# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised. 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid. . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883.**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The Powers have agreed to submit the Venezuelan dispute to The Hague Tribunal for arbitration. President Roosevelt, who stood ready to act as arbitrator if no other way of adjusting the difficulty could be found, is much gratified at the attitude of the Powers. Secretary Hay has already taken the diplomatic steps necessary for securing the raising of the blockade and the resumption of diplomatic relations between Venezuela and the Powers. As the representatives of Germany, England, and Italy are not at Caracas, Secretary Hay has suggested to the Powers that their ambassadors at Washington be authorized to draw up the preliminary protocol with a representative from Venezuela. Mr. Bowen, present minister to Venezuela, may be sent as the representative.

Strong opposition has developed against the Hay-Bond reciprocity treaty between Newfoundland and the United States, which is now in the hands of the Senate Committee on Foreign Relations, and it may fail of ratification.

Mayor Low has appointed General Greene police commissioner of New York City to succeed Colonel Partridge, who has just resigned.

**Foreign.**

The building of a railroad across Siberia is already having a marked effect. Since the road got well started the results have been analyzed by a paper called the *Review of Economical Development of Russia*. A great rush of immigrants into Siberia followed; among them many farmers, who taught the Siberians how to farm. The road has ruined most of the fairs, but increased the importance of the towns where they were held, as permanent business centers. New methods of farming have got under way. Immense quantities of butter are being made. The mining industries are being developed. The railroad has created a coal industry. Furnaces of the locomotives are fed to-day with Siberian coal. The rudimentary workshops of old times are shutting up: they cannot compete with European manufacturers. Methods of mining have been changed. The old steamboats on the rivers will not do; new ones are being made. In 1900 the expenses of the railroad exceeded the receipts by about three million rubles, but the government does not call this a loss, because the receipts from government roads in Russia have been increased several million rubles in carrying freight from and to the trans-Siberian road.

The conditions made by the British government in reference to the two new vessels of the Cunard Company, for whose construction the government advances the money are in the hands of the company. These conditions are unusually severe, especially the one requiring that the vessels shall maintain a twenty-five knot speed not only in the preliminary tests but throughout the voyages during the year. The vessels will cost about five million dollars each. The company will receive a conditional subsidy of $750,000 yearly. It is considered doubtful if any builders with reputations will undertake the risk of building vessels of the speed called for in the stipulations.

It is reported that the London County Council, which serves London as mayor and aldermen combined and which has complete control of the metropolitan municipal affairs under the advice and consent of Parliament, will send early in the year a deputation to America to investigate the building arrangements in the larger cities, with the view of introducing them in London if found practical.

January 1, 1903, King George will receive the newly appointed Persian ambassador after a disruption of diplomatic relations between Greece and Persia for 2,393 years. The last Persian king who sent an ambassador to Athens was Darius, who in 491 B. C. asked the Greeks for a tribute of earth and water as a mark of submission.

The Japanese government has introduced a bill to establish a Chinese and Japanese bank for the purpose of financing Japanese enterprises in China. The capital of the bank is to be 30,000,000 yen (nine million dollars).

**Industrial and Commercial.**

A careful preliminary estimate made by individual canvass of the railroads, and supplemented by figures from various authentic sources, shows that approximately 6,026 miles of new steam railroad were built in the United States during the year 1902. New tracks were laid in forty-two States and Territories. Oklahoma leads with 570 miles of new trackage; Texas follows with 496; Arkansas, 391; Indian Territory, 363; Georgia, 336. No new steam mileage was reported from Alaska, Delaware, Idaho, Maryland, New Hampshire, New Jersey, Rhode Island, or Wyoming. The number of new cars built outside of railroad car shops is approximately 164,547 and of new locomotives 4,070.

The National Society of Equity is being incorporated in Indiana. Concerning its object, its president says: "We expect to organize the millions engaged in agriculture. A complete system of crop reporting will be maintained through an official organ. Knowing the amount of crops produced and the consumption from past experiences, an equitable minimum price will be fixed by the directors of the national body and reported at once to all parts of the country. Once fixed the price will rule on that crop for the year."

The Lackawanna Steel Company of Buffalo, the largest independent steel manufacturing concern in the world, has received its first consignment of ore from upper lake points. The arrival of the steamer Moses Taylor with a cargo of 6,200 tons of ore at the company's unloading dock, marking the opening of the plant, was made the occasion of a noisy celebration along the water front. The company will employ fifteen thousand men. The plant covers an area of about two square miles.

The great iron and steel plant which is being erected at Monterey, Mexico, will be ready for operation early in January. The plant will cost about ten million dollars. It is claimed that it will be operated as an independent concern, with the view of supplying the markets, not only of Mexico but of Central and South America. It will produce rails, machinery, and iron and steel products.

The New York, New Haven and Hartford Railroad has placed with the Standard Steel Car Company of Pittsburg an order for two thousand steel framed box cars and the Lackawanna Railroad for five hundred hopper bottom steel coal cars. These, with other orders on hand, will keep the company busy until next fall.

The pig iron production of the United States for the year 1902 is estimated at 17,500,000 tons, which is greater than the total product of Germany and the United Kingdom. The steel production is estimated at 15,000,000 tons, an amount twenty times that produced in 1878.

The New York and New Jersey trolley tunnel under the North River has been excavated to a point about fourteen hundred feet from the New York end. The tunnel for six hundred feet or more of the remaining distance will have to be cut through a hard mica granite ledge.

The beet-sugar Senators and Representatives of Michigan and Minnesota have withdrawn their opposition to the twenty per cent tariff reduction for Cuba, because the beet-sugar growers of those States find they can adjust their business to the reduction.

**General.**

Yale has just received a remarkably large collection of Egyptian antiquities. It comes as the annual donation from the Egypt exploration fund and represents Connecticut's share in that fund for the current year. The present consignment, which is from Abydos and Fayum, is of unusual value. The prehistoric period is represented by a hundred flint instruments. These are spindle whorls belonging to the First Dynasty and Ushabti figures, beads, bronzes, and a double granite statue of Unnefer and his sister, ranging in point of historic sequence from the Eighteenth to the Thirteenth Dynasty. A fine cartonnage mask, ivory beads, wooden comb, pottery vases, lamp, glass vases, bronze bangles, etc., all date from the Græco-Roman period. The collection will be added to the accession of the last three years, which was installed on the fourth floor of the Peabody Museum last spring by George Grant McCurdy, curator of the Anthropological collection.

In February the Boston Handel and Haydn Society is to render Th. Du Bois' oratorio "Paradise Lost," which won the prize offered by the City of Paris in 1878. It has been performed many times in Paris, but never in this country. The work has been translated into English for the express use of the Society.

The Honolulu Chamber of Commerce, Merchants' Association, Builders and Traders' Exchange, and other bodies are preparing to celebrate the arrival of the cable steamer Silverton, which is laying the new cable between San Francisco and Honolulu. The steamer left San Francisco Sunday, December 21.

It is stated that the electrical engineers representing the New South Wales Railway will place with the Westinghouse Electric Company an order for electrical equipment aggregating over two million dollars.

Missouri's corn yield this season is estimated at three hundred and fifteen million bushels; Iowa's, three hundred million bushels; Kansas and Nebraska follow.

North America has twenty volcanoes, Central America twenty-five, and South America thirty-seven.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Misunderstandings Corrected.

Editor *Daily Herald.*

*Dear Sir:*—I have before me two editorials from your valued paper, discussing the subject of Christian Science.

As this subject is handled from a basis of misunderstanding and misconception of the nature, methods, and motives of the Christian Science denomination, I will ask of you a little space in which to set forth briefly the Christian Science teachings on the questions which your articles handle.

In the first editorial, under the caption of "Christian Science *versus* Common Sense," you state "Religious freedom is admirable; in fact, it is the best form of all liberty."

You may not know that Christian Science is a religious denomination, adhered to by a very great number of honest and sincere people in this country. These people are average citizens in point of intelligence, education, and ability. The fact that they believe in this religion and its beneficent influence upon their lives is an indication of the other fact that they found something in it different from that which they formerly accepted, and which they believe contains true merit. I will state that in your argument with reference to what you believe Christian Science to be, you have not touched the Christian Science thought in any one point. The basis of the arraignment is conjectural and hypothetical, and upon this basis you have erected a fabric of belief which is so entirely foreign to what Christian Scientists accept that the utterances directed against this conception do not touch them.

You state, "In the first place, there is no such thing as Christian Science. There never could be. The words are incompatible; they are antithetical. One means a system of religion; the other, an orderly arrangement of knowledge."

Let us consider these statements. Christian Science is, as its name indicates, the Science of Christianity.

Christianity is the acceptance and living of the teachings of Jesus Christ. Science, as you state, is an orderly arrangement of knowledge. Therefore, Christian Science is an orderly arrangement of knowledge about God, about man, and about Jesus Christ and his teachings. It is Scientific because it is demonstrable. It is true Science, because it deals with the true things of life; God, man, and the universe are the truest things of which the human mind can conceive, therefore, an orderly arrangement of knowledge about these things is in the highest degree scientific.

You state, "The practice of healing under Christian Science is not science, as science deals in facts. The healer starts on something that does not exist, and ends in a vacuum. They labor with figments of the imagination."

Let us consider these points. The basic thought of Christian Science healing is contained in the Scriptural declaration: "These signs shall follow them that believe; In my name shall they cast out devils; . . . they shall lay hands on the sick, and they shall recover." This and many other Scriptural promises are to the Christian Scientist very real and very practical. Christian Science is a practical demonstration of the Scripture, from Genesis to Revelation. The "healers," as you term them, start with conditions as they find them. They do not tell the patient that the disease is purely in his imagination, as the article would indicate; but they realize the fact that to the sick man, whatever the nature of his case may be,—the sickness is very real, and the healer does not state to him, "You imagine you are sick;" such a declaration would not cure one case in a thousand years. The Christian Scientist must have before him the perfect model, man created in God's image and likeness, perfectly pure and spiritual. With this in thought, their every effort is directed towards bringing out this perfect model wherever and whenever they see that which claims to be an imperfection. It must be conceded that at some time, and somewhere, evil, sin, disease, and death will be abolished, and the Christian Scientist's effort is to prove the words of Jesus: "The kingdom of God is within you." It is manifestly impossible to conceive of the kingdom of heaven as being within a body racked by disease, suffering, and pain; consequently these things must be destroyed, and destroyed on the basis established by Jesus Christ and carried on by his disciples.

To consider man from a basis of materialism entirely, leaves him having no hope and without God in the world, and, as your article indicates, makes him simply a complicated piece of machinery, which is liable to become disjointed at any moment.

On the other hand, to consider him as he really is, in his spiritual ultimate, when the mists of materiality have been dissolved, we find therein the perfect man, and it is this perfect man to whom the Christian Scientists refer, when they state "that man is the image and likeness of God, therefore perfect and spiritual."

To consider man from a material standpoint necessitates a recognition of everything which materiality includes, and no Christian Scientist will advocate exposure to contagion, unwise methods of eating and drinking, or any other of the numerous things you mention, which you state of Christian Scientists that they might claim to do with impunity. Man, considered from this basis, is subject to all that it implies, and is, indeed, in a hopeless predicament. While Christian Scientists have before them the highest ideals of right living, of right thought and action, they do not yet claim to have attained these ideals, but, like the Prodigal Son, they are somewhere on the way home.

As a matter of fact, Christian Scientists do observe quarantine laws, they do consider the rights of their fellowmen. They do recognize the necessity of the segregation of lepers or sending small-pox patients to the hospital, therefore all your statements with reference to all these things fall harmless.

You ask the question: "If the body is impervious to disease, why wear heavy clothing in winter more than in summer, why not eat acids and poisons and get fat?"

Christian Scientists do not claim that the body is impervious to disease; they simply claim that the real man, made in God's image and likeness, is impervious to disease, but they do not claim to have attained to that "real man." Jesus said, "Thou shalt not tempt the Lord thy God," and that command is just as binding to-day as it ever was.

Now then, as to the cases which you speak of from the

Copyright, 1902, by Mary Baker G. Eddy.

Digitized by Google

Bible. You state "The Bible speaks of Asa's being diseased in the feet; of Peter's wife's mother lying sick of a fever; of maniacs who were possessed of devils; of the lame, the halt, and the blind; of the woman with the issue of blood; of illnesses of all kinds, and of plagues known to the times."

Allow me to quote a little Scripture in this connection: "And Asa . . . was diseased in his feet, . . . yet in his disease he sought not the Lord, but to the physicians, and Asa slept with his fathers, and died." I would ask you, What does this indicate? That it is wrong to turn to God for help? I do not think you can reconcile the statement with such a thought.

Peter's wife's mother lying sick of a fever was healed by Jesus' understanding of the real man. The Bible does not state that Jesus, at any time, administered any material means, but through his understanding of the truth about God and man and the universe, through his demonstration of "the orderly arrangement of knowledge,"—the Science of Christianity,—he healed these diseases. The lame, the halt and blind, the lepers, the woman with the issue of blood, and all the others were healed on the same basis, and he said to his followers for all time, "Greater works than these shall he [any who believe on me] do; because I go unto my Father."

Christian Science is not a system of medicine, but it is pure Christianity, fulfilling every essential teaching and requirement of the Scriptures. Its ultimate object is the salvation of humanity, not only from sin, but from disease and death. This object may not be attained soon; but, nevertheless, notwithstanding the opposition of prejudice and the misunderstanding of their methods, Christian Scientists will go on courageously, knowing that the purity of their methods is a sufficient justification.

JOHN L. RENDALL.

In *Newton* (Ia.) *Herald.*

## The Higher Ministry of Christian Science.

THE generous commendation bestowed on Christian Science by "Reasoner," in a late issue of the *Examiner,* and the willingness on his part to recognize the vast amount of good which has resulted from the practice of this teaching, speaks well for his fairness. His deductions, however, based on several of Jesus' sayings, and also made from the writings of Paul and Luke, should not be allowed to stand unquestioned. In comparing the needs of the present day with the needs of humanity in Jesus' time, we find that practically the same conditions exist now as then, and we are, therefore, justified in taking the words and works of our Master literally as our guide in dealing with these conditions. In doing this we should be careful to discriminate between the acts and words of Jesus and the significance which has since been bestowed upon them by traditional teaching. Jesus plainly said to all who desired to follow him: "Heal the sick." He was, if anything, more insistent upon this than upon its correlated command: "Preach the gospel;" mainly because, as he repeatedly said, "By their fruits ye shall know them." By example, also, he dwelt more upon works than words. The four gospels abound with the recital of his many good works, whereas but one sermon is recorded.

It is true that Jesus said, "They that be whole need not a physician, but they that are sick," and yet is not Jesus himself known as the great physician? Does the term "physician" necessarily imply the use of drugs? Luke was referred to as the "beloved physician," and yet there is no record of his having used any material remedies in his ministrations to the sick after accepting the teaching of the Nazarene Prophet. The effort to prove *materia medica* to be a part of the teaching and practice of Prophets and Apostles must ever prove abortive, for the reason that the spiritual and material are antipodes and can never coalesce. It does not follow, however, that those whose understanding of Spirit, or God, enables them to obtain relief for themselves and others through prayer alone should denounce the use of the material by those who possess no such understanding. As our critic points out, Jesus never withheld material remedies from those who looked to them for relief, and neither do Christian Scientists. That there is a better way than the material for alleviating the ills of our race, no true Christian can doubt. There is a law of love, however, which requires each of us to afford our neighbor the full benefit of whatever plan he chooses in his effort to rid himself of suffering, and we should never thrust our views upon him. It is for this reason that Christian Scientists are careful not to impose their belief on others.

In healing without drugs, Christian Scientists have the highest Biblical authority. Even "Reasoner," is forced to admit that Jesus once sent out seventy who, returning, said unto him with joy, "Lord, even the devils are subject unto us through thy name." Is it to be supposed that these disciples ever preferred or recommended medical treatment after that? As late as 325 A.D. we find Christians confirming their ministry by "signs following."

Surely "Reasoner" does not wish to be taken seriously when he claims that Jesus gave us the parable of the good Samaritan, merely to point out the necessity of pouring oil and wine into wounds.

My critic asks why I do not raise the dead. The Apostle Paul once asked, "Why should it be thought a thing incredible with you, that God should raise the dead?" He also said that "The last enemy that shall be destroyed is death." It may be that "Reasoner" sees very little difference between restoring a broken bone and raising the dead, but it is evident that Paul recognized a difference. In the Science of Christianity one can no more solve the difficult problems before demonstrating the simpler rules, than can a student in mathematics or music.

Christian Scientists have found plenty to do in healing sickness and destroying sin, and the success which has attended their efforts in these departments of their work gives them ample justification for pressing on "toward the mark for the prize of the high calling."

In considering the admonition of Paul "to use a little wine for thy stomach's sake," we must take into consideration the customs of the times wherein wine was looked upon as a necessary beverage. Paul was not ignorant of spiritual things, but he did not claim to have apprehended all, and even modern doctors will not agree upon the wisdom of this advice.

Christian Science is a religion of works rather than words. The charge that it is efficacious only in cases of imaginary illness, is too trivial to invite serious consideration. In thousands upon thousands of cases, patients declared to be without hope by physicians have been restored to health through Christian Science. A large percentage of the membership of the Christian Science Church is composed of such people, and it is useless to offer any explanation for its growth and popularity which does not include this important fact. "Reasoner" or any one else can be supplied with abundant proof of this if desired.

Nowhere in Christian Science is the claim set forth that a famishing man can be set right without supplying him with food. Christian Scientists believe that harmony is essentially a law of God, whether manifested spiritually or physically. No attempt is made to overturn that which is normal in our daily lives. The demand which comes from suffering humanity for relief from its discordant conditions is the cry which Christian Scientists heed. As Mrs. Eddy says in "Science and Health with Key to the Scriptures" (the text-book of Christian Science) page 442: "Christ, Truth, gives mortals temporary food and clothing

Digitized by Google

until the material, transformed with the ideal, disappears; and man is clothed and fed spiritually."

Christian Scientists have no quarrel with physicians. It has within its ranks many noble men and women who were formerly practitioners of *materia medica*, and no consistent student of Christian Science can fail to recognize the good which is being done by the many eminent men and women in the medical profession. In teaching mankind how to obtain better health and greater happiness by looking directly to Him who healeth all our diseases, it honors the first commandment: "Thou shalt have no other gods before me," and thereby restores an important part of primitive Christianity.

ALBERT E. MILLER.

## Wrong Condemned.

IN attempting to discredit Christian Science, your correspondent groups it with theosophy and the religions of the Orient, and while it is not the intent of this article to depreciate the highest sense of good entertained by any individual, yet the classification of Christian Science with these religions is manifestly unjust, as even their own adherents regard them more as philosophies than religions. Christian Science, through the sick it has raised up from beds of pain, through vicious habits corrected, and the desire for strong drink, tobacco, and opiates destroyed, is proving itself a religion possessed of the vital elements which gave the early Christian church the life that outlived the Cæsars.

The passage quoted from a letter received from a lady at the head of the Order of the White Rose, in which she refers to art, religion, and spirituality as the "stupendous illusions of time," is set up as a false model of Christian Science, which would therefore have to shoulder this sweeping obliteration. Mr. Mackay exclaims: "What can we think of a mind that can assert that art, religion, and spirituality are 'stupendous illusions of time'! And yet her advance has been logical enough. If sin and sickness and death are 'illusions,' it is only one step further to assert that religion and spirituality, etc., and all other things are illusions."

In the first place neither the Order of the White Rose nor any other order are emanations of Christian Science. If this lady was ever identified with Christian Science, as has been suggested, she certainly had rejected it in its entirety before voicing this sentiment.

Mr. Mackay deduces that her advance from Christian Science to this position was logical on the ground that if sin, sickness, and death are illusions, it is but a step further to the assertion that religion, spirituality, etc., are illusions, in the light of the Gospel and the teaching of the Master. This deduction is not well drawn.

That sin, sickness, and death are stubborn conditions which have confronted poor humanity for the aeons is indisputable; but that they are to be overcome and erased from the experience of man through the accession of spirituality must be true, if Holy Writ is true, else the gospels have their foundation in sand.

The first chapter of Genesis holds God responsible for all that was made, not for nearly all, but for all that was made, and in that graphic account is no word or hint of moan, or blight, or tear.

When Jesus began to declare man's inalienable right to life, health, and liberty, the Pharisees pointed to the sick, the halt, and the blind that from time immemorial had begged by their highways, but the meek, mighty Nazarene shattered their arguments by healing the multitudes. In rebuking the Pharisees for their unwillingness to see the sick restored, Jesus referred to the woman he healed as one whom Satan had bound, plainly indicating that her infirmity was neither right nor real. If God caused Lazarus to die, why did Jesus reverse this decree by calling him from out the tomb?

So Mrs. Eddy says, on page 476 of Science and Health, "Jesus beheld in Science the perfect man, who appeared to him, where sinning mortal man appears in sense. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick."

Mr. Mackay's admonition that in contemplating Christian Science one must decide whether he shall follow Mrs. Eddy or Christ, will be found unfair and unwarranted by any one taking the trouble to read Science and Health, the text-book of Christian Science. No teacher since apostolic days has been as insistent in pointing to Christ as the model of daily life as Mrs. Eddy. In her last message to the Mother Church in Boston she says: "I again repeat, follow your Leader, only so far as she follows Christ."

The Scientist does not teach that sickness is simply fancy or imagination, for he knows it is solid conviction to those accepting it as a fact, but he does hold that God is Life, Truth, and Love, and that man is His reflection, hence, in reality he can neither be sick nor sinful, and he proves his contention, though perhaps feebly at the present hour, by the sick that are healed and the sinful that are reclaimed, ascribing all honor to God.

The long list of charms, cures, and cults with which Mr. Mackay has attempted to parallel the healing of Christian Science, are separated from the latter by a gulf as wide as that which lay between Dives and Lazarus.

Christian Science masters disease through the understanding that God is the Principle of health and harmony, and, as such, abolishes everything unlike Himself, while the cures Mr. Mackay pins his faith to, are wrought either through the blind faith that cured Sir Humphry Davy's patient, by the introduction of a clinical thermometer into his mouth, or much worse, through hypnotic suggestion, a belief in the control of one mind over another.

EDGAR M'LEOD.

## Against Paternalism.

MUCH as an improved standard of medical education is to be desired, anything in the way of restrictive legislation to this end savors both of protecting people against their own voluntary acts and of fostering monopoly. Upon either count it is to be looked upon with suspicion.

There would seem to be no objection to the state treating physicians as it treats banks, if public welfare requires it. The state requires banks to give all proper publicity to their condition, capitalization, assets, liabilities, and responsible officers. It forces a bank out of business only when its further continuance would constitute deceit and a fraud upon the public.

It would be difficult to devise an argument for state restrictions upon physicians who care for men's bodies, that might not be urged with equal force in favor of state restrictions upon preachers and priests who care for men's souls. The historical argument is as strong for the one as for the other; or rather it is as strong against the one as against the other. The state physicians of the Pharaohs were as much instruments of oppression and despotism as were the priests.

## Power for the World's Work.

THE primary sources of energy for doing the world's work are gravity and heat. All the forms of energy we are familiar with are resolvable into these. Even what we call water power is derived from the evaporation on the surfaces of the oceans due to heat, and only ocean tides are independent sources, and even these are dependent upon heat; for if the oceans were frozen there would be no tides. The working power of the tides as they now are is vast enough, taken as a whole, but on a limited area of a few acres such as can be controlled by man is much less than popularly supposed, and has always disappointed enthusiastic inventors who went so far as actually to test it without taking the trouble to compute it. One may be sure that the tides will never do much of the world's work.

The idea that electricity can be used as a substitute for heat or water power is seen to be illusory when it is remembered that steam or water power are antecedents of electric power, which in the absence of the antecedents does not exist. We therefore are compelled to consider heat as the source of energy for all the work of the world.

During the past hundred years the steam engine has been so perfected as to have increased enormously the amount of work done in the world. But the steam engine depends upon coal for its efficiency, and the supply is limited. To maintain her supremacy among nations England has drawn heavily upon her coal banks. At the present rate of consumption her supply may last a hundred years. Some of her enlightened men have been warning her of the danger, and she has been advised of the necessity for economy and especially of the advisability of appointing a committee of competent scientific men to devise methods of increasing the efficiency of steam engines; for it is a fact that the average steam engine utilizes only about five per cent of the energy that is in coal.

Suppose this were done and the engine efficiency were increased in a high degree, this would only postpone the time of the exhaustion of coal.

But is there an adequate supply of energy which could be drawn upon for the purposes of life if coal were exhausted? We have immense storages of petroleum and gas in Pennsylvania, Ohio, Texas; likewise in southern Russia. Trinidad has immense quantities of pitch. All these are limited in amount; but the sunshine is inexhaustible. The aggregate amount of the energy which comes to us from the sun is certainly sufficient for all the work of the world and all the inhabitants it will hold.

The diameter of the sun is 860,000 miles, and its radiation of heat is as great as 10,000 horse power for every square foot of its surface. Of course the most of this is lost in space, but we receive about one fourth of one horse power on each square foot of the earth's surface, so that there is enough energy received on two square feet exposed to the sun to maintain all the needs of the body. Under ordinary conditions this energy is not available for life directly. There is needed an invention that will do for heat what mechanism will do for electricity, do for temperature what can be done for voltage. We can get no more power by making a galvanic cell twice as large, but by coupling two cells together in a certain way we can get twice as much work as we can get with one. In like manner, if a quart of water at one hundred degrees temperature be added to another similar quantity and temperature, we have two quarts of water with same temperature. The working power of heat lies in its temperature, and it is increase of temperature above surrounding things that gives the pressure used for power. If an invention could be made that would add temperature as we can add electro-motive forces, we then might get from sunlight all the energy we could possibly use.

Excerpts from an article in the *Congregationalist and Christian World*, by Prof. A. E. Dolbear.

## The Lectures.

The mail address of Mr. Carol Norton of the Board of Lectureship during the months of January, February, and March, 1903, will be 206 Kearney Street, care of Christian Science Reading Room, San Francisco, Cal.

### At Canon City, Col.

Judge Hanna of Boston spoke to a large and attentive audience at the Opera House last Thursday night [December 4] on the tenets of Christian Science. His address was a scholarly exposition of the doctrine which has already gained many followers in this city. The introductory address was made by ex-Attorney General of Colorado, J. H. Maupin.—*Canon City Times.*

### At Charleston, S. C.

A large and intelligent audience heard the lecture on Christian Science by the Hon. William G. Ewing of Chicago, last night [December 11] at the Freundschaftsbund Hall. The audience was composed of representatives of many professions, religious beliefs, and classes of citizenship.

Christian Science is a subject of great interest at present, and there is a general desire to know more about the beliefs and tenets of the new faith, and the character of the audience evidenced the liberality of thought of the people of Charleston, and their interest and desire to learn something about Christian Science.

The speaker was introduced by Mr. F. H. McMaster.

*The Evening Post.*

### At Washington, D. C.

The Hon. William G. Ewing of Chicago addressed an audience that filled the National Theatre to its capacity yesterday afternoon [December 7]. He was introduced by Hon. John Franklin Crowell in part as follows:—

In the name of First and Second Churches of Christ, Scientist, of this goodly city, I welcome you to this feast of the Spirit; for it is to the spiritual man that these churches bring you a message. Whatever differences may be represented here to-day, there is one common standpoint upon which we all no doubt agree. We are one and all seekers of the light.—*The Washington Times.*

### At Cleveland, O.

A lecture upon the "Teaching of Christian Science" was delivered by Carol Norton, C.S.D., of New York City, November 30, under the auspices of First and Second Churches of Christ, Scientist, of this city. The Chamber of Commerce was completely filled. Mr. George R. McKay, a well-known attorney, introduced Mr. Norton and said:—

We have met here this afternoon to hear a new idea discussed, or rather, I might say, an old idea clothed in new language, possibly expressed in such words as will convey to each of us a new meaning of an old truth.

The very fact that so many have gathered to listen to an explanation of a belief which to many of us is entirely new, different from that which we have so long cherished, clearly demonstrates the freedom of religious thought pervading the minds of the present generation. History is full of instances of religious bigotry and sacrifices made by the persecuted in the sacred belief that they were carrying out the will of the divine Power; and equally zealous and sincere were the persecutors in their conviction of the righteousness of their cause.

The Pilgrim Fathers who left the land of their birth to seek a new home where they might enjoy religious liberty themselves, became the most zealous in their persecution

Digitized by Google

of those who did not agree with their doctrine in its narrowest and strictest construction, and also condemned as heresy any new idea broad enough for a drowning man to grasp even with his finger-tips.

Gradually this bigotry and religious fervor gave way to calmer reasoning and broader views; the desire for political liberty culminated in the Boston Tea Party, and numerous other heroic acts, followed by a struggle at arms for political freedom and liberty such as this world has never seen. With political freedom came also the desire for religious liberty, which was speedily guaranteed by our constitution; and to-day we stand out in the broad light of political freedom and religious liberty, free to say who shall rule over us, and thankful for the privilege of worshiping God after the dictates of our own conscience.

Strange that, within the very same state where religious liberty and freedom of either thought or speech were so carefully guarded and restricted, and where laws against witchcraft were so severely enforced, there should arise within its greatest seat of learning, a woman who, after years of patient study and research, has presented to this generation a new interpretation of an old thought, which in its practical operation has brought peace and gladness where all was gloom and despair, which has raised the sick, made the deaf to hear and the lame to walk, brought order out of chaos, and filled the minds of mankind with the ability to give a reason for the hope that in them lies.

We are here this afternoon to learn more of this belief which is so stirring the minds of thoughtful men and women throughout the land, and I take pleasure in introducing Mr. Carol Norton, who will now address you.

*Correspondence.*

### At Kansas City, Mo.

Judge Septimus J. Hanna lectured in the Auditorium of First Church of Christ, Scientist, December 9, and was introduced by Mr. Silas C. Price, a lawyer of this city, whose introductory remarks were in part as follows:—

I believe in the largest toleration in matters of belief, and in matters of teaching. While the conservatism that is inherent in the average human character may hold some of us back, yet that others shall think their own thoughts and have their own opinions and promulgate those opinions is but right. And we ought all of us by this time to have been brought up out of the bogs of bigotry, and should have freed ourselves from all forms of intolerance.

It is well for the world that men, generally speaking, are conservative. Conservatism is the great balance-wheel for mankind and for the world, without which all that is thought and believed would crash and break and come to naught. We are so constituted that the old things appeal to us. We are, generally speaking, chary of the new. Conservatism in character looks with suspicion on anything with which it is not familiar. Every new departure of thought is to it revolutionary and so to conservatism it is vicious. It cries out evermore with its inherent protest that "the old is better." And I think myself that much may be said for the old,—the old thoughts and beliefs, the old ideas, the old theories. You will perceive that I am myself conservative. The ideas and faiths and beliefs that have come down through the ages, and have survived the shock and test of the centuries, should not be lightly put aside. But against the protest of conservatism that the old is better, we must recognize the fact that every movement in human progress has begun with a new idea. A new thinker has come to the front with new thoughts, and new theories, and has advocated new faiths. This has been true through all the ages of the world. And while many of these new thoughts have not obtained, and many of these new theories have not succeeded: while, indeed, the whole pathway of human progress is strewn thickly with the wreckage of exploded theories and discarded beliefs, yet by the way of the new thought, of innovation in thinking, has come all the progress that the world has ever known. And so a new thinker should be hailed. He should be hailed, and his message should be heard and considered. Whether the teaching shall become established, depends upon its inherent truth, and the final test of all truth is time. And so while the world generally is ready to condemn every new teaching, and seeks to set aside every new teacher, yet, let him be heard, and his teaching be heard, and if it be of God, it will survive. If it have truth, it will live, and it will bless humanity; and if it have not truth, it will perish from its own lack of merit.

And so this evening, while I feel somewhat strange among you, and somewhat out of place in presenting and introducing the lecturer on this occasion, I am here to say that I believe that all opinions honestly held are entitled to be uttered, and should receive a respectful hearing. Only as men think has the world progressed. Only as new ideas have been brought out has the world been uplifted. So hail to the new idea, and let time be its test.

It is always profitable, and it should always be delightful, to listen to any discussion by a man who thinks, a man who represents study and reflection and investigation. You are to be entertained this evening by such an one, and so it is with pleasure that I now introduce to you the lecturer of the evening, Judge Septimus J. Hanna.—*Correspondence.*

### At Sylvania, O.

Long before the hour arrived for the delivery of the lecture on Christian Science by Edward A. Kimball, C.S.D., December 8, Garry's Hall was comfortably filled with a large and appreciative audience. The First Reader of the local church, introduced Mr. A. E. Jennings, First Reader of the Toledo First Church of Christ, Scientist, who in his introductory remarks spoke in part as follows:—

The ranks of the Christian Scientists are made up very largely of people from the present orthodox churches. If you will ask any Christian Scientist, he will tell you that he is more charitable and more tolerant than he ever was before. He will tell you that he loves good more and evil less; that he is more prayerful and more law-abiding. He will also tell you that he is endeavoring to obey the imperative commands of the blessed Master, the greatest physician the world has ever known.

Every system of religion, art, and medicine has made rapid strides during the past century. In religion we have been getting away from the material to the spiritual. Every one who believes in the teachings of our Lord will admit that he presented the best code of government the world has ever known. What might have been the outcome if the principles he taught had been followed? The beloved Leader of the Christian Science movement, the Rev. Mary Baker Eddy, says: "I have never supposed the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not continue for an indefinite time; but this I do aver, that, as a result of teaching Christian Science, ethics and temperance have received an impulse, health has been restored, and longevity increased. If such are the present fruits, what may not the harvest be, when this Science is more generally understood?" (Science and Health, p. 348).

*The Sylvania Sun.*

### Lectures at Other Places.

Webster City, Ia.—Carol Norton, C.S.D., October 9.

Georgetown, Col.—Carol Norton, C.S.D., December 5.

Jacksonville, Ill.—Edward A. Kimball, C.S.D., December 14.

Highland Park, Ill.—Edward A. Kimball, C.S.D., December 15.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### New Year Resolutions.

It has been customary, with many persons, to usher in the New Year with sundry good resolutions; but, unfortunately, the world has come to look upon these resolutions as ephemeral, and upon the custom itself as sentimental rather than practical. Notwithstanding the world's opinion, this usage is worthy of consideration.

If, in the past, our good resolutions have failed to receive the support of our best endeavors, and our efforts for reform have not met with success, we should not blame the custom, nor should we doubt our good intentions. Failure probably came because we based our efforts upon human will-power instead of upon the grace of God. Jesus said, "I can of mine own self do nothing: as I hear, I judge: and my judgment is just; because I seek not mine own will, but the will of the Father which hath sent me."

Every earnest determination which stands for better and purer living will be fruitful, and every honest desire to follow in our Master's footsteps will improve the individual in character and capacity, but lasting reform can come only through a demonstrable understanding of God and man's relation to Him, an understanding that God is not the author or procurer of evil, and that man is free from the thrall of iniquity which the mesmerism of mortal mind has sought to fasten upon him.

The best resolution that we can adopt for the year 1903 is, "We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497). M.

### The Challenge of Thought.

Fancy that our thoughts, just now in "this fair companie," should break the restraining bonds of speech, defy discretion, ignore courtesy, throw off all the insincerity of tact and suavity, and speak for themselves right out, how would they bear the test? How many of them would brave the light, how many scurry back in search of concealment? The suggestion may seem grotesque, but it has been wonderfully helpful, and often has showed the startling, though perhaps unintentional, discrepancy between the half-expressed thought-impulse and the resultant speech. This fancied liberty was a call to watchfulness in the old way of thinking, but when, through the teaching of Christian Science, we come to see that man *is* right thinking, the reflection of infinite Intelligence, we recognize the enormity of the false claim of wrong thinking, its reversal,—darkening suggestions of unkind criticism instead of charity, hypocrisy instead of honesty, backbiting and personal censure instead of open, loving rebuke,—and we are more than ever impressed that we cannot be too careful to keep pure and honest this thought atmosphere in which we live, and move, and have our being.

In our conversation, the mental reservation with which we think to appease troublesome conscience is usually the measure of divergence between what we are speaking and what we should have the moral courage to speak.

Some one has warned us, "Guard well thy thoughts: our thoughts are heard in heaven."

As number expresses itself to materiality through figures, so thought,—the real, the good, the true,—expresses itself to material man in words which appeal to eye or ear.

As figures may be made to falsify and misguide the unwary, so may words mislead and deceive, not only the listener, but the speaker as well; and as the inexperienced student of mathematics, through his ignorance of the properties of number, fails to work his problem, so we may trace our discordant results in speaking and in living to ignorance of that Principle which governs thought through perfect reflection of a perfect Intelligence.

Our thoughts, pure and true, the only thoughts worthy of us, are not only heard, but must be spoken, in heaven.

S.

### From the Old to the New.

He who has not acquired the gentle art of turning his back upon the things of yesterday, has missed one of the most practical ways of enriching the joys of to-day, for while maintaining due regard for all the good, beautiful, and true it has embraced, we may still say that altogether the best thing about human history is this: that we can let it remain a thing "that was and is not." Real progress means that we shall let the dead past bury its dead, and leave both the bones and the bad thinking, of our earthly ancestry, in Egypt.

The crustacean habit of annually escaping from the fetters of an unyielding self, is highly commendable, for, as all know, to cling to disabling limitations is to forego the possibility of growth, and we are less wise than these little children of the sea if we hesitate to part with those personal accretions, ideas, opinions, habits, etc., which, if they ever rendered us a service, no longer conduce to either our intellectual or spiritual advancement.

If we were to undertake to enumerate these heritages of our past which are to our present disadvantage, and which remain with us because we have made no intelligent effort to dismiss them, we would be astonished at their number and realize more clearly how great the folly of their retention.

The good old custom of auditing our life accounts at the New Year, assumes a new and much more important significance when we realize, in Christian Science, that we can enter upon a new year only as we enter upon a new life in consciousness; that the only old thing for us is an unworthy self, and that the only new, perennially new, thing is Truth. Error, sham, false beliefs,—these fail, grow old, are temporal, for they are without self-sustenance or Principle. Their normal is decay, their portion is death: but Truth ever retains its freshness and undying vigor.

At our best, the ideal never wearies, or grows stale and uninteresting. Its vitality, completeness, and repose bring us strength and unfailing delight. This is that Fountain of Eternal Youth so long sought of men, but wholly undiscoverable to the material seeker. He who would atone for the faultiness of his past by consecrating himself to a nobler endeavor, will fail yet again, unless he apprehends that the effective turning from the old to the new, is simply the turning from the illusive to the substantial, from the material to the spiritual, from the human to the divine.

Right thought of what is to be done, of the naturalness of the doing, and especially of our relation to that divine Principle whose spontaneous and infinite activity makes all things perpetually new,—this will present to each of us the possibility of "turning over a new leaf" every day and

Digitized by Google

hour of the new year, and of thus insuring a steady advance toward the attainment of perfect manhood.

It is this realization that has given buoyancy, alertness, and abiding inspiration to the world's great men, of one of whom it was recently said, "It seems impossible to put sufficient emphasis upon the fact that these forty years of incandescence came because the sources of his supply were demonstrably infinite. . . . Can a man's thought and feeling become weak . . . decrepit with this divine impulse beneath and within them? His abounding quality and freshness came from the abundance of the material which he did not have to invent."

"Discerning Christ, Truth, anew on the shore of time, they were enabled to rise somewhat from mortal sensuousness, or the burial of mind in matter, to newness of life as spirit" (Science and Health, p. 35).

This is the secret of growing young with maturity. Every demonstrable gain in our apprehension of Truth links us consciously to the infinite Source of all life, and we become the verdant channels of that stream whose abundant spring is never-failing.

Build thee more stately mansions, O my soul,
As the swift seasons roll!
Leave thy low-vaulted past!
Let each new temple, nobler than the last,
Shut thee from heaven with a dome more vast.

W.

## The Bells.

RING out, wild bells, to the wild sky,
The flying cloud, the frosty light:
The year is dying in the night;
Ring out, wild bells, and let him die.

Ring out the old, ring in the new,
Ring, happy bells, across the snow:
The year is going, let him go;
Ring out the false, ring in the true.

Ring out the grief that saps the mind,
For those that here we see no more;
Ring out the feud of rich and poor,
Ring in redress to all mankind.

Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out the want, the care, the sin,
The faithless coldness of the times;
Ring out, ring out my mournful rhymes,
But ring the fuller minstrel in.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease:
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be.

TENNYSON.

# From our Contributors.

## God the Saviour from all Ills.

SAMUEL GREENWOOD.

No one objects to the healing of sin by spiritual means alone, for the forgiveness of the sinner is the foundational belief of all Christian religions; and this result is sought without recourse to human devices or material aids. There is no monopoly in this redemptive work, no class legislation conferring this privilege on some conservative school of theology. The sin-sick man is allowed the freedom of choice or no choice at all, and if he dies apparently unforgiven, there is no outcry because he had no proper religious attendance.

Mortal man, with no resource outside of matter, is without a remedy for sin and is compelled by his extremity to seek salvation in God, Spirit, alone. He recognizes that sin is primarily a mental state and can therefore be reached only through mental or spiritual means. A physician would think the man demented who sought him for medical aid to cure dishonesty or hatred. In all *materia medica* he has no sedative to quiet a troubled conscience; no corrective that will remove the tendency to steal, or lie, or hate. But when continued indulgence of covetous and malicious thoughts has disturbed the harmony of bodily functions, the same physician, in all good faith, would dose him with his pills and poisons. If these drugs can remove the effects, why not the cause? and if they remove the effects and leave the cause still active, is the man healed?

The Christian world has based its theories of redemption from sin on the Scriptural promises of pardon, and though the ultimate result of their belief and prayer is beyond their ken, though they cannot know if the departed sinner has been admitted into paradise, they still hold to the efficacy and faithfulness of God's word. No one objects to this, except the infidel. There is no dismal protest that the day of moral miracles has passed, or that the Christ power which regenerated a Saul of Tarsus has not been operative since the apostolic age. But when Christian Scientists very lovingly suggest to their Christian brethren that we seek God for all good, and rely upon Him alone for the forgiveness of the sick man, they are met with skepticism and rejection. "Lord, to whom shall we go? thou hast the words of eternal life."

Diligent search of the Scriptures fails to reveal a single instance where health is promised as the result of our appeal to a medical doctor; or that if we resort to some form of material medicine our pain-racked body shall find harmony and peace. But the Bible does say that God heals all our diseases, and that reliance upon Him at all times and in all kinds of trouble will result in our deliverance. Have modern drugging systems, hygiene, or the operator's knife, rendered these promises superfluous and obsolete? If so, why not expunge these passages which have survived their purpose, and let us have an up-to-date Bible which shall contain only what remains for our own time of God's willingness and power to aid suffering men. But Christian Scientists have learned through happy experiences, that these hoary promises of God need not be eliminated either from the Scriptures or the life and practice of modern Christians, for they respond to-day as of old to the touch of living faith and spiritual desire.

Are not all the words of a truthful man equally reliable? and should not God's be likewise? Is not the "good news of God" as effective for the physical sinner as for the moral one? or does Divine help for the physical sufferer depend upon the virtue of a drug, or the skill of a surgeon. Are the morally diseased the only ones who can look with confidence to God for help? Is that prayer a "vain rep-

Digitized by Google

etition" in the ear of God, or a misdemeanor in the eyes of men, which asks the Father of all good for ease and health —and is content?

If sin and sickness are from the same source they would surely be reached by the same remedy. If sickness is but an incident or consequent of sin in some form,—and it is, —would not redemption from the greater include the less? The mortal sense of separation from God, Good, abides in continual fear, and from this mental state of guilt and dread are evolved all the disease pictures which the body manifests. The human body bears the same relation to these dreadful objects of mortal mind conception as the sensitized plate in the camera to external objects; and through Science we learn that the body is as unconscious of the discord it is supposed to feel as the plate is of the picture it reflects. Is not this position sustained by unbiased human reason? No sensation can be produced in the water and solid articles of food before they are partaken of, though they are boiled and macerated in preparation. Even a fool would not expect such a thing. But lo! we partake of these inanimate material elements, and in a few hours they are supposed to be part of intelligent man, capable of experiencing pleasure and pain. What has produced such a metamorphosis whereby the dead becomes the living, and the unknowing knows? This surely cannot be the life which was with the Father, nor the knowledge of the mind "which was also in Christ Jesus." In the majestic Science of man's spiritual origin, existence, and immortality taught throughout the Scriptures and made plain and practical in Christian Science, these fallacies of a mind which is enmity against God, are consumed like a moth, and God alone is exalted as the refuge for all woe.

God's way of deliverance is surely the best at all times, and always a safe one. Christian Scientists know that this divine way does not fail and is not obsolete. They actually know it; tangibly, physically know it in the same every-day common-sense way that they know when the sun shines, or that it is dark. They know it is an experience wherein they have met the same material conditions of pain and disease which arise in other people's experience, and God has succored them with no help from man—and why not? *why not?*

God surely lives to-day, the same boundless Love which has delivered men in every age; which led the children of Israel out of bondage and sustained them in the wilderness; which gave back her son to the widow of Nain and cleansed the Syrian leper; which delivered the righteous from the flames, the flood, and wild beasts; which healed the sick multitudes of Judæa; fed the five thousand, and redeemed our Master from death and corruption. "For there is none other name under heaven given among men, whereby we must be saved."

## Common Sense.

MARY E. HEYWORTH.

If one is studying music, he unquestionably abides by the basic laws of music. The beginner finds that the scale of C involves science no less certainly than does a fugue or concerto to one more advanced. We do not parley and doubt, and thus betray a lack of common sense, because an advanced work is beyond our present possibilities of attainment; on the contrary, we hold our thought in an attitude of practical obedience and gradually replace ignorance with understanding.

Now, why should we display less common sense and reason in working out our problem of being? Good is natural and flows freely through every unresisting channel. What is it that leads us to resist? Is it not often a lack of wholesome common sense? Are we not too often waiting for some mysterious manifestation of spirituality, and when its approach comes through the calm, strong insistence of the command, "Be better to-day than yesterday," do we not neglect the minor duties in expectation of greater ones? Or is this seeming resistance through the false suggestion of mortal mind that it is beyond us to become perfect; that the standard of this Principle is too high for our achievement? This attitude of thought produces darkness and doubt (ignorance), and is a menace to our growth. It is the subtle evil (devil) of self-condemnation under the guise of modesty, over-sensitiveness, and over-consciousness. It is the lie of condemning a self that does not exist in Science.

Science and Health says (p. 475), Man "possesses no life, intelligence, or creative power of his own, but reflects spiritually all that belongs to his Maker."

One of the little children in our Sunday School was asked how to become a Christian Scientist. He said, "By being good." When asked, "What does it mean to be good?" he replied, "Think right." The question was urged still further and he was asked, "How do you think right?" His answer was, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them" (Mrs. Eddy).

This Scientific sequence pointed out by this little philosopher is safe guidance for us all, and would naturally unfold the capabilities and supremacies of good in each of us, and effectually promote a steady, wholesome, deep-toned faith in God, which replaces, by the renewal of the mind, mortal ignorance and its supposed laws of limitation with the Wisdom which is but "common sense in an uncommon degree."

## Self-Reliance.

MRS. GERTRUDE MCCASLIN.

When are we, as students of Christian Science, to be self-reliant, self-supporting, and when are we to lean only on God, the giver of every good and perfect gift? When will teachers cease doing their students' work, husbands carrying their wives' burdens, parents solving all their childrens' problems, and *vice versa?* Do we not know that in continually doing others' work for them we are depriving them of their birthright, in that the talents they possess are not being used? The Scriptures tell us, "For whosoever hath, to him shall be given, and he shall have more abundance: but whosoever hath not, from him shall be taken away even that he hath."

Do we not paralyze the understanding of Truth by shouldering burdens that should be borne by those who know the truth but do not use it? Paul said: "Work out your own salvation with fear and trembling. For it is God which worketh in you both to will and to do of His good pleasure."

How are we to be saved from the nightmare of error, if we do not commence by degrees to destroy our belief in it? Often one is apt to be deluded with the idea that he is doing his very best, when the fact is that he is asleep and inactive. In "Miscellaneous Writings," p. 114, Mrs. Eddy says: "Christian Scientists cannot watch too sedulously, or bar their doors too closely, or pray to God too fervently, for deliverance from the claims of evil." In the Message to the Mother Church in 1902, page 29, we read, "Many sleep who should keep themselves awake, and waken the world."

To be self-reliant is to rely on God, to recognize no selfhood apart from Him, to know that in His strength we shall find strength and power.

We sometimes hear this query: Why is it that those who are quite young in Science are asked to solve the problems of those who have known of it so much longer, but have hidden their talent in a napkin? Yes, why do we stand in our own light and then seek perpetually to

Digitized by Google

borrow oil of our brother? Mrs. Eddy says in "Retrospection and Introspection," page 78: "Man shines by borrowed light." But this light is the light of God. The illumination of the individual pathway will not come until we commence to pray understandingly, "'Thy kingdom come;' let the reign of Truth and Love be established in me" (Church Manual, Art. XXI., Sect. 4).

Each right thought and desire in our every-day life is the forerunner of the larger work of which Paul speaks in 1 Corinthians, 15 : 26: "The last enemy that shall be destroyed is death." When the test comes and we stand alone with God, our sole reliance, if faithful we shall have the reward of the righteous.

## A Helpful Explanation.

EBA MACNAIR.

I WAS much impressed and helped by the following lines which appeared recently in the columns of the *Journal*.

"Being always was perfect and harmonious and man never fell from his true estate." Some one will say,—

"If man was always perfect in God, how did he ever fall into this discordant material condition? It would be as if some one would ask an astronomer, If the earth now revolves in her orbit around the sun, how did it ever happen that she used to be flat and stationary? The astronomer will say, it was never so, that was only a false sense of it."

The earth *revolved* all the same in spite of what people thought about it, their thinking wrongly did not affect its rotary motion. So likewise though mankind think erroneously about themselves that does not affect or interrupt the truth of being that man is always perfect.

Thinking wrongly only affects the wrong thinker in that he is so much minus the knowledge of the truth with regard to himself and the universe. It is the absolute Truth that makes free; and in proportion, therefore, to his ignorance, is the wrong thinker removed from freedom.

Let us increase in the knowledge of Truth which is essential to freedom,—the goal is worth the striving, and it is reached through the study of Christian Science rediscovered for this age by Mary Baker G. Eddy, to whom we owe ceaseless gratitude.

## Working out our Salvation.

G. B. P.

THE thought came to me to-day, why is it that sometimes our own problems are delayed?

Since it says in the Scriptures, "Work out your own salvation," and Jesus said, "I am with you alway, even unto the end;" it must be that some error is in our own consciousness and that we are not taking God into every detail with us, for that would bring harmony and peace.

Now if we are not reflecting and establishing harmony and peace, it cannot be God that we are working with, so we know that the fault is with us, and we must retrace our steps, watch every thought, word, and deed, and let nothing but God's way abide in our consciousness. Hold fast to Truth or else we slip back again, only to find error trying to work out our problem, through old ways, old deeds, and old thoughts, when we know they should be cast off as rubbish.

So need we to watch ourselves, guarding our every thought, for we know that "In Christian Science man can do no harm, for scientific thoughts are true thoughts, passing from God to man" (Science and Health, p. 103).

When doubt and fear and distrust try to crowd in upon us, we know those thoughts are of the world, not God, and we count them as intruders.

When these intruders find themselves cast out, they soon cease to trouble us, and God's eternal harmony, takes full possession of us.

## The Wednesday Evening Testimonials.

HARRY L. WORDEN.

THE progress of the church lies in its manifestation of the presence of God and the fidelity of its members in the acknowledgment of God in what he has done and is doing for us all. The lack of this acknowledgment is not felt so much by the larger churches as by the smaller ones. The world knows of the achievements of Truth only through the beneficiaries thereof, and if we are silent as to the benefits we have received, no matter in what degree, we are hiding our light under a bushel, the light that ought to shine from the housetops. The Wednesday evening meetings were instituted for the purpose of giving all an opportunity to tell to the world how we have been benefited by this great Truth.

Here is where the hungry go to be fed. Here is where those who thirst for good, go to be satisfied. If thy brother ask of thee bread (expression of Truth and Love), wilt thou give him a stone (silence)? Has the weary wanderer in the wilderness of earth's dreary hopes only found his way again into a "dry and thirsty land, where no water is"? Jesus said, "And whosoever shall give to drink unto one of these little ones a cup of cold water only in the name of a disciple, verily I say unto you, he shall in no wise lose his reward." How can we invite a friend or stranger to our meetings with the invitation, "Ho, every one that thirsteth, come ye to the waters, . . . incline your ear, and come unto me: hear, and your soul shall live;" and then sit down in perfect silence, not doing unto others as we would be done by?

Mrs. Eddy says in Science and Health, p. 372, "A just acknowledgment of Truth, and what it has done for us, is an effectual help. If pride, superstition, or any error, prevents the honest recognition of benefits received, this will be a hindrance to the recovery of the sick and the success of the student."

Don't let us make human sponges of ourselves, absorbing all the good, and unwilling to give out any unless persistently urged. It is only error, sometimes in the form of fear, self-consciousness, and false pride, or perhaps self-condemnation, that stands in the way of the public acknowledgment of the great good we have received. There is not one individual who has ever received a glimpse of the true heaven, as revealed to us through the understanding of Christian Science, who would return to the condition of mental darkness, and misconception that he was in when Truth found him. We are all glad to have found this light; then let us say so. We are all thankful to God that Mrs. Eddy, a noble, beautiful, Christian character, received this great revelation that is helping us all to understand God's word and has enabled us to demonstrate or prove our understanding of it; let us say so. Most of us have been lifted out of some severe claim of sin, disease, or inharmony; let us say so and give the fact but not too much in detail. Almost all of us have little demonstrations every day over some inharmonious condition of life, and why not say so, though we give no details, and thus render thanks to God for His wonderful works to the children of men. If it seems to be hard work, or an effort for us to testify in public, let us remember the others who are always faithful, and go and do likewise. Suppose some do allow themselves to be overcome by the false timidity of error, "what is that to thee? follow thou me," and to him that overcometh, I will give a crown of rejoicing. If we would all make an individual effort to see that we keep our own walks swept clean, we shall shortly find that our neighbor is also sweeping his. The church prospers under the individual effort of each and every member, who must remember that he is reflecting good in every thought and deed brought into subjection.

"Let everything that hath breath praise the Lord."

## Love all Excelling.

K. B.

OH! Divine Intelligent Love, we worship Thee, we praise Thee; Thou the Beauty of all that is beautiful; the purity of all that is pure; the one altogether lovely.

As we awake to spiritual consciousness, and escape from personal sense, we see and comprehend the beauties of Thy creation, and rising on the wings of divine Love, we enter into the secret of Thy presence.

What tongue can tell the glory? What song the wonders sing? Thy glories fit not language limits. Thy thoughts, too large for words, Thy love, too great for mortal span, Thy power, the All-in-all.

The light of Love which dawned in Eastern sky has brighter grown, and Love and light now span from east to west, and high above the clouds of sense our joy doth still increase, till all we say and all we do are echoes of Thy love.

Pure Love doth magnify itself, and every day it shines more bright, as hearts and minds unite in praise.

## A Little Understanding.

HATTIE E. RICHARDSON.

Do we realize what we are saying when we acknowledge that we have only a little understanding? If so, I think we should hesitate to repeat it; we should see the limitation we place upon ourselves.

In Genesis we read, "God created man in his own image, in the image of God created He him," then are we claiming too much when we claim all of this, and are we claiming enough when we accept anything short of this?

We hear it said every day, "I have only a little understanding of this Truth," and then the question is asked, "Why am I not healed?" or "Why can I not see this Truth more clearly?" Can we expect to receive all when we deny God, by saying, "I have only a little understanding?

We are bringing out in our lives what we continually hold in thought, and if our standard is not "Be ye therefore perfect, even as your Father which is in heaven is perfect," we shall go on manifesting only a little understanding.

I thank God for this revelation to us through our Leader, Mrs. Eddy, and it my prayer, that I may follow more closely each day the way she has mapped out.

### A Most Interesting Report.

During the year ending November 30, 1902, the Central Christian Science Reading Room Association of Chicago sold as follows:—

Science and Health, 3,055 copies; Miscellaneous Writings 311; Journals, 2,981; Sentinels, 7,434; Quarterlies, 8,353.

