "always good," will help over every temptation that error would throw in our way.

Last but not least, let us be meek, striving to be least, and the servant of all. Let us be willing to *serve*, rather than lead.

### Chrysostom's Courage.

What a wonderful example of Christian courage and childlike faith was manifested by Chrysostom, who, when threatened banishment by the Roman Emperor, said: "Thou canst not, for the world is my Father's house; thou canst not banish me."

"I will slay thee," rejoined the emperor.

"Nay, thou canst not, for my life is hid with Christ in God."

"I will take away thy treasures."

"Nay, that thou canst not, for, in the first place, I have none thou knowest of. My treasure is in heaven and my heart is there."

"But I will drive thee away from man, and thou shalt have no friend left."

"Nay," said Chrysostom, "and that thou canst not, for I have a Friend in heaven from whom thou canst not separate me. I defy thee; there is nothing thou canst do to hurt me."—*Selected.*

### The New Light.

Acetylene mixed with a certain proportion of oxygen gives a light three times as intense as the oxyhydric [calcium] light. Its brilliancy is such that even in full daylight signals can be sent to a distance of about five miles. In the night this distance is about trebled.

*The Literary Digest.*

Man is four:—

He who knows not, and knows not he knows not; he is a fool, shun him.

He who knows not, and knows he knows not; he is simple, teach him.

He who knows, and knows not he knows; he is asleep, waken him.

He who knows and knows he knows; he is wise, follow him.—*An Arab Apothegm.*

In all this world babel of myriad tongues, confusing, clashing, bewildering, there is always one voice that we may safely follow. It is the voice of Jesus.

Dr. M. S. Kaufman.

## Testimonies of Healing.

I send the following beautiful demonstrations of the power of Truth to heal, hoping they may encourage some who are striving for the light. A person who had suffered from asthma for over fourteen years, and was unable, through a complication of diseases, to attend to her household duties, was completely healed in three weeks' treatment, and able to do her household work, and use a sewing machine with perfect ease.

A young man living some distance from the city had an acute attack of an internal trouble, and asked a friend to telephone to a practitioner for help. It took about twenty minutes to reach the nearest telephone. Before the friend returned from sending the message, the young man sat up, and said to his mother, "I feel like a new man. He was healed with the one treatment.

There was an amusing incident in connection with the healing of a case in this city, some time since. A gentleman who had been confined to bed for many weeks with sciatica, and whom the doctors failed to help, was advised by a friend to try the then new treatment of Christian Science. In compliance with his request a practitioner drove over the next morning. He was shown into the bedroom, and the patient's wife rather doubtfully withdrew. After giving the treatment, the practitioner left, saying he would come again the next day.

As soon as the door closed, the anxious wife eagerly inquired, "Well, what did he do?" "Oh nothing," replied her husband, "but he took a good long nap in that chair." Notwithstanding that "nothing" was done for him, the patient rested peacefully that night, and when the practitioner came next day, the pain had almost entirely disappeared. He was told that if he felt inclined he could dress and go down stairs. As he did not feel that he could even stand, this seemed rather foolish to him, but before night he did go down, and the next day walked a few blocks.

It is needless to say that in a very short time he was completely cured, and frankly admitted that something had been done for him.

I myself am inexpressibly grateful for what Christian Science has done for me. Not only has it healed me of many physical troubles, but it has also taught me to turn to Principle in every time of need. When I was led to devote all my time to the healing work of Truth, I was tempted to think that I might not have sufficient to support myself; but a complete demonstration of supply has been made, and it is proven that working for Principle is not necessarily attended by drudgery and privation.

It has been my privilege to carry the truth to many homes and to be instrumental in removing some very obstinate ills, and it has been joyous work, bringing a full reward in the gratitude and gladness of those relieved. Indeed, when I begin to count up my blessings, they are more than can be numbered. The church services, testimonial meetings, class instruction, and students' meetings, all stand out as beacon lights along the way, and I am most thankful for these and for the priceless blessings that came with the new edition of Science and Health, showing that our dear Leader is receiving and imparting a yet fuller understanding of the Truth.—H. M. H.

---

After having received the benefit of the testimonials given in the *Sentinel* and *Journal*, for nearly three years, I deem it a duty as well as a privilege to give my experience to the Field. A testimony given in the *Journal* led me to investigate Christian Science, and I hope in return to be the means of leading some one else to see the beauty of this saving truth, and to learn to know God aright and man's relationship to Him. I know from experience that it is prejudice and misapprehension of what Christian Science is, that keeps many from enjoying the blessings it bestows.

I had been taking patent medicines for several years, and had been to one of the best sanitariums in this country, but was not healed, although I received some benefit, for which I shall always feel grateful, for I know the physicians did all they could for me. I sometimes thought I had exhausted all remedies, but did not give up, for I felt there must be something to heal me if I could find it.

When in this state of mind Christian Science came to my notice, and after reading several Journals, I purchased a copy of Science and Health. I read for several days at odd times. I commenced to improve, and in about a week I was healed of most of my ills, among which were dyspepsia and nervous debility.

Although I had heard about Christian Science before, I had never heard that the reading of the Christian Science text-book had ever effected the healing of anybody. I commenced reading to find out what Christian Science was, but was surprised to find myself improving, and was soon assured that it was the theology of Science and Health that healed me, just as it was the theology of Jesus that healed the sick. (Science and Health).

It has also proved to me that there can be no Christian Science Church that does not heal the sick and sinful, for healing follows as the natural result of the teaching of Christian Science. The Bible has become a new revelation to me, and I can read it much more understandingly by the light received through the reading of Science and Health.

I will close by offering my heartfelt thanks to our Leader, Mrs. Eddy, for the great work she has done and is doing for humanity.—A. F. M., Fairmont, Minn.

---

Hoping to help some weary one searching for light, I am led to give a leaf from my own experience, showing the steps out of a blind faith in God, to the dawn of that Light which is still leading me up to an understanding of the true God.

From my earliest recollection, I had been reaching out for God; seeking Him through the Scripture, reading the promises daily until many parts of the Word became familiar. I clung to whatever gave me a ray of light and hope. In early girlhood health began to fail, and so-called inherited troubles to appear. I sought earnestly the church and early became a member, where for more than twenty-five years, I found some degree of comfort, and I gratefully recognize the good that came to lighten in some measure the weary way.

I parted from this dear church only in obedience to a greater light which in later years dawned on my path,—the light of Christian Science.

Many physicians were sought while I prayed earnestly that these material ways might be blessed. But to no avail—sufferings increased. Then turning from these, I said I will seek through prayer alone, I will believe more fully, exercise more faith, and it may be God will reveal Himself to me, and lift me up. When faith wavered, I went to one who was well known as a man of such unwavering faith in God that through prayer a great work had been carried on for years. And many prayers did this good man offer for me; but no answer, save to find myself on a bed from which there was little thought that I would rally. Then hope fled, and faith seemed to be shipwrecked, and I said, "Is there a God?" I ceased to pray for healing, and asked God to let me die. I know now that Love was leading me, and out of all this darkened belief and blindness, I was led on up to the Light of Truth.

Thirteen years ago, when it seemed that everything of this life had failed me, a dear one came with words of hope, and gave me the first glimpse of the true God. I

Digitized by Google

learned that "The Christian Science God is universal, eternal, divine Love, which changeth not and sendeth no evil, and sin upon man" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 140).

Then my heart responded, there is a way, and I have found the open door which leads to it. Then as I was patiently led by this dear sister, and later by a loving teacher, I found the way of understanding which led me out of darkness into the healing, uplifting Truth; as revealed through Christian Science.

E. Louise Cotton, Roxbury, Mass.

---

I think it was in the year 1896 that Christian Science was first presented to me. I was spending the winter with relatives in Memphis, Tenn., so as to have the best medical treatment,—my home being in a small town. I was treated in an infirmary for six or eight weeks, but was growing weaker and more despondent every day, and the medicine and other material remedies soon lost all effect.

It was at this time that a cousin who had been healed a short time before by Christian Science, came to visit my aunt, with whom I was staying. Her healing was to us marvelous, since we had known of her former condition. I asked her if she thought it was possible for me to be healed by Christian Science, and many other questions. She gave me some tracts, and I at once decided to take treatment. After this I had no desire to return to doctors or medicine. Chronic constipation, indigestion, severe headache, and other smaller troubles soon disappeared. One or two old chronic ailments did not yield at once, but I have improved slowly and surely ever since my first treatment.

During the seven years I have been working I have had many beautiful demonstrations of the power of God's love over sin and sickness.

Eczema of about forty years' standing was healed after all material means had failed. Chills and fever in several instances were healed after one or two treatments. One boy who had had chills, sometimes for months at a time, was surprised when healed by one treatment. My younger sister was badly scalded on the throat and chest by hot water, and was relieved from pain in a few minutes by Christian Science treatment. My father, who was almost an infidel, was so astonished at this demonstration that he at once asked for treatment and was healed of several claims of sin and sickness.

My mother and I were in a runaway, and with the understanding of Christian Science were saved from prospective death. When the horses became frightened, the driver threw the lines down and jumped out. We at once realized the presence of God, and that there was no fear. We were not at all frightened, but did not know where we were going, for we could not reach the lines to guide the horses. In turning a corner the vehicle was overthrown and we were dragged under it until the horses kicked loose and ran away. There was hardly a spoke left in the wheels, the carriage was such a wreck. Of course, it created much excitement and when the horses had broken loose and we were again on our feet a great crowd had gathered, a doctor or two among them, who would not believe that we did not have broken bones or other serious injury. They said we would not acknowledge it because we were Christian Scientists. Our eyes, noses, and ears were filled with dirt from our having been dragged on the ground. There was a small scratch on my cheek, but it soon disappeared. My mother received some bruises and felt a soreness for a day or two, but this was the extent of our injuries.

A school friend who was studying wood carving let one of the sharp instruments slip, cutting an artery in the palm of her hand, as we supposed from the way the blood gushed from the wound. She was pale and sick from fright. The thought came instantly, "Blood never gave life and can never take it away" (Science and Health, p. 376), and before I knew it I spoke the words aloud. The bleeding stopped almost instantly and she looked at me with a smile of astonishment and said she was healed. She went to work that afternoon and said there was no more soreness in that hand than in the other.

I could never tell of the happiness Christian Science has brought to me, and the gratitude I feel to our dear Leader who has given this beautiful truth to the world.

Bertha R. DeVold, Paris, Tenn.

---

Our baby girl when about four months old had a breaking out on head and face which kept getting worse and worse. It was very painful and itching; it was called eczema, a disease usually considered incurable. As we were traveling from place to place, many kind ladies advised various remedies, but we persistently refused all material means and kindly informed them that we used Christian Science treatment, and that when we needed help, we employed a Christian Scientist.

They said, "Christian Science may help some things, but will never cure the disease on that child."

We let it go a while trying to work it out ourselves, but it became much worse, and we notified a practitioner and he began treatment. The child's head and face were one solid sore all over, angry looking, burning, and itching, and with water oozing out of the skin. The case was obstinate and took a long time to cure, but was finally conquered and the child was entirely healed. She has now a smooth, clear, beautiful skin.—Mr. and Mrs. Geo. H. Lee.

---

I was a poor, suffering, helpless mortal with headache and stomach trouble and sciatica and inward tumor, when friends begged me to try Christian Science. They were not Scientists at the time, but since I had tried everything else I was given over to despair. My last resort was Truth, and in two weeks I was able to attend my first Science meeting. Thank God for the dear teacher and healer who came to me with a face beaming with love, and told me that God could and would heal me. Thank our God, I soon got rest and happiness after long years of suffering.

The spiritual uplifting to me was more than the healing of physical troubles, for I had always tried to live to please my God and was making a god out of medicine and many other things. For over three years God has been our only healer. God bless the dear Mother for bringing this light to this age.—Mary E. Reeves, Kingston, Ont.

---

I would like to express my gratitude for what Christian Science has done for me and mine.

It has healed a broken leg which the physicians had been working on for eight months and could do nothing with, and it cast out fear when a sewing machine needle stitched itself into the finger-nail, so that there was no pain or soreness or inflammation. In fact, the nail healed over so beautifully that only a small portion came off and there was no inconvenience on account of the accident.

It has effected the disappearance of a seed wart which was very painful, and last but not least it has brought relief many times to my children, and proven to me that God is an ever-present help.—Kate N. Marx, Chicago, Ill.

---

Contempt is murder committed by the intellect, as hatred is murder committed by the heart. Charity, having life in itself, is the opposite and destroyer of contempt as well as of hatred.—Geo. Macdonald.

---

If we aspire to walk in the power of the new life, we must cast away all hindrances; and it must cost something we really value.—Charles G. Gordon.

## Religious Items.

Professor Harnack says: "You observe how Jesus felt the material wants of the poor, and how he deduced a remedy for such distress from the commandment, 'Love thy neighbor as thyself.' People ought not to speak of loving their neighbors if they can allow men beside them to starve and die in misery. It is not only that the Gospel preaches solidarity and the helping of others, it is in this message that its real import consists. In this sense it is profoundly socialistic, just as it is also profoundly individualistic, because it establishes the infinite and independent value of every human soul. Its tendency to union and brotherliness is not so much an accidental phenomenon in its history as the essential feature of its character. The Gospel aims at founding a community among men as wide as human life itself and as deep as human need. As has been truly said, its object is to transform the socialism which rests on the basis of conflicting interests into the socialism which rests on the consciousness of a spiritual unity. In this sense its social message can never be outbid."

To follow Christ is not to go out from the world. Christ came into the world. It is not living apart from the world. Christ lived among men and dwelt with them. It is not doing great things. It is carrying into our common life the spirit that Christ carried into his common life. Christ came to make men happy, and wherever he went he did make men happy; he carried joy with him; he was a joy-distributor. To follow Christ is to make others happy. . . . Christ came to make men happy by making them good. He told them the secret of happiness was to be poor in spirit, to be pure in heart, to be peaceful and peace-making. He came to put the fountains and sources of happiness within men. It is character, not condition, that makes our happiness, and he taught this partly by precept, but more by his life. . . . He made men better by living among them in such spirit that they desired his life for themselves. . . . Others besides Christ may wear a garment such that he who but touches the hem of it shall feel bet[illegible] better for the contact.

LYMAN ABBOTT in *The Outlook.*

In view of the life he spent on earth, judged by his contemporaries, our Lord was a conspicuous failure; but judged from our vantage point of the unrolling centuries his investment of life has brought the largest possible returns. Failure of the moment proves to be a glorious success in its unfolding. His choice of the permanent at the expense of the transient was deliberate. Repeatedly it is urged upon us for our following: "What is a man profited, if he shall gain the whole world, and lose his own soul? or what shall a man give in exchange for his soul?" In Christ's view the real success is faithfulness. Men are born with differing powers and opportunities. The choices are outwardly diverse, the manifest results are various; but all at last resolve themselves into the one great choice. The real opportunity is the opportunity of faith and service. The real and permanent reward follows upon Christ's recognition of our faithful stewardship.

*The Congregationalist and Christian World.*

WHEN THE WORLD CONQUERS.—The world conquers me when it succeeds in hindering me from seeing, loving, holding communion with and serving my Father, God. I conquer it when I lay my hand upon it, and force it to help me to get nearer Him, to get more like Him, to think oftener of Him, to do His will more gladly and more constantly. The one victory over the world is to bend it to serve me in the highest things—the attainment of a clearer vision of the divine nature, the attainment of a deeper love to God Himself, and a more glad consecration and service to Him. That is the victory—when you can make the world a ladder to lift you to God. When the world comes between you and God as an obscuring screen, it has conquered you. When the world comes between you and God as a transparent medium, you have conquered it. To win victory is to get it beneath your feet and stand upon it, and reach up thereby to God.—ALEXANDER MCLAREN.

Men and women are growing away more and more rapidly from the conception of religion as a special department of life; from an arbitrary division between things which are called religious and things which are recognized as secular. They are coming to see that religion is a principle which must penetrate and reorganize every form of life; that it is the underlying basis on which all sound and wholesome life must rest; that it is a point of view from which all things arrange themselves in a new order; that it includes not only organized instruments and methods of religion, but all civic organization, all political questions, the arts, sciences, —in a word, the sum of man's life as expressed in thought, in emotion, in action. Religion is not a profession; it is a life. . . . It is God in His world, and not God in any single church or activity for which modern society is searching.—*The Outlook.*

The difficult thing in this confession of the Master is not in avoiding associations and practices that we believe to be incongruous with the Christian character. That is comparatively easy; the difficult thing is to speak the word, and do the thing that shall be so positively right and beautiful that through it the Christian light shall shine. It is easy enough to keep your mouth shut, and to stay at home, but to talk and act naturally and yet to have the disposition of the Lord Jesus inspiring us, that demands a kind of initiative which approximates genius. And that is one of the gifts that we are to pray for and to cultivate. To take a very large and high example, Peter on the day of Pentecost said exactly the right thing. We need a similar spirit to lead us to do and say exactly the right thing in the various emergencies of life.

*The Watchman.*

It is well for us to discover that we have not in ourselves the sources of our highest life. When we submissively await the infinite processes we gain much. Under these conditions the fallow soul grows richly. We cannot say what it is that renews the productiveness of the soul, but it has gained plenitude of power, and proves itself capable of a harvest such as it has not borne before. In quietude we find faith. When we hurry not, we gain the most speed. Seeking not our own we find ourselves plentifully rewarded. In submissiveness we come into the largest freedom. When we have accepted the Divine will, we have arrived at our own largest personality. We are ourselves in largest measure when we think nothing of ourselves, and when we have no will of our own that demands enforcement.

*The Christian Register.*

PRAYER.—Religion is nothing if it be not the vital act by which the entire mind seeks to save itself by clinging to the principle from which it draws its life. This act is prayer, by which term I understand no vain exercise of words, no mere repetition of certain sacred formulæ, but the very movement itself of the soul, putting itself in a personal relation of contact with the mysterious power of which it feels the presence —it may be even before it has a name by which to call it. Wherever this interior prayer is lacking, there is no religion; wherever, on the other hand, this prayer rises and stirs the soul, even in the absence of forms or of doctrines, we have living religion.

*James's Varieties of Religious Experience.*

The greatest ambition one can cherish is to be a genuine Christian in faith and love and service, and it takes all these to make one such a Christian. And right where he is is the place for each one to cultivate this exalted purpose and to "press toward the mark for the prize of the high calling of God in Christ Jesus."

*The Universalist Leader.*

*The Congregationalist* says: "The decrease in the number of students of theology is as great in Europe as in America. Ten years ago 1,841 such students were enrolled in nine universities in Germany. Last year the number had fallen to 1,016. Is theology as a science losing its attractions for educated men?"

Clear and vivid consciousness of the divine presence is like the breathing of a new life and a new spirit into all things. When it comes to us, it transforms the universe. We are no more the subjects of dulness, apathy, gloom, or fear.—JOHN JAMES TAYLER.

To fill life full, you must open it upward toward truth, beauty, goodness. Seeking things below takes our strength out of us: waiting on the Lord for his higher gifts renews our strength day by day.

JAMES FREEMAN CLARKE.

A blameless life—what is it? You will find it all in the Sermon on the Mount, if you are wise enough to understand what is meant, and not to interpret it by the letter.

SIR WALTER BESANT.

It is the demands, not the promises, that make men of us; the responsibilities, not the enjoyments, that raise us to the stature of men and women.—P. T. FORSYTH.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory vs. Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

Cloth binding, each . . . . . $3.18
Two to Twelve books to one address, each, prepaid . . 3.00
Twelve or more books to one address, each, prepaid . . 2.75
Full sheep, stiff covers, gilt edges, same paper and size of page as cloth edition, each prepaid . . . . . 4.00
Twelve or more to one address, each, prepaid . . . . 3.75
Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid 5.00
Twelve or more to one address, each, prepaid . . . . 4.75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India paper, each, prepaid 6.00
Twelve or more to one address, each, prepaid . . . . 5.75

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth) each, prepaid . . . . . $2.25
Twelve or more books to one address, each, prepaid . . 2.00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid 4.00
Twelve or more to one address, each, prepaid . . . . . 3.75
Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid . . . . . 5.00
Twelve or more to one address, each, prepaid . . . . . 4.75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,
Single book, prepaid . . . . . $3.00
Twelve or more books to one address, each, prepaid . . 2.50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum, $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

A considerable number of American women have of late been led into observational and mathematical pursuits in connection with astronomy. One of them, Dorothea Klumpke, has been lent to France for more than a dozen years. Miss Klumpke has been connected with the observatory of Paris in one capacity or another since 1887. She is now at the head of a bureau for measuring star plates for the new international chart of the heavens, and has five assistants.

George E. Roberts, director of the mint, has issued his final estimate which shows that during the year 1901 the United States produced 3,805,500 ounces of gold, valued at $78,666,700, a decrease of $504,300, or .636 per cent as compared with the yield of 1900.

One of the latest roadway enterprises is that of a New York-Chicago boulevard of the most substantial construction. It is claimed that the active interests of a very large number of people living on the projected line of the road, has been secured.

**Foreign.**

Having observed the long list of countries which have sacrificed their independence by the reckless granting of concessions, King Menelik of Abyssinia, has decided to annul those already granted, and is said to have instructed his principal foreign adviser to take steps to accomplish this with the utmost rapidity, and at the same time without giving more offence than necessary to the governments of the countries to which the holders of concessions belong.

The Prussian landtag recently adopted a measure, aimed at wholesale drinking, which incidentally attempts to limit the sale of liquors during church hours on Sunday. The *Nation* says that the action of the landtag "is one of a number of signs that thoughtful Germans have taken alarm at the constant drinking, by which thousands of people, if not drunk, are always more or less under the influence of alcohol."

The prime minister of New South Wales, Sir Edmund Barton, said that the recent conference of colonial premiers laid aside the proposition of a British imperial zollverein because the colonial governments could not afford the loss of customs revenue that would be entailed by a system of free trade with the mother country.

It is asserted that Ex-President Kruger is in no way inclined to acquiesce in British dominion in South Africa, and is still clinging to the idea of a united South Africa under the Boer flag. Kruger is even said to have bitterly upbraided the Boer generals for giving up Boer independence.

**Industrial and Commercial.**

Another gigantic electric power plant, which is to rival that at Niagara, is to be built in Plumas County, California. The water supply is to be obtained from the Feather River. The two projected reservoirs will cover about 10,000 acres.

From the main reservoir it is proposed to construct a canal about ten miles in length to the Butte Valley reservoir, whence the water will be carried along the edge of the canon of Feather River by a series of tunnels for a distance of five miles to Mosquito Creek, where it will be given a vertical fall of sixteen hundred feet, producing a total of about 270,000 horse-power. When it is remembered that the total development of power at Niagara thus far has not exceeded 100,000 horse-power, a better conception of the magnitude of this new enterprise and its possibilities may be had.

It is reported that cotton picking has begun about two weeks earlier this year than usual. In view of the rapid opening of the crop, there is an inadequately supplied demand for labor, especially in Mississippi, Arkansas and Tennessee. Indeed, the Southern labor situation is said to be growing more and more serious owing to the rapid industrial development and railroad building that is absorbing the surplus labor which has heretofore been available to the planters at the cotton picking season. As a result of the scarcity, prices for labor, for cotton picking, and for all classes of work are opening higher at the beginning of the new commercial year than they have been for a number of years.

The substitution of oil for coal in various manufacturing enterprises throughout the South has had the effect of greatly curtailing the consumption of coal during the past few months. A prominent southern authority, commenting on this subject, says: "A large demand on the output of the Ohio River coal mines has been cut off this year. The southern market has already lost more than 300,000 tons, caused by the substitution of southern crude oil."

The steamship Alps recently sailed from New York, bound for Iquitos, a port in Peru, via the great river Amazon. This port is on the Peruvian line, near the eastern base of the Andes mountains. The Alps, which carries a general cargo, will go there direct, and there will be no reshipment of goods. It is expected that it will take from thirty-five to forty days to make the trip.

The business men of the anthracite coal region, represented by 118 delegates from fifteen cities and towns, are making an organized endeavor to effect a settlement of the coal strike by arbitration. A committee was appointed to meet Governor Stone and ask that he call a special session of the Legislature to consider the advisability of a compulsory arbitration bill.

The coal strike has resulted in the placing of large orders for products of English mines. There are probably 20,000 to 30,000 tons contracted for to be shipped immediately to New York, which demands 5,000 tons daily. The prices range from $5.50 to $7.50 per ton on board at Swansea, Wales.

It is announced that the White Star Line has ordered another steamer to be built by Harland & Wolff of Belfast, which is to be 20 feet longer and a few feet wider than the same company's steamer Cedric, now the largest liner in the world. The Cedric is 700 feet long, with a tonnage of 19,500.

A fair estimate of the Kansas corn crop for this year puts it at 35,000,000 bushels which at the present prices would have a value of $21,000,000. The potato acreage this year is unusually large and the yield is above the average.

**General.**

What is probably the largest watch ever made, was recently completed by the Waltham (Mass.) Watch Company. It contains all the parts of a modern watch, and was made for the purpose of showing the quality and formation of the more delicate parts contained in a movement, some of which in the ordinary size are so small that they are scarcely discernible without the aid of a microscope. It weighs 120 pounds and is about 18 inches in diameter.

The observed changes in the moon's surface, which have been noted by means of photography, suggest that an evolution has taken place as marked as on our own planet. It is even claimed that plain manifestations of the circulation of water, of vegetation, and of life at one time, are not wanting. Several theories accounting for the formation of lunar craters have been advanced.

The fisheries represent one of Norway's chief industries, and quantities of fish are sold at very low rates, particularly during the summer. One way in which these are utilized is by means of an invention which quickly dries and pulverizes the flesh of fresh fish. The resulting product, called fish flour, is easy to transport from one place to another and has great nutritive value.

Orsa, in Sweden, has during the course of a generation, sold £1,150,000 worth of trees; and by means of judicious replanting has provided for a similar income every thirty or forty years. In consequence of this commercial wealth, there are now no taxes; railways, telephones, etc., are free; and so are schoolhouses and many other things.

Joseph N. Muir, the naturalist, has visited a great tree recently discovered in the Sierras, near Fresno, Cal., and reports that it measures at its base one hundred and nine feet, and at four feet above the ground, ninety-seven feet in circumference. It is larger than "General Sherman" and "General Grant," which heretofore were the recognized monarchs of the forest.

One of the latest achievements of the electric furnace is the artificial production of crystalized carbon, the diamond. This is effected by utilizing the pressure produced by the increase in volume of a mass of iron when passing from the liquid to the solid state. The crystals thus far produced are microscopic; but they meet all the tests of the diamond.

The scarcity of coal is reviving interest in the peat bogs of New England. Many of these are of large area and are covered with meadow grass, but the peat often comes to within a foot or two of the surface. Professor Hitchcock has estimated that there are 80,000 acres of peat in eastern Massachusetts alone, with an average thickness of over six feet.

There were only 254 daily papers in existence in 1850. To-day there are 2,226. In 1850 the combined circulation of the papers was 758,454, while in 1900 the circulation of the 2,226 was 15,102,156. The aggregate number of copies issued during the year 1850 was 426,409,978, while in 1900 it was 8,168,148,740.

The diggers for the galleys of the Vikings have been very fortunate. Another vessel of the fierce warriors of the Middle Ages has just been unearthed in Norway. It is in a wonderful state of preservation.

## Selected Articles.

### The Education of Man.

THE following excerpts are taken from an article by Professor J. R. Mosley, C.S.B., of Macon, Ga., in the *Alkahest* for August.

"The problem of education is to perfect man as an individual and as a member of society; and while at times the individual concept of life and education has been uppermost, and at other times the social concept, the deepest desire and the finest struggles of the race have been to perfect itself and to perfect its members. Some races and individuals have had very low, crude, and almost wholly physical desires and correspondingly low concepts of what constituted a perfect man and a perfect society, and other races and individuals have had very high, refined, and spiritual desires and correspondingly high ideals of what man should be and what society ought to be; but, as much as the darkness of ignorance and sin has obscured the true vision of perfection, this light has nevertheless been with every man and every race that 'cometh into the world.' The education of man therefore includes every desire, thought, feeling, and activity that has led individuals and communities in the ways of truth, sweetness, light, beauty, harmony, joy, peace, righteousness, wisdom, goodness, and love; in a word, everything that tends to perfect the race and its individual members.

"The ancient peoples, who did most to formulate and work out the basis for our modern ideals of life and education, were the Romans, the Greeks, and the Jews; and, if we interpret Christianity as the highest and ripest fruitage of Jewish life and thought, as well as the highest revelation of God to man, there is scarcely anything in modern life and modern education, except the robust health, vigor, and love of liberty which we inherited from our primitive Teutonic ancestors, for which we are not largely indebted to the Romans, the Greeks, and the Jews. The Roman ideal of life and concept of education was physical, practical, military, and legal; the Greek æsthetic and literary; and the Jewish, moral and religious.

"The Christian ideal of life is the fulfilment and the spiritualization of Jewish ideals and a still higher revelation of God, man, and the universe; for Christianity reveals a perfect God; man in the divine image and likeness; and a new spiritual earth and heaven 'wherein dwelleth righteousness,' and where there is no more error, sin, disease, and death. The Christian ideal of life, and the Christian concept of education are both individual and social. Their purpose is to make man perfect as his Father in heaven is perfect, and to make the kingdoms of this world the kingdoms of Christ.

"The primitive Christian ideal of life, being purely spiritual, provided for a purely spiritual system of education as a means for the realization of this ideal. But while Jesus and the Apostles neither inaugurated nor resorted to any physical means for the physical perfection of man, as did the Romans; and while they did not encourage and establish schools for intellectual training, as did the Greeks, they healed the weaknesses and the diseases of the people, and ordinary men, according to worldly standards, under the spiritual inspiration and guidance of Jesus, became the great thinkers, writers, and teachers of the world. In fact, there is no possible ideal of perfection for man and for society in this or any other age, which, according to the teachings of Jesus, may not be realized by spiritual means, education, or culture; and the many-sided educational activities of our age are efforts to realize partially, if not wholly, the ideals of perfection which were taught and demonstrated by the Great Teacher.

"Great men, humanly speaking, make great men; small men, small. Good men inspire goodness in other men, while bad men tend to provoke and stir up badness.

"So powerful is the educational influence of personality that Emerson has observed, there is a natural college which groups itself around every great natural teacher. The young men of Athens around Socrates; of Alexandria around Plotinus; of Paris around Abelard; of Germany around Fichte, or Niebuhr, or Goethe; and we ought to add of America around Emerson. And there is in almost every community and in almost every circle of society some natural teacher for every natural learner. In fact, most of us are constantly touching some rare, though often obscure person, whom to know aright and to love aright is a liberal education.

"Those who are denied entrance into the best and most perfect life through personal contact with the really great thinkers and livers, may find it through objective personality, and by objective personality, I mean books. The book 'embalms the noblest thought of the noblest spirits about the noblest things.' They are 'the finest records of human wit,' says Emerson; and in that fine phrase of Milton, they are 'the precious life blood of the Master Spirit.'

"The books which most influence us for good are biographies and autobiographies. For through the books of this class we commune with and understand the thought of the best and wisest men and women of all ages, of all nations. Such work as Plutarch's 'Lives,' Boswell's 'Life of Johnson,' 'Tom Brown at Rugby,' and the best biographies of Alfred the Great, Luther, Wesley, Channing, Victor Hugo, Washington, Lincoln, and Emerson have a very high value in the education of man. I would mention the letters of Sydney Lanier and the correspondence of Mr. and Mrs. Browning as being of almost incalculable value for an understanding of the tenderer, the more ideal side of human nature at its best. The life of Socrates, as reported in the 'Memorabilia' of Xenophon and the 'Dialogues' of Plato, have the highest ethical value of any life that is reported to us outside of strictly religious and Christian sources. The story of Joseph, as told in the last chapters of Genesis, reveals the most nearly perfect life that was lived in the early history of the Hebrew race; and it is about the best, if not the most perfect, short story that has yet been written. The life and teachings of Jesus, as reported by Matthew, Mark, Luke, and John, has a power to idealize, spiritualize, and redeem the consciousness of the race as well as the desires, thoughts, and activities of individual men and women, that is almost inconceivable.

"The best poems of the race, including the poetry of the Bible, offer a most acceptable method for entering into the most perfect life. The true poem is a revelation of truth, beauty, and love.

"Another path leading to the best life is the scientific, poetic, and spiritual interpretations of nature. The key to the scientific interpretation of nature is mathematics and the mathematical sciences. The poetic interpretation of nature is as old as the reasonings of Job and the songs of David; and no one else has given us such insight into the spiritual meaning of nature as Jesus. Of modern men of letters, Wordsworth is the prince among nature poets; and Emerson has given us most suggestive hints of a spiritual reality which underlies all so-called physical nature.

"The most direct means by which one enters into the best and most perfect life is through the knowledge, demonstration, and communication of truth; through the love of God and man; and through praying, striving, and working for the best things—for the realization or the coming of the Kingdom of God, Good, among men. Even work of any kind, if well done, ministers in a marvelous way to the perfection of every side of our nature; and work that is done in love, for the promotion of the best, noblest, and divinest things, makes man a co-worker with God for his own perfection and for the perfection of all men.

"The purpose of the church is to teach religion and to minister to all the needs of humanity; and an ideal church would be the most perfect possible institution of moral and spiritual culture. For its work is to teach the highest truth that has been discovered and revealed, and that is being discovered and revealed, about God, man, and the universe, and to do everything for man that can be done to make him intelligent, loving, kind, and Christlike. It should teach 'the truth, the whole truth, and nothing but the truth;' the truth about God and His Christ which is 'life eternal;' the truth which liberates from all error and makes us free indeed. Pure religion stands for the highest ideality and the purest spirituality, as it creates the deepest hunger and thirst for the things that are true, just, pure, holy, lovely, and of good report, and the strongest aversion to everything that is untrue, unlovely, carnal, sensuous, and sinful.

"But as love is the principle, the truth, the way, the intelligence, and the spirit of all good; as it is the fulfilment of the whole law of perfection for society as well as individuals, the most direct and effective work of the Church is to teach and demonstrate love. It should impart the spirit of love and do the works of love. It should bring into healing and saving expression the love which is of God and which is God; the love which serves and blesses enemies as though they were friends, and friends as though they were ourselves; the love which reconciles man to God, and man to man."

### The Heavens in September.

AT 9 P.M. on the 15th Cygnus is overhead. Lyra lies to the west of it, then Hercules, Corona, and Boötes, the last near setting. Ophiuchus and Serpeus are in the southwest, and Scorpio is setting there. Sagittarius is west of south. Jupiter is just due south, and Saturn is an hour west of him. Between them, and a little distance above, are the two double stars of Capricornus—both worth looking at with a field-glass.

Aquila is above them, marked by the brilliant Altair, east of which is the little group of Delphinus. The southeastern sky is very dull, the only bright star being the lonely Fomalhaut, in the constellation of the Southern Fish, low down near the horizon.

Pegasus and Andromeda lie east of the zenith, with Aries and Perseus below and to the left. Capella is just rising in the northeast. Cepheus is above the Pole, Cassiopeia to the right, and Ursa Minor and Draco to the left of it, while Ursa Major is well down toward the northern horizon.

Mercury is evening star throughout the month. On the 24th he is at his greatest elongation, but being south of the sun, sets less than an hour after sunset, and is, therefore, hard to see. On the 20th he passes close to the bright star Spica, their apparent distance being less than one quarter of a degree. This will be an interesting sight, though one must look sharp to see it in the twilight.

Venus is morning star, rising rather less than two hours before the sun. Although 150,000,000 miles distant, she is still the brightest of the planets. Mars is morning star in Cancer, rising about 2 A.M. in the middle of the month and gradually increasing in brightness.

Jupiter is in Capricornus, and is by far the brightest object in the evening skies. Saturn, which is in Sagittarius, comes next to him in this respect.

Uranus is in Ophiuchus. On the 10th he is in quadrature with the sun, and comes to the meridian at 6 P.M.

Neptune is in Gemini, and is also in quadrature with the sun on the 27th, being due south at 6 A.M.

New moon occurs at noon on the 1st, first quarter at noon on the 9th, full moon at 1 A.M. on the 17th, and last quarter at 6 P.M. on the 23d. The moon is nearest us on the 19th and farthest away on the 7th. She is in conjunction with Mercury on the 3d, Uranus on the 9th, Saturn on the 12th, Jupiter on the 14th, Neptune on the 24th, Mars on the 27th, and Venus on the 30th.

At 7 P.M. on the 23d the sun crosses the celestial equator, entering upon the sign of Libra, and, according to the almanacs, autumn commences.—*Scientific American.*

### A New Artificial Fuel.

It is gradually dawning upon engineers the world over that the world's coal supply is not likely to last forever, and that the time is not very far distant when artificial fuel must be resorted to. At the present time the need of an efficient artificial fuel has been brought home to us, not because of any fear of the world's supply of coal giving out, but because of the prohibitive prices of anthracite, due to the strike of the coal miners. Inventors innumerable have drawn upon their chemical knowledge in the endeavor to produce a fuel which could compete with coal in efficiency, if not in price. Not so many years ago a prize was offered for a method of solidifying petroleum, or reducing petroleum to such form that it could be carried about readily and used for fuel in fire-boxes. The research thus stimulated resulted in the patenting of several fuels, among which is one that is a combination of peat and petroleum.

The peat is raised from the bog by a clam-shell digger or dredger. It is then conveyed to a disintegrator which separates all coarse material, such as roots. From this disintegrator it is conveyed to a press where it is reduced from eighty per cent of water to forty per cent. After leaving the press it passes through another disintegrator. Lime is then added, which tends further to dry the peat. The resulting mixture is conveyed to a drier, which is a steel cylinder, varying in length according to the capacity required. Petroleum in which bituminous pitch is dissolved is then added in a pug-mill or mixing-mill. After the thorough mixture to which the oil, lime, and peat are subjected in this mill, the final briquetting process is all that is necessary to produce the finished product.

The addition of lime results in almost a total combustion of smoke. During the burning of the fuel acetylene gas is formed. The intensity of the flame is such that it insures almost complete combustion of gases, which, under ordinary circumstances, escape in the form of thick black smoke.

*Scientific American.*

There is no unbelief:
Whoever plants a seed beneath the sod,
And waits to see it push away the clod,
He trusts in God.

### Secreted Valuables.

The habit of hiding coin and other valuables in secret, out-of-the-way places, seems to have been very general in past times when security vaults were unknown and pillages were frequent. The following interesting facts in evidence are gathered from the *Scientific American*.

The recent discovery in North Wales of several valuable silver urns, gold rings, armlets, and spoons, dating from about the year 1600, recalls some interesting facts concerning the recovery of treasure trove. The year 1882 appears to have been the most prolific in these unexpected finds. In January of that year, while repairs were being carried out in a house at Broughton, the workmen unearthed a large leathern bag containing thirty crowns and several shillings of the reign of Charles II., James II., and Queen Anne. In the following month a discovery of great antiquarian interest was made at Vufarfre, Sweden, when a number of antique silver bowls were brought to light. They proved to be excellent examples of twelfth and thirteenth century work, and were covered with quaint inscriptions. Some months later a clay vessel full of Roman coins was found near Yeovil, Somersetshire, and, at about the same time, two hundred and fifty coins of Queen Anne's reign were found at Watford. The greatest discovery of the nineteenth century took place in December of the same year in an old house in the Rue Vieille de Temple, Paris. Upon its demolition a copper jar was found in one of the walls. It contained seven thousand eight hundred and eighty-two gold coins, worth nearly $30,000 as bullion, but to the collector their value was untold, for they belonged, numismatically, to the rarest reigns of France.

### A Miracle of Irrigation.

If ever men worked miracles, they have worked them here in these western valleys. If ever something was created from nothing, these men have done it. Thirty-five years ago the Salt River Valley, into which we had driven, was all a parched desert, uninhabited save by a few lean Indians and two or three hardy traders, whom the sand and cactus crowded down close to the water of the river. It was a thousand miles from the nearest railroad—an unknown, desolate, forbidding land, a part of the Great American Desert, which travelers said would never support human life. To-day the Salt River Valley contains a population of over twenty-five thousand. It has three cities, one, Phœnix, the capital of Arizona, having electric lights, an electric car line, good hotels, churches, and other buildings; residences surrounded by trees, lawns, and a wilderness of flowers. More than 125,000 acres of land round about are laid out in farms, highly cultivated, with orchards of oranges, almonds, olives, and figs, and grain and hay fields. Thousands of cattle feed in the rich meadows, and there are bees, chickens, ducks, and ostriches unnumbered. Richer soil than this once desert valley does not exist anywhere in the world except in other once desert valleys. Here one may behold the startling spectacle of orange groves in bearing worth $1,000 an acre on one side of a fence, and bare cactus desert on the other, both having the same soil, the same opportunities, but only one having water. Here when a man builds his fence of cottonwood posts, such is the soil and such the water, that the posts take root and grow into trees, so that the wire of many old fences is seen running through the center of large trees. Here a farmer rarely needs to use fertilizer, for the river comes in bearing rich silt and spreads it over his fields; and he may sometimes cut two or three or more crops a year from his alfalfa fields, and then pasture them during the winter—winter which is in reality a continual spring.—*The Century*.

### A Pertinent Answer.

To the Editor.

*Dear Sir*:—The hopelessness must be apparent to every one, of trying to dissuade from Christian Science, persons who have tried medical treatment of every kind for years without benefit, and who, after coming to Christian Science, have been completely healed in a few days. It is equally hopeless to tell those for whom the Scriptures have become an open book, through reading the Christian Science text-book, that the latter does not contain the true interpretation of Christianity.

Your correspondent would long ago have attained a clearer idea of the blessings which Christian Science has in store for him, had he not confounded it with the pseudo-sciences which, under various names, masquerade as "identical with Christian Science," and yet use human will power and personal control. As he states, "the principles involved are all-important," and the Principle of Christian Science is totally and fundamentally different from that involved in any of those so-called sciences. Mrs. Eddy has explained this distinction in "Miscellaneous Writings." p. 97. In answer to the question: "How is the healing done in Christian Science?" she states:—

"It is not of the flesh, but of the Spirit. It is Christ come to destroy the power of the flesh; it is Truth over error; that understood, gives man ability to rise above the evidence of the senses, take hold of the eternal evidences of Truth, and destroy mortal discord with immortal harmony."

For the rest, Christian Scientists frankly acknowledge their shortcomings, and do not claim to be better than any one else. But common justice demands that their mistakes should not be weighed against the successes of other people. Failure for failure, and success for success, it will be found that the average is greatly in favor of Christian Science. For instance, the first case cited by the writer in question is that of a woman who died as long ago as December of last year in Ira. The next is that of a woman who died in March of this year in New York, and his third case is one from New Haven in July. Imagine for a moment the thousands of deaths which have taken place during these seven months under regular medical practice in these three places alone. It would be safe to say that the aggregate fatalities during thirty years under Christian Science practice in the twelve States where this denomination presents the largest growth, are not equal to the deaths occurring under material medicine in any one week in the last two years, in the cities of Chicago and Greater New York.

I am looking forward to the time when our critic will become interested in the real news concerning Christian Science, which is not at present to be found in the newspapers, but in the hearts of a constantly growing multitude of grateful men, women, and children, just as the real successes of the members of his congregation are not to be found in telegraphic news items.

W. D. McCrackan.

In *Elmira* (N. Y.) *Evening Star*.

### A Satisfied Witness.

To the Editor.

I have read the communication in your paper of August 12 signed "E. W." and desire to assure your readers that when I took up the study of Christian Science I had been wearing glasses for some twelve years.

The original prescription called for glasses for an aggravated case of astigmatism, and this prescription was given by a well-known oculist and the glasses furnished by a first-class optician. Names will be given if desired. The oculist at the same time gave it as his opinion that I

Digitized by Google

would always have to wear glasses, as the defect had existed from my birth.

I began the study of Christian Science while wearing glasses for astigmatism. At that time I saw a straight line with a peculiar curve in it when I took off my glasses. After I had gained some understanding of Christian Science I discarded my glasses and found that a straight line looked straight to my unaided eyes. I have not needed glasses of any kind for over two years, and am daily proving by my work as a portrait painter that I do not need them.

According to the oculists with whom I have spoken, eyes vary very much, according to the mental condition of the person. They tell me that few if any eyes are ever found to be entirely free from astigmatic tendencies. It must also be remembered that the examination to which I submitted out of friendly courtesy to Mr. Wood was conducted with the deliberate purpose of discovering such tendency if it were possible.

Personally, I am more than satisfied with the effect of Christian Science on my eyesight, and if that is my attitude, surely Mr. Wood, whose personal interests are not involved, has no cause to find fault.

CHARLES FREDERICK NAEGELE.
In *The* (N. Y.) *Sun.*

## The Absoluteness of Science.

CHRISTIAN SCIENCE is absolute: it teaches that Jesus, the first great demonstrator of Christian Science, knew the absolute principle of scientific being, and through this understanding he overcame all forms of error, sin, disease, and death. His promise to his followers, throughout all time, was, "He that believeth on me, the works that I do shall he do also;" so by reflecting Truth we overcome sickness, sin, and discord of every kind. Christian Scientists know they are approaching the time when they will realize more completely the fulfilment of his promise.

Christian Science teaches that sin should not be indulged, but must be uncovered and destroyed, to be overcome. It is very important that this should be understood, for many believe that, because Christian Science teaches that God does not recognize evil, it must follow as a consequence that Christian Scientists ignore evil. But Christian Science teaches that sin is a false concept of mortal mind, and that the consciousness of sin does not exist in the divine Mind. The destruction of evil is made more certain when we know that it cannot abide in reality. It is but the inversion of Truth. God is not the author of evil. James said, "Let no man say when he is tempted, I am tempted of God: for God cannot be tempted with evil, neither tempteth He any man." By knowing that sin is unreal, the pleasures of sin also lose their reality, and in the degree that Christian Scientists understand this great truth, evil desires are destroyed and supplanted by pure and loving thoughts.

Christian Science is scientific, it is not a system of human opinions. It does not rest on any personality, but on a fixed, eternal Principle.

Those ignorant of the truths of Christian Science, contend that it denies the Bible, whereas it rests wholly upon the Bible and explains it, making it an illumined book. Conscientious effort to prove its statements is necessary in this, as in every science. In the light of Christian Science, many passages of Scripture are reconciled, as, for illustration, these sayings of Jesus, "Ye both know me, and ye know whence I am;" and again, "Ye cannot tell whence I come, and whither I go." These statements, which may at first seem contradictory, are seen to be consistent when we understand that he referred in the first to his temporal existence, and in the second to his real spiritual life and origin. In this way Christian Science applies a principle which is bringing thousands to a greater love of the Bible, and leading them to depend upon God in every time of need.

Excerpts from article by ADA G. WHITE.
In *Portsmouth* (N. H.) *Herald.*

## Approved.

WHETHER right or wrong in their peculiar views—which seem absurd to many—the Christian Scientists in some things set religionists in general and the world at large a commendable example.

Reference is had especially to their refusal to be irritated by the shafts of ridicule which a multitude of magazine and newspaper writers have showered upon them, and their habitual strict avoidance of all acrimony in replying to attacks upon their doctrines.

The calm, concise, and courteous letters which two leading Christian Scientists of Illinois addressed quite lately to the *Canton Register,* in answer to some criticisms by a correspondent, seem to be not in the least exceptional in tone. In the columns of the *New York Sun* prominent eastern leaders among Mrs. Eddy's co-believers, are conducting with equal evenness of temper their side of a discussion that would have radiated heat enough to justify the turning in of half-a-dozen fire alarms if it involved the tenets of some other church.

Equanimity under provocation—absence of irritability, or fine control of temper—is not, of course, conclusive evidence of soundness of belief. But it indicates at least the sound and healthful mental state of the believer. It goes to show that Christian Scientists are something more than "cranks."—*Canton* (Ill.) *Register.*

## The Need of Discrimination.

Editor of *The Tribune.*

*Sir:*—The announcement is made in your columns that Dr. J. C. Bateson, of Scranton, has "discovered and demonstrated that the power to heal the sick, accredited to Christian Science, faith cure, clairvoyance, hypnotism, etc., is the same in each case."

Permit me to say that what Dr. Bateson claims as his discovery is in reality an old charge, which has been brought against Christian Science from the time of its first presentation. This charge, however, can only be brought against Christian Science by those who utterly fail to grasp its principles. The opinion of such critics is of as much value in determining the truth of this matter, as an opinion concerning mathematics offered by one who has never solved a single problem in arithmetic.

In classing Christian Science among the "superstitious notions and fads," Dr. Bateson failed to consider that Christian Science is believed in and practised by many people whose ability to discriminate between fact and fiction is fully equal to his own. They do not claim "supernatural intervention," as he charges, but they do claim and demonstrate that an understanding of God is a "very present help in trouble." The practice of Christian Science is not limited to healing the sick. Realizing as all must who take our Master's words for a guide, that sickness is but the consequence of sin, the Christian Scientist deals his hardest blows directly against sin, thereby correcting the tendency to be sick and suffer.

History ever repeats itself. We are told that Jesus was accused of casting out devils through Beelzebub. Throughout the Old and New Testaments, prophets and apostles were assailed, and esoteric magic was employed to show that the carnal mind is able to bring forward signs and wonders which would deceive if possible the very elect. If, as Dr. Bateson intimates, there is but one kind of power underlying all that borders on the so-

Digitized by Google

called supernatural, and that is hypnotism, the natural inference is that Jesus and his disciples were mesmerists, wilfully deceiving their followers. This theory I do not believe the doctor would care to foster. It is, however, the logical sequence of his proposition.

The only way to explain this Science is to learn first how to demonstrate it. Those alone who can demonstrate it are qualified to speak for it, and I invite Dr. Bateson to approach the subject with this object in view, if he wishes to understand it. Many Christian Scientists, who were formerly physicians, have discovered this necessity, and are to-day sharing its benefits. ALBERT E. MILLER.

In *Scranton* (Pa.) *Tribune.*

### A Child's Vocabulary.

It has been shown by actual count, by a professor at the University of Minnesota, that a two-year-old child may use in a day more than two thousand different words, repeating each of them, of course, from two or three times up to three hundred and fifty times, so that the total number spoken may reach ten thousand. The experimenter believes that a child's acquisition of words is governed partly by the law that the beneficial is generally pleasurable, and partly by habit. To a child, words are the means of obtaining pleasure and avoiding pain. The number of words in a child's vocabulary seems to have been greatly underestimated by previous observers.—*Exchange.*

### A Morning Petition.

Lord God!
Lend me Thy love, that I may love all men,
That I may show all men the way of love,
From palace high to deepest prison den;
That I may prove
How Brotherhood is Freedom's other name,
How Freedom's other name is but the Word,
And that Word is the Lord
Come down again..
Amen! *Anon.*

## Announcements.

**Applications for Membership.**

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

**Science and Health Revised.**

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

**Our Leader's Message.**

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price 50 cents; per dozen, $4.50, prepaid.

**Communion Message, June, 1902.**

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

**The Revelation of Christianus**

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address. $6.50; twelve copies to one address, $12.00.

**Remittances.**

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

**Photographs.**

A series of photographs were taken on the day of the Communion Service, showing a large body of Christian Scientists entering Mechanics Hall. These photographs can only be obtained direct from the photographer, Elmer Chickering, 21 West Street, Boston, size 13x16.

Mr. Chickering's prices are as follows:—

Where the pictures are packed for express, the price will be $1.00 apiece for the pictures, and 25 cents for packing, making $1.25.

In lots of six where they can be packed all in one bundle, the price will be $1.00 apiece, and no charge for packing.

In lots of twelve the price will be 85 cents apiece, and no charge for packing where they are shipped in one bundle.

In lots of twenty-five, the price will be 75 cents apiece, and no charge for packing where shipped in one bundle.

The above prices are based on finishing from one, two, or three different negatives.

**Building Fund of the Mother Church.**

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

**Clerk of the Mother Church.**

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

**Church Treasurer.**

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

THE preservation of President Roosevelt from serious injury upon the occasion of the startling accident at Pittsfield, Mass., September 3, has awakened a grateful sense in all hearts. His exhibition of deep feeling over the death of his faithful guard, whom he referred to as his friend, does credit to a nobility and kindness of nature which commands immediate recognition.

## Let us be Discreet.

THE command to preach the gospel does not mean o Christian Scientists that they shall intrude their views upon their friends and neighbors, nor even upon their own families, if they are not ready to receive the good tidings.

Our endeavors to interest others in Christian Science should be timely and courteous. Officious and persistent efforts to press the subject upon the attention of those unwilling to listen, is neither wise nor polite.

As a denomination, and as individuals, our every act is subjected to close scrutiny, and much of the world's estimate of Christian Science will be based upon our conduct and discretion. If we demean ourselves with Christly and therefore considerate gentleness, with loving regard for the rights and privileges of our fellow-men, it will be noted, and placed to our credit.

That the manner and form of our presentation of the truths of Christian Science, is the subject of notice and review is shown by a recent editorial in the *Canton Register* which appears in another column of this issue. The editorial is a just tribute to the spontaneous courtesy, good sense, and good temper apparent in the work of the Publication Committee. M.

## Keeping the End in View.

INFINITE mind defines itself clearly and logically, and its action can but be direct, positive, and orderly. These characteristics of Principle appear naturally and inevitably in its manifestations, and all the demonstrations of Christian Science are therefore exact, straightforward, and conclusive.

Human experience has taught us that successful achievement in our undertakings, is largely determined by the clearness of our perception of what we desire to accomplish, and the steadiness with which we hold to our course.

He who lacks definiteness of purpose, accomplishes little that is satisfactory either to himself or to others, and his pathway is sure to give evidence of vagrancy and vacillation. But he whose eye is fixed on an exalted goal, and who, avoiding secondary and distracting issues, adheres persistently to the doing of the thing he has in hand, he advances with the step of assurance, and the result is not problematical.

It is important that we remember all this in our activities as exponents of Truth. If we have some true thing to say, and have the grace to say it modestly, explicitly, and with considerate brevity, our testimonies will be listened to with interest and profit. If, on the other hand, our thoughts lack Truth's orderliness and continuity, if they are aimless and desultory, we shall effect nothing save perchance the demonstration of patience upon the part of our hearers.

As Christian Scientists, we most honor our profession and enhance our usefulness, when we are so responsive to Wisdom's guidance, that all our words are made to harmonize with a high and clearly defined purpose, and when we say no more than is necessary to fittingly and effectively express the truth. W.

## One Love.

UNITY is the essential of harmony. There is one Mind, one Truth, one Life, one Love. The claim of so-called mortal mind is one of separation. Truth is subdivided and set forth by mortal methods as truths. Life is separated into lives, while Mind is resolved into minds many. Love also is divided, sub-divided, and classified, but such division will not bear the light of Christian Science. The loves, so-called, of mortal mind, what are they? The love of place and power; the love of riches; the love of display, and the love of family,—the exclusive love of one's own kindred. And are these love,—that reflection of infinite Love which our Leader teaches us is impartial, impersonal, universal, and pure?

We hear much of partial love, of ambitious affection, of personal devotion, of exclusive friendship, of idolatrous attachment; but these are not Love. There is but one Love, and its reflection is selfless and humble. It knows no limitation either of wealth or poverty. The king reflects Love and his people rejoice, the whole nation shouting, "Long live the King." The peasant in the lowliest cot gathers beneath his roof the shelterless orphans; and Love sustains him, multiplies his store, transforms his crust into bread, and warms his hearth.

"Infinite Love is reflected in love" (Science and Health, p. 17). Let us learn to recognize this reflection in its every-day dress. The cheery "good morning" that gladdens the household for the day, is love's expression. Love blossoms in gentle courtesies and thoughtful consideration for the feelings of others; in the bright smile, the cheery tone. Love speaks in gladness, in every impulse humane and compassionate, and in the cheerful performance of every duty. Love hallows all work.

Let us learn to hear Love's note in the bird's morning song, in the cricket's evening chirp. Let us learn to find its pencilings on the clouds that glorify the parting day. The great Love Feast is spread, let us awake to its munificence.

It is easy for us to detect the counterfeits of the one Love, if we but bravely apply our Leader's tests; impersonal, impartial, universal, pure. S.

A RELIGIOUS contemporary has recently said that the scholars of the world are rapidly giving up their faith in miracles; but they are doing nothing to lessen the appetite for miracles, which is now eager and clamorous."

Those who argue for the decadence of religious faith would find apparent proof of their proposition in the astonishing fact that professed followers of Jesus venture to deny the possibility, and hence the lawfulness, of the spiritual works which attended his ministry, and which he declared should ever attend the ministry of those who believed on him; and for the doing of which he gave specific command.

The denial of their possibility in the past is, however, the logical sequence of the denial of their possibility to-day, and we must recognize the consistency of those who make the complete denial, as compared with those who assert the genuineness of the New Testament miracles, but who deny that these spiritual works may be repeated.

Digitized by Google

Over against all of these vacuous and theoretical pros and cons, how blessed are they who know that "The time for the reappearing of the divine healing is throughout all time" (Science and Health, p. 55); that the Christ is demonstrably present, and that the right apprehension of God-Truth is still able to save from sin, sickness, and death.

---

RECENTLY the Chicago *Record-Herald* published the result of a count of the attendants at the Sunday morning service of 125 of the 666 churches in that city. The churches selected were representative of the various denominations.

The figures are especially interesting to all who remember that the first Christian Science church in the world was organized in 1879, and the first in Chicago in 1886 with twenty-six members.

The following is a summary of the count. Roman Catholic, 17 churches, 47,085 attendants; Methodist Episcopal, 25 churches, 4,498 attendants; Protestant Episcopal, 18 churches, 3,046 attendants; Baptist, 15 churches, 2,358 attendants; Congregational, 12 churches, 1,882 attendants; Presbyterian, 11 churches, 2,680 attendants; Evangelical Lutheran, 5 churches, 840 attendants; Reformed Episcopal, 4 churches, 411 attendants; Christian, 6 churches, 873 attendants; Christian Science, 4 churches, 3,266 attendants; Independent, one church, 978 attendants; Union, one church, 272 attendants.

---

AMONG the varied types of personal enslavement one of the most trying to the cultivated ear is that of subjection to "the tyranny of a set phrase."

It is so easy to acquire the habit of "speaking in ruts," that unless one is blessed with true friends, he may not awaken to this fault before it has become fixed.

The forms of Truth's expression are no less varied than beautiful, and as we become perfectly responsive to Truth, we shall escape all bondage to the staid and stilted.

---

THE article, in our issue of August 28, on "A Beautiful and Remarkable Life," was attributed to Rev. S. C. Dunn. We find, however, that we were in error in following an esteemed contemporary, and that the authorship should have been ascribed to Rev. Samuel C. Gunn of Boston, Mass.

---

## South Africa.

WE are sure that our readers will be much interested in the following extracts from letters received by Mrs. Eddy's publisher from Mr. C. T. R. Cronjé, Edenburg, Orange River Colony, South Africa:—

December 31, 1901.

Is there no depot of Christian Science literature in South Africa? Our booksellers cannot supply us with any books on the subject, in fact they confess ignorance of the name Christian Science.

If only Science and Health can be brought within reach, there are many persons here ready "to immerse themselves in it," especially now after the futile reliance of such a large number of our people on the old (orthodox) systems. Science will be welcomed by a large number and will prove (shall we say?) an antidote to recklessness and total indifference.

August 3, 1902.

The books you sent me on the 30th of June came to hand in good order. Words fail to express my delight with them. The pocket edition of Science and Health especially, is a jewel. I have constantly been gaining a higher understanding of this great subject, but during these last few days my progress was simply marvelous, due to "Christ and Christmas" and the few chapters I have read in the revised edition.

Mrs. Eddy, as God's instrument in revealing to mankind again the precious Truth practised and taught by the Master and his disciples centuries ago, is entitled to our highest expression of thanks for so faithfully, though scorned and solitary at first, giving her message to mankind. As a beneficiary of her faithful labors, I contribute (very poorly, I know) my mite.

---

## From our Contributors.

### True Success not Material.

A. K. F.

CHRISTIAN SCIENTISTS, all over the world, assert daily that "there is no life, truth, intelligence, or substance in matter" (Science and Health, p. 468). The declaration of this truth is proclaimed publicly in every Church of Christ, Scientist, at the close of its Sunday services. It is the recognized duty and privilege of Christian Scientists to demonstrate the Scientific Statement of Being as given in their text-book, and to exemplify it by concrete results in their every-day life,—results so practical and so plain that all with whom they come in contact, or who are within the radius of their influence, shall be benefited, and the world thereby raised to a higher and still higher plane of spirituality, which is goodness.

"Nothing we can say or believe regarding matter is immortal, for matter is temporal, and is therefore a mortal phenomenon, sometimes beautiful, always transitory" (Science and Health, p. 277).

The query comes, however, time and again, what is my consciousness of Truth when in business, in society, or at home? Am I using material means, that success in business, good in society, or happiness in the home, may abound? Am I harboring a belief of power in some material apparatus, environment, or condition, as the cause of success? If so, then am I the servant of that belief, and mastery can come only as matter loses its identity to human sense.

No satisfying demonstration can be made until we eradicate the belief of power in matter or material conditions to *cause anything*, and rise above the sense of servitude to mammon. We must insist upon the eternal verity of one Cause, not many causes; one God, not many gods; one Mind, not many minds; one Spirit, not many spirits, and that this Cause, God, Mind, Spirit, is manifested spiritually, not materially, and that nothing else has, ever did have, or can have any real power whatsoever.

True success in business comes, therefore, not from matter but from Spirit, and must be spiritual. To the extent of our ability to gain a clear consciousness of these facts, so beautifully and clearly presented over and over again in our text-book, success will be unfolded to us and made manifest to human perception. "There is but one primal Cause. Therefore there can be no effect from any other cause; and there can be no reality in aught which proceeds not from this great and only Cause" (Science and Health, p. 207).

The same line of argument obtains in every connection one may have with society, from alms-giving to social entertainment. A persistent, conscientious insistence upon that wonderful old-new Truth, that *all* is spiritual, despite the contrary evidence of the physical senses, a perfect effect from a perfect Cause and no other effect because there is no other cause,—this rules out, as realities, all poverty, sin, suffering, and imperfection of any kind whatsoever. Its truth is proven by the fact that these nightmares of human belief disappear in proportion to the ascendency in consciousness of the spiritual over the material, and are replaced by the more beautiful, more happifying, and more harmonious realizations of Truth. Man is spiritual, not material, and "The great truth in the Science of Being that the real man was, is, and ever shall be perfect, is incon-

Digitized by Google

trovertible; for if man is the image, reflection, of God, he is neither inverted nor subverted, but upright and Godlike" (Science and Health, p. 200).

Whenever we begin to use matter as a means for securing good and happiness, in whatever form it may appear to us, and forget that happiness is not at the disposal of physical sense; forget that "Mind constantly feeds the body with supernal freshness and fairness" (Science and Health, p. 248); forget that matter never was a creator and never could produce harmony or a single heart-throb of real love, we shall gather, at the harvest, sorrow, discord, and despair. Remembering these truths and holding to them strenuously by the rule given us through the spiritual discernment of our revered Leader, we find health, harmony, and happiness coming into the possession of our household day by day, as our work is more clearly manifested, until the demonstration becomes *prima facie* evidence of the absolute truth of our position, and belief and faith blossom into understanding.

## A Change of Opinion.

A. P. COCHRAN.

I WAS reared a Methodist, but had early ceased to have any interest in religious matters, if by that is meant church affiliation or sympathy. I insisted upon harmony among preachers, precepts, and practice, and because I did not find it, I had lapsed into a state of indifference. I had not listened to a Sunday sermon for more than twenty years. I was a physical wreck, a victim of the tobacco habit for nearly forty years, and much emaciated by an hereditary disease, the progress and termination of which I thought I could calculate as closely as the return of the sun.

I had a friend who, through the healing of a sister, had became greatly interested in Christian Science, and I was very fond of ridiculing him for his foolishness. One day he said to me, "Read the book, and you will know more and talk less." I finally promised to do so. I borrowed a copy of Science and Health and read it as I would read a book of the day. Having finished it I was more than ever astonished that sensible people found anything in it, and told my friend so.

Some time after this, I met the Scientist who was in charge of the work in our city, and during conversation she said she understood I had read Science and Health and asked my opinion. I very candidly told her that its perusal only confirmed me in my previous estimate. Her reply was very pleasant and at the same time pointed, "I am told that you are a good reader. It is scarcely complimentary to you that you have found nothing where so many intelligent people find all. You have read the words, now read the book." I confess that I was piqued at this remark, but said nevertheless that I would do as she suggested.

Again I procured the book, and went at it with a determination to dissect it and be able to show my friend his folly, and at the same time to tell the Scientist, who had so cleverly rebuked my superficial reading, just how little there was in it.

For a month or more I worked, honestly trying to find the true meaning of the book, and yet to be able to controvert every proposition laid down. Of course I never succeeded in this last effort, but this fact did not lessen my determination finally to do so. I reached the chapter on "Prayer," and here I forgot to question, to discuss, or to analyze. It was the first time I had ever seen a practical, common-sense statement of the proper reason for prayer; a correct method of prayer, and, what was never promised before, an immediate and practical answer to intelligent prayer. I read this chapter over several times, with increasing interest, and while doing so, I became conscious of the fact that my desire for tobacco was gone, and I really had a distaste for it. As I continued to read, one by one the physical discords that had environed me for so long disappeared, and I could truly say for the first time in years, "I am well."

Is it necessary to write a sequel to such a story as this? Do I need to tell that class instruction followed close on this, and that I count as my greatest privilege the use of the understanding thus obtained in helping others to the same light?

## By Faith, not by Sight.

M. R. S.

IF St. Paul and his brethren walked by faith and not by sight, of course every consistent Christian should do the same. I thought I belonged to this class of consistent Christians, but I confess it never seemed necessary to apply the words of the text practically.

Paul says, "Faith is the substance of things hoped for, the evidence of things not seen," which was just so much Greek to me until I learned in Science and Health that faith is a quality of Mind, spiritual understanding; and sight in the text refers to material sense. Now for the application. Paul tells me to look not at the things which are seen, but at the things which are unseen, more Greek —the first part seemed clear, but what are the unseen things? Oh! I see now, and begin to take a few faltering steps by faith by looking at the unseen things. Here are some of them: God is Supreme Being; man is His image and likeness. God is Spirit; man is spiritual. God is Life; man lives.

I start out, and the very first thing sight (material sense) says, "I am not well." I meet a man, he is sick, so misery has company; another is dishonest, and I am afraid; and here is a cripple and there a murderer. Poverty, sin, and misery abound. I forget, I am not to walk by sight but by faith which says, "I am God's perfect idea and cannot be sick, neither can any other be different from me. The universe is spiritual and peopled by spiritual ideas. (Science and Health). Divine Love governs. I am not afraid. Poverty, sin, and misery have no place in divine Mind, which is the source of all supply. I am conscious only of the things of God. The feeble steps grow stronger, the way brighter, and the heart is lighter, for thought is right.

## The Availability of Truth.

C. E. M.

THE practical efficiency of Christian Science in the adjustment of business difficulties is being daily testified to by thousands, and the experiences which follow are of the many which could be told.

One day a man called to ask me to give him treatment for a cold rapidly developing into congestion of the lungs. He seemed very ill and tired, and explained his weariness by saying that he had been very busy and very worried. I asked him what worried him, and in reply he told me at length of the imminent failure of his business, a manufacturing concern. He had exhausted every means known to him, but without avail. His affairs, as he related them, seemed to my woman's sense very complicated. In fact, there were at least four different concerns involved, all with differing interests, as they supposed, and each afraid of the others.

As he told his tale, I felt at first confused and overwhelmed with the complexity and hopelessness of "minds many;" but as I closed my eyes to give the treatment asked for, and tried to shut out the clamor of conflicting interests, the evil suddenly resolved itself into one—fear.

Although the people affected by this trouble numbered at least one thousand, I saw that there was but one lie trying to gain control,—fear,—the belief that there is not

Digitized by Google

enough Good for all, and that man must live by robbing his neighbor.

But in the treatment, turning from this dark picture to the light of Truth,—the Omnipresence and Omnipotence of Good,—the recognition of Good as the One infinite Intelligence instantly and positively governing each impulse and activity, and so defining harmony, this recognition, in its radiancy annihilated the lie.

The man was healed and, on going back to the city to renewed conference with the very men whose obduracy had seemed like adamant, he found a readiness to do, and the final result was a continuation of the business on better terms than before.

Another time a man managing a business where union labor was employed, told me that a strike was impending. The owners and employees had met several times, but could not arrive at an agreement. He explained the trouble to me, but to my thought it seemed complicated and hopeless in its entanglement. He ended his recital with a request that I do what I could with Christian Science during the next three days. At that time the thing must be settled one way or the other.

Humanly speaking, I knew of no way. I had no opinion in the matter, but I did see that the root of the difficulty was mutual distrust or hate. Christian Science teaches plainly that there are not minds many governed by various evil motives, but that in fact and always there is one infinite Mind, through whose activities and laws is unfolded in consciousness such perfection and harmony and wisdom that we know this Mind to be Love.

To sense some thirty men, equipped with human knowledge of this business, were acting under the supposed domination of the belief in material minds and methods, and one woman, ignorant of the claims of the business, but equipped with the spiritual knowledge of Truth, worked upon this problem for three days.

In reality, one Mind governed consciousness and the acknowledgment of this fact, because of its verity, broke the lie of sense. A settlement was made that was just and right, and both sides were benefited by it.

## Our Whole Heritage.

E. M. B. S.

"Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ" (Ephesians, 4 : 13).

One foe to progress in the growth of some Christian Scientists is the remains of a false humility, that fears, or is unwilling, to claim its whole heritage, and so virtually denies the possibility of obeying our Lord's command, "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Self-abasement was looked on as a merit while we believed that sin was a part of our original nature; but self-abasement never helped us to rise out of sin, but was rather an excuse for laziness, and for compromise with sin. If this was the case before, how much less can self-abasement find a place in Christian Science, in which we find man to be God's own image and likeness! How dare we say that we cannot hope to do as well as so-and-so, because he has more intelligence, more love, more strength of character? Does not all good come from the same inexhaustible Source equally open to us all? Is God partial? We know that He "is no respecter of persons," and that "to all mankind, and in every hour, Deity supplies all good" (Science and Health, p. 494). It is we who limit ourselves by our false beliefs, fears, and false humility.

Ephesians, 4 : 1–13 speaks very clearly on this point, teaching us to be strong and courageous in claiming our full heritage. St. Paul begins his exhortation to walk worthily of the calling wherewith we are called, with the words "in all lowliness and meekness," not abasing ourselves, but making no claim for ourselves that we do not make equally for all men. Verses 4–7 give the reason for our claim. "There is one body, and one Spirit, even as ye are called in one hope of your calling; one Lord, one faith, one baptism, one God and Father of all, who is above all, and through all, and in you all. But unto every one of us is given grace according to the measure of the gift of Christ."

The following verses seem at first sight to limit our claim to all good, and give to each man special gifts, but the thirteenth verse explains fully that these seeming limits are only temporary; we have to take our steps one by one, "till we *all* come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

Mrs. Eddy says (Miscellaneous Writings, p. 183), "Man is God's image and likeness; whatever is possible to God is possible to Man, as God's reflection."

Let us say with the Psalmist, "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness." Then press on patiently and humbly, but courageously, "In the way Thou hast, be it slow or fast, up to Thee" (Miscellaneous Writings, p. 400).

## Love's Purpose.

BLISS KNAPP.

We all appreciate the ease with which we can perform some tasks that we love to do. The love of doing, not only takes the hard work all out of it, but it also makes it possible for us to realize a larger capacity for better work.

Jesus declared: "My yoke is easy, and my burden is light," nevertheless we all know that he undertook and accomplished more than any other man that ever lived. He concluded naturally that the only proper course to follow was to do right according to God's directing. But more, —his love to do right and to be right increased so constantly, that it finally rose pre-eminent above all mortal limitations. His boundless love to do the Father's will made him equal to every task, for it brought to him the might of divine wisdom. So Love's purpose to-day is to lighten our burdens, that we may be good and do good naturally.

St. John defines God as Love, and Science and Health says that "Love is the liberator" (p. 225). Now we begin to awake, in Christian Science, to the wondrous truth that underlies these two statements; for, the more we love God and love, above all else, to do His will respecting us, even as a model child obeys his parents in the spirit of love, the better we shall understand Him. We understand best those human friends whom we love most; and the understanding of our true relation to God heals us.

To have but one Mind, is to have but one purpose: namely, to love pre-eminently, to do right, and to fulfil all God's commandments in love. Then the work becomes easy, and we rejoice in the opportunity to do good and to be good.

God's love cannot bring sickness or disease upon His dear children; and when we understand this we have begun right. Then we are ready for the next step, which is to know, just as clearly, that God is the only Creator, and that He created only that which is good and eternal. Evil or disease has therefore no claim to existence and, in fact, never existed. We are commanded to know this, even as the first two commandments, reiterated by Jesus, direct us. It obtains, as well, that we must impart our understanding to others, for our Master and Way-shower left to us this oft-repeated command: Preach the gospel, heal the sick! We must emulate his example. We, too, must "heal by teaching and teach by healing" (Miscellaneous Writings, p. 358).

Digitized by Google

Moreover, we must obey in that spirit of love which never doubts or questions, if we would be truly obedient. Let us remember Jesus' words: "Thomas, because thou hast seen me, thou hast believed: blessed are they that have not seen, and yet have believed." Surely if we obey in love, it is no task, and we reap our reward in righteousness and joy.

## Living the Truth.

L. M. EARLE.

HEARING frequently of instances where over-zealous, well-intentioned Christian Scientists have unwisely presented thoughts of truth, in their impetuous desire to lead sufferers and seekers to its light, one is very forcibly reminded of the injunctions to bridle the tongue and to let our light so shine before men that they may see our good works and glorify our Father in heaven. Truly "the best sermon ever preached is the practice of Truth and the demonstration thereof" (Science and Health, p. 201).

One suffering from an accident which necessitated the using of crutches was thus addressed by a Scientist, "You don't need to use those crutches; there is nothing the matter with you; get up and walk;" when to the sufferer's physical sense that was an impossibility, and the apparent cold heartedness and absurdity of these statements aroused very naturally a strong antagonism to Christian Science.

Another, suffering from deafness for which it seemed necessary to use an ear-trumpet, desired to attend services at a Christian Science Church, but refrained from doing so because he felt that the trumpet would look out of place. When the matter was spoken of to a Scientist, the sufferer was told to go and use the trumpet as long as it seemed necessary to do so; that it would look no more out of place than the several pairs of glasses he might see there, or the occasional crutch or wheel chair. When sufficient understanding of Truth had been gained, or demonstrated, then he could lay it aside as no longer necessary. In this instance, much gratitude was expressed for a comforting, kindly word. Sympathetic feeling had been shown, and it won where the other had repelled, yet the intention and desire was the same on the part of both Scientists.

Those who are earnestly striving daily and hourly to reflect Love, health, and harmony, cannot fail to see how, unconsciously to themselves and others, their thoughts are again reflected in those about them. If living in the thought of unlimited strength in which is no consciousness of weariness or fatigue, others will unknowingly find themselves expressing the same thought and doing things that surprise them. Thus in time, the way is paved for a fitting word spoken in due season, and then it will not antagonize but interest and carry conviction.

One living in the thought of Truth is an inspiration to others, stimulating them to follow and do likewise, to find the same freedom and harmony, and the source from which they are obtained. Knowing how wide and extended is the influence of our life when we demonstrate the truth of Christian Science in all the practical details of every-day living, we should seek continually "to dwell in the secret place of the Most High," that we may radiate such beauty of thought and expression as will be most winning and convincing.

The life of each individual Scientist is like unto "a city that is set upon a hill." It attracts the attention of the world, and in more ways than we are aware. How prayerfully, therefore, and constantly should we strive to obey the command of the Master to watch, and seek to have that Mind in us which was also in Christ Jesus, in order that a correct thought may prompt each act and deed, never forgetting the great responsibility we assume in calling ourselves Christian Scientists.

## Among the Churches.

### Union of Forces in Montrose, Col.

The following extracts from a resolution, and the response it evoked, will be read with interest.

Knowing that we should all unite in the several churches, to elevate the human race from their material sense, and that all bodies of whatever kind should be in perfect harmony;

Therefore, be it resolved: That we as a body are hereby dissolved and offer our strength and support to the church of Montrose and ask their counsel in whatsoever work divine Principle may commit to us in the future.

The above resolution was unanimously adopted by the Association.

GEO. E. MILLER, *President.*
MRS. D. T. SMITH, *Secretary.*

Mr. Geo. E. Miller, *President.*
Mrs. D. T. Smith, *Secretary.*

Your resolution is received. Recognizing in this action the leading of Truth we accept the communication in the spirit of love which prompted it, and bid vou a heartfelt welcome to the privileges we have to offer.

Membership in the church is the result of individual action, which can only be taken individually, in accordance with established laws. Under these laws, applications for membership with this church will be received in the spirit of brotherly love and Christian fellowship. The church doors are always open to all who seek entrance through the leadings of Truth and Love.

Congratulating you upon this evidence of divine guidance, let us all press on until we are one in the unity of the faith.—MRS. HATTIE FREES, *Clerk.*

### The Church in Atchison, Kan.

The history of the Christian Science Church in our city, briefly told, is as follows:—

It was organized April 15, 1895, with seven members. The present membership is seventy-eight. The church owns its own edifice, and is self-supporting. It maintains nicely appointed reading rooms in the central part of the city, and it has raised and expended more than twelve thousand dollars since its organization, this amount being raised within its own congregation.

*The Atchison* (Kan.) *Globe.*

### Good News from New Bedford, Mass.

A copy of the following telegram sent to our Leader, has been received.

New Bedford, Mass., September 3, 1902.

Mary Baker Eddy, Pleasant View, Concord, N. H.

Unity of Churches in New Bedford, Mass. United members send you loving, loyal greetings. Glory to God in the highest, and on earth peace, good-will toward men.

FIRST CHURCH OF CHRIST, SCIENTIST,
of New Bedford, Mass.

Through floods of gold and fiery bands
Our waning day is borne:
But splendors break on distant lands;
Our sunset is their morn.

PRES. STRYKER.

Men and women are truly noble who are influenced by the helpful principles in the large circle of fuller and richer life, rather than by the selfish and narrow ideas in the small circle of personal pleasure and gain.—FRANK V. IRISH.

## Testimonies of Healing.

### The White Mountain Chapel.

At a recent Wednesday evening meeting of First Church of Christ, Scientist, Fabyans, N. H., the purport of the remarks and testimonials was in substance as follows:—

The leader expressed the thought that the God by whose power Jesus and the early disciples healed the sick and sinful is the same God to-day, and that the understanding of God and man, realized through Christian Science, enables us to substantiate the words of Jesus, "He that believeth on me, the works that I do shall he do also." The healing of physical sickness is the lesser mission of Christian Science; its greater mission is the healing of sin. As thought becomes purer and more spiritual, the body responds to that thought in improvement of health and harmony of action.

He then spoke of two cases of healing. One was suggested by one of the hymns of the evening (No. 186), which was written by one who had been pronounced, by medical authority, incurable. Through a few weeks of Christian Science treatment she was restored to perfect health, and in love and gratitude for her wonderful recovery she indited the words of the hymn.

The other case was that of a woman who through trouble and worry had become insane and been placed in an institution for such unfortunate people. She also had Christian Science treatment, and in a short time was fully restored. As her returning reason began to appear, the first stanza of the hymn just mentioned was given her, and she was helped to health of mind and body by her apprehension of the truth expressed in its words:—

> In Thee, Oh Spirit, true and tender,
> I find my Life as God's own child;
> Within Thy Light of glorious splendor,
> I lose the earth-clouds drear and wild.

Another said that he had been a member of an orthodox Church and had been taught that God is infinite in love. His faith, however, in the infinitude of God's love had been sorely shaken by the prevalence in the world of affliction and sorrow for the good,—the unhappiness, discord, and disaster of life. These conditions he could not reconcile with the teaching that God's love is infinite; for he was honest in believing that no human parent would, for disciplinary purposes, doom a wayward child to suffer from an incurable disease, or an innocent child to reap the results of the sin of its ancestors. In this attitude of mind Christian Science came to his attention. His consciousness was receptive to the teaching that God is indeed a God of love; that He is infinite Love, that the evidence of the five senses, which are constantly deceiving us, had led to a false concept of God and man and their relation; and that Christian Science, basing all things on Spirit as All-in-all and consequently excluding matter, its opposite, as having no reality, gives a spiritual standpoint from which to view and rightly judge all things. This spiritual understanding of God and His laws men find to be practical, enabling them to escape more and more from the supposed laws of discord and disease.

In the practical application of this Science he mentioned a case of ulcerated eyes which had nearly reached a condition of total blindness, but a few months' treatment restored the eyes to their normal condition

A business man said he once had for a second time a disease from which, on the first occasion, he had suffered intense agony. This time it meant an operation. Through Christian Science he was healed. Satisfied with the mere healing he now felt free to indulge habits from which his previous condition had compelled him to refrain. He again became a man of the world, and for six or seven years following the healing, he indulged in the pleasures of the world. He found, however, that the old disease was returning, and learned that if he lived a life of indulgence, he must pay its penalties. He saw also the necessity of showing forth in his daily life the truth that Christian Science had so clearly shown him. He again turned to Science, and now sought it for its own sake. His old habits soon dropped away, and in business he had since proven, by actual results, by fruits, that through the illumination of Christian Science the Golden Rule presents a practicable Christianity.

Another said, "Science is understood only so far as one can demonstrate it. A man's understanding of mathematics is measured by his ability to apply it to the solution of problems of varying difficulty. Christian Science is the Science of Christianity, the religion of the Bible, the practical, demonstrable Gospel of Jesus Christ, discovered and restated for this age by Mrs. Eddy in our text-book, 'Science and Health with Key to the Scriptures,' and as such it furnishes its proofs in the healing of sin and sickness." He then told how a man came into his office one day to transact some business. The man had scarcely seen a sober night for years. As the result of a long talk that day, on the teaching of Christian Science, the man left the office so touched by its truth that he found himself entirely free from the desire to drink, and has so remained.

Quite a number of strangers were present at this meeting. Here at the Sunday morning or Wednesday evening meetings, away from home, amid the impressive grandeur, the eloquent stillness of "the eternal hills," not a few summer visitors, from year to year, are hearing a clearer word of truth, both through the written word, and through the mouth of many witnesses.—L. I. W.

---

A question was raised in a recent Wednesday evening meeting at First Church of Christ, Scientist, Toronto, by a gentleman who stated that he was not a Christian Scientist. He said, "You people appear to have something which I have not. I don't know, but I would like to understand, what it is. For forty years I have known one man who is here to-night. He has always been strong and healthy, and I do not know what he obtains from Christian Science, yet he is very enthusiastic in its favor. What is the difference between us? I believe in being honest and upright, and in paying one hundred cents on the dollar, but I do not enjoy very good health. How can Christian Science benefit me morally as well as physically? I know by the hearty handshake I receive in this church, and your happy expressions, that you have something which I have not."

The Christian Scientist to whom reference had been made arose and said in reply that he had received a great deal from Christian Science, and also could refer to many cases of wonderful healing. For years his family had been kept well by Christian Science, and through the same means he had been enabled to overcome to a great extent his own impulsive nature.

Another speaker said, "Our friend has met with us to hear our testimonies as to the great blessings resulting from Christian Science, and we have many good things to share with him. The difference between Christian Scientists and those who are not, is that the latter believe matter to be substance, while the Christian Scientist believes Spirit to be the only real substance."

Another gentleman said that the healthy looking man needs Christian Science quite as much as any one, and related some instances in his own experience, in which injuries resulting from accident had been successfully and quickly healed through the understanding of Truth as taught in Christian Science. He further referred to the remarkable healing of his wife, and to many other cases in his family, wherein he had at all times found Christian Science a ready remedy.

Digitized by Google

Our inquiring friend was evidently satisfied that the true merits of Christian Science, both as a healer and health-preserver, were fairly set forth, but it is well to remember that what this revealed Truth has done for its adherents and for the world, is yet small in comparison with what it will accomplish when Christian Scientists more fully attain to their place and privilege as the children of God, adhere more closely to its Principle, and more faithfully live in accord with its teachings as we have them in our text-book and in the other writings of our Leader. all of which are based upon the spiritual interpretation of the Scriptures.—W. S., Toronto, Ont.

---

I desire to give through our periodicals an experience which has meant much to me, and which I hope will help some seeker for Truth, as much as it has helped me.

When I was young, and attended an orthodox Sunday School, I received every Sunday a small card upon which was a verse from the Bible. I would read and ponder over these little verses, and no passage caused me so much anxiety as that little declaration of three words, *"God is Love."* I could not understand it. I well remember how often it appeared on various cards which I received, and each time I would ponder over it, trying to reason it out, but each effort seemed a failure.

As I grew older in years, and studied grammar, I still thought of it, "God is Love." It seemed to be always with me, but I could not understand it. I reasoned thus: God is a very large person. Love is an abstract noun. How in the world can a very large person be an abstract noun? I could understand God as Good but I could not perceive or comprehend that God is Love.

I never advanced any farther than this in my reasoning until I began the study of Christian Science. Through extreme worry and unhappiness I was led to investigate this grand truth. I went often to a practitioner, and in one of the first talks with her, she explained that God is Love. She made her explanation so simple that any child could understand. She told me the difference between love and hate. She showed me that God is all and that hate has no place or power in God's kingdom. How happy I now seemed! Here was my question of years answered. I could now see that "God is Love." But it was not enough for me to see and believe this statement, I must prove it. The proofs came daily. No matter how loud error screamed, the knowledge that God is Love did overcome the evil, and I have one proof in mind of which I should like to write.

One evening as I was getting ready for church, a member of my household asked me not to go. I said that I wanted to go very much. This person coaxed me persistently not to go, but still I wanted to obey my own inclination. Seeing that coaxing did no good, the person threatened me, very angrily, that if I went to church, I would be locked out upon my return. Error screamed so loud and so angrily that I seemed for a while excited, but I went to church and as usual received much help. I clung steadfastly to God. I knew that God is Love, that God is All, and would overcome error. During the silent prayer, I declared that God is Truth, and Truth must overcome the error that talked at home.

When church was dismissed I started for home, wondering whether I would get in when I arrived. I knew that I should be sheltered somewhere, but I belonged in my own home.

As I was riding homeward on the cars, dark clouds appeared in the sky, the thunder and lightning were startling. A heavy storm was coming and I wondered if I should arrive home before it began to rain; and if I would get in when I arrived home.

I was somewhat worried but still I declared, "Truth must overcome error." I reached my destination, stepped off the car, and walked a short distance to the gateway leading to my home. As I looked up at the door, I thought I saw a figure standing there. The sky was so dark I could not see well, and the house was all darkened. As I approached the doorway I was convinced that some one was standing in it. What was my extreme surprise, upon reaching the door, to find the person who had been so angry now standing with the door wide open to receive me and smilingly saying, "O, I am so glad you are home! I was afraid you would not reach here before the storm came, and I am sorry that I was so cross before you went away."

I was much surprised at this revelation, and could not say anything, but I thought, "Surely, God is Love. What better proof do I need?"

This person, who is not a Christian Scientist, has never again manifested such anger. I know that God is Love, and that knowledge will overcome all anger and hate.

E. S. W., Chicago, Ill.

---

It is now over thirteen years since I first heard of Christian Science. I thought that I opposed Christian Science, but soon found that it was not the Science I opposed, but my conception of it.

Since I was a little child I had suffered severely every spring with neuralgia in my head and face. Sometimes it would last but a few days, at others it would be weeks before I would be entirely free from pain. It seemed to be worse every year, and how I dreaded each spring! Our family physician (one of the best of men) said to me, "You will doubtless suffer more severely each year, as long as you live."

A relative who had been healed by Christian Science came to visit us, and when I was suffering greatly she said to me, "Christian Science would heal you, and when you are ready to give up your medicine I will treat you." Doubting the possibility of help from any other source, I continued taking medicine for several days, but at last my sufferings were so severe that I gave up all medicine, asked for Christian Science treatment, was instantly healed, and have never had any return of the trouble.

Since my wonderful healing I have seen all manner of error vanish before Truth, not always so quickly as in the first instance, but just as surely.—S. R. S., Montrose, Pa.

---

I wish to express my thanks for Christian Science. I was healed of astigmatism, for which I had worn glasses five years. After receiving a few treatments I had no further use for my glasses. My little boy, eight years old. was bitten in the leg by a dog and I was told I had better take him to a doctor, but I had no fear. I treated him a few times and he treated himself also, and he had no pain. I have four small children and they say they are very thankful for Christian Science, because they do not have to be taking medicine.

I never read the Bible until I came into Christian Science. Now my daily companions are the Bible and Science and Health. I need hardly say how grateful I am for this demonstration of Good.

JENNIE KOZLOWSKI, Los Angeles, Cal.

---

There are ten things for which no one has ever yet been sorry. These are: For doing good to all; for speaking evil of none; for hearing before judging; for thinking before speaking; for holding an angry tongue; for being kind to the distressed; for asking pardon for all wrongs; for being patient toward everybody; for stopping the ears to a tale-bearer; for disbelieving most of the ill reports.

## Religious Items.

Rev. James H. Ecob, D.D., writes in *The Christian Register*:—

"Is it not too true of us this day that, when we think of God, He is either in a book, or in a house, or in a remote heaven? Are we not this day sentimental about our God? We draw a line through our life, setting off a small portion which is all clean and still and decorous and idle, and call it religious. That is for God. He is supposed to like that sort of thing. But the other, greater part of our life, the eager, pushing, working, playing part of our life, that is secular. He must not be invited there. . . .

"This division of our life into the religious and secular involves conscience in confusion and sophistry. It has placed the emphasis of conscience upon small, inconsequential matters,—externals, and forms, and times,—often to the exclusion of the weightier matters of truth and justice and goodness. It has become a truism, a commonplace in fiction, a by-word on the street, that your man of punctilious 'piosity' in his holy times and places is just the man who, when he catches you in his secular world, will do you out of your last cent with the address and hardness of a highwayman. I put it to you frankly, do we not all of us on Monday morning step lightly down the street to our business, our shopping, or to our pleasures, with a lurking sense that Richard is himself again: his foot is on his native heath? That meeting with the vast, dim, austere God, in His silent, shaded house, is over. He has retired to his heaven for the next six days, and here I am out in the open, frank, bustling, go-as-you-please, secular life."

Rev. Frederic W. Perkins says in *The Universalist Leader:* "Our modern life needs a tremendous vitalizing of faith in the intrinsic invincibility of the right, the resistless omnipotence of the kingdom of God as a working force in human society to-day. I do not mean simply a logically convincing argument that evil tends to disappear and that universal holiness and happiness must finally reign. I mean a genuine conviction that when a man takes sides with righteousness and purity and love, he is taking sides with the strongest forces in the world. In actual moral experience life is a battle—good on one side, evil on the other. What one's theory about the origin of that battle may be makes small difference. He may call the foes God and the devil, love and selfishness, spirit and flesh, the divine soul and the brute inheritance; but however the names of the contestants change, the fact of moral experience does not change. A man has to fight a battle, and the fighting is about as hard under one name as under another."

How can one be a Christian and bear a grudge? Many men and women think they can do it. They suppose that in the dark corner of their hearts where resentment rules, the law of Christ has no authority. Everywhere else they will serve him; here they will nurse a cherished hatred. Is not our actual religion half-pagan still when we can so reason—as many of us do? For if there is anything fundamental in the Sermon on the Mount it is, that contempt and hatred for any human being is a fearful sin. No man with anger in his heart, says Jesus, can offer a single acceptable sacrifice to God. How shall it be with those men and women all around us who have said their prayers and sung their hymns and uttered their testimonies for many years with an unrepented and unforsaken grudge against a neighbor or relative blackening their souls and undermining the foundations of character?—*The Standard.*

"Nowadays," said he [Prebendary Bevan], "we have a gospel of art, a gospel of science, a gospel of culture, a gospel of altruism, a gospel of sociology, in each of which there is much that is noble, true, and good, but nothing that can supply the place of the Gospel of Christ, nor anything of real worth that is not implied and involved in the Gospel already and inspired by it. This lesson it is which the modern civilized community at home and abroad needs to learn and be taught. Those who have worked as parish priests in the West of London know that even now what society most bitterly resents is the smallest practical interference with its own self-chosen ways. Mere pulpit satire and abuse—if clever enough—it tolerates, and even enjoys; but bring the matter home, if you can, to the social conscience, and you will find that the Gospel is still a 'sword.'"

London Letter in *The Church Standard.*

Until one receives a clear idea of the divine character he is without a clew to the proper understanding of the Scriptures. He does not view them from the center or from within. The trouble with a great many expositions and theologies is to be found just here. Their authors have not derived their conception of God from His revelation of Himself; but they brought their ideas of God, derived from early training, or reflection, or philosophical studies to the Bible, and have fitted its assertions and doctrines to their preconceived notions. In a spiritual sense they have disobeyed the second commandment. They have not, indeed, fashioned God out of metal or stones, but out of their imaginations, fancies, and philosophical reflections. What we want first of all is to get our ideas of God from God Himself.

*The Watchman.*

A TEST OF PERFECTION.—The apostle tells us that the tongue is an unruly member, and that the man who can bridle his tongue is a perfect man, able also to bridle the whole body. Words bubble up unbidden from mysterious depths within, and slip through the door of the lips so quickly that one has little time to put on the bridle of wisdom and prudence. The tongue is ever ready to fling them out where they will burn and blister most. The depths from which these burning words proceed are indeed mysterious. They are depths of levity, depths of malice, depths of envy, depths of selfishness and revenge. Never shall we be able to control the tongue until the heart is right. Grace will do it. "Let your speech be alway with grace, seasoned with salt, that ye may know how ye ought to answer every man."

*The Christian Advocate.*

Spenser B. Messer, D.D., writes in *The Watchman:* "The True Liberality is not a creed, neither is it an abandoning of the creeds. It is a new spirit permeating and hallowing the great truths of all confessions of the heart and head. It is a new vision, in which one sees that truth is greater than all dogmas; not only greater than some one of them, but greater than them all. The True Liberality does not become blind to the worth of things that men have believed; it sees, with new illumination, the greater truth and life of which they are as shining points. It is a second sight, which can follow truth past the creed forms and bodies, and see the soul of all truth in the soul of each truth."

It is a very dry time just now in the religious world, and it is a good time for us all to dig our wells deeper. Do not be satisfied, no matter what your experience has been, but dig deeper. The love of many is waxing cold. There never, perhaps, was a time when it required more alertness to keep from spiritual drowsiness and famine than now, and there is no better way to keep awake and refreshed with that living water that Jesus promised than to dig your well deeper, and then "with joy shall ye draw water out of the wells of salvation." Let us all resolve to go deeper! The drier it gets around you the deeper you need to dig.

*Christian Witness.*

Howard A. Bridgman, in an article in *The Congregationalist*, writes: "Questioned with reference to the general religious situation to-day, Dr. Gunsaulus confessed himself an optimist. 'There never was,' he said, 'such a desire to hear sermons that are based on facts. We religious people ought not to be wise overmuch, and this business of taking care of Jesus, as if he needed to be protected by a dogma about him, seems to me very inconsequential. I should not believe the Bible if it did not come to me with stories and traditions that bear the marks of the literature of the time when they were composed.'"

Another minister has determined to follow his conscience. Rev. Dr. Goldsmith of the Temple Baptist Church in Philadelphia has resigned, giving as his reason "the fact that he holds theological views which he deemed unwise to proclaim to his congregation, lest discord and dissension result and because he realized that unless he could clearly enunciate his belief to his people, he could not honestly and conscientiously continue as their pastor." His Church has reluctantly accepted the resignation, and the pastor will soon make a statement of his theological change.

The secret of a quiet heart—which is by no means equivalent to a torpid one—is to keep ever near God. Stayed on Him we shall not be shaken and our hearts shall be "fixed, trusting in the Lord." We get above the fogs when we soar to God, and circumstances in their wildest whirl will not suck us into the vortex if we are holding by Him and know that He is at our right hand.

ALEXANDER MACLAREN.

Good men and women are the best indicators of God's omnipresence.—*Selected.*

## LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full sheep, stiff covers, gilt edges, same paper and size of page as cloth edition, each prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Five or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a briet and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50: Six copies, $7.00: Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Secretary Shaw has decided to stand by the ruling of his department regarding the anomalous relation of Porto Rico toward our immigration laws. The situation arises out of the organic act making Porto Ricans "citizens of Porto Rico" instead of "citizens of the United States" as the Hawaiians, in corresponding legislation, were declared to be. Porto Rican citizens, accordingly, have no privileges over other foreigners in entering our ports.

At Manila recently the Federal party gave a banquet to Governor Taft, during which the native speakers complimented the governor, expressed faith in and affection for him, and promised to support his administration.

The value of the export trade of the United States with Africa has increased during the fiscal year 1902 to $33,000,000. England's export trade with the same country during 1901 was valued at $157,000,000.

**Foreign.**

Some interesting experiments are being made in England toward the solution of the housing problem, through so-called model villages. One of the most successful of these model villages is Port Sunlight, near Birkenhead, England, founded by the Lever Brothers in the interest of their employees. The present population of the village is about three thousand persons, who live in blocks of extremely picturesque cottages, each block having from two to seven houses built in early English style, and all varying in design; while each house has its patch of garden or lawn in front, and a bathroom among its interior arrangements. The rentals of the houses (of which there are six hundred) are in many instances as low as five shillings per week. The establishment represents an outlay of £350,000. Yet Mr. Lever asserts that merely as a matter of business it has paid him to invest this great sum in securing the general well-being of his workmen.

A bill has just passed the Cuban House of Representatives which authorizes President Palma to negotiate for the Republic a loan of $35,000,000 American gold at minimum rate of issue of ninety per cent and maximum rate of interest of five per cent per annum. The loan is redeemable in forty years. Four million dollars of the loan are to be used in developing agricultural and live stock interests and the balance in meeting the obligations of the transitory provisions of the Constitution.

The railroad from Damascus to Mecca, which is being built by the Sultan of Turkey, will be a great convenience to many thousands of pilgrims in the Turkish Empire and Persia. The railroad will be welcomed by all Mohammedans, because it will enable the pilgrims to visit both Mecca and Medina, one the birthplace and the other the burial place of Mahomet.

The J. P. McDonald Construction Company, an American concern constructing the railroad from Guayaquil to Quito, invited the Ecuadorean authorities to attend the inauguration last week of the railroad station at Alausi, which lies seven thousand feet above the sea and ninety miles from Guayaquil.

The corner-stone of the new Campanile at Venice is to be laid April 22, 1903. The cost for rebuilding is estimated at about half a million. The subscriptions from all sources amount to $295,000.

It is said that Paris has the largest debt of any city in the world, and is soon to issue a new loan for $40,000,000.

**Industrial and Commercial.**

The Southern Pacific surveyors have been engaged since last spring in locating a tunnel route for the Central Pacific road through the Sierra Nevada mountains. It is said that the route laid out by the surveyors provides for a tunnel nearly seven miles in length. The estimated cost of constructing the new route is fourteen million dollars. It will cut down the summit grade fifteen hundred feet and enable the company to eliminate all but three miles of its forty-two miles of snow sheds. The tunnel is to pierce the mountain at an elevation of about 5,300 feet. It is expected that the new route will reduce the time between Chicago and San Francisco about twelve hours.

A large plant is being established in the Tyrol, for the smelting of glass by electricity. These are the first works of their kind ever erected, though the electrical process of glass-making has been practised for some time past at Plattenberg in Westphalia. The first successful attempts at glass manufacture by the aid of the electric current were made some four years ago at Cologne.

Estimates of the wheat crop of the Canadian Northwest place the yield at seventy million bushels. This is almost entirely an exportable surplus. The time necessary to market this crop will depend on several factors; among them, men for the harvest, transportation facilities to the lakes, in both of which there is a deficiency, and the capacity and availability of the lake elevators.

The report of Lieutenant Ward Winchell, U.S.N., the expert detailed by the Navy Department to observe the installation and efficiency of the oil fuel system as fitted to the Oceanic Steamship Company's steamer Mariposa, has been received at the Navy Department and is said to contain matter of great value to the shipping and naval world.

The seven-masted schooner Thomas W. Lawson, the largest sailing vessel in the world, was successfully towed last week from the Fore River Works, Quincy, Mass., into Boston Harbor. After adjusting her compasses she headed for Philadelphia where she will take on a cargo of soft coal consigned to a Boston firm.

Beginning with September, puddlers in the steel mills at Pittsburg have received an advance of twelve and one-half cents per ton, and iron mill finishers a two per cent increase in wages. These wages, affecting twenty-five thousand men, are the largest ever paid in the history of the trade.

A swamp at West Homestead has been filled in with hot slag which has hardened into a solid mass. On this foundation will be erected by the Carnegie Steel Company the largest structural and angle plant for the manufacture of steel in the world.

**General.**

After having vanished from view for more than a year, the planet Eros has been rediscovered. The planet was first observed in 1898 by Witt of the Urania Observatory, Berlin, and given the name which it bears. Until 1898, as far as telescopes could show, Mars came nearer to the earth than any other planet, but after Witt's discovery it was found that Eros reached a point a little more than a third of the distance from earth to Mars.

The appearance of a new star in the constellation Perseus, and its rapid expansion into a nebula, which has been going on for some time past, have revived among astronomers the theory that some nebulæ may be formed by explosion. About 1870 Professor Bickerton of Canterbury College, New Zealand, showed that, if two stars should graze one another, the abraded parts, if relatively small, would have so high a temperature that they would at once become nebulous, and that the nebula so formed would, under certain conditions, continue to expand until dissipated in space. The present expanding nebula, has been growing at the extraordinary rate of several thousand miles a second, and is, in many ways, one of the greatest celestial wonders of the time.

The special 20th century funds, raised by the various religious bodies in England and America, have reached an aggregate of about $40,000,000. Abroad, most all the results aimed at have been obtained; but, despite the fact that more religious bodies went into the work there than here, fully half of the $40,000,000 total is to be credited to America, the Methodists North alone having raised $17,000,000. When the movement began the debts on Congregational churches in England were $2,500,000. To-day almost all of this has been paid.

That the automobile is coming into very general use is evidenced by the very large importation of foreign made machines. In France every owner and every chauffeur has to pass a rigid examination. Then his name, residence, clubs, gearage, and other details are taken and a number given him which must be placed on the back of the car. No machine is allowed to stand in the street unless it is occupied by a licensed operator.

Boston's famous subway system is to be enlarged by an extension to East Boston, which will pass under the intervening arm of the bay, and on which work is now rapidly progressing. Also by the Washington Street subway, which will connect with the East Boston branch at the old State House, where a commodious sub-station is planned for.

There is one curious thing about a Russian winter—in the latter part of October or the beginning of November the weather will be mild and no sign can be seen of an approaching change, when suddenly a light haze will be seen in the northern sky, and in twenty-four hours the thermometer may fall fifty degrees.

The steamship Colonia, from Liverpool, with the Pacific cable on board, has arrived at Victoria, B. C. After coaling she goes to Bamfield Creek, on the west coast of Vancouver Island, the terminal of the cable, where she will begin the work of laying it.

It is said that a mining shaft at Sombrerete, Mexico, is almost exactly on the Tropic of Cancer, and at noon on June 21 the sun shines to the bottom, lighting up the well for a vertical depth of eleven hundred feet or more.

Rear Admiral Frederick D. Rogers, commander-in-chief of the Asiatic station, will be the next commandant of the New York Navy Yard.

## Selected Articles.

### At the Threshold of Fall.

BEFORE the gray winds come and the birds go; while yet buckwheat bloom is sweet to the bees and the rising sun awakens nymphæa on the bosom of the misty pond; while yet the fields are fragrant with rowen clover, and the grouse and the wood-hen cluck to their late broods in the hazel thickets; while the lush greens of summer still possess the fields and crown the hills with sumptuous repose in the long day—in short, just now, let us give grateful praise to the uncommon loveliness of the season. How the earth has felt the luxury of its vegetable life, how flowered and leaved in marvelous gayety and profusion, how sent forth new swaying birches and cedars, hemlocks and pines, and flung forth, as in child's play, the delicate tender red leaves of spring from the ends of young maples and oaks! Nay, spring hues and fall tints have even balanced each other on the same saplings, so have remembrance and forecasting joined together in the happy unity of the year's advance.

And now that the later and more splendid of the golden-rods are beginning to glorify the plains and gleam in the bushrows between the fields, the aster tribes are beginning their royal succession in the violets and purples which are so much more emphatic than their earlier fellows of the wooded shades whose ray flowers are white, though their disk flowers are red gold and lemon yellow, ripening to deeper tones as they grow old. The character of these autumn blossoms is such as to challenge every eye, and indeed it is chiefly now that the element of daring and vigorous splendor comes into evidence, and the earth grows rich with the glory that none can pass by. It is the garnered sunshine of the centering life of the year that now echoes the great orb in which is embodied and from which proceeds the very inner vitality and energy of our familiar earth. What a tremendous revelation is this—not the gentle, tender, slow graces that begin the floral year, with their shy spiritual apparition, as arbutus, hepatica, pyrola, linnæa, partridge-berry, and such silent woodland flowers, that must be sought in their seclusion. Even the tall white daisies and buttercups seem retiring as the black-eyed Susans take their places in the fields. There are still recluse beauties in the woods, but who thinks of them in the brave onset of the goldenrods, purple asters, and the sunflowers—flowers that seem to say, as the poet appealed to the rose:—

> Suffer yourself to be desired
> And not blush so to be admired.

It is interesting to note how the ripening of leafage into fall color begins humbly, on the ground, so that now in many a field one sees whole tracts that are harmoniously colored in orange and flame, from the little buckwheat vine, which creeps on the earth where it finds nothing to climb upon, or more intensely red with multitudes of other polygonaceæ, such as smartweed, heartease, and the rest, whose pinkish flowers but serve to tone down the self-assertion of the red stems and leaves. Now the high grasses and sedges come out with notable plumes, and their stems and long swaying blades, deep with maroons and olives, lift the picturesque flower panicles into light in an aerial freedom; and the thatch that abounds on our plains begins to assume that Madira-wine tinge that gives its tone to many an acre. Besides these there are the sumacs, beginning to intimate the riot of leaf-color to come, while their scarlet or crimson pompons break upon the sight like fantastic triumphal decorations of the march of the hosts of the out-going year.

Meantime, the katydid has come, a little belated this year and not so strong in numbers as often. The evening concerts from the trees are wonderfully soothing and contenting—a single movement of the great insect chant, which in all its variations makes a symphony of nature, though the sonata form has never been mastered by these curious orchestral performers. Monody is the true epithet for the crickets and the grasshoppers; as for the cicada, whose savage whirr resounds at noonday, he wields an instrument that belongs rather with the sultry African music, not yet harmonized to a sensitive ear, and which is rather a barbaric interruption.

*The Springfield Republican.*

### Migration to the Canadian Northwest.

WHY do they "trek"? This is a question which many of my fellow-countrymen in the United States are now asking with regard to the stream of emigrants from the Republic to the Dominion of Canada. But yesterday the stream flowed the other way, and the people of Canada trooped over to the United States, thousands of them, every year. Now the trek is to the north; the "balance of trade" is with the Canadians.

It is not through any antipathy to American institutions that these hardy sons of the soil,—for the emigrants are notably the best type of agriculturists,—go forth to take up new homes in the sparsely settled great land of the north. The outgoers are men and women who have nothing but the kindest regard for the Republic and republican institutions.

Social and industrial reasons alone dictate the emigration. The desire of the emigrants is to better themselves. Within the past few years Canada has been discovered. She might have been discovered before, only the enterprising population to the south of the Dominion were too busy discovering the almost boundless resources of their own country, and bringing them into subjection, to permit of much time being devoted to their neighbors.

The settlement of Canada's vast vacant lands is barely begun. There are, it has been ascertained, in northwestern Ontario, in the province of Manitoba, and in the territories of Alberta, Assiniboia, and Saskatchewan, at least 200,000,000 acres of farm lands: over 250,000 square miles of habitable territory, of which probably seven-eighths are as yet unoccupied. The possibilities are great, the outlook captivating to an adventurous American. Take Manitoba as an object lesson. It has within its bounds 47,332,840 acres, of which 6,329,000 are lakes and 1,300,000 in timber reserves, leaving 25,000,000 acres of cultivable land.

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

Though last year only 2,952,000 acres of this territory was under crop, so great was the yield of wheat, barley, oats, and other crops in the province and neighboring territories that the railways were blocked for months, and every available means of transit by land and water are yet busily engaged in carrying the products of the phenomenal harvests to the world's markets. The Canadian Pacific Railway, to head off similar prospective conditions this season, has just obtained power from Parliament to add $20,000,000 to its capital stock, of which one half will be devoted to purchasing rolling stock and the other to providing new lines. These great crops and bright prospects have given an impetus to railway building in Canada, and whereas the Dominion was until recently contented with but one transcontinental line, the construction of another is now being rushed, to run several hundred miles north of the Canadian Pacific Railway.

Now that land can no longer be had in the United States for the squatting on, and when even railroad lands bring big prices in the open market, the temptation which such a country as we have here described offers to the progressive American farmer is very great. If he has money, he can buy a good improved prairie farm in western Canada for very much less than his own holding will bring. If he has a wealth of grown boys, he can obtain free of cost to himself, and for every boy over eighteen years, a farm of one hundred and sixty acres ready for the plough, and by united effort they can double their holdings by the yield of their labor in two or three years. This statement is not made at random. I have been over the territory, and have met with numerous instances of success in this regard. I knew a man who for a quarter of a century toiled on a stony, hard-to-work hundred acres in eastern Canada, and barely made enough to feed and educate his four sons and one daughter. He took the western fever, and settled west of Brandon, Manitoba, a few years ago. He sold his farm in Ontario, invested the money in adding three hundred and sixty acres to his free grant of one hundred and sixty acres; obtained one hundred and sixty each for his three full-grown boys, and together they began to work this immense farm. The money borrowed at ten per cent to stock the place was all paid off in five years, and so well did the venture turn out that the daughter was sent to a ladies' college in Ontario to complete her education, and the boys, at the end of eight years, were able to take a trip to Europe. This is no exceptional picture of the successful prairie farming in Canada, and it accounts in some measure for the present rush to the northwest from all parts of the continent and from Europe.

So the Yankee is trekking. Last year he crossed the border twenty thousand strong. In the first four months of 1902 the number of emigrants from the United States was 11,480, and they brought with them to Canada over $1,000,000 worth of property. As I write they are still pouring in, and it is expected that this year the number of newcomers from the United States will be more than double that of 1901.

The government that has held power in Canada for six years came into office with a pledge to hold the public lands for the settler, and not for the speculator. They have kept their promises, and land cannot now be obtained from the government except by *bona-fide* settlers, who do not get a deed until they build a house, cultivate some of their land, and remain in possession several years.

The Yankees cross a boundary line which is largely imaginary, and find a vast country with abundance of the very best grain-growing, cattle-raising, butter-and-cheese-making land for the taking up, if government territory, and for a mere song if the property of others. They find a land with a bracing, health-promoting climate,—cold at seasons, it is true, but just as enjoyable as to climatic conditions as the tier of states along its southern border. Then, the fuel question has been solved, even for the Canadian prairie settlers. West of the Red River and east of the Rockies there is much wood, and where it is not easily obtainable there is plenty of coal. Over 65,000 square miles of coal lands, much of them under government control, are known to exist in the area named. Newcomers from the United States find, too, that Canada is a country with institutions like our own, and with perfect security to life and property everywhere. Let me note that $40,000 was spent by the Canadian authorities in tracking and bringing to justice a murderer who waylaid and killed two citizens of the United States who were coming out of the Yukon territory. It was a large sum, but when some one in Parliament asked the Minister of Justice for an explanation of it, he said it was well spent, and would be spent again under like circumstances, for the Canadian government was determined that life and property should be protected.

CY WARMAN.

In *Review of Reviews.*

## A Chinese Statesman on America.

AN American student usually realizes that education is the stepping-stone to achievement. He studies with the expectation of fitting himself for the profession or occupation he is ultimately to enter. He makes the most of himself as a student, that he may be able to make the most of himself in his chosen career. All through his course of study this idea is instilled into his mind, and the consequence is that he leaves his college or university well prepared to enter upon life's activities. He is sure of himself. I may also add that the schools of the United States, both public and collegiate, are the crowning glory of this young and great republic. No words can bestow upon them too high praise. No estimate can be put upon the good which they are accomplishing in training young women as well as young men for future usefulness. Systematic education is reaching its highest form in this country. Its results are so practical that the country cannot help but advance.

The intelligence of the average American is worthy of note. This, I take it, is due in large measure not only to the excellent schools, but also to the innumerable newspapers and other publications. I have found, in all parts of the country, that in every town of any size there is published a daily paper, and that the metropolitan publications circulate in the homes of the most remote corners of the land.

The ability to seize his opportunities, which is characteristic of the American, is seen in the business enterprises of the country. Its industrial machinery is adjusted to the production of its wealth on a scale of unprecedented magnitude. This is a valuable condition. China is but awakening to its vast possibilities, and more and more will she welcome the American merchant and American commerce within her borders.

WU TING FANG.

In *Success.*

"There is one universal religion—the religion of love. Love your heavenly Father with your whole heart and soul, love every child of God as much as ever you can, and remember that the possibilities of good are greater than the possibilities of evil: and you have the Key to Heaven."

Helen Keller quotes these words in her interesting article in *The Ladies Home Journal* as having come from the lips of Rev. Phillips Brooks, in answer to her question, why there were so many religions. She adds, "Bishop Brooks taught me no special creed or dogma, but he impressed upon my mind two great ideas: the fatherhood of God and the brotherhood of man, and made me feel that these truths underlie all creeds and forms of worship." "I have found no creed or system more soul-satisfying than Bishop Brooks's creed of love."

## The People's Book.

THE National Educational Association at its recent annual meeting "resolved" that it would be well if the Bible might be studied in the public schools as literature; the implication being plainly made that general familiarity with the Bible was decreasing. Had the Association's members consulted publishers and booksellers, whether personally religious or agnostic, instead of accepting the baseless statements made in some public prints, they would have learned that, despite the many millions of Bibles already in existence, the annual demand for the old book is far greater than that for the new novel—no matter which—that has passed its quarter million mark, and that "everybody" seems to be reading.

The past few years have seen far more new editions of the Bible than of any other book, and many more are in preparation, the purpose of each publisher being to provide notes, explanations, maps, pictures, historical references, etc., that shall make Bible reading less puzzling and more informing than it has been in the past. If all the new Bibles are not being read, for what purpose were they bought? They are not thrown away, nor can they be found in the second-hand bookstores.

The only reason for supposing the Bible is less read than it once was, is that Christianity is developing from a matter of doctrine into a rule of life.—*Harper's Weekly.*

## Historic Missions.

THE historic old missions of California, relics of a picturesque past and monuments of the earliest civilization on the Pacific coast, are to be preserved. Steps have already been taken to repair them without destroying their rough grandeur or marring the unique types of architecture which they represent.

The old structures are not to be rebuilt. They will merely be kept in their present condition because of their historic value and as reminders of the romantic epoch of American history for which they stood.

The work of saving the old missions, which are crumbling in decay and disappearing, is being carried on by the Landmarks Club of Southern California, whose aim is to preserve the pretty traditions that tell the story of the pioneers who inhabited that region long ago.

There is a great deal of romance woven about these now falling buildings, which once stood out as the most unique institutions of a wild and half-civilized region. Round these crumbling stone walls, defaced and marred by more than a century of exposure to wind and weather, surged the wild, fighting Indians for whose salvation the religious enthusiasts of those primitive days journeyed through perilweighted forests, sacrificing their homes, their personal comfort, and even their lives to the cause which they so persistently prosecuted.—*Exchange.*

## The Right Thought of God.

GOD made everything that was made, as St. John says, "and without him was not anything made that was made." Who made sin and sickness? Did God? Are they a part of God's creation? God is Good and has created everything, did He create a capacity in His creation so that sin, sickness, and death could be evolved?

On the basis that God is infinite Good and all powerful, Christian Scientists are gradually gaining a supremacy over sin, sickness, and Satan. This dominion is rightfully man's, since it was originally given him as recorded in Genesis. Instead of these errors controlling man, and taking possession of him, and destroying him, man should control them. This control is not by enduring but by overcoming all powers that are opposed to God, and the most natural way of accomplishing this end is taught by Christian Science. Christian Scientists agree most emphatically with our critics that the healing is a compassionate act of an all-powerful God, they differ from him as to the method in which an all-loving, all-powerful, all-knowing, heavenly Father accomplishes this compassionate act of healing the sick and reforming the sinner.

As there is nothing divine except what relates to God, therefore Christian Science in honoring divine healing has honored God. No church has honored God more than Christian Science has, for it teaches man to pray to God without ceasing, and to depend on no other help.

JOHN E. PLAYTER in *Medical Dial.*

## Faith and Understanding.

HEALING in Christian Science, which brings freedom from sickness and sin, is founded not upon faith alone, but upon an exact knowledge of God. We are set free, Jesus tells us, by knowing the Truth, not merely by having faith in it. In this respect all branches of science are alike. We may have unbounded faith in the science of mathematics, but until we have a working knowledge of it, we cannot solve our problems. The ranks of Christian Science contain thousands of Christian people whose stanch faith in God has never wavered since it was implanted in their hearts at their mothers' knees, yet until that faith was supplemented by the understanding of God which they gained through Christian Science, they never were "cured."

The text-book of any science is necessarily the exponent of its principles, the arbiter of its ethics. In Science and Health Christian Scientists find a lucid exposition of religion, a guide to its employment, and a much needed "Key to the Scriptures."

The principles of Christian Science are set forth in their entirety in this book and nowhere else, but to grasp them it must be studied, not merely read. He who reads it through glasses of prejudice and antagonism may find much to condemn and criticise, but the man, woman, or child, who turns its pages looking for the good, searching for a clearer knowledge of the God who is Love, will never be "sent empty away."

Excerpts from article by WM. B. RATHVON.

## An Explanation.

To the Editor.

*Sir:*—It appears that our editorial friend is still perplexed over what seems to him an inconsistency in the lives of Christian Scientists; viz., That while they exalt Mind and belittle matter, they continue to eat and wear clothing, shoes, etc. And no doubt he may entertain the same view which we once held, that because Jesus ate and wore clothes there was something impractical in these words, "It is the Spirit [Mind] that quickeneth, the flesh profiteth nothing;" also that he demanded: "Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on."

It is certain that Christian Scientists do eat and drink, indeed, with more comfort, many of them, than when they were tormented with the pangs of dyspepsia, indigestion, and gastritis, and governed by countless contradictory, hygienic laws. And they wear shoes, better shoes, many of them, than when sickness, discouragement, and dissipation prevented their activity in such labors as would make them worthy of their hire. And they have better ability to assist in the feeding and clothing of others than before they were acquainted with the beneficial effects of Christian Science.

But Christian Scientists are learning that the life and teachings of Jesus were not inconsistent, and that through Christian Science an understanding of Christ Jesus, as the

Digitized by Google

Way-shower, that is, an understanding of his words and works, makes practical Christianity possible to-day. They are learning that to "seek first the kingdom of God and His righteousness," in other words, the kingdom of Spirit, of Mind, and of right thinking, purity of thought, will be rewarded by the supply of the natural needs of mankind. In rightly viewing the subject it is necessary to observe that Christian Scientists do not claim to be Christian Science; but that by the application of Christian Science they are becoming better men and women, improving their conditions morally, spiritually, and physically; relying more upon God as Spirit, Mind, Intelligence, and Cause; and less upon non-intelligent matter. NORMAN E. JOHN.

## Marking of an Historic Spot.

BENEATH the cloudless sky of an ideal September day Matthew Thornton chapter, D. A. R., dedicated a tablet, this morning (September 12), marking the site of the homestead of John Lovewell, one of the earliest settlers in Dunstable and who gave shelter to Hannah Duston when she arrived here after her escape from the Indians.

Fully a hundred members of the chapter and their friends assembled at the spot, which is just east of the second bridge over the Salmon brook, to take part in the exercises, and the programme was a very interesting one. Miss Katharine M. Thayer, acting as regent of the local chapter, had the exercises in charge.

The tablet, standing just to the right of the highway and beneath the shade of a sturdy young elm, is of granite and bears, in deep cut letters, the following inscription:—

ON THIS POINT OF LAND DWELT
JOHN LOVEWELL
ONE OF THE EARLIEST SETTLERS
OF DUNSTABLE, AT WHOSE HOUSE
HANNAH DUSTON
SPENT THE NIGHT AFTER HER
ESCAPE FROM THE INDIANS
AT PENACOOK ISLAND
MARCH 30, 1697.
ERECTED BY
MATTHEW THORNTON CHAPTER, D. A. R.
MARCH 30, 1697.

Miss Thayer opened the exercises with a few appropriate words, stating that the tablet had been erected by the chapter to show its appreciation of the sturdy character of the men and women who had braved the dangers of the wilderness and established homes far from their kindred.

Duke Street was then sung and the divine blessing was invoked by Rev. H. H. Mott.

Before the exercises were brought to a close Mrs. Augustus Berry of Pelham, a direct descendant of Hannah Duston, was called upon, and her address was very appropriate for the occasion. Hon. Virgil C. Gilman gave the authority for the spelling of the names upon the tablet, also for the site of the homestead. The stone was erected under the direction of this committee from the chapter: Mrs. Edward Murgatroyd, chairman, Mrs. John A. Spalding and Mrs. D. F. Runnells.

The address was delivered by Judge E. E. Parker and was a very eloquent effort.

*Nashua* (N. H.) *Daily Telegraph.*

Of special interest to our readers is the fact that this tablet marks the home of an early ancestor of our Leader. This John Lovewell was the father of the famous Indian fighter, Captain John Lovewell whose daughter married Captain Joseph Baker of Pembroke, N. H., the great-grandfather of Rev. Mary Baker Eddy.

# The Lectures.

## Judge Hanna's Initial Lecture.

THE following paragraphs are taken from a five column report by the *Dayton* (O.) *Herald.*

Victoria Theatre, Sunday afternoon, September 7, was crowded with as representative an audience as ever assembled, to listen to a lecture on Christian Science by Judge Septimus J. Hanna of Boston, Mass. The Judge was introduced by Rabbi Max Wertheimer of this city, who a few years ago espoused the Christian Science cause. The Judge was greeted with great applause. His lecture was a masterly production, and ably delivered; clear, concise in every way, and listened to with profound attention. His exposition of this doctrine will enable all who read to better comprehend the dignity of Christian Science, its true worth and work. No one could listen to this lecture and go away and truthfully declare Christian Scientists to be a godless and Christless class of people. Such a noble work to uplift mankind should receive the encouragement of all Christians.

In introducing the lecturer Rabbi Wertheimer spoke, in part, as follows:—

*Fellow Citizens and Friends:*—Thought rules the world and influences the lives of all. There is very much promiscuous foolish thought as well as correct and loving thought, garbled nonsense as well as awe-inspiring statements of Truth. What then are we to do? The Apostle Paul said, "Prove all things, hold fast that which is good." In the Greek original version, this text is even more emphatically stated and reads thus: "Put to the test all things, hold fast that which is good." I thank Paul for this advice. It gives unmolested scope of research, tolerance, and liberality.

It is only by unprejudiced investigation and testing, by contrasting and comparing all the various systems of philosophy with which mankind has been blessed and cursed, that we can arrive at a logical conclusion as to what is good for all, and what is evil.

Alexander Pope said, "The proper study of mankind is man." Spurgeon said, "It is a deplorably barren subject; say rather, the proper study of mankind is God," and this is the teaching of Christian Science. It begins with an infinite God and sticks to its text of Infinity. Emphasizing this colossal thought of the infinity of Good, we cannot logically assign any permanent power to the counterfeit forces of evil, and this thought is to rule mankind some day.

As a teacher of and contributor to Christian Science literature, the lecturer whom it is my pleasure to introduce, has done unremitting service. For eight years he was intrusted by Mrs. Eddy with the editorship of the weekly *Christian Science Sentinel* and monthly *Journal,* during which time he also officiated on Wednesdays and Sundays as First Reader of the Mother Church. He has recently been appointed as an authorized member of the Christian Science Board of Lectureship, and you are exceptionally privileged to hear his first public lecture, for which I can safely predict your unstinted attention and grateful satisfaction.

### At Maquon, Ill.

A very able lecture on Christian Science was delivered in the M. E. Church by Judge William G. Ewing of Chicago. Close attention was given to the lecture and much interest manifested. Judge Ewing was introduced by Attorney Emmanuel Swigert who spoke in part as follows:—

*Ladies and Gentlemen:*—We have reason to feel highly honored in having with us the distinguished gentleman who sits upon this platform, and who is to address us this after-

Digitized by Google

noon,—a gentleman who has graced the bench of the Superior Court of Cook County, Illinois.

As to the teachings of Christian Science, I am obliged to confess that I know but little, but this age is characterized with a desire to learn. I apprehend that there are many present in this audience this afternoon because of their knowledge of, and sympathy with, the cause of Christian Science; that others, like myself, are here because of their desire to learn the truths evolved from the Science of Christianity, and I am certain that the scholarly and eloquent manner in which the subject will be dealt with by the gentleman who is to address you will prove both pleasing and instructive in the highest sense.

I now have the honor of introducing to you Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science.—*Correspondence.*

---

Ralph Waldo Emerson, writing to his daughter, says, "Finish every day and be done with it. You have done what you could; some blunders and absurdities no doubt crept in; forget as soon as you can. To-morrow is a new day; begin it well and serenely, and with too high a spirit to be cumbered with your old nonsense. This day is all that is good and fair. It is too dear, with its hopes and invitations, to waste a moment on the yesterdays."

---

Is not salvation the uniting of all our nature into one harmonious whole,—God first in us, ourselves last, and all in due order between?—GEO. MACDONALD.

## Announcements.

### Applications for Membership.

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Photographs.

A series of photographs were taken on the day of the Communion Service, showing a large body of Christian Scientists entering Mechanics Hall. These photographs can only be obtained direct from the photographer, Elmer Chickering, 21 West Street, Boston, size 13x16.

Mr. Chickering's prices are as follows:—

Where the pictures are packed for express, the price will be $1.00 apiece for the pictures, and 25 cents for packing, making $1.25.

In lots of six where they can be packed all in one bundle, the price will be $1.00 apiece, and no charge for packing.

In lots of twelve the price will be 85 cents apiece, and no charge for packing where they are shipped in one bundle.

In lots of twenty-five, the price will be 75 cents apiece, and no charge for packing where shipped in one bundle.

The above prices are based on finishing from one, two, or three different negatives.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

THE rule by which, in Christian Science, the words Principle, Mind, Spirit, Soul, Life, Truth, Love, are used, as names of God, and as synonymous with the name God, is clearly defined in our text-book, Science and Health. On page 465 we read: "They refer to one absolute God, and nothing else. They are also intended to express the nature, essence, and wholeness of Deity."

The misuse of these words is apparent in the last paragraph of the article on "The Education of Man" in the *Sentinel* of September 11. To write that love is the principle of all good, the truth of all good, the spirit of all good, is not scientific. The capitalization is incorrect. It should read, divine Love is God, the Principle or Spirit of all that is good or true.

The word Love when used to signify God expresses infinite Love, infinite Principle, infinite Truth, infinite Good. Human "love" is only the reflection of the infinite Principle, Love.

The phrase "The love which is of God, and which is God," is also incorrect. "The love which is of God" is not God, but the reflection of God, and the reflection of God is not Deity, but is simply godlike. God is Love.

Further, an article on "The Education of Man" which omits reference to the most important factor in this education, namely Christian Science, should not have been reproduced in our publications. The only teacher is Truth, and the Science of Truth is therefore the one essential of education.

## Progress through Consolidation.

THE prime factors in the growth of any cause must of necessity be its own inherent virtue, and the wisdom, integrity, and energy of its leader. Of great importance, however, is the unselfish loyalty of its adherents, and their willingness to do whatever seems best for the general good, most conducive to the progress of the cause, which, in the case of Christian Science, means the greatest good for humanity.

Spiritual and material strengthening through the consolidation of churches, marks the present era in our denominational advance; and in no department of progress is the truism, "In union there is strength," better exemplified. It must not be inferred, however, that the frequent reports of such consolidation indicate a decrease in the number of our churches. On the contrary, the marvelous growth, to which the world is becoming accustomed, continues, and this union of churches is but the means whereby particular fields are strengthened and prepared for the natural expansion which has been delayed, perchance, through division.

The very general expression of satisfaction called out by these consolidations, as reported from time to time in our periodicals, is most gratifying. M.

## "Open, Sesame."

IN our testimonial meetings and "Testimonies from the Field" we frequently hear and read of the power of a text from the Bible, an expression from Science and Health; of a verse or stanza of a hymn, an inscription, or even a picture, by which the liberated consciousness was flooded with light.

Hungering humanity, yearning for the same liberator, turns hopefully to the same expression, only to be disappointed if it adopts it as a formula, the mere repetition of the letter, without understanding, and therefore without power.

"He uttered his voice, the earth melted," is scientifically grand, but it is not always of like significance, even to the same person. Do the adoption and use of the same words always produce the same results? While all these expressions are redolent with Truth, are words of Life, is not the real "Open, sesame!" the receptivity of one's own consciousness, be he practitioner or patient? Is it not the realization that Love is impartial, that the seeker is already and always found "In atmosphere of Love divine"? Is it not the realization that God's law of harmony obtains *now*?

To this receptive, prayerful, trustful state of mind, the words of Life from the Bible and from our text-book light the way into the rich storehouse of spiritual treasures. Daily living in this receptive obedience is the "Open, sesame!"

Truly, "The Kingdom of God is within you." S.

## The Offence of Personality.

How often, when prompted to advise or to rebuke in humility and love, are we hindered and controlled by fear lest we may hurt another's feelings. How often has the right, the opportune word remained unspoken, our duty been left undone, through this covert temptation to hide our responsibility under the assumption of a weak and baneful deference to possible sensitiveness and discomfort.

For the self-constituted critic and adviser who ventures his presumptuous intrusion upon others, there can be neither place nor tolerance. To all this, Christian ministry presents its contrast in the wisdom, kindliness, unobtrusiveness, and tactfulness of its appeal, and for one imbued with divine Love to declare that there are feelings which can be hurt, is to assume an entirely unscientific and unsaving attitude; and to be governed by this thought is to become amenable to sense rather than to Spirit.

If we know our brother as God's child, if the impediment of the thought of human personality be disallowed and destroyed, then we shall know that man may speak to his brother without hindrance or reserve, and that only good can come of our loyalty to the ideal in ourselves and in others. "Henceforth," says Paul, "know we no man after the flesh." Then surely the sensitiveness of the flesh can no longer beget fear, nor limit that true kindness which values our brother's welfare more highly even, than his good opinion. W.

IN an era of secular aggressiveness, when, in the counsels of the world, selfish indifference is so frequently escorted to the upper seats, it is most interesting and encouraging to find many of our great commercial dailies voicing again that stirring call to righteousness, justice, self-consistency, and fair dealing which made the words of the Master unwelcome to the sovereign and self-exercising hypocrisy of Judean marts.

The wail of the pessimist must give place when the pulpit is found in the counting room, and the ears of mercenary and political self-interest are thus compelled to hear the gospel of common brotherhood and communal right.

The ethics of the situation which has led to the coal strike, and the moral and religious significance of sentiments expressed by representative operators and workmen, have of late been subject, in secular editorial columns, to a fulness and thoughtfulness of analysis and criticism that would be a credit to wholesome Christian leadership.

Digitized by Google

**With the passing of a false conventional discrimination** between the secular and the sacred, the clergy have ventured to enlarge their range of thought not a little, and to discuss many subjects which the fathers would have eschewed; but the secular press is evincing the greater daring to-day, and the result is that a moral sense which is common to all the people is being appealed to, stimulated, and made assertive in a way and degree which gives promise of mightily affecting the trend of our political and economic life. And for this we have occasion to give thanks.

---

In evidence of a growing spirit of appreciation and good will upon the part of the press, we are pleased to note that *The Daily Argus* of Mt. Vernon, N. Y., prints in full the article headed "A Clergyman's Impressions of Christian Science," which appeared in our issue of July 24; and the August 14 issue of the *Weeping Water* (Neb.) *Republican* contains a six and a half column article on Christian Science, to which editorial reference is made, as follows: "Don't fail to read the article on Christian Science on the outside pages of this paper. Gather all the information you can, and don't be prejudiced."

---

## Among the Churches.

### Opening Services at Dayton, O.

SUNDAY, September 7, was an event of great importance to the Christian Scientists of this city. It was the formal opening of their church on the Boulevard, which they recently purchased from the Congregational Church. Having been newly painted and decorated, it presented a beautiful appearance, the interior of subdued green, base of dark green, gradually blending into a chamois-tone on the ceiling, rich and artistic in color effect, and soft and pleasant to the eye. In the vestibule there is a motto reading:—

"Divine Love always has met, and always will meet, every human need."—MARY BAKER EDDY.

And back of the Readers' desks, or pulpits, is another motto on ribbon design, reading: "God is Love."

The floral decorations were very pretty, consisting of palms, roses, carnations, and golden-rod. The audience assembled at both places was in every sense a representative one, a just credit to any worthy cause. Long before time for services to commence, the church was crowded, many standing during the entire service, and a number turned away, unable to gain admission.

Large delegations were present from Cincinnati, Columbus, and Indianapolis. Cars were chartered from Cincinnati, and a special train run from Indianapolis for this occasion. Visitors were also present from Springfield, Mechanicsburg, Hamilton, Piqua, Lima, Troy, Greenville, Eaton, O.; Richmond, Ind.; Louisville, Ky.; New York; Chicago; Scranton, Pa., and other places. Some of our hotels and restaurants were crowded. A beautiful incident was the attending in a body, of Second Church of Christ, Scientist, this city.

On the rostrum were seated Rabbi Max Wertheimer, who officiated as First Reader, and Mrs. Eliza P. T. Houk, Second Reader, Mr. John R. Hatten, the retiring First Reader, and Judge Septimus J. Hanna.

Services began by singing hymn No. 161, written by Rev. Mary Baker G. Eddy. The Scripture reading was selected from 84th Psalm and Revelation, 21st chapter. Then the entire audience bowed in silent prayer, followed by the audible repetition of the Lord's Prayer with its spiritual interpretation as given in the Christian Science text-book. After singing another hymn, Dr. Wertheimer spoke in part as follows:—

*Beloved Brothers and Sisters:*—We officially dedicate this building of ours to the one God of Israel. Without pomp and ceremony, the doors are thrown open to the public. Those who have not the Spirit of Christ are none of His, says the Bible. That church is mine that does most Christlike deeds. And Christlike deeds have been done here, are being done and will be done. In this hour of joy let us be grateful to the silent and noble toilers whom God has given us. The pioneers who paved a path in the Wilderness and prepared the way of the Lord.

Mr. John R. Hatten then spoke in part as follows:—

*Friends:*—It is by special request and a heart full of gratitude to God for this expression of divine Love that I welcome you to this all-day feast. To me this is a day of great rejoicing and thanksgiving. In this audience I see many who also have great reason to rejoice. I have known you in years past when your circumstances in life were altogether different from that of to-day. Why are we, as Christian Scientists, assembled here with faces beaming with smiles and good health, where once rested the dark lines of care and suffering? To the stranger within our gates we would answer, it is because we have found a religion that heals the sick as well as the sinful.

In looking back over the past nine years of our pioneer work in this city, a work beset with great discouragement and many seemingly insurmountable difficulties, there were times when it seemed that there was not a ray of hope, that all must go down in the dark waters of despair; yet the Truth has ever been with us, and at these trying times we were renewed in our efforts, feeling the great responsibility for which we came to this city, that the cause of Christ must be established, and that the gates of hell should not prevail against it.

Our church was organized March, 1894, with eleven members, and incorporated under the laws of the State of Ohio, January, 1898. We came into possession of this church property July 11th of this year. Our present membership is one hundred and twenty-eight.

As a church, we are much nearer the great goal of our hopes than ever before, and to-day's event marks another mile-stone in the history of our cause. Our formal opening of this beautiful little church is an expression of God's care over us. In the language of our text-book (Science and Health with Key to the Scriptures by Mary Baker G. Eddy), we can say: "Divine Love always has met, and always will meet, every human need." Is it not indeed a day for us to rejoice and to be exceedingly glad? This church home is but the substance of the things we have hoped for. May its doors ever swing in with a welcome to all; may its officers and members always be inspired with pure motives, striving to make this a place where the sick will be healed at our services, the sorrowing comforted, the sinful find and feel the Christ presence in sins forgiven, a place of refuge, a place where envy, hatred, and jealousy are unknown, where harmony reigns supreme, where one law binds all in one bond of Christian fellowship.

I would indeed be ungrateful, and these words would be meaningless, were I to fail to give a word of thanks to God that our dear Mother in Israel has been found worthy and able to receive, and teach us this Truth, a revelation that has relieved want and woe, healed diseases, reformed drunkards, reclaimed infidels, and made the world better. As a church and as a people there are none who have more to be thankful for than we have.

Mrs. Houk also spoke of the great value of Christian Science, expressing her joy for the present occasion. She said that the work accomplished thus far was due to, and further progress and success will be due to the continued manifestation of divine Love.

Judge Hanna said in part: "I feel with you deeply the significance of this event and know well what it has cost

Digitized by Google

to make it possible. This beautiful church is evidence that you have wrought faithfully and achieved well. I esteem it, therefore, one of the pleasures of my Christian Science career to be present with you on this occasion."

*Dayton* (O.) *Herald.*

### From Poughkeepsie, N. Y.

As anticipated, ground was broken for the new chapel in Poughkeepsie, September 3. The work of excavation has been begun, and the undertaking will be pressed to its completion. The *Poughkeepsie Enterprise* speaks of it as one of the most important steps, as well as the most progressive, in the life of the Christian Science Church in that city.

### Reopening in West Chester, Pa.

Last evening [September 3] the believers in Christian Science held their first meeting in their remodelled room on North High Street. The meeting room has been tastefully papered, and has a cheerful, cosy appearance, and when the meeting was opened, it was well filled.

After the opening service Miss Darlington announced that the room would be open on Tuesdays, Thursdays, and Saturdays from three to five o'clock, and that the literature was at the disposal of all.

She made a few remarks to the effect that the members have taken another step in the community and each should try to be more consecrated in casting out error. There is a work to be done and all should go into it joyfully, knowing that God is with us. After Miss Darlington's remarks the meeting was thrown open for testimonials and a number of believers spoke.

The *West Chester* (Pa.) *Republican.*

### Progress in Alhambra, Cal.

We, a small band, fourteen in number, desire to state to the Field our success, through earnest spiritual effort, in purchasing a building site in the most desirable part of our village, for which we paid six hundred dollars.

The opportuneness of this demonstration, and the simplicity and ease with which it was accomplished, prove conclusively that God is an ever-present help.

A building fund has been established, and through the realization of the spiritual church, "The structure of Truth and Love" (Science and Health), we hope ere long to build the material church.

We also wish to express our gratitude and appreciation to our dear Leader for her earnest endeavor to make clear to her followers the light of the blessed Truth through the revised edition of our text-book; and through her recent message we are led to see the great necessity of carefully observing and daily living these commands: "Thou shalt have no other gods before me," and "Love thy neighbor as thyself."

We have discerned the wisdom of our Leader's suggestion, and have adopted the By-law as to Readers.

WALTER HARRIS, *Clerk.*

### Kennebunk, Me.

It is very encouraging to us who have started Christian Science services to hear through the *Sentinel* of the progress of other churches and societies in the Field, and a report of the work in this place may prove correspondingly helpful to others.

When a number appeared to have become interested in Christian Science, and a desire was expressed to hold services, we felt authorized to act in harmony therewith. The Grand Army Hall was secured and the first service was held May 5, 1901. In looking back over the past year, we feel richly repaid for our efforts.

The First Reader comes from Portland, twenty-five miles distant. One who is now most helpful to us became interested by attending one of our services shortly after they were started. It appealed to her so strongly that she soon purchased a copy of Science and Health, subscribed for the *Sentinel*, has the Lesson *Quarterly*, is a most constant attendant, and as a natural result, is greatly improved in health.

A goodly number of Sentinels and Lectures have been distributed among those who drop in to the services out of curiosity or friendly interest.

Last fall a gentleman from Boston presented the public library here with a copy of Science and Health, and "Miscellaneous Writings" was donated about the same time, so that these works of our Leader might be placed upon the shelves together.

When we remember the number of stormy Sundays during the winter, and that some of our people live a considerable distance away and off the line of the electric cars, we feel that our attendance has been encouraging. We have had times, however, when a sense of discouragement would come to us, but Love has sent us unexpected helpers, and our hearts have been strengthened. We are continually holding the thought that it is not our work, but God's; and as He is the source of all supply, all its needs will be met; and surely the second year has started in most promisingly. A gentleman visiting at The Elms one Sunday in July gave us a most beautiful copy of Science and Health for the desk; the week following two solid oak desks for the Readers were sent us as a gift from First Church of Christ, Scientist, Portland, Me., and immediately after, the parties of whom we hire the hall had it thoroughly cleaned and the platform newly carpeted. All of this we greatly appreciate and are very thankful. We are fortunate in being so near Kennebunkport, Kennebunk Beach, and Wells, all noted summer resorts, so that a number of Christian Scientists visiting these places have encouraged us greatly by their presence at the Sunday afternoon service.—CARRIE E. REMICH.

### Growth in St. Louis, Mo.

Last Wednesday evening First Church of Christ, Scientist, in St. Louis, held its service in the large Hall of the Odeon, Grand and Finney Avenues, and hereafter, for a period of at least one year, the Sunday morning and Wednesday evening meetings will be held in this hall, the Sunday evening service being held in the church edifice as heretofore.

There were present at this service about seven hundred and fifty. The Sunday School will be held in the Recital Hall of the Odeon Building, which accommodates about five hundred. The large hall of the Odeon has a seating capacity of two thousand, and is the hall in which our last three lectures have been given. On each of these occasions the audience crowded the seating capacity of the auditorium.

The Odeon Building is of recent construction, the hall is the finest in the city, and will compare favorably with any hall of like character in the country. Its acoustic properties are excellent.

First Church of Christ, Scientist, in St. Louis, was organized in May, 1894, with a membership of fifty. Immediately thereafter steps were taken to erect a church building, which was dedicated November 10, 1895. This, we believe, was the first church dedicated after the Mother Church. The cost of this structure, apart from the lot, was $28,000, and it has a seating capacity of close to five hundred. Later about $6,000 additional was expended to meet the growing needs of the Sunday School.

During these years we have observed with great joy a growing interest in our Cause, resulting in large additions to our membership, which now numbers three hundred and fifty, and such an increased attendance at our two main

Digitized by Google

services as to necessitate the leasing of these larger quarters in order to seat those who come.

We have faith that even this beautiful and commodious hall will, ere long, be too small to accommodate those who are hungering and thirsting after righteousness, and who find their hope renewed, their courage strengthened, and their faith in God awakened through attendance upon our services.

About fifteen months ago a movement was started having in view the erection of a larger church edifice. A lot was purchased having a frontage of one hundred and fifty-two feet by a depth of two hundred and thirteen on our leading boulevard. Subscriptions were invited, and there is now a large sum in the treasury, which is being added to almost daily. Having secured this large hall, it is probable that action on the building of our new church may be deferred until the main buildings of the World's Fair are well under way, so as to benefit by the reduced cost of construction.

It is very apparent that the thought of this community has grown much more tolerant towards Christian Science as the years pass on. The lectures have contributed much towards this happy result, and the frequent cases of healing, both from sickness and sin, afford unquestioned evidence as to the truth of the teachings of Christian Science.

## From Our Contributors.

### Why do we Doubt?

F. A. G.

"If ye were Abraham's children, ye would do the works of Abraham."

Christ uttered this declaration as an axiom, a fundamental proposition, allowing of no dispute. Now as no Christian questions the validity of this assertion, is it not inconsistent for any Christian to question or oppose the declaration, "If ye [material men] were the children of God, ye would do the works of God," which is virtually the contention of Christian Science?

Jesus says that life eternal is to know the only true God. Human mind knows disease, pain, suffering, death; the diametrical opposites of "Life eternal." Now how in the name of all that is rational and practical in human experience, can these two direct opposites both be true, or be made to coalesce? How can human-mind knowledge be an emanation of the Mind which Jesus declared it is "Life eternal" to know? Such reasonings and conclusions as overlook absolute oppositions and negations in premises would never pass undiscovered, much less be accepted and become current, in any of the world's affairs; yet they are unchallenged and accepted by the Christian world at large in the one matter of most vital and eternal import,—the facts of Being; and the inexorably consistent Science of Truth, which does challenge and lay bare these irreconcilable discrepancies is pronounced by some unreasonable and dangerous! "Consistency thou art [indeed] a jewel," but how few care to "seek" thee, or desire thee, or even recognize thy unadulterated Light as they pass on to grasp the counterfeits of carnal-mind reflection.

### "And the Eyes of them that See shall not be Dim."

MYRTIE TENNEY.

A flood of sweet, grateful memories comes to me as I read the above quotation, and a feeling of deep and heartfelt gratitude to God that I have been awakened, and can see even a little of the beauty of holiness, and that my ears having heard the word have hearkened.

With joy I can say with the Psalmist, "Bless the Lord, O my soul: and all that is within me, bless his holy name, . . . and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases." Looking back over the past five years and recounting the innumerable blessings which Christian Science has brought to me, I wonder how I ever endured such a barren existence as was mine before I was awakened from the deep sleep of materiality, and how thankful I am that I have been permitted to do a little of the Master's work. It is such a small return for one having received so much, I have been requested to tell the readers of the *Sentinel* of the healing of a little girl of the claim of defective eyesight from birth.

The first of May, 1900, I went to the seashore taking with me a woman whose little daughter was to follow in a month's time. When she came, I saw a pale little girl wearing spectacles, and a great longing to tell her of her God-given freedom came over me, such compassionate love and pity, that one of His little ones should be debarred from the realization of her divine right. I said to her, "Dear, why do you wear those glasses?" She answered that she could not do without them, could not read or study, that the doctors said she was born with defective eyesight, etc. I told her that God never made imperfect eyesight and that they were the eyes that He had given her, therefore perfect, and asked her to take off the glasses and see if they were not all right, that the best of doctors made mistakes sometimes. She laid them away and daily we studied the Sunday lessons, she reading from a fine print Bible without the slightest difficulty, as well as reading other books a good share of the time. A few months later her mother found the spectacles out of the case, and asked what had she been doing with them. She said that just for fun she had tried to read with them and could not see at all.

She went through that school year without any trouble from her eyes, and graduated from the grammar school this year (1902), having done two years' work in one.

"And these signs shall follow them that believe [understand]." Is there anything else in this world that could give one such joy, such gratitude to God and our revered Leader, Mrs. Eddy, who has given us the spiritual interpretation of His word and made it possible for us to follow in the footsteps of our blessed Master, doing the works which he commanded? "Oh, for that light and love ineffable which casteth out all fear, all sin, sickness, and death; that seeketh not her own, but another's good; that saith Abba, Father, and *is* born of God!" (Miscellaneous Writings, p. 184.)

### "Freely ye have Received, Freely Give."

M. E. E.

*The Christian Science Journal* and the *Christian Science Sentinel*, are, in a degree, the property of every faithful worker in Truth. They have a place in our hearts; much interest is felt in their welfare; and our hopes are many for their usefulness in irradiating to the world the truths of Christian Science.

An important responsibility rests therefore upon each one to do his part to enlarge and promote this usefulness. We cannot fold our hands and wait for the weekly or monthly appearing of these messengers of Truth, hungrily devouring all that they bring to us, and then wait again for the coming of the next issue; we must do our part to heal the sick, feed the famishing, and encourage the faint. We must give of that which we have so freely received, for a treasure that is selfishly withheld, moulders and perishes; while given out, it flourishes and blesses anew the giver.

Possibly we have recognized this duty, and in obedience to its demand we may have sent an offering, only to experience disappointment, and even hurt, as week after week

Digitized by Google

we have looked in vain for its appearing. But our editors, watchful for that which will bring to all the greatest good, may have reserved it for future use, or may even have found it unavailable.

Often a wave of thought on some special line simultaneously sweeps over the field, and, in consequence, several articles may be sent to the Editorial Department which are much alike in substance, and a choice must be made. It does not follow that because an article does not appear in our columns, it is unworthy a place. If we are faithful to the Cause, and love its interests better than we love ourselves, we shall not let the non-appearance of our contribution discourage us, but will send again the best we have, and prepared as carefully as we know how, so that another will not have to do *our* work.

No word of Truth can be lost. If our contribution is the expression of Truth in Christian Science, we need not feel that our labor is useless, for its mission will be accomplished.

It has been said that when a pebble is cast into the ocean, the little circles on the water widen and ever widen until they reach the farthest shore. So when a clear thought of Truth is formulated, and we drop it into the ocean of human consciousness, its circling influences are far-reaching even beyond our ken. The tiny circlets of love have gone out, and we know not what weary, troubled sense may be quieted and blessed by them.

As we are prompted to do our part in this noble work; as Love impels us to give something out of our storehouse of experience, with the hope that, "A forlorn and shipwrecked brother seeing, shall take heart again," we will write our message out of grateful, loving hearts, praying that every thought expressed may satisfy some human need. If we give it entirely to God, realizing that it is from Him, and that He will take care of His own, and send it where divine Love would have it go, whether it appears in print or not, then there will be no anxiety regarding its fate, and no wounded sense of lack of appreciation should it fail to appear. Thus written and sent out our contribution will be the more likely to find its place in the pages of the periodicals that we so much love, and speak through them to thousands who need the encouragement and the help that our loving thought will give. Even if not accepted, it will be bread cast upon the waters, that will surely feed hungry hearts, and return to us in rich blessing, perhaps after many days; for every *giving*—even in thought—to Christ's "little ones" will have its reward. "Freely ye have received, freely give."

## Love.

EDGAR McLEOD.

During a western lecture tour, a prominent minister being asked by a press representative what the vital element of religion of the twentieth century would be, without a moment's hesitation answered, "Love." He said, "Love will be the slogan of the twentieth century."

In reading the First Epistle of John, who perhaps most clearly caught the radiant tone of Love from the Master, it is significant to note, after a life of prayer and divorcement from earthly ambitions, the beautiful simplicity and directness with which he tells these little churches primarily, and all the world eventually, that Love is all, and that the only measure of our progress that is at all reliable, is the depth of our love for our brothers and sisters, not a particular few, but all of them.

Before experiencing the healing, regenerating touch of Christian Science, I had not the remotest idea that there was a healing, benevolent agency outside and all around us, that was nourishing, guarding, and cherishing every condition of life, from the humblest little animal up to man, but with this idea I began to see what Jesus meant when he brings out the thought that not even a sparrow falleth to the ground forgotten of the Father. There may be those so obscure or degenerate that we regard them with contempt or aversion, or even some animal the lowliness of whose condition makes it despised, but Love loves them all without any reference to human estimate.

Experience has taught me that when the wrathful elements of affliction break over us, if we would only turn and let divine Love take us up heart to heart, we would be compensated, richly compensated, for any earthly loss.

Mrs. Eddy says: "Who hath found finite life or love sufficient to meet the demands of human want and woe?" (Science and Health, p. 257). I once stood where the finite love of friends and kindred was a mere mockery, and while duly appreciating the motive, words of human sympathy pierced my heart like daggers. Then it was, I was called on to turn and prove whether the teaching of Science and Health was simply a beautiful philosophy or a vital truth that could stand the test of the storm.

During that time I had moments of sweet peace, periods of beautiful harmony, glorious glimpses of divine Love, which perhaps nothing less afflictive could have revealed.

The experiences of these days have sweetened my life; have caused me to love all people better; to have more charity for shortcomings, more sympathy for failures, and as I begin to see that Love is the Father-Mother of all, animals which I have always loved have become doubly dear to me, and this holds good throughout the entire round of nature. There is an additional beauty in the sunrise, the forest, the landscape. A new charm is found in flowers since I have begun to regard them metaphysically and know it is Love that paints their petals, as Mrs. Eddy exquisitely puts it.

Mrs. Eddy says, "Love is impartial and universal in its adaptation and bestowals" (Science and Health, p. 13). One of the sweetest features Christian Science revealed to me, is the glorious democracy that everywhere exists in the kingdom of Love; the beautiful impartiality with which Love is manifest in all its ideas; from the most delicate little spray or flower to the giant oak. In comparison with the richness of God's love, what a poor time-server our mortal concept of love becomes, which classifies and limits to suit its own taste and culture.

## If we all Did our Best.

SAMUEL GREENWOOD.

If we all did our best, my struggling brother,
To be what God made us, for self and each other,
What kindlier hearts and happier faces
Would brighten the gloom of earth's desolate places!
What healing of heartaches, of sorrow and sadness,
What tides of good-will, what flowing of gladness,
Would flood this old earth with the glory of heaven,
If we all were but true to our nature God-given!

If we all did our best to be loving and kindly
Instead of thus crowding each other so blindly,
If brothers helped each to be truer and stronger
Gaunt phantoms of hatred would haunt us no longer!
The terrors of life would pass out as a vision,
And the shadows of sin with its pangs of remission
Be lost, in the sunshine of being primeval,
If we all lived for Good, and no one for evil!