The total amount of sales for the year is $29,543.94. We do not sell anything in our rooms but the writings of Mrs. Eddy and the publications of The Christian Science Publishing Society.—MRS. FANNIE L. PIERCE, *Manager.*

There are many people who are only waiting for grand opportunities. But there is an immense difficulty in getting them, in the mean time, to do the next thing, the nearest thing, a very simple thing. If the prophet bade them to do some great thing, why, they would do it with trumpets, and songs, and drums; but to do the little duty, the daily task, the common round, is too much to be expected of genius. Beware of genius, if it is not translatable into some kind of action and charity. It is not a dream from heaven, but a nightmare—from whence I know not.

JOSEPH PARKER, D.D.

## Testimonies of Healing.

On Thanksgiving Day eight years ago, Christian Science found me heart-sick, spiritually starved, and like a child crying in the night of despair, thirsting for the water of Life. I have been healed and fed. God's own little ones have ministered unto me with a cup of cold water in Christ's name. They have shown me the way to minister to the sick, the weary, and the heavy laden; and now it has become my turn and privilege to do the work which the Master has commanded us to do, if we love him. May every day of my life be a thanksgiving day, wherein my chief aim will be to praise God and enjoy Him forever while increasing in strength and understanding unto eternity.

I thank our Father-Mother God, I thank our beloved Leader, I thank my dear teacher in Christian Science and all the faithful followers, who by their works are showing humankind the way to Christian Science, and are helping their neighbors to help each other, teaching them in word and in deed what manner of love it is, which our Father hath bestowed upon us that comforts the sorrowing, saves the sinner, and heals the sick.

Through this Love reflected in love, I have been restored morally, physically, mentally, and spiritually.

J. T., New York, N. Y.

It is beyond words to tell what the understanding of Christian Science has done for me, mentally and physically, the last four years. I turned to it for help when the doctors told me that their last resort, the climate of California, could do nothing for me. I had always been more or less ailing, but for six years I had been constantly under different doctors' care, had done everything they had advised. When the doctor in Pasadena finally wrote my father that I was doomed to semi-invalidism I was driven to try Christian Science, which was presented to me at that time. I was under the Scientist's treatment from September to April, and then came back to Chicago to go through class. My healing certainly seemed not rapid, but I realize there was a gradual growth—a growth which is still going on. Now I am able to do as others do, and the idea of invalidism certainly does not apply to me.

But greater is the change in the religious thought,—instead of thinking of God as some great disciplinarian who is constantly punishing and torturing His children, I know Him as ever-present Good, omnipotent Love, in whom I can trust and not be confounded. Standing alone in my family, as I seem to, the struggles have seemed many, and the waters at times have seemed very bitter and deep, but I am learning to "be still" and know that Love "is at the helm," and I can truly say that every struggle rightly met has meant only a larger blessing for me, and I do, indeed, give thanks.—MISS ALICE P. HAGAR, Chicago, Ill.

Before coming into an understanding of Christian Science, I was continually battling with the thought that God could be good and yet send evil upon man, for all around me I saw good Christian people suffering from sickness and sorrow, and I tried to reconcile this with God's goodness. But I questioned, "Why does He afflict those who try to live up to their highest understanding?"

I was often advised to stop troubling myself about why God did these things, and trust Him. I did try, but that peace which is promised was not mine until I found it through Christian Science.

Now I know that my trouble was all in self, for, like the elder brother in the parable of the Prodigal Son, I looked to materiality for recognition of my good deeds and was disappointed every time.

Digitized by Google

I now rejoice daily in the knowledge that God is good, and I am growing in the understanding of Him whom to know aright is life eternal.

While I am deeply grateful for the physical healing which I have received, I thank God for the help Christian Science has been to me in training my children. I have had many difficulties in the way, but it has helped me out of them all, and I know that the light will grow brighter unto the perfect day.—E. M. HUGHES, Waltham, Mass.

---

Five years ago I came to Christian Science through the healing of a case of appendicitis from which I was a sufferer. The healing of this particular case had more to do with my coming to Science than anything else, although I knew of wonderful cases of healing, especially that of my wife. In my case I had been suffering for several days when I was taken violently ill. I was away from home. I came home and still had intense pain. My wife said, "You must have help." I said, "I realize that, and I must have it very soon." She said, "Which will you have, Christian Science or a doctor?" I said, "I will have Science." She stepped to the telephone and called a practitioner, and I do not think it was more than thirty minutes from the time that she had finished telephoning that I retired and slept soundly. The next morning I went to the office free from pain and with no after effects whatever from the attack.—GEORGE NEEDHAM, East Cleveland, O.

---

Some time ago my mother broke her wrist and collar-bone. She is not a Christian Scientist but does not oppose the thought and is often helped by my impersonal work. The physician who set the broken bones wanted to administer chloroform, but she refused. Finally the physician remarked, that it was wonderful how she endured the pain of the operation. I knew it was Truth that did the work. The healing went on nicely, and it was to me a great help, to have demonstrated this blessed Truth, as it enabled me to go through the trial in a composed manner, which was foreign to my disposition, before I became a Christian Scientist. I look back and wonder if it was really I. The work was done through my reliance on God. Another demonstration is that of overcoming a sense of enmity against me by knowing that God is Love, and that "Love is reflected in love." I am truly thankful for Christian Science and for the good received through our publications.

MRS. EMMA EVANS, Aberdeen, Miss.

---

Christian Science found me in the winter of 1900, a complete physical wreck, and I feel that I ought to testify to all the benefits I have since received, in the hope that my experience may encourage others.

A lady came to visit the family with whom I was staying, and told of the healing of her daughter through Christian Science. I became interested to know more of it, and felt at once that it was what I needed.

I was a victim of the liquor habit and always had said I should never leave it off. I used tobacco, and was profane.

One day a copy of the *Sentinel* was given me, and I eagerly read it. I at once procured several more copies, and in reading them I realized something of my relation to God, and through the teaching of Science and Health, which I also procured, I was enabled to overcome the liquor habit, the use of tobacco, and profanity. I enjoy reading the *Sentinel* and *Journal*, and more than all else, I have learned to understand and love my Bible, which had always been a sealed book to me. I thank God for Christian Science as revealed to us through our Leader, Mrs. Eddy.—SELDON E. RICHARDSON, Greene, Me.

I feel that it would be very wrong longer to delay my testimony of what Christian Science has done for me.

When I decided as a last resort to try Christian Science I was suffering from rheumatism and valvular enlargement of the heart, and had a bad rupture which I had had for twenty years, also a weak digestion and chronic constipation.

I had worn a truss for my rupture for about a year with very little effectiveness or comfort. One of the best surgeons in this city said that an operation was the only remedy. Inside of eight weeks from my first treatment, I threw aside my truss and, according to the surgeon above mentioned, am entirely cured. My rheumatism gradually left me, as did my other troubles. Somewhat over a year ago I was rejected by two of the largest insurance companies in New York on account of valvular heart trouble. Within six weeks I have taken out a twenty-year endowment policy in one of those very same companies, although they had my past record looked up. This shows what Christian Science did for my heart. Christian Science has changed my whole attitude toward life and added great happiness.—F. D. S., Brooklyn, N. Y.

---

Christian Science came to me at a time when everything was so dark, that life seemed a burden instead of a pleasure. I had had hip-disease for nearly seven years, and had undergone an operation by one of the best surgeons in this city without receiving any benefit. I also had lung trouble and heart failure, and had inherited an extremely sensitive nature. I was a most miserable woman. Night after night, when I retired, I would pray that I might go to sleep and never awaken, for there seemed no help or rest for me. But as the darkest hour always precedes the dawn, so it was in my case; for it was at this time that I was led to try Christian Science. From that day to this, I have been gradually improving, and am now free mentally and physically. Words fail to express my gratitude to Mrs. Eddy for "Science and Health with Key to the Scriptures," which has opened my understanding and led me to the freedom which I now enjoy.

Through the understanding of God that I have in Christian Science, I have been enabled to heal a case of alcoholism of twenty years' standing, a case of whooping cough in one week, one of malignant diphtheria and croup in one night.—MRS. L. B. LORD, New York, N. Y.

---

Christian Science found me discouraged, bewildered: I did not know which way to go. A friend came to see me and said her daughter had some Journals and tracts on Christian Science, and added, "Christian Scientists pretend to heal without medicine, but I don't believe it." I asked her many questions; she did not know much about it, only that she did not believe in it. As all material means had failed me, it seemed my only chance for life. I felt I should like to know what it was. In a few days, she sent me one *Journal* and two tracts. I then found there was a book called "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, and I had a great desire to read it.

We had paid out so much for doctors' bills, that I did not then have the money to send for it. I prayed for two or three days that there might be some way for me to see the book soon. My sister came, and said she had that book at home, but did not care for it, and I might have it. It was brought to me in the afternoon. After reading a few pages and examining it, I laid it down, disappointed, for I could not understand it.

My next step was to write to a lady for Christian Science treatment. A short time after this, one night I was filled with doubt and fear, and questioned, Will it help, or will it prove like all the remedies I have tried? These

Digitized by Google

words came to me, Fear not; I will help you. Had a person at my bedside spoken those words they could not have been more significant. I dried my tears, and went to sleep. When I awoke it was morning.

Soon after this I took my Bible and opened to Isaiah, 41 : 10. I did not know it was in the Bible, but there it was, the promise of that night, and I said, "God will help me." In a few weeks I did my house work. I can say I am very grateful that I have found the Truth which makes free. I am thankful to Mrs. Eddy, our Leader, who has shown us the way to practise Christ's teachings.

A. M. K., Rumney, N. H.

---

I would like to tell of the healing of a boy who was born blind. It was while he was distributing medical books in the various office buildings of this city, that he found his way to my office, and asked if he could be healed, and remarked that it would be a miracle. To human sense it seemed to be so, but with God it was divinely natural.

According to his own statement, he had been treated by the specialists of this city and of New York, but they had failed to do him any permanent good. His eyelashes were matted together, and he was just able to feel his way through the corridors of the buildings.

It was a case of twenty-three years' standing, and after five treatments he was able, for the first time in his life, to tell the time from the Court House clock at eight o'clock in the evening, from my office window.

The environments were such that the restoring of sight was a small part of the healing. When Jesus healed the withered hand, the taunt of mortal mind was too great to give God the glory, and so it was in this case. He was not willing to give Christian Science the credit. Then I left the case with God, until they were ready to get Science and Health, knowing that nothing is lost, and that all error will go out before the blaze of Truth. The moral elevation was as great as any part of the healing. The tobacco habit, in a very vile form, was also destroyed. Not being able to see, and having to care for himself, his clothes were in a very neglected condition. He now attends Christian Science service neatly dressed.

Although he never attended school a day in his life, he is now able to read the Bible and Christian Science literature of the very finest print, and when asked where he received his education, the reply is, "It was given to me from God."

On meeting his former physicians, two of the best oculists in this city, he was asked to give a reason for his marked improvement. His reply was, "God has healed me. I have been treated by Christian Science." He then proved his testimony by telling them the correct time as they held the watch before him.—Rosetti Kneip, Indianapolis, Ind.

---

### Special Notice.

Will our contributors please give the page and line of all references to our Leader's works, and the book, chapter, and verse of all Bible references. Thoughtful attention to this matter will be greatly appreciated.

---

### Erratum.

In our issue of December 25, first page, second column, line 14 should read 257th edition instead of 157th.

---

I am not earth-born, though I here delay:
Hope's child, I summon infinite powers,
And laugh to see the mild and sunny day
Smile on the shrunk and thin autumnal hours;
I laugh, for hope hath happy place with me;
If my bark sink, 'tis to another sea.

Channing.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to William B. Johnson, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

Stephen A. Chase, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

He [the editor of *The United Presbyterian*] thinks that the special need of the Church at the present time is expressed in words which he quotes from Dr. William Speer: "It is the prayer that shall bring again the rushing, mighty wind, so that it shall fill not this or that house, but the nation, the world; that shall scatter forth thousands of evangelists, and teachers, and helpers." Undoubtedly the Church does need prayer, and it needs the movement of spiritual forces similar to those that operated on the Day of Pentecost. But what the Church needs more than anything else at the present time is an appreciation of the immutable and universal character of spiritual law. People take the laws of nature seriously, but they think that the laws which pertain to the soul are of little account, if, indeed, they are really laws at all. We need to realize practically that the spiritual laws of life cannot be affected in any way by our obedience or disobedience, by our respect or disrespect for them; but that we are blessed or condemned by our attitude to those laws. If the members of our modern Churches really felt that they were not simply playing at Church, the Church would not be a social resort, it would not be one among the many respectabilities of life, but would become the exponent of principles of living which men could take home seriously to themselves, and go to work and practise in their daily lives in precisely the same way as they put into practice business or agricultural truths.

*New-Church Messenger.*

The crisis of the Church is upon us. From one point of view the Church is in a position of tremendous power. Its membership is counted by millions; it numbers among them the illustrious and the great. It is equipped with institutions for every work; schools of every grade, almost beyond number, and agencies for the transmission of knowledge. It is in close touch with the whole world. Men are hastening with the speed of the wind, and words are flashing to the ends of the earth in the lightning's path. In the hands of the Church is wealth untold to command all. And yet the world is driving on in a mad career of worldliness. The Church, the witness of Jesus, is speaking with a voice too weak to be heard outside its walls. The great agency of God for His kingdom is exhibiting but little power as against the kingdom of Satan. We believe in the kingdom of God, and are sure of its ultimate extension to all the world, but at the present time the power promised is not upon the Church at large.

*The United Presbyterian.*

The Rev. Frederick B. Mott, in an article in *The Christian Register* on "Religion in England," says:—

"In my socialist friend's view a great body of earnest citizens, severed from the National Church on account of its formalism, and equally from the dissenting denominations on account of their bigoted sectarianism, have intellectually become agnostic, while expending their energy neither in emotion nor theological discussion, but in practical work. . . .

"Formalism, divorced from living truth, drugs a nation into deadly slumber. Cold facts alone freeze the soul in icy isolation, sap heroism and the daring instincts of the heart yearning for an inspiration beyond thought more profound than reason, while practice inevitably, even though insensibly, ceases when the arteries are severed which feed it with messages from the eternal. Our only promise for the future must therefore lie in some great reuniting, unifying movement by which the living power of Christian faith may be restored to the fulness of its proper heritage."

The Rev. Cunningham Geikie, D.D., says in *The Examiner:* "The true Church is not that of robes and ritual and fashion, but an invisible union of the true worshipers, who are God's in spirit and in truth, whatever name they may bear among men. Summed up by Christ himself in the one word, Love, his blessed faith is as open a door to the slave as to the emperor; for the meanest can love as meekly and obey as sincerely as the highest. The shining round of the sun mirrors itself in the wayside pool as well as on the bosom of the ocean. Its image shines back from both with impartial perfectness, if there be an equal calm to receive it, but that is found more often on the lowly mountain tarn, or the lakelet of the woods, than on the broad breast of the ocean. Yes, and it shines back as if from depths as far down as the heavens are high, from the lonely spring in the desert, and as gloriously, as from the proudest waters. All can love, and holy love is the image of God."

The full text is before us of the apostolic letter of Pope Leo XIII. appointing a commission to promote the study of the Scriptures. It is to consist of several cardinals of the Roman Church, with a number of distinguished Biblical scholars of different nationalities. They are to study modern researches in Eastern lands, philology and ancient Oriental languages, and re-examine the manuscripts of the Scriptures. The papal sanction is given to the use of the aid furnished by heterodox Biblical critics and the cultivation of the art of criticism, though with a caution. It is expected that the result of the investigation will be given in an apostolic statement declaring "what is to be inviolably held by Catholics, what is to be reserved for further investigation, and what is to be left to the judgment of private individuals."

*The Congregationalist and Christian World.*

"Bring forth fruit with patience." Let others think religion, or theorize on religion, or talk about religion, be it yours to live religion. It is not creeds, or party, or churchmanship that will save you. All the dogmatic theology of Christendom will not save you. A dry, orthodox creed, or confession of faith, could as little insure the salvation of the soul, as a rule in algebra or a problem in mathematics. Bring forth fruit. Be noble. Love God. Open the drooping leaves of your renewed natures to the gladsome sunlight. In one word—"do those things that are pleasing in His sight." This is the want, the crying demand of our age—a living Christianity, epistles of Christ that may be "known and read of all men."—MACDUFF.

It is time now to ask the question,—and elect souls everywhere are asking it,—not, Is this according to the creed? but, Is the creed true, and are facts, accurately reported, the bases of the creed; or are the supposed facts deliverances of the human imagination, or events not rightly understood or set down in order as they happen? If this world floats in a universe in which justice is done and right things will be established, we need fear no investigation; but if it is a bad world and a universe of chance, we may do well to shut our eyes to the truth and make such terms as we can with the powers that be.

*The Christian Register.*

The Bible is the intelligible revelation of an intelligent and loving God to His intelligent, reverent, and obedient children. It is intended to be understood, appreciated, taken into the mind and heart, and incorporated in the life. The Bible is not an amulet, to preserve us from injury like the charms of the sorcerer, though some people seem so to regard it. The Bible is not a rosary to be read and repeated as though the mere recitation of the verses, like the telling of the Buddhist's beads, with no more intelligence than a parrot's, will bring us merit and ward off spiritual and bodily danger.

*The Examiner.*

"Grapho," a correspondent of the *Advance*, says wittily: "The man who is trying to reconcile religion and science has been with us a good while. He has a job which lasts. It is good for all kinds of weather and for a lifetime. There is no deadline of fifty in it." The point made is that true science and true religion can never be at a variance. Both are from the same author and there is no need for reconciliation.

*The Universalist Leader.*

There is just one ground of hope for the world—the reign of Christ in the hearts of men. No superficial Christianization can effect the needed cure. The present state of society in Christendom shows that nominal Christianity is not enough to remedy the evils that afflict the world. Christ regnant in the heart, his spirit controlling the life—this is the sole remedy for the ills of humanity.—*The Examiner.*

To perfect in you the image of God is the work of a life, the great work. It can be accomplished only by a life. Not by a few brief resolutions in your better moments, though they have their use, but by the plain path of daily duty is this won; by faithful work and pure thought, pure and holy love, the heart of goodness and soul of faith.

THEODORE PARKER.

Not in careless pleasure, but in watchful love and trust of God your Father, in faithful, fervent desire to be His child, is the secret of life's victory and of the overcoming of death by life.—STOPFORD A. BROOKE.

Seasons of calm meditation and of heartfelt devotion appear to be needful conditions, if we would richly attain that wisdom of which we read: "Whoso findeth me find eth life."—CHARLES B. UPTON.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## Items of Interest.

**National.**

During the year 1902 the number of National banks increased from 4,291 to 4,666; the total resources increased from nearly five and three-quarter billions to over six billions—more than a million a day; the increase in loans and discounts was about three hundred millions. The amount of money held in reserve November 25 was over five hundred millions, and the capitalization at that date was $714,616,353.

Dies for the new Philippine coinage are being cut at the Philadelphia mint in anticipation of the favorable action of Congress authorizing such a coinage. The Philippine Commission has agreed to indemnify the mint management for this expense in case of the failure of Congress to pass the coinage bill.

The San Francisco-Honolulu Cable, which the cable steamer Silverton has been laying, was completed in time to allow New Year's greetings to be sent to the United States from Honolulu. It is expected that by July 4 the work of continuing the cable to Manila will have been completed.

Ambassador McCormick, who succeeds Ambassador Charlemagne Tower at St. Petersburg, was tendered his farewell reception by Emperor Francis Joseph at Vienna last week.

On December 29 the new time ball erected on the top of the Ames Building, Boston, by the United States Hydrographic Bureau was dropped for the first time at 12 noon.

**Foreign.**

December 29, the viceroy, Lord Curzon of Kedleston, made his state entrance into the capital of the Moguls at Delhi, India. This constituted the opening of the durbar held to celebrate the accession of King Edward as Emperor of India. At the head of the procession, mounted upon an elephant, rode Lord and Lady Curzon; behind them were the Duke of Connaught, who represented King Edward, and the Duchess of Connaught; then followed in the order of their precedence the seventy ruling chiefs. At the rear of the procession rode General Lord Kitchener, the commander-in-chief in India, surrounded by a brilliant staff and followed by the heads of the provinces, with escorts of Indian cavalry and tribal leaders from beyond the border line. The entire route was lined by British and native troops. Huge crowds of onlookers witnessed the spectacle, which, it is claimed, has never been surpassed in magnificence. The announcement of the coronation of King Edward was made on New Year's Day. His message was received with great enthusiasm. The ceremonies will continue a fortnight. The total expense, it is estimated, will be $1,950,000.

A new Russian route to Persia is being opened via Odessa, Batum, and Baku to Lenkoran and thence to Enzeli, on the Caspian Sea. The route will be partly by rail, partly by sea. The distance is about a thousand miles.

France and Gautemala have agreed to submit to the International Arbitration Court at The Hague the French claims against Gautemala.

The Brazilian government has made an appropriation of $200,000 to defray the necessary expenses of an exhibit at the St. Louis Exposition.

If present plans are carried out, half-a-dozen of the Boer leaders will settle in Mexico and conduct extensive ranches.

**Industrial and Commercial.**

Anticipating the removal on January 1 of the tax of ten cents a pound on tea imposed during the Spanish war, an importing concern had accumulated at the bonded warehouse in Boston a stock of about twenty thousand chests of tea. During the last three days of last week this was shipped to various points of New England and beyond.

If the chests of tea shipped during these three days were arranged in a pile, having one hundred chests at the bottom in the form of a square and successive layers piled one upon the other, it would make a monument 312 feet high. In other words, this tea monument, if actually constructed, would tower into the air 92 feet higher than Bunker Hill monument. If the chests were spread out on the ground, they would cover about ten ordinary city lots. If they were placed side by side in a row they would reach within fourteen inches of six miles.

It is safe to say that this is the most important event in the tea history of Boston since the famous "Tea Party" of 1773. In quantity shipped and activity of work, the case has never, so far as is known, had its parallel.

Statements compiled as to Colorado's production of beet sugar show that five factories, representing a capital of $6,000,000, have turned out $8,000,000 worth of sugar during the year. Four new factories are to be built for the coming season. Seventy-five per cent of the total amount is paid to the farmers for beets and labor.

The United States Steel Corporation has issued a circular to its officers and employees in which it announces its intention to inaugurate a system whereby any employee on its pay-roll may become a permanent stockholder and share in its profits. One hundred and sixty-eight thousand men are employed by the company.

A new steamship service between Boston and Manchester to be operated by the International Mercantile Marine Company, with vessels furnished by the Leyland Company, Ltd., in connection with the New York, New Haven, and Hartford Railroad, will be inaugurated by the sailing of the Caledonia January 10.

Increases in the wages of the employees of the Delaware, Lackawanna, and Western Railroad amounting to about $500,000 per annum, and of the employees of the Baltimore and Ohio averaging seven or eight per cent, went into effect January 1.

The Memphis Long Distance Telephone Company, consolidating all the independent companies in Tennessee, Arkansas, Mississippi, Kentucky, and Texas, with connections with New York, Boston, and other Eastern cities, has been projected.

Evidences of industrial progress in the South during the past year are shown in the investments of more than fifty million dollars in constructing new railroads and twenty million dollars in cotton mills.

**General.**

The Automobile Club of Great Britain has planned an endurance run for 1903 that will be more severe than any hitherto attempted. No stops whatever are to be allowed, and an operator may not even clean his vehicle. Every minute spent in examining, oiling, or in any way touching the machine, except to regulate its speed and guide it, will be penalized.

The run will be one of one thousand miles on successive days, starting and finishing at the Crystal Palace. Not even punctures, or blocked roads, or railroad gates will be accepted as non-penalizable. Every one must take his chances. When the machines come in at night the operator must jump out and leave them without doing a thing. If the machines must be oiled or tinkered, the operator must do it in the morning, and be penalized one mark for every minute he spends at it.

The proposed dredging of the Tiber at Rome should result in some rich discoveries of works of art. In 1877 the dredging, which hardly went more than three feet below the bottom, brought to light an immense number of antiques; and when the Garibaldi and Sisto bridges were built the excavations revealed a great number of coins, medals, sculptures, bronzes, brasses, gems, pottery, and marbles. None of the objects, with the exception of some iron articles, had suffered much from their long submersion, which varied from fifteen to eighteen hundred years.

In proportion to the student enrolment, Johns Hopkins has one instructor to every four students; Cornell has one to eight; Yale one to nine; Columbia, Harvard, Northwestern, and Pennsylvania, one to ten; Leland Stanford Junior, one to eleven; California, Minnesota, and Syracuse, one to twelve; Nebraska and Princeton, one to thirteen; Michigan, one to fourteen; Missouri and Wisconsin, one to fifteen; Indiana, one to twenty-five, and Chicago, one to twenty-seven.

The Greek Terra-Cotta Room in the Boston Museum of Fine Arts contains 869 specimens, and is the largest collection on this continent. There are but four greater in Europe—the Athens, the Berlin, and the British Museums, and the Louvre. The collection represents finds from Tanagra, Myrina, Tegea, Smyrna, Tarentum, Corinth, Attica, Bœotia, Magna Græcia, Cyprus, etc.

Eight statues, twelve feet high, for the new cathedral near the palace in Berlin, have been approved by the German Emperor, and will take their places on as many prominent pedestals. They will represent Frederick the Wise, Albert of Prussia, Joachim the Second of Prussia, Philip of Hesse, Luther, Melancthon, Calvin, and Zwingli.

In the intercollegiate chess tournament just ended the colleges finished in the following order: Columbia, Yale, Harvard, Princeton. At a conference of the presidents of the chess clubs held during this tournament, the challenge from Oxford and Cambridge for the fifth annual cable chess match was accepted.

The International Mercantile Marine Company, organized by Mr. J. P. Morgan, proposes, it is said, to inaugurate an arrangement for a fast passenger and mail steamship service from both sides of the Atlantic for each day of the week except Fridays and Sundays.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### The Spread of Disease.

UNWISE and unscrupulous advertising of disease symptoms is conceded by most people to be harmful, yet very little is said against such practice, and few consider to what extent disease becomes prevalent because of much talk about it. When we consider the robust health of our ancestors in the days when less was known of disease, we are obliged to admit that with the increase of material knowledge has come an increase of diseases. Many types and symptoms of disease exist to-day which were not known in earlier days. It might be well to study the cause of this condition.

It is claimed that physicians are better able to cope with certain forms of disease than in former years. It is said that they deal more effectually with contagious diseases. This may be true, since fear is a great factor in the production of disease, and especially infectious and contagious diseases. It is probably easier for the kind, assuring physician to heal acute sickness than to overcome chronic troubles. This can be accounted for on the basis that all causation is mental, that disease originates in the mind of the patient before it is manifested in the body. Though a patient may not be conscious of any fear of a specific disease, his belief in the general uncertainty of health and the laws of contagion place him in a position where he has a standing invitation to all sorts of trouble. He should dwell in the consciousness of the omnipotence and omnipresence of God, and thereby close the door against the intrusion of disorder. It is reasonable, therefore, to conclude that much ado about disease and trouble tends to keep the mind filled with prospective calamity, and not only fosters unrest but makes the individual a more easy prey to disease and trouble. Even accidents and catastrophes more readily reach the fearful than those who are calm and composed. Sensational stories about casualties, vivid pictures of disease, in its varied symptoms, are not healthful for the same reason that the study of immoral pictures is not conducive to spirituality. They tend to debase one's ideals. We should keep in mind the picture of God's child, protected, sheltered and sustained by the divine Omnipotence and Omnipresence, if we would be free from fear and anxiety and governed by the unerring and unfailing Intelligence. Thus we would conform to the requirements set forth in the Scriptural text, "Seek ye first the kingdom of God, and His righteousness, and all these things shall be added unto you." And the Psalmist's declaration, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

There is in the Scriptures no promise of safety and rest in the study of material things, in the contemplation of evils, discords, imperfections, and diseases. This is the promise, "Thou wilt keep him in perfect peace, whose mind is stayed on Thee." Many an individual after the careful study of a specific disease has concluded with a well-developed case of that disease. Many a one after the careful study of symptoms in a medical advertisement has laid a foundation from which he has developed the very symptoms and diseases which have been so vividly portrayed to him. How often a retrospection of one's troubles has brought about their renewal. How often the mere telling of a by-gone toothache has produced a return of the pain. In the writing of news reports and in the recounting of thrilling adventures, startling developments, dangerous experiences, horrible diseases, the temptation always is to indulge in a vivid portrayal if not an exaggeration. We may assume that all speakers and writers desire to present a fair and honest statement of facts, but unless they are restrained by a knowledge of the harm which is produced by evil tongue and pen pictures, they are likely to yield to the temptation of exaggeration and thereby effect unnecessary evil.

What we need is to be governed by divine Principle. When it is understood that the same power which protects and saves from disease provides for all our wants, and mankind are governed accordingly, inconsistency, disease, poverty, and trouble of every description will be effectually and permanently destroyed.

ALFRED FARLOW.

### A Plain Statement.

To the Editor.

*Dear Sir:*—In your editorial in Friday's paper, entitled "Mrs. Eddy's Edict," you place a construction on her advice to Christian Scientists which is altogether different from that placed on it by those concerned. I ask you therefore kindly to give space to the following statement:—

Mrs. Eddy does not state that Christian Science is unable to cope successfully with contagious disease, nor was her advice so construed by those to whom it was offered. There is no reason why the promises of Christ relative to the healing of disease through the divine agency should not apply to contagious disease as well as to any other; but the popular opinion regarding the transmission of contagion, and the general and justifiable ruling of health officers that persons shall not go in and out of places where there is contagious disease, makes it incumbent upon Christian Scientists to respect these conditions of thought. Mrs. Eddy's advice is very plain to those to whom it was given, and must appeal to all as eminently sensible, so that all this talk about Mrs. Eddy's confessing that Christian Science is unable to handle contagious disease is "much ado about nothing."

Your statement, "Christian Science has never, nor will it ever, cure a case of genuine sickness," must surely be meant for a playful joke, for you are in no position to prove this assertion when thousands of the most respectable citizens of this country testify to having been healed of disease through Christian Science. You did not give your definition of "a case of genuine sickness," but it may be presumed that you would consider such things as cancer, tumors, inflammatory rheumatism, fevers, septic poisoning, etc., as "genuine sickness." If you do not, I have nothing more

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

to say, but if you do, and doubt that the practical application of Christianity in Christian Science has healed such cases, any Christian Scientist will be pleased to give you such testimony and evidence of the healing of these and many other diseases as you will not be able to question. I might here say that a gentleman at the head of one of the largest business concerns in this city, whose office is not very far from yours, recently told me of his healing through Christian Science of a disease so terrible and fearful in its ravages upon his body as to beggar description. He is now in perfect health. If you desire to know more about this you need only make the request.

In conclusion, I will say that Christian Scientists never seek to force an acceptance of their beliefs upon others. They simply ask for just and truthful statements when they are under discussion in order that the public may not be misled. An assault upon the feasibility of Christian healing is virtually an assault upon Christianity itself; for healing the sick and reclaiming the sinner were always correlated by Jesus. A perusal of the last chapter of St. Mark's gospel will make it plain that healing the sick was made an evidence of Christian faith and discipleship. Do we merit scorn for trying to conform to the demands of Christ, and proving our faith by our works?

R. L. ZILLER.

## A Frank and Fair Rejoinder.

To the Editor.

"The plausible phases of Christian Science" presented by Mr. Kimball in his recent lecture in your city, seem to have disturbed the Rev. Mr. Springer, and he has rushed on to dangerous ground in assuming to criticise a subject of which his own testimony shows him to be entirely ignorant.

It would seem that he half suspected his weakness from his manner of disconnecting sentences from their context here and there in Mrs. Eddy's writings, and grouping the crippled expressions to suit his own fancy. I leave it to your readers if this is true criticism. Any one knows what the Bible could be made by such dissection.

Does the inability to understand a subject cause it to be an absurdity? Does the gentleman understand the principle of Marconi's wireless telegraphy in all its applications? No. Will he admit it performs what its inventor claimed for it? Yes. Does he believe that still higher effects may be obtained through a closer application of electrical science? Yes. How does he arrive at these answers? By the results obtained. Is there anything absurd about it because it is wireless? Oh, certainly not, it is governed by law. Again, does Mr. Springer understand God, His omnipotence, His wisdom, His multiform resources, the order of His working? No. Can he heal the sick through his understanding of God and man's relation to Him? No. Does he deny that God's omnipotence fails in any direction? Certainly not. Does he deny Jesus' words: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father"? No, but he does not understand them. Does he deny that Christian Scientists are learning to do some of the Master's works by healing sickness and sin? He cannot without either manifesting gross wilfulness or ignorance, for the testimonies of too many reliable witnesses, both clerical and medical as well as others, would confound him.

The problem of wireless telegraphy and its underlying law he does not understand, yet he admits its truth because of its results. The Principle of Christian Science he does not understand, yet while obliged to admit its power he calls it an absurdity. Can our readers reconcile the two verdicts?

The Bible says, God is Spirit. Mr. Springer quotes Mrs. Eddy, "The individuality of Spirit . . . is unknown" (Science and Health, p. 330). Can Mr. Springer explain it? The Bible says, God created man in his own image and likeness. Then if God is Spirit, His image and likeness must be, is, spiritual. Mrs. Eddy again quoted, "We know no more of man's individuality, as the true divine image and likeness, than we know of God's" (Science and Health, p. 258). Is there any absurdity in this comparison? Can Mr. Springer offer an explanation of Spirit that will satisfy the average human mind?

Mr. Springer has made the mistake of attempting to deduce a material result from a spiritual hypothesis, and because of failure he charges Christian Science with absurdities. Perhaps one of the first lessons the Christian Scientist learns is the one the Master taught Peter when his interest in John's work caused him to forget his own problem and ask, "And what shall this man do?" Like many mortals of to-day he merited his rebuke: "What is that to thee? follow thou me."

The Christian Scientist interferes with no other church, creed, or physician, finding enough of the sick, sinning, and weary laden who, having lost all hope in their present religious and medical beliefs, are reaching out for some practical way to realize God as indeed a very present help in trouble.

As to contagion, Christian Scientists have proved conclusively for themselves and all who have fairly examined their work that they can successfully heal such diseases, therefore their position at this point is where it has always been.

They understand Mrs. Eddy's advice to mean that, until the general thought of the public is more willing to accept the efficacy of Christian Science healing in contagious diseases, it will be wiser to leave such cases to the care of systems from which there will be less fear awakened among the masses.

It is also true that Christian Science treatment is and will be, in a still greater degree, more preventive than remedial, for it is an exception that a disease is allowed to reach a stage where its symptoms could be diagnosed as contagious. However, should such an occasion occur, Christian Scientists will be found, as they ever have been, law-abiding in their promptness to report and isolate their patients. No case of the spread of contagion has ever been proved against a Christian Scientist.

Even in Greater New York, with a death record from diphtheria and croup of over twenty-four thousand in the year 1901, the President of the Health Board says: "Since I have been at the head of this department I have never received proof of a violation of any rule of the Sanitary Code by Christian Scientists, and as long as they conform to the rules of this department, they are no worse than any other citizen."

I have no unkind word for Mr. Springer in his inability to understand and apply the basic law of Christian Science, for, like many others, I had a like experience, and not until I realized the meaning of the Master's words, "Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein," or in other words, not until I was willing to throw down preconceived opinions of God, man, and salvation, gained only from material reasoning, and in a meek and humble thought ask for the spiritual understanding, did I receive the light I sought. Christian Science does not force itself on any one, and when one is satisfied with his present condition and wishes no other, it is wise to let him alone. Should at any time, however, the clouds seem dark and God's strong arm of love a long way off, if my brother will read Science and Health with an honest desire to know and apply the principle of its teaching, he, like thousands of others, will receive a blessing of which he now little knows.

CHARLES K. SKINNER.

## The Library of Congress and its Treasures.

IN the vernacular of social and official life the Library of Congress is always spoken of as the Congressional Library; and so it is generally known by the plain people. There is now before the joint committee on the Library a proposition to change the name by act of Congress to the National Library. It is fair to presume that this change will be made some day, because the vast and valuable library is no longer the Library of Congress exclusively. It is a public library, open day and night, and Sunday afternoons, for the benefit of all who may desire to occupy places in the reading room and order books. A semi-official publication announces: "It is, in effect, the library of the whole American people, directly serving the interests of the entire country." In his later years Thomas Jefferson always referred to it as "The Library of the United States."

The room which was occupied by the Library in the Capitol building had shelf space for 350,000 books. When the removal was made to the new building there were 700,000 books, 250,000 pamphlets, 500,000 sheets of music, 25,000 maps, and 26,000 engravings. The mass of material was so jumbled up that it was well-nigh impossible for the librarian or his assistants to lay their hands upon any specific volume within a reasonable time for ready reference. The veteran librarian, somehow, kept the approximate locality of the books in his memory. To have them catalogued was absolutely impossible, except as to their actual existence. The library now contains more than a million volumes of books, exclusive of all other material.

In 1872 Librarian Spofford began the agitation for appropriations for the rental, lease, or erection of a suitable building. He was fourteen years engaged in that agitation before an act of Congress permitted the laying of the corner-stone for the present palace of literature. A description of this architectural conception cannot be given in limited space. It stands pre-eminent over all public buildings, and is, without doubt or qualification, the most beautiful building in the world, not even excepting Taj Mahal, the famous building of beauty in India.

Col. John L. Smithmeyer, the architect, is of Austrian birth. He came to this country in 184_, a well-equipped civil engineer, with considerable learning in architecture. To him was committed the honor of preparing plans for the new library building which Congress had authorized. He did the work with exceptional skill, and everybody who has seen the product pronounces it one of the most perfect works of man. It is a pitiful commentary upon our government, that this man should now have a claim before Congress for compensation for his marvelous intellectual labor.

Although the Library was removed in 1897 from its inadequate quarters at the Capitol to the new building, the work of classification is yet incomplete, and the librarian does not know exactly the number of these treasures; but he says that there are more than 1,000,000 books and pamphlets; 55,700 maps and charts; 295,000 pieces of music; and upwards of 85,000 engravings, etchings, lithographs, photographs, and other prints. The Periodical Reading Room, recently opened to the public, has constantly on file 300 newspapers, and 2,000 magazines.

The Smithsonian deposit comprises more than a quarter of a million volumes. This deposit is constantly augmented by a system of exchange, whereby the Library receives annually a body of scientific literature comprehending practically everything of value issued by every scientific society of standing in the world. This unrivaled collection forms a scientific library of inestimable value. It is drawn upon by Representatives and Senators for the benefit of scientific men and societies, in all the states.

The copyright law of 1897 provides that any author, artist, or publisher who desires to obtain exclusive privileges must send two copies to be deposited in the Library. By means of this law, and its cumbersome predecessor on the statutes, the Library has accumulated the entire current product of American literary effort, and the deposit of this material alone would make the Library national in character. In the copyright office, on the ground floor of the building, it is ascertained that during the past fiscal year the total number of entries was 95,000; 9,000 being the product of foreign effort, and 86,000 the result of American work. Under this law, moreover, the Library has received an enormous number of engravings, photographs, and other works under the classification of fine arts. The total entries, from the date of the original and imperfect act of 1870, to the present, is 1,150,000.

One of the gems is the collection of 9,500 Orientalia; the most important in this country and one of the most valuable in the world. It is given a separate division for custody and administration, and is expected to confer great distinction upon the Library. Its basis was the collection formed by Caleb Cushing, our first minister to China. Among them are works not found in the British Museum, the Wade Collection, or in Wylie's Chinese literature. The "thirteen classics" alone number 366 volumes. There are fine sets of the Vinaya (Discipline), the Sutra (Precepts), and the Abhidharma (Metaphysics); also Choo He's history and statistics of Canton. Here also are 140 volumes of Japanese government publications, and the Wakan sansai dzuye, standard dictionary of 125 volumes.

"There is no printed catalogue of the present contents of the Library," is an official utterance of Librarian Putnam. "Between 1880 and 1897 no catalogues of any sort were issued. There have been lists issued on selected titles. No printed statement can be furnished an inquirer from a distance. The Library expects ultimately to place a card catalogue in some institution in each local center of important research."

With this official announcement in view, it will be seen that only a superficial statement can be made concerning the innumerable contents of this national treasure-house of the cream of the intelligence of the world in all ages. Nine other public libraries in the various departments of the executive branch of the government contain upwards of 1,000,000 volumes, and they will ultimately be added to the contents of the Congressional Library. It is partly in anticipation of this event, that the librarian will not now employ his comparatively meager force in the preparation of a "complete catalogue," when the prospective increase would make such catalogue incomplete and practically valueless.

Pride and pleasure commingled fill the heart and brain of every country-loving American who steps forth from the Capitol rotunda, glances across the broad plaza, and, for the first time, sees the marvelous building of the Library of Congress; the most perfect bit of architecture on earth. The Capitol faces east, the Library west. The Library building is four hundred and seventy feet long, and three hundred and forty feet deep. Exclusive of approaches it occupies three and a quarter acres. Its floor space is almost eight acres. The exterior walls are of Concord granite, all of it, however, polished well-nigh as perfectly as marble, despite its texture. It is in the style of the Italian Renaissance. The decorations, external and internal, from the fountain of Neptune at the first external grand granite stairway, to the gold-crowned dome, every ounce of material is the most perfect procurable, and every stroke of workmanship is from the hands of the most skilful artists and artisans. The narrator merely records the expression, oft repeated, of visitors who have seen the round world with all its wonders:—

"It is beyond criticism—magnificent—perfect."

SMITH D. FRYE.

# Among the Churches.

### From Concord, N. H.

The Christmas services at Christian Science Hall yesterday [December 21] were largely attended, visitors being present from Boston and elsewhere.

The hall was beautifully decorated with festoons, wreaths of laurel, and Christmas greens.

Following the regular service occurred the Christmas exercises of the Sunday School, in which the children participated. In place of the regular lesson they were told the story of the birth of Jesus and significance of the Christmas anniversary. The Christmas gift which was made each child was a beautiful copy of the Holy Scriptures.—*Concord* (N. H.) *Monitor.*

### The Growth in Chicago.

The first Christian Science Church of Chicago was founded in 1886. Its original membership was about twenty. It met in various halls during its early years, and it has always had extraordinary vitality. It was holding meetings in Kimball Hall during the years from 1887 to 1894. At the latter time it had outgrown the capacity of that hall, and from there removed to the Auditorium, where its services were held nearly three years.

The first church edifice was erected on Drexel Boulevard in 1897 at a cost of $110,000, and was dedicated free of debt, while the very large expenses of the Auditorium were being maintained.

The membership of First Church in 1897 was 704. It is now 1,383, notwithstanding the fact that four churches, aggregating 490 members, have been formed from its membership during this time.

At the time the First Church was planned the seating capacity of fifteen hundred was thought to be ample for some time to come, but at the time of dedication it was apparent that the congregation had grown beyond the capacity of the church, and people were soon being turned away from the services on account of lack of room. Accordingly, in 1898 and 1900, four new churches were formed from the membership of First Church. These were Second Church, on the North Side; Third Church, on the West Side; Fourth Church, at Englewood; and the Christian Science Society at West Pullman. The membership of the North Side church, called Second Church of Christ, Scientist, is indicated by the following figures:—

| | |
|---|---|
| 1898 charter membership | 171 |
| 1899 membership | 297 |
| 1900 membership | 357 |
| 1901 membership | 449 |
| 1902 membership | 531 |

The following figures indicate the growth of the West Side church, called Third Church of Christ, Scientist:—

| | |
|---|---|
| 1898 charter membership | 168 |
| 1899 membership | 224 |
| 1900 membership | 308 |
| 1901 membership | 411 |
| 1902 membership | 503 |

The membership of the Englewood church, Fourth Church of Christ, Scientist, is as follows:—

| | |
|---|---|
| 1900 charter membership | 120 |
| 1901 membership | 242 |
| 1902 membership | 286 |

The total membership of all the Chicago churches, including the West Pullman society, is about 2,750. These figures do not represent the congregations, which in all the churches except the First are more than double the membership.

In the First Church the membership nearly equals the seating capacity of the building.

The First Church is again overcrowded, and a movement is on foot to form a church of its members residing in Hyde Park and Woodlawn, which will be called Fifth Church, although virtually making the sixth church in this city. All these churches were organized with the hearty co-operation of First Church, and are operating in perfect unity with each other.

Many of the neighboring suburbs have flourishing churches. Among these are La Grange, Oak Park, Wilmette, and Highland Park. Evanston has a large and active church, which has a beautiful building of its own, and Park Ridge and Edison Park have lately united in erecting a building which is a quaint and interesting example of church architecture.

Besides the First Church building, the Second and Third Churches have their own edifices, which were completed in 1901 at a cost of $240,000. They were all built by the united efforts of the Christian Scientists of this city, and are universally considered beautiful examples of architectural skill.

The Christian Science Reading Room Association is under the auspices of all the churches, but is a separate organization. It is conducted for the benefit of the public, affording a quiet resting-place for those who desire to read the literature, and a convenient place for those who wish to buy it. It was established in 1889 with twenty-six members, and for a long time had offices in the Inter Ocean Building, but some years ago moved to 6 Madison Street, and has now a membership of over eight hundred. Although working on a small capital, its business in the past year has exceeded $24,000. The association is supported by the voluntary contributions of its members, and it is no small factor in the humanitarian work being accomplished here by Christian Science. BICKNELL YOUNG.

### Union of Churches in Aurora, Ill.

It is with heartfelt gratitude for the blessings we have received that we send greetings to the Field.

Sunday, December 14, we had one of the happiest gatherings ever held by the Christian Scientists of this city, the union of First and Second Churches of Christ, Scientist, having taken place on that day.

Happy faces testified to the joy each one felt at being once again united in the work.

We feel sure that our Cause will progress more rapidly than ever before, and arrangements have already been made to secure larger rooms.

December 12, the following communications passed between the two churches:—

*Dear Co-Workers:*—Knowing that as Christian Scientists we could do better work for the Cause in Aurora if united, we, as officers of First Church, do sincerely and cordially invite you to join with us at this coming communion. Yours in Truth and Love.

First Church of Christ, Scientist.
ARTHUR E. KITTELL, *Clerk.*

Mr. Arthur E. Kittell, Clerk of First Church of Christ, Scientist, of Aurora.

It is with gratitude and pleasure that we acknowledge the receipt of your communication, and in response Second Church passed a resolution expressing its willingness to disorganize and to unite with First Church, Sunday, December 14. Yours in Truth.

JENNIE K. WATERS, *Clerk.*

### From Lincoln, Kan.

About 1894, the seed of Christian Science was first sown here. The growth seemingly has been slow, but a retrospective glance shows that the seed was not sown on barren soil, and much good has been accomplished.

For two years three or four of us met at houses and studied the lesson; two years later, others being added, we rented a room and held regular Sunday services. In October, 1898, a church was organized with ten members.

Our advancement, in point of numbers, has been slow, and at times we have felt discouraged, until we began to count our blessings. We have had three lectures, and about fifty copies of Science and Health have been sold, also many copies of "Miscellaneous Writings" and other works of our Leader. We have Science and Health in the public library, the school library, county jail, and county farm, and have distributed many copies of the *Journal* and *Sentinel*.

A corner lot for a church building has been purchased and paid for.

We feel very grateful to Mrs. Eddy for the revelation of Truth in Science and Health, and we wish also to express our gratitude to all the workers at headquarters. We feel grateful also to the faithful worker who so patiently and lovingly sowed the seed here.

MRS. LILLIAN T. HARLAN, *Clerk*.

---

### An Encouraging Report from Sandusky, O.

"Enter into his gates with thanksgiving, and into His courts with praise." It was in the condition of thought which the above Scripture indicates, that we entered into our new church room to hold our first service and also our first Thanksgiving service on Thanksgiving Day.

Our hearts were overflowing with love and gratitude to our dear Leader, for giving us this opportunity to serve God and testify to Christian Science.

A bit of the history of our little church for the past six months may help and encourage some other church.

On the twenty-first of last July new Readers were elected, also a practitioner was appointed to have charge of, and be in regular daily attendance at, the reading room. Since that time our Sunday and Wednesday evening services have grown in interest, the attendance has more than doubled, and all needs are more than supplied. The sale of Christian Science literature has correspondingly increased, twenty copies of Science and Health having been sold and the other literature in like proportion, over one hundred and seventeen dollars having been received for it.

In November we began to look about for larger and more suitable quarters, and we found a large room, beautifully located on the ground floor in the Masonic Temple Building. We had it newly decorated and purchased rugs, furniture, pictures, etc. We now have a very attractive room, and our hearts go out in love and gratitude to God, the giver of every good and perfect gift. We also lovingly remember the one who has given us Science and Health, from which we have come to understand, as never before, the meaning of Love.

Contributions came to us from willing and loving hearts and we had enough to meet all obligations, proving again that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

To us it was a beautiful demonstration that while on Wednesday at 4 P.M. our room was in seeming confusion, bystanders remarking that it would be impossible to have the room ready for service the following day, yet by six o'clock everything was in complete order and readiness.

On December 9, Mr. Edward A. Kimball of Chicago delivered a lecture on Christian Science to a large and appreciative audience in Carnegie Library Hall, and we know that great good will follow.

On Communion Sunday five persons were admitted to membership in the church.

We also have a new church building fund started, and are looking forward to the time when we shall have a larger church and a church home of our own.

"Out of the abundance of the heart the mouth speaketh."

MRS. MARY P. MARBLE.

---

### Church Organization in the City of Mexico.

The first meeting of Christian Scientists in this city was held during Christmas week of 1898, and on January 1, 1899, five persons commenced the service in a private house. In March, 1900, the Readers took class instruction and on July 13, 1901, the Scientists organized as a society. They elected Readers and started a Sunday School. Reading rooms were opened which were to be kept open daily from 9 A.M. to 5 P.M. This order has been preserved up to the present time, but meanwhile a circulating library for the free use of Science and Health and other works of Mrs. Eddy, was started. These works can be had on application to any member of the committee. The Christian Scientists have just taken a new step, organizing as First Church of Christ, Scientist, of the City of Mexico, holding their first service to-day [December 14] as a church organization, filing with the government the customary petition and copy of their by-laws.

*The Mexican Herald.*

In a private letter regarding this interesting occasion the First Reader writes:—

We are all happy over this perfected demonstration, and trust that by our next Communion service (June, 1903) we shall have a number of members to propose for the Mother Church. All our bills are paid up, rent and piano paid in advance, and we have in the bank about $250 toward our Building Fund and the fund for a lecture this winter or next spring. God has certainly set the seal of success on this dear work.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

---

Once more we remind our friends that remittances for subscriptions to the *Sentinel* and *Journal* should be made to The Christian Science Publishing Society and not to the Editor. The Editorial Department does not attend to the business affairs of the periodicals.

### Conscience not the Ultimate.

A SEEMING obstacle in the pathway of humanity's spiritual advancement has ever been the belief that individual conscience is and must be man's sure guide on every occasion, his highest tribunal for the settlement of all moral questions, his unfailing monitor when doubt and perplexity beset him.

Christians, however, cannot appeal to conscience as the final arbiter of right and wrong, of truth and error. To do so would blind them to the general interpretation of conscience as a shifting standard of human opinion, varying with the environment of the individual and largely defined by his mental and moral training. Its tendency to leave God out of the equation and to exalt the law of Moses above the Gospel of Christ Jesus, discloses its inadequacy for the ideal of spiritual growth. While obedience to the Mosaic Decalogue is a requisite of Christian character, and "Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled," the genuine and permanent fulfilling of the law comes through following Christ. In other words, a man may measure up to the human standard of the moral law without being a Christian, but he cannot be a Christian without fulfilling the moral law in every particular.

In the spiritual progress of humanity mortal mind's self-justification through conscience will cease and give place to true righteousness and spirituality. In the transition from the belief of life and intelligence in matter to the understanding of infinite Love, man will forsake his varying standards of finite good and cleave to the true standard of infinite Good. He will grow out of his uncertain concept of justice and mercy into the true concept of infinite Life. M.

### The One Talent.

THE man with the one talent, far from being only an imaginary personality performing his part in the setting of a parable, is one of the veritable foes of our own household. He invades the precincts of our domain through suggestion of self-depreciation, basing his arguments upon comparison with those whom we consider more free, whose environments are less restrictive, who have more money, more time, more strength to devote to God's service. Through self-justification he reverses, to our false sense, the impartial munificence of infinite Love, universal in its bestowal, and declares a partial and scanty allotment of ability, and would make us forget that God's gift to all is all, that it is always our demand, not God's supply, that is lacking.

Listening to this counsel of self-depreciation, self-justification, and false humility, we carefully hide away our one talent, bury it in the earth, until, through inactivity, even that which we have is taken away.

The teaching of the disastrous non-use of the one talent is impressive. No matter how brilliant the demonstration of our neighbor of the five talents, our work is neither helped nor hindered thereby. His beacon light, upon the hilltop, affords no excuse for us, if we keep not our fainter, lower light burning to lead the traveler safely through the shadows of the valley.

Humble, trustful, loving activity is demanded of each one,—activity that is content to fill the present moment with honest, earnest effort, never restless as to results, persistent though progress be slow, undisturbed by contrast, undismayed by difficulties. Every suggestion to neglect our duty to God or God's little ones is a temptation to hide our talent.

Activity is life, and neglect of the humblest talent brings to us the same merited rebuke which the idle and cowardly servant received. Now, as then, vigilance and faithfulness of activity are rewarded by enlarged opportunities of usefulness. The one talent prayerfully used swings wide for each the door of human possibility. S.

### The Inutility of Pain.

THE ministry of suffering has been a frequent topic for religious homilies, and the statement that our Lord was made perfect through suffering is often quoted as evidence that pain has a vital and inseparable relation to character.

This assertion of the necessity of suffering and its salutary effect is the logical outcome of its classification as providential. The maintenance of God's goodness and wisdom, together with the claim that sorrow and pain are "from the Lord,"—these render the conclusion inevitable that their end is beneficent, and that therefore we should accept the situation with grace, if not gladness.

A further logical outcome of the above premises has not been generally accepted, however, even by devout Christians; viz., that this divinely appointed experience should not be shunned or intentionally lessened, but accepted as a dispensation of that Love whose gracious purpose it would be un-Christian and rebellious to thwart.

The traditional view of this subject is frequently referred to in the non-religious press, and the following excerpt from the editorial columns of the *Boston Transcript* presents a lay opinion respecting our theme which is no less pertinent than logical. The writer says:—

"It does not seem to the ordinary layman that human suffering always results in bringing the sufferer nearer to

Digitized by Google

mental or spiritual perfection. . . . While it is true that strong souls rise upon the experiences that have caused them pain, it is not to be denied that weak souls are often made mean and uncompanionable by hardship. . . . If suffering is invariably a means of regeneration, the terrible oppressions endured by criminals in days gone by, and still in some prisons, should show results in better lives. . . . If pain is a certain means of salvation, men ought to endure it with satisfaction; but the fundamental requisite of Christianity is to prevent suffering even of one's enemies,—a curious command if we thereby take from our neighbor a means of regeneration. If spiritual excellence is to be surely attained by physical and mental pain, we ought to wish suffering to befall our relatives and friends, unless, indeed, we are prepared to believe that physical well-being is more desirable than spiritual perfection."

It is certainly difficult to escape the author's conclusions, and it is no less difficult to bring harmony and consistency out of the confused thinking which obtains in the religious teaching of the past regarding this matter. If suffering is divinely sent, it must be for wise and good ends, and we are wronging ourselves and dishonoring God in our every endeavor to escape or limit it.

When, however, we come to understand, in Christian Science, that suffering has no place or part in God's plans or government; that it is but the experience of the falsity and disharmony of material sense, the associate and outcome of the idolatry of false belief, then we know that it is as alien to God's child as it is to God; that it is neither real nor necessary in the spiritual universe, and that the only service it can render is in reminding us that we are out of the domain of Truth, that we are companioning with swine when we ought to be sharing the joys of our Father's house.

Suffering no more befits a child of God than does sin. Both are foreign to God and His reflection. Pain has place in our education only so far as we are consciously or unconsciously irresponsive to Love. W.

---

A representative of a Christian communion may not fairly reflect its thought, but if his utterances are heard without protest there is a strong probability that kindred opinions are entertained by some of his confreres.

From this point of view the reported statements of Rev. R. P. Johnson before a recent Baptist congress, become significant as another evidence of that trend of thought which means the ultimate displacement of all ceremonial requirements for admission to church fellowship. He said in part: "To make baptism essential to church membership is to perpetuate its cleavage in the body of Christ along the line of ceremony merely. It would compel us, for the sake of a ceremonial observance, to disregard the fundamental Biblical principle of the right and duty of individual freedom of Scriptural interpretation. The policy of receiving members without baptizing them has been followed by many English Baptist churches. Its adoption here would not mean the discontinuance of baptism nor the disappearance of immersion."

---

### Memory of Good Deeds.

The memory of good deeds will ever stay,
A lamp to light us on the darkened way,
A music to the ear on clamoring street,
A cooling well amid the noonday heat,
A scent of green boughs blown through narrow walls,
A feel of rest when quiet evening falls.

EDWIN MARKHAM.

In "Lincoln and other Poems."

## From Our Contributors.

### To-day's Duty.

ELIZABETH C. WICKERSHAM.

OURS is a history-making era in which Christian Science is taking giant strides and "casting down imaginations, and every high thing that exalteth itself against the knowledge of God."

God's message to human consciousness, must needs come through some man or woman, and the one spiritually near Him in this age has received this great illumination, and has declared and demonstrated its healing and saving power to those willing to receive it.

The Source is pure and undefiled Good, and the message is the word that was with God, and was God.

If love actuates those who have been the beneficiaries of this healing and saving message, then their duty and their privilege are very great, and they will be saved from self-seeking, envy, hatred, revenge, and all the kindred evils which would "cast us down," and thwart the end we have in view. Science and Health says (p. 405), "The heat of hatred, inflaming brutal propensities, the indulgence of evil motives and aims, will make any man (who is above the very lowest type of manhood) a hopeless sufferer." Also, "Christian Science commands man to master these propensities,—to hold hatred in abeyance with kindness, to conquer revenge with charity, and to overcome deceit with honesty."

We therefore see that as soldiers of Christ we must keep our motives pure.

We must also have an understanding as to the nature and location of our enemy. We must know the quality and place of the foes we have to meet, before we can intelligently select our weapons.

Christian Science teaches us that both in the realm of the real and the unreal, the spiritual and material, mind and its manifestations are all there are. "To be carnally [or materially] minded is death; but to be spiritually minded is life and peace." How good, then, it is to know that we are not fighting men and women who differ with us on this or that subject, but we are at war with sick and sinning mortal thoughts which, like Herod, are ever seeking to destroy this Christ-thought as it is born in human consciousness. Evil thoughts and aims, doubt, fear, sensuality, claiming to be in ourselves and others,—these are our enemies, and these alone.

With the enemy uncovered, we look to our weapons, and say with Paul, "For the weapons of our warfare are not carnal, but mighty through God to the pulling down of strong holds." The great trouble is, that the mortal man tries to overcome evil with evil, when our Master admonishes us to "overcome evil with good." As our enemies are evil thoughts, our weapons must be good thoughts. Love must silence hate with Love. Spirit must dominate matter, Life must destroy death, Truth must overcome error. "Till we all come in the unity of the faith, and of the knowledge of the son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ." When this blessed condition is realized we shall see the great fact that distinguishes Christian Science from all other forms of religion or philosophy; *viz.*, that in it evil has no reality, intelligence, activity, power, or presence, because God or Good is All. Meanwhile, however, we must be awake to the claims of evil, and strive, with loving efforts, to comfort the broken-hearted, heal the sick, and preach the gospel to the poor and humble.

What hope of success against our common enemy would there be, if there were no unity of purpose and concentration of endeavor, loving-kindness, obedience, and loyalty to our Leader?

Digitized by Google

As disciples of this new-old Truth, we have an unswerving conviction that "the battle is the Lord's," that right is might, that God is all-sufficient in power, love, and wisdom, and that this infinite Principle is ever-present and destroys everything unlike itself. Let us rise in the strength of this spiritual understanding, with renewed and consecrated allegiance to our God, our Cause, and our Leader, letting "the dead past bury its dead" with its temptations, its failures, and its fears, and with unity of purpose and affection let us press forward to everlasting victory over all sin, disease, and death.

## The Value of Class Instruction.

R. S.

I HAVE often felt constrained to express my gratitude to our Leader for the class instruction in Christian Science, which she has made available to every humble, earnest seeker after Truth.

Before accepting the privilege, I was led to hesitate, and for two years I wavered, but really never stilled the desire to *know* that I was learning aright, keeping in the straight and narrow way; that I was holding steadfastly to Truth, being guided and governed by Principle only.

Class instruction satisfied that longing. It established my understanding, and removed, in a great degree, the fear of a possible mistake, a fear that constantly hovered over my every effort to demonstrate.

After instruction, I *knew* that I clearly understood somewhat of this infinite Truth, because it had been vouched for by one authorized to teach. It is our *knowing* Truth which frees us. Mrs. Eddy says, "Be firm in your understanding that the divine Mind governs, and man should reflect His government" (Science and Health, p 393).

## Confident though Censured.

J. E. FELLERS.

A PIECE of magnetized steel resting on a pivot becomes a needle which points towards the north pole. Why? Some one answers, "It is influenced by magnetic attraction." But why does it not point eastward or westward? While even the wisest have failed to explain this strange fact in nature, they have long ago ceased to doubt it. People assume great risks, confident that in all latitudes, when left undisturbed by other influences, that needle will turn toward the pole.

When on the ocean, the stars are lost in the night, and all is a waste of billows and tempest, in the midst of darkness and danger, the mariner watches his needle. The gravest dangers may surround him, but he has confidence and faith in the testimony of this bit of steel. He cannot see the pole toward which the needle points; no, he is looking not at the seen but at the unseen. He knows that thousands have reached their port by following the direction of the compass, and he too trusts it. Has he acted wisely? Yes. Does any one censure him? No. Yet that compass is a human invention, and is by no means absolutely reliable, for account must be taken of its variations.

After trusting human theories for years, and finding themselves still adrift on life's stormy sea of false beliefs, thousands of people have turned to Christian Science as a safer guide, and following its light they to-day possess health and peace. They have learned that the Bible is God's compass, steadfastly pointing the way, and they trust their guide implicitly, for it has never failed. Do they act wisely? Yes. Are they sometimes censured? Yes. Why?

## Holding to Ideals.

S. B. S.

WE cannot afford to lower, or even weaken, the standard which bears aloft the banner of our highest ideals.

We must not refrain from living our highest, simply from fear that we shall not be understood. When the highest motives and acts are misjudged then comes the cross-bearing, the burden seems too much; but if we can only remember that confident persistence in right doing will ultimately convince opponents of our true position, we shall not give way to doubt and discouragement. Jesus held to his understanding of the power and reality of eternal Love against great odds, in the face of death-dealing opposition, but he finally gave convincing proof of the truth of his cause. His spiritual understanding of Life overthrew the claim of materiality.

When we search our inmost thought and find that our whole desire is unto God and the coming of His kingdom, that we are free from personal motives and desires, we should be able to stand with unshrinking loyalty for ideals which will bear the closest scrutiny; ideals which are the inspiration of Infinite Mind.

## "God's Little Ones."

GRACE WHITE.

IN answer to the question of his disciples, "Who is the greatest in the kingdom of heaven?" Jesus, calling unto him a little child, said, "Whosoever . . . shall humble himself as this little child, the same is greatest in the kingdom of heaven," thus clearly showing humility to be the key which, unlocking the doors of heaven, reveals the "beauty of holiness."

To gain heaven who would not become humble,—humble as a little child? who would not gladly part with all which the world has given him of pride, self-love, fear, sensitiveness to appearances and to criticism, and take on instead the "robe of righteousness" whose interwoven threads are innocent, fearless trust; pure thinking; buoyant hope, and joyful contentment with present good?

During our walk through life we have all been blessed from time to time by contact with some of God's little ones; sometimes they have been children in years, sometimes they have reached the allotted "three score years and ten," and sometimes the snow of time has but lightly kissed their temples. But be they what the world calls young or old or middle-aged, if we will but clear our eyes of earth-clouds we may see glowing in their foreheads the blessed "white stone" of purity as the sign and seal of their citizenship in the kingdom of heaven.

## My Refuge.

MARY I. KEITH.

HARD pressed on every hand,
Yet not dismayed,
Amid the gloom I hear,
"Be not afraid."
Fiercely the storm may rage,
I will abide
Safe in Immortal Love
Whate'er betide.

Then let the error scream,
Soon will it be
Silenced forever, through
Eternity.
O Father-Mother God,
Teach me to pray—
"Thy will be done on earth"
From day to day.

## The Lectures.

### At Stillwater, Okla.

Last evening [December 11], a very large audience gathered at the Opera House to hear Judge S. J. Hanna of Boston lecture upon the subject of Christian Science. There were many in the audience from Guthrie, Perkins, Pawnee, Cushing, Marena, and Blackburn. Those attending were delighted with the lecture. Attorney W. B. Williams introduced the lecturer.—*The Daily Democrat.*

### At Fort Worth, Tex.

Judge Septimus J. Hanna of Boston lectured on Christian Science at Greenwall's Opera House yesterday afternoon [December 14], before a large audience. Not all present were believers in Christian Science, but from the close attention and appreciation that were evidenced from time to time during the discourse, it was apparent that all present were deeply interested in the subject. Judge Hanna was introduced by Mayor Powell.

*The Fort Worth Register.*

### At Wilmington, N. C.

A clear exposition of Christian Science was given by Judge William G. Ewing of Chicago in the Academy of Music last evening [December 15] under the auspices of First Church of Christ, Scientist, of this city.

The audience which heard Judge Ewing was not large, neither was it small, and all who listened to him were impressed with his earnest manner of presenting that phase of religion. Judge Ewing was introduced briefly by Robert Ruark, Esq., of the Wilmington bar.

*The Morning Star.*

### At Grand Junction, Col.

It was a treat to those who are broad enough to hear expounded the tenets and faith of another church, to listen to Carol Norton, C.S.D., of the Christian Science Board of Lectureship, at the Park Opera House last night [December 9]. The Opera House downstairs was filled with an intelligent and appreciative audience. There were present representative men and women of the city and a fair sprinkling of those who are believers in the faith from other portions of the country. Rev. J. A. Becker of the First Congregational Church of the city introduced Mr. Norton.—*The Daily Sentinel.*

### At Jonesville, Mich.

A large and intelligent audience assembled at Town Hall last Sunday afternoon [December 7] to listen to the lecture of Edward A. Kimball, C.S.D., of Chicago, on Christian Science. Delegations from Coldwater and Hillsdale were present, and the Presbyterian, Methodist, and Episcopal churches in this place were largely represented. In fact, those of various beliefs, and no belief in particular, were in attendance.

Mr. Kimball spoke nearly or quite two hours, and his large audience were seemingly so eager to learn the doctrines of Christian Science that they remained attentive and interested listeners to the close. In point of numbers and respectability the meeting was a decided success, and no doubt will be the cause of much discussion in this community for some time to come. Mrs. V. M. Doane, First Reader of the local Christian Science society, introduced the speaker in a few well-chosen words.

*Jonesville Independent.*

### At Rockford, Ill.

Edward A. Kimball, C.S.D., of Chicago, lectured at the Opera House, Tuesday evening [December 16] to an audience representing nearly all of the religious organizations of the city.

The speaker was introduced by R. K. Welsh, who said in part:—

Strange and wonderful as the progress in material things has been in the last century, scarcely less strange and wonderful has been the growth and development in religious thought and religious practices. There was a time when to be a doubter was to be a devil, when to be an honest inquirer was to be an outcast, but such is not the condition to-day. The spirit of this age, especially in this great country, is toleration and respect for the views of others. There was a day when we heard largely of the lake of fire and brimstone, now we hear of charity, brotherly love, and those things which tend to the betterment of mankind. It has largely become the object and purpose of religious people and those who think along religious lines to investigate and to appropriate that which is good in all creeds and in all denominations. These creeds and denominations all aim at the same end, and that is the amelioration of mankind. In other words, the impulse is to study and learn. That is the purpose of this gathering, and whether believer or unbeliever in Christian Science, I am persuaded that you and I have come to learn and to attempt to get at what is true in Christian Science as nearly as may be.—*The Rockford Register-Gazette.*

### At Dallas, Tex.

Carnegie Hall was comfortably filled last night [December 15] with an audience composed of members of the Christian Science Church and their friends assembled to listen to the lecture on Christian Science by Judge Septimus J. Hanna of Boston, Mass. There were many in the audience who did not belong to the Christian Science Church, but are disposed to learn of its teachings and principles. The lecturer was introduced by Hon. R. E. L. Knight, who spoke as follows:—

*Ladies and Gentlemen:*—The last century, it will be conceded, is unparalleled in the annals of time for the achievements wrought in mechanical construction, material development, and commercial expansion; and to thoughtful minds it is profoundly gratifying to reflect that in the higher and holier realm of the moral and spiritual, stagnation has not been permitted to obtain; that from the mad pursuit of material well-being there have been those who have turned away, and preferred to consecrate their minds and hearts to the relief of suffering humanity and the spiritual regeneration of the world. Of those who have loved and labored in this higher realm, none have achieved more substantial results, or gained wider scope for his or her influence, than has the Rev. Mary Baker Eddy, the Discoverer and Founder of Christian Science. Under her inspiration and direction, Christian Science has taken root, and has grown, and is flourishing in every quarter of the civilized world. Under its marvelous touch and influence, suffering and afflicted humanity everywhere is being succored and relieved as never before, and to countless thousands is being pointed out the way leading to permanent peace and joy in the life to come.

I am not versed in the lore or teachings of Christian Science, save only to the extent that its Principle is Truth and Love, the source and object of all that is pure and sweet in this life, and from which we derive our only foretaste and realization of the life to come.

It is true, Christian Science is, in a sense, a departure and advance in religious thought, training, and practice, and, as might have been expected, in common with all

Digitized by Google

religious reformations of the past, it is misinterpreted, reviled, and persecuted. I am one of those who believe that in religion, as in things material, life, thought, and eternal progress are the true purposes of animated existence and the final object of creation itself.

And, who, under the present flickering lights of thought and investigation, is prepared to challenge the declaration that matter is not what it seems, and that appearances are deceitful; that the real is the invisible, and that mind is the absolute master over matter? The unknown of to-day is easily the truth of to-morrow. We know more than our fathers. Shall not our children know more than we? Since Plato haltingly reasoned on the immortality of the soul, gradually has the light been dawning, and progression is still the order of the day.

In my opinion Mrs. Eddy is a true reformer and though misunderstood and misrepresented now, in the fulness of time, a grateful posterity will place her name along with those of Luther, Calvin, Wesley, and all the mighty host of those who have lived a life of sacrifice for the good of man and the glory of God.

*The Dallas Times-Herald.*

### At Maquoketa, Ia.

Last Thursday evening [December 18] a fairly good-sized audience, embracing many of our intelligent, thinking people, assembled at Rice's Opera House for the purpose of listening to an exposition of a religion which has had a marvelous growth in the past few years. Edward A. Kimball, C.S.D., of Chicago, was the speaker. He was introduced by Capt. J. Murray Hoag of this city, who said:—

*Ladies and Gentlemen:*—It is with great pleasure that I welcome you here this evening in behalf of the little band of Christian Scientists of Maquoketa. You represent numerous churches and creeds, all recognizing the same Master and aiming at the same goal. Your presence, to-night, is an indication of that Christian tolerance now, happily, so general throughout our land, and bespeaks a desire to gain a fair understanding of the tenets and teachings of Christian Science, which by the power of God, Truth, banishes sin and sickness alike. Our speaker comes prepared to speak authoritatively on the subject of Christian Science. I have the honor of introducing to you Mr. Edward A. Kimball of Chicago.—*Jackson Sentinel.*

### At San Francisco, Cal.

Before a very large and intelligent audience at the Alhambra Theatre yesterday afternoon [December 21], Carol Norton of New York, delivered a lecture on Christian Science. The speaker set forth with much elaboration the beliefs and principles of Christian Scientists.

*The Bulletin.*

Mr. Norton was introduced by Mr. Philip G. Galpin, who spoke in part as follows:—

*Ladies and Gentlemen:*—The attention of the world for centuries has been turned to the investigation of the problems attending the existence of the universe, of man, of life, of thought, of the relations of thought or of the mind to the physical body. To-day the world of pure science, unleavened by spirit, is wrestling without success with the problem of the origin of life.

If the doctrines of this newest born of the churches are true, they will harmonize with preconceived opinions,—if the latter are also true. To refuse to investigate lest we discover we have been mistaken is not the part of wisdom; to refuse to investigate lest others may not agree with our conclusions or scoff at them is not the part of a man of courage.—***Correspondence.***

### At Marshall, Mich.

On the evening of November 15, Edward A. Kimball, C.S.D., lectured on Christian Science under the auspices of First Church of Christ, Scientist. The speaker was graciously introduced by Rev. John M. Getchell, pastor of the Universalist Church of this city. The audience was fair sized and seemed very appreciative.—*Correspondence.*

### At Bowie, Tex.

Judge Septimus J. Hanna of Boston delivered an interesting lecture on Christian Science at the Opera House, last evening [December 18]. The house was well filled with an audience of the best people of Bowie and the surrounding country.

The lecturer was introduced by L. J. Rudy, a prominent lawyer of Bowie.—*Correspondence.*

### At Austin, Tex.

Judge Septimus J. Hanna of Boston spoke on the subject of Christian Science at the Opera House yesterday afternoon [December 21] to a large audience. After being introduced in a few well-chosen remarks by Mr. H. M. Moore, he immediately took up his subject and held the close attention of his audience throughout his lecture.

*Austin Statesman.*

### At Salt Lake City, Utah.

An audience of at least fifteen hundred people assembled last evening [December 14] in the Salt Lake Theatre to listen to a lecture on the "Teaching of Christian Science" by Carol Norton, C.S.D., of New York City. Mr. Norton held the close attention of the audience throughout his entire discourse, which was simple and to the point. The presiding officer of the meeting was Rabbi Reynolds, who, in introducing the speaker, spoke in part as follows:—

*Ladies and Gentlemen:*—I think that every one who thinks correctly must admit that it is a very healthy and normal manifestation of human beings to differ with one another; nevertheless, it is not normal, and it is not healthy to differ without thinking, without studying, and without investigating. The history of the religions of the world has always been, from time immemorial, a history of prejudice. Prejudice means to form a judgment without thinking and investigating, and without knowing something about it. It was over sixteen hundred years ago that the first council of religion was called in Asia Minor, and the Arians and the Athanasians met together, and if you remember the question was decided by violence, by prejudice, and by persecution. We ought to be thankful that we are to-day living in an age when men are ready to hear the other side and to listen to it, to investigate, to learn it, and that now, more than ever, we are coming to realize the great truth that has been expressed by the eminent philosopher when he said, "When we investigate things, we shall be surprised to find the truth in a place where we least expected it."

Now, my friends, and I take the liberty to call you such, I want to say that I personally represent a religion that has been misjudged for centuries—a religion about which people formed opinions with too little knowledge of its philosophy and its teachings. I consider it an honor and a privilege to introduce the gentleman with us this evening, who is also a representative of a thought that is now coming before the judgment and before the criticism of the world, which I hope will to-day, in this modern time, not be accepted without a great deal of investigation nor rejected without the same.—*The Salt Lake Tribune.*

## Testimonies of Healing.

It is with a deep sense of gratitude, that I seek to express what Christian Science means to me. Because desire was reaching out after something more satisfying, divine Love met that need, and the truth of the Bible promise, "Blessed are they which do hunger and thirst after righteousness: for they shall be filled," was and is daily being demonstrated by me.

Christian Science was first brought to me, somewhat over two years ago, through the loving thought of one who had at different times sought to bring the healing Truth to my wife, who often manifested physical troubles of various kinds, and had great fear of a fatal termination These attacks would leave her weak and exhausted for some days after. Our family physician used to tell me, when asked what the trouble was, that the causes were, catarrh of the stomach, nervousness, and weakness through injuries received from instruments. The sense of weakness and fear of these attacks prevented her doing the heavier kinds of housework, or if she did she had to suffer the consequences.

The condition of my wife, and also the recent sickness of one of our children, had caused me to be willing to search further for help. So although I, at that time, thought, "No more religion for me," yet when this kind friend left some copies of the *Sentinel,* I began reading them, and the more I read the more I became convinced that they expressed the truth that I had been seeking from early boyhood; first in a mission hall, then in the Salvation Army, afterwards in different Evangelical churches, as change of location made each most convenient. When Christian Science appeared, mortal sense had abandoned all these, and was relying strongly on socialism of a radical and material kind as the best system to meet the needs of crying humanity, my own many and perplexing problems included, and was ready to contend that religion, as such, was something to beware of, because practice, as I saw it, was at such variance with precept. The reading of the *Sentinel* was in a few weeks' time followed by the borrowing from the Investigators' Library of Scranton church, of a copy of "Science and Health with Key to the Scriptures" (our Leader's invaluable gift to this and future ages), and after some months' study of the text-book and the valued help and fellowship of the members of First Church of Christ, Scientist, Scranton, of which, within a few months, I became a member. I had the privilege of class instruction, the value of which I feel words are inadequate to express.

The Scripture, "Old things are passed away; behold, all things are become new," best describes the transformation wrought by Truth. The growing perception that no good desire was lost, but that all would be satisfied above all that we could ask or think; the enlarged realization of the presence and availability, here and now, of God, Good, to meet and overcome the mortal sense of discords, both of sickness and sin, has brought much rejoicing and satisfied the longing for something permanent, substantial, and demonstrable.

Various claims of sickness that had tyrannized over our children and held my wife in bondage, also minor troubles of my own, such as toothache and injuries received while following my trade of plastering, have been healed on the basis of Christian Science, without recourse to material means; Truth as apprehended in Christian Science, applied to such conditions as lack of work and business competition: lack of financial supply, and difficulty in collecting: is surely exposing their falsity and helping me to know them as myths of mortal sense with no foundation in Mind. Counting over the many, many blessings, the fruits of Christian Science, I exclaim with the Psalmist, "Blessed be the Lord, who daily loadeth us with benefits, even the God of our Salvation." "O taste and see that the Lord is Good."

DAVID REED, Moosic, Pa.

---

Christian Science has done much for me. I should be ungrateful indeed not to make due acknowledgment. From years of physical suffering I was on the verge of nervous prostration. After a few weeks' treatment I am stronger than for many years, with an endurance I never even hoped for; yet I believe I have but a glimpse into the great possibilities of this truth.

MRS. ANNA R. MULFORD, Chicago, Ill.

---

I would like to tell of a demonstration that was made for me in Christian Science, and for which I am deeply grateful.

About five months ago I was taken down with typhoid fever in its worst form. I had not eaten anything for five days and was delirious, but I was entirely healed. I am very grateful to Mrs. Eddy. I am seventeen years old and am every day making demonstrations of the healing efficacy of Christian Science.

HANSON COIT WHEELER, Chicago, Ill.

---

I should like to express my gratitude for what Christian Science has done for me, not only physically, but morally as well.

Through this truth I have been enabled to turn from the downward course and to look to God and to bless Him for my happiness. I have had more real joy and peace and happiness in the six weeks that I have been studying Christian Science, than in ten years before. I have been healed both physically and mentally. I took treatment from a Christian Science practitioner of this place, and to her and all the Christian Science friends I wish to give thanks for their kindness in showing me the way to the fountain of the living waters of Truth, Life, and Love.

EDWIN E. BONNELL, Black River Falls, Wis.

---

During the first years of my progress in Christian Science, it seemed there was one continual battle with physical conditions; but during the past year the work has been more the overcoming of inharmonious environments, destroying thoughts of poverty and lack,—the feeling that I must do without this or that, until I could demonstrate more goodness and love. The unconscious admission of my lack of goodness and love manifested itself in lack of money and lack of harmony in material conditions.

Since I have learned to destroy the thoughts of self-condemnation, and to know myself as the perfect child of God, to know that now I am supplied with all goodness, truth, and love, I have found a decided change in all conditions, and see that the only poverty or lack is our belief in the insufficiency of Love. Then oftentimes, we are too willing to do without the best, to limit God. I found this so in getting the new Science and Health. It came to me suddenly, one day, that I was doing without the new book through fear of not having money enough left to buy what I should need a month later. As soon as this thought presented itself, I started for the Reading Rooms, and purchased the book. In less than a week, one hundred dollars a year was added to my income.

I am so glad that every day I understand and appreciate more, the great Love that has enabled our dear Mother and Leader, to give us this truth. The more I am filled with Truth and Love, the better I am able to understand her life of self-sacrifice and love for all mankind.

MARGARET A. VARLY, Chicago, Ill.

For the past ten months I have been located at Cave Mine, Milford, Utah, and as the year is drawing to a close, I wish to express my gratitude to the editors of our *Sentinel* and *Journal*, and to the contributors as well, for their many helpful articles. I can look back at my ten months' experience here with a great deal of satisfaction. I started to spread the literature here by giving out the Sentinels and Journals, and they have borne much fruit, some good demonstrations having been made over colds, fevers, and other ailments. A number of people in the camp are reading works on Christian Science. I have distributed some four hundred Sentinels in this and other counties in this state and the state of Nevada, and have received letters of thanks from some who were acquainted with my handwriting. I wish to thank Mrs. Eddy for the revised edition of "Science and Health with Key to the Scriptures," and for her unceasing labor for the betterment of us all.

HERBERT W. LAWRENCE, Milford, Utah.

Some three years and a half ago my attention was called to Christian Science and its healing. Although at first I ignored it, I soon became satisfied that there was something in it, although what it was I could not understand. I then began the reading of Science and Health by our Leader, Mrs. Eddy, and had the privilege of going through a class in 1899.

I had always suffered from ill health, being extremely nervous. I was a member of several clubs, and therefore located where many in the world are to-day looking for happiness in material things. Soon after beginning to read Science and Health my surroundings began to change, my physical condition improved, and many erroneous beliefs which I considered essentials disappeared.

Through further understanding of Principle, I have been enabled to give up my belief in other illusions, and to-day I am well and better equipped to do God's work in His way than I have ever been. For all this I am truly thankful.

I have had several trying experiences during the past three years, and have had occasions of seeming darkness, but I knew the light was there and soon have seen it again.

As I look back over the past few years I realize more than ever the necessity on the part of all Christian Scientists for patience with those whose spiritual growth is slow, and at times seems to cease entirely. I realize that my growth was benefited by the kindness and love of those whom I met in Christian Science.

I appreciate more than ever the valuable work of the Bible Lesson committee, the Publication committees, and above all the sterling integrity of our Leader and her faithful interpretation of Life, Truth, and Love.

In my business office I keep the Christian Science literature for distribution, and have an opportunity of presenting the truth to many in the course of a week. I trust that I may see my way clear in the near future to help the Cause more than I am doing at present.

R. E. CAREY, New York, N. Y.

## Heart's Ease.

GEORGE I. WOOLLEY.

OF all things good on earth I am most sought,
And yet, albeit, I am rarely found;
I cannot be with countless millions bought,
And bootless ye may search earth's farthest bound.

I lie in paths of duty bravely done,
On rough-hewn ways that ever upward wind;
He who unwearied seeks th' Eternal Sun
With eager steps, my priceless boon shall find.

*Exchange.*

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist.—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The New Testament prophecy of the new heaven and earth wherein dwelleth righteousness is the assurance of the ultimate triumph of the Redeemer's kingdom. In the contrast of the two scenes, the earth lying in darkness behind Peter and in radiance before him, we mark with him that it is righteousness that will constitute the main point of distinction. It will be the descent of the Christ of moral character, of sweet and holy life, on this clouded and stormy planet that will insure the new day and the new time. In that "new heaven and new earth" which Christ is to build in the midst of the old, to supplant the old, Faith will descend and fill the soul with cheer. Hope will move amid the scene, glowing with happy expectancy. There will Love be found with her benignant face and her gentle hands of helpfulness. Abroad will Wisdom walk in her garments of light. In the sacred group will be found a new holiness as the inheritance of the soul in Christ, turned to survey a better future, a new earth, even a heavenly kingdom, wherein right shall be the first love of man and honor his chief glory! On this clouded and stormy planet Peter saw the new light dawning, the light of moral character, which hitherto had been but as a dim taper in the great darkness and the barren waste, but which would flame abroad and make all the scene noble and fair, in a Christ-like righteousness. This was the source of the great contrast which in prophecy he pictured for the believer's comfort.—*The Universalist Leader.*

The fancy of the poet and painter has revelled in the imaginary glory of the Nativity. They have sung of the bright angels who hovered there, and of the stars lingering beyond their time to shed their sweet influences upon that smiling infant. They have painted the radiance of light from his manger-cradle, illuminating all the place till the bystanders are forced to shade their eyes from that heavenly splendor. But all this is wide of the reality. Such glories as the simple shepherds saw were seen only by the eye of faith. All which met their gaze was a peasant of Galilee, already beyond the prime of life, and a young mother with an infant Child, whom, since there was none to help her, her own hands had wrapped in swaddling clothes. The light that shined in the darkness was not physical but a spiritual beam; the Dayspring from on high which now visited mankind dawned only in a few faithful and humble hearts.

FARRAR.

Rev. L. M. Powers says in *The Universalist Leader*:—

"Theology, long held to be the crown of the sciences is to-day the deadest thing that makes any pretence to life. The world's need is real knowledge of a living God. The theology of the schools and churches is a systematized knowledge of what dead men have thought of a dead God. All the attempts of the Churches to reinstall this knowledge of dead men concerning past things, are of little worth. A Church with a systematic theology to defend, must always lie behind the real thought of the age. Only a creedless Church can keep abreast of the times. . . .

"In my library of some thirty-five hundred books there are about five hundred books dealing with religion. Among these five hundred are perhaps twenty that have to do with theology strictly defined, and most of the twenty I have never read. For all books of value tell of God, and I have found a surer evidence and clearer knowledge of God in the books of mathematics, history, and poetry, than in those labelled theology."

Reviewing the fifty years since his ordination to the diaconate, Bishop Doane of the diocese of Albany in his convention address recently said: "Somehow the tone and atmosphere of religious life seem to me greatly to have changed. The contentions and controversies of fifty years ago have only faint and feeble echoes here and there, and the subjects have passed, many of them, into a sort of natural acceptance. What were accounted strange and unusual teachings and practices are really the usual teachings and practices of the Church. It seems to me that Church life and religious life to-day are calmer, quieter, stronger, steadier than was their wont when I was young. We are learning, most of us, more respect for other people's convictions as well as our own, and less of what I think Mr. Gladstone called 'cocksureness' about our own opinions. And the time seems ripe for certain recognitions of larger things, and the air seems rife with the movement of more unitedness along the lines of the real work for which the Church is in the world."

Rev. W. W. White, Ph.D., in an address on "The Purpose and Power of Prayer," as reported in *The Examiner*, says: "The purpose of prayer is not to give information to God. He knoweth our need before we ask it. Man must not use vain repetitions. The four hundred and fifty prophets of Baal learned the uselessness of this when they cried, 'O, Baal, hear us.' Its purpose is not to win God to our side—not to tease Him, not to 'overcome God's reluctance,' as some one has said, 'but to take hold of His willingness.' It is not the purpose of prayer that the laws of God should be violated; prayer is in harmony with those laws. Prayer is not illogical. We receive from man because we ask. Ask of God and ye shall receive. We should work, in the language of another, as though all depends upon us, and pray as though all depends upon God."

In the Reformed Church of the Ascension, Allegheny, recently, Rev. A. C. Dieffenbach, preaching on the "Need of a True Christian Science," is reported by the *Pittsburg Times* as saying: "That day is past when in a Christian community the word science calls forth the cry of heresy. As men have advanced in their education for the kingdom of God they have advanced in their demands for a rational religion. They do not believe that the teaching of Jesus is inconsistent with truth. They therefore do not believe that it is out of keeping with the orderly presentation of truth. And this is science. Christian Science. Christian science is the true science because the Gospel takes the lofty plane of spiritualizing men."

Do we need to go back to the simplicity of the Gospel in our conception of the meaning of conversion? Christ's teaching as to the new birth, or the birth from above, shows that the change required is a radical one. Sin has wrought, in medical phrase, a functional derangement of the heart, which neither the will of man, nor any outward sacramental application, can remedy. Only the Holy Spirit, reinforcing the weak, and of itself impotent, will of man, can effect a cure. We are not saved by character, but, being saved, character develops in us until, by the grace of God, we attain to the measure of the stature of the fulness of Christ.

*The Examiner.*

The great scholar, traveler, and archæologist, Dr. Hilprecht, lecturing in Philadelphia, says: "Let any one who has lost his faith in the Bible go to Babylon, where he will surely recover it in the desert solitudes." Most Biblical descriptions of places are so accurate that the permanent features of the situation seem so natural to one familiar with the Scriptures, as almost to make him ask himself whether he has not seen them before. The University of Pennsylvania has just endowed a chair of Assyriology and named Professor Hilprecht as its incumbent, at a probable salary of about five thousand dollars per annum.—*The Christian Advocate.*

True faith in God consists not merely in believing His Word, but in the doing of His will. To say, "I believe in God the Father Almighty, and in Jesus Christ His Son," is indeed the first and essential step in the spiritual life; the life that ends where it begins, with a "credo," lacks the essential proof of the genuineness of the confession. "Faith without works is dead." The two are so inseparably joined together both in the divine Word and in Christian experience, that it is a wonder any one should imagine for a moment that they are separable, or that the one could live and flourish without the other.—*The Examiner.*

The people are eager to hear a man tell what he knows. They care very little for what he is not quite sure of and still less for what he confesses he does not know. The most destructive preaching in the world is the argument in defence of or the apology for the eternal verities. No man is fit for the ministry who does not know something he is sure of and is willing to announce with confidence. The people are not going to believe the minister's doubts, and are not going to rush to the support of his uncertainties. Know something and preach it, and you will have a following.—*The Universalist Leader.*

We cannot, then, excuse the gloomy and sad-faced Christian. If he be one of Christ's followers, the spirit of Jesus, of love and trust towards God, will make all life cheerful, and move his heart to perpetual songs of praise and thanksgiving.—THOMAS HILL.

If good people would but make their goodness agreeable, and smile instead of frowning in their virtue, how many would they win to their good cause.

ARCHBISHOP USHER.

Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## Items of Interest.

**National.**

Attorney-General Knox in his report concerning trusts and combinations, which represents the general attitude of the administration and is authorized by the President, recommends immediate legislation forbidding all discriminatory practices affecting interstate trade, making them offences to be enjoined and punished; such legislation to be directed against both those who give and those who take illegal advantages, and covering discrimination in prices as against competitors in particular localities, resorted to for the purpose of destroying competition; and the creation of a bureau or commission in the proposed Department of Commerce to secure publicity through investigation of the affairs of the trusts. Power is also to be given to the courts to deal with infractions of the law and to enforce the findings of the commission. Several bills embodying these suggestions have already been introduced in Congress.

The Senate Committee on Foreign Relations reports favorably upon the general international arbitration treaty recommended by the Pan-American conference held at the City of Mexico last winter. The treaty is on the lines of The Hague treaty, but applies only to the republics of the western hemisphere. It provides a tribunal in which disputes over boundaries, claims, and other matters may be settled by arbitration.

The Bureau of Insular Affairs of the War Department has prepared for publication a comparative statement showing that for the ten months ending on October 31, the customs revenues of the Philippine Archipelago were $7,475,580, as against $6,921,559 in 1901, and $3,759,994 in 1899.

Senator Clay has introduced a bill to provide for the free importation of commodities controlled by trusts. The bill confers upon the President authority to suspend the collection of duties on such articles so long as the abnormal conditions prevail.

**Foreign.**

The appointment of Mulai-Mohammed, brother of the Sultan, as governor of the province of Fez, seems to have thoroughly relieved the critical situation of affairs in Morocco. As the ostensible object of the pretender, Buhamara, was to raise the sultan's brother to the throne, the adroit move of the sultan in making this appointment has resulted in depriving the pretender of the allegiance of his followers, and he has retired discredited. The acceptance of the position of governor also disproved the rumors that Mulai-Mohammed aspired to the throne. It is rumored, however, that the sultan is disposed to abdicate the throne in favor of his brother.

It is said that Great Britain has vigorously protested to the Turkish government against the permission granted in September to four unarmed Russian torpedo boat destroyers to pass through the Dardanelles into the Black Sea under the commercial flag of Russia. The British note says if Russian warships are thus allowed to pass the Dardanelles, contrary to existing international treaties, Great Britain will also reserve the right to demand similar privileges.

The State Commissioners of Education of New South Wales, headed by the president of the University of Sydney, are studying the educational system of the United States, especially the methods of primary school work and advanced technical education. The Australian Federation, following the example of the United States, has adopted the form of state, rather than national, control of education.

According to dispatches, Mr. Bowen, United States Minister to Venezuela, acting for that republic, has been empowered to pledge the customs receipts of Venezuela as a guarantee for the payment of the German, British, and Italian claims. He is expected to sail for Washington this week to aid in formulating the protocol preliminary to arbitration before The Hague Court.

The scheme of M. Berlier for tunneling under the mouth of the Seine has been adopted. The tunnel, which is designed to give railroad connection between Havre and Port Audemer, will be three thousand yards long. It will carry a double track. The cost is estimated at six and a quarter million dollars.

Abbotsford, the estate of Sir Walter Scott, is said to be in the market—perhaps to touch Scottish pride and result in its being secured for a literary museum.

**Industrial and Commercial.**

The construction of the new Denver-Salt Lake short line railroad has been begun. Contracts call for its completion and full equipment in 1905. There will be about three hundred and seventy-five miles of valley mileage and one hundred and twenty-five miles of mountain mileage. The road crosses the Continental Divide about sixty miles west of Denver by means of a tunnel eleven thousand eight hundred feet in length, two thousand feet below the crest of the divide, and at an elevation of ten thousand one hundred feet above sea level. The route passes through a section rich in ores, coal and mineral deposits, and grazing lands. It is claimed that the route will shorten the distance to the coast by one hundred miles and lessen the time by ten hours.

The Russian steamer Baron Drieson has arrived at New Orleans and will take on board eighty-five hundred tons of harvesting machinery for the Black Sea to be used by the wheat growers of Southern Russia. The machinery comes from Chicago factories. During January and February three other large ships loaded with machinery are expected to sail for Russia. In all two and a half million dollars' worth of machinery will be shipped on the four vessels.

Export trade with Mexico during 1902 amounted to over forty million dollars in value and the import trade was about the same amount. In 1891 the value of export and import trade with Mexico was fifteen million and twenty-eight million respectively.

Two Belfast ship building firms built during 1902, nineteen vessels aggregating 153,560 tons. The individual output is said to exceed that of any English or Scotch firm by 10,000 tons.

In Connecticut last year there were organized two hundred and thirty-seven corporations with an aggregate capitalization of over thirty-two million dollars.

Plans have been approved for the six-tracking of the Pennsylvania road between New York and Philadelphia, and perhaps as far as Lancaster.

Spartanburg County, S. C., stands at the head of the cotton milling interests of the State with $7,000,000 invested in 31 mills.

Three hundred and fifty-six locomotives were turned out by the two local shops at Paterson, New Jersey, last year.

During 1902 the shipyards of Bath, Maine, produced 26 vessels with a total gross tonnage of 31,633 tons.

**General.**

Reaping machines were employed this year for the first time by native farmers of Syria. Eleven were working during the late harvest in Cœle-Syria, and twenty-six in the plain of Esdraelon. Also for the first time in the history of this country, the present year has witnessed the introduction and operation in Syria of a steam threshing outfit. It caused considerable stir in Cœle-Syria, where it was installed. Its success was complete, even to the bruising of the straw—a most important item, since, in the absence of hay and with the sparing use of oats, barley, and other grains, crushed straw, in these parts, constitutes the staple food for stock. An oil-motor flour mill has been successfully started in this land, and is now grinding wheat in Lebanon.

Mr. Marconi, from his station at Table Head, Canada, last week for the first time sent a news message to the London *Times*. This message was sent in the midst of a snow storm accompanied by a high wind and occasional flashes of lightning. There was also a severe storm raging in England at the same time. This successful transmission in the face of most adverse conditions proves the practicability of the system. Mr. Marconi claims that a message could now be sent to any part of the world. He will soon establish a line between Italy and South America.

The Germanic Museum of Harvard University has been opened to the public. As the primary purpose of this museum is educational, no effort will be made to secure original works of art, but copies of German architecture, sculpture, and painting will be collected, which will represent historically the development of German æsthetic activity. The German Emperor has taken a deep interest in this matter and, as will be recalled, presented through Prince Henry, a gift which will represent ancient German art at its best.

One hundred and twenty-three pictures in oil, water-color, and pastel belonging to the collection of the late Mrs. S. D. Warren of Boston, were sold last week in New York for $346,275. The highest price paid was $23,500 for the little Millet "Shepherdess." The size of this canvass is nine by fourteen inches.

The most northern railroad in the world extends to Lulea on the Gulf of Bothnia in northern Sweden to Malmberget, a point fifty-two miles inside the Arctic Circle. This is two hundred miles further north than Nome and four hundred and fifty miles further north than White Horse.

The Pittsburg Locomotive Works, the local plant of the American Locomotive Company, has decided to duplicate its present plant. The concern employs at present about twelve hundred men.

### Highly Complimented.

THE work of our constitutional convention, recently adjourned, has been quite generally commended by the press at home and abroad. Words of the highest praise, but sanely considered and expressed, are uttered by *The Congregationalist* of Boston, the influential organ of a powerful religious denomination, which says editorially:—

"Celerity, common sense, courage have characterized the constitutional convention of New Hampshire in session the past two weeks. Contrasted with the recent Connecticut constitutional convention, its despatch, vigor of attack, and positive results give the more creditable record to the Granite rather than to the Nutmeg state. As the result of the covention's labors the people on the second Tuesday of March next year will vote on ten proposed alterations in or amendments to the present constitution. Some of these suggested emendations or additions are relatively unimportant. Others are of grave importance. Of the latter are the requirement that voters and officials shall be able to read the constitution in English and to write; that power to impose taxes on franchises and property passing by will and inheritance be given to the legislature; that the franchise be extended to women; and that the legislature be given authority 'to enact laws to prevent the operations within the state of all persons and associations, trust and corporations, that endeavor to raise the price of any article of commerce or to destroy free and fair competition in the trades and industries through combination, conspiracy, monopoly, or any other unfair means.' Summoned especially to deal with the problem of representation in the lower house of the legislature, the convention found a way out, which, while it preserves to the smallest unit a method of representation, also recognizes the equity of providing proportionate representation for the large towns and cities. Eight hundred inhabitants are necessary to the election of one representative; twenty-four hundred inhabitants are necessary for two representatives, and sixteen hundred for each additional representative.

"That the world has moved on and the temper of religious folk altered is seen in the call for a referendum by the people on the suggestion that the words 'evangelical' and 'Protestant' and 'every denomination of Christians' are to be stricken from the constitution where they limit the religious societies which the state is to foster and protect. 'Christian principles' and not 'evangelical principles' hereafter are to be conserved. Teaching of piety, religion, and morality' are not to be limited to Protestant definitions of the same, and 'all religious sects and denominations,' rather than 'every denomination of Christians,' are assured equal protection of the law. The debate on the provision of the constitution intended to curb monopoly was on a high plane, reflecting the unity and depth of sentiment of the representatives of the people; and the speech of Judge Aldrich of the Federal Circuit Court, in which he advocated such action, may well be taken as a perfect expression of the sober sentiment of New England democracy as it faces the perils of the hour as the century opens out. Coming from so conservative a source and so judicial a mind, the utterance was all the more significant."

From an Editorial in *The Concord* (N. H.) *Monitor.*

### Educational Work in Alabama.

THERE is one place in the hill country of Northern Alabama where the last census-taker must have received something of a shock. Instead of a one-room log cabin he found, at a place called Kowaliga, a well-constructed frame building of three stories, with several neat white outbuildings, all plainly devoted to the teaching of the young. But his surprise must have been still greater when he discovered that this was a school for colored children. Not only did he find in this little colony between one hundred and fifty and two hundred children under the instruction of six teachers, nearly all college graduates, but he was informed that the school undertakes to board a dozen pupils of each sex, that they may come directly under the influence of the teachers, and that the girls may be trained in housework and the rudiments of domestic science, and that the institution not only aims to give its pupils a good common-school education, but to train them to use their hands in the workshop and in the fields, for which purpose it gives limited instruction in manual training and plenty of experience in tilling the land.

"Doubtless a branch of Tuskegee," the reader will say. Yes and no. That Mr. Booker T. Washington's influence has penetrated to Kowaliga goes without saying. Wherever there are intelligent negroes there will be found some knowledge of Mr. Washington's teachings and ideals. Mr. Washington, too, was for some time trustee of the Kowaliga Institute, as this struggling school is called. But it owes its inception and development to a father and his son. The former is John J. Benson, born a slave, who by his own efforts has come "up from slavery" until he is to-day the most influential colored man in his county, and one who has the respect and confidence of his white neighbors. He has not only acquired by ceaseless industry the acres which he helped to till for his old master when in bondage, but has added to them, has built himself an excellent house and a sawmill, and has become known throughout his county as the foremost of his race. It is but natural that a man of this type should give his children the best possible education he could afford. But he has done more than that,—he has instilled into his children an intense desire to better the conditions of their race in the country round about their home. To William E. Benson, his son, who is guided by this fine altruistic spirit, is largely due the existence of the Kowaliga Institute. In its growth he finds abundant reward for his unselfish labors.

Returning, in 1896, from his college course, William E. Benson succeeded in arousing seventy farmers of the Kowaliga neighborhood to a realization of the educational needs of the community, and these poor, hard-working tillers of the soil gave freely of their limited means and time toward the school's first building, called Patron's Hall. They cut down the trees given them by an interested white neighbor and carted them to the senior Benson's mill,

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

where they were transformed into boards and shingles, for Kowaliga has been no foreign growth grafted upon the community, but was conceived and created by its founders without white inspiration or aid until it was well under way. While their fathers toiled on the building some of the farm boys formed a glee club and fairly sang $300 into the school's treasury. Then the American Missionary Association became interested in this plucky effort to let the light of education shine into the darkness of one of the most ignorant communities of the South, and through its support, and the Northern trips for help of young Mr. Benson, the school now has land and property valued at $10,000,—ten acres of the land on which the school stands being the gift of the man who has worked himself up from slavery into prosperity. This summer has seen still another evidence of the best kind of a commercial spirit, for some of the farmers, under the Benson leadership, have paid for their children's tuition by lending their time and strength to the erection of a boy's dormitory, which shall also contain additional and much-needed class-rooms.

And as the school has grown materially, so it has developed along educational lines. Not, of course, without making the mistakes inevitable in such an enterprise, but always seeing more clearly the needs of the surrounding country. It has begun to draw pupils from Georgia and Alabama, and from a far larger section than that surrounding Kowaliga and its neighboring hamlets. The school term has been extended from three to eight months, and by absorbing three district schools the Institute receives the state aid which would have been paid to them. "Its situation in the heart of an agricultural region," says Mr. Benson, "makes it the hope of hundreds, if not thousands, of boys and girls who cannot expect to go to Hampton or Tuskegee,—indeed, have never heard of these places." In place of the ignorant "Jack-leg" district schoolmaster, there are refined men and women who know something of the science of teaching in addition to mere book learning, and who, from the principal, Mr. C. W. Driskell, down, are persuaded that agricultural training is the principal need of the hour in this region.

Kowaliga is a non-sectarian school, and adapts its curriculum to the needs of the neighborhood. Thorough instruction is given in the grammar grade, but on practical farming, the care of live stock, and on the elements of manual training the main stress is laid with the boys. Cooking, sewing, laundry work, housekeeping, and the care of poultry and the garden are part of the girls' course. Naturally, a community of such limited opportunities cannot afford to support an institution as large as this. The state contributes less than three hundred dollars, the American Missionary Association four hundred dollars. The rest of the money necessary comes from tuition fees and from friends in the North, and further aid is urgently desired.

No one can see all this growth, as the writer has done, and not marvel at the change which, in a few years, has been brought about in this community by the school, or be other than deeply impressed with the utility of this attempt at self-help. It is distinctly a type of the negro school that is certain to spring up all over the South as more and more graduates of Hampton and Tuskegee go back to their one-room cabins and help to transform them into clean and respectable frame dwellings, as is being done at Kowaliga. Education brings with it a desire for better methods of living, and the Bensons, not content to let the school absorb all their efforts to uplift their race, have founded a land company, whose special object is home-building and the development of the negro farmer. With such an advance will go much of the picturesqueness of the present crude methods of living, but it means better and more prosperous citizens and more valuable neighbors.

## Proof through Practical Application.

Mr. Editor.

A curious phase of modern religious thought is presented by the sermon of Rev. Mr. T. H. Baragwanath of your city, as reported in a local newspaper. Christian Science has become a subject of so great popular interest, that persons who have never seriously studied its text-book, and have never attempted to put its teachings to the test of practical experience, are induced to tell the public what Christian Science is and what it is not. So irresistible is the temptation that even gentlemen who have never attended a Christian Science service, much less received Christian Science instruction or treatment, are heard to denounce what they mistakenly suppose it to be with the tones of authority. The unfortunate results of lack of proper preparation in treating this subject are illustrated by the sermon above mentioned.

In opening his sermon, Mr. Baragwanath quotes 2 Timothy, 4 : 3, 4, and refers to a time "when the practical truths of the Gospel of Jesus Christ would not be endured, but people would follow their own bent, hating such teachers and doctrines as opposed them." He should consider who those persons are in our day who will not endure "the practical truths of the Gospel," and who it is who are doing the "hating." These accusations certainly cannot be brought against Christian Scientists, for they are the very ones who are emphasizing these "practical truths," and who never preach sermons against their fellow-Christians, leaving all the "hating," if there is any to be done, to others. Jesus, according to the Gospel narratives, was occupied at least as much in healing the sick as in reforming the sinner during his ministry. He commissioned his disciples and apostles not only to preach the Gospel, but also to "heal the sick," and they followed his command, and so did the primitive Christians until Constantine made a State machine out of the church. Healing the sick was considered a necessary part of the "practical truths of the Gospel" by Jesus; why do not the clergy, who have received his commission, obey his command to-day?

I do not recall that Mrs. Eddy has anywhere made the bald statement that "The five senses are five personal lies," but if she did, she undoubtedly accompanied her words by an explanation of her meaning which should not be separated from the context, if the object in quoting her is to arrive at that meaning. In "Unity of Good" she has written at some length on this question of the five physical senses. On page 41 she says:—

"The physical senses (matter really having no sense) give the only pretended testimony there can be as to the existence of a substance called *matter.*"

If Mr. Baragwanath can define "matter," except in terms of mind, he will be the first person who has succeeded in doing this. Modern physiologists and psychologists are pretty well agreed that matter is essentially a mental concept, to be apprehended only by its phenomena. If natural scientists cannot tell us any nearer than this what matter really is, why should Mrs. Eddy's definitions of matter as "a mortal illusion" be scouted as an example of "stupendous ignorance,"—especially when Scriptures teach us that "God is Spirit," and that He made man in His image and likeness?

I cannot imagine where the reverend gentleman received his impression that Christian Scientists "damn" anybody for not "accepting" any facts, beliefs, or teachings. Christian Scientists are notably free from the intolerance which such conduct would indicate, and they concede to every one the right to their own opinions. Christian Science does not deny the "properties of matter" as properties of human sense, nor attempt to abolish "chemistry," "geology," "astronomy," and "hygiene;" nor does it seek

Digitized by Google

to wipe out "consciousness itself." Christian Science explains the true meaning of the term Science, as applicable "only to the laws of God, and to His government of the universe, inclusive of man" (Science and Health with Key to the Scriptures, p. 128); and affirms that "consciousness itself" is God. But "pain" does not enter into that consciousness, and "pain" must, therefore, remain what it always is, a "mortal illusion," to be successfully destroyed as such.

After all, the best proof of the correctness of Christian Science lies in its practical application. Christian Scientists do not claim to be better than any one else, but they do claim to be better than they used to be. They are more useful to their families and better citizens and friends than they were before they began to apply Christian Science to their daily lives. Of course, much remains to be done, and as a body of people, Christian Scientists are more fully aware of their human short-comings than most people, but experience has proved to them that, when they are true to their Christianity, as interpreted by their text-book, the improvement in their mental, moral, and physical condition is sure to follow.

I know that Mr. Baragwanath and others in your city who may have been misinformed upon the subject of Christian Science will gain much help, comfort, and joy from the serious consideration of the new, yet ever old, Truth which Christian Science presents for their investigation. This investigation, however, can only be satisfactorily conducted by turning to original sources of information and by learning from Christian Scientists themselves, who know whereof they speak.

W. D. McCRACKAN.

## Toleration.

IT is natural that there should be at least temporal objections to new things, since their adoption necessarily means a setting aside of old means and methods to the same end. One who has an accomplishment, invention, or discovery, which in its day has been highly acceptable, naturally is disturbed with the prospect of its being abandoned as a thing of the past; but when he learns that his neighbor's invention or discovery which is to take its place is of far greater value than his own, his interest in the general welfare of mankind restrains his wrath. He is glad because his neighbor has made possible an advancement beyond his own. It should be noted that the real duty of this life is to take as many steps as possible heavenward. We are not here to advocate eternal adherence to any temporal thing, but to "use the world as not abusing it," and diligently watch for and accept those things which lead onward and upward. Mortals should not be contented with anything short of perfection. They should keep before them that saying of David, "I shall be satisfied, when I awake, with thy likeness." This not only applies to business affairs, to school life, to the general commodities, furnishings, and provisions of mankind, but to religion and medicine as well. When the authorities and the people were inclined to persecute Peter, Gamaliel said, "Refrain from these men, and let them alone: for if this counsel or this work be of men, it will come to nought: but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." This was wise, for an utterly unprofitable thing could not long find adherents. Even if a fraud should find acceptance, such could not be lasting: for if really a fraud, it could bring no profit to those who accepted it and would not be received a second time.

In this age of rapid transit the demerits as well as the merits of a new thing are quickly circulated. It is perfectly safe to present every new thing to the world in an honest light. The misrepresentation of a good thing cannot permanently keep it out of use; neither can the misrepresentation of a worthless thing keep it long in use. Experimentation is bound to prove the worth of a given product, invention, or discovery. It is always safer and better to allow a thing to stand upon its own merits. Such a method more quickly affords the proper test on the part of the public, for they have become so used to the misrepresentations as well as the exaggerated commendations of new things that they are usually determined to try or witness for themselves. The Scriptural injunction is, "Prove all things; hold fast that which is good." Mere opinions are of no lasting benefit, and positive knowledge in respect to an untried thing can only come through experimentation and observation. By experimentation, however, we do not mean that mortals must enter into a practice of all the vices of the world in order to learn what there is in them. A better experimentation is in the practising of righteousness, which is opposed by vice and which convinces one of the advantages of right doing. There is no such thing as standing still. We are either learning the efficacy of a good thing by right doing or the inefficacy of an evil thing by wrong doing.

The saying of Gamaliel was exceedingly wise and applies as forcibly to-day as when first uttered. It may seem strange, but it is, nevertheless, true that in this our day, nineteen hundred years after Gamaliel, the same spirit of intolerance exists among men, showing the tenacity of error in the human heart and the amount of time required to uplift the world and bring about the long-prayed-for spiritual condition.

Christian Science, as a new discovery, comes in for its share of misapprehension, and must, like all new things, run the gauntlet of skepticism and intolerance. This could not be avoided in connection with its advent into an imperfect world, but its end is as sure as its beginning, and we are pleased to note that Christian Science is making its way, proving its efficacy and overcoming misconception and intolerance.

ALFRED FARLOW.
In *Boston Times.*

## The Genius and Teaching of Christian Science.

CHRISTIAN SCIENTISTS do not wish to boast of what they have done. Indeed, they recognize that, humanly speaking, they have done nothing, the God they worship, he "doeth all things well." Human superstition accepts the belief that it is natural for church work to lack funds, whereas Christian Science reveals that to manifest abundance in God's work is natural and proper.

In business, Christian Science makes men more accurate, apt, honest, kind, and considerate in all its relations. It is available daily, hourly, momentarily. It eliminates fatigue by destroying the cause of it. It enables men to take hold of problems with greater confidence than formerly, and to attain more immediate and better results with less expenditure of time and labor, and it relieves their work of the fear which so often hampers it. But above all, in Christian Science the law of God is discerned as a law that is equally good for all, and that nothing can be lost by conforming to that law, so that one is enabled to see the desirability of mutual concessions and mutual benefits in all transactions.

As for the artist or musician, his career is ennobled through Christian Science. He not only perceives more clearly the true basis of all art as a manifestation of divine Mind, but his ideals are made more tangible thereby and their accomplishment less remote. Besides this, Christian Science enables him to destroy all jealousy, envy, evil speaking, and other evils which often disfigure the artistic mind and prevent its full development.

Christian Science eliminates the fears of parents and

Digitized by Google

teaches the gentle art of protection through ever-present Love. The prevalence of some epidemic, or the news that the next-door neighbor's child has the measles or the mumps, no longer spreads consternation in their households. They have learned that Christian Science treatment is protective as well as curative in its effect.