If we all did our best where life's duties find us,
To work out our freedom from errors that bind us;
If our thoughts were all honest and pure and forgiving,
How much more sweetly would life be worth living!
What loads would be lifted, what gains gleaned from losses,
What love-jewelled crowns would follow the crosses,
What a heavenly place would this earth be, my brother,
If we all did our *best* for God and each other!

## Testimonies of Healing.

It is with pleasure that I testify to the benefits I have received from Christian Science. For two years I was confined to my home unable to do any work, and during this time under the care of four of our most eminent physicians; the last seven months of this time with the leading physician who, at the expiration of this time, pronounced my case hopeless, saying he had done all that he could do for me. This physician called my disease paralysis of the throat and lungs. Others named it consumption. I was coughing incessantly, suffered great pain all the time, hemorrhages were frequent; had night sweats and insomnia, and lost my voice for eleven months, not being able to speak above a whisper at any time, and the pains in my throat were excruciating.

My family, friends, and acquaintances had given up all hope of my recovery and, to be candid, I had come to the conclusion that I should soon die. It is written that "man's extremity is God's opportunity," and so it would seem in my case.

At this time an old acquaintance from another city, came to visit me, and was horrified to see my condition, and went away to bring to me a prominent lady of our town, that she might tell me of the healing of her husband by Christian Science. I was persuaded to try it, and like a drowning man catching at straws, I went to a faithful practitioner, who was highly recommended to me. I was very weak, and unable to get to her office without a good deal of exertion and fatigue. I was then taking the most powerful medicines every two hours, and stimulants between times, but when I commenced treatment I threw these all aside. Insomnia was immediately overcome, my cough gradually disappeared, and I had but two hemorrhages after I commenced treatment. It seemed to me I could feel my lungs fill up and grow strong and healthy, as I improved right along. My throat seemed stubborn, but each day I felt that my voice was returning, until one day at dinner I spoke aloud in asking for bread. My wife and daughter were so startled that a fear seemed to seize me, and I could not do it again until my wife telephoned to my healer and told her what had happened. My wife was told that if I had spoken once I could do it again, and at all times, and there was no occasion to be fearful. She gave me a treatment and my voice has been ever since and is now as strong as any one's.

For several months I have been working every day and often late at night. I can walk as far and as much as others much younger than myself. I am past sixty years old, and feel better on an average than I have for twenty years past, and with the aid of God and Christian Science and its teachings I hope to improve still more in ways yet unknown to me, and become more perfect in the understanding of the teachings of this blessed book, Science and Health by Mrs. Eddy.

The more I study and read the more I love its teachings, and I pray that I may live nearer to it day by day, until I understand it fully.

Before trying Christian Science, I was very sceptical, as many others are to-day on this subject, but I have had my eyes opened to what divine Mind, Love, and Truth can do, if sought through the teachings of Christian Science.

I thank God for the day I began to seek divine Truth as taught in Science and Health, and cannot tell in words how grateful I am to our Leader for giving us this book.

WILLIAM H. HAMILTON, Sacramento, Cal.

---

Immeasurable peace and blessedness have come into my life since Science and Health was put into my hands some twelve years ago. I did not need it for the physical healing, though I have since had numberless proofs of the preventive and curative power of Christian Science; but it seemed too good to be true that in this little volume was offered us absolute, practical Truth,—not guesswork or vague theories. My father was an infidel, and from him I had learned to be very critical, to take nothing for granted but to dare to investigate any statement, no matter how hoary with age and respectability. He read the "little book" but said that Christian Science was but adding one more to the myriad sects already in the world, and that all of truth never would or could be contained in one book, or be written by one person. My heart sank, —I had so longed to have his reason confirm my hope; but as my heart and head insisted that Science and Health surely did reveal the whole Truth, even though I could not yet perceive it, I tacitly accepted the challenge, and for years looked into every phase of mortal belief,—theosophy, spiritualism, the many shades of mental science, and other vagaries of human thought. I was seemingly darker and more mystified all the time, yet the error was destroying itself, and in time, after much assistance from my teacher in Christian Science, and through the privilege of living in the home of another Christian Scientist whose daily "line upon line" of Scientific counsel was invaluable to me, out into the clearing of God's own Truth I came, inexpressibly thankful to Mrs. Eddy for having given us the "Key to the Scriptures" whereby we may learn to follow the Truth that not only frees us, but enables us to help others.

Here I would express my earnest thanks to the many loyal workers who have consciously or unconsciously reflected the Light to me. How often at the testimony meetings I have heard the word that I most needed! To those who cannot yet make their demonstration to speak in these meetings, I would say with Longfellow, "Give what you have; to some it may be better than you dare to think."—FRANCES E. BAKER, Milwaukee, Wis.

---

I was relieved, and afterward healed of great suffering, of more than one year's standing. Through the assistance, patience, and kindness, of my Christian Science practitioner, I gradually but surely found myself as God's own child as the false mental images faded from my consciousness. It seemed a severe struggle, but I pressed on, never doubting or wishing to return to the old thought, or listening to error telling me there was no good in Christian Science.

I have worked to bring this living power in touch with my daily needs, and I find it meets them in proportion as I learn to ask aright, and obey divine Law. Mrs. Eddy tells us in "Unity of Good," p. 4, "Truth is God, and in God's Law, hence obedience is imperative."

I would say to those trying to find the light, go forward without fear, for with Science and Health unlocking the treasures of God's word you will be shown the true path to health, joy, peace, and hope, and say with me, God bless our Leader for what she has given and is giving to the world,—a practicable, demonstrable faith wherein our burdens are made light, our vision clearer, so that we may awake, and know that Truth is God, and in God's Law.—E.

---

A recent Lesson-Sermon touching the subject gratitude, made me see more clearly that I ought to contribute to our Wednesday evening meetings and our *Journal* and *Sentinel*. The benefits which I have already received through Christian Science are manifold and, if not practically innumerable, are too numerous to be fully recounted here. Let me commence with the first. For several years prior to 1897, while studying and practising law, I was greatly handicapped by trouble with my eyes. In 1890 or 1891 I consulted a well-known specialist, who said the principal cause of the trouble was hyper-metropia (long-sightedness) and weakness or partial paralysis of the ciliary muscles, especially of one eye. This was subsequently confirmed by

Digitized by Google

two other oculists. The first physician treated me for some time, fitted me with new glasses, and advised me to curtail my reading or change my occupation. The second treated me over a year, changed my glasses several times, ordered me to wear them all the time and further limit my reading. The third gave me medicine to reduce the inflammation, which was a constant symptom, and refitted my glasses once or twice. None of them promised any permanent relief, without a change of occupation. From 1893 to 1897, I wore glasses constantly, saved my limited amount of eyesight for most necessary reading, and seldom passed a day without pain and inflammation about my eyes.

Two of my friends were Christian Scientists, and they spoke of Christian Science opportunely and lent me Science and Health. I was favorably impressed with its religious teaching, and in February, 1897, wrote for treatment to one of my Christian Scientist friends, who had meanwhile removed to Evanston, Ill. A decided improvement was perceptible almost from the first, and in just two weeks I removed my glasses and have never felt the need of them since. Moreover, I soon found that I could read as much as occasion required, and such has been the fact ever since. It was a great delight to work and read freely, and to be wholly free from the fear of being obliged to give up my profession.

Since then I have felt and applied the nature and practical possibilities of divine Love in many ways (Message to the Mother Church, June, 1901, p. 4), and now praise God with increased understanding. Naturally, I am also grateful to our beloved Leader, who has voiced the truth to this age, and to my good friends who put me in the way of knowing it.—CLIFFORD P. SMITH, Mason City, Ia.

---

I wish to express gratitude for the healing of our little boy. A few weeks ago he had an ill turn which had troubled him a little for two days. I denied it and he seemed to be improving; but suddenly it developed into quite a fever. He had been subject to fever from a baby, and we had often employed doctors to handle it before knowing of Science; and often it was quite a time before he was himself. This day it seemed to be quite serious to mortal belief, and so we telephoned for one of our faithful practitioners here, who came at once; and after she was here about half an hour, the little fellow,—he had been resting while she was treating him,—turned to me and said, "Mamma, why do you wash my hands? they are all wet." Sure enough, the hands were covered with perspiration. The fever was broken. He was all right soon after that. The next day he seemed to be quite himself again. It was a beautiful demonstration to us, being met so quickly. My husband, who is much interested in Science although he doesn't understand it very well, seemed quite surprised and grateful.—B., Cleveland, O.

---

On the Fourth of July my little girl, then six years old, had all the symptoms of what I thought was a severe cold; but in a few days it proved to be whooping cough. Both vomiting and nose-bleeding would accompany each coughing spell, then she would lie in a stupor. She was very much reduced in flesh, and one night my husband brought home a bottle of homœopathic pills, saying, "Will you give her some of these to relieve that cough, if she needs them?" I said, "Yes, if she needs them," knowing at the same time that Truth was all that was needed and more powerful than those little pills. She didn't want them either, saying, "No; you treat me mamma, you treat me." Through realizing the presence and power of divine Love, the whooping stopped in just two weeks from that Fourth of July. She is now nine years old, never having tasted medicine.

Another time she ran a rusty nail that was protruding from a block of wood into her foot, and came screaming to me, the block of wood clinging to her foot. It took a stout pull on my part to draw the nail out of her foot. I took her on my lap, told her to stop crying, and I would treat her. Between her sobs she repeated with me the Mother's prayer for the little ones. Others present tried to persuade me to soak her foot in salt and water to draw the poison out, or to keep her from having lock-jaw; but I knew Truth was more powerful than any material remedies. I went into an adjoining room, rocked her a few minutes, declaring Truth, and she was soon on the floor playing. The next morning she put her shoes on as usual, never complaining of her foot. It neither inflamed, nor swelled. I could just see the mark where the nail went into her foot, and I know it went in some distance, as she only had on a pair of knit slippers.

Stepping on a nail myself a few weeks ago brought it all back to my memory. This nail barely went through the skin. I paid no attention to it, thinking it so slight; but it throbbed all night, was inflamed, and festered, till I had to pay attention to it; that is, demonstrate its nothingness.

We should not forget the little things. I find it is work, work, every minute to get out of self.

M. E. J., Seattle, Wash.

---

My oldest child, a girl of nine years, complained of a sore throat on awaking one morning; in the afternoon it seemed much worse. When I got home from work that night I found that she had a very high fever. I treated her in Christian Science, and she seemed to rest quite well all night. At noon the next day the scarlet rash was very much in evidence all over her body, the fever was very high, and the child became delirious. My wife and I tried to realize, as we are taught in Christian Science, that "God is All," that we must not fear or worry, that by so doing we distrust God; but we were not able to overcome our fear and we sent to one of our neighbors, a Christian Scientist, for help. When the neighbor arrived we realized that the sickness was contagious and that we should be obliged, under the health department regulations, to make a report.

We called in a physician to diagnose the case and make the required report, that we might "Render unto Cæsar the things that are Cæsar's."

The physician pronounced the case scarlet fever. Although we did not ask him for medical advice, he informed us, presumably from force of habit, that the child would be unable to leave the house for four or six weeks, that she would be obliged to remain in bed, keep warm, not get in a draught, and so on down the line of mortal-mind laws.

The fever commenced on Thursday and by Saturday night, with no treatment whatever other than Christian Science, not a trace of the fever remained. The child got up and dressed the following day, and ate her dinner with the rest of the family, after which she practised her piano lesson. From that day to this,—four weeks since she was taken sick, she has enjoyed perfect health. She has done just as she wanted to, except we did not allow her to go out doors among other children. A sister of the sick child, who was with her constantly, did not take the fever.

In the words of our Leader, Mary Baker G. Eddy, in her last message to the church, "Evil, though combined in formidable conspiracy, is *made* to glorify God," I found consolation. By reason of this affliction in my home I have realized as never before my relation to God, what God is, where God is, and how I may find Him.

JOHN J. HESLER, Chicago, Ill.

## Religious Items.

The natural man has no understanding of the things of the spirit. They are out of his reach. They require spiritual perception. Hence it follows that men may be intellectual and scholarly, and yet totally incompetent to pronounce upon the truths of the Bible or the facts of religious experience. An ignoramus in other affairs may be a better authority on these things than a philosopher, because they require not the eyes of a philosopher, but the eyes of a Christian. Therefore Jesus said: "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

Religion must be approached heart first and not head first. Any man who has sense enough to give his heart to God will be able to see what all rationalist critics will never see. The secret of the rocks is with the geologist; the secret of the stars is with the astronomer; the secret of languages is with the philologist; the secret of the Lord is with them that fear Him.

C. D. CLEWORTH.

Now if we think of the kingdom of heaven as that body of spiritual truth, and complex of ethical laws, by the light and guidance of which good men shape their lives, and which Jesus taught in his religion, what is the relation of the Christian Church to it? It would be easy enough, I think, to say what it ought to be. It clearly ought to be of the closest and most intimate sort. The professors of the religion of Christ, and members of his organized Church ought to be Christians in the strictest and most exemplary way. As far as is humanly possible, they ought to be filled with the spirit of the Master, and ought to direct their lives by his example. They should be the ones in the world to whom the kingdom of heaven has indeed come, the Lord's Prayer having been answered to them. We ought to be able to say, "If you want to know what the Christian religion is in its purity and simplicity, if you want to know what the kingdom of heaven on earth is, look into the hearts and lives of these men and women." REV. A. B. HERVEY, PH.D.

In *The Universalist Leader.*

Now, far be it from us to deny the presence and value of feeling in Christian experience. It cannot be absent where the experience is genuine. But it is subordinate and secondary; not the origin of that experience, nor a chief factor in it, but the consequence and fruit of quite different spiritual activities. Repentance toward God, faith toward our Lord Jesus Christ, the apprehension of truth concerning ourselves, concerning sin, concerning God, concerning Christ as Saviour and Sovereign, concerning humanity and its needs, concerning life and its duties, these call for a clearness and vigor of thinking, the exaltation and concentration of our highest faculties, that ought not to be clouded and bewildered by an excess of feeling. When the vision comes, when we see in some measure what God really is, and what we are in His presence, in view of His holiness and in view of His love, there will be feeling enough, poignant and irrepressible and not transient, but it will rest on a basis of clear knowledge, intelligent conviction, and intelligent faith.—*The Examiner.*

Thus far in history we have only been able to make the great idea of the communion of saints real in a partial and piecemeal way. It is hard to forget the differences which keep us apart. Yet the inner fellowship is a fact which has the right of way. The divisions are unreal and will pass by; the real thing is the brotherhood of all believers. First, we must recognize the common faith. Is this man Christ's disciple? Then he is my brother. How often we are tempted to reverse the process and say: "Is the man of my opinions? Then he may possibly be my brother." The one great gift the promised life has to offer us, after the vision of our Lord, is the unclouded appreciation of the communion of all believers.

*The Congregationalist and Christian World.*

If the spiritual world is to have the fullest reality for us, we must have some experience in the spiritual that is genuinely our own, not a hollow echo of something we have heard from others. In a Christian community, where the language of religious experience is familiar, perhaps there is no greater danger besetting the spiritual life than this danger of merely imitating the experience of others. To face the reality of a genuine religious experience means much that is uncomfortable; real willingness to see the facts of our own life and need as they are; the breaking down of our pride, the giving up of our selfishness, the putting of ourselves really and persistently in the presence of God's supreme revelation in Christ.—H. C. KING.

The promised land of holiness is before every one of us. The Christian generations which have preceded us have all been spies for us, bringing tidings of the hardness of the way, but all uniting on the goodness of the land and the blessedness of its conditions. Now, as in the days of old, there are Calebs and Joshuas on the one hand and faint hearts on the other, but now, as then, God is with those who are bound to overcome and who will conquer in His sign.

*The Christian Advocate.*

*The Christian Advocate* says: "As the cloud went before to show the way, so God by many providences goes before His people to make their way plain. The trouble is, so many do not recognize the providences, and refuse to be guided by them; they overlook God's hints and directions, and find no thought of God in their plan of life. With faith they might be as sure of direction as were the Israelites in the wilderness, and as free, too, of the needless worry and fret which makes the burden of the way."

Bishop E. G. Andrews of the Methodist Church says: "We do not think now as we did half a century ago. We see God and Christ and the Holy Ghost in a different light. In my younger years I thought of Him as a personal being in some distant part of the universe. Now I think of Him as a power within us, and I am impressed beyond measure with the all-pervading beauty and glory of love as a means of transforming humanity. We see that it is love that accomplishes God's work in man."

God offers to every human soul a "promised land." But it can be won only by overcoming the giants of temptation. Hence the Bible represents the Christian life as a warfare, and Paul carefully points out the armament we need for the conflict. (Ephesians, 6 : 11–18). "No Canaan of success in any pursuit, can be gained save by the conquest of the Anakim." This is especially true in the spiritual realm.

*The Watchman.*

*The Watchman* says: "It is the tendency of fear to magnify dangers and obstacles. The ten spies saw everything in an exaggerated form. Every man was a mighty giant, every city strongly fortified. But they forgot that the Omnipotent would have gone with them to the battle. And we may be sure that, if we go forward in the path God marks out for us, in confident reliance upon Him, He will give us strength and wisdom for every need."

Rev. A. E. Dunning writes in *The Congregationalist:* "The Bible mirrors human experience. Therefore it never grows obsolete. Every generation sees its journeys pictured in the approach of the Israelites to the promised land, and their defeat on its borders. But Moses and Caleb and Joshua still rise up as leaders, and the spirit which makes them strong and patient and triumphant is the spirit which the Bible tells us is of God."

Rev. J. Mervin Hall says in *The Watchman:* "In my judgment, here is the next great forward movement of the Church of Christ. How can we expect universal brotherhood until we have genuine Christian fellowship in the individual churches? And when the world beholds the demonstration of genuine brotherhood in the Church it will be drawn toward the kingdom of God with irresistible power."

It is easy to "tell the old, old story" of Christ's salvation. What the world needs is men and women who show what Christ has done for them. Testimony for Christ is valuable, but the best witness for him is in the holy lives of his professed disciples. Christians now, as the Epistles of Christ, written by the Spirit, are to be transcripts of his mind and teaching.—*The Examiner.*

We have just as much religious life as we show to God in secret—just that, no less, no more. Whatever is not wrought between thee and God, with no record but His eye, is chaff, which the wind driveth away.

MEYER.

To fill life full you must open it upward toward truth, beauty, goodness. Seeking things below takes our strength out of us; waiting on the Lord for His higher gifts renews our strength day by day.

JAMES FREEMAN CLARKE.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents, twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full sheep, stiff covers, gilt edges, same paper and size of page as cloth edition, each prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Five or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

### National.

A cipher despatch has been received from Lieutenant Peary, U.S.N., dated at Chateau Bay, Labrador, announcing his safe arrival at that place on his return from the North. This is the lieutenant's fifth trip to the North. The first was in 1886; the others in 1891, 1893, 1896. He started on the present trip in July, 1898, having been granted a five years' leave of absence from the Navy by Secretary Long in 1897. Four years have passed since Mr. Peary started on his perilous quest. The work which he has already reported, and recorded upon maps, includes extensive explorations in western Grinnell Land, the discovery of new land masses to the northwest of Greely Fjord, high peaks on the western, and noble glaciers on the eastern slope of the divide, and a complete revision of the map of the Hayes Sound-Buchanan Bay country. His still greater achievement was the rounding of the northern end of the Greenland Archipelago in the spring of 1900, completely delimiting the outlines of that coast so long shrouded in mystery.

The hearing of the claim of the United States against Mexico growing out of the "pious fund" of California, commenced at The Hague, September 15, before the International Court of Arbitration. This international tribunal consists of eighty judges, appointed by the twenty-four nations—two, three, four, or five, as the case may be. From these eighty the United States selected two judges to determine this case, The United States named Sir Edward Fry, formerly chief justice of the English Court of Appeals and Dr. F. Martens of Russia. Mexico named Signor Chelli, a distinguished Italian judge, and Dr. Lohman, a Dutch magistrate of high rank. These four judges will select a fifth. Neither nation may select one of its own citizens or a subject of its own sovereign.

Postmaster-General Payne will ask Congress for an appropriation of twelve million dollars for rural free deliveries. Nine million of this is for the maintenance of the fourteen thousand routes already established and three million for further extension of the system.

The crown prince of Siam, Chowfa Maha Vajiravudh, who is to sail from Southampton for the United States October 3, to visit the President and make a two months' tour of the country, has arrived at Copenhagen and has been received by King Christian.

The excess of trade of Canada with the United States over that with Great Britain last year was $33,500,000. Imports from the United States increased over $10,000,000 and exports to the United States over $3,000,000. Canada's third best customer is Germany.

The Congressional Library at Washington was opened September 14 for the first time on Sunday. The attempt has been made for years to have this done. The attendance was the largest in the history of the library.

It is expected that Sir Thomas Lipton's challenge for another series of races for the America's cup will be forwarded in a few days and reach New York before October 1.

Hearings on the action of the United States against the Northern Securities Company were begun in New York last week.

Speaker Henderson has declined the renomination as representative from Iowa.

### Foreign.

Russia has decided to found an archæological museum in Sabastopol. The building is to be erected in the style of an old Christian basilica, and to be arranged for three apartments, one devoted to the Greek, one to the Roman, and a third to the Byzantine period. The whole project has been entrusted to the management of Grand Duke Alexander Michailovitch.

In the Orange River Colony, South Africa, there are 890,000 acres of land at the disposal of the government. Every inducement is offered by the government to *bona fide* farmers who may wish to purchase these lands.

The exodus of people from Australia during the past few months to South Africa is causing very serious alarm. The hard times and crop failures are said to be contributing causes of the exodus.

A return of England's national debt, recently issued, shows that the gross liabilities amount to $3,842,216,930, an increase of $313,397,540 due to the South African war.

The official returns at Copenhagen on the results of the election make certain the sale of the Danish West Indies to the United States.

King Leopold of Belgium expects to make a tour of America next February and March.

### Industrial and Commercial.

An order for six new freight steamers of the largest type has been placed with the American Shipbuilding Company of Cleveland by J. C. Gilchrist. This addition will make the fleet managed by Mr. Gilchrist a close second in carrying capacity to the immense tonnage owned by the Steel Trust, at present the largest aggregation of freight carriers on the Great Lakes, and one of the largest in the world. With this order this company has under construction for delivery next year, thirty-four steamers.

The largest single electrical plant in Asia has just been installed at Seoul, in Corea. It is built for the Seoul Electric Company by an American firm, who hold it under a mortgage. The company operates an overhead trolley road of some twelve miles, and with the same power furnishes incandescent and arc lights for the city.

Official announcement has been made of the formal dissolution at Pittsburg of the Independent Glass Company. The thirty-eight factories which comprised this combination will continue operations as before the combination.

The first consignment of Welch anthracite coal, imported on account of the scarcity of coal in the market, reached New York last week. This with another consignment expected soon consists of about eight thousand tons.

The results of the experiments with oil-burning furnaces recently installed in the American line steamer Kensington, which has sailed from Southampton for New York, are awaited with keen interest in shipping circles.

The August earnings of the United States Steel Corporation are estimated at $12,500,000 and the July earnings were about the same amount.

Recent contracts with Pittsburg concerns for 1,400,000 tons of steel rails for next year eclipse all previous records.

Oil of good quality is reported to have been found on the southern Alaska coast near Copper River.

### General.

A second coronation pageant, perhaps even more splendid as a spectacle than in London, will signalize the proclamation of King Edward and Queen Alexandra as Emperor and Empress of India, at the beginning of next year. The ceremony will take place at Delhi, and the Viceroy's camp will be pitched upon the historic ridge where the decisive struggle of the great mutiny was fought. There will be a state entry into Delhi, with the viceroy and leading chiefs on elephants, under military escort, and the coronation durbar will be held in a great amphitheatre which will accommodate twelve thousand persons. Hundreds of chiefs and native noblemen will take part in the ceremony; forty thousand troops will pass in review, and the festivities will be continued for two weeks. An incident of the celebration will be the opening of the Indian Arts Exhibition.

"The Wellesley Inn" has just been opened at Wellesley. This corresponds to the "Harvard Union." It is under the management of Wellesley graduates, and the ownership of the property is vested in students, graduates, the faculty, and prominent men and women interested in the college. It offers a center for various formal and informal social functions and the entertainment of friends and visitors.

The North German Lloyd steamer, Kronprinz Wilhelm, on her recent trip from Bremen, Cherbourg, and Southampton, beat all previous western records, making the passage in five days, eleven hours, fifty-seven minutes. This is three hours and forty-eight minutes better than her own best previous record and twenty-six minutes better than the record of the Deutschland.

The New England Conservatory of Music of Boston last week occupied its beautiful new fire-proof, sound-proof home on Huntington Avenue. Portions of the interior are not yet fully completed, but class-room work has begun. The new dormitory building for women students has also been opened. The registration is very large and promises to reach two thousand.

In the Harvard Botanical Gardens at Cambridge have been grouped together in a long bed "a few old-fashioned plants" dated 1636 and in two other beds a few of the "principal herbaceous plants" alluded to in the works of Virgil and Shakespeare.

The opening of the new Mianus Branch of the Greenwich tramway gives complete trolley connection between New York and Boston, with the exception of a short strip of three miles between Cheshire and Milldale, which is soon to be built.

A new boulevard, divided into a promenade, driveway, and bicycle path, is being built from Athens to connect with a shore driveway already connecting Old and New Phalerum and the Piræus.

# CHRISTIAN SCIENCE SENTINEL

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Selected Articles.

### Extracts from a Lecture by Judge Hanna.

CHRISTIAN SCIENCE is a deep and sacred subject; the deepest and most sacred that can occupy human thought and purpose, for it treats of God, man, and the universe. It teaches God's omnipotence, His omnipresence and His omniscience. It teaches that God is the one and only Principle of man, and the one and only Principle of the universe.

It is the duty of the lecturer upon this subject to speak, primarily, to those who are not Christian Scientists. I shall endeavor to follow this rule, but I cannot see how I can speak of Christian Science at all, without saying some things to and for Christian Scientists, as well.

I assume, therefore, that you will expect me to tell you something of the Christian Science text-book and also of its author, the Discoverer and Founder of Christian Science.

#### THE TEXT-BOOK.

A few words, then, as to the text-book. This book, of which the Rev. Mary Baker G. Eddy is the author, was first published in 1875. As revised and enlarged at various times since then, it has reached at the present time over two hundred and fifty-one editions of one thousand volumes each. It bears the title of "Science and Health with Key to the Scriptures," and contains within its covers, in comprehensive and comprehensible form, the entire text of Christian Science. It is true that Mrs. Eddy has written many other books and numerous articles and essays for magazines and newspapers, as well as messages to the Mother Church in Boston, but these are in explication of the text-book. This book is a treatise on healing through the power of God, or the divine Mind, and is, therefore, properly called an exposition of Mind-healing. More specifically, it is a thorough exegesis of the Scriptural method of healing all manner of diseases and of curing all manner of sin through the understanding of God as all-present, all-powerful, all-wise and universal Mind. In short, this book is a spiritual interpretation of the Bible; hence its title—"Key to the Scriptures." I am aware that I am making for the text-book of Christian Science a tremendous claim, but I shall endeavor to make good this claim before I close.

#### THE DISCOVERER AND FOUNDER.

Mrs. Eddy is at once the Discoverer and Founder of Christian Science. She discovered for herself how to be healed of a sickness, the result of an accident, which, according to all ordinary evidence, had placed her at the very door of death. This may be said to have been her original discovery. This aroused within her a burning desire to know how she was healed, and also to impart to others the knowledge of how the sick are healed. This led her to search the Scriptures that she might find the healing Principle. She pursued her search until she found the healing Principle to be God. She proved this by healing all manner of diseases, and she proved as well that the same understanding of God which healed sickness also destroyed sin. Having so found and proved the healing and saving Principle, she proceeded to teach others, to found a college for teaching this healing system, to found periodicals for its propagation, to found a church wherein the healing Gospel could be preached and expounded through public services; and she adopted, from time to time, such other propaganda as became necessary to the establishment of a healing and saving religion. That such a system has been successfully established I need not say, for it is matter of common knowledge. Thus, I say, Mrs. Eddy is both a Discoverer and Founder.

#### LIFE AND CHARACTER.

And what of the life and character of one who has accomplished so much? I am sure a few words in reference to these will be welcomed by every sincere inquirer.

Born amid the beautiful but rugged hills of Bow, near Concord, New Hampshire, of sterling and strictly religious parents, descended from a long line of worthy and distinguished ancestors of Scotch and English blood, Mrs. Eddy was favored by nature and by God with advantages which fitted her for a great career.

Her early environments were such as to nurture and enlarge her inherited gifts. She was a student by natural bent and intuition. This native trend was strengthened by careful training in schools and academies, as well as by competent private tutors, among whom was her brother, Albert Baker, a graduate of Dartmouth College, and a distinguished lawyer and member of Congress-elect, having died, after a short illness, before taking his seat. Among her other instructors were such well-known educators as Mrs. Sarah J. Bodwell Lane, Mr. Corser of Sandbornton Bridge Academy, and Prof. Dyer H. Sanborn, author of Sanborn's grammar. This early training has been supplemented by long years of careful and thorough research and study. Poetry was with her a natural gift. As a young girl she wrote poems of such merit that they were much sought for and published in newspapers and magazines. She was also a prose essayist of distinction long before she began her labors as a Christian Scientist. In evidence of this I make mention of a single circumstance. During Mrs. Eddy's residence in the South, as the wife of the late Col. George W. Glover of Charleston, South Carolina, she wrote much for Southern magazines. Upon her return to the North, after the death of Colonel Glover, her reputation as a writer had become so wide that the Rev. Albert Case, then editor of the *Odd Fellows' Magazine,* offered her a salary of three thousand dollars per year to become a regular contributor to his periodicals. At that time this was a large salary for literary work, and speaks strongly of the estimate put upon Mrs. Eddy's literary ability. She has studied deeply in many of the higher branches of learning and in general literature. She is, from every point of view, a woman of sound education and liberal culture.

#### HER RELIGIOUS CHARACTER.

It may not be amiss for me to say that for nearly ten years, as First Reader in the Mother Church in Boston, and editor of the official periodicals, I have had opportunities which enable me to speak intelligently of Mrs. Eddy's life and character as well as of her labors and literary qualities.

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

Speaking from this vantage ground, I can truthfully say that, intellectually, she is, without exception, the most acute and alert person I have ever seen; that she labors incessantly and unselfishly for the cause to which she has devoted her life, and that, notwithstanding her years, she performs an amount of labor each day which, if known, would seem incredible. As to her religious character, I speak my profoundest conviction when I say that I believe it to be as nearly Christlike as is possible to a denizen of this earth. I cannot conceive how a person on this plane of existence could walk more closely with God or exemplify a more exalted Christian life.

And do not the wonderful results of her work, even thus far, prove this? To those familiar with them they most assuredly do. To the many thousands all over the globe who are the conscious beneficiaries of her work, she has indeed proved herself to be a religious reformer and a Christian evangel. Yet, notwithstanding her highly spiritual nature, she is withal an intensely practical person. She keeps close watch of current affairs and acquaints herself with the world's doings. Her message to the Mother Church in Boston of last June shows this in an especial manner. It shows, moreover, that she possesses the mental grasp of the world's great scholars and statesmen.

### Christian Science, a Practical Religion.

Christian Science is based upon the Bible. The Mosaic Decalogue and the Sermon on the Mount are its Articles of Faith. The Church Tenets restate, in few words, the spirit of the Decalogue and Sermon on the Mount. Christian Scientists are taught, from the beginning to the end of their text-book, to emulate Jesus in all his ways. The sincere Christian Scientist earnestly endeavors to carry out this teaching. In the measure that he falls short of this, he fails of his discipleship. Christian Scientists do not claim to have reached perfection—far from it. But in so far as they are sincerely striving for that goal, they are obeying their teaching and accomplishing good. Their Leader has repeatedly said: "Follow me only as I follow Christ." So, in turn, should her followers say of themselves. They must seek a perfect life, they must constantly desire and unceasingly pray for guidance to such a life, and they, in common with all earnest seekers therefor, may rest assured that, in the measure of their earnest seeking, they will, in due time, achieve and attain. Meantime they must be about their Father's business according to their best understanding and opportunities. To this end are they impelled by the very necessity of their studentship. So far as they are thus engaged they are daily rooting out of their own consciousness the seeds of error, the seeds of sin and disease, and to the extent that they do this they are pointing the way for others. A good life reflects itself as naturally and inevitably as the sun reflects its light. The sun cannot help reflecting light. No more can a good character help reflecting goodness. Reflecting goodness is the most practical, even as it is the most ideal, business on earth. Through the ministrations of the true Christian Scientist pain is relieved and destroyed, all forms of sickness are healed, all kinds of sin are overcome, sorrow is assuaged, broken hearts are restored to wholeness, separated and estranged friends, wives and husbands, children and parents, brothers and sisters, are brought into sweeter and more harmonious relations than ever before. More specifically, chronic and organic, as well as acute diseases, in all stages and forms, are brought under subjection and healed, licentiousness is curbed and destroyed, drunkenness is overcome, and mental distress and worry driven out, through this Science of Christianity. These results are accomplished beyond dispute. Indeed, there are few who now have the hardihood to question them. Shall any one say, then, that in so far as this kind of work is being accomplished, it is not what the Nazarene did and taught should be done? And is not this a most practical work in its results, even if it seems to be ideal in its methods?

*The Dayton* (O.) *Herald.*

## Macaulay's English.

It seems strange that hitherto there has been no serious attempt made to analyze the peculiar charm of Macaulay's English, which, when carefully compared with that of any other great writer of his own country, will be found to differ from it strikingly in texture, leaving aside the style, arrangement, and matter of the narrative. Taine, indeed, one of Macaulay's most ardent admirers, throws out a very clever hint on the subject, but it is only a hint. He says that Macaulay, while displaying in his writings many mental and moral qualities which mark him out to the French mind as being essentially English, at the same time exhibits such animation, clearness, etc., of style that Englishmen see in him a French mind. Now there is no doubt that Macaulay's English, in its clearness, correctness, and delicacy, resembles the best French compositions, but it is more than probable that this resemblance arises not from imitation of French models, but from the fact that Macaulay alone, of all the eminent English authors of his time, not only studied carefully and assiduously the great classical writers, whom Frenchmen, the leaders of the Latin race, have so often imitated with slavish reverence, but also studied the genius and grammatical structure of the English language with the same enthusiastic devotion that the French alone among the nations of Europe bestow on their native tongue. In his composition he handles every sentence with a tender, affectionate touch, which Taine recognized as peculiarly French.

Those who have read Trevelyan's "Life of Macaulay" will recollect with what care he toiled over his composition, writing and rewriting again and again whole episodes in the History.

"I spent," said he, "nineteen days working over thirty octavo pages." Again he says, "In two years from the time I begin writing I shall have more than finished the second part (vols. iii. and iv.), then I reckon a year for polishing, retouching, and printing." Each page as it was printed was again carefully revised and corrected.

Few people, however, are aware that after all this toil; after the first four volumes were printed; after they had been received with a welcome more enthusiastic than had ever been given to any serious literary work; after fifty-six tons of vols. iii. and iv. had failed to meet the first demand in England; after the fiercest criticism had failed to lessen the popularity of the work; after the purity and clearness of the English had been universally recognized—he sat down to undertake a complete and thorough revision of the four volumes, making a thousand corrections in spelling, grammar, punctuation, the use of capitals, arrangement of words in sentences, omitting words in some places, inserting them in others, adding sentences and whole paragraphs, and making some alteration in small details.

In spite, however, of the herculean labor expended on it, the History never smells of the lamp, the language is always simple, the style easy and flowing, and the narrative perhaps more than that of any other historian reads as if it had been dictated without an effort.

It is somewhat singular that of all Macaulay's numerous critics, some friendly, most of them hostile, Gladstone alone seems to have acknowledged in plain terms this remarkable quality of the great historian's English. He pronounces his grammar "faultless."

Not less remarkable than this purity is the author's fastidious selection of words and his success in expressing exactly the correct shade of meaning. There is probably no English author who approaches him in this respect, or who even aims at such perfection.

Digitized by Google

In spite of all attempts to belittle the importance of grammar and the classics, those who aim at success in literature will do well to consider that the most popular and successful writer of the nineteenth century was the one who paid most attention to grammar, and who studied most assiduously the classical authors. T. E. BLAKELY.

In *Harper's Magazine.*

## Christian Science not Superstition.

To the Editor.

When Christian Science is better comprehended (and it can only be understood aright in proportion as its precepts are lived) it will be found entirely free from any ingredient of superstition. We agree with you that there is a radical difference between the application of material remedies and Christian Science treatment. However, on this ground it should not be classed as superstitious. Jesus proved in his own life that the best preventive as well as the best remedy is an understanding of the divine Mind, and the laws of God governing man.

Christian Scientists do not "lay on hands," or "touch with the hands" in their ministrations to the sick, but through an understanding of God as governing His children they are able to alleviate suffering and prevent disease. The fact that the sick are healed by the use of spiritual means, or through prayer as understood in Christian Science, is not only verified by hundreds of thousands of beneficiaries, but in many cases is attested by medical practitioners, who rejoice that some humane means have been found that brought relief from suffering after the material remedies they administered had failed.

Christian Scientists believe that the natural law is the divine law, or God's law. There is nothing mysterious or superstitious about it. Judging from a human concept of things, it does not seem possible for the sick to be healed through divine Mind; yet, according to our understanding of Christian Science, it is perfectly natural. Thus in Christian Science, the natural law and the divine law are one; one is not spiritual and the other material, but both are spiritual, one and the same. So long as we continue to believe one to be spiritual and the other material, mystery will continue to enshroud us. We must have a science to show us the way, and when Christian Science is understood it will be found to have no connection with superstition.

The superstition that the natural law is a material law, a law of the carnal human mind, and that occasionally God sets these laws aside, tends to darken consciousness and bring on a state of perplexity, whereas to know that the natural law is God's law, better enables us to comprehend the Science of Being.

Christian Science does not appeal to man's superstitions; it takes them out of the domain of superstition and appeals to man's better reason, his better judgment. While Christian Scientists do not take material medicine, they are kind toward those who do; they are charitable in their views, wanting all people to have whatever they think will bring relief from suffering. LLOYD B. COATE.

In *Dayton* (O.) *Press.*

To judge religion, we must have it,—not stare at it from the bottom of a seemingly interminable ladder.

GEORGE MACDONALD.

Set yourself earnestly to see what you were made to do, and then set yourself earnestly to do it; and, the loftier your purpose is, the more sure you will be to make the world richer with every enrichment of yourself.

PHILLIPS BROOKS.

## The Lectures.

### At Toledo, O.

First Church of Christ, Scientist, was filled and overflowing with people yesterday afternoon [September 14] to hear the lecture of Judge Septimus J. Hanna on the subject, Christian Science. It was a splendid audience and Judge Hanna was given the closest attention throughout his discourse. Judge Barber presided at the meeting and he was introduced by Mr. Arthur E. Jennings, First Reader of the local church. Judge Barber said in part:—

*My Friends, Ladies, and Gentlemen:*—I assume it a great honor to take a part in this meeting. Since closing court, I have been around the country a little, making a trip of three or four weeks, and I have noticed two things in particular. I found everywhere I went—in the East, Washington, Boston, New York, and in fact all the large cities—I found all public churches or a very great many of them closed for vacation.

The second thing I noticed was the growth of the Christian Science churches. I was very deeply impressed with their church buildings in all the large cities. I saw the Mother Church, the great Christian Science Church in Boston, and everywhere I went I saw the growth and advancement of this cause.

It did not seem proper for me to preside at this meeting and introduce the lecturer. It did not seem right that I, who am not a follower of this faith, should introduce the speaker upon a subject with which I am not at all familiar. When I found that it was not the custom to call upon one who is a member of the denomination I consented. I feel highly complimented and honored to take a little part in this meeting.

We have come here this afternoon, drawn by the announcement of the discussion of this all important topic. Anything that will explain to us these great problems we gladly welcome.

Judge Hanna has been very close to the Discoverer and Founder of Christian Science for a number of years, and for the past ten years has been editor of its two great publications, *The Christian Science Journal* and *Sentinel.* Before accepting Christian Science he was a member of my own profession—a brother lawyer. He occupied a position on the bench, and he comes well prepared to speak authoritatively on this profound subject and I have the great pleasure and honor of introducing to you Judge Hanna of Boston.—*The Toledo* (O.) *Times.*

### At Kansas City, Mo.

Edward A. Kimball of Chicago, delivered a lecture on Christian Science at the Willis Wood Theatre yesterday afternoon [September 7] to an audience which filled the theatre. Major William Warner introduced Mr. Kimball and said:—

You need not feel alarmed at seeing me here, for I do not intend to deliver a lecture or a sermon, but, like yourselves, am here to listen to a lecture on Christian Science, a subject of which I know nothing. I know that a new truth, or, if you please, a rediscovered truth, that runs counter to the preconceived opinions of the masses, will find many doubting Thomases. Yet this is an age of intelligent investigation—an age of honest seeking after the truth, and I believe that in no time in the world's history has there been less prejudice and bigotry than now. A teaching that stands on the vantage ground of truth has nothing to fear from the searchlight of honest investigation. There is nothing, my friends, in this world so strong as truth, and often nothing so strange. In the two thousand years that have intervened since the Nazarene proclaimed,

Digitized by Google

"I am the way, the truth, and the life," truth has been often crushed to earth, but, thank God, ever to rise again. An illustrious poet and philosopher said, "You may kick the truth all day like a foot-ball, and it will be round and plump at evening." It remains, my friends, for Christian Science to demonstrate whether it is or has within it the truth to stand the kicking. But it, like every other denomination, should be judged, not by the prejudices of the past, however moss-grown or reverent by years, but should be judged by its works.—*The Kansas City Times.*

### At Gloucester, Mass.

Carol Norton, C.S.D., lectured on Christian Science at City Hall on Sunday afternoon [September 7], and was introduced to the audience by Mayor French. There was a good attendance and the lecture was listened to with close attention.

Mayor French, in introducing the speaker, spoke in part as follows:—

*Ladies and Gentlemen:*—I believe in saying what you think and not saying what you do not believe. And so, to-day, I say that I had the pleasure a few years ago of introducing to a smaller audience in this hall a Christian Science lecturer, and to-day as mayor of this city, I have the pleasure of introducing another lecturer of the same school.

I have been thinking of the meaning of Christian Science. Do Christianity and science agree? Scientists, not Christian Scientists, have not been of one opinion on this question. Recently one of the foremost among them said that not only did science and Christianity not harmonize, but recent developments proved that all forms of life were chemical. This is one way of looking at it.

I remember when a boy that I used to wonder very much that each of the many sects firmly maintained that their doctrine was right and all others radically wrong. They would not listen to a lecture, discourse, or criticism that in any way reflected upon their cherished belief. And I suppose there are millions to-day who would not for the world, listen to a lecture on Christian Science, lest they falter, lest their religion slip away from them and leave them stranded on the uncertainties of life. Well, I would not give much for a religion that I had to keep under a lock and key. I would not give much for a doctrine that I could not defend everywhere. We are here, we have minds of our own, and that religion is best in my judgment, not that is inherited, not father's or mother's religion, but that which best satisfies the mind after a careful consideration and survey of the whole religious field.

Many a man goes through life correct in all his ways, prompt in paying his debts and collecting what is due him, strict in all his religious duties, and yet is no surer of heaven than one who has lived committing fault after fault, going from one act of folly to another, because against his faults and acts of folly will be set a fairer list of acts of charity and self-forgetfulness, because to him who forgives much, much shall be forgiven. I might go on, but we are all of the same mind and desire to hear the speaker, and without further remarks I will introduce to you Mr. Carol Norton.

*Gloucester Times.*

### At Brockton, Mass.

One thousand persons, constituting an audience that was one of the most notable ever gathered within the building, listened to the address delivered by Carol Norton, C.S.D., of New York City, in the City Theatre yesterday afternoon [September 14]. Mr. Norton's theme was, "Christian Science: Its Teachings and Growth." He is a member of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston. The lecture was under the auspices of First Church of Christ, Scientist, of this city.

There were visitors from Boston and other cities and from all the neighboring towns. A special train brought a large number from Boston and a special car brought many from New Bedford. It was one of the most representative and intelligent gatherings ever seen at the theatre, and every age and every class was represented. So intense was the interest that elegantly dressed women even went up to the second balcony for seats, when the remainder of the house was filled.

Rev. W. H. Morrison introduced the speaker. Mr. Morrison is not a Christian Scientist, but a Universalist clergyman, and he acted in that capacity as a matter of courtesy, saying in his introduction that he came as an investigator and was not ready to commend or condemn Christian Science, but was glad of the opportunity to hear Mr. Norton.—*Brockton Enterprise.*

### At Muncie, Ind.

Judge William G. Ewing of Chicago, addressed an audience of five hundred people in the Wysor Grand Opera House, Sunday afternoon [September 7]. Judge Ewing presented a plea in behalf of Christian Science. He is a member of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, in Boston. He was brought to Muncie under the auspices of First Church of Christ, Scientist. The judge was introduced by Mayor Sherritt, who said in brief:—

*Ladies and Gentlemen:*—I feel that I should congratulate our speaker on having such a fine audience. It is unusual for so many people, in a city of the size of Muncie, to congregate to hear a religious service; I mean, outside of the regular church services. I think I distinguish among you many who have come to learn. We are hungry for the bread that satisfies. I congratulate Muncie on the opportunity of hearing a man who has sought out the depth of his subject. Truth never dies, and if we may hear anything that may do us good, our coming here is not in vain. I am always glad to have the opportunity to talk to men and women who are ready to be enlightened. We are struggling along as thinkers, and should be willing to be enlightened on all subjects. A man who will not face enlightenment is a coward. But I am not the lecturer, and I take great pleasure in introducing Judge William G. Ewing, who will speak to you.—*The Morning Star.*

### At Pittsburg, Kan.

A lecture on Christian Science by Edward A. Kimball, C.S.D., of Chicago, Ill., and a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., was given in the Opera House at Pittsburg, Kan., Tuesday evening, September 9, under the auspices of First Church of Christ, Scientist. The lecturer was introduced by Mr. W. E. Benton, an attorney of Pittsburg, and in his remarks he said he knew but little about Christian Science, yet believed in investigation and proof of all things, by going directly to the source and foundation; there were many things in Christian Science he did not understand, but one grand idea to him was that man was created perfect and could be so again, if he only would learn the Truth of Being.

The Opera House was well filled with the best and most intelligent people of Pittsburg and the general remarks were very appreciative. There were many Scientists present from Joplin, Girard, Lamar, Parsons, Cherokee, and surrounding towns.—*Exchange.*

Digitized by Google

In no case will any one be able to injure a man who does not choose to injure himself; but if a man is not willing to be temperate, and to aid himself from his own resources, no one will ever be able to profit him. Therefore also that wonderful history of the Holy Scriptures, as in some lofty, large, and broad picture, has portrayed the lives of the men of old times, extending the narrative from Adam to the coming of Christ: and it exhibits to you both those who are vanquished and those who are crowned with victory in the contest, in order that it may instruct you by means of all examples that no one will be able to injure one who is not injured by himself, even if all the world were to kindle a fierce war against him. For it is not stress of circumstances, nor variation of seasons, nor insults of men in power, nor intrigues besetting thee like snowstorms, nor a crowd of calamities, nor a promiscuous collection of all the ills to which mankind is subject, which can disturb even slightly the man who is brave and temperate and watchful; just as on the contrary the indolent and supine man who is his own betrayer cannot be made better, even with the aid of innumerable ministrations.

ST. JOHN CHRYSOSTOM.

### The Isles of Quiet.

THE Isles of Quiet lie beyond the years,
Hoar prophets say it; yet, for all the tears,
I doubt the saying of the seers.

I think that whoso seeks them here shall find
That all with open, patient heart and mind
Shall drink their peace from sun and wind.

I think who will may share their psalm, begun
The hour when summer day is done
The sky and field are growing one.

I know the foolish fancies fondest cling;
But I believe the still air's murmuring,
The sweet far thing the thrushes sing.

JOHN VANCE CHENEY.
In the *Outlook*.

## Announcements.

**Applications for Membership.**

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

**Science and Health Revised.**

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

**Our Leader's Message.**

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**Communion Message, June, 1902.**

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

**The Revelation of Christianus**

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

**Remittances.**

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

**Photographs.**

A series of photographs were taken on the day of the Communion Service, showing a large body of Christian Scientists entering Mechanics Hall. These photographs can only be obtained direct from the photographer, Elmer Chickering, 21 West Street, Boston, size 13x16.

Mr. Chickering's prices are as follows:—

Where the pictures are packed for express, the price will be $1.00 apiece for the pictures, and 25 cents for packing, making $1.25.

In lots of six where they can be packed all in one bundle, the price will be $1.00 apiece, and no charge for packing.

In lots of twelve the price will be 85 cents apiece, and no charge for packing where they are shipped in one bundle.

In lots of twenty-five, the price will be 75 cents apiece, and no charge for packing where shipped in one hundle.

The above prices are based on finishing from one, two, or three different negatives.

**Building Fund of the Mother Church.**

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

**Clerk of the Mother Church.**

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

**Church Treasurer.**

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## About Suspending Rules.

THERE seems to come a time in the history of every organization or society, when its members desire to act at once concerning some matter, and in order to expedite action it is proposed to "suspend the rules." As Christian Science churches do not differ, in this regard, from other organizations, it is well for us to understand what may, and may not be accomplished by a motion to suspend the rules.

As a general proposition it is safe to say that standing rules may be suspended at any meeting, without previous notice, but By-laws cannot be suspended at all.

By-laws are the organic law of the society, and usually contain a section setting forth the *modus operandi* of their amendment or repeal. In some states, the statutes under which corporations are formed, prescribe the method of amending the By-laws, and in those states any provision of the By-laws in conflict with the statute, is null and void.

When applied to a By-law, a motion to suspend the rules is in effect a motion to amend the By-laws. If the By-laws of the organization provide that they shall not be amended or repealed without certain notice, it goes without saying that any attempt to legally amend or repeal a By-law before such notice has been given will be unavailing.

A standing rule is not a part of the organic law of the society but is simply a rule of procedure intended to facilitate the transaction of business. A rule suspended must be suspended for a particular purpose, and when the purpose is accomplished the rule is again operative. Possibly the following will indicate the nature of a standing rule. Many legislative bodies have a rule limiting speeches to a certain number of minutes. A motion to suspend that rule for the purpose of permitting a member to finish his speech is in order.

We are informed that some of our churches have drifted into the very common error of taking action contrary to their By-laws under the belief that the adoption of a motion to suspend the rules was sufficient to permit such action. It is advisable that every error of this kind should be corrected without delay. M.

## The Beauty of Right Expression.

IN the unfoldment of Truth the ideal is ever seeking for its true expression, and if its fair proportions do not appeal to us it evidences the fixity and irresponsiveness of our human sense.

The soil answers to the seedling's call, and the fields and hedgerows are thus glorified with summer's sweet fashionings, the varied beauty and charm of leaf and flower; but mortal sense is not thus plastic, it does not, and cannot lend itself to the requirements of the ideal. Only glad and spontaneous receptivity can express perfection, and anything that is less than perfect is not divine.

This is equally true of expression in word and expression in conduct. Truth could come so much nearer to us were we not indifferent, or perchance attached, to the little errors which it can no more tolerate than the large, since it knows no adjustment to human faultiness.

These thoughts were suggested by reading the article, in another column, on "Macaulay's English." The painstaking care of this author, in his repeated revisions, brought the determination of his mature and scholarly judgment to bear upon the minutiæ of his expression, and the unstinted criticism to which he repeatedly subjected every phrase and particle of his writing, gave a beautiful quality, a delicacy of flavor to his language which made it the perfect vehicle of his thought, and which has rendered its study a delight and inspiration to all lovers of choice literature in succeeding years. It is thus that the masterpieces of literature and of art illustrate the truth that the exactness of the ideal, is the basis and occasion of its exactions, and both are its eternal glory.

Beauty inheres in all right living and doing, no less than strength, and it is ours therefore to cultivate a regard for refinement of expression, as well as for rightness of thought. The imperfect in either is error. It does not pertain to the true man. It is to be denied and disallowed with all that is unbecoming the image of God.

Christian Science is mighty through God to the casting down of error's imaginations, "bringing into captivity every thought to the obedience of Christ"—and what it can do for thought it can do for expression. It reveals the naturalness of a perfect life, and the value of every corrective comment and declaration. In the words of the Master when he said "consider the lilies," it directs to the study, and reflection of that detail of beauty, that symmetry of form, which is Truth's very own, and which characterizes Truth's natural expression in every domain of life. W.

## What Shall I Do?

WE are prone to plume ourselves upon what we are accomplishing or have accomplished without duly considering the more vital question of *how* are we doing our work. Christian Science found many, very many of us immersed in doing as if impelled and sustained by our own inherent power, and it required no slight effort to convince ourselves that God is the only power, the only action; that we are potent only as we reflect omnipotence; that we act only as we reflect omni-action; that self-immolation is our strength, and that individuality is defined by selflessness.

Coming out of this sense of personal effort, the question often suggests itself: "What shall I do? A brother is going wrong, I see his slippery footing, what is my responsibility?" Here as everywhere and always, the work begins with ourselves. Our responsibility is to know that temptation cannot voice itself in seductive words, or betray by the treachery of sensuous delight. Our responsibility is to maintain the right attitude of thought, and to keep our brother where God keeps him in the beauty of holiness.

When opportunity, the opportunity of a receptive attitude, is presented by our neighbor, we must speak the words of Life, without the limiting thought that he is not ready for Christian Science, but speak with the understanding that humanity is always yearning for the love of the Father. This is the impersonal reflection whose radiance pure and clear illumines the darkened pathway, and banishes the phantom of temptation and sin. Get human selfhood out of the way, and know that God's work is done. S.

WE have received quite a number of reports of fitting memorial services, held in Christian Science churches, in honor of President McKinley. Such expressions of appreciation are in keeping with the impulses of a patriotic and Christian sentiment. The remembrance of the work and worth of those who have served their country well and faithfully, will ever prove a help and inspiration to those who would emulate their example.

## From our Contributors.

### The Law of Christian Science.

E. M. T.

CHRISTIAN SCIENCE first appealed to me through a sense of law. It was presented to me as a governing power that ruled all, and I saw in it a law under which mortals might learn to live perfectly, a law which would govern our homes, our business, our social affairs, our every thought and action; in short, a something to govern us completely and harmoniously. My ideas of Christian Science were at that time very vague and unsettled, yet I never doubted its being the truth and what I wanted.

Soon after, I purchased Science and Health and read it nearly through, and during the reading my thoughts underwent a great change, though at that time I did not appreciate the transition, nor did I know it was taking place.

During the reading of Science and Health I overcame an attack of paralysis in eight or ten hours, by declaring God's allness and the nothingness of evil. I was but a beginner and I did not think I knew anything of Science, yet when my mind seemed almost a blank, and my mouth refused to speak, I mentally declared from morning till evening, "God is all, there is no evil," and when the night came I had "received the promise" and proved the unreality of evil. Soon after this my babe was born, with but little suffering, and I was up and dressed every day after, with no bad effects whatever. There were many lesser troubles met and overcome in the same way, yet, strange as it may seem, I laid the book aside for four years, thinking I could not understand it without a teacher. I know now that I was being made over anew, and getting ready for the revelation of these great and grand truths; that I was at that time too blind to see, though I was always looking forward to the time when I should have an opportunity to study and understand the teaching of Science and Health.

After four years I met a Christian Scientist and took up the study in earnest, and have since had class instruction under one of Mrs. Eddy's students. Since I commenced living this new life I have been through deep waters, yet God has never failed me. The study of Science has been a gradual unfolding of the Christ love, and clearer and clearer comes the revelation that only as we love can we know God. The letter killeth but the Spirit quickeneth. It is Love. The false claims of hate, malice, jealousy, envy, false judgment, can only be met through unceasing effort to overcome self and reflect God, Love. There is no Christian Scientist who does not "love the brethren," neither is there a Christian Science Church where Love is not the foundation. "Love is the fulfilling of the law" and God's perfect law will be fulfilled in us, and for us, and through us in proportion to our reflection of Him.

### Paying the Tithes.

J. W. G.

"BRING ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of Hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

This "commandment with promise," by the word of the prophet Malachi, like all God's promises and blessings, is characterized by its abundant fulness. But what can we bring into the storehouse of God, that can be of any value to Him? Can we add aught to the riches of Him who already has all things? "The silver and the gold" are His, "The cattle on a thousand hills." Were things like these needed in the least by Him, the Word of His power could instantly speak into existence more than worlds could contain.

A sweet old anthem, though somewhat colored by the old thought—expresses very fully, I think, the true concept:—

> Vain, sinful man, creation's Lord
> Thy offerings well may spare;
> But give thy heart, and thou shalt find
> Thy God will hear thy prayer.

While it is well for men to "honor God with their substance," it is not because He needs the material wealth, or lacks anything that any of His creatures can supply, but because to the one who makes any sacrifice whatever for Truth's sake there comes a blessing in proportion far beyond the sacrifice; but there is that which we can bring into God's storehouse which will be meat in His house and coin in His realm, and that is love, as manifested through patience, forgiveness, kindness, forbearance, benevolence, well-doing. And it is a wonderful fact that he who heeds the injunction begins then and there to receive and carry away that fulness of blessing which is promised. The more truly and abundantly we manifest Christian love, the more abundantly it springs up about and within us all.

There can be but one way to bring acceptable offerings to God, since the only way to manifest love to Him is by bestowing it tangibly and intelligently upon His creatures, —the expressions of His Being, all of them,—by whom we may be surrounded. Whether this be manifested in giving of one's money, or in bestowing the richer, more golden treasures of loving words and kindly deeds, a child of God must receive it as well as bestow it. Conversely, to do an unkind act, speak an unkind word—even think an unkind thought—to, or against any of God's creatures is, in fact, to direct it against God Himself. "Inasmuch as ye have done it unto the least of these my brethren, ye have done it unto me."

O to be faithful and instant in bringing the tithes into His storehouse!

### "Look Up, not Down."

W. B. T.

NEVER give up in the cloud; look up through it. Keep your gaze where the light must break.

A good way to come to the light is this: *do* the next little thing which lies at hand and *do* it willingly. Be thankful withal that there is something to do, and do it well. All this will serve to turn you from self, and with your heart aright, it will never be long before your thought will find its way to God,—to harmony, to quiet. The more unselfish in motive we become, the more is our peace insured; and in the sunlight of peace, as each heart knows, the shadows disappear. "Seek peace and pursue it" is the exhortation of David. He knew it to be the vestibule through which the reflection of Love enters the heart, bringing in the light.

Let us do the things before us with a view to helping others, never losing sight of the fact that it is the doing of one little good upon another, with faith in the Love that prompts us, that brings fuller, deeper insight into this Love; reveals it as the Principle of all true endeavor and consequent right action; and demonstrates to us, in the peace and harmony it brings, that God is Love. The dominion which thus comes to man, over himself and over his environment, becomes more and more patent to every struggling heart which sets itself faithfully to follow out the rule. Lost to self in the joy of doing good, the sense of struggle ceases. We find our "own in another's good" and rejoice in the sweet discovery that evil disappears before a selfless purpose and an understanding trust in Good.

It matters not so much what we do, all depends upon the spirit we entertain in doing it. There is a true way, a joyous way and a consequently loving way, of accomplish-

Digitized by Google

ing each task in hand; and the habituating of ourselves to discern this way and quickly to act upon it, enfolds the secret of a happy day. Then, whether we be in the counting-room, the household, or the practitioner's chair, the glad contagion of our cheer will spread about us; we shall both consciously and unconsciously pour out the truth we know of God and man in Christian Science through the love we entertain. Then will those paths of the old, gray world through which we pass, sing in consequence of our passing; and we shall move onward and upward with the joyful assurance that the living of our lives is not in vain.

Here a kind word, there a bright smile, love and faith behind them, will make plain the way to help the struggling, comfort the sorrowing, succor the needy, and heal the sick.

So we will look up, not down, as we go, and we shall surely hear again and again that voice

> Which swelled creation's lay: —
> "Let there be light, and there was light."
> What chased the clouds away?
> 'Twas Love, whose finger traced aloud
> A bow of promise on the cloud.
>
> *Miscellaneous Writings*, p. 388.

## "The Christian Warfare."

JOHN L. RENDALL.

THE warfare in which Christian Scientists are engaged is the constant endeavor to purify self and sense, and is the only warfare consistent with the highest ideals of Christianity, the warfare of which Paul speaks, "For we wrestle not against flesh and blood, but against principalities, against powers, against the rulers of the darkness of this world, against spiritual wickedness in high places."

This warfare consists of the destruction in thought of every claim of evil; the exclusion of every erroneous concept; the annihilation of every false presentation, or claim of power, apart from God.

The battleground of this warfare is the individual consciousness in which "the rulers of the darkness of this world" contest with "spiritual understanding" against the introduction of Truth. The enemy rallies its forces; doubt, despair, despondency, reinforced by malice, hatred, revenge, oppose themselves in vain to the irresistible current of divine Love. "The sword of the Spirit, which is the word of God" cleaves its way onward and upward; "the breastplate of righteousness" turns aside every shaft of malice and hatred, and "the shield of faith" proves to be an effectual safeguard.

The insistent recognition of God's allness and power, and the demonstration thereof in daily life, is the Christian Scientist's sufficient protection. He can say with the Prophet of old, "Be not afraid nor dismayed by reason of this great multitude, for the battle is not yours, but God's. Ye shall not need to fight in this battle; set yourselves, stand ye still, and see the salvation of the Lord with you."

This warfare requires courage; even that courage which comes only from an abiding faith in God. Its battle-cry is: "Be ye steadfast, immovable, always abounding in the works of the Lord," and the "Well done, good and faithful servant."

It is worth while to engage in this warfare, for its rewards are sure, permanent, and abiding. Beyond it,—and beyond it only,—is the way of peace and harmony, the fulfilment of the promise, "He that overcometh shall inherit all things, and I will be his God, and he shall be my son."

---

It is a help to remember that fear is always about something which has no existence; that it is a lie and a liar at all times; that it has no principle, mind, intelligence, law, or power; no language, motive, effect, or result; and that it never has had and never can have a place in Mind or in consciousness. H. S. H.

## Among the Churches.

### Church Organization in Needham, Mass.

Twenty-four members of the Mother Church met August 6, and organized as First Church of Christ, Scientist, of Needham.

September 2 the Masons, in most impressive manner, laid the corner-stone for what is to be our beautiful Town Hall. It was announced on that occasion that in the corner-stone were placed many documents relative to the religious and secular life of the town. These were itemized and one from First Church of Christ, Scientist, was included. In view of the progress Christian Science has made during the past thirty-six years, can we not predict that these papers, when examined in future years, will be among the most interesting to a majority of our people?

In 1897 a lady here was wonderfully healed through Christian Science, and seeing at once that "when one is convinced that there is a religion that teaches that God heals the sick, he can never be satisfied with a religion that teaches that God used to heal," this lady started Christian Science services in her home. We grew slowly, and in 1901 we engaged Masonic Hall, the home having proved too small for the forty to fifty people who came to the Sunday service. Here we now meet, and extend a cordial welcome to all.

Many representative people come in occasionally, all manifesting a loving spirit and a real interest in our Lesson-Sermon. We have organized with the Readers who have built up the work here, but have adopted the new by-law relative to a three-year term of service, and hope soon to take our place among the churches which have obeyed both its letter and the spirit. May this little branch glorify God in all its doings and thus prove a joy and satisfaction to our beloved Leader.—ESTELLE R. FREEMAN.

### The New Edifice in Kansas City, Mo.

What will be the most beautiful and most handsomely appointed church edifice in the city is now under course of construction on the northeast corner of Troost Avenue and Thirty-first Street. It is to be the place of worship of Second Church of Christ, Scientist. In architecture, decoration, and conveniences it is to be as nearly perfect as it can be made.

The location is an ideal one. The lot, which has a frontage of one hundred and forty feet on Troost Avenue and a depth of one hundred and sixty-five feet on Thirty-first Street, marks the highest spot in the vicinity, and when the building is finished its well-proportioned dome will stand out against the sky line and can easily be seen from all points of the surrounding city. The building, which will be one hundred and five feet square, will stand on the northeast corner of the lot, thus giving space for sixty feet of lawn on the front and thirty feet on the side street. The extreme height of the structure, including the dome, will be one hundred and two feet.

The exterior is designed in the classic style of architecture, in that period known as Roman Doric, and in bringing out the detail of the exterior and interior, conscientious study has been given to producing a perfect building after this ancient style. The base of the building to the top of the water table will be faced with dressed Phœnix stone, while the remaining portion of the exterior will be faced with dressed Phœnix or Carthage stone. The exterior of the dome and the entire roof will be covered with metal of bronze green.

In the construction of this building, it will be made as nearly fireproof as possible.

One of the most beautiful and artistic effects will be in the lighting. As far as possible, concealed lights will be used. In the space above the inner dome will be a number

Digitized by Google

of rows of electric lights, behind which are powerful reflectors, which throw the light down into the auditorium.

The decoration of the auditorium will be in soft shades of old rose and ivory white, with a slight blending of light greens and buffs, to emphasize the architectural effects.

In connection with the heating and ventilating of the church, every room and hall of the building will be provided with fresh-air pipes, and ventilation pipes at the floor and ceiling.

At present Sunday morning services are held in the Willis Wood Opera House and Wednesday evening meetings in the Pepper Building. Beginning September 14, Sunday evening meetings will be held in the Pepper Building.

The church was organized February 18, 1898, with sixty-two members and has increased the number to two hundred and thirty-nine. Outside interest in the work of the organization is shown by the fact that last Sunday an audience of eleven hundred people was present at the morning service at the Willis Wood Theatre.

*Kansas City* (Mo.) *World.*

### Church Organized at Lockhaven, Pa.

Christian Science was introduced into Lock Haven thirteen years ago, by the recovery of a chronic invalid through its ministrations. Three years later this individual, having had class instruction from a loyal student of our Leader, was asked to hold meetings in a private parlor. In this home the Lesson-Sermon was read for several years until the summer of 1899, when the society felt strong enough to hire a public room, and advertise its services in the daily papers. On December 11, 1901, the church was organized with twenty-three charter members, and larger and more centrally located quarters have been rented. In addition to the Sunday and Wednesday meetings a reading room is kept open daily where all Christian Science literature can be obtained. Science and Health has been placed in the public library, also the *Christian Science Sentinel.* A Sunday School has been established, a building fund started, and the members feel that a great period of growth lies before them. It seems to them a great privilege to be a branch of the parent vine and to help on in a small degree the great Christian Science movement.

WILHELMINA HENRY, *Clerk.*

### Chautauqua in Rockford, Ill.

I would like to tell the Field of the beautiful demonstration here. Knowing that "Divine Love governs all," we had no trouble in getting a permit for a representative tent on the assembly grounds. We secured one of the largest tents, and choice of location in the representative row, where all entering the grounds through the main entrance would pass.

During the session of the assembly we had over four hundred callers, outside of our own people and those known to us to be interested previously. Some called to ask what Christian Science was, some to ask for literature on the subject; others asked the privilege of coming in to rest, as the sign said "Welcome." One lady said she looked in and saw the motto, "Thou shalt have no other gods before me," and knew that where God's word was kept she would be welcome. All spoke of the beauty and homelikeness of the tent. Literature offered was gladly accepted. More than five hundred Sentinels, lectures, reprints, and pamphlets were given away. Many who came with burdened hearts and weary bodies spoke with thanks of the rest and peace received.

Dr. G., one of the visiting lecturers, an Episcopal minister, read the sign as he was passing, stepped in, and as he cordially shook hands, said, "I am not a Christian Scientist, but I heartily thank you for this tent. It is the first one I have seen on a Chautauqua ground. You have done a good work in having it here."

The daily papers all spoke in praise of the tent, mentioning that ours was the first church in the city to be represented.—LILLIAN V. WEATHERWAX.

### Opening Services at Cotuit.

On Sunday, the seventeenth of August, the members of First Church of Christ, Scientist, Cotuit, Mass., held the first service in their new home. The more than one hundred people who gathered at 11 A.M. were impressed with its simple beauty and attractiveness. The church building is situated on a lot facing the Main Street of the village. It is not large but has a neat and modern appearance. Although without tower or spire, the ornaments and small gabled windows of the roof relieve it of any barrenness.

There are three entrances. The front one leads through a small vestibule into the auditorium. This is well lighted, and the cypress finishings, and soft green tinted walls, give a cheerful atmosphere and peaceful appearance which are in direct accord with the Christian Science thought. It is pleasant to note here that the architect is a Scientist.

In the rear of the auditorium is a reading room to which entrance is gained through a side vestibule. This room is finished similar to the auditorium, with a large fireplace and mantle reaching nearly across the room, with shelves for books on each side. From this room doorways lead to a small waiting room for the Readers and to the basement.

At the close of the regular service the First Reader, Mrs. Carrie A. Parker, said in part:—

*Dear Brothers and Sisters:*—We have come here to-day with our hearts glad and full of gratitude for the demonstration so far made.

We extend a cordial welcome to all who have come here to rejoice with us in our first service in our new church home.

If the gospel is true, there is a mighty work to be done, and our labors must steadily increase. It is ours to forget self, be patient, tender-hearted, honest, loving, firm, true to our high ideals, and as the Scriptures teach, prove all things; holding fast that which is good.

The building of this church has given us new experiences. Through the offerings so willingly given we have proved that God is the Source of all supply.

To all from whom we have received offerings we extend a grateful recognition of their good will and love toward us.

Referring to our records I find that the work in Christian Science in Cotuit was begun, as is often the case, by two students going through the lessons in a private residence.

The number gradually increased until the parlor was too small to accommodate the attendants. A society was formed in 1897, and a small building was engaged for services. In May, 1899, First Church of Christ, Scientist, Cotuit, was incorporated with seven students.

In June, 1900, a lecture was given in Freedom Hall by Rev. Irving C. Tomlinson, C.S.B. The reading room under the auspices of this church was opened to the public in January, 1900, a Sunday School was organized January 13, 1901. Little more than one year ago we had a building fund of about one hundred and fifty dollars. Since then the lot upon which the church stands was presented to us by a brother Scientist, subscriptions have been received and added to the fund making it possible for us to begin work. The ground was broken for laying the foundation the latter part of March, 1902. Work on the building began April 25. The corner-stone was laid May 21.

In conclusion I cannot refrain from saying one word for our dear Leader. To this age has come a glorious revelation. The divine Principle of Being has been revealed to us through "Science and Health with Key to the Scrip-

Digitized by Google

tures" by Mary Baker G. Eddy, and we feel grateful to the Giver of all good for the Key that has unlocked the treasures of Truth and made it possible for all to share with her through whose spiritualized consciousness came the revelation.

When a man feels that he is sent of God, he is fearless. He never thinks about merely personal consequences. He does not say, "I cannot go before Pharoah or Cæsar, because he is a very great man and I am a very little one;" he says to the Lord, "If Thou wilt go with me, I will go." That is the true fearlessness; not audacity, not impudence or insolence, not self-exaggeration, but a Moses-like and a Jeremiah-like dependence on the word of the living God. Said the Lord to Moses, "Certainly I will be with thee;" says the Lord to every prophet, "I will make thy face as brass; thy voice shall be a living thunder, and thy look a destroying lightning, Go!" It is not the man who goes; it is the incarnate God. . . . I am not inventing a gospel; I am delivering one, and I must deliver it precisely as I heard it, and as I hear it every morning in the sanctuary of my own soul.—DR. JOSEPH PARKER.

## The Singing Shepherd.

THE shepherd climbed the hill through dark and light;
And on and on he went,
Higher and higher still,
Seeking a pasture hidden in the height.
He followed by the rill,
He followed past the rocks;
And, as he went, singing, he shepherded his flocks.

How wide those upland pastures none e'er knew;
But over the wild hills
A stretch of watered grass,
Outspreading, though half hidden from the view,
Invites that all may pass.
He sees the weary way;
Yet, while the shepherd sings, how brief the toilsome day!

Stand thou with me, and watch his eager feet.
He stays not for the drought,
Nor lingers in the shade,
Save where the clover and the streamlet meet.
There, quiet, unafraid,
The tender lambs may feed,
While the calm moon gives rest to those who are in need.

Again I see his figure cut the sky,
Then sink, and reappear
Upon a loftier plain,
Where far beneath his feet the eagles cry.
I cannot hear his strain;
But, in a moving drift,
I see the snow-white sheep follow the music's lift.

The climbing shepherd long ago has passed;
Yet in the morning air,
For those who listen well,
His song still lingers where his feet made haste,
And, where his music fell,
The happy shepherds know
His song allures them yet, beyond the fields of snow.

ANNIE FIELDS, in *Harper's Magazine.*

### Notice.

Readers will please note that the Science and Health reference 464—8 in Sect. III. of the lesson for September 28, would read 464—24 for the later revised editions.

## Testimonies of Healing.

### Testimony Meeting at St. Louis.

The Wednesday evening meetings of First Church of Christ, Scientist, in St. Louis, have been well attended, and good testimonies have been given at all of them. The following grateful acknowledgments of benefits received from Christian Science were made at one of the recent meetings.

One testimony was given by a lady who spoke of a young man's healing from sickness and want through Christian Science. She said that this man came to the door at the home of one of her friends, to offer some articles for sale. He stated by way of explanation that he had failed, on account of ill health, to get a position which he had expected to secure, and had undertaken to sell the articles because his supply of money was exhausted. The young man was suffering from rheumatism, his shoes were worn out, and his clothes were not clean. The lady told him that she did not need what he was offering for sale, but that she was in possession of something of which he stood in great need. She lovingly told him about Christian Science healing and gave him Christian Science literature, and he promised to come again in two weeks. He returned and told the lady that he was entirely healed from rheumatism. He had secured a good position in a railroad office, and was dressed in a new business suit.

"My early experience with Christian Science was right along the line of having my great necessities met," said a gentleman who was the next to give his testimony. He stated that when Christian Science was first brought to his attention, he was in a deplorable state of mind; that he had been out of employment for eight or nine months, and had become very much disheartened. "I had lost confidence," he said, "in myself and all faith in my ability when Christian Science was brought to my attention, and I called on a practitioner who was also a teacher. As she told me of Christian Science and how it unfolds the omnipotence of God to the human sense, I became anxious to know more about this truth. Accordingly I accepted an invitation to take a course of class teaching, although I had not a penny wherewith to meet the payment for this instruction. Just about that time I secured a position which I kept for a short time, although it was not satisfactory. No sooner had the class teaching in Christian Science been brought to a close, than I got a better position, and I have always ascribed this success to God's provision. Since that time I have always had a sufficiency, and I am confident that Christian Science reveals to us that God will meet every human need." The speaker also called attention to the fact that our greatest need is a knowledge of God and love for our neighbor. That it uncovers any spiritual barrenness and reveals the means of growth, and that it acquaints us with the privilege of claiming and taking possession of that which God has ordained should be ours.

A visitor from Chicago spoke as follows: "Some five years ago Christian Science was brought to the attention of my wife and myself, and since that time it has been our sole remedy in case of sickness, our refuge from temptations to sin. The change that came into my life at that time words can scarcely describe. Prior to the appearing of this truth I had been a man of the world in every sense; knew nothing of religious matters, never read the Bible, and had not for years been inside a church. Almost instantly I recognized in the Christian Science presentation a different thought from that which I had entertained of God. I then began to study the text-book of Christian Science and have been trying, ever since that time, to improve my understanding of this truth. It has not only aided me in sickness and to overcome the sins of the world, but it has also been a great benefit to me in a business way."

Digitized by Google

He then stated that he had worked a long time hoping for an increase in salary, but had failed to secure it. That his salary was raised, however, three months after he took up the study of Christian Science on account of his increased efficiency, and because he attended to his duties more acceptably in consequence of his more steady habits, and that his salary was raised repeatedly thereafter. In pointing out the necessity of loving our neighbor he said, "A man who was over me in my work seemed to have a great dislike for me, and I had a dislike for him. After coming into Christian Science I recognized that it was necessary for me to overcome this hatred. It was pointed out to me that if I overcame my *own* hatred for the man, the natural result would follow that his seeming hatred would disappear. It was quite a trial for me to put myself in obedience to the Truth as laid down in Science and Health, but in time I *did* overcome my dislike. In three years a better position was offered me elsewhere, and when the time came for me to sever my connection with the firm, this man between whom and myself there had been a strong dislike, told me that he was sorry to see me go, that my work had been satisfactory, and that he would be glad to give me another position at any time, if I should decide to return. This is an illustration of the power of divine Love. For all these benefits I am truly grateful to God; also to Mrs. Eddy and her loyal students who have done the pioneer work over the United States, and have made it possible also for us younger ones to do our work.

Several others gave testimonies. One stated that the study of Christian Science had brought to him the understanding of God as the only source of all true happiness; another testified to the peace that came to her through the reading of an article in the *Christian Science Sentinel;* and still another made grateful acknowledgment as to the efficacy of Christian Science in the speedy healing of a burn on her hand.—T.

---

When a child I was always sickly. I suffered from neuralgia, liver complaint, and another severe trouble, eczema. As time went on I grew more and more sensitive and had to wear flannels summer and winter; and still I would have neuralgia till I was tired out with pain. The doctor would always give me morphine or some other opiate to quiet me. One physician treated me for nearly six years, then said I would be obliged to go to the hospital as he could not help me; so I went, and endured the terrible suffering of several operations. But relief did not come, and I suffered so much that it led to nervous prostration. Later on two other operations were undergone and my torture was unspeakable. When I came out from under the influence of chloroform I did not know anything. I had been sick so long my husband said I was just like a little baby, I had to learn to walk and talk. I got so I could sit at last, and I did sit in my chair a year.

After all these years of suffering I heard of Christian Science, and went to church a few times; but in the extremity of my pain I was afraid to commit my case to God, and turned again to the physicians. When they pronounced my condition hopeless, I said I wanted Christian Science, and my husband then employed a practitioner who gave me absent treatment. She told me I could walk for I could lean on God; that I could sleep for I could rest in God. I caught the thought and began to walk. I rested in God, His everlasting arms were about me and I slept well. She taught me how to make little demonstrations and now I walk anywhere. I have walked two miles several times. With my daughters' help I do housework of all descriptions. Error tries to assert itself sometimes but I know it has no power, because God is all power. I am thankful for the understanding I have of God as revealed through Christian Science.

If any one reads this who is suffering, I advise him to investigate this truth. I was healed of all my complaints in about five months. My healing has been slow but sure.

I am thankful to all my helpers in Christian Science for what they have done for me, and to Mrs. Eddy for the revelation of Truth which makes us free. Through my trials I am at last led to know the true and living God. I now begin to realize why Christ said "ye must be born again."—Mrs. Julia Cooper, Shawnee, Okla.

---

When my first baby was born, I developed kidney trouble in a very severe form. My physician was greatly alarmed and fearing for my life, gave me the usual treatment for such a case, put me on a milk diet, had me take vapor baths every night, drink only distilled water, and I had medicine for every hour in the day. I was perfectly miserable all the time and for the last two weeks before my little one came, I rested neither day nor night, suffering in many ways, especially from very severe headaches, and was so weak I could hardly stand.

Finally, when my boy was somewhat prematurely born, he was a poor, weak, delicate little creature, and lived only three days. I came near to death at his birth, and my physician worked over me for hours, and at last sent for another doctor before I was restored.

My eyes also were affected—so much so that I could not distinguish the faces of those around my bedside. I was a long while recovering and never became entirely well until treated by Christian Science.

At the birth of my second child everything was quite different and all the old difficulties were met and conquered. The same trouble presented itself, but with Science—what different results! I was exceptionally well and looked better than I had for years. My friends were all surprised that I should be so well and predicted a very unhappy ending, thinking that I could not possibly pass through the ordeal a second time, and live. I was told that only the rigid treatment to which I had been subjected before, had saved my life, but the demonstration was perfect, not one sign of a convulsion and no pain.

The physician attending said it would be impossible for the child to be born without the aid of instruments, but Truth was triumphant.

My baby is now six months old and from her birth has been a strong, healthy child, never having been sick for a day.

I am very well and strong too; in fact, in better health than ever before and feel that I cannot be too thankful for this beautiful "Truth that has set me free" from all the old claims and changed me from a melancholy, unhappy woman into a cheery and hopeful one.

Lillian Hewson Lloyd, San Francisco, Cal.

---

The words, "Truth refuses to be hidden," have come to me with such force the last few days, that I feel I must respond with a testimony for the *Journal* or *Sentinel*.

It was after a conversation with my son, a lad of twelve years, that I felt I must acknowledge what the truth had done for me and my family. I remarked to him that I needed a new Science and Health, and was anxious to get the revised edition. He replied, "Mamma, I am going to take four dollars of the money I have earned and buy a new Science and Health, it will help me to sell more papers."

This boy has a small paper route, and for six weeks he has worked selling papers, cutting grass, etc., and has saved five dollars. He had a dearly cherished object in view for which he was saving his money. Tears came to my eyes on hearing his words, for I had been considering whether or not I could afford to buy a new Science and Health, and here, this child, without a moment's hesitation, was willing to sacrifice all that he had for the Truth. It came as a sweet rebuke to me, and money was immediately sent for two copies of the latest edition.

Digitized by Google

This same child, two years ago, worked and earned the money for his first Science and Health. He came home one night from a Wednesday evening meeting where he had heard the testimony of a lady in regard to a little boy who had a book, which he called his "Love Book;" and whenever he was naughty, or anything went wrong with him, he would shut himself up in his room to read this book, and then he was all right. My Harold said, "Mamma I am going to buy a 'Love Book' too." He started the very next day to earn the money in various ways, and it was quite remarkable the way the money came to him. He shovelled walks; and one lady gave him ten cents; and most unexpectedly, a dollar came in a letter from a person who knew nothing about the Science and Health, or his intention.

He seems to show quite a little business ability, and during the long vacation I encourage his earnings and he is learning to look to Truth for his guide in all his little affairs. Not long ago an opportunity presented itself for him to make a small investment, which seemed just the thing, as he thought. On considering it in the light of Truth, a false view of things was discovered, and he was protected from loss. This was a small problem worked out, but what a step it was toward solving a greater problem in life.—MABEL R. WRIGHT, Meriden, Conn.

---

As the English testimonies have always seemed to appeal to me most, I wish to send a few words of gratitude and thankfulness for others who may feel as I do. I began the study of Christian Science a little more than a year ago, and very soon my health greatly improved. In the course of a few months' study and attendance at the services, I was entirely healed of consumption of the glands of the neck, to which malady I had been in bondage many years. I had four operations, and the last one proving serious, the physicians ordered me to give up my work and to spend a year in Switzerland. This appeared to benefit for a time, but the trouble reappearing, in desperation and in dread of another operation, I turned to Christian Science, and with very joyful results.

Many other physical troubles have vanished, for which I am indeed thankful, but much more grateful am I for the daily help derived from right thinking, and the knowledge that God is All-in-all, and that the fact can be proved in destroying error in one's daily life, if one is only faithful to this grand revelation of Truth as presented by Mrs. Eddy in Science and Health.

M. I. W., London, Eng.

---

At a well-attended Wednesday evening meeting at Second Church of Christ, Winnipeg, the following were some of the testimonies given:—

A lady who had been an invalid for a year told of her successful treatment in Science. She also mentioned two encouraging letters she had received; one was from a lady in Stratford, Ontario, who, while visiting in Manitoba, had been relieved through Science treatment of a complication of diseases and was now telling of Christian Science in and around her own town, and others were becoming interested and many had sent for treatment through her recommendation; the other letter was from a lady in the far West who is a Christian Scientist also. She told of an insane woman visiting at her home, and during her stay they gave her Science and Health to read. When she returned home her husband was amazed and delighted to find that his wife, who had been mentally deranged for a year, was now perfectly sane. He, of course, was anxious to know what had cured her, and he was told it was through reading the Christian Science text-book.

A lady spoke of human sympathy. She said even some people who were not Scientists knew it to be a very bad thing. Some people had the notion that Christian Scientists were cold-hearted, and indifferent to the suffering. This opinion is quite wrong. There is no class of people who enjoy so much as do Scientists, to allay pain, to uplift the fallen, and to destroy sin and discord, but they know that in order to do this they must hold in thought harmony and health as the realities, and so by holding all in thought as healthy and harmonious they help to extricate them from their suffering and discord, whereas human sympathy would prolong it and defeat the very object in view.

A gentleman who thirteen years ago was a hopeless sufferer from asthma and hay fever, said that he had been a druggist, and was thus in a good position to test the efficacy of drugs. He found them, however, of no avail in relieving his suffering, and his case was given up by the doctors. In his extremity he turned to Christian Science and was completely healed, never having had a return of his old troubles. This gentleman said many had the impression that Christian Scientists were antagonistic to the doctors and to all religious denominations. Such was not the case. They believe that the great majority of the doctors are working conscientiously and doing all in their power to relieve suffering, but Christian Science heals mainly those whom the doctors are unable to benefit. He also said that the most successful business men of to-day were those who carried on their business in accordance with Christian Science principles.

Lastly, a gentleman spoke whose father, after reading Science and Health, lost all desire for smoking after doing so for forty years, and whose mother, through studying Science, gave up her glasses, which she had worn for twenty years, and can now read fine print without them. He told of how at times he had to remain at home from school and was confined to a dark room on account of his eyes. Then, just when he had decided to get glasses, he received Science and Health, and was wholly cured of bad eyesight through the understanding obtained by simply reading it. He was also able to demonstrate over severe colds, with which he was frequently attacked, and over other ailments. Christian Science was of inestimable value in his daily life.

A. G. McD.

---

About seven years ago I found myself with a very troublesome growth on my breast, and which was steadily getting larger. Becoming much frightened over it, I was advised to consult a cancer specialist, which I did, and he assured me that it was nothing more or less than a deep-seated cancer, and advised me to leave my home immediately and take treatment in his sanatorium, which I did. I spent weeks in the place not deriving any benefit from it whatever, and grew very much discouraged.

About this time we came to Scranton, and being asked to attend the Christian Science Church, did so. I also began to study the lessons, and began reading Science and Health. I became much interested, so much so that a little later on, I found that I was entirely freed from the cancer. I cannot express the fulness of my gratitude to Mrs. Eddy for all she has done, and all she has sacrificed for humanity.

Another demonstration which I wish to speak of, and which to me was beautiful, was at the birth of our little boy, now six months old. Treatment was asked for, and received with great benefit. The little one came about four o'clock in the afternoon, and the same evening I was on my feet. I arose the next morning and walked about the house, remaining up about two hours, feeling strong and well, and within one week was going in and out of doors at will.

Surely this is a proof of divine Love as an ever-present help.—MRS. MINNIE DERRELL, Scranton, Pa.

## Religious Items.

Rev. J. J. Morgan is reported in the *Kansas City Times* as follows:—

"We stumble over Christ and his promises because of their greatness. He staggers us; we cannot comprehend him. His greatness made the disciples to doubt. The words of Christ are still a stumbling block to men. Multitudes stumble over his miracles. Men do not work miracles, therefore the man Christ did not work miracles. Men do not rise from the dead, therefore Jesus did not rise from the dead. It requires greatness to believe in greatness. Some are not great enough to take hold of the great Christ. We stumble over his promises. It is a rare man that believes in a practical way what Jesus said: 'Whatsoever ye shall ask in my name, that will I do.' Are you equal to that? 'He that believeth on me, . . . greater works than these shall he do.' What will you do with that in your practical Christian life?

"Usually we modify his statements so as to in a partial way accept them. We limit and modify and trim down until we can take after a fashion. First we limit this promise to the apostles to get around it in that way. They were to do great things and great things were apt to end with them. But Jesus said: 'He that believeth on me, . . . greater works than these shall he do.' Just the form of expression that we have in the great commission when he said: 'He that believeth and is baptized shall be saved,' and this we say applies to the whole world; but that we limit to the disciples.

"The facts are that Jesus does not favor one man above another only as the one lives nearer to him than the other. His promises are to all. He made no distinction between Jew and Gentile. All are one in Christ Jesus that live the Christ life."

---

Communion with God is a far greater thing than the formal offering of prayer. Much prayer, public and private, is cold, perfunctory, offered because the occasion calls for it or in pursuance of a settled habit. True communion with God often finds no expression in words. It may be simply the outgoing of the heart toward God, the yearning of the spirit for peace in Him and for His loving presence in the soul. It may be that patient waiting upon the Father which simply listens, in rapt devotion, to hear the "still, small voice" of His infinite compassion and love. Our thought of prayer is often one-sided. We think of it as a speaking to God, and imagine that we shall be heard for our much speaking. But prayer in its completeness is *communion*, the interchange of thought with God. So Moses talked with God, face to face, as a man talks with his friend. And that is the exalted privilege of every disciple of the Lord.

Perhaps it is because we enjoy so little real communion with God that there is so little transformation in our lives. If our faces do not shine with diviner light as the years go by it is because we have not entered into the secret place of the Most High, and caught the glow of heaven from the heart of God. We are satisfied with formal prayer, and so we make little progress in the spiritual life. What the Church and the world need to-day is transformed lives, progressively unfolding from glory to glory until complete in Christ.—*The Examiner.*

REVOLT OR ASSIMILATION.—What the authorities of the more conservative Churches are apt to overlook is the disposition towards them of that educated younger mind with which they all have to reckon. It is from this class that the next generation of religious teachers has to come; it is on its attitude that, humanly speaking, the whole fortunes of these organizations will depend. It will not do for any of them to make too sure of that attitude. . . . The new generation, including those born in the most orthodox families, shows a surprising independence of the traditions of the fathers. It would only require a *non possumus* attitude in ecclesiastical circles toward its new-won knowledge and its mental tendencies to bring about a general and disastrous revolt. It is in view of this aspect of the case that we hail the issue of the latest claim for freedom of opinion. It will, we trust, help to prove to the capable young minds that are now balancing the question of a career, that the noble calling of the religious teacher, in this powerful section of the Free Churches, is one that may be entered without a too humiliating sacrifice of mental freedom.

*Christian World.*

HOW TO FIND HIM.—The world does not find God because it is not willing to pay the price of clear vision; it wastes its time and strength on all manner of expedients, experiments, spiritual labor-saving devices. The most vigorous intellectual methods, the most recondite practice of the mysteries, are easy compared with the labor and pain of casting out pride, vanity, self-consciousness, self-love, impurity of motive, thought, and impulse. Access to God is open to every man, is close at hand, may be found at any moment in any occupation, but the approach is made through a denial of self, a subjugation of self, a casting out of self, which men and women who are willing to search the heavens and travel to the ends of the earth are not willing to effect in themselves. God is always near; it is we who are afar off. God is always accessible; it is we who refuse to approach. God is always visible; it is we who cannot see. Blessed, therefore, and happy among the children of the world are the pure in heart, for they shall see and know.—*The Outlook.*

David James Burrell, D.D., writes in *The Homiletic Review:* "We cannot emphasize too deeply the difference between remorse and repentance. If sorrow for ill-doing could give assurance of absolution, we might believe that, not only Judas but all others who have felt the overwhelming pain of retribution, will be received into the heavenly city. But the sorrow for sin which commends itself to God is a sorrow which takes cognizance, not merely of the sin's consequences, but of its heinous character as offensive to God. Peter denied Christ, went out and wept bitterly; returned to Christ and faithfully served him. His tears were mingled with faith. He believed in the pardoning grace of God, and so was not driven to despair. He hated his sin and turned from it. This is the true repentance which drives the soul to God.

Rev. A. A. Bridgman writes in *The Congregationalist and Christian World:* "How, then, can we make ourselves ready for his coming? First by realizing that he is already here and that the 'coming' is simply a fuller manifestation of himself unto us. This calls for constant alertness on our part. The house into which an honored guest may come at any moment must be a house kept swept and garnished continually. Better than any pilgrimage to some distant sacred mountain is an inward radical house-cleaning that shall establish a man in decency, honesty, and kindness."

It often takes a higher type of manhood to endure failure bravely than to achieve success. When the failure comes without fault of our own or in obedience to ideals more noble than that of personal success, then to bear the disappointment cheerfully, to keep life sweet and sunny, to let our "desire to be great be swallowed up in a willingness to be what we are," lends to life a crown of glory which no mere success, however great, can bring.

RODNEY F. JOHONOT.

The fountain must be sweet, to send forth sweet waters; and the tree must be good to yield good fruit. We must not be castaways if we would save others. If we would learn to *do* good, we must learn to *be* good; and that needs self-knowledge and the knowledge of goodness. If we neglect common duties and every-day virtue, we shall rather be meddlers than helpers.

RUSSELL L. CARPENTER.

Rev. Frederick W. Atkinson says in *The Universalist Leader:* "So the demands of true religion are for clear thinking concerning the great realities and sanctities of life; for true feeling which takes the form of reverence and gratitude; and last of all, for action consistent with the other two. These three, but the greatest of these is the last, in which we fulfil the law of brotherhood and work."

Faith should not be an expectation that God will do some remarkable thing for His children, but a confidence, rather, that He will do everything for the best. The results of our own mistakes and persistent self-doing ought never to be attributed to God.

*The Standard.*

What the world really needs is men who have news from the land of the ideal, who have God's life within them, who open afresh the springs of living water that quench the thirst of the soul.—J. BRIERLEY.

*Zion's Herald* says: "It is a sad fact that most people see truth better than they live it. We need more vision less than we need more courage, more fidelity, more self-denial."

The crown of the morrow lies in that approach to the Christ character which a life of faithfulness to-day makes real and abiding.—REV. I. MENCH CHAMBERS.

Remember that your work comes only moment by moment; and as surely as God calls you to work, He gives the strength to do it.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only*.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents, twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid, one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full sheep, stiff covers, gilt edges, same paper and size of page as cloth edition, each prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Five or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen: $4.50 per dozen. Leather covers (pocket), $1.00 each: $5 00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum, $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50: Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cts. Twenty-five copies to one address $1.15; 50 copies to one address, $2.25.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

President Roosevelt has chosen Charlemagne Tower, ambassador to Russia, to succeed Mr. White as ambassador to Germany. Notification of this decision and that Mr. White's letters of recall had been issued by the State Department has reached the Foreign Office at Berlin. This will involve promotions as follows: Robert McCormick of Illinois will go to Russia; Bellamy Storer, of Ohio, to Austria-Hungary; Arthur S. Hardy of New Hampshire to Spain; Charles P. Bryan of Illinois to Switzerland; David E. Thompson, of Nebraska, to Brazil.

Major J. W. Powell, director of the Bureau of Ethnology at the Smithsonian Institute, at Washington, passed away last week at his summer home at Haven, Maine. Major Powell stood in the foremost rank of geologists and anthropologists of the world. His most notable scientific work was the exploration of the Grand Canon of the Colorado in the sixties. This exploit marked an important contribution to the geological, ethnological, and geographical knowledge of North America.

A new transcontinental railway for Canada is proposed. The project involves the construction of a line from Chicoutimi on the Saguenay River, a little below Quebec, westward, skirting the southern shore of James Bay, and running almost due west on the fifty-fourth parallel, through the famous Saskatchewan country, and via the Peace or Pine River Pass to the nearest point on the Pacific. According to reports construction will begin at once.

It is possible that Congress will be asked upon assembling in December to institute an investigation into the anthracite coal strike. It is reported that some of the labor unions endorse this programme. Some of the more radical in attitude suggest that the United States take over the anthracite region "by right of eminent domain."

The summer diggings in the Klondike region are closing. The output exceeds eleven million dollars in gold dust. It is expected that another year will see many of the smaller claims consolidated and the mining operations carried on systematically with improved hydraulic plants in the hands of corporations.

Lieutenant G. P. Emmons is on his way to Washington to report upon the finding of old boundary lines between Alaska and Canada.

The pension roll at the end of July last contained 1,001,497 names.

**Foreign.**

There are before the Canadian Government three propositions for a fast Atlantic line between Canada and England. One is for a twenty-two knot service from the Canadian Pacific Railway; one from a combination of steamship men for a twenty knot service; and another from the Allan line for an eighteen knot service. Objections to the first two are the expensiveness and the diminished freight-carrying capacity.

The forthcoming visit of Siam's Crown Prince to this country will be semi-official, as his main object is to be the study of our industrial establishments. He will spend about six weeks in this pursuit. Third Assistant Secretary of State Peirce has been designated by the President to look after the interests of the royal visitor. The Prince speaks English fluently.

The society for the protection of the interests of the German chemical industry, in session at Frankfort, has unanimously passed a resolution against the prohibition of the use of boric acid for the preservation of meats, and has appealed to the Bundesrath to reverse its decision.

A Berlin despatch says a plaster cast of the bronze copy of Schadow's statue of Frederick the Great at Stettin is being prepared for Emperor William as a part of his gift to Harvard University.

There are in use in Cuba three moneys.—Spanish gold, Spanish silver, and American gold. As the Spanish money is subject to much fluctuation in value, there is much probability that Cuba may adopt the American standard.

Sir Michael Herbert, the new ambassador to the United States, has sailed from England on the Campania.

**Industrial and Commercial.**

The New England Asbestos Milling and Mining Company has issued a circular to its stockholders proposing the increase of its capital stock to one and a half million dollars. The object of this increase is to enable the company to acquire three rich Canadian asbestos mines: The Beaver at Thetford, the Johnson at Black Lake, and the Broughton, P. Q., mine. The purchase price of these is $675,000.

In order to handle the increased ore business, the Great Northern Railroad is to enlarge its ore docks at Allonez, which are already the largest in the world. It is estimated that by the close of the present season the ore docks will have handled four million tons.

According to reports the New York, New Haven and Hartford Railroad is to contract for passenger and freight service between Boston and Antwerp and other European ports, and Liverpool and Manchester.

The American line steamer Kensington, which has been partially equipped with oil fuel furnaces, made a successful test of the use of this fuel on her recent trip from Southampton to New York.

A smelting company, capitalized at a million dollars, to be known as the Piedmont Smelting Company, with its head offices at Atlanta, Ga., has asked for a charter.

The cable steamer Colonia has landed the land end of the Pacific cable at Banfield Creek, B. C., and started on her long trip to Fanning Island.

The request of the mill men of the Minneapolis flour mills for an eight hour day with the same pay that has been received for a twelve hour day, has been refused by the mill officials. The very favorable terms offered by the officials have, however, been accepted by the men.

It is expected that within eighty days messages will pass over the new Pacific cable reaching from San Francisco to Honolulu. Later it will be extended to Manila, touching at Guam.

According to dispatches the Northern Pacific has at last decided to make Duluth, instead of South Superior, its grain terminal, and after this year will deliver all its grain at that point.

The potato crop of the famous Aroostook County, Maine, for shipment is estimated at four million bushels, a fair average, though one-third less than last year's product.

The Massachusetts State Board of Conciliation and Arbitration has fifteen cases as to prices, etc., pending before it.

**General.**

Rev. Dr. Francis L. Patton, who resigned the presidency of Princeton University last June, to be succeeded by Professor Woodrow Wilson, will be made president of Princeton Theological Seminary, this having been decided upon at a special meeting of the board of trustees. He has accepted the position, to which he will be formally elected October 14. Dr. Patton was professor of theology in McCormick Seminary, Chicago, for ten years, and later professor of apologetics in Princeton Seminary, and for fourteen years president of Princeton University.

London has between six and seven millions of people. It has seven hundred railroad stations and eight hundred miles of railways. One million persons travel daily in the underground cars. Omnibuses, hansoms, cabs, etc., carry two million five hundred thousand persons daily. No trolleys are on London streets.

After considerable controversy it has been decided that artistic photography shall be treated as one of the fine arts at the St. Louis Exposition. Photographs of high artistic merit are to be given a place in the fine arts department.

The Dominion line announces for next season a weekly service between Liverpool, Quebec, and Montreal. Five large vessels will be detailed for the service, the Canada, Kensington, Southwood, Dominion, and one other.

Plans are said to be on foot looking toward the consolidation of all the electric lines in the Michigan lower peninsula, excepting three or four lines. The capitalization will be about forty million dollars.

A new line of steamships to ply between Odessa, Naples, and New York is to be inaugurated in November. Three large steamers, the St. Petersburg, Soratoff, and Orel, have been detailed to this service.

English is more and more taking the place of French as the language of Russian court circles. The Czarina speaks English constantly, and the Czar, too, likes to express himself in the same tongue.

A vein of graphite of marked purity and easily worked has been discovered in the Adirondacks near Pyramid Lake, twelve miles west of Ticonderoga. A company is to be formed to work the mine.

Surveyors have finished locating the Alaska Central Railroad from Resurrection Bay to Yukon, a distance of four hundred miles. Coal fields were found along the route.

One of the new bridges to be thrown over the Seine is to be built in two stories, with one set of arches resting on another.

## Selected Articles.

### The Bible and Medicine.

SINCE Christian Science advocates total abstinence from material remedies and implicit reliance upon Spirit as the proper means of healing the sick, Bible students naturally ask: Is the practice of discarding the use of medicine justified from a Scriptural standpoint? However much of the truth may have been understood and practised by the prophets it is conceded by all that Jesus alone understood and demonstrated the perfect way and he resorted to no material remedies, not even to the use of human will for he said: "Not as I will, but as thou wilt." "I speak not of myself: but the Father that dwelleth in me, he doeth the works." Furthermore, after having accepted the teaching that God is omnipotent and the only first Cause, that He created all things, one may readily believe that the deific power can instantly destroy disease and sin and that to do this directly, instead of bringing it about through material laws or means, seems more practical and more strictly in accord with the institutions of the All-wise.

The Scriptures declare: "Lo this only have I found, that God hath made man upright; but they have sought out many inventions. Who is as the wise man? and who knoweth the interpretation of a thing?" "All we like sheep have gone astray; we have turned every one to his own way." "For my thoughts are not your thoughts, neither are your ways my ways, saith the Lord. For as the heavens are higher than the earth, so are my ways higher than your ways, and my thoughts than your thoughts." So long as man lacks in the understanding of the nature and essence of Deity he is naturally wanting in the understanding of His ways and means, and seeks out human and material inventions because the circumstances necessitate it. An individual lost in the woods does not choose the wrong path because he prefers that to the right one, but because he mistakes in judgment. That mankind have sought through material medicines to doctor the human body, though a mistake, has naturally resulted from their ignorance of a better way. Ill success from the use of crude human means has been convincing of their insufficiency, and has led on to the discovery of improved ways until at last Christian Science has been found.

It has been said that Jesus advocated the use of medicine when he said: "They that be whole need not a physician, but they that are sick." This position, however, seems to be very poorly taken, for if Jesus had taught the use of medicine he would surely have made his own life conform to that teaching. Throughout his career he taught by example exactly what he taught by precept. His own life conformed to all that he taught. He said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." He did not say, He who becomes well versed in material therapeutics shall do the works that I do. Neither did he declare: In the latter days, through the practice of medicine and surgery you shall be able to do greater works than I have done through the power of God. This was to be accomplished through faith in God. through a firm reliance upon His power. It has been said that when Jesus spoke of the good Samaritan "pouring in oil and wine" he was advocating the use of medicine.

I think it is quite generally conceded that in this statement Jesus was simply illustrating his point by a figure which was comprehensible to his listeners. The physician to which Jesus referred figuratively, in his words previously quoted, was the great Physician who destroys sin. If Jesus advocated the use of medicine, we might ask what system, what sort of medicine. It is well known to all that the remedies which were used in the days of the Master were very crude and are entirely discarded by the profession in these days. It is also quite well known that many of the remedies which were considered of value a few years ago are discarded by the profession of to-day, and it requires but little exercise of the imagination to conclude that a few years hence the medical profession will have largely outgrown the methods that are employed in the beginning of the twentieth century. It is also well known that the great Physician and His spiritual power are the same yesterday, to-day, and forever, and could therefore be recommended by him who spoke for all time and eternity.

It has been said that Jesus once healed a blind man by the application of clay and spittle, and yet not one who advocates this doctrine would think of recommending clay and spittle as a sure cure or even a good remedy for blindness. The Master's application of clay and spittle was an object-lesson illustrating his contempt for materiality. It has also been said that Isaiah advocated the use of material remedies when he told Hezekiah to apply a lump of figs to his boil. This is probably true, but a close examination of the Scriptural text on this point shows that while the Lord told Hezekiah that he would be healed, it was Isaiah, not the Lord, who told him to put on a lump of figs, and it is not unlikely that Isaiah, like many if not all of us in this age, thought it was necessary for him to help the Lord by the use of a material remedy.

Those who assume that the lump of figs was the means through which Hezekiah was healed, know quite as well as Christian Scientists, that this "remedy" would have very little effect upon a latter-day carbuncle. All down through the ages, divine power has been present in a sufficient degree to produce results, and in spite of human inventions and mortals' dependence upon matter, Spirit has not been silenced and men have reaped a reasonable degree of harmony and health in spite of the clouds through which the divine influence has been obliged to manifest itself. The Scriptures declare that "Asa in the thirty and ninth year of his reign, was diseased in his feet, until his disease was exceeding great: yet in his disease he sought not to the Lord, but to the physicians.

And Asa slept with his fathers, and died in the one and fortieth year of his reign."

Here we have it clearly set forth that to depend upon physicians instead of the Lord was, in this instance, considered a mistake which resulted disastrously. Some believe that it is proper to resort to medicine and ask God to bless the medicine. I once believed this myself and now have great respect for those who still entertain this opinion, but through Christian Science I have learned that the best

Digitized by Google

results are obtained when I rely upon the divine power alone. We never know what Spirit can and will do for us until we throw our whole weight upon the side of Spirit, and I am sure that those who launch out and depend upon God as the only means of healing the sick will never have cause to regret it, provided they do this understandingly. To attempt to discard material remedies without having an intelligent understanding of God, and how to apply the divine power to one's troubles, is not wise. There is a vast difference between depending upon Christian Science and depending upon nothing. Christian Scientists have within themselves convincing proof of the efficacy of their faith and its superiority over the means and methods which they have heretofore employed, and they believe that no man can do better than to trust God implicitly.

Even though some of the prophets may have lacked in their spiritual understanding and thereby divided their faith between spiritual and material means, Jesus, the acknowledged superior of all, neither used material remedies nor advocated their use.

## Coal Mines and Mining.

THREE ink blots on the eastern end of the map of Pennsylvania, between the Delaware and the Susquehanna Rivers, represent all the anthracite coal in the United States. They cover an area of four hundred and eighty-eight square miles, and produced last year 53,500,000 tons,—truly infinite riches in a little room. They are popularly known as the Wyoming, Lehigh, and Schuylkill regions. Their limits are so sharply defined that one can pass in five minutes through one of the notches in the surrounding mountain wall and find himself as much out of the "coal regions" as if he were a hundred miles away.

The coal measures lie on a floor of conglomerate rock, which rises about them on all sides like the sides of a basin, and is exposed on the slopes and summits of the mountains surrounding the coal regions. The coal measures which lie in this basin are composed of alternate layers of rock and coal piled upon each other like the layers of a jelly-cake, in which the thick layers of cake represent the rock strata and the thin layers of jelly the coal beds. The thickness of the coal beds varies from one foot to thirty-two feet, and that of the rock from a few feet to two hundred. The coal beds are pretty regularly distributed throughout the coal measures, and their presence in a certain place can generally be calculated upon, so that each bed bears its own name.

The theory of the vegetable origin of coal has many advocates, but the last word has not been said. The fossil plants in the coal measures, upon which so much has been built, are not found in the coal beds, but in the slate overlying them, which is not a species of coal, nor of vegetable substance in the process of changing into coal, but rock.

The term colliery includes the coal mine, with its buildings and appurtenances; the mine proper is underground. The entrance to it is by a drift, a slope, or a shaft. "Stripping,"—which is quarrying, and not mining at all,—is only possible where there is an outcrop of a thick bed of coal. The strippings are in the Lehigh and Schuylkill regions, where the coal is in the mountain tops. A drift is a horizontal tunnel in the face of an outcrop. It is the cheapest and was the earliest method of opening a mine, but the drifts have long since been worked out. A slope is a tunnel which follows down the dip of a coal bed from the surface. It is largely used in the Lehigh and Schuylkill regions, where the pitch of the beds is steep and outcrops frequent. In the Wyoming region the upper beds were formerly mined by drift and by slope; but these have been pretty generally exhausted, and access to the deep-lying beds is only possible by shaft. A shaft is a well-like excavation, opened vertically from the surface to the bed of coal which it is desired to work. Its width is the length of a mine car, from nine to ten and one half feet, and its length is governed by the number of compartments and area of airway needed. A shaft ten feet wide and twenty-four feet long is common, while some are thirteen feet wide and fifty-three feet in length. Its mouth, as far as the soil extends, is lined with cribbing or masonry, below which the rock forms its walls. Over or near its mouth is built the hoisting and pumping apparatus, and it is divided by timbering into carriage-ways, pumpways, and airways. A shaft is usually located so that its foot shall be in the bottom of a synclinal valley, in order that as the mine is opened up the slope it will drain itself into a sump, and the coal will be sent down the grade to the shaft. The lowest place in a mine is the sump,—usually near the foot of the shaft,—from which the water is pumped to the surface by powerful engines. From the foot of the shaft a tunnel called a "gangway" is opened at the right and left in the coal bed along the bottom of the synclinal valley, and parallel with this and above it runs another tunnel called an "airway." These are connected by short tunnels called "cross-headings." The gangway is the highway of the mine; it is permanent, and is heavily timbered on the sides and roof; in it are the mine car tracks, single or double, over which the coal is hauled to the shaft; it is the traveling way through which the men reach their working places, and it is also a part of the ventilation system.

The process of mining is simple, and the tools are of the rudest. They are pick and shovel, bar, hand and machine drills,—the latter an auger, turned by a crank,—and powder and squibs. The coal is loosened or "cut" from the face by blasting; the pick is only used to knock down loosened pieces from the roof and sides, to break up the largest pieces, and to separate the slate from the coal. The general plan of a mine is that of a vast hall with pillars of coal, and roof and floor of the black slate which lies next to the coal; but its floor is seldom level, and the gangways are far from straight. The breasts may pitch so much that the coal is slid down to the gangway in chutes, instead of being hauled over buggy roads. A mine is usually worked up the side of an anticlinal, as the surface of a hillside, while preserving in the main a uniform slope, yet drops into ravines and rises into ridges, so the coal beds bend and wind, and their course is followed by the gangways and the accompanying breasts.

The coal region is a vast network of mines, so connected with each other that one may travel many miles underground; and lying above each other, like the floors of a Brobdingnagian apartment house.

The last thing done is to "rob the pillars." This, notwithstanding its sinister sound, is a legitimate process. While a mine is being worked as much coal is taken out as is considered safe, leaving the pillars, supplemented by props, to support the roof. When a mine, or a portion of one, is worked out, the miners are sent in to take yet more coal from the pillars,—that is, to pare them to the last limit of safety. This work is begun at the farther end, and progresses toward the shaft.

The modern system of mine ventilation is perfect; and while simple in method, it is extremely complicated in its ramifications. The air is exhausted at the air-shaft by a fan, and fresh air rushes down the main shaft to take its place. The law requires that not less than two hundred cubic feet per minute be furnished to each person in a mine. The fan,—which is a huge wheel without a rim, and with broad blades like those of a side-wheel steamboat,—revolves day and night. During a strike, when everything else comes to a standstill, two things do not cease to move,—the fan and the pumps, for the stoppage of either would work irreparable injury.

## The Sun's Heat.

As the sun moves southward, and the shortening days bring the coolness of autumn, it seems appropriate to inquire: What is the nature of this immense supply of heat? By actual measurement (allowing for the heat absorbed by our atmosphere) it is found that the heat received by the earth under a vertical sun is enough, if all of it could be utilized, to run a one horse power engine for every four square feet of exposed surface. On account, however, of the absorption of heat by the air and the great mechanical losses in any form of heat engine, not ten per cent of this power can be put to practical use. Nevertheless the energy is there, though we cannot harness it.

Now the cross-section of the earth, as seen from the sun, is about twelve hundred million million square feet. So the rate at which the sun expends energy in warming the earth amounts to about three hundred million million horse power.

But this is not all. If there were a number more of planets, each as large as the earth and at the same distance from the sun, they would form a close-packed spherical shell inclosing the sun completely, and intercepting all its radiation. This sphere would be 186,000,000 miles in diameter and would contain over 2,000,000,000 planets. The total radiation of the sun must then be 2,000,000,000 times what the earth receives. The corresponding number of horse power is about 600,000,000,000,000,000,000,000—a number quite beyond our power to grasp. It amounts to over 10,000 horse power for every square foot of the sun's whole surface.

What can supply the sun with this enormous amount of energy?

If the sun's heat was not kept up in some way, calculation shows that it would cool off entirely in a very few thousand years. Even if it were all composed of the best of fuel, its combustion would only keep it radiant for five or six thousand years more.

A satisfactory explanation has been given by Helmholtz, who assumes that the whole mass of the sun is slowly contracting. The mass of the descending layers and the force of solar gravity that acts on them are so great that a very large amount of heat is evolved by the process. His calculations show that the whole amount of the sun's radiation in a year would be accounted for by a decrease of two hundred and fifty feet in the sun's diameter. The whole shrinkage of the sun in the three hundred years since the invention of the telescope would be about fifteen miles. Twenty times as great a change could hardly be detected by the best modern observations. So we shall have to wait a few thousand years before any evidence of this shrinkage can be obtained by observation.

## The Enclosed Electric Arc.

IN the older style of lamp the arc is formed between carbon points to which the air has free access. The upper carbon is the positive, so that the current flows from the upper to the lower. The carbons become pointed after the arc has burned a few minutes and the upper carbon burns about twice as fast as the lower, a small cup-shaped spot or crater, forming in it. The bottom carbon is much more pointed than the upper and does not attain to such a high temperature. The greater part of the light is emitted from the crater, and is thrown downward at an angle of about forty-five degrees. The temperature of the arc is exceedingly high and difficult to measure accurately, but it is estimated to be about 3,500 degrees C. . . . The chief objection to the open arc is that the carbons burn away at a comparatively rapid rate, thus making it necessary to trim the lamps daily. The positive carbon, if of the ordinary one-half-inch or nine-sixteenth-inch size, will burn about one and one half inches per hour, though, of course, the rate of burning depends somewhat on the hardness of the carbon. Also, the light from the open arc is not suitable for interior illumination, as it has too much of a glare unless it is toned down by means of opal globes or other devices that generally cut off at least fifty or sixty per cent of the light.

A great step in advance was made by the introduction of the enclosed arc lamp, which . . . is now widely used both for indoor and outdoor illumination. The chief point of difference between the two lamps is that the newer style has its arc enclosed in a small globe which, while not air-tight, keeps the air away from the carbons to such an extent that the rate of carbon consumption is greatly decreased.

The result of enclosing the arc as above described is that most of the oxygen present is soon burned out, and the arc burns in a hot atmosphere of carbon monoxid, nitrogen, and a small amount of oxygen. It is necessary to have a small amount of oxygen present in order to combine with the small amount of carbon given off, and thus prevent its being deposited on the enclosing globe.

The general appearance of an enclosed arc is quite different from that of the open arc. The ends of the carbons are nearly flat, and the light is of a softer and more pleasing character than that given off by the open arc. The flat ends of the carbons are probably due to the fact that the enclosed arc does not remain in one place, but shifts about over the ends of the carbons. There is no well-defined crater as in the open arc, and the arc is very much larger.

## Christian Science and Miracle Cures.

To the Editor.

*Sir:*—An article in your issue of September 13, reprinted from the *Boston Herald,* and entitled, "Miracle Cures in Mexico," raises questions of deeper import than is commonly realized. Since the author of that article referred to Christian Science in connection with his interesting description, I beg to emphasize the radical difference between so-called miracle cures and those resulting from Christian Science practice.

The former are amply described in the instance given by the correspondent of the *Boston Herald,* as cures effected "by prayers or vows offered" to a picture "accompanied usually by anointing the sick person with oil taken from the great lamp always burning before the picture."

The *modus operandi* of the Christian Science treatment has none of the features here described. It has no "vows;" its prayers are not such as can be offered to any material object; there is no picture; and there is no manipulation or physical application, such as anointing with oil.

The Christian Science treatment consists of *knowing* the truth in regard to God and man, namely, that God is spirit, omnipotent and omnipresent; while man, made in His image and likeness, is spiritual and not material. This spiritual understanding of the Truth is Science, and not merely belief, hope, or expectation; and this Science frees man from discord in accordance with Jesus' promise: "Ye shall know the truth, and the truth shall make you free." Thus it is that Christian Science not only reforms the sinner, but also heals the sick.

The correspondent of the *Boston Herald* should know that Christian Science teaches that perfect harmony, whether mental, moral, or physical, is never miraculous, but is normal and natural to man, while evil alone in its myriad forms constitutes abnormality. Hence the definition of the term "miracle" in the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, reads (p. 591):—

Digitized by Google

"MIRACLE. That which is divinely natural, but must be learned humanly; a phenomenon of Science."

Moreover, there are no prescribed "formulas" in Christian Science practice, for the realization of Truth is the only requisite, whatever form this realization may take in the sequence of ideas. In all this there is nothing "mystical," since Science explains mysteries and does not perpetuate them. A further vital distinction between so-called miracle cures and those resulting from Christian Science practice lies in the fact that, while faith seems to be requisite in the former, this is not true of the latter. Faith is not essential in the sick person who desires to be healed by Christian Science, and cases are frequently occurring where the incredulous and even the scoffing are healed by Christian Science of diseases which have defied the efforts of the most painstaking medical practitioners. And since the correspondent of the *Boston Herald* cites a list of so-called miracle cures, let me here mention among many that come to my mind that of a gentleman of Jewish birth who was healed by Christian Science, though he had no "faith" in it at all, but was, in point of fact, strongly antagonistic to it. This gentleman had suffered for five years from chronic laryngitis. Being a man of means, he had traveled to the homes of specialists in various parts of the world, and had been repeatedly operated upon, once by one of the most noted. He was at home, a physical wreck and condemned to die within a very short time, when he consented to try Christian Science, but his frame of mind may be judged from a "Letter to a Friend" published in the May number of *The Christian Science Journal*, wherein he wrote that he was "without any faith or belief in the efficacy of Christian Science, and, on the contrary, with feelings of positive anger at the urging done," he "agreed to take treatment." Relief from pain was immediate, and complete recovery followed shortly after. This happened several years ago, and I see this gentleman quite frequently, presenting all appearances of robust health.

In conclusion let me state that the "small church of Christian Scientists" in the City of Mexico, to which the correspondent of the *Boston Herald* alludes, is showing steady growth, according to recent accounts published in the *Mexican Herald*. This growth is naturally more noticeable among the English-speaking population of the City of Mexico, but I am informed that the Christian Science Society in that city already has a small Mexican class in its Sunday School.

It is evident that we are in the midst of a great extension of mental healing, and it certainly behooves progressive men and women not to be confused in regard to the fact that God is the Principle of all true healing.

W. D. MCCRACKAN.

In the *New York Evening Post*.

## The Permanence of the Divine Order.

IT seems obvious that Jesus introduced a new divine order that he intended should be perpetual. The whole implication of his teaching, and of all the New Testament writing, is that his followers would understand his principle and do the works he did. It is a matter of history that works of healing the sick, and even of raising the dead, continued for three centuries after the time of the Master. Now the world as never before is turning in its need to the life and teachings of Jesus as the solution of its problem. Men are looking for some spiritual movement and awakening that shall restore the primitive power and influence of Christianity as taught by Christ and his early followers. If Christian Science is not the teaching and the movement that is to accomplish this work, then another must come. Christian Scientists have no question that in Christian Science they find the long-promised deliverer, and they are assured of this because of its practical blessings in health restored, character renewed, and thought illumined. And they know very well that this which has brought them into more loving nearness with the life and character of Jesus, and which is enabling them continually to prove in every detail of life that "God is our refuge and strength, a very present help in trouble" is not allied to heathen delusion; for its fruits are not the fruits of error, but of truth.

ARTHUR R. VOSBURGH.

## The Lectures.

### At Chicago, Ill.

At Third Church of Christ, Scientist, Washington Boulevard and Leavitt Street, last night [September 16] Judge Septimus J. Hanna lectured on "Christian Science, Personally and Impersonally Considered." The speaker is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston.

*The Chicago Tribune*.

Judge Hanna was introduced by Rev. Jesse L. Fonda in part as follows:—

*Friends:*—It is generally admitted that the trend of thought and study is to give more attention to mental action and mental conditions. Christian Science has formulated this idea more than any other teaching, and so presents its mental explanations of the common facts of life and its spiritual interpretation of them. It does not pretend to change any true facts, but to give a different thought about them. It can be illustrated in this way: suppose you came into possession of a bank bill or a government greenback for a large sum. You would begin to plan how to use it to the best advantage. If a bank expert should show you that it was a counterfeit and worthless, that would not change the bill at all, its texture would be exactly the same, but your thinking about it would be changed; your estimate of it would change and the idea of value would pass entirely out of it.

Rev. Mary Baker Eddy is one of the boldest thinkers of the ages. She, like the expert, frankly challenges the larger part of the thinking of the world on such subjects as matter, body, disease, health, life, death, God, man, and immortality. She gives us a new understanding of the facts. Our change of thought and belief does not change the facts but it does change our action in regard to them. This teaching is to be found in the Christian Science text-book, "Science and Health with Key to the Scriptures," the text-book of the great Science of Life and Being.

Christian Science is often misapprehended. To give people a better general idea of its teachings a Board of Lectureship has been established.

Judge S. J. Hanna, C.S.D., who is with us this evening, has long been the editor of our periodicals, so we Scientists are acquainted with him through his writings; but it will be a pleasure to receive his thought by the spoken word. Judge Hanna will now address you.

### At Barrington, R. I.

Thursday evening, September 4, a lecture was delivered in the Town Hall, Barrington, by Carol Norton, C.S.D., of New York, a member of the Board of Lectureship, of the Mother Church, The First Church of Christ, Scientist, in Boston.

There was a goodly attendance, and the lecture elicited the closest attention from an appreciative audience, which was composed of townspeople and Christian Scientists from Providence, Fall River, and surrounding towns.

The speaker was introduced to the audience by Robert Fessenden, Esq., of Barrington, a member of the society under whose auspices the lecture was given.

Digitized by Google

After the few well-chosen words of introduction, the subject, "Christian Science is applied Christianity," was treated in an earnest manner by the lecturer.

*The Warren* (R. I.) *Gazette.*

### At Stanton, Neb.

The following is an extract from an editorial notice in *The Stanton Pilot:*—

"Judge Wm. G. Ewing's lecture on Christian Science delivered Tuesday night [September 16] at Grattans Hall was listened to by about three hundred people. A number were present from Norfolk and from the country but a very large majority of the attendants are residents of Stanton. The lecture is spoken of in highest terms by those present. It was a scholarly address and not a word was spoken at which the most virile opposer of Christian Science could take the slightest exception."

### At Sedalia, Mo.

First Church of Christ, Scientist, in Sedalia, Mo., had its first public lecture on Christian Science, given in this locality, September 2, by Judge William G. Ewing of Chicago.

Our little hall, which holds two hundred people, was full of interested listeners, who gave the lecturer their earnest attention throughout the entire lecture, and many expressions of appreciation were heard on every hand.

Judge Ewing was introduced to the audience by Mr. P. Sangree, a prominent lawyer of Sedalia, in brief and appropriate remarks.—*Correspondence.*

### At Lancaster, O.

The lecture on Christian Science at the Auditorium on Thursday night [September 18] by Carol Norton, C.S.D., of New York City, attracted quite a large audience. A delegation of between forty and fifty came down from Columbus in a special train to attend the lecture.

Mr. Norton was pleasantly introduced by Mayor Silbaugh.—*The Lancaster Gazette.*

Lots of time for lots of things,
Though it's said that time has wings.
There is always time to find
Ways of being sweet and kind.
There is always time to share
Smiles and goodness everywhere;
Time to send the frowns away;
Time a gentle word to say;
Time for helpfulness, and time
To assist the weak to climb;
Time to give a little flower;
Time for friendship, any hour.
But there is no time to spare
For unkindness anywhere.

I do not know of any way so sure of making others happy as of being so one's self.—SIR ARTHUR HELPS.

## Announcements.

### Applications for Membership.

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL.

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Question Answered.

MARY BAKER G. EDDY.

To the general query, What do you think of Mrs. Burnham's novel, "The Right Princess"? I reply, One can scarcely consider the book a novel, since so much of its idealism is realism. The author dissects character with the skill of a metaphysical surgeon: she uses the knife and leaves the patient healed. She has portrayed a Christian Scientist with simplicity and candor: her pen is the pencil of an artist. The general trend of the novel is above the common plane, and its wit is well flavored with wisdom. But The Christian Science Publishing Society does not advertise novels.

## Capitalization.

MARY BAKER G. EDDY.

A CORRECT use of capital letters in composition caps the climax of the old "new tongue." Christian Science is not understood by the writer or the reader who does not comprehend where capital letters should be used in writing it.

In divine Science all belongs to God, for God is all. Hence the propriety of giving unto His holy name due deference,—that which distinguishes it from all other names,—thus obeying the leading of our Lord's Prayer. Even the coming of Christ's kingdom on earth begins in the minds of men by honoring God, and sacredly holding His name apart from the names of what He creates. Mankind almost universally gives to the divine Spirit the name God. Christian Science names God divine Principle, Love, the infinite Person. In this, as in all that is right, Christian Scientists are expected to stick to their text, and by no illogical conclusion, either in speaking or in writing, to forget their prayer "hallowed be Thy name."

In their text-book it is clearly stated that God is divine Principle,—and His synonyms are Love, Truth, Life, Spirit, Mind, Soul, which combine as *one;*—the divine Principle includes them all. The word Principle should not be written or used as a common noun or in the plural number, or in the neuter gender. To avoid using this word incorrectly, use it only where you can supply the word God and make sense. This rule strictly observed will preserve an intelligent usage of the word, and convey its meaning in Christian Science.

What are termed in common speech the principle of harmonious vibration, the principle of conservation of number in geometry, the principle of the inclined plane in mechanics, etc., are but an effect of one universal cause, —an emanation of the one divine intelligent Principle that holds the earth in its orbit by evolved spiritual power, that commands the waves and the winds, that marks the sparrow's fall, and that governs all from the infinitesimal to the infinite,—namely, God. Withdraw God—divine Principle—from man and the universe, and man and the universe would no longer exist. But annihilate matter, and man and the universe would remain the forever fact, the spiritual "substance of things hoped for;" and their evidence of the immortality of man and the cosmos is sustained by their intelligent divine Principle, Love. Beloved Students: Herein you learn to hallow His name, even as you value His all-power, all-presence, all-Science, and depend on Him for your existence.

## No Compromise.

ONE of the most subtle temptations, to which we are subjected, is that of trying to make Christian Science easy for our friends, so that it will not grate harshly upon their preconceived notions of God and the universe, nor upon their views regarding social, economic, and religious problems that have taxed the world for ages. We will not accede to this temptation unless we forget that there is no solution of the world's problems except by the way of God's appointing; that the way of divine Science is as exact as the statement that two and two is four; that Principle is unvarying, unchanging, turning neither to the right nor to the left.

The best service that we can render our friends is frankly to take the ground that mortal and material concepts of ethics, economics, and religion have not saved mankind from the results of their self-imposed laws and never can, and that in presenting Christian Science as a means of salvation, we must be prompted only as our Leader was prompted. "The author has not compromised conscience to suit the general drift of thought, but bluntly and honestly given the text of Truth" (Science and Health, Pref. p. x.). Anxiety to win the approval of the world is but a phase of error inducing procrastination, indecision, and confusion of thought and purpose. Temptation seldom presents itself in the form of sin for sin's sake. Without some false promise of pleasure or profit, sin loses its appeal to humanity.

Benjamin Franklin wisely said, "Consider carefully every thought, before you act upon it. Do not let too much time pass to come to a decision, for this is just as injurious as it is to act too hastily." To consider carefully every thought, one must decide whether it includes some subtle temptation. The way to a prompt and satisfactory decision is made plain only through our prayer for that Mind to be in us which was also in Christ Jesus. Infinite Mind is ever-active, ever-operative, ever-wise, ever-expressed, and must of necessity be infinite Intelligence. M.

## Premonitions of Progress.

THERE is much being said, pro and con, respecting the alleged decline of institutional religion, and it is certainly true that there are many features of present-day thought which must inevitably beget solicitude upon the part of those who, in any sense, identify Christianity with institutionalism. On the other hand, there are no less abundant evidences that the religious instinct is increasingly assertive among the great body of the people.

The protest against certain social crimes is very conspicuous to-day, and the regard for the ethical significance of public legislation and economic combination is being more and more emphasized.

Amid all the conflict of opinions respecting national issues and policies, and the clash of interests in the industrial field, we may all rejoice that as never before the question of right and wrong is coming home to the people, and affecting their determinations. Truth is advancing, and we may be glad indeed when political issues can no longer be left to the determination of self-interest.

More than this, the people are alive, as never before, to the fact that religion is a matter of life, and that to be convincing it must be scientifically demonstrable.

The efforts to rehabilitate outgrown concepts of Truth, must end in grievous disappointment and deserved failure. Christ abides, the only Saviour of every unideal men-

Digitized by Google

tality and condition, and the passing of inadequate beliefs of what constitutes loyalty to him and his teaching, disturbs in no way the Truth, or its evolutionary advancement in the consciousness of the race.

Indeed one of the most serious and tenacious hindrances to the progress of true religion is the inherited predisposition to, and dependence upon that form, ritual, or statement which has stood for it, and if, as we have been led to think, the religious spirit remains none the less alert, this expressed anxiety respecting institutionalism springs from conditions which are among the most hopeful of our times. That Christian Science is largely responsible for this turning of thought from the material to the spiritual, from form to substance, from the human to the divine is beyond question, and the attendant mental stir is but the dawn's intimation that the day is at hand. W.

## The New Old Bible.

THE Bible student to whom the Scriptures have been opened by its Key, Science and Health, finds sacred history to be not a collection of biographical abstractions, not a compilation of mere personal experience. He finds more than this, that national development is the counterpart of individual regenerative growth.

The incidents from Adam to Jesus are fraught with deepest significance and are replete with wisest personal instruction. Each man travels in his own growth every step of the way from Egypt to Canaan. Indeed, the sense journey begins in the Garden of Eden with the seeming fall into materiality, and cannot end short of transfiguration into spirituality. On the way the Red Sea has to be crossed through faith in God, during which human sense can see only the surging billows of sure destruction. The manna is furnished to-day to the faithful followers of Truth, just as of old. The walls of Jericho must still be brought down through faith and unity. The same grumbling consciousness that questioned Moses' wisdom as a leader is grumbling and questioning still, and must still be rebuked and silenced. Again and again it is necessary to go back and handle the serpent which has been thrown down and fled from in fear, to go back and prove that all attainments in good beliefs, in business, in art, in law, and in letters when handled with the understanding of Christian Science, can and will become a rod upon which to lean while presenting to humanity this new revelation of the Truth that saves.

To the awakened student the Old Testament ceases to be an incredible, half-mythical history and becomes a constant teacher and counsellor in every-day living, a series of object-lessons which teach unquestioning obedience, unhesitant sacrifice, and unbounded faith in the one infinite Good. S.

HUMAN sense is much more successful in self-analysis than in self-correction, and a careful and correct diagnosis of disease is often made when there is a most pitiful and discouraging absence of any suggestion respecting an adequate and available remedy. We were reminded of this recently in reading the following lines in the columns of one of our exchanges.

"Thousands of people actually think themselves to death every year by allowing their minds to dwell on morbid subjects.

"The idea that one has some incipient disease in one's system, the thought of financial ruin, that one is getting on in life without improving prospects—any of them or a thousand similar thoughts may carry a healthy man to a premature grave. A melancholy thought that fixes itself upon one's mind needs as much 'doctoring' as physical disease.

"There have occurred scores of cases where healthy persons have thought themselves into having tumors and cancers—cases which admit of no doubt whatever that the diseases resulted from constant morbid fear. There might possibly be fewer cases of cancer if some great doctors could assure the world that it is not a hereditary disease; but morbid-minded persons on hearing that there is cancer in their families generally do the very worst thing they can do under the circumstances—they conceive an awful dread that they will be afflicted with it. They dwell upon the fear constantly, and every trifling ailment which troubles them is at first mistaken for the premonitory symptoms of cancer.

"The morbid condition of mind produces a morbid condition of body, and if the disease does happen to be in the system it receives every encouragement to develop."

This recognition of the place filled by fear in the procurement of diseases is important and essential in that progress of thought which leads to escape from its thrall, but how unsatisfying and unprofitable such diagnosis, if some means of escape is not offered. To tell a man he must not fear a fearsome thing is usually altogether unavailing, but when he is made to understand that the object of his fear is but a ghost, he smiles and is himself again. It is just here that the saving sanity of Christian Science appears. No one could take fright or go into hysterics over a zero, and it is the realization of the nothingness of evil, and all its various forms of manifestation to human sense, which make it possible for a whilom frightened timidity to escape its bondage and enter into the freedom of the children of God. So long as we assert the reality of evil we have no ground of hope or expectation that man may be saved from the fear of it.

### A Correction.

WE are glad to correct an error appearing in the testimony of Mrs. Harriet L. Miller, Evanston, Ill. (*Sentinel* of August 28).

Through the misunderstanding of a somewhat indefinite and imperfectly punctuated sentence, she was made to say that she was an invalid nearly all her life as the result of three surgical operations. The thought intended to be conveyed was that she was an invalid nearly all her life during which she endured three surgical operations. These did not effect a cure but they did bring relief, and of this she would make grateful recognition.

### The Builders.

I dwell near a murmur of leaves,
And my labor is sweeter than rest;
For over my head in the shade of the eaves
A throstle is building his nest.

And he teaches me gospels of joy,
As he gurgles and shouts in his toil:
It is brimming with rapture, his wild employ,
Bearing a straw for spoil.

So I know 'twas a joyous God
Who stretched out the splendor of things,
And gave to my bird the cool green sod,
A sky, and a venture of wings.

But why are my brothers so still?
They are building a lordly hall—
They are building a palace there on the hill,
But there's never a song in it all.

From *Lincoln and Other Poems* by EDWIN MARKHAM.

When a brilliant discovery or invention is proclaimed, men are astonished to think how long they have lived on its confines without penetrating its nature.

EDWARD EVERETT.

## From Our Contributors.

### Children's Comprehension of Christian Science.

MARGARET G. MEEHAN.

RECENTLY while on duty in the reading room, I was asked by a young man, what book would give him the most information about Christian Science. I gave him Science and Health, telling him that this and the Bible are our text-books. After reading a while he closed the book, and thinking a knowledge of some of the results of an understanding of Christian Science would be of benefit to him, I gave him the *Journal* opened at "Testimonies from the Field." In a few minutes he looked up, and in a surprised tone said, "Have you read this? It is a testimonial from a child. Are children able to do this work?" I reminded him of Jesus' words, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." I assured him that the pure mind of childhood is better able to grasp the Truth than the adult mind which is burdened and fettered by so much of error.

After he left the room my thought reverted to the many demonstrations the Sabbath School children have made, a few of which I will relate, as they may prove an assistance to other children. A boy about eleven while playing ball was hit on the head by "a swift one" as he called it. His first thought was one of anger, and throwing down the bat, he was about to refuse to play longer. The next moment he realized that it would be impossible to demonstrate away this physical pain with a mind filled with anger, and picking up the bat, he pleasantly told the boy who had hit him that he was all right and ready to go on with the game, and thereafter he felt no inconvenience from the blow.

A boy of nine was driving in the country with his parents when a thunder-storm arose. The mother, who always had an intense fear of lightning, became greatly alarmed. Turning to her, the child said, "Mamma, you can't telephone to Mr. —— now, (naming a practitioner) and you know you are God's child and nothing can hurt you." So clear was the child's realization of the protecting power of infinite Love, that the mother's fear instantly vanished.

Some time ago a girl of five, whose parents have no knowledge of Christian Science, entered the infant class. On the first Sabbath she was taught the prayer entitled "Mother's New Year Gift to the Little Children." The following Sabbath the child was asked if she knew the prayer, and she promptly recited it. "Well," said the teacher, "you have learned the words, now what do they mean?" As the little one did not know, the teacher lovingly and patiently told her of the truths expressed by the words. The next week the child said she had had a demonstration a few days previous, at which time her hand had been hurt. Upon being asked how she had made the demonstration she replied, "I said my prayer and I knew what it meant and was healed." The thought comes to me—we sometimes pray and don't know what it means, consequently we are not healed. Verily "a little child shall lead them."

Those engaged in the Sabbath School work find not infrequently that they are being taught by these children.

### A Tribute.

L. C.

RECENTLY it was my privilege to listen to a lecture on Christian Science. It seemed to me to breathe the peace of God, and after we had left the crowd for the quiet of home that one refrain lingered with me: "Come unto me, all ye that labor and are heavy laden, and I will give you rest."

Language fails to express my gratitude for "Science and Health with Key to the Scriptures" where step by step I can tread a new path, and find that the difficulties surrounding the road are nothing to the view which opens from the mountain top upon my vision.

On that calm and beautiful Sunday as I listened to those words of Truth, so simple and yet so fraught with deepest meaning, I could surely say "He leadeth me beside the still waters," and in their placid depths, in the afterglow of the next few days, I was enabled to decide a matter I had been pondering many weeks, waiting for the voice of God.

For this uplifting I wish to tender my thanks to him who was guided to the "Gem City" by the hand of the divine Love, whose "omnipotence, omnipresence, and omniscience" I never before so fully realized; and gratitude is above all due to her who placed upon the battlements the beacon light of Truth, the following of which had fitted me to receive the blessing of the words uttered by one of her children.

### The Indwelling Word.

ANNIE B. NOBLE.

MANY times I have felt the desire to express gratitude for our Hymnal. At one time, when my work seemed to be such that I had very little time to study and read, I determined to learn at least one hymn a week. This I did for eight months, and I found that I could sing about my work when it seemed difficult otherwise to direct my thought into right channels. By the time the morning's work was finished my thought would have been so cleared that I could go to work giving my treatments without delay.

Many times, through the realization of the words sung, error has disappeared. One time, when one of the "wee tots" had lain in a stupor all day, and I had tried to realize harmony with no effect, I started to sing the hymn, "In atmosphere of Love Divine." When I reached the line, "And holds you perfect in His Love," she opened her eyes, smiled, sat up, and was her bright little self all the evening.

During another busy year I committed to memory the Christian Science platform, in the chapter "Science of Being." This was a great help to me at the time, and since then I have taken one section for each day, thus going over them all once a month, and I find that each day's need is often supplied by the few lines for that day.

I hope that some other busy housewife may be helped by these suggestions.

I do not know how to express the loving gratitude I feel to our Leader, who has given us so much.

### Another Expression of Gratitude.

S. C. H.

IT is with loving thankfulness that I also would join "the ever-increasing throng of grateful ones" and express my appreciation for the comfort and good cheer that have come to us through the many channels of divine Love, meeting our every need.

First of all I wish to express the sense of love and gratitude that went out to our dear Leader when I read the new paragraph lately added to the chapter "Footsteps of Truth" in Science and Health, page 255 where she says, "Imperfect mortals grasp the ultimate of spiritual perfection slowly. But to begin aright and continue the strife of demonstrating the great problem of Being, is doing much." I can never tell what hope and courage those words brought to me. This last revision is certainly wonderful in its purity and clearness.

I would make special mention of the article in the November, 1901, *Journal* entitled, "Learning Love," which was so full of help and encouragement. The ordinary sense of love is such a counterfeit of Love as revealed in Christian Science that at times the struggling heart is overwhelmed with the apparent impossibility of ever attaining to that

Digitized by Google

Love which "is the fulfilling of all law," and I was impressed by the statement, "In loving God we find our sense of protection becomes greater than the sense of being attacked." This helped me to make a demonstration by which I proved this for myself a few days later.

I was awakened in the night by a severe attack, similar to those which in times past had caused me much trouble, but a sweet sense of this protection of Love came to me which so destroyed the fear, that in a very short time harmony was restored, and a feeling of thankfulness came over me to know that I was learning even a little of Love. I also remember the sense of gratitude that went out to the one who had helped me to get a clearer glimpse of "how to learn."

Many of our beautiful hymns are perfect prayers in themselves, and I am sure the congregational singing in our churches will continue to improve until we shall get clear glimpses of that true sense of harmony which inspires and heals.

## "In the Presence of Mine Enemies."

J. W. G.

After beginning my acquaintance with Christian Science as the exposition and realization of the law of Love, I was for some time in doubt as to the meaning of such passages as we find in Psalm 23 : 4, 5, and in Isaiah, 41 : 11.

Mrs. Eddy's rendering of the 23d Psalm, using Love as the appellation of Deity in that soothing, exalting, love-impelling song of praise and triumph has seemed so broadly and fully to cover human needs, and voice the realization of the all-presence and sufficiency of divine Love, that it has been in my thought almost as much as the Lord's Prayer. How could I even admit such a possibility as that I should ever be called upon to "walk through the valley of the shadow of death," when the angel of his presence lightens every place with the golden glory of ever-present Love? How could I admit that there could be "enemies" in whose presence divine Love should spread me a bountiful table? And referring to Isaiah, 41 : 11, how could I desire the fulfilment of a promise that certain ones should "be ashamed and confounded" and should "perish"? In the fulness of the love and gratitude found within the portals of Christian Science, I did not wish that anybody should be ashamed and confounded, or should perish.

So I was wont to interpolate "seem to" before "walk," in Psalm, 23 : 4, and "seeming" before "enemies" in the next paragraph. Isaiah, 41 : 11, I could only dispose of by the thought: "Dear Love, since nobody is incensed against me, in Truth, I shall have no occasion to seek for any such."

By and by, whether the thought came from a lesson in the *Quarterly*, an article in the *Journal* or *Sentinel*, some word of a friend, or from a voice out of the silence, I do not know, having overlooked the (seeming) source in its engrossing significance, there grew up the understanding that such references as these are not to personalities at all, but to those errors which would mislead us.

How often since then have I witnessed that Love has spread a bountiful table before me, right in the presence of a mortal mind fear that Good either could not, or would not, provide for me or had overlooked what I needed; has spread a table of satisfying peace and harmony where error had screamingly claimed that my brother was filled with malice, and that God's ideas, as manifested in man, were at variance.

How clear it becomes, in such a light, that those beliefs or discord, which would have us at war with Love and with Love's expression, shall be put to utter rout by the realization of Truth—"shall be as [what we have found them to be] nothing." How glad we are that such foes shall "perish" utterly; shall "be as nothing and as a thing of nought;" so that even if we would look where they had seemed to be we "shall not find them"!

## A Little Lesson.

MRS. CHRIS GUTHRIE.

Last evening as I sat on our front porch, my little boy of eight, was playing in front of the house placing stones to form a dam for the water which was flowing down the street just after a shower. He had been out to play previous to this with two little boys whose parents were Scientists.

As he worked away he finally exclaimed, "I am not going to play with those boys any more," and I quickly said, "Don't voice error, dear;" then asked him, "What have you just finished, darling?" He quickly answered, "A dam." "Just so," I said. "What does it do?" "It keeps the water from flowing down the hill to the little brook," he answered. "Now," I said, "by voicing that error of dislike you were closing, as it were, with a dam, all streams of love which should flow from and through you; go quickly and remove all those stones and let the stream flow on, and at the same time declare love for yourself. Let love fill your thought all the time if you want love yourself, for hate would choke the channel."

I write this, thinking it may help some other mother to explain the working of love and how needful it is to keep the channel open.

## Helping our Helpers.

C. J. G.

If a patient or student in Christian Science would think of himself and his healer or teacher as being the only occupants of a boat upon a storm-tossed sea, and then ask himself, "Shall I bend my energies and lend my strength to the oars, and assist the strong, experienced sailor to bring the frail craft out of danger, and into a harbor of safety?" his answer would be "I will;" and by the combined efforts they might reach their goal in just half the time. No one would sit idly by in the one case; but in the other one is often left to row the boat (do all the work) alone, and the patient wonders why his troubles do not disappear sooner. If we would only work as we are taught, and thereby help those who are helping us, we would regain health, and reach much sooner than we do the high standard of demonstration attainable for each of us. To do this is only another manifestation of obedience whereby we enter the harbor, the kingdom of heaven.

## A Convincing Experience.

A. H. B.

When I was a child I was taught that God is the loving and ever-present Spirit and I believed Him to be especially fond of good children. As I grew older reason seemed to demand that I should think of God as the unknowable. In January, 1894, I purchased Science and Health by Mary Baker Eddy. When I first read this book I was conceited over my supposed intelligence. However, I soon noticed that when I did not allow the book to anger me it would produce a quieting mental result, and so I read on. I was in a most inharmonious frame of mind, which I knew neither drug, knife, nor change of climate could relieve.

During the night of March 19, 1894, all my doubts as to the power of Christian Science were forever laid aside. It seemed to me that I recognized that the Christian Science God and the hovering Spirit of my childhood faith were identical. I felt His presence and power and I was glad. I heard the regular breathing of the sleeping doctor and of the drowsy nurse and I knew that the power of man was

Digitized by Google

nothing to rely upon. The arm of the Lord was revealed to me. During the quiet hours I repeated over and over many times some of the truths I had gleaned from Science and Health, and in the early morning I shouted to the doctor to wake up for unto me Truth had been revealed. Braving his displeasure I told him I had learned that there was a power in Christian Science, and I said to my dismayed husband that I greatly desired to study. Since that night, eight years ago, I have taken no medicine and I have never again cared for a human physician. Very often error has seemed present and God absent, and I have had failures and made mistakes, but instead of being adrift I have an infallible compass and guide in Christian Science. After such a joyful revelation it would be folly for me to doubt that there is a power in Christian Science.

## Among the Churches.

### Union of First and Second Churches in Beloit, Wis.

The workers in the Field will be pleased, and rejoice with us to know that another victory has been won and the standard of Christian Science in this place raised higher than ever before, and that unity now prevails.

The following are copies of the two letters which passed between First and Second Churches of Christ, Scientist, and which resulted in bringing together the two congregations.

August 27, 1902.

Second Church of Christ, Scientist, J. E. Sargent, Clerk, Beloit, Wis.

*Dear Co-Workers:*—Knowing that the cause of Christian Science in Beloit and our Mother's latest message demand greater unity of action, we most sincerely and cordially invite you to join with us as one church in the effort to show forth the Principle of Christian Science to the world. Trusting this invitation may be acceptable to you and praying for a favorable reply, we remain,

Very sincerely yours in the bonds of Truth and Love,
First Church of Christ, Scientist,
E. J. ADAMS, *Clerk.*

September 4, 1902.

First Church of Christ, Scientist, E. J. Adams, Clerk, Beloit, Wis.

*Dear Brothers and Sisters:*—It is with joy and thanksgiving we accept your loving invitation to join you as one church. In so doing we are confident that the Mother and the Field at large, will rejoice with us in this higher demonstration.

Yours in the bonds of Truth and Love,
Second Church of Christ, Scientist,
JOHN E. SARGENT, *Clerk.*

On Sunday, September 7, we all met as one church, and surely God was with us and great healing works were accomplished. The cordial welcome and the rejoicing, mingled with tears of thanksgiving, was beautiful beyond description.

At our Wednesday evening meeting, September 10, we all gathered to bear testimony to the great goodness and love of God toward us, and our gratitude to our dear Mother in Israel, Mrs. Eddy, for showing us how to make this glorious demonstration which joins us together in one grand Brotherhood of Christian Scientists.

All present who had the opportunity, testified to the great joy and peace this higher unity with God and each other, brought to them.

Our cause will now prosper. We are already arranging for larger quarters, as our present accommodations are insufficient to meet the demands of the large congregation.

E. J. ADAMS, *Clerk.*

### New Reading Room in Milwaukee, Wis.

The growth of Christian Science since Mrs. Mary Baker Eddy, its Discoverer and Founder, first gave to the world the result of her research, has been truly remarkable. In Milwaukee, as elsewhere, the teachings of Mrs. Eddy have been accepted by a goodly number of followers who have been zealous in furthering the work.

The opening of the Christian Science reading rooms on the fourth floor of the Wells Building brings forcibly to the front the fact that wonderful development has marked the progress of the Cause in this city.

It was an event that will no doubt be long remembered by the members of the church and those who are interested and are counted among the attendants. The progress made since the day when a tiny single room was first used, is perhaps best indicated by the degree of prosperity that may be observed in the reading rooms.

On September 1, when the new rooms were opened, the plan of receiving visitors and those seeking the ministrations of the practitioners of Christian Science was changed. Now a regularly paid superintendent is in charge of the rooms, whereas formerly the rooms were conducted by volunteers who devoted a half day at a time to the reading-room work.

In Milwaukee there are three churches, branches of the Mother Church in Boston. The progress made in Milwaukee is a fair example of the progress made in all parts of the world.—*Milwaukee Evening Wisconsin.*

### An Item from Monmouth, Ill.

The officials of First Church of Christ, Scientist, in behalf of the Christian Science Reading Room, made their request known to the directors of the Warren County Fair Association, and were granted the privilege of erecting a tent, for the purpose of free distribution of Christian Science literature, on one of the most desirable locations on the ground.

The tent was tastefully decorated and supplied with our literature, including Journals and Sentinels, a large number of which were gladly received by those who are looking to a brighter thought beyond. Two full days were spent in this way, and we feel confident that much good will be derived from it.—MRS. JULIA C. THIENES, *Librarian.*

## Enough to Know.

FRANCIS S. CLARK.

I REST content, whate'er betide,
For love and peace with me abide;
I care not *how* my footsteps go;
God guides! This is enough to know.

I know not *when* I shall forsake
All sin, and in His likeness wake;
But to Christ's stature I shall grow;
God reigns! This is enough to know.

I know not *why* sometimes I fall,—
Seem to forget that God is all;
I grasp His outstretched arms, and lo!
God is! This is enough to know.

Labor is worship!
The robin is singing;
Labor is worship!
The wild bee is ringing;
Listen, that eloquent whisper,
Upspringing.

CALVIN MACK.

## Testimonies of Healing.

The Wednesday evening meetings of First Church of Christ, Scientist, Closse Street, differ from those of other evangelical churches, in this: that in the Christian Science Churches, many testimonies are given of physical healing as the direct result of the spiritual uplifting which comes through the understanding of God in Christian Science. On Wednesday evening last, after the opening exercises, a gentleman spoke of the great spiritual light which had dawned on him, bringing comfort and hope when he was in despair and great physical suffering, and rapidly sinking into invalidism. Then this religion of Jesus came to him, bringing peace, fulfilling the promise of Jesus. The Comforter came, leading him not only to believe in God, but to know God, and to realize that "in Him," as Paul says, "we live, and move, and have our being." The understanding of this great fact restored him to health four years ago; and to-day he is a strong, well man, rejoicing to carry to the sick and sinning this cup of cold water, the healing and saving power and presence of Christ, and he would be ungrateful to God if he did not thus publicly acknowledge his thankfulness to Him for this evidence of His boundless love, and for His revealing this through that noble woman, Mary Baker Eddy, to whom the world is so greatly indebted.

Another gentleman said that recently a lady was taken suddenly very ill, and was suffering great pain. Her husband immediately sought the aid of a Christian Scientist, and he was thankful to God that in this century it is possible to see the promises in the Bible fulfilled. This lady was rapidly healed, relief and freedom from suffering were the immediate results, and in a short time the lady was about the house as usual.

Others spoke of benefits received, and expressed their gratitude to God for Christian Science, and for the light which it had shed upon the Bible, making it really the Word of Life.—*Montreal Star.*

---

Before I began reading Science and Health I was in great spiritual darkness and utter despair. Everything I put my hand to, in a business way, was a failure, but as I read and followed up the Bible references the light began to break. I saw myself as never before, and realized that I was not an accident, but that there was a cause for my existence, and that God was ever-present.

The spiritual light which came to me through reading our text-book was interspersed with many dark seasons and attacks of despondency. I never was desperately wicked or utterly depraved, but I have fully realized what Science and Health says, that "sin is the image of the beast, to be effaced by the sweat of agony," in that my shortcomings have clung to me with the greatest tenacity.

From my boyhood I have been very sensitive and have always harbored a spirit of revenge, never forgetting an injury, brooding over a small wrong till I would burn with hatred. While reading Science and Health I realized that this evil disposition was passing away, and to-day I am certainly a better man and a better husband.

I am a traveling man and away from home a great portion of my time. When I spend Sunday in a city where there is no church, I go over the lesson in my room. By this means I have long since demonstrated that God is confined to no particular place or condition, and through His loving kindness I am able at least to touch the hem of Christ's robe.

Up to four years ago the three prime factors in my life were hate, revenge, and repentance; and I grew almost sceptical because God did not answer my prayers and give me "a new heart." It never occurred to me then that if I would reform as well as repent "God would create in me a clean heart."—L. C., St. Louis, Mo.

Though I have delayed this contribution to our dear *Sentinel,* thinking words inadequate to express my thanks for benefits received through Christian Science, I most gladly bear witness to this great Truth, which delivers us from evil. Believing strongly in the unity of Spirit, I find the daily perusal of our Bible lessons an immense help, especially in my case, as I have been away from my fellow-students more or less for two years, and am surrounded with opposing thought.