Christian Scientists believe in supporting every worthy cause, and they give largely to charity. Mrs. Eddy says in her book, "Miscellaneous Writings:"—

"A certain apothegm of a Talmudical philosopher suits my sense of doing good. It reads thus: 'The noblest charity is to prevent a man from accepting charity; and the best alms are to show and to enable a man to dispense with alms.'"

Christian Science treats poverty in the same way that it treats disease, and destroys poverty. Thousands of people testify to benefits received in this respect.

Probably enough has been said to indicate that Christian Science practice is in no way associated with so-called mental suggestion, nor with any other form of belief involving the influence of one mortal mind or will over another. The process of Christian Science treatment is prayer, a prayer of understanding, not of mere belief.

Any person can gain this understanding by being faithful to the teachings of the Christian Science text-book. For any one else than a Christian Scientist to attempt to explain its method by some theory is not only vain, but presumptuous. These wrong ideas as to Christian Science and its practice ought to cease. Its followers are always ready to give information upon the subject, and always glad to offer a reason for the hope that is in them.

In contagious and epidemic cases Christian Science has a most enviable record in the prevention of the spread of these diseases among those who had been exposed to them. Hundreds of instances have been cited where one member of a family had been afflicted with some contagious disease, and other members of the family protected from it through Christian Science treatment.

Furthermore, so far as I have been able to learn in more than ten years of experience, no instance of the spread of a contagious or epidemic disease can be traced to the carelessness of Christian Science practitioners. They not only desire to obey the law in reference to the prescribed manner and time of isolation, but they recognize a higher law, which to them is inviolable, and which is embodied in the Golden Rule.

As already indicated, Christian Science stands upon the first commandment: "Thou shalt have no other gods before me." It declares the power and presence of the only living and true God, declares His infinity, and thereby logically denies any power or presence to evil. Some objections have been made to Christian Science on this account, but it is universally acknowledged that the results are astonishingly good.

Even those who feel unable to accept the views advocated by it, acknowledge that no one can earnestly follow its teachings without being morally benefited. Christian Scientists respect the opinions of all people. They do not judge unrighteous judgment, but cheerfully acknowledge every unselfish word and deed as a part of that grand reality which shall eventually rule the earth.

That one person should first perceive this Science and give it to the world was a necessity which cannot be denied. Mrs. Eddy says: "I named it *Christian*, because it is compassionate, helpful, and spiritual." That Mrs. Eddy, as the Leader of the cause, should not conduct it according to the suggestions of its critics is hardly to be wondered at, but this fact does not justify any one in falsehood, or excuse wicked and personal attacks. Her life and character are an open book, where all may see the motive and aim always directed by the one desire to be good and to do good.

To watch thought and see that it is pure and holy is the rule governing Christian Scientists, and it is the manifest duty of every man to follow this rule.

BICKNELL YOUNG.
In *Chicago Inter Ocean.*

---

Mrs. Eddy's recent advice by no means admits any more reality to disease than all her previous teaching has done. Disease is not made an entity by speaking or writing of it, any more than the term zero is made to mean more than nothing by adding, subtracting, or dividing it in mathematics. A million zeros still remain nothing, and a library written on the subject of zero could not give it any property or function except that of being nothing.

Enlightened public consciousness is rapidly learning that fear, apprehension, suspicion, and doubt are fruitful sources of contagion. It is daily being more widely understood that as a man thinketh, so is he; that courage, based on spiritual understanding, is a better preventive of epidemics than any quarantine; and that positive health is a thousandfold more contagious than negative disease.

GEORGE H. KINTER.
In *Buffalo Times.*

---

Christian Scientists love all men engaged in the amelioration of human suffering, and toward physicians their thought is always kind, for no class of men are more self-sacrificing.

When a Christian minister addresses his congregation with the desire that God's word may become a "present help" to sick and sinning mortals, it should be the truth that is spoken with the understanding, or the utterance will do no good, no matter how strongly it may stir the imagination or arouse the sense of right. An incorrect statement is not God's word. No matter how sincerely intended, it can do only evil until it is corrected.

CHARLES D. REYNOLDS.
In *Manchester* (N. H.) *Union.*

---

I like the little story that you have all heard. As the father read the Scripture in the family, and the child that was dearest to him sat at his knee,—the child who shared his journeys, and into whose sport he himself was not too old to enter,—when he came to the passage, "I and my Father are one," the child looked up with a blessed insight, and said, "Just like you and me, papa." Thus theologies fail and are ineffectual beside the insight of the child's mind that knows that all doors into the Father's heart are open and are never shut, and all access is immediate and ever procured.

### The Echo.

A THUNDERING tone, hard driven down a glen,
Broke on the granite at a mountain's feet,
And tremulous, and soft and lowly, then
Returned, a finished echo, pure and sweet.

In ancient days a voice of mighty power
Sang out the glory of our land to be:
Back from the walls of circumstance, this hour
That word returns, a rounded prophecy!

## Among the Churches.

### Advance in Joplin, Mo.

At our annual meeting held December 12, the reports of officers showed progress in all directions. The present membership numbers one hundred and four, and the attendance at our Sunday services and Wednesday evening meetings has greatly increased. Much interest is being manifested. In obedience to the new by-law, we have chosen new Readers. A liberal contribution has also been made to the Building Fund of the Mother Church. This church maintains a Sunday School and handsomely furnished reading rooms, centrally located. There has been a marked increase in the sale of literature in the past year.

We feel that the cause of Christian Science in Joplin is steadily advancing.—MARY J. BARGER, *Clerk.*

### Church Dedication in Shellman, Ga.

Sunday, October 12, First Church of Christ, Scientist, was dedicated with simple, but impressive services.

The church, so neat and unpretentious in architecture, was beautifully and tastefully decorated with potted plants lovingly and voluntarily offered gratis by a non-adherent.

The congregation was composed largely of people who had never attended a Christian Science service before. The most earnest attention was given throughout both services.

Shellman is a small town of less than five hundred inhabitants, and the membership of the Christian Science Church, not over fifteen. Our church being twice filled in one day, is encouraging to us.

The address of the First Reader was in part as follows:

"We welcome you here to-day to the dedication of First Church of Christ, Scientist, to the service and worship of God. We are small in number as yet, but none the less faithful and grateful, knowing that, as Jesus said, 'Where two or three are gathered together in my name, there am I in the midst of them.' We know that God is in our midst, for we gather here in His name and to praise Him at every service.

"This little church is the result of the patient toil and constant love for Truth exercised by its members. We have met here to-day with hearts and voices full of gratitude and praise to God. We do not assume to understand all the truth of Christian Science; we are only babes in this understanding, but we are striving, through consecration and constant study of the Scriptures, to grow in grace and understanding. We are striving to emulate Jesus in every walk of life, and, as Paul says, to let that Mind be in us which was in Christ Jesus."

The Second Reader said, in part:—

"The church organization here in Shellman, and the building of this temple, are the outcome of cures resulting from the absent treatment of some in whose cases *materia medica* had failed. These healings gave the patients restored such profound confidence in God's Word as the true healing power, that they became earnest students of Christian Science, meeting together regularly at their homes for the purpose of studying the Bible illumed by 'Science and Health with Key to the Scriptures' by Rev. Mary Baker G. Eddy, and later building a room in which the Bible Lessons were studied for a period of three years, and finally organizing into a church.

"May this visible sign of the power of Truth stand as a reminder that the Fatherhood of God and the brotherhood of man are made manifest, and within its walls may be found the love that is rest to the weary, consolation to the sorrowful, and healing to the sick."

Mrs. Sue Harper Mims of Atlanta was present, and said in part:—

"It is with a deep and grateful sense of God's infinite goodness, that we meet here to-day to celebrate this event, which we believe to be so useful in advancing the Kingdom of God on earth.

"This little church is not mighty to human sense, but it evidences to all that the supremacy of Spirit, divine Love, to heal the sick and raise the deadened senses to a spiritual recognition of omnipotent Good, has been attested by word and deed among you.

"To the Christian Scientist, God is the universal Love that embraces *all* in His omnipresence. He is *all* and beside Him, naught else is. 'Thou shalt have no other gods before me,' Spirit, and 'Thou shalt love thy neighbor as thyself,' is the universal creed of Christian Scientists, if they may be said to have a creed. The fulfilling of this law of Love, was Jesus' sublime mission, and he proved that obedience to this law of Love healed all manner of disease, poverty, and discord incident to mortal existence. He believed only in the power of Spirit, and he loved his brother better than his own life; because of this, he triumphed over every human ill, even death itself. Theology has somewhat hidden from us that Jesus as the Way-shower and elder brother came to show us how to imitate him. As a divine student of God, he did his sublime work for our guidance, and then encouragingly said: 'All things are possible to him that believeth.'

"Paul understood that this exemption from the law of suffering, from serpents, from poison, from sickness, was because there is a spiritual law that annuls the material laws that we have always been educated to believe in. It was because Paul understood this law that he threw the poisonous viper from his own hand without any evil results, and also raised the dead. He was not one of the twelve, nor of the seventy that Jesus sent out. Paul did all this, yet he never saw the personal Jesus. Now the great difference between Christian Scientists and other Christians is just here. We believe that Jesus and Paul, the prophets and the apostles, did their mighty works in accord with, and in demonstration of, an unchanging law of Life in Christ Jesus, as St. Paul himself expresses it; and that God's unchanging law must always be as available and operative at one time and in one generation as another, because we believe Jesus' own words that he came not to destroy the law, but to fulfil it. It is because of this that we are called Christian Scientists, for the word science means and deals with demonstrable laws,—a thing is to be known by proof or demonstration. Paul declared that his preaching was not with enticing words of man's wisdom, but in demonstration of the Spirit and of power.

To-day this glorious understanding of the power of Christ has come to us through the illumination of the Scriptures in Christian Science. Mrs. Eddy, our Leader, in her book, 'Science and Health with Key to the Scriptures,' has unlocked for us the vast treasures of the Bible, and enables us to understand and follow Jesus, at least in part. It is through her holy life and consecration to God, and understanding of Truth, that the primitive Christianity of Jesus, with the signs following, has been established in your midst, and for that this little church stands.

"It is a most sacred hour and work, and that all true Christians may be lovingly united in sublime understanding of God's *ever* Presence and Power to alleviate the sin and sorrows of human existence, is our deepest prayer.

"May divine Love continue so to radiate from this church that the blind may see, the lame walk, the deaf hear. May the rising sun of righteousness shed his healing beams on this community, till all will remember this day with thanksgiving, and, united in praise of the One God and One Christ, hasten the day when the kingdom of God will come on earth as in heaven, and God be here and now glorified."—W. T. SAXTON, *Clerk.*

## True Humility.

IN these days of social unrest, of sharp and almost merciless competition for personal supremacy in all lines of human endeavor,—commercial, political, and religious,—the world can listen to no better counsel than that of Paul to the Ephesians: "I therefore, the prisoner of the Lord, beseech you that ye walk worthy of the vocation wherewith ye are called, with all lowliness and meekness, with longsuffering, forbearing one another in love; endeavoring to keep the unity of the Spirit in the bond of peace."

Humility is wholly apart from the false sense dominated by fear and timidity, which shrinks from the private and public duties and responsibilities of daily life, and which frequently finds expression in sensitiveness, selfishness, and helplessness.

True humility has ever been characteristic of the faithful followers of Jesus. It is a normal, harmonious condition of consciousness, and is manifested in true brotherliness, unselfish love, untiring energy; it is satisfied and amply rewarded with the "Well done" of Spirit, and is not affected by the plaudits of men. If need be, it is aggressive to the point of daring, courageous to the extreme of wisdom, meek to the limit of forbearance. It has been described by an old writer as the virtue "which has a calmness of spirit and a world of other blessings attending upon it."

M.

## The Riches of Faith's True Inference.

AT a time when his disciples were bewildered with doubts and fears Jesus said to them, "Let not your hearts be troubled: . . . In my Father's house are many mansions: if it were not so, I would have told you." In these words of loving and suggestive reminder, as well as in his references to the good Shepherd's far-seeking solicitude for the lone lamb astray, and to God's anticipation of the sparrow's need, he emphasized the propriety of all those inferences of intelligent faith which necessarily spring from the Christian assertion of our kinship with a God who is infinite Love, and who is the disposer of all good.

These inferences locate the treasures that are ours, though yet unmined; they bring the joy of to-morrow's achievement to the relief of to-day's struggle, and authorize the present exploitation of all that a well-grounded hope and an exalted spiritual sense may embrace.

The Christian's legitimate anticipations of Good! who shall undertake to measure or enumerate them, who essay to picture or define the riches of Love's unnamed purposes toward its own! We have all known somewhat of a father's and mother's love, its far-reaching plans for our enrichment and happiness, its unrestrained joy when we have shown unhesitating confidence and made large demands upon it, and Jesus taught us to find in these foreseeing and fore-planning impulses of parental affection, the symbols and assurance of a heavenly Father's interest in us which is beyond words, His readiness to measure up to our highest aspirations, our most daring anticipation and appropriation of Good. Indeed, infinite Love can know no self-limitation, it blesses and saves unto the uttermost of our reception and consent. The fetterless unreserve of this Love must have appeared to Paul when, in writing to the Ephesians he declares that God is "able to do exceeding abundantly above all that we ask or think," and when he added, "according to the power that worketh [or is permitted to work] in us," he named Love's only seeming limitation.

All teachers will witness to the exceeding pleasure attending the guidance and supply of an alert and eager mind. The wide-awake boy who catches an idea and enthusiastically begins to invest himself with all the riches of its logical content, the corollaries which are as yet far removed from the unimaginative and unventuresome,—such a pupil's daring is a teacher's joy and stimulus, and drudgery becomes a delight in ministering to his advance. And yet how feebly this every-day experience suggests the fulness and spontaneity of the Father's answer to humanity's spiritual adventure upon the unexplored domain of Truth.

The inferences of intelligent faith in God! how rich and splendid they must be! These are the "Everlasting hills" of the Lord, and he shall ascend that hath clean hands and a pure heart. Men endure untold hardship, and hazard their lives that they may reach an earthly summit and feast for a moment upon the passing scene, but faith summons us to a Mount of Transfiguration from whose heights we may look upon Love's unlimited manifestations, and know that all we see is ours. Faith's true inferences embrace all our possible forecast of infinite Love,—let us not restrain the quickening thought,—its plans for our freedom from sin and suffering and all the fetters of ignorance and habit, poverty and prejudice; plans for the satisfaction of our noblest impulses, the fulfilment of our dearest hopes, the realization of our fondest spiritual anticipation; plans for our largest usefulness and success, and for our inheritance of all the endowment and estate pertaining to the sons and daughters of God. Let us not forget it all, nor fear lest we trespass upon our Father's munificence. "*Whatsoever* ye shall ask in my name, that will I do. . . . These things have I spoken unto you, that my joy might remain in you, and that your joy might be full."

The oceans of the Infinite are beyond all our plummets, and Truth's unmeasured store is his who dares to know himself Truth's child. W.

## A Fallow Field.

RICH, well-watered fields stretched away in all directions, fair and fruitful. In the midst was the old apple orchard, which swung out its pink-white censers every spring, prophesying in beauty and fragrance the plenty of the autumn. But what a contrast was there just at the foot of the orchard,—such a tangle of wild things! Briers and burrs, thorns and thistles and nettles, and in and out and over all, with sinuous grace, crept the poison ivy.

In was not surprising that the good farmer's purpose to plow up that fallow field had been long deferred. However, the morning came which brought the courage to cut and grub and burn and plow; a year later, the neglected field was a sea of golden grain.

During all its past the fallow field was blessed with the same rich soil that, in the orchard, had for years supplied the farmer's fireside with golden pippins and winter sweets; there was the same bright sunshine, the same refreshing rain, the same gentle dew. The brook danced just as merrily amid the tangled briers as under the heavily laden old apple-trees. Nature's work was done, and done well, and when there was added the resolute effort to uproot the noxious weeds, stir the soil, and cast the grain, a rich abundance smiled its blessing where the unsightly growth had been before.

Would it not be well for us to look about and see to it that no fallow field is running to waste in our domain?

Christian Science teaches, as the world has never been taught since the days of the Galilean, the rich and impartial endowment of man as the child of God. We know something of man's unmeasured possibilities. We know his hunger and thirst for Good. Are we earnestly and lovingly endeavoring to remove the poisonous weeds? Are we planting the seeds of purity and love wherever and whenever opportunity offers?

In the by-ways of our own hearts and homes, in the nursery, in the schoolroom, in the office, there may be a fallow field which would blossom as the rose and shed hope and happiness on many a passing pilgrim, were we more active, more faithful in our reflection of Love that is impersonal, impartial, universal. (Science and Health, p. 13.) S.

Of course the world is growing better; the Lord reigns; our old planet is wheeling slowly into fuller light. I despair of nothing good. All will come in due time that is really needed. All we have to do is to work—and wait. WHITTIER.

Material ameliorations are essentials, and we will strive to obtain them, not because the one thing necessary to man is, that he should be well housed and nourished, but because you can neither acquire a true consciousness of your own dignity, nor achieve your own moral development, so long as you are engaged, as at the present day, in a continual struggle with poverty and want.—JOSEPH MAZZINI.

There is a destiny that makes us brothers:
None goes his way alone:
All that we send into the lives of others
Comes back into our own.

EDWIN MARKHAM.

## What is Life?

LUCY D. BLANCHARD.

To the Christian Scientist, life is the eternal consciousness of Being, the true individuality of existence.

We learn in Christian Science that God is Spirit, also Life, Truth, and Love, and it must follow that all reflected life is spiritual, in and of God, harmonious, and eternal.

Jesus said, "I am come that they might have Life, and that they might have it more abundantly," implying that the world had never known real Life, and what had been called life was only an illusion which ended in death. Science and Health teaches us that "Life is the law of Soul, even the law of the spirit of Truth; and Soul is never without its representative" (p. 427).

Jesus was the idea of this true Life, a type of divine sonship, and our model. He recognized no life apart from God, his divine Principle. This was the basis of his manner of living, and his unparalleled demonstrations in overcoming sin, disease, and death. We learn from his teachings that Life is never in nor of matter, body; Life is never in man, but is the "Creator reflected in His creations" (Science and Health, p. 331). In another place he told his disciples that Life eternal consisted in a knowledge of God and Jesus Christ whom He had sent.

The material world has been educated into the belief that life is in matter and dependent upon it, that we each have a separate life of our own; but Christian Science shows us that this is impossible. Life can never be separated from God.

This sense of material life cannot stand under the light of Truth, and eventually it is seen to be nothingness.

Many of Jesus' controversies with the Jews grew out of their opposite views of Life. They thought it was material, and insisted that Abraham was their father, while Jesus knew that Life is Spirit, and said, "Before Abraham was, I am."

This shows us clearly that Life never begins and never ends, that nothing can destroy it, because it is God, and the real man, which Jesus represented, reflects this perfect Life, is one with the Father, and therefore immortal.

## The Real and the Unreal.

ELOISE CAMERON MAC GREGOR.

ONE day, soon after beginning the study of Science and Health, I looked out of a window and saw some children carefully examining the shadow of a tree which was cast on the lawn, the sidewalk, and the roadway, thus appearing to be constituted of grass, cement, and macadam.

Their heads were bent down scrutinizing the ground and they did not look up to see the real tree, made of one substance and growing straight out of and away from the earth, tall and beautiful, as it towered above them.

These children seemed entirely oblivious to this higher and only real existence of the tree.

Looking thus at the children the old thought was suggested, that "the proper study of mankind is Man," but such has been the attitude of mankind hitherto in its study of man, that, instead of seeing the real man, made in God's image and likeness, made of the one Substance, Spirit, they have habitually contemplated the deceiving shadows called mortal mind and material existence.

This downward view has begotten the idea that there is a morning of birth, when the shadows are heavy and stretch away to the horizon; that there is growth, or change, until noon, when maturity presents a more limited, defined, and personal shadow, and finally that this does not last, be-

Digitized by Google

cause there must come the evening of decay, when the shadows revert to the original type although pointing in the opposite direction, until their final extinction at a sunset which is inevitable.

All the day, however, the real tree remains quiet, undisturbed above its shadows, preserving the same upright perfection morning, noon, and night, thus reminding us of our Leader's words: "Entirely separate from the belief and dream of material living, is the Life divine" (Science and Health, p. 14).

Look upon the shadow man as the children looked upon the shadow tree, and he seems to be physical, mental, and moral, and this point of view has given rise to the three great subjects of the world's attention; viz., so-called science, theology, and medicine.

However, as we know that above all the nothingness of shadow stands the beautiful living tree, which no analysis of shadows can ever create, reveal, or destroy, so we know that above all the physiologic, theologic, and psychologic seemings of mortal mind, there stands the real man, unmoved, upright, and perfect because he is the likeness and image of Spirit, not subject to birth, growth, maturity, or decay, and "In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 477).

How grateful then must we be who—weary and heart-sick, over physical, mental, and moral deformities of the shadows—have been enabled to lift our thought from the stiff-necked contemplation of a so-called life with beginning and ending, to catch a glimpse of the one and only Life which is God!

"And when these things begin to come to pass, then look up, and lift up your heads; for your redemption draweth nigh" (Luke, 21 : 28).

"Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning" (James, 1 : 17).

"The physical senses can afford no proof of God" (Science and Health, p. 284).

"The Israelites centred their thoughts on the material, in their attempted worship of the spiritual. To them matter was substance, and Spirit was shadow" (Science and Health, p. 351).

## Thoughts.

SILAS COBB.

It is wrong thinking that brings disease and disharmony, and it is right thinking that brings health and peace. It takes true thoughts to make a true man; it is God's thoughts reflected, that build of us His temple.

"The body improves under the same regimen which improves the thought; and if this is not made manifest, it proves that it is not Truth which is influencing us. . . . The moral and spiritual facts of health, whispered into thought, produce very direct and marked effects on the body" (Science and Health, p. 370).

Further; if we would be happy we must have good thoughts. We cannot be truly happy and hate any one. Even if maligned we must love. "To be carnally minded is death; but to be spiritually minded is life and peace." If men could know that their happiness depends upon their cheerfulness, their politeness and kindness to others, and a happy and orderly way of thinking, backed by the knowledge that all joy comes from God, there would be more happy, and consequently healthy, people in the world. If every time an evil thought comes to us and we make it our companion, whether it be a form of malice, hatred, or anger, we knew that we must suffer in some way for this indulgence, either by actual sickness, or in some other way, we would all be more guarded and seek to purify our thought. "So it will ever be, till we learn that there is no discount in the law of justice, and that we must pay 'the uttermost farthing.' The measure ye mete 'shall be measured to you again,' and it will be full 'and running over'" (Science and Health, p. 5).

I have been healed in Christian Science of the so-called incurable. I have been cured of the tobacco habit of twenty years' standing. I have been able to relieve myself of a throbbing, annoying pain almost instantly. A large tumor which had been a trial for two or three years was healed in three treatments, and all this was done by letting in God's love thoughts and getting my thoughts tuned in symphony with Good.

The more we attune our thoughts to the divine harmony, the less discord there is, whether that discord be physical or mental. The more fully we realize that Love is our Shepherd, the more thoroughly shall we know that evil cannot lead us, and the more fully are our needs supplied.

The good thoughts that we have will be reflected not only upon our body, thus affecting our health and happiness, but it will affect our business. It rests with us to determine what our conditions shall be, whether we will have health or sickness, happiness or discontent, prosperity or poverty; and it thus rests with us to determine how soon we shall emerge from discord into harmony,—heaven. All want the best, although we may differ as to what that best is; yet the most intense desire for health, harmony, prosperity, will not of itself give them to us. The sick usually have a desire to be well, but that in itself does not make them well. This desire, in order to be properly realized, must be supported by the understanding that man is in reality always well, always contented, always harmonious, always prosperous. In proportion as we can realize this, in that proportion will our conditions, our business, our health, our lives be free from friction and from discord.

When light is turned into a dark room the darkness begins to vanish, and if this light is intense enough the darkness will be totally destroyed, and the cobwebs and the accumulated dust can then be easily disposed of. So, too, when the light of Love enters the darkened human consciousness, when "Truth through floodtides of Love" is poured in, and we are willing by its aid to brush aside the cobwebs of trouble, the dust of mortal mind, sick and sinful thoughts, then with brightness comes cheer, health, joy, peace. It is this Love which dissipates the fog of troubled human thought and does the healing. This is Christian Science, so simple, yet so difficult unless one becomes as a little child.

## "Let God Reign."

N. E. B.

To "let God reign" is our present work. These three little words seemed whispered to me one night, in a wakeful hour, and at once so plainly and clearly did the errors of sense and self stand out to my waiting thought, that I was startled with the fuller realization of the subtle error of self-righteousness,—self,—which assumes to usurp the presence and the power of God. It remains for us to heed these warnings of Truth through the still, small voice, and to put them into practice, day by day, until we shall reach the goal, knowing and expressing all Truth. As we reach a higher basis mentally and morally, the physical results follow naturally, and through these "signs following" come courage, strength, gratitude, and rejoicing that we are thus able to do our appointed work—to grow in grace by letting "God reign."

If a good face is a letter of recommendation, a good heart is a letter of credit.—LORD LYTTON.

## God's Universe.

ANNA W. K. MATHEWS.

In our recent Thanksgiving service one person in giving a testimony said, "I am thankful that God is Life, Truth, and Love." Christian Scientists are grateful to be learning that Being is Good instead of good and evil.

From this radical point of departure from previous teaching have sprung all the unnumbered blessings Christian Scientists have received, and, on this point, too, hinges the great flow of gratitude from their responsive hearts.

That God is Life, Truth, and Love, is the very basis of Christian Science, and as we come to understand this the aspect of the wilderness is changed until it buds and blossoms as the rose.

Our present sense of gratitude, which results from the understanding, in some degree, of the reality of God, Life, Truth, and Love, is a sign that we are beginning to sense our real condition, which is one of perpetual joy and independence. God's children never knew, nor will know, anything but Life, Truth, and Love; therefore, in place of gratitude in our sense of the word, methinks there will be always welling up in response to Good a profound joy and appreciation. Science and Health says, "His infinite ideas run and disport themselves" (p. 514). Our birthright, the full reflection of Good, is in strong contrast with a feeling of unworthiness for good received. Of late the thought of the goodness of God's universe has been growing upon me, and has shown me how, if this light remains undimmed, it simplifies all work in Christian Science. If God's universe is good we are enveloped and protected by Good, and the so-called mentality, ignorant or malicious, cannot affect us. There is absolutely nothing to fear in God's universe. Then you may be sure as soon as fear makes its appearance, that it is identical with error, and implies that evil has obtained an audience, has been believed, and consequently feared. On the strength of the universality, the allness, of Good, we must boldly refuse to believe a lie, and thus refuse to allow its manifestation. Thus we see how essential it is to keep clearly, the idea of a universe of Good, Good embracing and comprising the universe. Then, dwelling in this thought, we dwell "in the secret place of the most High," where no evil can befall us.

The change Christian Science works in character, little by little, day by day, is a constant source of wonderment to me, and this has all been made possible by this teaching that Good is All. Mrs. Eddy was the first since Jesus to take this stand and remain constant, and behold the results! Thousands have turned their faces toward the light, and are blessed in all the ways of life.

## A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building, Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*,
Box 56, Fall River, Mass.

## The Lectures.

### At Lynchburg, Va.

Judge William G. Ewing of Chicago, lectured last night [November 25] in the hall of Hill City Lodge on the subject of Christian Science. The hall was well filled, and, judging by the close attention accorded the speaker, the audience found the lecture a very interesting one. Judge Ewing was introduced to the audience in a few appropriate words by Miss Mollie C. Langhorne, First Reader of the Christian Science Society of Lynchburg.—*The News.*

### At Galveston, Tex.

An audience of two or three hundred people assembled yesterday afternoon [December 28] at the Scottish Rite Cathedral to hear Judge Septimus J. Hanna of Boston deliver an address on Christian Science which was listened to with the closest attention by his hearers. The lecture was an exposition of the teachings and position of Christian Science. The audience was composed of many who do not belong to the Christian Scientist faith. The Hon. Edward F. Harris of this city (representative-elect to the state legislature) introduced the speaker.

*The Galveston News.*

### At Riverside, Cal.

The Loring was well filled with an appreciative audience Sunday afternoon [December 28] to listen to an address on Christian Science by Carol Norton, C.S.D., of New York. The subject of his lecture was, "Christian Science is Universal Christianity."

Hon. J. S. Noyes introduced the speaker. He said in part:—

*Ladies and Gentlemen:*—Some few weeks ago a committee of the Christian Science Church invited me to preside at this meeting, and I can assure you that it was with a good deal of pleasure that I accepted. I am not a Christian Scientist, and know but little of what they teach, but this I do know, if I may judge them by the same standards I judge other denominations, that they are a band of earnest, high-minded, zealous, and conscientious Christian workers. There are many religions and many denominations of the Christian religion—all organized for the upbuilding of the human race, the amelioration of the down-trodden, and the ultimate establishment of the world upon the exalted standard of perfect righteousness and justice. The ways are many, through the different denominational routes, but the end is one—a full and complete living up to the teaching of Christ, as revealed to us through the gospel. It makes no difference to many people who are not in full accord with orthodox beliefs, whether a man is a Baptist, a Presbyterian, a Methodist, or a Christian Scientist. They all look alike to us, if I may employ the words of a popular song, and the only thing I would seek to know of them is whether they are sincere and earnest in their pretensions to a Christian life.

I wish to invoke upon your part a spirit of toleration for the views and beliefs of the speaker this afternoon. We all must surely believe in free thought and, therefore, free speech. I believe that it was intended that we should be as free to choose and enjoy our religion as we confessedly are to choose and enjoy any denomination of religion. Christian Scientists may be right, they may be wrong, but right or wrong we should respect their beliefs, give them a respectful hearing, and draw our own conclusions. God has not given us two sets of mental faculties—one to reason on worldly matters, and one to reason on religious matters. We concede the right of individuals to differ as widely as they may, upon worldly matters, why not, then, on religious matters?—*Riverside Press.*

## Testimonies of Healing.

In attempting to give my personal experiences since I came to Christian Science, there seem to be few startling things to relate, for since beginning the study of this Science, some fifteen years ago, I have been constantly protected by divine Love, never having been sick abed for a single day.

I did not come to Christian Science for the spiritual understanding, for I did not know then that it was a religion; I came to it simply for healing, that I might escape an operation that the surgeons considered necessary for my recovery. A teacher of mine was at the time taking a course in Christian Science, and he induced me to call upon a practitioner. I had six treatments of this student of Mrs. Eddy, but it would be difficult to tell when I was healed. I was so engrossed with what my practitioner told me of the omnipresence and omnipotence of God, that I quite forgot my pains and helplessness, knowing that if I were healed, I should have the proof that God is really here and now. At the end of two weeks I was well and able to return to my studies and enjoy them as I never had before.

As I look back, what seems to me most remarkable in all my experience is that the power of the declaration of the word of God, even when so little understood, worked such wonders for me. I was enabled through this slight understanding of Christian Science to teach from eight o'clock in the morning until nearly six, never feeling the least fatigue. I had learned that God is my strength, that in Him I live and move and have my being.

Soon I began to feel it was quite time I should be helping others, so I had the privilege of class instruction from her through whom came my first healing. I then felt better equipped to voice the Truth to those who needed it; and after all, this is the greatest happiness that has come to me, to show the way into peace, happiness, and health to those who think they are burdened with sin, sorrow, and sickness. As I grew in understanding, other physical troubles, such as catarrh, hay fever, rheumatism, and a disabled thumb were healed, proving that the renewal of the body comes through the renewal of the mind. Until all error is destroyed the mental warfare continues, but through it all there is always the assurance that Truth is victorious, and if we trust implicitly in the One Mind to deliver us from our adversary, the false sense of mind, there will be only one solution to every problem, and we shall be satisfied, when we awake, with His likeness.

Having been brought up by Jewish parents, I knew little of the New Testament, but through the study of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I could understand and believe that Jesus Christ was the Messiah foretold by the prophets, for it had been proved to me that those works which were called miracles, are the natural results of man's understanding of his perfect relation to God. Whereas I had no religion and no hope in the present nor the hereafter, I now know that God is here now as He was then, delivering us from our enslavement to every kind of fear and woe, in proportion to our reliance upon His help, and our willingness and desire to become more loving, meek, and pure.

After my healing, one member after another of our large family became beneficiaries of this great light, each one in his own way, some by simply reading Science and Health, others through treatment, all hungering for the Truth that had satisfied me. For all these blessings I have not words to express my gratitude to our beloved Leader. I only know that all the good I have received and all the help I have been able to give others, have been through my little understanding of God as He has been revealed to me through Mrs. Eddy's writings, and for all this I am deeply grateful.—Mrs. Henriette Kahn Venni, Chicago, Ill.

I am glad to be able to testify that Christian Science has recently helped me to overcome what might have been a severe case of seasickness. Three days out from Liverpool we encountered heavy gales which lasted several days, carrying away ventilators, raising the roof of the wheel-house, and doing other damage, so that our ship, though a large and steady one, was buffetted about considerably.

During the storm a great many of the passengers were seasick, and I soon found that I also had that temptation to meet. It seemed very easy to give up, but I fought all the afternoon, and at the end of that time the worst of the error was conquered, and I ate a good luncheon and dinner in my cabin.

For two or three days thereafter I found I must work occasionally, but the lie was always met, and I did not miss a single meal, but went into the dining-salon whenever I wished; several times, however, I was the only woman at the captain's table. I felt that this was a great victory, as there were a number of prolonged cases of seasickness aboard. Never was I more convinced of the mental nature of seasickness, which is so largely occasioned by fear, and by the sight or knowledge of others in distress. I was very grateful indeed to Science for aid in seeing the unreality of the error and overcoming it.

Beatrice Mabury, Boston, Mass.

I feel I must say a little of the blessing I have received by coming to Christian Science. I was alone in this town of six thousand inhabitants and had much to meet in many ways. In the spring of 1901 I went to Boston and went through a class. I did not think I was quick to grasp the thought, but my teacher said to me, "It will come with close application," and I have been reaping the reward ever since.

I have since found one student, a member of a local Christian Science Church, another whose parents were Christian Scientists, and one other a seeker for Truth, and they meet at my house every Sunday at half past ten and we go over the lessons together. We feel that God has truly set a table in the wilderness.

I have had many good demonstrations in helping the needy, and I would like to give an outline of one. A relative, very antagonistic to Christian Science, who lives about seventy miles from here, graduated in June last, and they claimed she had so overtaxed herself that she had nervous prostration with heart and brain trouble. She had a fainting spell one morning and lay until six o'clock the next morning in an apparently almost lifeless condition. She had medical help, and everything was done that could be in the material way. I received a telegram to come at once, and I found the house darkened and gloom all around, and she did not notice anything. I asked to be left alone with her, and in a short time she looked up and said, "Are you here?" I said, "Yes; and so is God here, and you are well." She sat up, and but for the fear held over her would have gotten up at once. The next morning she was at breakfast and went up town. Meeting her doctor, he said, "What cured you? I am much surprised to see you well." She said, "Christian Science has cured me." The doctor said, "I do not care, so you are cured; but I looked for you to lie in bed three weeks, if you ever got up." Now that whole family is reading Christian Science.

I feel thankful to God for giving us so wise a Leader. Under her guidance the good work will go on.

Mrs. S. E. Hill, Warrensburg, Mo.

Our first Thanksgiving service in the Christian Science Church awakened in me a sense of thankfulness that had never been aroused until I took up the study of the Thanksgiving Lesson.

Now I begin to realize a little of how much the teach-

Digitized by Google

ings of Christian Science have been doing for me, and I am aware that I owe a debt of gratitude that words cannot express. When I remember the condition that I was in when I first learned of Christian Science, and realize what a change has come into my life, I feel that the least I can do is to give to the Field some of these experiences.

I was a worldly man with all the worldly man's habits, and was suffering with many of the worldly man's complaints. My wife had just been healed of what the doctors said was an incurable disease, and through her demonstration I was healed of an inherited thirst for liquor, even before I would acknowledge that I believed in Christian Science. Very soon after I began to read Science and Health and work for myself, I was able to overcome the tobacco habit that was formed when I was but a small child, just able to reach the tobacco box and light the pipes for my father, mother, and grandmother.

In two or three weeks' treatment I was healed of eczema that medical treatment had failed to cure in twelve years. I used glasses to read or do fine work for several years, but I laid them aside in less than six months after I began to study Christian Science. I see now far better without them than I ever did with them. I had become very nervous and seldom slept well at night. I was subject to nervous and sick headaches from childhood, also suffered from catarrh and shortness of breath. I was troubled with many of the more common complaints, such as fevers, colds, throat trouble, stomach trouble, stiff joints, and tender feet, with corns and many other ailments. After four years study of Christian Science, nearly all these complaints have been healed entirely. My business has been far better and I have been more harmonious to friends, and more useful than before in all the walks of life. I begin to see how selfish and ungrateful I have been in keeping silent so long, in not expressing my thankfulness to the Cause that has done so much for me.

Words fail to express the gratitude I feel towards God for His word, and to Mrs. Eddy who has given us the Key to the Word.—CALVIN L. CARR, Logansport, Ind.

---

Nearly eight years ago I realized that 'man's extremity is God's opportunity" and, in my need, turned to Christian Science for help, though at that time I knew little of it, except that it was prayer of some kind. I am grateful to say my need was met and I was made whole.

Astigmatism, with painful headaches, presumably from the eyes, also an entire dependence upon glasses for reading and sewing, passed like a painful shadow from my consciousness. An inherited and tenacious belief of bronchial trouble of several years' recurrence, with consumptive tendencies (fourteen relatives having passed away with similar trouble) and a great fear and depression therefrom, disappeared after the second treatment, as did also a chronic and painful trouble of fifteen years' standing, the result of being thrown from a buggy.

Unfortunately my practitioner left this city soon after I was healed, and though I longed to know something more of Christian Science, I knew not where to seek for information. However, I finally communicated with a Christian Scientist in Atlanta, Ga., who kindly sent me Science and Health and other books. This was over a year after my healing, and it was while reading and trying to understand Science and Health (although I did not seem to grasp its truths) that sciatica of fifteen years' standing vanished like a distressing dream.

I had been at various times under the care of doctors, and believed firmly in the efficacy of medicine up to the time of my healing.

After my trouble, sciatica, left me I was overwhelmed by the possibilities of Christian Science, and being convinced that it is indeed the truth, I prayed continually for light, that I might be given understanding, and my prayer was answered. I met a student of Christian Science who helped me through the narrow way towards the light.

Many things have been overcome by the realization of God's omnipresence and omnipotence, among them dengue fever; the severe pain of dental work; loss of the senses of taste and smell; accidents; the fear manifested by my horses; and indeed so many things that it is impossible to mention them all, for are we not daily and hourly meeting and mastering something, some form of error?

I cannot, in words, express my thankfulness for the glorious freedom and spiritual growth, the peace and happiness attained through the realization of Truth and of our dominion and possibilities as the reflection of the perfect Mind. Though our hearts be overflowing with love and gratitude, it is only in overcoming error and living Christian Science that we can show our gratefulness for this pearl of great price. We cannot now understand, or appreciate, what Mrs. Eddy and her works have done for us.—C. M. D., Mobile, Ala.

---

Having been helped so often by the testimonials in the *Sentinel* and *Journal*, I wish to add my mite, hoping it may help some one whose healing is slow.

For three years I suffered from an abnormal inward growth. Christian Science was suggested to me in the beginning, but I felt that I should be better satisfied to have a physician give his opinion first, and employed him to help me. After a treatment I was always prostrated for a few hours, and the last treatment the physician gave me was so severe that the prostration continued for days. My suffering was intense. I then declared that I had had enough of *materia medica* and turned to Christian Science. After some months, I was in the "Slough of Despond." I thought I was doing my own work to the best of my ability, and yet there was no improvement apparent. For a while I stopped treatment and studied constantly, thinking that perhaps I could work out my own salvation, but I kept getting worse all the time. I began treatment again, devoting nearly all my time to the study of Science and Health, determined that if there were anything in it to heal me, I would find it. While at times I felt better, the manifestation of error increased, but I knew I was gaining a better understanding of Truth, and my fear was almost entirely destroyed. Then for three weeks error made its final effort to assert its power. According to mortal mind my end was near; but it was only the end of the false claim of error; for one morning, after studying again prayerfully and tearfully, the trouble was entirely overcome, and I was free. Such blessed freedom! I shall never be able to describe my joy. My healing was slow, but I have gained an understanding of Truth that I should never have attained otherwise. I feel very grateful to my kind and patient practitioners, and to our Leader, for showing us the way to apply this truth.—MRS. S. C., Pottsville, Pa.

---

Sixteen years ago my spine was injured by a fall, and I was obliged to give up everything for a while.

For nine years I was able to do but little work, and that which I did was always attended by suffering. The three years following I was a confirmed invalid. Growing worse, a consultation of doctors was held and the case pronounced tuberculosis of the spine, the upper part having commenced to decay.

One of the last resorts of *materia medica* was now employed, and the spine was cauterized ten times. Next I was put into a stiffened jacket, and in this condition was sent West to see if the change would not prove beneficial. I grew no better and in three months was obliged to call a physician. This made the tenth doctor who had been employed, including some of the best specialists in New England.

Digitized by Google

After five weeks in bed, the doctor said there was nothing more that could be done, and that I could live but a short time.

At this time, my mother, who was in Boston, wrote asking me if I would try Christian Science, and although I had no faith that it could help me, I did so to please her. A healer was obtained in Boston, and I was told to throw away my medicine, take off my jacket, read in the book, Science and Health, which would be sent me, and not to tell any one I was being treated. I obeyed the instructions of my healer to the very letter, and where, before, the removal of my jacket had caused great suffering, I was now able to discard it and not even feel the need of it for one moment. I gained steadily, and in three weeks was back East, a well girl.

For four years I have been out of bondage, and words can never express the gratitude I feel to God for revealing this glorious Truth to the world through the Leader of Christian Science, and to her, for her life of self-sacrifice and consecration to the Cause, which has enabled thousands of suffering mortals to be brought into health and harmony.

As much as I value the physical healing, the spiritual uplifting has been far more significant and valuable to me. The Bible had been my companion for years, but the reading of Science and Health has made it a new book to me. The spiritual light thrown upon it is most wonderful.

My earnest prayer is that my life may show my gratitude for my healing, and that in return for the faithful work done for me, I, too, may be able to carry this Truth to others.

F. E. H., Roxbury, Mass.

---

The favorable consideration of sin often leads to its commission. The meditation is the temptation. Therefore, dismiss the thought when it arises and before it demands gratification. It is easier to conquer the thought of sin than the sin itself.—THOMAS EDWARD.

---

Wherever there is failure, there is some giddiness, some superstition about luck, some step omitted, which nature never pardons. The happy conditions of life may be had on the same terms. Their attraction for you is the pledge that they are within your reach. Our prayers are prophets. There must be fidelity, and there must be adherence.

EMERSON.

---

## Mental Might.

JULIA W. MICHAEL.

A WORLD of surging nations has weighed the might of a crown,
A thinking, free-born people has cast the conqueror down;
Yet voices, choosing a leader, grow harsh to slander his name,
And holy hearts are broken upon the altar of Fame.

The hulls that hurled destruction lie rotting under the sea,
The hosts that harassed nations are paying tribute to Thee;
And all the work the builders have wrought for centuries past
Has yielded, sea-wall and rampart, to wind and storm at the last.

No more can pomp or person command invincible power;
No more can wail or warring humanly govern the hour;
For mental might, has come as light from the sky to quicken the sod,
And we live in a universe governed by one omnipotent God.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Dr. R. P. Johnston, pastor of the Fifth Avenue Church, New York, a speaker at the recent Baptist convention in Boston, is thus reported in *The Standard*:—

"To make baptism essential to Church membership is to emphasize ceremony rather than character, and is to exalt the letter above the spirit.

"The first statement is self-evident. For, following the principle, no degree of piety, no perfection of character, would enable one to enter the Church. Not even an angel from heaven without baptism could gain admittance. But experience amply and sadly teaches that some who have not evinced angels' dispositions have, by submitting to baptism, gained an entrance. This is inconsistent with the entire theory of Baptists. They have always insisted that character, vital piety, and not ceremony, is the essential thing in Christian life.

"The truth of the second statement is equally plain. We have always insisted that the letter killeth and the spirit maketh alive. Now, the Christian life is one in which obedience is the spirit and the rule. We say that Christ commanded baptism. So he did, but he commanded other things which are certainly as important. Why do we seize this one commandment and, exalting it above others, make obedience to it the test of Church fellowship? Why do we insist on the letter here and accept the spirit elsewhere? He commanded feet-washing as categorically and definitely as he ever commanded baptism. Yet we are satisfied with a spiritual interpretation of the command. If we are to be literalists, how are we to escape the dogma of human absolution or of the real presence in the bread and wine? The truth is, we are literal or spiritual in our interpretation to suit our theories. I am not finding fault with the principle; I am only asking why we insist on the letter in the matter of baptism, while we accept the spirit in other matters. As a matter of fact, the spirit of real obedience to Jesus Christ is not to be determined by a willingness or an unwillingness to be baptized, but by the whole tenor and disposition of life. To accept the testimony of the ceremony, of the letter, and reject the testimony of a godly life is to prefer ceremony to character, and is to exalt the letter above the spirit."

*The Examiner*, in its "Echoes from Other Pulpits," has this from the Rev. John J. Reed of the Washington Street Methodist Episcopal Church, Borough of Manhattan:—

"This brief narrative of the healing of the withered hand is as interesting and dramatic as it is full of inspiration and power for the individual, however unfortunate and downcast. The crowd watched Jesus, to see whether he would heal the unhappy man, that, instead of rejoicing with him, they might accuse him. . . . He turns from them and looks upon the man and quietly says, 'Stretch forth thy hand.' The man does not begin to reason, and to object that this is an impossibility; that the hand is powerless, and that the Lord Jesus, not being a physician, does not know the difficulties of the case as defined by medical terms. On the contrary, full of the simplicity of a childlike confidence, he immediately and without excuses responds with will, with purpose, and with strong desire; and the Lord, who uttered the command, 'Stretch forth thy hand,' supplies the power to do the rest. And the man, rejoicing, is immediately healed.

"The central thought of humanity's secret power lies in individual co-operation with Christ, who has all power, and in whom 'dwelleth all the fulness of the Godhead bodily.' His overflowing power is as available to-day as it was centuries ago for the man with the withered hand.

"The facts of our Lord's intervention in behalf of afflicted mortals as narrated in the Scriptures, and as seen and known by myself, are too sacred for full narration. The prayer of faith still heals the sick. The hand is the symbol of power for doing good: for feeding the hungry; for relieving distress; for doing works of righteousness for the poor and suffering. Like our Lord, let us go about doing good. Fearless of the multitudes who may hinder, and delaying not to estimate unfavorable conditions, response to the divine teaching must and will command the result."

Rev. Samuel A. Eliot says in *The Christian Register*:—

"Every step in human progress has been won by loyalty to an ideal. Wherever men have devoted themselves not to material, but to ideal ends, there the world's heroes and saviours have been born. If at this Christmas-tide we are to have a new birth of the Christ-spirit, we must cherish more cheerful and invigorating anticipations, we must have more noble discontent with existing conditions, we must cultivate the forecasting spirit by which we may discern in the present the seeds of the future, in the seen the symbols of the unseen.

"The Christ-spirit comes not in answer to formal prayer or verbal supplication. It finds no resting-place in ecclesiasticisms or theological formulas. It seeks some other Bethlehem to be born in. The Christ-spirit comes into the hearts that bravely aspire and that prove in daily life the dynamic power and the patience of hope. It comes to those who, looking up, rejoice in the approaching footsteps on the mountain of him who publishes peace. It is born in the souls that earnestly crave a more steadfast righteousness and a larger serviceableness."

"What shall it profit a man if he shall gain the whole world and lose his own soul, or what shall a man give in exchange for his soul?"

This has no reference to the future life, or heaven, except in so far as these are integral parts of the one indivisible spiritual life, which includes both earth and heaven. The reason is in force here and now, and is of the very essence of Christian living, in any world and in any condition of things. Man has but one true life, and that is the life which is hid with Christ in God, the life that is according to God's plan, the life that ever looks at things in God's way, and not in man's way. To miss this way, to forfeit it, to live after one's own plan, and not after God's, is to miss everything, is to make a complete and irretrievable failure of life, even though at the same time one should gain the whole world—its wealth, and power, and glory.—*The Examiner*.

The "London Letter" in *The Church Standard* quotes the Bishop of Rochester as saying at a missionary meeting: "I hope that I am not speaking harsh or hasty words when I say that never perhaps since that great day when the Lord appeared, never in any generation, have the lines converged and the barriers broken down, and the areas been opened out, which make possible an immense progress of the Christian faith as to-day. It presents to the statesman, the orator, the poet, almost unrivalled opportunities. The great peril is the half-heartedness in Church life; its concealment of its own master principles; its indifference to the enormous benefits to which it is heir."

The Rev. G. W. Penniman says in *The Universalist Leader*:—

"Believe not that God has once for all in the past revealed all His truth, told all there was, or even if He did, that He is not ready to tell it again and keep telling it, so that we can understand it better. Believe not that the day of Revelation is over, is past and gone, and will never be renewed to man. That man's faith is vain, and that Church's influence is sure to fail, which does not believe that God is speaking to us as much to-day as He did to Moses or to David, or even to Jesus himself, if we would listen as he did and surrender ourselves as completely as he did to the voice of God."

The divine will pervades the Kingdom of God. Only those in fellowship with God understand His kingdom. But where the desires of the soul beat in sympathy with the purposes of God, that soul may ask what it will and it shall be done. For all such prayer focuses itself in the petition, "Thy kingdom come, Thy will be done." Where that is the aim of life, the scepter of God is extended with universal promise.

REV. CORNELIUS WOELFKIN.

If the Church is not felt to be the harbinger of all professions and occupations, the bond of all classes, the instrument of reforming abuses, the admonisher of the rich, the friend of the poor, the asserter of the glory of that humanity which Christ bears, we are to blame and God will call us to an account as unfaithful stewards of His treasures.—FREDERICK DENISON MAURICE.

Preaching is empty air, prayer is but sound, Church services are like swinging doors if the Spirit of the Lord is not upon the people. For a time some may attend the services, but finding no green pastures and no living waters there they turn aside to find comfort elsewhere.

*The Christian Advocate.*

It is in the common circumstances of our lives that we are to learn the lessons of God's school. Unusual conditions and experiences are like examinations which test and declare what we have learned. The ordinary day, with its routine of drudgery, is the time for learning.

*The Congregationalist and Christian World.*

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid. . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

## Items of Interest.

**National.**

The International Customs Congress of American Nations convened last week in New York. The prime purpose of the conference is to call attention to the desirability of closer commercial relations among the American republics. Representatives of the Argentine Republic, Bolivia, Costa Rica, Cuba, Ecuador, Guatemala, Hayti, Honduras, Mexico, Labrador, Venezuela, and the United States were present when the congress was called to order. The congress is to consider the commercial systems and trade regulations of the various countries in order that unnecessary charges and restrictions may be removed, and in order that laws affecting the vessels and the handling of merchandise may be so fixed as to give the greatest convenience in commercial intercourse.

No agreement has as yet been reached in the Panama Canal negotiations as to the amount of annuity that the United States shall pay. Colombia rejected as insufficient the offer of the United States to pay a lump sum of ten million dollars and an annuity of ten thousand dollars, or a lump sum of seven million dollars and an annuity of one hundred thousand. Colombia's demand for an annuity of six hundred thousand has been refused, as also her proposition that the treaty covering the points upon which agreement has been reached be signed and the question of annuity be referred to The Hague Court for arbitration. This would bring the question into the Court eight years hence, two years before annuity payments, according to the present agreements, would begin.

The House Committee on Merchant Marine and Fisheries last week directed that a sub-committee of five be appointed to begin the investigation into the subject of coal transportation, which the House has authorized the Committee to make. It is probable that this sub-committee will first go to Boston to take testimony.

It is settled that Governor Taft of the Philippines will decline the seat in the Supreme Court of the United States soon to be vacated by the retirement of Justice Shiras, as he feels it his present duty to continue his work in the Philippines. Judge Day of Canton, Ohio, will probably be nominated for the position.

President Roosevelt has signed the bill passed by Congress providing for a rebate for one year of the duties on all imported coal.

The Carnegie Institute has guaranteed four thousand dollars to the Lick Observatory to further its astronomical researches.

**Foreign.**

Dr. Jean Charcot of Paris, has announced the plans for the Arctic expedition under the patronage of the Academy of Science and the Ministry of Public Instruction. A ship for the voyage is now under construction at Saint Malo. She will be especially equipped to resist ice. The party will leave France, May 15, for Spitzbergen, and thence will start for Franz Joseph Land. The expedition will be exclusively French. Lieutenant de Gerlach, who commanded the Belgian Antarctic steamer Belgica, will probably be a member of the party, which will also comprise several scientists. Dr. Charcot says France has hitherto left Arctic exploration to foreigners, and he hopes to revive French attention to the subject.

Extreme Irish landowners, who at the outset did much to make futile and even ridiculous the conference at Dublin of Irish landowners and tenants called to consider the sale of land to the tenants, have come to express approval of Lord Dunraven's report. The rental to be dealt with is a little over twenty-five million dollars and the amount the government would have to pay would be about three million dollars yearly. Chief Secretary Windham is anxious to make the most of this opportunity to secure permanent peace, and it is believed that the premier and a majority of the cabinet agree with the King that a great effort should now be made to settle the whole question.

It is reported that the censors have memorialized the Dowager Empress of China, asking her to resign in favor of the Emperor, and declaring that her retirement will be the first step in the direction of reform. This is said to be the expression of the best native opinion, the first that has been heard officially since 1900. They say that all the reforms proposed by the throne have failed, while many extravagances have prevailed.

One of the four Russian torpedo-boat destroyers, which the Sultan of Turkey gave permission four months ago to pass through the Dardanelles, passed through the Straits January 13. This action is contrary to the treaty stipulations concerning the Straits, and has already called out a protest from Great Britain.

The Board of Foreign Affairs, Pekin, announces that China is willing to acknowledge that the payments of the indemnity to the Powers for the Boxer outrages should be made on a gold basis, if some relief were granted during the present silver crisis, but that she is unable to pay in gold at present.

**Industrial and Commercial.**

The railway development of all sections of Canada during the twenty years from 1881 to 1901 has been enormous. Government figures show that there has been an increase in mileage from 7,260 to 18,184; in the number of passengers carried from a little less than seven millions to nearly eighteen and a half millions; in freight from twelve millions to over thirty-six million tons; in total earnings from twenty-seven million dollars to nearly seventy-three million; in operating expenses from twenty million to fifty million dollars.

According to despatches from Glasgow, two new Cunarders have been definitely ordered. Each of them will have three screws. The stipulations require that they shall maintain a speed of twenty-six knots for six hours, and twenty-five knots for two days' continuous steaming. They are to be ready in June, 1905, and will cost six and a quarter million dollars each.

It is stated that the International Mercantile Marine Company has under construction in this country and in Europe twelve vessels that will cost when finished twenty-five million dollars. They will have a displacement of ten to fifteen thousand tons and will be equipped for freight and passenger traffic.

The Pennsylvania Road, which has found by tests during the last two years that nickeled steel rails are three times more durable than standard steel rails, has ordered five thousand tons of them for use on the heavy curves through the Alleghany Mountains.

The management of the Rock Island Railroad Company has given an order for two hundred and twenty-five locomotives for both passenger and freight service. The cost will approach four million dollars. This is considered the largest single order on record.

Three of the largest locomotive works in Scotland are to be combined with a capitalization of ten million dollars.

**General.**

What is said to be the oldest Biblical manuscript extant was lately discovered in Syria and is now in safe keeping at Cairo. It comprises the Pentateuch, written in Samaritan characters on gazelle parchment, and its date is the year 116 of Moslem era—the year 735 A.D. It is declared to be far older than any of the Hebrew Biblical manuscripts in the libraries of Europe. It is stated that the oldest manuscript in the British Museum is of the year 1339 A.D., and this has hitherto been supposed to be the oldest in the world. The newly discovered manuscript contains immediately after the Decalogue a passage of about fifteen lines that does not exist in the authorized version. It is said that this passage is likely to clear up several long-disputed points.