The signs of the times do not frighten me any more, having learned by applying my understanding of Truth constantly in all practical ways, to look up quickly to the things of Spirit, which are real, while all else is shadow. While I was once constantly failing in spite of daily effort to lead a Christian life, now I have no need of medicine or any medical help, and I have kept well and strong without vacation, under unusual trials these last two years. Being now in my sixty-third year those around me seem to love me more, certainly I love them better, and if I were to go into detail, I could fill pages with the sweet story of the results of a more spiritual life through Christian Science as I have found it.—Louise Stropp, New York, N. Y.

---

"Methinks, were they to contemplate the universal charge wherewith divine Love has entrusted us, in behalf of a suffering race, they would contribute oftener to the pages of this swift vehicle of Scientific thought; for it reaches a vast number of earnest readers, and seekers after Truth" (Miscellaneous Writings, p. 156). These words have touched me, and led me to wonder if I am as grateful to God as I should be, for what has been done for me.

Sixteen years ago, I was healed of hopeless invalidism through the realization of the right concept of God. The length of time that has elapsed since my healing, is proof that it was of God, and not due to any mesmeric influence; for Jesus saith, "Every plant, which my heavenly Father hath not planted, shall be rooted up." My healing came through Mind; came as sweet peace from a God that is Love, and destroying such false qualities as resentment when we seem to be unjustly treated, and awakening that Christlike impulse which saith, "Father, forgive them; for they know not what they do."

We feel that in Christian Science we have found the only Comforter. We have seemed to pass through some deep waters, but the words of Isaiah have been fulfilled. "When thou passest through the waters, I *will be* with thee; and through the rivers, they shall not overflow thee."

Mary M. Davis, Plattsmouth, Neb.

---

My attention was first called to Christian Science through the healing of my sister, who had been an invalid for years. I had never been considered an invalid, but sometimes I wished I were, so that I might lay down the duties which I felt unable to perform. I had chronic catarrh and dyspepsia, and there was a general breaking down of the system. I know now that it was being in the world without a God to love, that brought on this lethargic condition, for when I began reading Science and Health and learned that God is Love,—Love that must be reflected and lived by man,—new hope and life sprang up within me, and all things became new.

I had some treatment, but I did not know when my physical troubles left me; I was so rejoiced at finding a good, wise, and loving God that I thought little about my troubles and they gradually disappeared.

My path in demonstrating Christian Science has not always been strewn with roses. There have been many thistles to uproot, but I have always been cheered by the thought that every thistle—error—which we uproot through Love is forever destroyed, and a flower of beauty and infinite blessing springs up in its place.

Digitized by Google

I wish to express my gratitude to Mrs. Eddy, who has walked the thorny path to clear the way and who has planted the seed which will bless the present and future generations.

Through humility and obedience we may learn to uproot error, for it is only ignorance and self-will that cause us to suffer. God is good and merciful, and leads us gently out of all ignorance and sin into the haven of rest.

ERNESTINE W. BRACH, Chicago, Ill.

---

Christian Science has brought so much peace to me, and has done so much for me that I find it difficult to express my gratitude in words. I had been a great sufferer since the birth of my first child more than twenty years ago. I also suffered from stomach trouble, neuralgia, and many other diseases inherited from my mother, not having learned as yet that I have one parent,—God.

I left my home in the east and came west, thinking I would find health this side of the Rockies. I was a member of the Christian Church for years and tried to live up to its teachings. I was told I must be patient, that suffering would purify me and make me better for the world to come. However, I was not patient and did not love God as I should, and as I now do, for I thought that He knew, and sent my suffering upon me. I am very thankful for Christian Science which has taught me that I may be free from sickness, as I come to understand that it comes not from the right thought of God, but the wrong thought of man.

MRS. EDNA L. SMITH, Salt Lake City, Utah.

---

To those who have never suffered from the fear of storms and atmospheric conditions, it may seem strange that any one could be under such bondage as I seemed to be in my early experience prior to my acquaintance with Christian Science. It seemed to be almost an innate, inborn sense with me that there was something in the rain, or snow, or wind from the east, that would take away my health, and as a result health did take wings.

A few years after becoming interested in Christian Science, I was called upon to minister to those who were quite a little way from the city, and I was in the habit of going once or twice a week for several years through all kinds of weather, intense heat, cold, rains, and snows of the severest character. I very well recall the sense that came to me the first time that I found myself riding through a severe sleet storm, with the wind directly in my face, when I realized my freedom from the fear that had possessed me the years before. I had hardly realized that I was learning that perfect love casteth out fear, but I certainly was mastering that lesson. In those journeys, the words of the hymn that we sing so often as Scientists, frequently came to me and helped to overcome the old thoughts of fear. It is a little hymn that is very familiar to many of us, and it frequently came to comfort me through those journeys:—

No burning heats by day
Nor blasts of ev'ning air
Shall take my health away,
For God is with me there.

LIDA S. STONE, Cleveland, O.

---

Some eleven years ago I become interested in Christian Science through a sister who is a Scientist. She urged me to try it, for I was in very poor health. I attended the church three or four times, then moved away from my old home in Minnesota to Oklahoma. There were no Scientists here at that time, and as I had not enough understanding to help myself, I went back to drugs. But I kept getting worse all the time.

I consulted a number of physicians. One said I had catarrh of both head and stomach. Another said I had a cancer of the stomach, and another, that I had nervous dyspepsia and female weakness. At this time I could not read more than fifteen minutes at a time, my eyes were so painful. I then went to an oculist and he told me that the trouble was my nervous condition. I could not sleep well. The physician said that I would have to learn to control my nerves, as he had nothing that would help me. I then left his office, went to the Christian Science Reading Room, asked for some literature, sent for Science and Health and the *Quarterly*, and studied for myself. Through the study of Science and Health I have been healed of all these ailments.

We have had some very good demonstrations in our family since. One was over diphtheria. Our little daughter had it first and we called on the practitioner to help us. The second case was our fifteen-year-old boy, who handled his own case. Both got along all right, for which we are very thankful, and we have learned that if we trust, Truth can do all things, and does indeed make us free.—MRS. E. H. SWANKE, El Reno, O. T.

---

I have been waiting patiently for the right time to come that we may add our testimony of healing through Christian Science.

Our little son was healed of scarlet fever when given up as dying by two of the best physicians we could obtain. I said to my mother, who was with us at the time, "I would like to try Christian Science," having a slight knowledge of its healing power.

I at once communicated with a practitioner, saying, "Will you please treat a dying child." Immediately after the message was sent we felt great peace and satisfaction, and we knew that the healing work was done. The child raised up in his cradle and reached for something to eat, which was offered him, it being at the noon hour. There was a time of patient watching and waiting for the wasted form to build up again, but Truth did its perfect work, even to the growing again of the palate. This was three years ago, and our little boy is robust and hearty.

The value of the Bible, and Science and Health in our home is above estimate.

MRS. E. E. CAMPBELL, Fredonia, Pa.

---

Every week I am so helped by some article or word in our publications, that I want to send my acknowledgment of what Christian Science has done and is doing for me.

I have had its blessings for fully twelve years, but only three years ago I had the happiness of studying with one of our Leader's loyal students, and what it has been to me since, I could never tell in words. One by one physical troubles have disappeared, and only when I look back, do I realize how liberated I am to-day.

From childhood I had a violent temper and was never taught to control myself, until, as a grown girl I came to live with a dear sister who was then becoming interested in Christian Science, through whom it was made known to me. It has not been an easy task, but by constant watchfulness and prayer, through the understanding of Christian Science, I am trying to let that Mind be in me which was also in Christ Jesus. I am very grateful to Mrs. Eddy for Science and Health, and for our *Sentinel* and *Journal*. My health and happiness I owe entirely to Christian Science.

ELIZABETH P. HARDING, Chicago, Ill.

---

There never was a day that did not bring its opportunity for doing good that never could have been done before and never can be again. It must be improved then or never.

*Golden Rule.*

---

The living Christian—pure of heart and unspotted by the world—is the best preacher of the gospel in these days.

## Religious Items.

Rev. Donald D. MacLaurin writes in *The Watchman* on "Prayer and its Answer:"—

"If you want health, wealth, joy, satisfaction, advancement, honor—pray and ask, and ye shall have them. Why sit ye here then in poverty? No matter how bad you are, no matter how far from the right lines of life you live, you have only to pray and ask, on the authority of Jesus, and you will have what you want.

"There is not a word of truth in all that; not a word—and yet people who read the Scriptures superficially, and study such a passage as this superficially, reach precisely such a conclusion, and because the answer is not forthcoming, throw the whole thing overboard, and say there is nothing in it at all.

"You say, 'Is there limitation or qualification?' Most certainly there is. 'Wherein?' you say. Let me ask, 'To whom did Jesus speak these words?' To Peter, James, and John, and the rest of the apostolic band; men who had forsaken all to follow him; men who had laid upon the altar of God everything that they deemed precious in this life; men who had become through him the children of God, and were living not for self, but for the Eternal. They are the sons of God; and sons, as we shall see, who are obedient to God; these are the people to whom the word is spoken, and for them the word is as sure as the divinity of him who uttered them.

"Study such a declaration as this in the light of the whole teaching of Jesus; yea, in the light of the whole teaching of the Word; and when you do this you will find in the first place that true prayer presupposes obedience to the revealed will of God. . . . The man who cherishes envy, and hatred and malice, or any other of the many sins with which we are afflicted, cannot get what he wants from God in prayer. But you say, then, 'who can pray? We are all sinners.' Aye, but there is a difference between the temptations to which we are exposed, and the coming into our hearts of bad thoughts and feelings, and the cherishing of these in our hearts."

William Eliot Griffis, D.D., says in *The Standard:* "In reality this is a religious age. Though labels may be rewritten or transferred, the trend of things is nearness to the divine Founder, and this is increasingly manifest—whether those to whom tradition is hallowed like it or not—by the removal of many courses of intermediaries between the men of to-day and the Son of Man. To those who see the reality of things, there is transformation indeed, but it is of the tree not of the cloud, that is, normal and beautiful evolution. Those who realize that all true progress in Christianity consists in a deeper insight and closer apprehension of the original ideas of the Master will not be cast down but cheered. This much is certain, that when the Church lives more like her Master and goes forth seeking to save, when she more clearly apprehends the truth which he lived before he taught it, when she substitutes the simplicity of his teaching for the vast accumulations which have been deposited upon it, when she stands for righteousness and for righteousness only, there will be nothing to mourn over either in the phenomenon or the leavening. There are not two gospels, but only one. . . . The Church that has the widest outlook, and which most fully ministers to the needs and service of the human soul will never lack for members. Only as the good news of God is made convincingly clear and the Church becomes more like her seeking, healing, and saving founder, can the decline in Church membership both as to quality and quantity be arrested. There is no other patent medicine or prescription of the faculty that can heal her disease."

Nowhere has there been such interference with natural free play of native powers as in the realm of spiritual things. . . . Religionists as a whole do not believe in the capacity of man for spiritual selection. Running through all forms of a superficial religious teaching there is a profound atheism of unbelief in the free contact of man with the world, an emphatic unwillingness to turn humanity loose and let it feed upon that which it calls good. This mood of trust in the spiritual instincts of the race is very rare among its spiritual advisers. Hence our religion is almost always artificial and unnatural. It is not normal to man, but abnormal. It decreases his natural powers of self-reliance. It weakens his capacity for choosing his own path and his own food. It "domesticates" him with a vengeance. It hampers him and surrounds him with hedges and ditches and bolts and bars. . . .

The spiritual powers of multitudes of men and women have been impaired by this process of domestication. They have lost their powers of flight and their capacity for self-reliance. . . . He who runs may read in what is here written a hint of why so much religious instruction is impotent and useless when we pass from the protecting shadow of the temple, and are obliged to rely upon ourselves to discover what is good and wholesome among the rank growths and great temptations of the open field and the wide world.—*Universalist Leader.*

Alexander McKenzie, D.D., LL.D., writes in *The Standard:* "It is hardly true to call duty the 'stern daughter of the voice of God.' It may seem so to one who is determined to have his own will and not to be instructed. But to one who wishes to know the right that he may do it, duty is the loving, gentle daughter of the heart of God. We see this at once if we find all our duty in the kind or helpful words, and the merciful, beautiful life of the divine Truth. To stoop and look continually into the love of God, into the life of Christ, is to be taught and moved. It is as if we were on the shore when law speaks from the fisher's boat; and the kindly words find our hearts, take us captive, fill us with desires to be all which love would have us. Reason approves, conscience responds, and we are drawn to the good. For they are not syllables alone which reach us; the words are spirit and life. And they quicken our spirit and excite our life. If we hold this influence, yield to it, transform the duty into conduct, we are moving with the divine intent, and shall dwell in the divine blessedness."

It is a cause for thanksgiving that there is more real study of the Bible at the present time than in any preceding century. Its history and exact meaning are better known to the members of our churches to-day than to those of any previous age. But there is a benefit coming from the Word of God aside from a knowledge of its literal meaning, which is not less, but possibly more important. Continuous reading of the Bible, and especially the New Testament, prayerfully, carefully, and thoughtfully, produces a certain attitude of mind and heart which can hardly be gained by the study of certain passages. By prolonged reading one almost insensibly comes into harmony with the tone and temper of the Word of God. In long and intimate communion its spirit enters into us, and we not only think God's thoughts, but reverently speaking, we in a degree come to have Godlike feelings.

*The Watchman.*

Dr. David Utter, of Unity Church, is reported in the *Denver Republican* as follows:—

"We find it repugnant to reason to think that God was ever angry with all mankind. Then we find it bad ethics to think that Christ, whether a deity or a man or an intermediate form, should be punished instead of a guilty race. It is bad ethics to teach that a man may be freed from the consequences of his sins through the suffering of Christ. . . . The rational idea of the atonement makes it mean simply reconciliation to the will and law of God.

"There are many in all churches to-day who stand really in this attitude, who see clearly the place of authority, and who will not make their judgment blind."

The infirmities of good men may be mentioned as an argument in favor of the mercy and goodness of God. We may use them for our encouragement when we are cast down and depressed by our own faults. But we may never make use of them as an excuse for our follies or an argument against goodness. The Bible has not concealed them, because it is free from partiality. The fact that these infirmities are frankly stated is evidence of the entire honesty of the sacred writers. In this our Lord differs from all men. Diligent search was made while Jesus lived among men, but no fault was found in him.—*Christian Advocate.*

*The Outlook* says: "The secret of life is an open one to the pure in heart; it is mysterious to all who strive to uncover it by knowledge alone. God is discovered, not by a process of searching, but by a process of living; He is incredible, remote, inaccessible, because people take the wrong paths of approach to Him. To the unselfish, the self-forgetful, the loving and the pure, God is not only credible; He is inevitable."

"Less talk and more walk; less wishing and more doing; less preaching and more practising; less organization and more life; less wheels and more spirit in the machinery; less of pretense and more genuineness, are great requisites in the world to-day," says G. B. Galligher.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only*.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full sheep, stiff covers, gilt edges, same paper and size of page as cloth edition, each prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Five or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5 00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each: per dozen, $12: per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The salaries and other expenses paid to consular officers for the last fiscal year amounted to $1,194,447. The amount paid to ambassadors and ministers was $597,332. This expense account, owing to extensions from time to time in the service, is steadily increasing.

At the invitation of President Roosevelt representatives of the Miners' Unions and of the coal operators met with the President in Washington last Friday to consider the anthracite coal strike.

Former Secretary of War, Russell A. Alger, has accepted the appointment of the Governor of Michigan to fill out the unexpired term of the late Senator McMillan.

The Navy Department has made out a commission for the advancement of Civil Engineer Robert E. Peary, the Arctic explorer, to the rank of commander.

**Foreign.**

The immense Victor Emmanuel monument in Rome which was begun more than thirty years ago, will be finished, it is stated, in seven years more. It will stand at the end of the Corso, and will be a grandiose building of porticos, Corinthian columns, statues, and bas-reliefs, containing two museums and perhaps a library, surmounted by a magnificent triumphal group of horses and chariot driven by a Victory, the whole rising about 290 feet. In front, standing out from the edifice, will be the equestrian statue of Victor Emmanuel.

The tariff commission of the German Reichstag has taken cognizance of the statements that certain German manufacturers are selling goods cheaper abroad than at home. The Home Secretary announces that the inquiries made by the Government prove the existence of about four hundred trusts. The Government will investigate their workings carefully and publish in a detailed report the advantages and disadvantages of trusts.

It is reported that the Colombian Government has sent notice to its legation at Washington refusing to grant a concession of sovereignty along the line of the Panama Canal to the United States, or to grant a lease in perpetuo. The report, however, is discredited at Washington.

The attendance at the twelve hundred public schools opened in Porto Rico last week is about fifty thousand.

Garcia Montes, secretary of finance, has reported the Cuban budget to be $14,000,000.

**Industrial and Commercial.**

The president of the American Institute of Electrical Engineers says: "The power houses in operation and under contract in New York City would replace all the central stations for lighting and power in Great Britain or Germany; they would operate all the electric railways of Great Britain and Europe combined; one alone would be sufficient for the railways of Germany, and the output of a single generator would run all the railways of Switzerland."

Without a strike or lockout or menacing threats an agreement has been reached between the boxmakers of Boston and their employers, establishing a new scale of wages and a work day that is two hours shorter than what generally has been the custom. The situation was discussed before the State Board of Conciliation and Arbitration, an agreement was signed there and it has been ratified at a meeting of the union.

For September the iron ore shipments from Lake Superior were greater than in any corresponding month in the history of the trade, amounting to about 3,750,000 gross tons. This, added to the shipments of the previous months of the season makes the total a trifle in excess of the entire amount shipped all of last year, which was the largest year in the history of the trade.

It is announced that coal has been found at Heppner, about twenty miles west of Portland, Oregon. A portion of the field, which has been ranged over closely, shows nine distinct and continuous ledges, and experts, who have ranged over a larger field in a general way, are of the opinion that the ledges extend over a region about twelve miles square.

The figures of the Treasury Bureau of Statistics show that the August record of the foreign commerce of the United States is two million dollars greater than for August of last year and twelve million dollars greater for the first eight months of this year than for the corresponding eight months of last year.

An experiment in the culture and manufacture of silk, which was introduced near Tullulah Falls, Georgia, last spring, is to result in the establishment of a large modern plant at Atlanta to cost several thousand dollars. Ten thousand mulberry trees were planted last spring and forty thousand more are to be planted.

The German-American Steel Ball Company, capitalized at one million dollars, is negotiating for the purchase of a plant at Meriden, Conn., where it will manufacture under German patents steel balls for ball bearings. The German representative is now on his way to America to instal the plant.

The Southern Pacific Railway has placed orders with German founders for forty thousand tons of heavy steel rails for early delivery. American makers could not promise such delivery under eighteen months.

The Burgess Sulphite Pulp Company of Berlin, N. H., has closed a deal with the Quebec departments of lands and forests for six hundred acres of timber limits on the upper St Maurice River.

Arrangements are said to have been completed for the construction of two plants in Massachusetts each capable of turning out thirty thousand tons of peat briquettes daily.

It is reported that the Union Pacific Railroad will double track its system from Omaha to Salt Lake City during the next few years.

**General.**

"Comet b 1902," the newly discovered comet, is expected to be a very striking sight by the end of October, equalling in brilliancy the great comet of 1882, and in size Halley's comet, the head of which was twenty times the diameter of the earth. Its tail will be very long. The comet of 1843 had a tail over three hundred million miles long. The new comet is travelling toward the earth at the rate of three million miles a day and will pass as near the sun as Mercury's orbit. Comets appear to have little weight. The Earth passed through the tail of a comet in 1861, as was learned afterwards, producing no effect whatever. A comet which went through Jupiter's satellites, made no disturbance in their relative positions.

The first Thursday in each month is the international kite and balloon day, established by the International Committee for Scientific Aeronautics. On this day dozens of kites are sent up by meteorologists in France, Germany, Russia, and other parts of Europe in accordance with methods established at the Blue Hill Observatory, Milton, Mass. These kites are equipped with various instruments for measuring atmospheric conditions where surface conditions are eliminated. Important results are anticipated from this collaboration.

The land department of the Union Pacific Railroad has been notified that there are nearly one thousand quarter sections of Government land subject to homestead entry at Sterling, Col., within the irrigation district of the proposed Government reservoir at that place. The reservoir, which is now being surveyed by Agent Newell of the Interior Department, was anticipated by the irrigation act of the last Congress, and will cost two million dollars. The land office at Sterling is getting the surveys of this land in order preparatory to the reception of homesteaders.

The Carnegie Institute of Washington, organized last February under a gift of ten million dollars from Andrew Carnegie, announces as its first gift to science the purchase, reorganization, and thorough equipment of the Marine Biological Laboratory, at Wood's Hole, Mass. The object of the Institute is "to secure, if possible, for the United States of America leadership in the domain of discovery and the utilization of new forces for the benefit of man." Daniel C. Gilman, late of Johns Hopkins University, is its president.

Recent excavations made by German archaeologists at Babylon have laid bare some fine specimens of wall decorations, in colored glazed bricks, in the southern citadel of El Kasr.

The New York rapid transit subway has cost thus far about twenty-one million dollars and is about three-fifths done. It is estimated that the work will be completed in about a year.

A homing pigeon, Sir Herald, recently flew from Denver to Pittsburg, a distance of over three thousand miles, in twenty-two days. Two years ago Red Boy covered the distance in twenty-one days.

David E. Thompson of Nebraska, recently honored with the appointment as minister plenipotentiary to Brazil, began life as a brakeman on the Burlington Railroad.

Miss Helen Keller enters upon her Junior year at Radcliffe College this fall. She has elected most of her courses in English literature.

## Selected Articles.

### The New East River Bridge.

THE following sketch of one of the greatest marvels of modern engineering skill, is taken from the columns of the *Denver Republican* and *The Scientific American.*

Never in the history of bridge building have giant cables been hung so swiftly as they were on New York's new suspension bridge over the East River. Those four cables contain 7,796 wires, each three thousand feet long, making 4,429 miles of wire. The seven months occupied in the work is exactly three times as fast as any similar work has ever been accomplished.

No serious accident, not a single interruption of the vast traffic of the roaring strait that is called East River, not a sound that could be heard, has marked the work. Yet those black atoms, looking more like insects than men from below, threw forty-five hundred tons of cable through the air in that time.

So high in air hang those great ropes of iron, so airy and lovely in outline are those vast towers, that no man gazing upward from river or shore can realize the monstrous dimensions of everything connected with that giant swing. Somehow, despite the fact that all about it is so motionless and still, the sight of those beautifully true and perfectly sweeping cables gives one an impression as if he were looking at the swoop of a bird suddenly fixed miraculously in mid-air in all its grace. Standing deep in the rushing green water, the two steel towers stand sturdy and powerful, like men at arms in metal harness. From every aspect one sees the blue sky shine through their open grillage work, softening their mighty trusses and girders and making them look, not as if they were dead tons of weight, but as if they might be swayed by the lightest airs.

It is only when one is high on the structure itself and can look downward from the towers that the true proportions of the great roadway become apparent. Then they become apparent overwhelmingly. The anchorage, a pile of granite, looks more like a busy shipyard than an edifice of the land. Diving into subterranean caverns beneath the tons of stone are great fifteen-foot links—link bolted to link with bolts as thick as a man's arm. This immense chain of tempered steel, held in place by the superincumbent mass of rock, a veritable anchor, only of enormous size, holds the cables proper, which themselves cease some distance away from the anchor. Their connection with the chain is made by simply passing the endless strands of wire around the outer links.

The individual wires in the cable are not as thick as a lead pencil. But out of them have been spun cables that are eighteen inches in diameter.

Although the anchorage itself rises high over surrounding buildings, the senses refuse to give the impression of height, for just ahead there springs the vast tower over which the cables are hung. Up, up, rising to its top with a swing so abrupt and great that one feels as if they were actually climbing visibly before one, go the four great cables. The top of the Brooklyn tower—332 feet above high water, higher by twenty-four feet than the gigantic St. Paul Building—seemed as high as a snow-capped mountain to us as we stood on the unfenced, unguarded summit, with all New York, Long Island, the Sound, the rivers, and the bay at our feet like a neat map.

Human hands, not as big by many inches as any one of hundreds of rivets around us, have hurled this mass of iron and steel across an arm of sea. Before these tiny two-legged animals that are hanging like flies to dizzy places all around us are through, they will have hung twelve thousand tons to these cables that they have spun.

The total weight of the bridge when completed will be sixteen thousand tons with the live load that it is designed to carry. But that will be play for the cables, for their total strength is expressed in about one hundred thousand tons.

Gazing down at them as they sweep in four glorious masses down and far out over the river and then up again, they seem to dart straight at the sky as they reach bravely for the top of the New York tower. Four torrents of metal, spouting out from steel embrasures! If architecture is frozen music, here, in this engineering feat, is Wagnerian opera transformed at the moment of its wildest revelry, into rigid steel. That giant swing, caught in its upward sweep, might, indeed, be the thunder itself, caught and transfixed to hang there, visible forever. As well might one expect the eye to note a fly when looking at Niagara as to see anything here except those noble spans, hanging serene and beautiful, high over the city's smoky atmosphere.

The breaking strength of each cable is twenty-five thousand tons and their combined weight is five thousand tons. The actual dead load which they will carry when the bridge is completed is eight thousand tons, and they are calculated to carry a maximum moving load of forty-five hundred tons. Each of the four cables contains 10,397 No. 8 steel wires. The specifications called for a strength of two hundred thousand pounds per square inch, but the actual breaking strength of the wire as determined on test, shows that the cables have an average breaking strength of two hundred and twenty-five thousand pounds per square inch; a truly marvelous result, and one which places these cables far ahead in point of tensile strength of any other structural material yet used in bridge building.

The cable wires, which are about three-sixteenths of an inch in diameter, were made at the mills in four thousand-foot lengths and reached the site of the bridge on seven-foot wooden reels. Each reel contained twenty-four of these lengths of wire, which were coupled at the ends with sleeve nuts, the joints being designed to give the full strength of the unbroken wire.

The rate of progress of the work has been about fifty wires in each strand in ten hours, or a total of about four hundred single wires each working day. When the end of the coil of wire was reached it was placed in a vise opposite to the end of the next coil of wire and the two were connected by a sleeve nut. A perfectly even tension was secured in each wire by adjusting it so that it conformed to the curve of a guide wire, which had been accurately adjusted in position by the engineers.

One of the best features of the new cables is the very excellent system of protection against weather which has been adopted. The wire is thoroughly coated at the mills

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

with a heavy mixture of graphite and oil, and although its greasy condition rendered it extremely disagreeable to handle, the benefit will be found in the practically indestructible nature of the work.

To complete the cables it will next be necessary to place around them the clamping bands, which will form also the saddles in which the suspender cables will rest. Then the cables will be covered with protecting shields which will consist of half-round troughs of sheet steel, semi-circular in cross section, one half of which will lie below, and the other half above the cables. Between them and the cables will be run in a hot mixture of cable preservative similar to that in which the individual wires were soaked as they were manufactured.

### Our Western Civilization.

What has often surprised the Chinese and other easterns is that the western world should profess a religion which is the absolute negation of their whole tone of mind and manner of life. They glorify force; their religion tells them not to glorify force. They make the gaining of wealth their principal and absorbing pursuit; their religion tells them that the love of money is the root of all evil, and that the rich man has the scantiest possible chance of entering the kingdom of heaven. Goethe has said that a man's philosophy is often the supplement of his character; in other words, all that he cannot put into his life he puts into his philosophy. Something of the same kind would seem to be true of the western nations and their religion. The sum of the matter seems to be that, where we thought we had everything to teach and nothing to learn, we find that we have much to learn—perhaps quite as much as we have to teach. We have a civilization of our own, but it is not a universal civilization; it is a steam-engine civilization. We have yet to learn the civilization that deals primarily with the heart and intellect, the civilization that truly, not only professedly and conventionally, esteems the life as more than meat and the body as more than raiment.

*Montreal Star.*

## A Thoughtful Reply.

Mr. Editor.

Starting from the point upon which we agree, "that God in His spiritual being is the elemental fact in the universe," we must conclude that the fact remains throughout the infinity of that universe. The words, "in his spiritual being," might imply that God is something besides Spirit, but this, I take it, was not intended. Your statement that the Christian Scientist reaches his next conclusion "by a leap of the sheerest dogmatism" is unwarranted, as is the assertion, "Nothing but the jingle of phrases supports the assumption that because an infinite Spirit is the origin of all things, all things must be spirit—that God cannot create a form of existence different from himself." It is admitted that God is infinite Spirit. Being infinite Spirit, there is no logical conclusion other than that he must express himself after his own nature, after the nature of infinite Spirit. The Bible indicates that the kingdom of God is spiritual. It also indicates the destruction of the material world. If we believe this and admit it, then we must admit that the material world is finite, for the destruction of the Infinite is inconceivable and impossible. If Spirit then creates matter, we see the Infinite creating that which can be destroyed, or in other words, the Infinite creating finite, which is a contradiction of terms. From the standpoint of God, it is clear that we must deny matter *a priori*, or deny Spirit *a priori*. Why? Because God's creation is eternal, and his kingdom, which "shall have no end," according to the Bible, would be partly spiritual and partly material if we accept matter *a priori*. In other words, matter would be eternal like Spirit.

Christian Scientists do not deny the existence of matter as a human belief, but they must deny it as a part of eternal entity if that entity is admitted to be Spirit.

No confusion of terms exists in Christian Science, but even a "friendly oracle" may find it difficult to make clear statements in relation to the spiritual facts as revealed in Christian Science, when the listener has been accustomed always to approach such facts from the side of matter rather than that of mind. The Christian Scientist does not reject any essential evidence. He does, however, believe that Immanuel, or God with us, furnishes the best evidence. He does not "bring in a false verdict, upon the issues which life presents to him," but endeavors to consider those issues from the highest standpoint.

"The oracle" did not say that "spirit, mind, thought, consciousness, personality, character, and nature were interchangeable terms." Some of these are, however, clearly interchangeable. Christian Scientists probably know that "consciousness has objective and subjective phases." Subjective and objective are here admitted to be phases, and that is true; they are phases of consciousness. Consciousness is, however, one.

Christian Science does most certainly declare that God, being holy, cannot be conscious of sin. To insist that God, infinite Good, who is holy and perfect, knows evil, is an attempt to account for evil. The object of seeking holiness is to overcome evil and eventually to reach a state where it is unknown. If God knows it, then it is clear that even he is not in a state where evil is unknown. Then how can man hope to attain such a state, if God is not in it? Christian Science accounts for evil and foretells its final and complete destruction, but not by any such process as that of ascribing it to God. By knowing God aright and doing His will on earth as in heaven, evil will finally be reduced to its native condition of nonentity.

The passage in Hebrews referred to does not say that our Lord is "still touched with our infirmities." If this interpretation is to be put upon it, then Jesus did not accomplish anything and he is still being crucified. The deathless Christ who said, "Before Abraham was I am," and who according to the Apocalypse says, "Behold I am alive forever more"—surely this Christ is the "merciful high priest" referred to in Hebrews. This makes the mission of Jesus complete as far as his blessed career is concerned, but does not relieve us by any vicarious theory of atonement from the duty of following him to the very point of perfection as he admonished us to do.

The assertion that "this Christian Scientist did not know Jesus Christ in the character of a sympathetic friend" is voluntary and without foundation, since the writer could not possibly know how the Christian Scientist views this phase of the subject.

As for the lamentation over the fact that God does not know wickedness nor know a wicked city, let me say that God's city is fully revealed in the Bible. Man needs to seek it. He does not need to ask infinite Good—God—to know evil, but he does need to watch and pray that he (man) may know and express Good. When individuals do this, they are reformed. Suppose all individuals in a city were to do this and be reformed, would not that city be saved? Would it be necessary for God to have known its previous wickedness? Is it not sufficient if redemption be accomplished through a knowledge of God and through the way as shown by Christ Jesus, without finding it necessary to make God know evil?

Christian Science is not "barren of benevolent fruitage for the relief of great public distresses," nor indifferent to the woes of men. Many of them are generous subscribers to benevolent institutions and charitable organizations. They do not talk about poverty nor parade their gifts.

Modern psychology does not account for Christian Science cures, and cannot do so. These can only be accounted for by those who perform them. For any one else to attempt to account for them is presumption.

Digitized by Google

To a Christian Scientist who is devoting his time to healing the sick and binding up the broken-hearted, it seems a matter of regret that his brethren of other denominations should misunderstand his work. He has learned, however, that peace and happiness are being attained through a knowledge of the God who is Love.

BICKNELL YOUNG.
In *The Interior.*

## The Question of Reality.

CHRISTIAN SCIENCE is based on the Scriptures in all their spiritual purity, it begins with God as All, omnipotent and omnipresent. It takes the spiritual creation as given in the first chapter and the first five verses of the second chapter of Genesis as the only creation. It goes farther, however, and says as God is Spirit, as the Scriptures aver, and He created man in His image and likeness, necessarily then man must be, is, spiritual, and he was given dominion over all. Christian Science therefore contends that the true man, God's idea, is the only real man, and that he never dies because he is the living, spiritual idea of an ever-living God. In Genesis, 2 : 5, we find the words: "Every plant of the field before it was in the earth, and every herb of the field before it grew." Christian Science insists that all God's creation is spiritual, perfect, and eternal, hence real and never to be destroyed. It does not deny, but admits, that all that appears real to the mortal senses is real to those senses; but those very senses and all they take cognizance of, being subject to the laws of matter, sickness, death, decomposition, etc., are not, cannot be, real in the true sense of the term. It is not through matter that man is enabled to regain that spiritual birthright of "dominion over all" which he must some time reach, and it is a loss of time to persist in looking there for help, for the command was, "But of the tree of the knowledge of good and evil thou shalt not eat of it: for in the day that thou eatest thereof thou shalt surely die."

In "Miscellaneous Writings" (page 86), Mrs. Eddy says: "What mortals hear, see, feel, taste, smell, constitute their present earth and heavens. . . . To take all earth's beauty into one gulp of vacuity and label beauty nothing, is ignorantly to caricature God's creation; which is unjust to human sense, and to the divine realism. In our immature sense of spiritual things, let us say of the beauties of the sensuous universe: 'I love your promise; and shall know, sometime, the spiritual reality and substance of form, light, and color, of what I now through you discern dimly.'"

If any person finds difficulty in understanding Mrs. Eddy's writings, as I did on the first perusal of them, let him not assume on this score the right, as some people do, to judge her teachings harshly. When men discern spiritual truth imperfectly, which is not an uncommon experience with the casual reader of Science and Health, they may be said to "see men as trees walking," and forthwith they go and report accordingly. The trouble is not with the truth, nor with Mrs. Eddy's statement of it, but with their erroneous conception.

CHARLES K. SKINNER.
In the *Muskegon* (Mich.) *News.*

## The Nature of Evil.

WHILE it is true that Christian Science teaches the essential unreality of all that is unlike God (infinite Good), this does not imply that there is no such belief as death. It is important, however, to know that death, like the other beliefs which lead up to it; namely, sin and sickness, are beliefs only, and not eternal and indestructible facts in the scheme of the universe. Beliefs have only as much existence and power as man gives them. They are, at their worst, only transitory evils, and Christians are commanded to "overcome evil with good." The question of the nature of evil is the rock upon which many theologians have split. The teaching of Christian Science on this point is explicit and direct. Mrs. Eddy has stated it repeatedly. In "Miscellaneous Writings," (p. 46), it is explained as follows:—

"The leading self-evident proposition of Christian Science is: Good being real, evil, Good's opposite, is unreal. This truism needs only to be tested Scientifically to be found true, and adapted to destroy the appearance of evil to an extent beyond the power of any doctrine previously entertained."

Much patience, and in some cases much suffering must precede the acceptance of this self-evident teaching, but when once accepted, it is not something which must be "mysteriously practised by the superior souls," but on the contrary, it dispels much of the mystery and mysticism with which Christianity has been unfortunately associated, to its detriment, in popular conception. In any case, the sincere desire to repent and to establish practical reformation is as essential to Christian Science as it is to every other body of Christian teaching.

### Temperature of the upper Atmosphere.

Some of the records obtained with balloons are striking. In October, 1895, a free balloon sent up from Paris, reached the height of forty-six thousand feet,—nearly nine miles,—and at this point a temperature of ninety-four degrees below zero, Fahrenheit was recorded, probably the lowest natural temperature ever recorded. A German balloon, in 1894, reached the unprecedented height of 60,500 feet, shown by a barometer column of two inches in length. The lowest temperature recorded was eighty-eight degrees below zero, F., probably a false record due to heating of the instruments by the sun. This balloon traveled five hundred and sixty miles in a northwesterly direction from Berlin, at an average rate of eighty-three miles an hour.

Ingenuity has surpassed itself in attempts to avoid the false temperatures due to insolation, or sun-heating, of the balloon instruments. This is because, with the usual form of balloon (open at the bottom), the balloon moves more and more slowly as it approaches its greatest height. Closed balloons of elastic material, on the contrary, rise with increasing velocity until they burst, and the errors due to insolation are greatly reduced. A balloon invented by Dr. Assmann is made by dipping a mould into a solution of India-rubber. This case was expanded to sixty-eight times its original volume before it burst, showing that it would have risen to a height of about eighteen miles. Balloons of this type are provided with a small parachute, so that when the case bursts, the instruments fall to the ground without damage.—*The Boston Transcript.*

### The Cause of Lightning.

In the annual report of the United States Weather Bureau, condensation is credited with a large share in its production. When small, feebly charged particles of mist are welded together, as it were, into raindrops, since the potential increases as the square of the mass, a high tension may easily be developed. Ten drops, each charged to one thousand volts, will thus produce one drop charged to one hundred thousand volts. As soon as drops begin to form at the beginning of a storm, the relatively small tension of the atmospheric charges soon becomes enormously multiplied, and disruptive lightning discharges are the result.

*Exchange.*

Humanity wants precious few books to read, but the great living, breathing, immortal volume of Providence. Life,—real life,—how to live, how to treat one another, and how to trust God in matters beyond our ken and occasion,—these are the lessons to learn, and you find little of them in libraries.—NATHANIEL PEABODY ROGERS.

## The Lectures.

### Semi-Annual Lecture of the Mother Church.

The semi-annual lecture on Christian Science, under the auspices of the Mother Church, will be delivered by Rev. Irving C. Tomlinson, C.S.B., in Symphony Hall, corner Massachusetts and Huntington Avenues, Thursday, October 16, 1902, at 8 o'clock P.M. The lecture is free and the public will be cordially welcomed.

### At Oshkosh, Wis.

A large and attentive audience assembled at the Opera House last evening [September 25] to listen to the lecture of Judge Septimus J. Hanna of Boston, upon Christian Science. Almost every seat in the entire house was filled at the opening, and those present listened attentively to the remarks. Almost every member of the local society was present and several from out of the city, besides a large number of outsiders. Judge Hanna is a pleasant and interesting speaker, and a man of good presence. The speaker was introduced by Attorney F. C. Stewart.

*The Daily Northwestern.*

The introductory remarks of Attorney Frank C. Stewart were as follows:—

*Ladies and Gentlemen:*—The subject of religion has always engaged the thought, aroused the sympathies, and enlisted the activities of mankind. The common experiences of one people are the experiences of another. The same sun shines upon them all and the same darkness envelops them. The hearts of all have been lightened by health and happiness and depressed by sickness and sorrow. All have been confronted by the mysteries of life and death, and it has long since been agreed by intelligent men everywhere that we are all children of the selfsame God, the Creator and Ruler of the universe. The idea of the brotherhood of man has civilized the world. Acting upon this idea, earnest men and women have striven for the betterment of the world.

The people of this city are a liberty loving people, particularly in matters of religion. We gladly welcome any one who has a message for us. We are glad of the Christian organization under whose auspices and through whose generosity and courtesy we are here assembled. We believe implicitly in the advice which Gamaliel gave to the Sadducees. You will remember that Peter and some of the other apostles were brought before the high priest and were upbraided by him for teaching in the temple after they had been admonished not to do so. The Sadducees became angry and took counsel among themselves to slay the apostles. Then arose Gamaliel, a doctor of the law and therefore capable of giving good advice, and said, "'Ye men of Israel, take heed to yourselves what ye intend to do as touching these men. . . . For if this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God.' And to him they agreed."

The advice given by this learned Pharisee when interceding for the Christians is also in accordance with the tenets and teachings of Christians themselves, and the spirit as well as the letter of it is coming more and more to be adhered to. In short, the world has become enlightened and the people are ready and willing to receive more light.

### At Sheboygan, Wis.

That Christian Science and its teachings is a force to be reckoned with in modern day evolution, was again demonstrably indicated at last night's [September 21] lecture held at First Church of Christ, Scientist. A more representative audience than that gathered together last evening has seldom been assembled in this city to hear a religious discourse. Whatever views may be held by others, it admits of no doubt that to its followers Christian Science, as set forth by Mrs. Eddy and logically expounded by Judge Septimus J. Hanna, is a religion, deep-rooted and solid-founded, and not only a religion of profession, but more, a religion of deeds. Its growth has been one of the marvels of the last quarter of the last century. To it have been attracted sages and thinkers of this country as well as the every-day toiler and laborer.

At last night's meeting the large auditorium, seating comfortably more than one thousand people, was filled, standing room being at a premium, every available inch of space being occupied by some one who closely followed the words of the lecturer, and at the end paid him that highest tribute of remaining motionless, intent on hearing more of a philosophy which has aroused the learned and also the unschooled.

The speaker was introduced by Judge Gilbertson in a few fitting and appropriate remarks. Judge Hanna indulged in no pyrotechnics; his was an appeal to reason, hence he needed not the oratorical tricks of him who persuades by figures of speech and rhetorical displays.

*The Sheboygan Telegram.*

### At Kalamazoo, Mich.

The audience room of First Church of Christ, Scientist, was well filled last night [September 18] to listen to a lecture on Christian Science by Edward A. Kimball of Chicago. Mr. Kimball is a member of the Christian Science Board of Lectureship, of The First Church of Christ, Scientist, the Mother Church, in Boston.

Preceding the talk by Mr. Kimball, Miss Cora Downer, First Reader of the local church, in well-chosen words, welcomed those present and introduced the speaker of the evening. Mr. Kimball's address was of about an hour's duration and he had the undivided attention of his hearers.

*Kalamazoo Gazette.*

The introductory remarks of Miss Downer were as follows:—

*Dear Friends:*—You have been asked to give an hour of your time and thought to the consideration of the subject of Christian Science. The justification for this request is three-fold. You have not been asked here that you may be made Christian Scientists. We recognize the sacredness of individual religious convictions and would not lay violent hands upon them or touch them lightly or irreverently.

We would have you know that Christian Science is preeminently Christian, that we worship "one Supreme, and Infinite God" (Science and Health, p. 497), and recognize but one Christ or Messiah; that we acknowledge the verity, authenticity, and inspiration of the Holy Scriptures and are one with you in the endeavor to further all that makes for righteousness.

From the standpoint of a common need, we would have you know the rational solution scientific Christianity offers of the problems which confront us, of the dominion over evil which it confers and its practical demonstrability in the establishment of better health and better morals. We would have you know the measure of deliverance which has been vouchsafed us from the sin, sorrow, disease, and disaster incident to human existence, the evil into which mortals are born and from which escape has hitherto seemed impossible.

In the limited time allotted him the lecturer of the evening can indicate to you but briefly the basis, scope, and application of Christian Science.

I have the pleasure of introducing Mr. Edward A. Kimball of Chicago, and bespeak for him your kindly, earnest, and unprejudiced consideration.—*Correspondence.*

### At Lima, O.

Sunday, September 21, we had the great pleasure of having Carol Norton, C.S.D., deliver his lecture, "Christian Science is Applied Christianity," before a very fine audience in the Opera House. The effort to have the lecturer here was a spontaneous one, and all consummated within ten days. There were numbers from out of town, Dayton, Ada, Bluffton, Spencerville, Wapakoneta, Venedocia, and Carlyle, Ohio, and Boston, Mass. The lecturer was introduced by the First Reader, Mrs. Florence Fullerton, who said:—

*Friends:*—It is indeed a pleasure to extend to you, on behalf of First Church of Christ, Scientist, of Lima, a most cordial welcome to this our third pu lic lecture in our city, on the subject of Christian Science.

All students of this Science realize that, were our motives and aims better understood by the people in general, and by our Christian brethren in particular, they would bid us God-speed in our efforts for the betterment of the human family. For this purpose there has been established by the Mother Church, The First Church of Christ, Scientist, of Boston, Mass., a Board of Lectureship, composed of those thoroughly competent to speak intelligently, authoritatively, and instructively on the subject. We have with us this afternoon, a member of this Board of Lectureship, Carol Norton, C.S.D., of New York City, whom I now have the honor of presenting to you, and for whom I bespeak your kindliest attention.—*Correspondence.*

### At Yankton, S. Dak.

Turner Hall was well filled with a very intelligent class of people last evening [September 19] to listen to the address of Judge William G. Ewing of Chicago, on the subject of Christian Science. Judge Bartlett Tripp presided at the meeting and gave the distinguished speaker a very handsome introduction.

The speaker is one of the ablest jurists of Illinois and not a man who could be carried away by a fad. He has evidently given the matter careful study and research, and his address will have the effect of stimulating others to study the subject. *Yankton Press and Dakotan.*

### At Battle Creek, Mich.

A large and representative audience of Battle Creek people assembled at the Post Theatre, Sunday afternoon, September 21, to listen to a lecture on Christian Science, delivered by Edward A. Kimball of Chicago, Ill.

That it was an attentive and appreciative audience is evidenced in the fact that they gave the speaker their undivided attention during the entire lecture of an hour and forty minutes. The lecture was given under the auspices of First Church of Christ, Scientist, and the speaker was introduced by the First Reader, Mr. Charles M. Adams.

*Correspondence.*

There are great problems ahead of us as a nation, but the really greatest problem is the problem of making better men and better women of all of us.—PRESIDENT ROOSEVELT.

Doubt is the trouble of a soul left to itself, which wants to see what God hides from it, and out of self-love seeks impossible securities.—FENELON.

## Announcements.

### Applications for Membership.

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

| | |
|---|---|
| Price, single copy, prepaid . . . | $4.00 |
| Twelve or more to one address, each | 3.75 |

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Pain not Providential.

A CONTRIBUTION recently received for publication contained the following statement, "I thank thee, Lord, for hours of pain." The inference drawn from this statement is the belief that God is the creator of evil, that He created evil that good might come of it; and that evil is something to be borne with resignation. The logical outcome of that belief would seem to be that evil is to be courted and welcomed as a means of salvation, but such a belief is entirely inconsistent with the teachings of Christian Science, which renders unto God His rightful place as the only Creator, but not the creator of evil. Hours of pain and sorrow and burden-bearing are not of God. He is not the creator of evil, nor does He make use of evil in manifesting Himself to His children. If He were to make use of evil, it would be necessary to consider Him upon the same finite plane as sick and sinning humanity, and that would, at once, dethrone Him, since the use of evil would imply an evil disposition or an inability to do His work without resorting to means that could be nothing less than abhorrent to a tender, loving Father. It cannot be argued from any logical basis that God afflicts His children, or that He permits some other power to afflict them.

As metaphysicians, Christian Scientists know that there is but one evil; this evil is a finite, human belief which continually asserts its ability to reverse and annul the law of God. It works upon the theory that its power must be measured by its success in deluding mankind into the belief that evil is of God, or is used by Him in His government, whereas in fact, evil has no power, and goodness cannot be reversed. Good has no opposite, hence the only reversal there can be, is the reversal of the so-called laws of evil, error. M.

## Which is It?

HUMAN sympathy with its open-handed charity, its word of commiseration, its tearful pity, and its tender counselings of resignation, comes to the sufferer in such a guise as not to be easily recognized as the subtlest of enemies. It is so like love, and we all so love to be loved. But here as everywhere Christian Science bids us look deeper, face courageously everything that seems, bids us examine the state of consciousness that expresses itself in these manifestations of human sympathy.

Unquestioning generosity to the poor, while in some instances it may be expedient, is never the ultimate relief from indigence. The only true healing of poverty or wealth is the understanding of man's sole dependence upon God. This understanding of man's true source of supply destroys all fear of money, either of lack or excess, and sets man free. Commiseration admits the condition of misery. The tearful eye does not, cannot understand that "there is no pitiable condition." Some one has wisely said, "Eyes that see the light must be incapable of tears." And what is meant by the counseled resignation of sympathy? Resignation to sorrow and misery as from God, God who is Love, Life, Principle, Truth? Good knows no resignation to discord, knows no discord.

We thus see the whole fabric of human sympathy fall, because it is not builded upon the Rock, Truth. We turn as ever to the Master and find in him a divine compassion, tender, patient, liberating the sufferer by knowing the nothingness of that which would fetter him. In the midst of wailing sympathy at the house of Jairus, note the serenity of divine compassion that said: "Talitha cumi!" In Bethany human sorrow and sympathy said regretfully, "Lord, if thou hadst been here, my brother had not died." Divine compassion said: "Lazarus, come forth." "Loose him, and let him go."

Which are we expressing in our daily lives, human sympathy or divine compassion? Are we saying, "I am so sorry for you. You look weary, your path is surely rough;" or are we saying and thinking, "Gladness is your inheritance, God is your strength. His yoke is easy and His burden light." Are we admitting the clouds or are we dispelling them with the sunshine of Truth?

Certain it is that our thoughts, our words, our acts are the outgrowth of one or the other of these acquired habits.

That which appears human sympathy is really sympathy with error and is rendered powerless for good by the admission of the existence of evil, while the longing for human sympathy is a form of idolatry that leans upon man rather than upon the all-sustaining arms of infinite Love. S.

## The Effectiveness of "the Religious Idea."

IT is a somewhat unusual thing for a commission of inquiry into economic conditions to commend the practical application of religious teaching as the only remedy for prevailing disorders, and Mr. Carroll D. Wright's suggestion, in his report to the President upon the coal strike, has provoked very general comment.

In an extended editorial article on the subject one of our leading dailies has said:—

"Carroll D. Wright's thesis, that 'the application of the religious idea is the true solution of the labor problem and the whole question must be placed on an altruistic basis,' is a common theory, but it is doubtful if it will stand the test of modern conditions. While religion should be cultivated as a help to the harmonizing of the differences between conflicting forces in human activity, the effort to bring business affairs under the control of altruistic motives is quite possibly a misdirected form of effort. Altruism, in the sense in which Mr. Wright uses the word, is not a natural basis from which material interests may be cultivated. The sense of the brotherhood of man, and money getting, are not born of the same instincts. The teaching to depend upon in the present situation would seem to be rather that showing the expediency of justice—that fair play brings the best financial results in the end, in the relations of capital and labor.

"The recognition of community of interest is simply the acknowledgment of plain, existing facts, and time will cause a larger and larger portion of the world to see its truth. Hard, practical common sense would, for example, have caused the coal operators to avoid labor troubles, lest they lose their market in many instances and open up other resources, as well as call the attention of the public to public wrongs and dangers and the defects existing in their system. Good sense, too, would tell the miners that a long coal strike would not only injure them during its continuance, but bring a long train of evils upon them in the future. A thoughtful care for their pecuniary interests would render both parties unwilling to sacrifice much to obtain the upper hand for domination over anybody concerned. To an enlightened business judgment, rather than to any manifestation of religion, we must look for the impulses which, sooner or later, will bring about a happier condition in the industrial world."

This is, perhaps, a fair statement of general thought as

Digitized by Google

to the impracticability, in business life, of "the religious idea" of Jesus. Many professing Christians have gained the reputation of conducting their week-day affairs upon a so-called business basis rather than upon a Christian basis, and the exponents of Christianity, as a whole, must shoulder the responsibility for the world's distrust of the working and determinative value of "the religious idea" in connection with secular affairs.

The realization of Christian truth which heals, is certainly very different from a sense of truth which may be used to frighten and dominate men, and any criticism therefore of Mr. Wright's proposition would be hazardous if one did not know just what he means by "the religious idea;" the editor referred to is not amiss, however, in the emphasis he places upon the expediency of justice. The wrestling world is justly repelled by a show of religious interest which has no word of condemnation for unjust and inequitable conditions. Representative workmen resent the patronage of charity and of wealth, and this is altogether to their credit. When they ask for a fair chance, —access to the bounty of natural resources, and an equitable return for their labor,—they are asking only for simple justice, the recognition of their inalienable rights; and the brotherly love which Jesus inculcates would certainly secure all these for them. Love instinctively and immediately expresses itself in the guarantee and administration of justice, and professed Christian interest which is tolerant of unjust conditions, or which would reserve special privileges for itself, merits the obloquy into which it has fallen.

The righting of wrong is a distinctly Christian act every day of the year and upon every possible plane of human experience, and Christ is the only Saviour in every human condition and event. The leaves of the tree of Life are for the healing of the nations, as St. John has said, and it is the province of infinite Truth to "save unto the uttermost." This is the Gospel we preach, and for this Christian Science stands. It re-echoes the glad tidings of the annulment of sin, sickness, and death, and the removal, here and now, of every ill incident to them. It honors both the fact and the method of the universal healing of the Christ, and it would replace the material means and human modes which have proved to be insufficient, with that spiritual force and agency which Jesus declared and demonstrated to be available and adequate for the solution of every human problem, the righting of every earthly wrong. It is therefore the privilege and duty of every Christian Scientist to acquire and maintain a right and redemptive consciousness respecting all these questions which affect the public weal, and, in so far as he is permitted, to bring the corrective truths of Christian Science to every individual and specific case of need. W.

## Timely Caution.

FROM time to time, there have been exploited by various papers and magazines, voting contests for the most popular, the wittiest, and so on; the person receiving the greatest number of votes to be awarded a prize. It is not our purpose to impugn the motive of those who organize such affairs, but we must protest against the bad taste which thrusts public mention of this kind upon those who do not desire it. The thoughtful and considerate will not yield to the temptation to take part in such contests, and surely a sense of propriety will always save loyal Christian Scientists from the use of our Leader's name in a manner that would be distasteful to her. M.

Never fear to bring the sublimest motive to the smallest duty, and the most infinite comfort to the smallest troubles.
PHILLIPS BROOKS.

# From our Contributors.

## The Mid-Week Meeting.

EDWARD EVERETT NORWOOD.

THE Wednesday evening meetings, established by our Leader, are unique and useful in the working of our Cause, and the progress of students in the solving of individual problems. They fill a place that is useful, both to the Scientists, and to those at present outside of Christian Science. At the Sunday service, we come to get, and getting, we consciously and unconsciously give, for as we are taking in the lesson, our understanding of it is going out, so all are blessed.

At the Wednesday evening meeting we come essentially to give, and here we find that in giving, we are also getting. We come in the spirit of gratitude to tell what Truth has done for us, how it is healing us, mind and body, how it is enabling us, through this understanding, to heal others, and how it is showing us the way to heavenly harmony, and lifting our thought above matter and material laws which never had any right to rule a child of God.

Gratitude engenders a more receptive condition of thought in which the divine energies may be better understood, utilized, and demonstrated. A lack of gratitude closes the receptive avenues of thought, and a doubting, faltering sense ensues, unfavorable to further progress.

*God is just as near us as we really want Him to be.* We are all just as good as we really want to be. We may think we desire to be better than we are, but if that desire is honest, it will be put into conscious practice, the evils in the undestroyed human concept will be overcome, and a higher basis gained.

We hear a great deal nowadays of "men who do things," and of "the strenuous life;" but we are learning, in Christian Science, that it is only divine Mind who does things, and that we really think, speak, or act only as infinite Intelligence acts through us; and we are trying to get out of God's way and let the work be done. When we realize that it is not by developing personality, but by purifying thought that we may become channels through which impersonal Truth comes to all men, we shall think less of personal responsibility, and work to keep the transparency clear, and we shall find this work to be the "strenuous life."

We are also learning in Christian Science to look behind the seeming and find

> What the hieroglyphics mean,
> Of the unseen in the seen,

that behind the dismal tale of diseased organs, inflammations, fevers, aches, and pains, are the false thinking, the errors and sins of personal sense; and seeing this at its true value, nothing, we can destroy it. We are also learning to rejoice, not so much that the devils are subject unto us, but that we are solving the problem of being, acquainting ourselves with God and being at peace.

Tennyson's description,—

> An infant crying in the night:
> An infant crying for the light,
> And with no language but a cry,

fitly describes the condition of searchers for Truth, when the night was dark and the cry faint. But thanks be to God who hath given us the victory, forty years ago there was one spiritually-minded, patient, and sincere seeker, whose desire for light was so great, the cry was continued, and at last an answer was heard; and now she has given us that answer in the majestic new tongue of Christian Science, whose fundamental statements are, "Good is supreme," "Error is not power," and "Man is the perfect image and likeness of God." When she gained this truth, Christianity and Science met together. From that basis we are working, and so far as in us lies, proving the allness and might of infinite Love.

Digitized by Google

God bless our dear Leader, Mary Baker G. Eddy! The world is slowly but surely recognizing the great work she has done and is doing for it, and sooner or later will give her the praise which she deserves.

## Thoughts on the Higher Life.

G. S. ADAMS.

MORE convincingly than ever it has come to me during the past few months, that we are under the protection of divine Love. How strangely unconscious many appear to be of the One all powerful to whom we owe all! Only in absolute dependence on our heavenly Father, do we come into the consciousness of His protecting presence.

If God needs assistance in the performance of His wonderful works, then we are admitting that He is not all powerful.

I am thankful for all that Christian Science is unfolding to me,—the revelation that right thinking and right living bring into demonstration what in reality has always existed for us in divine Mind.

The misunderstanding of God has brought about all inharmonious conditions, evil happenings growing out of fear, and fear coming through lack of faith, and submission to the assertion of the laws of human mentality. I know of a young lady who was in a car accident, and had but slight injury, but who was told by her physician that it would take two years for her nerves to recover from the shock. As the law was thus laid upon her it took just that length of time for recovery, and great were her discomforts during the allotted period.

Christian Science brings us into a higher plane of thought whereby we are protected from these so-called laws of mortal life, and as we rise higher and higher in the understanding of spiritual life, we approach the realm of divine Love, where all is harmony.

It is needful to be constantly on the alert, for right thinking alone can keep us free from the encroachment of evil in its manifold forms. Fortunately we have before us the example of one who is living this higher life. Lovingly she has devoted herself to the great work of re-establishing the teachings of Jesus Christ, so sadly needed by poor, suffering humanity. Through her unceasing labor and untiring love, we are reaping a rich reward. Let us show our gratitude by fashioning our lives according to that perfect ideal presented in the life of the Master as it is interpreted in Science and Health, our Key to the Scriptures.

## Salvation.

K. E. W.

ONE of the promises that Jesus gave to mankind was "Ye shall know the truth, and the truth shall make you free," and Paul having come to the understanding of this liberating truth through demonstration, declared "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." According to these statements, the knowledge of truth and the knowledge of spiritual law constitute salvation. God has again spoken to mankind through His messenger to this age, and Christian Science —the Science of God—is awakening human consciousness to the knowledge of "the Life which is Truth and the Truth which is Life" (Science and Health), and to the understanding of spiritual law which is the manifestation of eternally active divine Love.

We find in reading the Gospels that Peter was the first to voice this saving Truth. He replied to Jesus' question: "But whom say ye that I am?" with the answer: "Thou art the Christ, the son of the living God," and Jesus immediately affirmed that the Truth which Peter had declared was the rock upon which he would build his church. This rock, this fact of God's allness and of man's sonship in God,—Christian Science recognizes as the fundamental Truth of Being.

As man through the demonstration over sickness and sin, standing firmly on this rock, denies the evidence of the material senses which claims to be overwhelming, and proves the nothingness of the supposititious opposite of Truth, in the degree that this is accomplished, man enters into the possession of life and his salvation has begun. "He that hath the son hath life; and he that hath not the son of God hath not life."

As the demonstrations multiply and man is daily called upon for higher proofs, by the uncovering and destruction of more subtle and insidious phases of error, he comes gradually into the perception and possession of the Mind that was in Christ Jesus. He begins intelligently to obey the first commandment, "Thou shalt have no other gods before me," and his salvation is progressing.

Further steps onward and upward in spiritual consciousness give man some understanding of the meaning of Paul's words: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death," and he awakens to the realization that the law of the Spirit of life is the expression of Love. He understands that law is not the cold, barren, unbroken rule that mortal thought recognizes as law, but rather "the Father's great love that He hath bestowed upon us, and it holds man in endless Life and one eternal round of harmonious being" (Miscellaneous Writings, p. 77). He realizes that the law which is the manifestation of Love is not only incessant and eternal in its action, but it is exact, complete, exhaustive, "able to save to the uttermost," and man's thought reaches out towards that full salvation which will be his when he shall have demonstrated that "the depth, breadth, height, might, majesty, and glory of infinite Love fill all space" (Science and Health, p. 520).

## Christian Science Fruits.

MARGARET DUNCAN.

THERE are three things for which mortals everywhere are seeking: love, peace, and joy. But how perverted is the world's sense of these. It thinks to find within itself that which can only be found in God—Good.

Jesus said, "In the world ye shall have tribulation." They who are in the world, in the belief of life in matter, are asking, "Where can we find love, peace, and joy, and how are they to be obtained?" Can any but Christians, they who have come out of great tribulation, answer this far-reaching question?

Jesus did not stop when he said, "In the world ye shall have tribulation," he added, "but be of good cheer, I have overcome the world." "I, my ego, the Christ of me, has overcome the world by *knowing* and *proving* there is no such thing as matter with its deceptive false sense."

Christian Scientists are trying to emulate Jesus and are endeavoring to present some fruits whereby they may be known. The tree must be good that bears good fruit, and what tree can be better than the "tree of life"? Let us learn of this tree and of its fruit. First; it is the tree of Life. And what is Life? In Science and Health, p. 468, we are told, "Life is divine Principle, Mind, Soul, Spirit, without beginning and without end." Then, this Life is not life in matter, because matter has in belief both beginning and end. Life is Spirit which produces precious fruit. "The fruit of the Spirit is love, joy, peace." This is the fruit that grows on the tree of Life, the fruit that develops in awakening consciousness. The good seed being planted must be carefully watched lest it be choked by the growths of malice, envy, hatred, spite, jealousy,

Digitized by Google

and resentment,—before it has time to mature and ripen into *fruit*. The Christian Scientist knows that before he can obtain the fruit of the Spirit, which grows on the tree of Life, he must destroy in his thought the *belief* that there ever was a "tree of the knowledge of good and evil" to bear any fruit of tribulation. And this demonstration means work. It means digging deep into human consciousness and uprooting every seed of error's planting. Some of these seeds may have taken firm root. Oftentimes the roots of the seed of self need a great deal of tugging at, and possibly the effort to pull them up means agony, but we must not stop if we would gain the imperishable fruit of the Spirit.

There is another seed which mortals have to grapple with, and that takes effort and perseverance to uproot; namely, sorrow. But so long as a vestige of this seed is allowed to remain, there cannot be brought forth the fruit of the Spirit,—love, joy, peace. And sorrow, after all, is but a belief that there has been a separation from God,—Good,—in whom, a Christian Scientist knows, is found everything necessary for completeness. This seed can only be uprooted by claiming the dominion, which, "in the beginning" the great Creator gave to all His children, and by *proving scientifically* that in asserting his dominion man can surmount the false testimony of the senses.

Thus with patient persistence every seed of the belief of life in matter will finally be destroyed and then will be revealed, in all its glory, the tree of Life bearing the fruits of Spirit.

If the Christian Scientist be faithful to the demands of Love, however difficult they may appear to mortal sense, he surely will have revealed to him all the grandeur of this wonderful growth from sense to Soul, and will partake of the substance of love, joy, and peace—for "to him that overcometh will I give to eat of the tree of life which is in the midst of the paradise of God."

## Unselfishness.

ANNE DODGE.

JESUS said, "This is my commandment, that ye love one another as I have loved you. Greater love hath no man than this, that a man lay down his life for his friends," and Saint John has said, "Hereby perceive we the love of God, because he laid down his life for us: and we ought to lay down our lives for the brethren."

Unselfish love stooped to lift the cross upon its own shoulders, bearing the world's hatred and ridicule all the way to the summit of Calvary,—"despising the shame." Jesus, sublime in his simplicity and meekness, endured the cross of misrepresentation and misapprehension without a murmur, rejoicing in the knowledge that he was to prove the powerlessness of hatred and malice.

What does unselfishness mean? Simply this: to lay down one's life for one's friends and the brethren, which we cannot fail to do if we love God and humanity; to take up our cross cheerfully, gladly, and courageously, following Christ; to heal the sick as he healed them; joyfully to lay down, each day, a sense of life in matter, and prove that Life is God, divine Love, full of infinite blessings, healing and saving those who receive it.

To seek to bless and to do good to those who love us, is a sweet task, and comparatively easy; but far sweeter is it to seek to bless and to do good to those who hate us and return cursing for blessing, for this is the work of unselfish love. The desire to help others, to lift their burdens, release them from the iron bonds of fear and disease, to comfort those who mourn in Zion and give them joy,—this desire can only be born of unselfish love for humanity, and is known by its fruits, for it bringeth peace.

Who can hinder us if we would follow the leadings of Love, and sacrifice self? If we would lay down a false sense of life, comprising worldliness with all its petty vanities, self-seeking, the desire for money, love of dress and display, greed, and selfish amusements,—for pure and undefiled religion, none can hinder us, and as a reward, we shall be blessed with the "Spirit without measure."

The choice lies with us. The victory over the world is the victory over *self!* God worketh with the holy desire that craves only to *have* and to *give* love!

It is our own fault if we are led away from the "simplicity that is in Christ," our own fault if we seek worldly and material, instead of heavenly and spiritual things,—the inheritance that fadeth not away,—and we should turn again to Christ in deepest humility, and follow Him more closely than ever before, with greater proofs of self-sacrifice, and no professions at all.

Let us keep our conversation holy, our service reasonable, and be watchful lest we profess more than we are willing to perform. Are we willing to sacrifice self for the brethren? Are we willing to give up material possessions for Christ? If so, we shall attain the kingdom of heaven where Love reigns.

## Help in Student Life.

HELEN DEARBORN DAGGETT.

LAST year, my sister and I were at a college where the rules were very strict. We were the only Christian Scientists in the college and in an old conservative town. Christian Science helped us through many long, hard days which sometimes seemed rather dreary. We were away from all Scientists, but Science was with us, for we cannot be separated from Truth. Many little troubles were quickly overcome. In the spring I had a severe illness—one that was plainly seen by the teachers and by the other students. Absent treatment was received. Curious eyes were turned upon me, and many advised me to see a physician; but it was not long before relief came, and all saw the "present help," and knew that Christian Science was the only remedy.

In our examinations we were helped to realize the ever-present Intelligence. In many tasks that were ours to perform we realized the sustaining power of the one Mind, and at the end of the college year we were in better condition, physically, than at the beginning. For all these helps, and many others, we are grateful.

"Him with whom we have to do" (Hebrews, 4 : 13). He is your Guide,—why need you puzzle? He is your Shield,—why need you try so hard or wish so much to explain and vindicate yourself? . . . Don't creep, but *flee* unto Him to hide you from the assaults which you are too weak to meet. . . . And we are answerable only to Him in everything, for this is included in having to do with Him. To our own Master we stand or fall; and that latter alternative is instantly put out of the question, the apostle adding, "Yea, he shall be holden up, for God is able to make him stand." To Him we have to give account, if from Him we take our orders.—FRANCES RIDLEY HAVERGAL.

The hour is coming when men's holy church
Shall melt away in ever-widening walls,
And be for all mankind, and in its place
A mightier church shall come, whose covenant word
Shall be the deeds of love. Not *Credo* then,
*Amo* shall be the password through its gates.
Man shall not ask his brother any more,
"Believest thou?" but "Lovest thou?" till all
Shall answer at God's altar, "Lord, I love."
For Hope may anchor, Faith may steer, but Love,
Great Love alone, is captain of the soul.

## Among the Churches.

### Growth in Camden, Me.

In grateful acknowledgment of help received through reports from other churches, we submit the following, hoping it may prove an encouraging messenger to other little bands of workers for the cause of Christian Science.

At our annual meeting in August, 1902, the clerk of First Church of Christ, Scientist, in Camden reported many evidences of progress. He said there had been an increase in the attendance at the church services of townspeople who come with the spirit of kindly investigation. There is also an improved condition of the church building, which is leased from the Universalist society.

The reading room has been removed to larger and much pleasanter quarters and provided with better furnishings. We have a better realization of the affluence of Love, so that our bettered financial condition has enabled us to make the improvements, to add to the salary of our officers, and successfully to give a lecture in February. The lecture was delivered by Rev. Mr. McKenzie and was productive of great good, evidence of which was early manifested. The reading room committee report a much larger sale of literature than that of any previous year and a decided increase in the number of visitors. Boxes containing Christian Science literature have been placed in the waiting room of the street railway and in the boat house of the Boston & Bangor S. S. Co., and literature is being constantly distributed throughout the Field. The church and Sunday School have a church building fund, a Mother Church building fund, and a lecture fund.

At a meeting called in September the church adopted the Mother Church By-law relative to rotation in the office of Readers. The Readers then resigned in glad obedience to our Leader's wise forethought, and new Readers were immediately elected.—V. C. BUCKLIN, *Clerk*.

### From Idaho Springs, Col.

First Church of Christ, Scientist, of this place was organized August 12, 1902, in accordance with the laws of the state. The membership at that date was eight, and the average attendance at the Sunday services twenty. Our Sunday services are held in a hall, but owing to our inability to rent a suitable hall the Wednesday evening meetings are held at a private residence.

On May 25 we had the benefit of a lecture by Mr. Edward A. Kimball, and the Opera House was well filled. This was the first lecture on Christian Science given in this locality, and it was of great advantage to the Cause.

We are now making our subscription to the Mother Church Building Fund. "We welcome the increase of knowledge, and the end of error, because even human invention must have its day, and we want that day to be succeeded by Christian Science" (Science and Health, p. 95).

MRS. LUCY MOSHER, *Clerk*.

### Good Cheer from Victor, Col.

A year ago, our church was organized with twelve members, all members of the Mother Church. In September, 1901, we became known as First Church of Christ, Scientist, Victor, Col. In December, eight members were added, and June last eleven more, so that we now have a membership of thirty-one.

Our Sunday services are well attended, our Wednesday evening meetings are interesting, and our Sunday School is doing a splendid work.

The children have proven the truth of the Mother's words; viz.: That keeping does not enrich or giving impoverish. In April of this year, they gave one hundred dollars to their own church building fund, and in August, they voted to contribute the amount in their treasury (twenty-eight dollars) to the building fund of the Mother Church as an expression of their love.

The work that has been done this past year by our librarian is most encouraging: 222 Journals, 900 Sentinels, 200 Quarterlies have been sold during the year, with 34 copies of Science and Health: and over seven hundred copies of Journals, Sentinels, and tracts have been distributed free.

The church presented Science and Health to the Miners' Union Library in Victor, and the library fund has kept its reading room supplied with literature.

We feel that we are growing financially, physically, morally, and spiritually, and our desires go out in profound gratitude to God, and in thanksgiving to our Leader, for our unnumbered privileges and blessings in Christian Science.—ALBERT P. RUMOHR, *Clerk*.

## Value of the New Book.

FRANCES GIBSON.

I would like to add my word of gratitude to the many that have been spoken for the new edition of Science and Health, and to tell how its reading uncovered an error for me. I had always read Science and Health straight through from the beginning, excepting the Glossary; it never struck me that this could help me specially. When, however, the new edition came out I thought I would not omit this chapter, so I read straight through Glossary and all, and I found that it cleared up many things, and aided me very much in treating patients. The definitions of "Fear" and "God," were especially helpful.

## A Little More Love.

SAMUEL GREENWOOD.

THE content of the worldling is not in his gold,
Nor in wanton pleasures nor grasp of power,
Though he striveth to gain these hour by hour,
And yieldeth them homage till time is old;
For stronger than passions or greed of gain
Is his yearning for love, like a secret pain
That no earthly treasures have yet consoled.

For gold cannot buy one loving thought,
And sensuous bliss is a loveless path,
And all the power that this world hath
Cannot compass one blessing which love hath wrought,
For the world of the flesh and all therein,
Its honors, its pride, its pleasures and sin,
Are as passing shadows that come to naught.

A little more love for each other and God
And many a desert would bud and bloom,
And darkling shadows would lift their gloom
From many a pilgrim's upward road;
For Love is God, and His daughters and sons
Have been named of Him the loving ones,
Who scatter His radiant beams abroad.

The little more love that we all could give
Would many a weary wanderer rest,
Would lighten the burdens for lives oppressed,
And the troubled heart would forget to grieve;
And oh! what selfish strivings will cease
When we, like our Master, live only to bless,
And through daily loving learn how to live.

They serve God best who do well their simple duties,—not some fanciful sacrifice at a distance, but the plain, homely, every-day task that lies before them.

*Christian Life.*

## Testimonies of Healing.

Before learning of Christian Science, I had doctored for several years for many severe chronic diseases, and becoming discouraged, I prayed God to direct me out of such a discordant state, and if there were a higher, holier life that I might know it, and walk in it. I was brought up a strict Christian disciple and thought my religion the only true religion, yet there was always a yearning for a higher life and my physical suffering drove me into it. I knew very little about Christian Science, it only being mentioned to me as a healing agency, and as such I sought a practitioner, January 4, 1901, and arranged for one week's treatment. I was entirely healed in that time, for which I have always felt grateful to God, to our Leader, and to the practitioner who led me out of gloom and despair into a brighter way. I went to her as I should go to any doctor, not realizing that I was getting something more than the physical healing, which is the smallest part in Christian Science and not to be compared with the spiritual illumination. Almost two years have elapsed since I was healed, and not one of the old troubles has returned, nor have we ever since that healing had a doctor or a drop of medicine for any of the family, which proves to me that God is Good, and only *Good*, and that He is an ever-present help. My husband read the Christian Science text-book, Science and Health, and accepted the whole of its teachings as a beautiful truth; and my three children also love the Science and prove it an ever-present help to them. We have many beautiful demonstrations in our home, one of which I wish to mention here.

Our second boy, aged twelve, was shot in the eyes with a cannon a year ago last Fourth of July. Instantly he put his hands to his eyes and declared God as his sight, walked into the house unaided, got Science and Health, but could not see to read. He knelt in silent prayer and asked me to demonstrate for him, which I did as best I knew how, at that time being only a beginner. The pain in his face and eyes all left and the powder came to the surface and could be wiped off. We never even had a surgeon to remove powder. His eyes and face were full of it, but it never touched his sight; he was so much improved by noon that he went out to the park. All the redness disappeared and in one week he was entirely free. I repeat my thankfulness to God and to our Leader for giving this precious truth to suffering humanity to uplift, guide, direct, and keep us each day, for it removes sinful desires and therefore makes it easy to live a Christian life. I can say with the Psalmist, "Bless the Lord, O my soul, and forget not all his benefits."—MRS. MINNIE, M. KARNS, Richmond, Ind.

---

In proof of the effectiveness of the truths of Christian Science I would like to tell of the case of an old friend of mine now living in Cincinnati.

After a long and honorable career he found himself embarrassed, and unable to meet his obligations, and came to Boston to arrange a settlement with his creditors.

The conditions seemed to make it necessary for him to give up his business, as his entire capital was gone, and greatly discouraged he started for his home in Cincinnati. Being friendly to him, I wanted to cheer him up, if possible, and being somewhat interested in Christian Science myself at the time, I urged him to get a copy of Science and Health and take it with him to read on the train going home. I thought it would take his mind off his business troubles and be some comfort to him. Though a deacon in his orthodox church in Cincinnati, he bought the book and read it on the train all day, and became so much impressed with its truths that he stopped off at Dayton, O., to see his brother, who was a confirmed drunkard, with his will-power all gone.

My friend felt that Christian Science might help his fallen brother to be a man again, and so stopped off to get him to try it, not thinking of his own despondency. He arranged for his brother to make his home with a family who were devout Christian Science people until he could be cured of his drinking habits if a cure were possible.

His brother was completely cured of his taste for liquor and has never drunk a drop of intoxicants during the three years since. My friend the deacon became so much interested in the study of Christian Science, and the good it had done his brother, that both he and his wife became very devout Christian Scientists and are so to this day.

He says he can never thank me enough, for calling his attention to Christian Science at a time when he needed more help and encouragement than man could give.

He feels that only Christian Science would have carried him over his business troubles and given him courage to try again in the business world, where he had met with failure.

To-day both he and his brother are well and prosperous.

O. M. F., Boston, Mass.

---

I thank God for Christian Science and what it has done for me, physically, morally, and spiritually. It has lifted me out of sickness into health, out of gloom and despair into light and peace. It came to me as a messenger of Love, in a time of great mental and physical suffering, and led me gently to a higher and brighter sense of life, through that "right understanding of God" which "establishes health" (Science and Health). It has taught me how to make my faith in God practical in every-day life, bringing much broader, higher, and more satisfying results than had resulted from all past experience. I had searched the Scriptures with an inward longing for light and understanding, and the reward came, for I got glimpses of the truth, which, though dim, were still with influence, so that when I found Christian Science, and read its text-book, Science and Health by Mary Baker G. Eddy, I knew it was the key to unlock the Scriptures and reveal the Truth I had been searching and longing for. I very soon decided to "prove the doctrine" by a practical test.

I had, at this time, been in bed about three months with extreme nervous exhaustion and jaundice, resulting from hard work, improper diet, and exposure o such conditions of climate and environment as are generally considered a trial by the strongest, and I had never been thought very strong. Now every effort to get about or do any work, sent me back to bed again with great weakness and pain, backache, headache, and sharp cutting pains in the region of the liver.

While this was the condition, my mother remembered having heard of Christian Science as a healing remedy, and suggested that we try to find out what it was and if it could help me. I was fast losing faith in what *materia medica* could do for me, although I had reason to be very grateful for the kindness and faithful attendance of the doctor who had been handling the case. Previous to this I had had opportunity to observe and learn much from others' experience, as well as my own, for I had spent two years in a hospital training school for nurses, and had followed the profession of trained nurse from the time I graduated, in 1895, until, in my hour of need, I was led to Christian Science. We soon learned of a lady in Detroit who gave Christian Science treatments, and my mother wrote to her stating the case and asking if I could be helped. She replied that I could, and she would be glad to help me, when she returned from Boston, for which city she was about to leave Detroit for a couple of weeks. Would I, she asked, get the text-book of Christian Science, Science and Health, and read in the mean time, and on her return, call on her if I still wished treatment. I found the book at the home of a neighbor, who afterward told me I was about the last person she would have thought of offering it to, borrowed it, and began reading. At the end of the

Digitized by Google

two weeks, I was so much helped that I knew I was on the high road to health, and did not need any other treatment than the impersonal treatment received through reading the book. I continued to read, and as far as I could understand the application of its teaching, tried to act upon it. In less than a month I was entirely healed of the nervous and jaundiced conditions and all their accompaniments, and have had no return of them; instead I have been surely gaining in every way a better condition of mind and body.

It is now three years since all material remedies were given up in our home, and we (my mother, sister, and I) are learning daily to rely more and more on God as the only and Great Physician, the ever-present help in time of trouble, who forgiveth all our iniquities, and healeth all our diseases.

I have since had the privilege of class instruction from one of Mrs. Eddy's loyal students, and of becoming a member of the Mother Church in Boston.

My love and gratitude for Christian Science; its Discoverer and Founder, Mrs. Mary Baker Eddy, can be but poorly expressed in words. "Actions speak louder than words." I wish to let them speak for me.

CARRIE D. HAYWOOD, Ypsilanti, Mich.

---

Before learning of Christian Science I had suffered from indigestion until I had become very weak and emaciated. It was so bad that the doctor said I would have to go to the hospital and be treated, and that it would take about two months to cure me. I was obliged to have my stomach pumped out every day, and any one can understand how I dreaded this ordeal.

A week before it was decided that I should go to the hospital my husband went east on business, and while waiting in Portland for his train he called on some friends who had been healed through Christian Science. They gave him such convincing accounts that he decided to write a letter to me telling me what it had done for his friends, and said that I could be healed too, if I could believe. He told me that I should have to take no medicine, and that it was the divine power of God that was to heal me. We had never heard of Christian Science before, and this was something very new to me.

I mentioned the fact to several of my acquaintances, but they said it was all a humbug, insisting that the times are different now, and that the people are different from what they were in the time of Jesus.

My husband wrote to me, that I did not have to try Christian Science unless I wished to, but I felt that I could be healed and so decided to try it, regardless of what my friends here said of it; for it seemed to me that I was being guided into the right path. When I arrived in Portland, the friends who told us of Christian Science took me to the practitioner, and I was healed with a single treatment, and when I was ready to leave his office he told me I might go home and eat of anything that I liked for supper.

Prior to the treatment the only things that I could eat without causing me pain, were very soft boiled eggs and malted milk, and to sit down to the table and eat of anything that I liked was something that I had not been able to do for over four years. But I felt that I could do as the practitioner had told me, so I put my whole trust in God and did eat of everything that I liked. I tried to realize that I was the child of God, and my supper did not cause me the least bit of pain. That night I slept like a child, and when I awoke in the morning I was ready for a good breakfast. Not only my stomach troubles disappeared, but other diseases also. When my husband returned after a week's time in the East, he found such a change for the better in me that he took up Christian Science too, and after being treated for mental suffering, he was, through a better understanding of God, able to heal himself of sick headache from which he had suffered since he was a boy.

Having thus cited what Christian Science has done for me physically, I cannot find words to express how grateful I am for my mental healing, for I have been raised from the depths of despair. I was very nervous and very disagreeable and cross, and it seemed that nobody cared for me at all. I was so discouraged and heartsick at times, that I have wished that I might sleep never to wake again, for I said to myself, What good am I to any one when I am so miserable that I cannot even see the good in others.

Now all is changed; where there was discord, there is now harmony, and where there was hate now love and peace reign, and I owe it all to Christian Science.

It is with a heart full of joy and peace, and with deep thankfulness to our Leader and the dear friends who have led me to this blessed Light, that I write this testimony of my healing, and hope that some one who may read may be led as I have been and so be able to free himself of sickness and sin.—MRS. EMMA WEBER, Roseburg, Ore.

---

One year ago I was indeed "forlorn and shipwrecked," to human sense, without friends, and waiting the summons of death with what fortitude I could. I was given up by some of the best specialists in the northwest, who said I was afflicted with a complication of Bright's disease, and tuberculosis of the spine. I was wearing a brace, in the hope of thus gaining strength enough to walk, but after nine months in bed the doctors said I could not get well. Then it was that Christian Science was brought to me by an acquaintance, and I took up the treatment and reading. I have been able to go about, walking ordinary distances, with no trouble, since October, when I took off my brace, and have not worn it since; and from a pale, thin woman, whom all expected to see pass away in a few weeks, am become well and healthy looking, and feel like a new woman. Christian Science has helped me wonderfully, both physically and mentally, lifting me from despondency to hope and joy in life, and I am able to take up with joy the beautiful thought. Words fail me to express my gratitude for "Science and Health with Key to the Scriptures."

CORA M. JOHNSON, Granite Falls, Minn.

---

In the two years that I have been a student of Christian Science, life has been one continuous demonstration of the "present help" and the infinite wisdom of the one Mind. Though the only Christian Scientist in a family of seven, through "knowing the truth" many manifestations of error have been successfully met, and no physician has entered our home and no druggist has filled a prescription for any member of our family in that time. Many times there has gone up a "mist from the earth," but Love is our refuge, and fleeing thither we are conscious of no other power.

It is my most earnest desire to be found at all times about my Father's business, and my heart overflows with gratitude because God's ideas are found worthy to reflect that Mind whose effect is always to heal and to save.

M. N., Cincinnati, O.

---

The testimony in our issue of September 28, signed Mrs. Minnie Derrell, Scranton, Pa., should have been ascribed to Mrs. Minnie Deuell.

---

Let the motive be in the deed and not in the event. Be not one whose motive for action is the hope of reward.

KREESHNA.

## Religious Items.

The coming again to our world of the Lord Jesus is a cardinal doctrine of Christianity, frequently spoken of by the New Testament writers, and yet a doctrine which has found exaggerated interpretations. . . . Christ made it very plain to his disciples that he would come again, bringing as his witnesses to this in the hour of his departure heavenly angels who affirmed that it would be "in like manner" as they had "seen him go into heaven." As to the time of his regal reappearance he said himself that no man could know. The infinite purposes of God must first be fulfilled, but only God would know of that day and hour. Those who hold to the necessity of the Lord's return to earth to realize his purposes of Kingship seem to forget that he said before his departure "and, lo, I am with you alway." It seems very evident from all of Christ's teaching that the importance of his coming to the Christian should not be put upon his personal return and reign upon earth, but upon the need of his essential presence with the Christian all the way through his earthly journey. The emphasis in the lesson from Luke is not so much upon the coming as upon the Christian's readiness for the event when the day arrives, and the best readiness is to be girded and have our lights burning. Any listless looking or spending the time contending for the fact of his coming is not such a readiness as the lesson calls for. If we think of the event as a visible appearance only and limit it to this we shall be apt to do as many do who look for the coming of an earthly friend, put off the preparation for his reception till near the day of his coming and then seek to appear to better advantage than the average life we live. The greatest point in the lesson possibly is the thought that whenever our heavenly friend shall appear, if at midnight or any other hour, our house may be in readiness. In other words, the lesson is a plea for a right kind of life all the time. It is not only getting ready but keeping ready.—*The Standard.*

Rev. George W. Penniman, as reported in *The Boston Herald*, says:—

"The Christian faith is in the highest degree educative, because it sets before us the clearest and the highest ideal, and yet an ideal which is attainable. Jesus not only depicted and insisted upon a higher standard of life than the world had seen, but he also lived what he taught.

"What one man has done—not merely taught, but done; not merely preached, but practised—another may do. The highest standard of a life; higher than the wisdom of the sages or the insight of the poets, yet a standard of life to which we may attain, because Jesus of Nazareth, our brother man, has attained to it,—is not this of the highest educative value in the formation of character?

"The trouble with much of our life and conduct is that it is continually getting out of perspective. We are overestimating little things and underestimating great things, because we lack a proper standard to which we may refer them all. It is not the busiest lives so much as the wisely directed lives which attain unto the noblest characters and the greatest usefulness."

In the multitude of sermons that one hears in the churches or sees in print there are few that are burdened with the need of a salvation that is social as well as personal; few that seem touched with conviction of a widely diffused moral miasma that depraves the public conscience, and a moral profligacy of civic life engendered by an unchecked commercialism. The Christian preacher now needs to hew to the line of social righteousness as closely as did the Hebrew prophets whose divine inspiration his creed asserts. But Christian conference is needed in the present crisis quite as much as Christian teaching. God-fearing men in these United States need now to get together to confer about the common salvation at home, as well as for the salvation of the heathen.

*The Outlook.*

Rev. Felix R. Hill, Jr., writes in *The Homiletic Review:* "A glance at the New Testament teachings will show that the requisites of membership in the early Church meant something more than the acceptance of Christ as divine; always there was demanded a saving faith in him authenticated by a life that was genuinely and distinctively holy. The chosen generation, royal priesthood, and holy nation to which Peter refers in such glowing terms, were those who had been called into this marvelous light of grace. There can be no legitimate membership apart from repentance, faith, and a consistent, holy life."

The divisions of Christendom have wrought much evil in the world. Denominationalism has been a mischief-maker. Creeds, Churches, missionary societies, and denominational papers which have made over-much of divisions and artificial distinctions, have a long account of folly and misdoing set down against them by the recording angel. Because it is too much trouble to separate the good from the evil, and to strengthen all that is good in our institutions to such an extent that they can slough that which is useless, or worse, it is now the fashion to feel or to affect indifference to them all. But indifference in some respects is a more deadly sin than bigotry or open hostility.

*The Christian Register.*

Character is tested by actions, by the life, more than by the words that are spoken. The great characters of the world have undoubtedly moulded many after their kind. The heroes, the warriors, the statesmen, the reformers, the martyrs, the scholars, the social and political leaders of past centuries, have each in his turn exerted a wide and potent influence upon the world's life, and this by what they did more than by what they said. Historic characters are made such by deeds chiefly. It is those who live the truth as well as speak it,—who are ready to die for it if necessary,—who reach and inspire the masses.—*The Universalist Leader.*

Rev. L. O. Williams says in *The Universalist Leader:* "Without works faith is a form without substance which must soon vanish away. We too often look for faith as a result of intellectual processes, thinking that we may make some discovery in the world or fall upon some argument that will force from us a reluctant assent. We beg leave to remind you, however, that the great faiths by which men live have not come through observation or logic, but through sacrifice. It is as true to-day as it ever was that he that doeth the will shall know of the doctrine."

There is a fag-end religion even in the Church, men and women giving the fag-end of their time and energy and interest and support to the Lord and his work. That is what is the matter with many of our Churches and with many a Christian who wonders why he does not experience more joy and comfort in his religion. What is left after all other needs and desires are satisfied, or nearly so, is given to the Lord; what is convenient for one to do or give, when everything is being done according to one's ideas, nothing more.

*Lutheran Observer.*

A notable change is taking place in the aim and methods of evangelistic work. The camp meeting, which used to be a prominent feature of Methodism, is seldom heard of now. Where it is kept up, it makes little effort to preach the gospel to the unconverted. It appeals mostly to Christians. The many religious summer schools expect their membership to be mainly composed of Christians. The most noted evangelists assume that their mission is to deepen the spiritual life of believers.

*The Congregationalist.*

Brother men, one act of charity will teach us more of the love of God than a thousand sermons—one act of unselfishness, of real self-denial, the putting forth of one loving feeling to the outcast and "those who are out of the way" will tell us more of the meaning of the Epiphany than whole volumes of the wisest writers on theology.

F. W. ROBERTSON.

Let us remember that there is no greater stumbling-block in the way of the reception of true religion than the uncandid, untruthful, unjust, ungenerous deeds and words and tempers sometimes seen among men who profess to be and who, in a certain sense, are "not of the world."

DEAN STANLEY.

We believe that true religion speaks in actions more than in words, and manifests itself chiefly in the common temper and life; in giving up the passions to God's authority, in inflexible uprightness and truth, in active and modest charity, in candid judgment, and in patience under trials and difficulties.

CHANNING.

No good deed, no genuine sacrifice, is ever wasted. If there be good in it, God will use it for His own holy purposes, and whatever of ignorance or weakness or mistake was mingled with it will drop away as the withered sepals drop away when the full flower is blown.—FREDERICK W. FARRAR.

The larger, fuller life in Christ comes only in response to earnest seeking of it.

H. A. BRIDGMAN.

## LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only*.

PRICE:—Single copies two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume; 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, marbled edges, Oxford India paper, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each: $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents: Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.
THE CHRISTIAN SCIENCE MOVEMENT. 22 pp.
HEALING THROUGH CHRISTIAN SCIENCE. By Septimus J. Hanna.

One copy or more, each, 6 cents; 12 copies to one address, 60 cts. Twenty-five copies to one address $1.15: 50 copies to one address, $2.25.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

### National.

The trustees of the Carnegie Institute have received numerous letters urging them to take up the subject of economics and to make a thorough investigation of the relations between capital and labor, the rate of wages paid in proportion to the unit of work performed, private ownership of natural monopolies, etc. The executive committee of the institution has considered the matter, and an advisory board on the subject of political economy, which will give special attention to strikes and trusts, has already been selected. That the executive committee will bring the subject in concrete form before the board of trustees at its meeting in November is practically assured.

Friends of the Carnegie Institute believe that with its resources it could not only conduct a most comprehensive investigation of existing labor conditions both in this country and abroad, but it could effectually compare the information already published in varying forms on the subject, eliminate the personal bias with which almost every writer unconsciously colors his premises, and without bias coördinate the results.

The tenth National Irrigation Congress assembled last week at Colorado Springs. This congress is given national importance this year from the fact that the last United States Congress passed a bill authorizing the proceeds from the sale of public lands to be used for irrigation purposes in the several states. President Roosevelt sent a message of congratulation and cordial sympathy to be read before the convention.

Judge Lacombe, in the United States Circuit Court, New York, has handed down a decision in which he holds that a citizen of Porto Rico is not a citizen of the United States, and is, therefore, subject to the conditions of the immigration laws just as are other aliens. Their civil rights and political status are matters which the Treaty of Paris provided should be determined by Congress.

The thirty-sixth annual encampment of the Grand Army of the Republic assembled at Washington last week.

### Foreign.

A portion of the itinerary of the Crown Prince of Siam, who is to visit America this month has been completed. Starting from Boston he will pass through Portsmouth, Montpelier, Syracuse, Buffalo, Niagara Falls, and Pittsburg. The train for the use of the Prince and his suite will be composed of a Pullman combination car, a Pullman dining car, a compartment car, and the private car Columbia. The party will number upwards of twenty-five persons.

The three hundredth anniversary of the founding of the Bodleian Library, one of the six greatest libraries in the world and one of the finest university libraries in existence, was celebrated at Oxford last week. There were present many distinguished guests, and representatives from universities and libraries in various countries. The degree of Doctor of Civil Laws was conferred upon Ambassador Andrew D. White.

It is stated that the Canadian and British Governments have decided jointly to establish a fast Atlantic steamship service between Halifax and Liverpool with an annual subsidy of $1,125,000 for ten years. The service at present contemplates twenty-knot steamers. The Canadian Pacific Railway and a syndicate of steamship companies have both made offers for the contract.

It is reported that permission has been granted for building the American railway from Canton to Hankow in China, a distance of seven hundred miles, and that work was begun September 3 under an official assurance. This railway is being built by the China-American Development Company, and almost entirely with American capital.

The first reading of the bill which has been submitted to the Danish Landsthing by the foreign minister ratifying the cession of the Danish West Indies to the United States was fixed for October 15, the second for October 22. The Agrarian interests favor the sale, while the bankers, merchants, and even the Court, do not favor the sale.

An edict from the Chinese throne commands the viceroys that the picked students are no longer to be sent to Japan to be educated, but to the western countries, and that the expenses are to be met by the various provinces.

According to reports a direct express train over the Trans-Siberian and the Manchurian railroads will leave Vienna on January 1, and the service will be continued thrice a week thereafter.

The American generals, Corbin, Young, and Wood, dined with King Edward at Buckingham Palace last Monday by the King's "command."

A cablegram from Newcastle last week announced that one hundred thousand tons of coal had been sold on the Newcastle Coal Exchange for America.

### Industrial and Commercial.

The installation of the telephone system of the Illinois Central is now rapidly nearing completion. The line between Chicago and Omaha is nearly finished, it is stated. The line from Memphis to Louisville has been completed within 165 miles of Louisville, and it is expected that this gap will be closed up within the next few weeks, thus making the entire line, with all its ramifications, ready for operation by November 1. The telephone system will not displace but supplement the telegraphic system, the latter being used for dispatching trains as heretofore and the former for transacting the general or miscellaneous business of the road.

The official statement issued by the directors of the United States Steel Corporation shows net earnings for the first nine months of this year aggregating $101,142,158. Dividends of one and one-half per cent on preferred stock and one per cent on common quarterly were declared.

The increase in the freight transportation of the Rio Grande system calls for five hundred new freight cars of the "hopper" style for the carrying of coke, coal, and ores.

Members of the cotton trade estimate that the crop this year will reach ten or eleven million bales.

### General.

Professor Herman V. Hilprecht of the University of Pennsylvania, who has been abroad a year and a half engaged in excavating the buried city of Nippur in Babylonia, says: "We have unearthed twenty-three thousand tablets, and I shall make the deciphering of them my life work. The contents of these tablets will change the ideas of the world as to the early Babylonians. It will be seen that they knew in 2300 B.C. that the earth was a globe, and that their astronomers took the same view of celestial phenomena as we now take. The inscriptions are in cuneiform characters. Their deciphering is a matter of much difficulty, for we have no Babylonian alphabet; we must not only translate, we must discover the alphabet, which is the key to the translation. Nippur is, in fact, sixteen cities, one built above the other. We have by no means reached the lower of these buried cities. Much of the temple library has been brought here, and is now in the museum of the university. Within the last four months our most important discoveries were made."

A branch of the Women's Auxiliary of the American Park and Outdoor Art Association was recently organized in Boston. The object of the National Association is primarily the preservation of natural parks for public use and to stimulate public opinion as to the value of parks as educators. Its next object is to teach the value of trees, shrubs, flowers, fine lawns, and the artistic laying out of private grounds; the building of artistic houses and other structures; the value of trees on public streets, their planting and preservation. In short, the mission of the association is to cultivate a love of beauty in its application to public buildings and grounds, as well as to the homes of the people in city and country.

Committees representing the Automobile Club of America and the National Association of Automobile Manufacturers met in New York last week. The sentiment in favor of licensing, and of supervision of automobile construction and of regulation of these matters by the State laws with reciprocity among the States was unanimous. A State commission which should name and control examiners was suggested.

The Supreme Court of Illinois having denied a rehearing of the case, the long contest for the preservation of the entire lake front at Chicago for park purposes has apparently ended. This decision sustains the contention of property owners on Michigan Avenue for a view of the lake unobstructed by constructions on made ground.

According to despatches the Pennsylvania Railroad has placed the largest order ever given by any railroad company to a single concern. It calls for two hundred and fifty high-class freight locomotives, aggregating in cost $3,250,000, all to be delivered within the first six months of 1903.

The new collegiate department of Clark University has been formally opened at Worcester with dedicatory exercises and the inauguration of the first president of the college, Carroll D. Wright, United States Commissioner of Labor and Statistics.

Chicago is to have a replica of the equestrian statue of Washington by Daniel C. French, which was erected in Paris two years ago by the Daughters of the Revolution. The statue will be cast in bronze, and will stand in Washington Park.

"What I Say Unto You, I Say Unto All, *WATCH.*" *Jesus.*

## Selected Articles.

### Speed Tests of Steam and Electric Trains.

A SERIES of tests have recently been carried out on the experimental track of the General Electric Company at Schenectady. These tests were made with a view to determining the relative efficiency of steam and electric traction in suburban passenger service. The primary object of the test was to make a comparison of the rate of acceleration of the same train when hauled by an engine and by a pair of electric motor cars, such as would be used were the suburban lines to be equipped with third-rail electric traction. For the purpose of the test, a train of six cars was made up, which included five standard passenger coaches preceded by a dynamometer car.

The engine selected was one of the big tank engines especially designed for suburban service, provided for this purpose with large heating surface and cylinder capacity, and small-diameter six-coupled drivers. For the electric test two General Electric motor cars, one weighing 73,000 pounds and the other 70,000 pounds, were used. These cars are 54 feet over all in length, and are equipped with four motors, the two cars together giving about the same weight on drivers as the steam locomotive. The test was, therefore, perfectly fair, the acceleration being directly comparable for trains of equal weight. The drawbar pull, speed, and the time were recorded by the same dynamometer car in all cases, the engine simply being unhitched and the two motor cars coupled up for the alternate trials. In carrying out the tests, the train of six cars with its engine or its electric motors, as the case might be, was started from rest and run over one mile of track, the acceleration being made as rapidly as possible with the power available. These runs were repeated, dropping off one car at a time, and a careful record was kept of the speed attained in ten seconds, twenty seconds, thirty seconds, etc. The total weight of the train behind the engine or electric cars varied from one hundred and fifty-seven tons down to twenty-three tons.

The comparison of results proves that the electric motors can better utilize the weight upon their drivers during acceleration than a steam locomotive, the motor covering the same distance in the same time with less energy expended, and at less maximum speed than a steam locomotive, owing to its being able to maintain its maximum accelerating rate for a longer period.

As an illustration of the advantages, in point of economy of power, of electrical traction over steam, we find that for a train of six cars the watt hours per passenger required in a steam train are 43.9, as against 29.7 in an electric train. In a three-car train the watt hours for steam would be 77.4, as against 37.5 for electricity.

The actual comparison of coal consumption works out in the ratio of 6.6 pounds per horse power hour for electric traction and 15.6 pounds for steam traction. Assuming the cost of coal for electrical power is about a third the total cost of that power if maintenance and interest on investment be included, it is concluded that the actual gross cost of electrical power would closely approximate the coal consumption cost of the steam locomotive in this class of service, the maintenance and attendance cost of the electrical equipment being, however, considerably in favor of electrical power.

Extracts from an article in the *Scientific American.*

### The Cedars of Lebanon.

AT an elevation of about six thousand feet above the sea, on the left of the road to Baalbek, is a group of the noblest specimens of the vegetable kingdom in the East, which are believed to be thousands of years old and the remnant of the far-famed cedars of Lebanon, of which David and Solomon sang, and from which came the timbers for the Temple.

The term Mount Lebanon is misleading. There is no peak of that name, which is applied to a lofty range with several conspicuous summits extending about one hundred miles from the neighborhood of Damascus to the sea, and being about twenty-five miles broad from base to base. The most elevated peaks are Mount Hermon, 9,383 feet; Daharel-Kudhib, 10,020 feet; Jebel-Makmai, 10,016; El Miskych, 10,037; Fum-el-Mizab, 9,900; Sannin, 8,900 feet. These peaks are broken by rugged ridges, precipitous cliffs, and deep gorges. A parallel range, which does not reach to so great a height, is known as Anti-Lebanon.

Of all the mighty forests which formerly covered the slopes of Lebanon only five remain to-day, and they are limited in area. The loftiest trees and those most celebrated for their antiquity are found near the town of Becherre at an altitude of 6,300 feet, and are known as "The Cedars of God"—"The cedars of Lebanon which He hath planted;" and according to the botanists, who count their age by the circles in their trunks, they are three or four thousand years old. Like the immortal cliffs that tower above them, they have watched the passage of a procession of kings down the centuries, led by David, Solomon, and Hiram.

They are not so large nor so lofty as the great trees of California, but their antiquity and associations make them the most sacred and the most interesting groves in the world, and pilgrims come here to worship them. The best authorities are sure that we make no mistake when we revere them as the survivors of that forest whence Hiram obtained the timber for Solomon's Temple. The logs must have been carried down to the coast by hand, conveyed by sea in rafts to Joppa, and thence carried over the mountains to Jerusalem.

It is said that thirty thousand men were at work in the forest for twelve years and relieved each other every month in bodies of ten thousand men, who were organized and managed like an army. David obtained here the timber for his palace, and Zerubbabel in constructing the second Temple. The timbers in the temple of Diana at Ephesus and in the temples at Baalbek came from the same forests, and we know that the Phœnicians shipped much cedar to Greece, to Egypt, and to other places on the coast of the Mediterranean, not only before but for centuries after the days of Hiram, the mighty king of Tyre.

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

The remaining forest consists of about four hundred trees. The tallest exceeds one hundred feet, and the largest is fifty-six feet in circumference.

In the midst of the forest is a small chapel in which the Maronites worship and where they hold great feasts on the anniversary of the transfiguration and other ecclesiastical holidays. Below the forest is a beautiful lake about half a mile in length and a quarter of a mile in breadth, fed by innumerable springs that gush from the surrounding rocks.

*Chicago Record-Herald.*

## In Answer to a Criticism.

To the Editor.

In your published report of the Union Neighborhood Convention, it is said, "Rev. Robert Humphrey filled the gap by reading a carefully prepared paper upon Christian Science." The paper itself may have been carefully prepared, but evidently the education of its author in respect to Christian Science has been neglected, since his paper falls quite as far short of an intelligent exposition of Christian Science as some criticisms which have not been carefully prepared.

The statement, "You do not exist, I don't exist," may be "Hindooism," as our friend declares, but it is not Christian Science.

It is said that "Pundita Ramabai recognized it as such when she was in this country." It is no more strange that a Hindoo should fail to perceive the difference between Christian Science and Hindooism, than that many of the learned clergymen of our own country should thus err. The pantheistic doctrine of the Hindoos, which teaches the non-individuality of man, is as offensive to Christian Scientists as it could possibly be to others. That Christian Science is not in keeping with such a theory is demonstrated in that a close application of this Science in the lives of its adherents does not lessen the individuality, but rather increases it. Christian Science does not deny the existence of any created thing, but repudiates the erroneous concept of these perfect creations.

While Christian Scientists may differ in their understanding of the nature of sin and disease, they recognize that these exist in human experience and must be grappled with and overcome according to divine law. Mrs. Eddy declares: "In Christian Science it is plain that God never removes the punishment for sin only as the sin is removed —never punishes it only as it is destroyed and never afterwards, hence the hope of universal salvation. . . . Again, to assume there is no reality in sin and yet commit sin is sin itself which clings fast to iniquity. The Publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus" (Message, 1901).

Though the troubles of earth may be mountains to mortals, they weigh nothing in God's sight, and surely He sees all things as they are and is not in any way deceived. Our friend criticises the Christian Scientists because they employ a surgeon to set a broken bone. We venture the assertion that in their theory Christian Scientists are no farther in advance of their practice than are the Christians of other denominations. No doubt the Rev. Humphrey believes the Scriptural statement, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling." If so, is his practice consistent with his teaching? Theory always precedes practice, even as a law precedes its enforcement; and even a perfect way will not produce perfect results until perfectly used. Christian Scientists, like other Christians, are only infants in their ability to exemplify the life of the Master, and the child, whatever may be expected of him, cannot do the work of a man. Before reminding Christian Scientists of their shortcomings, it would be well for our good brother to make sure that he is able to comply with all the requirements of Christianity.

It is said that the gentleman touched upon Mrs. Eddy's financial affairs. We would like to add a short chapter on this point. Mrs. Eddy, through her entire experience as a Christian Scientist, has studiously thrust aside legitimate opportunities whereby she could have become a millionaire. Of these we name a few. She ceased teaching just at the time when her college was besieged with applicants and promised a very large income. She has transferred her periodicals (and these yield a goodly income) to the Christian Science Church, and besides contributing large sums for the advancement of the cause, she gives liberally to many charities. She lives plainly and economically, and confines herself to her study, where she toils night and day for the benefit of others.

Our critic declares that the material senses in some instances are unreliable, but that there is no reason to reject the testimony of the senses because at times they mislead us. "We need to interpret the senses." We can agree with this latter statement. To rightly "interpret" the testimony of the senses is included in the mission of Christian Science. Furthermore, we ask, if the personal senses deceive in one instance, how can we accept their testimony in any case? In court a witness whose testimony on one point is found to be false is considered unreliable, and his testimony is subject to impeachment. Paul said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." This being true, if the testimony of the Spirit is correct, material testimony is false, for the two are exact opposites.

ALFRED FARLOW.

## Some Objections Answered.

IT is merely a quibble to object that Mrs. Eddy asks, "What is God?" and to infer from her use of the word "what," instead of who, that she denies that God is individual Being or infinite Individuality. The question What is God? inquires into the nature or essence of Deity, and I doubt whether any creed or catechism asks the question, Who is God? In the Westminster Shorter Catechism, for example, the question is asked: "What is God? Answer: God is Spirit, infinite, eternal, and unchangeable in his being, wisdom, power, holiness, justice, goodness, and truth." And in the Westminster Confession of Faith it is also declared that God is invisible, without body, or parts, or passions. Christian Science is in full accord with this idea of God and follows this definition with logical consistency—never lowering the thought to the finite or anthropomorphic conception of Jehovah.

The word person has about a dozen different meanings, and in only one sense of the word can the term be correctly used to define God. One meaning of the word person is "being," and we say God is infinite Person or supreme Being.

Christian Science has now been proved in so many cases of healing and reformation that any one who seeks to oppose it by bitter words will always be overcome by the facts. Facts stubborn and invincible prove that the divine law of Life demonstrated by Christ Jesus frees men to-day as of old from disease and sin.

It will not avail, therefore, to make gratuitous comparisons between the successful works of Christian Science and the frauds practised by Jannes and Jambres, who withstood Moses, or Simon Magus, who sought to purchase the power of healing from the apostles.

Some of our critics seem to think that we are buying and selling the healing power, which indicates that they have not yet entirely risen above the thought of Simon Magus, that spiritual things are subject to barter and sale. The

Digitized by Google

text "freely ye have received, freely give" applies as much to the one who receives Christian Science healing as to the one who gives the treatment. Greed cannot succeed in getting something for nothing by quoting this text. On this subject Paul says: "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things? . . . Even so hath the Lord ordained that they which preach the gospel should live of the gospel." There is no objection raised when applying this principle to the ministry of preaching, and for stronger reasons the ministry of preaching and healing both, as it is in Christian Science, ought to be remunerated. WM. HOLMAN JENNINGS.

In *Weeping Water* (Neb.) *Republican.*

## The Reasonableness of It.

THE position that Science and Health holds in relation to the Bible is that of a commentary, and from the number of commentaries that have been compiled, one must admit that there was a need of helps to the better understanding of the Scriptures. Every Sunday School teacher uses the notes which have been prepared on the lesson, and all ministers explain to their congregation the Bible-texts. Surely our critics should accord to Christian Scientists the same privilege of studying the Bible and taking Science and Health as their commentary, since it has brought to them the most satisfactory explanation of what is contained in the Bible.

Christian Science acknowledges that sin and sickness are phases of human experience, but their non-existence as eternal entities is perfectly logical and demonstrable in the light of man's real spiritual nature as God's image and likeness. Our critics do not apprehend this last point, that the statements of Christian Science are demonstrable in the same way that Euclid lays down his theory, draws on the definitions to uphold his structure, and finally deduces the conclusion and adds his Q. E. D.

JOHN E. PLAYTER.

In *Metal Miner.*

## Sickness not Imaginary.

CONCERNING the statement that "there is no disease," attributed to Christian Scientists, permit me to say that these words cannot be properly understood without some accompanying explanation. Disease is variously described in Christian Science as an illusion or mistake, having just as much reality and existence as illusions and mistakes can be made to have, but no more. It will be generally conceded that when an illusion is recognized as such, it ceases to have even the reality it was supposed to have. When Christian Scientists say "there is no disease," they have in mind the necessary understanding that God is infinite Good, and that man, made in His image and likeness, reflects this infinite Good.

It is a pleasure to read the words in your columns, full of common sense, which point out how ailments are aggravated by "brooding over them." It is likewise true that the Christian Scientist should never complain, though most of us are mere beginners in this glorious faith which contains such splendid possibilities, and we are apt to fall sadly short of our whole duty in practical demonstration.

I am informed that Christian Science has some blessed results to record in the neighborhood of Lockport and Middleport, and it must be reckoned rather to its credit than otherwise that the occasional failures of Christian Scientists are published as special news, while the failures of other systems of therapeutics fill long obituary columns without calling forth comment.

The future is full of promise for true Christianity. Christian Scientists look for the time when Christians of all denominations shall be united and "of one mind" in their determination to heal the sick by the same spiritual means as sinners are now being reformed. In that day we shall truly recognize that all sin has been effectually and finally pardoned, and, as the Scriptures inform us, "God shall wipe away all tears from their eyes."

W. D. MCCRACKAN.

In the *Middleport* (N. Y.) *Herald.*

## How Wood Pulp is Transformed into Newspapers.

LET us consider how newspaper is made in one of the great mills of the Adirondack Mountains, where the giant machines, rattling on, day after day, never stopping, are scarcely able to supply the demand of a single New York newspaper. The timber, which is felled in the forests of the north in winter, is floated to the mill in the mountain streams by the spring freshets, and piled up in great heaps about the mill buildings, whose many roofs, chimneys, and towers form a strange picture in the wilderness against the background of cloud-topped mountains.

By being fed to shrieking saws, the spruce logs are cut into pieces that are no longer than a man's arm. "Barking" machines, which have disks of rapidly-whirling radial knives, attack the wood and tear off the bark. To prevent a waste of any part of the timber, an endless chain conveyer carries the bark to the boiler-room, where it is fed to the fires. Another conveyer, like the moving sidewalk at Paris, carries the clean logs to the grinding-room, where a long line of three-horned monsters is waiting for them.

Flumes, beside which men are mere pygmies, bring the mountain torrents rushing down to the grinding-room feeding the energy of forest cataracts to the great turbines. They have an enormous work to do. Within the iron cases of the three-horned monster are grindstones of a special hardness, turned by the turbines. The "horns" are hydraulic presses, which force the logs under them against the stones. Thus the wood is ground to pulp, the stones eating away three feet of wood an hour. The engineer tells us that more than 10,000 "horse-power-hours" of energy are needed to convert one cord of spruce into pulp, and that the mills use more power than a whole manufacturing city in New England. Cold water flows continuously on the grindstones to prevent the friction setting fire to the wood, and the mixture of ground wood and water, which flows away from the grinders, as a pinkish, gruel-like fluid, runs over the dams and through screens and drying machines, until, a thick mass, it is either put in storage tanks, in bulk, or formed by machinery into thick sheets that can be rolled up like blankets. It is then ground wood pulp, ready for the paper machines.

The sulphite pulp is prepared in a different way. The logs, when they come from the barking-machines, are cut up lengthwise, by "splitters," and then cut crosswise by "chippers," into pieces less than an inch thick. This thickness gives the length of the fiber. A "chipper," with its whirling knives, eats up a hundred cords of wood in a day. By falling on another "moving sidewalk," the chips are carried away to be screened, and then hand-picked—to sort out dust and dirt—and then are carried to storage bins above the great sulphite "digesters"—monster steel cylinders, with conical ends, standing upright in a row.

*Success.*

To him who, neglecting the revelations of immediate duty, looks regretfully behind and fearfully before him, life may well seem a solemn mystery, for, whichever way he turns, a wall of darkness rises before him; but down upon the present, as through a skylight between the shadows, falls a clear, still radiance, like beams from an eye of blessing; and, within the circle of that divine illumination, beauty and goodness, truth and love, purity and cheerfulness blend like primal colors into the clear harmony of light.—WHITTIER.

## The Lectures.

### At Chicago, Ill.

Judge Septimus J. Hanna, member of the Christian Science Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston, addressed a large audience in the Auditorium last night [September 30]. His subject was "The Theology of Christian Science."

*The Chicago Post.*

Judge Hanna was introduced by Edward A. Kimball, who spoke as follows:—

In behalf of First Church of Christ, Scientist, I bid you a cordial welcome, and extend to you the loving hospitality of this hour.

And now, in order that your sojourn with us may be in unperturbed repose, I think I may safely assure you that no word will be uttered here that is calculated to desecrate your religious sense, or offend the most delicate moral sensibilities, or do violence to your practical common sense.

I think that if you have believed in and obeyed God, you will do so the more, and do it the more gladly because of this night. If you believe in the Holy Bible, I am confident that your affection for the inspired Word will here be reinforced.

If you have accepted the divine Christ as Saviour and example, you will, even more intelligently, cleave unto him as your Redeemer and know that this Redeemer liveth and is now available for good in every hour of your need.

If you have never believed in God or accepted Christ, because you could not comprehend the bewildering conceptions which men have devised, you will learn that Christian Science removes religion and the Christian mission from the realm of unnatural mystery and brings them within the realm of law, of naturalness, and of rationality.

If you have ever had the slightest idea that the salvation and complete welfare of man are to be gained through the supremacy of the Mind which is God, and was also in Christ, instead of through mindless matter, you will here be comforted.

I do not think that the lecturer will entreat you to believe in Christian Science, nor importune you to become a Christian Scientist. He is here, rather, to stand as witness in testimony of the vast achievements of Christian Science, which have been in answer to the deepest needs of humanity.

He comes to speak of facts which spontaneously gain the sanction and satisfy the exacting demands of pure reason. He comes to plead for a better understanding of God who is altogether good, and who has not ordained the sickness or discomfiture of mankind.

He comes to plead for confidence in the science of a Christian salvation which is ample enough to save the sick man legally as well as the sinner, and he comes, too, pleading for the recognition and exercise of your natural dominion over evil.

He does this in the name of that which is at once true theology, true philosophy, and true science.

Coming to this age, which is in the travail of its fierce conflict over creed and philosophy, it comes, not to join in this conflict nor engage in acrimonious competition for your favor. Even though it be stoned and reviled, it "revileth not again." Its whole service is to teach men the science of God and man, to educate them in the holy art of loving, to wipe the bitter tears away, to comfort them that mourn, to heal the sick, and to turn the footsteps of the tired sinner out of the mire of tormenting evil. It cannot quarrel. It does not know how to hate or fight.

You will be addressed to-night by a man who, years ago, was wise enough and sensible enough to be a good lawyer and a good judge.

In the course of time he was also wise enough to know that the mighty works which were being done in the name of Christian Science warranted his deliberate and temperate investigation, and were pretext for a new and universal hope.

Leaving the honorable profession wherein he had contested for justice in the civil law, he entered into successful contention for the rights of man under the divine law which promises to abolish the law of sin and death, and destroy the works of the devil, which have bound earth's children to intolerable suffering, "lo, these many years."

After long experience and progress as a Christian Scientist, it need hardly be said of him that he is well qualified to enlighten you on this subject and engage your respectful attention.

It is a pleasure, therefore, for me to introduce Hon. S. J. Hanna.

### At Duluth, Minn.

A large audience gathered at the Lyceum yesterday afternoon [September 28] to listen to a lecture by Carol Norton, C.S.D., member of the Christian Science Board of Lectureship, on "The Growth and Teaching of Christian Science." Mr. Norton is a pleasing speaker, and held the close attention of his auditors throughout his interesting address.

Mr. Norton was introduced by Abbot Edes Smith, of Minneapolis. Mr. Smith said in part:—

The Apostle John tells us of the "Light which lighteth every man that cometh into the world." There is no man so sick, no man so sinful, that he does not have a glimpse of that light; for the Psalmist declares: "If I make my bed in hell, behold, thou art there."

With Paul, the best of us must admit that he sees the light only through a glass darkly; but no man who is true to the light which he sees, however faintly he may see it, can fail to be led on and up, until for him the darkness fades away and sooner or later, some day, somehow, somewhere, he finds himself to be perfect as the Father, in that light wherein is no darkness at all.

Was not Jesus right when he said, "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again." How can I judge my neighbor by my conscience, without thereby giving him the same right to judge me by his conscience?

Strange to say, however, some well-meaning people have imagined it to be their duty not merely to do good, as did Jesus, but also to attack the religion of others who accept the primitive Christianity of Jesus in all its original simplicity, in all its original purity, and in all its original entireness, and who are honestly striving to go about doing good, as he did, remembering that Jesus said, "It is enough for the disciple that he be as his master." To those who think they are attacking Christian Science I would say, in the words of Gamaliel, "If this counsel or this work be of men, it will come to naught: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God."

Nevertheless, by the unintentional misstatements of many who, in the pulpit, in the press, and elsewhere, with a very imperfect and incorrect understanding of their subject, have spoken and written against what they believe to be Christian Science, there have been caused widespread misconceptions of our religion. Not, therefore, to proselyte, but to free the public mind from some of these misconceptions, there has been established in The First Church of Christ, Scientist, in Boston, Mass., a Christian Science Board of Lectureship, whose members are authorized to deliver public lectures under the auspices of the various branch Churches of Christ, Scientist.

We meet here this afternoon under the auspices of First Church of Christ, Scientist, of this city, to listen to the words of a member of this Board of Lectureship. It

Digitized by Google

gives me great pleasure, and I esteem it a privilege to present to you the speaker, Carol Norton of New York City.—*The Duluth Herald.*

### At Brandon, Man.

Hon. William G. Ewing of Chicago, delivered a lecture on Christian Science to a fair-sized audience in the Opera House on Friday evening [September 26]. Mayor Fraser introduced the speaker.—*Brandon Times.*

### At Winnipeg, Man.

There was a large attendance at the Winnipeg Theatre yesterday afternoon [September 28], when Judge William G. Ewing of Chicago, lectured on Christian Science. Mr. Ewing was formerly a judge, and has a judicial manner in presenting his arguments, which is very effective.

*The Telegram.*

### At Winona, Minn.

A representative audience greeted Judge William G. Ewing of Chicago at the Opera House last evening [October 2]. The subject of his discourse was particularly attractive to many of the residents of the city, and he was listened to with the closest attention during his entire address.—*Winona Independent.*

### At Janesville, Wis.

A large audience assembled at the Opera House last evening [October 4] to listen to an address on Christian Science by Judge S. J. Hanna, C.S.D., of Boston, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston. The speaker is of calm, deliberate, and pleasing address. He was introduced by Attorney Marshall P. Richardson.

*The Janesville Recorder.*

### At St. Joseph, Mo.

Mrs. Annie M. Knott, C.S.D., of Detroit, a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, spoke to a large audience at the Tootle Theatre yesterday afternoon [October 5].

Mrs. Knott had for her theme the tenets of Christian Science. The address was prepared with care and was presented in a style of delivery which held the closest attention throughout. Very many who were unacquainted with the teachings of Christian Science attended the lecture, hearing for the first time of the beliefs of the society.

Mayor Borden presided at the meeting and introduced the speaker. At the close of the service a rising vote of thanks was tendered Mrs. Knott.—*The Daily News.*

He that attempts less than the status of his heart would warrant, attempts the impossible and limits the Holy One. To keep back part, to reserve anything which the mind and heart declare should be consecrated, is sin, and God cannot accept sin. An incomplete consecration implies an absence of love from the heart, and without love consecration is no consecration.—*Anon.*

## Announcements.

### Applications for Membership.

Applications for membership with the Mother Church to be acted upon November, 1902, must be in the hands of the Clerk on or before October 18, 1902.

It is desired that those who purpose to unite at that time send their applications in as soon as possible, as that will facilitate the Clerk's work.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

CHRISTIAN SCIENCE SENTINEL.

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## Thanksgiving Day Service

A SPECIAL Lesson Sermon for the Thanksgiving Day service to be held in the Mother Church and the Branch Churches is being prepared, and will be published in due time.

## The Right Way.

THE announcement that the anthracite coal strike has practically been settled is cause for general thanksgiving, and the fact that it will be settled without final resort to brute force or starvation is something upon which the operators and miners on one hand, and the general public on the other are to be congratulated. Such conditions as have prevailed for the past six months are not creditable to a professedly Christian country, and in fact the spectacle of organized capital and organized labor, exhibiting their blindness to the rights of the public, was painful in the extreme. It is to be hoped that the knell of hatred, malice, selfishness, and self-will, as factors in labor disagreements, has been sounded, and that the utter futility of such methods as have been employed heretofore has been recognized.

The only permanent adjustment of the relations of capital and labor must come, not through the misery and hardship of strikes, but through recognition of the inalienable rights of humanity. This recognition can come only through a right concept of the relation of each individual to every other individual. This involves the recognition of the Fatherhood of God, the recognition that God is the Principle of all righteous action, all justice, and all wisdom. The universal brotherhood of man manifested in the teachings of Jesus and acknowledged in Christian Science must be the standard. M.

## Unto Whomsoever Much is Given.

IT is said of a late Englishman, that while a man of unusual breadth of learning, even among England's legions of the erudite, he was strikingly unlike most scholarly men in what may be termed the wasteful hoarding of his knowledge, a lifelong habit of reserve in expression having made him a somewhat remarkable example of the "reticence of learning." Unusual resources were at his command for he was a child of many schools, was traveled, and the owner of a private library of over one hundred thousand volumes; but while constantly absorbed in the quest of new information, his life was singularly unproductive, and his vast learning passed away with him.

With less eminent people it very often happens that a laudable ambition to acquire, to gain for their own good, is apparently wanting its true counterpart, the productive impulse, an impelling desire to give out to others; and the unhappy divorce of these normal associates has marred the usefulness, and consequent satisfaction and growth of many lives.

The talented, in human estimate, and all those who have enjoyed peculiar advantages and opportunities, command a privilege and must recognize a responsibility which cannot be ignored or denied at the suggestion of a false humility, without dwarfing their ministry and leaving many "an hungered" who rightfully extend their hands for the food that is thus withheld.

To yield to the temptation to self-depreciation, is often to give frowardness its coveted opportunity, for ignorance is sometimes most tryingly voluble upon occasions when wisdom would be modest and retiring, and the mentally and spiritually enriched need to remember, with all others, the injunction of the Master when he said, "Let your light shine."

In Christian Science, ability is measured only by the fathoms of the divine fulness, and our availability should not therefore be measured and sadly limited, perchance, by a human-sense timidity and hesitation which is entirely out of keeping with the freedom and the proprieties of the spiritual life.

"Unto whomsoever much is given, of him shall be much required." W.

## A Word to the Children.

WHEN Jesus gathered the little ones into his loving embrace and said to the grown folk round about him: "Suffer the little children to come unto me, and forbid them not: for of such is the kingdom of God;" and added: "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein;" did he mean you? Are you the child? Christian Science teaches that the kingdom of heaven is not a far-away mystical place, to be reached at some distant, indefinite time, but that heaven is harmony, and that we can enjoy it here and now. It is possible that our homes, yours and mine, can be made heavenly; yes, can be heaven. This makes it clear that the boy or girl who is doing everything to bring harmony into the daily home life is the veritable child whom Jesus bade us copy. Hence, dear children, because you lead and I must follow, it seems to me well that we assure ourselves that we are journeying the right way, the way of Life.

The ideal child whom the Master had in mind, and who brings the kingdom of God into the home, is kind, gentle, lovingly active, springing at the cost of self-indulgence to relieve father, mother, to lighten the burdens of all. It is the unselfish child in whom determined wilfulness and conceited opinion have yielded to obedience, unanswering obedience, to a parent's superior wisdom and experience. It is the child who politely leads by the hand the little classmate clad in poor attire. It is the child who turns unhesitatingly away from a coarse remark and refuses to listen to an impure suggestion, much less repeat it. It is the faithful, trustful, humble child who quickly hears the voice of Truth and follows promptly. It is the child who gladdens the home with the sunshine of joy. Now we begin to see that the Christ-blessed child is the expression of love, obedience, purity, faith, humility, and joy, and we understand why we can enter the kingdom of God through no other consciousness, by no other way.

Daily, hourly, ask yourself this question, "Am I the child whom Jesus blessed? In every thought and word and deed must we, too, that are older grown, keep watch lest we forget to follow into the realm of faith, purity, simplicity, Love,—the kingdom of God. S.

IN speaking of the efforts being made to settle our economic problems, one of our contemporaries has recently and well said that:—

"No legislative enactments and no Constitutional amendments can effect a radical remedy of the conditions which imperil the welfare of the American people, if not the perpetuity of American institutions. Statesmen may well give themselves to the consideration of legal and constitutional measures, and merchants, manufacturers, captains of

Digitized by Google

industry, labor leaders, and professors of economics, to industrial and sociological measures; but immeasurably more important than either is the cultivation of a simplicity of life, a just measure of the value of material wealth, a temperance in desire, a spirit of fraternal good-will, a regard for public welfare, and a mutual respect of all men for one another, and of mutual regard for one another's rights and interests; for these ethical elements of character are absolutely essential to the preservation of a democratic state, as they are to the well-being of any community, whatever its political organization."

This is exceedingly good counsel so far as it goes, but it lacks effective suggestion. There is a world-wide difference between the consciousness which expresses the moral judgment, and exerts the moral influence referred to, and that positive realization of Truth which is Christlike and inherently forceful and corrective.

The number of those in this world who have the tempered desire, the spirit of good-will, and a thoughtful regard for the rights of others, is legion, but the great majority of them would unhesitatingly admit that they do not have that apprehension of Truth which confers the conscious ability to meet and master to-day's error in Christ's way. The insufficiency of ethical influence in the presence of buttressed and organized sin is no less apparent than the efficiency of that positive spiritual apprehension which gave Jesus such unquestioned mastery. The adjustment of the world's difficulties, the overcoming of entrenched evil, demands no more and no less to-day than it did in the first century, and to rely on any other agency than the Christ-truth, by which as Jesus assured and enjoined his disciples they should continue the doing of his mighty works, is to place dependence upon a broken reed.

Here Christian Science reveals its unquestioning loyalty to Christ in declaring the present availability of that spiritual power which made him personally superior to every claim of evil, and which is essential to the triumph of right and justice in the communal no less than in the individual life. It makes plain the practical relation between his ever-presence and our overcoming. W.

---

In commenting upon the ethical value of Biblical stories like that of Abraham's offering of Isaac, the editor of *The Outlook* has recently referred to the potency of the "inward light, the inward voice of divine revelation" which, reinforced perhaps by a prophet's rebuke, has broken "the dream of superstitious delusion with a mental awakening."

This statement of the order of Truth's advance in consciousness would do credit to a Christian Scientist, and it defines a process of spiritual evolution which obtains to-day no less surely than in the times of Abraham. Regeneration, the new birth, is just this progressive "awakening" to Truth, the breaking of the inner light of spiritual revelation upon the dark and delusive domain of false human sense.

---

We learn informally that some of the branch churches have held meetings for the purpose of devising ways and means of affording their members an opportunity to contribute to the Building Fund of the Mother Church, and that some have already taken active steps towards raising comparatively large sums. If our friends will kindly send us concise reports of meetings held for this purpose, we shall be glad to print one or more each week, as space permits.

---

The articles appearing in local papers on the subject of Christian Science and written by the State Publication Committee are of much interest and value to the Field at large. We shall be very grateful for clippings of all.

## From Our Contributors.

### Our Church Edifices.

A. K. FRAIN.

A friend recently said to us: "It seems to me you would be more closely following Jesus, whom you profess to emulate, if you would go into the slums with your work, feeding the hungry and rescuing the perishing, instead of erecting magnificent and costly temples of worship throughout the country."

In reply, we might say: You live in a fine home, beautifully located and richly furnished; you vote for, and approve, the expensive courthouse, statehouse, schoolhouse, and for those massive piles of brick and stone labeled "Poorhouse," "Asylum," or "Hospital." We believe, however, a more thoughtful answer will help to clear the atmosphere respecting the matter.

Christian Scientists claim for their religion that it is, first and foremost, a thoroughly practical, every-day system of thought for the correct government of every detail of human life. A system just as practical in the slums, so-called, as in any other field. We voice the sentiment of hundreds of thousands in saying that they are living evidences of Christian Science fruitage from the slums of despondency, drunkenness, despair, hatred, malice, revenge, poverty, sickness, and vice.

It is true they do not build almshouses or make any organized effort to meet the *effect* of discord, *per se*. It is, however, equally true that there is no body of Christians or humanitarians who give of their means more cheerfully and freely when appealed to for any worthy object along this line of work. This is evidenced by their large contributions to the Armenians, to the Galveston sufferers, etc.

Christian Science teaches what common experience corroborates, that relief of an effect can be but temporary, at best, and often tends towards the growth of the very evil it would eliminate; hence, permanent cures can only be obtained by exterminating the cause which lies at the foundation of all discord. It is good to destroy the thistle blows. It is best to kill the roots which breed the blows.

In the Christian Science text-book, "Science and Health with Key to the Scriptures," the Discoverer and Founder of Christian Science, Rev. Mary Baker Eddy, has told the world what this cause is and how to eradicate it. It is told so clearly and concisely that the wayfaring man may read and understand. It is read and understood by many thousands of people,—young and old, in every conceivable condition of mental, moral, and physical suffering; and they are learning from its pages how to lift themselves and others out of the embrace of vice, penury, and dis-ease of every sort. They are emerging therefrom just as fast as they grasp this wonderful truth, which was preached and practised by Jesus and his students nineteen hundred years ago. In addition to this, they are daily lifting human thought,—humanity,—to a higher level through their demonstrations, or practice, of Christian Science. Is it too much, therefore, to say that Christian Scientists are elevating mankind from the mire of servitude to sin and sickness, and placing them upon the solid rock of mastery upon which it is their God-given right to stand?

Multiplied millions are expended in the construction of universities, colleges, schools, and libraries, yet the most important study which can engage the attention of man is that of Christian Science. For the proper exposition of this Science, so essential to the happiness of all, buildings are erected to meet its demands which, completed without sacrifice, free from debt, beautiful, and harmonious,—are not yet commensurate with their supreme need as focal points for the instruction of mankind. These structures stand as externalized evidences of the power of Truth; as lighthouses pointing the way from the rocks and shoals

Digitized by Google

of material sense, to safety, reality, infinite Mind; as object-lessons to the "weary and heavy-laden," who may come and be relieved of every burden. They are God-made, not man-made, and reflect forever the power and goodness of the Christian Scientist's ideal,—infinite Love. Their development marks an epoch of freedom from the world's bondage to sin and sorrow.

Christian Scientists are optimists. They have more faith in the power of Good, than in evil. They are daily proving this faith to themselves and others. In their text-book Mrs. Eddy says, "Against the fatal belief that error is as real as Truth,—that evil is equal in power to Good, if not superior, and that discord is as normal as harmony,—even the hope of freedom from the bondage of sickness and sin has little inspiration to nerve endeavor" (Science and Health, p. 368). It is this "fatal belief," that hangs like a pall over many lives. It hides the real cause of the suffering about us. It prevents our recognizing the supremacy of Good and proving this supremacy in our own case. The stronger this belief, the more fatal its results. It is the inciter to all wrong. It is the only devil.

Those who study the Christian Science text-book seriously, without prejudice, and who try to work out their problems by the rules given therein, just as perseveringly as they would try to solve a problem in mathematics by *its* rules,—all such will assuredly get the correct answer. More than that, they will have made genuine advance in the work of rooting out the cause of all the apparent vice and distress now seen so plainly. More than that, they will then, and perhaps not till then, having eyes, be able to see, and having ears, be able to understand, something of the scientific thought which inspires, and something of the necessity and usefulness of the Christian Science church buildings.

## The Arch-Enemy, Discouragement.

ELIZABETH EARL JONES.

WE are all quite familiar with the old story of the devils and the just man. Evil devices of every kind were resorted to by the devils to make the just man sin, but he would not. They teased, they tormented, they tempted, they tried to force and to deceive; but all to no avail. The just man remained loyal to his God. At last a brilliant scheme was suggested by the arch-demon; it was that all the devils should henceforth direct their efforts to discourage the saint, well knowing that should he yield to discouragement he would become weak and it would then be an easy task to conquer him.

The first symptom of this false consciousness is doubt; the last despair. It was, indeed, a devil's master stroke, a subtle plot, and, if it proved successful,—a sure doom. But Love, the ever victor, triumphed.

Since I have been trying to follow Christ's example as it is so clearly and practically set forth in the Bible when read with our text-book as a commentary, I have often had occasion to remember this story of the just man and the wicked plot against him, and it never fails to rouse within me a protest that the devil or evil should try to tempt poor humanity with a suggestion of discouragement, and this thought brings with it a realization of the necessity for constant watchfulness and prayer.

Rich promises are before us. "Seek and ye shall find;" and if we have faith as a grain of mustard seed, seeming mountains of evil will be removed, and no good thing prove impossible. If we ask, "nothing wavering," we shall receive and accomplish, and we are told by that indefatigable Paul, that "In due season we shall reap, if we faint not." And more, far more than all this is promised, because our God is never-failing divine Love, the Mind that includes all.

As we approach conscious oneness with this Mind, we begin to understand in Christian Science, that the fulness of Love's infinite kingdom is reflected by each of God's little ones. Spirituality establishes man's dominion. If we look to a power less than God for freedom, joy, and life, it is inevitable that we become disappointed and discouraged, for no less power really exists. If, on the other hand, we know that "it is God which worketh in us both to will and to do of His good pleasure," and if we have ever so small an understanding of what God really is, we become strong instead of weak, and it would be impossible to doubt, no matter how dark the seeming clouds of error, or what the testimony of the deceptive senses. No, it is man's nature; his privilege, and his Christian duty to "rejoice always."

With the example that our Leader has set us, of unfaltering trust in God, consecration to the right, and tender love for mankind, it should not seem hard for us daily to strive to lay aside all pettiness, idleness, and self-seeking, that we may be the better fitted to help our fellow-man.

Christ is ever with us, regal in humility and power; he stills the tempest, walks o'er the wave, heals the sick and the sinning, turns water into wine, and rises triumphant even over the tomb,—and all may follow and share his cross and crown.

## The Boy in Christian Science.

BEATRIX ISABEL BEST.

A BOY! What does the term suggest? An upright sort of individual, not given to sentiment, but with a scorn for sham, a boundless capacity for "getting into things," and a true little heart kept hidden from the public in general, but surely discovered by a boy-lover. A religion that gets such hold of this boy as to enter even into his play, and call forth expressions of regret from him that "Sunday School is so short," must, indeed, have "something in it."

Amongst my many boy friends I number some Christian Scientists, boys who are endeavoring to demonstrate Truth for themselves, seeking to apply it in daily life, and I am prompted to give a few of their experiences as nearly as possible in their own words, and as you read, bear in mind that these boys are truly "boys," in all that word implies, full of activity and full of fun.

A few weeks ago final examinations were being held, and in one boy's class they began sooner than he expected. "I was scared," he said, "when the teacher told us, but I said to myself, 'Look here, I ain't afraid. There's nothing to be afraid of. Truth is all.' And I kept on thinking this way, and I got through all right and they gave me a special promotion." The principal of one of the large schoo's remarked to one boy's mother upon the ease with which he took his examinations, an ease which is the result of demonstration. To those who know anything of the suffering most children undergo while taking examinations, it ought to be a joy that some at least are finding their way out of the bondage of fear incident to the experience.

Two boys had some trouble in their play, and, as often happens, one went home, saying to the other, "I'll never speak to you again." The other, a Scientist, said, "I just kept saying, 'Love governs, Love governs,' so I did not feel angry and I knew it would be all right, and the next day we were out coasting, and he came up and asked me if I would like to go down hill with him on his sled, and I did, and it's all right."

Another boy I knew was wakened one night by an aching tooth. He asked his mother for some help and himself got Science and Health which he read for about half an hour, and, as he triumphantly remarked afterwards, "That was the end of that toothache."

A public school teacher bore witness in a conversation with me concerning her quick temper and irritable way of speaking. She mentioned the boy by name, and said,

Digitized by Google

"Sometimes when I begin to speak crossly, I catch sight of that dear little face, and I have to stop, or say it some pleasanter way. I do not know what it is about him. I expect it is his Christian Science." One day I stood for a few minutes beside this boy, a little fellow then about seven years old, while he was trying to copy Feruzzi's "Little Mother,"—an ambitious undertaking. I spoke to him concerning form and beauty, and such a sweet smile was given me with the answer, "Yes, I know; Mind does it all."

In the Sunday School class to which these boys belong the lesson is read, and since beginning to do this, two of them have earned money to buy Bibles of their own, another is beginning to earn for that purpose, and one has almost enough to buy a copy of Science and Health. Boys of nine and twelve years do not usually save their pennies to buy Bibles or other religious books.

I know of another boy who with his little sister spent his own money to buy a new edition of Science and Health as a birthday gift for his mother. "It was the revised edition we got," and the smile and the emphasis on *revised* were indeed a "thank you" to our faithful Leader; and as I find here a word, there a paragraph, a sentence, perhaps the punctuation, changed, making it all more beautiful, clearer, and plainer, I stand still, and am grateful.

These varied, and seemingly small experiences show that Truth is becoming the way to these boys; that in this battle of destroying "every sick and sinful thought" they wage their warfare and "run the race set before them with joy." Again I say, surely there is "something in it."

## The Only Way.

G. E. S.

WHAT a help is even a little understanding of the Truth to a man in business; how it does calm and encourage and inspire confidence! The knowing that he is really spiritual and that there is no reality apart from Spirit and its reflection, actually makes a new man of him. He is freed from old beliefs in ways which expand and bring joy to consciousness. Fears become hazy recollections of nothingness, and his heart overflows with gratitude that he has found his strength in the knowledge of Good.

The sense of lack or the fear of it can only be truly met by the absolute realization that ever-present Love is the one source of supply. The very act of seeking to realize this helps to externalize it.

God's man is entirely harmonious in all ways, for he is the idea of the only Mind there is, and it is beyond intelligent conception that any disturbing thought can emanate from this Mind which is Good.

The writer once heard a noted man say that "some one should tell the truth about the Bible." Subsequently it was learned that that "some one" is Mary Baker G. Eddy, and it is the truth she has told in her book, "Science and Health with Key to the Scriptures."

It is from this book and the teaching by a student of Mrs. Eddy that the writer has found the hope and understanding upon which the foregoing is based, and for which he is most grateful.

If there be a God at all, we shall know him by his perfection,—his grand, perfect truth, fairness, love,—a love to make life an absolute good,—not a mere accommodation of difficulties, not a mere preponderance of the balance on the side of well-being. Love only could have been able to create.—GEORGE MACDONALD.

The sincere man or woman is free from conceit, for conceit always involves a certain lack of downright honesty with ourselves which makes us blind to our limitations.

HAMILTON W. MABIE.

## Among the Churches.

### New Church Organized in Easton, Pa.

September 10, the Christian Science society of Easton was dissolved and reorganized as a church to be known as First Church of Christ, Scientist, being a branch of the Mother Church in Boston, Mass.

In the early part of 1898, a few interested in the subject met on Sundays at the residence of one who had been healed through Christian Science, to study the Sunday lessons. This was the beginning. Since then many cases of healing have resulted among the students and their acquaintances in Easton.

In January of 1902, the society recently dissolved was formed with eleven charter members. The growing interest and increased attendance at the meetings justified the society in seeking a more central location. This was found in the Pomp Building. Rooms 31 and 32 were secured, one being used to hold the Sunday morning and Wednesday evening services, the other for a reading room.

The friends of the movement are greatly encouraged by its steady growth. *Exchange.*

### From La Crosse, Wis.

The directors of the Interstate Fair, held at La Crosse, Wis., September, 1902, gave us permission to place a tent on the grounds for the purpose of distributing Christian Science literature. We were very favorably situated, where every one passing into the building could see the invitation: "Reading Room of First Church of Christ, Scientist. All are welcome."

At the close of the first day it became apparent that we must enlarge our supply of literature, and we made a second call upon Scientists in the Field to bring in back numbers of their Journals and Sentinels. To this call there was a glad response, and, including these contributions, we dispensed to a hungering multitude fourteen hundred copies of the various publications.

Progress marked every line of work represented—each meeting in some degree, "The world's sense of need." We feel very grateful to the directors of the Interstate Fair for the privilege granted us.—MIRIAM C. BLACKWELL.

### New Church in Milwaukee, Wis.

On Sunday, September 21, First Church of Christ, Scientist, of Milwaukee, opened its new church home to the public with two services, Second and Third Churches of this city joining in the afternoon. Both the morning and afternoon services were largely attended by friends and strangers, all alike showing a deep interest. The subject of the Lesson Sermon for the day was "Reality." It could not have been more appropriately chosen for this occasion. It gave us one more opportunity to recognize the helpful service of the faithful Lesson Committee. The thought of Reality was practically emphasized in the addresses of the Readers. In reference to the church the following suggestive thoughts were expressed: "The Christian Science Church is but the growth out of material beliefs into the spiritual understanding. This church is but the outward evidence of work accomplished through unity of thought and purpose, and this unity of thought must continue in order to hold this church, as an evidence. . . . No matter how beautiful or perfect this building may be, it in and of itself is but a building,—it is not the temple of God. 'Know ye not that ye are the temple of God, and that the spirit of God dwelleth in you?' Thus only, so much of God as each and every one of us, individually, brings into this place of worship, only so much of God will be here. Thus we must rule out of our consciousness anything unlike God, and worship Him in spirit and in Truth.

Digitized by Google

and make sure we do not defile the true image, nor deface the true likeness, but bear record in our lives that we have been with Him, and are true followers of the Christ. 'But I say unto you, That in this place is one greater than the temple.' 'Inasmuch as He who hath builded the house hath more honor than the house. For every house is builded by some man; but He that built all things, is God, . . . whose house are we; if we hold fast the confidence and the rejoicing of the hope firm unto the end.'"

Very often in the efforts to bring out the beauty and harmony of line and color, the workers realized the helpfulness of recognizing God as the author of all harmony and trusted Him for guidance. The children gave the windows, also the artificial lights, so beautifully symbolizing the "radiance of Spirit." These words from the Scripture were given us to ponder: "Ye are the light of the world." "Let your light so shine before men, that they may see your good works, and glorify your father which is in heaven." "For the fruit of the spirit is in all goodness and righteousness and Truth." "Proving what is acceptable unto the Lord."—JULIA J. RICKER, *Clerk*.

### From Placer, Ore.

As briefly as possible, I should like to tell of the growth of Christian Science in a mining camp, of about one hundred and fifty people, in the mountains. The organization is known as Christian Science Association of Greenback Mine, Placer, Ore.

Three years ago Christian Science was unknown in this vicinity, but with the arrival of two students, the work began in a very small way and the growth has been gradual and good. There has seemed to be much antagonism and bitterness, and a few sermons have been preached against Christian Science, but that did not prevent God from healing the sick, and the thought is leavening. Two people began reading the Lesson Sermon on Sunday evenings, in our home, and as the healing went on, others came in, till we were forced to seek larger quarters.

A year ago we commenced regular services in a hall and our attendance has been as high as sixty. The Sunday School is numerically small, but the fruits of it are promising. Last Easter it was our pleasure to send a love offering to the Mother Church, and we are now working for a lecture, the children joining us in this demonstration.

We look anxiously for the *Journal* and *Sentinel* and are very thankful to our dear Mother for the many blessings she has bestowed upon us. It is our constant desire and prayer, that we be worthy of them, and loyal to her as our Leader and guide.

Science and Health and "Miscellaneous Writings" have been placed in the Bunk House (miner's dormitory), and other books, pamphlets, and literature are in regular circulation. There is quite an active growth in Science this summer and many are proving for themselves that God is Good.—MRS. CLARA WILLSON THOMPSON.

### The Work in Halifax.

Possibly it may interest the readers of the *Christian Science Sentinel* to hear something of the work being done in Halifax. We have seldom heard from this branch of the Field, and yet I found on my arrival in this delightful city, that Christian Science was not only on a firm foundation, but that it is prospering in every way. I must tell you of the beautiful demonstration we had last evening. We are not many in numbers and have but little material substance, but we decided to have a lecture and engaged a lecturer. Then the question was how we could meet the expense. Until a week ago we had but six or seven members, then we added six to our number, but did not add very much in material wealth. We had a fund in hand to meet running expenses, but it was thought best not to touch that, but raise the money for the lecture outside of the fund. When the amounts were added we found we had pledged one hundred and five dollars. You can imagine our pleasure and surprise. There was no hesitation or crying, but it was given willingly and at once. We have demonstrated harmony and love as well as means. Good healing has also been done. We feel that now we will advance still more rapidly in this beautiful truth, as the lecture will bring the cause to the notice of the public, and be the means of leading others to at least investigate Christian Science and read our text-book.

ELIZABETH T. E. STUYVESANT.

### From Hoopeston, Ill.

First Church of Christ, Scientist, of Hoopeston was dedicated yesterday [October 5]. The services consisted of the regular sermon, followed by an address by the First Reader. A telegram congratulating us, was received and read from First Church of Christ, Scientist, of Milwaukee, Wis. Several Scientists from adjoining towns were present, and ten from Danville, Ill., also one from Chicago.

It was a happy day marking the completion of our church, and the sense of gratitude seemed to prevail for the good things which God had provided for us.—S. F. S.

### From Asheville, N. C.

Our first service in the church edifice owned by the Jews of this city, was held September 7. The church has recently been refitted with new furnishings for the room to be used as a reading room, which is very attractive.

Our congregation has increased in numbers, and we rejoice in the knowledge that Love is leading us and rewarding us for taking a step higher, in the scale of harmony. We pray that we may so live the Christ life that all who are thirsting for Truth may come and drink and be refreshed.—MRS. MARY LINDSEY, *Clerk*.

### From Stanton, Neb.

Christian Science has had its representatives here for about six years. By slow accretions the number of believers grew until on March 13, 1902, a business meeting was held, Readers were chosen, and arrangements were made for Sunday services, etc. Since then, regular monthly meetings have been held, also the Sunday service, which has had a very regular attendance, of from sixteen to twenty.

Love and harmony have reigned in all the work; one motive governs,—to advance the cause of Christian Science.

September 16, Stanton listened to its first Christian Science lecture, arrangements having been made for Judge Ewing to visit this point. To try to measure the good done by it would be folly. It has been discussed, and praised, and rejoiced over ever since; and in response to a general desire to read it, one of our local weeklies publishes the lecture in full this week. No printed copy, however, can possibly convey the deep impression it made on all who heard it.

Money to meet all expense came with loving generosity, and before noon of the next day all bills were paid.

Desire is now turning towards a public hall in which to hold services, and towards a Wednesday evening meeting which the public may feel more free to attend.

The population here is largely German, or of German descent. They are kind and liberal-hearted and pleasant to meet, and the Field is ready to harvest. It only needs patient continuance in well doing.—H. E. W.

The works are ready, waiting for us, all we have to do is to be willing to be led into them.—*Selected*.

## Testimonies of Healing.

"Ye shall know the truth, and the truth shall make you free." I began to understand something of the true meaning of this promise about three years ago, and have had many proofs since then that Truth does, indeed, make free. I had never been very strong and had seldom known by experience what really good health was. I had heard of Christian Science for several years, and was not exactly opposed, but never gave it serious consideration. As I look back I can hardly realize that I could have been so blind to my best interests all those years. It was to please a sister that I finally did consent to have Christian Science treatment. She came to see me at the State School in Coldwater, where I was employed, and found me in bed, suffering greatly from sciatica and unable to sit up. I had suffered much, and it was such a relief to have her take charge of me, though all were very kind, that I was ready to let her do with me as she thought best. So I was brought to Jackson and a Christian Science practitioner sent for. Words can but feebly express how thankful I have been ever since this step was taken. I began to improve at once, and in less than three weeks was able to attend church. One week later I *walked* home from church, a distance of more than a mile. I have had no return of rheumatism since, and other troubles have been, some entirely, others partly, overcome; among them weak lungs, severe headaches, extreme nervousness, and indigestion. For a number of years I had been obliged to wear a chamois skin waist, except during the summer, had a serious time with pneumonia, was always afraid of taking cold, and was always taking cold and coughing. Since coming to Jackson I have not worn chamois skin nor taken any medicine, and have been more free from colds than ever before. I was always inclined to look on the dark side of things, but Christian Science is teaching me that worrying implies lack of trust in God, and I am learning to look on the bright side.

I think that I thoroughly appreciate the physical benefit received, but to know by actual demonstration that God *is* an ever-present help and to know something of that peace which passeth all understanding, I value still more. When I first read Science and Health I did so only because requested to do so by the practitioner. I feel truly grateful that I have been led to seek the truth and my daily prayer is "Lead me in Thy truth and teach me."

H. C. H., Jackson, Mich.

---

I had for years been groping in seeming darkness and despair, mortal mind constantly telling me that I was broken down in health, overwhelmed with trials, troubles, and difficulties, till the burdens laid upon me seemed greater than I could bear. In vain I cried to God to help and sustain me. Because I had asked amiss I had grown to believe that there was no rest or peace this side of the grave. Although a member of the Baptist Church since childhood and always trying to believe that mine was the church built upon the Rock, Christ, yet all the time I felt that I had surely never attained the apprehension of Truth which was at last revealed to me, through Christian Science.

About one and a half years ago, I was taken very seriously ill with pneumonia. I grew worse very rapidly, till my sickness took the form of a congestive chill, and it seemed very evident that death was fast approaching. Our family physician lived thirty miles away and I would not allow any one to go for him, thinking perhaps I would get better, but instead my case grew so alarming that a doctor could never have gotten there in time to do any good, had he lived only a few miles away. So I asked my husband to send for a Christian Scientist who lived near, and who had impressed me very favorably in a talk which we had had some time before. My husband, not then believing, consented. When the Scientist came in, feeling that I was going fast, I said to her, "Oh, help me if you can!" "Yes, dear, I will soon help you," said she. She then requested those in the room to leave her alone with me, and turned to me with a smile. It seemed to me that the light of God shone in her face, and almost immediately a calmness began to steal over me. Truth came with such power that error had to give way, and I was soon fast asleep. When I awoke I seemed to have awakened to new life. I was filled with a calm, sweet joy and said to myself, surely this is that for which I have been so long seeking. That dear Scientist visited me each day for a week and told me of Truth. She showed me the Fountain of living water. I drank and it was sweet to my thirsty sense. Oh, how delightfully new and sweet!

My health was perfectly restored and I have no more use for material remedies. God is sufficient at all times and for everything. I now realize that prayer is not in vain, that Love wipes our tears all away. My heart goes out with love for God, the Principle of my being; to Mrs. Eddy, our dear Leader, and to that faithful woman who brought into my life Christian Science.

Mrs. Electa Anderson, Placer, Ore.

---

I am a beneficiary of Christian Science in a great measure. A little over two years ago I began to read the literature and was healed of catarrh of the throat, and of rheumatism that had bothered me for several years.

I have been engaged as a traveling salesman for ten years. During that time I had acquired many objectionable habits which were getting a firmer grasp on me as time went on, and sometimes when I wished to be free from them, all I could get in answer to my desire was to go ahead and drink deeper of the cup of indulgences, since that was all that could be done.

As I read the pure and uplifting literature of Christian Science I saw the great possibilities, and thought whispered to me, It is true; all its promises are true, and if you accept them you will have chosen the good part and have gained an hundredfold in the present time, and Life Eternal. This has been proved true. I began attending the services and have never had any desire for old habits. I have been in better health, and have been enabled to carry on my business in a successful manner, and in a way satisfactory to those with whom I deal, as well as to myself. In fact, all the discordant conditions of my life were eliminated with the touch of Love, as made known to me through the teaching of Christian Science.

To me it is something to be profoundly grateful for, to have health, happiness, and abundance; but that is not all. Christian Science has given me the desire to learn of the things of God, the desire to love and help humanity, and a peace that passeth all (human) understanding.

I should like to give one instance of many, where this truth has blessed those who have asked me for help. A man not knowing I was a Christian Scientist asked me to get him a position. I told him I would be glad to help him, but could do so only in one way, and that was through Christian Science. He laughed. I asked him to call at the hotel where I was staying, and I would tell him something about the work and what it could do for him. He did so, and after explaining to him somewhat the teachings of Christian Science, I told him I would give him the help required if he wished for it.