It is said that Signor Marconi, in addition to his work of perfecting his wireless telegraph system, is now interested in a portable wireless telephone apparatus by which a person can communicate at a considerable distance away with his home or with persons supplied with similar apparatus. The inventor has been at Wellfleet on Cape Cod during the past week perfecting the apparatus at his wireless message station. As soon as this is done he expected to go to his station at Cornwall, England, to instal there more rapid apparatus.

For the first time since the advent of wireless telegraphy, rival chess teams on two rival steamships have managed to play a game to a finish. This contest was between a team chosen from the saloon passengers of the American liner Philadelphia and one from among the voyagers of the Cunarder Lucania. The Philadelphians won, and told their story on the arrival of the two ships on the 18th.

Mr. John S. Sargent, whose paintings in the Boston Public Library are well known, was a passenger on the Lucania which arrived at New York last Sunday. He has come to America, among other things, to place in position in the library some further paintings which he was commissioned to execute.

Dr. William F Warren, president of Boston University, has sent to the Board of Trustees his letter of resignation to take effect in June. He desires to retain his professorship in the Theological School and asks for a leave of absence during 1903-1904. Dr. Warren has been connected with the University since 1866.

The cup defender at Bristol is making good headway. Another section of the frame is ready for raising. Her stern post has just been successfully cast. It is of gun metal and hollow.

## Selected Articles.

### Mrs. Eddy Replies to Mark Twain.

**Believes in but one Mother Mary and Knows she is not that One.—Explains the Appellation.—Name Given without her Consent by Students Spreads like Wildfire.**

CONCORD, N. H., Friday.—In answer to criticisms by Mark Twain, Mrs. Mary Baker G. Eddy makes the following statement:—

It is a fact, well understood, that I begged the students who first gave me the endearing appellative "mother" not to name me thus. But without my consent that word spread like wildfire. I still must think the name is not applicable to me: I stand in relation to this century, as a Christian discoverer, founder, and leader. I regard self-deification as blasphemous; I may be more loved, but I am less lauded, pampered, provided for, and cheered, than others before me—and wherefore? Because Christian Science is not yet popular, and I refuse adulation.

My first visit to the Mother Church after it was built and dedicated pleased me, and the situation was satisfactory. The dear members wanted to greet me with escort and the ringing of bells, but I declined, and went alone in my carriage to the church, entered it, and knelt in thanks upon the steps of its altar. There the foresplendor of the beginnings of truth fell mysteriously upon my spirit. I believe in one Christ, teach one Christ, know of but one Christ. I believe in but one incarnation, one Mother Mary, and know I am not that one, and never claimed to be. It suffices me to learn the Science of the Scriptures relative to this subject.

Christian Scientists have no quarrel with Protestants, Catholics, or any other sect. They need to be understood as following the divine Principle—God, Love—and not imagined to be unscientific worshipers of a human being.

In the aforesaid article, of which I have seen only extracts, Mark Twain's wit was not wasted in certain directions. Christian Science eschews divine rights in human beings. If the individual governed human consciousness, my statement of Christian Science would be disproved, but to understand the spiritual idea is essential to demonstrate Science and its pure monotheism,—one God, one Christ, no idolatry, no human propaganda. Jesus taught and proved that what feeds a few feeds all. His life-work subordinated the material to the spiritual, and he left this legacy of truth to mankind. His metaphysics is not the sport of philosophy, religion, or Science, rather is it the pith and finale of them all.

I have not the inspiration or aspiration to be a first or second Virgin-Mother—her duplicate, antecedent, or subsequent. What I am remains to be proved by the good I do. We need much humility, wisdom, and love to perform the functions of foreshadowing and foretasting heaven within us. This glory is molten in the furnace of affliction.

*The New York Herald.*

### Must make us Laugh.

To the Editor.

Mark Twain's greatest misfortune is that he feels compelled to sustain his reputation as a wit, a humorist, a very funny fellow. He must live, and to live he must make people laugh—for that is his profession. It is Mark Twain who writes, not Mr. Clemens.

Does any one suppose that the *North American Review* would have paid him for any serious article in reference to Christian Science—anything that would calmly, charitably, and dispassionately state the case and his opinion of it after a serious investigation of the facts? One need only to read, side by side, in the *Boston Journal* of the other day, extracts from the magazine article written by Mark Twain, and a criticism of the same by Mrs. Eddy; the one flippant, inconsequent, so-called wit; the other dignified, reverent, and patient, to form a very fair opinion concerning the spirituality of the two writers.

If Christian Science has never cured one single case of disease its teachings to do right, to love and trust God, and to love one's neighbor as one's self are sufficient to make a tremendous power for good among us—to exempt it from ill-mannered, snarling attacks, and to entitle it at least to tolerant welcome, if not to our active support.

One Who is Not a Christian Scientist, but who Believes in Fair Play. *Boston Morning Journal.*

### Reply to a London Critic.

To the Editor.

In your issue of December 21, there appeared an article attacking Christian Science, copied from the *London Lancet.* It is filled with misleading statements. These statements reveal such crass ignorance concerning the subject discussed by the writer of the article that any well-informed Christian Scientist must regard them with a smile of pity. But they are liable to mislead those readers of your paper who possess only a hazy knowledge of the subject, and I ask, therefore, a little of your valuable space to make some corrections in the interests of truth.

First.—The assertion in the article that Christian Science is "closely related to Manicheism" shows at once what a monstrous misconception exists in the mind of the writer of the article. Manicheism postulates two primal beings, Light (God) and Darkness, under the similitude of kingdoms, and declares that from the kingdom of Darkness have been born Satan and his wicked angels. Christian Science, *per contra*, postulates God (divine Principle) as All-in-all, and denies both the existence of any personal Satan, or devil, and also the existence, except as phenomena, of evil. The Manicheans regarded woman as the gift of demons, and rejected the Old Testament entire, and the greater part of the New Testament. Christian Science teaches the brotherhood of all men and women, and so reverences women as even to name God as "Our Father-Mother," and accepts the Bible in full.

Digitized by Google

Second.—The article states that Christian Science, "even according to its disciples, will not work in the case of broken bones." This is untrue. Christian Science has proved its complete efficacy in the case of broken bones, dislocations, etc., in many instances.

Third.—The article, although appearing in a medical journal of repute, descends to the undignified attitude of calling Christian Science a swindle. Scholarly writers do not usually stoop to the language of common shrews. They are aware that harsh epithets prove nothing except the anger and crudeness of those who employ them. But the article contains admissions as to the usefulness of Christian Science which prove the falsity of the harsh word above quoted. It says: "We should be the last to deny that faith has an influence upon certain forms of disease; mainly on functional, but sometimes on organic disease. . . . Christian Science may improve the symptoms, even when serious anatomical changes are present. . . . We do not deny that there are forces of the action and nature of which we know little or nothing."

Any discovery which can benefit poor humanity, even to the extent reluctantly admitted by the article, ought to be gratefully received, and deserves to be characterized in language of praise instead of reproach. And Christian Science is seeking reverently that spiritual realm wherein we may gain more knowledge of those "forces of the action and nature of which," the writer says that "we" (speaking for the medical profession) "know little or nothing." Christian Science is demonstrating, in hundreds of thousands of cases throughout Christendom, that it can do far more than the article admits, and that its methods are efficacious in the treatment of all forms of disease, organic as well as functional, and chronic as well as acute. It recognizes that the medical profession is doing its work as best it can from its standpoint of materialism, pure and simple, but it asserts and proves by what it accomplishes that the spiritual methods of healing sickness which were practised by Jesus can be employed now with success. Jesus promised to mankind: "He that believeth on me [that is, in the Christ, Truth], the works that I do shall he do also." Christian Scientists accept this promise as true; more than that, they are proving it to be true by the success which is attending their reverent efforts to learn more and more of those "forces" which are spiritual and of the divine Principle, God, of which *materia medica* confesses its ignorance. The world has a great deal to learn in many directions. It is considered praiseworthy to extend our knowledge in all ways which may benefit mankind. Christian Science is admitted, in the article, to have accomplished something, at least in this altruistic direction. Its work already deserves the most grateful recognition on the part of all thoughtful lovers of our race, and its grand mission has only fairly started. Its greatest mission, to my thought, is its irreconcilable struggle with the materialism which is paralyzing so largely the moral and religious notions of our age. Christian Science is, indeed, a "swindle" unless it serves to prove God, and that all men are immortal beings in the spiritual image and likeness of God, for it cannot pretend to do any of the "works" which Jesus did, and commanded us likewise to do, except by postulating God, and that man is His spiritual child.

CLARENCE A. BUSKIRK.
In *Indianapolis* (Ind.) *Journal*.

## In the Medical Arena.

Mr. Editor.

E. H. Judkins, L.L.B., D.D., pays his ardent respects to me in the September issue of your *Journal* and challenges me to answer certain questions. He quotes my statement, "Christian Science does not aim to practise medicine." This was made in answer to the assertion that Christian Scientists assume to be medical practitioners and are therefore liable to the regulations intended for the medical system. Laws regulating the practice of medicine insist that physicians shall be qualified in their special departments. A surgeon must understand that the amputation of a foot is more practical than the amputation of the head, and that the administration of strychnia is more dangerous than bread pellets. But the Christian Scientist administers no medicine, attempts no surgical operations nor physical manipulations of any character; hence he does not need the restrictions which apply to those schools which deal with material remedies any more than the ordinary layman. Though the prayers of a Christian Scientist may be more effectual than those of his good neighbors who do not understand Christian Science, they are not therefore dangerous and not in need of legal restriction.

Dr. Judkins declares: "He has, in reply to another article of mine said that the 'basic lesson of this Science is Scriptural,' but failed to produce the proof." Will the gentleman accept my apology therefor and give ear to my proof herein. Jesus declared, "God is Spirit." This is the basic lesson of Christian Science, and every statement contained in the Christian Science text-book is a consistent deduction therefrom.

Our critic declares: "One of the leading medical journals of Philadelphia has brought to the notice of the profession many cases of criminal neglect. . . . In that city two malpractitioners, probably of this cult, were recently held by the coroner for causing the death of an infant." I am well informed in respect to the case to which our critic refers, having made a thorough investigation of it, and I desire to say in unmistakable terms that Christian Science had nothing whatever to do with it. Merely excluding medicine and having nothing in its place is not the practice of Christian Scientists. The power of Christian Science may not be apparent to the eye, but that it nevertheless exists is proved by its results.

Our critic declares: "Two females 'Christian' Scientists, in Milwaukee, Wis., were indicted for practising medicine without a license." He adds, "They were convicted and fined." I am led to ask, if Dr. Judkins knew all about this case, why did he not say that the Supreme Court reversed the decision of the narrow-minded police judge, and the Christian Scientists were dismissed?

He declares: "In Victoria, B. C., a child died from laryngeal diphtheria lately; and the jury stated that the 'Christian Scientists' who maltreated the little boy 'did unlawfully kill and slay the said child.'" I have a letter from a reliable citizen of Victoria, B. C., in answer to my inquiry, in which he declares, "I would say that there is no truth whatever in the report you speak of. No child has died under Christian Science treatment in this city." Thus we note that of the three examples held up in such a flaming manner by our critic, two had nothing whatever to do with Christian Science, while the other case he misstates. It is not strange that those who are used to depending upon medicine, and have only a slight knowledge of the great benefits which have been accomplished through Christian Science, should consider a dependence upon this faith and the exclusion of medicine unsafe, but the Christian Scientist has proved convincingly to himself that a firm reliance upon God is the safest sort of a remedy for the ills of the flesh. There are multitudes to-day who testify to having been healed through Christian Science, after having exhausted all hope in other remedies. In view of such a record, there is little ground upon which to assume that those who believe in the use of medicine should be the sole guardians of the health of mortals. There is little ground upon which to plead for legislation forcing Christian Scientists to resort to those methods under which millions of their brethren have died.

Digitized by Google

Our critic asks, "If Christian Scientists do not aim to practise medicine, why do they try to treat diseases that doctors of medicine only are competent to treat under the laws of the state in which they live?" The question is not a competent one, since it assumes a proposition which has not yet been established. It has not been shown that the laws of any state exclude the practice of Christian Science, though this attempt has been made in several states. Since Christian Scientist practitioners have healed all manner of disease successfully, notwithstanding they have lost some cases, while, on the other hand, notwithstanding whatever of success may have crowned the efforts of medical practitioners, they, too, have lost cases, not to say many cases, upon what ground can it be assumed that the medical practice is a sufficient success to waive all dissatisfaction therewith, while Christian Science is set aside as worthless?

Our critic asks, "Why do Christian Scientists appear before committees in various states in opposition to bills regulating the practice of medicine, if they are not aiming to practise it?" I would respectfully call the gentleman's attention to the fact that Christian Scientists have appeared before committees for the purpose of urging that the laws relating to the practice of medicine shall be confined to the subject in hand, and shall not be manipulated in such a manner as to apply to those who heal by spiritual means and without medicine. Christian Scientists have no objection to the doctors' regulating themselves and their practice. It is the attempt to prevent Christian Scientists from praying for their sick to which they object.

As to the dealing with contagious disease on the part of Christian Scientists, I desire to say that no class of practitioners are more extremely careful in respect to quarantine than Christian Scientists. They recognize the general law of contagion, and that even Christian Scientists who are not properly and sufficiently protected by their understanding of the divine power and presence are liable to contagion. Like other classes, they have troubles enough which come uninvited, and do not intentionally or wilfully venture into the presence of contagious disease. Furthermore, they are extremely careful not to allow their sick to mingle with others, for they seek to avoid intruding danger upon their neighbors, and do not care to incur the unnecessary risk and additional labor that might be incurred when their patients with contagious disease are allowed to mingle with others. It is in strict accord with the teaching of this Science, not contrary thereto, that they use care in this respect.

Our critic asserts that a Christian Scientist stated, "'We do not believe in infectious diseases, and a person, if a Christian Scientist, could not contract such diseases.'" If a Christian Scientist made such an assertion, he was certainly unwise, to say the least. Christian Scientists do believe in infectious diseases, though they may differ from others in their interpretation of their nature, and why? Because they have not yet attained to a sufficient realization of what Christian Science teaches to enable them to unbelieve altogether in disease. A Christian Scientist, or a Christian who is one in the full sense of that term, would be a perfect man, and would be able to claim the promise of the Psalmist, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling."

Christian Scientists are not boasting as to their ability to remain immune from disease. They only claim that they are safe in proportion to their reliance upon God. I doubt if any Christian Scientist was foolish enough to make the statement that he could without evil consequence "bring patients with the small-pox into a room with other persons, or send children to school with scarlet fever." This may be possible, but a Christian Scientist would consider it a very foolish thing to attempt. It would be entirely contrary to the teachings of Christian Science to do this, for it is part of the practice of this Science to avoid trouble as well as to overcome that which has already found lodgment in us. If it was not right for the Master of Christianity to cast himself down to convince the devil, it certainly would not be right for Christian Scientists to do this for the purpose of convincing those who offer the same temptations which the devil suggested.

I am inclined to believe that successive generations of Christian Scientists will greatly improve the health and morals of mankind and increase their immunity from disease, and it is possible that a few hundred years from this present time there will be Christian Scientists far enough advanced to parade their patients with the small-pox in the presence of their neighbors without any trouble. But a Christian Scientist far enough advanced to justify such an attempt could probably heal small-pox instantly, and would have nothing to parade. At this period, it is enough for a Christian Scientist to undertake the healing of a patient, without incurring the necessity of preventing his neighbors who have been exposed to the disease, from taking it.

Our critic declares, "How many hundreds of innocent persons might thus be fatally stricken if 'Christian Scientists' could carry out their theories." The gentleman may rest assured that Christian Scientists are carrying out their theories. The only reason why the fatality to which he refers is not forthcoming is because the theories of Christian Scientists are not what he believes them to be. When he is better acquainted with Christian Scientists, their methods and their practices, he will certainly have a better opinion of them and will conclude that, after all, they are people of good sense and not dangerous to the community.

Our critic declares that Christian Science is not Christian. Jesus said, "He that believeth on me, the works that I do shall he do also." The ability, on the part of Christians to do the works which Jesus did, demonstrates the degree of their Christianity according to the standard of Jesus. We repeat again, Christian Science is demonstrable. It is not a belief, nor an ism. It is not claimed that this Science is in harmony with the more material philosophies, but it is scientific from a Scriptural standpoint and proves its truth by its results, the healing of the sick according to the method which Jesus taught and practised. Moreover, many modern physicists approximate very nearly to the teaching of Christian Science: "All causation is mental."

ALFRED FARLOW.

In *Journal of Medicine and Science.*

## The Path of Progress.

THE path of progress for Christian Science has been at no point an easy one, and the number of adherents found to-day within the Christian Science Church are there because of personal experience with this new and yet old teaching, and for no other reason. There is nothing in Christian Science to attract the seeker after personal enrichment. The demands made upon the individual in this faith are for constant and unceasing prayer, and it is a religion which depends upon works rather than upon words for its standard of righteousness.

Its numbers are recruited largely from the ranks of those who have had the best medical skill at their command, and two thirds of the membership of its churches is made up of persons who were formerly of good standing in other evangelical churches.

In insisting upon healing as well as preaching in its plan of salvation, it follows the example of our Saviour. Spiritual healing, as taught in the Bible and practised by prophets and apostles, should have as much place in the Christian teaching of to-day as it has ever had in the past. The

Digitized by Google

command of our Master to "heal the sick" is as binding upon any one of his followers as upon another.

I merely speak of these things in order to emphasize the fact that Christian Science can in no way be looked upon as mere theory. It is based upon solid foundation and, judging by its multitude of good works in the past, it is destined to relieve a large share of human suffering.

The tendency to censure its advocates whenever they fail to heal shows that much more is expected of this system than that of *materia medica,* and the success which has attended this practice in the past has no doubt justified this expectancy. The standard of success maintained in its practice, however, furnishes all the justification needed for those who choose this form of treatment in preference to any other.

The subject of Christian Science is inexhaustible. Its good works are countless in number. Its advocates, while found among no particular class of people, are above the average in intelligence, and it is through no sense of fanaticism that they adhere to their religious teaching. It is because they have found it to be the better way.

## Giant Trees Eight Thousand Years Old.

SURVIVORS of the age of mammoth tropical growth, probably eight thousand years ago, the big trees of California are the oldest and the largest living things upon the earth. Could they but talk our language, the secrets and mysteries of ages unknown to human history might be truthfully revealed. These same living trees, seemingly unnatural in their gigantic size, the source of amazement and bewilderment to travelers, have outlived all the nations of the earth up to the present time, and many of them now seem to be but enjoying the prime of life.

The tallest of these great trees is four hundred and five feet high; the largest trunk measures one hundred and ten feet base circumference. The wood of the big trees might be put to many valuable usages from a mechanical standpoint, but they are considered too sacred for such degradation. Already they have been mutilated to a degree that is a stigma on American sense of reverence.

It has been said that a famous scientist spent fifteen years in excavation and calculation, and determined that Cheops built the great pyramids of Jeezeh 2170 B.C. There are trees now alive in California that had bark on them a foot thick when Cheops' army of one hundred thousand began their thirty years' task.

*Sequoia gigantea* is the botanical name of the Californian. It grows where the ground is from 3,500 to 7,500 above the level of the sea. The big tree is found in groves and forests along the western slope of the Sierra Nevada mountains from Placer County on the north to Kern County on the south. Among the more noted groves are Calaveras, with about one hundred huge trees; the South Park Grove, containing thirteen hundred and eighty trees; the Tuolumne Grove of thirty; the Merced Grove, with not quite so many; the Mariposa Grove, with two hundred and forty-six giants; the Fresno Grove; the Dinky Grove; the General Grant National Park; the Giant Forest, and the Tule River Groves. There are a number of others of lesser importance. Largest of all these, and the greatest forest of the globe, is the Giant Forest. In here there are three thousand trees that have a height of more than three hundred feet and a girth of more than fifty feet. The tallest is four hundred and five feet. The General Sherman has by government measurements, a base circumference of more than one hundred feet, diameter thirty-four and one half feet, and is three hundred and seventy feet high. Eighty feet above the ground its circumference is eighty feet.

The Grizzly Giant is in many respects the most remarkable tree in the world. The Giant is in the Mariposa Grove. Its base circumference is one hundred and four feet. Five feet above the ground it is ninety feet. A limb eighty feet above the ground is twenty feet in circumference. In Mariposa Grove, driveways are cut through two of the living trees—the Wawona and California. In the Haverford there is a cavity which will shelter sixteen horses at a time. The General Grant in the General Grant National Park has a base circumference of one hundred and six feet. The dead Giant, spanning Crescent Meadow, is three hundred and ten feet long. Old Methuselah, in the Tule River Groves, has a base circumference of more than one hundred and ten feet. General Manager Ampere Ohm of the Great Circle Telegraph company, said,

"General Sherman, of the Giant Forest, contains seven hundred and fifty thousand feet of lumber. This if cut into telegraph poles of usual dimensions would make one pole forty miles long, or supply a telegraph line from Kansas City to Chicago with all necessary supports. If an incorporated town, a mile square, laid out with blocks four hundred feet long and eighty feet wide, were provided with the lumber that might be obtained from one of these trees, it would provide a four-foot sidewalk around every block without calling for more lumber. According to government estimates of weights, General Grant in the Mariposa Grove, or General Sherman in the Giant Forest would outweigh the entire population of Sacramento, Cal. Three of the largest trees would balance the weight of Omaha or Los Angeles."

The Big Tree is an evergreen. Its leaves are small, like those of the fir. It does not spread like the oak, its trunk being as straight as a church spire. The bark is sometimes more than three feet thick. The color of the bark is of bright cinnamon. The tree grows from seed that look almost exactly like parsnip seed. These seeds grow on the tree in little cones about two inches long, each having about two hundred seeds. The cones hang on the trees three years before they drop and scatter the seeds. It takes from thirty to fifty years for the Big Tree to add one inch to its thickness.—*Popular Mechanics.*

## Renewal of Copyright.

Class A. XXc. No. 49048.

LIBRARY OF CONGRESS, to wit:

Be it remembered,

*That on the twenty-sixth day of December, 1902, Mrs. Mary Baker Glover Eddy of Concord, N. H., hath deposited in this Office the title of a* BOOK, *the title of which is in the following words, to wit:*

*Science and Health. By Mary Baker Glover. Boston. Christian Scientist Publishing Company. 1875.*

*the right whereof she claims as author and proprietor in conformity with the laws of the United States respecting Copyrights.*

## Among the Churches.

### Activity in Canyon City, Tex.

Three years ago through a case of healing by Christian Science, the first seed of Truth was sown in Canyon City, and following this was the sale of one copy of Science and Health. This year our sales amounted to ninety-five dollars, including sixteen copies of Science and Health.

The children of the Sunday School have voluntarily contributed a fund for procuring paper racks for Christian Science literature to be placed in every hotel of the town.

MRS. V. EDNA HENSON.

### Church Building in Grand Forks, N. Dak.

The First Church of Christ, Scientist, is a society which has been doing a quiet work in the city for years, but which has not yet occupied a building of its own. It has occupied rooms in various buildings, moving from time to time into better quarters, until at present it has a very comfortable location in the Security Building. Within the past year, however, arrangements were undertaken for the building of a church edifice, and work was started on the new building late last fall. The building is located on the corner of Belmont and Eighth Avenues, and when completed it will be one of the handsomest in the city. Its cost will exceed $8,000.—*Grand Forks* (N. D.) *Herald.*

### Church Organization in Mechanicsburg, O.

For the past few months the Christian Scientists of this city have been holding services in rooms on Main Street, and they have been well attended. Sometime prior to this, meetings were held in private homes, but the attendance increasing, larger quarters were secured. The adherents of this faith now include some of the best people of our city. On Monday evening, December 29, a church was duly organized, known as First Church of Christ, Scientist, of Mechanicsburg, and for the present will continue to hold services in the same place. The Christian Science movement has grown with wonderful rapidity.

*The Mechanicsburg Item.*

### Prospective Church in Marshalltown, Ia.

At eight o'clock Thanksgiving morning First Church of Christ, Scientist, laid the corner-stone of its new building, corner of Main and Fifth Streets.

The services consisted of silent prayer, followed by the Lord's Prayer, with its spiritual interpretation as given in the Christian Science text-book. After the laying of the stone, the definition of Church was given from Science and Health; then from Matthew, 21 : 42, 44. Next came a passage from Mrs. Eddy's message to the Mother Church, June, 1902, and from her message to the Mother Church when it was dedicated.

The service closed with the repeating in unison of the Scientific Statement of Being as given in Science and Health, and the benediction.—*Marshalltown Reflector.*

### The Second Church in Washington, D. C.

Second Church of Christ, Scientist, moved last week to Robinson's Hall, Fourteenth Street, northwest. They have outgrown the smaller hall, and were forced to seek larger quarters.

The church is in a prosperous condition. The services yesterday were largely attended, quite a number of the congregation of First Church being present. The platform was decorated, with palms, ferns, and cut flowers, and presented an attractive appearance.

*Washington Times.*

Just before the sermon, the First Reader made a few remarks as follows: "We are glad to welcome the dear friends this morning to the first service in our new quarters. The occupation of this larger place marks an era in the growth of our church which is in an exceedingly prosperous condition in every way. During the last few months our membership has nearly doubled, there has been a large increase in attendance, and best of all, a great growth of unity, love, and spiritual strength. A verse of Psalms is significant of this hour: 'In thy name shall they rejoice all the day: and in thy righteousness shall they be exalted.' It is the earnest desire of every individual member that we may walk honestly, humbly, and lovingly in the statutes of Christian Science, and that this church may honor God and His Cause in our nation's capital."—*Correspondence.*

### Distribution of Literature in Cincinnati, O.

The committee for the distribution of Christian Science literature in this city and suburbs has been busy with this work for the past three months, and feels well pleased with the results of their efforts so far; and they rejoice especially that the seeming prejudice and even conservative spirit of our city is gradually giving way to a more tolerant and enlightened attitude toward Christian Science.

The committee has placed our literature in various libraries and other public institutions as follows: one copy of Science and Health in the Y. M. C. A., one in the Work House, one in the House of Refuge, one in Longview Insane Asylum, two additional copies in the Public Library, a copy of the latest revised edition in our reading room, and one copy in the Covington Library.

Besides this, we have ordered *The Christian Science Journal* and *Sentinel* to be sent to the Third Regiment at Fort Thomas for six months, the former to Company B. and the latter to Company C.

We found that the Public Library already owned five copies of Science and Health, and we were glad to learn that this library appreciates its oldest edition of Science and Health so much that the volume is kept under lock and key in the librarian's office as a reference book exclusively, and is not allowed to go out of the library. This particular copy is the third edition in two volumes, published nearly twenty years ago, 1883.

CORA E. JOHNSON, on behalf of Committee.

### A Prayer.

O Master, let me walk with thee
In lowly paths of service free;
Tell me thy secret; help me bear
The strain of toil, the fret of care.

Help me the slow of heart to move
By some clear, winning word of love;
Teach me the wayward feet to stay,
And guide them in the homeward way.

Teach me thy patience; still with thee
In closer, dearer company,
In work that keeps faith sweet and strong,
In trust that triumphs over wrong;

In hope that sends a shining ray
Far down the Future's broadening way,
In peace that only thou canst give,
With thee, O Master, let me live!

WASHINGTON GLADDEN.

We prepare ourselves for eternity by doing our day's work while it is day.—HENRY W. CROSSKEY.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### "Though one Rose from the Dead."

SOME time ago, so the story runs, a gentleman who was greatly astonished at the number of Christian Scientists whom he saw upon an occasion, asked, "Where have they all come from?" and the answer was, "Most of them from the graveyard." We were reminded of the aptness of this answer when we read the testimony of the witnesses in the Reed case in this issue of the *Sentinel*. One man testified under oath that twice he went to California in search of relief from "lung trouble," which later was pronounced consumption, that disease whose name alone has hastened its thousands to the grave. After several years of doctoring, his condition became such that his physicians advised him to return to his home in the East that he might "die among his relatives." While in this hopeless state he was induced to take Christian Science treatment. In six weeks he was able to resume his business, and had not lost a day on account of illness since that time, a period of three years and a half. As evidence of his restoration to health he stated that he had gained forty-five pounds in weight.

This man's case is but one of many, yet our critics have presumed to deny the efficacy of Christian Science, and have sought to interpose the strong arm of the law to prevent its practice. Fortunately for humanity, the days of sumptuary laws have passed, and legislative paternalism is on the wane.

If Christian Science were nothing more than a means of healing disease, its success would be evidenced by the testimony of any one of the three witnesses quoted in this issue, but the healing of sickness is only incidental to its great mission, the salvation of the race.

God speed the time when all Christians—all men—shall know the only true God, whom to know aright is life eternal; when the bitterness of prejudice shall have ceased, and the love of God shall fill all hearts. M.

### Love's Supremacy.

SOME of us will recall the keen and sympathetic interest with which we looked at the painting called "Breaking Home Ties," by Thomas Hovenden, which was exhibited at the World's Fair. It represents a scene in the living-room of a country home at the moment when an older son and brother is taking his leave to enter upon the untried paths of city life. The young fellow is standing in the foreground and is looking into the sad and solicitous face of his mother, whose hand rests tenderly upon his shoulder while she speaks a last word of loving counsel, admonition, and encouragement.

It is possible to find in the lad's face the suggestion of an assumed self-confidence, if not something of purposeful resistance to an appeal which is bringing an unwonted throb to his heart and tremor to his voice; but we all know that, deep within, he is pledging unfailing loyalty to all that will fulfil his mother's hope and gladden her heart, and that in the temptations and trials of the years to come, the remembrance of that tear-stained face will be more to him than all else, for the mother-love is the potent and inspiring factor of his life. In weakness it will be his strength, in discouragement his support, in sorrow his solace, until he come to apprehend, as he has not as yet, that this is Love's reflection, the essential of humanity.

The true sense of Love may be but vague and indefinite for us all until, through its revelation in human experience as a guiding, supporting, and impelling presence, we realize that it is the strength of the weak, the courage of the timid, the assertion of the irresolute, the persistence of the unstable, the joy of the grieving. Thus in some degree is its sufficiency disclosed and we begin to understand that the essence of our awakening life is indeed "the substance of things hoped for,"—divine Love. In experience which has already come to some of us, the young man must breast many a mad current, and sometimes his feet will well-nigh have slipped, but in the hour of his besetment, his mother's face is seen, her loving hand is felt again, and he is himself once more, and knows that love has more than conquered.

The epics or tragedies of human life bring opportunity to learn of the forcefulness, the nourishing and quickening power of the reflection of that divine Love which is man's true consciousness; and as we realize that this reflection is but the earnest and prophecy of the Infinite, and that consciousness is the only being, Love as Substance begins to appear, and we know that it is not only the greatest thing in the world, but the ultimate and only thing. W.

### A Demonstrable Truth.

1492—and the old world was complacently resting in the established certainty of some things: The earth was flat. What could be more apparent? From the highest promontories, from the masts of the bravest vessels, the same testimony—flat, flat, flat! And what beyond? Imagination answered, peopled the wild waste of waters with monsters terrible, and the intimidated mariner, dismayed at his own fancies, hugged the shore and quieted his ambition for gold and adventure with runes of dangers dire, and dread destruction.

What matter how round the shadow on the moon? What matter whether mast or hull of the ship appeared first? Man could see, and he that thought to observe and reckon and think contrary to that which the eye sees,—well, pity the folly of that foolish man!

Then came conviction, scientific truth appealed to reason, and the request at the cottage fireside for sailors, and at the palace gate for gold was the clarion call of truth which would not be stifled. The monsters of the deep fled before the prow of discovery, and the winged harbingers of a new continent welcomed the champion of a demonstrable truth.

Now as of yore, the influx of a demonstrable truth convulses the world of self-satisfied human thought. So long as the proposition promulgated is born of opinion or theory it may number its followers by scores or hundreds, but let the truth be a demonstrable one, bringing to humanity life and liberty, and thousands follow in its light, while those, unwilling to see, rise in antagonism to that which they will not perceive.

God has spoken, the revelation has been made, man has heard, and the arguments of materiality will pass. The monsters,—sin, sickness, and death,—will lose their terror and the vision of a new world will gladden the sailor as he nears the harbor of rest in the reality of Spirit. S.

## Notice.

THE Church By-Laws Article XXIII., Sections 4 and 5, forbid a member to report to the Pastor Emeritus cases of discipline, and they prohibit one member from defaming another member. Also Article XXVII., Section 3, requires a member to tell another member his fault according to Scriptural rule.

It is deemed but just that, after a member has been disciplined, he should be forgiven in accordance with Jesus' teaching and example. In restoring such an one to the privileges of full membership he is afforded one more opportunity to prove his worthiness thereof, and thus the Golden Rule is obeyed.

WILLIAM B. JOHNSON.

## Church Dedication in Manchester, N. H.

THE Christian Scientists of Manchester dedicated their new chapel with appropriate exercises Sunday, January 11. The occasion, which was one of marked interest, attracted the attendance of delegations from New York, Boston, Concord, and other Massachusetts and New Hampshire cities. Three services were held during the day.

We are indebted to the Manchester *Mirror and American* for the following excerpts from the addresses given.

Rev. Charles D. Reynolds, First Reader, said in part:—

To what do these dedicatory services here to-day testify? Unfolded in their practical import they signify that we have found the teachings of Christian Science practicable and helpful, and that they have found entrance into grateful hearts, proving that it is a restorative, saving, life-giving message from the Giver of every good and perfect gift. The motive force, therefore, that lies back of the building of this chapel edifice is the conviction and proof derived from personal experience, that there is a High Priest who can be touched with the feeling of our infirmities, as the Bible declares.

This abiding conviction is "God with us." This experience takes the existence of God out of the realm of theory and speculation, and becomes a demonstrable, scientific fact. This is in line with discovery and progress, removing the limitations of mortals. Christian Science is a practical, not a sentimental, religion. It is judged by its ability to heal mortal darkness. The same standard which Jesus asked be applied to his teachings and works: Christian Science also invites: "By their fruits ye shall know them." If there are no fruits there are no evidences of its truth.

Christian Science is successfully reducing the teachings and practices of Jesus to the apprehension of the age, proving that what he said and did was not for that age only, but is available now. It need hardly be said that Christian Scientists have no motive for calling themselves Christian Scientists except that in this teaching they have found their highest good. In trying to overcome obstacles of every kind, including sickness and sin, they have succeeded better by this way than any they had hitherto tried. Hence every Christian Scientist knows that the church edifice is not the church. The true church is a purified, spiritualized state in consciousness. Sin-filled humanity does not find its salvation in wood and stone. It is not, therefore, what this society has accomplished in accumulating material gain, these perish with the using; but what it has attained in its individual members of selfless love.

From the address of Mrs. Mary F. Berry, Second Reader:

The Queen City of New Hampshire has the honor to have been the first in the state to raise the banner of a broader religion, one which includes the healing of sickness as well as the healing of sin. In the fall of 1882 a student of the Massachusetts Metaphysical College came here and opened an office within a few rods of where this lovely edifice now stands.

This solitary ray of light seemed very small in the surrounding darkness, yet it drew to itself many who were heartsick and discouraged with repeated failures to find relief from physical suffering. As nearly as your scribe can remember, the first case healed was that of a man who many years previous had been stricken with paralysis and had never fully recovered the use of his body. In all these years he had never been able to go up stairs without dragging one foot after the other. His work necessitated the climbing of a long flight of stone steps two or three times daily. One day, with less than a week's treatment, he found himself running up the steps "like a boy," as he expressed it. A severe case of dyspepsia was soon healed. St. Vitus's dance was destroyed, and a case of erysipelas, which had become a frequent visitor, was permanently banished. These cures naturally attracted attention. In the spring of 1889 the first Christian Science Sunday service ever held in New Hampshire took place in a private dwelling with only a few women present. In March, 1894, a state charter was obtained and First Church of Christ, Scientist, was organized with twenty-three charter members. Our building fund was started in 1897. A little boy whose mother had been one of the first to seek healing, earned and gave five dollars. This proved to be the nucleus which finally gathered to itself sufficient to buy this generous plot of ground. The purchase was made in 1898 for $4,500. In September, 1901, it was voted that we proceed to build. New plans were submitted and it was decided that we build this section of what is to be in the future a large church, seating eight hundred. The corner-stone was laid December 7, 1901. Cold weather coming on, work was suspended until spring. Obstacles which have seemed insurmountable in the distance have disappeared as we approached them, and the work has gone on to completion.

From the address of Rev. William P. McKenzie:—

In every church of this denomination are those whose healing and salvation might seem miraculous were it not true that good is natural and only evil unnatural.

By what method are results obtained? Always by overcoming evil with good. When the sick know the truth they become free from their bondage. Their evil sense of life is overcome by a good sense of being alive in Christ Jesus; and they become peaceful in the certainty that God sustains them, and that the goodness of God endures now and forever.

Apart from sickness the discords of life are due to a similar wrong method of viewing life. Let there be a feud and each party tries to win partisans. The critic of another wishes his criticism to cloud over the impartial view of others. In other words, the usual desire of those who take a wrong sense is to overcome good with evil. Here Christian Science is a sovereign remedy for discord and misunderstanding in the home, in business, in national affairs. It shows how to overcome the wrong sense with the loving sense—to supplant hate with kindness, envy and jealousy with love.

From the address of Rev. Irving C. Tomlinson:—

Amid such surroundings we cannot forget her who labors unseen and unceasingly for all mankind. Through her spiritual vision and her devout life we have been helped to a profound love for God and better understanding of Christ Jesus and his church. He who beholds this fair structure will recognize that its holy purpose is the worship of God, and that this is the Church of Christ. Fair as is

Digitized by Google

this structure which the eye beholds, yet far more beautiful is the church invisible. You have had your church before these walls were reared. It is the healing of the sick and the sinful through Christian Science that has established here this permanent structure.

The source of all power is God. Out of the throne of God proceeded the pure river of water of life. Declares the apostle, "There is no power but of God, the powers that be are ordained of God."

To manifest among men the power of love divine, to offer to the most High the prayer of faith which heals the sick, to help all mankind to understand God aright, so that sin, sickness, and death shall be destroyed and health and happiness become the possession of all, these constitute the high calling of this holy church.

From the address of Alfred Farlow:—

Christian Scientists are not held by any fanatical allegiance to impractical ideas, but are true to a demonstrable and demonstrated truth. The period when men can be induced to follow faithfully mere theories is well-nigh past. Jesus taught, Blessed are they who know the commandments to do them. The blessing is to those who know for the purpose of doing. If it were possible to do or be the fulness of God's likeness without knowing anything about God and His likeness, we should not need theology. But we have learned in Christian Science that when we labor understandingly we make more rapid progress.

Moreover, though we may know a great deal it avails nothing if not practised, so we must both know and do. So far as the do part is concerned, all Christians, including Christian Scientists, agree. Christian Science purposes to give additional aid in that it makes the way more plain and renders Christianity more practical.

After I learned my way in Christian Science I discovered that man in his normal, God-made condition, as the image of God, loves by nature. I learned that love presents itself without an invitation the moment hate or evil is cast out. Now I know that to love I only need to stop doing anything else—any wrong. We love in proportion as we cease from evil, for love is the normal and natural condition of God's man.

The new church cost about $14,000 and is clear of debt. Mr. Reynolds, the First Reader, said yesterday: "Yes, we are free from debt, and although there may be a few outstanding accounts we have ample funds in the treasury to cover all. We did not erect our beautiful edifice until we had the funds."

As it is the intention of the society to enlarge the present structure as the society grows, the end is finished in wood. The enlarged plan is in form of a cross, and when completed will have a seating capacity of eight hundred. The present building will accommodate about three hundred people.

---

It is curious, if it were not so sad, to notice how many years of fruitful youth we spend less in learning than in wondering why we are compelled to learn.

DINAH MULOCK CRAIK.

---

A traveler hasting on his tourist way
Gazed on the various sights and scenes around,
But missed the grandeur that before him lay,
Because he did not take the highest ground;
Alas! how much of joy, of good, we all forego,
Because, to tell the truth, we stand too low.

J. C.

In *The Watchman.*

## From our Contributors.

### A Business Man's Letter.

WE are permitted to print the following extracts from a letter written by Mr. Ira C. Hubbell of St. Louis, Mo.

*My Dear Sir:*—If my remembrance is correct, there was a time when Christopher Columbus was considerably in advance of the age in which he lived, and when he first voiced to the world the ideas which had been given him, he received no encouragement, but finally some one was found who could see things as Columbus saw them, and then he no longer stood alone.

It seems to be characteristic of the average person to criticise most severely those things with which they are the least familiar, and we have daily illustrated the old *habeas corpus* story, wherein the man's lawyer told him that it was impossible for the authorities to lock him up, although at that particular time, the man was behind the prison doors.

Nearly eight years ago, Christian Science found me in very much the condition that a ship would be in, if at sea without a rudder.

The illustration that I have used herein, with regard to Columbus, only in a very small degree indicates the condition of thought which Jesus found when he was on earth nineteen hundred years ago, and only those have been able to appreciate his teachings, who have done absolutely as he commanded; and these only have followed his commands, and shown the proof which he exacted in his injunction, "If ye love me, keep my commandments;" and, my dear brother, all that Christian Scientists are trying to do, is to do just what Jesus commanded that Christians should do—no more, no less.

To be a Christian is to be Christ-like. There is no creed in it, and I have found, after eight years' study of Christian Science, that it comes the nearest to being the *real thing* of anything I have so far met with, and it has brought into my home just that same happy, healthful, contented condition that you found in the family you visited.

It has healed my wife of consumption, it has healed my daughter of pneumonia, it has healed my son of various ailments, it has healed me physically, and it has healed me of sin. It has given me a joy and happiness that I never thought could be mine. My wife says I am a better husband, my children say I am a better father, and a good many of my friends say I am a better man and citizen. For this Christian Science is entitled to all credit, because it has enabled me to get into closer communion with God, and enabled me to drive out the wrong thoughts and to think good, and you know thought always precedes action.

---

### Error's Limitations.

E. R. H.

DURING a conversation with a friend not long since, I was rebuked for speaking of a little demonstration. "Every demonstration is great." The thought has been very helpful, and has encouraged me to send to the *Sentinel* an experience of several years ago, which I now recognize as one of the way-marks in my progress in Science.

I am a member of a literary club, and was called upon to write a paper. The matter was before me for some time, and the longer it confronted me, the more persistent was error in declaring my inability to do the work, owing to a lack of advantages. As the date of the meeting drew near, with nothing accomplished, my anxiety was so great that all other duties were neglected. Suddenly the thought came to me: You are not looking to Truth at all, but depending wholly on mortal mind, and of course you cannot

Digitized by Google

write. Thus was error uncovered. I turned to Science and Health, and read, "'Work out your own salvation' is the demand of Life and Love; for to this end God worketh with you" (p. 22).

Clearly my work was not the writing of the paper, but destroying the error that was preventing me from reflecting Truth—the intelligence of immortal Mind. The demonstration was not made easily; on the contrary, there were many struggles, but the victory was finally Truth's. A year later, much to my surprise, the experience had to be repeated; but I have since seen that the result was on a much higher plane of thought.

## The Scientific Attitude toward Disease.

MRS. IDA W. STRAUB.

If we should suddenly find that a garment—filthy and in tatters—had been thrown over our shoulders, would we not hasten to throw it off? and if it should cling would we not make vigorous efforts to rid ourselves of it, not being content until we were entirely free?

Our first thought on noting the tattered garment would be this: "It does not belong to us, it is not a part of our apparel, we do not want it, and there is no reason why we should be compelled to wear it; we loathe its filthiness, we are ashamed of the tatters; and the assurance that we have the power to throw it off, nerves us to make sufficient effort to accomplish the result.

In this same attitude we should meet disease, the moment we discover its presence or approach, instead of weakly accepting its conditions, and arguing for it. Let the assurance that it does not belong to God's child, help us to make our first effort to be free. We know God, Good, never made it, and it is no part of Mind's plan.

No one suffers from choice, and as God's ideas, we do not need to suffer, if we recognize our true inheritance. God's law—the only law—governs us. As Mrs. Eddy says in Science and Health, p. 380, "Every law of matter or the body, supposed to govern man, is rendered null and void by the law of God." God's law never made it necessary that we should suffer, but makes it clear that we are exempt from disease and danger. (Science and Health, p. 411.) If fear should make the disease (seemingly) cling—fear that we are not strong enough to overcome it—let us not give up.

St. John said, "Perfect love casteth out fear." Jesus said, "Lo, I am with you alway;" also read, Isaiah, 41 : 10–13. God never made fear, hence it has no power over us. Love is the only power, hence there is nothing to fear; and the understanding that Christian Science gives us by the many assurances in our text-book, one of which is: "Knowledge that we can accomplish the good we hope for, stimulates the system to act in the direction which Mind points out" (Science and Health, p. 394), and gives us courage.

See that your thoughts are pure and your deeds noble. Use the experiences of life, whether they be of joy or sorrow, as steps in an upward climb. There is only one thing you can carry into eternity—your character. See that it is what it should be and the jasper gates will gladly swing open to give you a welcome.—*"Great Thoughts."*

How numerous the little foxes are! Little compromises with the world; disobedience to the still, small voice in little things; little indulgences of the flesh to the neglect of duty; little strokes of policy; doing evil in little things that good may come; and the beauty and the faithfulness of the vine are sacrificed!—J. Hudson Taylor.

## The Lectures.

### At Sacramento, Cal.

Carol Norton, C.S.D., of New York, lectured before a fine audience of about six hundred people in the Congregational Church, December 19, on the subject: "Teachings of Christian Science." He was introduced by the Hon. William Johnston of Courtland, in a few well-chosen words. Close and appreciative attention was given the lecturer.—*Correspondence.*

### At South Haven, Mich.

Judge William G. Ewing of Chicago delivered a lecture on Christian Science Sunday afternoon, January 4, in the Opera House, to an audience of about three hundred. The lecturer was introduced by Judge D. H. Pinney of this city, who said, in substance:—

*Ladies and Gentlemen:*—It is a pleasure to me to meet with you upon this occasion. Some of you, I presume, know as little about Christian Science as I do. None of us are too wise or too old to learn.

I am gratified to meet my old and valued friend, Judge Ewing, here to-day. In all the long years I have known him at the Illinois bar, he has ever been that same high-minded, Christian-like character. He has always stood high in his profession, and I know I but voice the sentiment of the Chicago Bar Association, when I say that no man ever left the bench in Chicago with a better or more blameless record for fairness, impartiality, and ability than he. He is always and everywhere a Christian gentleman, and I take great pleasure in presenting Judge Ewing to this audience.—*Correspondence.*

### At Houston, Tex.

The Opera House was filled to overflowing yesterday [January 4] upon the occasion of the address of Judge Septimus J. Hanna of Boston, upon the subject of Christian Science, and well may the speaker feel proud of the audience which heard his discourse upon this subject. The speaker was given full attention throughout, and much interest was evinced in his remarks.

Judge Hanna was introduced by Mr. James D. Sherwood, First Reader of First Church of Christ, Scientist, this city, who spoke in part as follows:—

Christian Science is to-day attracting more widespread attention than any other great religious movement, and that chiefly because of the blessings it brings to humanity, mentally, morally, and physically, through an enlarged understanding of God.

Christian Science is purely metaphysical, and hence it is not generally comprehended: and because of this some well-meaning persons have misrepresented it and have spoken against it, and believed in so doing they were rendering God a service and man a protection.

In order that the public may be properly informed, our Leader has wisely appointed a competent Board of Lectureship. A member of that Board is with us this afternoon.

I have the honor and pleasure of introducing to you Judge Septimus J. Hanna, C.S.D., who will now address you.—*Houston Post.*

### Lectures at Other Places.

Bracebridge, Ont.—Judge William G. Ewing, October 24.
Montrose, Col.—Carol Norton, C.S.D., December 11.

## Testimonies of Healing.

The following is representative of the testimony which was given to the jury in the case of The People *vs.* Merrill Reed *et al,* heard in Los Angeles, Cal., November last. It is especially interesting in view of the fact that it was given by people well known to the local public at large, witnesses who were subject to cross-examination at the pleasure of the court and counsel.

Mr. J. J. Petermichel, stenographer for the Southern California Fruit Exchange, testified:—

*Q.*—Mr. Petermichel, I will ask you whether you have had any experience in the matter of Christian Science treatment for disease?

*A.*—Yes, sir; I have had some experience.

*Q.*—You may state what your bodily condition was for which you were treated, and to what extent you had resorted to medical treatment prior to coming to Christian Science, and then what the result of Christian Science treatment was.

*A.*—I came out here originally in 1894 on account of what the doctors called lung trouble.

*Q.*—Did they call it consumption?

*A.*—It was not at that time defined as consumption. I will get to that later. And I went up—I came here and worked for Mr. Byrne, the general passenger agent of the Santa Fe, took a position there, and I broke down completely in three months; and the doctors then advised me to go to the mountains. I went to the mountains up in La Canada and La Crescenta, and remained there for about fifteen months, and was apparently restored to health. I saw Dr. Plankington—I think it is Plankington—who was then introducing the Edson system, and he examined me and pronounced me as cured. I then went back to Chicago, and was there a little over a year, and the old trouble came back, and the doctors advised me there. I had some of the best physicians there, Dr. Way, Dr. Reynolds, and Dr. Strzowski, they are all specialists in that line. They advised me to come to California immediately, and not to delay the matter. I came to California again, but my condition did not improve; in fact, I kept getting worse, and broke down completely in February of 1899, I believe it was; and I was in bed ten weeks at that time, and never rallied from the condition. I was physically a wreck. I only weighed about one hundred and twenty pounds; and I went on the advice of my physician here, Dr. Kruell—I went to Rialto and I stayed there and I got worse, and I saw Dr. Bayliss—he is now surgeon for the Santa Fe, I believe. He was the best man in San Bernardino, and he examined me and he told me I had to go to a higher altitude, and I tried to find a higher altitude. I traveled all the way from Victor back to La Canada again and kept gradually losing, and I saw my doctor here, Dr. Kruell, again when I came back. Well, he told me he had tried every remedy. I doctored with him for about a month or five weeks, and tried everything that he suggested, and he finally said—advised me to go to Dr. Croftan, in Pasadena, who had a laboratory there, and have an examination made of the sputum, so as to definitely settle the question as to what ailed me. I had an examination of the sputum made, and the doctor, Croftan, diagnosed it as mixed tubercular infection, combined with a mucous, and which in their judgment, made the case more aggravated, and more difficult to handle. And the doctor didn't give me any help at all; in fact, he told me that I could go back east and expect to die among my relatives and I was preparing to do that. I had moved into Los Angeles finally to go back to Chicago to my folks, and moved up on Twenty-ninth Street, and got a Christian Scientist on each side of me. And of course, I had no faith at the time, in Science. I had no knowledge or idea of a God, and the proposition seemed very preposterous to me. Anyway, they persuaded me to take treatment, and I took a trial treatment for a week. I paid the practitioner for the week's treatment and told her if there wasn't some immediate result, beneficial result, that that would kill all the faith I had in it. Practically grasping, as a drowning man would at a straw, I took treatment and the first week I got quite a bit of benefit, so much benefit that I felt encouraged. My stomach trouble which I had—I could keep nothing on my stomach in spite of all the tonics, and I had no trouble with my stomach after these treatments, and of course I had a good appetite, and I ate and I gained three or four pounds, and there was quite a bit of encouragement in continuing the treatment. I continued treatment for five weeks—might have been six weeks, possibly—not over six weeks—and I went back to the office. Of course I was not restored physically entirely, but I was so much better that I went back to the office, which the Scientist assured me would do me no harm, and I haven't lost a day on account of illness since that time, which was in June, 1899.

*Q.*—State your condition since that time.

*A.*—I am enjoying perfect health. I am doing hard work, and able to hold up my end at the office, and sometimes a little more. Sometimes one or two of the other boys get sick, which puts a little more of the daily work on to me, and it hasn't bothered me. I am gaining in flesh right along. I have gained some forty-five pounds since taking up the treatment; in fact, in every way I am enjoying as near perfect health as a man could.

*Q.*—You feel that you are in perfect health?

*A.*—I know that I am in perfect health. I know it absolutely.

*Q.*—You say that they told you at some stage that you had consumption?

*A.*—The microscopic examination was to the effect that I had tubercular infection with a combination of mucous, and showed cavities in my lungs of long duration, and it was rather a hopeless case, according to the doctors.

Mr. S. K. Lindley, a real estate broker, a resident of Los Angeles since 1883, testified:—

*Q.*—Are you a believer in Christian Science?

*A.*—I am.

*Q.*—You may state to the jury how you came to be a believer in it and for what bodily ills, if any, you have been treated by it, and with what results.

*A.*—I gave up my business in Michigan on account of poor health and came out here. I was troubled with liver and kidney troubles and stomach troubles and I came out here and I treated off and on for the last twenty years here and in Michigan for that trouble. I would get relief a short time and then get right back worse than I was before, and I was running down all the while; and two years and a half ago, after Mr. Ward had his experience, he kept bothering me all the while that he met me to try Christian Science. I thought he was a good deal of a crank and I declined; and he kept bothering me all the while; every time he would meet me in the office or anywhere, he would talk Christian Science. I says, "Now, Ben, if you will agree you will let me alone I will go and take a few treatments and see what effect it has on me." He said he would. He said he would not try any more Christian Science on me if I would try the treatment. One day I had a very severe attack of sick headache, and I went up to a Christian Science practitioner and I told her what I wanted, and I was not there but a short time until I was relieved considerably. I followed the treatment up and got entirely over the trouble. In fact, there were six troubles that I had that were cured by Christian Science.

*Q.*—What were they?

*A.*—Well, the stomach trouble, liver trouble, liver com-

Digitized by Google

plaint, astigmatism,—I kept wearing glasses all the time on the street, I have taken them off and do not wear them at all now,—and bleeding piles bothered me for twenty-five years. I have gone from one physician to another. They all wanted me to have an operation performed and I declined, and I am very glad now that I did. They were cured inside of a week by Christian Science treatment. I always had to take medicine to have a movement of the bowels—constipation; and I am now entirely free from it. I have not taken a bit of medicine for two years and a half and have not employed a physician in all that time. I can see without my glasses on the street and can get along without them a great deal better than I can with them, and I rely entirely on Christian Science. If I should get out of health in any way, shape, or manner, I should go on and take a treatment instead of employing a physician in any way, shape, or manner.

*Q.*—What is your age, Mr. Lindley?

*A.*—I am in my sixty-sixth year. Two years and a half ago I was hardly able to crawl around. I would walk down to the office and I would be so tired I would have to sit down and wait before I could do any business.

*Q.*—This condition resulted from the various troubles that had been treated by medicines for years?

*A.*—Yes, sir; I had what they called nervous prostration. I could hardly sit still and enjoy myself anywhere, and I was entirely cured of it by Christian Science treatment.

*Q.*—Over what length of time did your treatment continue?

*A.*—Well, I didn't continue right along. I would take a few treatments and stop—thought I was cured, and I would have the trouble or some other trouble and I would take more, but lately I have not taken any treatment for some time now.

*Q.*—You have had no occasion for any?

*A.*—No occasion. I am feeling all right.

*Q.*—It is your conviction now that you are in perfect health?

*A.*—Yes, sir. There is one thing that I was very thankful for. I had not been able to drink coffee for twenty-five years, and when I went up there the party that was giving me treatment, I spoke to her and said I was unable to drink coffee. She said to go down and get the best coffee I could find and take all I wanted. I told her I was a little afraid of that, but she prevailed on me to get it and I did, and I am very happy to say that I have been able to drink coffee whenever I wanted it.

*Q.*—No ill effects?

*A.*—No ill effects, and my stomach does not trouble me any. I don't have any trouble with it now.

*Q.*—What was the difference in weight between the time when you first began to take treatment and when you had recovered your health?

*A.*—I weighed one hundred and thirty-two pounds when I began the treatment. I am weighing about one hundred and sixty to-day. It was all on account of Christian Science treatment in my opinion.

Miss Winifred Whitehead of Pasadena, Cal., testified in part as follows:—

*Q.*—You may state what your physical ill consisted of and to what extent you had medical treatment.

*A.*—I was a cripple for five years and for two years of that time I was unable to walk at all. When Science came to me my foot was twisted in that way. It was set, unable to move it; it was crooked.

*Q.*—Your foot was turned?

*A.*—Yes, it was turned. I was not able to walk on it. I had no appetite whatever. I never slept more than half an hour out of the twenty-four hours for at least three years, and my mind—I was out of my mind more than half of the day. I had spinal trouble and suffered from constipation; in fact, I had pain everywhere.

*Q.*—How long a time did you have medical treatment?

*A.*—About three years, I think it was; three years.

*Q.*—Constant treatment? Did you have constant treatment from the doctor?

*A.*—Well, pretty constant. I came to Los Angeles and there I went to the county hospital and I was under treatment there. They put me under chloroform and consulted about me and put my foot in a cast. It was in there for several weeks and I went home and I went back there and the cast didn't do any good, and they thought they would try again and they tried it. They gave me medicine and finally said I must take hypnotic treatments: so I took hypnotic treatments for about a year. For two days I was able to walk under that treatment, but I got worse and worse and my mind got worse all the time, and finally I went to a doctor in Pasadena and he treated me for about a year, and I had two operations performed on my foot. The first time they cut the foot and amputated two toes, thinking to help me. The operation was not successful, so they concluded they better try again. Each time they put in an artificial tissue, hoping that would help it, but it was no use at all. The doctor said he thought I ought to go away. So I went down to Long Beach for a while and seemed to get a little better. I was in my wheeled chair all the time; had to be lifted from my chair to my bed. I came back to Pasadena and I got very much worse, and they suggested Science to me several times, but I didn't want it.

*Q.*—You mean Christian Science?

*A.*—Yes, Christian Science, and I said I would not have it; and finally my parents put me under Science treatment before I knew anything about it, because my mind was in such a state that I was unable to judge for myself.

*Q.*—When you say "Science" you mean Christian Science?

*A.*—Yes, sir. The first night I saw a Christian Scientist I didn't know she was treating me. When she came to the house I would not go in into the presence of strangers any way. I hadn't seen strangers for about two years. I was even afraid to see my own relations for about two years. That night when she came I went in and said, "Good evening," but I went out in the other room and had a spell, those spells I used to have when I would scream and fight and kick.

*Q.*—Describe the spell.

*A.*—Well, it was the claim of insanity. Then we went in and had supper and I stayed all evening. I didn't have a spell all that evening. I listened to her, but I could not believe what she was saying, but there was a peace there I had never felt before. That night I went to bed. I didn't sleep certainly, but I was so peaceful, and I didn't have a spell that night. For me, I was very rebellious; I didn't want to get well. I wanted to die, and I wouldn't acknowledge that Science helped me. This treatment went on and I gradually got better, but at the last everything just seemed to go very quickly. One morning I went to breakfast and I ate just the same as usual, not much as a sparrow would eat, and that night I went and ate a hearty meal as I have done ever since. After a while I was able to get on to my crutches through Christian Science treatment. I used them for three weeks, and one Sunday morning I went to church and I had been studying the Christian Science lessons, and in it it said, "The crooked shall be made straight." Well, that morning when that was read, it came to me that that was meant for me. I went home and I thought about it a great deal all the day, and I said to my healer—I was then staying with her—I said, "Do you know I believe if my foot was straight I could walk," and she says, "Try." I said, "Yes, but I am afraid to." She said, "You have nothing to fear. God is right here. He is your strength." And she said it in such a way I just

Digitized by Google

felt God was my strength and I got up. I put my crutches down as I started and walked across the room. As I started to walk, I walked on the ankle bone. As I walked my foot turned around straight and that limb was lengthened three quarters of an inch and I am now able to walk wherever I want to.

*Q.*—Without lameness?

*A.*—Without lameness. There was lameness for a little while, but there is no lameness now. I am perfectly well.

*Q.*—How long have you been so?

*A.*—I was cured June 30, 1901.

*Q.*—Miss Whitehead, you say that hypnotism was recommended?

*A.*—Yes.

*Q.*—By whom? I don't mean to ask the name of the person, but was it by a medical practitioner?

*A.*—By the doctors at the county hospital.

*Q.*—Did you try that?

*A.*—I did.

*Q.*—I understood you to say you grew worse.

*A.*—Yes, I grew worse. For two days I was able to walk under that treatment. I grew very much worse mentally. My foot seemed to get in a much worse condition afterwards.

*Q.*—So far as the appearance, the changed condition, the hypnotism seemed to make you worse?

*A.*—Yes, it did.

*Q.*—Did the hypnotic treatment affect you mentally?

*A.*—Yes, it did.

*Q.*—What was the effect of Christian Science upon you mentally, if there was any effect?

*A.*—It changed me completely.

*Q.*—Did it give peace of mind?

*A.*—Yes, it gave me peace of mind, and I lost my fear that I had had before. Under hypnotic treatment I got so if I dropped a spoon on the floor I would have one of these spells. My hands would close up that way and I would not know a thing; and you could not undo them.

*Q.*—You now have peace of mind?

*A.*—I have peace of mind. I have not any fear. I am not nervous at all now. It used to be before Christian Science came to me, if I saw a car a few blocks off, I would be frightened so I would become unconscious. Now I can ride on the car without the least fear whatever.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

Wisdom is oft-times nearer when we stoop than when we soar.—WILLIAM WORDSWORTH.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. William Short of St. Peter's Episcopal Church, preaching on the theme "The Religion of the Future," is thus reported in the *St. Louis Globe-Democrat*:—

"Time-honored opinions, hoary with the antiquity of centuries, have been cast aside, and old interpretations of truth, venerable with age, have been superseded. Our conceptions of God, of man, and of their relations to each other, have undergone a change."

Carlyle's definition of the old idea of the deity as "an absentee God, sitting idle since the first Sabbath at the outside of His universe and seeing it go," was to be replaced, Dr. Short said, by a future religion of divine immanence, which in itself is not new, but is a return to the teaching of the early Greek fathers. "We shall go back nearer to Christ and his apostles," the preacher said, "for many ideals and interpretations. At first the Christian religion was much simpler than now, and it was much more concerned about the way Christians lived than what they professed."

Touching inspiration, Dr. Short said; "As to the Holy Scriptures, they will continue to be the great guide to holy living. Yet they will be interpreted in a more rational way. The ancient fathers, to whom I have referred, regarded the revelation of the divine as a continuous process. All great poets and artists and helpful philosophers, as well as artisans and craftsmen who conceived beautiful designs and executed them, were thought to be inspired. But there were degrees of inspiration. So I imagine it will be in the future. All truth will be recognized as God's, and those writings most inspired, which help most, as the Bible has done to lift man up out of animalism and beastliness, out of vulgarism and ignorance and prejudice and selfishness, into a likeness of the manhood of Jesus, who lived the true son of God."

Rev. Charles H. Watson, D.D., who read a paper at a recent Baptist convention in Boston, is reported by *The Standard* to have spoken as follows:—

"In the broadest sense, revelation neither begins nor ends with the Scriptures. This is Scripture teaching and freely accepted. Nature is simply inexhaustible in her revelatory power. She is speaking in all languages to devout pupils and is speaking night and day. . . .

"A second proposition takes up this thought and crystallizes it as follows: From the nature of the case, revelation must be progressive. There is more in the character and mind of God than has yet been apprehended by any of His pupils. So long as any of God's pupils are teachable and receptive, He will go on disclosing His mind and will to them, æons upon æons, world without end.

"My third proposition is this: The Scriptures undoubtedly present to the world for all time a larger and more perfect revelation of the character and will of God than ever has been, or ever can be fully apprehended by mortal man. Hence all revealings of God before or since the Scriptures are accounted for by the Scriptures. The human mind staggers under the task of compassing all that God has revealed in His written word."

Rev. Tileston F. Chambers writes as follows in *The Examiner*:—

"The enunciation of moral truths or spiritual verities at once parts men. No word in reply may be spoken by those who hear. No open declaration of allegiance or antagonism may be made. But subtle and unseen lines of distinction are surely drawn between those who sympathize and those who oppose. Men must be loyal to the good as they face it, or else disloyal. All the more they must be loyal to the best, or disloyal. And so, from the day of the advent into this world of our Lord and Saviour Jesus Christ, he has afforded a criterion of character. While he was here on this earth, his life was the touchstone of every man's life. According to the record of the Gospels, all were sensitive to his influence. From the very beginning there was a division among the people because of him.

"The issue is still forced upon men. The living Christ is still in the world. He comes to every door. He knocks at every heart. He seeks an entrance to every soul. His spirit still strives with every human spirit. One person we cannot escape, Jesus of Nazareth. One question we must face, 'What shall I do with Jesus who is called Christ?' There is no parrying it, there is no putting it aside as of slight significance. Jesus always commands attention. He always affects the souls of men. He is the most compelling and impelling person in human history. From the sphere of his influence none can wrest himself.

Rev. Willis A. Moore in an article in *The Universalist Leader* says: "Now Christ was in the highest sense a true Son of God because he fulfilled perfectly the spiritual conditions which his Father had imposed. You say you would believe if you could do some of these things? The law of uniformity of nature holds; are you able to meet the conditions as he met them? to do as he did? If you are, you can accomplish similar results. He himself said, 'and greater works than these shall he do.' But can you be ever about your father's business? Can you meet all temptation without sin? Can you think only of your duty to God and your brother? Can you suffer patiently when falsely accused? Can you sacrifice your hopes, your life, for the very ones who condemn you and plait the crown of thorns and crucify you? If you can, then expect to do things that other men cannot explain; miracles in their eyes."

If Jesus had left nothing but the Parables, his name would have been imperishable in literature; if he had bequeathed to posterity nothing but the simplicity of his speech and the irresistible logic of his argument, he would have had a permanent place among the orators of the world; if he had given to the world nothing but the commandment, "Thou shalt love thy neighbor as thyself," enforced as it was by his own example, this one gift would have been sufficient to outweigh all the wealth of all the world; if he had left no record but the Sermon on the Mount, it alone would have made his natal day worthy of perpetual celebration—but all these added to the matchless majesty of a perfect life and the inspiring influence of an all-pervading love, are turning the eyes of an ever-increasing number to the path that he trod from manger to the cross.

*The Commoner.*

The great creeds of Christendom, as they are called, were formed, for the most part, in times of bitter controversy and as the fruit of such controversy. They were partisan statements, forced by the majority upon the minority with violence and the absence of everything that savored of Christian charity. The heat that ministered to their forging was mainly the heat of friction and strife, and not the heat from the "Central Sun" of righteousness and love. Hence it is that these creeds have been divisive, and not unitive, serving as battle-flags rather than as banners and bonds of peace. We are in the midst of searching inquiries into the very foundations of our faith, and the investigations will be more thorough, unsparing, and far-reaching than they have yet been. We need not regret this, for Christianity can stand every test, and be the brighter and stronger for every trial.

*The Examiner.*

The age of inspiration is succeeded by the age of reason and law, the age of reason and law by the age of ritual and observances. The effort to apply translates truths into dogmas, and principles into laws, and laws into rules. In the effort at completeness and minuteness the spirit evaporates. Then all things are ripe for change. The old bottles are no longer of use. The time of revolution or reformation is at hand. Dogmatism is truth crystallized; what it gains in definiteness it loses in power. Ritualism is worship crystallized, and what it gains in elaboration it loses in spirituality.

BISHOP RIPON.

There is no reason for anxious thought because we live in troublous times. When life abounds and its energies are manifest, new needs appear and new wisdom is demanded of those who must control and co-ordinate the new forces which are coming into life and action. It is a sign of health when great energies are contending with one another in the fields of human action.—*Christian Register.*

Our business is not to build quickly, but to build upon a right foundation and in a right spirit. Life is more than a mere competition as between man and man; it is not who can be done first, but who can work best; not who can rise highest, but who is working most patiently and lovingly in accordance with the designs of God.

JOSEPH PARKER.

Of one thing we may be sure,—if we have all that we want in any sphere of effort or influence, we have a lower standard than we ought to have. The best worker is always behind where he would like to be. His ideal is ever ahead of him.—SELECTED.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson. This supplement is printed in German *only*.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 33 pp.

Hearings on Proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Buswell Trial. 24 pp.

The Christian Science Movement. 22 pp.

Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES. In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Full sheep, stiff covers, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The Panama Canal Treaty was signed January 22 by Secretary Hay for the United States and Dr. Herran for Colombia, conveying to the United States for ten million dollars cash and an annuity of two hundred and fifty thousand dollars for one-half the period of lease and one hundred thousand thereafter, the long-desired canal concession across the Isthmus of Panama. By this instrument, when ratified by the Senate and the Colombian government, the United States, by a series of long leases, with the option of perpetuity, will practically gain absolute control of a tract six miles wide, with the option of extending laterals in any direction fifteen miles to utilize adjacent watersheds; it will have the sanitary and police control of the tract and of the cities of Colon and Panama; it will regulate the tolls, be exempt from taxation in every form, and receive the revenues of the two ports of entry; it secures the unequivocal transfer of the rights, privileges, and concessions of the Panama Canal Company; it assures the neutrality of the canal and the freedom of the ports of entry to the commerce of the world, and provides for the erection of tribunals on the strip to protect and adjudicate American interests. The price to be paid for the rights of the Panama Canal Company is forty million dollars.

The chairman of the Judiciary Committee of the House introduced the following resolution January 14: "Resolved, That the Committee on the Judiciary be, and is hereby, directed to investigate and report to this House, with all convenient speed, the opinion of that committee as to the power of Congress to declare that a necessity has arisen for taking possession of all coal, coal beds, and coal mines in the United States, and all lines of transportation, agencies, instruments, and vehicles of commerce, necessary for the transportation of coal, and that if, in the opinion of that committee, the power exists, and a necessity for the exercise of such power has arisen, that that committee forthwith report to this House a bill declaring the necessity, providing fully and in detail the occasions, modes, conditions, and agencies for said appropriation that will fully and completely exhaust the power of Congress in that regard." It went to the Committee on Rules.

The administration plan of a gold standard for the Philippines with a special silver coinage, recommended by Governor Taft, was defeated last week, and the minority proposition for the introduction of the American coinage system complete was carried. The substitute passed provides that the lawful money of the United States shall be legal tender on the islands, that the Mexican and Spanish coins shall be redeemed at their bullion value, and after six months no coin shall be legal tender except American money.

Mr. Bowen, United States minister to Venezuela, and now envoy of Venezuela to the conference of the representatives of the Powers, who are to consider at Washington the terms of a protocol for arbitrating the Venezuelan affair, arrived at Washington last week. The report that Venezuela would pledge her customs revenues to guarantee the claims of the Powers has not been confirmed. The blockade will probably not be raised or modified until the promise to pay has been guaranteed in some way.

The Cuban treaty, which is awaiting ratification, is said to be calling out protests from the British Chambers of Commerce of the United Kingdom on the ground that it discriminates against their West Indian trade.

**Foreign.**

An interesting application of international arbitration on the American continent has been inaugurated by the republics of Argentine and Chile, which recently signed a convention providing for the sale of all ironclads now being constructed for the two republics in European ship-yards. In addition, Argentine and Chile respectively agree to a partial disarmament of their fleets. The convention is intended to carry out the provisions of the treaty between the two republics which was signed last July, and provided for the limitation of armaments and the submission of all questions that may arise in the future to arbitration. While Argentine and Chile are applying their plan of arbitration and disarmament, there is pending before the United States Senate the general international arbitration treaty recommended by the Pan-American Congress held in the city of Mexico last winter. That treaty follows very closely the lines of the international agreement of The Hague, but applies only to the republics of the Western hemisphere.

In the course of a debate on the budget in the French Chamber of Deputies recently, Baron de Constant declared that the burden of armed peace causes the deficits that appear throughout Europe; that everybody knows it, but nobody ventures to admit it; that armed peace consumes fifty-four per cent of the French revenues; and that no successful policy—financial, social, or colonial—is possible under that burden.

According to official statements of the Canadian Department of the Interior, the total area disposed of during the past year under homestead entry, sale, and redemption of half-breed scrip, and by the railway companies was 4,954,847 acres.

It is reported from Constantinople that the Porte has communicated to the British embassy an irade granting British schools and religious institutions privileges identical with those allowed Russia and other orthodox establishments.

The Cuban House of Representatives has appropriated three hundred thousand dollars for the construction of a capitol building. At present the House and Senate are located inconveniently and a long distance apart.

Another Russian torpedo-boat destroyer has passed through the Dardanelles bound for Sebastopol.

The municipality of Venice has voted to spend $200,000 in the restoration of historic buildings.

**Industrial and Commercial.**

There are twenty-five ports on the Great Lakes having a registered tonnage ranging from one million to over five million tons. Cleveland leads the list with 5,037,282 tons, and five other ports, Duluth, West Superior, Milwaukee, Chicago, and Buffalo recorded over four million tons of arrivals. The enormous amount of this tonnage may be appreciated when compared with the tonnage of ports on the ocean frontage. New York in 1902 is credited with 8,982,767 tons of arrivals; London in 1901 reported 9,992,753, and Hong Kong in 1900 registered 8,626,614 tons.

The export trade of the United States for December, 1902, was eleven million dollars in excess of that for 1901, and three millions in excess of that for the banner year of 1900. The import trade was greater than that of any December trade in the history of the trade, $94,307,204, and was only exceeded by that of April, 1897, when they were abnormally large in anticipation of the approaching change in tariff.

The official report of the Southern Iron Committee for the six districts, Anniston, Birmingham, Chattanooga, Nashville, Sheffield, and Middlesboro, which is now being made up, will show approximately the following figures for the production in 1902: Pig iron and steel, 7,801,800 tons; cast-iron pipe, 167,466 tons.

The Gilchrist Transportation Company is soon to be incorporated in Ohio with a capital stock of ten million dollars. Next to the Pittsburg Steamship Company it will operate the largest fleet of vessels on fresh water.

The United Lead Company, capitalized at fifteen million dollars, has been chartered in New Jersey. It will consolidate, it is said, some twenty-five of the largest sheet, shot, and pipe concerns in the country.

The steel rail mills at Pittsburg, it is reported, are not taking orders now except for delivery in and after next November. They already have on their books orders for two million two hundred thousand tons.

**General.**

In a paper read before the Frankfort congress of German naturalists and doctors, Mr. A. Gradenwitz makes an estimate of the water-power now utilized in various countries for the generation of electricity. About one hundred and eighty thousand horse-power is thus utilized, he states, in Germany and Austria, in Switzerland about one hundred and sixty thousand horse-power, in Sweden two hundred thousand horse-power. The total power available in Sweden is reckoned at about two millions, in France ten million horse-power may be utilized, while the resources of the mountainous districts in Germany, Austria, Switzerland, and Italy may be placed at about the same figure. In the United States Niagara alone could furnish ten million horse-power.

A new 16-inch rifle built by the Government at the Watervliet arsenal, New York, was tested recently at the Sandy Hook proving grounds. The powder charge was six hundred and forty pounds, the weight of the projectile over a ton, twenty-four hundred pounds. This shot can be thrown a distance of twenty miles. The pressure per square inch is calculated at thirty-eight thousand pounds. The rifle cost two hundred thousand dollars and a pair of them with their mountings on a battle ship would cost a million and a quarter of dollars!

Plans to raise $425,000 to be devoted to educational endowments as memorials to the late Alice Freeman Palmer, formerly president of Wellesley College, have been perfected by the committee having the matter in charge. It is suggested that any amount received in excess of the sum named would be appropriately used in the erection of a memorial building at Wellesley.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### In Reply to a Churchman's Criticism.

*Mr. Editor:*—Dean Hart's letter in your issue of December 21 carries upon its face certain conclusions which appear to me evidently mistaken, and I will ask you for a little space to answer him according to my understanding of the subject.

The dean's quotations from Mrs. Eddy's writings show with considerable accuracy the difference which she reveals between the ideal or perfect man and the mortal or material man. But he fails to appreciate the fact that this mortal or material man is described in Christian Science as a false concept of man, and therefore as unreal.

Christian Science defines the term "real" as applicable only to that which is eternal and indestructible. But mortal man is by the very adjective "mortal," branded as vanishing and destructible.

Nowhere does Mrs. Eddy state or teach that the ideal man ever has been "incarcerated" in mortal man; or that "the Divine being was completely made prisoner by its devilish double;" or that there is any necessity "to deliver the ideal man from the terrible embrace of the mortal man."

While it is true that I quoted only two passages of Scripture in proof of the present authority of Christians to heal the sick, still the position of Christian Science is by no means dependent upon these two quotations, for the Bible is full from cover to cover of cases of spiritual healing. Suppose, however, it be granted for the sake of argument that Dean Hart's contention is correct; namely, that the early Christians only healed people "as a sign" to enforce their teachings, then "the present undoubted cases of cure cited by Christian Scientists"—to use the dean's own words—are doubly significant. For then these cures prove that Christian Scientists are following closely in the footsteps of the early Christians, since they are able to show the same sign to enforce their teachings; *i.e.*, the healing of the sick by spiritual means.

Dean Hart should free himself once for all from the notion that the Christian Science treatment is an exhibition of "will-power." The Christian Science text-book, Science and Health, says categorically on this subject (page 144): "Will-power is not Science. It belongs to the senses, and its use is to be condemned. Willing the sick to recover is not the metaphysical practice of Christian Science, but is sheer animal magnetism. Will-power may infringe the rights of man. It produces evil continually, and is not a factor in the Science of Being. Truth, and not corporeal will, is the divine power which says to disease, 'Peace, be still.'"

If it were true, as the dean states, that "the world does not possess a scintilla of knowledge as to the moral character of God," then mankind would indeed be in a deplorable and desperate predicament. Christian Scientists believe God to be Infinite Good, without variableness or shadow of turning, and they do not admit any possibility of evil of any kind in God or in God's creation. To speak of evil, therefore, is to touch upon a false concept, which will disappear when its falsity is recognized, just as any illusion ceases to seem real the moment it is understood as illusion. They know that God alone forgives sin, but they do not believe—and for this no logical person can blame them—that sin can be said to be forgiven while it continues. Therefore, one of the Christian Science tenets very properly states: "We acknowledge God's forgiveness of sin in the destruction of sin, and in the understanding that evil and sin are unreal, hence not eternal" (Science and Health, p. 497).

Christian Scientists have no desire to criticise the beliefs of others, and they realize the great difficulty which every religious teacher must experience in conveying spiritual meanings through the use of language. Christian Science is in reality a religion of doing, and the proof that it is understood can only be furnished by those who can show signs similar to those of the early Christians.

W. D. McCRACKAN.
In *The New York Sun.*

### Declaring the Truth.

*Mr. Editor:*—Your masked correspondent on the subject of Christian Science ends his essay by declaring "Christian Science denies the plain truths of the Bible. It is neither Christian nor Scientific, is out of harmony with the fundamental principles of logic and common sense, and contrary to the experiences of human existence." This Science has been discovered by Mrs. Eddy in the teachings of Christ. It is Christian because its teaching and practice are in strict accord with Christ. It is spiritually Scientific because its basic lesson is the Scriptural teaching, "God is Spirit." It is logical, because every statement contained in the Christian Science text-book, Science and Health, is a consistent deduction from its premise.

Our critic declares his intention not to omit anything that would change the sense in quoting from the Christian Science text-book, and yet some of the quotations which he has given, without their context, afford a very imperfect sense of Christian Science. Such is his quotation in respect to bathing and rubbing. Mrs. Eddy condemns these as hygienic methods, but she declares, "Cleanliness is next to godliness," and that "bathing should be for the sole purpose of keeping the body clean." Are Christian Scientists less clean in mind and body than other classes?

If our critic quoted from Science and Health for the sole purpose of giving a fair, unbiased meaning of it, why did he not quote more extensively and without comment? Did he believe that his comments would make the book more clear? or on the contrary, did he believe that by his peculiar method of making quotations and comments he could make the book to appear ridiculous? I would assure him that if Christian Science were what he represents it to be, it would be as offensive to its adherents as it is to him, and it is to be regretted that he does not make sure of his understanding before he attempts to teach this Science. We repeat what we have often declared, that it is as impossible for one to understand this Science sufficiently to present it correctly to others without first having been a successful practitioner, as it is to teach mathe-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

matics without first having a wide experience in the solution of mathematical problems. Whatever our critic may assume, Christian Science is indeed a Science, and must be so treated in order to be understood.

He declares, "Her [Mrs. Eddy's] chief object seems to be to deny the reality of sin, sickness, and death, yet she treats them all through the book as if they were very real to herself." The foundation teaching of this Science deals with its definition of God as Spirit, Love, the only first Cause; and secondly with His creation as His expression or manifestation. Thirdly it concludes as to the constituency of sin, sickness, and death from its teaching in respect to cause and effect. He who can endorse the major premise of Christian Science; namely, its definition of God as Spirit, Love; and its minor premise, His creation is after His kind, and therefore Spiritual, must of necessity endorse its every conclusion and the entire teaching of the Christian Science text-book.

Our critic insists that the Bible teaches the reality of sin, sickness, and death. Will he please quote wherein the Scriptures specifically declare sin to be real? Jesus declared sin, sickness, and death to be the works of the devil. He spoke of the woman as having been bound by satan, lo these eighteen years. He did not say she was bound by rheumatism, but "bound by satan." He spoke of satan as a liar and father of it, and of his own, his offspring, as a lie. If the woman was bound by satan and satan's bond is a lie as Jesus taught, according to axiomatic reasoning, she was bound by a lie, a false claim. Inasmuch as Jesus regarded sin, sickness, and death as the works or products of the devil, a "liar," whose "own" or offspring is a "lie," we are safe in assuming that he considered them not among the "stern realities" of existence, but as belonging to the erroneous evil sense of it. We will all agree that however great sin, sickness, and death may be to mortals, they can have no weight whatever in the sight of omnipotent God; for evil and disease have no more place in God's presence than darkness has in the presence of light. True, Mrs. Eddy speaks of these evil claims in Science and Health, and uses their common names, and Christian Scientists in their outward deportment recognize that these exist in human experience and must be dealt with intelligently. They believe in the power of evil and disease because they have not yet through a sufficient spiritual growth altogether unbelieved in these. One who has not enough faith in God to lift him above mortal frailties is more or less subject to sin and disease. Evil and devil are mentioned in the Scriptures as the powers of darkness. Darkness is not regarded as an entity, not as something but the want of something, the want of light. So evil should be understood as the want of the consciousness of the ever-present good.

Our critic objects to the teaching of Christian Science, that the blood, heart, lungs, brain, etc., do not constitute the life of man. This introduces a form of the much mooted question, "Which is first, the egg or the bird?" The question more directly put is this: Does the body produce life, or does life produce the body? In Christian Science the question would assume the following form: Does man create God, or does God create man? for God, according to Christian Science, is Life.

Our critic quotes from Deuteronomy: "For the life of the flesh is the blood." This and other quotations he offers as a proof that blood is the life according to Scriptural teaching. Is it not a little strange that he did not note and select the more clear and definite teaching of Jesus on this point? Why did he not quote the words of the Master, as a means of enlightening us on this question: "It is the Spirit that quickeneth [giveth life], the flesh profiteth nothing"? Herein Jesus declared Spirit to be that which animates and the flesh to be altogether unprofitable. Associated with the statement, "It is the Spirit that quickeneth," the Master's words, "The flesh [matter] profiteth nothing," can only be interpreted to mean there is no life in matter. Indeed, if matter or flesh is altogether unprofitable, it has neither life, substance, nor intelligence. Will our critic insist that there is anything in it from Christ's standpoint? When we consider this text, together with the Scriptural declaration, "God is Spirit," is not Mrs. Eddy absolutely correct when she declares Spirit to be the only Life, Substance, and Intelligence; and the universe, including man, to be the expression of Spirit? Paul wrote "that no flesh shall glory in His [God's] presence," Jesus never uttered a favorable word concerning flesh or matter.

Our critic objects to Mrs. Eddy's teaching that belief, acting through the mind, is the only thing that produces pain or sickness. Does he believe it possible to be rid of pain through prayer? Does he believe that Jesus and the apostles destroyed pain through prayer? If they healed by such a change in the mental condition of the patient as to inspire faith in God, a lack of faith in God must have been the real cause of disease. We may say we have taken cold, we have overtaxed ourselves, we have been exposed to disease germs and these are the causes of sickness, but are they the fundamental causes? Are we not sick because material elements and conditions have been allowed to be more to us than God? If in our meditation or prayer God becomes to us infinitely great, will not the so-called causes of disease become to us infinitesimal and lose their power over us? If not, then man has no hope in God, and the Psalmist was not right when he said, "Because thou hast made the Lord, which is my refuge, even the most High, thy habitation; there shall no evil befall thee, neither shall any plague come nigh thy dwelling." It is not the exposure to accident and disease germs that needs to be destroyed in order to make mankind safe, but the cause of these, a want of faith in the omnipotence and omnipresence of God.

Our critic declares that the Christian Science text-book encourages parents to lie to their children in denying the power of pain. If he is a Bible student he will recall the story of Elisha when surrounded by the Assyrians in the city of Dothan. His servant reported to him that the mountains round Dothan were filled with the horsemen and chariots of the Assyrians. Elisha prayed and told the young man to go and look again. He did so, and reported that the mountains round about Dothan were filled with the horsemen and chariots of God, so that "they that be for us are more than they that be with them." In this instance, which was the real picture, the hosts of the Assyrians or the hosts of God? We say on a cloudy day, that the sun shines in spite of the clouds. Cannot we truthfully say God is omnipresence, though because of evil manifestations this is not apparent? It is true that God is infinite Spirit and is everywhere present, yet material sense, which our critic seems to recognize as "common sense," declares there is no Spirit and no God. Which shall we accept as true? Is it a lie to acknowledge God and denounce His opposite? Paul said, "Yea, let God be true and every man a liar." It troubles my conscience not even a little to vehemently declare God's allness and satan's powerlessness. It is true that Christian Scientists take precaution against sickness and suffering, for it is not only a part of this Science to get out of trouble but it is also in keeping therewith to guard against it. Because of their yet remaining belief of life, substance, and intelligence in materiality, they are obliged to suffer to be so now and to indulge a great many practices which do not belong to the perfect spiritual man. Meanwhile they do not neglect the better part, to remember the ever-presence and omnipotence of God.

## Light for a Confused Sense.

DR. MCCORKLE, in his recent sermon on Christian Science, said, as have many others, that Christian Science is neither "Christian nor scientific." The Standard Dictionary defines a Christian as a disciple of Jesus Christ. The same authority says science is "knowledge gained and verified by exact observation and correct thinking." It is therefore truth ascertained.

The Christian Scientist can truthfully, therefore scientifically, state, that by conforming his life to the teachings and practices of Jesus, he can verify his words and keep his commandments, healing the sick and reforming the sinner by one and the same metaphysical or spiritual process. If this is true, the Christian Scientist becomes an expert, and in a court of justice the expert's testimony is to be accepted before that of one who is not.

If the doctor has never healed by the Christian Science method, he of course is not a reliable witness, either for or against Christian Science. The doctor, however, is willing to admit that many Scientists are good people, some of them through the insistence of their teachings upon certain statements of the Bible, as that 'God is Love,' etc., may have found in their new faith a comfort which they never found in the orthodox churches, not because the orthodox churches are wrong on these points, but simply because these people have not before realized in a proper way the comforting features of the Christian faith.

Christian Science does teach that "God is Love," and that "God is All-in-all;" a realization of this great truth is what brings the happiness and peace to the Christian Scientist, for it is this true sense of God that destroys the erroneous sense of Him—that He is the author of evil, or that He permits it. To cognize this fact through the spiritual understanding, brings a sense of freedom, joy, and gladness unknown before.

The doctor's text from 1 Timothy, 6 : 21, 22, which he used as a basis for his sermon, he quoted incorrectly, "Avoiding profane and babbling and opposition of science falsely so-called, which some professing have erred concerning the faith."

It is interesting to give a correct reading, as well as the twentieth century new translation, in order to show that the doctor might have been more careful in the choice of his text. The correct reading: "O, Timothy, keep that which is committed to thy trust, avoiding profane and vain babblings and opposition of science falsely so-called, which some professing have erred concerning the faith."

The twentieth century reading is as follows: "Pray, Timothy, guard what has been entrusted to you, turn your back on profane prattle and contradiction of what some miscall 'theology,' for some people, while asserting their proficiency in it, have yet in the matter of the Faith, gone altogether astray."

This new rendering of this passage shows that the phrase, "Science falsely so-called," believed by our friends in the ministry to apply to Christian Science, is not, nor was it intended, thus to be applied. It is the "theology" and the matter of faith about which Paul says they are gone astray.

Mrs. Eddy says in Science and Health that it is the theology of Jesus which heals the sick, as well as reforms the sinner. It is this theology and faith grown to understanding that the Christian Scientist applies to heal the sick and reform the sinner, thus realizing God's power and presence as omnipotent, omniscient, omnipresent. To assert that we are preaching the Gospel, and are "proficient in our theology, and not to heal the sick," becomes profane and vain babbling, sounding brass, and a tinkling cymbal.

Christian Science has reached that stage in its development in human consciousness when its cures can no longer be denied, but not being able to account for them because unwilling to accept and practise the Christ method, because unwilling to acknowledge that a woman was intelligent and spiritual enough to have a great revelation come to the world through her spiritual discernment, our ministerial friends account for the Christian Science healings on the basis of "blind faith cure," "hypnotism," "magnetic healing," "mental suggestion," or any other method except that God has power, and is willing to heal our aches and pains, while claiming to acknowledge God as a saviour from sin.

Christian Science is not healing by transference of mortal thought from one human mind to another. It is not hypnotism; the power to heal comes by emptying ourselves of our conceits, of our sins, of our false beliefs, by getting the human mind out of the way, and letting the Christ-mind come in and take possession of us, and rule us, and cleanse us from pain and suffering, as we are willing for Christ to cleanse us from our sins.

Not only "a few" of the cures of Christian Science can be accounted for "by a changed attitude of the mind," but all of them. Instead of morbid fear and imaginary ills, it blots out these pictures from the mind, and fills the thought with joy and peace that can only come through a changed mental condition. In this changed mental condition man finds in his inner consciousness the presence and power of God (as Paul says, the grace of God).

This face to face communion with God, through the law of Spirit, brings a sense of health, harmony, good-will, and love for one's fellow-man; it is a realization of God's presence, the justification by faith which Paul, through work and prayer, demonstrated to be the only way to find God.

Christian Science does not substitute Science and Health for the Bible. In Science and Health, page 497, the first tenet reads: "As adherents of Truth we take the inspired Word of the Bible for our guide to eternal life." Mrs. Eddy further says that for three years, she retired from the world to read and study the Bible, that she might find the rule and method of the Christ cure that had been so long hidden by materiality. These rules she has given to the world in Science and Health, and they are all in accord with the spiritual understanding of the Scriptures.

The *Lesson Quarterly* of the Christian Science Church contains lesson-sermons made up of passages from the Scriptures and references from Science and Health, bringing out their spiritual meaning; these are read by two Readers at the Sunday services. The doctor was misleading in his reference to the quarterly lesson.

For years after Mrs. Eddy's discovery of Christian Science, she subjected its rules to the broadest tests, healing the sick and the suffering.

After writing Science and Health she visited various ministers, seeking their co-operation in propagating and disseminating this healing truth, but to her they turned a deaf ear. After this, at her own expense, that the world might receive the alterative and healing effects of this truth, she published her book. On account of its intrinsic worth, changing people's thoughts of suffering, fear, and pain, to peace, happiness, health, and harmony, it won its way to popular favor, as well as to the condemnation of the schools and schoolmen.

Mrs. Eddy is its author, she is the recognized Leader of this great movement, but she is herself a patient listener for the still, small voice, and what she hears she gives to a hungering and thirsting world. Those who gladly receive her words do not worship her, but love her, as one who fills her own place in the unfolding of truth in human consciousness, and believe that she is a great religious reformer.

## Olive Culture in California.

THE largest olive orchard in the world, and probably the most remarkable and successful experiment in the history of American agriculture, is located at Sylmar, twenty miles from Los Angeles, Cal.

The ranch contains more than 120,000 trees. There are twelve hundred acres under cultivation. An additional eight hundred acres will shortly be planted to olives. There are forty miles of roads within the ranch, and one could drive all day without leaving its boundaries. Two hundred and ten thousand dollars has been invested in the orchard and $15.000 in the factory which treats the olive crop. Yet olive culture in the United States, which was at first deemed a great experiment, has proven successful, for the crop this season from the Sylmar ranch is valued at $225,000. When the entire two thousand acres shall be in bearing, at the present rate of increase, the ranch will produce an annual income of between $300,000 and $500,000.

Although the olive-tree has been cultivated for more than four thousand years, and olives have formed a staple food of some of the oldest races of earth, yet the young orchard at Sylmar is ten times as large as the largest olive orchard in Spain or the Holy Land. This is the first occasion upon which olive raising has ever been attempted upon a really wholesale American basis, and the outcome of this year's crop was awaited with keen interest, as it was a crucial demonstration of the possibility and profitableness of olive culture in this country. Added to this, it is said that the American olive tastes better than its European relative, and yields a far superior quality of oil.

The harvest at the big Sylmar ranch is enormous. One hundred and fifty men are employed in gathering the olives in harvest time, which is throughout the months of November, December, January, and on into February. The olive berries frequently weigh down the branches until they touch the ground. It requires a practised hand to gather the olives so as not to bruise them, and it demands some experience to recognize the proper time for picking. Two hundred pounds is a good average day's pick, at an average wage of about $1.50 per day.

The Sylmar ranch was planted seven years ago, and the trees yield about fifty pounds of olives each. An olive-tree does not come into bearing until it is four or five years of age. As the trees are supposed to live four thousand years —indeed, some of the trees on the Mount of Olives, in the Holy Land, are known to be over three thousand years old —an olive orchard may be reckoned on permanently.

The olive berry always grows on new wood, and, in order to increase the yield, the tree is "cut back," and new wood springs out, which bears fruit the second year. The cutting back process prevents a tree from "running to wood" instead of to fruit. Thus an old olive orchard, if properly pruned, will increase in value each year. The olive-tree is especially susceptible of cultivation. It is one of the deepest rooting trees known, and it is said that the roots extend as far into the earth as the branches rise above the soil.

In picking, the olives are carefully gathered in canvas buckets made for this purpose, and are brought to the factory in spring wagons, to keep them from bruising. The berries are gathered when ripe, although "ripe" olives are frequently "green" in color. After they reach the factory the olives are graded into "ones," "twos," or "threes," according to size. They are then put into a solution of lye. This takes out the bitterness. Here they remain a week or ten days. Then the lye is soaked out by fresh running water, and if they are for table use they are put into a solution of brine, where they remain permanently until bottled up or shipped away.

The olives to be used for oil are gathered from the tree a good deal riper than those used for the table. The oil is extracted by a series of "crushers" and hydraulic presses, which are composed of materials that will not absorb odors, stone and metal being used as much as is possible. From the time the olives are picked until they are ready for the market the most scrupulous care is observed that there shall be no contamination. The least foreign germ would cause the product to ferment after it is shipped away.

The big olive orchard presents a vision of surpassing loveliness. As far as the eye can reach it is one sweeping, billowy expanse of silver gray. The olive-trees themselves are not unlike willows in their graceful, somewhat drooping, silhouette. The trees are arranged in orderly rows, and near at hand one sees the peculiarly beautiful shade known as olive green, which becomes a silver gray whenever a breath of wind discloses the under side of the leaf. In the distance the perspective reduces the size and assembles the trees, producing an effect much like a field of waving grain. The orchard is situated in a beautiful amphitheatre in the Sierra Madre Mountains.

Probably the most remarkable feature of this ranch is the fact that it has never been irrigated. When the Los Angeles Olive Growers Association took hold of the property, in 1893, it looked like a desert, being covered with cactus and brush. The earth on the surface is always carefully pulverized, and, consequently, the water has been drawn up by capillary attraction. There is a strong underground seepage from the surrounding hills.

## An Interesting Discovery.

Among the noteworthy and curious finds which have recently been brought to light from Egyptian excavations are the series of carved slate palettes found at Hierakonpolis, by Professor Petrie, in the great tomb of the first predynastic kings, who reigned 6000 to 5000 B.C. These long-buried fragments vividly portray the art practice of this remote period. The palettes are considered to be among the most important of early monuments and of great interest zoologically, as showing several animals now extinct in Egypt. The palettes were employed by the royal ladies for grinding the face-paint, and the cup-hollow or ring-space on each was for holding the paint. The sculptures on the slates are supposed to refer to battles and victories before or at the establishment of the united monarchy under King Menes, and the conquered were the different natives —negroes, Libyans inhabiting that country before the coming of the first dynastic Egyptians. That the race who made these monuments had high artistic tastes and a knowledge of technique that argues a long practice of art is apparent from the objects themselves, which are eminently superior to any later Egyptian work.

One of the slate palettes has been identified from inscriptions as belonging to King Narmar, whose reign is now fixed by his tomb as being just before Mena.

W. L. BEASLEY.

In the *Scientific American.*

Among the forces that work for our progress are discontent with imperfect conditions, and aspiration or striving for better things. There is a natural and profitable kind of discontent that does not remain merely discontent, but merges into hope and lofty purpose of improvement. There are some who—to use a paradox—are content to be discontented. They do not appreciate the underlying merit or worth of that of which they complain, or make any earnest attempt to right the wrongs that offend them. The divine discontent, however, urges to new activities and better achievements.

REV. A. CONKLIN.

## The Lectures.

### At Lock Haven, Pa.

January 9, a large audience, composed of the best people of our city, assembled at the Opera House to hear Judge William G. Ewing of Chicago, deliver a lecture on Christian Science, under the auspices of First Church of Christ, Scientist. Visiting Scientists from Bellefonte, Howard, Williamsport, Renova, and Pittsburg were present. Judge Ewing was introduced by the district attorney of the county, R. B. McCormick, Esq., one of the leading attorneys of this city, who spoke as follows:—

*Ladies and Gentlemen:*—We have come together this evening to listen to a discussion of a much mooted, and, to most of us, a comparatively new, question. I doubt not that skepticism and unbelief fill the minds of the majority of this audience, but it will be very gratifying to the votaries of the Science which is about to be discussed, to know that we are open to conviction. The age of intolerance is past. Humanity is ready and anxious to receive and cherish anything which tends to the improvement of its condition physical or spiritual. The teachings which are about to be discussed, we are informed, are as old as Christianity, although presented to us in their present form within a comparatively recent time. The growth of this sect has indeed been marvelous, and the reports of what it has accomplished have filled our minds with incredulous amazement. We are therefore very fortunate in having this opportunity of hearing one of its most able exponents. I have the pleasure of introducing to you the Hon. William G. Ewing of Chicago.—*Correspondence.*

### At Philadelphia, Pa.

At First Church of Christ, Scientist, Broad and Spruce Streets, an interesting lecture on Christian Science was delivered by Judge William G. Ewing of Chicago, January 11. The lecturer was introduced to the fairly large audience by Attorney James W. Lowe.—*The Record.*

Attorney Lowe introduced Judge Ewing with the following words:—

*Ladies and Gentlemen:*—We are gathered here this Sunday afternoon to listen to an address on Christian Science. This is a subject with which many of you are very familiar, but to myself, and the greater number of people in this city, it is like an unknown field,—a strange and unexplored country.

The nineteenth century, which has just closed, gave birth to many new ideas and great movements, and it is during this present twentieth century in which we are now living that their merits will be demonstrated. The Christian Science movement is one of the most remarkable of them all.

Personally, I try to receive all new ideas in a purely catholic spirit, and accord them not only a patient but a welcome hearing; especially when the originator and followers of a new thought claim to be able to add one more stone to the temple of knowledge, and to hold out to suffering humanity a promise of relief from physical suffering.

Christian Science has attracted to its support many noted men and women, and the gentleman who will address you to-day is one of the foremost of them all.

After having risen in one of the most difficult of all the learned professions to the point of marked eminence, and won the personal confidence of his community, and the official confidence of the nation; after he had reached a length of service for the public and the years when he might have retired to a well-earned rest, he has with all the zeal of a new convert in a new-found faith, become one of the foremost standard-bearers in the Christian Science movement.

Ladies and gentlemen, you will now hear the message which he brings—the Hon. William G. Ewing of Chicago.

*Correspondence.*

### At Los Angeles, Cal.

Carol Norton, C.S.D., of New York, delivered an address on Christian Science at the Simpson Auditorium, December 29. He was introduced by Judge John M. Miller who said in part:—

The distinguished gentleman who was honored with an invitation to preside over this meeting, fully expected to honor you with his presence, but at late hour it was learned that it would be impossible for him to be here; I refer to Hon. M. P. Snyder, Mayor of Los Angeles.

So much by way of apology for my appearance on behalf of First and Second Churches of Christ, Scientist, of Los Angeles, whose guests we are, to extend to you a most cordial welcome here to-night.

The world is but just now reaching a point in its history, where men, women, and children are beginning to be accorded the right, not only to think along religious lines, but to think *aloud;* and as mind, by an interchange of honest, elevating thought, expands and is strengthened for higher flights, the present is certainly a "red-letter" day in the history of our race.

Considering the recent birth of the present Christian Science movement, it is astonishing how many thousands of people in this and other lands know of Christian Science and what Christian Science is, but at the same time it is remarkable that so many, many more thousands have imbibed, from one source and another, erroneous ideas of what Christian Science is, of its teachings, aims, and purposes. And though several fine discourses or lectures on this subject have been delivered here within late years, I venture to say there are many persons in Los Angeles who have no clear idea of what Christian Science really is, as well as many who rest under entire misapprehension of what it is.

The Christian Science Board of Lectureship is engaged in the educational work of enlightening us on this great subject, and in bringing humanity as nearly as possible to a full realization of its wonderful import. It is to aid in this grand work that the distinguished speaker will endeavor to-night to make clearer to us what Christian Science really is. I now have the pleasure of introducing Carol Norton, C.S.D., of New York City.—*Correspondence.*

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

You cannot dream yourself into a character; you must hammer and forge yourself one.

JAMES ANTHONY FROUDE.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Business Man's Needs.

THE following extract from a recent editorial in a daily paper, commenting upon the break-down from overwork of a prominent business man, is quite interesting:—

"In making a diagnosis of this case it is important to avoid the error that steady, concentrated work is damaging to health. The truth is found in the reverse of this proposition. Useful occupation is necessary to physical well-being as well as to happiness. Work should be properly regulated. When systematized and kept free from worry, which is a fault, not an essential, work is the best of preservatives as well as the most valuable way of spending time. In cases of what is called breaking down from overwork it is always well to look into personal habits in each particular case, for no two are just alike. Ordinarily, it will be seen that the cause of the trouble is outside of the regular vocation. The candle is burnt at both ends during the pauses, not in working hours."

We assume that from the standpoint of the materialist, the diagnosis is fairly accurate of many similar cases. Whether it is an accurate diagnosis of the particular case to which it refers is immaterial, because our comment must be only from the standpoint that every business man needs a more potent healing agency than material remedies or so-called rest cures. The diagnosis here presented indicates that worry is regarded as a cause rather than an effect. The statement frequently made by business men that through Christian Science their burdens have been lightened and their capacity enlarged, is not based upon the understanding that worry is a cause, or that it can be banished by will-power. Worry is an effect of fear, and the Christian Scientist sees that the fear is caused by distrust of God's watchful care and ample beneficence.

When the world is ready to give more general acceptance to the teaching of Christian Science, it will find its business affairs conducted upon a higher basis and its business men more capable of withstanding the seeming stress and strain of an active career. M.

### "Put Up Thy Sword."

WHEN the beginnings of Christian Science shall have found their true perspective, and the unprejudiced historian of the future addresses himself to the critical and comparative study of this epoch-making movement, he will not fail to note that inoffensiveness was one of its distinctive features.

Subject to a quality and a persistence of criticism which, from every point of view, is no less astonishing than discreditable, it has maintained a dignified silence, or, if it has spoken, it has been to express Christian charity and good-will toward all, including those who have been its severest detractors; and one of the many things for which all Christian Scientists have occasion to be very thankful is this, that the tone of our periodicals and of the work of the Publication Committee has not been marked by recrimination, counter-charge, or bitterness of reply; and that, under circumstances which were most trying, a truly Christian attitude has been so maintained, that our cause has been commended, and a potent, though silent, rebuke has been given to those who were led through ignorance or prejudice to trespass either upon the rights of religious freedom, or the proprieties of Christian courtesy.

Thankful indeed we may all be, for this attainment of our cause even though the remembrance of our own ofttimes ill-repressed resentment may interdict our personal appropriation of any part of the credit.

Competent leadership always registers itself no less certainly in the *morale* of a movement than in its achievements. Jesus was enlisted to win, but his followers soon learned that his successes were not to be marred by the employment of any means which were out of keeping with the divine ideal; that no product could be considered apart from the process of which it is the result. Following in his footsteps, our Leader has given us an example of inoffensiveness, the influence of which should be as manifest in our personal bearing as it is in the conduct of our cause.

The effective strength of an organization is always expressed in the completeness of its unification,—the clearness of the sense, entertained by each member, of a community of interest and an individuality of responsibility, and, other things being equal, that army in which this sense is the most definite and authoritative will always be the victor.

If, while standing firmly "for Truth and the Right," we as Christian Scientists do but eschew all polemics and factionalism, and individually exhibit that patient inoffensiveness, gentleness, and lovingkindness towards each other, and towards all, which honors the example that is set before us, then indeed shall we be "a peculiar people," and the nations will rise up and call us blessed. W.

### Love's Labor.

All are needed by each one;
Nothing is fair or good alone.
EMERSON.

THE painter who, though gifted with the skill of a Titian in the handling of brilliant colors, yet slights his sober grays and browns, sacrifices complete effects, fails of results. So in our web of life, we must give no less of watchful care to the demure but substantial warp than we give to the bright and golden threaded woof.

It is the routine of daily duty, the tiresome treadmill of the office, the schoolroom, or the kitchen, that needs earnest and watchful care, and more, it needs also to be transfigured by love, the love that eases the yoke and lightens the burden.

All work is Love's work, and our vocation is high or low, not in accordance with human classification of artistic or mechanical, professional or plebeian, but in proportion to the love we bring to it.

If every inmate of the home, whether stranger, son, or servant, be regarded as a child of God and given room to grow in the light of Truth, home will be filled with peace and holy joy, and it will know neither drudgery nor drudge.

When we acknowledge the inter-dependence of the things that are named great and small, we attach to the great, consideration and humility, to the small, dignity and importance. We must learn that a perfect demonstration always includes all, and is possible only through the perfect demonstration of each.

Could we look through and beyond the accepted estimate of important and unimportant into the realm of real merit, we should be surprised to find the halo removed from many a man-made saint and placed upon the brow of plodding obscurity.

Digitized by Google

Only as we recognize that man's work is truly measured by the love he manifests through it, do we give the worker his right dominion.

How light the step and how deft the fingers that are keeping time with the heart that sings: "This I do for the love of God—this I do for the love of man." Surely great and wise was he who counselled: "Never fear to bring the sublimest motives to the smallest duty." S.

## The Ministry of Lay Preaching.

Of the many encouraging signs above our political horizon, none is more promising than the part the editorial laity are taking in proclaiming the Gospel in its application to communal affairs. A good specimen of this good and efficient work is found in the following paragraphs taken from the editorial columns of the *Cole County* (Mo.) *Democrat*. In its clearness of moral discrimination, its forceful statement of the essential issue, and its loyalty to the Christ ideal, it would be a credit to any pulpit. Christian Science specially emphasizes, as has this writer, the most important fact that the corrective and saving purpose of the Gospel embraces every problem which human experience presents. Truth and Truth alone annuls and eliminates all error, and to bring it into saving relation to every disease and difficulty of human experience, is the great privilege and immediate duty of every professed Christian.

"If there be one thing above all others that the great body of practical working Christians need most to understand at this time, it is the duty resting upon them to measure all public acts by the test of the moral law, and to solve every political problem by the rules of Christian ethics. Wherever sin and crime, injustice and oppression, robbery, peculation, and fraud, may be traced either directly or indirectly to any law or political institution or governmental act, the constituent elements of that government who have not tried to remove the wrong are immediately responsible for it.

"Too many Christians send up their prayers to God while casting their votes for Satan. They may not know how they are voting, but it is their duty to find out. With the means of knowledge readily at hand, ignorance is no excuse. But, whether he arrive at the truth or not, it is certainly the Christian's duty to seek it. There is no higher ideal in this world than that of Christianity. It is the one great gospel consecrated to justice and human love. It is impossible to confine this doctrine in its scope or to set prescribed limits to its application. The moment you attempt to do so the whole system falls worthless to the ground, and enlightened human reason must reject it as a monumental and preposterous fraud.

"Christianity is of universal application, or it is nothing. It cannot be limited to merely individual conduct. The same principle that prevents your robbing your neighbor's corn-crib, must, if it have any logical or moral force at all, likewise prevent any number of men from robbing any number of corn-cribs. And so of all that is enjoyed by the Christian religion. It applies to the many, as well as to the few; to the nation as to the individual; to the whole as to the part. There is not one law for one man and another for ten, another for a hundred, and so on; but there is one glorious Law for all men, whether they be few or many, for the multitude as well as for one.

"In a government like ours, where every man is a piece of the sovereignty and we all have our voices in shaping the national policies, each one is personally and individually responsible for every social or industrial evil that may be traced to a political origin. That social and industrial evils do exist there can be no doubt. Sociologists and economists have shown very clearly that these evils are not due so much to the inherent infirmities of human nature as to the maladjustments of society. When one man can accumulate fifty or a hundred millions in a year, while thousands, equally intelligent, frugal, and industrious can hardly scrape together the barest necessities of life, we know that there is something radically and fatally defective in the political system under which such conditions are possible.

"Unless you try to right this wrong, unless you protest against it and strive to overthrow it, you are personally accountable for it. Think not that you can cast the burden upon society, for society is made up of just such creatures as you, and you are part of it. You may deny that you are your brother's keeper, but you certainly have no right to be your brother's oppressor—and you are his oppressor when you, either actively or passively, yield assent to that which does oppress him.

"The duties and responsibilities here referred to rest upon all alike, whether Christians or not, but none can be held to a more strict accountability than the Christian because he has set up a higher standard and professes higher ideals than do other men. The Christianity that confines itself to the work of inculcating the private virtues merely, while disregarding man's public duties, wholly overlooks one of the two fundamental commandments upon which are said to rest all the law and the prophets, and that is to 'love thy neighbor as thyself.' The religion that limits its operations to the amen corner is of little use in this world, and that which exhausts its benevolence in the fruitless effort to ameliorate the conditions of the victims of injustice, while doing nothing to remove the cause of involuntary poverty, is not much better. What the world really needs is not benevolence but justice. The truest, noblest, holiest charity is that which secures equal rights and opportunities to all men. Without this, pauperism and crime continue to increase, and the centers of the highest civilization will continue, as they are to-day, but festering sores."

## Contributions to the Church Building Fund.

The following impersonal reports of subscriptions to the Building Fund will be read with interest.

We held a special business meeting on December 2, and voted to subscribe five hundred dollars to the Building Fund of the Mother Church, payable quarterly in 1903. We hope to increase this subscription in 1904.

The Sunday School children of our church will send whatever amount of Sunday School collections they may have on hand January 1, 1903, and thereafter the collection taken on the first Sunday of every month, and will continue doing so until the Mother Church is completed.

A free-will offering was taken at our Wednesday evening meeting on Christmas eve, as a Christmas offering to the Mother Church Building Fund. No collection was taken, only the basket was placed on a table near the door and it was announced that those who wished to contribute to the Building Fund of the Mother Church would have the privilege of doing so at the close of the service, and they could cast their offering into the basket as they left the room. There was sixty-two dollars contributed at this meeting, which we send to-day as our Christmas present to the Mother Church Building Fund. We shall send more later on. But as this sum was given on Christmas eve and for the Building Fund, we thought it should be sent at once.

At the Wednesday evening meeting of our church, held December 3, the question was brought before the meeting relative to the church contributing to the Building Fund

Digitized by Google

of the Mother Church, Boston. Upon motion it was unanimously voted, that, commencing with Sunday, December 7, 1902, and continuing for one year, one half of the first collection taken up in each month, be donated toward the Building Fund of the Mother Church, and the other half toward the support of the Publishing Committee of our state, which was accordingly done and the amount of the first collection forwarded promptly.

We have been thinking that it would be well to contribute to the reports that you are publishing regarding the raising of money for the Mother Church Building Fund. It has been very gratifying to the members of our little society that we were able to make our demonstration and contribute our mite to this fund, and to do it so quickly. At our first Wednesday evening after notice appeared in the *Sentinel* in regard to the Mother Church Building Fund, the First Reader requested all those who desired to contribute to this fund to pass the amount to our secretary within the next ten days. Our little meetings have only ten or eleven regular attendants, but eight of this number contributed the sum of one hundred and forty dollars, which was forwarded to the Treasurer of the Building Fund on August 15 last.