I saw him the next day and he said, "What you told me last night is so. I want one of the books, Science and Health, and I will pay for it when you come again." This man had been for eight years working at a very small salary, but on my next visit he had part of the money for the book, and within a few days he had a position offered him at nearly twice as much salary as he had been getting, and a short time after this had a second offer, that paid him more than twice as much. He had been healed of kidney

Digitized by Google

disease and the tobacco habit, also of unhappiness, during the first week of his study. I afterward visited his home. His wife had begun to read the book and had been made well and happy. The home was one of plenty, of refinement and intelligence. The Bible and Science and Health were their daily study, and they had already begun to help others. It was as with the prodigal. He had become weary of feeding on husks, the non-sustaining things of matter, and had said in his heart, I will arise and go to my Father and accept the truth, and the Father had given him the never-ending understanding of Love which heals and redeems.

I am glad to be in the Field working by the side of those who, as one has expressed it, are pleading with a stricken race for the recognition of Christian salvation, which saves from the pangs of disease and the stain of sin.

It is right that I should acknowledge my gratitude to our Leader, Rev. Mary Baker G. Eddy; for through her ceaseless labor, this salvation has been made possible to human experience, and all who will "may take of the water of Life freely."—CHAS. J. PRENTISS, Chicago, Ill.

---

I wish to mention a healing of the morphine habit of nine years' standing, which was accomplished in four days' treatment, and another of snuff-taking of long standing, which was healed, also a case of consumption which the doctor had operated on, taking a part of one of the ribs out in order to draw off the pus which he said had collected; finally he decided the patient must die, but said if she would use cod-liver oil she might live a year. I will add that she is now in Kentucky visiting, and in a recent letter she tells me she is doing well. Another case was that of a lady who has had bowel trouble for four years, and who at last became so bad she came to this city to be treated by the physicians here. On examination the doctor pronounced her case a very critical one, and said there must be an operation at once. Meanwhile he treated the case with drugs, and in about two weeks made another examination and decided that the operation must be performed immediately, and told her the results would be likely to be fatal. She came to Christian Science and in two weeks was able to walk nine blocks; she washed, starched, and ironed her own clothes and packed them and was on the train for a four days' journey to her home in Tennessee, and wrote back saying she had had but one slight attack since she left me. She wrote: "I am getting along well, and I have made several good demonstrations since I saw you." I am sure much good will yet come from this wonderful healing.—E. KATE HOWELL, Shawnee, O. T.

---

Six years ago while my husband and I were in a neighboring city with friends, I was told of a man who had been cured of consumption by reading a book.

My husband was an invalid, and I was so anxious he should be healed, that I called to see the man at his place of business, to hear what he had to say, and get the name of the book.

The man certainly looked strong and hearty enough to live for many years. He told me he was nearly gone with consumption when he got Mrs. Eddy's book, "Science and Health with Key to the Scriptures," and by reading the book he was really healed, and also learned how to keep himself well.

It was a great mystery to me, but I believed every word he told me, and at once bought a copy of the book, took it to my room, and began reading. My husband was a druggist and I expected to find somewhere in the book a prescription to cure all disease. I wish to testify to the fact that the prescription is there, but not in the form in which I expected to find it.

I began at the beginning and read and re-read page after page, for some days, when suddenly a great error was removed from me. Resistance was useless, I was being guided by a firm hand. My sadness and depression were all gone, replaced by love, light, joy, and peace.

From that moment I have not doubted that Christian Science is the revelation of God to this age, made possible through the pure and noble character of the woman, to whom thousands who have been healed from sin and suffering are paying their tribute of gratitude.

From my own experience I know that the Bible, and Science and Health are *true*, and that those who are *willing* and *obedient*, will be led into the green pastures and beside the still waters; that woe cometh only to the disobedient.

MARY BRALLIER, Concord, N. H.

---

By occupation I am a blacksmith, and two and a half years ago I was about driven from the shop by hammer rheumatism in my elbow. After various pain-killers, cure-all liniments, a very highly charged electric belt, etc., for about three months, to no purpose, for a change I called on Christian Science for help, but without any hope of being benefited.

When I began treatment my arm was quite crooked and was wasting away very perceptibly. In about two weeks I could wield a nine-pound hammer with that arm, which before treatment could scarcely use a one-pound hammer. With that physical change, my thoughts began to change. I felt that anything so wonderful was certainly worth looking into, so I began studying Science and Health and afterward bought a Bible (my first one), and in a short time I found I had no tired feeling and could get along with about two hours less sleep. Profane language and tobacco chewing began to get distasteful. I had been addicted to both for about forty-three years. Burns, boils, toothache, etc., yielded to Truth through my small understanding, and with more help from our Leader's writings and the *Sentinel* and the *Journal*. "I propose to fight it out on this line."—A. S. GAMBLE, Placer, Ore.

---

My husband and I are deaf-mutes. Before we knew of Christian Science we had much trouble and sickness, it seemed one long struggle for daily existence. My husband's pay was small, the factory unpleasant, and the Union assessments frequent. Our lot seemed hopeless. We knew our sister was a Christian Scientist and talked often and much about it. One day about a year ago my husband was in bed sick with sciatic rheumatism. The doctor said it would be weeks before he would be able to work again. We sent for our sister and decided to change our way of doing entirely. We would stop putting our weight on the wrong side, we would trust absolutely in the allness of God. The doctor was dismissed and all the medicines were discarded. With Christian Science treatment he was able to be out of bed the next day and go to work the day following; the sciatica has never returned.

We then had treatment for our general unfortunate conditions. Circumstances forced my husband to give up his hard, unsatisfactory position; fear came in many times, but we put it out and trusted to God's goodness and love. After about six months' treatment the demonstration was complete and we feel "free indeed." My husband was sent for to take a position in a comfortable factory near home, with good pay, and has never been idle a day since on account of sickness or lack of work. We attend the Christian Science Church services every Sunday and Wednesday. We have all the literature and get the Sunday Lesson. Our fourteen-year-old boy is a member of the Mother Church and of First Church here. He talks and hears, and helps us very much. We are thankful for Christian Science.—J. P. K., Chicago, Ill.

## Religious Items.

God has always provided means for bringing souls into His presence with joy. Moses was called apart from the world to hold converse with Jehovah and it was after the communion that his face shone. He could not be in converse with God and remain the same man he had been. The impress of God was upon him. Even Jesus in the Mount of Transfiguration, while talking with the Father had the "fashion of his countenance" altered. What an expressive sentence this! If we want our lives changed, our look and manner take on a new and strange fascination before our companions, we must know how to get into the secret of God's presence, how to talk with Him. Do not expect some audible voice to speak to you when you talk with God. The secret of the Lord is with them that fear Him. He can speak in a language the soul can understand. Love always does. Communion is coming into union with God. One with Him in all your desires and purposes and plans. Others will often be more conscious of the effect than ourselves. "Moses wist not that the skin of his face shone." Well for us if others discern our transformation.

*The Standard.*

Rev. H. W. Barnes says in *The Examiner:*—"It is the union of words and works which justifies the faith of the Christian. Christ himself appealed to his work and his words: 'If I do not the works of my Father, believe me not. But if I do, though ye believe not me, believe the works: that ye may know and believe, that the Father is in me, and I in him.' When this question, 'Who is the son of man?' was asked him he simply announced himself as the Light that was among them, a sort of living light, on which they should believe that they might become sons of light, and not walk in darkness, but have the light of life.

"That which was wanted was not words for their ears, but experience for their hearts—letting the light in, that it might bear testimony to itself. Men must taste to see that the Lord is gracious. They will never catch the flavor of His graciousness till they do something more than hear about it or study descriptions of it. It is too large for words, but not too large for faith."

Rev. Robert Morris Raab, B.A., says in the *Homiletic Review:*—"A worldly, half-paralyzed Church, led by ministers who do not know what to preach, will fall short of changing the moral complexion of the world. The weakened condition of the ministry is quite as pathetic as that of the Churches. We may really indulge the hope that men will so sicken of this surface trickery in the name of religion as to hasten a strong reaction in favor of religious certainty and depth. Our times are morally very weak; there is much breaking down in the best of us. But the nerveless resistance, which has withstood the declension of American religious life will be forced to take the path of positive reform. If so, Protestantism may fall into two distinct bodies; one holding strictly to the Biblical message and the other pursuing a speculative life; one grappling with the hard facts of life and relying, for the religious improvement of all conditions of men, upon God; and the other devoting itself to the ceaseless round of intellectual guessing."

Rev. P. S. Henson, D.D., says in *The Watchman:* "And yet let us beware of mistaking the purpose of Christ's sacrificial suffering. Such representation of it has sometimes been made as led men to suppose that the sinner's salvation was accomplished very much like the rescue of Captain John Smith, and that God Almighty like the sternly vindictive old Powhatan was eager to smite him to the death, while Jesus Christ more tender hearted like the gentle Pocahontas interposed to ward off the vengeful blow, and so for Christ's sake was the sinner spared. Surely there was reason for Christ's pathetic words: 'Rigteous Father, the world hath not known Thee.' He is no such vengeful deity as these have been accustomed to suppose. He is no 'horrid Molock,' the fire of whose anger could only be quenched with blood."

A man who wants to be good must fight for it. The Christian life is a warfare—a conflict with self, with environment, with the invisible forces of evil. And no man in his own strength is equal to the battle. But the regenerated soul is not alone in the struggle. On his side are infinite forces, the sustaining hand of Omnipotence, the guidance of the indwelling Spirit, the comforting presence of his Lord, the helpful fellowship of believers in the Church. Thus sustained and compassed about, no earnest soul need despair of victory, however hard bested by foes within and without.—*The Examiner.*

Rev. C. A. Wethube writes in *The Watchman:* "The question, 'What is the Christian religion worth to you?' is really not so important as is the question, 'What is the Christian religion, as possessed by you, worth to the community in which you live, and to those beyond it whom you reach in various ways?' It was very common, during past generations, to ask a professed Christian, 'Are you enjoying religion?' A much better question is, 'Are you doing all you can to make the religion of Christ in you permanently worthful to all with whom you have dealings?'"

Rev. John Kelman says in *The Congregationalist and Christian World:* "There is a habit among some thoughtful people of simply sitting and looking at religious problems as we might look at the people passing along the road—a merely spectacular interest. They never think for a moment that they must decide definitely upon these problems for themselves. But Christianity is continually stopping a man and bringing him right around and saying, 'Which way is it to be, yes or no?'"

To-day is your day and mine, the only day we have, the day in which we play our part. What our part may signify in the great whole we may not understand; but we are here to play it, and now is our time. This we know: it is a part of action, not of whining. It is a part of love, not cynicism. It is for us to express love in terms of human helpfulness. This we know, for we have learned from sad experience that any other source of life leads toward decay and waste.

DAVID STARR JORDAN.

We have the living Teacher, the present Holy Spirit of God as really with us as He was with those who wrote the Bible. Without His inspiration we can no more read it aright than they could write it aright. And we shall trust our teacher according as we do His will and think His thoughts as far as we know them. Tradition, reason, and faith are the trinity through which we discern the Word of God.

*The Congregationalist and Christian World.*

Alexander McKenzie, D.D., LL.D., says in *The Standard:* "Let no one think that the purpose of the law is to reprove us. It may be compelled to do this. It will not stop with this if you give it room to advance. It delights to approve, to encourage, and reward. One who lives in the right shall hear again and again, Well done, good and faithful art thou! Comfort and strength are in the counsel of the Lord, and there any one who will may find them."

John Clifford, M.A., D.D., says in *The Homiletic Review:* "Christianity can advance only by personal conversion. Real religion is always original. It is never, never simply derivative. In the earlier stages it may be imitative; but that stage is passed soon, and the person must have an experience of his own and must know for himself what Christ is, what Christ can do if he is to be of any use in the Christian Church."

The prayerful purpose to be true to our own best,—that is to pledge ourselves to a continuous and unceasing forward march, to undertake what we can never again lay down as a completed task. For to trust our own best involves the thought that we stand ready to go forward to the better thing, that only the attainment of our present best can unfold to us.—*Selected.*

A man who lives right, and is right, has more power in his silence than another has by his words. Character is like bells which ring out sweet music and which, when touched, accidentally even, resound with sweet music.—PHILLIPS BROOKS.

The late Bishop Westcott believed that it was as perilous to live on borrowed opinions as it was to live on borrowed money; the practice must end in intellectual or even in moral bankruptcy. Our creed must be a spiritual growth and not a dress.

Christians are to be separate from the world for leadership, not exclusion. They are to be in advance of the rest of the world in character and love, leading on to God.—*The Watchman.*

Religion is the consciousness of the fatherhood of God and the brotherhood of man, manifested in peace and good-will and all work for human welfare.

REV. GEORGE E. LITTLEFIELD.

The more humble we are, the more kindly we shall talk; the more kindly we talk, the more humble we shall grow.—FABER.

## LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, marbled edges, Oxford India paper, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.
MR. KIMBALL'S LECTURE. 33 pp.
HEARINGS ON PROPOSED MEDICAL BILLS. 23 pp.
ANSWERS TO QUESTIONS IN CHRISTIAN SCIENCE. By Edward A. Kimball. 24 pp.
THE BUSWELL TRIAL. 24 pp.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

National.

The anthracite coal strike began May 10. On Friday, October 3, the strike being still unsettled, at the invitation of President Roosevelt, representatives of the miners and coal operators met with him in Washington to confer on the situation. As the outcome of that conference it is practically assured that both of the contending parties will accept the appointment by the President of a committee of arbitration whose finding shall be final and binding. The committee, already named by the President, will consist of the following men: Brigadier-General John M. Wilson, U. S. A., retired, late chief of engineers; E. W. Parker, Washington, D. C., expert coal mining engineer, statistician of the coal division of the United States Geological Survey, and editor of the *Engineering and Mining Journal* of New York; the Hon. George Gray of Wilmington, Del., of the United States Court; E. E. Clark, Cedar Rapids, Iowa, grand chief of the Order of Railway Conductors; Thomas H. Watkins, Scranton, Pa.; Bishop John L. Spaulding, Peoria, Ill; Carroll D. Wright of the United States Labor Bureau.

Commenting upon the broad international aspect of The Hague International Court of Arbitration, Judge Penfield of the United States Department who attended the recent hearing on the "Pious Fund," says: "The Hague Tribunal is accomplishing important results for America. Arbitration is not taken so seriously in Europe as it is in the United States. The American idea of treating international arbitration thus is beginning to exert its influence; it promises to overcome European prejudice and to lead to a general acceptance of this principle.

"In Europe they are slow to understand our idea of the equality of man; the individual counts for little. The Hague Tribunal is thus performing the important mission of extending the liberal spirit of American Institutions.

Postmaster-General Payne will discuss, it is understood, in his forthcoming report, the prospects of one-cent postage. Postal revenues are now so large that the nominal deficit of the Department is disappearing, at least upon the basis by which it is regularly computed. This is due in some measure to the exclusion from the privileges of second-class rates, of publications without a *bona fide* subscription list.

Twenty-eight engineers and assistants of the United States Geological Survey have been ordered to assemble at Needles, Cal., this month to begin active work in carrying out the provision of the irrigation act in the thirty-two townships reserved for this purpose along the Colorado River between Needles and Yuma on the California side. This will be the first experiment made under the new irrigation law.

The experimental shipment of American fruits to Europe this autumn by the Department of Agriculture has proved a success. A carload of Keiffer pears in four equal shipments was sent to London, Homburg, Glasgow, and Liverpool, and arrived safely under the government guarantee against loss.

The Post Office Department is said to be experimenting with various kinds of lighter material to be used as a substitute for the leather now used in mail pouches. It is expected thus to reduce the compensation paid the railroads, which is by weight, and also lessen the mail carriers' loads.

The renewal of the literary copyright between the United States and Spain has been agreed to by the cabinet at Madrid.

Foreign.

The hearing of the "Pious Fund" case before The Hague International Court of Arbitration has resulted in awarding to the United States $1,420,682.67 and perpetual interest of $43,050.99. As this is to be paid in Mexican silver the award is about halved. This is the first case tried before the Court. Two other cases are pending; one concerns the claims of American sealing and whaling vessels against Russia, the other concerns the Samoan claims arising out of the military operations of the United States and Great Britain in repressing rebellion in that island in 1899. Another matter before the Court being considered by the Spanish Treaty Claims Commission is the determination of claims of American citizens arising out of the late war.

It is stated that Queen Liliuokalani will leave Honolulu next month for the United States for the purpose of again pressing her claims for the crown lands.

The French and English have obtained equal concessions in the coal, petroleum, and iron fields of the Province of Szechuan, China.

Emperor William has bestowed the Prussian order of the Crown of the first class upon Captain Sverdrup, the Arctic explorer.

Industrial and Commercial.

The Algona Steel Company of Sault Ste Marie, Ont., is constructing a large steel and concrete dock for receiving the ore from its mines on the north shore of Lake Superior. Electricity generated by utilizing the flow from the lake conveys the material from the dock to the blast furnaces. The rail mill is said to be turning out seven hundred tons of rails daily. An associated company contemplates the erection soon of an immense plant covering nine acres for the manufacture of seamless steel tubes up to twelve inch size, under the Perrin patents, which the company has secured.

The flour mills at the head of Lake Superior are reported to be grinding about fifty thousand barrels of flour per week and the output for the year is expected to reach two million barrels. The Duluth-Superior Milling Company, which has a lease of the mills formerly included in the flour milling trust, is increasing its capacity steadily as are also some of the smaller companies.

The United States Steel Corporation has purchased at New Orleans thirty acres of land with a river frontage of twenty-two hundred feet upon which it will erect a warehouse and make it the distributing point for South and Central America for its steel product, which can be brought from Pittsburg by an all-water route.

The report of the surveyor-general for the quarter ending with September shows that the amount of lumber handled at the port of Bangor, Maine, was greater than for the corresponding months of last year, but less than for 1900, and amounted to over forty million feet.

General.

The Automobile Club of America last week conducted a road run from New York to Boston and return to test the reliability of machines. The run was under strict regulations. The maximum speed allowed was fourteen miles per hour. The first day's run was from New York to New Haven, the second from New Haven to Springfield, the third from Springfield to Boston. According to unofficial reports seventy-five machines started from New York, seventy-two from New Haven, the same number from Springfield. On the return trip seventy-one started from Boston, seventy-one from Springfield, and sixty-eight finished at New York. Twenty-two machines claim to have made the entire run without a single penalized stop, and thirteen with only one stop. In a similar test last year between New York and Rochester eighty machines started and only forty-one finished.

The total eclipse of the moon last Thursday gave astronomers opportunity to make microcentric measurements to determine the diameter of some of the moon's craters, or the white spot surrounding them; the time of occultation of stars passing behind the moon, from which their speed in space can be reckoned; and photographic data of various phases of the eclipse, intensity of light, etc.

The challenge of Sir Thomas Lipton and the Royal Ulster Yacht Club for the America's cup reached New York last week on the steamer Oceanic. The conditions are identical with the last challenge. The first race is set for August 20. The challenge has been accepted and an order for the defender has been placed with the Herresheffs at Bristol.

It is said that Lone Wolf, a restless Comanche chief, tired of the guardianship of the United States, desires to take his followers to Chihuahua in Old Mexico, provided the Government will buy lands there in exchange for its lands in Oklahoma. He desires that the short race of his people shall be run true to the traditions of its fathers.

An automobile was recently driven from Boston to New York, 245 miles, in a continuous run in thirteen hours and five minutes elapsed time, ten hours and a half actual riding time. The best previous performance is credited with fifteen hours riding time.

The potato crop for this year is estimated at two hundred and sixty-three million bushels and the combined spring and winter wheat crop at seven hundred million bushels; flax-seed, forty-five million bushels.

It is expected that the cut of logs on the Penobscot waters this winter will amount to about two hundred million feet if the weather is favorable. Of this quantity about half will be for the pulp paper mills.

The noted yacht, the Dauntless, once the flagship of the New York Yacht Club and the winner of many races, is to be converted by the widow of its late owner into a house-boat for humanitarian purposes.

It takes a steamer a week to go down the Russian river Volga, from the point at which it becomes navigable, to the Caspian.

The Christian Endeavor Societies of New England held a convention in Boston last week.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Semi-Annual Lecture of the Mother Church.

A LARGE, attentive, and appreciative audience gathered at Symphony Hall on Thursday evening, October 16, to listen to the semi-annual lecture on Christian Science given under the auspices of the Mother Church, The First Church of Christ, Scientist, of Boston, and delivered by Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H. The subject of the lecture was "Christian Science and its Discoverer." The lecturer was introduced by Professor Hermann S. Hering, C.S.B., First Reader of the Mother Church, formerly a member of the Faculty of Johns Hopkins University in the Department of Electrical Engineering.

The introductory remarks of Professor Hering were as follows:—

*Friends:*—The occasion to which you have been invited this evening, is the semi-annual public lecture given under the auspices of The First Church of Christ, Scientist, the Mother Church of the Christian Science denomination, and on behalf of the church, I extend to you a most hearty welcome.

To meet the demand for a correct and authentic public presentation of the subject of Christian Science, there was inaugurated a few years ago, a Board of Lectureship, consisting of men and women who are thoroughly qualified to speak on the subject.

Hundreds of lectures have since been given in the United States, Canada, and Europe by the members of this Board. The evidence of the good they have accomplished in overcoming prejudice and correcting false impressions is very marked, and they have been especially effective in bringing to weary, suffering humanity, the understanding of a substantial Christianity, the healing Christ, the Comforter which brings them health, happiness, and holiness.

We feel very grateful to our beloved Leader, Reverend Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, for all the good which she has made it possible for us to receive, and we are glad to tell of our well-loved and well-tried religion, to our fellow-men, if haply *they* may be feeling after a living, loving God, who is not far from every one of us.

The lecturer of the evening was a Universalist minister, the son of a Universalist minister. He was educated at Buchtel College, Akron, Ohio, receiving the degree of Master of Arts from that institution. Later he entered Tufts Divinity School, upon graduation he received the degree of Bachelor of Divinity, and for ten years thereafter preached in the Universalist Church. He was at one time assistant pastor of the Every Day Church of Boston, and later engaged in College Settlement work in the North End.

After becoming interested in Christian Science, he severed his connection with his former church, has since devoted his entire time to Christian Science work, and in addition to being a member of the Christian Science Board of Lectureship, he is First Reader of the branch church in Concord, N. H., near the home of our revered Leader.

The lecturer's education, scholarly attainments, and past experience well qualify him for the duties of the evening, and bespeak for him an impartial and unprejudiced hearing on a subject which in his own life and work he has found to be a practical and demonstrable explanation of the teachings of the Master.

The subject of the lecture, "Christian Science and its Discoverer" is a timely one, and I know that all will be glad to hear the truth not only of the discovery but also of the Discoverer, who has given to the world all that she has and is, that mankind may be able to prove that God is All-in-all.

It is with great pleasure that I now introduce to you Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H.

Mr. Tomlinson spoke as follows:—

The holy purpose of Christian Science is clearly stated in those words which the Master quoted from the Prophet Isaiah, as the announcement of his mission: "The Spirit of the Lord is upon me, because He hath anointed me to preach the gospel to the poor; He hath sent me to heal the brokenhearted, to preach deliverance to the captives, and recovering of sight to the blind, and to set at liberty them that are bruised." To accomplish these beneficent results for mankind is the sole and only object of Christian Science. To this end its prayers are offered, its literature freely distributed, and its churches erected to the service of God and man. Christian people who see this religion as it is, give it their fraternal sympathy and their kindly consideration.

In the brief time allotted us, we cannot hope to state fully this great theme, yet we may open the way for the earnest seeker after Truth to give this subject, which is now uppermost in the minds of thinking men, a fair and candid examination. No doubt its unparalleled development has occasioned the oft-repeated question: "What are the reasons for the marvelous growth of Christian Science?"

The text-book of this denomination, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, was first issued in 1875. In this brief interval there have been sold more than a quarter of a million copies. The first church of the denomination was organized in Boston in 1879. To-day its churches and societies in this and foreign lands number more than seven hundred. Two thousand seven hundred and eighty-four members were admitted to the Mother Church in Boston during the past year. The last Communion service of The First Church of Christ, Scientist, was attended by thirteen thousand persons, as reported by the Boston press. These facts, together with the conspicuous achievements and widely read writings of its wise Leader; the high character of its adherents, among whom are not only men of large business affairs, but also clergymen, physicians, teachers, and learned judges; and its multiplied cures of sickness and sin have awakened profound interest which has occasioned much discussion.

### THE DISCOVERER AND LEADER.

Those who are conversant with this movement, know that what is most conspicuous in the Cause and its growth is the wisdom, foresight, untiring devotion, and lofty Christian character of its Leader. The opportunities

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

afforded me for a full and adequate estimate of the Leader of this great movement have been favorable. During the past four years my residence has been in Concord, New Hampshire, the home of Mrs. Eddy, and for more than three months at one time I was a member of her household. The New Hampshire histories contain many important and interesting facts concerning Mrs. Eddy and her ancestors. From these accurate historical works one may glean much of interest concerning her and her family. She was born in Bow, near Concord, N. H., descended from sturdy Scotch and English ancestry. Captain John Lovewell, the famous Indian fighter, whose valor in the field destroyed the power of the savages and made it possible for the early settlers of northern New England peacefully to establish themselves, was her ancestor. Her great-grandfather was Captain Joseph Baker who settled in Pembroke about 1740. Captain Baker was one of the foremost men of his section. He received his commission from King George as captain of a Colonial Foot Company. He was a member of the third Provincial Congress of New Hampshire, and active in helping the province to take its stand for the new Republic. His three sons, one of whom was Mrs. Eddy's grandfather, were all soldiers of the Revolution. Intellectually, her family has always stood high. Mrs. Eddy's brother, Albert Baker, was a graduate of Dartmouth College. He was an honored member of the New Hampshire bar, an eminent debater, and a brilliant orator. He was thrice elected to the legislature of his native state, and had rapidly attained a leading position in those legislative halls when he died, at the early age of thirty-one. In the old church of Pembroke, three of her ancestors were its honored deacons. Her mother's father was Deacon Nathaniel Ambrose, and through his generosity and labors there was founded the North Congregational Church, which was known as "Deacon Ambrose's Church." The historian also tells us that so largely was the Baker family interested in founding the Methodist Church of that town, that "with propriety it might have been called the Baker meeting-house." Thus both sides of her family were founders of local churches. Mrs. Eddy's parents were devout members of the Congregational Church, both have family crests. Her mother was a woman of rare Christian virtues, and the atmosphere of the home was devoutly religious.

Mrs. Eddy is richly endowed for her work by nature and by grace. She possesses quick comprehension, a remarkably retentive memory, deep spiritual insight, a tireless energy, and an unquenchable love of mankind. Her native gifts were supplemented by the instruction of special tutors and by careful training in the schools and academies of New Hampshire. She was thoroughly taught by the well-known grammarian, Prof. Dyer H. Sanborn, and was greatly assisted in her education by her distinguished brother Albert. She had a well-established reputation for literary ability before her discovery of Christian Science. In childhood her thought naturally expressed itself in poetry, and verses flowed from her pen as readily and smoothly as the streams flow from mountain springs. Her prose and poetic compositions were eagerly read, and some of her writings, published in a book of poems fifteen years before her discovery of Christian Science, are now found in our public libraries. Her writings were sought by some of the leading magazines of the country.

Mrs. Eddy, from earliest childhood, was deeply interested in the subject of religion. She was early baptized into the church, and became an ardent member. As a child she listened eagerly to discussions on religion between her father and the visiting clergymen who frequented their hospitable home. When afflicted with a fever, her mother turned her daughter's thought to God in prayer. Relief came through her earnest petitions, and from that moment to the present hour the thought of God and His helpfulness to man has constantly abided with her.

In a momentous hour, she turned her thought wholly to the divine Helper. A wondrous illumination dawned upon her expectant vision, that subsequent years of deep seeking and finding have proved to be God-given by healing the lame and the blind, and by raising the dying. Having found the means whereby Christ Jesus and his disciples wrought their beneficent works, she earnestly labored to give her discovery to all mankind. She wrote the text-book of the denomination, founded the Massachusetts Metaphysical College, and established the church and its Publication Society. Thus she is not only the Discoverer of Christian Science, but the Founder of the religious denomination bearing that name. Those who have followed her closely, have observed her whole-hearted and entire devotion to the Cause entrusted to her care. She gives no time to social enjoyment, every moment of her waking hours being devoted to the service of God and man. She is honored and beloved in her home city. She has generously contributed to the city's public improvements, and her liberal donations are given not only to the Church of Christ, Scientist, but to other benevolent institutions. After a thorough study of her work and an intimate acquaintance with her life, I declare with gratitude, that I have found Mrs. Eddy to be the most reverent, Christlike character that I have ever known.

### Liberality of its Members.

Some critics, noting the remarkable prosperity of this Cause, have charged its followers with mercenary motives, when in fact this prosperity is due to liberality by reason of gratitude for the great benefits received through their religion. They remember the words of the Master, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake." Foremost among the virtues of these people, are their pure motives and unselfish labors. Clergymen, physicians, lawyers, and others, have given up all that was dear to them in order to take their stand for this vital religion. They know from deep experience how unselfishly and freely help is given. Its literature has been placed in nearly all public libraries, and its members gladly lend their reading matter to all who seek it. In nearly every city of the land there have been opened free reading rooms, to which the public is welcome. All possible provisions have been wisely made for helping every deserving applicant, whether he be rich or poor. No worthy appeal for healing and teaching is ever made in vain.

It is true that this religion gives to its members help in all ways. Through the healing they have been freed from sickness and its attendant expenses, and they have been enabled to devote their entire time to their vocations. A deep love for God and the Holy Scriptures has taken from them a desire for many of the luxuries and extravagances of life. Its members have indeed been made healthier, happier, and more useful to themselves and to others. These gifts they feel are from God, and they are grateful to Him for His blessings. We ask, Why should not God bless those who are doing right? Why have not the workers in this vineyard of the Lord the same right to receive remuneration as the laborers in other vineyards? Clergymen, teachers, and others, are understood to be doing God's work and are paid for it. Why should not the Christian Scientist receive pay for doing good work? The incomes of its churches are sufficient to meet their demands, and come from its own membership and no others. These churches, as well as their members, are abundantly blessed of God. We submit that the prosperity which attends this Cause should not excite criticism but rather congratulation. It testifies that God does abundantly bless His people and His Church. It indicates that this religion means better conditions for the poor. It means

Digitized by Google

adequate education for all the children of men, and sufficient time and opportunity to worship God aright. It suggests that when the religion of Christ is applied to the practical needs of men, there will be accomplished the grand purpose for which this Republic was founded, the enjoyment by all of "life, liberty, and the pursuit of happiness."

### Its Biblical Theology.

An important consideration closely identified with the rapid growth of this religion is its evangelical theology. Its adherents know it to be not a new or different religion from the Bible; it neither adds to, nor subtracts from, the historic Christianity of Christ. It is the simple Apostolic gospel of the early Christian church which its members are earnestly striving to live among men. It has no creed, but the following are its tenets, written by Mrs. Eddy and accepted by all adherents:—

1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to Eternal Life.

2. We acknowledge and adore one Supreme and Infinite God;—acknowledge one Christ—His Son Christ Jesus; the Holy Ghost or the divine Comforter; and man His divine image and likeness.

3. We acknowledge God's forgiveness of sin in the destruction of sin, and in the understanding that evil and sin are unreal, hence not eternal. But the love of sin is punished, so long as it lasts.

4. We acknowledge Christ's atonement as the evidence of divine and efficacious Love, unfolding man's unity with God through Jesus Christ the Wayshower.

5. We acknowledge that man is saved through Christ—through divine Truth, Life, and Love, as demonstrated by the Galilean Prophet in the healing of the sick and the overcoming of sin and death. Also, that the crucifixion of Jesus and his resurrection were designed to elevate human faith and understanding to the spiritual perception of the eternal existence of the good and the real in man.

6. We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure.

[Copyrighted and used by permission of Reverend Mary Baker G. Eddy, the author.]

These tenets are contained in the text-book of the denomination, "Science and Health with Key to the Scriptures," written by Mrs. Eddy, and are therein fully explained. What I herein say is gained from a study of this book.

With all believers, the Christian Scientists' most precious book is the Holy Bible. One of the most prized gifts of their religion is the bestowal of a deeper love for the sacred Scriptures, and a closer study thereof. Unbelievers, who had rejected the Old and New Testaments because of their apparent inconsistencies, are now constant readers through the new light given them by the study of their text-book, which is indeed the "Key to the Scriptures." Others, who had thrown aside the inspired Word as impracticable for this age, through their new understanding make the Bible their daily companion. In adversity and in sorrow, this precious Book lifts the clouds, and lets in the sunlight of Love divine. In sin and in sickness it restores the wanderer to his father's house, and bestows the healing balm of Life Eternal. Of the Bible, Mrs. Eddy says: "It is my only text-book." And again she declares that it is to her "the chart of life." These believers rejoice with the Rev. R. S. McArthur, who says of the Bible that "It never had so mighty a grip alike on the educated classes and the simple-minded folk as at this hour."

As taught in Christian Science, God is the God of the Bible. He is the Almighty God of Abraham, the "I AM" of Moses, the "Father which art in heaven" of the Master; He is "the God of our fathers," who gave them a home in this favored and promised land, who bestowed upon them the priceless inheritance of civil and religious liberty, who brought them triumphant through fraternal strife and hath made them one nation, and one brotherhood, from the Atlantic to the Pacific, and from the Lakes to the Gulf. He is more and more becoming to them the Giver of a home of peace and good-will upon earth. He is bestowing here and now upon them freedom from pain and sorrow, sickness and sin. He is bringing them through the struggle with self, and giving them that tender sympathy and love which makes them feel their kinship with all the sons and daughters of men.

In company with all Christian people, Christian Scientists hold that their Saviour is the one Christ Jesus, foretold by the prophets and revealed in the New Testament. He stands alone, their Lord and Master, than whom there is none other. He is the foundation of their church; for with Paul they say, "Other foundation can no man lay than that is laid, which is Jesus Christ." Helped by the deeper experiences they have felt, they recognize the great worker of good deeds in Palestine as the worker of good deeds in their own homes. He healed the sick and raised the dead; he declared of every follower, "The works that I do shall he do also." Recognizing his presence with them here, knowing that they are nothing themselves, but that to him belongeth all power, they rejoice to see the brokenhearted healed, the blind recovering their sight, and the sick and sinning set at liberty. Why should not their faith and their fruits proving that God's words are true, give joy to all His church?

They recognize the presence of the Holy Ghost, the divine Comforter, leading into all Truth. They understand that, to be without the presence of the Holy Spirit, is to be without the living God and the healing Christ. In the unmerited abuse which in the past has sometimes been unjustly heaped upon them, they are comforted by the Master's words, "They hated me without a cause. But when the Comforter is come, . . . He shall testify of me: and ye also shall bear witness because ye have been with me."

In company with the higher insight of all religious peoples, these believers think of man as more than a creature of the flesh. His type is not the Egyptian Pharaoh oppressing the children of Israel in cruel bondage, but rather he appears in Moses, escaping from serfdom into the promised land of freedom. The true man as revealed to them is not a material, sensual, animal man; he is seen rather in the youthful David with full faith in God going forth to destroy the Goliah of sin and sickness, disease and death. The man they strive to know is found in Christ Jesus, Son of the heavenly Parent, the perfect image and likeness of infinite Spirit. They are grateful because they are discovering through the light of Christian Science that their natural heritage is not weakness and weariness, but rather strength and health, peace and joy, the gift of their loving Father. They are learning that the laws which govern them come not from an evil power, but that God and His laws alone govern men. As it is written, "The gift of God is Eternal Life," and they are beginning to understand the words of the apostle, "Now are we the sons of God."

The third tenet speaks clearly as to the Christian Science position concerning sin. It declares in unmistakable terms that this religion does not ignore evil. Its determined purpose is to destroy sin and put an end to its reign. The text-book, on page 327, declares: "Sin is the image of the beast, to be effaced by the sweat of agony." Every member of this church, instructed by his Leader, prays each day to the heavenly Father, "Rule me, and rule out of me all sin." In this earnest struggle, he is helped by knowing that sin is no part of God's kingdom, and therefore it is outside the realm of the real. God, who is infinite Good, could not create or ordain sin, hence it is not real nor eternal. Sin consists of wrong thinking and wrong acting, and ceases when mortals think and live aright. God is

Digitized by Google

light; sin is darkness; hence it is written, "God is light, and in him is no darkness at all."

### Atonement.

Most heartily with historic Christianity does this church accept the atonement of Christ. It sees in his atonement the clear evidence that infinite Love does indeed work with man. In Christ's perfect oneness with the divine Mind, God, is seen man's unity with his Maker. The atonement is the at-one-ment, or at one mind with God. A simple sentence from the chapter, "Atonement and Eucharist," explains the practical view of this vital doctrine.

"Every pang of repentance and suffering, every effort for reform, every good thought and deed, will help us to understand Jesus' atonement for sin, and aid its efficacy; but if the sinner continues to pray and repent, sin and be sorry, he hath little part in the atonement,—in the *at-one-ment* with God,—for he lacks the practical repentance which reforms the heart, and enables man to do the will of Wisdom" (Science and Health, p. 19).

The fifth tenet begins, "We acknowledge that man is saved through Christ." With all other followers of Jesus the Christ, the members of this church understand that there is no salvation outside of Christ. With the Apostle they affirm, "There is none other name under heaven given among men, whereby we must be saved." Through their text-book, they are helped to see that man is saved through Christ now, as he was saved when Jesus walked the highways of Galilee. Overcoming sickness and death, as well as overcoming sin, was Christ's work. And this same method he gave to his Church. He commanded his disciples, in all times, not only to preach the gospel, but to heal the sick. The first action of the early church which attracted attention, was the healing by Peter and John of the lame man at the Temple. This healing created much antagonism in ecclesiastical circles, but it was the means of the rapid growth of the early church. Those healed by the Christ method find themselves not only vastly improved physically, but morally as well. Sickness follows the so-called mind of evil; health follows the mind of Christ. Great as have been the temporal blessings bestowed by this church, its richest gifts have been its spiritual ministrations. With the healing of the body there comes a new interest in the Bible, a deeper love for God and man, and a more reverent following of Christ Jesus.

In the last tenet of this religion all its believers solemnly promise to strive, watch, and pray for the mind of Christ; to love one another; to be meek, merciful, just, and pure. Might not this beautiful statement be well taken upon the lips of every sincere seeker for the light?

Does not this brief review of the fundamental points of this religion suggest that it is not to be lightly cast aside by inuendo or invective? Does it not show that it is worthy of the consideration of thinking people?

### Applied Christianity.

At some place in the discussion of this subject, one is quite certain to hear it said, "I can accept Christian Science as a religion, but I do not see that healing is any part of the work of the Christian Church." In reply, it must be acknowledged that, in the present condition of the church, there is some justification for the common call for more practical works. Many forms of helpfulness have been taken from the church, and have been assumed by other agencies. Hospitals are provided for the sick; the Associated Charities and the Poor Farms care for the poor; the Reformatories and Industrial Schools look after the sinners. Even the youth are cared for outside the church, in Young Men's Associations and other worthy institutions. Shall we therefore conclude that the church has no beneficent mission? Who is a better judge of the purpose of the church than the Master? His words were not only, "Preach the gospel to the poor," but "Heal the brokenhearted; recover the sight of the blind." His explicit command to the members of the church which he established was, "Heal the sick, raise the dead, cleanse the lepers, cast out demons." If the mandate of Jesus be regarded as authoritative, healing is not only a constituent part of the work of the church, but it is a compulsory part of this work. There is good reason, then, for thoughtful deliberation upon the religion which not only reforms the sinner, but also, in keeping with the direct commands of its founder, and the practice of the apostolic church, cares for the poor, and heals the sick.

The answer that is sometimes given to what has already been said is, that the church is doing this work through the noble army of physicians. We have no quarrel with those who are using other methods of healing, but we contend that greater results can be obtained by relying entirely on the divine Power. We never know what Spirit, God, can do for us until we throw our whole weight upon the side of God. Whatever others may think, Christian Scientists have proved convincingly to themselves that in their reliance upon God alone they have chosen "the better part" and the more effectual part. In Christ's healing of disease, even though he used no drugs, he did possess an effectual remedy. Jesus was in harmony with patriarch and prophet when he said: "Whatsoever ye shall ask in prayer, believing, ye shall receive." And the Apostle James instructed the early church, "If there be any sick among you, send for the elders, and the prayer of faith shall save the sick." Again it is said, "The effectual fervent prayer of a righteous man availeth much." It is evident, then, that the Bible method for the cure of disease is that which Christian Science discloses. To object to this system, because of its healing through prayer is to reject a fundamental doctrine of the Holy Scriptures.

Revelation supports this religion in its healing method. Reason also gives its endorsement. Observe how intense hatred flushes the face and changes the entire action of the physical organism. Many a one through intense anger has brought upon himself severe sickness. It has been said that if a mother were to nurse her child when in a fit of anger, that which was food for the child would become poison. To cure anger, shall one administer a drug? Then to cure the effects of anger, would a material remedy be the only one? Rather shall we not say, that as hate is an erroneous mental condition, the remedy is the right mental condition? If the wrong thought produces sickness, then the right thought must heal it. Again, recall how fear affects the body. It makes the face grow pallid, and wastes the form. What suffering and torment follow the condition of fear! And as anger seems to produce sickness, so fear brings on disease. A bad mental cause is followed by a bad physical effect. Shall a drug be the only remedy, or shall the wrong thought give way to the true? If Jesus is permitted to reply, his words are, "Ye shall know the truth, and the truth shall make you free." "Fear hath torment," says the apostle; and the mental remedy he prescribes is this: "Perfect love casteth out fear." Drunkenness, licentiousness, the opium habit, all false appetites induce a train of evils resulting in sickness and death. Is it unreasonable, in view of the wrong mental states involved, to hold that when these false conditions of mind are replaced by the mind of the Lord, harmony will be restored? Again, are not so-called nervous diseases the offspring of morbid mental conditions? Shall not a system enlist our sympathy which insists that if the wrong mental conditions are replaced by the right mental conditions, harmony will ensue? A writer, not a Christian Scientist, has wisely said: "The idea that one has some incipient disease in one's system, the thought of financial ruin, that one is getting on in life without improving prospects —any of them or a thousand similar thoughts may carry a healthy man to a premature grave." He further says, "The morbid condition of mind produces a morbid condition

Digitized by Google

of body, and if the disease does happen to be in the system it receives every encouragement to develop." Christian Scientists know that this practical helpfulness of their understanding, acquired through the study of their text-book, in harmony with the Bible and with reason, has been an important factor in the wonderful progress of their church.

### The Important Discovery.

To some good people a sufficient reason for refusing to investigate this subject is the assertion, that if this were of God the discovery would have been made long ago. This objection is one which might be advanced for every new step in the progress of the race. Why did not Martin Luther and Washington and Lincoln come long years before their advent? To reject Christian Science because of its late discovery is to show slight understanding of the world's development. As well refuse the telephone on the ground that if it were truly beneficial to man it would have been discovered long ago, as to refuse the investigation of Christian Science because of its recent discovery. A study of history will make it clear that discoveries are made when human needs are apparent, and the demands for higher and better conditions are recognized.

The apparent need for swifter communication by land and sea between man and man, and the demand for better facilities of transportation, were followed by the discovery of the steam engine and the electric dynamo. In our civil, social, and religious problems there are apparent and appalling needs. Is there not a crying demand for higher and better conditions in the social fabric? Do not our overflowing prisons, our crowded hospitals, our asylums, all point to a deep human need for better conditions? Do not the race and industrial problems that confront us call for a new remedy? Or shall we say that discoveries are in place everywhere except in religion? Do we not all agree that the great discoveries which have so advanced the civilization of the age have been the work of God? Shall we then affirm that God works beneficently through discovery in every field except religion? We are confident that the future will make plain that the advent of Christian Science was as necessary and as natural as the advent of the electric light. Before electricity could be discovered and applied, there must depart from man the fear of this agent. There must be a recognition in it of a power that may be used for good ends; there must come a desire to escape from darkness and emerge into light. Accompanying this new and uplifted desire, is the right man to make the discovery. Watt, Morse, and Edison became discoverers, not through accident, but by reason of their fitness for the discovery. Only through extraordinary insight, indefatigable research, and persistent and unremitting toil, have we been blessed with the steam engine, the telegraph, and the electric light. We are confident that the future will make plain that those conditions which accompanied the beneficent discoveries in the physical realm, have been present likewise in the advent of Christian Science. The closing years of the last century were strongly marked by a departure of fear and the presence of a higher understanding and love for the infinite All-Power, the Creator and Father of man. These years were likewise characterized by an intense aspiration for higher and better conditions among men.

### Hopes Fulfilled.

In the Discoverer of Christian Science we have found most strongly marked the hopeful features which our past century has made apparent. She knew her heavenly Father only as divine Love, for whom she had no thought of fear, but only the most tender regard. At her mother's knee she was taught that the power of God through prayer could restore her to health and harmony. In childhood, through effectual fervent prayer, she banished sickness and restored health. Having heard that Daniel offered up his prayers to God seven times a day, she thought that this was the practice among all Christians, and she would not close her eyes in sleep at night until seven fervent petitions had been offered at the throne of grace. She was gifted with extraordinary spiritual insight. So remarkable were her spiritual gifts that a sainted clergyman said of her, "She was sanctified before she had birth." Accompanying this deep love for God was an intense love for man. Her early years were marked by unselfish devotion to the needy. As a child she was wont to bestow her garments upon her less fortunate playmates. As she grew older, she became a ministering angel to the afflicted and the needy. She was inspired with an intense conviction that the remedy for all the ills which afflicted mankind was the loving power of God. It needed only a crisis in her life to make possible a great discovery. This crisis came when, apparently dying, there was found no earthly remedy to help her. Bereft of all material aid, she sought the heavenly Comforter, and God's answer to that prayer was health and the discovery of Christian Science. To whom shall we go for convincing proof as to the truth of the discovery and its value? Is it not true that those who consider themselves or their interests injured by a discovery frequently reject it, and condemn the discoverer? The owner of the stage coach opposes the coming of the railroad; the maker of candles is blind to the electric light; but the great mass of the people are glad to abide by results and accept what is best.

In conclusion, the vastly important declaration made by this religion is, that there has been discovered the Principle of healing sin and sickness employed by Jesus and the Apostolic Church. The further understanding is, that the fruits of this discovery may be enjoyed by all. Each one may so understand the Principle of his being that he can overcome sickness in himself and others, and destroy the power of sin and even death itself. This healing Principle is God, of whom the Psalmist chanted, "He healeth all thy diseases." Is this too good to be true? Rather shall we not say, it is true because it is good. If Christian Science is false, then its more than a million cures are the product of a falsehood; all its intelligent and devout membership, its multiplied churches, are the outgrowth of delusion. How long is it since falsehood was the father of such progeny? When was it that the law of God was so changed that thorns are bearing grapes, and thistles ripening figs? If it be true, then herein we have fulfilled the bright and glowing promises of psalmist and prophet. Herein is found realized the long hope of the ages; herein glows brighter and brighter the light which has been leading the children of men out of darkness into the eternal noonday of God; herein are fulfilled the comforting words of Holy Writ: "God shall wipe away all tears from their eyes: and there shall be no more death, neither sorrow, nor crying, neither shall there be any more pain: for the former things are passed away."

## A Prayer.

ELIZABETH EARL JONES.

Oh lead and light me, all the rugged way,
As a fond mother leads her little child;
When night seems darkest, tell me of the day,
And when I weep let me behold Thy smile.

Thy tender love doth all suffice for me;
But should I ever from Thy paths depart,
O loving Father, turn me back to Thee,
E'en though the turning seem to break my heart.

As the false sense of man is crucified,
Let me arise with Christ, above the gloom
Of sin and sense and self,—all purified,—
And triumph with the Master o'er the tomb.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Christian Citizenship.

We are sometimes asked what is the duty of Christian Scientists regarding politics, and how much part should they take as individuals in national, state, and municipal elections. It would seem that there can be but one answer; namely, it is the plain duty of every citizen to participate in the government of his country, and he is the best citizen who most carefully, prayerfully, and punctually exercises the right of suffrage. This does not mean that the admittedly undesirable in political methods shall be perpetuated, nor that blind and unreasoning partisanship shall govern our actions. Right thinking and right acting must be paramount in the domain of public affairs; and in order to bring about this condition, rightly directed individual effort is required.

It is the duty of every good citizen to do his share toward the election of men of unselfish motives and sterling integrity, for just and wise laws and their fearless administration are essential to public welfare. Consistent Christian Scientists are well qualified to perform this duty, and the plea that they do not approve of methods now in vogue, or that the heat and turmoil of the ordinary political campaign is distasteful to them, is not a valid excuse. To stand aloof will not cure the evil. If practical politics are not what they should be, the blame is largely with those who decry present methods without taking active steps to correct them. Ambition and selfish desire for private gain have no place in the ideal social condition. If political methods and conditions are to be improved, the change must come through the individual whose ballot is cast unselfishly, whose every thought is one of love for his fellows, and whose every desire is for the establishment of Christ's kingdom. M.

### Only Right Thinking.

"There is nothing either good or bad, but thinking makes it so." We have from the human standpoint admitted the wisdom of Hamlet's words: we have learned to expect that the tenor of man's thought will manifest itself in his work. Christian Science teaches that man, the reflection of God, is what he thinks; and as he thinks in God, manhood is manifested, harmony demonstrated. Man thinks health, his step grows more elastic, his breathing deeper, his eye brighter, the body responds to health-thinking just as certainly as the figure wrought in color or stone responds to the thought of the painter or sculptor. The artist could never produce his effect, should he, even at intervals, lose sight of his ideal, work he never so assiduously.

"Keep your eye on your model, don't watch your hand," said the master as he passed up and down the corridor criticising the work of his students. It was wise teaching, indeed, and most practical; the counsel goes with us, growing with our growth and expanding with our experience.

"Keep your eye on your model!" We stop to consider our life-model. Man, our model, is not some vague conception that thinks, he is the thinking itself, the active reflection of Life, Love, Intelligence.

The bad thinking which presented itself to Hamlet as a claimant equal in power to good thinking, Christian Science relegates to the realm of unreality and thus denies its power, then through its demonstrated teaching it proves that man's harmony,—spiritual, moral, physical,—is a manifestation of right thinking.

As Christian Scientists, we must begin and continue to think purity, gratitude, gladness, health. S.

### The True Ground of Rejoicing.

**Let him that glorieth glory in this, that he understandeth and knoweth me.—*Jeremiah*, 9: 24.**

The repository for the worldly sense of happiness is a to-morrow which can never become to-day, and being thus infinitely removed its possessions are wholly unattainable though perennially sought.

The religious teaching of the past has largely accommodated itself to this sense of joy's futurity, and in so far happiness has been a mirage which has enticed only to elude. It has been externalized and excluded from the *now* of personal consciousness. Christian hope has been largely centered in a heaven which is distinctly apart from the possibilities of present experience, and from which men are not more separated by space and time than by their instinctive turning from death, their purposeful avoidance of what they have regarded as heaven's only door.

Over against all this thought stand the many gladsome declarations of Jesus which teach clearly that the true ground of rejoicing is immediate and abiding. "The kingdom of heaven," said he, "is within you." "Your heart shall rejoice, and your joy no man taketh from you." "These things have I spoken unto you, that my joy might remain in you." "Ask, and ye shall receive, that your joy may be full."

A thought of life's satisfactions which begets the greed for spoil, is gross and repulsive to the spiritually aspiring; nevertheless, in a significant sense and degree, we have all located happiness in achievement, and have found our pleasure in compassing those ends which have appealed to us as most worthy of Christian endeavor. The doing of the works of healing as Jesus commanded, the casting out of demons,—those manifestations of evil which torture and degrade mankind,—successful effort here, has been thought of as yielding some of the sweetest returns of the Christian life; but at a time when his disciples were indulging a satisfaction of this kind that seemed to be abundantly authorized, Jesus said to them, "Rejoice not, that the spirits are subject unto you; but rather rejoice, because your names are written in heaven." He who is under the dominion of the world's thought, that the winner is to find his joy in having the material things he has won, will find it difficult indeed, to understand these words of the Master. The competition of the world has grown out of the conviction that when success was ours, joy would be ours also, and the legitimacy of our making success in every wholesome undertaking an occasion for happiness, will not be denied upon the human plane; it appeals strongly even to the average Christian sense, but it manifestly finds its source in that human touch with error, that divided consciousness which is foreign both to God and to His idea.

Jesus reversed the human estimate, in his teaching that "the joy of the Lord," our true reward, is the consciousness of good,—the recognition of our spiritual individuality as the manifestation of God.

It is well, as one has said, to "cultivate a buoyant, joyous sense of the crowded kindnesses of God in daily life," but

Digitized by Google

however great our blessings, however noble our doings, we are to rejoice not in assured possessions, nor in accomplished ends, but in that realization of Truth, that awakening to spiritual selfhood which makes these acquirements and overcomings natural and possible, now. Our joy thus becomes a well of water springing up and flowing forth unto eternal life, and the Christ-mind, the palladium of our peace, is preserved within, safe from the disturbing touch of every earthly experience. Paul continually enjoined and exemplified this rejoicing in the inner supremacy of Truth, and his words to the Philippians fittingly embody both his thought and his habit: "Rejoice in the Lord alway: and again I say, Rejoice." W.

## Selected Articles.

### Who is the Best Interpreter?

MENTAL training in any legitimate line increases one's ability to understand, and, everything else being equal, a scholar should be more ready to perceive the beauties of Christian Science than an ignoramus; but it is oftentimes true that bigotry and self-conceit accompany what is commonly called knowledge, and thus prevent the reception of new ideas. Those who are well satisfied with lesser theories than Christian Science are not apt to be favorably impressed with it. St. Paul had this in mind when he said, "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble are called: but God hath chosen the foolish things of the world to confound the wise," etc. Our Master also declared, "I thank thee, O Father, Lord of heaven and earth, because thou hast hid these things from the wise and prudent, and hast revealed them unto babes."

The Christian Science text-book expounds Christian Science in a sufficiently clear manner to heal thousands who have never had any other teacher than the book itself. Let those who pretend to think it verbose produce a philosophy that has accomplished more for the world than the teaching of Science and Health. Do they propose to take away from the people that which has accomplished so much good, and give nothing in its place? Are they willing to allow that one who has never demonstrated a proposition in mathematics, though he may be able to repeat the rules accurately, is a safe teacher of mathematics? Would not such a teacher be like clouds without rain? Do critics advocate that our schools be equipped with teachers who have never had any practical experience, teachers of mathematics who have never solved a problem? The difficulty is, some are not willing to admit that Christian Science is indeed a science and therefore are not willing to treat it as such. We insist that even in "chemistry" only those who have had practical experience are safe teachers and the teacher who has had the most experience is the best qualified to teach. ALFRED FARLOW.

In *Boston Ideas.*

### The Right Means.

Is Christian Science illogical because it heals a man by mental means rather than through his stomach? Then Jesus was illogical, because this is the way he healed, and taught his followers to heal. From the standpoint of common sense we should strive to deal with cause rather than effect, and this is precisely what Christian Science does in correcting a man's sinful thoughts that he may enjoy better health. It is because Christian Science deals its hardest blows at sin, that it corrects the tendency to be sick and suffer. ALBERT E. MILLER.

In *Nicholson* (Pa.) *Examiner.*

### A Kindly Protest.

OCCASIONALLY there appear in some papers uncharitable reflections upon the church or organization popularly known as the Christian Science Church, its teachings, leaders, and followers. Not infrequently the comments are based on a failure to heal some incurable disease, and statements which have no foundation are spread broadcast as facts, and on this flimsy base a superstructure of defamation, misrepresentation, and abuse is too often reared.

More often than not, the writer is quite ignorant of the subject-matter and makes up in sneers what he lacks in knowledge. There is unquestionably much in its teachings which the ordinary mind rejects. At the same time, we doubt if the average medical practitioner would enjoy having only his failures to cure made a subject of remark.

While not professing to know much of the creed, canons, or workings of this church, if its members are to be judged by their works, then there must be good in its teachings. If acts, not words, are to count, then their sincerity is beyond question.

It seems hardly fair to select failures to cure as the only measure of their faith. Be the reason what it may, whether as some claim they try to live what they profess to believe, and are more nearly allied to the early Christians among whom brotherly love meant everything, than are the members of other churches, or whether they are simply fanatics, blind followers of the blind, as is held by others, it is incontestably a fact that they are "doers of the Word," as they understand it.

To its members the teachings of this church bring in a large measure of happiness and contentment and a love for God and man. No one can attend their services without being impressed with the sincerity, earnestness, and good-fellowship that exist among its members. If any are sick they are visited; if any poor, they are helped; if hungry, fed. If faith, hope, and charity are the three great virtues, and charity the greatest of the three, these will be found to a greater degree amongst the members of this modest church than in some of the great historic churches of Christendom.

In fact, these people try to live their faith, to practise what they preach, and neither sneer nor threat swerves them from their path. Their object and purpose is not to attack, but to attract; to do good, not harm.

There must be good in teachings from which flow temperance, kindness, humanity, and brotherly love. Would not one's time be better spent in attacking evils which degrade mankind than in sneering at an institution which tends to elevate the race?

From an Editorial in the *Portland* (Ore.) *Journal.*

### Some Explanations.

As Christian Scientists we contend that there is but one First Cause, and that is God. This primal, creative, governing Cause, God, is Spirit, and all effects therefrom are, and must in the nature of things be, spiritual. Man, the image and likeness of such a God, is not material, but is spiritual. All so-called "force" is really divine energy manifested, reflected, in the good and only the good, the spiritual and only the spiritual. There being no matter, even from the standpoint of the natural sciences, all is spiritual, and dates back to God, the great First Cause.

We do most heartily agree with the affirmation that the declaration of the unreality of matter is a very old doctrine. It is as old as God Himself. How could it be otherwise when God is, was, and ever will be Spirit, and could not create matter. In our text-book, Science and Health (page 335), we read: "Spirit, God, has created all, in and of Himself, Spirit. God never created matter, for there is nothing in Spirit out of which matter could be made; for as the Bible declares, without the Logos, the

Digitized by Google

Wisdom or Word of God, 'was not anything made that was made.'"

Christian Science does not claim to have created these great basic truths, any more than Leverrier created Neptune, which up to his time, fifty or sixty years ago, had been swinging unseen in space. He noticed irregularities in the motions of other planets, and judged these to be occasioned by the proximity of some unknown planet. He persisted in his work and soon discovered Neptune. Thus Mrs. Eddy noticed the perturbations in humanity, its unsatisfied mental hunger, its unsolved problems, its erratic course. She recognized that the equipoise was being disturbed.

Jesus, in his short ministry of three years, endeavored to overthrow the long settled beliefs of the centuries. For three hundred years after his ascension, Christian healing, based upon the unreality of matter and the reality of the good, the pure, the healthful, and the true, occupied the attention of men, but was finally smothered by the crystallizing of creed and dogma. The truth in the first chapter of Genesis, demonstrated by Jesus, that man is the image and likeness of God, is an eternal truth. Mrs. Eddy has simply brought it out from its hidden condition, and applied it to sick, sinful, and dying humanity, to save them from their own mesmeric beliefs. On page 146 of our text-book we find "Divine Science derives its sanction from the Bible; and its divine origin is demonstrated through the holy influence of its Truth, in healing sickness and sin. This healing power of Truth must have been far anterior to the period in which Jesus lived. It is as ancient as the 'Ancient of days.' It lives through all Life, and extends through all space."

Let me close with another quotation from page 104 of our text-book: "Agassiz, the celebrated naturalist and author, has wisely said: 'Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it.'" Long since people have tired of saying that Christian Science conflicts with the Bible, and the world is fast leaving behind the second erroneous postulate, and hastening onward to the third stage described by Agassiz. This Christian Science or Science of Christ,—knowledge of God,—will ultimately be accepted by the entire world.

## Prayer not Medical Practice.

No one can find fault with the statement that "the doctrine of no-doctoring is not doctoring, and of doing without medicine is not medical," unless reliance upon God, as taught by Christianity, can be defined as medical practice.

Any attempt to define a Christian Science church as "a medical institution," and to bring it, as such, under the special legislation governing medical practice, must inevitably raise a series of knotty legal problems. Since every Christian denomination is based on the Bible, and the latter preaches and teaches, from cover to cover, that God heals, it must follow that, if the Christian Science denomination is to be reckoned as "a medical institution," then every other Christian denomination must come under the same classification, or else it must proclaim its belief that God does not heal.

The terms "mental concentration" and "thought-transferrence" do not properly describe the *modus operandi* of the Christian Science treatment, and these terms are not used, so far as I can recall, in Christian Science literature, except in warning students against the exercise of human will-power. The Christian Science treatment consists of knowing the truth in regard to God and man; namely, that God is Spirit, omnipotent and omnipresent; while man, made in His image and likeness, is spiritual and not material. This spiritual understanding of the truth is Science and not merely belief, hope, or expectation; and this Science frees man from discord in accordance with Jesus' promise: "Ye shall know the truth, and the truth shall make you free." Thus it is that Christian Science not only reforms the sinner, but also heals the sick.

## Good is Expressed in Wholeness.

G. M.

WE should not sentence ourselves by admitting traits of character or a disposition adverse to the Christ character, any more than we should admit the reality of sickness and its many phases. If we do, we shut out the manifestation of the Christ idea, and hold ourselves still in bondage to the Adam belief.

If God is the only Creator, the Father and Mother of all, and man is His offspring, then there can be no time when man does not express all that is beautiful and harmonious in character. He thus brings out all the "fruits of the Spirit," "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance: against such there is no law."

To be made "every whit whole," is to have no nature apart from God. In speaking of a good-natured person, do we stop to think it truly means the nature of Good, God, expressed through that one? Wholeness, completeness, is the full expression of Good, in which health, character, and disposition are included.

## The Truth Established.

DORA W. STEPHENS.

IT was my privilege to attend the World's Congress Auxiliary, which was held in Chicago in connection with the World's Columbian Exposition of 1893; also to be present at the meeting of the Parliament of Religions, when the address written by our Leader marked an epoch in the world's history.

On the platform, and in the great auditorium, were seated thousands of persons, representing different nationalities, doctrines, and creeds, all more or less based on the belief of life and intelligence as existent in matter. While listening to the inspired words of our Leader, which set forth so clearly the true idea of God and man, this verse from Scripture came to my thought with force and significance, "There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female; for ye are all *one* in Christ Jesus."

As the reading proceeded, and the infinite idea of infinite Mind was unfolded, I saw how perfectly Christian Science coincides with the Scriptures. The testimony of the personal senses, of "minds many" gradually yielded to the spiritual sense of one Mind, and that Mind's perfect idea, —Christ, the Son of the living God, stood revealed in a clearer light than ever before. The power of the word of Truth had indeed transfigured thought, proving Mrs. Eddy's words to be true: "Mine is the spiritual idea, which transfigures thought" (No and Yes, p. 35).

Had I not already been convinced, through innumerable proofs, that Christian Science is the truth, as taught by our great Master, this experience would have destroyed any possible doubt. Although many times since then, the false conceptions of material sense have clouded the clear consciousness gained on that memorable morning, the same Principle which produced it then, has melted away the shadows, and revealed again and again this Son of God, this divine idea of divine Mind.

## Unselfish Love is Holy Work.

ARNOLD BLOME.

SOME time ago, I heard these remarks from a lady interested in Christian Science. She said, "We had painters in our store within the last week, and they showed that they were much impressed with the kindness and love shown them by a Christian Scientist for whom they had worked. They said, "If all Scientists are as loving and considerate as this lady, then all ought to learn of Christian Science, and the working-men would have more respect shown them, and it would enable them to do their work more cheerfully." It seems that whenever she passed them she had a word of cheer for them. The janitor of a neighboring building where this Christian Scientist had a patient, had a similar experience and expressed gratitude for her kindness. While I was listening to these words a host of thoughts seemed to flow into my consciousness. They aroused within me a desire to express goodness in every act, word, and thought, and were a rebuke to idleness and self. It has long been lingering in my thought that unselfish love reflects the divine and manifests Life eternal.

This little incident has been a great help to me, for it has taught me that our enemy is only a lazy self, because our opportunities to express God, Good, are always at hand.

We learn in Christian Science that "God is Love," and that "God is All in all;" then it is unprofitable and useless to try to reflect anything but Love. The appreciation expressed by these men proved how beautiful and profitable is the reflection of Love in the small things of life. It healed them of prejudice and bitterness because of class distinction.

In doing for others we do for ourselves and work out our life-problem. As there is but one God, one Mind, there can be but one body—Christ, and we are members of Christ. Ought we not, then, to love every member of that body as ourselves? The Master's whole time was spent in doing good to others, and he said, "I am the way," "follow me." Even on the cross he worked and prayed for those around him. Is not this same unselfish love manifested by our Leader? Who is not daily feeling the influence of her unselfish life and love?

## God is Love.

F. B. HOMANS.

EVERY Christian and believer in the Bible will admit the statement that God is Love, and yet how many pure-minded Christian men and women deny in their extremity the very statement they know to be true. When sorrow and trouble seem to fall heavily upon them they meekly submit and say "Thy will be done." Is it God's will that children should be torn from loving parents; that thousands should be slain in war, drowned at sea, tortured by plagues and tyrants? Would He be a God of love if He were the author of such things? No, it is God's will that His children should live in peace, love, and harmony, for God is Love. If we only believed, trustfully knew, that God is Love, and relied upon His protection, we would ward off all sin and sorrow. Whoever does a kind, loving deed, even though he be full of wickedness, will feel the glow of peace and happiness come over him which always goes with a good deed. Why? Because it is the Good, God, that prompts the action. No one ever failed to receive this silent but bountiful reward for a noble deed done.

Often we hear people say, "I wish I were rich and I would give this and do that," etc. We do not need money to do God's work or to receive God's reward. A kind thought, a loving word, or a thoughtful act is worth more than money to the sorrowing heart, and a thought of Love, if understandingly given, will open the way to feed the hungry, heal the sick. To see, to know, and to feel that God is Love, this is to live and to be filled with joy and peace.

## The Lectures.

### At Crawford, Neb,

There was a large audience at the Syndicate Hall on Monday evening [September 22] to hear the lecture delivered by Judge William G. Ewing of Chicago, on the subject of Christian Science. The speaker explained the Christian Science doctrine as near as he could in the time occupied, and was given the closest attention possible by his hearers. His remarks were well received and will undoubtedly result to a great extent in allaying the prejudice existing against Scientists and correcting wrong impressions formed as to their doctrine.—*Crawford Bulletin.*

### At Cincinnati, O.

A lecture on Christian Science by Judge William G. Ewing of Chicago, Ill., was given at Robinson's Opera House, October 5, under the auspices of First and Third Churches of Christ, Scientist, of this city. Attorney Kelly introduced the speaker appropriately and briefly.

The Opera House was filled with a fine audience of the most intelligent and cultured people of Cincinnati, who gave the lecturer the closest attention from beginning to end of his grand discourse.

There were visiting Scientists present from Boston; Ottawa, Can.; Dayton; Winchester; Lexington; Cynthiana, and other cities.—*Correspondence.*

### At Minneapolis, Minn.

An audience which tested the capacity of the Metropolitan Opera House assembled yesterday afternoon [October 5] to listen to a lecture on "Teaching of Christian Science," by Carol Norton, C.S.D., of New York. Mr. Norton is a member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., which is the Mother Church of the Christian Scientists in the United States.

The lecture was given under the auspices of First Church of Christ, Scientist, of this city.

Mr. Norton was introduced by Rev. Dr. Marion D. Shutter, of the Church of the Redeemer, who said in part:—

"When I left the Baptist faith, in which I was brought up and which I still love, some of my friends charitably said that I was crazy. Now, I hear on all sides that Christian Scientists are crazy. Well, I like people who are crazy enough to believe that God is not dead and buried in Judea, but that He lives, and leads, and inspires, and works to-day, as in the world's remotest yesterdays.

"You have done much to banish the old theological ideas and make the world think new thoughts. You are one of those liberalizing forces by which that noble, but conservative body which I admire for so many things, has been compelled to write across the somber pages of the Westminster confession: 'God is Love.'

"Some day those three words will be the all-sufficient creed of Christendom."—*The Tribune.*

### Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* please take note of the label on the cover of the last number received. If this reads Dec. 02, it means that this is the last number for which payment has been made, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March, 1903.

There is nothing so sweet in the old Bible a the declaration that "God is Love." I am no Calvinist, but I feel in looking over my life that I cannot rely upon word or work of mine to offset sins and shortcomings, but upon Love alone.—WHITTIER.

## Among the Churches.

### New Quarters at Fort Wayne, Ind.

First Church of Christ, Scientist, held its opening services in its new quarters, Floral Hall, at 10.30 yesterday morning [October 5], and notwithstanding the inclement weather the beautiful hall was filled with a fine audience.

*Fort Wayne* (Ind.) *News.*

### Proposed Church in Austin, Tex.

Second Church of Christ, Scientist, of Austin, has acquired a building site on the corner of Guadalupe Street and West Ninth Street, being the northeast corner lot of Block 101, city of Austin.

This denomination intends to erect a handsome church edifice on this property in the near future.

*Austin Tribune.*

### Church Organization in New Bern, N. C.

We now have a Christian Science Church in our city. The Society which has been doing its work quietly for several years has disbanded, and a church has been organized, to be known as First Church of Christ, Scientist, of New Bern, N. C.

The Society consisted of seven loyal Scientists who have stood all tests brought to the work in its pioneer efforts, and when ready to form into a church organization, they found twenty-one active workers ready to unite even more firmly and faithfully, to establish the teachings which they believe will free mortals from sin and sickness and eventually from death.—*New Bern Journal.*

### Union of First and Second Churches in Dayton, O.

Wednesday evening, October 8, 1902, records perhaps, the greatest demonstration yet brought out in our city. It was a happy, joyful occasion, a song of thanksgiving and praise to God; for at this meeting First and Second Churches of Christ, Scientist, were re-united after two years of separation. The following communications passed between the churches:—

Dayton, Ohio, October 6, 1902.

Mr. Lloyd B. Coate, Clerk, First Church of Christ, Scientist, Dayton, Ohio.

*Dear Brother:*—We the undersigned committee of Second Church of Christ, Scientist, are officially authorized to report that at a meeting held this evening it was decided by unanimous vote that Second Church is ready to unite with First Church as one church, in the bonds of fellowship and love, to work together for the growth and good of the cause of Christian Science in the city of Dayton.

Yours in the bond of Truth and Love,
FRANK JOSEPH KRAMER,
MRS. ESTHER E. FRAZIER,
BERNARD HENRY KRAMER, JR.,
*Committee.*

Dayton, Ohio, October 8, 1902.

Mr. Bernard Henry Kramer, Jr., First Reader, Second Church of Christ, Scientist, Dayton, Ohio.

*Dear Brother:*—It is with pleasure that we acknowledge receipt of the communication from Second Church of Christ, Scientist, this city, stating that it is willing to unite with First Church of Christ, Scientist, as one church in the bonds of fellowship and love, to work together for the growth and good of the cause of Christian Science in this city. We will gladly welcome you into full fellowship, to all the rights and privileges of First Church of Christ, Scientist, Dayton, Ohio (upon conditions happily agreed to).

By official action of First Church of Christ, Scientist, Dayton, Ohio, at their annual meeting, October 7, 1902.

LLOYD B. COATE, *Clerk.*

## Testimonies of Healing.

### A Japanese Student's Testimony.

TRULY the ninth of September was one of the memorable days of my life. That afternoon I was suddenly attacked with both stomach trouble and fever; and gradually my condition became so serious that I was compelled to retire to my private room. I passed the whole night struggling with my enemy, and was scarcely able to read the words to which I turned, "God is our refuge and strength, a very present help in trouble," and "It is absurd to suppose that Spirit will produce disease and leave the remedy to matter" (Science and Health, p. 104).

I was tempted in my suffering to adopt a material method of relief, happily I was not overcome by the temptation, but determined that I would faithfully put my trust in the mercy of Providence.

With the above determination, the light of hope began to dawn in my heart despite my great agony. At this time I was visited by a kind friend, a Christian Scientist, who seeing my apparent suffering offered to give me a treatment. After about ten minutes of prayer for me, he left me with the following words of cheer: "Never mind, you will soon be all right." After his going I closed my eyes and prayed myself, and from that moment gradually a peace came upon me. I slept soundly until that evening, when, to my great wonder, I found that all the burden of agony had been taken away and I ate my supper with my usual appetite.

My healing was so quickly wrought through the power of Christian Science that I wondered if it was a dream; but to my great joy I found that truly all my sickness was gone, so that I could work as usual from the next morning. This experience is a proof to me of God's care, and that God is our refuge and strength, a very present help in trouble.—F. A., Oakland, Cal.

Christian Science is a wonderful help to me every hour of every day. Out of many demonstrations I may mention the following which shows the invincible protection of divine Love. Where I am employed there is a stable of from fourteen to eighteen horses, and early in the winter of 1901 a disease known as pinkeye broke out among them. One after another the horses were taken with the disease, which would last from five days to a month or more, and in one case it terminated fatally. The animals seemed to suffer a great deal, and could not be used while the attack lasted. The remedies ordered by the proprietor had no effect, and none of the veterinaries could do anything to stop the spread of the disease. It was finally concluded it would have to run its course. There were about forty people connected with the business, and I was the only one who knew anything of Christian Science. I began to work on the thought of God's protection, and made a close study of the 91st Psalm, making it a basis of demonstration. After almost all the horses were over the disease, the other drivers would say frequently, "Your turn will come next," etc. My horses were out in all kinds of weather and never missed an hour's work or a meal all winter long.

This was all the more remarkable, as the pair I drove had just come, with two others, from the eastern part of the state, and the climate is very different there from that f the coast. On that account, the first winter is supposed to be very severe on horses, until they become acclimated. Both of the other horses were very ill for a long time, and one never fully recovered, while mine have always been healthy. This was a grand proof to me of the utility of Christian Science, and it saved me no end of confusion and discord.

J. M. M., Seattle, Wash.

Digitized by Google

I will add my testimony to the truth of Christian Science as a healing power. Last February I met with a very painful accident. I burned my hand with very hot grease. Three of my fingers were burned to a blister. I was not where I could reach a practitioner, but I demonstrated myself as far as my understanding went.

The second day following I was where I could get help from a practitioner He gave me a treatment at night. The next morning the blisters were all dried and the pain and inflammation were gone. The second treatment was all that was necessary and my hand was well.

I have received benefits repeatedly from Christian Science, both morally and physically, and I am trying for a better understanding.—FRANK KILE, Placer, Ore.

---

According to the song I used to hear in our Sunday service, I was blind, I could not see; I was deaf, I could not hear; I was dumb, I could not speak. But, thanks to Christian Science, I learned to see anew. I found Christian Science in 1896. My eyes were then so inflamed and swollen that when I went to my work I passed mostly through the alleys on account of shame for my condition. I was deaf to our sermon, also to the English language, because I am a German. All I did understand were the words Christian Science, and Jesus Christ; but by continued reading of our text-book, "Science and Health with Key to the Scriptures" by Mrs. Eddy, also the study of our *Sentinel* and *Journal,* and by living and practising in my daily life, I have understood as much as I needed for my daily protection.

Since I began to study Christian Science, I can testify that I have not used one cent's worth of medicine for relief, neither have any of my family, used anything except Christian Science, and we are all in good health. My suffering caused me to seek for relief and rest, and to-day I can say: I find happiness, rest, and peace in Christian Science.—E. HUGO HENSCHEL, Chicago, Ill.

---

I was quite dissipated, a slave to drink, and had not seen a certain former friend for years, when a business trip called me to Detroit, and out of old-time remembrances, rather than affection, I called at his place of business. He invited me to tea that night, and I there first learned from him, who had been my boyhood friend, of the Christ-truth of Christian Science. I shall never forget the feelings that took possession of me at the sight of this old friend, who had also shared my dissipation and sin, in days past, now bowed in silent prayer for me to a God whom I had never known. The flood of light that came with those moments of prayer can only be known to one who, in the prime of manhood, had been led to lay aside all manly hopes and say, "I am a slave to *rum.*" To be able, as one who had bowed to persecution for years, suddenly to feel the power of a giant; to arise and shake off, like a worn-out garment, the habit of years; this can be felt and understood only by one similarly situated. It can never be described.

That wonderful experience came to me nearly three years ago; and never since receiving this one treatment has a desire to drink come back, while blessings great and multiplied have poured into my heart and home, until at times I have felt like covering my face and saying, "I am not worthy."

I have never ceased to thank God, and have spread in my poor way, the knowledge of His truth; but at times there have come doubts, from where, I know not, nor do I care, for each one has left me with clearer vision and happier heart than before.

About ten days ago, there came from the business corner of error's Pandora box a gloom so settled, so impenetrable, that not a gleam of light came to me. God seemed to have gone out of my life, and only those who have felt His love can feel that gloom. It was not twilight; it was blackness. I tried to shake it off, but physical troubles came also, and I decided to take a trip. The night before I left, there came a letter from another Scientist friend which I had put in my pocket and which I quite forgot during the first day of our travel. I was wretched, not so much physically as mentally, and about dark I chanced to put my hand in my pocket and pulled out this letter, and as I commenced to read, my eyes rested on these words: "And it was to destroy the works of the devil that the son of God was manifested." That letter did the work (or rather the truth in it), and across the troubled waters came again Christ's voice, saying: "Peace, be still." Life again thrilled with joy, "and he that was dead came forth." To-day I am free, and with my freedom come higher thoughts of the great possibilities of a daily co-operation with him who loved me and gave himself for me.

W. V. B., Detroit, Mich.

---

For a number of years before coming into Christian Science I was an invalid. For weeks and sometimes months at a time I had to be taken care of, dressed, carried up and down stairs, etc. I had tried *materia medica,* hygiene, oil baths, cod liver oil, and climate, before Christian Science was brought me by a dear woman who told me I could be healed by it. My opposition to what I thought was Christian Science was so great that I told her I would rather not be healed than to be healed that way. However, I had not a spark of faith in the efficacy of drugs, and when I took medicine to make me sleep I became more wakeful than I was before taking it. At last, not knowing where to turn, I consented to take Christian Science treatment, and in two or three weeks I was able to take up my business that had gone on in a very poor way without me for five years.

The physical healing was nothing compared with the light that came to my darkened senses. I was in financial trouble, and in taking up my business again I brought my Christian Science into my work daily, but the financial question was not met at once. However, by persistent handling of the errors that came up, and casting out the thought of envy and jealousy, I was enabled to make the demonstration. I am most thankful to every one who has given me help in Christian Science, but especially to "Science and Health with Key to the Scriptures." I can never be thankful enough to Mrs. Eddy for her great and good work.—MISS ROSE WRIGHT, Spokane, Wash.

---

Over twelve years ago Christian Science was presented to my thought, and it certainly did not come by chance, but at the time when I was sadly in need of its healing power and presence, and its divine Principle, God. As I now know, I was in the very depths of darkness and despair with neither health nor strength to sustain me.

Through *materia medica* and its laws I was doomed to actual starvation. The last physician I tried, prescribed for my daily food a teaspoonful of peptonized powder in a glass of boiled milk for each meal, but with no promise of help from even that. I tried to swallow the dose as prescribed; for three months actually being starved to death. Knowing nothing better, I seemed compelled to submit.

While waiting for what I knew not, came these words to me: Did you ever hear of Christian Science? I said, "No." I was asked why I did not try it. I was told it was all from the Bible and it would not hurt me and I would not have to take any medicine, and I was given the name and address of a Christian Scientist. I will say that from the first treatment my whole life was changed. I had found my God. I took several treatments, bought Science and Health, and in due time studied, and no matter how hard the seeming battles over sense and self, I have never let go, and the victories on the side of right cannot be numbered.—MRS. MINNIE B. ALCOCK, Chicago, Ill.

Early one summer morning late in the season when spiders were plenty and finding their way into snug corners in the ceilings, I took a broom and stepped thoughtlessly into a chair to reach one of these intruders. The ceiling was very high, and in stretching to reach the spider I lost my balance. The chair tipped and I found I could not save myself in the least, as my feet were entangled in the long, soft folds of my wrapper. I fell backwards and struck the floor heavily. I lay over on my side for a few minutes, during which I suffered torture in my back. After working a little while to gain a sense of Love that outweighs and destroys pain and fear, I succeeded, in a measure, and arose, again mounting the chair to finish my undertaking, but the pain was so intense that I could not straighten up. The attempt was foolish, and only increased the awful discord. There was more work to be done than I had been willing to admit, and I sought the bed I had lately left, and stayed there the rest of that day, working continuously at my demonstration, for it must be made before Sunday.

It so happened that only two of my Christian Science friends became aware of the accident and with their impersonal aid and my own work I was able to sit up the following day for a little while, though with considerable pain, but the next day I felt enough better to dress, walk down a long flight of stairs and down street three blocks and back. The day following, which was Sunday, found me in my usual health and in my usual place as one of the Readers of our service. What but the greatness and grandeur and power of divine Love could thus help humanity in its weakness and stress out of the dilemmas, accidents, and sufferings entailed upon us through human law and ignorance? and how blest is humanity to-day, in being the recipient of God's message of healing, as revealed in "Science and Health with Key to the Scriptures."

ALICE M. PECK, Oshkosh, Wis.

---

I wish to express my gratitude for Christian Science through our periodicals, in so far as I can do this through human language, and tell something of its great benefit to me. It is now five years since I first heard of Christian Science, and they have truly been the happiest years of my life. It was in 1897, when away from home and friends, completely discouraged with the load of sorrow which seemed to be my lot, that Christian Science was brought to my notice by a number of persons who were perfect strangers to me then, but who told me of the great blessing Christian Science was to them, as well as to their friends. I was advised to read the Christian Science literature which they offered me, and I gladly accepted it and began to read. That was indeed a glorious day for me, and again this Scripture was fulfilled, "The people which sat in darkness saw a great light; and to them which sat in the region and shadow of death light is sprung up." This was surely my experience, for it was then that Christian Science proved a deliverer, when all else had failed. I procured a copy of Science and Health which I now prize more than all else. I had read but a few days, when I found to my great astonishment, that I was healed of two chronic ailments which had vanished like dew before the morning sun. Since then, many times has Christian Science proved to me to be the comforter spoken of by Jesus. In 1898 I had the privilege of class instruction from one of Mrs. Eddy's students, which has been of great benefit to me and has enabled me to bring the blessings of Christian Science to many others. The way has been discovered by our dear Leader, Mrs. Eddy, and my greatest desire is that I may ever prove faithful and follow therein.

MRS. EMMA A. RIXFORD, Oxford, Mich.

---

The greatest fault, I should say, is to be conscious of none but other people's.—CARLYLE.

## Announcements.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Rev. Frederic J. Gould says in *The Christian Register*:—

"When we really seek to understand the perennial influence of Jesus upon the soul of man, when we would find the secret of his unrivalled supremacy, his pre-eminence of moral leadership in human society, we shall discover it, not in the goodness or greatness of achievement which makes him an object of religious faith, but in the principle or method of that goodness, which makes him the Author, the Inspirer, of a like goodness in ourselves. It is the way in which he has won his leadership. . . . which reveals to us the secret of his spiritual mastery.

"We may search hundreds of Christian commentaries of every age, and find no satisfying, convincing portraiture of the life of Jesus. But if we go back two millenniums and a half, we shall find this life was better understood by an enlightened and spiritual Hebrew, five hundred years before the birth of Jesus, than it has been by innumerable unspiritual Christians five hundred or eighteen hundred years after his death."

Life is something that acts from within even against external hindrances, whether physical or spiritual. Life makes itself known by what it does and what it becomes. . . . The tiniest acorn put into the soil will begin to grow toward a great oak, and unless hindered will in time become a mighty tree, full grown and complete.

The Christian is one who has received a new life. . . . It makes him a new creature, for it is of the nature of God. The old life of the natural disposition and desires which is called the life of the flesh, is now brought under a new force which changes the direction of growth and by a new impulse begins the production of a new type or a new kind of man from what he would have been had this principle been rejected.

If this new life is of God we may well conclude that its growth will be toward a divine ideal, toward all that is Godlike and perfect. This was Paul's conception of this life, "May grow up into him in all things," "till we all come . . . unto a perfect man."

*The Standard.*

Rev. P. S. Henson, D.D., says in *The Examiner:* "Undoubtedly for twenty centuries Christianity has been a mighty factor in this world's affairs. Many have professed it who never possessed it, and many who were genuine disciples of it have so utterly misunderstood the genius of it that in its name they have perpetuated the most abominable atrocities. But take it all in all, its beneficent restraints have contributed more than all other agencies to hold in leash man's brutal passions and to awaken within him the noblest ambitions. It has been the banner-bearer in the march of human progress and has laid the foundations and reared the walls of all the noblest structures of modern civilization. In education and in politics, in literature and in law, in reformation and emancipation, it has been the all-pervasive and determinative element."

Bishop Henry W. Warren, LL.D., says in *The Christian Advocate:* "So to-day some of the most effective Church organizations have essentially no preaching at all. Naturally after a few points of doctrine have been expounded to a given people ten years they become flat, stale, and unprofitable. But a service that ministers to the larger faculties of spiritual life is perennially new. The preacher who descends from the lofty realms of worship, faith, love and its expression in life, to mere intellectual demonstrations, descends from prophet to schoolmaster: from 'Thus saith the Lord' to thus saith logic, science, mind, with ample room for other minds to controvert and overturn. He brings his people down with him. It is as great a fall as if the teacher of dialectics fell to teaching only athletics."

Rev. C. H. Mann writes in the *New Church Messenger:* "The fulfilment of Scripture has been something vastly grander than what has been generally supposed. It is something more than the historical occurrence of certain events that have been foretold; it is something more than a realized prophecy, in which by prophecy is meant a telling beforehand what shall come to pass. . . . It is when man loves with the love that is revealed in the Scripture, and when he thinks with the truth that is therein taught, and when he acts as it is therein commanded that the Scripture is fulfilled. All other realizations of the Word is empty and meaningless; but this fulfilment of it is actual and full of life."

Rev. Robert Morris Raab, B.A., says in the *Homiletic Review*:—

"Is Protestantism losing faith in prayer? This is a delicate question. For my own part, I positively believe that Protestants are losing faith in the efficacy of prayer. This, of course, slants toward atheism. The man who deeply believes in God must believe in the efficacy of prayer, or suppose God bound. But there is a theory gaining considerable currency among Protestants that prayer is not valuable for any favor it brings from God, but valuable only for the beneficial reflex influence it has on the soul. This, of course, is a practical surrender of the Bible doctrine of prayer, and evidences a loss of faith in the supernatural."

Rev. N. A. Haskell is quoted in the *San Jose Mercury* as follows:—

"The religion of love and of good-will among men, though as old as is civilization, has been so confined within the narrow theologies of the churches, so overlaid of the supposed essentials of religion, that its beauty has rarely been seen or its presence recognized.

"When the Church of the new century reverently puts aside the theologies that have served the needs of man in an age that is past, and brings into the life of men this simple religion of love and of good-will, it will be welcomed and proclaimed throughout the land as a new religion."

The sum of the matter is, that it is not enough that a man acts conscientiously; he should have an enlightened conscience. The conscience may not only lack sensitiveness, but it may lack information. It may be inactive, and it may be badly instructed. It has been justly said that many of the grievous sins of our time, the crimes against society, the swindling transactions, the defalcations, the betrayals of trust, the repudiation of public obligations, are not deliberate violations of what is clearly seen to be right, but rather the result of consciences stupefied, sophisticated, and uninstructed.—*The Watchman.*

The remedy for a joyless life is more Christianity; more faith and love and service, and not less. Seeking delight for itself is courting disappointment. When we are wholly occupied with work or with companionship joy comes unsought. The happy Christians are intent upon the business of their life for God, absorbed in the work their Father has given them, studious to serve Christ in ministry to his brethren, instant in prayer.

*The Congregationalist and Christian World.*

Christ is the standard by which every man must test himself. It is not altogether unprofitable to make use of lower standards. To measure ourselves by the prophets, apostles, martyrs, and holy men who witnessed a good confession will enable us to see our own shortcomings and make us feel our need of grace. But all standards are imperfect except Christ.—*The Christian Advocate.*

Superstitions have indeed been associated with religion. So they have with law, medicine, nature, the family, the State. But we do not reject what is true in them with the false. Religion is just now eliminating itself from many superstitions, and there is every day more religion in the world and less ignorance, doubt, and fear.

REV. C. W. BIDDLE.

Would you see God? Look about you among the good, the true, the loving hearts of His children, and in every trait of holiness and benevolence there present see Divinity ever freshly incarnating itself, to teach new lessons of goodness, righteousness, and love to all the sons of men.

JOSEPH MAY.

There are worse things than persecution for righteousness' sake and among these is the supple conformity to the world, the easy indifference which bends to every influence and has no principle of resistance in it. That way lies the danger of the Church to-day.—WILLIAM M. TAYLOR.

The *Churchman* believes that a dual standard in the Church, one for the clergy and one for the laity, has had, and will always have, disastrous effects on Christian teaching and Christian practice.

Toleration in matters of religion I account the best fruit of all the struggles, labors, and sorrows of the civilized nations during the last four centuries.

PRES. C. W. ELIOT.

*Zion's Herald* has the following: "The worst of all heresies is the heresy of the heart, the most perilous of scepticism is the atheism of the affections."

Carroll D. Wright declares "the decalogue" to be as good a labor platform as any.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only*.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, marbled edges, Oxford India paper, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL; 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The Agricultural Department is to have a model farm situated just across the Potomac. It will embrace that part of the Arlington estate not used for the National Cemetery, amounting to about four hundred acres and bordering on the river. It is the purpose of Secretary Wilson to make it an attraction for farmers, not only of the United States, but from all over the world. There will be model farm buildings, a model orchard, and all sorts of crops, standard and new.

Of the three hundred and eighty-six members who will comprise the next House of Representatives, two hundred and eighty-three of the present House have been renominated. A large majority of these renominations are in districts that practically insure their election.

It is probable that the Civil Commission will increase the Philippine appropriation for the St. Louis Exposition by one hundred thousand dollars, making the total three hundred and fifty thousand dollars.

At the close of the last fiscal year the funds made available for irrigation purposes by the sale of public lands amounted to $9,500,000.

Attorney-General Knox has made to the President his report upon the validity of the title of the Panama Canal.

**Foreign.**

Grand Duke Nicholas of Russia, in recently paying a friendly state visit to the Sultan of Turkey, passed through the Dardanelles on a Russian ironclad. This is the first foreign battleship that has passed through the straits since the Crimean War, forty-seven years ago. By the treaty signed at the close of that war the Dardanelles were closed for all time to any ship of war save those of Turkey. It is not improbable that the result of the Duke's visit and his action in taking a Russian man-of-war through these waters may be the neutralizing of the straits through a congress or an interchange of notes, as has already been done in the case of the Suez Canal, and opening them to the warships of all nations and making it an international waterway. In this event the Powers would undoubtedly compel Turkey to raze the extensive fortifications that line the shores of the Dardanelles.

A check to the sale of the Danish West Indies to the United States came last week when the Landsthing rejected the bill at its second reading on a tie vote. In 1867-68 negotiations for the sale of the islands were ratified by Denmark and by a plebiscite on the islands, but the treaty was shelved by the United States Senate for two years and finally reported adversely. The present negotiations have continued intermittently for several years, and the present treaty was signed January 24 by Secretary Hay for the United States and Constantine Brun for Denmark, and ratified by the Senate February 17.

It is reported from authoritative sources that France, Germany, and Great Britain have concluded an agreement providing for the military evacuation of Shanghai and the Yang-Tse-Kiang valley. The negotiations have brought about an important extension of the open door policy as urged by Secretary Hay. The United States, while not a party to the negotiations, shares in the benefits of the agreement as to equality of treatment and has been kept advised concerning the negotiations. An early date of evacuation is expected.

The correspondent of the *London Times*, who has just returned from a two months' tour of Manchuria and an inspection of the Russian railroad, says Russia has made such effective use of her opportunities during the past five years that Manchuria is virtually a Russian province, enriched with modern improvements and marked prosperity. Even after evacuation her privilege to guard the railroad will still make her occupation effective.

Premier Combes of France has had a conference with the National Committee of the Miners' Federation and the latter agreed to submit the demands of the strikers to arbitration. The Premier was also to consult with the delegates of the companies. His action is looked upon in France as being in emulation of President Roosevelt's intervention in the coal strike in the United States.

The King of Sweden and Norway, to whom was referred in 1899, as arbitrator, by Great Britain, Germany, and the United States, all claims of private individuals growing out of military operations in Samoa, has reported in favor of Germany.

It is reported that the Cuban House of Representatives has passed a bill granting the National Telephone Company, an American concern, a concession of fifty years' duration for an exclusive telephone system in Cuba.

Captain Otto Sverdrup, the Arctic explorer, has been invested by King Oscar with the grand cross of St. Olaf, and given an annual allowance of $810.

**Industrial and Commercial.**

The gold now in the United States Treasury exceeds that of any previous time in the history of the country, and, with one possible exception, it exceeds that of any country at any time in the history of the world. The single reported exception is that of Russia about eight years ago, when that country was preparing to resume gold payments. At that time Russia is said to have had in its treasury $598,000,000 in gold. Last week the vaults of the United States Treasury contained $573,936,194, an increase since July 1, 1901, of $79,087,897.

The great Soo power canal built on the American side of St. Mary's River, Michigan, at a cost of between four and five million dollars, and expected to develop sixty thousand horse-power, was formally opened last week and was made the occasion of a great industrial jubilee. The first power the 320 turbines produced was used to start a street car.

It is stated that the Southern Pacific Railway after a ten months' trial of oil for fuel for its locomotives, will return to the use of bituminous coal. It is reported that the intense heat cracked the boiler sheets, and that the coating formed on the boiler flues caused a great waste of fuel and heat.

A combination of independent steel manufacturers is reported to have purchased iron ore tracts in Michigan and Minnesota at a valuation of sixty-eight million dollars.

**General.**

The experiment showing the rotary motion of the earth originally made by the French astronomer, Toucault, in 1861, in the Pantheon at Paris, was lately repeated there by Flammarion. The pendulum attached to the dome of the Pantheon consisted of a piano wire two hundred and twenty feet long and sustaining a ball weighing fifty-six pounds. When allowed to swing freely through a long arc, the stylus attached to the ball at each return marked a different point, as if the table beneath were revolving.

The Boston Museum of Fine Arts has recently acquired two valuable paintings. One, purchased from a private collection in Venice, is an autograph canvass seventeen by twenty-two inches by Paul Veronese entitled "Justice;" the other is an unfinished portrait by Thomas Lawrence. The trustees have recently created a new department, that of Egyptian Art.

The official reports of the committee of the Automobile Club of America allows perfect scores to only eighteen machines in the recent "reliability run" from New York to Boston and return. As sixty-eight of the seventy-five machines which entered the run finished, a longer run for next year is suggested,—New York to Montreal,—and in 1904 New York to St. Louis.

The British cable steamship Colonia arrived at Honolulu October 10, after laying a cable 3,455 knots in length from Vancouver, B. C., to Fanning Island. The work of landing the cable at Fanning Island will be done by the Angelia, while the Colonia will later be occupied with the American cable between Hawaii and the Midway Islands and Guam.

Leopold Batrres, an eminent Mexican explorer and authority on archæology, has just returned from another expedition to the cities of Zapoteen in the state of Oaxaca, where the life of peoples who lived three thousand years ago is being disclosed with striking similarities between the mortuary relics of Egypt and the earlier Mexican civilization.

The Grand Trunk Railway Company, which controls the Central Vermont system, is credited with plans for extensive improvments in its freightage and wharfage facilities at its New London, Conn., terminal, a step in its proposed policy of shipping through that port a larger volume of freight from Canada and the West.

Dr. Woodrow Wilson was last Saturday inaugurated as president of Princeton University amid impressive and befitting academic ceremony. There were present many representatives from educational institutions and from public life.

Over thirteen thousand people visited the Corcoran Gallery of Art in Washington one day recently. The number of visitors during the month has been unusually large.

The trustees of the University of Chicago decided on the 22d inst. in favor of separate instruction for men and women at the university.

The crop of apples for this season is estimated at forty-three million bushels as against twenty-seven million last year.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Thanksgiving Day.

**Order of Service for the Mother Church and Branch Churches.**

1. Organ Voluntary.
2. Hymn.
3. Reading the Thanksgiving Proclamation of the President of the United States, or the Governor of the state, or both.
4. Reading a Scriptural Selection.
5. Silent Prayer, followed by the audible repetition of the Lord's Prayer with its spiritual interpretation.
6. Hymn.
7. Reading the Explanatory Note on the first leaf of the *Quarterly*.
8. Announcing the subject of the Lesson-Sermon, and reading the Golden Text.
9. Responsive Reading by the First Reader and the congregation.
10. Reading the Lesson-Sermon prepared by the Bible Lesson Committee.
11. Solo.
12. Testimonies by members of the church, appropriate for the occasion.
13. Hymn.
14. Reading the Scientific Statement of Being, and the correlative Scripture according to 1 John, 3 : 1, 2, 3.
15. Pronouncing Benediction.
16. Organ Voluntary.

No collection is to be taken at this service.

### The Lesson-Sermon.

*Subject:* GIVING THANKS.

*Golden Text:* "O give thanks unto the Lord, for he is good: for his mercy endureth forever." Psalm 107 : 1.

**Responsive Reading:—1 Chronicles, 16 : 8–14, 25–29.**

8 Give thanks unto the Lord, call upon his name, make known his deeds among the people.

9 Sing unto him, sing psalms unto him, talk ye of all his wondrous works.

10 Glory ye in his holy name: let the heart of them rejoice that seek the Lord.

11 Seek the Lord and his strength, seek his face continually.

12 Remember his marvelous works that he hath done, his wonders, and the judgments of his mouth;

13 O ye seed of Israel his servant, ye children of Jacob, his chosen ones.

14 He *is* the Lord our God; his judgments *are* in all the earth.

25 For great *is* the Lord, and greatly to be praised: he also *is* to be feared above all gods.

26 For all the gods of the people *are* idols: but the Lord made the heavens.

27 Glory and honour *are* in his presence; strength and gladness *are* in his place.

28 Give unto the Lord, ye kindreds of the people, give unto the Lord glory and strength.

29 Give unto the Lord the glory *due* unto his name: bring an offering, and come before him: worship the Lord in the beauty of holiness.

### The Truth of the Matter.

To the Editor.

In your issue of Monday, October 6, was an unwarranted attack upon Christian Science by Dr. Leavell, in an abstract of his sermon delivered in the First Presbyterian Church, this city, and it is with the view of correcting misapprehension of the teachings of Christian Science that I ask the privilege of replying.

Christianity was ushered in through persecution from other sects who differed from it; and to-day, as of old, the cross still attends its efforts to bless humanity; but where one has a message which he knows will comfort the sorrowing and help them, he delivers that message without fear of unkind criticism or unjust comparison.

The reverend gentleman contends that Christian Scientists are lacking in clear moral intelligence. The writer has been a student of Christian Science for the past fourteen years, and yet his moral sense is acute enough to distinguish between right and wrong sufficiently to deter him from making an attack upon a religious body of whose teachings he is ignorant—Christian Scientists are forbidden to do so by a church by-law, which reads as follows:—

Art. 27, Sect. 11. "A member shall not publish, nor cause to be published, an article that is uncharitable or impertinent towards religion, medicine, the courts, or the laws of our land" (Church Manual, p. 61). We are admonished to "love one another," and to practise the Sermon on the Mount which cautions us against unjust criticism. Dr. Leavell says, "they call everything good." To this statement I reply that Christian Science is based upon the First Commandment of the Decalogue: "Thou shalt have no other gods before me." From this premise Christian Science designates as evil all that is opposed to the nature and character of God. In the Gospel of John we read: "God is a Spirit." God is infinite; hence Spirit is infinite—is infinite Good. From this Scriptural authority we declare that the opposite of Spirit, namely, matter, is evil. This position is proved when we accept the statement that God—Spirit—is omnipresence, omnipotence, and omniscience. In Psalm 139:7–10, we read of the omnipresence of Spirit; and if Spirit be omnipresent, its opposite, matter, cannot be present anywhere.

Christian Science does not refute individual consciousness nor the individuality of man, as the Doctor avers. Christian Science declares that sin is not of God's creation, and that true consciousness does not include a knowledge of sin, and that it is possible to fulfil Jesus' command: "Be ye therefore perfect, even as your Father, which is in heaven is perfect." The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, says on page 265:—

"This scientific sense of being, forsaking matter for Spirit, by no means suggests man's absorption into Deity, and the loss of his identity, but confers upon him enlarged individuality, a wider sphere of thought and action, a more expansive love, a higher and more permanent peace."

And in her message of 1901 Mrs. Eddy writes:—

"Do Christian Scientists believe that evil exists? We answer, Yes and No! Yes, inasmuch as we do know that evil, as a false claim, false entity, and utter falsity, does exist in thought; and No, as something that enjoys, suffers, or is *real*. Our only departure from ecclesiasticism on this subject is, that our faith takes hold of the fact that evil cannot be made so real as to frighten us and so master us, or to make us love it and so hinder our way to holiness. We regard evil as a lie, an illusion, therefore as unreal as a mirage that misleads the traveler on his way home.

"It is self-evident that error is not Truth; then it follows that it is untrue; and if untrue, unreal; and if unreal, to conceive of error as either right or real is sin in itself. To be delivered from believing in what is unreal, from fearing it, following it, or loving it, one must watch and pray that he enter not into temptation,—even as one guards his door against the approach of thieves. Wrong is thought before it is acted; you must control it in the first instance, or it will control you in the second. To overcome all wrong it must become unreal to us; and it is good to know that wrong has no divine authority; therefore man is its master. I rejoice in the scientific apprehension of this grand verity.

"The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality. Error uncondemned is not nullified. We must condemn the claim of error in every phase in order to prove it false, therefore unreal."

Christian Science denies sin, sickness, and death as entities, because it declares with St. John that God is the only Creator. God is Good, and His creation was pronounced "very good," and finished. Sin, sickness, and death are not found mentioned in this record of God's creation; and they cannot be creations of God, for St. John says: "For this purpose the Son of God was manifested, that he might destroy the works of the devil," and we know that is just what Jesus did. He destroyed sin, sickness, and death, and declared "the works that I do ye shall do." As true followers of the Master, every one shall have to prove his faith by his works, and in doing as he commanded. When the law of the spirit of life in Christ Jesus has made us free from the law of sin and death, then sin will be proven unreal, because it will have no power over us, and the desire to sin or belief of pleasure in sin will be destroyed.

JAMES D. SHERWOOD.
In *Houston* (Tex.) *Post*.

### The Last Great Enemy.

THE writer of the following article does not adequately represent the teaching of Christian Science, but his apprehension is far in advance of religious thought in general and is specially interesting as an earnest of things to come.

An old proverb says, "There is a remedy for everything but death."

Is there no way to overcome that? In this day and age we cannot afford to speak too quickly. To-day we do not overcome it, but is there any reason to believe that man has reached the end of knowledge? The question we have in mind now is not what we already do, but what it is possible to reach.

We submit that if ever a man appeared upon this earth as a scientific teacher it was Jesus of Nazareth. In a "practical" as well as "metaphysical" sense he was scientific. Honestly and reasonably interpreted, he was accurate in his teachings. It has required two thousand years of slowly wearing away of the curtains of blindness to determine this great fact, but sufficient is now visible to establish it. One thing after another has become manifest, and time has proved his promises, precepts, and teachings, to be correct. He has been wrongly interpreted by the world through these centuries, and fully as often by those who desired to be faithful followers, as otherwise, but in our blindness we did not see, and even in seeing we perceived not the truth.

His promises in reference to healing the sick have been proved, and are being proved every day, showing that the laws upon which he worked and which he attempted to teach are not only possible, but fundamental. Only those who have investigated fully and without prejudice have a correct understanding of the potency and power of these

Digitized by Google

laws. No man or woman who seeks to investigate them, filled with pre-existing faith in matter, and with a prejudiced purpose, can present an opinion that is of value to those who earnestly seek the truth. Very slow and unsatisfactory headway is made in trying to serve two masters at the same time.

Assuming only what is true, that his teachings as laid down have proved to be scientifically correct so far as the world has reached a point to work them out, there really remains but one thing more to test literally, and that is what the world has known through its advancing years as "death." Up to this point he has been found not wanting. Is it possible that he really literally means us to understand that there is a way, by learning and following which the last great enemy, death, may also be overcome? His other teachings are practically proved to be correct right here in our present periods of life. Is this an exception? Are the other promises intended to be for every-day use, and this only for dreams and hopes? He pledged to the world that he would overcome this great event, and the sacred history bears out the statement as true. All else having been proved true in experience and development (saying nothing of historical accuracy), is it not reasonable to believe that this too is to furnish to the world a great sense of relief in the future?

Every student of the Bible narrative covering the life of this wonderful teacher, is conversant with his promises and pledges, but we venture to say that not ten persons who read this believe to-day that his promise to the world that it should overcome death, as the last great enemy, was really in earnest; if in earnest, they will construe it as meaning something else—something away off several millions of miles in space and centuries in time—a mere hope to ease the harsh sorrows of earth. The ordinary man of earth, who has never deceived us, when he has had plenty of opportunity to do so, we bank upon. The person who has been our honest teacher and friend covering a lifetime, and never swerved from true loyalty, we cling to as the salt of the earth. What holds true in business and social life as a basic proposition is true everywhere.

It is quite evident that if people would give as much time to the honest study of these questions as to some of the most useless frivolities of life, they could find a mine of treasure.

From Editorial in *Charlotte* (Mich.) *Leader.*

## The One Healer.

NOTHING short of understanding faith in God, is capable of reforming the sinner, healing the sick, and ultimately overcoming all error on a natural, common-sense, demonstrable, Christian basis. And, while Christian Science often heals those who claim to have little or no faith in it prior to their own healing, no other class of Christians have such an intelligent and practical faith in God as Christian Scientists; for they rely on Him and depend upon Him to supply all their needs,—present as well as final salvation from all evil, sin, disease, and death.

They are also actually proving in a Christian, scientific way that all the promises of Jesus are as true and available in this age, as when they were first given; that Christ, who is "the same yesterday, to-day, and forever," has lost none of His healing, saving, and redemptive power; that "these signs shall follow them that believe," in the twentieth as well as in the first century.

Christian Science, as taught by Rev. Mary Baker Eddy, its Discoverer and Founder in and for this age, restores the original spiritual meaning and scientific sense of the Scriptures; and, as this spiritual interpretation and scientific sense of the holy Scriptures God, man, and the universe are discerned, blind faith in God gives place to understanding faith, or Christian Science. J. R. MOSLEY.

In *Macon* (Ga.) *Telegraph.*

## "By their Fruits."

THE strength of Christian Science lies in its practical results. It is a positive force. It arrests attention by its dynamics. On every hand people speak of the happy changes it has wrought in their friends or families. They know of former drunkards who through it have lost all desire for stimulants, morphine fiends who are freed from the drug, dishonest men and women made honest and pure, boorish and selfish persons becoming refined and loving, lifelong invalids rendered hale and hearty, chronic grumblers turned into cheery good fellows, consumptives healed, and the insane restored to their right minds. They see husbands and wives reunited and harmony enter homes where discord once reigned. They find gross materialists taking pleasure in spiritual matters, and agnostics and so-called atheists coming like little children to learn of the Scriptures.

If Christian Science had done nothing more than to supply the "Key to the Scriptures," which has unlocked the treasures of the Bible to those who were once indifferent or actually hostile, this alone would have sufficed to earn for it the high place among the older Christian denominations which it is taking to-day. W. D. MCCRACKAN.

In *New York Medical Journal.*

## Charity.

A RETROSPECTIVE view of religious history, the large number of different denominations, all professing to follow Christ, the struggle each had coming into existence, and when once in power the lack of tolerance each had for the other, wielding the lash of persecution with the cry of "heresy," against the new ones who stepped aside from the long cherished and beaten paths of the forefathers; the envy, strife, and jealousy that has arisen on doctrinal points between professed Christians disrupting the brotherhood of mankind, all show the need of Charity. Had there been a greater exemplification of this Christian trait our Master would not have been crucified, and instead of the cross and crown forming the central emblem of Christianity, it would have been marked with charitable toleration for those who honestly differ with us. Every stain on the pages of sacred history, all misrepresentation and denunciation of the motives of reformers, show a lack of toleration, a lack of Charity, and a violation of the Golden Rule to give unto others the same rights which we ask for ourselves.

Among the signs of the times at the dawn of the twentieth century is the death of the embers of religious persecution, and a greater demonstration of Charity. The more spiritually minded clergymen are taking in a wider scope of vision and recognition of good wherever found, regardless of denomination. Despite some accusations made against Christian Science, and the fact that some denominational editors positively refuse to correct errors published regarding Christian Science, yet, nevertheless, the Christian Scientist is striving and will continue to demonstrate to the world in a most practical way that "God is Love." In due time true worth and work will be recognized, and the Christian Science cause will be honored in accordance with its fruit, the standard by which all things are to be measured.

If one person looks through a more spiritual lens than another, as is often the case, then there is need of Charity on the part of both that the one gazing through a more material lens does not accuse his brother of being too "ideal;" and the other display a lack of Charity in patience until his brother becomes more spiritually minded. If one has attained that point of growth where they have more confidence in God than in material medicine, there is need of Charity toward those who have not reached that point; if one has a brighter glimpse of the spiritual

Digitized by Google

significance of the Scriptures there is need of Charity toward those who have a more material concept of God, and give the Bible a more material rendering. Our Master manifested the greatest Charity toward all who opposed his work, even those who maligned and persecuted and crucified him, and he prayed the Father to forgive them because they knew not what they did.

"Students are advised, by their teacher, to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these opinions. Let us be faithful in pointing the way through Christ, as we understand it; but let us also be careful always to 'judge righteous judgment,' and never to condemn rashly" (Science and Health, p. 444).

In our work it is also well for us to refresh memory with Paul's admonition to the Corinthians, beginning,—

"Though I speak with the tongues of men and of angels, and have not charity, I am become as sounding brass, or a tinkling cymbal."

LLOYD B. COATE.

### "O Ye of Little Faith."

CHRISTIAN BURKE.

A sower sowed his seed, with doubts and fears;
"I dare not hope," he said, "for fruitful ears;
Poor hath the harvest been in other years."
Yet ere the August moon had waxen old
Fair stood his fields, a waving sea of gold;
He reaped a thousandfold!

In a dark place one dropped a kindly word;
"So weak my voice," he sighed, "perchance none heard;
Or, if they did, no answering impulse stirred,"
Yet in an hour his fortunes were at stake,
One put a life in peril for his sake,
Because that word he spake!

"Little I have to give, O Lord," one cried,
"A wayward heart that oft hath thee denied;
Couldst thou with such a gift be satisfied?"
Yet when the soul had ceased its mournful plaint,
God took the love that seemed so poor and faint
And from it made a saint!

*Exchange.*

When I see the superstitions which the world's religion has fastened on the conscience, the spiritual terrors with which it has haunted and subdued the ignorant and susceptible, the dark, appalling views of God which it has spread far and wide, the dread of inquiry which it has struck into superior understanding, and the servility of spirit which it has made to pass for piety—when I see all this, the fire, the scaffold, and the outward inquisition, terrible as they are, seem to me inferior evils. I look with a solemn joy on the heroic spirits who have met, freely and fearlessly, pain and death in the cause of truth and human rights.

There are other victims of intolerance on whom I look with unmixed sorrow. They are those who, spell-bound by early prejudice or by intimidations from the pulpit and the press, dare not think; who anxiously stifle every doubt or misgiving in regard to their opinions, as if to doubt were a crime; who shrink from the seekers after truth as from infection; who deny all virtue which does not wear the livery of their own sect; who, surrendering to others their best powers, receive unresistingly a teaching which wars against reason and conscience; and who think it a merit to impose on such as live within their influence, the grievous bondage which they bear themselves. How much to be deplored is it, that religion, the very principle which is designed to raise men above the judgment and power of man, should become the chief instrument of usurpation over the soul.—WILLIAM ELLERY CHANNING.

## The Lectures.

### At Oakland, Cal.

Every seat of the large auditorium of First Church of Christ, Scientist, was occupied last night [October 7]. Chairs filled every available space and people even sat in the organ loft. The occasion was a lecture by F. J. Fluno, M.D., C.S.D., on the subject of "Christian Science a Reasonable and Rational View of All Things." Professor McChesney, former principal of the Oakland High School, introduced the speaker in the following words:—

I presume that every one present will concede that as the centuries have passed there has been a gradual change in human thought from a mere material view of the world to one partaking more or less of the spiritual. I say a gradual change, and I may also say that at times the change was so slight that it was well-nigh imperceptible. There have been times when there seems to have been a retrograde movement. The careful reader of history, however, must recognize the fact that there has been a constant uplift of human thought from the material to the spiritual. Were this not so, Christianity has not fulfilled its mission and will have much to answer for. Nearly two thousand years ago Christ appeared, and by his words and deeds gave a wonderful impetus to a spiritual growth among his followers, and so of others who listened to their teachings. But materialism and spirituality are so diametrically opposed to each other, and human thought is so inclined to work along the lines of least resistance, that a mere material view is difficult to overcome. This fact has been fully recognized during the Christian era, and we see that numberless expedients have been resorted to in order that the spiritual side of man might have a more satisfactory growth. Asceticism in various forms has been practised, the idea being that by mortifying the flesh the spiritual sense would be quickened. Men and women have shut themselves away from a wicked world, hoping and trusting that in the seclusion of a monastic life they would catch glimpses of beatific visions which were denied to ordinary mortals. By these and other expedients, which I cannot dwell upon at this time, men have sought to save themselves from sin and thus prepare themselves for a place, after life's fitful dream had passed, where all would be joy and peace. Theories were promulgated; some beautiful, but evanescent; some ingenious, but impractical; others learned or dogmatic, but all failed to a large extent in presenting truth so that it might be a working basis of action, equally adapted to the ignorant and the learned. Men saw away in the distance a faint light, but they were unable, however much they mortified the flesh or however skilled in dialectics they might become, to approach it sufficiently near to bask in its vivifying beams. Let me not be understood as affirming that the numberless sects which have arisen during the centuries have not been productive of good. On the contrary, I think they have been of great value in leading to a higher standard of thinking and living. Their very existence is evidence of the longing of the human soul for a truth which satisfies and is equal to all emergencies, and thus it has happened that even imperfect and unsatisfactory religious beliefs and practices have had their value in raising mankind to a more perfect understanding of God and of themselves as related to Him.

During the last quarter of a century a new candidate has arisen for the consideration of those who seek a higher spiritual life. It has spread with such remarkable force and rapidity throughout the Christian nations that it merits our serious attention and study. If I may be permitted a personal remark I would say that while I am not a Christian Scientist, still, from my limited observation of its influence over the lives and conduct of its followers, and my imperfect understanding of the truths on which its

Digitized by Google

teachings are based, I consider Christian Science worthy the investigation of all who believe in a higher spiritual life and would like to enjoy the consolations it affords. If the sick are healed, if men are made to love justice and truth, if they are imbued with that love for God and man which surpasseth understanding, then Christian Science cannot be from the devil, but must have its source and origin in the fountain of God. If the fruit is love, the tree must draw its nourishment from a like quality.

This meeting has been arranged for the purpose of extending the knowledge of those who are somewhat familiar with the principles of Christian Science and have a desire for more; also that those who have given the subject little or no thought may receive an inkling at least of what it stands for as compared with the other religious denominations of the day. The speaker of the evening is a member of the Christian Science Board of Lectureship, and thus has had ample opportunity for familiarizing himself with the fundamental teachings of Christian Science. I take pleasure in introducing F. J. Fluno.—*Oakland Tribune.*

### At Richmond, Ind.

A large and representative audience responded to the invitation to hear Judge William G. Ewing of Chicago, on Christian Science at the Gennett Opera House yesterday afternoon [October 12]. H. Reese Marlatt presided over the meeting and introduced Judge Clarence A. Buskirk, ex-Attorney-General of the state, who delivered an appropriate prelude to Judge Ewing's address.

*The Sun-Telegram.*

Judge Buskirk's introduction was in part as follows:—

"Have faith in God," is a loving command, a divine philosophy, and a joyous promise. It is one of the living watchwords of Christian Science. Under the standards where such words are penciled hundreds of thousands of rejoicing men and women are already gathered throughout Christendom. But the most sublime thought is like a sunbeam obscured by clouds unless it has fruitage in action. Jesus not only gave us sublime teachings, but he sought to prove to mankind their truthfulness by what he did and entreated us to do. He proved that faith in God is sure and reasonable by demonstrating that through such faith the sick could be healed, the lepers cleansed, the sinners reformed. And he expressly promised, basing his promise upon the eternal immutability of Truth, that, "He that believeth on me [that is, believeth in the truthfulness of Christ's teachings], the works that I do shall he do also."

Suffer me to say that I stand before you as one who has tested Christian Science in his own household for over seven years, and who has never found it wanting, but at all times a sure and priceless benefaction. I have faithfully tried to study it during those seven years, and I wish to say to you and to all that it is my sincere and unhalting conviction that Christian Science is based and built on the rock of Truth. Christian Science brings great physical benefits to its students, but still greater are the moral benefits which it brings to them. No matter what a man may have been; no matter in what dark caverns of atheistic doubt he may have been stumbling and falling; no matter how successfully the sirens of sensuality may have sung to his foolish senses, luring him on towards destruction; no matter how abject, hopeless, friendless, and forlorn he may have become; if that man can once grasp and realize the joyful verity that God is his loving Father, that there may be an end to suffering and sin, that hope and faith and joy are the ultimate lot of each and all of us, and that there is no real law but the law of God and no real power but that of Good, then that man begins to learn the dignity of his own stature as standing in the spiritual likeness of God, and begins the divine process of purification, regeneration, and disenthralment.

*Correspondence.*

### At Sioux City, Ia.

Carol Norton of New York City, delivered an address yesterday afternoon [October 12] at the Grand Opera House, upon "Christian Science is Applied Christianity." The house was filled, it being estimated that the listeners numbered over a thousand. Mr. Norton proved to be an interesting and forceful speaker. He was introduced by Frank P. Van Gorder.—*The Sioux City Tribune.*

The introductory remarks were as follows:—

*Friends:*—The lecture this afternoon is given for the purpose of presenting to the public a brief statement of what Christian Science teaches, and to correct false impressions about it. The opposition to the scientific interpretation of the Scriptures, which Christian Science affords, comes from a wrong apprehension of what Christian Science teaches.

Owing to this and many other misconceptions, a Board of Lectureship has been established, the members of which are thoroughly informed on this subject, thus affording the public the opportunity of hearing the truth about Christian Science. The one who is about to address you does so with authority from the Mother Church in Boston. I take pleasure in introducing Mr. Carol Norton, member of the Christian Science Board of Lectureship, of The First Church of Christ, Scientist, in Boston, Mass.

*Correspondence.*

### At Whitewater, Wis.

Last Tuesday evening [October 7] Judge Septimus J. Hanna of Boston, spoke at the Congregational Church in this city. The prominence of the lecturer and the fact that the religion of Christian Science is to some an unknown religion, led many to accept the invitations issued by First Church of Christ, Scientist, of this city and to be present at the lecture. Judge Hanna opened his address with a beautiful eulogy upon Mrs. Eddy, the Founder of the faith he was to expound. He spoke of her work, her exemplary life, and her zeal in the cause she espoused. The lecturer then defined the position of the Christian Science believer, and some were surprised that his quotations and sentiments were almost wholly from the Scriptures and particularly from the sayings of Christ. In fact, the tenets embraced the highest New Testament standard of living. The subject of mental healing, or divine healing, was discussed at full, and Bible quotations given to support the theory of healing. It was certainly time well spent to listen to Judge Hanna.—*Th Whitewater Gazette.*

### At Portsmouth, O.

Judge William G. Ewing of Chicago, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, Boston, lectured at Christ Episcopal Church Monday evening, October 6, to a good audience. The audience was a cosmopolitan one, composed of people of all creeds and no creeds. Attorney William B. Grice introduced the lecturer. He said, in part, that he believed there was something in Christian Science, and while not a full believer himself asked an unprejudiced hearing to the distinguished speaker of the evening, who was a man of high learning and had held many positions of trust. He said we could know something of all things but not all of anything, and asked the hearers to adopt his plan of accepting whatever might seem to them to be good, and of rejecting whatever might seem to be not good. He then introduced Judge William G. Ewing of Chicago.

The speaker was listened to with undivided attention, and many remarks of appreciation were heard after the lecture. Visitors were present from Charleston, West Va.; Cincinnati, and Canton, Ohio.—*Correspondence.*

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### An Exalted Ministry.

As Christian Scientists we hold a peculiarly sacred relation to our fellows, and it has been truly said that ours is an holy calling. We are summoned to comfort the sorrowing, to bind up the broken-hearted, to reclaim the sinner, to encourage despairing endeavor, to make wasted lives useful, to heal the sick, and all this in the name of Christ, in the way of God's appointing.

Ours it is to extend a helping hand to the repentant sinner, ours to defeat the cunning of the tempter, ours to annul the rule of malice, hatred, hypocrisy, lust. Truly the responsibility is great! Ours it is to obey that mighty new commandment, to love as Christ loved; ours it is to be meek with the meekness of Jesus, merciful as our Father in heaven is merciful, just with the immutable, unswerving justice of infinite Love; ours it is to be steadfast in purity of thought, purity of word, purity of deed.

We have solemnly promised "to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus" (Science and Health, p. 497). Our daily prayer is, "Let the reign of Truth and Love be established in me, rule me, and rule out of me all sin" (Manual of the Mother Church). Thrice blessed is that man who is truly a practitioner of Christian Science, who has crucified the lusts of the flesh, who is indeed a minister of grace. M.

### Anticipated Troubles.

WHEN we learn that the present moment is the only moment, and that this moment's demonstration is the whole demonstration, we shall have come into possession of our whole inheritance. It is not the present obstacle that cannot be removed, not the present duty that cannot be performed, not the toil of this hour that fatigues. It is the anticipated obstacle, duty, or toil that wearies and discourages.

As the shadows of evening deepen and darken in the gathering twilight, we may forget that with to-morrow will come to-morrow's glad sunlight; likewise we are liable to forget that with each coming duty will come strength for its performance.

Mortal mind, even while sleep should knit "up the ravel'd sleave of care," busies itself by throwing up imaginary impassable barriers of work and worry, and he who listens to the tempter rises from his couch weak and weary. What is weary? Not matter, for the body has been lying quiet and undisturbed; not mind, for mind reflects Mind and knows no weariness from action. The busy-body, as well as the sufferer, is the counterfeiter, mortal mind.

Christian Science identifies this anxious, anticipative state as fear, fear engendered by a belief in self-derived power, in human strength with its admitted limitations; and it is the province of Christian Science to destroy the illusion by its demonstrable teaching that man is the reflection of Omnipotence, that his strength is realized in right asking. Thus fear and anxiety are eliminated, and he learns that as the manna supplied the present need, so strength will be given to do God's work at the right time.

Charge not thyself with the weight of a year,
Child of the Master, faithful and dear,
Choose not the cross for the coming week,
For that is more than He bids thee seek.

Bend not thine arm for to-morrow's load,
Thou mayest leave, that to thy gracious God,
Daily, only, He says to thee,
"Take up thy cross and follow me."

S.

### Character and Conduct.

A WRITER has recently well said that the weight of one's character must be about a hundred times that of his word, in order to make his appeal effective.

Paul writes, "Those things, which ye have . . . heard, and seen in me, do!" That is why his words were so forceful. "There was a character to be seen behind the words which were heard. So with all of us; the best part of our speaking must be done before we open our mouths."

The fact that very much we say about Truth often seems to make but little impression, is fully explained by that incredulous attitude of the public which has inevitably resulted from its experience in the sad discovery of the contrasts between the profession and the practice of not a few, between what men do and what they preach.

The unique place occupied by Jesus, in the world's thought, is accounted for in part by the perfection in his life of this rare quality of consistency. He is indeed the great Exemplar. He lived the life he commended, he made the self sacrifices he enjoined, he manifested the love for God, and the love for our fellow-man which ring out everywhere in his gospel, and therefore it has come about that despite such inconsistency and unworthiness upon the part of his professed followers as has oftentimes evoked the sneer of contempt, Jesus retains his hold upon the heart of the world, and his words have lost nothing of the force of their appeal during all the centuries.

The splendid lesson of his history in this respect should receive the special and constant attention of all Christian Scientists. We insist that the value of Christian Science is to be determined by its fruits, that the authority of its teaching is established by the practical demonstrations which are its consistent and logical outcome, and it is therefore perfectly legitimate and proper for the world to demand of us an altogether convincing life of every-day high-mindedness and unselfishness, of good works as well as words. We ought to be glad and thankful for this test in view of the fact that through the understanding of Truth we can meet it. "Be ye therefore perfect, even as your Father which is in heaven is perfect" is the faultless ideal set before us, and if we keep that ideal steadily in view and strive for its attainment in the spirit of the Master, we shall win that approval and confidence which expresses the world's recognition of the parallelism between our practice and our preaching. W.

### A Friendly Critic.

THE writer of the following editorial excerpts in the Newburg, N. Y., *News*, evidently has an imperfect understanding of the meaning of the phrase "mind-healing" as used in Christian Science, and he fails to make it clear that the effective healing Mind is not human mentality but divine Intelligence; nevertheless he evidences an advancing thought, and his judicial attitude is to his credit and will prove the open door to a clearer apprehension of Truth.

"The *News* is not an apologist for Christian Science. It acknowledges that it knows little about the cult and therefore is not in position to comment upon its theories and beliefs intelligently and exhaustively; but if our esteemed contemporary has given the subject study, its article sig-

Digitized by Google

nally fails to show it, as it consists of denunciatory statements that would be entirely without effect in the minds of people who love the truth and who when they are told that something is wrong demand the proof.

"The principle underlying Christian Science, as we understand it, is based upon the assumption that the mind is master of the body. This proposition is not to be scoffed at. Self-development is as yet an art in its infancy. The achievements of the mind in the development of the world are so wonderful as to pass the understanding. The mind is all-controlling not only over health, but over the temperament and the character."

## The Thanksgiving Service.

WE are confident that all Christian Scientists will rejoice in the inauguration of a uniform Thanksgiving Day service which has been prepared at the request of our Leader.

While not forgetful of the specific and peculiar occasions for rejoicing which pertain to individual experience, the true spirit of gratitude will seek to emphasize, in public service, those larger considerations for thanksgiving which pertain to the nation, to all Christian people, and especially to all Christian Scientists.

How insignificant indeed seem the things we have thought of as material blessings, and to the possession of which we have largely looked for pleasure and satisfaction, when compared with the unmeasured gain which has come to us in a demonstrable knowledge of the healing Truth. Surely an ungrateful and unrejoicing beneficiary of Love's bestowals in Christian Science, would be a paradox of incongruity, and our glad participation in the service will give fitting expression to that deep and abiding sense of indebtedness and gratitude which fills the heart of every true Scientist. W.

WE have received numerous requests for the publication in advance of the dates upon which lectures will be delivered by the members of the Board of Lectureship, but it does not seem practicable to comply with such requests. We are informed by the lecturers that in many instances engagements are made by telegraph only a few days in advance; that in other instances dates are changed or cancelled too close to the date originally announced to permit of correction in the *Sentinel*.

The requests are mostly from traveling salesmen who desire to arrange their trips with a view to attending the lectures delivered in their territory, and we should be pleased to aid them if possible, but we believe that a list that could not be guaranteed as absolutely correct would at times cause them disappointment and, perhaps, expense. If our friends who are about to have lectures will fully advise all Reading Rooms; within, say one hundred miles, all that is desired in behalf of the traveling salesman will probably be accomplished.

WE are in receipt of various warning notices intended to protect Christian Scientists from the imposition of those who are attempting to obtain money fraudulently. It seems useless to take our space in repeating these alterable descriptions and aliases. It might be well for all to remember that beggary is not Scientific, and that the worthy poor will be helped in their demonstration by those to whom they are personally known.

Not only is there no virtue where there is no rule and law, but there is not even pleasure. The plays of children themselves have laws, and would not exist without them; these laws are always a form of restraint, and nevertheless, the more strictly they are obeyed the greater is the amusement.—JOSEPH JOUBERT.

# From Our Contributors.

## Finding the Light.

WE are privileged to use the following self-explanatory communication from a Baptist minister to Christian Science friends:—

*Dear Friends:*—I want to tell you the good news. After many years of blind unbelief and persecution of Christian Science I have at last found the *Light*. How strange the past does look now! I can hardly find words to tell you my new joy, and I feel as if I ought to keep quiet and listen to God. One week ago last night, in First Church in Chicago, I publicly announced that I had taken my first step in Christian Science, and if your patience will endure it, I will try to be brief in telling you a little about myself.

I paid no great attention to Christian Science until after marriage, and only when my wife was no more by my side in the religious work I loved so dearly, was my attention strongly called to it. I investigated skeptically, and having convinced myself that it was the workings of evil, I began to hate and condemn everything that belonged to Christian Science. You may have a faint idea of the persecutions my dear wife had to undergo while living with one who hated the way that was life to her. Time would fail me to tell you of the many ways I annoyed her. When I could not read anything against Christian Science, I would attend lectures against it by people who did not know any more about it than I, and sometimes I would get so incensed against the Truth that I would preach against it. In this and many other ways I kept up the fight. During all this time I was keeping up this blind fight against Truth, I verily thought I was doing God a service and lived as it were a Pharisee of the Pharisees and persecuted this way even unto Damascus. I was blinded by mortal sense, but when I asked at the street called Straight for sight the scales fell from my eyes and I beheld the Son of God with healing in his wings, and now because I have (seemingly) done much against the Truth, I shall never be satisfied until I have sufficient understanding of this glorious way to be allowed to go forth and tell the good news of the glad tidings to all the world. I will close with a testimony witnessing that God is true. A few days before I made up my mind to acknowledge Christian Science I was impelled to purchase a Science and Health and read it honestly. I did so, and took it with me on a journey. Before sleeping that night I read of its pages fifty or more, and it was like peeping into a new world. I made up my mind that all was right. On the train, on Sunday morning, a gentleman shared my seat, and as we talked he unburdened his heart to me. Our destination was the same,—Jacksonville, Ill.,—I, on business and he to pay a periodical visit to his wife in the State Hospital for the Insane. She had been there since her child of four months was born, and she was wrecked in body and mind. I told him my story, of all my past, and what I had found. He begged me to talk that way to his wife. I consented gladly, and they came to the morning service, at the close of which we withdrew to a quiet spot in the park. It was after three o'clock when I left them, the woman's headache gone and she sitting clothed in her *right mind*. I shall never forget that man's happiness when he bought my return ticket, and took his wife home to bring sunshine back to his life. I attended to business, hurried back to Chicago to hear a lecture on Christian Science in the Auditorium, and enjoyed it greatly. The following night I witnessed to the public that I had taken my first step in Christian Science. My brother brought his wife here to be treated by a specialist, and I told them my story and took them to church. They did not see the specialist. My brother, a fellow-laborer in the ministry, said that, knowing me as

Digitized by Google

he did, there must be something in Christian Science. I advised him to see you and investigate. He took your address, and I know the rest. I wish to thank you both and all the faithful friends for their good examples which have helped me greatly. My own dear wife has been my guiding angel to bring me to the Truth. Imagine, if you can, the joy of my beloved when she knew that she had not labored in vain! the leaven did work. I thank you all. You are at liberty to make such use of this epistle as seems best for Truth. Yours in Love.

G. H. LUTZ.

## The Overcoming of Personality.

H. P.

To many of us there has come the thought that certain personalities precipitate errors for us, and so hinder our progress in solving life's problem. We are tempted to think that if we could get others to think and do right, or if our lot were cast with different surroundings, our own difficulties would be lessened. As well might a child, on reaching the problems of mathematics, wish to discard his arithmetic because of the seeming difficulty. If he continues studying, these tests of scientific intelligence will present themselves no matter what his topic, or how often he changes his teachers, until he masters his problems by application to the studies in hand.

So it is in life; whatever seems hard to overcome will be our master till we make Truth our own, then Truth will make us free from life's perplexities. Jesus came to earth in an uncongenial environment and ascended out of it. His ascension was reached on this plane and while surrounded by those who had made life so hard for him.

Jesus' followers contributed to his burdens. Had they fully realized that his work was to establish an eternal Principle of Life, to benefit all mankind, and that it was this Principle that they loved and obeyed, and not Jesus' personality, evil would have been robbed of its seeming vantage.

The moment we entertain the thought that good is in person or place, that moment evil seems to get to work.

## The True Church.

LUKE tells us (chapter 9) that Jesus sent forth his disciples "to preach the kingdom of God and to heal the sick." This church stands as a testimonial of our faith in the Master's words. It calls for obedience to the whole gospel. Jesus' commission is but half carried out if we attempt to preach the gospel and not to heal the sick. The gospel cart drags heavily up Zion's hill if it has lost one wheel. On one side is the gospel preaching, on the other should be the healing of the sick. And where this wheel is lacking how can there be progress? This church stands to declare abroad that "God is Love."

All ye are brethren! and because "love is the fulfilling of the law," this church must stand for Love which heals and saves. It proclaims Truth. This church stands to call mankind to the obedience of the First Commandment of all: "Thou shalt have no other gods before me." It refuses to accept any claim to power which springs from any but the one source and Creator, who "made all that was made" and pronounced it good. Thus it dethrones evil and relegates it to darkness and oblivion, for, having no creator, it never was made. Brethren, this church stands to call us, each and all, to a higher understanding of God, and of man in his relation to God, and in the degree in which we approach God through the demonstration of this understanding, we are nearing that highway upon which the redeemed shall walk, and are beginning to realize the unity for which Jesus prayed, saying, "That they all may be one; as thou, Father, art in me, and I in Thee, that they also may be one in us: that the world may believe that Thou hast sent me." Because this church does stand for Truth, undivided,—the seamless robe of Christ,—it is welcomed by the weary and heavy-laden, by the thoughtful student of God's word, by the sick and the sorrowful, and by the repentant prodigal. For all others who may think that they oppose Christian Science, because they are still unacquainted with its message of Love for them, this church stands waiting with patient, loving kindness. It has no judgment to express of their methods, no voice of condemnation of their views. It simply stands waiting, ready to do them good through its impersonal preachers, the Bible and Science and Health, the glad tidings, or gospel of health and holiness which God has already prepared for all His children.

From the address of Miss Stella F. Sabin, First Reader, at the opening of the new church at Hoopeston, Ill.

## Balance your Account.

MRS. L. M. EARLE.

FEELING sometimes almost discouraged over the manifold subtle attacks of error, as well as the more open and aggressive ones, the questions arise: Am I growing in the understanding and progressing in the spirit of Truth? Am I more often the victor or the vanquished? Strong in the strength which God supplies, or weak in the false beliefs and claims of mortal mind and its so-called laws, general and specific?

While querying thus on a recent occasion I opened my Bible [Revised Version] to the Epistle of James, second paragraph, and there I read, "Count it all *joy*, my brethren, when ye fall into manifold temptations; knowing that the proof of your faith worketh patience. And let patience have its perfect work, that ye may be perfect and entire, lacking in nothing." And further on in the same epistle: "Blessed is the man that endureth temptation: for when he hath been approved, he shall receive the crown of life, which the Lord promised to them that love him. Let no man say when he is tempted, I am tempted of God: for God cannot be tempted with evil, and he himself tempteth no man: but each man is tempted when he is drawn away by his own lust, and enticed."

I now recognized that these attacks of error are but temptations from evil to weaken our faith in Truth, and to strengthen our beliefs in the reality and power of matter, and sense testimony. Then thought went back over the period of years since the light of Truth first dawned in my consciousness, to sum up the profit and loss, and to balance the account. On one side were numerous physical ailments of greater or less severity which had yielded their claim of power and reality to the truth which I had realized of their nothingness; a tendency to hasty, sarcastic, angry speech, that had been overcome; an impulsive, impetuous, wilful nature, that had been considerably subdued; envy, hatred, and malice, that had been softened to something more akin to love; morbid, bitter, and unhappy thoughts, that had given place to those more natural to the real man; selfishness in varied forms that had grown more considerate, thoughtful, and yielding to others, and less exacting; fear in many phases, that had been destroyed; I had gained ability to endure and accomplish that which would formerly have been impossible; and, grandest of all, an illumined Bible and a love for it which was given through the teachings of "Science and Health with Key to the Scriptures." This enumerates but a small part of all that was found on that side and its value is inestimable.

The sum total on the other side was found to be insignificant and valueless in comparison, and the account was closed with a deep sense of joy and gratitude that the gain

Digitized by Google

was thus proved to be so much greater than the loss. Science and Health says on page 196, "Better the suffering which awakens mortal mind from its dream, than the false pleasures which tend to perpetuate it."

As the primary purpose of Christian Science is the healing of sin and growth in spirituality, I have often heard the wish expressed that more testimonies of that nature might be given and written, rather than so many on the physical line. These thoughts are therefore offered with the hope that they may help others in time of seeming discouragement and doubt, take a retrospective glance at their progress and blessings.

These changed mental, moral, and physical conditions have been worked out through the understanding and demonstration of the Truth taught and revealed in "Science and Health with Key to the Scriptures."

## Children in Christian Science.

S. W. H.

SINCE Christian Science became the motive power in my own life, its work for the children has seemed to me specially important on account of its far-reaching influence in the home, and also because of the unconscious power with which the child-thought touches all with whom it comes in contact. To the average man and woman, Christian Science comes as a complete reversal of all previous methods of thought and action. We enter upon "the eternal now" as we begin to mould ourselves anew, as we realize that in deed and in truth we are to find "the kingdom of Good" in our own consciousness, and not in some remote future state; so it is with a mighty struggle that those of riper years tear up the old landmarks. All this is eliminated for the children; they have nothing to unlearn, and they have no past to forget; from the outset, with them, to be metaphysical is to be natural. It never occurs to Christian Science children that Science and Health is hard to understand, and they put their sense of Truth into practice as soon as they walk and talk.

I recall a case of instantaneous healing in which a baby of two years was the mouthpiece for the Christ. The mother was a young Scientist, and after struggling for several hours with an old enemy, had finally given in, and had gone to her own room, asking her sister to keep the baby away from her; but the little fellow escaped and managed to open his mother's door. His amazement at finding her in bed, was, as she said, a rebuke. He ran to her, lisping, "Mamma, God loves you! Mamma, get up!" She tried to coax him to run away, but, slipping from the bed, he went to the next room, found her copy of Science and Health, and came back holding it up, saying, "Here it is, mamma, all right. Get up, mamma." She did, and in a very short time was entirely free from pain. The clear understanding of her own little one had destroyed her fear, and she was healed.

A child was brought to us for treatment by his mother who was not interested in Christian Science at that time, but who knew that material means could do nothing for the case in question, which was an ungovernable temper that had been hereditary in this family for generations. The boy was helped at once, but as the family lived at a distance from the city, and could not attend services, the mother promised to aid the work by reading Science and Health aloud to her son for half an hour every night. A few weeks later, in writing to the practitioner, she said that she could not understand the book, but that her children evidently did, for all four of them insisted upon listening to the reading. Within a very short time these children were helping each other to overcome all discordant conditions,—cuts, bruises, stings, etc., and they ceased to have the little illnesses to which they had formerly been liable. The mother frequently heard them quoting the book as a reminder to each other to stop impatience or selfishness, and she confessed that the whole atmosphere of the household had changed. After a few months had passed, the mother herself asked for instruction that she might be enabled to work intelligently. All these children have the clear understanding that brings quick results in Christian Science work. They have had considerable opposition to meet from other members of the family, and one boy was sent last year to a church school in Canada to lessen, if possible, the influence of this new-old thought. I will give an extract from a letter just received from him.

He writes: "I am keeping my promise to read in the morning, and it is easy, after all, for I wake at six, and then it is quiet; I read only a word at night. Now I am reading St. Matthew and 'Atonement and Eucharist.' There is an awful lot of things to work against up here, the worst are to love my enemies and the theological thought. I seem to get colds and to get hurt at football, but since I am trying to be straightforward and honest and am clear as a bell, I think these errors come from the other things."

This is from a boy of twelve, and he is the only Scientist in that school, but he faced the position openly last winter, and asked the head-master's permission to keep and read his book. The Sunday School is a marked feature of the church to which I belong, and our little ones always sit with their teachers through the morning service, and their voices can be plainly heard in the singing, especially of our Leader's hymns. Even the very little ones know all the hymns and many of her longer poems. They can repeat the Scientific Statement of Being and "Beloved Christian Scientists," and are in the habit of using these when working for themselves. Before the Sunday School closes, our teacher always examines the children to see how much of the metaphysical meaning they have assimilated from the Lesson-Sermon and from their class teaching.

Two of our students were walking home from church with their baby daughter who is a member of the infant class, but who had never been permitted to go up or down stairs alone. On the way they came to a place where there were three or four steps to mount, the baby had run ahead, and as they approached her they heard her saying, "All is Mind, all is Mind," and they did not touch her. As she came to the steps she put up one little foot and then drew herself up, and repeated the process till the whole had been mounted, then she turned and gleefully shouted, "Mind did it, mamma!"

Is not this training a child in the way it should go? That was the wisdom of Solomon, and it has proved to be the wisdom of the ages. The love of our Leader has given us the "Key" with which we may unlock the door to that kingdom of Love, where "a little child shall lead them." Jesus said, "Have ye never read, Out of the mouth of babes and suckings thou hast perfected praise"?

It is necessary that religion should be held and professed in a liberal spirit. Just as far as it assumes an intolerant, exclusive, sectarian form, it subverts instead of strengthening the soul's freedom, and becomes the heaviest and most galling yoke which is laid on the intellect and conscience. Religion must be viewed, not as a monopoly of priests, ministers, or sects; not as conferring on any man a right to dictate to his fellow-beings; not as an instrument by which the few may awe the many; not as bestowing on one a prerogative which is not enjoyed by all; but as the property of every human being and as the great subject for every human mind. It must be regarded as the revelation of a common Father to whom all have equal access, who invites all to the like immediate communion, who opens his works and word to every eye, and calls upon all to read for themselves, and to follow fearlessly the best convictions of their own understanding.—WILLIAM ELLERY CHANNING.

## Among the Churches.

### From Lawton, Oklahoma.

It is with joy and rejoicing for blessings received, that we send greetings to the Field.

Christian Science work was begun in Lawton soon after the opening of this new country, in August, 1901. We began holding services in a tent with four students. As our town progressed our work grew, and we soon had to change our place of service from the tent to a two-roomed dwelling house. Our numbers increased until it was advisable to organize a church, and in February last, we organized with thirteen members.

April 1 we had a lecture by Edward A. Kimball which was well attended and which awakened much interest. Many have investigated Christian Science as a result. Soon after the lecture we moved to a better and more commodious room in the business part of the city. This room nicely furnished is now open at all hours of the day with Christian Science literature for distribution, and Mrs. Eddy's works for sale, or to be lent to seekers after Truth. There is always some one in attendance to welcome and help the stranger. Our church services are also held in this room. Our numbers have naturally and constantly increased, being drawn from all classes. Excellent demonstrations have planted the seeds of Truth in different parts of our country and city; these are now growing and ripening into an abundant fruitage. We are striving to manifest watchfulness, prayer, and obedience to our Leader's counsel and advice that we "keep our minds so filled with Truth and Love that sin, disease, and death cannot enter therein."

MRS. A. L. PARMENTER.

### Growth in Erie, Pa.

The annual meeting of First Church of Christ, Scientist, of this city, was held October 7. Encouraging growth is manifest in nearly every direction. Last year the treasurer's report showed a balance on hand of ninety-two cents. This year it amounts to thirty-six dollars after paying the expenses of our lecture by Mr. Norton. The attendance has increased largely, and more seem ready to identify themselves with us than heretofore. The building fund has increased, also the sale of literature.

The Mother Church By-law in regard to a three-year term for Readers was adopted by the church as soon as our Leader requested it. In accordance with this By-law the present Readers were allowed to finish their three-years term, which expires in March. We are sure great good will be the result of its adoption, though at present we have in part to walk by faith and not by sight, as Paul says, believing she whom God has chosen, or rather, who hath chosen to follow God, will be given wisdom to carry on the work.—W. S. DAY.

### Progress in Richmond, Va.

The Christian Scientists of Richmond are pleased to send to the *Sentinel* a report of the growth of our Cause. Our Sunday Service was begun December, 1900, in the parlors of a student, who came to Richmond to take up the work.

At our first meeting eight persons were present. At our first Wednesday evening meeting eight persons were in attendance, but it was not many weeks before the attendance increased, until fifty or more were present at both the Sunday services and the Wednesday evening meetings.

In May, 1901, Judge Ewing lectured for us in the Academy of Music. About six hundred people were present to hear him. Much good healing work has been accomplished during this time, some of the cases being considered very wonderful. Several persons have been taught Christian Science, and these in turn, are spreading the good news, with signs following.

A reading room was opened in January, 1901. All the works of our Leader, together with our periodicals, are to be found there for perusal or purchase, and we have distributed much literature.

We organized as a church June 1, 1902, with a membership of twenty-three, eleven of whom are members of the Mother Church. The church has adopted the recent By-law in regard to Readers.

We have a Sunday School of ten children, and the children lead in the pure, clear thought of Christian Science.

ALICE BERNARD.

### From Minneapolis, Minn.

We are much gratified with what was accomplished for our Cause during the sessions of the State Fair.

Everything about our building presented a most pleasing appearance and gave an impression of the substantiality and permanency of Christian Science.

Great numbers called and were received by the attending committee, who answered their questions and gave them literature. Those who registered numbered 1,496 and a total of 2,875 called.

Literature was liberally donated by our people and also cash to the amount of twenty-one dollars, to buy literature for this purpose. This made it possible for us to distribute 1,558 Sentinels, 324 Journals, 802 Supplements, 1,086 Reprints, and 144 Pamphlets.

The visitors who registered represented two hundred and thirty-two towns and came from fifteen states, besides England, Canada, and the District of Columbia. No literature was sold but some orders were taken for Science and Health and for our three periodicals.

Four requests were made by strangers for treatment, and there were four cases of impersonal healing reported.

One request for treatment was made by a woman who had met with quite an accident. Some one told her to go over to the Christian Science Headquarters; the result was that she was fully relieved so that she was able to continue her business, although the decision had been made to give up and leave the grounds.

This work at the fair has brought about good results already, more than can be estimated by any human method. Much seed has been sown and will spring up in the two hundred and thirty-two towns to which the good tidings have been carried. "The harvest truly is great."

JOHN E. PLAYTER, *Chairman of the Committee.*

### Organization at Waverley, Neb.

First Church of Christ, Scientist, Waverley, Neb., was organized September 8, 1902, with fifteen charter members. Christian Science was first introduced in Waverley in 1893. We commenced holding meetings at that time in a private house; now we hold our meetings in a hall with an average attendance of about thirty. We have the same attendance at our Wednesday evening meetings. Our Sunday School is also well attended.

A great many have received help from Christian Science in this vicinity. We changed Readers recently, complying with our Leader's request, and we feel that it is doing much good here as well as all over the Field, showing the wisdom of our dear Leader.—T. J. BEALE, *Clerk.*

### Thanksgiving Service in Toronto.

Following our Leader's admonition published in the *Sentinel* last April, First Church of Christ, Scientist, Toronto, held a thanksgiving service on October 16, the day set apart by the Canadian government.—W. S.

## Testimonies of Healing.

A little over a year ago I was persuaded to try Christian Science. I was a complete wreck from rheumatism and other causes, and as I hobbled from the car to the Scientist's home,—a distance of one block,—I little thought that in a short time I should be walking erect and free, and as for thinking that I should ever be as strong and healthy as I am to-day, I simply could not have believed it.

My healing included more than relief from rheumatism, since up to this time I had always been sickly, inclined to be consumptive, and my friends, I have since been told, had decided that I could not last over a month. I was subject to cold sweats, through which I had been reduced to a mere skeleton.

During the treatment, an enlargement of the neck, which I had had since childhood, disappeared, so that although my weight has increased over forty pounds, I am able to wear a collar which is an inch smaller than that formerly used.

I ought to have said that I was *taken* to Christian Science, for at that time I had no faith in it. I was in a state of discouragement and doubt, since I had tried everything, as I thought, worth trying without receiving any benefit. Besides the so-called regular course of doctoring and drugging, I had gone to sulphur springs and taken a great number of baths, etc.

After the first Christian Science treatment I knew I should be healed, although there was no very marked improvement. At this time, through suffering (both mental and physical), I had drifted away from the Methodist Church, in which I had been a worker, into a state bordering on infidelity. I believed that God made me suffer, and this made me rebellious. But, thank God! through Christian Science as given to humanity by our Leader, all this is changed and I have learned that God is Love, and I love Him. I now love to study the Bible in this beautiful light.

I am actively engaged in business, which makes it necessary for me to drive long distances daily, through all our severe Canadian winter, through wet and dry, yet I am entirely free from my old enemy.

In giving thanks for all that has been done for me I cannot omit the greater blessing,—the spiritual uplifting,—I receive from our Sunday services, also from the study of the lesson each morning before starting out on my daily duties.—ROBERT D. EDEY, Westboro, Ont.

---

Six years ago I was a despondent, melancholic, unhappy invalid, a victim of inherited stomach trouble. For several years I tried all forms of treatment with the best physicians here, and at last tried a special form of treatment, which prescribed a rigid diet for a year. Becoming emaciated, weak, and discouraged, I consulted other physicians. Some told me I was being starved to death, but the slightest departure from the prescribed diet brought much suffering. In this hopeless condition, my husband and I felt that something must be done soon for my relief, so as a last resort it was decided I should go to a well known sanitarium. My trunk was packed and tickets ordered, when a friend called and asked me to put off my going for two weeks and try Christian Science. My reply was, "I don't believe in Christian Science, and it would be time wasted." She responded, "Well, if it doesn't do you any good, it certainly will do you no harm." This seemed reasonable, and I consented to go with her to see a practitioner. The influence that first talk had upon me words fail to describe. It was like a ray of sunshine in a darkened room. I was a stranger and she took me in; hungry, and she gave me the bread which cometh down from heaven; thirsty, and she gave me the living water. The next day I had neuralgia—an old enemy—and sent for the practitioner. This was overcome in one treatment. Regular treatments were begun and continued for about ten days. One trouble after another vanished in a way that seemed to me miraculous. The Science literature was to me "As cold waters to a thirsty soul."

I ate everything I desired after the second treatment without discomfort, though at first with doubt and trembling, but Truth gained the victory over all my fears.

After the second treatment my glasses were laid aside. They had been worn constantly for three years. Oculists pronounced the trouble astigmatism, caused by the shock of an operation. It has now been six years, and I have never felt the need of glasses since and my sight is much better than when I used them. During the past six years, many opportunities have come to me to prove this Truth; and I wish to express my gratitude to our Leader for the loving self-sacrifice of which Science and Health is the outcome.—LILLIE C. AMES, Denver, Col.

---

Fourteen years ago, I was a total wreck, given up by my physicians, and sent home to die. I had been afflicted with chronic dyspepsia and indigestion for fifteen years, and had completed the entire round of medical treatment, including mineral baths and travel. To sense I was gradually nearing the end. While in this condition I heard for the first time of Christian Science. I did not know what it was, but was induced to try it by a friend. My condition was such that I could not take any food without causing me great pain; I suffered from taking a drink of water.

I was a member of an orthodox church and had been a Sabbath School superintendent and class leader for ten years. Many times I had prayed fervently to God to hear me, but my prayers were unanswered and I suffered on as others do who have not the understanding of prayer.

I went to see the Scientist very reluctantly, with many misgivings and doubts, but was told by the lady that I must eat my supper that evening and come to see her in the morning. My fear of food was so great that she could scarcely persuade me to eat at all. That evening I ate of everything I wanted, even to meat-pie and cake; I drank a cup of strong coffee, and, to my great astonishment, slept soundly all night. I awoke in the morning without a pain and was hungry for my breakfast. The scales began to fall from my eyes and I was convinced that God is in the world as of old, and that His children are doing the work again that Jesus had taught them to do nineteen hundred years ago.

I now began to study Science and Health. It completely upset my former conception of God and man. I had a hard struggle to escape from my old theological teaching, but by patience and careful study, I learned that it was the key that unlocked the Scriptures, and God was made known to me as Principle and not as person. I was living away out in the country in Colorado where I could get no help or instruction. I began to practise Christian Science because I could not help it, there was suffering all about me and being filled with the Holy Ghost I began to heal others. Many came to me weighed down with disease of long standing, and many went away whole, while others who seemed to linger a little longer were finally made whole.

I have great reason to be thankful for Christian Science.

J. F. LETNER, Hynes, Cal.

---

I should like to send to our dear *Sentinel* one of my earliest demonstrations in Christian Science. I had been out one afternoon, and on returning home, I found that our baby boy was missing. The maid whom I had left in charge of the children said she had searched everywhere and could not find him. I learned from the other children that they had filled a trench with water in the yard and the baby had fallen into it, and on being lifted out had run and hidden himself in the house.

I found the child at last sound asleep under one of the

Digitized by Google

beds; his wet clothes were clinging round him and the cold wind was blowing upon him from an open window. When I lifted him out, his flesh was cold and he began to shiver from head to foot. Mortal mind spoke loudly; but the voice of Truth came still clearer, declaring that matter could not take cold unless mortal mind said so. I changed the dripping garments and dried the little fellow with a towel. All the time the Truth came clearly through my consciousness. The battle was a long one, for, to sense, the child had taken a severe chill, but Truth was mightier than error, and finally prevailed. In about an hour and a half from the time I found him he was running around as merry as ever and there was not the slightest symptom of a cold to mark the occurrence. This to me was a most convincing proof of the practicability of Christian Science. I have had many wonderful proofs since, but that one always stands out as a landmark. I think it was all the more wonderful to me, since up to that time my greatest fear for the children was of their taking cold. I am very grateful for Christian Science, and my one prayer is that I may be worthy of the name I bear.—A. J., Montclair, Col.

---

Eleven years ago, I was afflicted with a difficulty that physicians could not name. Briefly I will say that I employed the best medical practitioners the country could produce, and we had quite a number to choose from. After deriving no benefit, they advised me to seek a lower altitude, —the seashore,—and we spent a summer there. I consulted some of the best physicians in New York and Philadelphia. Another summer was spent at a sanitarium in New York State, without being healed. Some relatives importuned me to try Christian Science, but I assured them that I was in too bad condition to waste any time in that manner, for I considered Christian Scientists "crazy." However, what they said made an impression with me, and a few days later, ashamed to be seen going to a Christian Scientist, I went to see a practitioner, and from that day to the present, I have never refused to eat, and never had to lose one hour's time from inability to work, and no physician has ever crossed our threshold. For thirty years I was a habitual user of tobacco, and had tried almost everything known to *materia medica* to cure me of this habit, but failed. The practitioner asked me if I desired to get rid of the tobacco habit, and I assured him that I did, if the desire for it could be destroyed. However, at this time the tobacco habit was not overcome. I well remember the day after the election of Mr. McKinley. I was sitting in my office, and all at once I seemed impelled to go to a Christian Scientist and take treatment for this tobacco habit. I took three treatments and was healed. That has been six years ago, and I have never had any desire for tobacco since. Now of the two healings, I consider the last demonstration the greater. In the first instance I wanted to get rid of my suffering, but the second required a great sacrifice for me to make.—C., Denver, Col.

---

I attended my sick mother for nearly two years, when I was attacked with paralysis, having two strokes about six months apart. The second stroke left me so I could not read, nor write a word, nor talk well. I could not do much work. I was then living in San Diego, Cal. I came here soon after and become interested in Christian Science and sent for a practitioner. I had not been treated more than a week before I could both read and write, and in three weeks' treatment my speech returned. Since then I have been well and strong and able to do almost any kind of work. It will be a year in August since I was healed. I am thankful to the practitioner for showing me the way, and to Mrs. Eddy for Christian Science, which is the truth.

MRS. J. C. MCMONIGAL, Placer, Ore.

## Announcements.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### The Revelation of Christianus

And twenty other poems by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.00.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Christian life, so far as it is genuine, is a manifestation of God. His spirit witnesses through men of the beauty of holiness. It is imperfect witness, for Christians are imperfect men, but in so far as it is genuine it is effective. God himself is the supreme attraction for those who are made in His image. Where He is known and manifested men will be drawn together as iron is drawn to the magnet.

The increase of machinery counts for little where abundance of power is wanting. Do we not often make the mistake of elaborating worship, enriching art, multiplying attractions, studying advertisements, and forget the power of God's presence with His people? The life of the Church is the indwelling of God in the hearts of His children, manifested to men in holy, cheerful, fraternal, helpful lives. Have we anything better than this to offer to the world? Is there anything which can take the place of this in mere diligent use of the many inventions of our modern Church activity?

The Church is attractive when men feel that God is with its members—meets with them in their worship, goes with them to their business, is invited to be a sharer of their pleasures. God, as of old, is revealed through man to man. There is no better way of revelation. The measure of our power with others is the measure of our clear transmission of the light that God has put within our spirits. If we are Christians, the light is ours. The problem is to make our visible lives transparent mediums, free from all stains and spots of injustice, unkindness, selfishness, and pride, that the light may shine through them for the attraction of the world.

*The Congregationalist and Christian World.*

*The Boston Herald* quotes Rev. Dr. Withrow, of Boston, preaching on the subject, "Heresy in the Church To-day," as saying:—

"This heresy is religious indifference. In past ages people were persecuted for heresy, and thousands suffered martyrdom. In the first stage it was a struggle for life or death; in the second it was a war of words over rival opinions in religion. But in our time it is evident that the whole Christian Church has been gradually moving toward an attitude of great tolerance on these questions which used to be so hotly disputed. In place of the old themes . . . we get now what are called ethical subjects. The time of which Paul spoke when he said men would not endure sound doctrine has come and gone. They do not resent this doctrine now—they simply tolerate it. The people say 'what's the use?' and 'who needs to care?' when any doctrine in religion is mentioned. To-day there is a widespread indifference to the things of religion. In the old days men used to fight over dogmas that do not trouble us, and whatever else they were, these men were tremendously in earnest. . . .

"Never was there so widespread an interest in questions of personal religion as to-day, but all the same there is widespread religious indifference."

*The Church Standard* quotes Bishop Coadjutor Mackay-Smith as follows: "As yet, although I sincerely believe the Church has improved since early days, there exists no clear sign that she has attained such a goal. But still, thank God, she has reached the vantage ground over the centuries that she believes a 'Trust of Love' to be a nobler thing than a 'Trust of Theology,' and would prefer (if obliged to choose) to buy up all the goodness in the world rather than to purchase thirty-nine or thirty-nine thousand articles. Never again, I believe, will even the most dogmatic Christian burn those whose definitions discontent them, or fail to love those who control their tempers better than their creeds. The ambition to prove the Church of God a universal love trust is at least awake and moving on."

One secret of a sweet and happy Christian life is learning to live by the day. It is the long stretches that tire us. We think of life, as a whole, running on for us. We cannot carry this load until we are three score and ten. We cannot fight this battle continually for half a century. But really there are no long stretches. Life does not come to us all at one time; it comes only a day at a time.

*British Weekly.*

A brave, clear-sighted faith will look on difficulties as divine calls and opportunities; as challenges to soberness, thoughtfulness, and divine enterprise. Divine re-enforcements are always at hand; and to work along the line of improvement is to work with God. To deal with changing situations, we must adhere to unchanging principles. The light that lighteth every man will grow clearer and wider, if faithfully followed. We must appeal with confidence to the instincts of the soul,—to the divine witness in the human. All the facts of our time are to be accepted and interpreted as revelations; whether they work for retribution or for redemption, they illustrate spiritual laws. The oldest word is still the youngest, fresh as the morning. It points for all ages the way of life, and reconciles all our childish antagonisms. Its clearest utterance comes in the message of Fatherhood, Sonship, Brotherhood,—the gospel of divine humanity.

REV. CHARLES G. AMES.
In *The Christian Register.*

The followers of Christ are not fulfilling their high calling unless they are shedding abroad in the spiritual world such knowledge, good cheer, and beauty as light bestows. He used of them the same words he uses of himself, "The light of the world."

A Christian life solves problems that science cannot reach. It carries with it assurances that do not depend upon logic, or philosophy, or induction. The best defender of the faith is the simplest Christian who follows his Master closely with supreme affection. It does not require any training in the schools to give weight and worth to holy living. No sermon is ever so powerful as a martyrdom. A child's prayer has melted the heart that stood out stoutly against the persuasions of the orator.

*The Interior.*

It is said that an English builder, a few years since, determined to build a house within the walls of the old Jerusalem, and having resolved to lay its foundation on the rock of David's time, he found it necessary to excavate through fifty feet of accumulated rubbish. These Christian centuries have been prolific in religious rubbish, and whoever now would build with the Son of David must dig down through superstition, and priestcraft, and tradition, and prejudiced interpretations, until he finds the "Word of the living God."—DR. HODGE.

The work and the Word should agree. The fruits of the Spirit are given in the fifth chapter of Galatians, the twenty-second verse, and they are these: "Love, joy, peace, long suffering, gentleness, goodness, faith, meekness, temperance." The work of all Christians should therefore exhibit all these traits, and in so far as any work fails of this, it falls short of the full Christian standard, and will in the same degree fail of its full success and usefulness.

*The Watchman.*

The real man is never known until you see him in calamity and disaster, and then will be revealed the elements of strength or weakness which have been accumulating through all the preceding years. It is not to our disadvantage to be put to such tests, for they minister to our perfection of character; only we must not forget that they are coming, and we must not forget to be prepared for them when they come.

*The Examiner.*

Last year the two chief Bible societies working in China sold no less than 3,106,295 Bibles, New Testaments, and single portions. Of these, over 2,000,000 were in Mandarin, over 700,000 in the classical style, and the remainder in the various Chinese dialects, Thibetan and Mongolian. It is believed that the Mandarin version of the Scriptures when completed will be intelligible to two-thirds of the vast population of China.

Rev. H. A. Bridgman writes in *The Congregationalist and Christian World:* "There is a personal relationship in religion, or there is nothing. The power of the divine life, which we feel throbbing through the world about us, the gracious, brooding spirit over us all, manifested once in human form in Jesus Christ, claims the love of each one of us; and claims nothing but what we, in our capacity as sons of God, are able to give."

Little self-denials, little honesties, little passing words of sympathy, little nameless acts of kindness, little silent victories over favorite temptation—these are the silent threads of gold which, when woven together, gleam out so brightly in the pattern of life that God approves.—CANON FARRAR.

*The Watchman* has the following: "Our faith grows pure and strong in proportion as we break away from credulity and superstition. The faith that will give endurance to our consecration will not be a borrowed one; neither will it be an ignorant one."

Rev. William R. Clark, D.D., says in *Zion's Herald:* "The Church wants no pulpit parrots, nor weak-kneed, hesitating guides. The preacher should preach only what he believes, and tremendously believes."

A holy life has a voice; it speaks when the tongue is silent, and is either a constant attraction or a perpetual reproof.—HINTON.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Chrtsiian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Pamphlets may now be procured singly at what was formerly the wholesale price. The intention is to enable those who wish to disseminate the teachings of Christian Science by the distribution of literature, to do a wider work.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

For list of pamphlets see next page.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, marbled edges, Oxford India paper, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

### The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Pamphlets.

LEGAL ASPECTS OF CHRISTIAN SCIENCE. 72 pp.
SCRIPTURAL REFERENCES SUSTAINING THE DOCTRINES OF CHRISTIAN SCIENCE. 63 pp.

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Attorney-General Knox has decided that if the United States should accept the offer of the new Panama Canal Company, submitted last spring, for the sale of the canal for $40,000,000, it would receive through the parties in interest a valid and unencumbered title to the property. This decision was reached after a thorough investigation of the situation in Paris, first by Special Attorney Charles W. Russell, and later by the Attorney General himself.

The next step is the signing of a treaty with Colombia, to which it is stated there is no serious objection on the part of that government. As soon as the treaty is signed the President is authorized by the Spooner bill to pay the purchase price to the Canal Company and appropriate $110,000,000 for the purpose of finishing the work.

Minister Wu, it is said, is trying to have the question whether the enormous indemnity of 450,000,000 taels demanded from China by the Powers shall be paid in gold or silver submitted to The Hague International Court of Arbitration. Minister Wu maintains that China is totally unable to pay the amount in gold. Secretary Hay is reported to be favorable to the proposition, if the other Powers can be brought into line.

The State Department has learned through Minister Squiers that the draft of the Cuban reciprocity treaty with the proposed amendments have been forwarded to Washington by President Palma. Concerning the treaty, former Military Governor Wood of Cuba says: "In view of the present crisis the Cuban sugar industry is absolutely ruined without reciprocity with the United States."

The members of the Anthracite Coal Strike Commission appointed by the President met in Scranton last Thursday to begin their investigations into the conditions in the mining regions. The hearings are not to be given until the formal claims of the miners and the answer of the operators have been filed.

Governor Dole of Hawaii, in his report on that territory, recommends among other things a limited immigration of Chinese laborers for agricultural work only.

The sub-treasury paid out last week $2,220,000 for gold recently received at San Francisco, the bulk of which came from Australia.

President Roosevelt has issued a proclamation designating Thursday, November 27, as a day of national thanksgiving.

Boston entertained the Crown Prince of Siam last week.

**Foreign.**

The report has gained some currency that the Prince and Princess of Wales will visit the St. Louis Exposition in 1904. It is learned by inquiry that, while no official invitation has been extended, the matter has been presented unofficially to King Edward, who returned a polite but non-committal reply. The acceptance or declination will await, of course, the transmittal of an official invitation from the United States Government.

A plan has been laid before the Municipal Council, of Berlin, Germany, for an underground electric railway passing through the center of the city and reaching the suburb of Schoenberg, a distance of seven miles. Four years' time and $14,000,000 will be required to build the road.

The coal operators and the union miners of France have agreed, through the kindly offices of Premier Combes, to accept arbitration. Pending the finding by the arbitrators, which will take considerable time, the miners will probably return to work.

It is reported at Brussels that Mr. Kruger has abandoned his irreconcilable attitude and intends to seek permission to return to South Africa.

A bill has been introduced into the French Chamber of Deputies for the separation of Church and State.

**Industrial and Commercial.**

The heavy movement of freight east and west promises to more than tax the carrying capacities of all the principal lines and lead to a serious car shortage. The resumption of mining in the anthracite region makes an abnormal demand for cars for carrying coal. Many roads, anticipating a shortage, have been adding new cars of all classes, and revamping old ones, as well as increasing their locomotive equipment.

It is reported that negotiations are under way for the merging of the Pittsburg Coal Company and the Monongahela River Consolidated Coke and Coal Company with a combined capitalization of $110,000,000. The yearly output of these two concerns is about 30,000,000 tons of bituminous coal. The purpose of the combination is to economize operations and eliminate the trade rivalry between the two companies.

To the three or four lines now touching at Honolulu is soon to be added, according to reports, a new French line. The steamers of the Massageries Maritimes, now sailing between Marseilles and Sydney, will next month include in their itinerary Honolulu New Caledonia, Tahiti, and San Francisco.

It is stated on good authority that the United States Steel Corporation, which controls two-thirds of the output of the Connellsville region, in order to steady the market has fixed the price of coke for next year at $3 per ton. The market price has been running from $4 to $6.

Official figures from the five large companies having their offices in Scranton showed that ninety-five per cent of their collieries were in operation last week, and that the output was about three-fourths of what it is normally, amounting to about seventy thousand tons of coal daily.

An American syndicate is negotiating for a number of electric lighting plants in northern Mexico at Tampico, Victoria, Montemorellos, and Linares. In case of the success of the pending negotiations the syndicate proposes to extend its operations to other cities.

The first real railway merger in which Mexican capital is exclusively interested has just been consummated in the State of Yucatan with a capitalization of $22,000,000. This merger takes in all the principal railroads on the isthmus.

A gigantic sugar corporation, which seeks the control of the output of the plantations in Hawaii, is about to be incorporated, it is said, in New Jersey under the name of the Hawaiian Securities Company, with a capital of $12,000,000.

**General.**

The London committee of the Egyptian Exploration Fund has appointed as an American committee to work in harmony with it the following: Professor William W. Goodwin, of Harvard, chairman; John E. Lodge, secretary; A. M. Lythgoe, curator of the Egyptian Department of the Museum of Fine Arts, Boston; Edward Robinson, director of the Museum of Fine Arts; Gardiner M. Lane, treasurer of the Boston Society of the Archæological Institute of America; and Thornton K. Lathrop, trustee of the Boston Athenæum.

In a report to the Department of State, Charles S. Francis, United States Minister at Athens, Greece, announces that an unusually interesting archæological discovery has just been made in Bœotia in the plain of Chæronea, where the Greeks in 338 B.C., lost their independence by their defeat by Philip of Macedon. This discovery is the tumulus of Philip's soldiers, and will be of importance to topographers, ethnologists, and archæologists.

At the recent auction sale in Boston of the library of the late Edwin Conely of New York, an uncut copy, first edition, of Hawthorne's "Fanshawe" was sold for $840. This was Hawthorne's first romance, written while he was a student at Bowdoin College, and was printed in 1828. Only a few copies of the original edition were sold and the rest were destroyed, hence its rarity.

Professor Herman V. Hilprecht, head of the Archæological Department of the University of Pennsylvania, is reported as saying that the university is now in possession of the richest collection of Babylonian antiquities in the world,—superior even to that of the British Museum.

It is stated that the Customs Congress, one of the three international gatherings proposed by the Pan-American Congress at its last meeting in Mexico, will meet at New York January 15, 1903. Thirteen republics have already signified their intention to send delegates.

Another Antarctic expedition has started on its voyage southward. It is the Scottish party, under the leadership of Mr. W. S. Bruce, which, in a strong, seaworthy Norwegian whaler, the Scotia, sailed from Troon.

The actual work of building the Shamrock III., the new challenger for the America's cup, will begin in a few weeks. The bending of the frames is nearly finished, and the shaping of her keel plates has commenced.

The new tunnel, about forty-two hundred feet long, being constructed under the harbor from East Boston to Boston, has been excavated and completed for about thirty-five hundred feet.

Mrs. Elizabeth Cady Stanton, the pioneer of woman suffrage in America, passed away at her home in New York City, October 26, at the age of fourscore and seven.

Between fifteen and twenty thousand students are enrolled this year in the various higher educational institutions of Greater Boston.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Science and Christianity.

"No more striking manifestation of the interposition of divine Providence in human affairs has come in recent years than that shown in the rising up of the body of people known as Christian Scientists, who are called to declare the real harmony between religion and science, and to restore the waning faith of many in the verities of the sacred Scriptures."

These words, destined to become historic, were uttered by the Hon. Charles Carrol Bonney, president of the World's Congress Auxiliary, during the Parliament of Religions held in Chicago. It would be difficult to give in a few words a better statement of the mission of Christian Science. While there has seemingly been a great gulf between science and religion, it is nevertheless true that the greatest discoveries of science have been made in the most advanced Christian countries and by men of high Christian ideals. Bonaparte, a skeptic, said: "Since ever the history of Christianity was written, the loftiest intellects have had a practical faith in God;" and Kepler, one of the chief founders of modern astronomy, speaking of his wonderful discoveries, said: "I think God's thoughts after Him." It was not until Christianity had leavened the thought of the world that the great discoveries in chemistry, astronomy, and physics were made. It is the testimony of history that the greater the Christian attainment of a country, the greater its scientific achievements. And hence a greater advancement of Christianity is requisite to bring forth greater developments of science. The modern scientific world is undergoing as great a change as the modern religious world. The *Christian Register* says:—

"Nine hundred and ninety-nine out of a thousand of the theological books printed twenty-five years ago are now worthless and unsalable. But the same thing may be said of books of many other kinds,—medical, philosophical, scientific. Not a single instrument used in the laboratories of Harvard College forty years ago has any value now excepting as a curiosity for a museum. It is astonishing how many things we have lost, to the great advantage of mankind." May it not be that the full understanding of Christianity will include and involve a full understanding of science?

This question Christian Science answers in the affirmative and bases its affirmation on the mission of Christ Jesus, who proved God's power, understood, in destroying disease, sin, and death, and in his control of the physical universe, as manifested in stilling the storm, feeding the multitude, and walking on the waves. In the words of the Discoverer of Christian Science, "Jesus of Nazareth was the most scientific man that ever trod the globe. He plunged beneath the material surface of things, and found their spiritual cause" (Science and Health, p. 313).

His proofs so miraculous to the human mind were really divinely natural, a manifestation of divine Science. That they are not supernatural to a divinely imbued mind is clear, for Jesus said: The works that I do ye shall do, and commanded his disciples for all time to give proofs of God's government of the world in eternal Science.

It is evident that the world's sense of science is not that of Christ Jesus. In fact, after nearly two thousand years the world is still tormented by the same evils and disasters, and is looking everywhere for relief. Christian Science has come to meet the world's great need; it has revealed the divine Principle and rules for demonstrating the Science that Jesus taught; it is the absolute revelation of man's true relation to God, the eternal Cause and Creator of the universe. It is possible for mortals to begin at the numeration tables whence they may work up to the infinite calculus of God's divine Science.

The whole of the philosophy and practice of Christian Science is contained in the Christian Science text-book, "Science and Health with Key to the Scriptures." The author distinctly announces that in her search for Truth, the Bible was her only guide, and upon investigation it may be seen that there is nothing in the doctrine or practice of Christian Science that she did not find, and that you may not find in the Bible. This should silence the objections of Christians. In fact, the great value of Mrs. Eddy's work, implied in the title, "Key to the Scriptures," is the reasonable and demonstrable light it throws on the meaning of the Scriptures. In this book she says: "I therefore plant myself unreservedly on the teachings of Jesus, of his Apostles, of the Prophets, and on the testimony of the Science of Mind. Other foundations there are none" (p. 269), and the first tenet to which all joining the Christian Science church must subscribe reads: "As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to Eternal Life."

While the physical healing is only one of the incidents of the reforming and regenerating influence of Christian Science, it is naturally the one which has attracted most attention and aroused most discussion in the public mind. In fact, the large majority of its adherents have been drawn to its ranks through the physical healing of themselves or friends, only to find that these were the "signs" indicating its higher and broader mission in correcting the evils and errors of mortal existence.

From the Christian Science standpoint the dismal realities of the human mind, its sins and sicknesses, are not the fixed facts which we believe them to be, and it is possible to eliminate them and annihilate them through the understanding of divine Mind, God. In the words of St. Paul: "To be carnally minded is death; but to be spiritually minded is life and peace."

It is generally conceded that the mind governs the body somewhat, but it remained for Christian Science to show that our bodies express our thoughts, and that in order to have sound and whole bodies we must have healthy, whole, or holy thoughts. The words whole, health, and holy are derived from the same root and had originally the same meaning. The above statement agrees with the Scripture, "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap. For he that soweth to his flesh shall of the flesh reap corruption; but he that soweth to the Spirit; shall of the Spirit reap life everlasting." A kind, benevolent, and pure-minded person invariably shows this condition on his face, while a debased, wicked, or impure man mirrors his thoughts as well. We also speak of happy faces, cheerful or gloomy natures. If evil, sinful,

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

or sick thoughts distort a man's face, may they not affect other portions of his body,—the heart, lungs, or brain,—and bring about a diseased condition? And may it not be true that good, healthy, holy thoughts will produce the corresponding manifestations of health? A noted New York physician said not long ago that the prevalence of Bright's disease among business men could be traced directly to the excitement, worry, and strain of active business life. If this be true, is it not plain that if this strained thinking could be eliminated its dread effects—a plainly organic disease—would also be destroyed? The basis of this true health by right thinking is what Christian Science has brought. It consists in striving to let that Mind be in us which was also in Christ Jesus, and in obeying the proverb "In all thy ways acknowledge Him, and He shall direct thy paths. . . . Trust in the Lord with all thine heart; and lean not unto thine own understanding." Thus Christian Science is the antipode of hypnotism, mesmerism, mind cure—systems one and all based on the so-called power of one mind over another—for it turns man's thoughts to God, the divine Mind, as the infinite source of all good. In the words of the Psalmist: "Bless the Lord, O my soul, and forget not all His benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies."

C. FRED HACKETT.
In *Utica* (N. Y.) *Tribune.*

## Beware of False Prophets.

ST. PAUL said to Timothy, "Beware of the oppositions of Science falsely so-called." St. Paul was a Christian, and without doubt entertained no knowledge except that which is Christian and warned Timothy against any un-Christian knowledge or Science. In other words, he warned Timothy to beware of the opposites of Christian Science which are falsely called sciences.

There is much taught in the world in the line of theories and Biblical interpretations, so that it becomes necessary that there should be a test in order that we may be able to divide between truth and error, and it can be readily seen by all that the plausibility of any particular belief or doctrine is not a safe and conclusive proof of its truthfulness. Neither is it a proof of the genuineness of a particular creed that it can be established by certain Biblical interpretations. The worth of a religious belief is known by its fruits. The only test which Jesus gave was that of reforming the sinner and healing the sick. True, there are many methods of producing such results, and each particular religionist may be able to point to some fruits and thereby claim a Scriptural endorsement of his peculiar faith, but only a perfect way can eventually bring perfect results even when in course of time it becomes perfectly used.

The Egyptian magicians with their enchantments produced the same results which Moses produced up to a certain point, when they failed and acknowledged concerning Moses' power, "This is the finger of God." So there are many ways and means which, because of the pliability of the human mind and its ability to receive impressions, produce apparent results, and, therefore, the test can only be in the final outcome. The results which are effected are oftentimes a mere exchange of one human condition for another, as suggested in the text: "They have healed also the hurt of the daughter of my people slightly, saying, Peace, peace; when there is no peace," and not a destruction of the human condition by the divine power. So that people are not only deceived by theories but by the results of applying wrong theories. Eventually, however, through experimentation, all will come to a knowledge of the true way.

Paul said, "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble, are called: But God hath chosen the foolish things of the world to confound the wise; . . . that no flesh [matter] should glory in His presence." Paul clearly manifests that the preaching of the cross which was foolishness to the learned Greeks and a stumbling-block to the Jews, had for its purpose to bring about that state wherein matter should have no glory, no life, substance, or intelligence, no credence whatever in the sight of Spirit, God. St. Paul had already declared, "The wisdom of this world is foolishness with God." Later he said, "But as it is written, Eye hath not seen, nor ear heard, neither have entered into the heart of man, the things which God hath prepared for them that love Him." Again, "But the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned." In a modern translation the word material takes the place of the word natural in this statement. The text declares in fact, that the five personal senses do not give any knowledge of God and of His creation,—the things which God hath prepared.

Again, St. Paul said, "The flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other." The testimony of the five personal senses is always contradictory to our spiritual understanding. Which is the false teacher, personal, or spiritual sense? Which is the most reliable, which the better guide to the Christian? Inasmuch as the Master of Christianity said: "It is the Spirit that quickeneth; the flesh profiteth nothing," and "This is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent," we must conclude that Christianity is practice based upon spiritual understanding,—a true understanding of God in contradistinction to a mere belief or opinion about Him. Jesus evidently had very little regard for the universally accepted belief of life, substance, and intelligence in matter, since he spoke of the flesh as an unprofitable thing and never had anything favorable to say of it.

Jesus was undoubtedly correct in his teaching and practice, and searchers for the truth should note this at the outset. His marvelous success was the proof of the correctness of his practice while the correctness of his practice establishes the truthfulness of his teaching. It behooves us, then, to understand accurately what he understood and to live as he lived, and thus verify his promises, "These signs shall follow them that believe;" "He that believeth on me, the works that I do shall he do also." We who understand what Jesus understood and who deport ourselves accordingly, shall be followed by the same "signs," for to produce results in the destruction of sin and its consequence, called disease, to promote spiritual growth, and to overcome the false sense of life which we call mortal existence, is the purpose of Christianity.

Christian Science bases itself unreservedly upon the Scriptural statement, "God is Spirit," and does not endorse or include anything which is not in perfect accord with this premise. Its adherents are Christian Scientists only in proportion as they are able to understand and demonstrate this Science of Christianity.

ALFRED FARLOW.
In *Boston Times.*

Whatever oppression is on a man, whatever trouble, whatever conscious something that comes between him and the blessedness of life, is his sin; for whatever is not of faith is sin; and from all this He came to save us. Salvation alone can rouse in us a sense of our sinfulness. One must have got on a good way before he can be sorry for his sins! There is no condition of sorrow laid down as necessary to forgiveness. Repentance does not mean sorrow; it means turning away from the sins.

GEO. MACDONALD.

## The True Christian Scientist.

THE prayer of the Christian Scientist is distinctly one of understanding. The knowledge of God's goodness and power is with him constantly. His remedy for disease is always at hand and effectual. The sufferer who applies to him for relief, no matter what his sickness may be, is at once shown the necessity of lifting his thoughts away from self to something higher. He is shown the impossibility of making good responsible for evil, or, in other words, he is shown that God never created disease and suffering nor decreed that it should be inflicted on mankind. On the contrary, He "created man in his image and likeness," to have dominion over all. Every physician recognizes that it is fear which robs the patient of his courage and strength. The Christian Scientist helps to restore his patient by showing him there is nothing to fear. If God is Good and is ever-present and omnipotent, what is there to fear? A realization of this fact leads to the inevitable conclusion that all which is unlike God is unreal, that is, in the sense that eternity and all which pertains to God has reality.

The recognition that disease is not of God robs it of its power, and the patient begins to manifest more harmony in mind and body. He is not only benefited physically but mentally, and through proving to him that sin is responsible for sickness the sinner is reformed. Better health and morals invariably follow Christian Science treatment.

The constant prayer of the Christian Scientist is to be conscious of God's omnipresence and omnipotence, and through this to rise superior to the power of sin and disease.

ALBERT E. MILLER.

In *The Medical World.*

## Divine Law.

CHRISTIAN SCIENTISTS believe that the natural law is the divine law, or God's law. In the science of mathematics it is perfectly natural for the basic law to govern numbers. Only through an understanding of this basic law is the correct solution to problems obtained. There is nothing mysterious or superstitious about it except to those who may not fully understand. Judging from a human concept of things, it does not seem possible for the sick to be healed through the divine Mind; yet, according to our present understanding of Christian Science, it is perfectly natural. Thus in Christian Science, the natural law and the divine law are one; one is not spiritual and the other material, but both are spiritual, one and the same. So long as we continue to believe one to be spiritual and the other material, mystery will continue to enshroud us. We must have a science to show us the way out, and when Christian Science is understood it will be found to have no connection with superstition.

The supposition that the natural law is a material law, a law of the carnal human mind, and that occasionally God sets these laws aside, tends to darken consciousness and brings a perplexed state of mind; whereas to know that the natural law is God's law, better enables us to comprehend the Science of Being.

Christian Science does not appeal to men's superstitions; it takes them out of the domain of superstition and appeals to man's better reason, his better judgment. And what is the proof? The testimony of an innumerable company that Christian Science has healed them of suffering weighs mightily against the assertion that "it is impossible to demonstrate the efficacy of prayer in the process of healing," the testimony of this large body of intelligent and cultured people bearing witness that Christian Science has led them out of many phases of sin, and is leading them into higher ways and purer living, refutes the declaration that "it is impossible to defend the theory on moral grounds;" the potent fact is that Christian Science, lived, increases the love and trust of all its followers in the Bible promises, in the power of good over evil, of truth over error, and mind over matter, even to the exclusion of the use of material medicine; consequently, there is no foundation for the accusation that it appeals to men's superstitions. While Christian Scientists do not take material medicine, yet they are kind toward those who do; they are charitable in their views, wanting all people to have whatever they think will bring relief from suffering.

It is true there have been some deaths under Christian Science treatment. Because the disciples of the Master failed in an instance of healing, does not discredit the work of the Master; it showed a lack of comprehending what Jesus taught. If a patient is not restored under Christian Science treatment, instead of discouraging the individual and discrediting what the Master said should be done, it should and does lead the practitioner to search more diligently after a better understanding of the Principle of healing.

## An Appeal for Justice.

To the Editor.

In your issue of the 14th instant you gave prominent notice of the receipt of a pamphlet devoted to an adverse criticism of Christian Science and its adherents, by a minister of another denomination, the *Ledger* thus becoming an instrument in the hands of one church to criticise and condemn another. In this I feel that it has, without the least intention, done those whom I represent a deep injustice.

It is well known, of course, that the several denominations differ from each other upon essential doctrinal points, but I do not believe you would, upon serious thought, think it right to allow your paper to become the medium through which the Presbyterians might criticise the Baptists, the Methodists the Episcopalians, or *vice versa.* Wherefore, then, should not this same rule apply to Christian Science?

The Christian Science Church has no quarrel with those who differ from it, it does not meddle with the affairs of others, and is innocent of any offence worthy of such condemnation as is contained in the pamphlet to which you have given so prominent a notice. So long as the Christian Science Church attends to its own business and lets the business of others alone, no one can possibly have any just ground for dispute with it.

Because our method of preaching and teaching may differ from that of the other denominations, in that we follow our teaching with practical demonstrations, thereby escaping the rebuke, "Faith without works is dead," does this bestow upon those who disagree with us authority to judge and condemn? We differ from some of the orthodox teachings because we understand the Bible differently, but we do not condemn what we believe to be the sincere efforts of those who hold opinions contrary to our own, nor criticise those who hold such opinions.

J. C. BATTS.

## The American School in Porto Rico.

THE first legislature which convened in Porto Rico after the island came under American protection enacted a new school law, based upon the conditions in Porto Rico and in strict harmony with American ideals. Under its provisions at least ten and not more than twenty per cent of all municipal funds are set aside as a school fund. Thus the schools were lifted absolutely out of politics and placed upon a sound financial basis.

The legislature also voted the department of education in

Digitized by Google

1900–1901 $400,000, in 1901–1902 $501,000, besides a fund of $15,000 to maintain young men and women in schools in the United States. It is, perhaps, fair to say that Porto Rico is voting now a larger percentage of its revenues to education than is any state of the federal union.

The teacher problem was a grave one. The old Spanish teachers were educated to believe that a school is a vested right,—that the school exists for the teacher. It was no light task to inculcate the idea that the school exists for the pupil, that the tenure of the teacher is not for life, but for such time as results in good to the child.

The teaching body is now almost wholly freed from politics. Education is on practically a non-partisan basis in Porto Rico. A necessary weeding out of incapables caused a great scarcity of teachers, and in the mean time the number of schools to be opened was increased two hundred per year. One of two courses was open,—either to import teachers from the States or make them. It was decided not to bring from outside more than a minimum number of American teachers. No people make substantial or permanent progress unless their leaders are raised up from their own number. Hence a normal school became a necessity.

With no stronger appeal than that it was the patriotic duty of the best young men and women to devote their time to teaching, a summer normal for ten weeks was projected. It was felt by the optimistic that we could enroll about one hundred pupils. The school opened with eight hundred and six, and many were refused because no room could be had for their instruction. It was a magnificent response. Old social lines were broken. Young women who never appeared in public without a chaperon came to the normal and studied most faithfully. The examination at the close gave us almost two hundred additional teachers.

The department at once began the erection of a normal school building, at a cost of $40,000, including land and equipment. This is located on a beautiful campus of seventy acres at Rio Piedras, convenient to all the island, and capable of training at least three hundred teachers. It is in every way a successful training school.

American teachers to the number of one hundred and twenty-six are at work teaching English in the schools. Through them many native teachers have learned the best methods and have acquired the English language. To-day almost every teacher in the island speaks and teaches English. There are fully forty thousand children using the English language and singing our national hymns in the tongue of the great republic.

Porto Rico, two years ago, did not have a single schoolhouse. Spain in four hundred years erected not one. The United States military government erected one poor frame structure which fire destroyed. The department of education announced that it would erect school buildings if the municipalities would donate suitable ground. In every case this was done. The sites are in each case large, usually one acre, and convenient. To-day more than fifty first class brick, stone, and concrete buildings are in use. No one act of our government did more to hasten the Americanizing of Porto Rico than this campaign of school extension.

The dedication of these fine structures was always an occasion of great rejoicing. On one occasion, when a rural agricultural school was to be dedicated, the pupils of Bayamon were hauled three miles in ox-carts. Half a hundred boys and girls standing in a small cart drawn by four oxen, would wave their small American flags under the palms and cheer the American republic and sing its national airs. It was a splendid spectacle. Eight of these carts formed a great procession.

In twenty-two of these new buildings school is supplemented by actual work in agriculture. Each pupil spends part of each day cultivating the soil on the school grounds. The enthusiasm for this practical training is boundless. Over twelve hundred youths are learning practical agriculture. When a pupil carries home to his "shack" the beans, peas, tomatoes, etc., which he himself has cultivated, and the family gets a meal therefrom, they have a substantial argument in favor of the new system of education.

The poor people of Porto Rico are making unusual sacrifices to educate their children. No compulsory law is necessary. Attendance is higher in percentage than in any state of the Union except Massachusetts, which state exceeds Porto Rico only by one per cent. Hundreds of children carry their shoes and stockings to and from school and in their arms. It is a common experience to see the pupils at dismissal leave the school, sit down by the roadside, remove shoes and stockings, and climb rugged and jagged mountain trails barefooted to save the shoes and thus prolong their use. I know women who sit on the river rocks all day and every day washing clothes to keep their children in school.

In the mountain district above Corozal a boy was found in school wearing a peculiar shirt,—at least four times his size. Upon inquiry it was learned that the boy had only one shirt and that one was being washed. That the boy might not miss a day in school his father gave the son his only shirt. The father that day, naked to the waist, carried a case of merchandise on his head over the mountains, under the palms, in a fierce tropic sun, a distance of twenty miles and return, that his boy might learn. And the father's shirt on his son's back bore the legend, "Pillsbury's XXX"!

At Juncos I saw a boy in school who was unusually self-conscious, and who, in moving about from class to seat, never turned his back to me. Inquiry of the teacher told the story. The boy was finally to pass to another room, and my teacher-friend's explanation led me to watch. As the boy passed out I saw that all the shirt he had in this world was on the front of his body! Hiding the shame of his poverty, there he was in school; dressed only in a pair of tattered trousers and half a shirt, he was to me a genuine little patriot, pressing his face to the light and pushing his half-naked body forward in the movement for the uplift of himself and his beautiful island home.

I wish from the bottom of my heart that many American boys might learn from this poor boy the great lesson once told me by a boy in a Porto Rican school who modestly admitted he could speak some English. He said, "I am learning many things in this school. I like best the story of Abraham Lincoln. He was a poor boy like me, and lived in a log cabin as poor as mine. But he was honest and earnest, and became the saviour of his country. I mean to work hard that I may become of use to my country."

These are but types of a zeal that is almost a frenzy on the part of the people of this island to become educated. These are the only people who have come to us with enthusiasm and without coercion as a result of the late war. They are a credit to us, a worthy addition to the complex forces that make up the newer republic.

Let us welcome and work for these children of the nation. They are trying by education, by industry, and by obedience to law to prove their right to a place in the sisterhood of states. They are learning what we must all learn with deeper meaning, that the door to statehood in the federal union is the door of the free public school.

From an article in *The Congregationalist* by Prof. M. G. Brumbaugh, Commissioner of Education for Porto Rico.

### Quarterly Subscriptions.

Will subscribers to the *Christian Science Quarterly* please take note of the label on the cover of the last number received. If this reads Dec. 02, it means that this is the last number for which payment has been made, and your subscription should be RENEWED AT ONCE. If this is done it will insure the prompt delivery of the *Quarterly* for January, February, and March, 1903.

## Utilization of Pine Needles.

THE illimitable forests of yellow pine abounding in the State of Oregon, with their accessibility to through lines of transportation, suggested to a German from the forests of Thuringia the transfer of a lucrative business to the Pacific coast. In Germany the leaves never exceed two inches in length, while in Oregon they often exceed thirty inches, and average twenty. In the former country the forest laws are extremely strict and often prohibitive, obliging the maker of the product to use the dried leaves that have fallen to the ground and thus insuring an inferior and less effective quality of goods. In the western state denuding the yellow pine of its leaves has been encouraged, the expert of the forestry commission having pronounced the process beneficial. A tally kept of the weight gathered from a certain number of trees indicated that the crop taken in April weighed 650 pounds, while the same trees in October yielded 775 pounds.

Five hundred pounds is regarded as an average day's work. The leaves are picked into sacks and hurriedly sent to the factory. Exposure to the sun causes the leaves to wilt, and impairs the quality of the product. In picking, the thickest bunches of leaves are selected, and the scanty ones neglected.

In the extraction of pine oil, two thousand pounds of green leaves are required to produce ten pounds of oil. The process is the ordinary one of distillation. In the manufacture of fiber the leaves pass through processes of steaming, washing, drying, etc., twelve in all, occupying four days. Two qualities are produced, first and second. The first, from which no oil has been distilled, is worth, upon the market, about ten cents per pound. The fiber is elastic, and the staple only little shorter than the green leaf from which it was made, and with strength sufficient to enable it to be spun and woven into fabrics. Mixed with hair, the fiber makes an excellent material for mattresses or pillows. The oil extracted gives an agreeable flavor to candies. Toilet soaps are made, strongly impregnated with essential oil of pine needles.

The fiber itself, after curing, looks like a slender shaving of some dark wood, retaining its odor indefinitely. Insects abhor it on that account. It is said that the Oregon factory is the only one in the world outside of Germany.—*Scientific American.*

## The Comradeship of Right.

G. R. L.

BRIGHTEST star in darkest night,
Christ's our Comrade in the fight.
Strong in knowing He is near us,
Smite we left and smite we right,
With His panoply bedight,
With His presence in us bright,
In the fellowship of light.
What a mighty band of comrades
Are the comrades in the right!
Of all clans, and tribes, and times,
Of all tongues, and of all climes,
In the everlasting comradeship of light;
We're together, and we're strong,
We're the unseen Spirit-throng,
And we battle down the wrong
In the comradeship of Right

Most of our criticism of others is either idle or unjust because it does not take into account the obstacles overcome and the progress accomplished.—HAMILTON W. MABIE.

## Among the Churches.

### Union in Binghamton, N. Y.

On September 24 the members of First Church of Christ, Scientist, addressed the following letter to Second Church of Christ, Scientist, Binghamton, N. Y.

*Dear Co-Workers:*—Believing that as Christian Scientists we could do better work for the Cause in Binghamton if united, and that this union seems to be the need of the hour, we, the officers and members of First Church of Christ, Scientist, do most cordially and lovingly invite you to unite with us at this time.

Sincerely Yours in Truth,
MARY E. FERRIS, *Clerk.*

On September 29 a cordial response to this invitation was received, which resulted in the desired union.

Last night [October 22] was our first meeting together, and we had a large attendance of happy people. Many testimonies of good healing were given, and many expressions of thankfulness for this demonstration of Love.

As each church was more prosperous financially and numerically than ever before, it was not material necessity that brought about this union, but each was working for the upbuilding of our Cause, and had adopted the new church By-law as to rotation in office and so were ready to take this advanced step.

In this blessing we recognize the result of our dear Leader's untiring labor, and know that it is through her manifestation of Love and wisdom that we have been enabled to fall in line, and join the army of united workers in the vineyard of Christian Science.

MARY E. FERRIS, *Clerk.*

### Corner-stone Laid in Kansas City, Mo.

An event of unusual interest in church circles of this city was the laying of the corner-stone of Second Church of Christ, Scientist, at Thirty-first Street and Troost Avenue, at nine o'clock this morning [October 20]. The ceremony was witnessed by three hundred people, mostly local Scientists, who had gathered to celebrate the event as a milestone in the era of church building in their rapidly growing denomination. Following the placing of the stone in position a copper box hermetically sealed, and containing the Bible, copies of all the writings of the Rev. Mary Baker G. Eddy, the *Journal* and *Sentinel*, periodicals of the denomination, and the daily papers, was inserted in the stone.

This Second Church of Christ, Scientist, organized in 1898 with sixty members and has grown to have a regular attendance of over six hundred.—*Kansas City Star.*

### Union of Churches in Austin, Tex.

Last week a step was taken by the members of Second Church of Christ, Scientist, which is causing rejoicing among all concerned. The church was disorganized and the members applied for admission to First Church of Christ, Scientist, the Austin branch of the Mother Church of Boston, Mass. They were joyfully received and worshiped with First Church of Christ, Scientist, on Sunday, at 107 West Seventh Street. The services of First Church of Christ, Scientist, will hereafter be conducted in the place of worship occupied by Second Church on East Ninth Street before its disorganization, as the place is more commodious and therefore better adapted to accommodate the enlarged congregation.—*Austin* (Tex.) *Statesman.*

We learn that the notice of the purchase of a building site, by the above Second Church of Christ, Scientist, which was quoted from the *Austin Tribune* in our issue of October 23, was an error, and we are glad to make this correction.—EDS.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Rights and Duties.

CHRISTIAN SCIENTISTS present themselves to the world as a people consistently following the teachings of Jesus, the accepted Master and Exemplar of Christianity, rendering to God the things that are God's and to Cæsar the things that are Cæsar's. Their position is that of law-abiding citizens, enjoined to be scrupulously exact in observing the laws of the land, careful of the rights of their fellowmen, asking no more for themselves than they are willing to grant to others, and patiently to seek the religious liberty guaranteed to all men under the constitution of all free countries.

The first amendment of the constitution of the United States provides that

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof;" and further (14th amendment, Sect. 1), that "no state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States . . . nor deny to any person within its jurisdiction the equal protection of the laws."

The essential features of these provisions of the federal constitution reappear in the constitution of the several states, of which the following excerpt from the constitution of the State of Illinois may serve as an example:—

"The free exercise and enjoyment of religious profession and worship without discrimination shall forever be guaranteed: and no person shall be denied any civil or political right, privilege, or capacity, on account of his religious opinions."

In a majority of the progressive and enlightened nations of the world, some form of the Christian religion, the teachings of Jesus Christ, is prescribed as the religion of the State, in others Christianity is recognized as the prevailing religion of the people. The United States is within this latter class, because the great majority of our people profess some form of Christianity. We may therefore say that this is a Christian country, and no one should have the hardihood to dispute the right of any and every person to practise Christianity, or, as Webster defines it, "the system of doctrines and precepts taught by Christ."

No one at all familiar with the New Testament will deny that Jesus Christ taught his followers to heal the sick, that he used no material means in healing those who came to him, that he taught his followers to heal as he healed, and that his immediate followers healed without material means. It is therefore a fact that the religion of Christ includes healing without drugs or other material remedies, and this has been recognized, in some degree, by Christian teachers of all faiths. The establishment of this fact places Christian healing within the protection of the religious liberty guaranteed by the constitution. The fact that so-called material science has declared for a system of drugs does not alter the fundamental law of the land, nor does it give reason for invading the personal and religious liberty of the people.

A different phase of the question is presented, however, in the matter of reporting cases of so-called contagious disease, in keeping with the law or regulation which, subject to the above constitutional limitations, has been enacted with a view to conserve the public welfare, and so long as the law demands that such cases be reported, Christian Scientists should be prompt and unfailing in their obedience and give the public the benefit of any serious doubt which may attend the classification of disease. Respecting this our Leader has said:—

"On the subject of reporting contagion I have this to say: I have always believed that Christian Scientists should be law-abiding; and, actuated by this conviction, I authorized the following statement, which appeared in *The Boston Herald* about one year ago:—

" 'Rather than quarrel over vaccination, I recommend that if the law demand an individual to submit to this process, he obey the law; and then appeal to the gospel to save him from any bad results. Whatever changes belong to this century, or any epoch, we may safely submit to the providence of God, to common justice, individual rights, and governmental usages.'

"This statement should be so interpreted as to apply, on the basis of Christian Science, to the reporting of contagion to the proper authorities when the law so requires. When Jesus was questioned about obeying the human law, he declared: 'Render unto Cæsar the things that are Cæsar's,' even while you 'render unto God the things that are God's.' "

Healing through Christian Science has been before the public for some thirty-six years, and notwithstanding that it has been the subject of bitter criticism and merciless attack, it has won its way to public confidence through the healing of every form of disease.

Its adherents are healthy, happy men and women, and in unnumbered cases they were made healthy and happy through Christian Science after years of suffering, and after medical and surgical treatment had utterly failed. If there were but one such case it would present justification for the existence of the Church of Christ, Scientist, but there are thousands. To demand of Christian Scientists unvarying success in overcoming disease, is to subject them to a test which would utterly and forever condemn the material methods of treatment for which the exactors stand. While Christian Scientists rejoice in achievements which have removed all doubt, both as to the sufficiency of the Principle of Christian Science, and as to the only safe and wise course for them to pursue, they recognize that they are but relative beginners in the apprehension of Truth, and they point to Jesus as the only perfect demonstrator of the healing power.

Undoubtedly the list of thirty-five failures within six years, recently compiled by a critic is not complete, but if there were several times that number the percentage would still be so far below the normal death rate under medical practice as to accentuate the fact that Christian Science is more efficient.

We have heard no whisper of indicting the physicians and parents of the 1,145 who died of diphtheria in six months in Greater New York.

Since Christian Science has been before the public, hundreds of reputable persons have testified that they have been so enlightened by reading the text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, that they have been healed, and very many of them after they were given up by physicians. Mrs. Eddy is constantly in receipt of thanks and encouraging words from Archbishops, Doctors of Divinity, eminent lawyers, and loving children.

Mrs. Eddy advises that "until the public thought becomes better acquainted with Christian Science the Christian

Digitized by Google

Scientists shall decline to doctor infectious or contagious diseases."

The prosperity of our Cause, and the health and regeneration of mankind demand that all Christian Scientists shall be awake to every thought that quickens their spiritual perception. They must remember that "In Science, Divine Love alone governs man" (Church Manual), and steadfastly consecrate themselves to the service of God.

ARCHIBALD MCLELLAN, *Editor.*

## From our Contributors.

### Our Abiding Comfort.

A. L. V.

DAVID said in the ninety-fourth Psalm, "In the multitude of my thoughts within me thy comforts delight my soul."

What a volume the Psalmist speaks in these few words! It is almost the summing up of his life's history. What a multitude of anxious thoughts must have surged in upon him as he beheld the waywardness of his beautiful son! What sorrowful thoughts, as he saw the results of his own dreadful mistakes! What tumultuous thoughts, living in the midst of a warlike people!

From the sacred annals we read that the sword never departed from his house. Yet, in the midst of all this tumult and adversity, he could say, "Thy comforts delight my soul."

How these words buoy the courage of the Christian as he realizes that the same comforts are here and now, for him as for David, for God is unchangeable.

We are not only to have patience, courage, and endurance in the midst of our daily work and cares, but delights. Paul despised his afflictions and "gloried in tribulation." No calamity could separate him from the love of Christ.

With the light of Christian Science on the sacred page we grow strong, not in body only, but, better still, strong to resist error in all forms, in a selfless dependence on God. Learning well the lesson, that in ourselves we can do nothing, the next step is to deny that false self and seek the only true Source of all power and all good, and then comes the proof of Paul's words, "For when I am weak, then am I strong."

Oh, the joy of knowing that evil has no power! The Bible plainly says this: "For there is no power but of God." Laying aside the weight of a false belief in the power of evil, we know the delight the Psalmist possessed and attain, somewhat, to that acquaintance with God which brings peace.

The student of Christian Science soon learns to detect lethargy as one of the little foxes that would destroy the vines. Idleness is not rest, for nowhere in God's creation, do we behold it. God's universe is never idle, divine energy pulses in leaf and flower, in wave and sunbeam. Mrs. Eddy says, "The leaves clap their hands as nature's untired worshipers," and thus give us a beautiful lesson to guard against fatigue.

We rest only when we perceive growth. In Love, we both work and rest. It is restless human energy that frets and wearies. As heirs of God, we would daily pray to be worthy of our rich inheritance and more and more to realize the kingdom of heaven within us.

### Wise Guidance.

FRANCES A. GESNER.

THE farther one advances on the straight and narrow way which leads from the illusions of material sense to Spirit's immortal consciousness,—the Mind which is Life eternal,—the more utterly inadequate do words become to express one's gratitude for the discoveries and realizations by the way, and for the infinite glory of the prospect which grows on the awakened vision. All attempts at human expression thereof seem futile, and communication of experiences ceases to be verbal, when reflected from consciousness to consciousness. Truly "eye hath not seen, nor ear heard" what the devoted disciple of the Science of Christ knows, realizes. Such alone can learn how the doctrine is of God. But to render tribute to whom tribute is due, to Cæsar the things of Cæsar, let me add my mite to the grateful offerings of my fellow Scientists, in hearty appreciation of the faithful and successful labors of all engaged in the preparation of that invaluable mental nourishment which is feeding all who receive the *Quarterly*, the *Journal*, and the *Sentinel*. My thanks seem a lame expression; but they are accompanied with a God speed from my inmost heart.

May I add that though myself deprived of church associations, there being no opportunity here (Naples, Italy), I feel no less intense a desire for the best interests of every fellow Scientist and the healthy establishment of our Cause. To this end I hailed with delight the new provision for periodical change of Readers, as I did years since, the substitution of Readers for pastors. I can but feel that the domination of ecclesiasticism has ever hindered, too often darkened, the way of true religion which community of interest, action, and responsibility can alone fully illumine. Glorious as is the Light now dawning, Christian Scientists, as well as those of other denominations, have all the temptations of material sense to meet and overcome; and "Watch" is the true and necessary password for each and every individual traveler on the Scientific way of Truth and Life. Let all that is within us bless the holy name of Him, who guides and enlightens our dear Leader in Israel.

### Love.

CONSTANCE GIBSON.

THOUGHTS seem to have been unfolding themselves more than ever to me lately about Jesus, his mission and his life; and one of these thoughts was the tenderness of the divine Love which he reflected. When I first became interested in Christian Science I was greatly struck by the purity of divine Love, but it seemed to me a long way off and far beyond my reach. It was the life of a Christian Scientist whom I met last summer, which first led me to see that divine Love is not far off and unnatural, but that it is just the nature of God and all around us. The only expression of this Love is infinite sympathy, infinite tenderness, and infinite mercy, and that it is this Love expressed by Jesus which is the Saviour of the world.

Jesus made no condition before he loved, he just loved on all the time. He never asked if those around him were living up to their highest sense of right; he never waited to see if they were demonstrating his teachings; he just went on loving, and if his very love uncovered evil he only loved the more until it was destroyed. It was not he who condemned the adulterous woman; it was not he who nailed the thieves to the cross, and even the very men who mocked and scourged him he commended to a loving Father's care. Jesus' mission was not to destroy but to fulfil. Mrs. Eddy says (Science and Health, p. 518): "Blessed is that mortal who seeth his brother's need and supplieth it, seeking his own in another's good." When the multitudes were hungry Jesus did not send them empty away, thinking the supply was not sufficient for his own disciples. He gave thanks for what he had, and this spirit of gratitude and love radiated until it satisfied them all. It was this Love which Jesus proved to be all-powerful to destroy sin, sickness, and death, and this is the Love which we too have to reflect.

Jesus never told us to wait for a world to come in which to love, he told us to love now. He never told us to wait

Digitized by Google

to see if our brother was doing his work before we loved him; the command is to love, and love means love,—nothing else. We must not wait to be perfect before we begin to obey. We must become as little children, and in meek simplicity follow in his footsteps all the way. We know that the smallest thought of love is from God, and contains within itself all good. There is no limit to the good this little spark can do, if we give thanks for it and give it all to others. Then it will shine brighter and brighter until the very tenderness and sweetness of its expression will lead all men to its divine Source for health and happiness.

Has not our Leader proved to us by her life that the Love which Jesus reflected is here with us to-day? Is not her Message to us this year just a new melody in the Song of Love? Has she not so expressed the purity and tenderness of divine Love in every act that we needs must follow out of very gratitude, and so prove by our deeds the truth of St. John's words: "If we love one another, God dwelleth in us, and His love is perfected in us."

## Identity.

W. E. H., JR.

"IDENTITY is the reflection of Spirit" (Science and Health, p. 477). But what is it that reflects? When I experience a desire to turn from evil, to turn towards Good in any degree or in any direction, that desire is certainly a reflection of Spirit, God; but what is the "I" which experiences?

There is no such existence. This very sense or supposition of an "I," to experience a desire, is the false sense of personality, the cloud which seems to hide the real identity.

The conscious desire to be or do good, is the true and only consciousness, individuality, or identity. This consciousness being from and of God, is at one with Him, and the individual identity is found to be a reflection of Spirit, not something which effects that reflection.

A deeper and deeper realization of this truth dispels more and more, the "old man" of material personality, and as these advances in consciousness are made, the products of false sense are destroyed, the ills of the flesh disappearing, as true being in Spirit is realized.

## Healing Work in Mexico.

EDWARD C. BUTLER.

AN event of special significance to the work here occurred September 1 in the birth of a child under Christian Science treatment. The mother, Señora Fragosa, is a woman forty-five years of age. Eleven years have transpired since the birth of her last child, and she had always suffered considerably in former experiences. The material conditions led the two doctors who had been consulted by the family, to declare beforehand that the mother would suffer severely, and might not be able to get through. The daughter, Angela, a young woman, had been helped in Christian Science, and for nearly a year has attended the services. She has had success in treating in other directions, and felt so confident of her ability to help her mother that the family did not call the physicians. Every condition was successfully met by this young woman. The preliminary symptoms appeared at five o'clock in the morning and at eight, the little one was born, and the neighbors called it a miracle till Angela explained that it was but divinely natural to demonstrate over every pain and danger. The mother was able to attend to her household duties in a few days, and the family, lost in enjoyable wonder at this manifestation of God's power, are very happy that it could be effected through one of their own countrywomen. Angela said she had no fear from the first, and even when the case seemed very dangerous, she was enabled to hold such a thought of harmony and peace as to banish pain and anxiety.

Five days later, in another part of the city, another child was born under Christian Science treatment. In this case the mother Señora Paz, practically suffered no pain. No physician was called, only the midwife, as in the other case. A sister to the mother of the child had learned somewhat of Christian Science two years ago, but had dropped the subject till two months ago when she returned and was healed of some troubles of her own. This young woman treated her sister, and although at times the case seemed desperate, both clung to what they knew of Christian Science. Every condition was met fearlessly and therefore successfully. Neither child has had any set-back, and both are healthy and strong.

A few days ago a little Indian baby was saved from death by Christian Science. It was only seven months old. The parents, Garcia by name, live in the suburbs of the city of Toluca. They brought the baby to this city, having seen the healing of a friend of the family. The day before they left Toluca the baby had suddenly taken sick, they said in consequence of *mal de ojo,* the evil eye, a superstition quite common among the Indians of Mexico. The child was carried to our office and treated. When brought, it was in a comatose condition, and had been so for three days, during which it had not taken any nourishment. It lay limp and apparently lifeless in the lap of the mother. In half an hour, the mesmerism was broken, and the handsome little fellow smiled up into our faces. He was entirely well. The family have returned to their Toluca home carrying with them a most grateful sense of the power of the Christ-truth, so marvelously revealed to the world by our Leader.

## Self-Denial.

ELLA S. SARGENT.

LET me not be influenced by material sights and sounds; let me hold my thought to the highest idea which comes to me from the Word of God; let me cling to that holy thought to the exclusion of every suggestion of self, and in that moment of clarified consciousness, the still, small voice will convey some truth to my spiritual sense; and it will thus become for me the voice of God, mightier than the noise of many waters, silencing in its perfect dominion all the discordant sounds of finite sense.

This is the self-denial for my daily practice. This, the self-denial which is holier than the taking of the less desirable that another may have the choice. This, the mental abnegation which silences self when it would gain the ear; denies it a hearing and casts it out when it would usurp the throne of reason.

This, the cross: "Deny thy *self:* take up thy cross, and follow me."

## The Thanksgiving Day Service.

THE Responsive Reading and Lesson-Sermon to be used at the Thanksgiving Day service will not be published except in the *Sentinel* of October 30 and the November *Journal.* It is hoped that a very general use of the *Sentinel* in this service, may be planned for, so that it may be brought to the attention of many, who are not now familiar with our publications. We are confident that the slight effort and expense involved will bring a large return of Good. Churches wishing copies of this number of the *Sentinel* for distribution to their congregations, will please order at once. It will be supplied at the regular prices; viz., twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

## The Lectures.

### At Evanston, Ill.

Hon. William G. Ewing addressed a large audience at First Church of Christ, Scientist, last night [October 10]. He was introduced by Mr. Holmes Hoge of this city, who said:—

*Ladies and Gentlemen:*—It is again my privilege to stand upon this platform and in behalf of First Church of Christ, Scientist, Evanston, to extend a cordial welcome to all present who have come to listen to the speaker of the evening. The subject is one that is engrossing the thoughtful attention of millions of the human race, many of whom have been raised from sick and dying conditions, and are now rejoicing in health and strength and in a fuller and more satisfying knowledge of God, whom to know aright is life eternal. There is nothing new in Christian Science, but it is the discovery of the great truths as taught by our Master in all their simplicity and strength that enabled him to overcome sin, sickness, and even death, and demonstrate over all material law. We endeavor to follow Jesus' example by preaching the gospel and healing the sick and sinful. This branch church, like all other Christian Science churches, has been planted here as the result of deep-seated conviction, and from this platform are promulgated truths that have for their foundation the words of Holy Writ, as found in the Bible and made plain to Christian Scientists by and through the spiritual interpretation as given in our text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. We have not accepted these teachings blindly, but have proved them true by actual demonstration; thus the knowledge of the truth of Christian Science is as firm in our minds as the fact that two times two are four and not five. Love is the impelling motive power of Christian Science. We seek not to proselyte, but simply in our Master's name to offer the cup of cold water to the dissatisfied, broken-hearted, weary, and heavy laden.

To-night we have with us a member of the Christian Science Board of Lectureship, who will tell you some of the truths as taught in our text-book, and in the spirit of the love of Jesus Christ endeavor to make plain things that seem to some hard to be understood. Judge Ewing needs no formal presentation to an Evanston audience, but let me bespeak for him the earnest and sincere attention of those present.

The Hon. William G. Ewing of Chicago, will now address you.—*The Evanston Press.*

### At Jamestown, N. Y.

When Hon. William G. Ewing of Chicago, accompanied by Martin F. Jackson, First Reader of First Church of Christ, Scientist, of this city, appeared in Samuel's Opera House, Sunday afternoon [October 19], he was greeted by an audience which occupied nearly the whole of the lower part of the house as well as many seats in the balcony. Scientists were present from New York, Toledo, Olean, Bradford, and other places. In introducing the speaker of the afternoon Mr. Jackson said:—

*Ladies and Gentlemen:*—Christian Science has been, and is to-day criticised for what it is not, and its adherents are many times judged accordingly. Now, a Christian Scientist holds inviolate the divine law of loving his neighbor as himself. "All things whatsoever ye would that men should do to you, do ye even so to them." A Christian Scientist does not quarrel with his fellow-man because of his belief or unbelief; he would not intrude upon another's way of thinking, uninvited, to influence or proselyte, any more than he would enter another man's office and dictate to him the way in which he should conduct his business. A Christian Scientist does not malign the medical profession because he may differ in thought from it, nor does he condemn any church or religious society because it does not teach as he is taught. Above all things he is enjoined "Judge not that ye be not judged." If one single sin-burdened mortal can throw off his thraldom as a result of any belief; if one single earth-famishing soul can be led out of darkness into light, out of disease into health, through the office of any teaching, have you not much to rejoice over? And Christian Science numbers among its members hundreds and thousands of sick raised from their couch of pain, and sinners reclaimed.

No movement in the religious world since the Christian era began has attracted more attention than has Christian Science, and no movement has ever been more misunderstood; so, to meet the need of correcting these erroneous opinions and of presenting Christian Science to the public through those who have in part demonstrated its Principle, a Board of Lectureship was instituted in The First Church of Christ, Scientist, of Boston, Mass., and I have the pleasure of introducing to you one of its members, Judge William G. Ewing of Chicago.—*Jamestown Journal.*

### At Chicago, Ill.

"Christian Science is Applied Christianity" was the subject of a discourse by Carol Norton, C.S.D., member of the Board of Lectureship of The First Church of Christ, Scientist, Boston, Mass., before a large audience in Second Church of Christ, Scientist, Wrightwood and Pine Grove Avenues, last night [October 16].—*Chicago Chronicle.*

Mr. Norton was introduced by Judge Septimus J. Hanna, in part, as follows:—

The question of whether Christianity is a Science or whether Science is Christianity, is now before the world, pressing for a hearing. The fiat has gone forth. No human hand can stay, no human tongue prevent its serious consideration, *pro* or *con.*

Those who understand, can prove for themselves the truth of Christianity. The more nearly a provable truth approaches the spiritual, the more Scientific is that truth, for the spiritual is the truly Scientific. The world must, sooner or later, accept this conception of Science, or else admit that it is without any Science, for the speculative and changeable is pseudo-science, not Science. Temporal and mutable things are human fancies, and are in no true sense Scientific. Whatever is of God is Scientific. If Christianity is of God, Christianity must be Scientific. There is no true Christianity apart from God, therefore there is no true Science apart from God.

This is, in substance, the teaching of the text-book of Christian Science. Such a text-book, of necessity, had an author; that author was, of like necessity, a great religionist and a great philosopher. Otherwise such a text-book could not have been produced.

Every sincere Christian Scientist knows that the Rev. Mary Baker Eddy is such a religionist and such a philosopher, and thus knowing, they honor and revere her as an instrument of the divine Mind to show forth in her words and deeds, this true religion and philosophy. Our brother who is to address you will tell you of this Science.

It is my great pleasure now to present to you, as the lecturer of the evening, a brother lecturer, Carol Norton, C.S.D.—*Correspondence.*

### At Leavenworth, Kan.

The Christian Scientists of Leavenworth may well feel that their lecture Sunday afternoon [October 12], given by Mrs. Knott of Detroit, Mich., was a complete success. More than five hundred people were in attendance, all of whom gave the closest attention to the speaker. A number of visiting Scientists were present from Kansas City,

Digitized by Google

Wichita, Winfield, Arkansas City, and Oklahoma, but the majority of the audience was from our own city, for whom the lecture was specially given.

Mrs. Knott is a forceful and entertaining talker, and it is safe to say she can have a good audience here any time she returns for a lecture.—*Leavenworth Times.*

### At Madison, Wis.

Judge Septimus J. Hanna of Boston, lectured at the Fuller, Sunday afternoon [October 5], under the auspices of First Church of Christ, Scientist, of Madison, before an audience of five hundred people.—*Wisconsin State Journal.*

### At Oak Park, Ill.

Judge Septimus J. Hanna, member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, of Boston, delivered a lecture on Christian Science, to a large and appreciative audience, at the new Warrington Opera House, Monday evening, October 20, under the auspices of First Church of Christ, Scientist, Oak Park, Ill. The speaker was introduced by Mrs. Orrilla W. Day, C.S.B., who spoke in part as follows:—

When the disciples of John interviewed Jesus as to his claim to the Messiahship, his answer was "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." He did not call attention to his person or his following, but to his work. The world then, as now, had its great generals, its emperors, its wise men and philosophers, but then, as now, men were sick, sorrowful, and dying. Despairing humanity needed the proof of a loving Father-Mother God.

The prophet Isaiah had foretold this Saviour and named him by his works: "Unto us a child is born, . . . and his name shall be called Wonderful, Counselor, The mighty God, The everlasting Father, The Prince of Peace." He was proving his claim to these titles and John was satisfied. Again in this day is Christian Science proving by its works that the Christ is still among men.

*Correspondence.*

### At Cedar Rapids, Ia.

It was a highly pleased audience that heard the lecture of Judge Septimus J. Hanna of Boston, in Greene's Opera House last evening [October 23], on "Christian Science." All trades and professions, and in fact every line of the commercial activity of the city, were represented in the audience, and the attendance of ladies was very large. It was an audience of thinking men and women.

A few minutes after eight o'clock Judge Hanna appeared upon the stage accompanied by Attorney T. A. Berkebile who introduced the judge as follows:—

*Ladies and Gentlemen:*—Not being a Christian Scientist or "a prophet or the son of a prophet," I am innocent of any intention of attempting a sermon. In these days of evolved ideas, religious progressions, and impartial hearings, investigation is fast removing prejudice, bigotry, and dogma, and we are coming to realize that good is the single aim of all, and that all reverently bow before a common God.

To-night we are to be told of the precepts and belief of a religion that has had a marvelous growth in power and piety, and the story of that faith is to be narrated by a lawyer, a judge, and a Christian editor who has seen fit to forfeit attained achievements and forego the multiplying opportunities of a successful professional and public career to teach the doctrine of his belief.

My friends, I have the pleasure of introducing Judge Septimus J. Hanna of Boston, who will address us on the subject of "Christian Science Personally and Impersonally Considered."—*Evening Gazette.*

## Testimonies of Healing.

When I was a child I used to love to read pieces in books and papers that touched on the subject of healing through prayer. I often prayed for the sick that they should recover, and thought myself successful on several occasions. I desired to know more about the healing power of nineteen hundred years ago. I knew and often expressed myself as believing that the same power exists to-day as of yore. I could not get any light on my darkened consciousness in the church of my fathers, and was willing to take up anything as a study that would enable me to grasp that truth for which I was longing.

Before leaving the old church I tried liquors and drugs of many kinds, those prescribed by many doctors as well as those advertised in the pages of the press. Sometimes I would read pamphlets that described diseases, the symptoms of which exactly corresponded to my case. Then I would send off for the article, on receipt of which I found that I was only duped once more. I tried many such advertisements.

A Christian Science practitioner came to Victoria, British Columbia, where I was residing. On several occasions I advised my friends who seemed inclined to study Science and Health to lay it aside. Several I ventured to advise not to have anything to do with the book which this Scientist was trying to introduce to the people of Victoria, otherwise they would find themselves in bondage.

During all this period of running to and fro, I had not yet found the pearl of great price. I still had a desire to know the truth, the whole truth, and nothing but the truth, and under the impulse of this strong desire, I was led to Winnipeg, Manitoba. I came here with the dregs of disease and almost despair clinging to my wandering consciousness. I again looked around for some form or doctrine to which I could pin my faith, for the five doctors who had been prescribing for me held out no hope; they said that they could not cure me; operations were suggested. Even the mental science, so-called, to which I had pinned my whole faith had been found wanting, and after being in Winnipeg for a time, I at last wandered into the Christian Science hall. I felt I must have treatment, for I had lost all faith in drugs, yes, in everything.

I shall never forget the sweet sense of love that seemed to come into my consciousness after taking my first treatment in Christian Science. Just one ray from the light of divine Science, and the fears and doubts of my life began to disappear, and as I gained in the understanding that there is only the one infinite Mind governing and controlling the universe, including man, the diseases and false claims of mortal mind began to fall away. I now glory in the Truth that sets free and is taught in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Instead of being in bondage, I find that I am now freed from the bondage of the so-called laws of mortal mind, through the perusal of Mrs. Eddy's writings and the putting into practice what I have learned. There are thousands thanking God this day for the many and great blessings given us through her.

After gaining more understanding of Christian Science, which was supplemented with the harmonious thought that I found in the Christian Science Church, and the apparent desire on the part of its members to live the Golden Rule, the love they expressed in their faces as well as in their lives, and the desire on their part to lend a helping hand to the less favored,—seeing these traits of character manifested through its members, I could no longer refrain from casting in my lot with them and partaking of the good things at the feast of divine Love, Life, and Truth. The experiences and demonstrations that I have had through my understanding of Christian Science in every

Digitized by Google

line of thought which I have had to meet, have proved to me many times over that Christian Science is indeed the religion that Jesus taught, demonstrated, and lived. We cannot rest on our oars when we once take up this divine Science, we have to pull against the current of mortal thought, and by persistent effort we ascend the stream and gain the rest that remaineth for the children of God.

WM. LOUGH, Winnipeg, Man.

I have thought for some time that for the benefit of the public, I ought to tell what Christian Science had done for me.

Last year I had an abnormal growth on my left hand; it was very painful and grew so fast that I was frightened, for I thought it was a cancer. Some of my friends wanted me to have it cut out, but I said I would try Christian Science, since it had performed some wonderful cures in our family; so I started for a practitioner. I stopped on the way and showed it to a doctor. He very quickly said it was a virulent cancer, and ought to be cut out without delay. But I was afraid, so we sent to a practitioner in Kansas City, and he treated it. It has left only a small scar.

It was a case of slow healing, it took over three months, but it is well, and I have no fear of its coming back. All my life I had a fear of cancer and smallpox, and while my hand was being treated, we had a very bad case of smallpox in our house, and not one of the family had it. It was all over town. People would ask us what we had, or what we did. We told them we took Christian Science. They said it was wonderful.

I have no fear of anything any more, and I give all glory to God.—MRS. S. A. THOMAS, Corning, Mo.

Having been benefited by many helpful words through the *Sentinel* and *Journal*, I feel that I ought to express a word of gratitude for the many blessings Christian Science has showered upon me, therefore in a humble spirit I will make an effort to reflect a ray of the light which has brightened my path, with the hope that it may brighten the path of some weary wanderer, awaken a thought of repentance in some prodigal son, or strengthen some struggling heart, which is battling with sin, sickness, and the fear of death.

What is Christian Science? What is it doing and capable of doing? are the questions which inquirers ask. These questions are answered in the Christian Science text-book, Science and Health, but we can only understand and make them our own in so far as we prove them by experience and demonstration. It is in this sense that I wish to add my mite in testifying to the healing and saving power of Christian Science.

From an ecclesiastical standpoint, Christian Science has proved to me to be the true interpretation of the Bible and the teachings of Jesus Christ. Brought up in the Lutheran faith, I was from boyhood searching for Truth, and while I was not exactly dissatisfied with my religion, I felt that there was something lacking in it. During my investigation into everything religious, Christian Science came to my observation. In my first glance at it, I perceived that there was something in Christian Science which the other religious teachings did not have. I always loved the Bible and read it constantly, but there was a veil that obscured my understanding. Through the light of Christian Science, it has become an illuminated book, containing "the leaves of the tree," which are "for the healing of the nations."

Christian Science has improved my health, although I did not come to it for the physical healing. It has proven to me that the healing of the body from all infirmities is the natural outcome of true theology.

From a business standpoint, I find Christian Science of the greatest benefit. If the business and professional world, the farmer and the statesman, would be guided by its Principle, all our economic, commercial, and financial problems would be easily solved.

Going back to my individual experience, I must say that I feel I can never be too thankful to Mrs. Eddy for the revelation of infinite Truth. After being so much benefited through the study of the Christian Science text-book, through the help of the Sunday lessons and the Christian Science periodicals, I felt impelled to make every sacrifice possible to get a better and clearer understanding of its truths. In persuance of this desire I had the privilege of class instruction from one of Mrs. Eddy's loyal students. To her I also feel greatly indebted, because from her experience she was able to show her students clearly the narrow way of Truth, as explained in the text-book. In the address of welcome our teacher admonished her students, by saying in part that we, having named the sacred name of Christian Science, must place our hands in God's hand, and walk in the narrow path of Truth and Love,—we must deviate neither to the right nor to the left, but be true unto the end. These words have remained with me ever since and have been many times a great help and comfort in hours of trial. When everything seemed dark, when error raised its voice, the thought would come to my consciousness, "place your hand in God's hand and stand fast in the Truth of Christian Science," and our Leader's words in Science and Health, page 495: "When the illusion of sickness or sin tempts you, cling steadfastly to God and His idea," have sustained me.

When the class was finished I was so imbued with courage and spirituality that I was willing to sacrifice all else to devote my time to Christian Science work, but as I had leave of absence for only a few weeks and was expected back in my position, I felt it a duty to comply with my contract, otherwise my employer would have been very much embarrassed at that moment. In the class I learned that we cannot serve God and mammon; that we must be willing to give up all if we would follow Christ, but I also learned that we must give unto Cæsar the things which belong to Cæsar and unto God the things which belong to God. Having seen how much Christian Science was needed in the business world, I saw a great work before me; being able to distinguish between Truth and error more clearly, I discerned how much there was for me to do, right where I was, being in a position where I had many discordant thoughts to contend with. I applied Christian Science in every case; I met all hate and dissensions with the thought of love, and I found work a hundred times easier than before, and business and other problems very much more easily solved.

Besides this, came the proof that through Christian Science we are able to destroy human suffering, and to give a certain amount of time to the healing work alone. I have seen all manner of evil and disease flee before the Truth, and I have had many proofs of God's omnipotence, omnipresence, and omniscience, and I have learned that "God, Truth, Life, Love, can and does heal the sick through the prayer of the righteous" (Science and Health, p. 231).

I wish to mention just one instance which proves God's omnipresence. It was the healing of a case of St. Vitus's dance by absent treatment of a person I had never seen. Therefore, I can say with a heart full of thankfulness that Jesus' promise is true, when he said, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you." This promise is to-day renewed and fulfilled through the revelation of Truth, and for this the world owes endless thanks to Mrs. Eddy, the Discoverer and Founder of Christian Science.

FRED D. HURST, New Orleans, La.

Digitized by Google

I have been interested in Christian Science nearly seven years. Before that time I was suffering with kidney trouble and sick headaches, as well as other diseases, and had doctored and taken drugs until I had lost confidence in such remedies.

While writing to a friend I told her my trouble and she made plans for me to come to her house and take Christian Science treatment, as she was being treated and was getting well. I gladly accepted her kindness and I improved immediately. I desired only the healing part of Christian Science, as I had been taught not to believe in it.

One day I was relieved of a sick headache and it seemed so wonderful that I thought there must be something good in it; and when the practitioner who had been so good and kind to me asked me to read Science and Health, I did so. I was surprised to find it based on the Bible and that Christian Scientists were healing the sick and sinful as Jesus did. Then it was my privilege to attend a Christian Science Church and I enjoyed the services so much that I looked forward to the day when I would be a Scientist.

I had derived untold good from the treatments I had taken for several weeks, and I returned home with better health than I had ever known, and I have since been able to support myself.

Feeling the necessity of making my living, and a desire to be among Christian Scientists, I spent four years in Galveston, Tex., doing housework for Christian Scientists. I joined the church there, which was a great help to me; I also rejoice in being a member of the Mother Church.

I was in Galveston during the September storm, and attribute my safety to Christian Science.

One day I had just started dinner, and on opening the oven door of the gasoline stove the fire flashed into my face and singed my hair. It frightened me so much that I thought I never could use the stove again.

I went to the lady I was working for and asked for treatment, which she gave me at once. Not knowing my face was burned I washed it to remove the smoke, and the skin came off, leaving patches of raw flesh; then it pained me so I didn't think I could stay near the stove, but my fears were soon allayed and I got dinner the same as usual, and in a week my face was healed.

I want to express my gratitude to our Leader for this knowledge of Truth.—CARRIE A. HOGAN, La Porte, Tex.

---

Before coming to Christian Science I was almost an infidel. In this unbelieving state of mind, I commenced to read Science and Health. Words cannot express what that wonderful book has done for me. I was very profane. I was also very fond of liquor and tobacco and a victim of other bad habits. I am much pleased to say they have all been destroyed through the reading of our text-book. I have also been healed physically, but to me that is as nothing compared with the great moral benefit I have received. I cannot be too grateful to Mrs. Eddy, our Leader, who has been the one chosen of God to give to the world this new-old Truth of Christian Science.

ALEXANDER CLARK, Hamilton, Ont.

---

In May, 1901, I was running a Burleigh machine, sinking a shaft, and one night as I was blocking it in position it fell and caught me in the back and abdomen and injured me internally, causing hemorrhage, from which I suffered terribly.

I placed my case in the hands of a Christian Science practitioner and she immediately began treatment. This was on Saturday. The following Wednesday I went to work again entirely healed of the injury and rheumatism, which had bothered me for about ten years. Have never had an attack of it since. May the good work go on.

J. P. ANDERSON, Placer, Ore.

## Announcements.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religous Items.

Rev. Frederic J. Gould says in *The Christian Register:* "But, though men here and there may, by various impulses and motives, display godlike action and deep, instinctive faith in the highest human life, without conscious faith in God, it still is true that, for the moral life to be at its best, we must be able to say from the heart, 'Thou art the God of my strength,' and 'The Father that dwelleth in me, he doeth the works.' Then, in firm, rational assurance of victory, we persevere, being 'steadfast, unmovable, always abounding in the work of the Lord, forasmuch as ye know that your labor is not in vain in the Lord.' Though our particular plans miscarry, our personal hopes are destroyed, whatever exhaustion, disappointment, pain, and sorrow come in life, we are able to share that uplifting, forward-looking, victorious faith in God and in God's humanity, which carried Jesus through to the shining, glorious leadership of the race. Jesus, 'who for the joy that was set before him,' the joy of bringing abundant life to human souls, and opening the kingdom of heaven to all who should share his spirit,—for this joy, 'endured the cross, despising the shame, and is set down at the right hand of the throne of God,' the guide to all who struggle and aspire to realize the ideal humanity."

THE LIGHT OF PATIENCE.—God never leaves us wholly in the dark. When the great light of heaven fails, God has given men wisdom to prepare some lesser lights that shall carry them through until the great light comes again. Even so in man's spiritual experience. When the great lights of hope, or revelation, or inspiration, seem to darken, when we feel like crying, "Why hast Thou forsaken me?" then God has given the human heart grace to go by lesser light. Such a light one of our modern novelists has termed the "Candle called Patience." We can keep along by the aid of this until the great lights begin to brighten once again. Is not this what the prophet meant when he said: "It is good that a man should . . . quietly wait for the salvation of the Lord?" Patience is one of the humbler lights, but the beauty of it is that it shines brightest in the times of our greatest darkness. It is good to go forward cheerfully, glowingly, in hope; but let us not be ashamed if the best we can do is to go forward bravely and quietly in faith, carrying the candle of patience. "More than half the noblest men and women you meet carry such candles."

*Sunday School Times.*

Love is life, and lovelessness is death. As the grace of God changes a man's heart and cleanses and sanctifies him, this is the great evidence of the change, this is the great difference which it makes: that he begins to grow in love, to lay aside self-seeking, and to live for others—and so he may know that he has passed from death unto life. He may know it even here and now—yes, that great discovery of love, that learning to live for others and finding the grace and gentleness that God is keeping up all over the world—even now it is the way from death to life. Even now it changes homes, it lightens every burden, it brings peace and gladness into the hardest days; it alters even the tone of a man's voice and the very look of his face. But all this, blessed and surpassing as it is, far above all else in the world, still is but the beginning. For that life into which we pass, as God's dear grace of love comes in us and about us, is the very life of heaven.—FRANCIS PAGET.

God's love is not proved by argument. You cannot reason a man into the conviction that he is an object of affection. It must be shown as Jesus showed it, in common human intercourse. Paul has drawn its working picture for us. It suffers long and is kind, it envies not, seeks not its own. We have but to translate in daily life these qualities into the first person singular of the active voice, and we shall become lights in the world through whom the divine radiance of perfect love will shine. In this was manifested the love of God toward us, because that God sent His only begotten Son into the world, that we might live through him. . . . Beloved, if God so loved us, we ought also to love one another."

*The Congregationalist and Christian World.*

*The Examiner* says: "It is undoubtedly true, and strange as true, that the Bible is a sealed book to multitudes in Christian lands. Even in Christian homes it is not read and known as it should be. If read at all, it is perfunctorily read and only in disconnected fragments, a chapter here and a chapter there, hurriedly skimmed through at the fagend of the day. But in heathen lands, as *The Christian Intelligencer* remarks, the Bible is a new book, and to the heathen mind a wonderful book, and hence is undoubtedly read by those who possess it with greater diligence and studied with deeper interest than in Christian lands."

J. S. Maver, M.A., writes in *The Watchman:* "The man who prospers too easily is not likely thereby to develop the finest type of character. In spiritual work immediate and abundant reaping tends sometimes to be productive of spiritual pride, to a man's own undoing and to the undoing, probably, of the work itself. He who is the instrument in God's hands of a pentacostal blessing has need to fear and to guard lest self insidiously creep into the place that should be Christ's alone. The noblest Christians are those who most markedly have in their patience won their souls."

LOVE OF MAN.—The present time puts strong emphasis upon love of man, but in a sentimental rather than a practical manner. The word "love" is in constant use, but it does not stand for any effective duty that men have recognized. In a word, love is a theory, a religious dogma, and not a practice based upon social and economic justice. It is something we talk about, and not something we live in our business dealings with our fellow-men. The reason for this seems to be that we have not yet accepted the social nature of moral obligations.—*The Christian Register.*

Rev. A. A. Berle, D.D., is quoted as follows in the *Boston Transcript:* "Men need to seek God rather than formulate theories about Him. The great intellectual vice of our time is that we rest so much upon the transitory things, while the great eternal things hardly find recognition. The knowledge that God is and must remain the sovereign and loving Lord of the universe is the final standing-place for the religious heart. It lifts the heart above its environment and brings it into the divine presence."

In such moments you doubt all: whether Christianity be true; whether Christ was a man or God, or a beautiful fable. You ask bitterly, like Pontius Pilate, What is truth? In such an hour what remains? I reply, obedience. Act—be merciful and gentle, honest; force yourself to abound in little services; try to do good to others; be true to the duty that you know. And by all the laws of the human heart, by the Word of God, you shall not be left to doubt.

F. W. ROBERTSON.

Who is the Christian? Why, one who has the spirit of Christ in his soul—that's all. Not one who says he believes in Christ, but one in whom the spirit of Christ is reincarnate. There can be no narrower definition which does not wrong him, and no lower ideal which does not disown him. In the Church or out, call him by what you will, where truth, courage, sympathy, and humanity are found in a human soul, there Christ is dwelling too.—REV. L. M. POWERS.

Salvation is a vital matter, and let no man suppose that any creed or formula or ceremony or penance can save him, when there is no renewal of his inmost spiritual being. Christians have become "partakers of the divine nature," and have thus established in them the qualities of that character which shows them to be in reality "the children of God," by likeness as well as by birth.—*The Examiner.*

A man's attitude toward Christ is a revelation of his own inner life. His treatment of the Gospel tests him. He accepts or rejects it because of what he is. The secret affinities of his spiritual nature draw him to Christ or away from him. This is undoubtedly the significance of our Lord's declaration that the Holy Spirit will convince the world of sin, "because they believe not on me."—*The Watchman.*

F. Carnegie Simpson in "The Fact of Christ," answers the question, "What is a Christian?" as follows: "A Christian is one who is responding to whatever meanings of Christ are, through God's spirit, being brought home to his intellectual or moral conscience. This is a definition at once exhaustive of the profoundest Christianity and admissive of the simplest."

We want religion because without it a part of our nature—and that the highest—would be dormant. We want it because it alone gives the meaning of experiences and feelings and capacities which are as truly ours as anything connected with our existence.—*Selected.*

# Works on Christian Science.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.**
In one volume, 700 pp.
THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING.

| | |
|---|---|
| Cloth binding, each | $3.18 |
| Two to Twelve books to one address, each, prepaid | 3.00 |
| Twelve or more books to one address, each, prepaid | 2.75 |
| Full Sheep, stiff covers, marbled edges, Oxford India paper, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Morocco, limp, round corners, gilt edges, Oxford India paper, convenient for pocket, narrow margins, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, Oxford India paper, each, prepaid | 6.00 |
| Twelve or more to one address, each, prepaid | 5.75 |

Orders for Science and Health in lots of twelve or more to one address, may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles written by the author and published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

| | |
|---|---|
| Price (cloth) each, prepaid | $2.25 |
| Twelve or more books to one address, each, prepaid | 2.00 |
| Morocco, limp, round corners, gilt edges, convenient for pocket, 4½x6½ inches, narrow margins, each, prepaid | 4.00 |
| Twelve or more to one address, each, prepaid | 3.75 |
| Levant, divinity circuit, leather lined to edge, round corners, gold edge, silk sewed, each, prepaid | 5.00 |
| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06; $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

# Published by The Christian Science Publishing Society,

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

### National.

The present Senate contains fifty-four Republicans and thirty-four Democrats out of a total of ninety seats. As the result of losses in some States and gains in others at the recent elections the present majority will be increased by two at least. In the present House of 357 the Republican majority is forty-one. The new apportionment increases the seats to 386. The returns indicate a majority of only twenty-eight to thirty-four in favor of the administration.

Señor Concha, the Colombian Minister, called on Secretary Hay last week by appointment to resume negotiations concerning the necessary rights to be conferred upon the United States for the construction of the Panama Canal. It is believed that Colombia wants $10,000,000 instead of the $7,000,000 proposed by the United States. This difference is not considered a serious hindrance.

The annual report of the commissioner of navigation shows that on June 30 the documented tonnage of the United States was the largest in its history, comprising 24,273 vessels of 5,797,902 gross tons. American vessels carried 8.8 per cent of the exports and imports as compared with 8.2 per cent in 1901. The increase in tonnage was mostly in large steel steamers.

The cost of the temporary work of the twelfth census, according to the director's annual report, was $11,854,818, or an average of 15.5 cents per capita of the population of the United States. The total cost of field work was $4,358,670, or a per capita cost of 5.7 cents. A total of 59,373 persons were employed in the census.

A bill has been introduced in the Vermont Legislature proposing the change of the capital from Montpelier to Burlington. The bill was introduced by request and created no little stir. It carries an appropriation of $200,000 and a proviso that Burlington shall have paid into the State Treasury an equal amount.

### Foreign.

M. Delcasse, French Minister of Foreign Affairs, replying to a suggestion by a French delegate to The Hague Conference that questions pending between France and other Powers be submitted to The Hague International Court of Arbitration, writes that he has instructed the French ambassadors to endeavor to obtain from the Powers consent to submit to The Hague Tribunal long-standing differences. It is believed that one of these differences is the question between France and Great Britain regarding the French shore, Newfoundland.

King Edward has been generally credited with taking an active part in the negotiations which brought the Boer war to a close. It is now asserted that he has been complaining to the ministers about the condition of Ireland, and that the recent appointment of a man of unusual ability and experience as permanent secretary at Dublin, was made in deference to his wishes. The semi-official announcement is made that the King will visit Ireland in semi-state in the spring.

The announcement is made that the organization of the International Mercantile Marine Company has been completed and that mortgage gold debentures to the amount of $50,000,000 have been issued bearing interest at 4½ per cent. The company's capital is $120,000,000, the whole standing in the names of the five voting trustees, Morgan, Pirrie, Widener, Ismay, and Steele.

An imperial decree issued by the Chinese Government provides for the dispatch of a number of Chinese students to the seats of learning in the United States for study in graduate courses. They are sent at government expense. Upon their return those successful in examinations will be appointed to government positions.

It is said that the Powers are negotiating for a reorganization of The Hague International Court of Arbitration, and that French is proposed as the official language of the court. In the recent "Pious Fund" case the lawyers spoke in English, French, and Spanish.

An American has been appointed to the position of chief assayer of the Chinese mint at Tien-Tsin.

The new Japanese budget estimates the revenues at $129,000,000 and expenditures at $131,000,000.

### Industrial and Commercial.

President Mitchell of the miners' union last week filed with the strike commission his statement of the strikers' case. It practically reiterates the demands made at the Shamokin convention and does not favor the sliding scale of wages advocated by President Baer of the Reading Company. These demands are a twenty per cent increase in the wages of men working by contract or piece work; a reduction of twenty per cent in the hours of work without any reduction of the earnings for men paid by the hour, day, or week; the adoption of a system by which coal shall be weighed and paid for by weight wherever practicable, the minimum rate to be sixty cents per long ton, and the differentials now existing at the various mines to be maintained; a mutual agreement between the operators and the miners' union as to wages, arbitration of grievances, etc.

It is reported that the United States Steel Corporation will contract for every berth in the American Shipbuilding Company's works as fast as they become vacant. The contract entails a probable outlay of $10,000,000. The fleet will be used for carrying ore from the head of Lake Superior to the furnace docks on Lake Michigan and Lake Erie. The Pittsburg Steamship Company, a constituent member of the steel combine, at present operates a fleet of 112 vessels, with a total carrying capacity of about ten million tons of ore per year.

The deal is said to be practically accomplished for the amalgamation of all the extensive flouring interests on the Pacific coast. It will take in the large plants of Washington, Oregon, and California, and result in one great corporation with a capital of $20,000,000 and facilities equal to the present and prospective demands of the Pacific coast and the Orient.

The Anthracite Coal Strike Commission has officially decided that if any change is made in the rate of wages of the men it shall date from November 1. The operators in their original proposition to President Roosevelt wanted the commission to fix the date. The miners wanted the prospective new rate to date from the day they returned to work, October 23.

It is reported that the Great Lakes Engineering Company is to construct a large shipbuilding plant on the Rouge River, a few miles from Detroit. Seventy-five acres, it is said, have already been purchased by the capitalists who will form the Great Lakes Shipping Company.

On account of the inability of American and Canadian concerns to furnish locomotives, because of the large orders on hand, the Canadian Pacific, for the first time since its original equipment, will import engines from across the Atlantic.

### General.

The last section of the British imperial cable was laid at the Fiji Islands, October 30, thus bringing Great Britain, Canada, New Zealand, India, and South Africa into unbroken connection with each other without leaving British soil. The new cable from Vancouver to Fanning Island and thence to Norfolk Island, Queensland, and New Zealand is 7,986 miles in length. The Vancouver-Fanning Island section of 3,455 miles is the longest cable in the world without a break. Over these cables and connecting telegraph lines messages can now engirdle the globe.

Charles J. Glidden of Boston is said to be the first to send a message around the world by this new circuit. This went as an ordinary telegram and started on Saturday at 9:15 A.M. from the office of the Postal Telegraph and Cable Company at the Hotel Touraine, and read as follows:—

"Boston, Nov. 1.—Glidden, Boston, Mass., via Vancouver British cable to Australia. Around the world."

This message was received in Boston by the Western Union Telegraph Company at 12:35 A.M., Sunday, thirty-nine hours and twenty minutes after it left Boston. A few errors occurred in transmission and it arrived after its long journey as follows:—

"Southport (Australia) Nov. 2.—Gleddon. Boston, Mass. Around the world."

Acetylene has been experimented with for signalling in the German army with marked success. Mixed with a certain percentage of oxygen it is said to give three times the light of the oxy-hydrogen lamp, and can be plainly seen in daylight at a distance of five miles.

On Tuesday, November 4, Pope Leo XIII., who was elected pontiff February 20, 1878, surpassed all his predecessors, except Pius IX., in his tenure of the pontificate. He is ninety-two years of age.

The shipments of gold from the Klondike region have ended for the year with a total amount of $11,500,000. Almost the entire yield was forwarded to the United States.

Glasgow, for the first time in its history, opened an art gallery to the public on a Sunday last month. Over twelve hundred people visited it between two and five o'clock.

## Selected Articles.

### But One Christian Science.

To the Editor.

*Dear Sir:*—I have read with great interest the article by the Rev. George M. Cummings in your issue of September 18, under the caption, "Answers Judge Ewing," and was much impressed with the genuine tribute which he paid to the high standard of Christianity of Judge Ewing and certain Christian Scientists in your city, for whom, as he stated, he has "the most profound respect."

The gentleman's recognition of the good points in the lives of these adherents of the Christian Science faith is refreshing, and to some extent robs the balance of his article of its sting; for if, as he states, "Christianity is to be judged by its fruits," it is a self-evident fact that a religion that can produce "a beautiful Christian spirit" must have some substantial basis for its claims to Christianity.

Mr. Cummings states, "so I do not oppose Christian Scientists, but Christian Science." I will venture to say that this gentleman opposes, not Christian Science, but his own misconception of it, for to oppose Christian Science is to place himself in opposition to the plainest precepts of Jesus Christ, the great Founder of Christianity, who by word and example plainly indicated the practical nature of his teachings and their adaptability to the needs of mankind for all time. The urgent need of man for salvation from sin and sickness did not cease with the material disappearance of Jesus and his disciples, and has not yet ceased; and therefore a statement from the clergy that the Christian mission of healing the sick in connection with its other mission of healing sin was limited to Jesus Christ and his immediate disciples, seems inconsistent, illogical, and inconceivable in the light of Scriptural promises concerning God's presence, power, and availability in every time of trouble.

In answer to Mr. Cummings's question I will state there is but one Christian Science, and it is the one upon which Judge Ewing lectured. Rev. Mary Baker Eddy is the Discoverer and Founder thereof and the author of its text-book, "Science and Health with Key to the Scriptures."

The attitude of every Christian Scientist with reference to sin and sickness is correctly stated in the above-named text-book. If our critic were more familiar with the Christian Science teachings he would at once perceive that Judge Ewing's presentation of Christian Science and its attitude toward sickness and sin is in perfect accord with Mrs. Eddy's teachings. Christian Scientists are indeed willing to be known "by their fruits," and I submit, as a fair proposition, that in this respect they should be judged on the same basis with other religionists.

Our critic states that to raise a dead soul to newness of life is greater than to raise a dead body. I take it for granted that he esteems the regenerating and uplifting power of Christianity as of greater import to the cause of Christ than mere physical healing and will not quarrel with this position. At the same time, I must point out the fact that Christian Science, as a religion, is one of the greatest moral and spiritual teachings in the world to-day. It has redeemed thousands of people from the darkness of unbelief in God, and point by point, "line upon line, and precept upon precept," it will stand the most critical tests as to results obtained in the regenerating of humanity; and in addition to this it does that which other churches have not esteemed an essential of Christianity; namely, it heals the sick. If the various presentations of belief known collectively as the Christian church have a right to be thus designated because of their efforts to save humanity from sin and its effects,—and I am not questioning this right,—will our critic point out one good, substantial Scriptural reason why Christian Science, which complies absolutely with Jesus' teachings and the Scriptural injunctions, should be debarred from this title? Or why is it not worthy of acceptance by any Christian?

It is inconsistent with the highest ideals of Christianity to state that because Christian Scientists have not "raised from the dead a man who has been dead four days," it is unworthy of respect and of acceptance.

Paul states, "The last enemy that shall be destroyed is death."

As our critic would not deem this a fair test of his own standing with reference to the Christian religion, why should he ask it of Christian Scientists?

That Christian Science has accomplished much in the healing and saving of humanity is an indisputable fact, attested by thousands of Christian people. While they do not claim to have attained that degree of understanding possessed by Jesus, yet they are deeply grateful for the measure of understanding which has been granted them.

The statement that "healing the sick is not a part of the Christian religion," throws the burden of proof upon the opponents of this healing, for if the Scriptures are to be taken as they read, they plainly teach that Christians should heal the sick for all time. JOHN L. RENDALL.

### How our Senses do not Tell the Truth.

To the Editor.

The highly interesting article in a recent issue of the *American*, entitled, "Are Our Senses Reliable?" by Professor Conville Melinand, refers to Christian Science in this connection, but, unfortunately, in such a manner as to make it seem responsible for the utterances of various philosophers, psychologists, and physicists with whose views Christian Science has little, if anything, in common.

In closing his article Professor Melinand makes the following exceedingly frank and generous statement in regard to those whose views on this question he does not indorse: "I do not say that they are wrong; I do not claim that I am right; but I do say that there is a reasonable doubt, and that this doubt is justifiable until they have proved their assertion."

No one could ask for a more receptive mental attitude on the part of any searcher after truth, and I, therefore, welcome the opportunity to show Professor Melinand what, according to my understanding, are the teachings of Christian Science on the question propounded by the title of his article.

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

He should first realize that he has not stated the precise teachings of Christian Science anywhere in his article, and he has not cited a single exact quotation from the only authoritative text-book on the subject of Christian Science, namely, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. Although many philosophers, psychologists, and physicists have shown a trend toward Christian Science in the past, and this trend is gathering great momentum in our day, it must not be forgotten that the actual basis of Christian Science and the rules for its practical application were never stated or formulated until this was done by Mrs. Eddy, who thus became the Discoverer and Founder of Christian Science. It is distinctly misleading, therefore, to attempt to group Christian Scientists with philosophers, psychologists, or physicists of any school, because there is no such school which can explain or demonstrate Christian Science. It is true that Christian Scientists discard the testimony of the five physical senses as untrustworthy, but they do this for totally different reasons from those advanced by the scholars quoted by Professor Melinand.

These "modern philosophers," he informs us, "invoke three principles. One argument is taken from the construction of our nerve system, one from our dreams, and one from science." But Christian Science practice is based upon a knowledge of the nature of God, from which, in turn, are derived certain deductions as to the nature of the universe, including man. It is because the testimony of the physical senses cannot inform us concerning God, the Principle governing the universe and man, that Christian Scientists discard this testimony as unreliable and thus unscientific. Moreover, Christian Science teaches that there is but one Principle, and would never "invoke three principles," as the modern philosophers quoted by Professor Melinand are said to be doing. In answer to the question, "Is there more than one Principle?" Science and Health states, on pages 465 and 466: "There is not. Principle is Divine, one Life, one Truth, one Love; and this is God, omnipotent, omniscient, and omnipresent. *Omni* is adopted from the Latin adjective, signifying all. Hence God combines all power, or potency, all-science, or true knowledge, all presence. The varied manifestations of Christian Science indicate Mind, not matter, and have but one Principle."

Christian Science at most only uses "the construction of our nerve system," "our dreams" and the theories of "science" (meaning thereby natural science, so-called) to illustrate the falsity of material concepts in contradistinction to the eternal and indestructible verities of Spirit. Nor can there be found in any of the writings of accredited Christian Scientists the astonishing statement: "There is no such thing as a body." Christian Science does not deny the existence of a single object in the universe, it merely teaches that the material concept which the physical senses place upon the infinite number of objects in the universe, is a false concept, and that the true concept is spiritual.

So, too, Professor Melinand's statement in regard to certain philosophers that "they think of the soul as being located in the centre of the brain," shows them to be in direct opposition to the teachings of Christian Science. For the latter states categorically (Science and Health, p. 467):—

"Recollect that Science reveals Spirit, Soul, as not in the body, and God as not in man, but as reflected by man. The greater cannot be in the lesser. Such a belief is an error that works ill. This is a leading point in the Science of Mind, that Principle is not in its idea. Spirit, Soul, is not confined in man, and is never in matter."

I refer to the various opinions of philosophers quoted by Professor Melinand, not in order to attempt their disproof, but to show that they are totally at variance with the teachings of Christian Science, which must not, therefore, be grouped or classified with them.

The teaching of Christian Science in regard to the physical senses is to be found in many portions of Mrs. Eddy's works. For instance, in Science and Health, p. 488, we read:—

"Christian Science sustains, with immortal proof, the impossibility of any material sense, and defines these so-called senses as *mortal beliefs,* whose testimony can neither be true of man nor of his Maker. The corporeal senses can take no cognizance of spiritual reality and immortality. Nerves have no more sensation, apart from what belief bestows upon them, than the fibres of a plant. Mind alone possesses all faculties, perception and comprehension; therefore mental endowments are not at the mercy of organization and decomposition. Otherwise the very worms could unfashion man. If it were possible for the real senses of man to be injured, Soul could produce them in all their perfection; but they cannot be disturbed or destroyed, since they exist as immortal Mind, not matter."

Another work of Mrs. Eddy's, "Unity of Good," enters quite extensively into the general reasons for the unreliability of the physical senses. On pages 40 and 41 of that work, the author states:—

"Spirit is the only Creator, and man including the universe is His spiritual concept. By matter is commonly meant mind,—not the highest Mind, but a false form of mind. This so-called mind and matter cannot be separated in origin and action.

"What is this mind? It is not the Mind of Spirit; for spiritualization of thought destroys all sense of matter as Substance, Life, or Intelligence, and enthrones God in the eternal qualities of His Being.

"This lower, misnamed mind is a false claim, a suppositional mind, which I prefer to call *mortal mind.* True Mind is immortal. This mortal mind declares itself material, in sin, sickness, and death, virtually saying: 'I am the opposite of Spirit, of Holiness, Harmony, and Life.' . . .

"The physical senses (matter really having no sense) give the only pretended testimony there can be as to the existence of a substance called *matter.* Now these senses, being material, can only testify from their own evidence, and concerning themselves; yet we have it on divine authority: 'If I bear witness of myself, my witness is not true.'"

It is interesting to note that even in testifying to the phenomena of matter, the physical senses, so-called, are exceedingly untrustworthy.

Consider, for example, how deceptive is the sense of sight. Perhaps the commonest illusion concerns the earth and the sun. For thousands of years, the most highly civilized races believed that the sun rose and set over the earth. Uncivilized races believe this still. But thought has corrected this mistake, and assured us that the earth revolves around the sun.

The heavenly bodies look much larger to us on the horizon than they do at the zenith, but thought tells us that their size remains the same, whatever their position.

If you plunge an oar into the water, it seems to become bent at the point where it touches the surface of the water Thought tells you that the oar is still straight, but that it looks bent because the rays of light, in passing from the air into the water, become deflected.

If you look up a railroad track, the rails seem to meet in the distance, but thought comes to the conclusion that they do not really meet.

The eye is arranged like a photographic camera, with a dark chamber and a sensitive plate called the retina. Natural scientists tell us that the retina receives the image upside down, but still we see things right side up.

If the physical sense of sight is deceptive, so, too, is that of hearing and that of touching. We have all heard of cases where a leg has been amputated and the patient still seems to suffer from a pain in the foot.

Among the remarkable operations which modern surgery performs is the fitting on of new noses. In such cases the skin is generally cut from the forehead and brought down

Digitized by Google

over the new member. Surgeons say that patients undergoing this treatment, when they want to scratch their noses, often scratch their foreheads, because the skin used to be there.

As for the physical senses of tasting and smelling, they resemble each other so closely that natural scientists find it almost impossible to distinguish between them, and are now debating in their minds whether we do not, after all, taste with our noses and smell with our mouths.

If any one wants to see what would happen in a world where the five physical senses held full sway, uncorrected by thought, I refer him to "Alice's Adventures in Wonderland" and "Through the Looking Glass." There everything went by contraries, or upside down. There people, instead of cutting the plumcake first, and passing it around afterward, passed it around first, and it cut itself afterward; or, instead of hurting themselves first, and crying afterward, they cried first and then hurt themselves afterward.

It is certain that whatever theories may be advanced in regard to the phenomena of matter, no one has yet been able to explain what matter really is.

Professor Huxley writes: "After all, what do we know of this terrible matter except as the name for the unknown hypothetical cause of states of our own consciousness?"

Professor Wilhelm Muller, the German scientist, said in a recent article: "The study of chemical combinations led to the establishment of the atomistic theory. The latter is, undoubtedly, ingenious, and apparently perfectly logical, but, if we follow it out in its consequences, we soon find ourselves in a dilemma. If the atom is indivisible, it cannot occupy any space, for everything that fills space, no matter how small, can be thought divisible, and must be divisible *ad infinitum*. But, on the other hand, if the atom is really indivisible and does, therefore, occupy no space, it can never be a part, however small, of matter. o plus o plus o plus o . . . to infinity would always be equal to o. The total is equal to the sum of its components. Inasmuch as the total, in this case matter, occupies space, that quality must essentially pertain to every part, however small, of the whole. The logical deduction would be that matter is composed of parts which are not matter, a theory which is obviously unsound."

Under the pitiless scrutiny of the natural scientists matter turns to dust, dust to atoms, and atoms to higher attenuations of nothingness. Matter in its last analysis, whether finally divisible or indivisible, becomes imperceptible and inconceivable, while Mind remains supreme, indestructible, eternal, and immemorial.

Never was the trend from physics into metaphysics more pronounced than it is to-day. The more closely so-called material laws are observed, the more surely do they point to mental concepts. But mankind proceeds timidly from the supposedly known to the traditionally unknown, clinging with one hand to the testimony of the physical senses, while with the other it gropes for that which can only be spiritually apprehended, not knowing that it is holding to the shadow before it touches the Substance.

Mankind has entered upon a new phase of the journey from physics to metaphysics, from sense to Soul. The speed is accelerating, and at every step the mastery of Mind is being emphasized. There is hardly the possibility of a choice left between materialism and idealism. The idealist has already overtaken and passed the materialist. Success in every occupation is now felt to be a matter of right thinking. Brute force and physique count for less every day; Mind is being recognized in practical affairs as the fundamental moving cause. The world is becoming hourly more of a thought-world.

But let the traveler on this journey be meek and childlike. The way of true science, as it appears to mortals, is always narrow. The call of real Science, as men hear it, is a still, small voice. But the Master's promise to the Jews holds good to-day: "And ye shall know the truth, and the truth shall make you free." W. D. McCRACKAN.

## The Situation in Indiana.

Mr. Editor.

In your issue of October 16 appeared a special from Indianapolis concerning the decision of the Indiana Supreme Court in the case of a magnetic physician who was convicted in the Lawrence Circuit Court of practising medicine without a license, under the medical law of 1901, and who appealed to the Supreme Court, where the conviction was affirmed. The special, however, erroneously states that the Supreme Court applies its decision to Christian Science practitioners, and this being untrue I ask the privilege of briefly correcting the special thus far. The law does not name Christian Science practitioners, and the decision of the Supreme Court makes no reference to them directly or indirectly. If any case should be begun against a Christian Science practitioner under said law of 1901, important distinctions will be shown to the courts between the attitude of Christian Science practitioners under that statute and the attitude of magnetic healers under said statute. Briefly stated, this differentiation consists of questions of statutory construction, and, more important, of questions arising under the bill of rights in both the Federal and Indiana constitutions guaranteeing the freedom of religious conscience. C. A. BUSKIRK.

## God and Man.

To the Editor.

It will be readily conceded that the question, What is God? is fundamental to every religion. Whatever terms we may use in relation to Deity can make no possible difference to Him. The only question at issue is, are they helpful to us? One learns to think more practically and lovingly of God through the terms used by Christian Science to explain Him. Such thought is not indefinite, for it is unswerving faith, and rests in the perfect assurance of having discerned the omnipotence and omnipresence of God in whom is no evil at all. It would seem to a Christian Scientist that to refer to God as "a Being who is divinely human" involves a contradiction. God is infinite, and everything human is finite. To think of God after human concepts, even remotely, would be as material as if one were to paint a picture and worship that.

To think of God as co-extensive with the spaces of the universe ends in materialism. No Christian Scientist would do that. Furthermore, space is not involved in the Christian Science thought of God.

The Christian Science idea of man does not "mingle God and man." The Christian Science text-book is very strong on this point:—

"Man is spiritual. He is not God, Spirit. If man were Spirit, then men would be spirits, gods. Finite spirit would be mortal; and this is the error embodied in the belief that the Infinite can be contained in the finite" (Science and Health, p. 93).

Christian Science denies that God created anything material. God is infinite Spirit and manifests Himself after His infinite nature; therefore He did not create what is called the material world, nor any part of it, nor the physical organs which are so wonderful, but He has created a perfect man and a perfect universe in and of Spirit, and one must logically stick to that, even though it involve the denial of matter as anything more than "a subjective state of mortal mind." This denial of matter as real or eternal from the standpoint of Spirit does not destroy anything, but brings everything to light in its true nature.

### Professor Huxley on the Bible.

Professor Thomas Henry Huxley, the famous agnostic scientist, was a member of the London School Board. In the discussions that came up respecting the reading of the Bible in the schools, he expressed himself in favor of the measure very vigorously, as was his wont. Friends and opponents were alike surprised by his position. He explained himself thus: "Greatly to the surprise of many of my friends, I have always advocated the reading of the Bible, and the diffusion of the study of that most remarkable collection of books among the people. Its teachings are so infinitely superior to those of the sects, who are just as busy now as the Pharisees were eighteen hundred years ago in smothering them under 'the precepts of men,' it is so certain, to my mind, that the Bible contains within itself the refutation of nine tenths of the mixture of sophistical metaphysics and Old World superstition which has been piled round it by the so-called Christians of later times; it is so clear that the only immediate and ready antidote to the poison which has been mixed with Christianity, to the intoxication and delusion of mankind, lies in copious draughts from the undefiled spring, that I exercise the right and duty of free judgment on the part of any man, mainly for the purpose of inducing other laymen to follow my example. If the New Testament is translated into Zulu by Protestant missionaries, it must be assumed that a Zulu convert is competent to draw from its contents all the truths which it is necessary for him to believe. I trust that I may, without immodesty, claim to be put on the same footing as a Zulu."—*Exchange.*

### If Men were Wise.

WHAT might be done if men were wise—
What glorious deeds, my suffering brother,
Would they unite
In love and right,
And cease their scorn of one another?

Oppression's heart might be imbued
With kindling drops of loving kindness,
And knowledge pour,
From shore to shore,
Light on the eyes of mental blindness.

All slavery, warfare, lies, and wrongs,
All vice and crime might die together;
And wine and corn,
To each man born,
Be free as warmth in summer weather.

The meanest wretch that ever trod,
The deepest sunk in guilt and sorrow,
Might stand erect
In self-respect,
And share the teeming world to-morrow.

What might be done? This might be done,
And more than this, my suffering brother,—
More than the tongue
E'er said or sung,
If men were wise and loved each other.

CHARLES MACKAY.

Our affections are not ours to be blighted and crucified, they are ours to be deepened and purified.

HAMILTON W. MABIE.

## The Lectures.

### At Brantford, Ont.

There was a large audience in the Opera House last night [October 21], when Judge Ewing of Chicago delivered an address upon Christian Science. Mr. T. H. Preston, M.P.P., occupied the chair. The judge is a fluent speaker and handled his subject in a masterly style.

*Brantford Courier.*

### At Livermore Falls, Me.

Monday evening, October 20, we had the pleasure of having with us Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., who delivered a lecture on "Christian Science and its Discoverer," in Music Hall. In the audience were many of the most intelligent and cultured people of Livermore Falls, who gave the lecturer the closest attention throughout his discourse.

The speaker was appropriately introduced by Mr. John H. Maxwell, a leading attorney of this village. Our local paper printed a full synopsis of the lecture.

There were visiting Christian Scientists present from Wilton, Beans Corner, Augusta, Waterville, and Monmouth.

*Correspondence.*

### At Washington, Pa.

At the Town Hall last night [October 16] a meeting was held at which the Hon. William G. Ewing of Chicago, former judge of the Superior Court of Cook County, Illinois, made an address on Christian Science. The meeting was well attended and much interest was manifested in the address. The lecture was given under the auspices of the Christian Science Society of Washington. A special train was run out from Pittsburg, bringing nearly a hundred followers of the denomination from Pittsburg, Carnegie, Crafton, Ingram, and Canonsburg.

The meeting was presided over by T. Jeff Duncan, of the local bar, who in a neat and short address presented the speaker of the evening.—*Washington Observer.*

### At Wichita, Kan.

"The Teaching of Christian Science," was the subject upon which Carol Norton, C.S.D., a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass., spoke in the Toler Auditorium Sunday afternoon [October 19]. The Auditorium was well filled with interested listeners, and the silence which pervaded the big building while the speaker was giving his lecture, proved that he had the attention of every man and woman in the audience. His lecture was scholarly and showed the result of deep thought and study. It was instructive from every standpoint, and was interesting to the unbeliever as well as to the believer.

In introducing the speaker, Rev. W. S. Vail of the Unitarian Church said he was glad to be present and have the pleasure of saying the word of introduction. The very large audience clearly indicated the fact that the people were seeking truth, that the public mind was alert, and that men were ready to hear an accredited messenger of this newer church. He further said that all of us could learn useful lessons from Christian Science; that it was unquestionably helpful; that it taught many universal truths, and universal truth ever appealed to that which is fundamental in the very structure of soul.—*Wichita Beacon.*

### At Springfield, O.

There was a large audience at the Y. M. C. A. auditorium last evening [October 14] to listen to the lecture by Judge William G. Ewing of Chicago, upon Christian Science. The attendance was by no means confined to the

Digitized by Google

members of that church in the city, but there were many citizens there from all the walks of life, including ministers, physicians, lawyers, etc., to hear the tenets of the faith explained.

Judge Ewing is not a flowery orator, but the exact opposite, a plain, convincing talker, who gives every evidence of being in full sympathy himself with everything he utters. His lecture consisted mainly of a plain talk. He made no attempt to sway the audience with anything but the arguments which he brought forth.

The lecturer was introduced by Judge J. K. Mower, who said briefly in doing so that every one should listen with much respect to a man who had given up his profession to devote his life to a religious work, whether or not their beliefs agreed with his.—*The Sun.*

### At Des Moines, Ia.

Carol Norton, C.S.D., of New York City, lectured on "The Growth and Teaching of Christian Science," at the Y. M. C. A. auditorium, October 13.

Mr. Norton was introduced by Hon. Lafe Young, who said in part:—

The Christian Science organization originated in 1866, and now has slightly less than eight hundred church organizations. It has met with phenomenal success because its members believe in something. They have the conviction that they are right, and have the courage of their conviction. Its members believe a little stronger than do the members of other churches those truths which all teachers and all preachers have preached and taught since the Saviour came. So strong has the organization become, and so devoted its followers, that no reader or writer of these days passes idly by this belief or those who profess it.

*The Register and Leader.*

### At Fort Wayne, Ind.

Acduth Veshalom Temple was completely filled Tuesday evening [October 7] by a splendid audience that came to hear Judge William G. Ewing of Chicago, in his lecture on "Christian Science: Physician and Redeemer."

The lecture last evening was given under the auspices of First Church of Christ, Scientist. Judge Ewing was introduced by Judge Robert S. Taylor. In part Judge Taylor said:—

I am more than glad to perform this simple duty. A most wonderful fact in nature is the yearning of the soul for the supernatural, a longing for religion. And could we be lifted high enough to view earth's peoples I imagine we should be impressed with the spectacle of long lines of humanity each following a religious sect, each confident he had found the true faith, and each more or less distrustful of the other. Yet so far as my observation goes I believe there is to-day more toleration, far less of religious rancor, than was prevalent in my earlier days. Years ago controversies between sects were most acrimonious and virile. To-day much of this has disappeared.

I always like to hear a lawyer talk about religion or science. The legal training gives men capacity for clear, logical reasoning. The lawyer, too, likes to talk to a good juror, and one of the requisites of a good juror is that he know nothing about the case on trial. In this light I commend myself this evening as a qualified juror in this case. Perhaps in the minds of most people Christian Science stands rather for a science of healing the sick. I hope to hear to-night that it is more than that. I hope to hear that it is the science of living well in body, mind, and soul: that it is a system that elevates and develops man's spiritual nature as well as his physical being. With this pleasant expectation I am gratified to present the able Judge William G. Ewing of Chicago.—*The Fort Wayne Sentinel.*

### At Chicago, Ill.

Carol Norton, C.S.D., lectured on "Teaching of Christian Science" October 28, at Marlowe Theatre, under the auspices of Fourth Church of Christ, Scientist, Chicago. The lecturer was introduced by Mrs. Harriet R. White, with the following remarks:—

It is an undisputed fact that there is, in every individual, an inborn capacity to know and understand Good. "That was the true Light, which lighteth every man that cometh into the world," says St. John. It is also a fact that nothing can stop the activity and upward trend of this heaven-bestowed consciousness.

In view of these facts, and knowing that all the world earnestly desires peace, that it desires a cessation of pain, sorrow, and all the burdensome, heart-breaking woes and ills that so constantly beset it, and knowing that every one at least hopes to find some unchanging, demonstrable means of reaching that peace, this lecture is presented for your consideration.

Isaiah, the prophet, speaks of this much to be desired peace as the result of fulfilled conditions, "The work of righteousness shall be peace; and the effect of righteousness quietness and assurance for ever."

Jesus, the fulfilment of all prophecies, illustrated them perfectly. He lived so consciously one with the Father, working only as the Father worked, speaking only as he heard, that his perfect peace was a constant blessing to all who honestly and earnestly sought him. His "Peace, be still!" quieted the tempest so effectually that health was established where disease had made its ravages, joy reigned where sorrow had thrust its dark shadow, and life was manifested despite the boasts of death. And he said, "My peace I give unto you."

Paul, not a disciple or student of the man Jesus, but an apostle through the discernment of this true idea of Life or the Christ, admonishes us to "let this mind be in you, which was also in Christ Jesus." He, after bearing testimony to this spiritual-mindedness as being his veritable saviour from affliction and all sorts of torment and even destruction, declares, "To be carnally minded is death; but to be spiritually minded is life and peace."

Even in early Jewish history, the same law of cause and effect was recognized by Moses when he said to the children of Israel, "I have set before you life and death, blessing and cursing: therefore choose life, that both thou and thy seed may live."

So, throughout the law and the prophets, the gospels, and the Pauline epistles, we are shown that the way to peace is through Christianity; and that Christianity is demonstrably the way to harmony and health, will undoubtedly be discerned through this lecture, given by one who is eminently fitted, because of wide and varied experience, to tell us of the things which make for peace.

It is with great pleasure that I introduce to you Carol Norton, C.S.D., who will now address you.

### At Joplin, Mo.

The Club Theatre was well filled last evening [October 21], to hear Carol Norton, C.S.D., lecture on Christian Science. The audience was large and representative. The lecture was under the auspices of Second Church of Christ, Scientist, whose members may congratulate themselves upon the success of the lecture.

Miss Grace Holmes of Webb City introduced the speaker in a few appropriate remarks.

Mr. Norton's subject was "Christian Science: its Teaching and Growth."—*The Joplin Globe.*

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Individual Demonstration

IT is an axiom that every individual must work out his own salvation, and this axiom is applicable to Christian Science churches as well as to individuals. Mere personal opinion cannot be accepted as a reliable guide, and for us to pursue a certain line of action for no better reason than that others have pursued it, is to fall far short of demonstration. The following extract from a letter recently received from a friend in the Field is much to the point, and we believe that its publication will prove helpful:—

"There is, to my sense, an evil abroad in the land. Instead of each branch taking the Bible, Science and Health, and the Mother Church Manual, and working its problem out by the light of revelation Scientifically, there is a strong tendency to write to different branch churches and see what they are going to do about the new By-law, when they will adopt it and elect Readers, and whether they will elect Readers for one year or three years. The effect of this way of working is to my mind very demoralizing to sound church government and also to individual growth and demonstration. The circumstances and conditions attending different branch churches are so varied, and their demonstrations so unequal, that I do not see how such a course can be helpful, but contrariwise harmful and confusing."

We know that the thought which prompted the Psalmist to say, "Except the Lord build the house, they labor in vain that build it," must be the basis for all our work, and that our appeal for guidance must be to infinite Mind, and not to mere human opinion. M.

### The Healing that Makes no History.

THE good and true alone have liberty and law of propagation, but if they may be anticipated, and the riches of their fruitage be effectively planned for and assured, no less certainly and wisely may evil be foreseen and its manifestations forestalled. Indeed, the only authorized history of any error is the history of its interdiction, and to this end Christian Science has come.

The best word we can ever write about a noxious weed or a bad temper is that a long time before their beginnings, we carefully and patiently gathered up all the seed and destroyed it. This is what gives such significance to the word protection as it is used in Christian Science, a word that should be as fully identified with our daily habit as it is with our vocabulary.

Before the morning stars sang together the eternal maintenance of all good things was provided for in the tender and unwearying activities of Love, and they be happy hearts and homes where alert and illumined thought makes permanent place for peace and joy by denying both ingress and reality to every sense of lurking ill which, without these daily demonstrations, would assert its presence and maintain its sway. Protection through Truth is thought for all time, but its realization is always immediate, and if in watchfulness and gratitude we are proving the keeping power of Love to-day we need not fear for our safety to-morrow.

How many afflictions would all have been spared, how many seeming disabilities to our Cause would have been avoided, had forethought waited upon faithfulness in guarding our every door against the evils that have come while men slept. "What I say unto you, I say unto all, Watch."

And let gladness and joy abide with watchfulness. Every error that is wrestled with and overcome through Christian Science, witnesses to many which are defeated by anticipation. The strifeless victory is ever the greater achievement, and we have great occasion to sing again the songs of our fathers who while yet in Egypt, as are we, found that through prompt obedience their thresholds were passed by.

Love's protection is no less available than Love's cure, and a fitting commemoration of these thanksgiving days will include a grateful recognition of the absence of unnumbered burdens which, apart from the protecting shadow of Love's wing, it would have been ours to bear. W.

### With Authority.

"AND they were all amazed, and spake among themselves saying, What a word is this! for with authority and power he commandeth the unclean spirits, and they come out."

Every step in the journey of Jesus was marked by this assurance of authority. In the Temple his child-wisdom shrank not from voicing itself in the midst of the doctors. Ecclesiastical learning and high estate had no power to intimidate him or silence the words of Truth that proved him to be already about his Father's business. Following in the light of his marvelous demonstrations at Cana, at Nain, at the tomb of Lazarus, we find the same unquestioning assurance that his words would carry their own fulfilment.

"Stretch forth thy hand" is just as much the utterance of Omnipotence to-day as it was nineteen centuries ago. The law of God is just as truly harmony, and just as surely dispels discord and dreams as it did in the first century. Omnipotence has lost no power. Omnipresence has not withdrawn Himself from His image and likeness. What He was yesterday He is to-day and forever. "The Lord's hand is not shortened that it cannot save, neither His ar heavy that it cannot hear."

Surely in the march of years, error has not become more real, certainly evil has not incorporated itself with good. Sickness is no more reality than when the nobleman's son was healed by the Master. The fever is the same unreality that afflicted Peter's wife's mother. The erroneous manifestations of material sense are just the same as those that vanished when the word was spoken with "authority." Furthermore, since God is omnipotent, omniscient, omnipresent, and omni-active; and since man reflects His power, His intelligence, and His action, why to-day our feeble and faltering utterance of "Loose him and let him go"? Is it not because the consciousness of authority that set aside the mortal law of limitation and knew only God's law of freedom and harmony, has given place to fear and doubt? Is it not because the practical living of the Christ that brings man into the demonstrable knowledge of infinite Love and establishes the brotherhood of man in peace and purity, has proved too high a standard?

The words of authority spoken in profound faith and perfect trust by the Nazarene seem almost to have lost themselves in the lapse of centuries until the Discoverer of Christian Science, exalted above the limiting faith in a personal Jesus, perceived, then demonstrated and taught to sinning, suffering humanity, that the impersonal Christ is ever present with the same authority, and but awaits the recognition and utterance of man through faith, and prayer, and a consecrated life. ## Exactness.

HENRY C. LAWRENCE.

I HAVE been thinking lately about my work in Christian Science, and have been wondering what I should say if the question were asked, What is the most important thing in your work?

There are many things of much account in the work of a Christian Scientist. Detail must be carried out with the utmost care. First and foremost his own thought must be kept clear and in the direct line of Science, deviation from which our text-book states is fatal to our progress. The smallest erroneous thought must be given proper attention, for if put aside as insignificant and unworthy our time, it will some day return to claim more of us. If not at first corrected and destroyed by Truth it will later on cost us more.

Think for a moment of the little things an architect must take into consideration in planning a large building, and imagine the result if these were neglected. Now in what sense and how far are we architects, and what sort of a building are we planning? We each have the building of character to construct, and our success or failure depends upon our wise choice of each thought which helps to make it, or our foolish acceptance of every random idea which presents itself. Our beginning or foundation must be laid in the true Christ-character which the Master presented to us. This plan must be followed with precision in erecting the superstructure, so that the finished work may agree in each particular with the model. But unlike the material building, this construction or development is the growth of years. It is progress out of the seen into the unseen, out of the mortal concept into immortal Truth. Greater care, closer application is required of us in our progress in Christian Science than in anything else, and without this we do not progress, even though we think we do.

Do we in our relations with our Publishing Society pay sufficient heed to the details which will help those at headquarters? Do we forget to renew our subscriptions in time to save the extra work otherwise occasioned? Do we neglect our yearly contribution to the Mother Church for the cause of Christian Science? It is easier to attend to these things than it is to put them off. It seems to me exactness is one of the little things required of us in order properly to demonstrate Christian Science. Christian Science means exactness. Things must be right. Duty must be done on time, or we lose something. Then we wonder why some one else has not been more prompt.

What can the command of our Master to be perfect mean if it does not mean care and promptness? "This spiritual idea entered into the minutiæ of the life of the personal Jesus. It made him an honest man, a good carpenter, and a good man, before it could make him the glorified" (Miscellaneous Writings, p. 166). Jesus recognized and fulfilled his own demand, and this made him what he was and all he was. How can we expect to reach his understanding if we do not obey him and follow him? If we do not become a good workman in whatever may be our occupation in life, and a good man, through our study of Christian Science, of what practical value is it to us? Certainly Christian Science is practical for all in all things, or it is not practical at all at any time. Our text-book tells us nothing is more practical when the rule is followed, and nothing can be of use when its rule is disregarded. Our Leader has shown us in a very conclusive manner, her understanding and proof of its usefulness in the work of each day.

If God cannot be taken with us into our business (and by business I mean every-day work of whatever nature), He will prove of small value to us. We say God is Good and we desire good business. We want our work to be done smoothly and be finished in the best possible manner. Can this be brought about when we leave God at home or in the church and follow policy in our business? Hear the words of Jesus on this point, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you." Our business success, then, as well as all true success, must be based upon a right apprehension of Him "who hath gathered the wind in his fists" and directeth all the ways of a man, to whom belongs "the earth . . . and the fulness thereof."

A right apprehension of the Principle of Christian Science will ensure our obedience to all and only that which promotes our growth. If we follow the teaching of our text-book we shall not fail to consider carefully each of the little things which go to make up a perfect whole. We shall act promptly, work well, and heal quickly, for the spirit giveth liberty. (Message, p. 15.)

## Bearing False Witness.

EDWARD EVERETT NORWOOD.

THE Psalmist says, "Open Thou my lips; and my mouth shall show forth Thy praise." When a Christian Scientist, having an eye single to the glory of God and with the evidence of the spiritual senses before him, opens his mouth to talk, it is to say something of worth. Truth has so educated him in the new tongue of Spirit, that he testifies to things spiritual, to things of harmony and health. Because his thoughts are on the side of Spirit, his affections pure, and his motives good, his words and deeds are right, and he becomes a channel through which Wisdom is expressed.

"Thou shalt not bear false witness." When we testify to matter's discordant conditions, to the changeable phenomena of material sense, we are bearing false witness, for we are trying to make a lie the truth. Our weight is thrown, not on the side of divine Mind, but of matter. We are thus giving added force to a lie which is already believed by universal mortal thought, by all who are not instructed in the Science of Being.

This state of mortal consciousness called human life is, at its best, prone to look upon the bad side of everything. It knows no better, so it can do no better. While its conclusions are based upon false evidence, it is accepting them as true, so is self-deceived.

When one says, I am hot, I am cold, I am sick, I am tired, he is bearing false witness. He is also breaking the first commandment, annulling, in belief, the law of spirituality, and turning his back on God. How easy it is to bear false witness! How prone we are, at times, to admit the suggestions of material sense and voice a claim of error, and so make it real. The devil finds an easy channel in the mind of a discouraged Christian Scientist. Surely we should remember that while the path seems narrow, our Leader tells us, "It expands as you walk in it."

Are we enlisted in this warfare to fight or to play? The temptation comes at times to question if we are, after all, doing much, if any, good. But how are we to outline God's work and judge? We are to do our best, living up to our highest sense of goodness and leave results to the infinite Mind, who doeth all things rightly and well; and we often find that we are doing far more than we ever dared hope or expect.

A common experience of Scientists is a sense of limitation. We ask, "Can God furnish a table in the wilderness?" and the answer comes, "Ye shall be filled at my table, . . . saith the Lord God." Before we learned the "Scientific Statement of Being" in Science and Health, we thought the supply was material and mortal mind was the source. But taking up and declaring the truth in that

Digitized by Google

most wonderful paragraph, we learn there is no life in matter, there is no truth in matter, there is no intelligence or no substance in matter, we realize it cannot give us one thing or do anything for us, and we are cutting ourselves off from any reliance upon its supposed power or potency in any way. Thus we see all is Spirit and its spiritual manifestation, and we have only what we demonstrate or express by our realization of this declaration.

If our spiritual sense is impoverished, our bank account may soon be also, for we are lacking in and failing to express the one Substance, divine Love. The apostle says, "Owe no man anything, but to love one another." If we love enough, we have all, and can do all, for Love is the one and only Substance.

When we pay the debt of love, when we love in the face of hate, opposition, and persecution, when we wait patiently and lovingly on God to work things out, and keep our minds pure and in Love, we shall soon find it is indeed "the fulfilling of the law," for it covers the whole ground of demonstration.

Let us, then, love and bear witness only of Love, and thus realize the fulfilment of the promise, "No good thing will He withhold from them that walk uprightly."

## The True Wealth.

S. S.

SOME time ago, while thinking over saving money in the old way, these thoughts came very forcibly, that as we day by day overcome something of error in our lives, destroy our sense of limitation, and come into a larger sense of the fulness of Truth, we are placing to our credit in the Bank of Demonstration a balance from which we can always draw in case of need. The more faithfully we work, the more shall we add to this account of our own experience, from which we draw to help those in like need and also to meet our own necessities. Therefore, it behooves us to place something to our spiritual credit daily, that this never-failing source of supply may be our own, and we need then have no fear that we shall lack anything in a material way.

If we can get our thought cleared of the belief that the possession of money is the means through which supply comes to us, and know that everything necessary to our comfort and happiness, whether it be things so-called material, or human kindness shown us, all is a type of the bounty and infinite character of Love, and as that grows through demonstration, so also will the manifestation, in ways impossible for mortal thought to outline.

I illustrate by the result of one demonstration in my own experience. For months I have had a very darkened condition of thought to meet, and to-day rejoice in knowing it has been met Scientifically. The error was that of human love and hate, with all its accompanying malice, jealousy, revenge, the sense of wounded self-love, and much bitterness. Sometimes it seemed to be met; again, the conditions seemed as bad as ever.

I knew it was useless to run away, even if necessity had not seemed to make it impossible, for nothing is ever gained that way, and I had to meet the problem amidst what seemed almost unsurmountable obstacles.

I feel very grateful to the different sources which gave help, and among them three things stand out with great prominence. One was a testimony given at one of the Wednesday evening meetings, the other two were paragraphs from the *Journal*.

At the testimony meeting referred to, a lady said Christian Science had taught her to know what it meant to love her neighbor as herself, in that she knew she must be just as willing to see error as error, apart from the true man, when manifest in her neighbor, as when manifest in herself. This seemed to bear special significance, for I saw that I had been claiming all the light of Truth to separate the evils which had brought about these conditions from my own selfhood, but had not been applying the same rule to my neighbor with as much sincerity.

The first paragraph from the *Journal* referred to was from the article in a recent number, "Joy through Humility," reading, as nearly as I can remember, "The Fatherhood of God and the brotherhood of man is recognized as through humility we annihilate self, and rise into that purer atmosphere of Mind, where the love-light warms and beautifies." It seemed to narrow all that was left down to destroying "self," and those last words, "warms and beautifies," rung in consciousness until a great work was accomplished in changing the entire thought.

The other paragraph from the *Journal* read, "God's ideas can only express love to each other, for Love is all there is," and further on in the same article it says that there is no need for self-commiseration. The holding of these thoughts in consciousness for a few days, wrought the transformation. A little later there was a manifestation that seemed to deny that this had been done, but by standing by the realization so clearly felt before, the condition changed almost instantly.

As a direct and wholly unexpected result, through the one whose thought had seemed so antagonistic for so long, there came financial help very much to be desired, an expression prized more for its impersonal kindness than for its actual money value. Of infinitely more importance, is the positive knowledge of growth in understanding, the laying up of treasures in that mental storehouse, to which we can go when the call for help comes from those who are in like distress, to sense, or for our own protection: the knowledge that no matter how swollen the dragon of lust and hate, it is killed by holding fast to Love, by steadfastly seeing our brother in the secret place of the most High, even though this Truth is not yet made apparent to his consciousness; all evidences of another governing power will disappear, and we can only have the riches of brotherly love shown to us and can only give the same. This surely is the true wealth, the pursuit of which is of more concern than anything else, by which we realize what it is to seek first the kingdom of God and His righteousness, knowing that all things shall be added unto us.

## Conquest of Self.

MRS. E. L. CURRY.

THE first few weeks after I became interested in Christian Science were so happy and full of joy that it seemed to me I should always feel thus. There was such a sense of ever-present Love with me that I did not worry over any trial that arose in my daily work, and I expected this happy state to continue.

But soon I found the struggle of conquering self must begin. Impatience, pride, anger, and selfishness would come to my consciousness, and it would not do merely to say there was no reality in these things, for that meant overlooking and not overcoming error.

This lesson of conquering self every Scientist has to learn, and it is not an easy one by any means. It is one that requires great watchfulness and prayer.

We have to learn love, not only love for those who are kind and agreeable, but love for everybody, even those who seem to hate and be most unkind. We can do this only by knowing there is no reality except Love and His creation, and that the errors we see in others are not real, that they only *seem* so to us, and that we are all the children of one Father who is Love and Good, and we are His reflections. Then we must learn to be patient, and destroy all selfishness, and be content to try to follow our Master, who, although no fault could be found in him, was reviled and ill-treated. In Science and Health, p. 232, we read,

Digitized by Google

"There is no place nor opportunity in Science for errors of any sort. Every day makes its demands upon us for higher proofs rather than professions of Christian power. These proofs consist solely in the destruction of sin, sickness, and death, by the power of spirit, as Jesus destroyed them."

We must be humble, and when one seems to fall, let us not throw stones, but remember our own weaknesses and try in love to encourage and help that one to rise. Mrs. Eddy tells us in "Miscellaneous Writings," p. 356, "Humility is no busy-body: it has no moments for trafficking in other people's business, no place for envy, no time for idle words, vain amusements, and all the *et cetera* of the ways and means of personal sense."

Let us begin at once, and daily and hourly continue the conquest of self, knowing if we are obedient and faithful we shall overcome our errors, and be led by Truth on and on until all of self is conquered, and we hear "Thou hast been faithful over a few things, I will make thee ruler over many things."

## Abundance.

M. BETTIE BELL.

THE twenty-second chapter of 1st Chronicles is one that ought to be interesting to every Christian Scientist at this hour. There is no thought of poverty or lack expressed in this chapter. In almost every verse abundance is emphasized.

God giveth us the increase through our advancement in spiritual understanding. God knows what we want ere we ask Him, and He answers before we call; therefore, in proportion to our trust and faith, it will come to us. We manifest the riches of the law when we express the qualities through which the riches flow.

We could never have a poverty of joy, goodness, humility, grace, or meekness if we had faith in the promises and understood the divine law. Our riches are in the possession of these qualities of thought.

If we are in want and feel that we have nothing to give, let us examine ourselves and see if dishonesty, deceit, hate, or any other false thought is closing the door to our inheritance.

Riches is a permanent, positive quality. It is the natural consequence of spiritual light. Whenever we know we are never poor, we become rich. David said, "I hate vain thoughts: but thy law do I love." Vain thoughts are poverty thoughts. If we catch the true tones of Life and Love, we can never say we are poor.

Abundance comes through an increase of power, love, ability, gentleness, and charity. Let all hasten to obey the words of wisdom: "Arise therefore, and be doing, and the Lord be with thee." "The young lions do lack, and suffer hunger: but they that seek the Lord shall not want any good thing."

Our strength grows out of our weakness. Not until we are pricked and stung and sorely shot at, awakens the indignation that arms itself with secret forces. A great man is always willing to be little. Whilst he sits on the cushion of advantages, he goes to sleep. When he is pushed, tormented, defeated, he has a chance to learn something; he has been put on his wits, on his manhood; he has gained facts; learns his ignorance; is cured of the insanity of conceit; has got moderation and real skill. The wise man always throws himself on the side of his assailants. It is more his interest than it is theirs to find his weak point. The wound cicatrizes and falls off from him, like a dead skin, and when they would triumph, lo! he has passed on invulnerable.—EMERSON.

The giant is made strong in wrestling with obstacles. Power is the resultant of the forces overcome.—*Success.*

## Among the Churches.

### Thanksgiving Service in Winnipeg, Man.

You are no doubt aware that October 16 was appointed for Thanksgiving Day in Canada.

Desiring to be obedient we arranged a lesson as best we could in the same order as the Sunday service, including a lesson-sermon. The service was well attended, and all seemed in an earnest, thankful, and obedient thought.

MARGARET M. ELLISON.

### A New Church in Grand Rapids, Mich.

First Church of Christ, Scientist, will to-morrow break ground for a new $30,000 edifice which is to be erected at the corner of Washington and South Lafayette Streets.

When the Science church is completed it will be one of the handsomest edifices in the city. The lot upon which it is to be erected is in the heart of the most beautiful section of Grand Rapids.

The church is in a flourishing condition. There are one hundred and thirty-three active members, and the Sunday and Wednesday evening attendance is largely in excess of this number.—*The Grand Rapids Herald.*

### Union of Churches in Lincoln, Neb.

The Principle of Christian Science is, one divine Mind. Unanimity is the state of being in one Mind. Unity is the manifestation of this mental state.

To make this demonstration we must begin with the one Mind that "unifies men and nations; . . . fulfils the Scripture, 'Love thy neighbor as thyself'" (Science and Health, p. 340).

This was our work to do and we rejoice and are grateful for the understanding of Love which destroys every seeming claim of discord and separation.

The manifestation of unity in Lincoln began to appear soon after the adoption, by the local churches, of the new by-law regarding Readers, and about the first of September conferences were held among Christian Scientists with a view to unity, and on September 21 the Boards of Trustees and Directors of First Church, in joint meeting, passed the following resolution:—

"Resolved, that believing the good of the Christian Science Cause to be paramount, and that absolute sacrifice of personal belief and sentiment should be made in furtherance of the Cause, we, the Trustees and Directors of First Church of Christ, Scientist, duly convened, resolve, that we will, as church officers willingly and cordially adopt any honorable means calculated to bring about unity among Christian Scientists, and if deemed advisable or necessary for the accomplishment of that purpose, will, as early as practicable, take measures to effect the entire dissolution of First Church of Christ, Scientist, of Lincoln, Nebraska, that a union of all Christian Scientists in Lincoln and vicinity desiring to unite may be effected."

In response to the above, Second Church of Christ, Scientist, passed a resolution expressing its readiness and willingness to dissolve, to unite to form a new church.

A similar resolution was then passed by First Church, and the two churches were dissolved October 10. There was held on the same date a meeting of all Christian Scientists under the call of the joint committee. This meeting was very harmonious, articles of incorporation and by-laws were adopted, officers chosen, and Readers were elected for a term of three years.

The Board of Trustees has leased the large and beautiful hall in the new Fraternity Building, the former places of worship being too small to accommodate the united congregation.

A very enjoyable incident took place on the evening of October 1; the Jews held their New Year services in the

Digitized by Google

Temple, which caused First Church to postpone the Wednesday evening meeting to Thursday evening. The thought was voiced by one that First Church attend the Second Church on Wednesday evening, and this was generally favored. All were happy to be together, and rejoiced in this first fruits of unity. Thursday evening a like meeting was held at First Church, so that what at first seemed a loss of the regular evening meeting was shown by Love to be a great gain.

Our new church held its first Sunday service October 12, and the peace and harmony that prevailed and the joy and gratitude felt, for the realization of the thought of being of "one Mind in one place" will make that day one long to be remembered.

This report can only suggest the love to God, to our Mother in Israel, and to all mankind, that fills and overflows our thankful hearts. Obedience, self-abnegation, submission to the revealed will of God through Christ Jesus, has brought about the desire of every loving heart.

We trust that our experience may be a help to others, and that in every field all Christian Scientists will realize that "Divine Love alone governs man" (Church Manual).

C. E. BROWN, *Clerk.*

## The Mother Church Building Fund.

IN response to a late suggestion, we are receiving reports of meetings and methods of branch churches for securing contributions to the Building Fund of the Mother Church. They will prove of interest to the Field, though referred to impersonally, and we give three of them below.

A meeting was held September 16, to make arrangements for sending our contribution to the Building Fund of the Mother Church.

Its purpose being made known, an account was read of the manner in which this church contributed toward the building of the Mother Church in 1894, and we were reminded that, as we had cheerfully and generously given in the past, so had we prospered.

The chairman then asked what was the wish of those present as to the amount to be sent. It was moved and seconded that we, as a church, send $1,000. The motion was carried and each then wrote on a card with his name the amount he would give, and, on October 11, we sent $1,000 from the church, one hundred and ten persons subscribing this amount, and one hundred dollars from the Sunday School, toward which sixty-eight subscribed.

On September 8, one hundred and thirteen dollars was sent from a students' association and one individual gave $1,000, making a total of $2,213.

---

At the last meeting of our Sunday School, October 26, we voted to contribute the first Sunday's collection each month to the Building Fund of the Mother Church.

A few years ago our Sunday School gave fifty dollars toward the purchase of our society's organ.

---

At a called business meeting it was unanimously voted to give to the Mother Church Building Fund the collection taken the first Sunday of each month.

Our little Sunday School voted to give all their collections so long as they were needed.

---

We can't choose happiness either for ourselves or for another: we can't tell where that will lie. We can only choose whether we will indulge ourselves in the present moment or whether we will renounce that for the sake of obeying the divine voice within us—for the sake of being true to all the motives that sanctify our lives.

GEORGE ELIOT.

## Testimonies of Healing.

Mortal mind had pronounced the following sentence upon me: Weak constitution, low vitality, defective nutrition, poor circulation, etc. I was always very ambitious and always breaking down. I tried in succession doctors and medicine, change of climate and altitude, osteopathy, hydropathy, electricity, physical culture, diet, fresh air, exercise, sunbaths, etc. I was becoming the worst kind of a health crank.

One day, lying on the sofa taking my "hour's rest before meals," I felt very nervous and irritable. My mother read some articles in a *Christian Science Sentinel.* I remember I complained that they did not explain what Christian Science was or how it healed, and then I thought if only a Christian Scientist might treat me a few minutes it would save all this valuable time I had to waste every day trying to "calm my nerves." I had a strange craving to go to a Christian Science service, but I said, "Christian Scientists are lazy, 'Eternal vigilance is the price of health,' I must obey the laws of health." But the more attention I paid to health regimen the worse I became. I was at the end of my tether and discouraged. Finally I went to the Christian Science reading room and could hardly wait to find a practitioner, I was so impatient and anxious, and so craved health and strength. When at last I found one and tried to talk to her I could only cry, I was so despondent. She treated me and gave me "Miscellaneous Writings" and later Science and Health to read. Before I left her that day, my whole horizon had changed. Where before had been heavy clouds, now all was rosy. After two weeks of treatment and reading, I was wonderfully improved and have slowly but steadily progressed ever since. I have been through a class and my mother has come into Science with me. Through demonstration I have secured a position and believe I have found my niche in life, for all of which I am very grateful to dear Mrs. Eddy and of course to God above all.

ALENE DUNBAR WOOLSEY, Denver, Col.

---

I wish to tell of Christian Science healing in our family. First, because I believe grateful acknowledgment of God's benefits should be the first fruits of renewed spiritual life, and secondly, because I know from experience how these very experiences in detail serve as beacon lights to others striving for spiritual and physical perfection.

Visiting some Christian Science friends I was persuaded to try Christian Science, because I had remarked at breakfast that I could never take coffee, as extreme nervousness and headache followed. I added that I had constant headache, and had been taking medicine which seemed ineffectual. Their attitude toward trouble and sickness of all kinds, exhibiting so great a confidence in God that it seemed to me to be surprisingly Scriptural, opened my eyes to the practicality of Christian Science.

On my return I bought a copy of Science and Health and a *Journal*, and read them during a short visit to Lakewood.

From the first it all seemed ethically beautiful, and more, its truth seemed absolute. Many things seemed inexplicable, and are yet not fully understood, but the fact that God is All-in-all, forever supreme, made entire reliance on Him the very rational thing, and to-day I rejoice that through that beautiful belief, my spiritual life has been refreshed beyond all past experience, and that the headaches have disappeared as well as appendicitis. My brother has been healed of rheumatism and a peculiarly dangerous form of rupture. For this spiritual awakening and the physical healing I am reverently grateful, and I thank our Leader for showing us how to follow Christ in his appointed way.—H. S. P., Glen Cove, N. Y.

Digitized by Google

Whenever I receive my *Sentinel* I always look to see if there are any testimonies from England. Thinking others might do the same, I send a short one. Three years ago, I was given a *Christian Science Journal*. When I read the testimonies my heart yearned for this healing power for my mother, who had been suffering for months from a swollen, inflamed foot for which doctors could do nothing. One said it was disease in the bone and the other that it was the beginning of the end, as mother was seventy and had been an invalid for years. As it was an American magazine, I thought it impossible at first, but turning to the back I found a few names in London, so wrote to a lady there. A gentleman kindly answered my letter and advised me to write to a practitioner in Edinburgh. I did so and asked for treatment for my mother. The foot was healed in a fortnight, and shortly after, rheumatism, that mother had suffered from for years, was healed. We have had many demonstrations since that time for which we are thankful. We have the *Sentinel* and *Quarterly*, and very much enjoy them, and long for the time when all shall know the Truth that makes free, not only from bodily disease, but from unrest of every kind. I have had the privilege of going through a class with one of Mrs. Eddy's loyal students, to whom we owe much. We trust that some will be helped by this attempt to express what we owe to Christian Science.

ISA S. HENRY, Seaham Harbor, Eng.

---

A short time ago, as I sat by the bedside of a dear sufferer trying to realize the Master's "Peace, be still," I recalled my own experience and know how real is the fear and how strong the belief. Deep gratitude came to me as I realized what a long distance I had come guided by the blessed light of Truth as revealed in Christian Science. It has raised me from a sense of fear and distance from God to a consciousness of the all-presence of God as Love; from a sense of invalidism and dependence to one of health and usefulness. In the years of weakness and suffering that followed my mother's death, I prayed for light, searched far and wide, but found no relief. The bodily suffering was great, but the yearning and longing for the Christ-Truth was greater. When all hope had fled and I turned wholly to God, a dear Christian Scientist friend called, telling me that the Christ-Truth had never gone. I began the study of Science and Health; there were struggles with fear and prejudice, ut slowly, surely the light came. The Christ-Truth that I longed for as a child has come. Old things have passed away, behold all things have become new.

My heart goes out in deep gratitude to our Leader for our text-book, Science and Health, and to the dear sister in Truth who has so patiently and lovingly led me.

BARBARA D. MOORE, Somerville, Mass.

---

I wish to express gratitude for the many blessings I have received from Christian Science. Something over a year ago a lump appeared on my head which seemed very annoying at times. It was pronounced cancer. My mother had one on her head.

At times I felt some uneasiness, and fear would say, "You cannot destroy this claim as you have not sufficient understanding." So I thought I would have to ask for help. But immediately came the thought, God is everywhere. He is with me just as He is with others if I look only to Him for help. I immediately began the work with the Bible and our text-book. I spent a day in earnest, prayerful research, and I thank God I found help; and ever since this demonstration was made it has seemed to be my duty to tell of this victory over a dread disease. When error howls without, my remedy is the little message from Mrs. Eddy published in the *Sentinel* some years ago, "Peace, be still! Our Father is at the helm."

M. J. B., New Virginia, Ia.

It is with a heart overflowing with gratitude and thanks to God, that I write my testimony to the *Christian Science Sentinel*. About fifteen years ago I had a bad accident and tried doctors for a long time, but to no avail. Then I tried Christian Science and was healed, and later have had a number of demonstrations, and sure proof that it is the truth of God to the world. At first I could not read English, so it was very hard for me to grasp the meaning of Science and Health, but I have never for one moment since I was healed, doubted that Christian Science is the true way to everlasting Life. Thanks be to God and our dear Leader.—MRS. CARRIE FIGENBAUM, Beloit, Wis.

---

"God *is* Good, Good to-day." This means to me that God is declared again to-day, even as Jesus "declared Him" (John); and He is seen through the works, many of which our publications are continually telling.

It expresses also my thought of love and gratitude for the Rev. Mary Baker Eddy, the one through whom the declaration of God has been given to-day, and through whose love, unselfishness, and faithfulness to the right, first reaching me through her faithful student, I have been enabled to realize better physical health and the desire to be made truly whole, to awake in His likeness (Psalms). I am thankful and full of joy as I read of the peace and understanding and freedom coming to those who write for our publications.

After eleven years of bondage to glasses worn constantly for astigmatism and far-sightedness, and with much difficulty most of that time, I was enabled to lay them aside one night when our child was under Christian Science treatment five and one half years ago, and never put them on again. And I am free from any difficulty, so that if it were not for my desire to give thanks, I need never think of it all again. I have seen through Christian Science treatment in our family alone, the entire overcoming and casting out of fear expressed in chronic bronchitis in aggravated form, chronic indigestion, malaria, sprained ankle, influenza, neuralgia, and rheumatism. I am trying to live my gratitude.—A. E. B., Providence, R. I.

---

For some time I have been seeking the way honestly to express gratitude for my healing in Christian Science. I asked, What is gratitude? and the answer came: To live, to love, to walk in obedience to Principle.

It is little more than two years since I learned of Christian Science and claimed the privilege of calling a copy of Science and Health my own. At that time I had for eight years been wearing glasses which an oculist shortly before had said I should always be obliged to wear. I have not worn them since the book became my possession.

Thinking about the book one day, I awakened with a start. What a wonderful thought this is, and how different from other theories I have read, mentally antagonized, and quarreled with, because I could find nothing satisfying. To be sure I understood very little, in fact remarkably little, of what I was reading, yet the words sounded so very reasonable. Then, too, where had the old, unending sense of weariness, the heart trouble,—a disease of five years' standing,—and many other bodily ills gone? Why, gone with the awakening, proving that they were only a dream.

After reading about seven weeks a belief of deafness was overcome. The hearing of one ear had been destroyed by an injury received when a little child, and the other was pronounced permanently affected.

Although I am grateful for these many blessings, my healing from the habit of biting the nails brought a keener sense of rejoicing, perhaps because of the years of constant struggle to overcome it. Ever since I can remember, this habit had been a source of punishment. Once for nearly a year I held out, but with the fear lest I might yield, and the

Digitized by Google

fear always conquered; until one little sentence, spoken by one who has taught me the meaning of the word "friend," uncovered the error and removed the fear.

I turned to Christian Science solely to learn of God, Love, and Christ, and through the loving patience of my teacher I have been led step by step, by example and precept, to rejoice in the healing which finds expression in this passage of the Gospel: "I was an hungred, and ye gave me meat: I was thirsty, and ye gave me drink: I was a stranger, and ye took me in: naked, and ye clothed me: I was sick, and ye visited me: I was in prison, and ye came unto me."

What words can express the gratitude I offer to our dear Leader, who has shared with us the fruit of her faithful, constant labor of love, and led us to the consciousness that the kingdom of heaven is at hand.

HARRIET S. VINCENT, Brooklyn, N. Y.