Shortly after the movement to enlarge the Mother Church was inaugurated, a meeting was held at our church, and the president appointed a committee consisting of seven members to devise ways and means by which our church, as a whole, may send its contribution. A committee meeting was held and it was thought proper to send a circular letter to each member of our church. This was done, and quite a generous contribution was the result, $1,562.15 has already been forwarded to the Treasurer of the Mother Church. A meeting is held the first Wednesday of each month immediately after our usual service. A collection is taken up, and short, helpful talks are given in harmony with the thought that "Giving does not impoverish us in the service of our Maker, neither does withholding enrich."

We know that our home in the Mother Church is dear to all, and what we can do we should do to forward this cause, which can, and does help all mankind, and we rejoice in the opportunity to assist in a work that is broad enough, deep enough, and wide enough to be governed by God.

At the recent business meeting of our church the following plan was unanimously adopted by our members, as the best way for us to work in the building of the Mother Church; viz., that every member take each day the Bible and Science and Health as the basis for individual work in demonstrating our contributions to our beloved Mother Church, that these contributions be handed as fast as received to the clerk of our church, and be sent by him to the Treasurer of the Mother Church, in sums of one hundred dollars or more, and that this plan of action be carried on by our church, until no more contributions shall be required.

We have lately sent on our second contribution of one hundred dollars, also fifteen dollars as a Christmas offering from the children of the Sunday School. We are working in a similar way for the building of our own branch church.

We are very apt to get the idea that there are high positions and that there are low positions, that there is important service and unimportant service; but I believe that God expects the same amount of conscientious work from a person in a low position as from one in a high position.

## The Prodigal Son.

MAY DAVIS.

THE parable of the Prodigal Son typifies that state of mortal consciousness which is so submerged in materiality and the gratification of the senses as to be perfectly satisfied with itself. In its selfishness, it wanders far away from the true idea of happiness, which, we are told in Science and Health, p. 57, "is spiritual, born of Truth and Love." After a while this false sense fails to satisfy, and consciousness is awakened to feel the need of something higher and better. Through suffering and want, pride and self-will are laid aside, and in meekness and humility, this human consciousness arises and goes to the Father,—Principle, Good.

Though yet "a great way off," from the attainment of spiritual perfection, this turning away from sin and the humble, honest desire for Good, is met by Divine Love, and the realization of man's divine sonship brings with it peace, and the "joy of sin forgiven."

How clearly this thought is expressed in Science and Health, pp. 322, 323.

## Demonstration.

ZEBULINE H. BECK.

"THE supremacy of Spirit was the foundation on which Jesus built" (Science and Health, p. 138). Jesus said that "Whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man, which built his house upon a rock: . . . and every one that heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, which built his house upon the sand."

We who are seeking to build our House Beautiful, should be sure its foundation is based upon the supremacy of Spirit, of Mind, and not on the shifting sands of mortal mind, and its so-called laws. Shifting sand is a type of mortal mind and never to be depended upon. This supremacy of Mind must be acknowledged, not only as the governing power in the spiritual realm, but also in the so-called material world. The acknowledgment of the eternal fact that immortal Mind governs all, annuls the claims of matter to sovereignty.

We can have but one standard to follow if we would be victorious, for a divided interest brings a divided result. Unity of thought, oneness of purpose should be our working basis. To make perfect demonstrations we must rigorously exclude every suggestion of error from our thought. If we let error be aught else than error, we are taking failure into our problem, and there will be failure in our conclusion. The closer we live to Spirit, the higher our demonstration of its laws will be.

It is in our own consciousness that this work of crowning Spirit as king, must be done, and if done carefully, habitually, no one will be in our presence a moment without receiving a blessing.

Perhaps our greatest fault is in seeing the shortcomings of another, instead of our own. If Love is becoming more real to us, self is becoming less, and we will be able to destroy in our own consciousness the seeming error in others, and error will be impersonal, having neither habitation, nor name—no thing at all.

Self is the price we must pay for admission into heaven: not merely what we do for others, but errors overcome within our own domain of thought. "He that overcometh shall inherit all things; and I will be his God, and he shall be my son." This fact is shown clearly by the so-called close of the Master's career on earth. After all he did for the help of poor sinning and suffering

Digitized by Google

humanity, it was only he himself that ascended up into heaven. He had marked out the way for us, that was enough. "Work out your own salvation." No one can solve that problem for you, for me, and the sooner we are about our "Father's business" the better.

## A Clergyman to a Clergyman.

*Dear Sir:*—Your "objections" lie before me. Permit me to say that I am a minister in one of the orthodox churches, and have endeavored in reading Science and Health to do so from an unprejudiced standpoint. To my mind, prejudice is the child of ignorance, and is therefore not born of heaven. You and I, as recognized leaders in spiritual things, should be careful what we exalt or oppose, knowing our influence on others. How essential, then, that we possess, as far as possible, the knowledge divine, the love which is radiant with its own glorious power, and the truth which alone can effectually make men free, and add to these (if indeed addition is necessary) the spirit of Christ, without which we are none of his.

I have given the subject of Christian Science considerable time and study, because I have believed for years that God had not withdrawn healing power from His children. My study, having given me something of a knowledge concerning this important subject, has failed to disclose anything that will harmonize with your conception of it. Without doubt you think you are right in the position you have taken, and have a sincere desire to put down anything which opposes, to your mind, the kingdom of Christ. But we should be careful. Remember the man who touched the ark. Remember those who persecuted John the Baptist and our blessed Lord. Remember Paul, who was sure he was right when he oppressed the Christians of his day, verily believing he did God service. The cause of our Lord has suffered more from those who professed themselves children of God than from the wilfully sinful. "A man's foes shall be [are] they of his own household." Let us be careful how we criticise Christian Science, lest we be found warring against Truth. To my personal knowledge several have been cured through Christian Science of diseases which doctors have pronounced hopeless, and it has given peace, happiness, and spiritual prosperity to many thousands.

Concerning the "First Word" written by The ——— Chemical Company who have issued the booklet which contains your views of Christian Science, I have nothing to say, unless it be that it is quite natural for such a company to be opposed to a people whose views and life practice forbid their assisting to enrich such a corporation, though I doubt not but that they love each member of the firm and hope they may some day learn their error and turn to Truth as a more efficient power than any chemical which they may compound.

In your introductory remarks I find it stated, "As to what Christian Science really is, it is difficult to give a definition." As a scholar you doubtless know that science is classified knowledge. Prefix the word Christian, and you have a concise and comprehensive definition. In the gospel of John, we read, "And this is life eternal, that they might know thee the only true God, and Jesus Christ whom thou hast sent." The Saviour's own words here define the true Life as knowledge of God,—Christian knowledge. Not creed, not mere profession, but knowledge which is not of this world, but of God and his Christ. Of course to the world-clouded mind "it is not easy to get a clear and comprehensive idea" of this Truth, because "the natural man receiveth not the things of the Spirit of God: for they are foolishness unto him: neither can he know them, because they are spiritually discerned" (1 Corinthians, 2 : 14).

You evidently have the cart before the horse in the statement, "it is a religion whose creeds exalt the importance and all sufficiency of self." A child can read Science and Health and easily catch the idea that its author emphasizes the fact that God is All. Mrs. Eddy's book abounds with the thought of God's allness and our dependence on Him. On page 201 we read, "Passions, selfishness, . . . yield to spirituality, and the superabundance of being is on the side of God, Good." Page 205, "When we realize that there is but one Mind, the divine law of loving our neighbors as ourselves is unfolded to us; whereas a belief in many ruling minds hinders man's normal drift towards the one Mind, one God, and leads human thought into opposite channels, where selfishness reigns. Selfishness tips the beam of human existence towards the side of error, not towards the side of Truth." Page 568, "Self-abnegation —by which we lay down all for Truth, or Christ, in our warfare against error—is a rule in Christian Science."

The trouble is, my brother, you have, in reading Science and Health, and in looking at its deep-running truths, viewed them from a merely human standpoint, leaving God entirely out of the question. It is impossible to grasp the truths of that wonderful little book without placing God in His rightful position; you must view them from the right view-point,—the spiritual.

Your thoughts under "Is Christian Science Christian?" may satisfy your mind, and perhaps the minds of many who may read your words, but in the light of "by their fruits ye shall know them" they fade into insignificance, and hence can do no harm.

You say, "It [Christian Science] superinduces a lazy and contented calm which allows the world and all things in it to drift." If you can find the members of any church more active, and more abreast with the progressive life and thought of to-day than those of the churches of Christ, Scientist, you will find something which, as yet, has been undiscovered. Christian Scientists are not lazy, but are certainly "calm," for God has spoken to the once troubled sea of their sin-ridden natures the blessed words, "Peace, be still!"

Your statement, "But the gravest error and the most un-Christian peculiarity of Christian Science reside in the fact that they place the center of the universe in the soul of each individual" is in itself a grave error. It is comparatively easy to make assertions, it is another thing to prove them. In Science and Health, p. 281, we read, "The one Ego, one Mind, or Spirit, called God, is infinite Individuality supplying all form and comeliness, which reflects reality and divinity in individual man and things." Here the center of all things is vested in God, not man. Man, like the rest of God's creation, reflects, and therefore glorifies, God. Page 331, "God is individual, incorporeal,—divine Principle, the Universal Cause, the only Creator, and there is no other causation."

You further state, "According to their strict theory, no physical care is to be given to the sick; nor is sympathy, as we understand it, to be offered to the afflicted." Again I refer you to Science and Health, p. 365, "If the Scientist reaches his patient through divine Love, he will accomplish the healing work at one visit. . . . If the Scientist has enough Christly affection to win his own pardon, . . . then he is Christian enough to practise scientifically, and deal with his patients compassionately." On the next page are the words, "The physician who lacks sympathy for his fellow-being is deficient in human affection." Let him that readeth understand.

Are you not rather severe when you exclaim, "It subverts the doctrine of the Trinity, as the church has always held it, and substitutes for it a shadowy nothing"? I may say that the Trinity as understood by the church has never

Digitized by Google

been understood. Three persons, or personalities, in one is incomprehensible to the human mind. But God the Father as Life, the Holy Spirit as Truth (divine knowledge), the Christ as Love,—all in God, is indeed a beautiful trinity, and is comprehensible; not a "shadowy nothing," but all-in-all to him that believeth. Page 330 says, "God is the infinite Person." The Trinity is Life, Truth, Love.

There is but one expression, and that in italics, under the heading, "Is Christian Science Scientific?" which I desire to correct. "The point where Christian Science has duped its votaries is this: It has confused the category of diseases that are present through an emotional or nerve-disturbing cause with the category of diseases that are present through external causes; and it has placed all manifestations of pain and sickness under the former." May I ask, Did Jesus Christ make any classification of disease in the ordinary sense? Without doubt he recognized differences in them, and knew there were various causes to which he might attribute them. But did he, or Peter and the other disciples and apostles, make a diagnosis, —feel of the patient's pulse, ask him to show his tongue, and take his temperature? We recognize the good the physicians have done and are doing, the consecration manifested in many a doctor, but is there not a better way? What does the Bible say about healing? Please take the Word of God,—it is authoritative. I notice in your criticism you do not, in a single instance, quote from the Bible,—yours is simply human reasoning which so many times is weighed in the balance and found wanting. Precautions in the line of sanitary plumbing, sewerage, etc., are in connection with what Christian Science has done, the causes of an increase in longevity.

You say, "Christianity and Christian Science do not coalesce." No, because they are one. Can love coalesce with itself?

In the Preface of Science and Health, is this thought, "Those only quarrel with her [the author's] method who have not understood her meaning, or discerning the Truth, come not to the light lest their works should be reproved. Page, 256, "Progress takes off human shackles. The finite must yield to the Infinite. Advancing to a higher plane of action, thought rises from the material sense to the spiritual." "God is a spirit: and they that worship him must worship him in Spirit and in Truth." "Ye shall know the truth, and the truth shall make you free." Trusting you will receive these words in the spirit in which they are penned, and that they may bring you into the higher realm of Life, Truth, and Love, I am, very sincerely and faithfully,

Your Brother in Truth,

MARTIN SINDALL.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Among the Churches.

### Progress in Long Beach, Cal.

The Christian Scientists of Long Beach met February 19, 1902, and formed a society with seventeen charter members, to be known as First Christian Science Association, Long Beach, Cal.

During the past year our attendance has increased. We have secured cozy rooms in which to hold our services, and with the advent of the new year have made a bank deposit as a nucleus of a fund for a building site. We know that, "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

EMMA F. BURGESS, *Sec.*

### Annual Meeting at Reading, Mass.

The fifth annual church meeting of First Church of Christ, Scientist, Reading, Mass., was held in its usual place of meeting, Monday evening, January 5, 1903. After the audible repetition of the Lord's Prayer, the reports from the various officers were given. A general gain along all the different lines of work was the main theme of each report. The average attendance at the Sunday morning services has been over one hundred. On Wednesday evening the attendance has been nearly ninety for every week in the year.

The roll of membership has been increased twenty-nine per cent of the whole number during the last year; the increase in the congregation has been about fifteen per cent over last year.

Negotiations are in progress with the Odd Fellows to secure the large main upper hall for both the Wednesday evening and the Sunday morning services, as the lower hall has been crowded to its limit for several months.

*Reading* (Mass.) *Chronicle.*

### An Encouraging Report from Concord, N. H.

The annual meeting of First Church of Christ, Scientist, was held last night in Christian Science Hall. The reports of the officers showed the substantial progress of this church during the past year. Fourteen new members were received, making the present membership one hundred and fifty-two.

The treasurer reported all bills paid and a balance in the treasury.—*The Concord Monitor.*

In reviewing the history of the year the President, Rev. Mr. Tomlinson, said in part:—

As we review the year that is gone, a deep sense of gratitude must fill all hearts. We are grateful to the visiting Scientists, who have helped us so much by their presence. We remember with love the generosity of those brethren who, though not of our home city, yet rejoice to bless us with their rich gifts. And to our Mother in Israel, who holds unwearied watch over all the flock, who leads them into green pastures and beside still waters, we offer our filial love and reverent gratitude.

The activities, which have been briefly reviewed, are the outward signs and symbols of the work of this Church of Christ, Scientist. But who shall tell of the unseen energy and benevolences of which we can make no note?

God has so blessed this church that our hearts go up to Him in gratitude. But at this annual meeting we do not come together for congratulation, but rather to strengthen one another for greater sacrifices and more heroic endeavor.

When we are alone, we have our thoughts to watch; in our family, our tempers; and in society our tongues.

HANNAH MORE.

## Testimonies of Healing.

When I was a small boy, I injured my foot in such a way that I was bed-fast for some time. I was doctored for quite a while, and I was finally able to be up and around, although any cold weather or a jar to my foot would bring the old pains back again.

Years rolled by, and in 1899, I hurt myself by lifting a weight that was too heavy. I went to a doctor, and he informed me that the trouble was rupture. He attended me for a while, till I got so I could do some light work. After some months, it came back again, and one doctor said, "You will never be cured, unless you submit to a surgical operation." Well, I had too much fear of the knife to consent, so time passed away, until, in the spring of 1901, when, through the help of a lady friend, where I was staying at the time, I was led to Christian Science.

At first it all seemed a mystery, but the more I read in Science and Health the plainer it grew, until my bonds fell off, and I was free. What peace and joy are mine on account of this truth.

I wish to tell of a demonstration which I was able to make over error quite recently. I came home as usual one Sunday night after attending church, and retired about ten o'clock. The next morning I woke up with a terrible fever, which I was unable to check all day. There were times when I was tempted to give up in despair, but the thought came to me, Would that be doing as God would have me do? Well, I managed to hold out until after supper when I built a fire in my room, and sat down to read our text-book. I studied till nine o'clock, and then went to bed, slept soundly all night, and have not had a return of the error since.

Words fail to express my gratitude to Mrs. Eddy for the light she has given us, and to the friends who have so lovingly pointed me to this healing Truth.

CHARLES A. EPLEY, Silverton, Ore.

---

When I at last decided to try Christian Science, I was completely discouraged. We had tried everything with only slight temporary improvement. When thirteen years of age, I was taken with paralysis one night and the next morning was unable to turn myself over in bed or to move my limbs.

At that time we were living where we could get no medical assistance. For nine weeks I was not able to be moved. After some time, however, I was brought to Spokane for treatment. The doctors gave me no hope from the first; they said I would never stand on my feet again. Shortly after coming to Spokane we heard of Christian Science; but, like many others, were unwilling to give it a trial until all else had failed. We tried first one thing, then another, until we had tried everything.

At a sanitarium they had a brace made of steel and leather which I was to wear at least three or four years, perhaps a lifetime, for curvature of the spine. After six months at the sanitarium I went to a magnetic healer's and was there nearly three months. When I left there I could move about the house on crutches, but was very nervous; if any one in the room spoke when I was not expecting it, I would start as if struck.

When I came away my mother took rooms in a private house and we decided to try Christian Science as a last resort. When the practitioner first came to see me I was so discouraged I had hard work to keep the tears back. She talked to me about Science, and how good God is to His children, and told me I need not wear the brace. When she left me I was a happier girl. When I remembered my back a few days later, I found it better. I improved steadily from that time, until now I walk in the house alone, and use only a cane when out of doors.

Sometimes it seems as if my healing were slow, but when I remember it is only three years ago that the doctors said I would use a wheel-chair all my life, it does not seem long. God has done much for me and I am thankful to Him. God will not leave me now, because He never leaves any work unfinished.

I always love to get the *Sentinel*, and the testimonies help me a great deal. I am thankful to Mrs. Eddy for this understanding of Truth and to the dear Scientist who has worked so hard and so patiently for me.

ETHEL BUNCE, Spokane, Wash.

---

It is now just eight years since our attention was first called to Science and Health, and from the reading of the first line of the Preface—"To those leaning on the sustaining Infinite, to-day is big with blessings"—my husband and I have never ceased to give thanks for the innumerable moral and physical benefits which we and our children have received.

Within these eight years we have had a few serious troubles, one a badly broken finger which was completely healed in ten days, only a slight scar remaining,—divine Mind was the healer. Not even a bandage was used nor was the finger set, simply a soft rag was bound loosely about the hand to keep it clean. Our little daughter was knocked down and run over by a bicycle and left in an unconscious state. On coming to she was for a few minutes very ill, but was completely healed in twenty-four hours. The three children had an attack of measles, but were all healed and out within three days. A bad case of mumps was healed in one day. Our two valuable little dogs had such a bad case of malignant mange that a veterinary surgeon thought they should be shot. They had lost nearly all their hair and one was covered with sores. They were perfectly healed through Christian Science treatment, and their hair all returned more beautiful than ever in a surprisingly short time. I shall add only one more case of healing; a very severe and seemingly serious case of poisoning. My husband and two daughters were taken very alarmingly ill within an hour after our luncheon, and for a moment, as I was alone with them, it gave me a little sense of fear, but I quickly realized that though it might be a thousand people, only the one claim of "poison" had to be handled; that to God all things are possible, and that He puts all enemies under His feet. In less than an hour they were all comfortable and sleeping peacefully, and within three hours were about as usual with no bad effects.—LOUISE V. MOCKRIDGE, London, Eng.

---

Christian Science came to me through a sister who was then living in Boston. She kindly sent a copy of "Science and Health with Key to the Scriptures" to my mother, and we both became interested.

I knew nothing of Christian Science with the exception of having heard of several persons being healed through it, and supposed it was one of the many kinds of faith cure. I began to read the book with a great deal of curiosity. I had not read many pages before I became deeply interested by it, and it was always with great reluctance that I put it down to attend to other duties.

I was at this time a member of the Methodist Church and had a class in Sunday School. I continued my attendance and taught my class until I could no longer hold to the old beliefs.

There were no Christian Scientists here, so I did not know of the *Quarterly* or anything about Christian Science services. I sought one of Mrs. Eddy's students in a neighboring city, and received the assistance that I greatly needed. In the mean time I obtained a kind letter of dismissal from my late pastor. Just after leaving the church

Digitized by Google

I read several passages from our Leader's works that made the pathway clear to me, and my own healing added great strength to my understanding. After working earnestly the best I could I took class instruction. I am grateful to say I have succeeded in planting the truth in several homes, and it has been of great benefit to me. I feel a deep sense of gratitude for our Leader and for our Church and co-workers.—LULA M. HASLUP, Sidney, O.

I was in a situation as general housemaid but was much troubled with varicose veins. I had been wearing an elastic stocking for over three years. I had consulted four doctors about the trouble; one of them said I must undergo an operation and have the veins cut and tied, or I would never be well; two said I would never be able to earn my living. Of course, being a poor girl, I had to work, my mother not being in a position to keep me at home or give me a trade.

A lady heard of me and wrote to me, lending me Science and Health, and asking me to tell her later if I should like treatment. I accepted the kind offer, and I can truly say I am healed. I feel very grateful to God for His goodness in sending such a friend. I feel as if one of Christ's disciples had been sent to heal me. I know what my practitioner said about Christian Science is quite true, "In God we live, move, and have our being." God is Love, His Word is a lamp unto my feet. I shall ever have faith in Christian Science.—MABEL BOWDEN, Cornwall, Eng.

"Character, courage, and common sense" are the trinity which President Roosevelt has honored as the essential elements of a man who is fitted to be a citizen of a self-governing nation.

Opportunity goes, but inspiration comes. Time goes, but eternity comes. The human goes, the divine comes. The world passes away, and the fashion of it; but heaven comes, —the heaven of a better faith, loftier hope, more generous love, making all things new and fair.

JAMES FREEMAN CLARKE.

## Renewal of Copyright.

Class A. XXc. No. 49048.

LIBRARY OF CONGRESS, to wit:

Be it remembered,

*That on the twenty-sixth day of December, 1902, Mrs. Mary Baker Glover Eddy of Concord, N. H., hath deposited in this Office the title of a* BOOK, *the title of which is in the following words, to wit:*

*Science and Health. By Mary Baker Glover. Boston. Christian Scientist Publishing Company. 1875.*

*the right whereof she claims as author and proprietor in conformity with the laws of the United States respecting Copyrights.*

OFFICE OF THE REGISTER OF COPYRIGHTS, WASHINGTON, D. C.

*In renewal for fourteen years from June 4, 1903.*

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The promised Messiah was to become the world's king. Jesus had been hailed as the Messiah, and did not discourage the belief. But he showed no disposition to assume the earthly powers which the Jews ascribed to their expected king. And so they asked, When is the kingdom coming—when will this power be assumed? His reply was that it will not come in such a way as to be seen with the eye, not with the glitter of a court, the expansion of a nation, the march of soldiery, the increase of wealth and luxury. The real kingdom is of the spirit of truth and love. It is even here now, among you. Its king is here, although those who are looking for pomp and circumstance do not recognize Him. The kingdom of God is among you and within you. It is a kingdom of the soul—a reality more glorious than it hath entered into the heart of man to understand. It is a kingdom of loving unselfishness, of good will, of peace, of heaven; and it will be established within the human heart whenever the heart accepts and adopts these principles as its laws of life, and the leadership of the king who reveals them, and whose presence alone inspires men to follow them.

After teaching the Pharisees, and through them the whole world, this great truth that His kingdom was a kingdom of spiritual love and life, built upon the acknowledgment of the source of these heavenly qualities, he turns to his disciples and says: "The days will come, when ye shall desire to see one of the days of the Son of man, and ye shall not see it."

How true this is, even literally! For many centuries the hills and vales of Palestine have been sought by pilgrims in the endeavor to walk in the paths where he trod, to look upon the scenes, which, as child and man, he beheld, and thus to understand more perfectly the book which contains the record of his life and words, and bring the past into the present as vividly as possible, and thus to behold once more the days of the Son of man upon the earth.

The literal and past days of the Son of man have gone forever, but the days of the living Son of man are ours and may be more and more ours forever. . . . We need to remember the risen Lord, who gives rest to the soul, who is with his disciples all their days unto the end. These are the days of the living Son of man. Look for him here. Look for him daily. Look for him in the duties and pleasures and in all the opportunities for service to our fellow beings which our days afford.—*The New-Church Messenger.*

Those who attended the Boston Ministers' meeting recently were treated to a thoughtful, comprehensive study of modern spiritual conditions by Rev. J. W. Buckham of Salem, whose insight pierces below the surface and beyond the present, finding even in this materialistic age signs of a coming spiritual renewal. This reasonably optimistic view he bases on these grounds: The disintegration of materialistic philosophy and the return to idealism and to the philosophy which underlies religion; evidence of providential order in the unity of humanity; a tendency toward altruism, due to the consciousness of a common Father; the likelihood of a reaction from modern absorption in material things which will change the standard of values from the material to the spiritual; the breaking down of denominational and theological barriers; the unification of human life due to rapid communication and mental alertness and sensitiveness, rendering all avenues open for the coming of Christ; and forward looking faith and prayer.

Mr. Buckham thinks this renewal will not be of the old-time character or methods. It may come through an individual pastor, teacher, or author, who shall so speak in the power and wisdom of God that people must hear. It is likelier to come through the gracious power of some God-sent truth entering with new force many minds at once. It will cleanse public and private life, adjust industrial differences, purify and fill our churches.

*The Congregationalist and Christian World.*

Professor E. H. Johnson, D.D., of the Crozer Theological Seminary, says in *The Watchman:*—

"It is disloyal to our one Master to say that a view which is not in our opinion so disloyal as to forbid it to be secretly held among us is so disloyal that it must not be openly avowed among us. For myself, I have not, and never have had, any such secret opinions; but I stand for the absolute right of every Baptist to declare views which I do not believe in, but which I dare not propose to expel him for holding. There is no secure ground for liberty except loyalty to Christ alone, and there is no secure loyalty to Christ except in liberty for Christians.

"Truth is but correct statement of reality; and reality must come to light in order to be recognized and correctly stated. The fight is on. It is arduous and confusing. Let it go on. Christ is the truth, and this will appear. But I claim for every Baptist the right to be a good soldier in this contest, and I say that he is most disloyal to Christ and to the denomination who says no one shall spread any battle signal except the ones we have always followed. I expect to troop with the crowd unless the right of a brother to fight on the skirmish line is denied; and then I will fight beside him, and resist every attempt to put him under arrest, so long as he does not turn his piece against the Leader of us all."

The apostle Paul believed that the resurrection of Jesus was not only an evidence for the Gospel, but an indispensable essential feature of the Gospel itself. He dared to say that you cannot have Christianity without the resurrection of Jesus. May it not be that one of the reasons why Christianity is not advancing to-day as we believe it should, is that so many are substituting for the Christianity of the New Testament a type of religion that is emasculated of the miracle of the resurrection, and, hence, is a stranger to the divine certainty of the truth of Jesus, to the sovereignty of his authority, to the efficacy of his atonement, and the assurance of his triumph that are involved in his resurrection?—*The Watchman.*

We must first have learned the way to Christ for ourselves. Unless we have become familiar with it we shall be as a stranger in a strange city; quite as liable to go the wrong as the right way. It is but presumption for us to attempt to convince others that we can show them how to find Christ when we are ignorant of the way. Knowing the way is but an experience of salvation. Too often there is danger of becoming mere sign-boards. It is so much easier to stand and point out to the inquiring the way they ought to take than to become a leader and bring them to Christ. A little experience in this work will make it easier for us to help others.—*The Standard.*

Edward Bok writes in the *Ladies' Home Journal:* "There can be no love for God which is unattended with love for man. The final test of a Christian life is not the worship of God, but always the love of man for man. If the message of him whose birth we celebrate at Christmas teaches us one thing above all others, it is not that we shall try to do for him as a person, but that we shall seek to do for one another. That is knowing Jesus and clearly understanding him. And wherever this true conception of his life and teaching is reached, there we find men and women thrilled with a passion for giving."

To-day is your day and mine, the only day we have, the day in which we play our part. What our part may signify in the great whole we may not understand; but we are to play it, and now is our time. This we know; it is a part of action, not of whining. It is a part of love, not of cynicism. It is for us to express love in terms of human helpfulness. This we know, for we have learned from sad experience that any other source of life leads towards decay and waste.

DAVID STARR JORDAN.

Religion always comes first in the order of time. Theology always comes after religious experiences have accumulated and begun to need explanation. Somebody must be religious before anybody can be a theologian. But after religious experiences have been observed, studied, classified, accounted for, one can be a theologian at second hand without being religious at all; and that is what is the matter in the world of theology to-day.—*The Christian Register.*

Rev. J. J. Gorham says in *The Examiner:* "But the modern minister is a prophet. If he is no longer commissioned to foretell coming events, as the prophet of old was, he is divinely ordained and commissioned to tell forth the message of God to his Church and the world. It is his business to seek diligently to know that message, and to speak it forth clearly, distinctly, and positively."

It is not enough to read the Bible; one must meditate upon it and absorb its spirit and teaching. The Holy Ghost works in the soul to its enlightenment, quickening, direction, and purity, as the Word of God is carefully studied and vitally assimilated.

*Presbyterian.*

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## Items of Interest.

**National.**

Mr. Bowen, envoy of Venezuela, has had a number of conferences at Washington with the representatives of the blockading Powers. The Powers having claims against Venezuela but taking no part in the blockade have asked for equal footing in the matter of the payment of their claims. This request the blockading Powers are disposed to deny, claiming for themselves preferential consideration. On this attitude France makes the point that such action would put a premium upon war methods rather than peace methods in the collection of indemnities.

The title and rank of envoy extraordinary and minister plenipotentiary have been conferred on Baron Speck von Sternberg, who assumes control of the German embassy in the absence of Dr. von Holleben, German ambassador to this country. The Baron presented his credentials to the President Saturday.

The Supreme Court of Lincoln, Neb., in an opinion by Chief Justice Sullivan, declared the reading of the Bible in the public schools of Nebraska to be permissible so long as it does not take the form of sectarian instruction. This is a practical reversal of a previous decision by the same court.

Investigation into the coal situation by the United States Government was begun in Boston last week by the sub-committee appointed by the Committee on the Judiciary. A committee appointed by the Massachusetts Legislature is also making an investigation.

According to despatches, the President has submitted to Congress a note from the Mexican Government and one from China asking the United States to lend its moral support to a plan to give stability to the currency of the silver standard countries of the world.

Hon. John T. McDonough, ex-secretary of New York State, will accept the appointment as justice of the Supreme Court of the Philippines tendered him by the President.

Judge W. R. Day has accepted a tender of appointment as assistant justice of the United States Supreme Court.

**Foreign.**

During July, August, and September, 1902, thirty-nine per cent of the imports into Cuba came from the United States, seventeen per cent from Spain, thirteen per cent from England, five per cent from France, and five per cent from Germany. From countries in the Western Hemisphere other than the United States the imports were eighteen per cent; other countries in Europe two per cent, and from elsewhere one per cent. Eighty-two per cent of the exports went to the United States, seven per cent to England, four per cent to Germany, three per cent to Spain, and one per cent to France. During the same period the duties collected in Cuba amounted to $3,401,360, of which $1,208,380 was paid on goods from the United States. The value of the exports to the United States was $17,485,024. The total value of the imports was $14,316,272. The imports from the United States amounted to $5,361,795, and from countries other than the United States in the Western Hemisphere $2,556,783.

Interest in the proposition to build a railway line connecting the systems of the United States and Mexico on the north with those of Chile, Paraguay, Uruguay, and the Argentine Republic on the south, traversing all the Central American republics and all those in South America which touch the Pacific Ocean, with branch lines into Venezuela and Brazil, is being kept alive and it is not improbable that efforts will be made to have the road completed at least as far as the line of the Panama Canal in time to be of some service in connection with the completion of that work. The International American Conference, which met in the City of Mexico last winter, adopted resolutions favoring the construction of the intercontinental railway.

The Magdalen Islands have been sold to a syndicate of New Brunswick and Nova Scotia capitalists. The price paid for the islands was seventy thousand dollars, and for the mining rights thirty-two thousand dollars. This group of islands, composed of the Coffin, Albright, Entry, Amherst, Grindstone, and Byron, lies in the Gulf of St. Lawrence, sixty miles northwest of Prince Edward Island. The group is fifty miles long, but quite narrow. The fisheries and mineral deposits are of considerable value.

Secretary Hay and Ambassador Herbert have signed a document to refer the long-pending Alaskan boundary dispute to a commission of six jurists,—three American, three British. They will consider the boundary line as delineated in the treaty of 1825. The press opinion seems to be that the decision will be in favor of the United States.

The Spanish Minister of Finance announces that the final budget of 1902 shows a surplus of $9,600,000.

**Industrial and Commercial.**

The Cedric, the latest addition to the White Star fleet and the largest steamer in the world, is practically completed, and will prepare for her maiden voyage from Liverpool to New York early this month. This huge vessel, seven hundred feet long, is the second steamer to exceed twenty thousand tons, her sister ship, the Celtic, being the first. The Cedric will have accommodations for three thousand passengers. She has not been built for speed and will not attempt to lower the Atlantic record.

German shipyards in 1902 built two hundred and twenty-seven steamers of 212,283 tons register, a decrease of three steamers and 49,000 tons in comparison with 1901. The steamers under construction at the year's end numbered one hundred and twenty-one, of 255,977 tons, against one hundred and forty-two of 317,080 tons, in 1901. Two hundred and eighty sailing vessels, of 58,715 tons, were built in 1902, being an increase of sixty-nine vessels and 28,000 tons.

**American shipyards launched last year almost as many vessels as all Europe combined. During 1902 there were built in this country four hundred and eight steamers of all sizes and seventy-six sailing vessels of over two hundred and fifty tons.**

**The Baldwin Locomotive Works is turning out daily six completed engines, and though working night and day is unable to meet the demand from the great railroad systems for motive power. Thirteen thousand men are employed in the shops.**

A cotton mill to cost $450,000 and have one thousand looms is to be built at Charlotte, N. C.

**General.**

Peter Cooper Hewitt, grandson of the famous Peter Cooper, has invented a lamp known as the mercury vapor lamp, which was exhibited April, 1901, at the American Institute of Electrical Engineers. The light is produced by rendering luminous, by means of an ordinary direct current of electricity of low power, a vapor or gas confined in a glass tube. When the lamp is started, the heat generated by the electric current turns into vapor enough of the mercury to fill the glass tube, in which, before starting, there is almost a perfect vacuum. The vapor serves as a conductor of the current, and glows under its influence. The light produced is of great intensity, is very economical, and suited for both indoor and outdoor service. Besides the lamp, he exhibited his static converter. This is described as the most original and important discovery affecting the general distribution of electric current for light and power purposes, that has been brought to public attention since electricity became a commercial product.

The ancient Temple of Juno in the Island of Samos, which Herodotus described as one of the glories of the pre-Christian world, has just been discovered by the Archæological Society of Greece, after being quite lost for many centuries. It is stated that the portions of the temple so far brought to light include the altar, the bases of the twenty-nine columns, many inscriptions, and lesser objects. Work is being actively prosecuted, and it is hoped that the whole of the ruin will be laid bare for the study of the learned in architecture.

Professor Hilprecht of the University of Pennsylvania, recently delivered a lecture before the Anthropological Society at Berlin, on the progress of American operations at Nippur, in Babylonia. In the course of his description of the excavations on the site of the Temple of Baal, he said he expected to unearth a large library of stone books, which he believed were buried in a neighboring hill.

Andrew Carnegie has purchased for $225,000 part of the Pittencrief estate near Dumfermline, including the glen which runs through Dumfermline, and the Dumfermline Tower, where Malcolm Canmore, the Malcolm of Shakespeare's Macbeth married Princess Margaret.

At the Marquand sale of antiquities in New York recently, a Chinese vase, or "peachblow amphora," six inches in height, was sold for $3,200. A Limoges enamel brought $26,000. The proceeds of the six-day sale amounted to over a half million dollars.

The experiments on the military railroad between Berlin and Zossen, Germany, in connection with keeping a moving train in continuous wireless communication with the signal station, have been completely successful.

A movement is under way in New York City looking not only toward the extension of the subway system there, but also to a transfer of the management of the new lines to the municipality.

The orange crop of Florida this season is estimated at seven hundred and fifty thousand boxes.

## Selected Articles.

### Christian Science Bill Killed.

SOME days ago Representative Abbott of Manchester introduced a bill in the New Hampshire Legislature, the purpose of which was to prohibit the healing of physical ailments by Christian Scientists. The bill imposed a penalty of $50 for the first offence; $100 for the second offence, and if the party further persevered in violating the law, he was to be sent to jail.

By the action of the House the bill was referred to the judiciary committee, and yesterday [January 29], by a vote of eleven to one, the committee refused to report the measure.

It is needless to say that the believers in Christian Science are very much pleased with the result. They are proud to know that the members of the legislature declined to offer this insult and do this great injustice to the people of this state who have an abiding faith in the tenets and doctrines of Christian Science.

The *Patriot* feels free to say that in its views it represents the intelligence and integrity of Concord, when it commends the legislature for refusing even to recognize so unjust and discriminating a bill.

The Founder of Christian Science, Rev. Mary Baker G. Eddy, makes her home in Concord; she has done and is doing much for Concord in everything looking to the upbuilding of the city and its interests; she has been willing to contribute in every way that good citizenship can demand or expect.

The people of Concord who believe with her are not proselytizing; they are not urging others to accept the things that they believe and practise; their mission clearly is to do what good they can for their fellow-men; they are all good citizens, peace-loving and law-abiding.

If there is a healer among them, he is not advertising nor proclaiming his powers of combating sickness; he is not urging others to accept him as their physician; he goes when he is called, and only when he is called, and surely American men and American women are endowed with sufficient appreciation and intelligence to be permitted to select such physical healers as their judgment or desires may advise or suggest.

Like bills, with similar intent, have been introduced in other legislative bodies, in other states at other times, but with the great majority of them the purpose was more or less concealed. This cannot be said of the measure proposed by Mr. Abbott: in this, there was neither concealment nor deception. The bill was directed against Christian Science and the practice of Christian Science healing, and the judiciary committee, in the minds of an overwhelming majority of the good people of New Hampshire, did what was fair and right, when it refused to permit even the consideration of a bill so manifestly unjust.

This paper is not advocating the cause nor proclaiming the virtues of Christian Science, any more than of any other religion. It bespeaks for all, at the hands of our lawmakers, liberal and just treatment; the Constitution of the United States, and the Constitution of every state of the Union, recognizes the right of the individual to worship God after the dictates of his heart and conscience, and any effort on the part of religious bigots to interfere with this clearly defined right is palpably wrong,—wrong in theory, wrong in law, and wrong in fact.

If the believers in the Roman Catholic Church were being discriminated against, or a proposition looking to discrimination were proposed in the legislature, we would say, "Don't do it." If such a bill were directed against Congregationalists, Methodists, Baptists, Unitarians, Adventists, Wesleyans, or Episcopalians we would say, "Don't do it," and when the members of the legislature should refuse to recognize such arbitrary measures, we, with thousands, would say, as we now say, "Thank you."

Editorial in *Concord* (N. H.) *Patriot.*

### In the New Hampshire Legislature.

**Bill to Prohibit Practice of Christian Science Reported Adversely from Committee and Buried by Large Vote in the House.**

COMMITTEE REPORTS.

JUDICIARY. An act in relation to the practice of Christian Science. Inexpedient to legislate.

Mr. Abbott of Manchester said that a requested hearing on this bill had been denied by the committee on judiciary and he moved that the bill be recommitted.

Mr. Nason of Dover said the committee felt justified in refusing to waste time over this bill, which he read. The committee does not feel that constitutional rights of belief should be denied to Christian Scientists or any one else.

Mr. Abbott said the bill was intended to protect children and others. The hearing denied is simply a matter of courtesy, which the ridicule of the bill certainly is not.

Mr. Buckley of Lancaster said it would do no good to recommit the bill. The time of the committee is fully taken up and should not be wasted. He said that personally he was opposed to Christian Science, but was also opposed to such an insult to a large body of good people as this bill contemplates. To recommit it will be to provoke a long and costly battle.

Mr. Cavanaugh of Manchester thought no member should be denied the privilege and courtesy of a committee hearing.

Mr. Abbott's motion prevailed and the bill was recommitted on a *viva voce* vote.

Mr. Ahern of Concord called for a division and took the floor.

He said he was not a Christian Scientist and did not believe in that form of worship. But he was convinced that this bill had had sufficient consideration, and that no good would come from recommitment.

The division resulted, Yes, 70, No, 194, and the motion was lost.

The resolution of the committee that it was inexpedient to legislate was adopted on a *viva voce* vote.

## In Answer to a Clerical Critic.

MR. KIDD has said that Christian Science is a "substitute for Christianity and that it antagonizes science—is an enemy of philosophy, and a subverter of religion." Christian Science is not a "substitute" for Christianity, but it is Christianity, scientifically demonstrated. It antagonizes (as truth always does) all so-called science, philosophy, theology, and religion that is not of God. It not only claims to be a renewal of the teaching and practice of Christ, but it amply proves this, in the first place, by the fact that it is based upon the teaching and demonstration of Christ and his apostles; and in the second place, it brings about the same physical, moral, mental, and spiritual results in the believer, as did the teaching and practices of Jesus and his early followers.

Even this critic seems to acknowledge this when he says, "Many of the advocates of Christian Science are very respectable people, who are sincere. They are an honor to the community, and usually they are a people who were formerly members of the church, who have now risen to a higher spiritual plane," etc. He assured his audience that he did not profess to possess any wisdom concerning Christian Science. But how can a man who is not a Christian Scientist and has never applied its Principle to the healing of a single case, and who acknowledges that he does not understand it himself, correctly interpret its Principle and practice? He cannot, for Jesus said: "If any man will do His [God's] will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." The same will apply to Christian Science, for it is the truth about God.

In Christian Science the Bible and Science and Health, by Mrs. Eddy, are our only preachers. But certainly no one who loves the word of God can object to the Bible, neither will any one object to Science and Health when he once learns that it fearlessly and faithfully interprets and explains the Bible according to the teaching and practice of Christ Jesus.

It is not true that Christian Scientists are hampered in their study of the Bible. They are perfectly free, and only because they have found that Mrs. Eddy has given them the key to the Scriptures do they voluntarily accept it. There is no "subversion" in Christian Science. Our critic says: "In the back of the book is a glossary giving the words which Mrs. Eddy orders must be substituted for those which are found in the Bible." This is not true. What Mrs. Eddy says is this: "In Christian Science we learn that the substitution of the spiritual for the material definition of a Scriptural word often elucidates the meaning of the inspired writer. On this account this chapter is added. It contains the metaphysical interpretation of Bible terms,—giving their spiritual sense, which is also their original meaning" (page 579).

Mr. Kidd also says that "to the outsider the physical healing seems to be the great thing in Christian Science, but according to Science and Health this is but a small part of Christian Science.' But this is the truth It is the moral, intellectual, and, above all, the spiritual uplift and illumination that comes to one healed through Christian Science, that is the greatest pearl of all. But why should this seem so strange to a messenger of Christ, when we remember that our Master said to his ambassadors that they should "heal the sick" as well as "preach the gospel"?

Christian Science also demonstrates that Mind is the creator of all that really is,—the good and the perfect,—and that the false belief of the so-called mortal mind is the author of all that is unlike God, which includes sin, sickness, and death. Destroy this mortal mind by the power of Truth, and you will wipe out all that is unlike God.

The reason that all true teachers and students of Christian Science find that Mrs. Eddy's books are indispensable is this, that they find that they reveal the Principle of Christian Science, as well as the *modus operandi* of the same.

It is not only proper and Christian for Mrs. Eddy to protect Science and Health by a copyright, but it is a duty as well, for the success of Christian Science depends on keeping its teachings pure.

Mr. Kidd ought not to forget that his own denominational book concern, in which he is a stock holder, copyrights its books and papers. He objects to the Christian Scientists receiving pay. But when Christ sent out his disciples to preach and heal, he said: "The laborer is worthy of his hire." Does Mr. Kidd preach the gospel for nothing? Is he not paid for his time and labor?

As for the price of Science and Health, it is cheap, not only when you look at the subject-matter (and that is probably what gives a book its real value), but also when you look at it from a commercial standpoint. It is no small book,—it contains seven hundred pages. Let him compare it with the text-books of his own denomination, and he will see how unjust this criticism is.

Mr. Kidd questions the statement: "There is no truth in pain." But if he will calmly study the question he will find that this is true. Pain is inharmony, and we all know that there is no inharmony in God, and God is Truth—hence there can be no pain in Truth. He says: "God is All. We can believe that only by vacating our senses." If this be true, then let the false senses go, for either God is All-in-all, or He is not. But we all know that the Bible teaches that God is All-in-all, and it is on the Bible that Mrs. Eddy and her followers stand.

He asks: "If sickness goes, why not death?" To this we answer, it certainly will be destroyed, for it has no place in Truth, but Paul said: "The last enemy that shall be destroyed is death." In Science and Health, p. 426, we read: "Sin brought death, and death will disappear with the disappearance of sin."

In reply to what he said about the suffering and death of Jesus, I will say that the human Jesus both suffered and died, but Christ, the manifestation of Truth, God, never suffered and died.

In closing I will quote again from Science and Health, p. 347: "Is it error which is restoring an essential element of Christianity,—namely, apostolic, divine healing? No; it is the Science of Christianity which is restoring it, and is the light shining in darkness, which the darkness comprehends not."

REV. SEVERIN SIMONSEN.

## Science is Knowledge.

Mr. Editor.

To those knowing little or nothing of Christian Science, the arguments presented by Dr. Johnson in *The Herald* of last Sunday might be misleading, for this reason, that the perfect honesty of thought expressed throughout would lead them to expect from so able a man, a clear understanding of the subject in hand.

While Christian Scientists have no unkind word for the writer, remembering their own experiences, they take decided exceptions to his reasoning. Dr. Johnson has fallen into the error of other professional men, of attempting to evolve the material from a spiritual hypothesis. I need hardly say that this is an impossibility, and I believe that quiet reflection will convince him that his attack upon Christian Science is not fair to his own intelligence.

Dr. Johnson truly says, "Science is knowledge." Medical men claim their profession to be a science, but none will be so rash as to call it an exact science. If theories founded entirely on matter giving but indifferent results may be termed "science," I ask why a proposition based

Digitized by Google

on spiritual understanding may not likewise be called "science"? One is knowledge discerned from matter and its conditions; the other is knowledge obtained by the realization of God as the source of all true intelligence, which is reflected upon all His spiritual children.

Christian Science declares that God created the universe, inclusive of spiritual man, but that the mortal senses are incapable of discerning His spiritual creations, that which is apparent being but a faint manifestation of their beauty and grandeur. On page 86 of "Miscellaneous Writings," Mrs. Eddy says: "Even the human conception of beauty, grandeur, and utility, is something that defies a sneer. . . . To take all earth's beauty into one gulp of vacuity and label beauty nothing, is ignorantly to caricature God's creation; which is unjust to human sense, and to the divine realism."

Christian Scientists accept the account of the creation given in the first chapter of Genesis and the first five verses of the second chapter as the true, the spiritual; and that following as the mortal mind (or, as St. Paul says, the carnal mind) account. Theologians and others have puzzled over these two diametrically opposed versions of the creation, and not one of them has been able to reconcile the two. The serious thinker is led to ask if God saw all that He had made and behold it was very good in the first and spiritual creation, where was the need of a second creation, for the Scriptures aver His works are eternal? It was to the spiritual man that God gave dominion over all, and just in the ratio that we realize our true birthright and put it into action, are we able to overcome material conditions.

Having misconstrued Mrs. Eddy's use and capitalization of the words "Mind" and "Truth," our brother takes exception to what he considers a lower estimate of their value than is their right. On the contrary, the opposite is the fact; for Christian Scientists understand God to be omniscience in the fullest sense, hence the word Mind most clearly represents this quality. If the Doctor will substitute "God" for the capitalized terms,—Life, Truth, Love, Mind, Principle, Spirit, Soul, and Substance,—when reading Science and Health, the right meaning will appear to him. Instead of robbing "Truth" of its rightful meaning, its application in this manner places it higher. Its vastness was beyond the comprehension of Pilate when he asked, "What is truth?" and through this lack of understanding he sacrificed Truth's representative.

Why should exception be taken to Mary Baker Eddy as being the first to realize and give to the world this new, yet old, truth? Is not the tree known by its fruits? Has any one ever before given a rule of metaphysical healing that is practically demonstrated? As well might it be asked, why were Luther, Washington, Lincoln, and others chosen for their particular mission? No thoughtful person will say chance placed them there. History repeats itself. In Numbers, 12 : 2, Miriam and Aaron say, "Hath the Lord indeed spoken only by Moses? hath he not spoken also by us?" And now here is Dr. Johnson making the same complaint in regard to Mrs. Eddy.

Instead of casting obstructions in the pathway of those who are pioneers out of the tangled depths of materialism which for so many ages has held the world, let us be thankful for the light, and that it came through a woman, remembering in our hearts that our mothers were women. For the patient, self-sacrificing years of toil for humanity the world owes to Mary Baker Eddy a debt of gratitude to which it will some day awaken. As a leader of a religious movement of such magnitude, the wisdom and ability displayed by her in directing its affairs stand unrivaled.

With reference to the criticism on the use of "mortal mind" in a lower sense than "Mind," it must be readily seen that until the carnal mind has been changed by the reflection of good from the divine Mind, it does not manifest anything but self in its myriad forms, hence the illustrations quoted of it are correct.

Let it be remembered that the work of Christian Science is both remedial and preventive, and the healing of sin and sorrow is of greater value than the physical, for the latter will follow as a necessary consequence. It is not claimed that Christian Scientists have passed the threshold of the Principle involved in this religion, yet they know that each day brings them nearer, until some time man's relation to his Maker will be fully understood.

The charge that Science and Health is "wordy confusion" will not stand the test of the doctor's calmer judgment, for the testimonies of too many able men of his own and other professions to the contrary, stare him in the face. The trouble is, he has read the words with a material thought, now let him read the book with a spiritual insight.

CHARLES K. SKINNER.

## The Efficacy of Christian Science.

Mr. Editor.

I again ask of you space in which briefly to comment upon your rejoinder to my article of December 5, in which you state your ideas with reference to the efficacy of Christian Science treatment.

In my former article, I endeavored to set forth the fact that Christian Scientists recognize that to the human mind or mortal mind, disease is very much of a reality, and Science and Health, the text-book of Christian Science by Mary Baker G. Eddy, distinctly teaches this fact. This text-book, however, indicates a clearly demonstrable method of overcoming sickness and sin—a method which is in accord with the teachings of Jesus Christ and the Bible in its entirety.

The statement from Science and Health (p. 273 to which you object: "Matter, and its claims to sin, sickness, and death are contrary to God, and cannot emanate from God," is a demonstrably true statement. The first chapter of Genesis, which, to the Christian Scientist, is the authentic account of the creation, states that God made man in His own image and likeness. Other portions of the Scripture teach that God is Spirit; hence, man, created in the image and likeness of God, is certainly not material.

Again, the first chapter of Genesis says, "God saw everything that He had made, and, behold, it was very good." If God made all—and He did—and all which He made was good, it is entirely consistent with the Scripture to believe that sickness and death are contrary to God, and cannot emanate from God. The wildest flight of imagination cannot conceive of sickness, sin, and death as being good.

Many physicians are taking the position of late years, that the mentality, to a very great extent, dominates and controls the physical well-being. It is difficult to know just where mentality ceases to dominate.

The Christian Science position is that Mind governs and controls all things; that matter in itself is inert, sensationless, and utterly devoid of power or impulse; and this position is not inconsistent with the higher deductions of natural scientists, who have made an especial study of mental action.

You state, "Mrs. Eddy says the only effect produced by medicine is dependent on mental action:" and say, "if this were true, a deadly poison taken by accident would not affect the person taking it, because, if taken by mistake, there would be no mental action that would be injurious." In this statement you fail to recognize the subtlety of what is termed the mortal or human mind which has for centuries believed that certain so-called poisons produced certain injurious effects; this is a belief of the human mind collectively, and in accordance with the laws governing mortality becomes operative upon the body of one taking

Digitized by Google

such poison, even though he were not aware of the fact that it was poison. Paul recognizes this fact when he states, "But I see another law in my members, warring against the law of my mind, and bringing me into captivity to the law of sin which is in my members;" and he asks, "Who shall deliver me from the body of this death?" and again, "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death."

No Christian Scientist would feel justified in taking poison in the effort to disprove its bad effect. If he should take poison from that standpoint, he might expect the worst possible results; but if Jesus' words are to be believed, a Christian Scientist taking poison by mistake may overcome the bad effects, and demonstrate the truth of Jesus' teachings on this subject. It is a mistake to believe that this position originated with the Christian Scientist, as the following quotation will prove, "And these signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover," and "if they drink any deadly thing, it shall not hurt them."

Your statement that "a disease resulting from the presence of some germ, such as diphtheria or other malignant disease, cannot be cured" is effectually disproved by the fact that such cases have been and are being cured under Christian Science treatment. I know personally of several such cases, some of the most malignant nature. Recognition of God's presence and omnipotence effectually debars any one from believing that there is something too hard for God to do. In the words of the Scripture, "The Lord's hand is not shortened, that it cannot save."

With reference to the statement that "Christian Science appears to be a misnomer because Mrs. Eddy's followers do not pretend to know anything about the diagnosis of disease or the laws of physiology," I will say this, that a Christian Scientist has the same general knowledge of anatomy and physiology as is possessed by the average citizen; he also knows something, and perhaps a great deal, regarding the claims of disease; but, even were your position correct, it would make no difference in the healing of disease from the Christian Science standpoint. The thing necessary for the Christian Scientist to know is the truth about God and man; to understand the practical application of God's laws, which supersede all other so-called laws, and so become operative in every case of discord, whether it be called sickness or sin. The one remedy for the destruction of evil is good; for the extermination of a lie is truth. A boy working a problem in mathematics does not need to know the wrong or false system, but he does need to know the true, and Christian Science teaches the truth about God and man.

Your statement, that from the Christian Science standpoint "the man who lives in filth, drinks impure water, or comes in contact with contagious disease, has nothing to fear if he only relies implicitly on prayer and the proper mental action," is a statement which it would be difficult for you to prove.

No Christian Scientist takes such a position. Filth in any degree is utterly obnoxious; drinking impure water knowingly would be tempting God, and no Christian Scientist would be guilty of such an act; neither does he willingly come in contact with contagious disease, except in the effort to heal said cases, and then he is as careful of the rights of his fellow-man as any one else who is engaged in the same mission.

I do not wonder that you confess an inability "to find any warrant in the Christian religion or in Scripture on which to base such a belief," because it would be just as difficult for a Christian Scientist to find such a warrant in the belief as you present it. If Christian Scientists believed and acted in accordance with your presentation of the matter, I could find no warrant nor justification for the existence of Christian Science. If you understood the purity of the motives and methods of the Christian Scientist, you would find less—infinitely less—to which you could take objection, and much more that you would heartily commend.

JOHN S. RENDALL.

In *Creston* (Ia.) *American.*

## The True Source of Happiness.

DAVID said, "I shall be satisfied, when I awake, with Thy likeness," and we are proving by our daily experiences that true happiness comes from within, not from without, and that it is afforded by the contemplation of the unseen and eternal realities of being.

In my early experience as a Christian Scientist I was much disturbed because of the persecution of those who did not believe in this Science. The bitter opposition, the discourtesy manifested toward the Science and its adherents on the part of some, marred my peace of mind. I naturally looked forward to the time when my neighbors would all be Christian Scientists, and cease from their unreasonable and unwarranted criticism. I anticipated that then I should be happy. Weary of waiting for my environments to become suitable to taste, I have learned to seek happiness in my understanding that mortal existence at best is only an empty dream, and that I should be happy because God is Good, Life, Truth, Love, omnipotent and omnipresent, and I am His reflection. To an extent I have ceased to wait for environments and things material to make me happy. I now try to be happy because it is right, and because it is wrong to be unhappy. I have learned that nothing but my own sins can make me unhappy. Many seem to believe that happiness in the home is occasioned by its beauty and conveniences, and yet it is true that some of the most beautiful homes are the most unhappy, while, on the other hand, some of the most humble homes are the happiest. Even the affection between husband and wife, if it would be permanent, must be fostered and sustained by right conduct. Infinite happiness belongs to that state or condition wherein man, through spiritual growth, has attained to perfection, has awakened to his real individuality as the image and likeness of God. Knowing this, we shall labor to such an end and shall be less disturbed by our unpleasant material surroundings and by our wants viewed from a material standpoint. If we look beyond the veil of matter into the unchanging spiritual reality of being, we shall note that we now have all that we can ever hope or desire to have, so far as the lasting is concerned, and each successive acquisition in the material world is but a stepping-stone to be left behind in our onward march toward the heavenly state. However, we are truly grateful for the improved conditions which follow our rightly directed efforts in this life, noting in this the fulfilment of the Master's promise, "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you."

ALFRED FARLOW.

In *Boston Times.*

If we were as covetous of time and opportunity as we are of money, and as diligent in the use of what we have as we are desirous of what we have not, we would soon be rich in material and spiritual wealth. "Godliness with contentment is great gain."