---

When I first heard of Christian Science, I was in a small town in the northern part of Missouri. I had been an invalid for three years, and during six months of that time I never stood on my feet. The light was so painful to my eyes that I had to wear smoked glasses. I had tried all kinds of physicians, but none of them said I could be healed. They all said I could be benefited, but I would never be strong and would always have to be very careful. I was unable to walk more than a few yards when I took my first treatment in Christian Science. This was about two o'clock in the afternoon. After this treatment, I took off my glasses, walked up stairs, went to sleep, and slept until five o'clock. The next day I walked three blocks. In twelve treatments I was perfectly healed. I am on my feet the greater part of the day; run up and down stairs, and suffer no inconvenience from it.

This was about thirteen years ago. At that time I seemed to get only the physical benefit. I knew very little of the spiritual uplifting which now means far more to me than the physical healing. I studied Science and Health and was able to overcome my own troubles and sometimes those of others.

I am very grateful to our dear Leader for giving to the world this wonderful Truth.

MRS. MIRA STEELE, Brookfield, Mo.

---

We are sometimes asked why we do not hear of more slow demonstrations. I will write these lines for those who think that their healing is slow. Eleven years ago I began to take Christian Science treatment for a severe form of asthma; the asthmatic spasms were conquered at once, but the cough and pain lingered for many months. Sometimes I would cough all night without getting any sleep; in fact, my whole body seemed to be affected. I was under constant treatment for almost a year; it was about three years from the time that I began treatment before I was well. Many times I was discouraged; still, I clung to God, for doctors, and many friends (who were not Christian Scientists) told me that my disease was incurable. A preacher once told me that God could do a great deal, but He could not heal asthma. I am very thankful to God, for He did heal me. I am also thankful to dear Mrs. Eddy, and to all who helped me. I wish to tell of a woman who suffered from sick headache. The attacks would come twice a week and last twenty-four hours each time. She had been taking medicine for over twenty years, and instead of getting better she was getting worse when she turned to Christian Science. She was under constant treatment for about a year before she was relieved. Now she is very thankful for the freedom that Christian Science has brought to her and her family.—M. C. N., Chicago, Ill.

---

Prayer is the contemplation of the facts of life from the highest point of view.—EMERSON.

## Announcements.

### Science and Health Revised.

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff bevelled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

| | |
|---|---|
| Price, single copy, prepaid . . . | $4.00 |
| Twelve or more to one address, each | 3.75 |

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

DIVINE GIFTS.—Without reference to the question of personal intercourse with the Divine Spirit, and all that goes under the name of prayer, there is going on throughout the world of discussion the question, How can man get access to and use the stores of wisdom and power that are in the divine nature? If there be a God at all, and if we are spiritual beings capable of intercourse with Him and capable of receiving gifts from Him, it follows that it must be possible for human nature to enrich itself beyond even the dreams of the prophets. Jesus promised that his disciples should do greater things than he did; and ever since that time there have been those who have tried to take him at his word, and to realize in their own experience the meaning of his promise.

But disappointment constantly follows the attempt to arm and enrich one's self with the powers of omnipotence. The divine wisdom flows in a scanty stream through many devout souls and earnest seekers after the truth, who have earnestly desired to receive it. Unless we hold that the expectation of sharing the divine fulness can never be realized, the reason for this disappointment must be found in wrong methods. . . . All the teaching of Jesus in story and parable tends to enforce the doctrine, that, if one would have new gifts from God he must show his willingness and ability to put to good use those which he has. . . . All experience teaches the lesson that good gifts used multiply and increase, while neglected they shrink and disappear.—*The Christian Register.*

Rev. James M. Campbell, D.D., says in an article in *The Homiletic Review:* "Prior to Pentecost the Lord enjoined his disciples to pray for the Spirit; but where is there the slightest intimation that they were ever enjoined to pray for the Spirit after Pentecost? Why should any one pray for what has already been given? . . . When we read the words 'Ye shall receive power after that the Holy Ghost is come upon you,' it is surely pertinent to inquire, When were these words spoken? To whom were they spoken? Has the promise which they contained been fulfilled? The advent of the Spirit is here, as always, referred to as a distinct event. Has it taken place? Has the Spirit come upon the Church? Need we answer? The Spirit is here and here forever to abide. His presence is therefore to be always assumed. Instead of tarrying for his coming we are to rejoice in his presence; instead of seeking to conquer his reluctance we are to take hold of his willingness; instead of waiting for his enduement of power, we are to go to work believing that all the power we need has been made over to us; instead of waiting through weary years of deferred hope for some special faith-compelling visitation from him, we are to yield ourselves at once to his complete possession, doing the work that he bids us in the strength that he gives us."

Unless the Churches can offer something which men can find nowhere else they may as well close their doors. The early Church did offer something which could not be found in the world, and it proved to be a powerful attraction. The early Christians were poor, persecuted, afflicted, tormented, despised. They had no worldly allurements to offer those whom they invited to go with them. But men were drawn to them for all that. They came in multitudes and said, "Let us come in and share your lot." They did so because they saw that these despised and persecuted disciples of Christ had something which the world had not. They had something which the world could not give. They had something which every one wanted. They had love,—genuine, pure,—sweet charity. They had freedom from sin and fear. They had no more fear of prisons and fagots than Daniel had of lions. They had victory over death. They marched out to meet death with a smile and a song. Men wanted this. It is, indeed, the chief good. Let us speak seldom of other advantages of religion, but dwell with emphasis on this spiritual good. If Christians have this spirit, if they show by their conduct that they really have this highest good, they will not find it difficult to persuade men. Without it we can do nothing.—*Christian Advocate.*

There are springtimes of the soul as of the world; moments and moods when fresh experiences and new forms of faith break turf and bark of habit and tradition. There are summerlands when kindled enthusiasm covers life with spreading vine and fig-tree foliage. But ever the autumn follows, and the hoar frost nips the luxuriant growth, and winter with its whited sepulchre of lifeless formula descends. But the spirit is not dead. Under the snow the seed and root of finer growths survive. The life behind the form and in the soul is only waiting for the season of its rebirth. In some to-morrow it will break the turf and bark and green fields, and fragrant flowers of worship will cause the earth to break forth into singing and the hills to echo with their laughter.

*The Universalist Leader.*

Rev. F. W. Betts says in *The Universalist Leader:* "The Churches are doing very little to abolish corruption. The multiplication of churches does not affect this problem. . . . The problem is not so much to get men into the Church as to get those sentiments into men that shall bring them voluntarily into the Church. Get their souls and they cannot stay away. We must make them hunger for a satisfaction they do not now desire. Penetrate the mass of human darkness and corruption with the light of brotherly helpfulness, and all the rest will take care of itself."

There is a sense in which all true goodness is Christian. Christianity is not a name, but a spirit and a mode of life. Wherever you find that spirit and that mode of life you find Christianity, whatever name it may be called. As light is light, whether it proceeds from a candle or a star, so love is the same in all ages and in all the earth. Christ is love, and love is Christ. He has other sheep that are not of this fold. Love is the door.—REV. A. CONKLIN.

Rev. H. A. Bridgman says in *The Congregationalist and Christian World:* "Some people complain because they live where they can find little Christian work to do. But Christian work, like charity, begins at home. A man would better take himself in hand before he tries to do his neighbor good. After all, our real troubles and greatest grievances arise, not because of the perversity of others or the injustices of society, but from our own half-tamed natures."

If all we could get from life should be simply what comes to us naturally and without any volitional effort on our part we should be little less than a machine. The machine can turn out a certain kind of work, but is made no better by what it does. We are affected by our service. There is a relation between us and what we do; between our task and our personality.

*The Standard.*

Rev. J. C. Perkins has this in *The Christian Register:* "What is your life or mine but the constant effort to ally ourselves with what is infinitely higher and better than we are ourselves, and struggling ever with blessed faith and hope for an understanding, which, if far from perfect, shall at least bring sufficient peace and rest for our little day and hour?"

We shall never be the "light of the world" except on condition of being the "salt of the earth." You have to do the humble, inconspicuous, silent work of checking corruption by a pure example, before you can aspire to do the other work of raying out light into the darkness, and so drawing men to Christ himself.—ALEXANDER MACLAREN.

Unpremeditated speech is the heart's overflow. "Out of the fulness of the heart the mouth speaketh." But true Christian hearts are like great mountain lakes, into which the brooks, turbid with clay and sand, may flow, but from whose pure depths the water pours forth clear and beautiful for the blessing of the earth.—"Closet and Altar."

Rev. George A. Gordon, D.D., in his lecture on "The Quest for a Theology," delivered at Yale recently, said: "The final thing to remember in the quest for a theology is that the soul in Christian experience is the foundation of theology. To be a great spiritual thinker one must be a great spiritual liver."

We cannot ask a better point of leverage from which to move our little fragment of the world toward truth and goodness than the point on which we have been placed. All that made saints and heroes of old strong and full of trust is as near to us as it was to them.—HENRY WILDER FOOTE.

The *New York Observer* believes that if the world is to be saved, it will be saved by the power of applied love. If the race is to be uplifted, it will be uplifted by hands of love. It is divine love that is to make men good. It is the love maker not the law maker who will ultimately win men's souls for God.

Henry Ward Beecher said that the Bible could be understood in spite of the commentaries.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

| Twelve or more to one address, each, prepaid | 4.75 |

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science: containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion: 132 pages. Price by mail, $1.06: $5.00 half dozen: $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents: $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9 00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science; 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents: per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents: $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY THURSDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U.S.A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

According to a report just issued from the Post Office Department, the estimated cost of covering the 700,000 square miles of territory not yet reached by the rural delivery system would be about $24,000,000 and would require over 25,000 men for the twelve hundred routes. The system will be extended to some seventy post offices the current year.

The reciprocity treaty between the United States and Newfoundland, a revision of the old Bond-Blaine treaty, has been signed by Secretary Hay for the United States and Sir Michael Herbert for the British government. It will be submitted for ratification by the Senate as soon as Congress assembles.

All the reciprocity treaties between the United States and the West Indian colonies of European Powers, which were not ratified by the Senate at its last session, are to be extended another year in order that they may be passed upon by the approaching session of Congress.

Minister Wu has presented to President Roosevelt his letter of recall and will leave immediately for his home without awaiting the arrival of his successor, Liang Cheng, who is still in China. The first secretary, Mr. Tung, will be in charge of the legation meanwhile.

The next territorial delegate to Congress from Hawaii, according to reports brought from Honolulu by the steamer Alameda, will be Prince Kalaianaole, popularly known as Prince Cupid.

**Foreign.**

The great natural resources in upper Canada are to be tapped and given an outlet to the Pacific and the Atlantic seaboards by the construction, already under way, of the Trans-Canadian Railway. The line will be 2,830 miles in length, is backed by British capital, and is expected to be completed by 1907 at a cost of $95,000,000. It will parallel the Canadian Pacific from which it lies about three hundred miles further north. It traverses a region producing over fifty million bushels of wheat per year and tributary regions rich in petroleum and coal.

A resolution of sweeping character has been introduced in the Hungarian Reichstag, and among other things empowers the government to route emigrants through the Hungarian port of Flume, thus affecting the North Atlantic steamship lines touching at Bremen, Hamburg, Rotterdam, and Antwerp. Austria is said to be preparing a similar bill making Trieste the port of departure, and imposing strict conditions upon emigrants.

The official report of the railway companies of Great Britain for 1901 shows that the percentage of profit for the year has been very small, that the price of coal was a large expense factor, and that there has been an extraordinary increase in the number of passengers who travel third class.

The arbitrators accepted by the miners and the coal operators in France to adjust existing differences, have already decided in the case of two districts that the wages cannot be justly increased, as the wages paid are proportionate to the selling price of the coal.

United States Minister Bowen of Venezuela wires his Government that he has been informed that the President of Venezuela has arrived at Caracas and that the executive branch of the government is now located there. He thinks the war is ended.

The French Chamber of Deputies has adopted a resolution calling for the appointment of a committee of thirty-three members to investigate the conditions of the miners and report upon means to prevent economic outbreaks.

Experiments recently conducted on the Zossen-Berlin military road have demonstrated that a speed of seventy-five miles an hour can be maintained without destructive wear of motors or roadbed.

Germany has agreed to the American proposal to submit for arbitration in The Hague Court the question whether the Chinese indemnity of 450,000,000 taels shall be paid in gold or silver.

The Spanish cabinet resigned last week. Senor Sagasta has had an audience with King Alfonso and though meeting with some difficulty, hopes to report a new ministry this week.

Dr. Francisco de Paula Rodrigues Alves, who was elected president of the United States of Brazil last March, was formally inaugurated last Saturday.

**Industrial and Commercial.**

Work upon the New York and Brooklyn tunnel to be constructed by the Manhattan Transit Company for a syndicate of English capitalists, which purchased the franchise granted a few years ago by the New York Legislature to the New York and Brooklyn Railway Company, has been begun. The tunnel is to be patterned, it is said, after the London "tuppeny tube."

A contract has been concluded with the owners of High Island, which lies adjacent to the Maine coast near South Thomaston, for granite for the new Pennsylvania Capitol. The granite for the Congressional Library was also taken from this island. It is thought that two million dollars' worth of granite will be called for by the contract.

The director of the mint has made public his final statement of the gold output of Alaska for the past ten months, based upon the receipts at San Francisco, Seattle, and the Selby refinery. This statement shows a total of $18,870,075, an increase of about four million dollars over last year's output.

The Connecticut State forester has purchased a tract of one thousand acres of barren land near the center of the State to be used as a State park and an object lesson in scientific forestry. This is the beginning of a system of similar parks to be laid out in various parts of the State.

The twenty-eighth annual meeting of the American Bankers' Association was held in New Orleans last week. More than a thousand were in attendance. The matters discussed made it one of the most interesting and important meetings in the history of the organization.

The total value of the exports from the United States during the first nine months of the present year amounted to $311,302,441. For the corresponding nine months in 1898 the valuation was $99,840,074 and in 1892 $111,294,024.

The shipments of ore from the mines of the Menominee range in Michigan for the year ending October 1 amounted to 2,950,000 tons. The port shipments from Menominee for the year will amount to about 5,250,000 tons gross.

A train of twenty cars carrying $75,000 worth of wool, the clip of one ranch, was en route last week from Idaho to Boston. It is said to be the largest single consignment of wool ever sent East.

The New London (Conn.) Street Railway Company has shared with its employees the profits of the year, by giving to old employees $10 and the new ones $5 in recognition of their faithful service.

At the Penobscot boom this season, which has just closed, 144,000,000 feet of logs were handled.

**General.**

The gold production of the world for the calendar year 1901 is estimated by the director of the mint on full returns at $263,374,700. Of this amount the United States produced $78,666,700; Mexico, $10,284,800; Canada, $24,128,500; Africa, $9,089,500; Australia, $76,880,200; Russia, $22,850,000; the balance was contributed by various countries in small amounts. The director estimates the total industrial consumption at eighty million dollars' worth, the balance has gone into coin or its equivalent.

An American is said to have offered $300,000 for a painting by Rubens in the Church of St. Martin at Alost, Belgium. Leading Belgian artists have petitioned the government to secure this Rubens for the Brussels Museum and thus prevent it from going out of the country.

Some artificial rubies submitted to the French Academy of Sciences for examination have been pronounced by its members superb in color, and in purity and brilliancy equal to the genuine stones. The process of production, which is partly by means of the blow pipe, is inexpensive.

The new Chamber of Commerce building, New York, was dedicated last week and the one hundred and fiftieth anniversary of the Chamber was celebrated. President Roosevelt and Ex-President Cleveland were present and spoke briefly.

An international festival of music will be held in Berlin, October 1–7, 1903, in connection with the dedication of the Richard Wagner monument. One day will be devoted to English and American music.

A fund of one hundred thousand dollars has been subscribed for the endowment of a new chair at the University of Pennsylvania to be known as the "Clark Professorship of Assyriology."

The corn crop for the season, which in quality is much below the normal, is estimated at over two and one-half billion bushels.

The value of the natural gas consumed in the United States last year was $27,007,500. The wells active numbered 10,297.

Mt. Holyoke College, November 7, celebrated the sixty-fifth anniversary of its founding.

## Thanksgiving Day Service.

A THANKSGIVING DAY service will be held in the Mother Church Thursday, November 27, 1902, at 10.30 A.M. All seats will be free for that service. The public are cordially invited.

## Selected Articles.

### Christian Science and Prayer.

INASMUCH as the Scriptures teach that prayer is the Christian's means of obtaining divine aid, no question can be of more importance surely, than this: What is prayer? If there is such a thing as legitimate, intelligent, and profitable prayer, surely Christians desire it. In all the affairs of life the efficacy of a method or means is determined by its result. Jesus said, "A tree is known by its fruits." A careful study of the Scriptures must be convincing to all students that the Bible advocates prayer as a means of results. If, therefore, results are not forthcoming in the life of professing Christians, we are compelled to admit that their prayers are wanting. We are taught, "God is a very present help in trouble." "The prayer of faith shall save the sick, . . . . and if he have committed sins, they shall be forgiven him." If our prayers are not answered shall we conclude that resultful prayer is a thing of the past? or shall we stick to our text that intelligent, God-inspired prayer is always in place and always efficacious and therefore the want of results from our petitions is because they are not in keeping with God's way? One declares, "I have prayed for years to be healed, but am still sick; therefore I have lost all faith in prayer." We should not excuse our want of results on the ground that prayer is not efficacious, but should awaken to the fact that there is something wrong with the kind of prayer which we are using.

Christian Scientists seldom pray for things and enterprises since they do not consider their judgment sufficiently mature to determine what special material things are proper for mankind. In time of distress they recognize a want, but the material appearance is only the external manifestation of a far more serious lack. For example, we have been without coal. The coal traffic has been very much obstructed. The price of coal has been exorbitant, and a general calamity has existed because of the coal strike. The coal strike was perfectly natural and unavoidable under the existing circumstances. Therefore, to pray for an end to the strike and seek to bring it about without removing the evils that produce it cannot remedy the situation except temporarily. A lack of true brotherhood; the existence of greed, selfishness, stubbornness, strife, contention, intemperance, ignorance are among the evils which make possible such a calamity as this country has just witnessed. In our immature judgment we might believe the coal strike to be a mistake and therefore pray for its end, while superior intelligence and more mature judgment might indicate to us that a coal strike, under existing circumstances, was an inevitable means to a proper end. If under such circumstances we should beseech divine Intelligence to end the strike, we should surely "ask unwisely" and "receive not." That there was evil at the bottom of the strike is a point which we can all judge righteously, and we can be absolutely certain that it is always right to pray for the end of evil and the establishment of good. Recognizing this, the Christian Scientist is required to pray daily, "Thy kingdom come. Let the reign of Truth and Love be established in me, rule me, and rule out of me all sin." He is also required to pray that this reign of truth and love as taught in Christian Science may "enrich the affections of all mankind and govern them." In our limited understanding of our needs we might estimate that a house, or a farm, or a large bank account is an essential, and pray therefor, when in fact, in the sight of infinite Intelligence, it might be better for us to lose even the little that we have. On the other hand, we can all rest assured that it is proper and right in the sight of God to have more goodness, meekness, faith, more charity and love than we now have. Solomon said, "With all thy getting, get understanding," and he prayed for wisdom. A business man might feel the need of carrying out a certain undertaking. It might seem perfectly right and proper to him, even a necessity, and yet in the sight of wisdom, it might be the basis of a calamity. What he needs, therefore, is sufficient wisdom to determine the right course and sufficient moral strength to carry it out. His prayer, therefore, should be a petition for wisdom and strong Christian character. God is Spirit and Spirit has only spiritual things to give. If we would invoke the divine aid, then, we must pray for spiritual things. If we are sufficiently endowed with wisdom, goodness, meekness, charity, intelligence, we have all that we need to insure legitimate and real success. If we pray for spiritual things, pray to be better and wiser, we shall never pray amiss and shall thereby comply with the Master's injunction, "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you."

### A Plea for Fair Judgment.

To the Editor.

Whoever has been privileged to heal the sick by Christian Science methods, or is familiar with the blessed peace and influence of such methods, must be amazed at their comparison to the practices of negro savages in equatorial Africa. For a proper counterpart one must turn to the pages of the Old and New Testament, and to the writings of the Christian Fathers.

The principal difficulty experienced by those who are not students of Christian Science in understanding its *modus operandi* proceeds from a misunderstanding of the word "mind," as used in Christian Science. When Christian Scientists speak of disease as a "claim" or "error" of mind, the general human consciousness is meant by that term. Disease does, indeed, seem real to general human consciousness, which Mrs. Eddy has denominated as mortal mind,

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

but disease is not an entity, enjoying power and permanence in the divine Mind, or as the Scriptures define it, in that mind "which was also in Christ Jesus." We have a record of St. Paul's experience, who said that "the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

Christian Scientists welcome any public inquiry into their faith, for a day of great rejoicing is in store for the sick as well as the sinful and sorrowing, when the beneficent results it has accomplished and is accomplishing, day by day, are as well known to the public at large as they are to those who have enjoyed their benefits.

In judging of the work accomplished by Christian Science, the public should remember that the Christian Science denomination is recruited, in a great measure, from persons who were once what an insurance company would call rejected risks; *i.e.*, persons who were sick and despondent, not a few among them having been pronounced incurable.

Mrs. Eddy has explained the power which has accomplished such noteworthy results in the following words:—

"The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love. Regardless of what another may say or think on this subject, I speak from experience" (Science and Health, p. 1).

Justice demands that a system should be judged by its successes and not by the occasional failures of its exponents.

W. D. McCRACKAN.
In *New York Evening Post.*

## Beginners in Christian Science.

To the Editor.

Our Master said, "Blessed are the pure in heart: for they shall see God." That is, blessed are the pure in thought, or consciousness, for they shall discern the Principle of goodness. The same fountain cannot send forth both sweet and bitter waters, so it would be impossible for one not having a high spiritual nature and character to make any progress along the lines of religious discovery and demonstration.

Christian Scientists are glad to note that the life of their Leader from earliest childhood has been singularly pure, devout, and loving, with an unquenchable longing to know and do God's will and a desire to help humanity.

Dr. Stevens, after speaking of protracted demonstrations and failures in treating by Scientists, says: "Either this is not the Science by which Christ healed, or these Scientists have not mastered it."

No one on earth to-day claims to be more than a beginner in Christian Science, either in understanding or demonstration. Mrs. Eddy, its Discoverer and Founder, says in the preface of her Science and Health: "To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ." And again, in the same book: "Whosoever reaches the understanding of Christian Science, in its higher significations, will perform the sudden cures of which it is capable; but this can be done only by taking up the cross and following Christ in the daily life."

So the reverend gentleman will see that the reason Christian Scientists of to-day do not accomplish the cures as quickly as did Jesus and and his disciples, is, they have not reached the same spiritual altitude; but wonderful cures have been done in this generation by professed demonstrators of this Science, and, I may add, in proportion to their real Christliness, understanding, and purity of motives, their ability as healers, or avenues through which the healing is done, will increase. We do maintain Christian Science is a demonstrable Science, and its followers are proving it to be so every day. I have seen nearly every so-called fatal disease cured by it and many in a few days' treatment.

Christian Scientists only claim to be Christian learners, humbly endeavoring to put into practice the wise teachings of their Master, and Dr. Stevens has the same privilege, which he certainly is not using by spending his time in condemning those who are trying to do so. Let him search his Bible again carefully, after carefully reading Science and Health, and he will find, to his surprise, it is all contained therein.

EDWARD E. NORWOOD of Washington, D. C.

## The Better Part.

To the Editor.

I was much interested in your editorial of last week, "The Better Part," in which was brought out the difference between the persons living in the material sense of things, controlled only by the desires and aspirations of this material life; and those striving for an understanding of the spiritual life with its absolute realities.

That this last realization must came to us one and all, sooner or later, is certain; but unless we begin our problem of life as spiritual on this plane we shall be ill-prepared for its later unfoldment.

The continued restlessness of tired humanity, seeking and striving for a sense of rest and peace which seems so far away, shows but too plainly how the deception of mortal existence, its pleasures and beliefs, but pall on the senses. To those whose dear ones have passed on, the question is ever recurring, "What is spiritual life?"

It is to such that Christian Science, lived and applied in its purity, unfolds the truth that Life is one and eternal. To them the words of Jesus "Be ye therefore perfect, even as your Father which is in heaven is perfect," means a growth from the material to the spiritual; and while the change we are looking for may not be fully realized here, we must look and work in that direction if we would advance.

We must learn that as we put off the desires of the flesh in their myriad forms, they are as quickly replaced by spiritual light and joys which, step by step, lift us higher in the understanding of the truly real.

Mrs. Eddy says in Science and Health, page 485, "Emerge gently from matter into Spirit. Think not to thwart the spiritual ultimate of all things; but come naturally into Spirit, through better health and morals, and as the result of spiritual growth. Not death, but the understanding of Life, makes man immortal."

With all due respect for the religious views of others (for a Christian Scientist, if living up to his teaching, does not interfere with others, nor is he intolerant of them. Christian Science is clear cut in its position and is entirely separate from mental science, faith cure, theosophy, etc. I say this that one may not be confused with the other.

Christian Science teaches, first, that God is one God, omnipotent, omnipresent, and omniscient; that He is the only Creator, and that He is Spirit. Second, that God's creations, including man and the universe, are spiritual and not material. Third, that man, created in the image and likeness of God, reflects and partakes of the Life, Good, which is God; but that he is not God nor ever will be. He is the creature or spiritual idea that reflects Him in every particular.

On page 518 of Science and Health, Mrs. Eddy says: "Man, as the image of his Maker, reflects the divine might. He is the master of earth, not made to till the soil. His birthright is dominion, not subjection. He is lord of beast, fowls, reptile, and fish,—himself subordinate alone to his Maker."

On this point of subjection, Paul spoke very plainly: "And when all things shall be subdued unto him, then shall

Digitized by Google

the Son also himself be subject unto Him that put all things under him, that God may be all in all."

Hence we see man not as God, nor part of Him, neither independent of Him, but rather a perfect reflection, whose individuality as His child may never be lost, nor his life curtailed, any more than God could be blotted out.

CHARLES K. SKINNER.

In *Charlotte* (Mich.) *Leader*.

## The Beatitude of Purity.

A LITTLE child was asked which of the beatitudes she would chose, if she could have but one of them. After reading them over thoughtfully she said she would choose the beatitude of a pure heart, for if she had this one she would have all the others with it.

There is an Old Testament beatitude which throws light upon this word of Christ's. It reads, "Blessed is he whose transgression is forgiven." We would have filled in the sentence differently, "Blessed is he who has never sinned;" but the way it is in the Bible is far better Our way of writing it would have shut out all the world; God's way leaves twelve pearl gates which are never shut by day nor by night, and there is no one so guilty that he may not come within the circle of blessing.

Then we remember that there is a word in an old book which runs thus: "Wash you, make you clean. . . . Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool." There is a New Testament word also which answers as antiphonal to this: "If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness." "The blood of Jesus Christ his Son cleanseth us from all sin."

It is very clear, therefore, that this beatitude, lofty and heavenly as it is, is not impossible of attainment and does not exclude any sinner of the human family. The pure in heart are sinners who have been forgiven and cleansed.

Yet it is no ordinary holiness which is described in this beatitude. All the beatitudes are for lofty spiritual attainments, attainments which are not easily reached. It costs to be good and to wear the honors of real sainthood. Not all Christians are pure in heart. Too many live on a low plane. They are borderland Christians. Like the Israelites settling in their promised land, they do not drive out all their enemies. They tolerate some of them. They allow favorite sins to share life with them.

Christians with a pure heart have exterminated every Canaanite. They have made an entire consecration of their life to God. This means that they have given Christ full possession.

"They shall see God." This is a wonderful promise. We know that in glory the redeemed shall see God. But the promise refers to this life as well as to the beatific vision in heaven. The pure in heart shall see God here. In the olden days holy men sometimes were granted wonderful visions of God. Theophanies, we call these exceptional manifestations. The most marvelous of all revealings of God to men was when Jesus Christ was on the earth. "He that hath seen me hath seen the Father," he said when one of his disciples implored him to show them the Father.

Jesus has now passed out of mortal sight, and yet we have his promise to be with us always. He who sees Christ now sees the Father revealed in him. We see Christ by faith,—the pure in heart see him. The clouds and mists and dust that hide the blue sky, the shining sun, and the glory of the stars all are earthborn. They are never part of the sky itself. The heavens breed nothing that hides or dims their beauty. In like manner, whatever hides God's face from any life is born of the life itself. Only sinful thoughts and feelings obscure the heavenly vision. But when the heart is clean and pure, with no mists and clouds of sin arising, we can look unhindered into God's very face.

It is possible to live in close fellowship with God, conscious evermore of His approving smile. The story of Brother Lawrence, the simple-minded cook of a Carmelite monastery, illustrates what is attainable in the way of seeing God in this present life. The phrase he used continually to describe his theory of Christian living was "the practice of the presence of God." He said that for many years he had never lost the sense of the presence and companionship of Christ, and that he was as conscious of it while serving in the noise and clutter of his kitchen as when engaged in the holiest exercises of devotion. What he learned to do we may learn to do. The pure in heart shall see God, and the vision need not be interrupted by any task or duty, by any sorrow or trial.

To enter the beautiful gate of this beatitude we must seek the purifying of our heart and the cleansing of our life. Without Christ all such striving is in vain.

Extract from an article by J. R. Miller, D.D., in *Record of Christian Work*.

## Our Winter Sky.

THE constellations whose outlines are associated with winter begin to appear again in the eastern sky. At nine o'clock in the evening, during the middle of November, Cassiopeia is almost overhead, directly above the Pole star. It can be recognized as a zigzag line of fairly bright stars.

The next group to the eastward, along the Milky Way, is Perseus. The remarkable variable star Algol is the southernmost of its two conspicuous stars, and lies between Cassiopeia and the Pleiades, somewhat nearer the latter group. For most of the time this star is of nearly the second magnitude, but at intervals of about three days, it runs down to the fourth magnitude, remaining at this brightness for about twenty minutes, while the rise and fall in brightness occupy about four hours each.

The variability of this star is believed to be due to the presence of a dark companion, which partially eclipses it at every revolution.

Below Perseus is Auriga, marked by an irregular pentagon of stars, one of which, Capella, is the brightest one at present visible anywhere in the sky. Below this again is Gemini, whose twin stars Castor and Pollux are just rising. To the right of Auriga is Taurus. The group of the Pleiades, with the ruddy Aldebaran lower down, make this an easy constellation to identify. The little V-shaped group of which Aldebaran is one, is called the Hyades. The next star to Aldebaran is an interesting wide double, just separable with the naked eye.

Below Taurus is the incomparable Orion, the most brilliant constellation in all the heavens. With the two bright stars in his shoulder and knee, and the line of his belt between, he is so familiar that he hardly needs description.

To the left of Perseus, and southeast of the zenith, is the little triangle that marks the head of Aries. The faintest of the three stars is a very pretty double, requiring a small telescope to bring it out, which has an added interest from the fact that it was the first double star noticed by astronomers. It was discovered by Hooke in 1664. The large but inconspicuous constellations Eridanus, Cetus, and Pisces fill the southeastern sky.

The great square of Pegasus lies to the southwest of the zenith. A line of conspicuous stars extending from it toward Perseus marks the position of Andromeda. The nearest of these to Perseus—Gamma Andromedæ—is a very pretty double star, the larger component being reddish, while the smaller is green.

The conspicuous star low in the southwest is Fomal-

Digitized by Google

haut, in the constellation Pisces Austrinus. Aquarius lies above it, and Capricornus to the right. The fine cross of Cygnus, almost in the center of the Milky Way, is one of the most prominent of the western constellations. The star at the foot of the cross is another fine double which can be divided by a powerful field glass, while its contrasted colors show finely in a small telescope.

Lyra lies below Cygnus on the right, and Aquila on the left, each marked by a bright star.

The Great Dipper is close to the northern horizon and the Little Dipper swings to the left from the Pole star, encircled by the coils of the Dragon.

Venus is morning star until the 28th, when she passes through superior conjunction, and becomes an evening star once more.

Mars is morning star in Leo, rising about 1 A.M. on the 15th. He is nearly on the line joining Regulus and Spica, about one third of the way from the former toward the latter, and is fairly bright.

Jupiter is evening star in Capricornus, remaining visible till about ten o'clock.

Saturn is evening star in Sagittarius, and sets between eight and nine.—*Scientific American.*

## The Overcoming of Disadvantage.

THERE is often an advantage in what looks like the disadvantage of defeat and disappointment. When the great historian, Dr. Edward Augustus Freeman, was at the University of Oxford, he earnestly competed for the prize offered for an essay on the Norman Conquest of England. He failed of getting it. Long afterward he said: "Fortunately I failed to win the prize. Had I won it, I should have flattered myself I knew all about the subject. As it was, I went on and learned something about it." The issue of that further learning is his monumental "History of the Norman Conquest," his chief service as historian and the reason of his undiminishing fame. When one will take defeat and disappointment as a spur, immediately he changes them into weal. You remember those brave lines of Robert Browning, of one who

> Never turned his back, but marched breast onward;
> Never dreamed though right were worsted, wrong would conquer;
> Held—we fall to rise, are baffled to fight better,
> Sleep to wake.

Let me tell you how you can surely bring to beauteous bloom the dry and ugly root of what you think your disadvantage. Thus you shall do it—by doing the noblest thing you can amid your disadvantage; not the thing you would like to do, but the thing you can do. Though the early Christians, being scattered, could not do the many things their hearts yearned toward doing, they could tell, being thus scattered, the good news of God.

They were making disadvantage the minister to character. No coddled saints were they, but stalwart ones, whom loss and persecution caused to become but the more useful. And character is the goal to which God will push us, even over rough roads, if He must. DR. WAYLAND HOYT.

In the *Examiner.*

Nations, like individuals, must be free before they can be responsible for their actions and, by kindling in the hearts of all men the sanctuary-lamp of conscience, God has imposed upon each the duty of walking by its light; and liberty, which gives us the power of choosing between good and evil, is "not the right to choose evil, but the right of choice between the various paths that lead to good."

MAZZINI.

## The Lectures.

### At Berlin, Ont.

Seldom has the Berlin Opera House been crowded by a larger or more intelligent audience than that which assembled on Thursday evening [October 23] to listen to a lecture on Christian Science by Judge William G. Ewing of Chicago. The lecture was followed with the closest attention throughout.

Mr. E. P. Clement, K. C., acted as chairman and briefly introduced the speaker.

### At Kankakee, Ill.

A large and intensely interested audience listened to the lecture delivered at Huling Hall last evening [October 28] by Judge S. J. Hanna, on the subject, "Christian Science Personally and Impersonally Considered." The lecturer was introduced by Rev. W. R. Andereck, Pastor of the First Baptist Church, who briefly and fittingly referred to the advice of Gamaliel as applicable to all new religious movements.—*The Kankakee Gazette.*

### At Hamilton, Ont.

Hon. William G. Ewing of Chicago, Ill., addressed a good-sized audience in the Oak Hall Building last evening [October 20]. It was a mixed audience, and many prominent workers in the local orthodox churches were present.

Mr. J. V. Teetzel, K. C., was chairman, and in introducing the lecturer, thanked the local Christian Scientists for the honor they had done him in asking him to preside at the meeting, for he felt it to be an honor to be present at a meeting of this kind, which was of an educational value.

*Exchange.*

### At Ottumwa, Ia.

Carol Norton of New York lectured at the Grand Opera House last night [October 17], on Christian Science as applied Christianity. He was introduced by J. G. Hutchison.—*Ottumwa Courier.*

The introductory remarks of Mr. Hutchison were as follows:—

When our Pilgrim Fathers went forth from their native land to seek an asylum of liberty where they might worship God according to the dictates of their own consciences, in 1620, a new nation was born, and a brighter dawn of civilization began. Down to that time it was difficult to find an abode for such a glorious privilege anywhere in Europe, or even in England. This brave little band did, for a short time, find such an abiding-place in Holland, but soon, by their courage and holy zeal, they found their way in the Mayflower, through the storms and breakers of the almost unknown mighty deep, till they landed on the historic Plymouth Rock. From that landing began the establishment of the principle of religious liberty. It is one of the key-stones of our federal arch; it is one of the foundation-stones of our republic; so, since then, and to-day the great United States—that nation which is destined to lead the world in Christian civilization—has embodied in its fundamental law that no restriction or interference will be tolerated in the right of man to worship God as his conscience shall dictate.

We differ in our religious conceptions, or construction, of God's word, but any society or organization which has for its foundation belief in the teachings of our Saviour, Christ, cannot be far wrong. The church of our God is secure in the faith and love of those who constitute its membership; certainly, therefore, the Christian Science Church rests securely anchored in God's perpetual love. It is pre-eminently a church of the strongest faith, love, charity, and help for each other among its membership.

Digitized by Google

To-night, by the request of a friend of First Church of Christ, Scientist, in Ottumwa, I have a very pleasant duty to perform. We shall have the delightful opportunity to hear the doctrines of this church expounded eloquently and logically by one of its adherents.

We cordially welcome him to an Ottumwa audience and I feel sure we shall be instructed and edified mentally and spiritually. Therefore, ladies and gentlemen, I take great pleasure in introducing to you to-night Mr. Carol Norton of New York.

---

### At Concord, N. H.

The lecture on "Christian Science and its Discoverer," delivered last evening [November 13] in Phenix Hall by the Rev. Irving C. Tomlinson, C.S.B., First Reader of First Church of Christ, Scientist, in Concord, and member of the Board of Lectureship of the Mother Church in Boston, drew a large and thoroughly representative audience which filled the hall completely. In addition to the very large contingent of Concord people present, there were visiting delegations from Manchester, Nashua, Tilton, Franklin, Laconia, and other New Hampshire communities, as well as from Boston, Providence, Roxbury, Jamaica Plain, and other points beyond the state. A special train was run from Boston to accommodate the party from that city.

The presiding officer was the Hon. Henry M. Baker of Bow, former member of Congress from the second New Hampshire district, and a cousin of the Rev. Mary Baker Eddy, Discoverer and Founder of Christian Science. In presenting the speaker, General Baker said:—

*Ladies and Gentlemen:*—Before presenting the lecturer of the evening permit me to offer a few suggestions derived from observation and association with Christian Scientists.

I find they are in earnest and enthusiastic; that in general they entertain no doubt of the truth and wisdom of their doctrine and practice; that they are generally upright, honest, true men and women, good citizens, excellent neighbors, kind-hearted, generous and faithful, living lives equal to the best in the community; that they ordinarily mind their own business and do not insist that others shall conform to their faith or practices, but are willing each one shall enjoy the same freedom of thought and conduct which they demand for themselves; they try to make the Golden Rule the living principle of their lives; when persecuted they do not retaliate, when reviled they do not revile again; they believe that Truth is mighty and will prevail and, doing what they can, trust the final outcome to God, whose right it is to rule and to determine the time for the accomplishment of His purposes; their faith is so strong and steadfast that, despite the warning and entreaty of the doctors and some of the clergy, they entrust their lives and the lives of those most dear to them to the professional treatment, without medicine, of their own practitioners. In most cases they are successful, as is evidenced by the fact that when any one fails to regain health under their treatment that result is emblazoned before the public with various statements indicating that it is improper, possibly criminal, to enter or to depart from this world without the assistance of those who so frequently are in attendance upon both occasions. Those who become excited over an occasional failure to cure by the Christian Scientists, seem to forget that not all the patients of the most learned and skilful physicians and surgeons recover, and that other well-known fact that patients have recovered under Christian Science treatment who had been pronounced incurable by others. Would it not be well for us to be just before we become fanatic? Then possibly we should not get excited at all.

That the mind should dominate the body few, if any, will deny. This truth has had its exponents through the ages.

Petronius Arbiter wrote, "*Medicus nihil aliud est quam animi consolatio.*" A physician is nothing but a consoler of the mind. Seneca, with his practical good sense, said, "*Pars sanitatis velle sanari fuit.*" The wish to be cured is a part of the cure.

All Christian Scientists believe in this, and they follow the practice and teaching of Jesus of Nazareth when they cure disease without medicine. They recognize Rev. Mary Baker Eddy as his disciple and honor her for her teachings and pure life. One of the honored representatives of the Scientist faith,—an accredited lecturer of the denomination,—is present, and I take pleasure in presenting to you Rev. Irving C. Tomlinson of this city, whose acquaintance so many of you enjoy.—*Concord Monitor.*

---

### At Lancaster, N. H

"Christian Science and its Discoverer," was the subject of a lecture delivered by Rev. Irving C. Tomlinson, C.S.B., of Concord, at the Opera House, Tuesday evening, October 14. The speaker was introduced by Col. Henry O. Kent. who spoke as follows:—

I have been requested by excellent citizens whose opinions I respect and whom I am very willing to oblige, to present to the audience the speaker of the evening. I am not aware of the specific nature of his address, but assume that it comprehends the purposes, beliefs, and practice of those associated as believers in Christian Science. With this subject, which has to a marked degree attracted public attention, I am largely unfamiliar, thus I am neither its advocate nor its defender. It represents a phase of thought of undoubted interest.

If the theories and beliefs here presented are good and true, their discussion can do no harm; if they are erroneous and pernicious they will not be permitted to delude or endure. In either case the test is discussion and publicity.

The gentleman who is to address you has deserved intellectual repute and high position among his associates. I bespeak for him courteous and careful attention, and present, therefore, Rev. Irving C. Tomlinson.

*The Coos County Democrat.*

---

### At Broken Bow, Neb.

A lecture was delivered by Judge William G. Ewing Sunday afternoon [September 21] on "Christian Science: Physician and Redeemer," through the invitation of the Christian Science organization of Westerville, Neb., and under the auspices of the Scientists of Custer County, Neb.

Hon. J. R. Dean, formerly prosecuting attorney of the county and one of the leading lawyers of this city, introduced the speaker in part as follows:—

It is perhaps unexpected to some in this audience that one born into the communion of the Presbyterian Church should be selected to introduce the speaker upon the subject of Christian Science. But the thoughts of men are widening and the race is tolerant where once it was narrow and bigoted. My friends, we must learn the lesson of toleration in its best sense if we have not already done so, and having learned, must practise it toward our fellow-men.

I see before me members of many Christian denominations, all entertaining different views of Christianity, but perhaps not as to any of the essentials. This should teach us to exercise the charity that recognizes God as Father and all men as brethren.

My friends, whatever may be our views, whatever may be our religious beliefs, I am sure we shall all listen in a friendly frame of mind to the address of the distinguished speaker.—*Custer County Chief.*

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Right Practice.

THE greatest wisdom is shown in foreseeing and forestalling evil, and thus avoiding threatened dangers; but the consciousness that does this is entirely distinct from the mental condition which is forever fearful for the future, forever crossing bridges that have not been built.

The wisdom which prevents the manifestation of evil is the divine reflection, and is seen in the clear understanding which uncovers the works of the evil one, only to destroy them; which sees the powerlessness of evil; which knows that the belief in the reality of evil is all there is to it, and that the total destruction of this present belief is the sure safeguard against evil manifestations in the future. Wisdom, however, is not expressed in the thought that tremblingly asks What can I do if this comes to pass? or, What shall I do if that should happen? Such inquiries pre-suppose the possibility and even the probability of evil manifestations, and thereby invite them. To indulge in speculation of this nature about ourselves, or to put the burden of such thought upon others, is a type of malpractice. M.

### A Pertinent Question.

"CANST thou not minister to a mind diseased?"

As the world wakes up to the fact that there is neither cause nor effect in matter, and learns that the false claim of disease is both born and nourished in the domain of mortal mind, the trite old Shakespearean question is rejuvenated with a present interest and becomes the vital question propounded to all methods of healing. "Canst thou not minister to a mind diseased?" dis-eased by sorrow, wrung by the anguish of discouragement, despondency, gloom? Here is the root of malady. What hast thou to administer? A mind dis-eased by sin,—jealousy, dishonesty, debauchery, here is the source of our ailment. Wilt thou minister to darkened consciousness with nostrums? A mind dis-eased by poverty that opens the door to the recesses of crime. Canst thou minister to it? A mind dis-eased by discordant family relations, dishonored friendships, disloyalty; these reveal the cause of the pallid face and faltering footstep. Canst thou minister to it? A mind dis-eased by greed, by ambition, by pride, by selfishness,—sins that find expression in physical discord. Who can minister to this? They, only, who by patient following of the Master and by a clear understanding of the revelation of Christian Science have learned that false mortal mentality, the source of all evil, is not Mind; they who can demonstrate that there is one Mind, and that neither Mind nor its reflection can be diseased, and who thus destroy both the illusion of a "mind diseased" and its consequent physical inharmony. They can thus minister who have found that the "sweet oblivious antidote" for all discord is Love. 'Tis no mere doctor, but the Christ disciple who knows and can prove that only Love will

Pluck from the memory a rooted sorrow;
Raze out the written trouble of the brain,
Cleanse the stuffed bosom of that perilous stuff
Which weighs upon the heart.

Through this Love-cleansing alone is harmony restored, both mental and physical. S.

### The Theory of Partial Sonship.

A PROMINENT religious weekly has recently been arguing for the essential brotherhood of man, and in a citation of Scripture evidence it says:—

"In the opening chapters of Genesis it is declared that God made man in his own image and breathed into him the breath of life. . . . Surely if this breathing signifies anything, . . . it is that man is like God in some fundamental and essential elements of his nature."

A legitimate inference from the phrase, "in some elements of his nature," would be that in other elements man is unlike God, and that this inference is authorized and intended is made clear by this later statement in the same article, "that man is an animal is attested by the study of comparative physiology."

Christian Science is at no point more clearly differentiated from traditional thought than in its insistence that man is not a compound of spirit and matter, good and evil, divinity and animality, but wholly spiritual, and God-like in every element of his nature. Christian Science maintains that everything in our concept of man which is unlike God, is not real, true, or legitimate; that it has no authorization or recognition in God's plans, and is not sustained by Him; and it teaches that regeneration, the new birth, is the awakening to this consciousness of the true and only manhood.

If man is constituted of a divine element plus something else, then the new birth would result in an imperfect man, since it would annul the plus element; but if, as Paul says, we are "complete in Him which is the head of all principalities and powers," regeneration means man's escape from the material sense which is not man, and from which we are urged to flee, as that which is neither essential nor serviceable to man.

Mortal sense, with all that pertains to it, is thus identified with the carnal mind which is not good, nor of Good, but altogether evil, the belief of a lie and the outcome thereof. "Anybody who is able to perceive the incongruity between God's ideal and poor humanity, ought to be able to discern the distinction (made by Christian Science) between God's ideal, made in His image, and the sinning race of Adam" (Science and Health, p. 345).

The first sin against God is the denial of His all-inclusive oneness and supremacy, and the first sin against man is the denial of his entire Godlikeness in nature. So long as we predicate evil of man's nature, so long do we hinder his escape from evil's false claim of presence and power. To attribute a composite nature to man, follows naturally, however, from this writer's association in thought, of ideas which are gathered from two entirely incongruous statements respecting man's creation. The first, from Genesis, 1 : 26, regards man as wholly spiritual, and gives the history of his appearance without any reference whatever to matter. The second, from Genesis, 2 : 7, represents man to have been made from matter (dust), to which the breath of God was added, thus effecting, by divine fiat, a union of wholly unlike elements. The distinct separateness and inherent contradiction of these two records, the harmony of the one and disharmony of the other with a spiritual concept of God and His manifestation, is quite generally accepted by Biblical exegetes, and it follows that indifference to this basic and necessary discrimination must lead to that forced association of opposing ideas in the

Digitized by Google

concept of man, which Christian Science consistently and unhesitatingly repudiates.

It is true that the history of humanity presents the warring phenomena which are in accord with this assumption of man's conglomerate nature, and it is equally true that these phenomena will continue so long as the assumption is maintained. The apprehension of the integrity of his spiritual nature, and the persistent assertion of that integrity, is man's first step toward freedom, and when we no longer recognize the legitimacy of the jumble of this false sense of man's nature, and know him as God knows him, that is, as he is and not as he seems, then we may hope to hasten the Prodigal's return.

Paul, speaking to the acutely disputatious heathen of the Agora at Athens, entirely ignored their seeming humanity, and declared that they were the offspring of God, and in thus remanding the false sense of being to its native nothingness, he expressed that right idea and habit of thought respecting man's nature for which Christian Science stands.

W.

## From our Contributors.

### Sin Healing.

FLORENCE W. FLOURNOY.

ONE of the greatest needs of all who are striving to be Christian Scientists, is a constant, far-reaching protection from the suggestions of mortal mind. Our worthiness to bear the name Christian Scientist is not so much revealed by our mental grasp of the Word, our willing sacrifices, or our healing work, as by the mental attitude and moral tone of our daily lives.

Corrected lives are the strongest missionaries for the truth of our religion. We must daily know that the real mission of Christian Science is to destroy the sinful beliefs of mankind. We must remember that healing of error—sin—requires the uncovering and facing of our own mental operations, and the ability to stand and meet with understanding and love, the revenge which sin endeavors to hurl upon its destroyer.

"It is the spiritual idea, the Holy Ghost or Christ, which enables you to demonstrate, with scientific certainty, the rule of healing" (Science and Health, p. 496), yet faith in God's power to heal will not cover needless discrepancies between our daily living, and the moral demand of our declarations of Truth. Let us empty ourselves of the world's standards daily, that we may rise to that holy consciousness that can penetrate and destroy the mask of evil, through its oneness with the Truth it utters.

### Humility.

H. T. G.

JAMES says, "The Lord resisteth the proud, but giveth grace to the humble." Meekness and humility go hand in hand. Jesus said, "Blessed are the poor in spirit, for theirs is the kingdom of heaven. Blessed are the meek, for they shall inherit the earth." As we strive to know God better, He reveals to us the folly of pride; the utter nonsense of boasting.

Should we be rash enough to indulge in this form of error, we shall soon find that we must prove that our boasting is not vain, else that other Scripture becomes applicable to us: "Pride goeth before destruction, and a haughty spirit before a fall."

We have examples of what constitutes true humility in the lives of Moses, and the Master. Among its prominent characteristics we find, fidelity, obedience, patience, justice, truthfulness, self-control, peace, constancy, firmness, moral courage; all these exercised in or toward the Infinite, the unseen, ever-present God, the Power outside of self; a complete surrender of the human will to the divine.

When we have thus learned to prove our implicit allegiance to His perfect will, and to lose ourselves in His love, we shall begin to realize how He "giveth grace [inspiration] to the humble."

### "Taking Heed."

JESSICA CLARK THOMAS.

"WHEREFORE let him that thinketh he standeth take heed lest he fall." This verse has always seemed to me to have been written for almost any one other than myself. While a member of one of the orthodox churches it seemed a warning to those outside the fold. After learning in Christian Science that we were all of one fold with one Shepherd who loved all equally well, I began immediately to look about for those to whom my little verse might apply. I had no intention whatever of being among the number, there was such a threatening air about it; but it did seem to fit so exactly the self-righteous that again all was serene, for surely I was humble and even timid, and had no false sense of pride whatever to fall from. I did not realize then that the very humility I was congratulating myself upon, was the cloak chosen by my pride and self-righteousness. My thought was so fixed upon the standing and falling that I overlooked the *taking heed*. I fully appreciated the danger for others, and only yesterday tried to make it clear to a dear one that he must be on the alert continually lest he be surprised by error, then I settled back comfortably, feeling that because I had won a battle the week before I could afford to rest. But error is always busy and caught me unguarded. After the dismal failure of yesterday I went this morning to my Bible for help and opened to the lines above quoted. All doubt as to whom or for whom they were written vanished, and with it the uncomfortable feeling, for the threatening air was gone. It was simply a Father's tender warning to his child, "Take heed;" and my thought turned gratefully and lovingly to the Leader who gave to us the secret of it all when she said, "I will listen for thy voice, lest my footsteps stray."

### Freedom without License.

R. M. W.

As we pass from a state of mortal mind to a state of spiritual understanding, as revealed in Christian Science, we come to a point where we would fain grasp the new, yet seem unwilling or unable to give up entirely the old, and few of us pass this point at a bound.

In regard to medicine and the laws of hygiene, a complete renunciation of former theories is less difficult, since through the understanding of Christian Science we have proved that sickness is not a necessity, and have found health, the goal toward which these once accepted theories assumed to point the way. To be sure there may come suggestions now and then that medicine or surgery might avail something when the desired result seems not to be reached promptly, but these suggestions are not in themselves pleasant, and the thought of drugs, or the knife, is never an alluring one. Many people, however, first comprehend Christian Science from the standpoint of healing, and because old methods of healing become unsatisfactory and are therefore fully renounced, they sometimes are led to the mistake of believing that there must be a renunciation of all the things that pertain to the old life. This erroneous opinion can hardly be entertained by any who really understand Christian Science or who know in the least what Jesus meant, when he said, "I am not come to destroy, but to fulfil." Whereas it is not difficult for us to give up something that had no inherent attraction, as for

Digitized by Google

instance medicine, the transition from the so-called pleasures of sense seems a more serious one to make. An analysis of these pleasures, shows them to be often but a hollow mockery of real enjoyment. Often they spring from a restless desire for constant amusement and excitement, and from social emulation, which can yield no satisfaction, but only a wearisome craving for something more. It is only the renunciation of our false sense of pleasure that we needs must make. All that is good, pure, and uplifting in life is ours to keep, to respect, and to enjoy. Each step forward implies simply a clearer discrimination between the true and the false. All that we have known of truth is retained, there is no occasion for its sacrifice.

Truth demands obedience in all ways. For a parent to be a healer of disease and yet allow his child to be disobedient or wilful, means that he has a very limited conception of what obedience is. The old method of exacting obedience through fear of punishment, is certainly not in accord with the Christ-Truth. The motive that led to the wrong act is not changed because bodily suffering is inflicted. There is no truth involved in an obedience thus obtained, and a great many parents realize this fact. It sometimes happens, however, that in doing away with this erroneous method of securing obedience parents fail to give their children a higher basis from which to act, and so leave them in an unsettled state of mind which results unhappily. Obedience is the demand of Love, and unless the child learns to obey, he cannot become the perfect man or enter into the "measure of the stature of the fulness of Christ." We must not renounce obedience, because we have outgrown certain coercive theories for securing it. Christian Science means emancipation, not renunciation. It means freedom from old habits and modes of conduct because these become unsatisfactory. It does not mean the giving up of anything good or true.

Because we, as Christian Scientists, have begun to understand somewhat of that liberty which Jesus taught, we should be the better able to enjoy all the pure and simple experiences of our human life. This freedom, however, is characterized by chasteness, modesty, and refinement of thought and act, it gives no license for crudeness, indelicacy, or any wrong doing. We cannot disregard social conventionalities until society as a whole has outgrown their necessity.

## Love's Healing Presence.

L. S. S.

ALL who know anything of Christian Science know that it teaches at all times that Love is the governing Power, the only Power, the only Government, the only Principle of man and the universe; and though it is omnipotent and omnipresent,—so great that the human mind cannot comprehend it, yet it is so simple also that even the little child can recognize and does recognize its healing presence.

A few days ago I was in a car, when a woman with several small children entered. One tiny creature, a little over a year old I should think, was very restless and irritable, and evidently very sleepy. Her eyes were heavy and she acted as if she would like to sleep. The mother tried in the customary ways to quiet the child, and in consequence she herself grew exceedingly irritable, and was very vigorous in the means employed. Of course the child resisted this and screamed and cried. There was a very sweet looking woman sitting in the seat back of this little group, and the tired child was at that moment, with its eyes full of tears, leaning on the mother's shoulder. The lady leaned forward with the most ineffable sense of love. It seemed as if the car was filled with it. All she did was to push back the hair from the eyes and forehead of this weary and sorely troubled creature, and say tenderly, "What is the trouble, little one?" The child instantly stopped crying, and in half a minute the poor thing was sleeping peacefully. It brought a beautiful lesson to me of the gentleness, the strength, the omnipotence, and the simplicity of divine Love. Human love is the reflection of the Principle that Christian Science teaches.

In thinking this over there came to my memory another instance which occurred several years ago, and which at that time and to-day seems like an expression of the greatness of Love, as well as its simplicity. A woman came for help. She was a young woman, but as she came into the office she seemed to be bowed, almost decrepit; her face was lined, and she was suffering with sorrow and heaviness, as though there were nothing in the world but sickness. She asked for help, and when the treatment was given, it seemed as if the room were filled with the consciousness that Love would meet every human need, and that all we had to do was to know this fact. There was no argument used at all through the two weeks she came for help; but as she came in her need, this sunlight of Love came also, and the woman was healed through this sense of Love's presence alone. The affliction was a very serious one, but it was seen that Love can meet easily what to mortal sense is very dreadful, just as it can lend a Christ-like touch to one who is speaking to a child, and so dispel its small trouble.

## Seek First the Kingdom of God.

E. M. H.

How often, when desiring to satisfy some long-felt need, and knowing that it is right that it be satisfied, I have found that not until self-will is hushed and humility and honest sincerity for God's cause are uppermost in my heart, do I receive that which is essential. The need of the hour is often for something more than material things. We must ask to receive "this day our daily bread," and our famished affections will be fed. If we cannot hear for ourselves the voice of Truth, some one will give the helpful word that will feed and satisfy. When we no longer hold on to the idea of the reality of material things and conditions, and seek those things which are from above, we gain a better understanding of God, and of man's relation to Him, and a desire to be more pure, more worthy to be called a child of the kingdom.

"The earth is the Lord's, and the fulness thereof," and our Father-Mother God is always pouring out blessings which we are not aware of. If we were occupied in acknowledging the gifts, perhaps our needs would not be so many and our thoughts would be flowing in more grateful channels.

In Science and Health, p. 34, our Leader speaks of "the receptive thought," and to understand this attitude and maintain it, brings to man the inheritance of the only true riches.

There is a perennial nobleness, and even sacredness, in work. Were he never so benighted, forgetful of his high calling, there is always hope in a man that actually and earnestly works: in idleness alone is there perpetual despair. . . . The real desire to get work done will itself lead one more and more to Truth. . . . The latest Gospel in this world is, Know thy work and do it. . . . Know what thou canst work at, and work at it like a Hercules.

THOMAS CARLYLE.

The precepts of Jesus are the essential element of his religion. Regard these as your rule of life, and you build your house upon a rock. Live them out, indeed, and you have entered the kingdom of heaven—you even now enter it.—CHANNING.

# Among the Churches.

### New Quarters in Charleston, S. C.

First Church of Christ, Scientist, have moved from their old location to the ground floor of 145 Meeting Street, where they will welcome all visitors to their church services and to the reading room.

MRS. ELIZA F. LOCKWOOD, *Clerk.*

### Plans for new Church in Salem, Ore.

A contract has been let for the erection of a new church building in our city for Second Church of Christ, Scientist.

It is to be a modest building, in the classic style of architecture. It will have a seating capacity of two hundred in the main auditorium, and will have a spacious children's room, besides reading and consultation rooms.

*Salem* (Ore.) *Journal.*

### Progress in Manhattan, Kan.

It is with great pleasure we announce the opening by the 1st of November of a Christian Science Reading Room in Fielding's new building north of the post-office.

This is a practical demonstration of the power of Truth and Love over the seeming obstacles in the way. We are planning for our contribution to the Mother Church Building Fund, and would express our appreciation and gratitude to our beloved Leader, who has so wisely planned all the steps to advance the cause of Truth.

### Thanksgiving Service at London, Ont.

Thanksgiving Day was duly observed throughout the Dominion on Thursday, October 16, in conformity with the proclamation of the Governor General of Canada setting apart this day as a day of public thanksgiving.

Our service was almost identical with the services as published in the *Sentinel* of October 30, with the exception, however, of the Lesson-Sermon.

Numerous testimonies were given, rendering heartfelt gratitude to the Giver of all good for the revelation of Truth to this age.—A. A. CAMPBELL.

### Church Opening in Ann Arbor, Mich.

Opening services were held yesterday morning and evening [October 26] at First Church of Christ, Scientist, on South Division Street, in honor of the completion of their new auditorium.

In the morning the regular services were held, the usual order of exercises being followed, prefaced by a few words of welcome from Mrs. Boardman, the First Reader in the church. In the evening an address was delivered by Mrs. Annie M. Knott of Detroit, the subject being "Prayer."

The church has been remodeled and presents a very pleasant and attractive appearance inside.

*Washtenaw Times.*

### Building at Marshalltown, Ia.

First Church of Christ, Scientist, of Marshalltown has just let contracts for the erection of its new church home, the construction of which is to be begun at once on its property at the southeast corner of Fifth and Main Streets.

The congregation was first organized April 30, 1892, by one of Mrs. Eddy's students, with twenty charter members. Services have been held for the last two years in the Kirby Building, corner of Main Street and Second Avenue.

The new building is expected to be an artistic and worthy addition to the architecture of Marshalltown, as well as a dignified and restful home for the congregation for many years to come.

It will be completed in the spring and will be open and free to all. This congregation, though small, has the elements of growth within it, and it is hoped that the many who now oppose and scout the idea of Christian Science, through ignorance of what it really is, will, under the hospitable roof of the new church, learn enough about it to be willing to accord to Science the fair play which is not denied to other denominations.

*Marshalltown* (Ia.) *Herald.*

### A Word from Grand Forks, No. Dak.

It may be remembered that last year we decided to gather a fund to erect a suitable building for a public reading room on the North Dakota Chautauqua grounds. This year the project was accomplished. Before the opening of the assembly a story and a half cottage was built. The funds ($575) were furnished by the Christian Scientists throughout the state, assisted by a few contributions from points in Minnesota. The structure was greatly admired by all.

The number of visitors was large, and this demonstration virtually swept away the feeling of separation between the Scientists and others on the ground. All classes, including ministers, came and went freely, expressing much appreciation of the restful privileges of the cool, pleasant rooms.

A Christian Science lecture was, as usual, in the programme. This was ably given by Mrs. Annie M. Knott, under the auspices of First Church of Christ, Scientist, of Devil's Lake City. The people generally commented freely and favorably upon the lecture.

Much literature was distributed and a number of people newly interested in the Truth. We find this Chautauqua work one of the important branches of our endeavor.

MARTHA SUTTON THOMPSON.

### Progress in Florida.

A small company of earnest seekers has been worshiping here for the past eighteen months, and while some good had undoubtedly been done before and has been done since this series of meetings was inaugurated, all realize that the task of establishing true Christian Science in the community is still in its infancy, though it is over sixteen years since the first copy of Science and Health was brought here. Services were also held before and have been held since the present order of services was established, at various houses at intervals during the winter. It is the prayer of the little band here that divine Love will meet their need, in establishing a branch church. During the past year interest in Christian Science has so increased through the healing of numerous cases of so-called incurable disease, that at times there were more calls for treatment from this and adjacent settlements than one practitioner could do justice to.

Of the ten faithful attendants at the Sunday service, eight have taken up the study within two years, and several are doing their own demonstrating and helping relatives and friends.

Evil persistently predicted the cessation of the meetings and consequent impossibility of securing a lecture, and seemed very active for a time; but at this date, the full lecture fee is in the hands of the First Reader and a sufficient amount pledged to meet the other expenses—travel, advertising, etc.

More copies of Science and Health have been sold by the local practitioner since January, 1901, than during the eight previous years of her work in this Field. In January, 1901, there were but two subscribers to the *Quarterly* and *Sentinel*. To-day there are eight subscribers to the latter, and twelve persons, including a little girl of ten, are now

Digitized by Google

daily students of the Lesson-Sermon in this place and the adjoining village.

Our faith has often been severely tested, and twice it seemed necessary to suspend the service for a few weeks, but with the majority the love for the service, even without music, has never waned.

To any one waiting for a certain number before starting a church, the verse, Matthew, 18 : 19, may be cited as an incentive to begin. It has been proved again and again that some of the most successful Fields in the country today are those where but two, patient and healer, began, knowing that God would prosper their work.

C. D., De Funiak Springs, Fla.

### Church Organized in Longmont, Col.

For the past four years, Christian Science services have been held in Longmont, Col., at the home of one of our number, who has faithfully kept the little band together during the pioneer days, knowing that, "Where two or three are gathered together in my name, there am I in the midst of them." On September 27, 1902, a Christian Science Church was formally organized and chartered by the state. The following Sunday, service was held in the Knights of Pythias Hall, two members of the Mother Church having been elected Readers.

In loving unity, this church has been organized, no thought of who shall be greatest having entered this field; Love being our watchword, the Bible, and "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, our only teachers.

MRS. MILDRED MAY GILDMER, *Clerk.*

## The Mother Church Building Fund.

WE give the following additional reports, from Branch Churches, which for obvious reasons are made impersonal.

With the thought of possibly aiding the Building Committee in their labor, and noting the possibility of the needs being met before our demonstration may be completed, I have been instructed to inform you that our Sunday School has voted a contribution of one hundred dollars to the Building Fund of the Mother Church, to be paid within six months from October 1, 1902.

Following the leading of divine Love, we called a meeting of the church and congregation September 15, 1902, for the purpose of taking steps toward the raising of funds for the building of an auditorium for the Mother Church, at which time the following resolution was adopted:—

"Whereas: The following resolution was unanimously adopted at the annual meeting of the Mother Church, held in Boston, June 18, 1902, to wit: 'Recognizing the necessity for providing an auditorium for the Mother Church that will seat four or five thousand persons, and acting in behalf of ourselves and the Christian Scientists of the world, we agree to contribute any portion of $2,000,000, that may be necessary for this purpose,' and

"Whereas: This church desires to enter promptly and fully into the spirit of that resolution and meet its full share of the responsibility thereby created:

"Therefore: Be it resolved: that this church raise the sum of $50,000 or more for the purpose above mentioned:

"And be it further resolved: That the Board of Trustees be authorized to take such steps as in their judgment will bring the matter before the congregation and those interested in the cause of Christian Science, and provide an opportunity for subscribing to the fund.

"And, that said Board of Trustees be empowered to collect such subscriptions when due and forward the proceeds to the treasurer of the fund."

In accordance with said resolution the Trustees immediately took the matter in hand and sent subscription cards to each member.

## Testimonies of Healing.

Not long since it was necessary for me to have some dental work done, and as my teeth had always been termed over-sensitive, the old dread of pain came up to be destroyed, and it was destroyed through the small understanding of Christian Science which is my greatest possession.

On entering the dentist's office, the thought that "perfect love casteth out fear" came to me, and I held steadfastly to this truth, and realized the absence of pain in Love, while the dentist performed a long and difficult operation without any inconvenience to me.

Each time he stopped to get new instruments, I read a few lines in Science and Health, and when he finally would go no farther because of the lack of sensitiveness (fearing that the tooth was beyond saving), and with a very puzzled look remarked, "I don't understand this, your tooth is not a bit sensitive," he was told that the Truth of Christian Science was the remedy used to destroy pain. He looked astonished and said, "Oh!" Then he seemed to subject me to the severest tests, probing around the nerve, and using hot and cold air, trying to make me feel pain in matter. But Truth was the victor, and the work proceeded after he had been assured that I fully intended to have the tooth crowned. He questioned me closely, fearing that an abscess might form at the root which had first to be filled.

During the fitting of the crown the treatment was anything but gentle, the teeth being so close together, but no sense of pain or discomfort came to me. Since then the same dentist has operated on my teeth and said, "It is very strange, your teeth are not one bit sensitive." It is with the greatest sense of gratitude that I acknowledge the practical help to me of Christian Science.

I hope that this may free from fear some one who is laboring under the dread of the dental chair, as I once did to such an extent that the mere mention of it would make me sick and miserable. Now it has no terrors for me, for Christian Science has taught me that God is an ever-present help.—E. W., Salem, Ore.

It is with a heart full of gratitude, that I give a testimonial of what Christian Science has done for us. By so doing I trust that I may give a cup of cold water in Christ's name to all those who hunger and thirst for the glorious light of Truth.

Christian Science has revealed the God whom I worshiped as a far-away, personal Deity, to be an ever-present help in trouble,—keeping, animating, guiding us with the divine Spirit,—Life, Truth, and Love.

We came to Christian Science in March, 1902, and in May a man asked me to give his family and himself employment in my prune orchard. I had heard of the immoral reputation of his family, heard that they had created trouble last year and had been expelled from an orchard, and I considered it wisest not to hire him.

But very soon, by the help of my wife, through whom I had been led into Christian Science, I saw clearly how unlike Christ had been my course in this matter, and I wrote to him to come with his family in prune-picking time.

Some time after this the man came up and asked when the prune-picking would commence. We told him and he went away. Scarcely was he out of sight, when a mason who was working near by, and who had overheard our conversation, rushed out to us and poured out his doleful story of the man's immoral character, dwelling particularly on the unwholesome evidence brought out in a lawsuit. It made no impression on me more than to bring very clearly to my realization the lesson Jesus taught us, when he would not condemn the adulterous woman, regarding evil as impersonal, not personal. When I was left alone, the mason came back, all downcast now. "Why, Mr. Weber," he

Digitized by Google

said, "you don't know how ashamed I feel of myself; why it is too mean for anything to try to keep down a man whom the world has kicked down and who is trying to rise again. Now you will have so much trouble on that account."

I assured him, that there would be no trouble, but everything would be all right, and asked him to remember the words of our Master: He who is without sin, let him cast the first stone.

That evening, after questioning me about Christian Science, he told me that he did not believe in Jesus, but was a free-thinker. To that I answered nothing, but read Science and Health and the Bible whenever I could, and his boy took a *Sentinel* with him. A few days ago I was made glad indeed to have him give me the money for a Science and Health. Surely the good seed that God has sown will bring forth its perfect fruit.

There was no symptom of jealousy or competition that Truth did not overcome, none of hatred that Love did not quench, none of discord that Harmony did not rule out.

The fruit was gathered under a perfect sky. The man who was said to have such a bad reputation became one of my best workers, taking charge of the drier during the day, while his wife guided their children in gathering the fruit. Once in a while, after the day's work was faithfully done, in the evening we would hear from their camp the grand song: "Nearer, my God, to Thee," the strong voice of the father mingling with the loving voice of the mother and the clear, bright voices of the children.

Then I could perceive the wise words of our Leader: "Good thoughts are an impervious armor; clad therewith you are completely shielded from the attacks of error of every sort. And not only yourself are safe, but all whom your thoughts rest upon are thereby benefited."

MORRIS WEBER, Roseburg, Ore.

---

Christian Science has not come to me, as to many, with sudden healing, but with an increase of understanding and an uncovering of mental error which must necessarily be destroyed before physical harmony is realized. The greatest blessing that has come to me has been through striving to hold all God's children in their true relation to Him; to lay aside the sense of self and refuse to recognize error as a reality, especially where it seemed most apparent; to entertain no thought but of love toward any fellow-being, and by so striving, I have found an increased consciousness of God's presence and Love. In regard to what has seemed a great trial, I have realized that God is all powerful; that His work is finished, and all we need is to know this, and in proportion to my realization has the seeming darkness given place to light.

I thank God for Christian Science as revealed to us through our Leader.

NELLIE C. WARNER, Cromwell, Conn.

---

Christian Science has done much for me. For years I suffered with sick headache and weak stomach. In 1896 I had serious stomach trouble. I tried all kinds of medical help, but they all failed to give me relief. In 1898 I was afflicted with cancer of throat. I was attending Christian Science meetings, but at that time was careless and indifferent. When the doctor told me that an operation should be performed, and it was doubtful if I survived, I said I would not submit to an operation. When my Christian Science friends heard what I had done, they said, "Tell her to stick to that and it will disappear." In seven weeks I was healed, not only my throat, but also all my old complaints, among which was a frightful rupture, no sign of which is left.

Christian Science and the love of God did all this for me.—MRS. NEWELL FERRIS, Pipestone, Minn.

Christian Science has been "a lamp to my feet" for nearly fifteen years, my only teacher being Science and Health; and through its teaching I have been enabled to heal disease in many forms in myself and others. But to me the purifying and elevation of my own thought, has been its highest good, the fulfilment of earnest desire, the overcoming of self, the peace and joy that comes from realizing that God is an ever-present help in time of trouble, not alone in the great and overwhelming trials of life, but in common, every-day trials that lie in wait for us.

I am alone in our town (as a Christian Scientist) and may not have sufficient light to bring others to see as I do, neither have they the power to take from me my little light. With my *Journal* and *Quarterly*, I march calmly on my way, thanking God and our dear Leader for the measure of wisdom I have.—MRS. M. W. CLARK, Winfield, Ia.

---

After wearing glasses for a year and a half and taking electrical treatment most of that time, and receiving little help, I became discouraged and decided to try Christian Science. I laid aside my glasses, began studying, applied what I learned, and in two or three months I was cured of astigmatism and a disease of the optic nerve caused by overworking the eyes. Both the doctor and the oculist said that I would have to wear glasses all my life. The doctor also said that one of my eyes was so diseased that it probably would never be very strong. We learn in Christian Science that man need not be governed by these material laws, and I am glad to say that my eyes are stronger than they have been since I was a child and my sight is perfect. I have been helped in many other ways and am very thankful for the understanding that I have of Christian Science.

A. FLORENCE MEAD, Los Angeles, Cal.

---

In picking up the *Journal* with a desire, though unexpressed, for help, I read a few lines, when my eye lit upon the word Creator, and the thought came, Why, if God is my Creator, my Father and Mother, what have I to fear or dread? This thought followed quickly upon the first: If I were the child of very influential, powerful, and wealthy parents, who were to me always kind and loving and thoughtful, they, without a doubt, would have given me every advantage and would always have looked after my welfare. They would have supplied all my needs when called upon to do so, and even before. Being ever ready to help me, they would have seen that nothing could occur to make me unhappy, would have decided and judged for me unselfishly and wisely when called upon. Freely and gladly would they have arranged harmoniously the details of my life, so that I might always be at ease, peaceful, and happy. Guarding me, to the best of their loving ability, against danger or accident, deception or grief, so that in any case or at any time I should know where to go for help, advice, and counsel, tender care and love. If, then, my only Father and Mother is God, who is all power, all intelligence, all love, all good, and present at all times and places, what can I fear or dread? For God's power and love are infinite, for God is Power and Love. Thus I have a Father caring for me constantly and never leaving me, one that I can depend upon under every adverse circumstance; in fact, there is no adverse circumstance in His presence, and He is always present; so if I am obedient to my Father-Mother God, recognizing the ever-presence of Him who is infinite Intelligence and infinite Love, I cannot suffer, for suffering could not come to me through obedience to infinite Intelligence, or Love. "Suffer little children, and forbid them not, to come unto me: for of such is the kingdom of heaven," and we are all His little children.—MRS. MILLIE MOSENFELDER, Davenport, Ia.

It is now over six years since we heard of this healing Truth that is revealed in Christian Science. At that time my wife was suffering from sciatica and other ailments that the doctors said were incurable. She was asked to try Christian Science, which she did, and was healed in one treatment.

Later on, I was persuaded to go to First Church, Toronto, and before leaving the auditorium, I took my glasses off, and have never needed them since, for my eyes were healed instantaneously.

I also suffered from fits for over twenty-five years, and was growing worse, and the doctors said they could do nothing for me. This affliction has disappeared, through the healing which is taught in Christian Science. And so, ill after ill has passed away, for which I am truly thankful.

Not only for physical healing do I give thanks, but more for the spiritual uplifting, and peace and harmony which have come into our home.

I cannot close without expressing our gratitude to our Leader, for the unceasing work she has done, and is doing still, for the elevation of mankind.

L. D. FRAZEE, Toronto, Can.

---

I should like to tell of an experience which shows the faithful and loving care of our Father when we trust wholly in Him for strength and peace in trouble and sorrow.

One year ago I passed through what, to the senses, is one of the greatest sorrows in this life, when my companion of nearly thirty years was taken from me in almost "the twinkling of an eye." From the first moment, when the shock was so great that I could use no other argument, I repeated over and over again, "God is right here and fills my home, there is no room for sorrow." Thus clinging steadfastly to the Father and listening to no false claim I was given great peace and courage, enabling me to fulfil all duties required at that time in a calm and quiet manner.

Six months later, when Thanksgiving was near, a sense of loneliness came to me which was very hard to overcome, and on Thanksgiving Day this feeling was intensified. Being in a room alone for a short time, I fell into revery and sadness. When it seemed as if I could bear my burden no longer, I heard the patter of little feet, the door was thrown open, and my grandchild of four years looked in and said, "Nana, do you know the first commandment?" Without a moment's hesitation I replied, "What is it, dear?" She sweetly repeated, "Thou shalt have no other gods before me." Then she closed the door and ran away. The child had been taught the commandment by her aunt for her Sunday School verse. After she had learned it, to please her, she was told to go find grandma and ask her if she knew the first commandment. They were at the front of the house, while I was at the extreme back, a distance of seventy feet, and they had no knowledge of my whereabouts. But the Father sent His message by one of my most precious earthly treasures,—a little child,—to lead me back to the fold where all tears were wiped away and sweet peace was mine.

My gratitude for what Christian Science has been to me in this great trouble can never be expressed in words.

ERMINA V. WILLARD, Charlestown, Mass.

---

God placed a duty in my hand,
Before mine eyes could see
Its rightful form, the duty seemed
A bitter thing to me.
The Sun of Glory rose and shone;
Then duty I forgot,
And thought with what a privilege
The Lord had blessed my lot.

*Exchange.*

## Announcements.

**Science and Health Revised.**

"Science and Health with Key to the Scriptures," printed from new plates, with lines numbered, and with important revisions by the author.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff beveled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

Price, single copy, prepaid . . . $4.00
Twelve or more to one address, each 3.75

**Our Leader's Message.**

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**Communion Message, June, 1902.**

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

**Remittances.**

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

**Church Tenets.**

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

**Building Fund of the Mother Church.**

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

**Clerk of the Mother Church.**

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

**Church Treasurer.**

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The best theology a man can have and the most satisfying creed he can endorse and the most virile faith he can possess, will be found in an inherent power which gives him the victory over the world; over its follies and foolishness; its sins and temptations; its allurements and deceptions, and enables him to conquer the great world of carnal forces without him and the greater world of subtle selfishness within him. A faith that endures through seeing him who is invisible anchors life to "the evidence of things not seen."

No one need lose faith to-day, for though we are seemingly in an age of doubt, we have just as many evidences of divine power to conquer unbelief as in the time when Abraham believed God, or in the days of Jesus when he cast out devils and turned Saul into an obedient apostle. The simplest sort of faith, if it be like that of a little child, will open the way for God to come into the life, and His coming means omnipotence,—divine authority and power to master all opposition to right, and drive out every lurking foe. So complete is the change that John calls it being "born of God." It is a new life in every essential feature, a new life that makes everything new to the man who possesses it. Whenever you find yourself able to overcome an evil tendency or desire, or see others so changed that now they live a life opposite to their former one of selfishness and sin, then know that you have the best evidence of the newest victory for the old faith.—*The Standard.*

With this view of it, we need not talk much about goodness. It is the life only that is essential. Quality of life is what we desire and need. All talk of goodness implies a conventional standard, a life of routine, a formal excellence. It is not this we are to aim at, but what is genuine, vital, eternal. A natural, wholesome, sincere life is the best one, and, therefore, the one with most of virtue. It is even essential that we shall be unconventional in order to be genuine, that our virtue shall come from the heart, that it shall express our real sentiments. Otherwise we lose ourselves in what is proper and becoming, and forget what is just, true, and loving. But the good life does not needlessly reject what is conventional, but vitalizes it, makes it again a genuine expression of the impulses of the heart.

It should not be forgotten that the true life is to be found in not seeming to be good. As we turn from an excess of piety, so we are repelled by a goodness that is too mindful of itself. We want a goodness that is sturdy, that is not over-refined and delicate. Better a sinner who is good once and again than a saint who lapses into occasional crimes. It were well not to try to be too good, but to be as good as we can consistent with a vigorous morality. We are rightly repulsed by the man who is finically good, over-sensitive, too æsthetic. We need with our virtue something to give it strength, and so to make it truly human.

*The Christian Register.*

To hearten the world with the confident spirit of righteousness is to be a preacher of the Gospel. It need not be that you speak one word if so be your life, in its strength, sweetness, and patience, is a living Gospel seen of men. But if you speak, then ponder well the spirit of the message you would utter; feel that some good news has come to you and with it hasten to comfort all who mourn, to strengthen the weak, to instruct the ignorant, to cheer the despondent; feel that the spirit of the Lord God is upon you and that He has anointed you to preach good tidings unto the meek. There are enough to spread gloom abroad; there are real troubles enough at best, why need we borrow more? The world is moved forward by those who have faith, who believe, who are confident; those who, while never ignorant of nor indifferent to the evil facts, are keen in their discovery and use of good facts. The world is held back by those who are timid and doubtful and suspicious. Put the heart of God into the life of the world and its salvation is at hand.

*The Universalist Leader.*

In many Protestant Churches are ordinances are similarly perverted. The infant is in danger of being lost unless it is "baptized" by a duly qualified and ordained minister, as though there were saving virtue in the water and saving power in the minister. The Lord's Supper also has become a "sacrament," that can work some supernatural change in the recipient, entirely independent of his own inward spiritual condition. This is not Christianity; it is its caricature and deadly perversion.

The only remedy for these perversions is in the complete return to the New Testament. No temporizing will work a cure. No comprehensive liberalism will reach the case; no broad platform of the leading doctrines on which all can stand; no agreement of evangelical people without reference to the ordinances; no federation of the Churches. These have their value, and may not be ignored; but what is demanded of every Church of Christ, and every disciple of Christ, is a whole-hearted return to the whole of the New Testament.

*The Examiner.*

Rev. Donald MacLaurin, D.D., says in *The Examiner:* "I have spoken thus far of God's absolute capacity to help us, but there is a relative capacity as well. He 'is able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us.' Now God's absolute capacity is what I have named, or tried to name, but His relative capacity to help us, to do for us, is limited by us—by the power that works within us. For instance: God cannot pardon your sin if you are not willing that He should pardon your sin, and if you are not willing to ask Him to pardon your sin. God is not able to make a man pure if the man does not wish to be pure. God cannot give a man knowledge if the man has no desire for knowledge and is not willing to receive the knowledge. God is limited in His relative capacity by the power that worketh within us. If we are filled with unbelief, God is limited—God cannot bestow upon us the thing that we need. It is said of Christ, you remember, that he could do no mighty works at a certain place because of the people's unbelief."

It was not till Peter had repeatedly denied his Master, and had deliberately resented the imputation that he was one of Christ's disciples, that he began to understand why the Lord put him off and said to him, "Whither I go thou canst not follow me now." We do not know when we are fit to go with Christ, when we are able to breathe his atmosphere; neither do we know what trials and temptations and patient waiting will be required to purify us of those weaknesses and imperfections which are concealed and thriving in our hearts and which would render the divine companionship uncongenial. But God does know, and in His mercy He measures out just so much truth of doctrine as we can use without treading any of it under our feet, just how much mortification, humiliation, and indulgence we need to enable us to ferret out and expel the parasitic evils which threaten our spiritual life.

*New-Church Messenger.*

"God is love." If we are born of God, we must have His spirit. If we have His spirit love becomes the dominant grace in our lives. Love prompts to sacrifice, and indeed makes sacrifice easy. Is love the chief spirit of the modern Church? Is that a hard question? Can anybody answer it? Is love ever swallowed up in the desires for display, preferment, or pleasures? . . . The Church of the future that is to take the world for Jesus will be fairly afire with love for God and love for men, and therefore will be irresistible.—*Zion's Herald.*

John R. Slater writes in *The Standard:* "Moses had visions of God, and carried his visions into his daily work. He did not have two inner worlds,—the world of imagination, spiritual vision, ecstasy, and another world of everydayness. The two were one. He endured as seeing—not merely as having seen—Him who is invisible. He was not a dreamer but a doer."

Christians, it is your duty not only to be good, but to shine; and of all the lights which you kindle on the face, joy will reach farthest out to sea, where troubled mariners are seeking the shore. Even in your deepest griefs, rejoice in God. As waves phosphoresce, let joys flash from the swing of the sorrows of your souls.—BEECHER.

Religion should be the bread of life which cometh down from the high heaven of our most consecrated purpose and our most passionate desire. And when it is this, it shall be not for our own hunger only, but we shall pass it on, "like bread at sacrament," to others who are hungering for God.

JOHN WHITE CHADWICK.

Great occasions do not make heroes or cowards; they simply unveil them to the eyes of men. Silently and imperceptibly, as we wake or sleep, we grow and wax strong, we grow and wax weak; and at last some crisis shows us what we have become.

CANON WESTCOTT.

A good many devices for the reformation of society—many of them grotesque enough—are rife in our day, but we have never come across any quite so effectual as the conversion of sinners into saints. That is God's plan, and it cannot be bettered.

*The Examiner.*

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS.** An illustrated poem,

| | |
|---|---|
| Single book, prepaid | $3.00 |
| Twelve or more books to one address, each, prepaid | 2.50 |

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Price by mail, $1.06; $5.00 half dozen; $9.00 per dozen, all prepaid.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED-TIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL: 80 pages, cloth covers, red edges. Price by mail, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen, all prepaid.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science: 35 pages. Leatherette covers, gilt top. Price by mail, 37 cents; $3.00 per dozen, prepaid.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pp. Price by mail, 26 cents; per doz., prepaid, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Price, 26 cents; per dozen, $2.50 prepaid.

**OUR LEADER'S MESSAGE.** The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**NO AND YES.** A brief statement of very important points in Christian Science; 56 pages. Pebbled cloth covers. Price by mail, 27 cents; $2.50 per dozen, prepaid.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pp. Paper covers. Price by mail, 21 cents; $2.00 per doz., prepaid.

**FEED MY SHEEP.** Written by Mary Baker G. Eddy. Music by Lyman F. Brackett. Price, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable, to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## Christian Science Bible Lessons.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One Copy, one year, 50 cents; Fifty Copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN. "Saw Ye My Saviour."** Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages, illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.00

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

## Items of Interest.

**National.**

The American Commissioners at Pekin have completed their award on the indemnity claims of the American missions, commercial houses, and private persons. The total amount awarded is $1,800,000, with interest amounting to $130,500. To the Chinese converts who suffered through their connection with the Americans, an award of $17,500 was named. Although the original claims were reduced more than one-half, all the claimants are satisfied, except the merchants, who complain of the policy of the Government in paying in small instalments, and say the recovery of trade requires prompt settlement of awards.

The annual report of the chief examiner of the Civil Service Commission shows that during the last fiscal year there were 60,558 examined in and for the classified service, of whom 40,508 passed and 13,298 were appointed, promoted, or transferred. In addition 1,174 persons were examined for the Philippine service, of whom 480 passed.

Postmaster General Payne's forthcoming report will recommend a two-cent rate for postage between the United States and Great Britain, Germany, and France; and favors an early reduction in domestic postage to a one-cent rate. He thinks that the increased volume of postal business would soon reduce any initial deficit.

Governor Dole has issued a call for an extra session of the Hawaiian Senate to consider the removal of public officials charged with embezzlement and other official misconduct, and the appointment of their successors.

**Foreign.**

The proposed sale of the Danish West Indies to the United States having been defeated, the Danish government has selected a commission to go to these islands in December to investigate their economic conditions and report on the necessary steps to be taken for their improvement. The head of the commission is M. Nordlein, chief of the department of telegraph and railroads in the ministry of public works.

A poll of the Irish landlords, which was undertaken by a committee interested in the Irish agrarian question, on the proposal to call a conference of landlords and tenants with a view to the sale of the land to the tenants, has resulted in a vote of 1,228 to 578 in favor of holding the conference, for which arrangements will immediately be made.

The British government has forbidden the Standard Oil Company from exploiting in the Burmah oil field. Two companies with a large amount of British capital, besides numerous Burmese owners, are successfully developing the field, which is said already to be producing one hundred thousand gallons of oil daily.

An English traveller who has just returned from Mongolia states that Russia is building a railway from the Manchurian section of the Siberian line across the eastern Gobi desert to the city of Kalgan, at the gate of the Great Wall of China, 110 miles north of Pekin.

A bill has been introduced in the French Chamber of Deputies to compel mining companies holding concessions from the government to admit their employees to a share in the profits. The House voted urgent consideration of the bill and referred it to the Committee on Mines.

Royal assent was given last week to all the bills in Parliament relating to the Charles T. Yerkes' "tube" railroad plans for London, which provide for the construction in the aggregate of about one hundred miles of underground and surface tracks.

It is announced from The Hague that the award in the matter of the Russian-American Behring Sea fisheries questions will be made by Councillor Assi, the arbitrator, on November 29.

A league against the abuses of motor car driving is being formed in Paris, and judges, barristers, and literary men have already joined it.

An American tender to install underground telephones in St. Petersburg for 315,000 roubles has been accepted by the authorities.

The strike of the French coal miners is practically over, and two-thirds of the men have returned to work.

King Edward last week received the Emperor of Germany and King Carlos of Portugal.

**Industrial and Commercial.**

A prospectus giving the outline of the plans of the International Warehouse Company, to be established in New Orleans for the purpose of concentrating the cotton carrying business of the world at New Orleans instead of Liverpool, has been issued by Jerome Hill, one of the best known cotton men in the South. "The promoters of this enterprise wish," he says, "to make this international warehouse so strong financially that it will be enabled to issue receipts that will be acceptable and negotiable in the banks of this country and Europe." Three million dollars will be required to build the two proposed warehouses.

The Commercial Pacific Cable Company, which has been negotiating since last July for a landing place in China, now announces its readiness to comply with the conditions approved by the President for an independent American cable from Manila to Shanghai, a distance of 1,200 miles, and its ability and intention to construct the same and have it completed within a year. This will give an all-American line from the Pacific coast to China.

Recent developments make it appear that a general scheme for advances in the wages of employees has been adopted by the great railway systems of the country, and thousands of their employees have already been affected by the advance of wages announced within the past few months. This action is thought to be taken partly in anticipation of the continuance of the increased earnings of the roads, partly to lessen the possibility of strikes.

During the year ending June 30, 1902, there was imported into the Philippine archipelago merchandise, exclusive of gold and silver, to the value of $22,141,842, an increase of two million dollars over 1901, and exceeding all previous records. The exports for the same period were $23,927,679, of which amount about $16,000,000 was nearly equally divided between the United Kingdom and the United States.

So heavy is freight traffic between Chicago and New York eastward bound that the Pennsylvania road has issued notice to its local agents that for the present no grain beyond that contracted for can be handled. The same congested condition is said to exist on the other lines. The car shortage is estimated at 35,000.

The new railroad just completed from Havana to Santiago by the Cuba company at a cost of $14,000,000 will, according to expectations, be opened for traffic November 28. The distance is about five hundred miles and will be covered in twenty-two hours. The transportation heretofore by steamer has required three days.

A pulp paper mill, which is to be one of the largest in the South, is to be established in western North Carolina. Its promoters are negotiating for a tract of 72,000 acres of land near Forney Creek.

A train consisting of thirteen cars is en route on the Canadian Pacific Railway for New York and Boston with a cargo of silks from the Orient valued at $9,750,000.

At the Bangor (Me.) boom sixty-two million feet of logs have been handled this season.

**General.**

The hearings of the miners' side of the case have begun before the Anthracite Coal Strike Commission at Scranton in the chamber of the State Superior Court in the Lackawanna Courthouse. The presentation of their claims will be followed by the reply of the operators. It is expected that two weeks at least will be consumed in the hearings.

A special car of the Lake Shore Electric Company recently covered the distance between Cleveland and Detroit, 120 miles, in three hours and ten minutes. For sixty miles of the trip a rate of a mile a minute was maintained, and an eight mile straightaway strip was covered in seven minutes.

The committee appointed in June last by the trustees of Oberlin College to nominate a successor to the late John Henry Barrows, D.D., as president of the college, has reported, and the trustees have elected Henry Churchill King, D.D., to that position.

The British minister in Cuba reports to his government that the failure of Cuba to secure reciprocity with the United States will result in more economical farming on the part of the planters, and hence be a benefit to them.

The work of building the new defender of the America's cup began at Bristol last week, and the assurance was given by Mr. Herreshoff that the keel of the new craft would be moulded within ten days.

A collection containing several hundred extremely rare books and pamphlets on theatrical history and biography, left by the late Robert Lowe of London, has been presented to Harvard by John Drew, the actor.

Ex-Queen Liliuokalani of Hawaii, who is en route to Washington to prefer her claims for the crown lands, arrived at San Francisco last week.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Christian Scientists are Satisfied with the Bible.

To the Editor.

Rev. Mr. Thomson's designation of Christian Science as "one of the most dangerous isms of the present day" is faulty on two essential points. It is not an "ism," neither is it dangerous.

Christian Science has reached a point where its true worth as an important factor of religious thought cannot be ignored. It is a religion of practical results in the healing and saving of humanity from sin and sickness.

Mr. Thomson says, "Christian Science has enough semblance of truth to appeal to certain classes, but there is no lie so great as the lie that is half a truth." I would suggest that "a lie that is half a truth" is an utter impossibility. A lie is no part of truth and *vice versa;* so from his own statement, Christian Science contains enough "truth to appeal to certain classes."

It appeals to those who are hungering and thirsting for spiritual food, and who, having exhausted their faith in material conceptions as to God and man, gladly welcome this better way. They have found Christian Science to be the soul-satisfying, peace-bestowing, and health-giving religion of Jesus Christ. In their extremity, it fed them with the "bread from on high," and has given them the "peace which passeth understanding, which the world cannot give," and I might add, which the world cannot take away.

Mr. Thomson says, "Christian Science insists that the Bible should be enlarged, added to, and supplemented with what they call revelations received by their disciples. They would substitute Mrs. Eddy's Science and Health. They deny the divinity of Jesus," etc.

These statements are erroneous on every point. Christian Scientists are satisfied with the Bible as it is. They have no desire to enlarge it, or supplement it in any way, shape, or manner, and have no disciples whose business it is to receive "revelations." Neither do they by thought, word, or deed, substitute Science and Health for the teachings of the Scriptures. The text-book is to them, as its title indicates, "The Key to the Scriptures," which has unlocked and explained some of the treasures of truth contained in the Bible.

Neither does Christian Science deny the divinity of Christ, as our critic asserts. Mrs. Eddy says (Science and Health, p. 25): "The divinity of the Christ was made manifest in the humanity of Jesus. . . . The Christ was the Spirit which Jesus implied in his own statements: 'I am the way, and the truth, and the Life,' 'I and my Father are one.'"

As to the existence of a personal devil, who, says our critic, is denied by Christian Scientists "in direct violation of Jesus' teachings," I will quote Jesus' words: "Ye are of your father the devil, and the lusts of your father ye will do. He was a murderer from the beginning, and abode not in the truth, because there is no truth in him. When he speaketh a lie, he speaketh of his own: for he is a liar and the father of it."

It is evident to all Christian Scientists that that which "has no truth" in it is untrue, and, therefore, unreal. They do not, however, deny that "impersonal" evil, "that which maketh and worketh a lie," seems to be in evidence.

Christian Science emphasizes every essential point in the teachings of Jesus Christ, the great Founder of Christianity, and is in perfect accord with said teachings.

Jesus said, "By their fruits ye shall know them," and, if earnest, consistent, charitable, kindly, and practical Christian lives are esteemed worthy evidence of Christianity, Christian Science will certainly stand in the front rank.

Now as to the "blame" for Christian Science. Mr. Thomson would place it upon the "ignorance of some of the doctors of medicine"—I quote him literally. The doctors are not to "blame" for Christian Science, for neither they nor any one else could have prevented its appearance. God has always supplied every need, and the world needed Christian Science; so it came.

Mr. Thomson might as consistently try to locate the blame for the appearance of Elijah, or Moses, or Jesus, or Martin Luther, or John Wesley, or any other great regenerating and uplifting teaching or force which has been manifested.

"God's ways are higher than our ways," and it is in accordance with His goodness that Christian Science has come, and it has come, as Jesus said, "with signs following."

JOHN L. RENDALL.

In *Council Bluffs* (Ia.) *Nonpareil.*

### Removing Misunderstandings.

*Mr. Editor:*—The report in your paper of a recent criticism of Christian Science, contains so many incorrect statements, that I ask the privilege of your columns to reply.

The critic concedes that "Christian Science has many commendable characteristics;" "it is a great promoter of hope and good cheer;" "it is valuable in the emphasis it places on the spiritual constitution of the universe;" "multitudes have undoubtedly been benefited physically by its ministrations;" "it is also unquestionable that many have experienced a moral renovation through the teachings of Christian Science." Having acknowledged all these beneficial results, he proceeds to criticise, not Christian Science, but his views of its teachings. If Christian Science really were what he says it is, it could not produce the results it does, and he would be justified in not believing in it.

The first objection is to the Christian Science theory of matter. He says it is inadequate, and adds, "I believe, as Emerson says, that 'God has delegated His wisdom and authority to every stone,' and that matter is a dense but real form of the great reality." In "Science and Health with Key to the Scriptures" (p. 277), Mrs. Eddy says: "The realm of the real is spiritual. The opposite of Spirit is matter, and the opposite of the real is the unreal, or material. . . . Nothing we can say or believe regarding matter is immortal, for matter is temporal, and is therefore a mortal phenomenon, sometimes beautiful, always transitory." This agrees with Paul's statement: "For the things which are seen are temporal; but the things which are

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

not seen are eternal." In teaching the unreality and unsubstantiality of matter, Christian Science does not claim, as the critic asserted, that there is no body, no man, no earth, no universe. On the contrary, we read in Science and Health (p. 114): "In divine Science, the universe, including man, is spiritual, harmonious, and eternal. Science shows that what is termed *matter* is but the subjective state of what is herein termed *mortal mind*." The term "mortal mind" is used to designate the supposed opposite of Immortal Mind, or God, and is what Paul referred to as "the mind of the flesh," which "is enmity against God." But the real man, the image and likeness of God, manifests the divine Mind.

The critic says, "Its theory of evil is unworthy. Evil is real on its own plane. Anything in its place is good, and anything out of its place is bad. There is a genuine sense in which evil is 'good in the making,' outgrown-good."

On the plane of the physical senses evil seems very real, but the sense in which Christian Science says it is unreal is that it is not eternal, and does not originate in God, the only real Cause. According to the Scriptures, "A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit," showing that good and evil are not from the same source, and evil is not "good in the making." Envy, hatred, and revenge are not the outcome of divine Love, and can never be good in any place.

The next objection made is that "Christian Science, like all 'religions,' is illogical and limited in practice." Christian Scientists do not claim that they have yet demonstrated over all imperfection, but the divine Principle and rules have been discerned, and they are working out their problems. Mrs. Eddy says, in "Miscellaneous Writings" (p. 359), "The way is absolute, divine Science: walk ye in it; but remember that Science is demonstrated by degrees, and our demonstration rises only as we rise in the scale of being."

The statement that Christian Science "does not emphasize the greatest motive as the prime factor in religion, in other words, does not make love the one essential of life," displays a surprising lack of appreciation of its teachings. Christian Science, more than any other religion, emphasizes the fact that God is Love, and we read in Science and Health (p. 113), "The vital part, the heart and soul of Christian Science, is Love." It is a religion of both getting and giving, for it recognizes God as the divine source of all good, and as we receive from this source we have something practical to give to others. Adherence to Principle establishes health; and instead of using "as a motive a selfish longing for physical comfort and prosperity," Christian Science teaches "seek ye first the kingdom of God, and His righteousness" well-knowing that if this be done, "all these things shall be added unto you." Thus health and prosperity are the natural results of a right understanding of God, and obedience to His law.

It is a mistake to suppose that Christian Science is bound by an unlimited human arbitrary authority, and that there is no opportunity for progress. Mrs. Eddy says in Science and Health (p. 233): "Progress is the law of God, whose law demands of us only what we can certainly fulfil;" and again (preface ix.): "To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ." Mrs. Eddy also said in her recent message to the Mother Church, "Follow me only as I follow Christ." Christian Science is a revelation of the absolute Principle of Being and its manifestation; but its demonstration is progressive, and must necessarily be, from the very nature of its infinite Source.

The critic very graciously says, "We ought not to be ignorant of the development and should be sympathetic rather than unkindly critical;" but his next conclusion seems strangely inconsistent. He says, "We should study the application of pure spiritual force to the cure of sickness. We should go as far as we can in that direction. If we can be healed of disease without the use of remedies, that is the best process. But we ought not to discharge medical skill and medicines, by which the human powers are reinforced so that sufferers are also thus relieved." Christian Science is demonstrating that all forms of disease can be healed through spiritual power alone, and without the use of material remedies; and as that is admitted to be the "best process," why cling to the outgrown material remedies? Is that progress? So long as people believe in the efficacy of drugs, they will use them, and medical skill in administering them will be in demand; but those who have found a better way will certainly use it, and they would be inconsistent if they did not.

The injunction to prove all things, and hold fast that which is good, is being fulfilled by Christian Scientists, for they have found something that they can hold fast. Demonstrable Science is not a changing opinion, and the Principle of Christian Science is God, divine Love. The understanding and demonstration of this Love is the progressive work of Christian Scientists.

FRANK W. GALE.

## Spiritual Healing for all Time.

To the Editor.

*Sir*:—In your issue of October 20 the Dean of Norwich is reported in his initial attack on Christian Science: "Why should it be thought a thing incredible with you that God should raise the dead?" This question was asked by Paul, astonished at the hardness of heart of his hearers, but to-day the Dean will not admit that God will even heal the sick in this country. He says: "When the signs [of healing] had served the purpose for which they were promised, they ceased." In spite of this assertion the Dean is reported to have continued as follows: "This is not in the least inconsistent with the fact that miracles continued in the Church long after Apostolic times, but the exact period when they ceased it is not possible to say. The cessation of these miraculous powers is also not inconsistent with the idea that where the original need is felt to-day,—in, for instance, the mission field,—signs will be vouchsafed, as they were in sub-Apostolic times. They are vouchsafed, I am sure, to-day in China and in other places. An old need may be met in the old way; but where God is revealed, where Christ is owned, I should doubt—I should challenge—any miracle, because the need of it does not exist."

So the Dean thinks God will heal the sick in answer to prayer "in China and in other places," but not in England? And his reason given is "because the need of it does not exist." Have we no need for the healing Christ to-day? Is England free to-day from sickness? Are not the hospitals overflowing with so-called incurable diseases? And is not the clamor for new hospitals ever increasing? What is the Dean's authority for making this discrimination in favor of the Chinese as against God's children in this country? This is Christ's promise: "He that believeth on me, the works that I do shall he do also." The perfect construction of that sentence leaves no loop-hole for misrepresentation; the words can have but one meaning among those who know what were "the works" of Christ. Again, Christ said (Mark, 9 : 23), "If thou canst believe, all things are possible to him that believeth," and when his disciples failed to heal sickness He did not say, "The need of it does not exist," but he charged them with

Digitized by Google

their "unbelief" (Matthew, 17 : 20). "An old need may be met in the old way," says the Dean. Exactly so, and that is why God's healing is being manifested to-day, not only among the Chinese, but here in England, and in America, and elsewhere. It is not surprising that God's healing should be disowned by many to-day in the present condition of prevailing thought. This is the "night" of materialism spoken of by Luke (17 : 34), and unless people can place both hands in the wounded side they will not acknowledge the healing Christ, who is with us always, even to the end of the world.

Is it not a marvelous thing that the Shepherds of Israel, the pastors of the flock, should be the loudest in their denunciations of the healing which is again proclaimed by the wayside?

"The diseased have ye not strengthened, neither have ye healed that which was sick." "Behold, I am against the shepherds; and I will require my flock at their hand, and cause them to cease from feeding the flock" (Ezekiel, 34 : 4, 10).

I commend the whole of this chapter to your readers at the present moment. The Gospels are filled with the healing of the sick as well as with the reformation of sinners, and Christ's followers were bidden to go and do likewise. "As for my flock, they eat that which ye have trodden with your feet; and they drink that which ye have fouled with your feet. . . . Therefore will I save my flock" (verses 19, 22). Christian Scientists do not use material drugs or medicines, because they believe that the Christ healing is the only real medicine; therefore the Dean derides these people for "abstention from the use of means."

Jeremiah (30 : 13, 17) says, "Thou hast not healing medicines . . . for I will restore health unto thee, and I will heal thee of thy wounds, saith the Lord." In the dark ages medicine was born of witchcraft and deception, and every abomination on the earth has in turn been used for medicine at some time. Not one per cent of the drugs used only forty years ago obtains now in common use among the medical profession. How can we then after that we have known God, or rather are known of God, how can we turn again to the weak and beggarly elements—to be in bondage.

As a class, the medical profession is filled by an honorable and high-minded race of men, but their attempt to grapple with disease by material means was by the nature of disease foredoomed to failure. The unreliability of drugs is best testified by the declarations of medical men.

Do the Shepherds of Israel, does the Dean, maintain that God is not the healer of disease and the protector from all danger and sickness? Then how do they interpret the Ninety-first Psalm? If this Psalm and a hundred other similar passages are to be eliminated from the Scriptures, will the Dean state which parts of Holy Writ are to be accepted by Christians, and which rejected "because the need of it does not exist"?

## The Overcoming Mind.

IN searching for an explanation of the phrase "general human consciousness," used by me in a previous communication to your columns, Mr. Jay states:—

"If by the phrase is meant that people generally regard matter and disease as something real, would it not be necessary to change the opinion of most people before it would be possible to effect any cures by this method?"

This question goes very near to a vital point in the teaching of Christian Science, namely, the explanation of what Mrs. Eddy has denominated "mortal mind." According to my understanding, this mortal mind is a supposed opposite of the one Mind, God. The word "supposed" is used, because in reality there can be no opposite to Infinity. Mrs. Eddy states, on page 114 of "Science and Health with Key to the Scriptures:"—

"Mortal mind is a solecism in language, and involves an improper use of the word 'mind.' As Mind is immortal, the phrase *mortal mind* implies something untrue and therefore unreal; and as the phrase is used in teaching Christian Science, it is meant to designate something which has no real existence. Indeed, if a better word or phrase could be suggested, it would be used; but in expressing the new tongue we must sometimes recur to the old and imperfect, and the new wine of the spirit has to be poured into the old bottles of the letter."

It is this "untrue and therefore unreal" mortal mind, called by St. Paul the "carnal mind," which seems to decree disease and inevitable death, and which, through the agency of the five physical senses, places a material concept on man and the universe, and through idolatry and mythology has at times succeeded in placing a human material concept upon God himself.

The Founder of Christianity has illustrated by his life how it is possible to wage war against the false concepts of mortal mind without waiting first "to change the opinion of most people." As we follow the story of Jesus' life in the Gospels, we read how he destroyed one mortal belief after another, until he was able to make his final demonstration of the conquest over death itself. After the overwhelming realization of the omnipotence of spirit had come to him at the hour of his baptism, he went into the wilderness. There he met and destroyed the claim of material hunger, and learned that he could be fed by spiritual food: he met and resisted the temptation of pride, and the belief that he could do wonders apart from God; and he met and vanquished the desire for personal power—"and behold angels came and ministered unto him."

After surmounting these tests, he "went about all Galilee, teaching in the synagogues, preaching the gospel of the kingdom, and healing all manner of sickness and disease among the people." But he did not stop there. He also conquered so-called material laws. By feeding the five thousand with five loaves and two small fishes, he broke the law of limitation; by walking on the waves, he conquered the laws of gravitation; and, finally, by raising Lazarus and others from the dead, and then by rising from the tomb himself, he conquered for all time the belief in the inevitableness and binding power of death.

It should be remembered that behind every so-called physical action, mechanical or chemical, stands a law, and that every law is a purely mental concept. No law, as such, can be apprehended by the five physical senses, and this points to the fact that Mind always rules in the last instance. As Mrs. Eddy has stated: "The world would collapse without Mind" (Science and Health, p. 209). Then why not turn to Mind at once, and not as a last resort? When we so turn, we find that it is not necessary to wait "to change the opinion of most people," before receiving our reward, for Mind is the sole arbiter and has already decreed to those who will accept the good news, health and happiness, holiness and harmony. The theology upon which most of us have been fed made the real man bad, and this real bad man had to be made good. The task was deemed difficult. But modern theology is beginning to recognize that the real man is good, and that this real good man, when assailed by the illusions of mortal mind, need only turn, like the Prodigal Son, to the heavenly Father, in order to know himself as he really is.

The fact that disease is made the subject of conversation, or even of thousands of volumes, cannot make it real. The term zero means nothing. We may discuss it by the hour, we may add it, subtract, multiply, and divide it by the page, without making it anything more than it already is, namely, nothing. A million zeros are still nothing. Hence it

Digitized by Google

should be realized that, if harmony is real and established as the atmosphere of God's creation, a zero calling itself dis-ease, or absence of ease, is only a negative, and no amount of conjuring with negatives can ever make a positive.

Christian Science practice results from a desire on the part of a great company of earnest and intelligent men to live Christianity, and not merely to talk it. Christian Science does not accomplish its results by "diverting our minds," but by causing us to realize the omnipotence, omnipresence, and omniscience of the One Mind.

W. D. McCRACKAN.
In *New York Evening Post.*

## The Prime Object to be Attained.

IT has been said that the teaching of Christian Science in respect to the nature of disease and the spiritual remedy therefor is a palpable fallacy. That learned men should make statements of this character upon a mere cursory examination of the theory of Christian Science, taking no account whatever of its effects, seems strange even from the standpoint of a disinterested individual. If Christian Science does indeed heal, if its use actually produces results, who can question its value? Since multitudes of beneficiaries, a large percentage of whom had exhausted all hope in other curing means, are alive and well to-day through the application of Christian Science, what is there to warrant the assertion that it is a palpable fallacy? Shall not a tree be known by its fruits? That the teaching of this science is not exactly in harmony with some philosophies of longer standing is not a matter to be considered. Thousands of inventions and discoveries have been made in recent years which cast a reflection upon theories and things which belong to the past, but they are not on that account fallacies. Our critics might as well go back to the time of Jesus and the apostles and declare their efforts to heal without the use of material rememdies to be fallacious, for a declaration of this sort stigmatizes the good works of Christ and his followers.

It is said, "The prime purposes of their church, and the one that distinguishes it from the orthodox church, is that it attempts to heal the sick." Bodily healing is not a "prime purpose" but an inevitable consequence in Christian Science. The prime object of the application of Christian Science is to purge and purify the mental condition of the patient, to inspire faith in God and thereby overrule all evil. As a result, the disease of the patient is destroyed, so that healing the sick is a very secondary matter in the practice of Christian Scientists. It would seem from the verdict of certain critics that a Christian Scientist must institute some means of getting rid of his sin and at the same time remain in a sick condition, for he is condemned on the ground that those who espouse the Christian Science faith become well in body. Can our friends suggest some method whereby light can be admitted into the presence of darkness and the darkness at the same time be retained? If so, then he may show to the Christian Scientist a method whereby he can be in a proper attitude of mind in respect to his heavenly Father, and at the same time retain his disease. Must the Church of Christ, Scientist, be debarred from recognition because the practice of its faith heals sickness as well as sin? Strange indeed is the doctrine which would criminate men because their faith in God heals the sick. Is such doctrine based upon the inevitable fact that trusting God implicitly necessitates the casting aside of lesser dependencies, and therefore dishonors time-worn customs and usages? We all pray to be led out of materiality unto God: why not act accordingly?

In the matter of the observance of all sanitary laws Christian Scientists are as careful as any other class of people and their lives will attest the fact that they are quite as clean in both mind and body. While they may differ from the medical schools in their understanding of the cause of contagion, they recognize that the material sense of existence admits such a law, and that it must be wisely dealt with. It has never been demonstrated that the practice of Christian Science is detrimental, but on the contrary, the benefits of its influence are felt everywhere, not only in the sick-room and in business life, but in all the affairs of mortal existence.

ALFRED FARLOW.
In *Boston Times.*

## The Finding of True Individuality.

THE continued restlessness of tired humanity, seeking and striving for a sense of rest and peace which seems so far away, shows but too plainly how the deception of mortal existence, its pleasures and beliefs, palls on the senses. To those whose dear ones have passed away the question is ever recurring, "What is spiritual life?"

It is to such that Christian Science, lived and applied in its purity, unfolds the possibility, nay, the absolute certainty, of the life begun here as never ending, but as going on in its separate individuality, even with the seeming reality of the opposite claiming recognition. To them the words of Jesus, "Be ye therefore perfect, even as your Father which is in heaven is perfect," means a growth from the material to the spiritual, and while the change we are looking for may not be fully realized here, we must turn our eyes and work in that direction now, or we shall be at the foot of the ladder in our new experience.

We must learn that as we put off the desires of the flesh in its myriad forms, they are as quickly replaced by spiritual light and joys which, step by step, lift us higher in the understanding of the truly real.

Mrs. Eddy says in Science and Health, p. 485, "Emerge gently from matter into Spirit. Think not to thwart the spiritual ultimate of all things; but come naturally into Spirit, through better health and morals, and as the result of spiritual growth. Not death, but the understanding of Life, makes man immortal."

Christian Science teaches, first, that God is one God, omnipotent, omnipresent, and omniscient, that He is the only Creator, and that He is Spirit. Second, that God's creations, including man and the universe, are spiritual and not material. Third, that man, created in the image and likeness of God, reflects and partakes of life and all good as the essence of God, but that he is not God and never will be. He is the creature or spiritual idea that reflects Him in every particular.

On page 518 of Science and Health, Mrs. Eddy says: "Man, as the image of his Maker, reflects the divine might. He is the master of earth, not made to till the soil. His birthright is dominion, not subjection."

On this point of subjection, Paul spoke very plainly. "And when all things shall be subdued unto him, then shall the Son also himself be subject unto him that put all things under him, that God may be all in all."

Hence we see man not as God, nor part of Him, neither independent of Him, but rather a perfect reflection, whose individuality as His child may never be lost, nor his life curtailed, any more than God could be blotted out.

## The Manufacture of Cut Glass.

It may be thought by some that the cutting of the beautiful glass tableware that is so highly prized is done with delicate tools, wielded by artists as fragile and æsthetic as the product of their skill. The cut glass factory, as a matter of fact, is as rough and workmanlike an establishment as any shop where machinery buzzes and leather belts whirr the day through. There are several of them in Philadelphia.

Along each side of the shop run rows of wheels, differing in sizes, but all alike in one particular. Above each is a receptacle for fine sand and water. The mixture is allowed to trickle down on the wheel at which the workman is cutting a piece of glass, and against this sanded wheel the cutter presses the punch bowl or vase or tumbler upon which he is at work, allowing the combination of sand and whirring wheel to wear away the glass until cut deep enough to take the impression of the pattern.

This pattern has first been marked roughly on the article to be cut. The workman takes this rough-marked bowl or vase and follows closely the outline of the design with his sanded wheel. It is very important not to cut either too deep or too shallow a groove in the glass, for the one would send the wheel right through the glass, while the other would leave the design of uneven shape and finish. In knowing just how far to cut and in avoiding the chipping of the material, while patiently boring away at the pattern, is where the glass cutter shows his skill.

When the first cutter has shaped the pattern in the glass he turns it over to another man, presiding over a wheel of more delicate edge. This man goes over the work the second time, assuring the smoothness of the grooves cut. Then a third man goes over the work, making it still smoother, and so the cut glass travels around the room until it finds its way at last into the final hands, in a room off in the corner, where men work, wearing thick rubber gloves and rubber aprons and inhaling noxious acid fumes that compel them every few minutes to seek the outer air.

For three centuries glass cutters have been improving the work of turning into exquisitely chiselled tableware the plain glass articles that come from the cooling room of the factory. It was only in 1630 that the art of making flint glass was discovered in England. It had greater density and power of refraction than the ordinary glass, and lent itself more readily to manipulation, and so was the first glass suitable for cutting. Glass that could be cut had long been sought, but only faint outlines and engravings were possible up to that time.

It seems strange that the method should have remained undiscovered for so long, when it is remembered that the making of glass is one of the oldest arts in the world. No one knows, in fact, when, where, or how the manufacturing of glass originated, so ancient is its origin. Sculptured designs representing glass blowers at work were found in ancient Memphis. These sculptures were made five thousand seven hundred years ago, and represent glass being blown through long tubes, just as is done to-day. The Egyptians made beautiful glass, both for wares and ornaments, and the Romans patterned from them. Only the cutting of glass, therefore, is of modern origin.

### Art.

At her light touch, behold a voice proceeds
Out of all things to chide our sordid deeds;
A beauty breaks, a beauty ever strange,
The Changeless that is back of all the change.
Lightly it comes as when a rose would be—
Takes feature yet remains a mystery.

EDWIN MARKHAM.

In "Lincoln and other Poems."

## Among the Churches.

### Advance in Mansfield, O.

The services of First Church of Christ, Scientist, of Mansfield, Ohio, which for some time have been held in private apartments, were held October 26 in their new rooms in the Stocking Building.

The rooms are pleasantly located, and with a beautiful array of "Floral apostles" they presented a pleasing appearance to those present on the occasion of the first services in the new quarters.

Let us bear in mind this admonition in the article, "The Smaller Churches" in the *Sentinel* of July 17, 1902, "As the tree is imperfect if the smallest twig thereof be imperfect, so the completeness of this great movement is dependent upon the perfection, the purity, the Scientific understanding of these dear children of the Mother Church."

Let us strive for this understanding, and may this branch be loyal to the vine and show forth our loving thanks to our Leader by each and every one of us reflecting Life, Truth, and Love.—MRS. MINNIE CONARD.

### New Church in Jackson, Mich.

First Church of Christ, Scientist, held its opening service Sunday, September 21, in their own church home.

We were organized in 1895 with six members. As the society grew, the need of a permanent home was felt, and in March the Jewish Synagogue property and the adjoining building, formerly occupied by the W. C. T. U., were purchased. The buildings were very old, but a more desirable location could not have been found. The church edifice has been repaired and renovated, and thus transformed into a place which suggests simplicity, restfulness, and harmony.

There is room on the lot for an annex, which may be added for reading room purposes, and it is hoped that this will be erected in the near future.

The quiet way in which money was raised as needed, has seemed very unusual to those who have witnessed it, and some surprise was manifested that there was no appeal for money at the opening service of the church. Within six weeks of the time the opportunity offered for the purchase of the property, three thousand dollars had been donated without solicitation, some of it coming from quite unexpected sources.

The church was well filled and a very attentive audience listened to the Lesson-Sermon,—subject, "Reality,"—a lesson which seemed singularly appropriate to the occasion.

The First Reader spoke in part as follows: "There are in every community those who feel they have not found in creeds and doctrines the spiritual food they need, and who feel a desire to get back to the simple truths taught by Jesus. To all such we say, This church invites you to co-operation and service, and to seats that are always free. Let this thought remain with us, that only as we are lifted up from materiality and selfishness, and are led to pray honestly, 'Thy kingdom come,' shall we draw to us those needing health, encouragement, and guidance. When we really understand that all are sons and daughters of God, we shall carry with us such signs of happiness and strength that we cannot fail to draw those who need just what we have to give."—OLIVE E. PETTIT, *Clerk*.

To-morrow you have no business with. You steal if you touch to-morrow. It is God's. Every day has in it enough to keep any man occupied without concerning himself with the things beyond.—HENRY WARD BEECHER.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Wherefore?

MARY BAKER G. EDDY.

OUR faithful laborers in the field of Science have been told, through the alert editor-in-chief of the *Christian Science Sentinel* and *Journal*, that "Mrs. Eddy advises, until the public thought becomes better acquainted with Christian Science, that Christian Scientists decline to doctor infectious or contagious diseases."

The great Master said, "For which of these works do ye stone me?" He said this to satisfy himself whereof he spake as God's representative—as one who never weakened in his own personal sense of righteousness because of another's wickedness, or the minifying of his own goodness. Charity is quite as rare as wisdom, but when it does appear it is known by its patience and endurance.

When, under the protection of State or United States laws, good citizens are arrested for manslaughter because one out of three of their patients, having the same disease and in the same family, dies while the others recover, we naturally turn to Divine justice for support, and wait on God. Christian Scientists should be influenced by their own judgment in the taking of a case of malignant disease, they should consider well as to their ability to cope with the case—and not overlook the fact that there are those lying in wait to catch them in their sayings; neither should they forget that, in their practice, whether successful or not, *they are not specially protected by law.* The above quotation stands for this: Inherent justice, constitutional individual rights, self-preservation, and the gospel injunction, "Cast not your pearls before swine, lest they trample them under foot and turn again and rend you."

And it stands side by side with Christ's command, "Whosoever shall smite thee on thy right cheek, turn to him the other also." I abide by this rule, and triumph by it. The sinner may sneer at this beatitude, for "the fool hath said in his heart, No God." It is known that the good young student, Mr. Lathrop, after he was prosecuted for practising Christian Science, finished healing the cases of diphtheria that he had on hand. Statistics show that this Science cures a larger per cent of malignant diseases than does *materia medica.*

I call disease by its name, and have cured it thus; so there is nothing new on this score. My book Science and Health names disease, and thousands are healed by reading its name and learning that so-called disease is a sensation of mind, not matter. Evil minds signally blunder in Divine Metaphysics: hence I am always saying the unexpected to them. The evil mind calls it "skulking," when to me it is wisdom to "overcome evil with good." I fail to know how one can be a Christian, and yet depart from Christ's teachings.

---

No question of the efficacy of Christian Science in cases of infectious and contagious diseases is involved in Mrs. Eddy's advice that until public thought becomes better acquainted with Christian Science, Christian Scientists shall decline to doctor such cases.

Attempts to pervert her words into an admission that Christian Science is impotent in cases of malignant disease are unwarranted by the facts, and fail of their purpose. The healing of cases of this character, diagnosed and designated by physicians and recorded by Boards of Health and other health officers, proves beyond question that Christian Science is most efficacious, and every effort to controvert this evidence must signally fail if public records are correct and medical diagnosis is of value.

Mrs. Eddy's advice is wise and timely, and we can best serve our Cause, and express our gratitude for her loving care, foresight, and leadership by giving heed to it.

When we fully awaken to the necessity of preventing disease instead of waiting for its manifestation, we shall see more clearly the wisdom of her advice, and that we have been led to a potent realization of the powerlessness of all evil, whether present in manifestation, or feared for the future. ARCHIBALD MCLELLAN, *Editor.*

### The Activity of Love.

DIVINE LOVE is omni-active, and human love, its reflection, expresses itself in action. We are liable to confound the passive inertness of amiability with loving-kindness, and rest ourselves content in an unexpressed approval and appreciation of the good in people and projects, to satisfy ourselves in a state of amiable apathy quite distinct from loving activity. Love, so-called, is mere sentiment unless demonstrated in self-sacrificing effort for another's good. The reposeful consideration of what we *would* do for our brother is immeasurably outweighed by the humblest appreciable attention. A simple flower breathing through living perfume a message of kindness is vastly more worth than the "Gold of Ophir" hidden away in the mines of the imagination. Let suspicion challenge every sentiment that is not willing and waiting to spring into active service for the thing, the person, or the cause beloved. Do we as Christian Scientists love our Leader and our Cause? Love is measured by that consecrated activity which results from purity of motive and self-surrender.

S.

### The Acceptable Thanksgiving.

OUR appreciation of the common kindnesses of neighbors and friends impels us to make due and loving acknowledgment and a return of kindred favors when opportunity offers, but gratitude for higher and nobler gifts, especially for intellectual and spiritual quickening, finds its true and legitimate expression in responsiveness and receptivity of heart, a consecration of life to the ends for which our benefactor stands.

Thankfulness thus comes to mean, practically, the glad appropriation, assimilation, and ever-enlarging use of added blessings. It means growth, a broader culture, an increased capacity, an expanding usefulness.

The plant answers to the rain in its deeper penetration of root, its putting forth of leaves and branches, its opening of flowers; and in thus fulfilling a larger life and service it directly magnifies its need of more rain, its possible utilization of yet richer conferments of sunshine and of shower. So too the earnest student yields his every awakened power to the control of the Master's thought. Every increase of conscious indebtedness stimulates his zeal and intensifies his loyal and enthusiastic devotion to his instructor, and his gratitude is expressed in the fuller reflection of the philosophy or system of thought which the teacher represents, as well as in the alacrity with which he returns for deeper draughts from the fountain of his inspiration. It is thus that we naturally and practically appropriate all that we really love, and in the highest, most serviceable exercise of our acquirements, we best evidence our gratitude for them.

Digitized by Google

The exhibition of a spirit of Christian thankfulness means very much more than being polite to God. It calls for the larger and truer reflection in life's activities of all that by which we have been enriched through Love. It means more and more of conscious dependence upon Love, more and more of responsiveness to Love, more and more of demand upon Love's inexhaustible store.

"What shall I render unto the Lord," says the Psalmist, "for all his benefits toward me?" and he well answers, "I will take the cup of salvation, and call upon the name of the Lord." His return to God for the unmeasured good received, was a glad and thankful stretching forth of hands toward those larger gifts for which loving appreciation always and speedily makes room.

This thought of thanksgiving, not only appeals in a peculiar way to all true Christian Scientists, it will run and be glorified in them. With every step's advance in our understanding of Truth, comes a more immediate and trustful answering back to its call. Thus appreciation joins hands with responsiveness, and both lead on to more active, more joyous, more intelligent, and more effective endeavor. Heaven bestows no good for safe keeping, and the intelligent and faithful use of blessings received, will be evidenced in that consecrated capacity for anticipated gifts, which is our best thanksgiving. W.

## From Our Contributors.

### Squaring Accounts.

F. R. P.

At the end of the month, the accountant for each business house takes off the ledger a "trial balance." In doing this the end to be accomplished is that the debit and credit sides of the accounts shall equal. If the figures vary one cent, this may be proof that there could be a much greater error than this small amount shows, and this mistake must be found before the next month's business is taken up.

Should not we Christian Scientists balance our accounts with Principle every day, and know that our actions are in accord with honesty, truthfulness, sincerity, kindness, temperance, and all the fruits of the Spirit? On the pages of our lives should be written these characters, and they can be balanced and squared by pure thoughts, active work, right motives, and good deeds.

Our opportunities will then be carefully watched and our acts and thoughts governed by loving obedience to the teachings of our text-book, following in the path which our Leader has carefully pointed out to us. In this way the teachings of the Bible, interpreted by "Science and Health with Key to the Scriptures," will be unto us a practical rule of living, and will help us to "Love one another" in deed and in Truth, to love our enemies, and to "square accounts with each passing hour" (Message, p. 29).

### A Simple Story.

C. R.

A man built a house and the name of the house was Human Sense, and he set about making it very beautiful, expecting to find great happiness in it when it should be completed. The largest of the rooms was a magnificent apartment filled with musical instruments, paintings, and statuary, and the name of the room was called Music and Art. Another room, whose walls were lined with shelves of books which the man had spent years in collecting, was called Intellectuality. There were other rooms, among them a superb dining hall where sumptuous repasts were to be served, and these rooms were called The Pleasures of Sense. But the best room of all and dearest to the man's heart was one which had been fitted up especially for his daughter, whom he idolized, and this room was called Human Affection. When the house was completed the man was proud and pleased, and he said, "Now I shall know perfect happiness." And so after carefully closing all the doors and windows to keep out intruders, he set himself to enjoy the house which he had built. But after a time he noticed that his daughter grew thin and pale and he began to have a great fear at his heart.

One day on glancing out of the window she caught a glimpse of Truth, and she said to her father, "Open the door and let Truth enter." But the father refused. Then one morning he found his daughter missing. Every room was searched in vain, she had gone to seek after Truth. The father wept bitterly and closed up the room called Human Affection. The only thing now remaining to him was a violent hatred of Truth which caused him to bolt and bar every window and door of his house so that Truth could have no chance to creep in. But when the winter came and the man sat before his fire, Truth smiled at him from the midst of the flames. Then a great rage took possession of the man and he ordered the chimney to be sealed up so that Truth could not continue to torment him. But when this was done the room was so filled with smoke that the man could not breathe, and sooner than let Truth in he put out the fire and sat shivering with cold and alone, for all his servants and friends had left him. And the man's heart was sad and he said within himself, "What has my goodly house profited me, and all its beautiful rooms? And he was very cold and very lonely, so that when finally Truth knocked softly on the door he answered, "Come in." "But the door is locked," said Truth. Then the man rose reluctantly and unlocked the door. But Truth still waited without, saying, "Open the door." Now the door had been closed so long that it was very hard to open, but after much effort and many struggles the man at last succeeded in opening it a few inches, and when he saw Truth standing without, all his hatred and sorrow and loneliness vanished. With renewed strength he flung the door open wide and bade Truth enter, but Truth said, "Come and follow me," and the man's heart was filled with love and joy, and he went gladly, leaving his beautiful house and following after Truth.

### "O Taste and See that the Lord is Good."

W. S. G.

The life of the Psalmist in many respects was similar to that of the Christian Scientist. The Psalmist not only praised the Lord continually, but his heart went out to others, and he wanted them to share with him the joys of a practical truth, and he cried out to them, "O taste and see that the Lord is good."

He had tried the pleasures of the world; he had indulged in many forms of sin, and knew how deceptive they were. He had wandered from God; he had shared the advantages of riches; he had ascended the ladder of fame to its heights; he had walked about in prominence and moved in splendor, and in the face of such varied experiences he exclaimed, "O taste and see that the Lord is good." Those of us who are trying to live this practical truth as taught in Christian Science, have shared the seeming pleasures of sense; have wandered about in the wilderness of sin and disappointment; have shared the guidance of other churches; have read God's word prayerfully; but could not apply His promises in daily life till the searchlight of the "Key to the Scriptures" was thrown upon its pages. With the help of this little book, the promises of God are unfolded to us, "big with blessings," and we say to our neighbors, "O taste and see that the Lord is good."

Studying the Bible with the light of Christian Science

Digitized by Google

we become more familiar with the "new tongue," or practical truth; and in proportion as we follow in the footsteps of the Master, we learn how to taste of true spiritual food.

Jesus practised the truth he taught, and instructed his disciples to do likewise; and it is the duty of his followers of this age to do the same. We cannot attain this goal by simply studying the Bible, we must live the Gospel daily, and under all circumstances place intelligent reliance upon the promises of God. When affliction seems heavy, the Bible assures us that the Great Physician, is an ever-present help; and a radical dependence upon his omnipotence and omnipresence, not only brings healing, but joy and peace.

When dark clouds seem to gather about our pathway, and great storms of error seem ready to burst upon us, the shadow of His wing is our refuge, and as we nestle under its protecting care, the sunlight of Truth dispels all seeming mist, and the sky of life becomes bright and clear, and we can then rejoice in this manifestation of divine Love.

In Science and Health, p. 209, we learn that "spiritual sense, is a conscious, constant capacity to understand God." That being a fact, it opens the way for all earnest Truth-seekers to partake of the glorious feast, which the Psalmist shared.

"The spiritual sense of Truth must be gained before Truth is understood. This sense is assimilated only as we are honest, unselfish, loving, and meek" (Science and Health, p. 272). This is the rule, which God's children must apply in daily life in order to attain to the blessed experience of the Psalmist. We must empty ourselves of all dishonesty, selfishness, hatred, and pride, reflect Truth and Love, and, "as newborn babes, desire the sincere milk of the word."

It is very evident that the fruit of the spirit, which was so grateful to the Psalmist, is shared in largest proportion by the pure in heart. Such a consciousness cannot be attained by mere profession, but is gained by living in the Spirit, and cultivating those Christian graces which Jesus taught, and which were reiterated by Paul and other writers to the early Christians.

With grateful hearts we thank God for this redeeming Truth, which brings rich blessings for all, and we thank our Leader for her writings, which have indeed proved to be a "Key to the Scriptures."

## Singleness of Purpose.

GRACE SAFFORD FARRINGTON.

WHILE reading an article recently on the life of a famous musician, I was much impressed by the perseverance, the absolute singleness of purpose which he showed in his life work. Even as a child, although his parents cruelly opposed, he held steadily to his purpose to become a musician. The obstacles of poverty, opposition, and criticism failed to discourage him. He persevered, until to-day his name is classed among the greatest violinists the world has ever known. Yet he is but one of the many who have attained to success in spite of seemingly insurmountable difficulties.

If, then, success in every line of life depends upon hard work and perseverance, can we hope to attain to the best and highest success of all, a Christ-like life, if we indulge any indolence, discouragement, or waste of time in idle dreaming, foolish theorizing, talking instead of doing and being? Let us lay aside at once and forever the false notion that we can get into the kingdom of heaven otherwise than by earnest effort. Jesus is our Way-shower, and we are like unto ships that have no rudder, if we do not hold constantly in mind the life of the gentle Nazarene, and look to him for guidance as we humbly, earnestly, pray and work to reflect his God-like nature.

Does the ideal seem too high? Does the impossibility of attaining discourage before we start? Then let us remember that the Christ is God's great gift to the world. Jesus came manifesting the Christ and is thus our inspiration and example. Let us bravely follow in his footsteps. Let us not hesitate, though the standard be high and the pathway steep. We can attain if we will. God's promises stand sure. He is not mocked. Whatsoever we sow, that shall we also reap.

Our Leader's life has been an example of courage and perseverance. With wondrous patience she has overcome all obstacles to bring to us a gift of priceless value. She has spared herself no sacrifice to show struggling humanity that the Christ-love is practical; and that to-day, as of old, it brings physical and spiritual healing. But nowhere does she tell us that aught but patient, faithful work will make this Christ-life ours.

Let us awaken more fully than heretofore, to our glorious possibilities as the "sons of God," and remembering that, if the eye be single, the whole body shall be full of light, let us strive to hold steadily and faithfully to the example that is set for us.

By constant endeavor to overcome self, by striving always to give to others the love that blesses and heals, by holding steadily to our purpose through evil and through good report, little by little into our hearts will come a peace that the world can neither give nor take away, the peace which belongs to honest, straightforward effort. And thus will we daily manifest that "love which finds its own in another's good."

## An Old Thanksgiving Day.

O'ER well remembered paths that lead to fields of long ago,
Although my feet have lost the way nor may its windings know,
My heart turns back, as birds return to summer lands of cheer,
Or as a pilgrim, worn and gray, unto his home draws near:
My heart turns back, the slow years fade, a boy again am I,
Who lacks the wisdom of the world, but also lacks its sigh
The fire burns low, the mists steal out that hide the past away:
Again I am a little boy upon Thanksgiving Day.

No palace was my grandsire's home, a cottage brown and old,
The only wealth it ever knew was sweet contentment's gold;
All homely was our daily fare, but simple, kindly cheer
Gave it a zest that banquets lack through every later year:
Each meal began with spoken words of reverential praise
That He whose love is o'er us all was heeding still our ways.
So passed the days, remote from care, unmindful of the fray,
Till brightly o'er the waiting world there dawned Thanksgiving Day.

. . . . . .

A day of praise, a day of love, of gratitude and cheer,
It differed only in degree from others in the year,
For these were but old-fashioned folk, who walked in simple way,
And deemed that every morning brought a new thanksgiving day:
And still in dreams I see the trust that lit my grandsire's face,
The while he bent a reverent knee before the throne of grace:
And, like a song that steals adown from summits far away,
I hear the good man's prayer for me on each Thanksgiving Day.
So may I feel and humbly speak, as best a wanderer may,

. . . . . .

The thanks that are no formal words, upon Thanksgiving Day.

ALFRED J. WATERHOUSE.
In *Success*.

# The Lectures.

### At St. Johnsbury, Vt.

Judge William G. Ewing of Chicago, gave a lecture on Christian Science in Music Hall last week Tuesday evening [October 28]. The lecturer was introduced by Hon. Elisha May.—*The St. Johnsbury Caledonian.*

### At Brattleboro, Vt.

The followers of the Christian Science religion in Brattleboro are entitled to entertain feelings of pride at the success of their efforts to bring before the Brattleboro public the essential elements of their doctrine. The lecture by Judge William G. Ewing of Chicago in the Auditorium last evening [October 30], under the auspices of the Christian Science Society of Brattleboro, drew an audience that packed the floor and the first balcony.

*The Vermont Phoenix.*

### At Nashua, N. H.

A goodly company assembled at City Hall Friday evening [November 7] to listen to a lecture upon the subject of Christian Science by Judge William G. Ewing of Chicago. The lecture was given under the auspices of First Church of Christ, Scientist, of this city. A larger or more cultured audience has not greeted any speaker here for a long time. Judge Ewing presented his subject in an earnest, eloquent, masterly manner, which delighted every one of his hearers.—*Nashua Telegraph.*

### At Batavia, Ill.

Carol Norton, C.S.D., of New York City, delivered a lecture on Christian Science Friday evening, October 31, under the auspices of First Churches of Christ, Scientist, of Batavia and Geneva.

The lecture was listened to with deep interest by about three hundred people, a number of whom were present from Geneva, Elgin, and Aurora.

Mr. Norton was introduced by Miss Willietta McCracken, former First Reader of the local Church.—*Correspondence.*

### At Buffalo, N. Y.

An illustration of the broad-minded element in Buffalo's makeup was given yesterday afternoon [November 9], when the Rev. L. M. Powers, a Universalist minister, introduced the Rev. Arthur R. Vosburgh, a Christian Science lecturer, to a splendid audience at the Teck Theatre. His lecture was given under the auspices of Second Church of Christ, Scientist, of this city.

The Teck Theatre was filled. Some of Buffalo's best thinkers were in the audience. The boxes were occupied by Christian Scientists from Rochester, Lockport, Niagara Falls, and other nearby cities.—*The Buffalo Express.*

### At Schenectady, N. Y.

There was a large audience in the Van Curler Opera House yesterday afternoon [October 26], on the occasion of the lecture by Judge William G. Ewing of Chicago, on "Christian Science: Physician and Redeemer." Colonel Samuel R. James introduced Judge Ewing, as follows:—

I may be criticised by some of my orthodox friends for accepting the honor of introducing the distinguished gentleman who is to talk to you about Christian Science. I should deem myself narrow-minded and bigoted not to have accepted the distinction. There are church accommodations here for about five thousand people. There are twenty-five thousand more who have not attended church to-day, and this is undoubtedly due to the fact that the people are dissatisfied with the old religion on account of advanced thought. I am in favor of anything that will make people better, morally, mentally, and physically. If Christian Science will do this, then I am in favor of Christian Science.

It is my pleasure to introduce to you Judge Ewing, of Chicago.—*The Union.*

### At Galesburg, Ill.

Before a large audience which filled the lower floor and balcony of the Auditorium yesterday afternoon [October 26], "The Teachings of Christian Science" were explained by Carol Norton of New York.

His lecture, dealing with the tenets of this new faith, was closely followed and proved interesting and instructive to unbelievers as well as believers.

The speaker was presented to the audience by F. H. Sisson, editor of the *Evening Mail*, who spoke in part as follows:—

A most casual study of the world's history reveals the fact that the philosophers and thinkers of all ages have been reaching out toward the infinite, striving to satisfy their longing for higher things, endeavoring to fix and interpret the soul of life and to define their own sense of deity.

Embodying in his teaching the highest thought yet brought to men, the Christ came with his matchless lesson. One who speaks to us with the avowed purpose of helping mankind to express and learn the lesson and life taught by this God-like man is deserving of our attention. One whose life's effort is to bring better health and better morals to mankind merits our sympathy and friendly interest. I therefore take pleasure in presenting to you Mr. Carol Norton of New York.—*Galesburg Mail.*

### At Indianapolis, Ind.

A lecture on Christian Science was given at English's Opera House yesterday afternoon [November 2] by Carol Norton of New York. The lecture was heard by a large audience, many of the members of which are adherents of the faith and many others were drawn by favorable reports concerning Mr. Norton.

Mr. Norton was introduced by J. Guy Hough, of First Church of Christ, Scientist, of this city, who spoke in part as follows:—

The passing centuries have witnessed many remarkable changes in the thought of man; truths which have always existed but to which man's apprehension was unawakened, have been from time to time revealed, applied, antagonized, fought, and accepted.

The advent of Jesus of Nazareth did not change God's will or law toward man, for God is "the same yesterday, to-day, and for ever," but it did change man's conception of God and revealed a Christianity that has made modern civilization a possibility.

Is it strange that the struggle which has cast off, in a degree, human limitations in material things, should result in a higher conception of God, the Author of such revealed goodness to man? Is it strange that a right apprehension of Him and His law as taught and demonstrated by Jesus and again made practical through the teaching of Christian Science, is casting off the bondage of poverty, sin, and disease?

Christian Science, discovered and founded by Mary Baker Eddy, has freed thousands of helpless sufferers from every condition of misery, and revealed and taught as demonstrable knowledge the fact that God is with us now, and is an ever-present source for the solution of every problem in the lives of men.—*The Indianapolis Journal.*

### At Milwaukee, Wis.

A well-dressed and earnest audience filled every seat in the parquette and first balcony of the Pabst Theatre last night [September 26], and overflowed into the gallery to hear Judge Septimus J. Hanna expound the doctrine of Christian Science.

Organ music preceded the introduction by James G. Flanders, who said in part:—

The speaker whom I have the pleasure of introducing to you this evening is one who has attained distinction both at the bar and upon the bench. Although I must explain that I am not one of those who have accepted the faith of which he will speak, yet I believe that it is the duty of every thoughtful man, and especially of the members of the profession to which I belong, to seek the truth. That colorless intellectuality which makes a good judge is of great assistance in the search for truth and in the sifting of errors from truth. It is a man of such endowment whom I have the pleasure of introducing to you.

*The Evening Wisconsin.*

### At Burlington, Vt.

Judge William G. Ewing of Chicago spoke to a large audience in the Howard Opera House Sunday afternoon [November 2] on "Christian Science: Physician and Redeemer."

The Hon. Robert Roberts introduced the speaker in substance as follows:—

In contemplation of the Infinite and the search after religious truth, the mind wanders far and wide. It has always been so. No repressive influence has ever been able to bind it or to circumscribe it. From time to time some prophet, true or false, is heard to cry, "Eureka! I have found it—a new light for the soul; from the heights I have spied out a happy land of promise where many wanderers may find rest and peace." It is generally wise to give ear to the new voice. It may bring us glad tidings; but if not, it will only add one more to the many disappointments of the inquisitive spirit. Many of us cannot understand precisely what Christian Science is. A distinguished gentleman has come to tell us about it. I bespeak for him a fair hearing.—*Burlington Free Press.*

### At St. Paul, Minn.

A large audience listened to the lecture on Christian Science at the Grand Opera House yesterday afternoon [November 2] by Mrs. Annie M. Knott, C.S.D., of Detroit, Mich. The lecture was given under the joint auspices of First and Second Churches of Christ, Scientist, of this city. Mrs. Knott's subject was, "The Religious and Scientific Value of Christian Science."

Hiram F. Stevens introduced the lecturer and said in part:—

You will excuse me for personalities; for, while I do not think it necessary to apologize, I wish to explain, for some might think it wrong for the son of the president of a state medical society of allopathic physicians, who is an officer of a regular church organization and dean of a regular institution of legal training, to appear in any connection with what is supposed to be irregular theologically as well as medically, by those who are considered to be qualified to know. But one must recognize in this great republic the right of people to be wrong; if they are wrong, the right of people who are thought to be wrong to convince other people who thought they were right, that they were wrong. It is this that has induced me to accept the very great honor of presenting to an audience of this kind, whose appearance alone is evidence of an intelligence of the highest order, the gifted woman, Mrs. Annie M. Knott, who will now address you.

*St. Paul Despatch.*

### At Fremont, O.

A large audience assembled in the Opera House Monday evening [November 10] and listened to an interesting and able lecture by Edward A. Kimball, C.S.D., of Chicago, on Christian Science. He was introduced to the audience by Ray Lutz, First Reader in First Church of Christ, Scientist, Fremont, under the auspices of which the lecture was given.

*Fremont News.*

### At Peoria, Ill.

A fair-sized audience assembled in the Grand Opera House last night [November 4] to hear the lecture of Judge Septimus J. Hanna on Christian Science. It was in the main one of the most intelligent audiences which have ever greeted a speaker in this city.

Judge R. H. Lovett introduced the speaker in part as follows:—

The greatest question which has ever been propounded to any man, is that question which Pilate asked our Master and which has come ringing down through the ages, "What is Truth?"

I believe that every honest man is a seeker after truth. As Christian Scientists, we believe that when the average man condemns anything, he does so because he believes it is not true; and we also believe that when any man thinks he is denouncing Christian Science, he is mistaken, and is simply raising his voice against his own false notion of what Christian Science is.

And so we have invited the public here to-night to listen to one who speaks with authority as to what Christian Science really is.—*Peoria Herald-Transcript.*

### At East St. Louis, Ill.

At the City Hall auditorium last night [November 2] a large audience was present to listen to a lecture on Christian Science delivered by Judge Septimus J. Hanna. The speaker was introduced by John J. Faulkner, who spoke in part as follows:—

I believe in greeting in a spirit of tolerance and endorsement any organization that has for its object the association of persons of intelligence and thought; has in it the essentials of truth and right living, and for its ideal, the making of the world brighter and better.

The explanation of the doctrine of Christian Science, as I understand it, is an effort to apply the doctrines and life of Christ himself to every possible phase of human life, physical, moral, and mental. Some of us may not be able to go to the extreme in the application of this doctrine, but the effort to follow and emulate in every walk of life the teachings and character of the lowly Nazarene must result in better and higher ideals, better men and women, more perfect individual and community life.

In the spirit of tolerance and the willingness to hear and receive the truth from any source we are gathered together this evening to listen to one high in the counsels of the Church of Christ, Scientist. Let us take to our hearts the good from whatever source it may come, remembering that truth will live no matter how fiercely it may be assailed by prejudice and intolerance.—*East St. Louis Journal.*

### Lectures at Other Places.

Silver Creek, N. Y.—Judge William G. Ewing, October 17.

Amsterdam, N. Y.—Judge William G. Ewing, October 26.

St. Louis, Mo.—Judge Septimus J. Hanna, October 31.

Plymouth, Mich.—Carol Norton, November 7.

## Testimonies of Healing.

When I first came to Christian Science for help I was suffering from indigestion and could not take any solid food without great distress. The doctor told me he could not do anything more for me, as he had tried everything he knew of. I then went to a Christian Scientist practitioner whom I had met, I not knowing anything about Science. When she told me it was the way Jesus and his disciples healed, it did not seem strange to me, for I thought, why should not some one prove and practise the healing he taught in the Bible. She gave me a treatment and told me I might eat whatever was set before me if I wanted to. I did so, and have from that time to this, and that was five years ago. I wish to thank our Leader for giving us Science and Health.—E. A. F., Waverley, Mass.

The importance of being familiar with all Mrs. Eddy's writings was made clear to me in a recent experience. Malice was seemingly directed toward me so strongly that at first I seemed unable to destroy the thought. I felt condemned for reflecting it, and the fact that I reflected the malice seemed to separate me from God, thereby cutting off my source of help. Suddenly these words of Mrs. Eddy in "Unity of Good" came to me: "God pities us . . . and guides every event of our careers." I said, He pities me then, I know He pities me. With this realization of His pity I fell on my knees and grateful tears filled my eyes, for He was no longer afar off but very near to help and save. Gratitude welled up in my heart, and I thanked God fervently for this experience, inasmuch as it had drawn me nearer to Him.—Miss Elsie Kelso, Yale, Ia.

I can only express in a slight degree how much good the lesson-sermons do us. Every week's lesson seems compiled expressly for the needs of that week. Only to-day a distressing claim was healed while reading the lesson.

The Hymnal, also, is a source of harmony. Many times clouds have been lifted while singing the beautiful hymns.

During the seven years we have looked to the Bible and Science and Health for help in trouble of all kinds, we have had wonderful proofs of God's unfailing love and presence. Our three little ones are growing up sturdy and strong,—the two older ones making their own demonstrations over school work, and all three using this sure remedy for errors incident to childhood.

We cannot be grateful enough to Mrs. Eddy for giving us Science and Health.—C. B. T., Denver, Col.

We first heard of Christian Science six years ago. A gentleman who was a candidate for Representative stopped at our house one night, and I told him that my wife was suffering with a cancer. He recommended Christian Science, telling me that his son had been healed of consumption, and advised me to write to his son, adding that he would send me something to read regarding Christian Science. We wrote, and the literature came. From that time we began to think. We procured Science and Health, but we had treatment for my wife before she was healed.

The benefits we have received since that time in our family are too numerous to mention here. Through Mrs. Eddy's labor of love for us, we have been able to help others, both morally and physically.

I will relate a case of healing which occurred with our fifteen-year-old boy last spring. He was working out on a ranch and was taken with a severe form of typhoid fever accompanied with inflammation of the bowels. He was sent home on Friday about 6 A.M., and called for treatment. We sent for the practitioner and she arrived about twelve o'clock; he was helped immediately. The demonstration was not perfect, however, until Sunday morning about nine o'clock.

I am thankful to God for the revelation of this saving Truth, Christian Science.

Marion Armstrong, Amarillo, Tex.

As the annual Thanksgiving season draws near I am reminded of my own indebtedness for blessings received, and that some expression of thanks for the help received from articles in the *Journal* and *Sentinel*, should be given, one especially in the *Sentinel* of May 29 entitled, "Examination."

A woman living in one of our far western states, up in the mountains, fifty miles from a railroad and twelve miles from a post-office or store, had received the *Sentinel* sent by some friend, and an old copy of the *Journal*. She was so impressed by the wonderful cases of healing in both of them, that from the list of the names of practitioners, she selected one, an entire stranger and far away from her, asking help for a dear friend, that he might be healed, and again be able to take care of his family. She also expressed a great desire to see a copy of Science and Health. She was not able to buy one, as there was nothing for her to do there by which she could earn money, for all were as poor as she was. Some literature, a copy of Science and Health, and the *Quarterly* were sent to her. The expressions of gratitude for them were very touching. She said the Bible was made very plain to her through the study of the lessons and Science and Health; that they were feeling strong and well and full of courage. All is changed with them. She and her husband are intensely interested and are trying to live the teachings of Christian Science. My heart overflows with gratitude to God and to our Leader for this priceless blessing—Christian Science, and my daily prayer is, that I may so think, speak, and live the Truth that others may see that it is the same Truth which Jesus taught and lived, and that it does heal the sick and sinning.—A. N., Springfield, Mass.

During the two years and eight months of my experience as a student of Christian Science, I have had many proofs of its wonderful healing effects, but that which was the most positive proof occurred quite recently. My father was with us on a visit during the summer. One evening while in a building quite strange to him he made a misstep and fell from the top to the bottom of the stairs, landing head downward on the stone pavement. I was in an adjoining room and heard the noise, and surmised at once what had occurred. My heart almost stopped beating, but only for an instant. I quickly recovered myself and felt that I had a duty which required all the strength I could command. I rushed down stairs and found my father lying limp and apparently lifeless on the walk with a contusion in the head nearly as large as the palm of my hand from which the blood was flowing in a heavy stream. A large crowd had gathered around him and all manner of kindly assistance was offered. On my way down the stairs I cried aloud that error or evil had no power, and when I reached the sidewalk, I stood before that crowd with a feeling of mastery and power which no one could ever describe. For the first time in my life I realized what it meant to "speak as one having authority." I waved the crowd aside, thanked them for their offers of assistance, and then gathered the limp form of my father in my arms. In less than five minutes of treatment he revived and was strengthened sufficiently to walk home with me, a distance of about four squares. It took all night to stay the flow of blood, but the next day he did not suffer from any weakness. The soreness in the muscles was so bad that he could not move, but in about thirty-six hours from the time he fell he again walked to the store with me, and, excepting

Digitized by Google

a scab which had formed on his head, was entirely well and no bad effects. Considering his age, which is seventy-three, those who saw the accident must surely have considered it a miracle. To me it was another very great evidence that the healing power of divine Love is ever-present and omnipotent, and needs but to be understood to be a very present help in trouble. We were brought up in the Jewish faith and always adhered to it very strongly, but Christian Science has given us so many proofs that it is true Christianity, that most of our family have accepted it as the real religion wherein the living God is understood and demonstrated; wherein there is no creed or human theology, but God is the Father of all and all men are brothers. Besides the physical healing, Christian Science has given us a spiritual awakening and a desire for prayer which we never felt before. We are striving hard to overcome the thoughts of evil in order that we may be pure and thus exemplify the true God-likeness. Christian Science teaches that to be wholly separated from evil doing and thinking will place us in the rightful state known as the kingdom of heaven. For the understanding of God we have received through the aid of Christian Science, and for the manifold blessings it has showered upon us, I have a heart full of gratitude and love for our Leader, Mrs. Eddy. May God bless her and quickly bring to all mankind the understanding of her divine message.

JACOB S. SHIELD, Warsaw, Ind.

---

I was not brought to Christian Science for any special physical healing, but came, as an humble investigator, searching for the Truth,—reaching out and feeling after God.

As to my church, I thought I was fairly well satisfied, since I could not see that any of the others gave any more comfort than did mine; however, down in my heart there was that lack of something which satisfies.

That peace of mind I did not feel, but the opposite,—constant fear and dread of some sudden and unexpected (or expected) calamity. As I read "Science and Health, with Key to the Scriptures," and studied, and read again, the Truth, as shown us by Mrs. Eddy, began to dawn on me. I continued to read, both my wife and I, and we were soon able to demonstrate this Science for ourselves, in our family and in our every-day life, which to us is satisfying, beyond what our church had ever given.

We have had some convincing demonstrations, and with us Christian Science is no guess-work, but an absolute demonstrable fact; and to say that we are grateful for this new-old Truth, after years of searching and groping in worse than Egyptian darkness and bondage of material belief, does by no means express what we feel for the revelation which is making us free, and revealing to us our true birthright.

I have come to realize that if the one command of the Master, to go and preach the gospel, is to be carried out, then the others are of like importance—"Heal the sick, cleanse the lepers, raise the dead, cast out devils."

I believe that all the churches are influences for good; that they are stepping-stones to a higher spirituality; but I am more than grateful to feel and know that God is not confined to the four walls of any church, but that He fills all space and is as really present in our humble little home, as in the most elegant churches.

I realize, as the Scriptures declare, that "The hour cometh, and now is, when the true worshipers shall worship the Father in Spirit and in Truth."

W. W. SHARP, Deposit, Tenn.

---

The strength of resolve, which afterwards shapes life and mixes itself with action, is the fruit of those sacred, solitary moments when we meet God alone.

F. W. ROBERTSON.

## Announcements.

### Science and Health Revised.

Science and Health in Levant binding will hereafter be printed on heavy Oxford India paper, making a book about an inch thick. The size of page will be the same as that in the cloth binding.

Science and Health bound in sheep will hereafter have gilt edges and be printed on the same paper as that used in the cloth edition and have the same sized pages.

Science and Health is also bound in leather, stiff beveled boards, gilt edges, printed on the same paper as the regular cloth edition, making a beautiful volume for libraries and for Readers in churches.

| | |
|---|---|
| Price, single copy, prepaid . . . | $4.00 |
| Twelve or more to one address, each | 3.75 |

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

In the Sermon on the Mount there is a Thanksgiving proclamation attributed to that Son of Man who laid bare the most precious secrets of the human heart. It is a wonderful proclamation; and it cuts squarely across all the selfish instincts and narrow purposes of the people who are just good and nothing else. It holds its place supreme in religious literature, with no second but Paul's matchless song of love. It makes all ordinary invitations to praise and prayer seem commonplace and trivial. To those who are on the heights of power and prosperity, it brings to view principles and treasures compared with which all their worldly gains are not worth the mention. At the same time, by a similar contrast, it makes those who have suffered much and long, forgetful of their anxieties, and even happy, as they see the beauty and grandeur of that which rises behind the vicissitudes of their fortunes, and gives human life its meaning.

The great preacher did not shut out the dreary routine of the common life nor forget its tragedies. He knew the shame, the sorrow, the terror, which afflicted the men and women about him. But he does not pity them, he does not complain of the wrongs they suffer. He does not even promise them present deliverance and redress, and the punishment of those who afflict them. But, as he is set before us in the simplicity of the narrative, he stands before them tender, cheerful, courageous, and tells them how blessed they are. "Happy are ye, sons and daughters of men; for yours is the kingdom of heaven. You shall see God. You shall be called His children. Rejoice and be exceeding glad." And the wonder of it is that poor, sick, suffering, sorrowful human creatures heard his word and believed him. They did not turn away in despair with the complaint that his optimism did not feed the hungry, nor bless the sorrowful, nor bind up the wounds of those who were persecuted for righteousness' sake; but in some wonderful way they accepted his statement of truth, and went away fed and healed and comforted, and full of the spirit of thanksgiving.—*The Christian Register.*

The Right Rev. Thomas Frank Gailor, S.T.D., D.D., Bishop of Tennessee in a sermon in *The Church Standard* says:—

"'It is a tremendous thing to believe in one God,' and to dream of what that means for the world. But what about man? What about ourselves? Is this God a vast terror of might and majesty incomprehensible; bringing to pass His inevitable purpose, through pain, loss, misery, destruction, without pity or regret; gripping the nations in iron grasp; crushing them like crumpled leaves; using man as He uses ten thousand other instruments; stalking across the stage of the world, serene, indifferent, unconcerned—only glorious in the sweep of His inexorable power?

"It is, indeed, a tremendous thing to believe in one God; but such belief is not incompatible with awful hopelessness—with pitiful despair.

"Surely it must be plain to every mind that through our highest literature, as well as through our average thought and our serious enterprise and activity, there are shining lines of faith and hope, converging to a new and wonderful conception of man and of the world. They may not be labelled 'Christian,' but they are not anti-Christ. They may not always appear rational or trustworthy, but they are not intentionally irreverent. In some new way with some fresh and startling impulse, the idea of the spiritual has laid hold upon the world. Statesmanship has become avowedly religious. Human governments with quickened consciousness are dedicated to God. The thought of the unification of mankind is leading up to and compelling the thought of God. Man, in all his ventures, ambitions, activities, aye, in his sorrows, defeats, discouragements, is admittedly the child of God."

It is but necessary to pass from one church edifice to another in the large Social Democratic centers, notably in Berlin, to observe the vacant seats, the apathy of both congregation and preacher, and to realize how much Germany is in need of a revival of the genuine spirit of Christianity. . . . The modern German drama, with its religious commentaries and psychological aspects, and the modern German philosophy, still under the influence of Neitzsche and Schopenhauer, are also inimical to the orthodox Church. In the modern German drama, as written by Philippi, Sudermann, and Hauptmann, and reflecting the attitude of the skeptical Norwegian school, there are both disguised and open attacks upon orthodoxy as represented by certain individual characters. . . . While leading theologians, scientists, and philosophers allied with the prominent universities are endeavoring to harmonize progressive views with Christianity, the tendencies of the universities of Berlin, Heidelberg, Königsberg, Bonn, and Strassburg would indicate that the orthodox Church is steadily losing ground.—*The Outlook.*

Edward Everett Hale, D.D., says in *The Christian Register:* "To every man it has been made clear that God is on his side, that God is his Father, and he is God's child. This was not clear in 1801. It is in the changes in the spiritual life of men up to 1901 that you have the secret of that advance in vital power which accounts for the advance in physical resources. This accounts for the enlargement of all men's plans and possibilities. It explains so far the reasons why the world of 1901 is a better world to live in than the world of 1801. Even the faithful Christian of the beginning of the century was harrowed and haunted by his feeling that God was angry with the world which He had made, and might well be sorry that He had placed any men or women in it. To speak simply, men were tangled up in every effort to get forward by the twisted stems of their fathers' theology. It was like a man stumbling and sometimes falling in woodland when he catches his feet in greenbrier or moosewood."

If one were asked to point out the peculiar characteristic of the Christian life of our time he would not go far wrong in calling attention to the sombre and joyless tone of much of our individual and corporate Christian experience. The note of joy in believing, if not lacking, certainly is not dominant.

The mood of joy can only spring from a presentation to the mind of those truths to which it is related, but that consideration opens the question whether the average presentation of the Gospel places sufficient emphasis upon those truths which awaken peace and joy and love. When the Apostle spoke of "joy in believing" he must have had in mind certain truths that are nominally related to this emotion. He must have thought of the Gospel primarily as a message of good news.—*The Watchman.*

THE SUPREMACY OF LOVE.—The assertion that love is the greatest of all spiritual gifts has come to be a universal teaching of the Christian Church. Here all shades of opinion unite; and all are orthodox in their creed concerning love. Its supremacy becomes manifest when we look to God, and remember that He is revealed unto us as love. Love in man is the Godlike thing. The divine in him is manifest in proportion as love rules his life. Love springs forth from the very center of man's being. Its seat is the very shrine of his nature. It gives efficiency to all other gifts; without it they become void and useless. It sweeps outward as far as life stretches in its possibilities.

*The Christian Advocate.*

*The Church Standard* in its "London Letter" thus reports Canon Henson at the Church Congress on the question of "Union:" "Then came a vivid picture of what the speaker believes to be among the results of sectarianism. 'The awful solemnity of religion is obscured in the bustling strife of sects; there is an eager denominational press sustained by, and sustaining an exorbitant spiritual vanity, never slow to point the most satisfying moral, and in plain terms to advertise the religious concern. . . . The higher elements fall into the background because they are comparatively useless in the struggle for denominational existence. . . . Fitness is determined rather by resolute worldliness than by spiritual excellence.'"

When Jesus Christ endured his great testing in the wilderness, the record not only says that he was "led by the Spirit" to the place of trial, but also that he was "full of the Holy Spirit;" and so it was that he returned into Galilee "in the power of the Spirit." And in this day of trial, when the Church is being tested as never before in all her history, there is peculiar need that she be "filled with the spirit." . . . If we are to pass through this period of criticism and skepticism and investigation, when the very foundations are to be overturned and scrutinized, and if we are to come out unscathed, then it must be through the presence and power of the Holy Spirit in an eminent degree.—*The Examiner.*

*The Examiner* says: "Some good people are very much concerned lest they be not prepared to die. It is far more important that we be prepared to live. Right living is, in fact, the only safe preparation for death."

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 33 pp.

Hearings on Proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Buswell Trial. 24 pp.

The Christian Science Movement. 22 pp.

Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

PRICE:—One copy or more, six cents each, twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Expressions Concerning Christian Science. Rich Bessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred $1.25, one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid, one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

**For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.**

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

F. H. Newell, chief hydrographer of the Geological Survey, has decided on seven sites which he will recommend to the Secretary of the Interior as suitable for the purposes of irrigation reservoirs to be constructed by the Government under the recent Irrigation Act. These lie on the St. Mary's River and the Big Horn in Montana, the Gunnison River and the Grand River in Colorado, the Gila and Salt Rivers in southern Arizona, the Carson and Turkee Rivers in Nevada, and the Sweetwater in Wyoming.

Professor Asser, the Dutch jurist who has been arbitrating the claims of American sealers for the seizure of their vessels by the Russian government about ten years ago, has delivered his award in favor of the United States. The amount awarded is $101,270 with interest; the amount demanded was $512,443.

According to the statement of Secretary Hay all the essential points involved in the Panama Canal treaty have been arranged, and it could be signed at any time. It is thought that the delay on the part of Colombia is for the purpose of raising the purchase price.

It is stated that Queen Liliuokalani will attempt to secure from Congress $3,000,000 for the crown lands in the Hawaiian Islands, which were taken over at the time of annexation. A bill will probably be introduced in Congress for her benefit.

The report of the director of the mint shows that during the last fiscal year there were coined more pieces than during any previous year, but that their value was less than for 1901.

The number of names on the pension roll for the fiscal year ending June 30, according to the annual report, was 1,041,687, the amount paid in pensions $137,504,268, the total expense of the department $141,090,428.

**Foreign.**

In Berlin three hundred Americans celebrated Thanksgiving Day by dining together at the Kaiserhof. Retiring Ambassador White, who presided, proposed the healths of the German Emperor and President Roosevelt. At London nearly five hundred Americans dined at the Hotel Cecil under the auspices of the American Society. The company included Ambassador and Mrs. Choate, all the members of the embassy staff there, Robert McCormick, American Ambassador to Russia, Consul-General Evans, the Rt. Hon. A. A. Asquith, Lord Reay, Lord Fairfax, Field Marshal Lord Roberts, and Sir Henry Newman. Toasts were proposed to the King and to President Roosevelt with equal enthusiasm. At Paris the day was quietly observed by the American colony. At Rome the day was announced by the display of the American flag over the houses of the Americans. At Vienna about two hundred attended the reception at the Hotel Bristol given by Charge d'Affaires Hale and Mrs. Hale.

A large delegation of farmers under the auspices of the German Agricultural Society intends to come to the United States in April for a three months' tour to study American agricultural methods. The German embassy at Washington has negotiated the affair with the Agricultural Department, which will furnish a guide for the entire trip, the German government defraying his expenses. Special attention will be given to the dairy farms at Baltimore; to the Agricultural Department at Washington; to the stock yards at Chicago, St. Louis, and Omaha; to the beet-sugar industry in Nebraska; to the irrigating systems of Colorado; the fruit farms of southern California; the wheat farms of the northwest; the grain elevators of Chicago; and the agricultural experiment stations en route.

After forty-five days' discussion of details, the education bill has passed the committee stage in the House of Commons, the final vote that the bill be reported being 212 to 83. Notice was given that several amendments would be made in the report stage of the measure. The bill has the support of the Anglican Church, but is strongly opposed by the Non-Conformists of England.

Emperor William in his farewell audience to Ambassador White at Berlin on Thanksgiving Day, presented him with the Gold Medal of the Empire for science and art, an honor conferred each year upon the German or foreigner, who, in the opinion of the government, is best entitled to it.

Lord Lansdowne, the British Foreign Secretary, has handed to the Chilean and Argentine ministers the award of the British arbitration commission in the boundary dispute between Chile and Argentine. The award is a compromise. Chile's chief contentions are not allowed.

The Czar has conferred the Grand Cordon of the Saint Alexander Newysky order on Ambassador Tower, and the French government has made him a grand officer of the Legion of Honor for his book on the Marquis of Lafayette in the American Revolution.

The members of the imperial commission to investigate German trusts have requested the government to extend their inquiry so as to include the important foreign trusts, such as the American oil and shipping trusts.

The evacuation of Shanghai by the foreign troops began last week, Japan being the first government to withdraw its garrison.

Colonial Secretary Chamberlain is to make a visit to South Africa to study the conditions existing there.

**Industrial and Commercial.**

A consolidation of the Union Steel Company with large works at Donora, Pa., and the Sharon Steel Company and subsidiary interests, has just been arranged. The new concern, to be known as the Union Steel Company, will have a capital of forty million dollars and will be the strongest independent company in existence. It is rumored that this company will either be merged eventually into the United States Steel Corporation or else co-operate with it in some working arrangement.

It is estimated that during the twenty-four hours of a recent Sunday there were moved in and out of Pittsburg 929 freight trains, consisting of 46,225 cars carrying a tonnage of 1,750,550 tons, relieving in consequence the greatly congested terminal freight yards.

A movement supported by the Canadian government is said to be on foot to erect in Canada subsidized flouring mills for supplying the flour market of the United Kingdom and the Continent.

The white pine lumber sawing season of the northeast is over. The shortage of three hundred million feet is likely to result in high prices.

**General.**

In accordance with a vote by the last general convention a commission was appointed to canvass thoroughly the Protestant Episcopal Church in the United States of America—the present official designation—to ascertain whether that body wishes to change its name. This canvass will be conducted through the various diocesan conventions, about eighty in number, and it is desired to have the results of the canvass in the hands of the committee in time to report at the next general convention. Many names have already been suggested.

The laying of the corner-stone of the new Public Library took place in New York recently. This marks the formal step in the final result of a long series of negotiations, by which the foundations provided by the generosity of the Astors, Mr. Lenox, and Mr. Tilden have been consolidated through sacrifices on the part of the families represented and the liberal spirit of the boards of trustees of the different foundations.

The deepest sounding in the Carribean sea lies south of the Great Cayman and is 3,428 fathoms. The deepest known place in the South Atlantic is a spot of 4,030 fathoms, eleven miles south of the equator, 18 degrees, 15 minutes west of Greenwich. The deepest sounding on record is in the North Pacific, where Lieutenant Commander M. H. Hodges, U. S. N., measured a depth of 5,269 fathoms.

In 1880 the value of farm products in the United States, south, exceeded that of manufactured products by more than two hundred million dollars, while in 1900 manufactures exceeded farm products by more than one hundred and ninety million dollars, although meantime the agricultural population increased thirty-six per cent.

The lead keel of the new cup defender, now building at the shops of the Herreshoffs, Bristol, was moulded last week. One hundred tons of lead were run into it. The keel is said to be deeper and larger than that of the Constitution. Shamrock III. is expected to draw one foot more than her predecessor.

The aggregate capitalization of the industries at Pittsburg, Pennsylvania, is more than two billion, five hundred million dollars. The production of steel in Pittsburg in 1901 equalled half that of England, more than that of Germany, twice that of France, five times that of Russia.

According to German statisticians, the United States stands fourth in the volume of import and export trade for 1901, with $2,118,000,000 in value. Great Britain ranks first with $4,165,000,000, the British colonies second, and Germany third.

Professor Favaro, the Venetian, declares that the results of his researches into the correspondence of Galileo with his intimate friend, the Venetian patrician, Sanuto, establishes beyond question that it was Galileo who invented the thermometer.

## Selected Articles.

### Christian Science not Pantheism.

To the Editor.

In your issue of September 7, I find an article under the caption "Religious Pantheism," being a report of a lecture delivered by Rev. J. L. Murphy.

In this lecture Mr. Murphy undertakes to elucidate imaginary connections between Christian Science and Pantheism, and from a basis of misconception and misunderstanding of his subject endeavors to set forth "fallacies" and the "false philosophy" of Christian Science.

Starting from wrong premises his conclusions are necessarily faulty, and betray the superficial nature of his information. Christian Science is, as its name indicates, a science, the Science of Christianity. Its text-book is "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. This text-book teaches certain clearly demonstrable, and therefore incontrovertible, facts, which no other work save the Bible has ever taught with reference to God, man, and the universe.

Mr. Murphy's claim that "Christian Science is built upon the philosophy of Spinoza" is without foundation and incapable of proof. Where is it argued that Spinoza or any other philosopher or teacher has been enabled to discover, found, and teach a perfectly demonstrable system of healing the sick and sinful through their understanding of God's power and ever-presence? The alleged points of similarity between the teachings of Spinoza and Mrs. Eddy, upon which Mr. Murphy bases his claims, are the statements: "God is All," and "God is Substance."

I would call his attention to the fact that the statement "God is All" antedates Spinoza, having the authority of Scripture, thus bearing out Mrs. Eddy's statement: "The Bible was my only text-book," and its correlative statement: "No human pen or tongue taught me the Science contained in this book, Science and Health; and neither tongue nor pen can ever overthrow it" (Science and Health, p. 110).

Christian Science teaches that God and His ideas, reflection, or creation, constitute the only reality, the only substance. Genesis, 1 : 27 reads: "So God created man in his own image, in the image of God created he him; male and female created he them." And again, verse 31: "And God saw everything that he had made, and, behold, it was very good." The Bible also teaches, "God is Spirit," hence it follows that man, made in God's image, is necessarily spiritual.

Mr. Murphy has fallen into the common mistake of supposing that substance is necessarily matter, hence he reasons that a system which claims "God is substance" means "God is matter," and by reason of this claim is pantheistic. This reasoning is faulty because based upon an erroneous hypothesis. Paul said, "Now faith is the substance of things hoped for, the evidence of things not seen." It is not claimed that Paul meant "Faith, being substance, is material, simply because it is substance." Who ever saw, felt, or heard of faith materially?

Paul recognized the reality of substance, that it is spiritual, not material. It is not very strange that one ignorant of its teachings should confuse Christian Science with materialism or Pantheism; because the word "substance" is ordinarily associated with matter or body, and it is hard for a materialistic thought to grasp the idea of spiritual substance. But be that as it may, Christian Science is entirely separate from, and is not based upon, any other system of religious or philosophical thought, and is the very antipodes of Pantheism.

Mrs. Eddy says in "Christian Science *vs.* Pantheism," "At this period of enlightenment, a declaration from the pulpit that Christian Science is pantheism is anomalous to those who know whereof they speak—who know that Christian Science *is* science, and therefore is neither hypothetical nor dogmatical, but demonstrable, and looms above the mists of pantheism higher than Mt. Ararat above the deluge."

And again, in Science and Health, page 110, Mrs. Eddy says,—

"No analogy exists between the vague hypotheses of Agnosticism, Pantheism, Theosophy, Spiritualism, or Millenarianism, and the demonstrable truths of Christian Science; and I find the will, or sensuous reason of the human mind, to be opposed to the divine Mind, as expressed through divine Science."

Mr. Murphy's presentation of the Christian Science "creed," as he terms it, would not be recognized as such if met alone by any Christian Scientist. It is simply a few disconnected and garbled sentences from Science and Health, with an explanatory rider of his own attached to each, which utterly perverts the real meaning.

### The Contagion of Health.

To the Editor.

"Catching health" is an admirable way of putting the truth. Your editorial under that heading hit upon a great truth. Health is indeed "catchable, contagious." Sickness has always been more contagious than health because more people have believed in the former than in the latter. But things are changing. The world is so tired of diseases that are not healed and death that is not checked, that it is turning, in its natural quest for remedies, away from *materia medica* to mental remedies. God is guiding that quest. The Gospel of health and holiness, brought, in His name and by His Son Jesus Christ, is commencing to transform this pain-racked planet of ours.

"Don Malaria," as you style that popular disease, is a lie that nestles in human belief. It is a belief that one day a man has a fever and the next day he has a chill. Man is the image and likeness of God and cannot suffer from inaction, overaction, and reaction; and when he can realize that truth about himself the malaria will disappear. If, as you say, one third of the English-speaking colony in the City of Mexico is in the "iron grasp of Don Malaria," you are simply voicing the old beliefs of the past. Let people stop thinking along such low levels if they would

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

find themselves well and without need of quinine or tonics. Why do not the doctors catch malaria, small-pox, and other contagious diseases? Because they do not fear them. If they will teach their patients not to fear, they can be healed without medicine. The newspapers, too, are to blame for the spread of contagion. They publish names of diseases that only exist in the human thought, giving them real power and place instead of crushing them out of the public thought. They create mental pictures that are manifested in their readers.

Christian Scientists are educating the thought of people away from the unprofitable habits of the past. People may not understand how it is done, but how many things in our daily experience lie too deep for our human philosophy! We accept them because we see the results. In the secret of our own home we can realize the wondrous truth taught and lived by Jesus Christ and left us as a deathless legacy. There are very many people in Mexico who are making denials of error and declarations of truth, feebly perhaps, but they are ridding themselves of sickness. One cannot laugh away something that is producing such practical results in our midst. God does the healing in each case, and one cannot laugh away God.

It is no argument against Christian Science that so few, comparatively speaking, have accepted it. Every truth has had its pioneers, its day of small things. Galileo, "thinking in astronomy,' was alone, but his ideal did not die with him. Newton was alone in the discovery of universal gravitation, but this secret of nature does not sleep with him under the dome of Westminster Abbey. Columbus stood alone, a pitiful, pathetic figure, at the gate of the Franciscan convent in Andalusia, begging bread and water for his starving child. That was four hundred years ago, and he was alone with his sublime thought of another world beyond the ocean. But he is not alone to-day in that thought, which has survived him. God's messengers—Galileo, Newton, Columbus, Isaiah, Luther, Wesley—were alone at first in their work; but the world long since caught up with them. In her wonderful pronouncement of Christian Science, Mrs. Eddy was alone for years. Thirty years ago, when she realized its life-giving power, she started her classes with but one person.

Health is not a condition dependent upon matter. It is predicated of mind. Our New England forefathers did not know the meaning of such words as "malaria," "appendicitis," etc. Their tastes were simple, their needs few, their food plain, their lives heroic, for they had no time to be sick. "Obedience to the so-called physical laws of health has not checked sickness. Diseases have multiplied, since man-made material theories have taken the place of spiritual truth" (Science and Health, p. 165). All is in thought. "A sick body is evolved from sick thoughts believed" (Science and Health, p. 260). Man is the image and likeness of God, as we are taught in the first chapter of the Bible, and as God has never changed, man has never changed from that condition. We must know this, however, in order to be rid of the troublesome beliefs we have carried for so many years. This is the best self-culture. It is more—it is self-preservation. If we do not daily set aside our false beliefs and become more familiar with health than with sickness, we shall continue to be the prisoners of pain.

The same rule applies to contagion. Sickness has always been more contagious than health because more people have believed in it. This is not a mere theory. As Cleveland said, "It is a condition which comforts us—not a theory." Theorizing about health will not make us well. We must apply the laws of God and then we are rid of sickness. Reverse our old way of thinking, and health will become universal. It does no good for people to make fun of these statements or disbelieve them. It is the truth involved in the declarations of Christian Science that makes free from all sickness, and that truth is self-evident to all who accept it and to them alone. This belief in contagion has never helped people; it has hurt them. Now try the opposite, and you will get an opposite result, even health. Contagion is always mental. Matter has no life, truth, intelligence, or substance of its own, so it cannot transmit contagion. "We weep because others weep, we yawn because they yawn, and we have small-pox [and malaria] because others have it; but mortal mind, not matter, contains and carries the infection" (Science and Health, p. 153).

## In Answer to Criticism.

Mr. Editor.

A recent essay on Christian Science by Rev. Luther T. Townsend, D.D., is presented as an "answer by an expert." The gentleman admits that Mrs. Eddy, the Leader of the Christian Science movement, is a woman of more than ordinary ability, and that her writings "contain sentences and aphorisms that in wisdom and rhetorical excellence would not suffer in comparison if placed alongside of some of the sentences of Arnold or Emerson." Since Dr. Townsend is a professor of rhetoric, we note the value of this admission. He also declares that a great and important truth lies at the basis of Mrs. Eddy's Christian Science theories. That he indorses the basic lesson of Christian Science is noted in the following statement: "She says correctly that God is supreme, the only Life, Substance, and Intelligence of the universe and man." Having admitted this premise, it seems strange that the gentleman could not indorse the whole of Christian Science, since every statement contained in the Christian Science textbook is a consistent deduction from that which he acknowledges to be true. Unfortunately, however, he has misconstrued a large portion of the teachings of Science and Health, and, as a matter of course, has not been able to indorse his misconception. In this, however, he does not differ from Christian Scientists, for what he has condemned is as offensive to them as it is to him. His general treatment of the subject leads us to believe that the opinion of an "expert" on Christian Science is not worth as much as the absolute understanding of a practising Christian Scientist who may not be so expert in other matters.

Mrs. Eddy has given to the world ideas which are new, but in so doing she has been careful not to intrude them upon ears which do not welcome them, nor to speak disparagingly of the good works of others. On this subject she teaches in her book, "Science and Health with Key to the Scriptures," p. 444: "Students are advised by their teacher to be charitable and kind, not only toward differing forms of religion and medicine, but to those who hold these opinions."

During a period of sixteen years I have carefully compared the teachings of Science and Health with the teachings of Christ, and have found the two identical. While our friend declares Christian Science to be un-Scriptural and un-Christian, he quotes no Scripture to prove his assertion. He declares the teaching of this Science, "God is to be understood," to be erroneous, giving his opinion that God cannot be understood, but must be merely "believed and feared." Therefore, instead of declaring Christian Science to be un-Christian and un-Scriptural, he should have said I believe Christian Science to be un-Scriptural and un-Christian; instead of declaring: "Christianity teaches that there are evil spirits and a personal devil," he should have said I believe there is a personal devil. Furthermore, inasmuch as he had nothing to give on the subject of Christian Science and Christianity but a belief, it would have been well for him to have waited for the day of understanding. He should, consistently with his admission, declare

Digitized by Google

his unfitness to challenge the correctness of the teaching of this Science concerning God, devil, disease, atonement, etc.

We fail to see wherein the public can be benefited by mere opinions on a question so vastly important as that of Christian Science. If our critic admits that he does not understand God, he must of necessity admit that he does not understand any part of Christian Science, for every statement contained in the Christian Science text-book is a consistent deduction from the Scriptural definition, "God is Spirit." After declaring that he himself does not understand God, how can he consistently declare the Christian Scientists' definition of God to be erroneous? How does he know that Christian Science defines God incorrectly, if he knows nothing at all about God, but simply believes? One may believe an error.

We will agree with the proposition that the human mind can be evil, though we may differ from our critic as to the constituency of the human mind as well as its evil. Indeed, we would declare that the human mind can be nothing else but evil. Furthermore, in proportion as it is evil, it is not mind at all. Though good and bad seem to exist in the same individual, they mix even less than oil and water. Man is himself—in his right mind—free from dementia, using the word in its broad sense, only as he has the Mind of Christ.

We will not quarrel with our friend in his belief that the devil is a person, but we are surprised, for we have found very few Bible students who retain the old belief that the devil is a person with horns and hoofs, and who disagree with Christian Science in its teaching that the devil is "evil . . . the opposite of Truth" (Science and Health).

Science and Health teaches "God is personal in an infinite sense, but not in an anthropomorphic sense." Possibly if Dr. Townsend could and would define his sense of the personality of God we might find it identical with that of Christian Scientists. If he had given the exact wording of the Christian Science text-book he would not have found so much to criticise, nor would he have found it so easy to make it appear non-scriptural if he had presented the Science itself instead of his misconception of it.

I was a member of an orthodox church when Christian Science was first presented to me, and, though I was quite ready to accept the theory of this Science, I was determined not to do so, for I believed it conflicted with the Bible. Upon searching I found some Scriptural verses which were plain statements of Christian Science, and this encouraged me. Later I found others, and again others. As my knowledge of Christian Science grew, its harmony with God's Word became more and more apparent. Now I find the entire teaching of Christ in strict accord with that of Science and Health.

Dr. Townsend declares that a Christian Scientist attempted to prove to him that she could place her hand in the flame without feeling any pain, but that a burned hand was the outcome. Then he adds: "Our friend, however, insisted that Mrs. Eddy could put her hand in fire and suffer no harm," whereupon he offered money to Mrs. Eddy to do this and other miracles. Mrs. Eddy's reply that she had wrought a greater cure, had "cured a man from the habit of opium eating," I consider a very good one. To save a man from the cursed habit of using opium is more important than to take upon herself the protection of a hand unnecessarily placed in the fire. Christian Scientists, like other Christians, have troubles enough which come uninvited, and there is no need of hunting for them. It is no part of Christian Science practice to venture into trouble wilfully or otherwise, though adherents of this Science faithfully apply their understanding of God's power and presence when circumstances force them to encounter danger. Dr. Townsend should note that the Master of Christianity refused to cast himself down from the pinnacle for the purpose of convincing the devil, and that Mrs. Eddy, wiser than her student, was consistent with Christ's example when she refused to accept the challenge. If it was not right for Jesus to cast himself down for the purpose of convincing the devil, it would not be right for Christian Scientists, his followers, to accept such a challenge for the purpose of convincing those of this age, who, though probably Christians in character, offer the identical temptation which the devil suggested to Jesus. It is an important feature of Christian Science practice to keep out of trouble as well as to work out of it.

Christian Scientists recognize that evil and disease exist in erroneous human experience, though they differ from others in their understanding of their nature. Science does not teach, however, that sin and disease can be overcome by merely denying their existence, any more than they teach that darkness can be destroyed by denying that it is an entity. As darkness is overcome by light, so sin and disease are scientifically overcome by the divine Omnipresence. Darkness is not regarded as something, but the want of something, the want of light. So sickness should be understood as the absence of health, and evil the lack of good. Evidently our friend has confounded the Christian Science healing method with what is commonly called "mental suggestion."

It is the spiritual man which Christian Scientists believe to be "eternal and always harmonious," not the mortal or material sense of man.

In its teaching, All is mind, there is no matter, this Science does not deny the existence of created things. It recognizes that all visible phenomena are real, and exist as the creations of Spirit, but are not what they seem to be to the uneducated human mind. Here our critic has failed to grasp what this Science gives in return for what it repudiates; hence his objection.

The statement, "We are never Spirit until we are God" is not a statement of Christian Science. We prefer not to accuse our critic of a misquotation, but will follow the usual method of charging it up to "typographical errors." Christian Science does not teach that man will ever become God or any part of God. It teaches that "God is Spirit," and man, in his normal and God-made condition, is the Spiritual likeness of God.

The statement, "God never forgives sin," severed from its context, does not give a correct understanding of Christian Science. While this Science fails to indorse that definition of divine pardon which some seem to accept, it is nevertheless in perfect accord with the Scriptural teaching in respect to pardon and forgiveness. In her chapter on "Prayer," in Science and Health, Mrs. Eddy declares: "Truth bestows no pardon upon error, but wipes it out in the most effectual manner. Jesus suffered for our sins, not to annul the divine sentence against wrong, but to check the sin and show that it must bring inevitable suffering." It is not correct to say that sin can be destroyed by merely thinking that it is unreal. It is acknowledging that there is nothing in it by ceasing to sin that overcomes it. Science and Health teaches: "The evildoer can receive no encouragement from the fact that Science teaches that evil is the unreality of existence; for the sinner is making a reality of sin—making that real which is unreal—and thus heaping up 'wrath against the day of wrath.' . . . Only those who repent of sin and forsake all evil can fully understand the unreality of evil." Christian Scientists fully indorse the teaching of St. John: "If we say that we have no sin, we deceive ourselves, and the truth is not in us. If we confess our sins, He is faithful and just to forgive us our sins, and to cleanse us from all unrighteousness."

It can be readily seen that he who continues in sin is not admitting it to be an unreality. He indulges in sin because he thinks there is something in it, not because he believes there is nothing in it. On this subject Mrs. Eddy teaches in her 1901 message to the Mother Church. "To

Digitized by Google

assume there is no reality in sin, and yet commit sin, is sin itself, that clings fast to iniquity. The Publican's wail won his humble desire, while the Pharisee's self-righteousness crucified Jesus.". Christian Scientists believe in the atonement and the resurrection and all else contained in the teachings of Christ, though they may differ from our critic in their understanding of these. That Christian Scientists have an intelligent and Christian understanding of how to heal through prayer is evidenced by the results which follow their prayers. The declaration on the part of one who cannot heal through his own prayers that the Christian Scientist who heals through prayer does not pray, ought not to have much weight with thinking people. It is not in good taste for critics to say to Scientists, "You are not healing through the divine power, but by the suggestion of the human mind." Who knows how the Christian Scientist heals but the practitioner himself who produces the results in question? True prayer is such a communion with God as brings the petitioner into a conscious realization of His omnipotence and omnipresence. This breaks the power of sin and disease and "sets the captive free."

Our critic declares, "Christianity says that God is the ruler and lawgiver of every realm in the universe, and that, so far as the laws themselves are concerned, apart from the evil nature in man, there is not and there never has been and never can be any conflict or opposition." With this we heartily agree. The evil nature in man is the only thing that Christian Science condemns as not being of God, and we would add that the individual misconception of the universe and the misinterpretation of its nature and constituency is by reason of this very "evil nature" which our critic repudiates. And all evil and sickness are consequent to an erroneous conception and appropriation of creation. Hence the necessity of understanding God and His creation and deporting ourselves accordingly.

Christian Science teaches that God, though unseen to human sense, is the ruler of the entire universe. In her text-book Mrs. Eddy teaches that healing the sick, in fact, all marvelous manifestations, are "not supernatural, but divinely natural." Christian Scientists believe that results which are wrought contrary to material laws are marvelous to human sense, hence properly named miracles in the Bible, but they are in perfect accord with divine law and are not by reason of a suspension thereof. When this fact is understood by all mankind, health instead of disease will be contagious.

Our critic insists that Christianity declares heaven to be a location. If this be true, why did Jesus say, "Let no man say lo here, or lo there, for behold the Kingdom of God is within you!" Heaven is God's kingdom.

This Science teaches that heaven is the state or condition of the perfect, spiritual man. Heaven is where God is, and God is everywhere present. To be fully conscious of the divine presence is heaven itself, while to live according to erroneous belief is hell. ALFRED FARLOW.

In *Chicago Record-Herald.*

## Judge Fair Judgment.

IN dwelling on one or two recent failures, the great success which Christian Science has achieved in healing the sick should not be overlooked. Thousands of people are in the world to-day who were given up to die by physicians, and afterwards healed by Christian Science. That a few failures should occur among the many successful demonstrations which attend this teaching, is not to be wondered at when we remember that even the disciples of Jesus—those who stood closest to him—were not always successful in their efforts to restore the sick to perfect health. To the ordinary observer, it is evident that Christian Science must teach sound doctrine. Its advocates are recruited largely from the ranks of those who have had the best medical care at their command, and the records of church membership in this denomination show that two-thirds of its people were in good standing in other evangelical churches before adopting Christian Science as their religious belief.

I must dispute the assertion that Christian Scientists are "ignorant and untrained." It should not be assumed that the Scientist enters practice without preparation. His line of study may differ from that pursued by a student in *materia medica,* but the standard of efficiency is none the less high and, in addition, the Christian Scientist must needs have "clean hands and a pure heart" to bring to the suffering ones that knowledge of God's love and care which is needed to restore the sick and raise the fallen.

If prayer is not to be classed among remedial agencies, the teachings of the Bible on this point will have to be rejected. Interwoven with the teaching of both Old and New Testaments, we find the doctrine that prayer is the most effectual remedy for human want and woe. The Scripture abounds with verse and narrative wherein is set forth the necessity of appealing to the most High when in sickness or sorrow.

The Christian Scientist cannot be blamed for trying to prove the teaching of the Bible on this point to be more than mere theory. Jesus proved it possible to apply a demonstrable understanding of God to the daily affairs of men, and he urged his followers for all time to do likewise. When Christian Science is better understood it will be seen that those who have been denouncing it have in reality been disputing with nothing but their own erroneous conception of Christian Science. Until that time arrives it is to be hoped that all critics will inform themselves as thoroughly as possible before attacking this Cause.

ALBERT E. MILLER.

## The Quality of Faith.

To have faith in immortality is not merely to be of the opinion that men will live after death. It is to be possessed by the conviction of immortality; it is to live as an immortal; it is to measure all successes and all defeats, all joys and sorrows, all past disappointments, present duties, and future achievements, by their relation to an eternal life. It is never to grow old, because an immortal cannot age; it is never to be in despair. It is to see an awakening in every sleep and a spring in every winter. To have faith in God is not to entertain the opinion that there is a God. It is to be possessed by the conviction of His reality and of His personal relation to His children; it is to take guidance, counsel, courage, hope—in a word, life—from Him. It is to be full of God; it is to be able to say, as the Master said: "The words that I speak unto you I speak not of myself: but the Father that dwelleth in me, He doeth the works." To have faith in the Bible and in Christ is not to have an opinion as to the nature of inspiration or as to whether the unity of Christ with the Father is a metaphysical unity or a moral unity; it is to be inspired, directed, dominated, by the conviction that God is in His world; that He was in the lives and experiences of those whose story is told in the Bible; that He was reflected, as in a mirror, in the life of Jesus Christ; and it is to find in this revealing, that is, unveiling, of God, in the book and in the person, a way to a like communion with God through the book and through the person.—*The Outlook.*

The highest things are credible to those only whose lives respond to and fulfil them.—HAMILTON W. MABIE.

## Among the Churches.

### The Work in Dover, N. H.

Several years ago a few seekers after Truth began meeting at private houses for the study of the Quarterly Bible Lessons, and two Readers were chosen as soon as there were two of their number who were members of the Mother Church. Numbers increased so that in October, 1899, a small hall on one of the principal streets was hired and furnished. The attendance, from fifteen to twenty-five, would have been larger had several of our number not moved away. October 1, 1901, the only members here of the Mother Church, five in all, met and organized First Church of Christ, Scientist, in Dover, and received papers of incorporation from the state.

God has cared for this little church, and by the Christ-love and unity of its Directors and members the claims of error, which would separate and scatter this planting of the Lord, are being proved powerless, and new members have been added at each communion.

In obedience to the new By-law relative to the change in Readers, new Readers were at once chosen and the change made on the second Sunday after the notice appeared in the *Sentinel*. Success has followed obedience. September 1, 1902, a Christian Science Reading Room was opened for the public in the same room in which the services were held. Soon finding this room inadequate, two adjoining rooms in the Post Office Building, one for auditorium and the other for a reading room, were leased for a term of years. These rooms are furnished, without debt, in good taste, and are convenient for all our present needs. Surely divine Love has opened the way for all blessings.

The Sunday School was organized in June, 1902. Unity and love prevail and new faces are appearing at both the Wednesday and Sunday services. We feel most grateful to our Leader Mrs. Eddy, the Mother Church, and to all our Christian Science brothers and sisters who have been helpful to the growth of Christian Science in this place.

EVA E. BUNKER, *Clerk*.

### A Word from Barre, Vt.

A sweet sense of unity, of at-one-ness with each other and with our Father, pervaded the annual meeting of First Church of Christ, Scientist, in this city, which was held October 4. In each consciousness was a clearer realization, than ever before, of the deep significance of the Christian Science Church to the world to-day.

Permeated by this spirit, the new By-law relative to change of Readers, was adopted, although, to our limited vision, we could not see how we were to be supplied. But with an abiding faith that God does provide "a table in the wilderness;" that "Divine Love always has met, and always will meet, every human need," this forward, upward step was confidently taken, in loving obedience to the request of our revered Leader. In so doing, again has this Scripture been fulfilled: "And it shall come to pass, that before they call, I will answer; and while they are yet speaking, I will hear," for we are provided with Readers, and the provision has exceeded our highest expectation. As a church we are bountifully blessed.

A month previous to our annual meeting the church and Sunday School contributed to the Building Fund of the Mother Church. We esteem it a great privilege thus to indicate our appreciation of the spiritual bonds which unite us to the Mother Church. We know that "the branch cannot bear fruit of itself except it abide in the vine."

Standing as one, "in the unity of the faith," we go forward in the happy assurance that "one with God is a majority."—MRS. ADA BEERS FOSTER, *Clerk*.

### Another New Church.

The new church edifice of First Church of Christ, Scientist, of Park Ridge and Edison Park, Cook County, Ill., was opened October 12, 1902. To accommodate all who might desire to attend, three opening services were held.

In the spring of 1897 two Christian Scientists met each week to read Science and Health, and in the spring of 1898 they were joined by three others, when regular services were begun. The attendance steadily increased and in June, 1902, it was thought expedient to rent a hall for the services. On July 25 a church was organized with twelve members, and this number soon after increased to twenty-two, and plans for a church building were formulated. The corner-stone, a block of granite from Concord, N. H., was laid September 16, 1902. The building is simple and chaste in design, and reminds one of a little New England church.

The opening service was a joyful occasion and was attended by many friends from Chicago and other points.

MRS. JENNIE L. WILLIS, *Clerk*.

### Activity in Kewanee, Ill.

At the county fair which was held here in September, the Christian Science Reading Room Society of this place had a tent for the purpose of distributing Christian Science literature, and to offer people an opportunity to investigate.

The ground for the tent was donated and was a most desirable lot. A sign, "Christian Science Reading Room —Welcome" was placed over the entrance, and brought many visitors. We spent four days there and were kept quite busy distributing literature and trying to answer the questions of those who called.

We feel that Christian Science work here has received quite a stimulus from this source.

MRS. MARY CALLENDER.

### Progress in Ithaca, N. Y.

The annual meeting of First Church of Christ, Scientist, of this city was held November 13. The church was organized September 3, 1901, under a charter from the state. There were eighteen charter members taking part in this organization. The report gave the total present membership as twenty-seven. The congregation has correspondingly increased from about twenty a year ago to about sixty at the present time.—*The Ithaca Journal*.

### The Sky of the Heart.

A fallen leaf on a flowing stream,
And on the water a moment's gleam
Of sunshine—and the chilling gray
O'erspreads more coldly the autumn day.
And once this had brought a pang to me,
A sense of pain in my heart to see
The leafless trees and the stubble sere,
And the darkening face of the dying year.

It is not so now. My heart is glad,
Though every sight and sound is sad,
For I have come to realize
That joy depends not on the skies.
The path of my duty holds along,
Through winter's storm and springtime's song,
And cloudy the day or stormy the night,
The sky of my heart is always bright.

MALTBIE D. BABCOCK.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### The Passing of Intolerance.

FORTUNATELY for mankind, religious intolerance, which has been the cause of more bitter quarrels, more shedding of blood, more suffering than all else in the history of the world, is on the wane, and the rights of each person to worship God according to the dictates of his own conscience is more clearly recognized. Broad-gauge men of all denominations know that true brotherliness and true religion go hand in hand, and that neither is advanced by abuse and malicious misrepresentation of the views of others. The rule is proved by the exception when some person becomes imbued with the idea that he has a special mission to save the world from the danger of a religion differing from his own.

The progress of thought along the line of toleration is noticeable in the attitude of the public toward Christian Science, and in no particular is it more clearly seen and more distinctly emphasized than in the willingness of editors, judges, lawyers, ministers, physicians, and other public men to introduce our lecturers, and in many editorials recently appearing in the daily press, which recognize the position of Christian Scientists as consistent with the teachings of Christ Jesus and well within their rights as law-abiding citizens. Truly the leaven of love is at work, and the brotherhood of man, the kingdom of heaven, has come nigh unto this generation. Divine Love is reflected in loving tenderness and forbearance, and is healing the prejudice and intolerance which has belittled and beclouded humanity throughout all ages. M.

### If I had Time!

How prone we are to justify ourselves behind the acceded limitations of time and sense! Many of the sweet amenities of living, gentle courtesies, yes, even Christian obligations, are crowded out by the self-justifying, self-satisfying assurance that they would be done, and gladly done, but for lack of time.

The argument is that Father Time, through age and experience, has grown incorrigible, that he vouchsafes us only so many hours in the day and then relentlessly drops the curtain of darkness and repose and bids us prepare for the hurry of to-morrow. While we grant the patriarch's decree, let us remember that it is not so much the number of the hours as the harmony therein that gives us dominion.

We must first cultivate a keen eye for the nature of duties, a quick perception of their relative importance, a speedy judgment that sweeps from the field the unimportant detail and brings out the dignity of work.

A young girl seeking help from Christian Science said, "I cannot find a moment for reading or studying the Lesson-Sermon, I am so busy, so driven!" After a few days obedience to the demand for at least a half hour's study of Christian Science the first thing each morning, she said, "It is peculiar, but I have not only been able to do all my work, but am finding time to work on my Christmas presents." She had not multiplied the hours of the day, but she had sought first the kingdom of harmony. The sense of confusion and hurry had thereby been destroyed, and this meant more than added hours.

As Christian Scientists, we do not excuse ourselves from clearly defined responsibility or obligation at the bidding of "If I were good enough," or "If I were well enough." We know it is a possibility as well as a duty to establish, through the demonstration of Truth, the requisite virtue and health to meet such calls. Through wise selection and adjustment of tasks, it is equally possible and important to be able to meet the demands of each hour harmoniously, and free ourselves from the limiting "If I had time."

We are not authorized to credit ourselves with any kindly act of intention which is crowded out by lack of time. The chances are that the trouble lies deeper,—in apathy, inertia, procrastination, imperfect method, all of which are but varying expressions of selfishness.

Let us speak the truth: "I do have time for every manifestation of love and tenderness in the abundant present."

S.

### "As a Grain of Mustard Seed."

WHEN Jesus said, "If ye have faith as a grain of mustard seed, ye shall say unto this mountain, Remove hence to yonder place; and it shall remove; and nothing shall be impossible unto you," he gave unqualified assurance of the possible results of that "little faith" which is spiritual understanding,—the God with us who is "able to do exceeding abundantly above all that we ask or think, according to the power that worketh in us." He declared for the perpetuity and sovereignty of the smallest idea of Truth; and in this, his thought was very far in advance of the estimate and understanding of his disciples both then and now.

Men are ready to concede the swift and self-propagating power of an infinitesimal of evil, and upon this basis they have built up a philosophy of heredity and contagion which has ruled the nations with a rod of iron. Intense fear is aroused, and life is imperilled, in human belief, by the presence of a single infected molecule. The prevailing theories of disease would reduce the determinative factors of human history to the dimensions of an atom, and hang the issues of mortal life upon the favoring or unfavoring conditions of a cell.

If, on the other hand, we consider the prevailing mental attitude toward good, we find that while those larger assertions of Truth which are expressed in the irresistible movements of nature, and the universal moral convictions of men, have commanded consideration, and antagonism to them has been reckoned a defiance of God, the potency of the lesser manifestations and apprehensions of Truth has been minimized to a degree which has amounted to a denial of their practical efficiency.

The weakness of asserted faith is thus clearly traceable to an apparent denial of the presence and power of God in His minor manifestations, the simpler understandings of one who is but a child in spiritual things. And yet Jesus taught what, under material form, appeals to us as natural, a simple matter of fact; namely, that truth is always truth and nothing but the truth, that it is always indifferent to error, and that the Infinite is ever-present and wholly available.

We readily accept the proposition that a physical element of any kind always retains its distinctive features, never forgets its mission, and invariably acts a given way under given conditions. We know that the vast aerial sphere in which the earth is imbedded no more perfectly discloses the law of refraction than does the tiniest dew-drop that adorns a blade of grass. We know that it is not necessary to remove the great power plant to the point where its developed energy is needed, for a bundle of wire suffices to transmit

Digitized by Google

the unmeasured energy of a Niagara to every village of a state. Why should we not in the same unquestioning way realize that the simplest touch with God brings to us His unmeasured resources, His all-conquering might?

The multiplied and presumptuous assertions of error which have brought humanity into such abject enslavement, but counterfeit those divine ideas—the sons of God—which people the universe, and which are individually clothed with supreme majesty and might. Having excluded all the spiritual light it can by enswathing humanity with material sense, error would fain have us believe that the glintsof light which do reach us are feeble and unilluminating, and so far as we yield to this seduction in so far is error's false rule in us prolonged and made sure. But the revelation of Truth in Christian Science has come to disallow and defeat these claims of error; it strikes off the fetters of limitation, and through demonstration gives proof of the present and saving power of the simplest divine idea; and earth's tired and troubled children may thus find assurance, victory, and peace, though, perchance, they cannot see their Father's face, and are consciously linked to Him by His hand-clasp alone. W.

## Thanksgiving Day Services.

### In the Mother Church.

THE interest manifested in our initial Thanksgiving Service has given further evidence of the presence among Christian Scientists of that spirit of sincere gratitude which above all others they have occasion to exhibit.

Threatening and somewhat disagreeable weather did not interfere with an attendance which crowded every part of the auditorium, and which included many strangers and friends. All seemed to enter most heartily into the service and thoroughly to enjoy it, and the day will abide as a pleasant memory, a permanent influence for good, and an evidence of the wisdom of our Leader in instituting it.

The published programme was followed, including the reading of Psalm 145 as a Scripture lesson, and the joyous singing of hymn No. 9, "Our God shall reign," and No. 151, "How beauteous on the mountains."

About twenty-five minutes were given for testimonies by members of the church, and in calling for them the First Reader said, in part:—

"The Lesson-Sermon has given you the Science of gratitude, and now you can bear witness to the fruits which have resulted from its practical application.

"Christian Science has brought us greater blessings from God's storehouse, the realm of infinite Love, than anything that has ever before come into our lives, and we really have more to be grateful for than any other people on earth today.

"Christian Scientists therefore love to praise and glorify their heavenly Father, the Giver of all good. They also love to honor His faithful witness and mouthpiece to this age, Rev. Mary Baker G. Eddy, whose purity, consecration, and faithfulness have made it possible for us to receive these manifold divine blessings.

"They love to declare that Christian Science has brought them from sickness, sin, misery, wretchedness, poverty, and turmoil, into health, holiness, joy, happiness, affluence, and peace; and they also remember that gratitude opens the windows of heaven."

At the close of the time allotted for testimonies it was ordered by a rising vote, all present joining, that the following message be forwarded by telegraph to our Leader.

Rev. Mary Baker G. Eddy, Concord, N. H.

*Beloved Mother*:—The members of the Mother Church and friends, assembled on this Thanksgiving Day to honor and praise their heavenly Father for His tender mercy and His unnumbered benefactions, feel that it is a fitting occasion on which to express their grateful sense of indebtedness to you, as the one through whom has come to them the blessings of a clearer understanding of Truth in Christian Science.

They rejoice in the ministry of your life and teaching to the sick, the sorrowing, and the sinful of all the world; in the patient and loving kindness in which you have borne and toiled for the good of mankind; and in the wisdom of your self-sacrificing and successful leadership; and in all they are but representative of an innumerable company who would join them in the expression of loving regard and appreciation.

The Mother's hymn, "Shepherd, show me how to go," was then sung, and in closing, the following benediction was spoken:—

"The Lord bless thee, and keep thee: the Lord make his face shine upon thee, and be gracious unto thee: the Lord lift up his countenance upon thee, and give thee peace."

The following is an epitome of the testimonies.

The first speaker expressed gratitude for the spiritual and physical transformation which gradually but surely followed her increasing knowledge of Christian Science, commencing with her first visit to the Mother Church almost eight years ago. In closing she paid a tribute of thanks to Mrs. Eddy. The next speaker related an incident in his experience which prompted him, while on the Pacific Coast, to leave everything and come to Boston that he might identify himself with the Christian Science movement under the leadership of Rev. Mary Baker G. Eddy, whom he had not before recognized as the Leader, and that he had thereby obtained a spiritual insight and satisfaction of heart which he had never before possessed, and for this he gave thanks.

Another said, "Five years ago I was brought here in a carriage. Doctors had pronounced me incurable. I was entirely helpless and paralyzed. I could hardly drag my feet. I was healed by Christian Science. For all this I want to express thanks and gratitude to God for what Mrs. Eddy has taught. I am grateful for the blessings I have received."

A lady then spoke of her gratitude for a better understanding of God through the teachings of our Leader, having been rescued from chronic invalidism which prevented the taking of even a drink of cold water without suffering. She said that on Thanksgiving Day, eight years ago, she was in a hospital preparing for an operation when Christian Science was brought to her attention. She was saved from the operation and the troubles that seemed to make it necessary, and has become a healthy woman, a better wife and mother, a better neighbor; that through Christian Science she has been taught to look to God for all strength and all supply. She closed her testimony by saying, "We must try in our every-day life to reflect Love if we would show our gratitude to God and follow the teachings of our dear Mother and Leader."

She was followed by a speaker who voiced her sense of gratitude in a number of quotations from Scripture bearing on the general subject of thanksgiving.

The next speaker gave thanks for healing through the reading of Science and Health some fourteen years ago, previous to which time he hardly knew what it was to have a well day.

Another expressed her thankfulness that Christian Science had opened to her the doors of the church and given her a new understanding of the significance of that term. From her earliest recollection she had turned away from the church of her fathers and family, had resisted its overtures, refused its ministrations, and denied the value of its sacraments.

Digitized by Google

"My mother," said she, "was a devout churchwoman, a lover of the Bible, and the last night of her life on earth she asked that I would read aloud her favorite chapter, the fourteenth of St. John's Gospel. I read it with bitterness in my heart, and when I had finished, resting my hand on the open book, I said, 'Why do you care for this? What good has it ever done for you?' I was young, and my heart was bleeding and rebellious at her long martyrdom. Looking at me without reproach—though the stab must have been a cruel one to her, the last bitter drop of her cup—with eyes that looked beyond, she said, so gently, 'You do not understand, dear, but you will some day,' and in the morning that voice had ceased, for me.

"Years afterwards, when I, too, was bending under a load of prolonged physical and mental suffering, a dear sister, who, like our mother, was a devout churchwoman, crossed the ocean to see me. She was deeply troubled at my utter disregard of all outward forms of religion, and begged me to attend church sometimes, to take part in its sacrament. But I answered, 'No; the bread and wine mean nothing to me; I have never partaken of them, I never will, until I see better than I do now what Jesus meant by these symbols.' She left me very sad, thinking, perhaps, that we might never meet again, and that I might go down into the darkness of the valley of the shadow, without even the pale star of the old church to light my way. Just a few weeks after we parted, the light of Christian Science shone upon me, and like a garment my agnosticism and my physical diseases dropped from me and I stood forth healed. Then the church—Christ's church—became indeed most beautiful; I became a member of this Mother Church, and at my first communion, the first I had ever attended in any church, the Scriptural reading for the opening service was that same fourteenth chapter of St. John, and as those immortal words of the Master came to me once again: "Let not your heart be troubled: ye believe in God, believe also in me," I understood then, better than I had ever dreamed I should, something of the omnipresence of God, and realized that in Him all separation was annulled.

"Above all other things to-day I thank God for this revelation of a mother's love that has come to the world through our Leader, in Christian Science. Because of that love we women of the world to-day can be glad for the first time in our lives that we are women. To her through whom this love has been revealed, and above all to God, who has given us such a Mother and guide, I offer up my thanksgiving to-day."

Another referred to her escape from the thraldom of long-continued illness, for which material remedies gave no promise of relief. Through Christian Science she had been healed and made free and strong as never before, and with physical betterment had come a quickened spiritual life and the joy of knowing that she could help others, in fulfilment of the Master's assurance that his blessed works we should do. She also spoke of the recent and wonderful healing of a little cripple boy whose case was pronounced quite hopeless by several physicians, and for all this her heart was aglow with thankfulness to God and to her who has made known the way.

Another spoke of his satisfaction and gratitude that in the testimonies given in this church, there was not only rejoicing over the healing of disease, which in many instances had been pronounced incurable, but there was yet greater joy and thanksgiving for spiritual illumination, and for the light which Christian Science has thrown upon the Scriptures. "It is because of this," said he, "that our love goes out to our Mother. She has given us a better understanding of the divine Life. Truly we have great reason to be thankful for Christian Science and for its Discoverer.

### At Concord, N. H.

There was a good attendance upon the Thanksgiving services of First Church of Christ, Scientist, at Christian Science Hall, Thursday morning at half past ten o'clock. The service was similar to that held in all Christian Science Churches in the United States.

In addition to the regular congregation and others from Concord, visitors were present from Boston, Michigan, and the Bahama Islands.

"Giving Thanks" was the subject of the Lesson-Sermon, and the Golden Text was: "O give thanks unto the Lord, for He is good: for His mercy endureth forever" (Psalm 107). The sermon consisted of Scriptural texts and their correlative passages from the denominational text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

At the close of the sermon, opportunity was given those who so desired to express their thanks to Almighty God for blessings received. The first speaker told of her healing by the power of God, through prayer, from an advanced stage of consumption after all hope had been given up. Another said that ten years had been added to his life through Christian Science, but the most precious gift was the new understanding of God and Jesus Christ and the deeper love for the Bible which had come to him. The rescue of two who had fallen and their restoration to lives of usefulness was feelingly related. Many others gave thanks not only for restored health, but for the overcoming of sin and the abiding desire for higher and holier lives.

*Concord Daily Patriot.*

## From our Contributors.

### The Master's Test of True Discipleship.

MARY A. DAGGETT.

As the result of study and growth in Christian Science, new views of Truth and Love are constantly unfolding in human consciousness. When it occurred to me to give to others through the *Sentinel* some thoughts that I find helpful, something said, There have been so many articles about love in the *Sentinel* of late that yours is nothing new, and it will probably be superfluous. However, I remembered that no two of these articles had been alike, and that each was good in its own way. Because Love is infinite, there is no limit to its reflections, and these have as many different phases as there are individuals or needs. So I decided to send my little message, knowing that it would do good in some way, even if never published.

Jesus said, "By this shall all men know that ye are my disciples, if ye have love one to another." How often have we taken it as a matter of course that we do love one another well enough, and have not realized the full meaning of our Master's pregnant saying. How often have we ignored it altogether. But as we begin to lead the life which Christian Science teaches us to live, we find that nothing unlike love should dwell in our hearts. Then, in home life, in church work, in our relations with our fellowmen, in and outside the church, how much we discover in ourselves that bears not the slightest resemblance to love. We may find somewhat of selfishness, envy, jealousy, rivalry, resentment, bitterness, ambition to be first, and strong dislikes, even hate. We are frequently tempted to feel something quite unlike love toward some whom we thought we loved. And we are tempted to believe that some whom we thought to be our best friends have manifested anything but love towards us. We find a great deal to do to eliminate from consciousness these false views of ourselves and others. It takes much prayer, many struggles with self and sin, much charity, much practice of

Digitized by Google

the Golden Rule to be able to stand the test, and we begin to realize what a severe test our Master has given us, and his wisdom in giving it. We see also the wisdom expressed in Science and Health in the following words: "'Little children, love one another,' is the most simple and profound saying of the inspired writer" (Science and Health, p. 572). Only in striving to obey this command, do we begin to perceive its profound significance; for there is no depth in human consciousness that it does not sound. Can we heal the sick or destroy sin in ourselves and others, can we comfort the sorrowing, can we endure persecution, can we attend to our business successfully, in fact, can we do anything without love?

I wish to express, again, my gratitude for our Christian Science periodicals, and especially for the *Sentinel*, our faithful *Sentinel*, watching the growth of our cause, the world's attitude toward it, and guarding and warning us against the lurking foes which seek to overwhelm or deceive us. How often I have been helped to "defeat the cunning of the tempter," by the words found in its columns.

## The Sun is Shining.

IDA LAWTON.

SOME time ago, while working on a piece of work which seemed quite discouraging and gave poor returns, I found myself in tears. Suddenly turning and looking out of the window, I was quite surprised, and said to myself, "Why, the sun is shining!" It so changed my thought that I found peace at once.

When Jesus was called upon to give an account of his teaching, he said, "My doctrine is not mine, but His that sent me." In speaking for Christian Scientists in this age, we may say that the health, harmony, and peace which they enjoy are not in themselves, but belong to the Principle that governs them, which Principle is God, Good. While we keep in line with our Principle we have a never-ending source to draw from.

While learning my way in Christian Science I have had many proofs of God's love and power. Learning to love Christian Science, trying to live it and make it my own, I have been led out of darkness into light. I have learned the unreality of some discords as naturally as a child learns his lesson in school.

After our last Communion, the Mother's address, and the Wednesday evening meeting which ended all that material eye could see, my whole heart responded in these words:—

> And as we rise, the symbols disappear:
> The feast, though not the love, is passed and gone;
> The bread and wine remove, but Thou art here—
> Nearer than ever—still my Shield and Sun.

Since that time my love for God and Christian Science has become stronger; my love and loyalty to our dear Leader are stronger than ever, and I have been drawn nearer to our own branch church and all connected therewith.

Just a word for our new text-book, which has opened to me a larger light, for which I am most grateful. I wish to send through these lines my love and thankfulness for every loving effort put forth by our ever-faithful Leader, and all who are working to bring the whole world to see there is but one Mind, and that, God.

## The Phraseology of our Testimonies.

MARTIN F. JACKSON.

"No wise mother, though a graduate of Wellesley College, will talk to her babe about the problems of Euclid" (Unity of Good, p. 8). So should we in Christian Science simplify our talk that the babes in Truth may understand.

The apostles left records of healing all manner of disease and never failed to designate the name by which they were known.

The Master did not say, "What belief are you laboring under?" but, "What is thy name?"

To the epileptic boy he said, "Thou dumb and deaf spirit, I charge thee, come out of him, and enter no more into him." And our Leader says (Science and Health, p. 398), "These instances show the concessions which Jesus was willing to make to the popular ignorance of spiritual Life-laws;" and have we not that same ignorance to deal with to-day?

The word "dyspepsia" should strike no more terror to the heart of a Christian Scientist than the phrase "claim of dyspepsia;" and to the stranger in our meetings, the one whose nerves "do feel," how much more convincing it must be to learn that Christian Science heals the man who is sure he is suffering.

## The End.

H. S.

"THE end of all things is at hand." The idea of death has so long been associated with this prophecy that it is well to begin to think of its real meaning. Peter seems to be exhorting the church to follow the example of Jesus in giving up the things of the flesh—and seeking the things of the Spirit.

There is a reasonable requirement of things to eat and drink, and more than this is the indulgence of material sense.

There is a reasonable limit to the things needed to clothe and warm us, more than these are simple vanity and vexation of Spirit. This being conceded, why not be willing to give them up if we can secure spiritual gain thereby?

By thinking of the things that are true, honest, just, pure, lovely, and of good report we can be seeking now the kingdom of heaven and its righteousness, and all these other material things will surely be added unto us. We cannot secure eternal life while we are satisfied in trying to live by the things that perish with the using. Eternal life is realized by seeking just this spiritual kingdom; the new heaven and new earth wherein dwelleth righteousness.

## A Good Suggestion.

W. H. MACFARLANE.

A FEW years ago a sister in Science called my attention to the many "fear nots" of the Bible. Acting upon the suggestion I have from time to time looked up the fear nots, be not discouraged, be not dismayed, and whatever encourages us to look to a power outside of our own selves. The blessing that has come to me has been very marked. The author of "Science and Health with Key to the Scriptures" p. 373, says very truly, "The fear of disease and the love of sin are the springs of man's enslavement." And again, "Sin is the foundation of sickness" (Science and Health, p. 391). The careful observer is convinced that these statements are quite true, hence the power of Love's word to unclasp the fetters that bind humanity.

And thus it is, and will be, when we look into the "fear nots" of the Bible; by constant study, meek and lowly appreciation, these mighty truths will become to us a consciousness that will enable us to meet and destroy every seeming condition that is unlike Good.

"Thy word is Truth," and Truth is mighty to remove mountains. "If God be for us, who can be against us?"

No man has a right to arrogate to himself one particle of superiority because he has had a college education, but he is bound, if he is in truth a man, to feel that the fact of his having had a college education, imposes upon him a heavier burden of responsibility; that it makes it doubly incumbent on him to do well and nobly in his life, private and public.—PRESIDENT ROOSEVELT.

## The Lectures.

### At Atlanta, Ga.

One of the largest congregations of yesterday [November 9] was that at the Grand Opera House when Mrs. Mims, in a clear and convincing line of argument, propounded and expounded the beliefs, the objects, and results of Christian Science.

There was no possible room left for doubting the deep impression made by the lecturer upon her listeners, who reached from the orchestra circle and parquet to the rear of the family circle and balcony.

Included among the listeners were a number of Atlanta divines, who paid the closest attention to every word and explanation of Mrs. Mims. The audience, too, was distinctly locally cosmopolitan, embracing both the representatives of Atlanta's most exclusive circles and those who move in the plainer paths of the workaday world.

Mayor Mims introduced J. R. Mosley of Macon, who spoke interestingly of the work of Christian Science. He paid a beautiful tribute to Mrs. Eddy, and in a most felicitous manner introduced Mrs. Livingston Mims.

*The Constitution.*

The introductory address of Mr. Mosley, was in part as follows:—

Christian Science, to those who are even beginning to understand it and who are trying to live it, is just what its name indicates,—Scientific Christianity, with the restoration of the healing element of the Christianity of Jesus and the apostles. In other words, it is nothing less than what the title of the Christian Science text-book—"Science and Health with Key o the Scriptures"—indicates, for it not only reveals that the Christianity of Christ is the one absolute Science, but it also brings with this spiritual understanding of God, Christ, and the Bible, a Scientific method and attitude of life, as well as a healthy and harmonious state of mind and body. It makes the Bible a new book and restores its ancient life-giving, health-restoring, and saving power.

Christian Science unfolds to us the truth that is suggested by the titles of two of Mrs. Eddy's minor works,—"No and Yes," and "Unity of Good;" for the whole tendency of Christian Science wherever it touches one's life, and the whole teaching of Christian Science is to say "No," in the Christ-way of denial, to everything that is sensuous, carnal, sinful, sickly, and deadly, and to say "Yes," in the Christ-way of affirmation, to everything that is true, beautiful, lovely, holy, pure, healthy, spiritual, and God-like; and it reveals the unity, harmony, consistency, and immortality of all the manifestations of Good, and the discord, inharmony, inconsistency, and mortality of all the manifestations of evil.

Christian Science, coming as it does, to fulfil all good and to destroy all error, can do good but not evil; it can bless, but cannot curse; it can heal, but it cannot make sick; it can promote life, but cannot produce death; it can love, but it cannot hate. Even though misunderstood and misrepresented, it does not complain. Though reviled and stoned, it revileth not again. When it suffers the greatest wrongs, it does not even threaten, but imparts the highest possible blessings. It is always hopeful, always patient, always kind, always loving, always healing, always saving, always helpful.

It has been my good fortune to know personally some of Mrs. Eddy's neighbors and many of her students, who have been most closely associated with her, and they each and all bear grateful and conscientious testimony to the fact that she is the most reverent, spiritually illuminated, and Christ-like character they have ever known.

### At Littleton, N. H.

A lecture was given by Judge William G. Ewing of Chicago, Ill., November 3, under the auspices of First Christian Science Society in Littleton, N. H. The audience was large and representative of the best people of the community, and included doctors, lawyers, and ministers.

Visiting Scientists were present from Lancaster, Whitefield, Bethlehem, Lisbon, Lempster, and Woodsville, N. H.; also St. Johnsbury, Vt. The speaker was very ably introduced by. Hon. Albert S. Batchelder of Littleton, who said in part:—

Whether Christian Science is valid or invalid on principle or according to the tests of actual experience in its application to human affairs, is a question which is not within my province or purpose to discuss, and my opinions in regard to the subject are not what you have assembled to consider.

My presence here is merely an incident of no importance and one in which I am moved solely by my desire to be courteous to the reasonable requests of my friends and neighbors, and by my desire, furthermore, to improve an opportunity to prove the sincerity of my conviction that every cause, when presented in accordance with the generally accepted methods of reason, free speech, and fair argument is entitled to a considerate hearing in any community and before any audience willingly assembled to attend to its presentation.

If this doctrine that is to be presented to-night be true, there need be no concern about it on the part of its friends further than to see to it that it has a hearing; if it be false it will surely come to naught when it strikes against the hard tests of common sense and common experience.

*Correspondence.*

### At Pottsville, Pa.

Judge William G. Ewing of Chicago, delivered a lecture at the Academy last evening [November 11] upon Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, and was largely attended. Judge Ewing held the attention of his audience from the opening to the close of his remarks.

His remarks were so pointed and his arguments so concise that there is little doubt that many of his listeners were convinced that the actual practice of Christian Science principles was nothing more than the observation of the teachings of Christ himself. A true Christian lives a Christian life, and does not devote his life simply to the teachings of a creed.—*Miners' Journal.*

S. Burd Edwards, Esq., in his introduction said in part:—

It is true that there are some things about the theme of this particular church that have been subject to criticism, but it has struck me that if you and I are entitled to our peculiar religious belief, why not somebody else? In other words, if we want to believe in doctrines why cannot we allow other people to believe in Christ? It is one of the Constitutional guarantees of this country that every man may worship God according to the dictates of his own conscience, and for Americans at least the days of religious hierarchy are over. I think I can say, that the Christian Science Church in general has made wonderful progress, and it seems that they are going ahead in spite of all opposition that can be placed in their way.—*Correspondence.*

### At Randolph, Vt.

Hon. William G. Ewing of Chicago, formerly judge of the Superior Court in Illinois, lectured before an audience of about two hundred people of all shades of belief in DuBois & Gay's Hall last Friday evening [October 31], on "Christian Science: Physician and Rede mer."

Digitized by Google

Judge Ewing is an exceedingly pleasant speaker, with a gentle tolerance of others' cherished beliefs that inclines one to give him an unprejudiced hearing. His lecture was listened to with close attention, and made a favorable impression. The speaker was introduced by J. D. Denison, Esq., in a few well-chosen words.—*Herald and News.*

### At Bucyrus, O.

The Vollrath was filled with an appreciative audience Tuesday evening [November 11] by people from Bucyrus, Toledo, Mansfield, Galion, Marion, and other places, who assembled to hear a lecture on Christian Science by Edward A. Kimball, C.S.D., of Chicago.

Mr. A. E. Jennings, First Reader of First Church of Christ, Scientist, Toledo, introduced the lecturer in part as follows:—

Jesus said: "Go ye into all the world, and preach the gospel to every creature," and "heal the sick." He also distinctly said, "Teaching them to observe all things, whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world." Christian Science is asking its followers to obey the command, "Heal the sick," and enabling them to prove that the Christ-truth is with us to-day. The discovery of this healing power and its adaptation to every-day life has awakened the world, and in some instances startled it.—*The Daily Forum.*

### At Joliet, Ill.

A good house greeted Judge Hanna, who delivered his lecture at the Auditorium last evening [November 6] on Christian Science. Besides the attendance from Joliet, people came from Chicago, Englewood, Lockport, Wilmington, Morris, and other nearby towns. The speaker was introduced by Charles B. Jamieson.

The lecturer is a precise speaker, strong and eloquent in the presentation of his view of Christian Science, and he received cordial applause as he closed his tribute to the cause he loves so well.—*The Joliet News.*

The introductory remarks of Mr. Jamieson were in part as follows:—

*Ladies and Gentlemen:*—It is doubtless an indisputable fact that there is not a man, woman, or child who does not desire to be healthy, happy, and successful, and who, when understanding it, will not welcome and adopt into his life that which will bring into his experience the greatest measure of joy, health, peace, success, happiness, and genuine satisfaction, and a more demonstrable understanding of the one only true and living God, whom to know aright is life eternal, not only in the vast hereafter but in this present time also.

The greatest preacher the world has ever known, the greatest physician the world has ever known, has said: "Ye shall know the truth, and the truth shall make you free." The learned and distinguished gentleman who is to address you to-night does not come here to proselyte, but to state the facts and appeal through reason and justice for an unprejudiced and impartial investigation and consideration.

---

A little consideration of what takes place around us every day, would show us that a higher law than that of our will, regulates events; that our painful labors are very unnecessary and altogether fruitless; that only in our easy, simple, spontaneous action are we strong, and by contenting ourselves with obedience we become divine. Believe and love, —a believing love will relieve us of a vast load of care. O my brothers, God exists. There is a Soul at the centre of nature, and over the will of every man, so that none of us can wrong the universe.—EMERSON.

## Testimonies of Healing.

Reading the testimonials of healing in the *Journal* and *Sentinel* has always given me great help, increased my faith, and showed me what great obstacles others have removed, both mental and physical. From my cradle I was very sickly. I inherited from my mother nervous headaches that had made her an invalid for over thirty years. I also inherited eczema in a very severe form, which covered different parts of my body, made my left arm useless, and produced a discharge from the ears that caused me to be very deaf. I was so deaf that other people could converse in ordinary tones without my knowing it unless I happened to see their lips move. I was treated by many doctors from my infancy until I was about seven years of age. The physicians then said that I could not be cured. My mother, who about this time turned to Christian Science and received great help, put my case in the hands of a Christian Science practitioner. My healing was slow, but I am now perfectly free. I have not been bothered by nervous headaches for several years, am entirely cured of eczema, and my hearing has been all right for some time.

About a year ago while in the South I contracted malarial fever in a very severe form. In a short time I had lost greatly in weight and was in a bad mental condition. Not being able to work and there being no Christian Scientists where I was, I returned home. Most of the time I was unable to be about, and when a chill came on, which was always followed by a high fever, I would be helpless from six to eight hours. Sometimes these chills came on twice a day, leaving me very weak. As soon as I arrived home I took Christian Science treatment and in the first five days I gained eight pounds and felt a great change, both mental and physical. I was able to eat heartily, whereas before I could scarcely eat anything. In about six weeks after receiving treatment I weighed more than I had ever weighed, and the chills and fever were entirely destroyed.

I have had a number of small ailments to meet, and also great mental trouble, but I have been able to destroy them by knowing my perfection in God mentally, morally, physically, and spiritually. Although I have a number of errors to overcome every day and many yet to be destroyed, I know that by faithfulness I shall in time be victorious.

F. B. H., Webster City, Ia.

---

We are privileged to publish the following testimony which was embodied in a private letter to a friend:—

Friday afternoon at about half past three, I went out to the acid works to look at some new work. We had built some acid pits, solid brick affairs, three feet deep, and at the time they contained only a little sulphuric acid and some clay.

Stepping on the wall of one of these pits, the bricks gave away, swinging me half around. I could not jump or grab at anything, and fell half backwards into the pit towards a partition wall. Down I went, two hundred pounds avoirdupois. The first thought I had was, "I must smash my head on the partition," the second was "Truth." There was no time for more thoughts. According to so-called natural laws, I should have fallen on my side and back with a more or less broken head. But my God spoiled the order and regulation. He laid a firm hand upon me and held me up.

There was no fear or confusion. Looking at the situation, I found myself crouched at the bottom of the pit, like a rabbit in the field. I had both feet under me. I got up, scrambled out of the pit, looked at me from top to bottom, and found myself all there. A little dust on the overcoat, and some mud on my shoes, but not even a splash of acid. I brushed myself clean, and with a joyful heart gave thanks to God, finished my business at the acid

Digitized by Google

works and went back to my office, which is about half a mile. In walking I noticed that my right foot wanted to say something mean, but I did not pay much attention to it.

I had considerable walking to do when I came to my office and towards five o'clock I made ready to go home, a clear mile distant. When I started out, my right foot rebelled and tried to dictate a fainting spell, but I managed this movement with the Scientific Statement and the Ninety-first Psalm. "For He shall give His angels charge over thee, . . . they shall bear thee up in their hands, lest thou dash thy foot against a stone." That struck the right spot and I marched on as lively as ever.

On removing my shoe at home, I found there was no swelling, no bone broken, but I could not step on the foot and had to drag it. Then I settled down for good straight work. When I fell I thought of my head, but not of my feet.

After supper Mr. S. came and we read our lesson, "Adam and Fallen Man." While reading there were suddenly three or four loud cracks in the ankle and bones of the foot. We both stopped and looked up, and had to laugh. Then I told Mr. S. the whole performance. At eleven o'clock when I went upstairs I still had to drag the foot.

During the night the old serpent woke me up at different times, trying to tell me all kinds of lies such as, "You wont be able to go to work in the morning," "You cannot sing to-morrow evening and Sunday." "Wont they laugh at you," etc., also fear wanted to tell me that the trouble was not overcome, and I must telegraph for help; but God did not forsake me, He was my ever-present Helper.

When I dressed myself in the morning there was no swelling, no discoloration, and I went to work joyfully and was grateful for the victory won.

When Mr. S. came in the evening (Saturday), he laughed when he saw me running to the door to let him in. I told him if I could dance I would do so, I felt so happy.

When I came to the full realization of the whole affair, the glorious Truth, I could not help myself, I had to cry for joy, and I am not ashamed to say so.

How grateful we must become to our Leader, Mrs. Eddy, for the blessing she has given to all of us, and how charitable we must become to all who are still waiting.

DR. FRED W. MANN, Franklin, Pa.

---

I feel that I can no longer put off acknowledging the benefits I have received from Christian Science. A physical disorder from which I had suffered for years had made me a complete nervous wreck. I could not get along without some kind of sedative all the time, and the thoughts of the slave I had become to this habit, together with the physical suffering, would sometimes drive me almost insane. I was finally persuaded to try Christian Science, and from the time of the first treatment I never again tasted medicine or had any desire for it.

The spiritual uplifting which came with my first insight into this great truth seemed marvelous, and I have ever since been happier than in all my life before. I did not believe in God or the Bible, and was discontented and miserable, but now all is changed. I have a religion which I would not give up for all the world,—a practicable, demonstrable religion, bringing with it peace, health, and happiness; and I cannot tell how thankful I am to Mrs. Eddy for her courage in giving the world the benefit of her great discovery. I try to show my gratitude by daily living in harmony with Truth as far as I understand it.

CARRIE B. EATON Brooklyn, N. Y.

---

It is amazing from what a mere fraction of fact concerning him, a man will dare judge the whole of another man.—GEORGE MACDONALD.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50 prepaid.

### Communion Message, June, 1902.

TheAnnual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. W. B. Riley of Minneapolis, in a sermon on "Supernaturalism and the Success of the Church," is thus reported in *The Standard*:—

"This beginning of miracles did Jesus in Cana of Galilee, and manifested forth his glory; and his disciples believed on him" (John, 2:11). The Christian world has fully consented to the authenticity of this miracle. But, strange to say, that same Christian world is divided against itself on the subject of the modern miracle. The creeds of most of the greater denominations are silent touching the issues of this controversy. Atheists, naturalists, rationalists, formalists, and kindred folk have so violently and assiduously assaulted the miracle itself and spoken with such rage against the thought of a modern miracle that they have made timid men afraid to talk on the subject, lest they should seem to fly in the face of philosophy or science, or both; and coerced from too many Christian men the humiliating concession concerning the Lazarus at the gate: 'Thy bruise is incurable; thy wound is grievous; there is none to plead thy cause that thou mayest be bound up.' Is such a concession to the power of the adversary necessary? What saith the Word?

"What men want to know is this: Whether what Jesus did at Cana of Galilee, at Jericho, at the bier of the Nain widow's son, at Lazarus' tomb, are works so wonderful that God's power alone accounts for them. The supernatural is in no sense the unnatural. It would be difficult to show that the miracles of the Master were not, every one, a replacement of some dethroned power to its natural position.

"The water made wine at Cana was only the first in a series of wonderful works. The very phrase employed is a promise of marvels to follow. Certainly it never entered the mind of the Master that either his matchless words or his marvelous works would end at Calvary. If any man say that the works to be done by his apostles and disciples did not include miracles, let him read the commission to the twelve. If any man say this commission was given only to a select company, let him read the great Commission. Was James prescribing for apostles only, or for the period in which he lived when he wrote? Were Justin Martyr, Irenæus, Tertullian, Origen, and Clement false in their claims of miracles in answer to prayer? Was Bishop Simpson deceived when at death's door he mingled his voice with the voices of Bishop Bowen, William Taylor, and others, asking to be recovered, and there came a change so sudden that the physician called it a 'miracle'? The failure of present-day believers to appropriate the promises of God no more discredits the divine purpose in making them, than did the discomfiture of the disciples, praying in vain for the relief of the epileptic, prove that Christ had put into his commission to the twelve, words which were mischievous and misleading.

"The miracle's purpose is shown by the text. It evidenced the deity of Jesus. It expressed the sympathy of Jesus. It attested the saving power of Jesus. If the miracle was potent for penitence and furnished the very basis of belief two thousand years ago, who doubts that the revival of the Word's plain teaching concerning it and the practice of claiming its promises would compel men to cry out again, as did Peter, 'We are unclean,' and to seek his favor who is alike able to say, 'Arise; take up thy bed, and walk,' or 'Son, thy sins are forgiven thee.'"

Dr. George A. Gordon in the Lyman Beecher Lecture Course at Yale, in the Lecture, "The Quest of a New Theology," says:

"We have come upon a new day in theology. Within the last twenty-five years in Great Britain and in New England the traditional theology has passed away. Like the icefields that move south, these traditional beliefs have disappeared, melted under the power of the new intellectual climate into which they have floated.

"In the far north, similar fields exist, and in the polar regions they always will exist, in absolute safety, and in certain latitudes beliefs that cannot endure elsewhere are completely secure. They are embalmed in ignorance, shielded by excess of darkness, increased by atmospheric frigidity. From Calvinistic Scotland there has floated out into nothingness a great body of obsolete divinity. Progress has simply left it behind. The same is true of English non-conformity.

"In all the enlightened portions of this country the same fact is obvious. If we regret it, the regret cannot mend the condition of affairs. Within a quarter of a century a body of theological opinions which had endured with only minor modifications for fifteen hundred years has become obsolete. Not since the beginning of preaching has there been any time so hard upon the educated and honest minister."

Rev. James M. Campbell, D.D., says in *The Homiletic Review*:—

"What is lacking is not more of the spirit than God has already given, but more room for His presence in our hearts; a more complete surrender to His inworking; a more complete dependence upon His help; a more wise and faithful cöoperation with Him in all purposes of His grace in our lives, in the lives of those around us, and in the life of the world. While the Spirit is all for us, while all He has is ours, the benefit which we actually receive from Him will be measured by the scope He finds for His work of grace within us.

"The universal gift of the Spirit not only comes to each Christian as he is prepared to receive it, but it also comes in the form which agrees with his nature and with the work to which he has been providentially appointed. The supernatural and the natural blend."

Knowledge shall vanish away. How quickly yesterday's science becomes out of date! What a mercy that the Bible never did harmonize with science. If it had done so, even ten years ago, it would be discredited by now. Knowledge is a shifting quantity. We measure social progress by the repeal of old laws. We measure intellectual progress by the discarding of old knowledge. We measure spiritual progress by the discovery of new channels for love. Love is never old-fashioned, never antiquated, never shamed by the advance of the world's civilization. Whatever changes, political, social, doctrinal even, may come tomorrow, we know that Paul's love-chapter will stand unchanged, save as it will be given a larger, richer interpretation.

*The Epworth Herald.*

Man is not "a poor shuttle in the hand of Fate," nor is he confined to the murmurings of the sea-shells for his knowledge of the plan and the planner of the universe. Man is God's child, made in his Father's image, and heir of all his Father's resources. Why not use his advantages and privileges, with rejoicing gratitude, rather than shut his eyes and ears and heart, and then lament with wilful perversity that he cannot see nor hear nor know? . . . True, man has lost his glorious birthright through sin; but he may recover all through the love and grace of Jesus Christ.—*The Examiner.*

The wisest people are asking not, Is this written in the creed? or, Can the doctrine be proven by citation of chapter and verse from the Bible? but, Is it true, is it good, is it needful for the welfare of the people? In consequence of this new and more catholic mood, the few, simple, fundamental truths of religion are coming to the front.

*The Christian Register.*

It is true that a man's ideal will always transcend his actual. Yet, in order to be truly free, a man must ever be *on the side of his ideal*. Let him never defend his shortcomings, as if he had no thought above them. Let him confess that they are failures and transgressions of his own inward law.—*Selected.*

Every day new relationships are forming around us; new circumstances are calling upon us to act—to act manfully, firmly, decisively, and up to the occasion, remembering that an opportunity once gone is gone forever. Indulge not in vain regrets for the past, in vainer resolves for the future—act, act in the present.—F. W. ROBERTSON.

My faith is that there is a far greater amount of revelation given to guide each man by the principles laid down in the Bible, by conscience, and by Providence, than most men are aware of. It is not the light which is defective, it is an eye to see it.—NORMAN MACLEOD.

A Chinese mandarin who has filled a book with extracts from the New Testament is reported as saying that if the people who professed the religion of the New Testament were to live in accordance with its precepts that religion would spread over the whole world.

Pious platitudes in pulpit or press do not necessarily make a saint. To teach the people a great doctrine it is necessary to talk out of a great heart and substantiate every theory by purest living.

*The Christian Standard.*

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## Items of Interest.

**National.**

The Senate Committee on the Philippines admits that the silver standard for the Islands is a mistake. Governor General Taft urges the adoption of a gold standard. The contest in the Senate will be between the adoption of the double standard and the straight gold standard.

The attempt to have the differences between the miners and operators adjusted outside of the Commission through a subcommittee having proved futile, the Coal Strike Commission, after an adjournment of ten days, again resumed its sittings last week.

The United States Senate has confirmed the appointment of Chief Justice Oliver Wendell Holmes of Massachusetts to be associate justice of the Supreme Court of the United States. He expects to take his place on the bench this week.

The Prince of Siam sailed from Victoria for Yokohama last week Tuesday. As Monday is considered an unlucky day among the Siamese, the steamer, Empress of China, was held, out of deference to the Prince and his party until 1.30 A.M. Tuesday.

President Roosevelt upon the opening of Congress last week sent the customary message, in which he made conservative reference to the tariff, trusts, and capital and labor.

General Bliss, who was commissioned to go to Cuba to arrange the basis of a satisfactory reciprocity treaty with the United States, has met with success in the adoption of the propositions advanced by him thus far.

An amendment to the Senate diplomatic appropriation bill proposes to reorganize the consular service so that promotions shall be made from grade to grade.

The prospects for legislation on the currency problem in the present session of Congress seem promising.

**Foreign.**

Dr. Herran, who is said to have been appointed by the Colombian government to succeed Minister Concha, will continue the negotiations for the canal treaty. Satisfactory agreement has been reached concerning the question of sovereignty. The indemnity and minor points are now under advisement. Colombia's position is this: She now has complete sovereignty. Under the present concessions to be purchased by the United States, Colombia is a participating partner in the canal. The United States offers ten million dollars in a lump sum and ten thousand annually, or seven million in one payment and one hundred thousand dollars annually. Colombia contends that neither of these propositions offers sufficient compensation.

The new Museum of Egyptian Antiquities was opened at Cairo, November 15. The building, without the extensions which have already been planned, covers twelve thousand square meters of ground and has cost over one million dollars. On the ground floor may be seen the enormous stelas, the giant sphinxes, the bulls of basalt, the marble rams, the granite sarcophagi, and colossal statues of the gods; columns, statuettes, capitals, friezes; and remains of the Greek, Etruscan, Roman, and Byzantine periods. The upper story contains vases, potteries, papyri, amulets, scarabs, jewelry, and many other small articles.

The Italian government has purchased the Villa Borghese, and will convert it into a public park. The price paid was $660,000, of which King Victor Emmanuel contributed $60,000 from his private purse. The celebrated art collection of the Villa Borghese was bought some time ago by the Italian government, although some of the famous paintings had previously been bought by foreigners and sent out of Italy in contravention of the Italian law. The villa and the art collections came into the market as a result of the financial difficulties of Prince Borghese.

The Duke and Duchess of Connaught, who are to represent King Edward and Queen Alexandria at the coronation durbar in India, have started on their journey. They will go by way of Egypt, where they will be present at the opening of the great Assouan dam.

The Education Bill passed the third reading in the House of Commons by a vote of 246 to 123, and has been sent to the House of Lords for its first reading.

Siam has adopted the gold standard and the mints have been closed to the free coinage of silver.

**Industrial and Commercial.**

The total value of granite, limestone, sandstone, slate, and marble produced in the United States in 1901 was $60,982,000. Maine led in the production of granite, its value being $2,703,000. Massachusetts followed. The total value of the limestone production of the country for the year was $26,406,000, of which Maine furnished $715,250 worth; Pennsylvania, $5,681,000; Indiana, $2,999,000; Illinois, $2,793,800; Iowa, $777,484; Missouri, $1,362,000; New York, $1,738,700; Ohio, $2,000,000; Wisconsin, $1,225,400; Virginia, $986,000.

The National Tube Company has completed plans for remodeling and enlarging its works at McKeesport, Pa. While these plans double the capacity of the plant, the number of workmen, owing to the introduction of improved machinery, will be increased from eight thousand men to only ten thousand. The company will also erect at Loraine, O., at a cost of about five million dollars, another plant of nearly equal capacity. The plans of the company also include nine new furnaces which will add 1,575,000 tons to their pig iron production.

The Southern Car and Foundry Company, located near Memphis, announces that the capacity of the plant will be doubled within sixty days. Orders to keep it running at full capacity for two years are already booked. It now turns out ten complete cars daily, employs four hundred men, and has a pay roll of $250,000 per year.

The anticipated log cut, on the east branch of the Penobscot River for the coming season is estimated at seventy million feet. It is expected that six or eight million feet of lumber of this season's cut will be shipped from the port of Bangor before the river freezes, a very large fleet being now in port.

Representatives of seventeen malleable iron works located in Michigan, Wisconsin, Ohio, Illinois, Indiana, Pennsylvania, New York, New Jersey, and Tennessee signed an agreement last week consolidating their companies. Their capital amounts to about twenty million dollars.

The statistician of the Agricultural Department estimates the cotton crop of the present year at 10,477,000 bales of four hundred pounds each. The acreage was over twenty-seven million acres.

Official announcement has been made that the Manhattan Elevated Railway Company will be leased to the Interborough Company which is to operate the subway now being built in New York City. The lease will take effect next April.

A project is on foot to establish extensive works in Charleston, S. C., for the manufacture of porcelain and terra cotta from the kaolin clay, of which extensive deposits of a superior quality exist in the State.

The Southern Pacific Railroad is to adopt a plan for pensioning its old employes similar to that now operated on the Pennsylvania, the Illinois Central, and the Chicago and Northwestern.

Five Massachusetts companies, recently organized, have filed at Augusta, Maine, certificates of organization. The companies are capitalized at $2,950,000 with only $21,000 paid in.

**General.**

The important art collection formed by the late Henry G. Marquand will be exhibited and sold in New York in January, under the auspices of the American Art Association. Mr. Marquand gave many of his most valuable old pieces to the Metropolitan Museum, but this private collection contains antiquities, ceramics, carvings, tapestries, enamels, paintings, and sculptures of the most artistic merit. Its dispersion will be a notable event in the history of New York Art sales.

The "Holy City" of Jerusalem has now electric lights and telephones, electric tramways. Wells with modern windmills are multiplying and commercial enterprise rapidly increasing. Many ancient landmarks are being obliterated, and many sacred associations are disappearing before the march of modern progress.

A Frenchman has invented a short-hand typewriter or "steno-dactyl," by which it is claimed that two hundred words a minute can be easily written. It has ten keys, five for each hand, admitting various combinations; is light, noiseless, and the work, though written phonetically, can be easily read.

Despite foreign criticism, Greece is determined to restore the ancient Parthenon. Marble, newly quarried, will be used for the parts to be restored, which, contrasted with the old, weather-stained portions, will present a grotesque appearance.

The death of Ex-Speaker Thomas B. Reed occurred in Washington Saturday night, also in Paris, that of Mrs. Alice Freeman Palmer, former president of Wellesley College.

A portrait of the late President Shafer by Kenyon Cox was unveiled at Wellesley College last week.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### A Physician's Testimony.

Editor *Saturday Post.*

In your issue of November 15 was an article entitled "Is Christian Science a Humbug?" This may be a proper question to bring before the public, but no case is fairly and honorably tried in a court of law or justice until both sides have had a fair and impartial hearing, therefore, we beg permission to present some testimony.

To reply to the numerous assertions therein made would fill a volume rather than a limited newspaper article, consequently we will confine our remarks to a few assertions which most concern the public.

Who is to judge of the genuineness and merits of Christian Science? Shall we be influenced by those who have personal interests to subserve; dogmas, professions, and creeds to foster; who have no knowledge of Christian Science other than that gained in the effort to find something to say against it? Or shall we rely on the testimony of those who have been healed by it, and have made a careful study of it for years?

One who could not sing or produce a harmonious sound on any musical instrument would not be deemed competent to criticise a great musical performance or composition. One who had never learned figures would not be chosen to solve a mathematical problem. Christian Science is a very profound subject, and no one should attempt to criticise it until he has given it much careful study.

One writer has very truly said, "The only way to explain this Science is to learn to demonstrate it. Those alone who can demonstrate it are qualified to speak of it."

Does Christian Science heal, is the question before the court of the people. If it does heal, it is not a "humbug," but a boon to this generation.

My own testimony, in brief, is that some sixteen years ago, after many years of invalidism and suffering, I was on the list of incurables, told by one whom I then believed to be one of the best physicians in Chicago, to close up my earthly affairs and prepare to "go hence." Being a physician myself, I could see no help outside *materia medica.* As a last resort, and to please my wife, I turned to Christian Science and was made well. Through the study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I learned enough of this Science to put out many lesser diseases which were menacing me, and to keep myself healthy and happy ever since. It is a fact of note that Christian Scientists, wherever found, are healthier and happier than any other class of people extant.

During the past sixteen years I have been closely affiliated with Christian Science and Christian Scientists, and have had no occasion to doubt the efficiency of this Science. Considering the above, I believe I can give competent testimony. There are now hundreds of thousands who can, and will if called on, give just as strong testimony in regard to the healing efficacy of Christian Science. Thousands who were once inebriates are now thanking God that they have been saved through this Science. Among this number are to be found some of the brightest intellects of this and other countries. Who has the temerity to say that this throng of honest, intelligent people are misled dupes?

The whole book, Science and Health, is an effort to bring men from darkness to light, to lead them into Godliness.

This healing religion is known to be demonstrably true by men and women of honor and culture, men and women who are second to none in their mental and moral attainments. It is not confined to any one class, but is embraced and cherished by people of every profession and walk in life, and every condition of thought, in this and foreign countries.

Those who say unkind things about this religion are either misinformed in regard to its basis, objects, and aims; in regard to the good works being done, or have personal ends to subserve. The same condition existed when Jesus was on earth. He was called a wine-bibber and a glutton, accused of consorting with low and vulgar people; of casting out devils through the prince of devils.

To all of this he merely said, "Blessed are ye, when men shall revile you, and persecute you, and shall say all manner of evil against you falsely, for my sake."

DR. A. WILLIS PAINE.

### "The Kingdom of Heaven is at Hand."

WERE these words of John the Baptist true? If they were true when they foretold the coming of the Prince of Peace to redeem mankind, they must be as true to-day as they were then, for the Master left this word with his disciples: "Lo, I am with you alway, even unto the end of the world." Are there any weary ones to-day who are sighing for heaven? Let them listen to these words, and know that "The kingdom of heaven" is indeed near at hand, and that it is the only real kingdom there is, for God is the King of all the earth. All other rulership is a usurpation of power, and this is the cause of their trouble. Yielding obedience to any but the King of this kingdom is to-day bringing confusion and bewilderment to take the place of the peace and joy which belong to God's children. Heaven is harmony, and in the kingdom of heaven there can be no discordant thought or deed. Are we living in this kingdom now—to-day? It is at hand, and there is no excuse for us. If we are neglecting to turn to the light, we must not complain of the darkness. God is Good, and He pronounced His creation to be "very good." He has provided only good for His children. He has sent teachers to guide, and to proclaim, "The kingdom is at hand." Jesus even told what the signs were, so that all might know if they were his true disciples. He said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This word of the Master has been proved to be true. Are we his disciples? Are we proving our allegiance to the only King of the "kingdom of heaven," which is "at hand"? Are we doing the works, and showing forth these signs which "follow them that

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

believe"? Christian Science is teaching us how to understand God's Word so as to bring forth the signs of which Jesus spoke. We can prove this to-day, and so can know that we are in God's kingdom. We can know and enjoy the peace which marks this kingdom of harmony. God is no respecter of persons. He has not changed. His Word has always been truth. All through the ages there have been those who sought and found God a very present help in time of trouble. To-day, through the revelations of Christian Science, multitudes are coming to know Him, and are learning to apply the teachings of its text-book, "Science and Health with Key to the Scriptures," in such a way as to be freed from the fears and disorders which they had thought were incurable. God does not withhold this understanding from any. It is free to all who will seek, and we cannot, without culpable negligence, refuse to hear the word which calls, as of old, "The kingdom of heaven is at hand."

## The Naturalness of Truth's Growth.

THE rapid spread and marvelous growth of the Christian Science movement is attracting the attention of thoughtful and intelligent people everywhere.

To those who are not conversant with Christian Science it must, indeed, appear strange that large and flourishing churches of the denomination are springing up all over the land. To the Christian Scientist this is not surprising, but purely natural. He knows from experience that the moment a person is healed in Christian Science he becomes a new man—new physically, morally, intellectually, and spiritually. He knows, too, that the Bible will be opened to that man, as it has never been unfolded to him before.

Of course, when the people see this great transformation that has taken place in those healed through Science, who in so many instances have been pronounced incurable and doomed to a life of suffering and invalidism by leading physicians, they naturally become interested in that system of religion which heals the sick as well as reforms the sinner, and they tell the story to others; they investigate, and they find, as we all have found, that here is a religion that fully satisfies all the wants of man, and because it does this it naturally attracts the multitudes just the same as in the time of Jesus and his apostles. For people who are suffering to-day will, as in the time of Jesus Christ, press through the multitude of criticising Scribes and Pharisees in order that they may touch the hem of the garment of Truth.

It is very gratifying to note the cordiality with which Christian Science is received in this city. We find that the same sense of "seeking" that is manifest everywhere is also present here, which is most natural, in view of the fact that so many thousand young men come here every year to seek their college education. Yea, we are living in an age of seeking. Men and women all over the land are seeking after something higher and better all the time.

The time has at last come when people are no longer satisfied with their past attainments; and especially is this true when it comes to their religious experience. They find to their great sorrow and disappointment that their religion does not meet the needs of the hour. It does not heal their sick, and those who profess conversion, seem to be easily led back to evil again. They feel their deep need, and are assured that if somehow they could only get a right and clear understanding of Truth, all would be changed.

This case is well illustrated, I think, in the life and experience of a lady who lives within a few miles of New York. She is a woman of bright intellect; has traveled extensively, but in all her travels her one search has been to find the book that she felt, and intuitively knew, existed somewhere. She would often inquire for it, and when asked what book she was seeking, would say: "I do not know the name of the book, nor the name of its author, but it is a book that will answer all the questions of my heart and solve the problems of life—a book that will solve them scientifically and thus lead me out of the mysteries of sin, sickness, sorrow, disappointments, and death into the light and true understanding of God and man. A book that will place man in eternal harmony with his Maker."

This good lady met a friend of mine a few months ago, and told her of her search. When my friend had heard the story, she told her that she, too, had been a seeker after Truth, but that she had found the book, and finally she said that it was "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. This seeker at once secured the book, and I am happy to say that she finds it is answering her questions, and solving her problems; just as hundreds of thousands of other intelligent seekers after Truth have found that it is doing for them. It has swept away the unrest that had been hanging over their spiritual horizon, as it has opened the prison doors to those of us who sat in the shadow of death, and has given us back our life, health, and strength, as well as a spiritual understanding of God and man, so that we, too, may live though we had been doomed to die years ago.

Thus it is that Christian Science is meeting the needs of the hour, and by so doing, it is fast winning the confidence of the people and destroying all prejudice. And just as fast as people wake up to the fact that there is here and now a religion that will meet and solve all their problems, and bring salvation from all the ills that flesh is heir to, and which is so practical that it can be applied with certainty and success to every problem of life; when this is understood, they will come to it, and nothing can successfully stand between them and this blessed truth of Christian Science, for they will claim their God-given birthright. And we rejoice to see how men and women of intelligence, culture, and understanding are taking their stand for this true Science. SEVERIN E. SIMONSEN.

In *New Haven Register.*

## Mystery and Manifestations.

THE only things in this world that are mysterious are the things we do not understand. The telephone is a mystery to a child, and to many a man for that matter, because they do not understand the brainless thing that talks. Nature's "open book" is a mystery to millions, but how simple it is to the botanist. Yet that botanist can never make a flower like God's flower. Back of all this so-called mystery is God, divine Principle, who governs all, and the flower expresses God's unseen beauty, though faintly. On page 512 of Science and Health, we read: "From the infinite elements of the one Mind [God] emanate all forms, colors, and qualities; and these are mental, both primarily and secondarily. Their spiritual nature is discerned only through the spiritual senses. Mortal mind inverts the true likeness, and confers animal names and natures upon its own misconceptions." Is this mysterious and incomprehensible? If so, it is because we do not understand it. What is true in one direction is true in all. The God who guides and governs the universe, and whom we but faintly see reflected in the most beautiful things about us, is the same God who governs and guides man. He is reflected in man, and all men, to a greater or less extent, manifest such reflection. God reflected in man is never a sick or sinful reflection. "Jesus beheld in Science the perfect man, who appeared to him, where sinning mortal man appears in sense. In this perfect man the Saviour saw God's own likeness, and this correct

Digitized by Google

view of man healed the sick" (Science and Health, p. 476). If Jesus were on earth to-day he would heal the sick and the sinful just as he did in Palestine, without medicines and wholly by the realization of Truth. His followers, since his time, have healed in the same way. Christian Scientists effect all their cures in the name of Christ, and according to the method inculcated by Jesus Christ. As Christian Scientists, we cannot be too positive in our rejection of medicine and all material remedies, and in placing our sole reliance upon our Father—God.

Again, in Science and Health we read, "It is plain that God does not employ drugs or hygiene, nor provide them for human use; else Jesus also would have recommended and employed them in his healing" (p. 143). "Jesus never spoke of disease as dangerous or difficult to treat" (p. 147). "Mind as far outweighs drugs in the cure of disease as in the cure of sin" (p. 148). Is this mysterious and incomprehensible? If so, it is because we do not understand it. But thousands of Christian Science practitioners do understand it, and in proportion to their understanding is their ability to heal the sick and raise the dying to life. . . . Some day these practitioners will be enabled to realize the Truth so absolutely and unerringly that their practice will be uniformly successful.

They are now subject to the criticisms and condemnation that fell one hundred years ago on Samuel Hahnemann, the good old German physician, who was the father of homœopathy. He found out, what should have been known ages ago, that mankind was tired of medicines, tired of being experimented upon. . . . He had done the world a great good, but he antagonized old prejudices, and an act was passed forbidding physicians from dispensing their own medicines, and Hahnemann was obliged to leave Leipsic.

Twenty-five years ago, or soon after the first publication of Science and Health, Mrs. Eddy and her students commenced healing on a still higher basis. Following the practice of the early Christians, they discarded medicine entirely, and have been successful. But the world is not yet used to this mode of healing, and calls it mysterious and even wicked. If a century of successful practice has not enabled the homœopaths to overcome popular prejudice and subdue the inherent conservatism of the human race, it can scarcely be expected that Christian Science would become popularized in a quarter of a century, yet it has won its way most astonishingly, and perforce of its own merits.

EDWARD C. BUTLER.
In the *Mexican Herald.*

## Christian Science not Pharisaism.

*Dear Sir:*—Christian Scientists do not wish to claim credit for anything which they have not earned. If their replies to attacks are characterized by patience, this is partly due to their own recollection of the time when Christian Science looked to them very much as it does to their critics. Moreover, Science is not a subject upon which light can be thrown by passionate argument. Science is orderly and calm, and requires understanding rather than heated assertion. I shall be grateful to your readers, therefore, if you will absolve Christian Scientists from any taint of pharisaism, or better-than-thou-ism, even if in giving a reason for the faith that is in them, they show that they are absolutely certain of their ground. This certainty comes from the testimony of the Scriptures and from actual experience in their own lives. They do not claim any special power or special knowledge which is not accessible to all sincere searchers after Truth. The Christian Scientist gives due credit to physicians and surgeons for the work they are doing for the relief of mankind, but he has proved by demonstration that a knowledge of material methods in treating disease is not necessary for the cure of disease, and as mental or spiritual treatment is in direct line with the example of the Founder of Christianity, he feels justified in continuing this practice. The Christian Science text-book states very clearly,—

"If Christian Scientists were teaching or practising pharmacy or obstetrics according to the common theories, no denunciations would follow them, even if such treatment resulted in the death of a patient. The people are taught in such cases to say, Amen. Shall I then be smitten for healing, and for teaching Truth as the Principle of healing, and proving my word by my deed? James said: 'Show me thy faith without thy works, and I will show thee my faith by my works'" (Science and Health with Key to the Scriptures by Mary Baker G. Eddy, p. 342).

After all, there is nothing so scientific as actual proof, and since no one any longer seriously disputes the fact that Christian Science does heal the sick, as well as reform the sinner, Christian Scientists have no quarrel whatever with practitioners of material methods. They only ask that their work should be judged by the same standard, and that credit should be given where credit is due.

W. D. MCCRACKAN.
In *Binghamton* (N. Y.) *Herald.*

## Wiser Counsel.

THE following recently expressed comments give evidence of the dawning of a clerical judgment which is not in bondage to prejudice.

The Rev. Frederick W. Millar of the Ryder Memorial Universalist Church of Chicago, in speaking from his pulpit with reference to the attitude of many religious teachers toward Christian Science, said:—

"Nothing can be more clear than that this comparatively new and vigorous branch of the Church of Christ has a perfect right to interpret the gospel after its own manner, and to infuse into its followers any spirit not incompatible with the public peace.

"This they have been doing, and thousands of refined, cultured, and beautiful souls, dissatisfied with the teachings of the older sects, have found a spiritual home in the new church. Under the wise leadership of Mrs. Eddy, who but a few years ago stood alone as the one Christian Scientist in all the world, the denomination has grown to such proportions as to compel the attention of the whole civilized world.

"Christian Science is a revolt against the materialism of the age; it is a spiritual movement, and as such must be recognized by the Christian world at large. It is doing for the people what Luther and Knox did for Germany and Scotland, and what Ballou, Channing, and Parker did in their day to throw off the yoke of Puritanism in New England. Whatever is good in the Christian Science Church is the common property of every other branch of the Church of Christ, and every heart should rejoice that Christ is proclaimed.

"I wonder if the time will ever come when the fierce sectarian rivalries that now disgrace our common Christianity will come to an end."—*The Chicago American.*

Christian Science does not teach that "All is good" in the sense that all the phenomena of the human mind are good; but it claims that God, divine Mind, is good, and that this Mind and its manifestations are all that is real and eternal. It therefore follows that the more Christian Science is lived up to the more good will be made manifest.

### How Does the Spider Spin its Web?

Every observing country boy has noticed the wonderful feats of the spider in suspending his bridge from one point to another, high in air. My father often told us how he and his father, while crossing a bridge over the Merrimack River in Boscawen, N. H., early one morning, saw a spider's web extending clear across the river from one point direct to another, a distance that must have been at least two hundred and fifty or three hundred feet. The sun was just appearing over the tree-tops and shone upon the web, so that it was distinctly seen the entire length. They speculated how the spider could have spanned the stream with his web. Certainly the web could not have been strung by the help of the wind, which, nine times out of every ten, blows down the river in this locality. The prevailing winds in New Hampshire are from the northwest; and the river at this point flows from the northwest and runs southeast; the bluffs are quite high on each side, from which it follows that the east or west wind could not have blown strong enough at this point to have carried the web across.

Every open-eyed countryman knows that large spiders can walk on the water, or rather run. I have seen them frequently go so fast on the water that one could hardly see them. I have thrown them into the water many times, where the current was swift, to see how soon they would reach the shore. To any one not familiar with this insect it would be surprising to see how swiftly it can run over the water.

My grandfather thought that the spider ran across the river, although the current was deep and strong at this point. But my father could not agree to this proposition. He said it would be impossible for a spider to regain the other shore so directly across and then carry his web so high above the water and fasten it to the tree branches on the opposite side without getting the web entangled in the branches in climbing the trees. Neither of them could solve the mystery. I have noticed in attics and barns that spiders spin their webs from one rafter to another at an angle of about thirty or forty degrees. I have also seen them spinning webs from one branch of a tree to another. They seem to jump from one branch and swing on the web so as to reach the lower branch at sometimes an angle of forty degrees or less. Webs formed on these angles are frequently seen. The upper cable seems to be the one that holds the web; and below this cable the web is spun. But how a web is thrown directly across a road or river is beyond my comprehension, unless the insect, after having crossed the river, attaches the web to some bush, then climbs a tree, and spins down to the web, detaching and carrying it to the higher branches. This the spider can do, I am sure, for I used to like to break the webs in order to observe how carefully the insect would pick up the broken strands, mend them, and then carry the broken ends to their proper places.

### Advancing Thought.

"Never worry about what you can't help, and never worry about what you can help."

This was the chief rule for happiness prescribed by Dr. Lyman Beecher Sperry of Oberlin, O., to more than one thousand men who gathered at the Columbia Theatre to attend the men's meeting held there by the Y. M. C. A.

"Physiology, Fear, and Faith" was the theme of Dr. Sperry's address. He explained in his opening remarks that he is not a clergyman, but a physician, who is much interested in the welfare of mankind and believes that the mental attitude has such effect on the health of the body that all men should be persuaded of the importance of avoiding mental conditions which will interfere with the functions of the physical body.

Dr. Sperry spoke of the alarming death-rate shown by statistics of the United States, and declared that it is time that men are considering the cause of so many deaths. More than half the persons born do not reach maturity, he said, and many who do live for many years are delinquents. An army of physicians is required to attend to the sick. More than one thousand diseases have been classified by doctors. A hundred schools of medicine have come into existence and thousands of quacks who do not pretend to belong to any school are enriching themselves caring for people who believe they are sick.

"The primary functions of the body are to convert food into blood and blood into energy," said Dr. Sperry. "Anything which interferes with these functions paves the way for sickness. Excitement, worry, and fear impair digestion, cause unnatural action of the respiratory organs, and disturb the entire economy of the system.

"Fear is an enemy to man through and through. Faith is his friend constantly. A conscience void of offence to God and man inspires faith and health. Thousands whose mental attitude makes recovery impossible take medicine. Drugs may be taken which deaden pain temporarily, but recovery is brought about largely by harmony with God and man, and cannot be brought about by medicines. The man who can inspire hope, contentment, faith, love, cheerfulness, and confidence in an invalid can be of great assistance to him.

"The crying need of the world is teachers or healers who can persuade men to keep themselves clean mentally, morally, and physically. The man who makes up his mind to live in sight of God and man with a clear conscience will be happy and will enjoy good health. Faith is what the world needs. By faith I do not mean theology or philosophy, but union with Christ."—*The Washington Post.*

"Have mercy upon me, O Lord; for I am weak." We ought to know that this is not the doubting prayer of one who is trying to persuade God to help him, but it is the very turning to God who is our help; who is our strength and our health.

When in need, we should at once go where all supply is; we should at once and with all assurance turn to God and receive help, strength, health, for they are ours. They are ours, for God is *our* God.

ELISA M. YOUNG, Chicago, Ill.

### A Progressive Pulpit.

That pulpit is incredibly weak which still thunders with anathemas against Christians who do not pronounce its shibboleths. Who cares how men formulated their creeds from the New Testament a thousand years ago? We have access to the same Bible. We may formulate our own symbols and preach the Gospel from the same old Book from which they drew their inspiration. I do not decry the stream of the creed-makers; but I do rejoice that instead of being compelled to dip from those streams we can go to the fountain-head and get our message from the old Book, whose truths we may interpret as well as those who have gone before. The pulpit that now preaches creed instead of Christ; which exalts a method above a fact, and cares more for disputation about non-essentials than for impassioned appeals to men to lay hold of the essentials, is weak. There is too much defence of the truth in many pulpits and too little preaching of it. The truth needs preaching, not defending.

REV. CHARLES B. MITCHELL.

## Among the Churches.

### A Letter from Australia.

It may be of interest to the Field to know that the subject of Christian Science was brought before the great Australian Anglican Congress held in Adelaide, state of South Australia, last month, by the Bishop of Christchurch, N. Z. It is rather remarkable that the congress should have devoted even so much time as it did to the subject, in view of the fact that Christian Science is only just beginning to obtain a foothold in Australia; but it is evident that the rapid growth of Science in America and Europe is being very keenly watched here.

Both the Adelaide daily papers have published a letter bearing on Christian Science. This is especially gratifying from the fact that so far as I know this is the first time any of the great Australian dailies have published anything in favor of our Cause. Several of the religious papers have from time to time during the last five years alluded to Christian Science, but only in such a way as to clearly show that the writers had scarcely a glimmer of what it is; hence they fell into the customary errors arising from ignorance, and so far they have not accepted letters in reply to these misstatements. But we wait patiently for that demonstration, and it will be made in good time. It is the day of small things for Christian Science in Australia, but there is steady and gratifying progress. Many demonstrations have been and are being made; and the sale of literature, and the increased enquiry for it, give the confident assurance that a mighty work is about to be done here. No one can be more grateful than the writer for the revelation of Truth that has come through our Leader, and this feeling of gratitude is one of the most pronounced features of Christian Science in this new land.

But I do not intend this to be a personal testimony. I only desire that you who are helping us so much should know that the first movements of a great upheaval of religious thought are visible in Australia, where, I am convinced, Christian Science will find a most fruitful soil.

I may add that preparations for organizing a church in Sydney are now in progress; also that one little speech made by the Bishop of Tasmania at the Congress was to the effect that he advised the clergy to take all that was good out of Christian Science and assimilate it for the glory of God and the benefit of man.—R. NALL, Sydney, N. S. Wales.

### A Thank-Offering from Kinston, N. C.

I know all will be glad to learn, that the largest number which ever attended a Christian Science service in Kinston, N. C., gathered at our room on Thanksgiving Day. The service was beautiful and helpful, and the testimonies and expressions of gratitude given would have made our Leader's heart glad. Some who have attended our services for two or three years without giving a testimony, were impelled to rise and express thankfulness for benefits received—spiritual, physical, and financial—through Christian Science. And how is it that we know our Father-Mother God? We are well, instead of sick; rejoicing, instead of sorrowing; prosperous, where we once failed; in fact, we know ourselves as God's own children. These blessings are ours because there was one so pure, so responsive to Truth, as to hear the still, small voice, and give to the world its utterings in "Science and Health with Key to the Scriptures."

The Lesson-Sermons are a table prepared before us in the presence of our enemies; and the contributions from the Field which appear in our publications, are pleasant places along the journey from sense to Soul.

For all this and more I give thanks, and pray that I may show my gratitude in right thinking and right acting.

MISS BESSIE SUTTON.

## The Building Fund of the Mother Church.

WE append additional reports from Branch Churches, which for obvious reasons are made impersonal.

In the spirit of hearty co-operation this church, numbering twenty members, has arranged to send two hundred dollars to the Building Fund of the Mother Church.

A letter sent to each member stated the desire of the church as a whole, and requested that each subscribe the amount he or she could give, and return same.

At the time of the last meeting of the trustees, who had arrangements in charge, fourteen members had responded to the call with subscriptions for one hundred and forty-nine dollars and fifty cents. Some frequent attendants desire to give, and the Sunday School children hope to do a share.

So we have arranged for two hundred dollars. One half to be paid May 1, 1903, and the balance November 1, 1903; said payments to be turned over promptly to the treasurer of the fund.

---

A special meeting of the members of the church and congregation was held Monday evening, October 6, 1902, to devise plans for contributing to the Building Fund of the Mother Church.

A resolution was offered to the effect that this church raise the sum of ten thousand dollars or more for this purpose, and the Board of Trustees be authorized to take the necessary steps to bring the matter before the congregation and those interested in the cause of Christian Science, and be empowered to collect subscriptions and forward the proceeds to the treasurer of the fund.

The discussion of the resolution was general, and the prevailing thought one of gratitude for the opportunity now offered to all to participate in this work. Many who had availed themselves of the privilege of subscribing to the fund for the present Mother Church Building spoke of the good that had come to them as a result thereof. Cases were cited of those who were late in sending in their subscriptions to that fund and their regret on having the money returned to them; of others who did not make any subscription to that fund and had since regretted it. To such as these the present opportunity comes as a boon.

It was shown that the ability of each individual to contribute to this fund would be in proportion to his willingness to give. The supply is infinite and there is no lack when this is recognized.

As illustrating the vital interest the branch churches have in this work it was pointed out that if the branches of a tree are to show a healthy growth, the parent stem or trunk must be carefully nurtured. So if the branch churches are to show a healthy growth it is essential that the Mother Church in Boston should be properly equipped. If there were no Mother Church there would be no branch churches.

Some thought a larger sum than ten thousand dollars should be stipulated as the minimum amount to be raised, but it was shown that the words "or more" in the resolution, eliminated all sense of limitation and as large an amount could be subscribed as desired.

The resolution was unanimously adopted.

Since this action was taken the Trustees have formulated a plan for taking subscriptions and have announced same to the congregation.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Thanksgiving in the Branch Churches.

We are compelled to ask our readers and contributors to be satisfied with this acknowledgment of the reports of the Thanksgiving Day services in the branch churches, and to accept the statement that we would gladly publish all the reports if space permitted. We are, however, unable to publish all without devoting an entire issue to them, which is, of course, impracticable.

The reports all show that the services throughout the Field were well attended, and that a great sense of peace and happiness was manifested by the congregations; that the beauty and appropriateness of the Lesson-Sermon were recognized, and the opportunity for bearing testimony to the healing and regenerating influence and power of Christian Science was greatly appreciated, and in most instances the time allotted to this feature of the service was all too short for the accommodation of those who desired to speak. Many who had not spoken at the Wednesday evening meetings availed themselves of this opportunity to testify to benefits received. The testimonies were not confined to cases of physical healing; there were abundant expressions of deep gratitude for moral and spiritual uplifting, and thankfulness for a larger and better thought about the holiday and its significance.

All the reports received agree in their expressions of gratitude to our Leader for this welcome and helpful addition to our regular services. M.

### Who Spoke?

The words we listen to, how much less important are they than the words we speak?

Should a man charge us with hypocrisy, forgery, theft, or any other moral obliquity of which we knew ourselves to be innocent, how promptly and emphatically we would deny the charge; and no amount of implication, suggestion, or open accusation could make us waver. We know our inherent honesty of deed and purpose, and there is no resultant disturbance. Now upon what is our denial based? Upon self-knowledge.

Daily, numberless suggestions, just as false, quite as vicious, and far more subtle present themselves to us, and they speak something after this manner: "I'm completely discouraged. I see nothing ahead but financial ruin. Beggary stares me in the face." Do we rise in indignation and deny this suggestion? Do we bravely face the thief who would rob God's child of his heritage—the consciousness of his sonship? Do we say, "I know the riches of my Father, and nothing can make me afraid?" Do we? or do we rather listen to the tempter, take up the refrain, and argue with the enemy against our own case?

Perhaps dread of disease has left an open door for the sly suggester, and unwarily we voice his false words, which through our prompt adoption seem to be really our own, and say: "A damp, dark morning, and my old neuralgia back in full force!" The suggestion so incorporates itself with our thought that for the moment, unless wide awake, we fail to see it as something quite as extraneous to us as the false charge of forgery or theft. Here, as before, self-knowledge gives power to say, "Get thee behind me!" A knowledge of the true self is the understanding of God's image without spot or blemish, without fear of poverty or pain.

When we can see all temptation to sin or suffer as suggestion, wholly apart from ourselves and from all personality; and when we teach ourselves to declare promptly and vigorously the exact opposite of what the lying material senses suggest, we shall have made our declaration of independence from error. The child of Truth utters only truth, and truth is always harmonious, hence every discordant word or suggestion bears the birthmark of the son of perdition and should be and can be excluded by the power of Love. When we understand the claim of power that attaches itself to suggestion, we shall be just as discriminating and careful of the words we hear, as of those we speak. S.

### Meeting Criticism.

In counselling the Colossians Paul said, "Let your speech be always with grace, seasoned with salt, that ye may know how ye ought to answer every man,"—and the injunction is certainly very wise and pertinent.

To remain silent and self-possessed when the person or cause we hold dear is being misrepresented or traduced, is a test even of saintliness, and there is need of prayerful seeking for that grace which will enable us to resist the temptation to reply to irritating criticism, when we would better far keep still. The promptings of a sense of loyalty and of injustice may, and often do, tug at their leashes, while protest and denial bay loudly for their quarry, but he who keeps all in steady subjection to the wisdom that is Love, will have accomplished more than he that taketh a city.

Without doubt the best counsel and motto for us all in this matter, is couched in that single word, "Don't," for the inoffensiveness of our silence will be no less impressive and discomfiting to the antagonistic and disputatious, than it is strengthening to us and commendatory of our faith.

An honest, loving, and consistent life is the most eloquent and telling advocate Christian Science can have, and it is very fortunate that we can each and all, including the humblest and most self-distrustful, measure up to the requirements of this role.

Nevertheless, there are times when fitting words are called for, and to speak them worthily is to fulfil our Lord's behest when he said, "Heal the sick, cast out demons." The only adequate equipment for this ministry is that Scientific sense and attitude which is patterned after the Mind which was in Christ Jesus. Fearless recognition of the impersonality and nothingness of error; unfailing address to man as God's image and reflection, and not the ignorant, prejudiced, and malicious seeming which error has assumed for our trial; the ability to say frankly and unhesitatingly, "I know" or "I don't know;" acquaintance with the order of logical reasoning and a clear apprehension of the human, as well as the divine aspects of the point at issue; entire confidence in the ability of Truth to take care of itself and to dissipate all seeming obstructions, and, above all, that Christ-like love which is ever patient, tactful, courteous, and kind,—if these things be in us and abound, the outcome of our effort rightly to divide the word of Truth is abundantly assured.

Wisdom of address, without which we are sure to classify ourselves with that army of well-meaning blunderers who have been an obstacle to the advance of all great and good movements, is as indefinable as beauty, and its perception is usually separated from its acquirement by long stretches of humiliating experience, but it is an essential of success in winning men, and he who would possess its secret

Digitized by Google

in Christian Science, must be a close and constant student of the life of the Nazarene. The story of his meeting with the woman at the well reveals a winsomeness in wisdom's way which, if mastered, would render our appeal no less irresistible than was his.

The wise provision of our Leader for an authoritative reply to newspaper criticism, relieves the Field of a sense of solicitude and responsibility, and at the same time gives all opportunity to study the best methods of meeting objections and refuting error; but we can most effectively supplement the able work of the Publication Committee by living such pure, unselfish, consistent, and blameless lives as will convincingly demonstrate the truths of Christian Science which they assert. W.

## From Our Contributors.

### Growth.

EXTRACT FROM A LETTER TO A FRIEND WHO HAD NOT FULLY ACCEPTED CHRISTIAN SCIENCE.

I WOULD not have you think from what I have said or may say, or from what you may have observed in my daily life or in the lives of others, that the Scientist believes himself individually better in any way than those who have not yet attained to an understanding of Christian Science. Neither would I have you feel that I hold any belittling thoughts of *materia medica* or theology Indeed, the true Christian Scientist realizes his debt of gratitude to those who now hold, and who in the past, to the best of their knowledge, have held the truth as high as they could. While I may feel that my orthodox and medical friends have not yet caught the true spirit of progress which rests upon the hour, I realize and appreciate the value and strength of the work these good people have done and are still doing. Those who cannot or will not accept this new-old light which is flashing across the world, need *materia medica* and theology until such time as they find the better way.

We all feel an attachment for the homestead from which years ago we went forth untried and inexperienced. We like to return, and with eyes stronger grown look again into the old well from which the "moss covered bucket" drew the water years agone, but we do not feel inclined to substitute that well, with all its sweet memories, for the conveniences we now enjoy by virtue of improved water supply.

We appreciate a visit occasionally to farming districts, in which the same old sickles are used that were in use long ago in harvesting, but we do not care to substitute the reap hook and the scythe for the improved harvesting machinery of to-day. These old ways and methods have served humanity well, and for that reason they lend a charm to the past, but the doors of progress have swung open and *thinkers* have pressed on to the consideration and acceptance of better ways and means.

Although I rejoice in having made some progress in my investigation of Christian Science, I would to-day no more think of quarreling with or condemning those who still cling to the past, than I would have thought of ridiculing my father upon my return from college because I could demonstrate a proposition in geometry and he could not. If progress means anything, if advancement along any line carries blessings with it, as it should, then, as we grow in our understanding, we should be broad enough to see humanity on the one side and its needs on the other, and strong enough at least to do something toward bringing our fellow-man into a correct knowledge of Him whom to know aright is life eternal. We cannot do this by criticising those whom we would bless.

As the chilled bud opens its bloom to the south wind and the sun, so do hearts long sad and heavy laden turn naturally to Christian Science for rest and peace, if the faintest gleam is seen. Willingness to know this great truth is the first requisite; faithful effort to grasp its meaning the first step. The quiet, loving, patient, cheerful, every-day life of a true Christian Scientist such as you will observe among those who have studied the subject deeply, will always be one of its greatest preachers. Do some Scientists reflect intolerance, impatience, and ill temper? Yes. They have not yet buried their dead. These weaknesses were brought over from the old experiences into the daily life of the Scientist, but were not so noticeable until Christian Science turned on the light.

The knowledge of Christian Science is the fruit which thinkers are gathering from a deeper study of the Bible, and while as Christian Scientists we do not desire to take from others any health, happiness, or joy which the interpretation of the Scriptures by theology and medicine may bestow, we do believe that these time-honored systems have not built their houses far enough back into the past to have found the Christ spirit as the chief corner-stone. We are either building on the rock, "Thou shalt have no other gods before me," or we are building on the sand, "Material remedies are more powerful than God."

It must be observed that theology by its interpretation of the Bible is not healing the sick within its gates. It must also be plain that *materia medica* does not cure sin or make its patients better morally or spiritually. It must be admitted, therefore, that each of these two great agencies lacks something to make its work complete. They have done all, and are still doing all they can to relieve the sinful and the suffering, and for this they deserve the praise of the world, but Christian Science, being able to cure both sin and disease and to banish from consciousness the poisons of fear, hatred, malice, envy, jealousy, licentiousness, and hypocrisy, must be recognized by the unprejudiced as a step forward and along the lines which Jesus told his followers to move.

The things we see around us and the impressions conveyed by the material senses are not the deepest nor the highest. Indeed, such things are not things at all. We see to-day the waves of the sea and the clouds of the air, but to-morrow they are not. Beneath the wave is the sea. Above the clouds is the sky. In the sea and sky we have a symbol of the depth and height of this spiritual manifestation whose Principle is God. In the waves and clouds we have symbols of beliefs and prejudices which would hide and obscure. Christian Science, properly understood, stills the waves and dispels the clouds, leaving a calm sea and a clear sky. J. E. FELLERS.

### An Important Lesson.

MRS. L. M. EARLE.

THIS admonition is given us by our Leader in "Science and Health with Key to the Scriptures," p. 392, "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you may control yourself harmoniously." And she further states: "The issues of pain or pleasure must come through mind; and—like a watchman forsaking his post—we admit the intruder, forgetting that through Divine help we can guard this entrance."

This statement recalls an experience I had several years ago which illustrates how hard it is to get rid of an erroneous thought after it once gains a foothold in our consciousness, as well as the necessity for performing our office as porter and promptly and firmly shutting it out, and without parley.

I answered a ring of the door-bell one morning to find a pleasant-voiced, attractive young lady who wished to show me the prospectus of a set of books for which she was canvassing. I told her I had not time to look at it,

Digitized by Google

neither did I care for the work, but this did not deter her from a further attempt to overcome my judgment by her persuasive powers. As I was inexperienced and did not care to seem rude, I suppose I did not speak firmly enough. After she had held me some time in conversation, thinking to convince her that I really did not need the books, I invited her to step in and see two large, well-filled bookcases. So determined and persistent was she, however, that she then calmly seated herself and from that vantage-ground renewed her attack. I made another attempt to get rid of her by saying that I was engaged in making cake when she came, and should like to be excused and go on with my work, whereupon, by this time rightly guessing that I was alone in the house, she proposed to accompany me to the kitchen. Finding myself caught in a trap, as it were, there was but one thing left for me to do, and that was to remain firm in my refusal to sign a paper which it seemed to be her purpose to compel me to do. After spending three long hours in a vain attempt to conquer by persuasive art, and finding herself unsuccessful, she became very abusive and insulting, finally taking her departure in a perfect rage because all her efforts had failed.

In common experience, some error of thought, subtle, attractive, and in seemingly harmless guise, presents itself at our door of thought, seeking to make us victims of its cunning wiles. If we graciously accord it a hearing, it will insinuatingly intrude itself within the door, unless the watchful and alert porter detects its real nature and intent, and closes and fortifies it with Truth. If it gain admittance it will calmly hold possession against all efforts to eject it, and will leave no insidious argument or enticing appeal untried in its effort to conquer and control.

As this saleswoman used so much of her time and deprived me of so much of mine, upsetting all my plans for the day, in a selfish determination to carry her point in order to make a sale, so will error insistently and persistently keep up its warfare and urge its claims upon our attention with untiring energy, interfering with all our efforts to think and do the right, confident of thus winning in the end. It will require our best, most earnest, and conscientious work to defeat its aims and purposes, and a patient, firm refusal to yield ourselves its servant to obey. When at last obliged to own itself vanquished, it will be very apt to turn and vent its rage and fury upon the victor.

The lesson learned from that experience has helped me since to be prompt and wise and firm when I have encountered an error of thought.

## From the Old to the New.

HATTIE P. WILLIAMS.

About a year and a half ago some one lent me the text-book of a new system of short-hand. I examined it and was so impressed with its advance upon the old systems, that I determined to master it. I had always heard that the greatest difficulty in learning a new system, was in forgetting the old characters which the hand had become accustomed to form. This thought I met Scientifically, by absolutely turning my back, as it were, on the old, and never for one instant allowing any images of its characters to dwell in thought. Doing this constantly and persistently, I experienced none of the difficulty that mortal thought anticipated.

It did not occur to me at the time, but since, I have realized that the course I pursued in regard to the short-hand, is the Scientific and only method of destroying old images of thought, to which we were accustomed prior to our acceptance of the new Scientific thought of Truth. Every conception, every expression that savors of our former condition, when we dwelt entirely in mortal beliefs, must be absolutely denied, turned out of consciousness without delay or argument, and there must be no comparison of the old and the new, to see wherein their difference lies, or to see how much the new exceeds the old in good.

The better way is to cast out the old, and thus make room for the new, so that there be no clashing of beliefs. Doubt of Truth, and fear that we cannot accomplish a desired end, are not expressions of Intelligence, and therefore cannot be entertained by one who is striving to learn the "new way," "forgetting those things which are behind."

## Vain Thoughts.

A. C. G.

Do Christian Scientists think vain thoughts? Let us hear the meaning of *vain:* "Producing no good result, fruitless, destitute of force, weak, unsatisfying, useless."

What is the result of our thinking? Do our thoughts bear the fruit of Spirit? Is there force back of our thinking and is it the force of Mind, or are our thoughts weak, unsatisfying, useless? It behooves every Christian Scientist to heed the advice of the Master when he said, "Watch." To that word one might with profit, add a little and make it read, watch your thinking.

Our progress would be marvelous if we were so alert that not even a shadow of an empty, useless, worthless, fruitless, or idle thought were permitted to remain. Then we would realize the omnipotence of Good so clearly that all that is opposed to the law of God would disappear.

## Fasting and Prayer.

L. S. S.

In the old faith,—the Episcopalian,—great stress, as I remember, was laid upon the thought of fasting. We read the words that Jesus gave, that we were to watch and fast and pray,—we read that he said that the evil or devil cometh not forth but by prayer and fasting; but we had no spiritual sense of fasting. I remember very well that during the Lenten season, which occupied six weeks, I was very diligent in fasting, abstaining from certain things that I was especially fond of. It was a great cross to me, so I thought, and therefore I believed my crown was to be very great. But when I came to Christian Science, I began to know a little of what it means to fast. I am beginning to know how to fast from material senses. There is nothing else from which we are called upon to fast. God's table of Life and health and strength and cheerfulness and joyfulness and meekness is spread before us daily, even in the house of our enemies. So that all that we are called upon to fast from is fear, doubt, and distrust of the Father's loving kindness, and it seems strange that it should seem hard to us. Sometimes the words of the old hymn may be partially true, "Our souls, how heavily they go to meet eternal joys." And yet, after all, Christian Scientists are the happiest people in the world, and we are beginning to know a little of fasting and a little of prayer. Prayer follows quickly the fasting from material sense and the realization of the allness of omnipotent Love, Life, Mind now and here. Surely this is true and effective prayer.

There is great power in simplicity,—simplicity of speech, simplicity of life in every form. The world has no patience with people who are superficial, who are trying to show off, who are trying to be what the world knows they are not.—Booker T. Washington.

# The Lectures.

### At Delavan, Wis.

A large and representative audience gathered at the Opera House, Tuesday evening [November 11], to listen to the lecture of Dr. Silas J. Sawyer of Milwaukee, on Christian Science. The lecture was an interesting and earnest statement of the new faith and the method of reasoning which is proving conclusive to so many.

*Delavan Republican.*

### At Beatrice, Neb.

Judge S. J. Hanna of Boston delivered an interesting and instructive lecture on Christian Science at the Auditorium last evening [November 17]. The house was well filled by an audience of the best people in Beatrice, and the marked attention given the speaker showed that they were there to hear the truth as to the tenets of Christian Science. The speaker was introduced by Rev. E. M. Buswell, of the local church.—*Beatrice Sun.*

### At Toronto, Ont.

The subject of Christian Science has now lost something of its novelty to the general public, but as presented yesterday afternoon [November 16] by Rev. Arthur R. Vosburgh of Rochester, N. Y., an official lecturer, to an audience that completely filled the Grand Opera House, it proved of engrossing interest to his hearers. The lecture was given under the auspices of Second Church of Christ, Scientist, of this city, and the lecturer was briefly and fittingly introduced by Rev. Dr. Wild.—*Mail and Empire.*

### At Rock Island, Ill.

Mr. Carol Norton of New York lectured at the Illinois Theatre on Tuesday evening [November 18], on "The Growth and Teaching of Christian Science." The auditorium was crowded with adherents of every phase of religious belief and unbelief when Mr. Norton was introduced by Mr. George Sheldon, First Reader of the local Christian Science Church. The lecturer held the undivided attention of his audience as he elaborated the teachings of the church, and told something of its history and growth.

*The Rock Island Union.*

### At Youngstown, O.

An audience of about eight hundred persons assembled at the Park Theatre Sunday afternoon, November 9, to listen to a lecture on Christian Science by Edward A. Kimball, C.S.D., of Chicago. Mr. Kimball was introduced by Judge J. R. Johnston, a Scientist of this city, who spoke in part as follows:—

We are assembled to hear and learn something about the Truth, not new truths but old ones; for all truth is eternal, and must of necessity have existed from the beginning. What we may think or believe is not always the truth. For nearly six thousand years it was the universal belief, based upon daily observation, that the sun rose and set each day, making its diurnal passage around the earth, yet Galileo discovered and demonstrated that this belief was not true, and had not been during all those years. It was not a new truth that he discovered, but an old one,—one that had existed from creation's earliest dawn. Kepler's discovery of the laws of planetary motion was not the discovery of a new truth, but of a truth that had existed from the time that the morning stars sang together. Newton's discovery of the great law of gravitation was simply the discovery of a scientific fact that had always existed.

But because these truths were not new, it does not deprive these men of the honor of being discoverers, and the same may be said of our beloved Leader, who, in her search for Truth, discovered the old truths of primitive Christianity that had been discarded and relegated to the theological garret. Having made a practical application of them to the life and conduct of mankind, she is entitled to rank with the greatest discoverers of the ages.

*Correspondence.*

### At Salem, Mass.

Judge William G. Ewing of Chicago delivered a lecture on Christian Science on Thursday evening, November 6, at Ames Memorial Hall, under the auspices of First Church of Christ, Scientist, Salem, Mass. It was listened to attentively by an audience of between five and six hundred persons.

The lecturer was introduced by Mr. Alfred Farlow, who spoke in part as follows:—

Since it is impossible to fill a vessel that is already full, it becomes necessary that all preconceived beliefs and opinions, all prejudice and self-satisfaction be set aside in order to give a fair hearing to that which is new. Those who refuse to give ear to new ideas are a hindrance to progress, while those who are ready to listen are a blessing to the human race and give impetus to progress.

### At Mason City, Ia.

On Monday evening, November 10, Judge Septimus J. Hanna delivered a lecture at Parker's Opera House in Mason City, Ia. The Opera House was completely filled with an audience of the representative people of the city. Many Scientists from other towns and cities were present. The lecture was printed in full in the two daily papers the following days, with editorial expressions of the highest compliment to the lecture both as to the subject-matter and the eloquence and earnestness with which it was delivered. The intense interest of the vast audience was manifested by the breathless silence and rapt attention with which they listened to the end.

The lecturer was introduced by Mr. J. E. E. Markley, who spoke in part as follows:—

*Friends:*—It speaks well for the advancement as well as for the superiority of the citizens of any community that they are willing to hear and consider the opinions of those who may come claiming to know some new truth, or to have discovered some new phase of the old. It was Confucius who, thousands of years ago, declared that the superior man is social and not partisan,—tolerant and not dogmatic.

Victor Hugo says that man's greatest enemies attack him from within, that we need not fear the robber or murderer who comes from without, that our prejudices are robbers and our vices are murderers. Prejudice is the child of ignorance and exists only so long as the darkness of ignorance surrounds us.

Truth is likened to the sun—a sphere of light radiating to every part of the material universe its light. Truth is universal and infinite. We only faintly or in part see the great truth of being. The portion of the sun's rays that strike this little world of ours is but an infinitesimal part of the radiance of that glowing sphere; the light that comes to each one of us comes to no other eye and illuminates no other sight; even though we stand side by side we see not the sun, nor any object, in the same light, yet the light is from one source and performs the same beneficent office for us all. As the light of the sun, so truth is infinite, universal, and all-sufficient, flowing from the one source—eternal Mind. We may not see it just alike, but it comes to bless all who receive it.—*Correspondence.*

Digitized by Google

### At Elwood, Ind.

There has probably been no public lecture in Elwood in the past several years that has caused so much favorable comment as that delivered by Carol Norton, C.S.D., of New York City, at the Kramer Grand Theatre, last Sunday afternoon [November 16].

The lecture, which was under the auspices of First Church of Christ, Scientist, of this city, was well attended, and the large audience contained many of the thinking people of the city, who went to learn something. Judge Call, who introduced the speaker, said that he was not a Christian Scientist, but he was interested in the information about to be given the audience.

With others present it was the same, and those who braved the bad weather to hear Mr. Norton's lecture were educated and edified by his remarks. There has been a general discussion of the lecture since its delivery and much thinking done.—*The Elwood Call Leader.*

### At Grand Rapids, Mich.

Fountain Street Baptist Church held a large and intelligent audience Friday night [November 14], which had gathered to hear Carol Norton of New York City lecture on Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist. Mr. Norton spoke with an earnestness of expression and depth of sincerity that made a profound impression on his hearers, who evidenced the keenest interest by giving the closest attention to his words throughout his discourse. He explained the belief of the true Christian Scientist in a manner that could not fail to dispel erroneous ideas entertained by many ignorant of the real foundation of the faith, which he showed is based upon the teachings of the Bible—that Christian Science is, in fact, applied Christianity. He was introduced by Mayor W. Millard Palmer, who said in part:—

We are all seeking the same goal, though by different paths. We accord each the path he shall choose. The thousands and hundreds of thousands in this country who hold allegiance to the faith as expressed in Christian Science show that the presentation of that faith is entitled to a hearing. But one degree less intolerant than persecution is that form of mind that refuses to hear the truth.

*The Grand Rapids Herald.*

### At White Plains, N. Y.

The Hon. William G. Ewing of Chicago lectured Thursday evening [November 13] in the Auditorium.

He was introduced by Mr. George H. Daniels, General Passenger Agent of the New York Central Railroad, who said in part:—

I have lived all my life, except fourteen years, in the West, where the speaker of this evening comes from. I have known of his work for many years and I have never heard anything about him except what is good. I esteem it a high honor to introduce to you Judge Ewing of Chicago, who will now address you on Christian Science.

Judge Ewing said in part:—

I want to say at the outset that this lecture has nothing to do with the matter that has been made public through the practice of Christian Science in White Plains. I have too much respect for the ethics of my profession to attempt by any public demonstration to influence any act or acts that have been taken by any one.

Christian Science is so little understood because it is so misrepresented. Our contention is that Christian Science helps through the power of God, and through that power alone is any one helped.

Christian Science has no quarrel with doctors. I believe that the medical profession is one of the learned professions of the world. I believe its followers would sacrifice their lives, if necessary, for the amelioration of the ills of humanity. But we do not take the doctor's medicine now. Neither do they take ours. There is the parallel. My own last thought and word is that every breath I have drawn for the past eighteen years I owe to Christian Science.

*The New York Sun.*

### At Detroit, Mich.

A lecture by Carol Norton, C.S.D., of New York City, was delivered at the church edifice under the auspices of First Church of Christ, Scientist, of this city, Sunday afternoon, November 9.

There were present between one thousand and twelve hundred people, who gave the lecture the closest attention.

Mr. Norton was introduced by the Rev. Reed Stuart, pastor of the Unitarian Church, who spoke as follows:—

*Ladies and Gentlemen:*—It gives me much pleasure to be permitted to meet with you this afternoon. First, in a general way; because, however great may be my own failings in this respect, it is always a source of delight to meet those who place the emphasis of their teaching and practice on the superior side of life. Here you believe that the spiritual is superior to the material; love is better than hatred; and life is master of death. In this we are in perfect accord. Many of you have gone further into the mysteries of the spiritual life and its laws than I have yet been able to go. I congratulate you. If I could see what you think you see, I should be as you are and act as you act. We can only see what is given us to see, and I dare not pretend to the possession of things that are not mine. Perhaps the coming years may reveal things that are now concealed from me; but, meanwhile, I can only use the spiritual truths I actually possess. If I should ever have the light you think you have, like you, I should follow implicitly whither it might lead.

There are those in this company who went out from the church to which I have been permitted to preach for many years. They came here because they could find that which they could not find in the church they left. In this they acted wisely. None of us can afford to slight any opportunity furnished us to make advances in the realm of the spirit. So far as may be known those who went out had for me only kind sentiments, and for them I had and still have love in my heart. I am glad they are finding here the kind of food their souls demand.

In a more specific way, I am glad to be here because it gives me an opportunity to hear a recognized teacher of Christian Science speak on his chosen theme. It would be an easy and delightful task to say pleasant things of him who is about to address us. This is not necessary; perhaps it is also not desirable. An almost general result of observation is that those who are hungry for personal praise rarely deserve it, and those who most deserve it do not care for it. Thus permitting his work to commend him, I beg to present Mr. Carol Norton, who will speak on "The Teaching of Christian Science."—*Correspondence.*

### Lectures at Other Places.

Saginaw, Mich.—Carol Norton, November 13.

Jersey City, N. J.—Judge William G. Ewing, November 14.

Ann Arbor, Mich.—Edward A. Kimball, November 16.

Oneonta, N. Y.—Judge William G. Ewing, November 18.

If you cannot be righteous without wearing quills like the "fretful porcupine" you are not maintaining a winsome life. A true balance of character will have a broad and generous disposition in a life that sturdily adheres to truth.

REV. PEARSE PINCH.

## Testimonies of Healing.

It may interest the readers of the *Sentinel* to read of the penetration of Christian Science into this "up country" village of Umtali, in Rhodesia, South Africa. I seemed to be the one chosen by God to be the mouthpiece for His message, and it is with feelings of the deepest humility and gratitude that I recognize the divine guidance.

I had scarcely begun the study of Christian Science when I came to this little town, just a year ago. What little I did understand was learned through the kind and loving help of a lady in London. I was not led to Christian Science by any physical healing, but because when I first heard it mentioned, and even though it was in tones of derision, I exclaimed to myself, "That rings true, and I believe it is what I have been waiting for." As the teachings of the Church of England brought me no satisfaction, I went to the lady above mentioned and drank in all she had to say on the subject, and then I bought Mrs. Eddy's book, Science and Health, and after reading a few chapters I threw it away, saying it was nonsense. My teacher smiled and said quietly that they had all been through that, and that if I read on it would come to me. And now I want to give my experience, hoping that it will encourage many a student despairing of ever understanding this wonderful book.

No one could have been more hopeless than I was. I thought I should never understand it, and for months I read and argued and questioned (all the time longing to be able to understand it). I was fighting Truth though I did not recognize that fact. Suddenly one day the thought came to me, "This has all been pointed out and proved for you, you have not to find it out, you have only to learn it." Then I gave up fighting and questioning and became in mind "as a little child," and from that moment the light gradually came. What I could not grasp I quietly passed over and saw light where I was allowed to see it, with the result that after ten or twelve months I not only can help myself in the matter of healing, but have been enabled to help others, two cases that I have been successful in being serious internal troubles.

Since I have been in Umtali several people have become interested in the Science and are studying it with my help, and in this tiny town of only about four hundred white inhabitants there are five copies of Science and Health which I think is most gratifying. I have had much scoffing and derision to endure, and at first, before I felt secure in the truth, every adverse criticism, whether to my face or in print, troubled me, and I wondered, "Am I right?" I prayed deeply and earnestly that if it were truth I might be led to it, and if otherwise that I might be shown my error, and in the most unmistakable way was I led step by step and shown that it was the truth. Mortal mind fought hard to possess me and tried to convince me I was following a false doctrine, but gradually Truth prevailed and mortal mind got weaker and weaker in its protests, and now I know that God, Good, is all, and that there is none beside Him.

For many years past I had been longing and seeking for something, I knew not what; I was never satisfied; I hardly knew if it was a bodily or mental want. With regard to the Bible, I used to read and ponder, and I felt that somehow the church did not follow the teaching of Christ. What was this mystery of his teaching that set all the people so at variance? Then again why were all those promises made by our Saviour to those who believed in him? They were either empty promises, meaning nothing, or we were not living so as to realize their fulfilment. In that case, why were we not so living? for I knew of people living the lives almost of saints, and yet even to them the promises were not fulfilled. Oh! what was wanting! I longed to know. And then after years of longing and doubting and sore hunger, I was found ready to receive the message and it came to me, as I have said, in words of scoffing and derision, and yet they sank into my heart and I felt I had found what I wanted, and I can say now what I have never been able to say before, "I am satisfied."

I have had many demonstrations of healing. One case was that of my own little girl of three. She came to me one day saying she had a bad sore throat. It was much swollen and inflamed, and she could not eat and was heavy and listless. I treated her as best I could (as I was very young in Christian Science then) and told her she must ask God to make her well and He would do so. In an hour she came to me and said, "Mamma, isn't God good because I asked Him to make my throat better and now it is quite better." I looked and the child's throat was perfectly well and she was bright and lively and romping about as usual. It was a marvelous demonstration, and one that helped me considerably. Again I say, Let no one be discouraged. No one could ever feel more hopeless of understanding Christian Science than I did, and yet even I have succeeded. Study it quietly and prayerfully and you will succeed. Do not fight and question and try to reconcile it to your old material knowledge and understanding. It is error in the shape of self-conceit which thus tries to hinder you.

No wealth this world could offer could tempt me to give up even my small understanding of Christian Science. I cannot describe all that it is to me, but every Christian Scientist knows, and those who are yet to learn the Truth will then find out for themselves what a blessing it is.

AGNES H. S. HARRISSON, Umtali, Rhodesia, S. Africa.

---

By reading the testimonies of healing in our periodicals, I am convinced it is my duty to add mine to the many. I did not come to Christian Science for physical healing, but for spiritual help. I had a chance, however, to test the healing power of Christian Science as well. Between the ages of seven and eighteen, I was held in bondage by rheumatic fever and heart trouble which used to last all winter. The physician said I would finally outgrow it, which I did to some extent. The word rheumatism would strike terror to me. I used to have rheumatic pains throughout my entire body, one steady ache. The old trouble appeared after coming to Christian Science. It seemed as if determined to prove fatal. The intense suffering lasted about three weeks, passing from one part of the body to another, until at last it seemed to have become quite unendurable.

I am now thankful for the trial I passed through, which proved the power of God who never sent pain and suffering to His children. I am grateful to those dear ones who were instrumental in relieving me of this demon of disease. They said I inherited it from my grandmother. It is stated in Science and Health, p. 63, "Man is the offspring of Spirit. The beautiful, good, and pure constitute his ancestry."

One who helped me through this trial, was my little girl, six years old. She spent most of her time reading the Bible and Science and Health to me. She believed every word was healing me. Through her demonstration the swelling disappeared from my feet. The first Sunday I attended church, it seemed impossible to wear my shoes. I was putting on my slippers when my little girl, who seemed quite indignant, said, "Why, mamma, you can wear your shoes;" she was so positive that I tried again and wore them all day without any discomfort. I am thankful to God for the holy privilege of reading the Bible and Science and Health with even a grain of understanding.

I have seen many cases of healing in Christian Science, one was of indigestion. A young man was so far gone with this disease that his physician said he could do no more for him. This young man was able to eat a hearty

Digitized by Google

meal after two Christian Science treatments. That was three years ago. He is still able to eat whatever he desires.

K. T., Cincinnati, O.

---

Many troubles have been overcome through Christian Science, for which I am very thankful. The best one was the rescuing of my three-year-old son from scarlet fever. One hour mortal mind told me he was dying. Two hours later he lay in my lap smiling and humming a song. The practitioner helped me. I find richest food in the *Journal, Sentinel,* and *Quarterly*. I could not do without them.

MRS. T. E. CLARK, Eureka Springs, Ark.

---

I had goitre and suffered terribly from the effects of it. I had tried several eminent physicians but none gave me relief. I felt at times that I did not care to live, I was so miserable. When I had given up, a Christian Scientist asked me to try treatment. I told her I did not know what it was, but if there was anything in it for me I was ready for it. I am perfectly well and enjoying the life which I was so willing to give up because of my suffering before I found Christian Science. I hope to understand more fully soon. This I know, that it found me a total wreck, and made me a healthy, happy woman.

MRS. JOSEPHINE E. LAYCOCK, Cynthiana, Ky.

---

Before I took up the study of Christian Science three years ago, I used to catch very severe colds in my chest and throat, and also had attacks of rheumatism and neuralgia. Added to this, I nearly always felt tired and had a sense that life was unsatisfactory. Through Christian Science I have been healed of all these complaints, and can say that now I feel well and strong. It has sometimes been a hard struggle with error, but by clinging to Truth and knowing that God is near to us in times of trouble, the light has come with healing and has brought peace and happiness.

All we have to do is to silence self and to let God's light and love flow into our thoughts. As we look to God and allow only this reflection to shine through us, the darkness disappears, and we come into our birthright of power and dominion nd rest in divine Love, for "my people shall be satisfied with my goodness."

MISS VERONIQUE GREVILLE, London, Eng.

---

I was healed, when I was dying, and several of the organs were inactive. I had been an invalid for several years, and weighed less than one hundred pounds and now I am in perfect health and weigh one hundred and fifty pounds. It has been fourteen years since Christian Science saved me from the grave. Before becoming a Christian Scientist I was bitten by a spider; the flesh seemed to come out to the bone, and extended almost around my arm. Since accepting Christian Science I was again bitten, behind my ear. Error suggested every danger, but it was perfectly met in twenty-four hours, and the great comfort to me was, that the fear of the spider was destroyed,—I saw that the danger was a dead mortal law, and my own belief of it; that it was not the spider at all.

I have also been greatly helped in my disposition. I was once revengeful and unforgiving, and full of false pride, which has been destroyed through the understanding of the Science of Being; by knowing that we have dominion over every false suggestion, and by knowing that discord is no part of our real self, and is as separate as our right hand is from the left.

I could write at length of the blessings received, as could all Christian Scientists.—B. S., Dallas, Tex.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts set. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

President W. H. P. Faunce of Brown University, who preached recently at the Central Congregational Church from the text "Prepare to meet thy God, O Israel," is reported by the *Boston Herald* as saying:—

"The battlefields of to-day are not on the plains, but mainly in the great office buildings. We may weld the swords into plowshares, but the battle of the plowshares still proceeds. Every political problem has become an economic problem, and every economic problem is a moral problem.

"When we stand face to face with the great economic movement, there are three attitudes that a man may take. He may say, 'How am I concerned in this? It is one more fight between labor and capital, and I suppose the strongest will win, and I do not care.' That is the attitude of the parasite and the coward. Or a man might say: 'This new movement threatens me and my methods. It is a criticism on my friends, an attack on my property, and I resent it.' That attitude means insolence on one side and violence on the other. Or a man may say—and it is the province of the Church to teach every man that he should say—'Where is God in this great struggle? What does divine righteousness demand? What does the real brotherhood of man imply? Do I act on the same principle in the church on Sunday morning and on Monday morning in the stock exchange? Are the Christian business men and the Christian workingmen of this country really laboring to make the kingdom of God come and nothing else?'

"If not, then our judgment day is coming—not in the clouds of heaven, millenniums from now; but here in America, between the Atlantic and the Pacific, here in New England, until we achieve the reorganization of society on a genuinely Christian basis. God's will is going to be done on earth as it is done in heaven—through us, if we will help; in spite of us if we do not care."

Rev. Frederick William Hamilton, D.D., in *The Universalist Leader*, says:—

"The holy city is nothing else but the divine life entering human lives and manifesting itself in every institution of human society. To develop the divine in man, the heaven-born part of him, to open his soul wide to the incoming and the indwelling of the divine life,—that is to bring the holy city down from heaven. Not otherwise can any new Jerusalem rear its walls for the shelter of the weary nations.

"Is not this the gospel for an age of misdirected idealism? Again the conditions of the old time are fulfilled. Men are seeking feverishly after the Kingdom of Heaven, and their own confused cries of 'lo here!' and 'lo there!' so fill and deafen their ears that the quiet voice of the Master, warning them to look within, is all unheeded. Men are ready to try every panacea of legislation and philosophy . . . as means for the building of the holy city, but for the most part they are unwilling to trust the one and only means by which it can be built,—religion issuing in character. . . . It is time for the whole Church to stand again before the world as interpreter and ambassador, declaring with the sublime faith of its founder that in Christ is the way, the truth, and the life. The world has many wants and one need—religion. The need once satisfied the wants disappear, as the sick longings of the fever-stricken vanish when wisely applied remedies heal the disease at its source."

Why does Paul, speaking by the Spirit of God, place so exalted an estimate upon love? Why does he exalt it, not only above prophecy and miracles and healings and other notable gifts, but above even the graces of faith and hope? Because love brings us into closest kinship with and likeness to God. "He that loveth not knoweth not God; for God is love." Because love is the essential quality, the quintessence, so to speak, of all other graces and virtues. Because love alone has sufficient impelling force to overcome our moral inertia, and lead us to heroic endeavor for the saving and uplifting of a fallen race. Because love is the one and only bond strong enough and pliable enough to unite all mankind in a genuine and lasting brotherhood, thus fulfilling our Lord's ideal of his earthly kingdom. Because, to quote Paul's own words, it suffers long, is kind, envies not, vaunts not itself, is not puffed up, does not behave itself unbecomingly, seeks not its own, is not provoked, takes no account of evil, rejoices not in unrighteousness, but rejoices with the truth, bears all things, believes all things, hopes all things, and *never fails*. Here, indeed, is perfection.

*The Examiner.*

Every apologist of conventional theology thinks it necessary to justify the aberrations of early Christianity. The reason is easily discovered. Conventional theology does not date from the Gospels but from the creeds. Those systems of theology which so long held sway had their birth, not in the brain of Jesus, but in the supposed necessities of a later age when men were trying to formulate standards by which to classify true "believers," and weed out heresies and heretics. How far this process was or is of importance to the perpetuity of the work of Christ is extremely doubtful. We have come to a time when these speculations and definitions do not satisfy the human reason. They have become empty formulas to thinking people of all Churches. In the light of history, and as revealed by the sequel, in their failure to satisfy the mind of man today, the most that can be said for them is that in an age which suffered from acute speculative curiosity and intellectual fog they did *temporarily* fix the standards of a *Church* which was the main support of social order.—*The Universalist Leader.*

The true evangelist exalts Christ and his Church, and condemns organized sectarianism that erects in every community its barriers to Christian unity. It recognizes whatever of Christian life and faith may yet be entangled in denominational bonds. It cooperates with all good men as far as possible in any good enterprise, but takes care not to have fellowship with their party errors. It properly assumes that a Church of Christ is needed in every community where men desire to be Christians and decline to make alliances with denominational establishments. It insists that the world must be saved from sectarianism as well as from other sins. It proclaims only that gospel which now, as in the beginning, breaks down the middle walls of partyism, and out of two (or a hundred and sixty) creates one new man or Church, *so* making peace.

*Christian Standard.*

It is not enough to say, "I love Jesus." That is a good confession at the beginning of the Christian life, and it is good to repeat it often as occasion offers; but it is not enough. How are we showing our love? By confession alone? But Christ demands much more of us. He asks first our love and then our service, and the *service* is the proof of the love. Peter must show his love by feeding the lambs and tending the sheep. Lip service was no equivalent for heart service in the Master's eyes. Feed—tend—*do* something for thy Lord, and so demonstrate thy love.—*The Examiner.*

The severest reflection on the theological seminary is not the herculean attack of an independent press, or the violent opposition of the materialistic scientist, or the polished shafts of hostile literati, but it is the empty church, the prominence of evil in the community, the loss of confidence in the absolute integrity of the professor of the Christian religion, the weakness of the Church in large areas.—*From the inaugural address of President J. H. George, at Chicago Seminary.*

It is true that the Churches already have the benefit of a great deal of spiritual motive power.—for the Almighty is active in our day as He has been in every previous historic period.—but the need is for more power. The machinery of religion is of little use without the power from on high. Not statics, but dynamics, represents the Church ideal. Pray for *more* power.—*Zion's Herald.*

The experience of the Christian is his strongest shield against unbelief. He knows that Jesus has given him peace. He has felt that Christ has quickened him into new and nobler life. He has received a new nature from his Lord. Get this experience and it will give you steadfastness.

WILLIAM M. TAYLOR.

However practical we deem it, that life loses itself which fails to keep in touch with the invisible—with the deeper principles which make business more than barter, and science more than hammering rocks and a skilled use of the scalpel, and life more than the baking and eating of bread.

JAMES M. TAYLOR.

It is God that speaks in secret promptings. The Spirit will leave you if you refuse obedience; every warning disregarded is a door closed against future progress. If you do not now the good which you can, the time will come when you cannot do the good which you would.—FREDERIC H. HEDGE.

Anybody can build a house; we need the Lord for the creation of a home.

J. H. JOWETT.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEED AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $7.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1865, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy. Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

A statement prepared in the General Land Office shows that 6,109,039 acres of land were disposed of by the Government during the first three months of the present fiscal year, the receipts therefrom amounting to $2,615,089, an increase of 600,897 acres in area and $1,184,910 in receipts over the corresponding period of the last fiscal year.

General Wright, vice-governor of the Philippines, has appeared before the House Committee of Ways and Means and advocates a reduction of tariff rates on Philippine goods coming into the United States to twenty-five per cent of the Dingley schedule, instead of seventy-five per cent as under the present law.

It seems probable that Vice-Governor Wright will become governor of the Philippines; that Governor Taft will succeed Justice Shiras of the United States Supreme Court, who retires by age limit, and that W. W. Rockhill will fill the vacancy on the Philippine Commission.

The first decided move in the interest of the French reciprocity treaty was taken by Senator Cullom, chairman of the Senate Committee on Foreign Relations, when he gave notice that he would ask the Senate at an early date to take up the matter.

**Foreign.**

The Assouan dam on the Nile was opened last week by the Duke of Connaught, who is *en route* to India to attend the coronation durbar. The dam has cost over a hundred million dollars. It is a hundred feet thick at its base and floods the valley back about fifty miles. The annual flood with its fertilizing silt and soil has now passed, and the flood gates will be closed until March for storage. The sluices will then be gradually opened into the Treery irrigating canal. The scarcity of water due to a low Nile is thus avoided, and the agricultural area will be increased. This dam, which is two thousand metres in length, lies just above the Tropic of Cancer near the first rapids of the First Cataracts about five hundred miles from the mouth of the Nile, and makes possible a storage capacity of over one billion cubic metres of water. When the reservoir is full the famous temples on the island of Philæ, with the exception of the great temple of Isis, will be submerged from two to four metres. A canal with four locks now leads around the Cataract and renders the Nile navigable the year round to Wady Halfa, one hundred and twenty-five miles above the dam.

England and Germany have both served upon Venezuela an ultimatum in regard to the payment of indemnities for injuries to their subjects. The course to be followed, which was first outlined to the United States Government and approved as not conflicting with the Monroe Doctrine, consists of the posting of the ultimatum; breaking off diplomatic relations; a peaceful blockade of revenue ports; seizing the custom houses and collecting fees until the amount of the indemnities are satisfied.

The Colombian government disapproving of Minister Concha's action in dealing with the canal treaty has recalled him. The negotiations are now being conducted in a friendly manner by Dr. Herran, charge d'affaires. He has already cabled his government the desirability of prompt action.

Germany is planning the laying of a submarine cable from the Azores to Dutch Guiana. Germany has entered upon a vigorous policy of constructing or inducing the construction by German capital of submarine cables that shall be wholly independent of other nations.

The British Foreign Office has issued the text of the Anglo-Abyssinian treaty, which was ratified October 28. By this treaty Great Britain obtains the right to construct a railway through Abyssinia, which may become a possible link of the Cape-to-Cairo line.

The creation in Russia of the new Department of Mercantile and Marine Ports is interpreted to mean that Russia contemplates the employment of large subsidies in the development of her mercantile marine.

The first regular passenger train from Havana to Santiago over the new railroad of the Cuba Company was run last week. It had aboard about one hundred and fifty through passengers.

An edict has been issued in China ordering the confiscation of all the telegraph lines in order to secure secrecy for government dispatches.

The House has passed a bill appropriating $50,000 for the expenses of the Anthracite Coal Strike Commission.

**Industrial and Commercial.**

The keel of the largest six-masted schooner ever undertaken, as well as the first six-master to be constructed of steel, was laid last week at the Fore River Shipyards, at Quincy Point, Mass., on the readjusted blocks from which the seven-master Thomas W. Lawson was launched a few months ago. Her length over all is 339 feet 6 inches, her water line 306 feet, beam 48 feet, depth 29 feet 9 inches, displacement, 7,000 tons; she will spread about thirty-six thousand square feet of canvas.

The importations of steel and iron manufactures in the ten months ending with October, are, according to the figures of the Treasury Bureau of Statistics, double those of last year, three times as much as those of 1898, and larger than for any year since 1891. The total value was $31,987,056.

The National Novelty Company, a combination of some thirty or more iron, wood, and metal toy making concerns of the country, has filed articles of incorporation in New Jersey. The capital is to be about ten million dollars.

Reports to the Reading Railway offices show that last week, for the first time since the resumption of mining, the normal output was reached with thirty-one collieries in operation, the output one day being 1,305 cars.

Six new Massachusetts companies have recently filed certificates of organization at Augusta, Maine. The collective capitalization is $2,073,000, of which $1,400 has been paid in.

**General.**

A "liquid lens," the invention of Dr. Grun of Brighton, England, made by placing an oil between the combinations of the lens (and not in the air spaces) shortens the focus materially and makes a very rapid lens by which a photograph may be taken in a theatre, the footlights only being used, in a quarter-second exposure, and in an ordinary room with an illumination of forty-eight candle power a photograph can be taken with an exposure of five seconds.

J. Q. A. Ward has accepted the commission to design for the St. Louis Fair the figure of "Jefferson accepting the Instrument of Transfer of the Louisiana Territory," and D. C. French the companion figure of "Napoleon in the act of Signing the Transfer of his American Empire." Augustus St. Gaudens will design a group of symbolic statuary, probably the "Triumph of Missouri."

A fleet of twenty-five oil steamers having a capacity of nearly six thousand barrels, besides a large number of barges having almost the same carrying capacity, will soon be plying between New York, Philadelphia, Baltimore, and Texas. The vessels are huge floating tanks into and out of which the oil is pumped.

At a recent auction sale in Boston of rare and valuable articles collected by the late Mrs. S. D. Warren a Sevres vase brought $1,250. It is decorated with a fine portrait of Marie Louise and is signed by the artist Constantin. Its companion piece is in the Sala Della Stufa in the Pitti Palace, Florence.

The Massachusetts Institute of Technology is to establish a Graduate School of Engineering Research to open October 7, 1903. This school will confer upon those who pass satisfactory examinations the degree of Doctor of Engineering.

"Allen Farm," once the home of Ethan Allen, the hero of Ticonderoga, will soon be transformed by its present owner, W. J. Van Patten, into a public park and presented to the city of Burlington, Vermont.

After thorough trials of American and English locomotives on the government railways of New Zealand, the officials report that the best results have been achieved by the former.

Twenty-four thousand nine hundred dollars was paid in London a few days ago for Thomas Gainsborough's portrait of his daughter. In 1864 it brought only $585.

The Park Street Church, Boston, known familiarly as "Brimstone Corner," and erected in 1810 at a cost of $50,000, has been sold for $1,250,000.

A story comes from Mexico of a remarkable find of a rich Aztec treasure at Yesca by a party of Americans accompanied by an expert archæologist.

The English language is to be systematically taught in the Mexican schools, English being considered as essential as Spanish for commercial life.

Settlers from Australia and New Zealand still continue to go in large numbers to South Africa, despite discouraging reports from that country.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### The Treatment of Disease.

*Mr. Editor:*—Your comment upon my late letter encourages further correspondence upon the signification of the two terms "absent treatment" and "claim" as used in Christian Science. My considerate regard for your space prompted me, when writing you before, to be brief, but now I will endeavor to outline more minutely my meaning, hoping to make clear to you and to your readers, if you will publish my letter, our use of these words.

Your position is in part a laudable one. Mrs. Eddy once wrote, "I respect that moral sense which is sufficiently strong to discern what it believes, and to say, if it must, 'I discredit Mind with having the power to heal.' This individual disbelieves in Mind-healing, and is consistent." (Miscellaneous Writings, p. 223). Her words would apply exactly to you now.

You have conceded that "Christian Science as a firm, calm belief in the teachings of Christ, may be efficacious in the curing of diseases of a nervous character," and state that "many diseases of this kind are largely or purely imaginary," and in this you have really concluded the argument; for there is no class of diseases which so generally baffles the "regular schools" as this. If Christian Science could do nothing more than release the hysterical and hypochondriacal, that alone were sufficient reason for its existence.

But you only claim that some of these diseases are imaginary. May I tell you that many such cases, which the broad-minded members of the medical fraternity regard as very real, are to-day being referred to us by them, and that they are as grateful as the patients when the latter are healed?

Then as to your next difficulty, "when it comes to broken bones, etc.," it is our present rule, often reiterated in the press, to refer broken bone cases to surgeons, and this by Mrs. Eddy's specific direction; while every issue of *The Christian Science Journal* and *Sentinel*, and each Wednesday night meeting of every Christian Science Church, affords testimonials of healing of all kinds and degrees of sickness and sin, which will bear investigation if doubted; or, I will furnish you names of persons treated absently and healed by Christian Science, if you care to take the trouble and expense of investigating them.

Here is one: A man well along in years had his foot injured, the injury so real that gangrene had set in, and the first joint of his great toe had disappeared. His attending physicians decided, and arranged, to amputate, first his toe, then his foot, and at last his leg; but finally concluded that he could live but a week at best, and they would better not operate. His case was then given over to Christian Science, and he was healed in 1898 and is sound to-day. I saw him last summer for the first time, and if you could have witnessed his greeting to me it would have cured your doubt, I am sure. He is a sturdy German farmer, and I have no doubt he will tell you the story himself, and that his family will corroborate it, if you go there; but don't write him; he is unlettered; go and let him tell you if you want evidence, then give your readers his story, and you will begin to believe in the practicability of "absent treatment." His name and address are at your disposal. Different evidence might be, even to your fair mind, but an instance of "absent work," and if thus convinced against your will, you might be of the same opinion still.

You are right about the hypothetical case of broken thigh bone, and I fully agree with you; it is "useless," and worse than useless, it would be injurious for him to try to imagine that "he is uninjured;" will-power too is literally of no avail, but such process would not be proposed nor pursued by a Christian Scientist. Did you think that was Christian Science? Well, you are mistaken, and there are others, but the number of them is growing less as the press helps us to set them right.

Now just a brief paragraph about the use of the word "claim." I was once in the railroad service. Our company maintained a high salaried official and an expensive office force and equipment, for no other purpose than to fight "claims." I recently heard a Congressman say that the Committee on Claims has the hardest time to secure recognition of any department in the government. Why, a claim is never worth the paper it is written on until it is allowed, and in Christian Science Mrs. Eddy is teaching us to disallow claims and we do not often have to "pay the uttermost farthing," though with our present limited understanding we do sometimes fail.

Believing, as you state, in the divine origin of Christ, what will you do with his declarations: "The works that I do shall he do also." "These signs shall follow them that believe."

Finally, "absent treatment" does signify the omnipresence of God, beautifully, effectively, because it is God—not the Christian Scientist—who heals; so you see "absent treatment" verily denotes that God is present not only here, but over yonder also, where claims of sickness, gangrene, and the like, hold sway until dissipated through the operative understanding that God, Mind, is everywhere present and all-powerful.

The doubts about the efficacy of Christian Science are probably as sincere as were the impressions of universal mankind that the earth was flat, and that the sun somehow got around it once in twenty-four hours, up to the time that Galileo made his discovery. Very few are so bitterly denunciatory as were the people who would have silenced the ancient discoverer of the earth's actual shape, but who did persecute him into a recantation; but the fact that the world has continued to rotate ever since Galileo discovered its rotundity, is prophetic of the change which may take place in the general views of Christian Science when the people become better acquainted with the facts.

I have seen it demonstrated, and must believe; that you have not seen it does not disprove the fact; your doubt is probably as honest as was John the Baptist's, but the same Saviour whom you quote said, "Go and shew John again those things which ye do hear and see," and I can do no less, no more.

Yours sincerely,

GEORGE H. KINTER.

## Right Recognition.

*Mr. Editor:*—The advice of Mrs. Eddy to Christian Scientists concerning infectious or contagious diseases has called forth comment in the press. Much of this has been singularly beside the mark, and some of it has even been characterized by malice, as well as ignorance.

The time has passed when would-be critics who do not know Mrs. Eddy personally, who have never been admitted to her home, who do not even pretend to understand her teachings, much less to live by them, can be allowed to speak authoritatively of her life and character. Those who really know Mrs. Eddy are unanimous in expressing love and admiration for her. Moreover, how pitiful must all ignorant critics appear in the eyes of the great multitude of persons who have been saved from the dire effects of sin, sickness, and sorrow by her interpretation of Christianity!

I will not urge upon your readers my own high estimate of Mrs. Eddy, but will ask them to consider the opinions of others. A gentleman well known in the literary profession, Mr. J. I. C. Clarke, had a lengthy interview with Mrs. Eddy some months ago, and this is the picture she presented to him, as he wrote it in an article over his signature:—

"I saw a venerable gentlewoman of kindly face advancing with that short step of courtesy, that gentle lowering of the head in token of recognition, and that frank extending of the hand which have somehow passed out of parlor greetings—not to their betterment. It was not, however, something of the grace of the old school *grande dame*, but the gentle air of conscious motherhood that made the meeting most agreeable."

Mrs. Eddy once said that a single case of healing by Christian Science sufficed to recompense her for all the suffering she had endured to establish Christian Science, and there are many thousands of such cases. But what must we think of those who deliberately add to her burden under the impulse of ignorant prejudice?

The following words were sent to Mrs. Eddy from the distinguished author of a distinguished work in London, England:—

"To Mrs. Eddy, as official head of a community whose principles are the practical in-and-out working of the gospel of love from God to man, and from man to his fellow-man.

"This copy of a treatise which it is believed will be of interest to her is offered by the author.

"W. M. H. Milner, M.A., A.B.I., F.R.G.S."

In lecturing in White Plains the other day the Hon. William G. Ewing, ex-judge of the Superior Court of Illinois, thus referred to Mrs. Eddy, whom he had known for many years:—

"Every gentle, thoughtful man knows that from the world's morning until its high noon of to-day, woman has been the holy, patient, faithful guardian of its spiritual thought; knows—gratefully, lovingly knows—that for two thousand years woman—not man, but woman—has kept the religion of Jesus Christ on this earth, and she will keep it there until the kingdom of this world becomes the kingdom of our God and His Christ. All the doctrine, philosophy, and practice of Christian Science is given to the world in Mrs. Eddy's book, entitled 'Science and Health with Key to the Scriptures,' and may be easily known and understood by every man who has the energy to read and the ability to think. . . . I do not hesitate to say to you, as a man among men and not wholly lacking in appreciation of the beacon lights of history, romance, and song, that have illumined the centuries as they pass, that in my judgment this great book of this great woman contains more of sweetness, and song, and hope, and help for men, than all the product of the printers' art, save only the Bible, your Bible and mine, our fathers' Bible."

Judge Septimus J. Hanna stated before a vast audience the other day in Chicago:—

"It may not be amiss for me to say that for nearly ten years, as First Reader in the Mother Church in Boston and editor of the official periodicals, I have had opportunities which enable me to speak intelligently of Mrs. Eddy's life and character as well as of her labors and literary qualities.

"Speaking from this vantage ground, I can truthfully say that, intellectually, she is, without exception, the most acute and alert person I have ever seen; that she labors incessantly and unselfishly for the cause to which she has devoted her life, and that, notwithstanding her years, she performs an amount of labor each day which, if known, would seem incredible. As to her religious character, I speak my profoundest conviction when I say that I believe it to be as nearly Christlike as is possible to a denizen of this earth. I cannot conceive how a person on this plane of existence could walk more closely with God or exemplify a more exalted Christian life."

These are only a few of many opinions concerning Mrs. Eddy which show forth her great worth and love for her fellow-men.

W. D. McCrackan.

In New York *Commercial Advertiser*.

## Error Rebuked.

To the Editor.

*Dear Sir:*—I do not know from what source your contributor draws his information regarding Christian Science, nor from what premises he argues, but his information and his conclusions are singularly inaccurate and mistaken. The right to the title, "Christian Science," has been ably defended with so much success so many times, it seems improbable that any one will still challenge such a phrase. Science is the orderly arrangement of systematic knowledge on any subject. Christian Science is the true knowledge of God and His universe including man. Science must be susceptible of demonstration. Christian Science has amply proved its right to be called both Christian and Scientific by the thousands of cases of sin and sickness healed by its methods. No other argument is necessary to refute unfounded criticism.

Christian Scientists do not merely say that "sickness is not real" and leave the question there without further qualification. This point is made clear by Mrs. Eddy in Science and Health, p. 460:—

"Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. It is more than fancy, for it is solid conviction. It is therefore to be dealt with through right apprehension of the Truth of being."

Christian Scientists emphatically do not "deny all truth and claim only 'error.'" On the other hand, God, as Truth, is preached as supreme, the only power and presence, and error is described as that which is the supposed opposite of Truth, God, but which in reality has no entity, since Truth, God, is All. A failure to apprehend the meaning of the term "reality" as found in Christian Science leads to false conclusions. The words "real" and "unreal" in Christian Science correspond with St. Paul's distinction between the eternal and temporal, between the spiritual and carnal. This is further elucidated by this passage from "Science and Health with Key to the Scriptures," p. 277:—

"As God himself is Good and is Spirit, so goodness and spirituality must be immortal. Their opposites, evil and matter, are mortal error, and error is the opposite of Truth. If one is real, the other is unreal, and cannot be the outcome of God."

Your contributor is incorrect in his statement that Christian Scientists "say Christ was mistaken." Nowhere in the writings of Mrs. Eddy, or of any other Christian

Digitized by Google

Scientist, will be found any sentence warranting this amazing assertion. Jesus is the Leader, the great Exemplar, the Way-shower, and as such, Christian Scientists accept him fully, and they do not think he was mistaken. They so completely believe in his teachings as to disease, and they understand so much of his methods of healing sin and sickness, that they are able to imitate, in a degree, his works and fulfil his command to "heal the sick."

Our critic cites St. Matthew's statement that Christ went about healing all manner of sickness and all manner of diseases among the people, and thinks this statement warrants the conclusion that "Christ thus recognized the existence of disease." That the destruction of disease and its disappearance should be used as an argument to prove its reality, is, to say the least, extraordinary. That which can be destroyed is, according to Christian Science, not real, for whatever is real is created by God, and is, therefore, eternal. That discord of every nature, could be destroyed, Jesus proved beyond doubt, without resort to any of the so-called physical sciences, or without the use of drugs, medicines, hygiene, or other material methods. Christ did, indeed, say, "They that be whole need not a physician, but they that are sick," but did he thereby recommend drug doctors? He himself was the Great Physician, and he undoubtedly referred to divine Mind as able to heal all man's imperfections. The fact is, that he never consulted with physicians, never asked them to assist him in making a cure, but healed in direct opposition to all the established schools. Christian Scientists are not "fools" and they are not "dishonest," unless to obey God is foolish, and to love our fellow-man is dishonest.

WILLARD S. MATTOX.
In the *Eastern State Journal*, (N. Y.).

## Right View of Atonement.

*Mr. Editor*:—In your city there is a little band of Christian Scientists who are striving to carry out their understanding of the true doctrine and duty of Christians; who are not abusing or traducing others for their religious convictions; but who do not like to have their own earnest religious convictions publicly denounced as "straight from hell."

When the priesthood of the then established religion in the country of Jesus denounced his works of going about and healing the sick by spiritual methods, as the "works of Beelzebub," the harshness of the hate-born language which they employed could neither take the place of logic nor weaken the mighty forces of what Jesus did as evidence of the truthfulness of his teachings. Every advance in the world's thought has encountered the hate and denunciation of those whose social, ecclesiastical, or business interests it has seemed likely to disturb. But "the world moves notwithstanding." Christian Science is making a very great and rapid growth throughout Christendom. Nearly seven hundred churches in this country, the Canadas, and Europe organized within the last few years, and several hundred thousand people testifying to the efficacy of Christian Science methods, attest this growth.

If Mr. Blackstone has ever studied the matter in any scholarly way, he ought to know that Buddhism, Theosophy, and Christian Science are not properly classed together. Their doctrines and practices are entirely distinct and different, as much so as those of Methodism and Mormonism. To put them in the same category is merely to practise a hackneyed trick of the sophists.

Many of the older Christian sects differ from the Methodists in their ideas of the atonement.

In "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the revered Leader in Christian Science, is an entire chapter entitled, "Atonement and Eucharist." I make a few excerpts. "The atonement of Christ reconciles man to God, not God to man; for the divine Principle of Christ is God, and how can God propitiate himself?" (p. 18). "Even Christ could not reconcile Truth to error, for they are irreconcilable. . . . Every pang of repentance and suffering, every effort for reform, every good thought and deed, will help us to understand Jesus' atonement for sin, and aid its efficacy; but if the sinner continues to pray and repent, sin and be sorry, he hath little part in the atonement—in the *at-one-ment* with God,—for he lacks the practical repentance which reforms the heart, and enables man to do the will of Wisdom" (p. 19).

The old concept of the atonement is not Christian, but is largely borrowed from the pagan and Hebraic ceremonials of propitiating some dreaded deity through the sacrifices by the blood of animals or human beings.

Mr. Blackstone rightly says that we are told, "Go, . . . and preach the Gospel." But what authority has he to divide the sacred commands, to obey only one part, and ignore the other? In the same sentence, Jesus commanded us, and all men of all generations, "Heal the sick" as well as "Preach the Gospel." Christian Scientists can find how the union of Church and State, in the fourth century, under Constantine, brought a divorce into man-made creeds between the commands above quoted. But they are setting aside that ecclesiastical divorce as un-Christian; and are proving by their works in healing the sick, etc., that truth is eternal and unchanging; and that the Scripture, "Faith without works is dead," deserves recognition. Jesus said: "He that believeth on me, the works that I do shall he do also." When he sent a message to John the Baptist, which was intended to prove to him that he was the Christ, did he send argument or mere declaration to that effect? No; he sent word: "Tell John what things ye have seen and heard; how that the blind see, the lame walk, the lepers are cleansed, the deaf hear."

CLARENCE A. BUSKIRK.

## An Interesting Comment.

WHY is it that so many educated men are so feeble at distinguishing differences? An example occurs to us in connection with the recent proclamation of Mrs. Eddy, the Christian Science Leader, in which she advises her followers to bow before hostile public sentiment to the extent of allowing the employment of physicians in the treatment of infectious and contagious diseases. It ought to be perfectly plain to any fair-minded man of intelligence that this is no recantation. There is nothing in the proclamation to indicate that Mrs. Eddy has not as much faith as ever in the efficacy of her teachings. On the other hand, it is a manifest mark of respect for the rights of others. Since others than Christian Scientists fear these diseases and have no confidence in her theory regarding them, a persistence in her methods would subject them, at any rate in their own minds, to the dangers of sickness and death. She therefore proposes that their right to protect themselves by their own methods against infection and contagion, even though she thinks those methods superstitious, be recognized by her followers. Her conduct in this matter should command respect. It is infinitely more exalted than the narrow behavior of many of her adversaries, who regard her teachings as superstitious. Yet it is made the occasion of fresh attack, and in at least two instances that have come to our attention she is grossly misrepresented. Two Chicago clergymen of education, and presumably honest, referred in their sermons last Sunday to this action of hers as a recantation. Neither seemed capable of appreciating the difference between recantation and generous acknowledgment of the rights of others.

## Gross Ignorance.

IN carrying a long ladder it is very important to remember that it has two ends, because if you don't the probability is, if you go very far, that somebody will be hit unexpectedly. So when one attempts to make fun of the religious or medical belief of any class of people, it is important that he who indulges in this silly practice understand, to some extent at least, what he is writing or talking about. Otherwise some one is liable to be unexpectedly hit, and sometimes the offender is the one.

It is better for speakers and writers to be always charitable toward those holding different opinions, and the better-informed Christian Scientists and medical practitioners are, each class admitting that there are many intelligent, honest, and conscientious people in the other class, laboring for the enlightenment and relief of humanity. In both classes there have been many cases of relief from diseases recorded as well as quite a number of deaths. In six months in Greater New York 1,145 people are reported to have died of diphtheria while under the care of medical practitioners, but we have heard no complaint of that, and we are not going to make any, for the doctors doubtless did all they could; were honest, conscientious, and regretted very much indeed the loss of every patient. While this report is doubtless true there is another made by a critic of Christian Science which, strange as it may seem, gives the number lost under Christian Science treatment in six years as only thirty-five. In neither instance is the number treated given, so the two statements, if admitted to be correct, give no basis to judge as to the superiority of the two forms of treatment, but enough information is given to show to thinking people that the question is not an entirely one-sided affair.

In the beginning of all new forms of doctrine or any new science, the scoffer is always ready to ridicule and try to say something smart but, as a rule, in doing so discloses his gross ignorance of the subject under consideration.

From an editorial in *Putnam Journal,* Unionville, Mo.

## Our Ideas of God.

A CHRISTIAN SCIENTIST writing on this subject would phrase his thought somewhat differently, but the author of the following paragraphs refers to the authority of Jesus' words and their relation to Christianity in a way that will prove helpful.—EDS.

Within the lifetime of middle-aged men the question has shifted from what truth can be proved from the Scriptures, to what truth can be proved about the Scriptures, and now it is what can be proved about God. We are getting back to essential and fundamental things. No arguments perhaps can demonstrate the existence of God, but men are so made that like the writers of the Scriptures they spontaneously make the grand assumption of His existence. But the exigent question is what kind of a being is He? What are His relations to the universe? What are His moral qualities? What conception are we to form of His character?

The Christian answer to these questions has been obscured from failure to view the Old Testament in its proper perspective. Too many of our theological treatises assume that Jacob and Joshua and David had the same conception of God as the author of the Epistle to the Ephesians, and the author of the Fourth Gospel. They do not see that in the progress of revelation the minds of men took in larger and truer ideas of the most High. And this disclosure culminated in Christ, who gave the supreme revelation of the Father. No matter how much we think of the Old Testament, we must not exalt it to such a place that we contradict the opening verses of the Epistle to the Hebrews, or make it a work of supererogation that Christ came to reveal God to men.

Slowly the best religious thought of our time is coming to see that we can and must place the utmost emphasis upon the assertion of Jesus, "He that hath seen me hath seen the Father," and measure the Old Testament idea of God, and the ideas that science and philosophy form of God by the idea that Jesus gives us of God. When one has the solution of a vexing problem, it is very easy by the aid of the new light to harmonize the facts that baffled and puzzled. We grope through nature and philosophy up to God, and do not find any satisfying view of Him. We come nearer to a conception in which we can rest in some of the Psalms and in Isaiah, but the revelation is shadowy, incomplete, and unsatisfactory. It is only when we come to the New Testament that we find a disclosure of God that meets the wants of the reason and the moral nature so perfectly that in accepting it reason herself becomes true in her action, and the moral nature purified. We cannot escape it. We must judge everything that preceded Jesus by the standard of Jesus. Nay, further, we must estimate all other knowledge of God, from whatever source, by the revelation of Jesus. The teachings, the life, and the spirit of Christ are the touchstone by which all other values are recognized.

And we suppose that it cannot be contradicted that if, from any source, there should come to us a loftier, purer, higher conception of God than Jesus has given us, Jesus would be superseded. His claim ultimately rests, not upon miracles or any external credential whatever, but upon the character of the revelation of God he made in his life, his teachings, his death and resurrection.

The phrase, "Back to Jesus," has become the watchword of a school, but what we really need to do is to go forward to Jesus. He is far in advance of the ripest and richest religious thought. As yet our churches have hardly begun to get a view of his revelation of the Father. We are still confusing it with the pagan ideals, with Hebrew partial glimpses, with the theories of science and philosophy. The world to-day is asking, as never before, the question of Philip: "Show us the Father, and it sufficeth us." And the answer to it is the reply of the Redeemer, "He that hath seen me hath seen the Father."—*The Watchman.*

---

Though Christian Scientists may differ from others in their understanding of the nature of disease, they recognize that it exists in human experience and must be dealt with intelligently. Whether or not the administration of medicine, one system of which is supposed to cure by producing a like disease while another proposes to cure by producing a dissimilar disease, is more intelligent than the modern theory that all causation is mental, remains to be demonstrated to a large portion of the people, but most modern physicians admit that the mental condition has much to do with the physical, and not one of them has ever been able to draw the line and say, Thus far and no farther. While on the other hand, Christian Scientists are proving daily that divine Mind understood and relied upon as the only power, does overcome disease. ALFRED FARLOW.

In *New Bedford* (Mass.) *Evening Mercury.*

---

Christian Science is founded upon a belief which has God as its inspiration. The people who believe in this cult are law-abiding and intelligent; and, under our laws, they should be protected against annoyances so long as they refrain from acts which may be detrimental to public health.

## Among the Churches.

### Dedication at Los Angeles, Ca.

Both the *Herald* and *Times* of Los Angeles devoted considerable space to reports of the dedication of First Church of Christ, Scientist, which occurred Sunday, November 30. The *Herald* said, in part:—

"At the morning service yesterday First Church of Christ, Scientist, was crowded until but little standing room was left. It was a time of especial rejoicing, for the handsome church had been freed of debt and was dedicated."

The *Times* said, in part:—

"Having freed their new temple from all financial incumbrances, the congregation of First Church of Christ, Scientist, yesterday formally dedicated it.

"Dedicatory services were held both morning and evening, and the bright new edifice on Seventeenth Street, between Figueroa and Georgia Streets, was well filled each time."

The regular service for the day was elaborated by additional music and by appropriate addresses by Dr. F. J. Fluno, C.S.D., of Oakland; Mrs. Lizzie L. Filbert, C.S.B., of Los Angeles, and Dr. A. A. Sulcer, C.S.B., of Riverside.

The following message from our Leader was read at both services:—

Pleasant View, Concord, N. H.
November 20, 1902.

First Church of Christ, Scientist, Los Angeles, Cal.
Mrs. J. P. Filbert and the Board of Directors.

*Beloved Students:*—Your kind letter inviting me to be present at the dedication of your church was duly received. It would indeed give me pleasure to visit you, to witness your prosperity, and "rejoice with them that do rejoice," but the constant recurring demands upon my time and attention pin me to my post. Of this, however, I can sing: My love can fly on wings of joy to you and leave a leaf of olive, it can whisper to you of the Divine ever-presence answering your prayers, crowning your endeavors, and building for you a house eternal in the heavens.

You will dedicate your temple in faith unfeigned, not to the unknown God, but unto Him whom to know aright is life everlasting. His presence with you will bring to your hearts so much of heaven, that you will not feel my absence. The privilege remains mine to watch and work for all, from East to West, from the green sward and gorgeous skies of the Orient, to your dazzling glory in the Occident, and to thank God forever for His goodness, and for His wonderful works to the children of men.

With love, Mother,
MARY B. G. EDDY.

The opening service of this church, held Sunday, October 6, 1901, was quite fully reported in the December *Journal*, 1901.

### A New Chapel in Albany, N. Y.

Exactly thirteen years ago to-day a little band of earnest people incorporated the Christian Science Church in Albany, and to-day [November 16] for the first time the members of that sect in this city will worship in their own edifice. At 10.45 o'clock this morning the beautiful new chapel at the corner of Madison Avenue and Quail Street will be opened for services, and the occasion will be one of great rejoicing, for the little band has grown to goodly proportions and it is believed that with a house of worship of their own a great impetus will be given to the work in this city.

It is an interesting coincidence that the day selected for the opening of the new chapel is date for date the thirteenth anniversary of the incorporation of the church here, for this fact was not discovered until after the date for the opening had been selected. The dedication of the chapel will not take place until some time later.

The growth of the Christian Science movement in this city has been quite remarkable, and there is every indication that from now on it will be still more so, and that the chapel to be opened this morning is merely a promise of the greater church that will in time spring from it. The movement was first introduced in Albany in 1887, and on November 16, 1889, the church was incorporated. The membership has increased a hundred per cent in the past year, and the efforts of the present Readers have been crowned with marked success.

At first the movement met with much opposition here and many unjust criticisms were heard on every side, but as the Christian Scientists moved on in the even tenor of their way, demonstrating the sincerity and unselfishness of their motives, persecution gradually ceased, and to-day, as they enter their first real home, they do so with the knowledge that they have taken a distinct place among the religious denominations of this city and command the respect of all men and women who recognize the right to worship God according to the dictates of one's conscience.

*Albany Sunday Press.*

### Laying of Corner-Stone in Poughkeepsie, N. Y.

The laying of the corner-stone of First Church of Christ, Scientist, of Poughkeepsie, took place this morning [November 12] at eleven o'clock with simple yet appropriate ceremonies.

The First Reader of the local church announced at the opening of the exercises that they were gathered to perform a simple but important ceremony in connection with the erection of the first Christian Science house of worship in the Hudson River valley.

"The exercises of to-day," said he, "mark an epoch in the religious history of Poughkeepsie, and our children's children will 'rise up and call her blessed' who has made the occasion possible. There will go forth from the walls of this church a religious teaching of health, happiness, holiness or wholeness, and heaven, which will bring a peace which 'passeth all understanding' into the lives of all who will accept it."—*Exchange.*

### Growth in Springfield, Mass.

The local Christian Scientists have arranged to hold their Sunday morning services at 10.45 in the large hall of the Grand Army Memorial Building on Court Street. The increased attendance at and crowded conditions in the present quarters have necessitated this change.

*Springfield Republican.*

## All is Thine.

BESSIE MOORE EUSTACE.

WHY worry for the future?
Eternal good is mine,
For have I not His promise,
"Son, all I have is thine"?

Why fret about past failures?
God would not have me pine,
Because these words I doubted
"Son, all I have is thine."

Why live not for the present?
Love knows no other time
In which to prove this blessing,
"Son, all I have is thine."

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Favorable Decisions.

THROUGH the courtesy of a friend we are able to give the following information regarding a case recently tried in Los Angeles, Cal. The prosecution was especially aimed at the practice of Christian Science and was considered to be a test of the rights of Christian Scientists in the State of California. In August last the five-year-old daughter of Mr. and Mrs. Merrill E. Reed died of diphtheria, and the parents, who were Christian Scientists, were arrested about a month later on a charge of misdemeanor for having allowed their child to die "without proper care, nursing, and medical attendance." The prosecution was under a statute enacted in 1876, but this was the first trial under the statute. The case was reached during the last week in November and the trial occupied four days, at the end of which time the jury returned a verdict of "Not guilty." The defence did not subpœna any witnesses, but hundreds stood ready to testify if needed. Twenty-four of the best citizens,—judges, senators, and well-known business men,—testified to benefits received through Christian Science treatment.

The Los Angeles *Express* in reporting the trial said, "The witnesses evidently were sincere in what they said, and the position of the men and women is such that they are above any suspicion of fraud."

The same paper gave the following summary of the testimony of Mr. Ben E. Ward, City Assessor and County Assessor-elect:—

"Mr. Ward testified that he had been rescued from death by the treatment. He had been reduced to a nervous wreck, and when he was compelled to leave his office and went to Chicago no one ever expected him to come back alive. He detailed his sufferings on the train East, and of his experience with physicians. At Chicago he had become interested in Christian Science and finally consented to take treatment. His recovery was practically instantaneous, and from that day to this he had never taken a dose of medicine nor had he been sick. He and the members of his family relied absolutely upon Christian Science, and since his return from Chicago, three years ago, he had never had a physician in his house professionally. He declared that his health was perfect, and he gave all the credit for his condition to Christian Science."

We expect to publish in a later issue the stenographic report of as much of the testimony as is possible in the space available in our columns.

The following is copied from the news columns of the *Boston Herald*:—

"Atlanta, Ga., December 13, 1902.

"A decision was handed down by the Supreme Court of Georgia to-day which is regarded by Christian Scientists as a vindication. A citizen of Dublin, this state, a Christian Scientist, refused to give medicine to his sick child. The child died, and the father was arrested and fined three hundred dollars.

"The case was appealed to the state Supreme Court, which to-day reversed the judgment of the lower court, holding that failure to give medical attendance to children when ill is not a violation of the laws of the state."

Two more cases are thus added to the number which demonstrate the utter futility of such proceedings, and inspire hope for the day when public opinion will no longer tolerate the arrest of reputable citizens at the instance of self-interest and prejudice. M.

### The Nobler Giving

CHRISTMAS comes again to remind us that it is the world's giving time. For one happy day at least the impulses of selfishness have met their match and something of the sunshine of the Golden Rule finds its way to every hearthstone and every heart. Without any parleying over considerations for our own future needs, universal good-will becomes the almoner of our bounty, and our riches are committed by his unstinting hand to that great gift stream whose tributaries drain every store, and whose tide bears enrichment and surprise to all mankind.

While the festal day tarries we can but ruminate on what a pleasant thing it is to be really self-forgetful, to be busy, yes, absorbed in planning and working for the joy and betterment of others, and we wonder how so many of us could have forgotten this secret, in the intervening days. We recall also that in the true life all joy belongs to giving, though the sense that is self-centred has tried to wrest it from its native place and attach it to our getting. To this weakening human sense there has been and is yet much of bondage, but in our awakening we see that he truly finds life who yields to the highest, most unselfish impulses, and the consciousness of this finding is at one with the knowing that our names are written in heaven. The doing of a Christ-like deed is coincident with the recognition of the Christ-spirit within, whence springs our only unalloyed joy and peace.

It will be well moreover if we do not forget that the best, most worthy gifts are those which answer to the deepest need, the noblest capacity, the highest aspiration. Much of the world's giving satisfies a sense whose presence were better ignored than ministered to, and this was Jesus' offence in part, that he would not concede to unideal expectations and demands, however conventional.

The Christ-child came to satisfy only as he saved; his mission was to bless rather than to please, to supply a need rather than gratify a want, and in the thoughtful and persistent giving which patterns after his, we shall honor and perpetuate his Christmas. To give wisely we must perceive nobly. When our brother is revealed to us as the child of God, with all the capacities and aspirations pertaining to divine sonship, then and then only, shall we bring to him our choicest, most helpful, most worthy gifts. To see God "as He is," is to see his manifestation in man, and bringing to that man his due, we "shall be like" God. The impulse and endeavor to give both largely and well, is an expression of the Christ-man, and it links us to infinite resources of Good.

Far removed from this truly Christian giving is its worldly reversal,—the vain and burdensome striving to do and outdo, which is so familiar to our sight and which mars the Christmas time with the rush and fret of a vulgar and degenerating competition and display. It has neither spontaneity, sincerity, nor satisfaction, and most deserves condemnation when it elicits praise. To give because "I suppose I ought," or "that I may balance an account" is incongruous, and wholly unbecoming the Christian ideal.

Let us be wise and unpretentious in our giving, and whatever its expression let us give, and give to all, love—genuine, unbounded, sincere, Christ-like.

None can give so generously, none so well, as the true Christian Scientist. His access to Love's inexhaustible

Digitized by Google

resources, his consideration for needs, his perception of the best and his loyalty to that best, these give character and effectiveness to generosity, and the objects of his kindness are blessed indeed. Thus has our Leader given. Wisdom, unswering fealty to the ideal which should be ours, tender patience with our slow approach to that ideal, and unfailing mother-love,—how these have been revealed in all her life-work, and in every message, revision, and counsel that has come to us. We may well think of her in endearing terms, but we shall prove worthy of her gifts only as we follow her example, and illustrate in our own lives the truth of the poet's words:—

What is the thought of Christmas?
Giving.
What is the hope of Christmas?
Living.
What is the joy of Christmas?
Love.

No silver or gold is needed for giving
If the heart is filled with the Christmas love,
For the hope of the world is kindly living,
Learned from the joy of God above.

W.

## The Fruitage of Expectancy.

In our Master's wonderful object-lesson, which for nineteen centuries has been directing men back to the simplicity of childhood if they would find the gateway to heaven, the child has, by common interpretation, come to mean the consciousness of innocence, purity, and obedience. We are the more ready to follow his pathway, because as we journey, we know we tread on holy ground. After our weary wanderings, we gladly turn back to the freshness and fairness of our childhood morning.

There is another characteristic of childhood, however, not so commonly recognized, perhaps, but equally worthy of remembrance and emulation. It is the confident expectancy of immediate, practical results. Childhood has neither power nor inclination to satisfy itself with the dry bones of speculation and theory. It demands and anticipates prompt demonstration. When the truth of Christian Science is presented, it never doubts, never questions, it simply expects the results named. This trustful expectancy brings its reward.

The child's prayer carries its answer in its confidence. When he prays for food, no matter how unfruitful the wilderness, he spreads his table and prepares for a feast. His trust is unwavering, unquestioning, spontaneous, reliant. It is intuitive with the little ones, but we who have reasoned ourselves away from the sweet and simple consciousness of universal harmony must win it back again. Reason and demonstration will help us on the way, and the Love which glows in childhood's intuitive expectancy will find its perfect freedom again in us, as, one by one, we are liberated from the trammels of human sense.

S.

The service of Mammon brings such large returns that it may come to seem contributory to the service of God. Probably nothing so degrades the Christian religion in the view of men of the world as the conformity of Christian churches and Christian believers to this doctrine of ethical bi-metallism. To see a man of the double standard accepted among the saints and a distinction permitted between the principles of the business world and of the Christian church, is enough to drive from the influence of religion many a man who has no rule of life but to be consistent and incorruptible in his daily work.

Prof. Francis G. Peabody.

## A Praise Note.

R. N.

Entering my garden in the early morning, I was greeted by the song of a robin redbreast. The melody was so sweet that I stood and listened. Then there came from another part of the garden a similar song, and the two birds trilled luscious notes without a sign of discord or inharmony, melody answering melody in real joyousness. So pure and clear and delightful were these notes, forming a perfect antiphon of praise for the bounty everywhere manifested, that I was instinctively led to meditate on the lesson that these songsters were teaching.

Shall not the life and work and testimony of every Christian Scientist be pure and clear and joyful? "The corner-stone of all spiritual building is purity" (Science and Health, p. 241), and if we are earnestly desiring to reflect divine Love, we shall seek to purify ourselves, even as Christ (Truth) is pure, and cultivate that clear spiritual vision that will enable us to see only Good. Too often is that vision blurred by impure thought, and then error assumes such formidable dimensions that we are in danger of being discouraged in our demonstration of Truth. But the pure in heart—in thought, in word, in deed—"shall see God" and rejoice in the spiritual blessings that come from victories over mortal enemies that at one time appeared to be absolutely unassailable.

It is our privilege, too, seeing that we are growing in the understanding of Truth, to let our words be definite, clear, emphatic,—without doubt or fear. There should be no tremulous notes in our utterances. We are ambassadors for Truth, and as such every word we speak should be based on the solid foundation of Divine Science. And so, also, as we remember that we have been, and are now being, brought out of great tribulation, should we not live in the spirit of praise? "The joy of the Lord is your strength." No people on earth should be more joyous than Christian Scientists, for they can rejoice that "Mind constantly feeds the body with supernal freshness and fairness, supplying it with beautiful images of thought, and destroying the errors of sense which each day brings to a nearer tomb" (Science and Health, p. 248).

It was said by Lessing, the German philosopher, that "Christianity has been tried for nineteen hundred years; it is now time to try the religion of Christ." Thanks to our beloved Leader, we now know what the religion of Christ is in all its deepest spirituality and its practical bearing on every-day life. It is the religion that is enabling us to "feel the divine energy of Spirit, bringing us into newness of life, and recognizing no mortal nor material power as able to destroy" (Science and Health, p. 249). And in this "newness of life" we find ourselves responsive to the Divine impulses; the atmosphere in which we live is changed; our motives are purer; we long to show that the Golden Rule is not Utopian, if it had been it would not have been proclaimed by Jesus. We are demonstrating the unreality of those fetters which formerly held us in bondage, and are rejoicing in such spiritual freedom that every day should have its song of thanksgiving.

That song, becoming so familiar to Christian Scientists everywhere, is often the sweetest when it is embodied in quiet, helpful words of truth and gentle deeds of true discipleship and love. Herein is Love manifested: that Love's messengers show forth the beauty of holiness in loving deeds. And great is the reward therein. For "the work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever."

## Suffering—in Christian Science and Out.

EDWARD EVERETT NORWOOD.

RECENTLY, when talking to a patient who had been brought out of a severe trouble and the keen suffering attendant upon it, and who had formerly been through the same experience without the aid of Christian Science, the thought came, what a difference there is in human experience without a knowledge of Christian Science and with it.

The first state is either silent endurance or rebellious resentment, both often attended with resort to narcotics to quiet the nerves or stupefy the senses, and thus make one oblivious of his environment. The trouble, or infirmity being held in thought as a reality, it seems natural to charge it to some cause; and too often the Father of all mercies is held responsible for it. Or it may be, even if the cause be recognized as in sinful sense, an inefficient appeal is made to God to cure it, and failing, He is no less falsely accused.

All know more or less, the sorrows and sicknesses, the disappointments and heartaches of human experience, and so often, in the graphic words of Jeremiah, "We looked for peace, but no good came; and for a time of health, and behold trouble." The error seemed so real and present, and Good so far away and inefficient, that we were often well-nigh hopeless.

But in the blessed light of Christian Science, how different does it appear! When vicissitudes come, as they do and will so long as we are in the human, we search for the cause and know it is in our own thought, either by wilful wrong thinking, or because we are not expressing love enough to make it unreal. We know the cause is in mortal mind, and the cure in immortal Mind. Then recognizing this claim of sense at its true value, *nothing*, the understanding which enables us to see it thus, rightly applied, destroys the error, and we have harmony restored.

Christian Science shows us that the powers that be are ordained of Good, and there are no other powers. It lifts the mind above "the perishing pleasure and accumulating pains of sense" (Miscellaneous Writings, p. 17), and shows us the realities of being, the divine Mind and His infinite idea, and we are satisfied.

## Nature's Solvent.

WILLIAM S. CAMPBELL.

IN the study of divine metaphysics we are admonished: "In patient obedience to a patient God, let us labor to dissolve, with the universal solvent of Love, the adamant of error,—self-will, self-justification, and self-love; for these war against spirituality, and are the law of sin and death" (Science and Health, p. 242).

In the material world there is no universal solvent. Contrary to what might be expected, the fluid that is most nearly a universal solvent is not a strong acid that burns and destroys, but it is the most harmless, the most nearly universal in distribution, and the most absolutely free of cost—simply water. Does not this fact in the physical realm prefigure the great truth in the metaphysical realm, that the one universal solvent is gentle and unassuming in its manifestation, universal in its adaptation and bestowals, and free to all?

Prof. Henry Drummond gave to the world a great truth in his famous essay, "Love, the greatest thing in the world." It remained for the Christian Science text-book, "Science and Health with Key to the Scriptures" to show to the world that Love is not a mere sentiment of varying value in the destruction of hatred, envy, and revenge, but that in its manifestation there is the expression of an unchangeable, universal, eternal law. According to Webster, adamant is a rhetorical or poetical name for the embodiment of impenetrable hardness. If we analyze human experience closely, we find that its adamant of obstruction consists of the three elements,—self-will, self-justification, and self-love. To Mrs. Eddy we owe a debt of gratitude for that demonstrable understanding of Love which dissolves these obstructions and enables us to overcome all our foes, and rejoice in the triumph of Love's universal law.

---

When we take a wide sweep, we are so apt to be vague. When we are aiming at generalities we do not hit the practicalities. We forget that faithfulness to Principle is only proved by faithfulness in detail. Has not this vagueness had something to do with the constant ineffectiveness of our feeble desire that our time should be devoted to God?—FRANCES RIDLEY HAVERGAL.

---

I have often heard the remark, "I make no claims to perfection." This is usually said with an accompanying sense of self-satisfaction. Jesus said, "Be ye therefore perfect, even as your Father which is in heaven is perfect." David said, "As for me, I will behold thy face in righteousness: I shall be satisfied, when I awake, with thy likeness." As Christian Scientists, can we afford to make any claim to anything, except perfection? Should we not manifest it, in the religious world, the business world, and in the home environment?—FANNY BOGARDUS HUNT.

---

## O Little Town of Bethlehem.

O LITTLE town of Bethlehem,
How still we see thee lie;
Above thy deep and dreamless sleep,
The silent stars go by.
Yet in thy dark streets shineth
The everlasting light.
The hopes and fears of all the years
Are met in thee to-night.

O morning stars, together
Proclaim the holy birth!
And praises sing to God, the King,
And peace to men on earth.
For Christ is born of Mary,
And gathered all above,
While mortals sleep the angels keep
Their watch of wondering love.

How silently, how silently,
The wondrous gift is given;
So God imparts to human hearts
The blessing of His heaven.
No ear may hear His coming,
But in this world of sin,
When meek souls will receive Him still
The dear Christ enters in.

. . . . . .

O holy Child of Bethlehem!
Descend to us, we pray;
Cast out our sin and enter in,
Be born in us to-day.
We hear the Christmas angels
The great glad tidings tell;
O come to us, abide with us,
Our Lord Emmanuel!

BISHOP PHILLIPS BROOKS.

## The Lectures.

### At Wilmington, Del.

In the New Century Club last evening [December 2] Arthur R. Vosburgh, C.S.B., spoke on the subject "Christian Science is Scientific Christianity." Mr. Vosburgh was introduced by Norman E. John, First Reader of the local church.—*The Republican.*

### At Denver, Col.

Judge Septimus J. Hanna lectured on Christian Science at the Broadway Theatre yesterday afternoon [November 23]. The theatre was crowded even beyond the point of "standing room only," and many were turned away. The audience was composed of the most intelligent and intellectual people of the city. Judge Hanna was introduced to the audience by Mrs. Frances Mack Mann, who told her listeners that in doing so she was introducing one of Denver's former leading citizens.—*The News.*

### At Terre Haute, Ind.

Edward A. Kimball of Chicago, spoke before an audience that packed the lower floor of the Grand last night [November 30], having for his subject "The Cause and Cure of Disease."

In introducing the speaker, John T. Beasley made a number of remarks to show that he neither believed nor disbelieved the doctrine of Christian Science, as he had never given the subject much thought. He compared the audience to a jury, and stated that it remained for the members to judge whether or not Mr. Kimball proved his case.—*The Terre Haute Express.*

### At Colorado Springs, Col.

To one of the largest and most select audiences that has been gathered in Colorado Springs for a long time, Judge Septimus J. Hanna, who left a good law practice in Colorado several years ago to take up the work of spreading the doctrines of the Church of Christ, Scientist, lectured last night [November 21]. The audience was representative of the city's best thought, and it listened throughout the address with apparent deep interest. Judge Hanna was introduced by Mayor John R. Robinson.

While there were doubtless hundreds of the large audience who were not members of the speaker's faith, he undoubtedly set many to a serious consideration of it who would not have heretofore considered themselves likely to grant it even so much.—*Colorado Springs Gazette.*

### At Leadville, Col.

Judge S. J. Hanna, for many years a resident of Leadville and formerly register of the United States land office here, addressed the Leadville members of the Christian Science Church and a large number of others last night [December 2]. Judge Hanna is now of Boston, Mass., and for several years has been prominently identified with the Christian Science movement.

*Leadville Herald-Democrat.*

Hon. J. E. Havens, a prominent member of the bar, introduced Judge Hanna, and spoke as follows:—

*Ladies and Gentlemen:*—You come here to-night, as I did, not to see a reed shaken by the wind, but to hear what our old-time friend and former fellow-townsman, Judge Hanna, will have to say to you on that all-absorbing subject,—Christian Science,—a subject that I, for one, have never yet been able fully to understand,—and also to extend to our friend and his estimable wife a kindly greeting after an absence from this city of so many years. Some twelve years ago Judge Hanna, who was then, and still is, a member in high standing of the bar of Colorado, gave up a lucrative practice, disposed of a valuable law library at a sacrifice, and went out from among us to engage in this, to him, new field of labor. He appears before you to-night as an authorized member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston; and it is my privilege and great pleasure, ladies and gentlemen, to introduce to you, as the speaker of the evening, the Honorable S. J. Hanna, formerly of this city, and late of Boston.—*Correspondence.*

### At Green Bay, Wis.

A large audience listened to the lecture on Christian Science by Carol Norton, C.S.D., of the Christian Science Board of Lectureship, at the Green Bay Theatre, last night [November 20]. The lecturer gave a clear explanation of the beliefs of Christian Scientists.

*Green Bay Advocate.*

The lecturer was introduced by Mr. S. H. Cady, District-Attorney, who spoke in part as follows:—

I am not, ladies and gentlemen, a Christian Scientist. I know little of its faith, little of its teaching; but I am something of a lawyer, enough of one, at least, to know that here in this land we have a constitutional provision—and the constitution is the highest law of the realm—a constitutional provision which guarantees to every man the right to worship Almighty God according to the dictates of his conscience, and which says that this right shall never be abridged or infringed. And I want to raise my voice at this time against the enactment of any law, no matter what it may be called and no matter what argument may be given for its existence, which gives to me as a Congregationalist, or a Presbyterian, or a Catholic, religious rights which it does not give to you, my brother, as a Christian Scientist.—*Correspondence.*

### At New York, N. Y.

The Hon. William G. Ewing of Chicago lectured in First Church of Christ, Scientist, New York City, last night, November 21. He was introduced by W. D. McCrackan, in part as follows:—

As one who has learned a little of the purport of the message of Christian Science, let me assure all those to whom the subject is still unfamiliar that this message is at once the sweetest and the grandest that man has ever heard. It is in truth the song of glad tidings which the prophet shepherds heard when the star of hope appeared to them as they tended their flocks: "On earth peace, good will toward men."

Christian Science brings with it the promise of this peace devoutly longed for, and the possibility of this good will. It promulgates the brotherhood of man on the only lasting basis of self-denial and self-purification.

It is commonly said that charity begins at home, but I invite you to consider the necessity for a movement which teaches that reform also begins at home. Suppose you and I should decide to-night never to hate any one again, no matter what the provocation. Suppose others should unite with us in this resolve, and this group should grow to thousands, and millions, until all the inhabitants of the earth had joined, would not hate be as effectually stamped out from human consciousness as though it had never been? Imagine this process to be extended to envy, jealousy, malice, and all the vices, then, by degrees, all sin would disappear, and with sin, all sickness and, eventually, death itself, which St. Paul has called the "last enemy."

The lecturer of the evening will tell you something about the reasonableness of Christian Science, and something about the Discoverer and Founder, Rev. Mary Baker G.

Digitized by Google

Eddy, to whose labor of love we owe the establishment and continued growth of the Christian Science movement.

I take great pleasure in introducing to you the Hon. William G. Ewing.—*Correspondence.*

### At Hartford, Conn.

A large audience gathered at Parsons's Theatre yesterday afternoon [November 9] to listen to the address on Christian Science delivered by the Hon. William G. Ewing of Chicago. The audience, apparently, was composed of all sects.

Judge Ewing was introduced by the Rev. Severin E. Simonsen, C.S.B., who welcomed the audience in the name of First Church of Christ, Scientist. "We live in an age of seeking," he said. "The laborer is seeking higher wages, and men everywhere are seeking higher education. Everybody is seeking something higher, something better. This is especially true of the spiritual life."

He referred to Science and Health by Mary Baker G. Eddy, the text-book of Christian Science, as supplying the light which is sought in this direction, and which "enables seekers to see God as All-in-all."—*Hartford Post.*

### At Marion, Ind.

The Indiana was packed yesterday afternoon [November 23] by a representative audience to hear the lecture of Edward A. Kimball of Chicago. The best people of the city were in attendance and guests were here from all parts of the state.

Attorney George Thompson of this city introduced the speaker.

The local Christian Science people who arranged the lecture were highly gratified at the splendid audience, and well they might be pleased, for it was a fine audience. They feel that the lecture has created a new and wider interest in their belief, and that much good will come of it.

*The Marion Daily Leader.*

The introduction of Attorney Thompson was in part as follows:—

I take it that there are many shades of belief represented in this audience, but we have learned to pay respectful attention to a speaker, even while we do our own thinking. As for myself, I am not a believer in any particular doctrine, I do not believe in any particular creed or dogma; but I emphatically believe that any doctrine, any creed, which gathers to itself men and women of intelligence and thought, has in it the essentials of truth, the essentials of right living, which tend to make us better and happier as a community and as individuals Judged by the worldly standard of education and culture, I know that this new Science numbers among its advocates persons of the most conspicuous standing of any society in the world to-day. Some of my best and dearest friends are professors of this faith, and I know that they are not sophists. That the old religious beliefs of the past are to-day being superseded by more progressive thought will hardly be denied. The spirit of toleration and of respect for the views of those who may differ from us seems to be one of the marked features of the religious progress of to-day. There is more charity, more brotherly love, among the different denominations than ever before. While we are making great progress along material lines, there is a great wave of idealism that is rapidly gaining momentum in human thought, showing us spiritual laws and forces, bearing us on to new wisdom, power, peace, and righteousness.

Now I am not here to advocate or defend the doctrines of Christian Science, but I am glad to say that the principle of charity in all things, for one another and for humanity, that is practised and taught by its adherents is, to my mind, Christianity in its simplest and broadest interpretation. As I understand it Christian Science is an effort to apply the doctrines and teachings of Jesus Christ to every possible phase of human life, physical, moral, and mental. We may not be able to accept the application of that doctrine in its entirety, but certain it is that if you apply in your every-day life this doctrine, this principle of action, the great life of Christ himself, inevitably there must spring up in you nobler living and higher ideals, and by living strictly and exactly according to this principle man must make of himself a pure and perfect creature.

Whatever prejudice we may bring with us here to-day let us throw to the winds, and give our respectful and unbiased attention to the claims of this society as they will be ably presented to us.—*Correspondence.*

### At Orange, N. J.

The Hon. William G. Ewing of Chicago lectured at Music Hall, Sunday afternoon [November 16], to a representative and appreciative audience. The lecturer was introduced by Charles T. Root of East Orange, who spoke in part as follows:—

The avowed aims of Christian Science are nothing less than to restore pure and primitive Christianity, to heal the sick, to reform the sinner, and thus to bring the kingdom of heaven back from the distant future, out of the hazy region beyond the grave to which theology centuries ago banished it, and to re-establish it here and now, where Jesus Christ himself located it; namely, in the hearts of men. Such startling propositions naturally bring up questions like these: Can Christian Science be true? Can it be possible that its stupendous claims are founded upon the facts of the universe and the experience of living men and women? Is its magnificent programme capable of fulfilment? If these questions can be satisfactorily answered in the affirmative, then even this age of commercialism and material progress must admit that Christian Science is the greatest thing in the world. Your presence here this afternoon indicates that these questions interest you, and we are fortunate in having with us one who can throw some light upon them; who can outline to you the main propositions of Christian Science and can point you to the proofs which support them, in order that you may, each for himself, judge whether you should further investigate this momentous subject and prove for yourselves whether Christian Science can bring into your lives the blessings which a cloud of witnesses testify that it has brought into theirs.

*The Orange Chronicle.*

---

Should the writings be preferred before the thing that is written of in it, and which caused the writing and dictated it, as it is by those who think the Word is not that which filleth all things, calling in the hearts of all, though not regarded.

By the perusal and contemplation of it, the Holy Bible will appear assuredly to be as much the Word of God as the writing by the hand of man can be, and the words there spoken by the prophets, Christ, the apostles, and other holy men, as much the Word of God as words and voices of men can be.

Yet the writing, the words, the sense or meaning, proceeding from creaturely instruments, are creaturely, whereas the thing properly called the Word of God, which inwardly frames the meaning and formeth all things whatsoever, both visible and invisible, is not a creature, for it is the Creator, the creating Word, which is God himself, who formeth all things in himself. He creates the creature and so that Word of his that is produced and manifested externally by the creature is God's Word, but is not God the Word; but the inward Word in the heart, that is, "the Word of faith," even Christ the Word and that Word is God.—JACOB BOEHME, (b. 1575.)

## Testimonies of Healing.

In our warfare with error we have similar experiences, although the outward manifestations seem quite different. The words which bring an uplifting of thought to one are sure to prove a light to some one else struggling in the darkness. For this reason our publications are of inestimable value. In one case the help received by this means was so apparent that I should like to relate the experience. I received a message one afternoon about five o'clock from a lady who was becoming very much interested in Christian Science, asking me to treat her for a violent pain between her eyes, accompanied by extreme faintness whenever she attempted to move. Early in the evening I received a message that she was no better, again late at night the same word. The next morning, her face was very badly swollen and inflamed. Before night she was almost unrecognizable. None of the family understood or were especially interested in Christian Science, but recognized that the mother should be free to choose her means of relief. The next day the swelling and soreness had extended to the ears and back of the head, and she was unable to hear a sound. During this time there was constant effort on the part of the practitioner to realize the nothingness of this manifestation. On the fourth day the *Sentinel* came and contained an article on "The Uncovering and Destroying of Sin," in which this statement occurred, "The sometimes fearful and inexperienced student mistakes the stir and agitation caused by the declarations of Truth for the seeming power of evil, and so loses his demonstration through not acknowledging Truth as the *only possible factor* at work." These words were like a beam of light in the darkness, courage came, and a more steadfast reliance upon God.

A reference in the Lesson-Sermon for the week helped to establish the awakened understanding: "Every agony of mortal error helps to destroy error itself, and so aids the apprehension of immortal Truth. This is the new birth going on hourly, whereby men may entertain angels, the true ideas of God, the spiritual sense of being" (Science and Health, p. 548). Immediately it was seen that this seemingly malignant manifestation of evil was not a cause for apprehension (fear), but a call for a higher, "apprehension of immortal Truth." The patient quickly responded to this higher understanding and made rapid recovery. She soon became a member of the church and an intelligent and active worker. She has often said that that was her test, as to whether she was ready to accept Christian Science fully.

I feel very grateful for a recent article in the *Sentinel* entitled, "Identity." I have known of one case of what would be called instantaneous healing through the understanding brought by this article.

H. C. S., Janesville, Wis.

---

My experience in Christian Science dates from January, 1900, at which time one of my friends came to Christian Science. Our neighbors said she was going crazy on Christian Science. I met her in her home, and saw the matter in a very different light. I saw that she, to use an old-fashioned expression, was "soundly converted from darkness to light." Two or three days later, she told me it had occurred to her that she could lay off her glasses now, which she had been obliged to wear from early childhood, not being able even to sweep her floor without them. I saw her every day without her glasses on, for hours, at her window facing my house. She sat reading Science and Health, and I naturally concluded there must be truth in Christian Science, and, God being no respecter of persons, I said, I could and would lay off my glasses, which I had been obliged to wear nearly thirty years (being then seventy years of age). With my glasses I decided to lay aside my prejudice also, and investigate. My understanding was limited in regard to Christian Science, but my faith in God was strong.

At this time I was trying to cure a case of measles with magnetic healing, had been trying four or five days, but had signally failed. After learning something of Christian Science, I treated the child by offering a simple prayer of a very few words, and left him in God's loving hands. The one treatment healed him from being a very sick boy just beginning to break out with the measles, to one in health, and in just a few minutes. He said to his grandpa, "I am better; I am well." He went to the table, ate a hearty dinner, and before I knew it was at his play. No bad results following, the neighbors said he did not have the measles after all, but he did not have them again when exposed repeatedly.

I have not had to wear glasses since, and "bless His name" for giving us this heritage, this dominion.

How true it is that the kingdom of God is within us. I have had a number of beautiful demonstrations, and the more I am able to demonstrate, the more humble I feel.

MRS. A. COSTEL, Ashland, Ore.

---

I have known of Christian Science for about fourteen years, but gave no attention to it until some three and a half years ago. I had been doctoring constantly for about six months, and had had poor health for years before this. Finding myself no better after spending much money for medical treatment, I accepted an invitation to go to relatives and receive Christian Science treatment. Before going my weight was one hundred and four pounds; after three weeks' treatment I weighed one hundred and eighteen pounds. I began doing my own work, running up and down stairs, against which a law of limitation had been previously made, and which when disobeyed, brought suffering. I also did all the cooking for seven. Circumstances seemed to make it impossible for me to study and practise Christian Science, and I soon found myself discordant again. The most annoying illnesses were stomach trouble and a pain on the top of my head which had bothered me for years, and at which the physicians would shake their heads with a perplexed look and remark, "I do not know the cause of it."

I began to study, but I did not work while it was day, and the night was come and was getting darker and darker. Then when a little daughter was born we had a doctor. This was our third child, and at the birth of the second I almost passed away; consequently I had a great fear, and just as I expected, I almost passed on this time. On the night of the tenth day after the birth, I was attacked with excruciating pains. I did not think I should live till morning. The doctor pronounced it neuralgia of the stomach. I took medicine every two hours for four weeks, but had from three to five spells a week. The medicine did no good, but the chloroform did relieve me somewhat. I grew so discouraged and despondent that I began to make preparations for my death, which I felt sure was near. Only those who have been in the "valley of the shadow of death" can understand what I suffered. I wanted treatments again, but my husband was not strongly in favor; however, when he saw I was getting no better he consented. When my baby was five weeks old I began with Christian Science treatment; I had one spell only after this, but I was so disappointed at not being healed at once that I tried first one practitioner and then another; and there were many battles to fight and many doubts and fears. I think I cried about one third of the time, often a whole day. Every organ in the body seemed to be diseased, and I seemed to be sore all over. I can see now it was best for me that the healing was slow. Although two and a half years have elapsed, I still have errors to meet. Very much has been done for me,—notably, the almost entir-

Digitized by Google

relief from that terrible fear of an early death and the above mentioned pain in my head. I can eat what I please, —meat, beans, etc.,—which formerly brought on the neuralgic pain.

I am learning in Science that we cannot inherit anything but good, for we have but one parent, even God; that we are made in His image and likeness, that we cannot express death or a fear of death, for God is Life. The image in the glass does not express one quality which the original has not.

I want to say I am thankful for all the help received through Christian Science, thankful to its good and wise Founder and all those who have been instrumental in bringing the light to my darkened sense.

L. M. S., Greenwood, Neb.

---

I feel it my duty to give a testimony of the healing of our little son. On Sunday, May 5, 1901, he was taken sick with acute pneumonia. He was attended by two of our prominent physicians. On Monday evening, he was given up as past human aid; they told us he could not live until morning, and that it would not be necessary to call again. He was unconscious from Sunday until Wednesday morning; his body was cold, his lips and fingers had turned black, his tongue was swollen until his mouth and throat were filled. A Scientist whom we had met on several occasions was called after the physicians had gone, and when she arrived she found her patient raving in delirium and being held by great force on the bed.

Soon after treatment was commenced he quieted down and gradually became easier. In a few hours he recognized his family and continued to gain. On Friday he was able to be dressed, and on the following day was out in the yard with the other children, perfectly well, without a trace of the dread disease. Everything had been overcome and he has been in perfect health ever since.

Words alone cannot express the gratitude we owe to Christian Science for what it has brought to our home.

MRS. AMELIA STONEHOUSE, Detroit, Mich.

---

Nearly two years have elapsed since I heard of Christian Science. I was ready for it; for, like a great many others, I had tried almost everything else without avail. I turned, as it says in our text-book, like a tired child to something more substantial; that is, to divine Love.

I have found it a present and lasting help since I have learned my way so as to apply the truth. I had been subject to very severe headaches all my life, but they were very much worse for the five years previous to my acquaintance with Science. The headaches were overcome and catarrh of nearly twenty years' standing has yielded to Christian Science treatment.

I had worn glasses for twenty years also. I took them off when I began to read Science and Health, and have never had them on since. I had other threatening troubles which were the first warning of disease that often ends in consumption, but I am now entirely free.

Praise God, through Christian Science I have been able to see and find that these troubles are not real, that all things unlike God are unreal, and not of His creation.

I have worked earnestly to help others to come and see how good the Lord is. Through His blessing some of the seed has fallen on good ground and is springing up.

In this work we know our labor is not in vain, for Truth is mighty and will prevail some time, though we see no immediate result.

I sincerely hope this brief testimonial will be helpful to some other person who, like me, has been groping in the darkness but who now sees the glimmering of the dawn; the forerunner of brighter days.

MRS. E. E. MOORE, Portland, Me.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency

## Religious Items.

Rev. Washington Gladden, D.D., in *The Congregationalist and Christian World* says:—"The one thing in which we have come short, I fear, is this realization of God in our lives. What with our philosophy of second causes and our schemes of moral government, we have put God far away from us. Such words as those in which Paul assures us that God is working in us to will and to work for His good pleasure we have been wont to interpret in some dry, forensic fashion; the mystical union of the spirit of man with the Spirit of God is not for us the practical fact that it was to Paul and John.

"Here is the source of our weakness, the cause of our barrenness. If we could begin, even now, to live the eternal life; if we could call in the dubious sentries who stand on every frontier of consciousness to demand of God some philosophic formula before we will let Him in; if we could hear the voice which bids us

Speak to Him, for He hears, and spirit with spirit can meet.
Closer is He than breathing, and nearer than hands or feet;

if we could feel the gentle pressure of His love on every side of our lives, bringing light for our doubts and healing for our hurts and bounty for our poverty—how quickly all these questions that now trouble us would be solved; with what dauntless hope, with what invincible purpose we should go forth to the work of the years before us. Instead of the uncertain, querulous, half-apologetic tone in which our messages are often uttered men would hear us saying, with Paul, 'I know whom I have believed;' instead of the timorous, tentative endeavors which frustrate themselves, we should go about the work of the kingdom as men go about their daily business, just as if we expected to do it."

We have become so imbued with the half or quarter truth that the Gospel is intended to ameliorate human conditions in this world, that we forget that there are losses and disappointments which nothing in this world can alleviate, only the revelation of an infinite Father, and the heaven of which Paul wrote, and which John saw.

Of course in certain Churches of a liberal order there is much preaching that comes back to this, that if you do pretty well things will come out right somehow, but there is very little real comfort in these vague declarations, for the message of comfort must be concrete, and it must recognize a moral order in the universe which demands righteousness. A bare optimism based on a guess is about as comfortless as anything that can be imagined.

What we regret is that evangelical Christianity, which is so positive in its assertions of sin, and of human responsibility, and the necessity of active service, is so largely failing to emphasize those truths that throw a ray of divine light and comfort into troubled human conditions. It is not often that one hears Christians talk about heaven, or listens to a sermon on heaven. We are losing the note of positiveness as to the blessedness of the everlasting life for those who are in fellowship with Christ. We are quite too willing to treat the references of the New Testament to this great matter as figurative, forgetting that even figurative language, if it is rational, is based upon an underlying reality.—*The Watchman.*

Professor Gerald B. Smith of the Divinity School of the University of Chicago is reported as follows in *The Standard* in an article entitled "Some Unsolved Problems in Modern Christianity:" "Our grandfathers' theological books now are dust covered. There is no greater drug on the market than a theological library containing books printed prior to 1875. Men can be won only by a minister who himself has the scholarly spirit. The problem of a scientific theology is attracting general attention. Biblical and historical scholars are rising up in ever increasing numbers. Connected with the new scholarship is a serious problem—the feeling on the part of Christian workers that critical scholarship is subversive of effective evangelical work. The continued debates of scholars encourage suspension of judgment, a deferring of decision; and deferring of decision means spiritual inactivity. A perception of this difficulty has led sometimes to a depreciation of critical scholarship. It is quite possible to become so much interested in theories about the Bible that attention will be entirely diverted from the fact that through the Bible God brings men face to face with the most momentous question of life—the question of our spiritual relationship to Him. Here, then, is a problem thus introduced by the modern scientific method in theological study."

An article in *The Biblical World* contains the following: "Too often Jesus' teaching has been handled as though it were a systematic, scientific treatise on theology and ethics, whose expressions were fittingly to be subjected to a laboratory test, each element to be exactly determined by finely graduated measuring-rods, or delicate weighing scales, or as a new volume of legislation, every word of which was to be applied with complete literalness, forming a rigid system of minutely regulated conduct. No greater mistake could be made. Microscopic analysis is a radically wrong process to be applied to Jesus' utterances; for he chose to deal with the masses, and his ideas were expressed in language which they could hear and consider. Figurative language was natural to him as an Oriental, and by no other style of expression could he have held the attention of his Oriental audiences."

You cannot set the world right or the times, but you can do something for the truth; and all you can do will certainly tell if the work you do is for the Master, who gives you your share, and so the burden of responsibility is lifted off. Go to the man who is carving a stone for a building: ask him where that stone is going, to what part of the temple, and how is he going to get it into place, and what does he do? He points you to the builder's plan. This is one stone of many. So when men shall ask where and how is your little achievement going into God's plan, point them to your Master, who keeps the plans, and then go on doing your little service as faithfully as if the whole temple were yours to build.

PHILLIPS BROOKS.

C. G. Wright has this in *The Standard:* "This world will never be won for Christ except as Christ's followers have a burning enthusiasm for righteousness, except as they arrest the attention of men and fix it upon him who is the source of all power and all life. But enthusiasm is not produced by an act of the will. It is an effect, not a cause. It is a resultant of three things; belief that a given object is worthy of attainment, concentrated effort upon the object sought, and intense eagerness to attain the end in view."

It is a trite saying, and true as trite, that to become master of oneself is to win the greatest of all victories. Our worst enemies are not those who assail us from without, but the traitorous passions and lawless desires that rise up within us. No Satan-forged weapon, how keen soever it may be, can harm our souls if the citadel is kept by purity and trust in God. "A man's enemies are they of his own household." With them under subjection to his will, he can successfully "quench all the fiery darts of the wicked one."—*The Examiner.*

If one looks for any rewards or returns for labors spiritual he should keep in mind the law, that those alone attain good who do it; that one's own possessions of truth increase according to the freedom with which he shares that truth with others; that in things of the spirit it is possible to hoard one's self poor and give one's self rich, as the old proverb has it. This is as true, and wholly true, of Churches as of individuals.

*The Universalist Leader.*

Real growth in character comes as so many of the best gifts of God come,—by the way. In doing what we believe to be God's will for us, many things lie in the straight line of that fidelity. Every unselfish act makes unselfishness more possible.

H. W. FOOTE.

My faith is, that there is a greater amount of revelation given to guide each man by the principles laid down in the Bible, by conscience, and by providence, than most men are aware of. It is not the light which is defective, it is the eye to see it.

NORMAN MACLEOD.

Our prayers are bills of exchange, and they are allowed in heaven when they come from pious, humble hearts; but if we be broken in our religion, and bankrupts of grace, God will protest our bills; He will not be won by our prayers.—*The Examiner.*

There is no one to whom God will ever intrust any large and glorious will to do in the future who is not willing to do that little phase of God's will lying very close and very near now.—ROBERT E. SPEER.

If you cannot be a Christian where you are, you cannot be a Christian anywhere. God is no more in my home than in thine.

G. CAMPBELL MORGAN.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only.*

PRICE:—Single copies, two cents each, post paid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.
Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.
Mr. Kimball's Lecture. 33 pp.
Hearings on Proposed Medical Bills. 23 pp.
Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.
The Buswell Trial. 24 pp.
The Christian Science Movement. 22 pp.
Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Expressions Concerning Christian Science.
Rich Blessing.
Beauty of Christian Science.
Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

## The Christian Science Journal.

Founded April, 1883.

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $3.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The House Committee on Interstate Commerce has ordered a favorable report on the Department of Commerce Bill. The provision including the Bureau of Labor in the new department was retained on a tie vote.

The bill, as it will come from the House Committee, will embrace within the proposed Department of Commerce, the Lighthouse Board, Lighthouse Service, National Bureau of Standards, Coast and Geodetic Survey, Bureau of Immigration, Fish Commissioner, Bureau of Statistics of the Treasury Department, Bureau of Foreign Commerce of the State Department, fur seal and salmon fisheries, Bureau of Labor and Census, and three new bureaus—insurance, manufactures, and corporations.

The province and duty of the proposed Bureau of Corporations, is, under the direction of the Secretary of Commerce, to gather, compile, publish, and supply information concerning corporations engaged in interstate or foreign commerce.

A bill has been introduced in the House that "provides that any National Bank with the approval of the Comptroller of the Currency, may take out for issue and circulation an amount of National bank notes not exceeding twenty-five per cent of its paid up and unimpaired capital without depositing United States bonds," and "that as a guarantee of the payment thereof it shall deposit with the United States Treasury an amount equal to five per cent of the issue, which deposit shall count as a part of its lawful reserve against said notes.

The total value of exports of the United States to Germany for the fiscal year of 1902 was $173,148,820. Of this total $45,500,000 was in breadstuffs and provisions. The lard figures alone were $16,237,000.

The President has sent to the Senate the reciprocity treaty recently negotiated between the United States and Cuba. It was referred without reading to the Committee on Foreign Relations.

A bill has been introduced into the Senate proposing the admission as States of New Mexico, Arizona, and Oklahoma.

The indications seem to point to an agressive "campaign of education" in favor of better financial legislation.

The Senate has passed the pension appropriation bill without discussion. It carries $139,847,000.

**Foreign.**

United States Minister Bowen now has charge of the British, German, Italian, and Dutch interests at Caracas. A pacific blockade of La Guayra has been established. Neutral ships are not to be interfered with. President Castro's proposal to have the various claims against the nation arbitrated is considered inadequate by the Powers, as it is unaccompanied by a guarantee to pay in case the arbitrators decide adversely. To the proposal of President Roosevelt that the Venezuelan trouble be submitted to The Hague Tribunal for arbitration, the allied Powers reply with a counter proposal that President Roosevelt himself arbitrate the issues. He may consent so to act. Until the details of arbitration methods are decided upon, the blockade will continue.

The Educational bill which has been as strongly opposed by the English non-Conformists as it has been supported by the Anglican Church, passed its third reading in the House of Lords last week and was reported back with its amendments to the House of Commons, by which it was adopted by a vote of 197 to 159. The bill secures to the Established Church the right to conduct religious instruction in the schools.

After a continuous session of eighteen hours and a half on its third reading the German Reichstag finally passed the tariff bill by a vote of 202 to 100. It is understood that the bill is aimed chiefly against the United States. Chicago packers affirm that the bill will deprive them of twenty-five per cent of their export trade in provisions, exclusive of fresh meats.

The English Parliament was prorogued last Thursday by royal commission.

**Industrial and Commercial.**

The entire product of the Pressed Steel Car Company from now to June 1, about one hundred cars a day, will be taken by the Pennsylvania Railroad. This involves an expenditure of about $15,000,000, will increase the carrying capacity of the railroad about 750,000 tons, and greatly relieve the congested freight condition in the Pittsburg district. Orders for the engines to move these cars have also been given.

The landing and splicing of the shore end of the new Pacific cable, which is to connect San Francisco with Honolulu, was accomplished last week. About forty thousand people witnessed this work. As soon as the shore end had been spliced to the main body of the cable on board the cable steamer Silverton, she headed for Honolulu at a seven-knot speed. The cable is about twenty-five hundred miles long. In order to detect any possible imperfections in the cable, communication is kept up with the shore as the cable is laid.

The Board of Aldermen of New York has given its consent to the construction of the Pennsylvania Railroad Tunnel, which will reach from the Hackensack Meadows to Long Island City, passing beneath East and North Rivers and Manhattan Island. There will be a terminal station in the center of Manhattan Island. The tubes for this tunnel, cannot be begun, it is said, for nine months yet, as shafts must first be sunk to the lowest level of the tunnel. These tubes are of cast iron two inches thick, with an inner lining of concrete. The strength of the tubes will be sufficient to insure a speed of forty-five miles per hour.

As was hinted at the time of the formation recently of the Union Steel Company, combining the Union and Sharon steel plants at Pittsburg and Sharon, the company has been absorbed by the United States Steel Corporation. The transaction represents between forty and fifty million dollars.

The American Navigation Company has just been formed in Maine with a capitalization of one million dollars. It contemplates the establishment of a large fleet of vessels under one head. Many New England vessel owners are interested in the enterprise.

**General.**

The tunnel being excavated at Niagara Falls for the Canadian Niagara Falls Company is a remarkable piece of engineering, and will have, when completed, a length of 2,200 feet. About 900 feet from the wheel pit and 1,300 feet from the portal a shaft was sunk to the required depth from which the excavation was carried on in both directions. The tunnel as well as the wheel-pit are to be lined with brick throughout. The wheel-pit will be about 180 feet in depth.

The Marconi Telegraph Company announced last week that trial messages had passed to Canada from England, and that within a few days messages would pass between Canadian and British government officials. This feat was accomplished Sunday when the station at Table Head, Cape Breton, forwarded wireless messages to King Edward and Victor Emanuel. The receipt of these messages and of one to the *London Times* was verified by cable.

Professor Hilprecht, the archæologist of the University of Pennsylvania, has sailed from New York on his way to Nippur. After addressing several student audiences at Leipsic and other German university cities, he will proceed to Constantinople where he will work upon the tablets there stored. In that city he will fit out another expedition and then go to Nippur to make further excavations.

After a two years' exploration of northern Siberia, a part of the Jesup North Pacific Exploring Expedition has returned to New York. The expedition reached regions never before reached by white men, and found races as yet unknown to the civilized world. The collection of fifteen thousand specimens will be installed in the American Museum of Natural History.

The enrolment at Yale, including all departments, is 2,816. Eighteen foreign countries are represented. Graduates from 167 colleges are studying there. The total enrolment of Harvard in all departments is 4,261, exclusive of Radcliffe and the summer schools, which bring the total up to 5,206. There are 334 instructors.

The general meeting of the Archæological Institute of America is to be held December 31–January 2 at Princeton Inn. Among the Princeton professors who will speak are Professors Carter, Marquand, and Frothingham. Professor Goodwin of Harvard will deliver the annual address.

The original letter written by George Washington to Patrick Henry, wherein the former declines to accept a grant of money passed by the Virginia Legislature for services in the Revolution, was sold at auction last week for $580. It bears the date of October 29, 1785.

A hitherto unknown portrait of Martin Luther, painted by Lucas Canoch, the celebrated artist and burgomaster of Wittenberg, has been uncovered in the town church of Wittenberg. It is pronounced to be the best portrait of Luther in existence.

New regulations concerning the erection of buildings in Paris have been promulgated. The buildings erected in streets less than 39 feet in width must not exceed the width of the street by more than 19½ feet, and the maximum height is 66 feet.

The Anthracite Coal Strike Commission adjourned for the holidays last Saturday. When it resumes its sittings the first Monday in January it will meet at Philadelphia.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Consistency.

THE attempt of denominational editors to misrepresent the teachings of Christian Science, when examined in the light of Truth, shows a lack of consistency. Our Master, speaking of this same condition, said in substance, They have eyes, but see not, and they have ears, but hear not; they would not enter in (accept his teachings), and hindered those who desired to come to him for help.

What would be thought of a novice who would write a criticism severely denouncing the science of music, mathematics, or astronomy, pronouncing their teachings "self-contradictions and vagaries," when he had not tried to learn by putting into actual practice the laws whereby the science was to be mastered? And yet this is the attitude of some denominational editors toward Christian Science. They persist in taking detached sentences from their context, and associate such quotations so as to make them convey an altogether different meaning from what was intended. But the truth of Christian Science cannot be forever hidden from the people by such unjust comparison. If a child learning mathematics should start with an error in the multiplication table, he would never gain the correct solution of any problem so long as this error existed in his mind. Our critics start with a wrong apprehension of Christian Science, and because of this it thus appears to be contradictory; while, on the other hand, more than a million people speak of its practicability, due to its Scientific accuracy and perfectly logical statements. In Jesus' day some declared his word was the power of God unto salvation; while others stated his words were of the devil. A very large number of people declare that the teachings of Christian Science have shed a light on the Scriptures which now enables them to read the Bible understandingly; perusing it from a sense of pleasure instead of as a mere duty. It has increased their dependence in God, Good, and established a greater desire to walk in the footsteps of Christ Jesus. Judging this teaching by its fruits, it cannot consistently be classed as a vagary.

These critics denounce and condemn Christian Scientists for doing the very thing Jesus commanded should be done, yet they do not heal the sick as part of their religion, though the Master joined the commands, "preach" and "heal." Christian Scientists believe "The best sermon ever preached is the practice of Truth" (Science and Health, p. 201), and it is this course that enables them to heal the sick.

Our critics refer to and recommend the words of those who refuse to live the precepts of Christian Science; whereas the loyal Christian Scientist recommends the Bible and the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, the latter founded upon the former. No one could expect to get the true life-work of the Master set forth in a book Judas Iscariot might have written; but he will find it recorded in the gospels of Matthew, Mark, Luke, and John. A correct understanding of Christian Science cannot be gained from its opponents.

The truth of the teachings of Christian Science is becoming more generally accepted by "the poor in spirit" —all honest, earnest seekers after Truth; the work is moving steadily on with wonderful rapidity, the sick are being healed, the sorrowing comforted, the sinner reformed, The Christian Scientist desires to be consistent with Jesus' teachings, though they may seem inconsistent with some of the traditions of the elders of to-day.

Surely, if the Christian Science text-book is such a bundle of inconsistencies as our critics aver, there would not be such a steady and rapidly increasing demand for it. It has now reached the 157th edition of one thousand copies each.

The Christian Scientist is fully aware that our critics do not understand this subject, and that their criticisms are exposures of ignorance, an attack, not on Christian Science, but on their own concept of it. It is for a similar reason that Jesus taught his followers to pray, "Father, forgive them; for they know not what they do."

All over this land and in foreign countries Christian Science continues to spread rapidly; churches are dotting the land; many of the most cultured class of people are studying the subject and applying its teachings to the alleviation of human misery. A large company of people will testify, after trying material remedies in connection with the prayers of the church, that they failed to get relief and comfort; but Christian Science has brought surcease from sorrow, sickness, and poverty, and brought a peace of mind that nothing else gave them; and this is because it has shown them a brighter glimpse of the Christ-Truth.

L. B. C.

In *Dayton* (O.) *Herald.*

### The True Law of Compensation.

To the Editor.

Kindly permit an answer to the leading editorial of your estimable paper of the 18th, in which a column is devoted to an effort to show that Christian Science is inspired by commercialism rather than by the Spirit of Christ.

In the first place, the very lecture that was under criticism was given freely to the audience, and the poor and infirm were welcome equally with those in better circumstances. All the expenses of that lecture were borne by the Christian Scientists. Those who failed to hear the lecture may obtain free copies of the same at the Christian Science reading room in the Oliver Theatre.

The Christian Science churches in all our cities and in many towns maintain free public reading rooms. In every one of these rooms there is literature for free distribution, as well as a comfortable place to read all the works on Christian Science by Mrs. Eddy.

If our critic knows of any "halt or blind or lepers," or otherwise infirm, who desire free copies of Science and Health, he will do us a kindness to send them, or to come in their behalf, to our reading room or to the board of our

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

church, or to some Christian Science practitioner or church member.

If the Bible "is as plain as daylight" and needs no "key," then how do you account for the many commentaries, creeds, and sects? If the meaning and application of the Scriptures is so well understood, how is it that the sick are to-day resorting to the students of medical schools rather than to the students of the divinity schools? If every other denomination has its explanation and exposition of the Bible, why not permit Christian Scientists to have their commentary on the Scriptures? Since health and salvation come to us from the Christian Science explanation of the gospel, we are satisfied with this rule of living, and are willing that others should worship according to the dictates of their conscience.

Our critic says that "All there is in Christian Science comes from the Bible." If it all comes from the Bible, then why oppose Christian Science? Because they charge for their written works and their works of healing? The right to receive a return for spiritual work is clearly set forth in the Bible. It was to spiritual work that Jesus applied the saying: "The laborer is worthy of his hire." The workman in the world is admitted to be worthy of his hire. Is he who heals his fellow-man less worthy? If the cigar seller is paid for his work, shall not the one who destroys the habit of using tobacco be rewarded? If the saloon keeper is paid a salary for selling whiskey, shall not the Christian Science practitioner be paid for that prayerful ministry which destroys the desire for drink? If the medical doctor is paid for his services and the preacher for his labors, shall not the Christian Scientist, who combines in the ministry the work of preaching the kingdom of God and healing the sick, receive his reward?

It is objected that Christian Scientists charge for treating patients whom they have never seen. Surely the absent patients would not pay unless they received benefit from this ministry. Payment is not required in advance. It is God who heals, as every Christian Scientist will testify, and God is everywhere. Jesus healed those who were absent from him, and he is our exemplar in all things. The text "freely ye have received, freely give," applies as much to the one who receives the ministry of healing as to the one who performs this service.

What evidence has our critic for the assertion that "Jesus never charged for the cures he effected"? Customs were different in the days of Jesus and the apostles. They were entertained from house to house by those among whom they labored. They also carried a money bag for their collections. The early missionaries not only had their own needs supplied, but also took up collections for the saints in Jerusalem. Paul says: "If we have sown unto you spiritual things, is it a great thing if we shall reap your carnal things? . . . Even so hath the Lord ordained that they which preach the gospel should live of the gospel."

If the people preferred to keep practitioners in their houses rather than pay them a small consideration, so that they may rent their own houses and meet the other current expenses, the pristine order would be followed to the satisfaction of all. In apostolic times Christians had all things in common, "Neither was there any among them that lacked: for as many as were possessors of lands or houses sold them, and brought the prices of the things that were sold, and laid them down at the apostles' feet: and distribution was made unto every man according as he had need." I wonder if those who now object to paying three dollars for a book that a whole family may use, or who object to paying something for the ministry of saving men from vice and disease, would have sold houses and lands and laid the money at the apostles' feet? We can well believe that doctors "give away thirty per cent of their services" to the poor. Sixty per cent would be nearer the proportion of free treatment in Christian Science.

Another example of the sacrifices which Christian Scientists are making for the benefit of the public is found in the fact that Publication Committees in the different states are supported by our denomination in order that the public may have authorized statements concerning Christian Science and its development.

Yours sincerely,

WILLIAM H. JENNINGS.

In *Lincoln* (Neb.) *News.*

## Suffer it to be so Now.

CHRISTIAN SCIENCE demands absolute perfection of its adherents, and yet they recognize that perfection must come by spiritual growth. The first lesson in Christian Science must be taken first, the second lesson second, and so on. It is as impossible to practise the last lesson first in this Science as it is in mathematics and music, and to know this, is an essential part of its teaching. It is not only irrational to practise the last lesson first, or to mistake the beginning for the end, but it is out of harmony with the teachings of this Science to do so, and, moreover, is impossible. The neophyte in Christian Science may mistake in judgment as to his ability to demonstrate absolute Science in a given case, but he could not do this on the basis of Science. Such a mistake would indicate a lack of Christian Science. A consistent Christian Scientist undertakes only that which he can do with a reasonable degree of success. For example, he might heal the sick successfully, but he might not be able to live without eating. Therefore, in the matter of eating he is choosing the less of ewo evils, well knowing that in the day of perfection, which may be centuries in the future, he will, to use the language of Science and Health, "neither live to eat nor eat to live." It is in conformity to this important lesson in Christian Science that its adherents are careful to isolate their sick patients from others. When they have proved that in every case they can instantaneously heal all manner of diseases and thereby immediately destroy the possibility of imparting them to others, they will then have no occasion for quarantine. At present, their efforts to heal are more or less experimental, and for this reason they must deport themselves in such a manner as to be on the safe side.

Some critics of Christian Science claim for its adherents what they do not claim for themselves. It has been asked, Will a Christian Scientist dispense with a surgeon in the case of a broken limb? If he has not proved by experience that he can do this with safety to his patient, he would not so attempt, but would call a competent surgeon to do the mechanical work. Jesus illustrated another form of this law when he allowed himself to be baptized of John, saying, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness." He knew that he had gone beyond the necessity of any help from John, but he knew that the influence over his fellow-men which was necessary to the fulfilment of his mission would be greatly jeopardized if he failed to conform to the customs which the highest thought of his time regarded as an essential practice. So, in the matter of handling infectious and contagious diseases, a Christian Scientist might, in strict conformity with the teachings of his faith, yield to popular opinion and suffer to be so now a practice which they would not regard as essential if the general public understood this Science better. The Leader of the Christian Science movement, teaching and advising strictly on the basis of Christian Science, notes this fact and speaks accordingly, and her students readily accept the lesson and put it into practice.

ALFRED FARLOW.

## Not Mental Suggestion.

YOUR quotations from the scholarly work of George A. Coe, Ph.D., show a conscientious effort on his part to explain Christian Science without resorting to ridicule or wilful misstatement, and so far they merit the appreciation of the Christian Scientist, for let it be understood that Christian Scientists have one motive in common with Dr. Coe, and that a basal one; viz., the desire for truth. The point of divergence in the doctor's argument is right at the beginning. Let the most honest explorer start his investigation by facing in the wrong direction, and the straighter he follows that path, the further he will travel from the desired goal.

Many honest Christian opponents of Christian Science (and I assume that Dr. Coe belongs to this class) start with the assumption that Christian Science and mental suggestion are essentially the same in their operation. They then proceed to expose the fallacies and limitations of mental suggestion, and really believe that they have riddled Christian Science. As a matter of fact, the tyro in Christian Science can do more to expose and demolish the operations of mental suggestion in five minutes than does the doctor in his whole book.

Christian Science and hypnotism, or mental suggestion, are polar opposites. Both Christian Scientists and hypnotists declare this opposition, and surely their testimony should have weight.

And here let it be said that only a small percentage of Christian Scientists are regular practitioners. The most of them are quietly and earnestly working out their own salvation, lending a hand here and there when asked for help by friends or relatives. But the distinctive test of the higher nature of the work of Christian Science is the one given by the Master: "By their fruits ye shall know them." These fruits are not merely healing the sick, but include as well reforming the sinner, reclaiming the vicious, cleansing the impure thought, and teaching a cheerful reliance on God in every emergency. Surely these last results should seal the lips of our Christian brethren.

No mere therapeutical agency ever built massive temples or evidenced the cohesion and permanence manifested by Christian Science. Spasmodic gratitude to an unknown God for transient physical benefits never could draw together the class of citizens that are to-day investigating and applying the rules of Christian Science in daily life. No physical regeneration could have implanted in the minds and hearts of these men and women the patience, charity, and love which they are to-day showing towards all forms of misunderstanding, misrepresentation, and persecution.

J. U. HIGINBOTHAM.
In *The Advance.*

## Prove all Things.

As in the science of mathematics, if we incorporate error or falsity into our statements we find error and falsity in the conclusion, so in our problem of life we must include in our premises only those things which we wish realized in our experience. Thus can we mould our thought and lives by having that mind which was also in Christ Jesus; and we need not doubt, nor fear to put it to the test, for St. Paul said, "Prove all things; hold fast that which is good," and Jesus said, "By their fruits ye shall know them." Thus are cause and effect found to be a scientific certainty in our Christian experience.

The Principle upon which Christian Science is based is without beginning and without end. Christ said, "Before Abraham was, I am." The Christian era was ushered in through the application of this Principle to the lives and affairs of men, even to the minutest detail. Christian Science is the further development of the practical, ameliorative, and beneficent influence of the Christ-Truth, to which Jesus referred when he said, "Ye shall know the truth, and the truth shall make you free." To what are we in bondage, unless to sin, with its resultant discords, disease, and death. Then to know the Truth of being, the facts of existence, is to bring freedom from this servitude. Blessed thought!

If life were dependent upon material conditions and beliefs, we might know much of Truth, and yet our conditions would not be bettered; but Jesus said, that to know God is life eternal. So we seek to know God, Truth, and conforming our thought and lives thereto, find the freedom of the Sons of God.

What more natural than that Christian Scientists should feel the deepest gratitude to her who has been faithful to God and her fellow-men, giving to the world this glorious illumination, bearing patiently the misjudgment and misrepresentation which seems ever the lot of those who lead in the world's advance.

Gratitude is a divine quality. It should be cultivated in ourselves and appreciated in others.

FLORENCE F. FULLERTON.
In *Lima* (O.) *Republican-Gazette.*

---

Recent events have revealed that the public is deeply interested in this new-old religion; that prejudice is gradually yielding to fair judgment; that kindness and generosity find a larger place in the minds of men than heretofore; that the trend of opinion is more or less characterized by justice, and that opposition is confined within comparatively narrow limits.

Christian Scientists have never claimed for themselves unvaried success in the treatment of disease. What they do claim, however, is, that the percentage of failures placed to their credit is far below that of any other system on earth.

The healing of disease, while not the most essential feature of Christian Science, is yet an essential one, and is, to its followers, the outward evidence that their faith in God is of some practical value, and is one way in which they endeavor to worship and praise God. Shall the sinner alone avail himself of God's love and mercy and goodness? Cannot sick, suffering, crying humanity expect anything from God? Will not God now, as in the old days, send His word and heal them?

J. C. BATTS.
In *Newport* (Va.) *Daily Press.*

---

The prayer of enlightened faith, by which Christian Science heals, is the prayer which understands or realizes that all good is already accomplished, and that God has never willed that man should be sick, or that he should be a sinner. Here is a distinction between mere faith, which has no basis in reason or revelation, and that assurance of God's ever-presence which enabled Jesus, his disciples and apostles, and the early Christians to heal, and which still should enable all who believe in him to do the works that he did. This distinction alone is sufficient to separate Christian Science from every form of religious belief which teaches that infinite Love either causes or allows His children to suffer.

WILLARD S. MATTOX.
In *Geneva* (N. Y.) *Review.*

---

It seems unnecessary to point out that Christian Science is in no sense the practice of medicine. It is the fulfilment of God's omnipotence, just as Jesus taught his followers. No court in this free land of ours would attempt to regulate a man's right to pray nor his right to expect his prayers to be answered.

## The Lectures.

### At Richmond, Va.

Judge William G. Ewing gave his second lecture in Richmond, Va., last Sunday afternoon, November 30, at the Academy of Music, the largest auditorium in the city. There were nearly a thousand people in attendance. The work started here less than two years ago.—*Correspondence.*

### At Baltimore, Md.

Hon. William G. Ewing of Chicago lectured yesterday afternoon [November 23] in the Lyceum Theatre on Christian Science. Judge Ewing was formerly a judge in the Superior Court of Illinois. A large audience greeted the lecturer. His subject was handled in a masterly manner.—*Baltimore American.*

### At La Porte, Ind.

The lecture last evening [November 25] at the Unitarian Church by Mr. Edward A. Kimball of Chicago, a member of the Board of Lectureship appointed by The First Church of Christ, Scientist, of Boston, was well attended. Quite a number were present from South Bend. The speaker ably presented the tenets of his church, showing wherein it agreed and wherein it differed from other denominations.—*La Porte Herald.*

### At Lincoln, Neb.

Before a magnificent audience at the Oliver Theatre last night [November 16] Judge Septimus J. Hanna of Boston, Mass., delivered an address on Christian Science. The lower floor and the balcony were filled and people were standing up. It was necessary to open the gallery to admit the overflow. The lecture was a scholarly exposition of the teachings and position of Christian Science by an eminent authority. Mayor H. J. Winnett introduced the lecturer.—*Nebraska State Journal.*

### At Norfolk, Va.

The Christian Science Church, on Freemason Street, was filled last night [November 27] with an audience which probably embraced people of every religious faith in the city who desired to hear of Christian Science. One of the official lecturers of that denomination, Judge William G. Ewing of Chicago, was the speaker of the evening. Three of the Protestant denominations, at least, were represented among the clergy in the audience.

Judge Ewing was introduced by Mr. George H. Barrett, a prominent citizen of Portsmouth, who is President of the Board of Directors of the Christian Science Church here. Mr. Barrett's remarks were brief, but very happy, and included the statement that the purpose of the lecture was to set right many misconceptions that are abroad as to the teachings of Christian Science.

Judge Ewing, who is a very winning speaker, and exceedingly gentle and gracious in his manner, gave much of his discourse to stating wherein the beliefs of Christian Scientists accord with the older churches—naming their belief in an infinite, all-present God; in the Christ, born of the Virgin Mother; in the Bible, and in prayer. He did not name the points of disagreement, saying that if there was agreement on the essentials there were no "essentials" upon which to disagree.—*The Public Ledger.*

### At Kewanee, Ill.

Edward A. Kimball, C.S.D., lectured last evening [December 11] at the Opera House before a fair-sized audience. He was introduced by James H. Andrews, who said:—

*Ladies and Gentlemen:*—Charity is the finest virtue which God has put into the hearts of man to profess and practise. Tolerance is the sweetest flower of charity. While some of us may not be devotees or disciples of the faith under the auspices of which we have met, it is the part of good breeding and intelligence and ambition to listen well and learn. It gives me great pleasure now to introduce to you Mr. Edward A. Kimball of Chicago, who is to speak to you upon Christian Science.

*Kewanee Star-Courier.*

### At Danville, Ill.

A great many people braved the storm of last night [December 2] to avail themselves of the opportunity of hearing an authoritative statement of Christian Science. The lecture was given at the Opera House by Edward A. Kimball, C.S.D., of Chicago. He was introduced by W. R. Jewell, Sr., who said, substantially:—

There has been much heard of Christian Science, and its adherents say it is much misunderstood. I am sure that all welcome any sincere movement the object of which is to diminish disease and promote health, to lessen trouble and add to peace, to decrease wrong and increase right. I do not fully understand the fundamental principles of Christian Science, but as we know a tree by its fruit, we can truly say that the tree is good that produces so many excellent characters as Christian Science has in this community. That we may hear authoritatively on this subject, I have the pleasure of introducing Mr. Edward A. Kimball of Chicago, authorized lecturer of The First Church of Christ, Scientist, Boston, who will now address you.—*The Danville News.*

### At Newark, N. J.

Judge William G. Ewing of Chicago delivered a lecture on Christian Science, Friday evening, November 21, in the New Auditorium, to an audience of about five hundred. The lecture was under the auspices of First Church of Christ, Scientist. The lecturer was introduced by Mr. Arthur W. Moore of this city, who spoke in part as follows.

*Ladies and Gentlemen:*—The Christian Science annual report published last June stated that there were then in this country five hundred and twenty-one fully organized and incorporated Christian Science churches, and one hundred and eighty-four societies which were holding Christian Science services. There were also upwards of one million adherents of Christian Science. This number includes those who were admitted to full membership, and those who simply accept Christian Science.

Last week a popular orthodox clergyman of this city declared that the Christian Scientists as a body were intellectually superior to the members of any other Christian denomination. You will please bear in mind that the Christian Scientists did not make this claim, but this is the expressed opinion of a learned and liberal clergyman of Newark.

This opinion and the statistics are not submitted to you as a boast, but if so many of such a class of your fellow-citizens have embraced Christian Science as their religion, then that religion is certainly entitled to earnest and conscientious consideration, and ought not under any circumstances to be lightly met with derision or antagonism.

*Correspondence.*

### At Beloit, Wis.

An audience which packed the Wilson Opera House from orchestra to dome Sunday afternoon [November 23], listened with interest and marked attention to Carol Norton, C.S.D., of New York, who spoke at length on the "Teachings of Christian Science." He treated the question tactfully and made a good impression on those not of the Christian Science faith. Among his hearers were a hundred members from Rockford who came up on two special cars over the electric road, a bus-load from Janesville, and delegations from Orfordville, Delavan, and Elkhorn.

The speaker was introduced by E. P. Salmon, who spoke in substance as follows:—

Here in Beloit we are glad to welcome any stranger who is vouched for by some of the best of our citizens. We are also willing to recognize the good in a movement whether we endorse all its special beliefs or not. In our day we ask of men and organizations not so much, What are their beliefs? (although beliefs are of course essential), as What do they do? It is impossible to establish a new movement by mere discussion or overthrow it by argument. The real test is the good in it, "By their fruits ye shall know them." Judging by this standard, Christian Science has the right to a fair hearing.—*The Beloit News.*

### At Victor, Col.

Before an audience that filled the Victor Opera House Judge S. J. Hanna of Boston, Mass, last evening [November 25] delivered an address upon Christian Science, which was listened to with the closest attention by his hearers. The lecture was a scholarly exposition of the teachings and position of Christian Science. The audience was composed of many who do not belong to the Christian Science faith, but are disposed to learn of its teachings.

The president of the meeting was Judge Huff of Victor, who spoke partly as follows in introducing Judge Hanna:—

The days of the dark ages have come and gone, leaving behind them a trace of their superstitions, traditions, and conditions, upon which this new world of ours to-day exists.

The struggle for an existence by many, and for supremacy by mankind generally, affords serious reflection for the thinking mind.

The world to-day is looking for a higher plane of life, one that will lift it from beneath the clouds of uncertainty up and into a sphere of perfect contentment.

This evening, beneath the shadow of Pike's Peak, in this beautiful city of Victor, whose foundation is pure gold, we have with us a gentleman, who, by the dint of industry and research, has qualified himself to speak for the betterment of his fellow-man.—*The Cripple Creek Times.*

### At West Philadelphia, Pa.

A lecture was given by Judge William G. Ewing on Christian Science at St. James Hall on the evening of December 4, under the auspices of West Philadelphia Church of Christ, Scientist. An audience of more than six hundred assembled and listened with close attention and interest. The speaker was introduced by Mr. William T. Randall, First Reader of the church, who said in part:—

"Our pleasure this evening is greatly enhanced by the contrast of this meeting with one on the same subject given in this city, this same month twelve years ago. At that meeting only eighteen persons formed the audience, sixteen ladies and two gentlemen, one of whom was myself. A comparison of this meeting with that, indicates the growth that Christian Science has had in public interest here as elsewhere."—*Correspondence.*

### At Colorado Springs, Col.

To one of the largest and most select audiences that has been gathered in Colorado Springs for a long time, Judge Septimus J. Hanna lectured last night [November 21] at the Opera House. The audience was representative of the city's best thought, and it listened throughout the address with apparent deep interest.

Judge Hanna was introduced by Mayor John R. Robinson, who prefaced the words of introduction with a brief tribute to the high character of the following which Christian Science has here and elsewhere, and to the speaker himself, who was for many years a resident of Colorado and an active member of the Colorado bar.

The speaker of the evening gave a comprehensive yet necessarily brief statement of the nature of the belief of the Christian Scientist, how far his belief goes and why he believes what he does. His remarks were out of a heart secure in its own conviction, and the declarations made, had therefore, great force and reasonableness.

*Colorado Springs Gazette.*

### At Glens Falls, N. Y.

A large and appreciative audience assembled at the Empire Theatre last evening [December 2] to listen to a lecture on Christian Science by Judge William G. Ewing of Chicago. Brodie G. Higley of Sandy Hill, introduced the speaker with a few appropriate preliminary remarks, in which he contrasted the intolerance of the past with the charity and liberal spirit of the present.

Judge Ewing spoke eloquently and entertainingly for an hour and a half. The attention of his hearers was not lost for a moment of that time. His capacity for analysis was clearly demonstrated. He is a clear thinker, and presented his thoughts with a rare degree of force.

*Glens Falls Star.*

### At Savannah, Ga.

The lecture on Christian Science delivered by Judge William G. Ewing of Chicago, under the auspices of First Church of Christ, Scientist, at Lawton Memorial last night [December 9], was a clear exposition of that religion.—*The Savannah Morning News.*

### Lectures at Other Places.

La Jara, Col.—Septimus J. Hanna, C.S.D., November 30.

Omaha, Neb.—Mrs. Annie M. Knott, C.S.D., October 6.

An experience may be a warning. A young man cannot come to Christian Science too soon. The longer he hesitates the more his deceiving mortal senses will weigh him down with counterfeit experience that will have to be unloaded either by understanding or suffering. The Master said, "Except ye become as little children," and to have so short a way to go, so slight a change to make, is a condition to be desired.—J. F. M.

## Affluence.

THE fingers of each shrub and tree,
In the dark earth grope trustingly
For what they need; and He who knows
Supplies the want of oak and rose.

So I'll not fear, but trusting know
Abundance to my need will flow,
If I but feel through mist of sense,
The plenty of Omnipotence.

EMILY HOUSEHOLDER.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### A By-Law and Amendments.

Art. XVIII., Sect. 7.

There shall be a Building Committee which shall consist of not less than three members of this Church in good standing, elected by a majority vote of the Christian Science Board of Directors and with the approval of the Pastor Emeritus.

Art. VI., Sect. 1, Par. 2.

The business of the Mother Church shall be transacted by its Christian Science Board of Directors. A majority vote and the consent of Mrs. Eddy shall dismiss a member of this Board. The salary of each member of this Board shall at present be seven hundred dollars per annum.

Art. XVII., Sect. 3.

REPORT OF DIRECTORS.—It shall be the duty of the Christian Science Board of Directors to report annually the amount of Church funds on hand, the amount of its indebtedness, and of its expenditures for the last year. The books of the Church Treasurer shall be audited semi-annually.

Art. XXVII., Sect. 5.

BROKEN BY-LAWS.—A member who shall break, or has broken, a By-Law of this Church, or has caused another member to do so, shall not hold office in this Church. If this offence be repeated, the name of this member shall be dropped from the roll of Church membership.

### Preparation.

WE are informed that some of the smaller churches, when electing new Readers, have been impressed with a lack of available material within their own ranks, and have felt compelled to draw upon other fields, a condition that should not exist after three years of active public work. The principal lesson to be drawn from this seeming lack of material is that there is need of more specific as well as more general preparation for every branch of Christian Science work, and that the healing of the sick is but a part of our ministry.

Another phase of the question, which must be carefully considered, is the danger of creating within our ranks a certain class who would, in time, come to be looked upon as professional Readers. It does not seem that the establishment of such a class could be conducive to the growth of those comprising it, nor to the growth of the individuals who felt relieved thereby of the necessity of qualifying themselves for the work within their own field.

Christian Scientists, in these early days of denominational growth and expansion, should realize that the call, "Follow me, and I will make you fishers of men," may come to them at any moment, and they should be prepared for it. No matter how small in membership a church may be, nor how limited the experience of its members in public affairs, it should have within itself material for all its needs.

For the same reason that Christian Scientists should be ever ready to heal the sick, they should be ever ready to preach the gospel. Neither can be properly done without earnest preparation and diligent study. Those without training for public work of this character, should know that it is never too late to acquire the necessary preparation.

M.

### A Living Gratitude.

TRUE gratitude expresses itself in higher living. A great truth is presented to us, we see it, but it is not ours until we live it. Unless practice keeps pace with perception, we were as well off without our perception. The most eloquent proclamations of a grand truth sink into insignificance when compared with the most unpretentious life in which its precepts are daily applied and harmony is wrought at the sacrifice of self.

The old world is aweary of preaching; but when the on-moving masses call a halt, and exclaim, "Why, here is a peculiar people!—a pure, high people,—joyous, healthy, harmonious in all ways, thinking each of another's good, upright, fair-minded, generous, setting ever the riches of spirit above earthly riches and honor," when this is exclaimed, the people recognize the actuating impulse to be Love; they respect the sincerity that manifests itself in a pure life, they leave the beaten pathways of the world, and follow rejoicing. Prejudice may pervert, fear may threaten, society may frown, humorists may ridicule, and friends may forsake, but pure, healthy, happy lives are an unquestioned demonstration, an unanswerable argument.

The religion that makes good men and women is the demand of the hour and is the only religion that will succeed or ought to succeed.

The teaching of our Leader is plain. "Goodness reaches the demonstration of Truth" (Science and Health, p. 2).

"The true understanding of Christian Science Mind-healing never originated in pride, rivalry, or the deification of self. . . . The ways of Christianity have not changed. Meekness, selflessness, and love are the paths of his testimony and 'the footsteps of His flock'" (Rudimental Divine Science, pp. 30, 31).

Our thankfulness must be demonstrated in holy work, sometimes in obscurest duty. Without works, words are meaningless and deceive no one save those who would by them deceive.

"While the heart is far from divine Truth and Love, we cannot conceal the ingratitude of barren lives, for God knoweth all things" (Science and Health, p. 3). S.

### The Surprises of Modern Religious Thought.

WHOEVER takes the time to look through the pages of current religious literature will be impressed with the warring incongruities, the turmoil and tussle of the world's expressed convictions. It is a day of entire freedom of utterance, both in adverse criticism and in the most pronounced support of traditional beliefs, and this frankness of confession and denial is one encouraging aspect of the situation.

Never since the days when Dean Stanley's polished blade began to smite the unguarded hosts of contented Anglicanism, has there been such a portentous stir in theological ranks, and the boldest radical not infrequently shares the page with the most ultra-conservative.

Two leading evangelical church organs lie before us, both of which stand for the integrity and authority of Jesus' teaching as recorded in the Gospel narratives. Both would undoubtedly concede that Jesus healed the sick by the spoken word of Truth, and that in commissioning his disciples he commanded them to continue these works of spiritual healing. One of these journals, however, is emphatic in its assertion that "freedom of conscience in

Digitized by Google

the domain of religion does *not* include the practice of the art of healing," and it classifies the endeavor of some of Christ's followers to heal the sick by spiritual means as "illegal and iniquitous conduct." If we may judge of them by the attitude of their leaders, we can but assume that this point of view is endorsed by a large body of professed Christians to-day, and we are thus brought face to face with one of the greatest anomalies of Christian history.

Jesus and his disciples of the early church met much of protest and opposition in the practice of their healing work, but we question if anything said of them by their critics and defamers was more positive and condemnatory than this twentieth-century indictment by those who are championing the cause for which Jesus came; and it is startling enough to find the legitimacy and propriety of Christian healing unequivocally denied, in the language quoted, by those who are professed followers of him who said, "The works that I do shall he do also, and greater works," "Go into all the world," "Preach the gospel," "Heal the sick."

The most casual reading of the life of Jesus must impress every one with the significance he attached to the healing of sickness, both in his words and his works, and when we remember that he ascribed all his works to the divine presence and activity ("My Father . . . doeth the works"), and recognize that the divine law and manifestation must be uniform and ever operative, we are led to the logical conclusion that to deny the legitimacy and possibility of spiritual healing to-day is to deny it for all times, since all the essential factors remain the same. God the ultimate active agent does not change, nor does His law of manifestation, and since humanity's sore need abides, there is nothing lacking to-day save that right apprehension of this available divine law which is the human side and condition of its healing activity.

To deny the possibility of reaching a saving degree of spiritual apprehension, is to deny the law of spiritual progress, the significance of the faith which Jesus inculcated, the correctness of Jesus' definite statement that his works were to be continued by his disciples, and the historic evidence that these works were continued in the apostolic church.

The other journal referred to surprises us no less with the words of a reverend and distinguished lecturer who argues vigorously for the historic fact of Jesus' healing works, their naturalness and legitimate continuance. He says:—

"The words in which Jesus Christ proclaims himself the Good Physician are found in all the three synoptic gospels. They point to what was indeed the most obvious and prominent fact in his ministry, that he went about doing good and healing those who were afflicted in mind or body. The mission of Christ on earth was primarily a mission of healing. It is a mistake to suppose that the wonderful cures which he wrought were intended chiefly as evidences of his supernatural power and credentials of his mission. Considering how emphatically he protested against the demand for miracles and refused to comply with it, it is impossible to believe that he journeyed from place to place in order to give a series of thaumaturgic exhibitions. . . . Our Lord performed these cures as part of the gospel of the kingdom; and the lesson which he meant to teach by them can hardly be missed."

All this sounds like a hearty endorsement of spiritual healing as a present and essential part of the Christian ministry, but we are abruptly disenchanted when our author reaches the conclusion that the conceded apostolic ministry to the physical needs of humanity was that of *materia medica*, and, therefore, that all ministers should be graduates of a medical college! The lecturer does not deny that Jesus' works of healing and those of his immediate disciples were effected without drugs, and he names no date when the students of the Master ceased to heal after the manner taught and practised by their teacher, and adopted a method which he nowhere recommended, and which ignores his classification of sin and disease as one, and to be eliminated by one and the same method. Our brother would no doubt concede that sickness and suffering are but the incidents of sin, and if, as all agree, the cause is removed through spiritual cleansing, the new birth, we are wondering how he can logically cling to the unquestioned effects of this cause, and declare for their natural persistence until another and wholly extraneous remedy is applied for their removal.

If all these Christian advocates for the divine appointment of *materia medica* would but recognize the importance and necessity of the practical demonstration of religious truth, as well as all other classifications of truth, and act upon Jesus' words to John the Baptist's committee of inquiry, they would acquaint themselves with the undeniable and convincing facts of healing in Christian Science, and thus be saved the unhappy and uncommendable endeavor to maintain a position which is no less untenable in the light of gospel teaching and consistent reasoning, than it is in the light of the abundant and most satisfying evidence in hand. W.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

## From Our Contributors.

### The Careful Use of Words.

ROBERT L. ZILLER.

IT has been said that the life of a Christian Scientist should be characterized by an uncommon amount of common sense. This common sense should lead to sound judgment, quick and clear perception of the needs of humanity and the way to meet them, and a wholesome perception of the eternal fitness of things. To this understanding add tact, and we have a Christian Scientist whose words and deeds will shine through the firmament of spiritual understanding into the hearts of benighted humanity with the steady light of a fixed star. The conversation of such an one will be clothed with the chaste garb of precision, and Love will so fashion his phraseology that the meaning thereof will be apparent to the dullest disciple or the uninstructed seeker. Then the injunction of the Master to "Feed my sheep" may be fulfilled, and in this every true Christian Scientist will rejoice.

The Wednesday evening meetings furnish an excellent opportunity to point out to the stranger within our gates what Christian Science can do and is doing for suffering humanity in all its needs. Many come there who know absolutely nothing about the teachings of Christian Sci-

Digitized by Google

ence, and it is at these meetings, as well as elsewhere, that the greatest tact and discrimination in the choice of words should be used. If a stranger, seeking to know something about the healing in Christian Science, hears case after case spoken of as this or that belief being healed by treatment, without a definition of the terms used, he may go home wondering what manner of thing this mysterious treatment is which heals the beliefs that so grievously afflict the speakers. Perhaps not knowing just what may be meant by the word "treatment," he consults his dictionary and there learns that the word means a number of things. He finds that, with reference to disease, it means, "To manage in the application of remedies." He learns that in chemistry various substances are treated by acids and other chemicals. The miner treats his ores, the writer his subject, the photographer his negatives. There is no definite idea in his thoughts whatever, and, what is most to be regretted, the unqualified and indiscriminate use of the word does not bring God to his thought at all. He does not comprehend that God had anything to do with the "treatment," and here he misses the cardinal point of the discourse. All ambiguity could easily be avoided by occasionally substituting the word prayer, for every person knows that an effectual prayer implies the action of God on humanity. It should be explained that the prayer of the Christian Scientist is not a blind or unreasoning appeal to a personal God, and that his treatment consists in the "fervent and effectual prayer" of righteous understanding, by which the sick are healed and sinners reclaimed. This would furnish a basis for intelligent research, for the hearer would at once realize that he was dealing with something more than a human theory. These remarks are made with reference to the effect of testimonials on strangers, for, of course, Christian Scientists already know that every honest treatment is a prayer in the highest sense of the word. Too much care cannot be used to make it plain to the hearers that Christian Science is not a human system of metaphysics, but a divine revelation and a mode of regeneration wherein God is All-in-all. The tendency of the age is to place the healing on a basis of mortal mind, and this should be studiously guarded against.

It would be difficult to utter words of more profound significance than those which our Leader gives us from the summit of her exalted understanding, and with which she opens the first chapter in the revised edition of Science and Health: "The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love. Regardless of what another may say or think on this subject, I speak from experience. This prayer, combined with self-sacrifice and toil, is the means whereby God has enabled me to do what I have done for the religion and health of mankind." There is something sweet and sacred about the thought of prayer, something that implies a surrender of self and all evil, and an acknowledgment of infinite Love as All-in-all. To those weary of the trials of earth, and the heavenly-homesick, the thought of prayer is associated with the tender Father-Mother God, under whose loving care the heart finds rest and strength. The Bible attributes many wonderful happenings therein recorded to the efficacy of exalted prayer, and Jesus declared that the righteous prayer of a true disciple would bring into manifestation the blessings he deserved. When a speaker states that prayer, as understood in Christian Science, is the treatment which has been the means of bringing about his wonderful restoration, there is an immediate disposition on the part of the hearer to know more of the religion in which prayer has been raised from mere lip service and unanswered appeals, to a factor of such amazing potency. Christian Science teaches how to pray rightly and effectively, and it should be patent to both speaker and listener that this righteous prayer is the treatment which heals the sick and reclaims the sinner. Our Leader uses the word prayer more frequently than treatment. Surely it would be well for us to follow her example, for a more frequent use of the word in our Wednesday evening meetings, as well as elsewhere, would dignify speech and be helpful in many ways.

In this connection it may be well to touch lightly upon the use of the word "demonstration." To demonstrate means "To point out, to show, to indicate," or, "To prove beyond the possibility of doubt or contradiction." Therefore it is proper to use the word in connection with such things as require proof of their validity. It may be necessary to demonstrate the truth of an assertion, the soundness of a theory, or the correctness of some law. As applied specifically to Christian Science, the word means to give tangible evidence, or proof, of God's power, presence, and allness through the beneficent operation of the eternal laws of Being upon man and the universe. Hence when spiritual understanding, comprehending the great facts of Being, brings about a harmonious manifestation through the operation of unchangeable law, a demonstration, or proof, has been given of the truth of Christian Science in its teachings concerning God and His relation to man and the universe. From this it will be readily understood that a true demonstration in Christian Science is a thing of no small importance, inasmuch as it is the means whereby mortals receive tangible evidence of verities unseen to the finite senses. Therefore the word should not be carelessly used. We may demonstrate, or prove, the fact that an understanding of God and His laws will include the wisdom which makes men thoughtful and punctual in their affairs. We may likewise demonstrate, or prove, the fact that God will ever supply our necessities. We are allowed to coin a new word when there is a real demand for it, but there is no occasion for juggling with a good English word in ungrammatical and inartistic ways, and certainly it leads us far from the exactness which Christian Science enjoins. The frequency with which these mistakes are made indicates the fact that many well-meaning students, who are otherwise careful, fall into this error through force of habit and thoughtlessness. Let us make it evident that Christian Science gives us wisdom to express ourselves correctly as well as to think and act correctly. In loving consideration for those who seek to understand Christian Science, let us so order our conversation that we shall not confuse them with an incorrect and meaningless use of words. It is well to mean what we say, and to say what we mean. "Who is a wise man and endued with knowledge among you? Let him show out of a *good conversation* his works with meekness of wisdom."

## Self Pity.

K. S. E.

I HAD always been what is termed a healthy woman, quite prosperous, with a good social position and very happy in my family relations. After spending the greater portion of my life in this kind of existence, we went to reside in Brussels, for several years. Here in this most beautiful of European capitals, one is surrounded by all that could be desired by a refined taste and a love for the artistic, and for a while, my new experiences, novel environment, with the many opportunities for study and self-culture, were very pleasing to me.

But after a year or two, I became strangely restless and unhappy. At night, instead of going to sleep like a reasonable woman, I would lie awake an hour or more, grieving over trifles that had happened, over things that had not happened, and worse than that, over things that probably never would happen.

Digitized by Google

About this time, I was advanced to a position of distinction at the palace, and my misery seemed complete. I wept at least three hours every night. Here I began the earnest study of Christian Science, that heretofore had been to me only an excellent system of healing.

It required but a few weeks of study to make me understand my unrest. Out of the dark caverns of error, I had conjured up "airy nothings" and given them a name, clasping them to my heart with a devotion and energy that could be born only of self-pity. What had I been pitying? As I analyzed "self" and followed up this line of thought, the meanness, the smallness, the absolute nothingness of self, came clearly and forcibly to me, and in the same proportion I gained the victory over this sin of self-pity. It was a sharp struggle, but a brief one.

Self-pity is one of the most heinous and one of the most subtle of sins. It easily assumes the guise of unselfishness, of self-denial, of loving service for others, but it never rings true, and never fails of detection by the earnest and awakened thought. Conquer it thoroughly, and these other errors, being undermined, will finally disappear. Since this experience, I have had a comfort, a happiness, I never knew before.

## A Marked Illustration.

M. E.

GAZING out of the window of the Century Building just above the arched entrance of massive rock masonry, fixed and unchangeable in its entirety, I saw its reflection in the window of the building opposite. The solid arch was rent in twain, all out of proportion; it swayed in mid air; it rose and fell in unsteady rotation; at times it appeared likely to be dashed to the ground a battered mass of ruins.

Closer inspection showed that the window was in the form of a transom on a pivot, and the variable winds swaying the window back and forth, produced the illusive spectacle.

The thought which vividly presented itself to my mind, was its comparative suggestion of our relation to our life Principle. Here was the solid rock entrance, unchanged by the unsteady sway of the window; yet its reflection was demoralized. Steady the window by fixing it in its firm frame, and the reflection would be solid, whole, true to its original object.

So is it with our life. Change our status of being; establish it in firmness and steadfastness of purpose, clinging ever to the enduring, the good, and the true; planting our feet unswervingly in the stronghold of Truth and Love, in which there is no "variableness, neither shadow of turning," we shall ever reflect the wholeness and infinite goodness of our life-giving Principle,—God, "'gainst which the winds and waves can shock. Oh, nevermore!" (Miscellaneous Writings), and the false promptings of sense in its varied forms of illusion, will be forever hushed.

Let us, then, labor for an inward stillness,
An inward stillness and an inward healing,
That perfect silence where the lips and heart
Are still, and we no longer entertain
Our own imperfect thoughts and vain opinions,
But God alone speaks in us, and we wait
In singleness of heart that we may know
His will, and in the silence of our spirits
That we may do his will, and do that only.

H. W. LONGFELLOW.

The source of your duties is in God. The definition of your duties is found in His law. The progressive discovery and application of this law is the mission of humanity.—JOSEPH MAZZINI.

## Among the Churches.

### Progress in La Jara, Col.

We are glad to send you an encouraging message from this little town situated in the heart of the Rockies.

In the spring of 1895 three friends met at the home of one of them once a week, to go over the Lesson-Sermon. In June, 1897, we began having Sunday services. At this time there were but four who were really interested in Christian Science. In the fall we rented a room, furnished it with a reading desk, benches, chairs, rug, and curtains; all very simple and plain.

In the summer of 1901, a few more were added to our number, and during the winter we sometimes numbered as high as sixteen. Many of these, however, dropped out, leaving about nine regular attendants.

Error tried to make us feel discouraged, since the work did not seem to grow, but we are learning that the church is a "structure of Truth and Love" (Science and Health), and that Truth and Love do attract and hold.

In June, 1901, we organized as a society, and last September we called Judge Septimus J. Hanna to give us a lecture, to which we had the pleasure of listening, Sunday, November 30. He was introduced by one of our prominent citizens, Hon. D. E. Newcomb. We feel sure that this lecture has cleared away much prejudice and misunderstanding in regard to Christian Science. It was a veritable love feast to the earnest seekers for Truth and Light.

Judge Hanna was very much gratified with the close attention of his audience.

Our next ambition is to secure a lot and in time to build a small chapel.—FRANCENIA A. NORLAND.

### Advance in Alameda, Cal.

The Field will be glad to learn that after much patient waiting upon the part of the faithful workers here, divine Love has given a rich reward.

The way was not clear for the establishment of a reading room till about two months ago. Then a room in the same building with our hall was vacated, and after thoughtful deliberation the Board of Directors rented the apartment and made it comfortable with necessary furniture, while loving hearts gave many beautiful gifts of pictures and other furnishings.

The ties of love, gratitude, loyalty, unity, and harmony are bound more firmly about our little church, and we humbly thank the Father for this expression of His love, for it is from Him all blessings flow. He is the giver of every good and perfect gift.—SARA HIGBY, *Clerk*.

### Church Organization in Highland Park, Ill.

First Church of Christ, Scientist, of Highland Park, Ill., was organized November 12, 1902.

The growth of Christian Science in Highland Park and this recent step upward, evidences to us that the work is in accord with divine Law and divine Love. The interest here grew, as in numberless other places, from the tiny mustard seed of faith and love in a few steadfast hearts. This was made manifest in July, 1900, by a Christian Science Society with a membership of ten. There has never been one backward step. We acknowledge with rejoicing the Power as all divine, and are glad to do our share, in the one work which is destined to reveal the Truth that is to make all mankind free from sin, disease, and death. We join in loving and grateful greeting to her whom by universal consent we are privileged to call our Leader and Mother. It is through her loving labors that this truth taught by Jesus, is made a demonstrable truth to us.

MRS. SARAH W. SWEETLAND, *Clerk*.

## Opening of Reading Room in Caldercruix, Scotland.

ON Saturday afternoon, November 1, the local Christian Scientists formally opened their Reading Rooms in Gowenlea Place, Caldercruix. There were a number of Scientists from Edinburgh, Airdrie, Glasgow, and Denny, who came to take part, and augmented the number already in the district to about forty. The opening took the form of a short service, at the close of which Mr. C. W. J. Tennant, the First Reader of the Caldercruix Christian Science Society, gave a historical account of the work and its wonderful progress in the district since its beginning. It was in October, 1900, he said, that Christian Science was first brought to Caldercruix. Several people, on hearing something about it, at once became interested, and obtained the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Soon copies of the Christian Science Bible Lessons were procured, and from this sprang the desire to meet together and study the Bible Lessons. In October, 1901, the first meeting took place at 8.30 P.M., in the Co-operative Hall, Glengowan. It was soon apparent that this hour would not suit every one who wished to attend, and three weeks later the hall was obtained for Sundays at 3 P.M., by the kindness of the Plymouth Brethren, who had it engaged for the whole day. Shortly after this the Plymouth Brethren moved to another locality, and as the hall thus became vacant it was secured, and two Sunday services were then held at 11 A.M. and 6.30 P.M.

On April 7, 1901, the first testimony meeting took place, and on April 13 the Sunday School was opened. In October, 1902, two suitable rooms were taken, and nicely furnished as reading rooms, and it was with great gratitude to God that the congregation met together that day to enjoy the unfolding of the fruits of their realization that God is the only Mind and Source of supply. This had been made practicable to this age by the revelation of Christian Science which is the outcome of the pure and noble life of Mrs. Eddy, its Discoverer and Founder.

Miss Lilias Ramsay, First Reader of First Church of Christ, Scientist, Edinburgh, in addressing the meeting, said she knew that the work had been founded aright, because it had been founded in purity, that is to say, in the pure desire to glorify God and benefit mankind, and that it now rested to a great extent with the members of the Christian Science Society in Caldercruix at large, to see that the superstructure was worthy of the foundation, and that no pride, no selfishness, no ambition, no worldliness of any sort entered in to mar the beauty of this temple of the living God. She went on to consider what this opening of a Christian Science Reading Room really signified. To the outside world it would simply imply that another Christian sect, of the hundreds that had arisen since Christianity was first revealed, had gained some footing in Caldercruix. To them it meant that the glorious, the all-satisfying Christ-Knowledge of the allness and perfection of God and the consequent perfection of the real man in His image and likeness, which was first brought to earth two thousand years ago through the personality of a human baby born in a humble stable in the little town of Bethlehem in Judea—that that same satisfying Christ-knowledge had dawned on the consciousness of some of the men and women of Caldercruix.

The members of the Christian Science Society in Caldercruix had this day taken a more public stand than ever before, and it behoved them to see that they were doing all that was in their power each day to become more worthy of the name of Christian Scientist. Their duty was to follow humbly in the footsteps of the Master, striving daily to realize more and more the allness and omnipotence of good, and the consequent unreality and powerlessness of evil, thus rising "daily into higher and holier consciousness" (Science and Health, p. 419). She then pointed out that the field of battle in the Christian warfare was always the individual consciousness, and she called attention to three points which she considered essential; viz., honesty, fidelity, and self-abnegation. She concluded with a few words expressing love and gratitude to Mrs. Eddy, who through her purity of thought had been fitted to discern Christian Science, and by her self-abnegation had been enabled to give it to the world, and pointed out that the best way to show gratitude for all she had done was to live as closely as possible to the Truth which had been revealed to her.—*Exchange.*

## The Building Fund of the Mother Church.

THESE reports from the Field are made impersonal for obvious reasons.

Our Sunday School teacher has told us about the proposed enlargement of the Mother Church, and we wish to show our love by sending our mite (eight dollars) to the Building Fund.

We have had our Sunday School only about a year, and there are but five of us.

---

At our annual meeting held November 13, this church decided to send a contribution to the Building Fund of the Mother Church about the first of January, and also to send a second contribution about the first of June.

It was also voted by the members of our church at this meeting to give the building fund of our own church, which amounts at present to $103.52, to the Building Fund of the Mother Church, to be sent on with our first contribution in January.

---

At a meeting of the members of our church, held September 17, it was decided that this church contribute to the Building Fund of the Mother Church, the general collection to be taken on the Sunday following Thanksgiving Day.

---

As an expression of loving appreciation of the courageous response to the needs of the Mother Church, our Association at its meeting October 7, 1902, unanimously voted a subscription of five hundred dollars to the Building Fund of the Mother Church, to be remitted one half within six months and one half within twelve months from October 1, 1902.

---

If you let a single ray of light through the shutter, it will go on diffusing itself without limit till it enlightens the world; but the shadow that was never so wide at first, as rapidly contracts till it comes to naught. The shadow of the moon, when it passes nearest the sun, is lost in space ere it can reach our earth to eclipse it. Always the System shines with uninterrupted light; for as the sun is so much larger than any planet, no shadow can travel far into space. We may bask always in the light of the system, always may step back out of the shade. . . . There is no ill which may not be dissipated like the dark, if you let in a stronger light upon it. Overcome evil with good. Practise no such narrow economy as they whose bravery amounts to no more than a farthing candle, before which most objects cast a shadow wider than themselves.

THOREAU.

---

In the long run the most unpleasant truth is a safer companion than a pleasant falsehood.

PRESIDENT ROOSEVELT.

## Testimonies of Healing.

After two years of spiritual and helpful comfort received from reading our weekly and monthly publications, I am constrained, in this season of thankful acknowledgment for all our blessings, to contribute my mite to the overwhelming evidence of the might and power of the Christian Science thought.

I am glad that the remoteness in time of the incidents narrated in Bible history cannot prevent us from drawing spiritual lessons from the characters mentioned therein, and applying them in the life of the individual of to-day. It has been said by another, that "the conversion of Paul proved the power of Christianity to overcome the strongest prejudices, and to stamp its own type on a large nature by a revolution both instantaneous and permanent." The conversion of Paul typifies the revolution that still continues to work in man through the same power of a risen Saviour. Before his conversion he was filled with a seeming religious fervor, only of a type opposite to that which finally claimed him; and so it is with man to-day, when his material sense of wrong yields to the spiritual sense of right, when the loving and entreating voice of Jesus in his glorified humanity is recognized in the consciousness of man, as it was then, calling "Saul, Saul, why persecutest thou me?" (a call that is individualized by the substitution of our own name for that of Saul). When this voice is recognized and heeded, then will it bring man to his Damascus, and remove every doubt that it was the Christ who demonstrated for us all the Science of Being.

I thank God and the Founder of this revealed Science, that, about two years ago, in the reading of Science and Health, I saw the light which showed me the way out of bondage to the liquor and tobacco habits, with the attendant results of over forty years' standing. This, and very many other proofs since, together with the spiritual uplifting which has followed, making joyous my own life as well as the lives of others, convinces me as it did Paul—and as he so beautifully expressed it—that, "I live, yet not I, but Christ liveth in me."

ARCHIBALD WINNE, Chicago, Ill.

---

I wish to tell of my experience with quinsy sore throat. I cannot remember the winter, or even the summer, from the time I was a child of five until Christian Science came to me, that I did not suffer almost constantly with my throat. I suffered nearly three weeks with the last attack which I had, before I went to a practitioner for help. I was reading Science and Health and had been reading it for some time, and I was trying to do what I could for myself. I was away from home, and my father, hearing of my condition, sent for me at once. Upon reaching home he insisted upon my having some help. A healer was sent for, but the first two or three days there seemed to be no relief whatever. For nearly three weeks I had taken no solid food, and it was with difficulty that I swallowed liquid food. On the fifth morning my father came to my room and asked me if there was anything he could do for me. I remember well the reply I made. I asked him just to let me die in peace, as I could not endure the suffering any longer. But somehow after he left me I arose and dressed and went to the home of the practitioner. I never quite knew how I got there. As soon as I reached her home she made me comfortable in a big chair and began working for me. I remained with her for dinner at twelve o'clock, and at that time I ate a dinner of beef soup and cracker, and went home perfectly healed, not a particle of soreness left in my throat. From that day to this I have not had the slightest return of the old trouble.

ALICE PIERCE, Cleveland, O.

I feel it my duty to write a testimonial of the light and happiness that have been brought into our home through Christian Science by the healing of our daughter. Eleven years ago she was taken with a nervous trouble from which she suffered everything. Night after night my husband and I sat and held her in our arms that she might get her much-needed rest. We were living at Phelps, N. Y., at that time, and had physicians from there, also from Geneva, and we took her to Rochester and to Clifton Springs. She grew better, but had terrible spells with her breathing, and eating the slightest amount of food caused a sensation of smothering. We moved to Batavia seven years ago and she doctored more or less since that time, till she felt discouraged and said she didn't believe she ever would get well, but the raising of her sister from a deathbed led her to Christian Science, and by Christian Science she was healed. She also had very weak eyes, and said she wished the light were brighter, so she could see. The light has come, but it is God's light, and that is the light of the world.

MRS. HATTIE GOODMAN, Alexander, N. Y.

---

It is with hearts overflowing with gratitude for Christian Science that we send a report of a few of the many demonstrations of the power of Mind over matter which we have had in three years' growth of the movement on the Llano Estacado of Texas.

Not for our own glory, but for God's, and that all sufferers may take heart and look up, knowing that "The Lord is not slack concerning his promise, as some men count slackness; but is long-suffering to usward, not willing that any should perish, but that all should come to repentance."

A case of pneumonia was overcome with one day of Christian Science treatment. Several cases of slow fever were destroyed by one week's treatment, while parallel cases under *materia medica* lasted from three to six months. Hearing has been restored in three weeks' treatment. Many acute troubles have been wholly destroyed in one treatment.

In a case of shooting, the ball passed through a boy's thigh and the wound never even suppurated. It was healed in twenty-four hours and the lad went on to school with no inconvenience. Another was that of a little girl of ten years who came down with spinal meningitis. After being drawn out of proper shape she was healed in one week by Christian Science and the form is perfect.

One case of small-pox, where the doctors had refused to go and the man had made his will, was healed in less than a week, and another case of the same disease never manifested itself on the surface of the skin.

For all these and other triumphs we owe to Mrs. Eddy, our dear Leader, endless thanks, for it is by her teaching that all this has been made possible to us.

We can show gratitude only by living and practising the wonderful Truth as set forth in "Science and Health with Key to the Scriptures."—V. E. H., Canyon City, Tex.

---

About a year ago I was asked to treat a lady who had been in very feeble health and had suffered intensely for many years. I had not treated her a week when she walked in to see me from her home—about three miles out—and walked back the same afternoon. She had not walked so far in twenty years. She was diseased from childhood, and said she had been under the care of doctors for fifty years. Her father was a physician, and twenty others of the medical profession had treated her, and they all said she could never be well.

For long periods she would be unconscious and confined to her bed. She would have violent spasms, and showed me where her tongue had been terribly bitten during the suffering, and her arms scarred from the use of morphine injections. She had undergone four surgical operations without

Digitized by Google

the slightest benefit, and several times was given up to die. She had suffered from pleurisy and violent attacks of sick headache all her life.

Just before applying for treatment a lady gave her some Christian Science literature to read. She was convinced at once that it was the truth, and began attending the church. She asked me to treat her, and before the week was out she was free.

She has been in good health now for a year, and leads a very active and useful life. Her weight before treatment had never been more than one hundred and two pounds while it is now one hundred and twenty-five. She joined our church last December and is a loyal and devout member, always full of gratitude to God, and to our Leader for the discovery of Christian Science.

BELLE BLACK, San Antonio, Tex.

---

I was suffering day and night with sciatica when my dear mother wrote me to try Christian Science. For one month I was under absent treatment and was helped so much that I slept the first night and soon was free from that distressing trouble. I am now fifty-one; I do the work for a family of six. It is five years since I began to study Christian Science. I have never been sorry, although it has been a struggle. There is no Scientist near here. My family are not in sympathy with me, except my two little ones, twelve and ten years old. They have had measles, but they were very light cases, owing to Christian Science treatment. The little boy had a broken arm, and had no help from a doctor except to set the bone. I am very thankful to know of this ever-present help. I find many rough places, but the truth helps me over them, and I know that each trial makes me stronger. I am beginning to realize that God expresses all the love and sympathy there is. We have had many good demonstrations. I am most thankful to our Leader, Mrs. Eddy.

MRS. FRANK WALBRIDGE, McIntire, Ia.

---

To introduce myself I would say, that we as Christian Scientists stand alone in this part of our state, Michigan. We are as a lone tree in the midst of a vast plain. The name Christian Science seldom reaches our ears, except as we occasionally read an unfavorable comment in a newspaper. But our all-sufficient light comes through the pages of Science and Health, which appear to be more and more illumined. Our circumstances and conditions in this material life are peculiar. Nearly sixteen years ago I was (as it appears to me, providentially) led to Christian Science. At that time, I was completely broken down by disease and poverty Through a Christian Scientist this welcome light and deliverance came. Through her treatments and highly spiritual instructions, I was saved from the grave. My beliefs of sin and disease were legion, and it became evident that they must be destroyed through suffering as well as through Science. The belief of sin of almost life-long standing grew mighty in strength and governed the so-called man, but the strong man is being bound. Catarrh and salt rheum from birth, which have afflicted me, are being overcome, while other complaints of shorter duration, but which were the cause of great suffering, have entirely disappeared.

Jesus' speaking of an afflicted one's being bound of Satan for these eighteen years seems remarkable, but the truth of Jesus' words: Greater works than these shall he do" is manifest in these latter days, when we can truthfully say with reference to ourselves we have been liberated, though bound of Satan, lo, these fifty years.

We have had many remarkable demonstrations of the Truth in our own family, as well as with others.

FRANKLIN HENDRICKS, Brethren, Mich.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price. 50 cents; per dozen, 4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. Hobart Clark says in *The Christian Register*:—

"Men felt then the truth of what Jesus said in the Sermon on the Mount. They caught a glimpse of his meaning; yet, failing to understand it exactly, the Christian Churches, while talking about the riches of the kingdom of heaven and insisting upon their value, have for centuries done this in such a way as to make them seem far away and quite unreal, if not purely imaginary. The Churches have talked about these riches as if they had no place in the world we live in now and no part in man's present life. The Church has too often said, not 'All things are yours,' but 'All things shall be yours in some far-away heaven of the future, provided you fulfil the necessary conditions, and claim little or nothing here or now.' That lesson was not what Jesus meant. He was trying to bring the life of those poor people to a higher level by showing them their real riches, by helping them to see how much they had while apparently having nothing. He spoke in the present, not in the future tense. He did not say, 'Blessed shall be the poor because they shall have the kingdom of heaven.' He was not making a promise: he was pointing to a fact. He said, 'Blessed are the poor;' and then he added 'in spirit,' to make his meaning plainer, because 'theirs is the kingdom of heaven' here and now. He who had nowhere to lay his head was a rich man: the kingdom of heaven was his, he knew it, and was speaking to them out of his own knowledge and experience. He wanted them to share that experience with all its unconsidered wealth, which was theirs already if they could but accept it and enjoy it, their material poverty being no sufficient reason why they should not do so.

"I sometimes doubt if Jesus was the original author of that story about Dives and Lazarus. If he was, the story itself must have been misunderstood and misinterpreted. No one ever saw more clearly than he did that the man whose soul is alive within him does not have to die and go to some far-away heaven, in order to obtain his inheritance: he is in possession of it here and now, if he sees and cares to claim his birthright. The nominal owners of this world are not its real possessors."

The Rev. Dr. Rubenstein is thus reported in the *Baltimore Herald*:—

"One need not be a very deep philosopher to see that traditionalism must yield to a fresher form of faith. One need not be the son of a prophet to pronounce the doom of theological dogmatism. It is all quite evident. Those fine structures in theology, built up so painstakingly through centuries of ratiocination, buttressed and supported by such fine-spun logic and abstruse philosophy, the modern spirit will have none of them. Wherever the mind has been enlightened by modern knowledge speculative theology goes a-begging. You may invoke all the terrors of a bygone age and you cannot make the thinking man of to-day have the same views of God, the Bible, and man as were possessed by his ancestors twenty generations ago.

"I am quite aware that some will regard these utterances of mine as heresy. But I speak nothing but the truth. Day by day the victorious march of reason continues. It has stormed fort after fort, some even proclaimed as impregnable, leaving its own defenders there. Nothing so far has been able to withstand its approach. In a conflict lasting four hundred years Church and State had both to yield in the end. It is now attacking the superstitions and prejudices of the individual, after laying down its laws for society. Where men are thinking 'in troops,' as it were, following blindly their leaders, they will soon be thinking each for himself.

"Liberal thought in religion, as is evident, is necessitated by the demands of a progressive civilization.

Dean Leonard, speaking before the Universalist Club on the occasion of his eighteth birthday says:—

"Eighty years ago men lived, so far as their own recognition went, under the government of a God whose ways were mechanical and arbitrary, unmoral, and, as we now see, immoral. To-day ethical ideas and methods move in all our thought of God, and His dealing with men. We see, or, at any rate are beginning to see, that all divine administration is morally automatic, from which, however, no intelligence is dismissed, and no force of law or love ever absent. Eighty years ago the antithesis was the world here and the world there; and everybody talked about saving souls off this planet into some other place.

"To-day we know that salvation only which is inseparable from character We do not talk of here and there, but we talk of a life with God and of a life without God. The true antithesis is a man right and good, or a man not right and good—a life setting the right way, or a life going the wrong way, and all determined by what the man is and not where he is."

When, therefore, good men tell us that we are not to rely upon our own strength, but to trust in God, they do not mean that we are not to do our very best, but they mean that we are so to keep our minds in relation with divine facts that they may make their normal impression on our souls.

Always we shall find the sharp contrast between what we can see and judge by the senses, and the promises of God and the claims of His allegiance, and we shall be brave and true in God's service just in proportion as we discern and respond to the invisible and spiritual fact. In such enumerations of faith as we find in the eleventh chapter of Hebrews perhaps we feel like saying of so many of those instances that they illustrate courage rather than faith. But when we say that, we forget that courage is a manifestation of faith in action. The man is courageous because he sees the spiritual fact and responds to it.

*The Watchman.*

Believing on Christ, learning of Christ, following Christ,—that is what it is to be a Christian. You must believe on him that you may learn of him. You must learn of him that you may follow him. But believing is nothing, and learning is less than nothing, if they do not result in faithful following. There are two paths in which the Christian follows Christ in this world,—paths which are always parallel, and which often merge into one,—the path of integrity and the path of benevolence. In doing right and in doing good the Christian is a follower of Christ.

WASHINGTON GLADDEN.

We are so to incorporate the spirit of Christ that we are to live his life, forgiving men their trespasses. This does not mean merely letting things go. That may be laziness. Forgiveness is something more: it is the heroism of self-conquest, it is the triumph of the spiritual, it is man mastering himself. This is the victory that overcometh the world, even the faith that forgives and is strong: for any faith must be strong that has in it the element of forgiveness.

REV. HUGH C. WALLACE.
In "The Consecrated Life."

Rev. Carl F. Henry says in *The Universalist Leader:* "The righteousness, the purity, the tenderness, the surpassing loveliness of the character of Jesus is explained by the fact that his God, in whom these virtues resided in their fulness, was constantly in his thought. It is our thoughts that make us. If we are to be upright and honest and just and pure and loving, we must think on these things. Thought is the food of the mind."

The observance of dead forms—that is, forms that have no spiritual meaning—is not only no help in spiritual living, but a positive injury. These lifeless forms lead the man who observes them to believe that he has done something meritorious, whereas he has simply deceived his own soul, and made a mocker of religion. God is Spirit, and they that worship Him must worship, not in dead forms, but in spirit and in truth.

*The Examiner.*

Intellectual doubt goes deeper down than the intellect, nor will intellectual clearness cast it out. Unless the heart be settled in Christ, the intellect may go on doubting forever. Unless the spiritual atmosphere be clear, it matters little what is the character of the intellectual. It is that spiritual kingdom that gives laws to all the rest; they depend upon it, not it upon them.

WILLIAM F. STEVENSON.

*The Christian Register* says: "The changes that are going on in theological seminaries and churches are for the good of the people. The Church is like a great frigate on which the barnacles cluster until headway is lost. The periodical cleaning up is essential to good service."

Give thanks for something and you will find something to give thanks for. No life is so poor as not to be comparatively rich. Envy is the mother of poverty, charity the parent of wealth, and contentment the open way to heaven.—*The Universalist Leader.*

We can best prove our thankfulness to the Almighty by the way in which on this earth and at this time each of us does his duty to his fellow-men.—THEODORE ROOSEVELT.