It is singular how impatient men are with overpraise of others, how patient with overpraise of themselves; and yet the one does them no injury, while the other may be their ruin.—JAMES RUSSELL LOWELL.

## The Lectures.

### At Orangeville, Ont.

A large audience gathered at the Town Hall on Tuesday evening, January 6, to listen to a lecture on Christian Science by Judge William G. Ewing of Chicago, Ill. Mr. W L. Walsh acted as chairman and introduced the speaker of the evening.—*The Sun.*

After Judge Ewing was through with his lecture, Mr. Walsh again spoke, and said he was very pleased to hear Christian Science so clearly explained, and he had no doubt that every one in the hall would go away with a very different idea of Christian Science from that he had come with. He said there was not one word or thought given in the lecture that either the medical fraternity or the clergy could take exception to. He was also pleased to find that Christian Scientists were so charitable towards all other sects and creeds and religious opinions; that it was not only an honor to him to have the pleasure of introducing Judge Ewing, but a privilege to listen to such a clear explanation of the doctrines of Christian Science. He did not know that he would ever become a member of their church, but he was very agreeably impressed with a sect whose motives, from what he had just learned, were so pure, and which if lived up to, would benefit humanity and the world in general.

*Correspondence.*

### At Marshall, Tex.

Judge Septimus J. Hanna, C.S.D., of Boston, Mass., delivered a lecture at the Opera House Sunday afternoon, January 11, to a large audience, on the subject of Christian Science.

Judge Hanna is a gentleman of pleasing address, and striking appearance, and his earnest adherence to his subject, and his deep knowledge of the theme which he wished to present, won the closest attention of his hearers.

The address was replete with beautiful language, convincing argument, and eloquent appeal, and will be handled at greater length in our "Weekly Church Letter."

*Marshall Morning News.*

Judge Littleton, of the County Court, introduced the lecturer as follows:—

*My Friends, Ladies, and Gentlemen:*—It is a long stride in the direction of civilized liberality of thought when a people realizes that their religious sentiments are matters of belief and based upon that kind of reasoning whose conclusions are not absolute verities but probable truths. Then dogmas begin to lose their control over the minds of men and reason asserts itself. I suppose that every one present this afternoon has some religious views more or less systematized, but your presence here shows your willingness to discuss those great questions which of late years have occupied the attention of great minds. There are scattered over the United States more than five hundred organizations known as Christian Science Churches, and when we examine the membership of these churches we are forcibly struck with the high intellectual development and social standing of that membership. There are also thousands of good people throughout the country who, after being at death's door, have been restored to health, comfort, and happiness by Christian Science. You may have your explanation of the phenomena and I may have mine, but the facts remain as I have stated, and the Christian Scientist has his explanation of them. We have here a subject worthy of our sincerest attention.

And I am happy to be able to say this afternoon that we have with us a gentleman well fitted by experience and education to speak upon this subject. Judge Hanna, who will address you upon these great questions, was for a quarter of a century before embracing Christian Science an attorney at law—actively engaged at the bar and on the bench in the practice of that profession which more than any other sharpens the intellect and renders it alert in the detection of error and apt in the weighing of evidence and drawing proper conclusions. He has also since embracing Christian Science had the best opportunities of familiarizing himself with its teachings, and speaks authoritatively of these matters.

I now have the pleasure of introducing Judge Septimus J. Hanna of Boston.—*Correspondence.*

### At Santa Barbara, Cal.

Carol Norton, C.S.D., of New York City, delivered a lecture upon the "Teaching of Christian Science," at the Opera House, January 5, under the auspices of First Church of Christ, Scientist.

Edward A. Kimball, C.S.D., of Chicago, who is a visitor in our city, kindly consented to introduce the lecturer. His introductory remarks were highly appreciated by the audience; his own prominence as a lecturer making the occasion doubly interesting to all present.

There was a large and attentive audience, composed of representatives of many professions and religious beliefs. The lecture was well received, and comments were most kind and liberal. The three daily papers printed long extracts from the lecture, and one of them, the *Daily Independent*, published an editorial speaking in the highest terms of Christian Scientists everywhere, and of Christian Science as a Christian religion.

Our church was organized under the laws of the State of California, October 2, 1900, and while our membership is only twenty-six, yet we are owners of a beautiful little church building and lot in a nice locality, and the peace of Christ is manifested, as is evidenced by this successful lecture.—*Correspondence.*

---

I was now assured by evidence which I could not resist, that all which man—with his limited knowledge and experience—has learned to regard as due to Supreme "Power" and "Wisdom," although immeasurably beyond his comprehension, is also associated with the exercise of an "absolutely beneficent" influence over all living things, of every grade, which exist within its range.

And the result of my labor has at least brought me its own reward, by conferring emancipation from the fetters of all the creeds, and unshakable confidence in the Power, the Wisdom, and the Beneficence which pervade and rule the universe.

SIR HENRY THOMPSON.
*A Great Surgeon.*

---

The capacity for religion is a talent, the highest talent we have.—HORACE BUSHNELL.

---

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## As to Legislation.

UNDER the guise of bills "to regulate the practice of medicine and surgery" efforts have been made in different states, from year to year, to secure legislation opposed to Christian Scientists, but it is worthy of note that these bills have not been introduced in response to demands from the general public, and that they have not received the active support of leading and representative physicians, although as a rule their passage has been urged by the medical profession. Because Christian Scientists are not practising medicine, and the courts of many states have so decided, the framers of these bills have endeavored to extend the definition of "the practice of medicine and surgery" to embrace every act of succoring the afflicted, from the administering of the housewife's simples to the final consolation of the clergyman. In this they have forgotten or ignored the fact that the courts will not enforce a strained and erroneous definition, even if backed by legislative sanction.

While Christian Scientists have always protested against legislation the purpose of which is to classify them with practitioners of medicine, they have carefully refrained from opposition to the efforts of the medical profession to raise the standard of its own members through legislation. Christian Scientists concede that the standard of fitness for admission to any of the learned professions should be very high, and that the most learned of each profession should take all lawful and honorable means for preserving the integrity of their standards.

The endeavor of the medical fraternity to establish rigid rules for determining the qualifications of those who desire to enter the profession is praiseworthy and legitimate, for without doubt it would be disastrous to turn loose upon suffering humanity an army of incompetent and inexperienced persons, uneducated in the use of the poisons which comprise so large a portion of *materia medica,* and to entrust to unskilled hands the delicate and dangerous operations of modern surgery.

Attempts to secure legislation for this purpose are, however, entirely separate and distinct from those which have for their aim the prohibition of every system differing from that employed by the class seeking legislation. Legitimate endeavor to repress medical quackery is creditable to the profession, but the same cannot be said of efforts to create a monopoly and to abridge the most sacred rights of the individual. Whether these efforts to prohibit the practice of Christian Science have been prompted by the belief that the sick cannot be healed except by the administration of drugs or the use of surgery, need not be discussed further than to say that every state in which such restrictive legislation has been proposed, numbers among its citizens thousands who owe life and health to the practice of Christian Science, and many of these people will testify that they were healed by Christian Science after medicine and surgery had utterly failed to give relief.

Because these cases of healing are happening every day, and are becoming more widely known; and because the Christian life and character, and exalted ministry of Mrs. Eddy are appreciated by her fellow-citizens of New Hampshire, short work was made of the bill introduced last week in the legislature of that state. The framer of the bill discarded the use of the threadbare cloak, "An act to regulate the practice of medicine and surgery," and boldly assailed Christian Science by name. Before the Christian Scientists of the state had time to oppose the bill it was defeated. Clergymen, physicians, lawyers, and public men of all shades of religious and medical belief rose up in protest, and in forty-eight hours after the bill was referred to the Judiciary Committee, it was defeated. A member who spoke for the committee said that it felt justified in refusing to waste time over the bill, and that it did not feel that constitutional rights of belief should be denied to Christian Scientists or any one else. A motion to recommit was defeated by an overwhelming majority, after which the report of the committee, adverse to the bill, was adopted without a division.

This prompt and decisive action of the popular branch of the New Hampshire legislature is particularly gratifying to Christian Scientists, because it shows that their Leader and her ministry for mankind are appreciated in the state where she was born, where she now resides, and where she has spent the greater part of her life. The thanks of Christian Scientists throughout the world are due to the members of the legislature and to those who came so generously to the aid of our Leader and the Cause she loves and for which she labors. M.

## The Larger Horizon of True Living.

WE are prompted to more thoughtful endeavor toward nobler living only as we awaken to its larger significance.

When Jesus said, "I have overcome the world," he spoke of the most splendid personal doing known to men or angels, for in these few words were gathered up all the unnamed temptation, the unseen heroism, the unmeasured agony and self-sacrifice of the most brave, most pure, and most true life ever lived. To his family, his immediate followers, and his race it had a scope and intensity of significance which none would venture to outline, and yet how meagre and inadequate would be our thought of the great Way-shower and his work, were we to consider his life apart from the larger context of this brief summary which he gives of it.

The extent of Jesus' life-achievement is vastly greater than the story and setting of his unique personality. To-day, as in all the eighteen centuries and more since this declaration was made, men are finding in it the strength and inspiration to which they ascribe their victories, and the triumph of Jesus is chronicled again in all the spiritual overcomings which lie behind the goodness of personality, and greatness of deed which illumine the Christian world.

Now one of the greatest features and encouragements of the Master's life was its universality as the forecast, pattern, and essential basis of all true living; the assurance it gives that to your right consciousness and mine there is the same natural radiation of good; that in our every overcoming something of gain is effected for every struggling heart, and that as surely as we may know that sickness and sin are being defeated and annulled within our own human consciousness, so surely may we know that every other man's problem is not only capable of solution but is being solved. This apprehension of the saving compass of the individual reflection of Truth, brings a meaning and interpretation to life which is both new and inspiring.

The stories of Theseus, and of St. George, and a hundred kindred traditions remind us that this thought of the

Digitized by Google

possibility of a largeness of life which ignores personal limitations in the embrace of its usefulness, has broken out again and again among men, and the world's growing and constantly expressed sense of indebtedness to one who is a Teacher and Leader to-day, attests its present recognition of that larger ministry to which the spiritually responsive are ever led.

Christian Science has given practical direction as well as special emphasis to this great truth revealed in the life of Jesus; viz., that every man may live for the immediate good of every other, and it has begotten a new and intelligent purpose to accomplish something for our brother's rescue, to serve both God and humanity by that overcoming in the arena of our own consciousness which practically aids our every fellow-man in his struggle with the same problem. Christian Science treatment may be interpreted as the extension of a helping hand from a higher elevation of spiritual consciousness. It is our individual and satisfying proof of the omnipresence of Good.

To realize that in every denial of error, every declaration of the truth, every decision for God, we are serving all earth's needy ones; that in resisting temptation, in subduing selfishness, in standing for the right every hour of the day, we are not only securing our own freedom, but are bringing the sin-enthralled, all about us, nearer to the door of their liberty,—to realize this, is to awaken to the greater dignity, effectiveness, and joy of right living. It is to find that unfailing inspiration and strength which make our living a blessing indeed to all. W.

## Our Best.

OFTEN when forced to admit unsatisfactory results, imperfect work, we have said, "Well, I did the best I could," and so indifferently dismissed the matter. But is it true in any case where results are unsatisfactory, that we have done our best? Do we appreciate the grandeur of our best? Jesus gave us the standard of our possibilities: "Be ye therefore perfect, even as your Father which is in heaven is perfect."

Now our old-time trite excuse is simply self-justification, and the sooner we call it by its right name and admit the claim of its enervating influence, the sooner we shall reach the Master's standard, the sooner achieve satisfactory results.

In our old way of thinking we believed our success to be commensurate with the strenuousness of the effort which we of ourselves brought to bear upon the project in hand. Through Christian Science we learn that our works grow in beauty and perfection in exact proportion to our self-surrender, our understanding that God works in and through us.

The perfect reflection of a perfect God must ever be perfection, and any seeming defect must be traceable, not to the immaculate Cause, but to the medium of expression.

To become perfectly reflective of Good in all we think, or say, or do,—and this is to do our best,—means no idle life. It means a valiant struggle with self, a tearing down of the strongholds of old beliefs, a subjugation of principalities and powers, of the fortifications of self-justification and self-esteem which we have been so industriously throwing up and which will not crumble at a frown nor melt with a tear. It may take the full seven days of faith and prayer to conquer, but it is the only conquest worthy of our effort, and the only victory that will enable us to say truthfully, "I did the best I could."

Until self is immolated, it will supply ready excuse for poor results; meanwhile, knowing this, we shall find abiding stimulus to better effort in the remembrance that, with the help of Scientific understanding, "we are all capable of more than we do" (Science and Health, p. 89). S.

## A Brief Account.

WE are pleased to print, with permission, the following interesting letter from Rev. Irving C. Tomlinson of Concord, N. H., to our Leader, Rev. Mary Baker G. Eddy:—

Dearest Mother.

Feeling that you may like to know something more of the notable victory for Truth won by your friends in the legislature of the Granite State, I send you this brief account.

Last Monday the following bill was introduced into the New Hampshire Legislature:—

Sect. I. It shall be unlawful to practise Christian Science, faith cure, Mind Healing, or other like agencies in the curing of disease.

Sect. II. Any person convicted of any of the practices mentioned in Sect. I. shall for the first offence be fined $50; for the second offence, $100, and for each subsequent offence be imprisoned in jail for not less than six months.

Sect. III. In case any treated by a so-called Christian Scientist, Faith Curist, or Mind Healer, should die, and it is proven that said death resulted or was hastened by failure to call a regular physician, said Christian Scientist, Faith Curist, or Mind Healer shall be deemed guilty of manslaughter, and punished as the statutes provide.

The bill, according to the rule, was referred to the Judiciary Committee.

And this Thursday morning, by a vote of 12 to 1, the Committee reported to the House "Inexpedient to legislate."

This favorable report was adopted by the House and the unholy measure was killed by a majority of 12 in a vote of 194.

We have again a beautiful illustration of God with us, for this great victory was won by your friends who are not yet Scientists. No legal counsel was engaged to manage the case. Not one of your representatives visited the Legislature Hall or called upon the Judiciary Committee or one of the legislators. Your many friends outside the church gladly enlisted in your behalf and attended to every needful detail.

It was opposed by Protestants and Catholics, laymen, lawyers, and doctors. On the floor of the House you had the help of Lawyer Buckley of Lancaster, a law partner of Ex-Governor Jordan, and Mr. William Ahern, a democrat and Roman Catholic of Concord. An active worker on our side in the House, was Dr. Hill, a representative from Concord.

The temper of the public is shown in the expedition with which the affair was disposed of. The bill went to the Committee Tuesday. Thursday morning they voted "Inexpedient," and before noon the legislature had reduced it to its "native nothingness."

Yours with three cheers for the Granite State,

IRVING C. TOMLINSON.

Concord, N. H., January 29, 1903.

### The New German Supplement.

Those whose work brings them in touch with German-speaking people, will find the supplement, issued with this number, a ready means for disseminating information regarding Christian Science. Additional copies of the supplement will be supplied at regular prices, which will be found on page 367.

The fact of our deriving constant pleasure from whatever is a type or semblance of the Divine attributes, is the most glorious of all that can be demonstrated of human nature; it not only sets a great gulf of separation between us and the lower animals, but it seems a promise of a communion ultimately deep, close, and conscious with the Being whose manifestations we here delight in.—*Exchange.*

## From our Contributors.

### Being Ready for Christian Science.

EDWARD EVERETT NORWOOD.

WHILE we know that al are really the ons and daughters of God, and in our awakening are ready for the spiritual uplift and regeneration that Christian Science brings, we find in our experience that some apply for the healing who are seemingly unwilling so to surrender the beliefs of materialism as to let the light of Truth come in, that the giory of the Lord may be risen upon them.

Recently a man applied for treatment, and prefaced his application by saying: "Now, first of all, I desire you to give me some proofs that this system of yours is going to cure me. I want to know if you have cured others of the same trouble, how long it required, and to know if you are sure you can cure me. I am a practical man, and do not intend to spend my time, patience, and money experimenting."

The writer, in so many words, replied: "My friend, what you are saying and asking is not new to me, for you have voiced the spoken or unspoken thought of a large majority of those who come to us for help in Christian Science. From a human sense basis, your demand seems reasonable enough, and it is perfectly natural for you to think it is so. But let us consider it a little and see.

"First of all, you tell me you have what has been pronounced by physicians (several of them specialists in their line) an incurable disease. You have spent large sums of money with them, a great deal of time, and I presume, much patience, else you would not have continued their treatment as long as you have.

"You have admitted that during this time you relied upon God, the divine Helper, practically not at all; even frankly acknowledging that your faith in His power and willingness to heal was very slight indeed. During this time the physicians failed to relieve you to any appreciable extent. Finally, as a last resort, you have come to Christian Science for help. Yet the natural inference from what you say is, that if I cannot promise you a complete and certain cure at an early date, you will abandon this system of mind-healing, which I firmly believe to be God's method, and return to the material. Now, it is a poor rule that will not work both ways. Before I even agree to take your case, I desire some proofs from you.

"First of all, I wish to say, Christian Science is not a doctor's shop. It is not merely a system of mental therapeutics, but it is a religion,—the Scientific Christianity which Jesus taught and demonstrated, and which we also are now endeavoring to demonstrate. Are you ready and willing to give up the false thinking, the sinful practices, which you admit to a great extent caused your trouble? Are you willing to endeavor to purify your consciousness of all evil, the beliefs of pleasure in matter, to deny false appetite? Are you ready to be governed by my suggestions as to reading and to open your mind, prayerfully, hopefully, to see whether or not Christian Science is the truth? Are you willing to make a sacrifice of money to pay for your treatment, and of your time, that you may come here and let me tell you of God and His spiritual laws; and of your patience, that it may have its perfect work? Are you willing to give up your spirit of condecension and to come as a little child, saying, 'If this is God's word, if it is God's truth, I want it above everything else in this wide world, and will give up all else to get it, and shall patiently wait until my mind is renewed,—seeking first the kingdom of God and His righteousness, Truth, for Truth's sake—knowing that all other things will be added?'

"If you are not willing, my dear friend, to approximate these statements, or at least to change your attitude of thought to a great extent from what at present it seems to be, you would better wait a while, and come at some future time when you are ready. Such are the 'proofs' which we, as Christian Scientists, require, and they are far more reasonable than yours."

The person in question "went away sorrowing, for he had great possessions" of false beliefs, but his view-point was greatly changed, and it may be confidently affirmed, from various evidences, that he is not far from the door, and when he does come again, it will be in a better and more receptive state of mind.

Science and Health, p. 456, tells us, "Science makes no concessions to persons or opinions," and surely we should uphold the banner of Christian Science in a dignified way, and let all see that we have something they absolutely need, but to get it, they must say with the seeker of old, "Lord, I believe, help Thou mine unbelief."

### A Suggestion for Children.

R. M.

THIS summer while visiting relatives in Canada I noticed that my sister's children were much interested in a new sort of juvenile savings bank.

A small box with an aperture at one end and a slot in the middle of the top was left at the home of the young patron. Over the opening in the end a stiff piece of paper had been pasted, which was removed once a month, when the collector called for the contents and credited the amount saved to the young owner.

The little folks were greatly delighted when I added my mite to their savings, and thinking it a good time to impress a lesson I said, "Now I am going to ask you to contribute to a sinking fund that I want to establish. I am going to teach you how to start a banking business in good works. The coins in this institution will be prayers instead of pennies, and deeds instead of dollars. Every time that you do a kindly act, you are adding to the value of the stock, and when you reach manhood's estate, you will have a good capital to begin life with in earnest."

This idea seemed no less pleasing to the little ones, than that of hoarding pennies.

I wonder if any of my young readers could guess the character of the first coin put into this novel banking institution. I see I shall have to tell you. Its denomination was "love." As you will learn later, there is a great variety of coins that belong to this denomination. All acts of unselfishness, kindness, courtesy, and thoughtfulness for the comfort of others come under this head.

While sitting on the porch one afternoon, with the youngest of my wee financiers, I noticed a lonely little chick, that had escaped the sheltering protection of its mother's wing and had fallen into the creek. He was making frantic endeavors to reach *terra firma*, but every time he touched the shore, a wicked yellow dog snapped at him so viciously, that he retreated again to the water.

I drew the attention of my small companion to the painful situation, and as fast as his chubby little legs could carry him, he ran to the bridge, crossed it, drove off the ugly dog, and rescued the terrified chick. This seemed such a propitious beginning for our bank, that the little folk were quite enthusiastic to continue the good work, and I have no doubt long ere this have added many beautiful coins to their collection.

Since then I have wondered if it would not be feasible to enlist the services of all our boys and girls in establishing a great moral sinking fund, which will eventually wipe out the debt of sin, and hasten the coming of the kingdom of heaven upon earth. We cannot afford to ignore the children's aid in establishing the universal reign

Digitized by Google

of harmony which must result from the demonstrations of Truth, and we might call such an organization The International, Good-Deed, Investment Association.

This is rather a long name, but I am going to suggest that we add yet another word. Several years ago when I was abroad I noticed something that struck me as being very peculiar. Instead of having the sign John Brown & Co. over a grocery store, as we see it in America, I found it named John Brown & Compy., Limited. The commercial usage of the term as I came to understand it does not suit our wants, but nevertheless I propose that we make the term "Unlimited," and add it to the title of the organization. Our banking institution being altogether original, why should we not have an original title, original business methods, and original means of extending our field of usefulness? In fact, I know of only one thing original that we need bar out of this institution, that is original sin, which, after all, is not original, for Christian Science teaches that God (Good) is the only origin, and if Good is the only origin, it stands to reason that everything original must be good.

However, we have wandered a little way from our title which now reads in full: The International, Good-Deed, Investment Association, Unlimited.

It seems to me that this designation is appropriate, for certainly we are investing our treasures "where neither moth nor rust doth corrupt, and where thieves do not break through nor steal." In other words, we are building character, for you know how the old adage runs, "Sow a deed, reap a habit; sow a habit, reap a character; sow a character, reap a destiny." Now it follows if the deed be good so will be the habit, and if the habit be good so will be the character, and likewise the destiny which is its outgrowth.

Moreover, the term "Unlimited" suggests the great truth that the resources of Good are inexhaustible. We need never be obliged to suspend business or take advantage of the bankruptcy law because of lack of capital. In proportion as we realize this, we cannot collapse, for there is no reaction in Mind.

Then too I like the word "Unlimited" because there need be no age limit as regards membership in this association. No one is too young and no one is too old to join it. The little maid who closes the door softly so as not to disturb the sleeping baby, has deposited a coin in our bank that is not to be despised. And while I have addressed this suggestion to children, adults will be welcomed as investors, for are we not all infants in Science, and is it not written, "The child shall die an hundred years old"?

## Israel's Helper.

J. E. FELLERS.

THE Bible is replete with incidents to which many events in the last century run parallel. The beautiful story of Moses has a new and peculiar interest when studied from the standpoint of comparison. The king of Egypt, actuated by "the elemental principle of all persecution—that of fear blended with envy," and a mistaken belief of doing right, sought to destroy God's chosen people, the children of Israel. Task-masters were placed over them. Burdens were imposed upon them beyond endurance. The chains of bondage were riveted tighter and tighter. Finally the edict was sent forth that their children should be cast into the Nile as soon as they were born.

About this time Moses was born. At first his mother thought she would hide him from the king's wrath, but learning that this could not be done, she made a small ark of the reeds that grew on the banks of the river, put the babe in the ark, and placed it upon the waters near the shore, leaving the babe's sister to watch what might become of it. Just as this frail bark and its occupant were about to be borne away from the shore and into the current, the king's daughter, a godly woman, came along, heard a faint cry, had the child delivered from danger, and when a nurse was needed to care for this babe, at its sister's suggestion, its own mother was chosen. Whether the king's daughter know that the nurse was the mother of the child, we cannot tell. If we are wise, however, we may observe that in this case, as in many others, God chose a woman to bring back to the world that which her father had sent away.

How like the Egyptian king and his priests, each believing that he was doing a great work, were the advocates of the time-honored remedies for earth's suffering and woe; how like the Nile,—heavy, sluggish, and turbid,—were the false beliefs of humanity, and how like Moses, helpless, adrift on this perilous stream, and ignorant of danger, was all mankind when Science and Health was given to the world, and through it and its author Christian Science was brought back to human consciousness. Note also how like the king's daughter, who heard the young child's cry, protected him from the wrath of established customs, took him back to his father's home and laid him in his mother's arms, was our Leader, who, hearing the call of her fellowmen, led them back to an understanding of life eternal and to a confidence in the protection of a Father-Mother God.

## His Kingdom.

JOHN F. BRAUN.

ONE of the phrases which fell most readily from the lips of Jesus was "the kingdom of heaven," and we gain a clearer insight into His kingdom by a study of the contexts and similes which Jesus employed in this connection.

When, according to Matthew, he likened the kingdom of heaven unto "a man who sowed good seed," unto "ten virgins," unto "a net," it seemed as if he wanted to point out the fact that his subject should be part of the everyday experience of plain men and women. He further said it was like "a king," like "a treasure," like "a householder," like "a traveler," like "leaven." Surely the import of these homely similes is, that heaven is not a far-off place, but something very close "at hand."

The Master did not compare it to the far-off planets, nor to the impalpable rainbow, nor to something unapproachably distant. He seemed continually to bring his subject close to men, to find a link by which to connect the ideal with the practical routine of work-a-day life.

True, it was not to be of this world, not of the universe of matter, of sin, sickness, and death; but it was to be "within you," for those who could look past the seeming, and who, with spiritual discernment, could take in the things of God.

It has been well said that things are just as real as we make them; it is also true that only those things appear to us, which we have the sense to perceive. On a material plane, we seem to need the sense of sight in order to appreciate color, and the sense of hearing to perceive sound; in somewhat the same way we need spiritual sense in order to become conscious of the presence of the kingdom of heaven.

It might be possible to find a man, physically blind, who is prepared to deny the existence of color; in the same way "the fool hath said in his heart, There is no God." This fool is merely an unfortunate fool, for he is blind to the beauty of holiness and deaf to the sweet concord of divine harmony; he has never developed spiritual sense, and the things of the kingdom are to him a sealed book. To the infidel, God is nothing and nowhere. To many Christians God is something, somewhere; and He only becomes All-in-all to us as we follow the apostolic injunction to put off

Digitized by Google

the old man and put on the new man, who, made in the Divine image, can, with spiritual sense, realize the allness of God, and, realizing, can enter the kingdom.

When a great truth comes to the individual, it comes by inspiration. This inspiration is not miraculous, it is, on the contrary, perfectly natural. It is the inbreathing of the things of the kingdom through spiritual sense; inspiration is normal for the consciousness which is dedicated to Love. Some time since a clergyman asked with a smile, if the Christian Scientists really believed that the Founder of their church received Christian Science by inspiration. The reply was, "Certainly they do," and their reason for so believing is as follows: God is Spirit and God is Truth; therefore if this is, as we believe, a great spiritual truth, it must have come direct from God, there is no other source whence spiritual truth could emanate. This, then, is inspiration; inspiration that will come to each thought attuned to heavenly things.

Our text-book makes clear the great fact that this kingdom of heaven is not a far-off ideal, attainable only after death, but that it is a present possibility. Many sermons have been preached on this subject and many books written, and while the subject is a large one, for it embraces infinity, yet, like all the subjects handled by Jesus, this one lends itself to a very simple solution, one not above the comprehension of the "little child." In the light of Science it is possible to define heaven, or at least to locate it, in a few words: *"The place where God is."* Heaven without His presence is unthinkable; with His presence it is complete. God is everywhere, therefore heaven is omnipresent, prepared to open its pearly gates to each aspiring thought and to send its celestial visitants upon the slightest hint that they will be made welcome.

This knowledge of the ever-presence of the kingdom is at once supremely idealistic and intensely practical, for it clears the mental atmosphere. The consciousness which knows, even to a limited degree, something of the ever-presence of the kingdom, is equipped to battle with the seeming forces of error. The assurance of this ever-presence of Good is the sword of the Spirit, which can decapitate every form of evil and bring to each one of us that peace which the world cannot know.

## "Ho, Every One that Thirsteth."

M.

SINCE my experience has been so different from that of others, I write it, trusting that it may help some seeker after Truth who is situated as I was a few years ago.

Shortly after becoming interested in Christian Science, I gave birth to a child. This circumstance, together with other conditions that arose, made it impossible for me to take class instruction at once.

I had accepted Christian Science through faith, and had felt its healing touch under treatment. But I was not satisfied, and wished to have an understanding which would enable me to apply its teachings to my every-day life.

I had previously been told by a Scientist to study all Mrs. Eddy's writings. Following this advice, I devoted the most of my spare time to a systematic study of the Bible and of Science and Health, together with all of Mrs. Eddy's other writings, the Church Manual, and the authorized Science literature.

So far as I understood, I proved from the first the truth of Mrs. Eddy's teaching. Thus gradually, by study and by demonstration, I came into that understanding which is *knowing*.

To-day I no more doubt the truth of Christian Science than I do that of the multiplication table. When I turn to the Bible and Science and Health for help, I know that it is the voice of God that is speaking to me, and I am satisfied.

Therefore I would say to those who for any sufficient reason are deprived of class instruction, wherever you may be, in Boston, or in the most remote parts of the earth, "Do not be discouraged, 'Love is impartial and universal in its adaptation and bestowals' (Science and Health, p. 13). The same wisdom which has provided class instruction through our beloved Leader, has also provided this wonderful Science literature, which enables an honest, earnest seeker after Truth to understand and prove the truth of Christ's saying, 'If ye continue in my word, then are ye my disciples indeed; and ye shall know the truth, and the truth shall make you free.'"

## "Only Little Snowflakes."

A. H. KOHLHAMMER.

ONLY little snowflakes, so small, so white, so soft: gently falling, falling; yet as they rest upon the dark and dreary earth, little by little they clothe all in a mantle of dazzling white, even in a robe of sparkling beauty.

May we not all learn and heed their lesson; for if we examine ourselves, we may often, yes, too often, find our lives darkened by sin, sickness, and despair; barren of good deeds and acts of kindness, and disobedient to the good, endearing, and true.

Then it is that even as the snowflakes accomplish with ease the task of robing all in white, so we, if we pattern our thoughts after purity and Love, and show forth that Mind which was also in Christ Jesus, may make to disappear the unideal, unworthy, and unreal of human manifestation and experience, and so make our lives an expression of grace and beauty.

How easily, also, may we cover our brother's nakedness (even his faults) by hiding them beneath a mantle of loving compassion, thus beholding in him only the perfect and true always.

If each little word, each little deed, be a word or deed of love, they will change darkness to light, sorrow to joy, pain to pleasure, and sickness to health.

How careful we all should be in thought and deed, always remembering Jesus' words, our Leader's motto, "What I say unto you, I say unto all, *Watch.*"

Keep still. When trouble is brewing, keep still. When slander is getting on his legs, keep still. When your feelings are hurt, keep still, till you recover from your excitement at any rate. Things look differently through an unagitated eye. In a commotion, once, I wrote a letter and sent it, and wished I had not. In my later years I had another commotion, and wrote a long letter; but life had rubbed a little sense into me and I kept that letter in my pocket against the day when I could look it over without agitation and without tears. I was glad I did. Less and less it seemed necessary to send it. I was not sure it would do any hurt, but in my doubtfulness I leaned to reticence, and eventually it was destroyed.

Time works wonders. Wait till you can speak calmly, and then you will not need to speak, maybe. Silence is the most massive thing conceivable, sometimes. It is strength in very grandeur. It is like a regiment ordered to stand still in the mad fury of battle. To plunge in were twice as easy.—DR. BURTON.

### Three Little Rules.

Three little rules we all should keep
To make life happy and bright—
Smile in the morning; smile at noon;
And keep on smiling at night!

*St. Nicholas.*

Digitized by Google

## Testimonies of Healing.

Two little children of a friend of mine, not a Scientist, ate a quantity of powdered glass and sugar, but by the prompt use of Christian Science, the threatened trouble was met so fully that but one of the children had any belief of suffering and that was so slight as not to interfere with his play. This experience has made it more plain than ever to me how God is an ever-present help in time of trouble and very near to those who call on Him.

A. E. D., Provo City, Utah.

---

It is a little more than three years since I heard of Christian Science by receiving a *Journal* which I read carefully.

A Christian Scientist who seemed very glad that I was interested gave me more literature and asked me to give up my medicine for a few days and then come and she would let me take her Science and Health. That helped me more, and in a short time, I went home without my medicine and with much improved health. I read some numbers of the *Sentinel,* and soon sent for Science and Health.

I need not give the details of my ailments, for we hear too much of sickness. I had already dwelt on them too long. Now, I am trying to be more thankful for the truth which makes free, and to realize that Love is sufficient at all times. I now have a copy of Science and Health, which I enjoy.

The way has not always been bright. Many times I have felt most discouraged, but where can we look but to Him who has given us such wonderful promises? The Bible is full of them, but before studying it in the light of Christian Science, I could not see them.—G. E. B., Plainwell, Mich.

---

My New Year's resolution was to send in my testimony to the *Sentinel.* I am ashamed to say I have waited three years to do this.

I was healed of creeping paralysis, rheumatism, and nervous prostration. For the encouragement of any who think they will try one more material remedy before giving Christian Science a trial, I will say I had many eminent physicians in Chicago, of all schools; I had electricity, massage, everything, in fact, that money could procure. One of my greatest sins was allowing a sense of depression to come over me. I was healed of that by reciting a verse from our Leader's poem, "Wish and Item," "That melancholy mortals will count their mercies o'er" (Miscellaneous Writings, p. 391). So that when tempted to grieve I say, "Am I counting my mercies o'er?"

After a few months' study in Science, I was cured of the grip by Truth revealed in the words "Being is holiness, harmony, immortality" (Science and Health, p. 492).

To help some who may think they are not being healed fast enough, let me tell them that this was not done in a day. I had treatment every day for six months, and had to go many times for help to the loving practitioner, who taught me step by step the way out of error, but by clinging steadfastly to God and His idea (Science and Health, p. 495) I have come out all right.

I had other troubles besides sickness to overcome. Through the study of false mental methods, I had been greatly confused in thought. In my own family I have seen diphtheria healed in one treatment, and for all this I am more than grateful to God for the truth revealed through our Leader, and I am thankful for all who have helped me.—Mrs. M. L. Edison, Chicago, Ill.

Christian Science was brought to my special notice in 1898 by the healing of my wife. We had tried all the local physicians. She also underwent an operation at a hospital, where they pronounced her trouble tubercular peritonitis, and gave no great hopes of recovery. She grew worse, and at length the attending doctor said the only remedy that would prolong life would be another operation, and that it must be performed within three weeks. So we decided to try Christian Science, and accordingly sent for a practitioner who came and gave treatment. The following day my wife went to the table and ate what the rest did, after which she rode with the practitioner two miles in a carriage and ten miles on the steam cars with no ill effects. The following Sunday she walked to church, a distance of one third of a mile. She came home in less than three weeks and has never had a return of the trouble. I have seen many demonstrations to prove that Christian Science is from God.—A. I. Goding, West Acton, Mass.

---

In love and thankfulness I would like to express my gratitude for our periodicals, the *Journal* and *Sentinel,* and to all who have, through them or otherwise, helped me in any way to understand and demonstrate Christian Science. All that I have and all that I am, I owe to it. Not only has it given me perfect health, but it has enabled me to overcome many discordant conditions in myself and others.

One morning I was called in haste and asked to stay with a neighbor while her daughter went for a doctor. I was also asked to suggest some material remedy that might relieve the pain pending the arrival of the physician. The trouble was eczema, the whole throat being very red, with large yellow blisters from which yellow matter was flowing. Instead of the desired material remedy I offered Science treatment, of which the family knew nothing up to that time, and it was gratefully accepted. There was, at the time the treatment was commenced, every manifestation of intense suffering, but the relief was so pronounced and immediate that a continuance of Christian Science treatment was preferred to medicine, asked for, and, of course, given, and the doctor was not sent for. In one week the throat was perfectly white, showing no trace of eczema whatever.

A pronounced case of train sickness, which asserted itself even when the victim, a child, rode in a street car or carriage, was overcome in one treatment and has not reappeared in the six years since, although much traveling has been done. For all the victories over error and all the blessings of Truth I am more than grateful.

M. L. W., Baltimore, Md.

---

I wish to acknowledge through the pages of the *Sentinel,* the healing of inherited heart trouble. Last year its symptoms became more and more aggravated, until it had reached a stage which was alarming. For months I battled, for I was constantly conscious of its intruding presence. It was the last thing I was conscious of when I went to sleep and the first when I awoke. This is what would suggest itself, "Any one who has been in Science as long as you have, and is not yet healed of a chronic difficulty, cannot expect to be healed on this plane of thought;" and then the last enemy would suggest itself. Although I never admitted this suggestion, yet I seemingly grew worse.

On the evening of the 17th of last October, Mr. Carol Norton lectured here. I was healed at this lecture of chronic heart trouble. I was not conscious of it, however, until the next morning. When I awoke, I was free from every symptom, and these words came to me at once, "I believe I've been healed." I have been free from every symptom ever since. I am very grateful for this healing.

Digitized by Google

It was unexpected and very sudden, and has been a source of great encouragement as well as freedom.

A. H., Ottumwa, Ia.

---

I wish to express my gratitude for what Christian Science has done for me. About three years ago I began to have severe attacks of backache. Although my mother was a Christian Scientist I did not ask her for treatment and I did not have sufficient understanding of the truth to help myself. The attacks of backache became more frequent until finally I was in almost constant pain. The spinal trouble caused my body gradually to grow deformed, one side being much shorter than the other, and in one of my hips the bone seemed to be out of the socket.

At this time I was living with relatives who were not Scientists, and they and others were much alarmed at my condition. Now I saw that neither will-power nor my small understanding were able to save me. I asked my mother for treatment. My healing was slow. I had seemingly suffered much, the mental discord being even greater than the physical. For a short time there was no improvement, then another practitioner took the case and I at once grew better. The pain and weakness soon left me and my body once more became straight. I think I owe everything to Christian Science, and though there is so much yet to learn, surely the experience has not been in vain.—L. E. J., Fortuna, Cal.

---

The day before Thanksgiving, a little child, six years of age, who was in our town with a theatrical company, had been suffering from fever for about three days. She would not have a doctor or take any medicine, but said, "If you could only find a Christian Scientist I should be well." Her mother made inquiries and called for me. I went to see the child, who was in bed with a high fever. In an hour after treatment she came bounding into my office and said, "I am all right now." There was not a sign of fever and perfect action of the system had been made manifest. This resulted in bringing he leading lady in the troupe to ask for treatment. She resolved, also, to devote the next summer to studying Christian Science. The child's faith made her whole. Surely I am most thankful for Christian Science and to Mrs. Eddy for giving us so rich a treasure.

M. L. R., Cadillac, Mich.

---

Prayer makes us feel the divine presence,—the presence of a heavenly Father and an Almighty friend. That presence must be consolation, strength, and joy. He who "prays without ceasing" will "rejoice evermore."

W. J. Fox.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

---

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

## Religious Items.

We see convincing evidences that the Christian Churches in this country are in the first stage of an evangelistic movement, which is likely to affect all denominations and to continue for several years. These evidences are found in newspaper discussions of religious problems, in news from the Churches, reports of sermons, and plans for aggressive work. Especially do we note the increasing purpose of individual Christians to reach their neighbors and friends with the effort to persuade them to declare themselves as disciples of Christ. The Presbyterian Church is probably taking the lead in this movement at the present time. But other denominations are falling into line. The *Watchman* notes many signs of aggressive effort among Baptists throughout the whole country. Methodist papers speak hopefully of the sense of longing among their Churches for deeper spiritual power to break through the indifference and worldliness of the life around them. Letters received by us breathe like aspirations and hope. This movement is not confined to any locality, does not put forward any particular doctrine, recognizes no one great leader. It is the quiet awakening of men and women to the value of Christian living, to the supreme importance of fellowship with God, to admiration of the character of Jesus Christ, as the revelation of the Father, to a growing desire to become like him and to persuade others to come into obedience to him. These indications summon every Christian to renewed prayer, to more faithful study of the Bible, and to keep open eyes to discover opportunities to win others to Christ.

*The Congregationalist and Christian World.*

Robert Stuart MacArthur says in *The Watchman:* "It is comparatively useless for pastors to denounce the 'higher criticism' and to announce their own loyalty to orthodox views of Scripture and theology if their own ministry is fruitless in the edification of saints and in the conversion of sinners. A warm-hearted and loving heterodoxy may be more acceptable to God than a frigid and moribund orthodoxy. There are some men so anxious to keep all their theological fences in superb repair that they neither till the fields nor reap any harvests. The question for a true orthodoxy is not, ultimately, as to the depth of its well, but as to the number of thirsty souls whom it satisfies with its living water. Let the old Gospel have free course and be glorified once more in all our pulpits. Let Christ and him crucified be exalted as the only hope of lost men and women. An exalted Christ is still the mightiest magnet to draw men to holiness and to heaven. A warm, living, loving Gospel would be the newest, freshest, sweetest, and mightiest message which has been heard for many years in some pulpits. Let us give the crucified Christ the opportunity in every pulpit to fulfil his promise, 'And I, if I be lifted up from the earth, will draw all men unto me.'"

There is nothing that religion needs more, if it is to retain its hold on multitudes who are indifferent to its claims, nothing that religion needs so much, if it is to awaken once again those deep spiritual impulses and magnificent enthusiasms which have marked its great ages, as a method of treatment and a class of advocates which will uncover and proclaim those universal and everlasting principles on which religion rests in the nature of man and in the history of the world. We must find a foundation in a universalism of thought and philosophy broad enough and solid enough to support the affirmation that religion is an everlasting necessity, and that without it there can be no philosophy of history, and no permanent hope of human progress. We must insist that the whole argument for religion, and for that specific form of religion called Christianity, must be reconstructed from the ground up. We must ask it to justify itself in the fierce light of all knowledge, and insist that all forms of faith shall stand the test of the enlightened intelligence and the moral judgments of mankind.—*The Universalist Leader.*

We need to recognize anew the teaching of Christ and of Paul that our most immediate environment is not matter but spirit. We are insphered by the spirit of God. In Him we live and move and have our being. We pray for a revival. God is waiting to give it. His method is simple. "The Spirit also helpeth our infirmities." God works in as we work out. Our importunity is God's opportunity. Humanity exhausted brings God the Exhaustless. Divine involution complements human evolution. Infinite fulness is at hand. Be filled with the Spirit.

The Spirit alone can refresh us, disentangle and emancipate us from our materialistic earthiness. The ice-bound, snow-covered earth will soon yield to the glad, returning, life-giving sun, and early spring will reveal once more the abundance of life. Let the Spirit help and the revival is here. Welcome the Spirit's involution and truest evolution follows. Yield the cold heart to the warmth of the loving, life-bringing Son of God, through the Spirit, and our prayers for revival will not be in vain.

J. W. BRIGHAM.

The remarks of Rev. Leighton Williams, a speaker at a recent Baptist convention in Boston, are thus summarized in *The Standard:* "Something ends with the close of the New Testament canon, namely, the authoritative rule of faith and practice for the whole Christian Church. But it is incorrect to say that revelation ends with the New Testament. God as the ever-living and ever-acting is also the ever-speaking God. The attempted distinction between revelation and illumination is fallacious and unsatisfactory. Revelation is not so much external as internal. Belief in continuous inspiration and revelation is called for, and intelligent Baptists should be ready to embrace it. Great will be the increase of power in our Churches when they are prepared to 'hear what the Spirit saith unto the Churches.'"

A man in really good circumstances once said: "I look at what I have not and think myself unhappy; others look at what I have and count me happy." It is our shame and sin that we are not all more ready to count our mercies—to consider the blessings we have instead of complaining of things we seem to lack. How prone we are to forget God's benefits! We have excellent memories for all our trials and sorrows and losses, but fail to recall our blessings. It seems that the very abundance of God's favors and their ever unbroken flow tend to make us all the more forgetful of the Giver of them all. But it is our duty to remember to be thankful. If we think, we cannot but thank.

*The Standard.*

Jesus said of himself, "I am the light of the world," and of his disciples, "Ye are the light of the world." So then, if we are his disciples, we are fulfilling the same service to the world that he, the true Light, came to fulfil. Nor are we, as is sometimes said, mere reflectors of Christ's light. The holy flame has been kindled within us, and become a part of ourselves, so that we are as truly, in our measure, centres of light as was he. This is at once a precious privilege and a tremendous responsibility.

*The Examiner.*

Let those who sometimes suppose gentleness to be tame, insipid virtue, make careful study of it as seen in the character of Jesus. They will learn to admire it. They will be impelled to cultivate it. They will perceive it to be a fruitful source of true and mighty power. When we understand that, one is gentle, as Jesus was, because he can afford to be: because, apart from the moral aspect of the matter, he realizes that he is strong enough in the highest sense to dispense with bluster, we feel that he has attained to a lofty and honorable level of character and life.—*Selected.*

The Rev. John Love, D.D., says in *The Examiner:* "Christ taught a practical religion: a helpful religion; a religion sweet in spirit and lovely in expression, and which, carried out literally, and by all, would introduce a blessed era in the home, the church, in society, in business. It was given not for information merely, but for inspiration; not that we might form a creed, but that we might shape a life. The 'Golden Discourse' incorporated and emphasized the 'Golden Rule,' which, fulfilled by all, would introduce the true 'Golden Age.'"

Sometimes the Christian life is presented in such an unlovely guise through the conduct of those who are supposed to illustrate it that there is little reason for wondering that men are repelled from it. Still the chances are that far too much is made of the shortcomings of Christians. No one fully realizes his purposes and ideals, and the man who is struggling hardest may make the least headway because he has the most to contend against.—*The Watchman.*

Two ways: To argue about holiness until you lose it. Simply to testify to it and let the other party argue all he pleases.

*The Christian Witness.*

We believe that the Gospel needs to be declared far more than it needs to be defended.

JAMES WILEY.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The Elkins Bill amending the Inter-State Commerce laws on the points of rebates and discriminations by common carriers has been adopted by the Senate without debate. Senator Hoar's bill, carrying out the Administration's suggestions for the expedition of anti-trust cases in the courts, has been passed by the Senate and House. The Senate has also put in the Department of Commerce Bill its approval of the Bureau for Corporations and the provisions for publicity as to affairs of trusts.

A number of bills have been introduced into the Legislatures of both Massachusetts and Connecticut to regulate the speed of automobiles and define their privileges. The Connecticut bills are especially drastic. In Rhode Island the speed is limited to the "common traveling pace," which the courts have decided is about seven miles per hour. Maine is also legislating on the subject.

The Fowler Currency Bill came up for consideration in the House last week. This bill permits National Banks to issue credit currency notes equal to twenty-five per cent of their capital, the notes to be taxed at a half per cent per annum and to be safeguarded by a guaranty fund of five per cent of the notes outstanding.

By a vote of 51 to 16 the City Council of Chicago has voted to ask the Legislature to pass a bill allowing any city of the State to purchase street car lines at any time by condemnation proceedings, thus permitting municipal ownership of street railways.

The monthly statement of the public debt shows that at the close of business January 31, 1903, the total debt, less cash in the treasury, amounted to $943,942,563, which is a decrease for the month of $3,222,116.

The withdrawal of J. Edward Addicks as candidate for United States Senator from Delaware probably ends his twelve year contest for that position and breaks the deadlock in the senatorial contest.

**Foreign.**

The Vera Cruz and Pacific Railroad was completed last week between Cardova and Santa Lucrecia. It connects with the National Tehuantepec Railroad at the latter place, thereby giving an all-rail route to the Atlantic port of Coatzacoalcos and the Pacific port of Salina Cruz, from points in the United States and interior points in Mexico. This road is an important link in the long-projected Pan-American line.

The Venezuelan affair seems to be progressing satisfactorily, although there have been several delays. Protocols have been drafted and are about ready to sign providing for the reference of the claims of the blockading Powers for preferential treatment, for the cash payment of $27,500 to each, and the raising of the blockade.

The treasury report for Cuba for January gives the balance in hand at the end of the month as $2,180,841, against $1,824,882 at the close of December. The January receipts were $1,528,400 and the disbursements $1,172,450.

The fourth of the Russian torpedo boats, against whose passage through the Dardanelles Great Britain protested, passed through the straits last week.

**Industrial and Commercial.**

Exports of manufactures show a marked increase in the calendar year 1902 as compared with 1901. The total value of the 1902 exports of manufactures, as shown by the figures of the Treasury Bureau of Statistics, is $410,650,967, against $395,134,030 in 1901. Nearly all the important manufactures entering into our export trade show an increase. Iron and steel manufactures show a decrease of over $4,500,000, and mineral oils a reduction of $4,000,000. Copper manufactures showed the largest gain, $12,000,000. The next largest gain is in cotton manufactures, which shows an increase of over $7,000,000. This increase in cotton goods is chiefly in cloths sent to China, the total exports of cotton cloths to China in 1902 having been 326,000,000 yards against 201,000,000 yards in 1901, the value in 1902 being $16,048,455, against $10,224,215 in 1901. Agricultural implements show an increase of over $1,000,000; books, maps, etc., nearly $1,000,000; manufactures of fibres nearly $1,000,000; leather and manufactures thereof, $1,500,000; manufactures of wood, over $1,000,000; while woolen goods, paints, paraffin, jewelry, india-rubber goods, glass, and gunpowder and other explosives also show increases in greater or less degree.

After many conferences between Mayor Low, the Board of Estimate and Apportionment, and the officials of the New York Central Railroad an agreement has been reached for the enlargement of the road's terminal facilities. The plans provide, among many costly terminal improvements, for a mammoth hotel above the Grand Central Station, similar to that which will be built over the Pennsylvania's terminal station on the West Side. Mayor Low has asked that the necessary bills be passed by the Legislature to authorize the proposed changes.

A locomotive of the De Glehn type, which has taken from this country to France the palm for swift running, is being built by the Baldwin Locomotive Works for Cornell. It will be a four-cylinder balanced compound of the passenger type with four truck and four driving wheels. The engine will cost about fifteen thousand dollars. Purdue University and Cornell have both adopted this plan of studying the engine.

According to reports the traffic situation in the South, Southeast, and Southwest is now more serious than it has been at any time this year. The railroads are short of rolling stock, cars, and motive power, and the situation, instead of improving as was expected after the bulk of the cotton crop had been moved is steadily growing worse. There is much improvement, however, in the shortage on the western roads.

During the month of January the Delaware, Lackawanna, & Western Coal Company's output was a record-breaker. The total number of tons mined was 963,700. The company's total output for the last week was 248,000 tons, showing an increase mined and transported output of 79,700 over the previous month.

The subsidiary companies of the United States Steel Corporation have orders on their books for over 5,500,000 tons, the largest unfilled bookings that they have ever had.

**General.**

"Signor Marconi has made contracts," says *The Watchman*, "to transmit messages between America and Europe by wireless telegraphy at ten cents a word, the present price by cable being twenty-five cents, and he thinks the price may ultimately be reduced to one cent a word. In that case the cables would be superseded for telegraphic purposes, but they might be changed to telephone uses. It would be interesting to sit in one's office or home and talk with a friend on business connection in London or Paris. To imagine that a father may sit in his home and converse with a son or daughter who is serving as a missionary in India or Japan is far less improbable now than the idea of reaching India in six weeks would have appeared in 1800 or than the possibility of talking with any one five miles away would have seemed fifty years ago."

The extraordinary Biblical find, the discovery of which in Egypt has already been noted, is a manuscript of four books of the Pentateuch, written in Samaritan characters on parchment. The manuscript contains two hundred and fifty-five folios in excellent state of preservation with the exception of the first page, which has been restored. The folios are thirty-eight centimetres long, containing twenty-four lines to a page. A page containing the date 116 Moslem era, which is equivalent to A.D. 738, is well preserved. The manuscript is the oldest of any of the Hebrew manuscripts of the Bible yet discovered. Its owner is reported as already negotiating the sale of it to the Chicago Museum.

The National Association of American Roadmakers meets at Detroit this week. One of the measures that will come up for discussion is that which provides for a great public highway to connect the capitals and chief cities of the States. This matter is already before Congress through a bill which provides that Congress shall appropriate twenty million dollars to supplement funds raised by the States for the building of the road.

The annual report of the bank commissioners shows that the deposits in savings banks in Connecticut aggregate $203,522,225, an increase of $10,273,316 over the previous year. The whole number of depositors is 444,407, an increase of 18,819. (The population of the State in 1900 was 908,420.) The average amount due each depositor is $454.67.

Three thousand cities and towns in the United States now have a curfew law. It is reported that where enforced, the commitments to the reform schools have decreased from 60 to 80 per cent, and there has been an increased attendance in Sunday Schools, notably of boys.

The Philharmonic Society of New York is considering the subject of forming itself into a "permanent orchestra." It is proposed to raise twenty-five thousand dollars a year for the next four years as a guarantee fund. This society was first organized in April, 1842.

A marble statue of Shakespeare by the sculptor, Otto Lessing, is to be unveiled at Weimar in June. This is said to be the first statue of the poet erected in Germany.

The verdicts and judgments in the New York tunnel disaster, which occurred about a year ago, have thus far cost the New York Central Road $472,000.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### A Present Help.

SOME seem to think that because Christian Science is based upon the propositions that all causation is mental, and that the divine Mind and its manifestation constitute all reality, the adherents of this faith utterly ignore the material universe and its conditions, and expect to depart from earth immediately, and take up their abode in the spiritual realm. This assumption, however, is not in harmony with the teachings of this Science, but is in accord with material theories. Christian Science does not teach that heaven, the immortal state, can be reached by making a journey from one location to another, but by journeying from imperfection to perfection, from a material condition to a spiritual state. However rational Christian Scientists may be in their practice, critics are apt to mistake the end for the beginning, the last lesson for the first. They demand of Christian Scientists what Scientists themselves do not assume ability to perform. All other followers of Christ must admit that their theory demands quite as much as that of Christian Scientists. No more sweeping demand could be made than that which is contained in the Master's injunction, "Be ye therefore perfect, even as your Father which is in heaven is perfect." The command, "Heal the sick, cleanse the lepers, raise the dead," is no more binding upon Christian Scientists than upon other Christians. If Christian Scientists fail to comply with this requirement of our Lord, it is for the same reason that the members of other denominations fail.

Christian Scientists make no boasts or claims of special ability as individuals to perform the works which the divine order requires. They only claim that it is demanded of all to work out of materiality into a spiritual condition, and that harmony, health, freedom from sin, will follow as a natural consequence. Christian Science is not only a good cure, but also a valuable preventive. It is, perhaps, conceded by all that it is easier to keep out of trouble than to extricate one's self from it, and while Christian Scientists may not be able to heal all the obstinate cases of sin and sickness which are presented to them, they would be able to save millions who are plunging into evil and disease if such would listen to the ethical teaching of this faith. The enlarged, more comprehensive, and spiritual understanding of God which this Science affords, gives to the wayward strength to cope with the powers of darkness with renewed efficiency. A rational Christian Scientist does not expect, at the present time, to reap all that Christian Science promises. He has but started on the journey. He is grateful even to have learned the way. He is glad that the journey is begun. He reaps a rich reward for his beginning and patiently waits for greater things.

The improved mental condition which Christian Science has furnished, though it does not take him out of the world, enables him to live above it in a large degree. Jesus noted this, and he did not ask that his disciples should be taken out of the world, but that they might be kept from the evil in it.

Christian Science renders possible an immediate overcoming in a degree, and gives hope and courage to wait for further deliverance. It may not lift the business man out of his business, but helps him to do it more intelligently and more honestly. The present degree of spirituality to which the adherents of this Science have attained, may not constitute a perfect preventive, but it will at least furnish a clearer realization that God is a present help in time of trouble. It does not set aside the necessity of education, but enables its student to determine more accurately as to his educational wants. Thus we note that Christian Science makes of its followers better business men, better teachers, better students, better husbands, better wives, better preachers. It makes them better able to do the will of God, to conform to His likeness. To overcome evil with good is just as binding upon Christian Scientists as it is upon the entire world, and while the adherents of Science point with gratitude to the results of their sincere efforts in the practice of their faith, they earnestly appeal to mankind in general to join in this effort, well knowing that if the entire world would accept this Science and put it into practice, hope and courage, happiness and prosperity would universally increase, while despair, sorrow, sin, and sickness would diminish in a most striking degree.

ALFRED FARLOW.
In *Boston Times.*

### The Basis of Healing.

To the Editor.

In your issue of the 16th inst., you published a communication on Christian Science, from the pen of Rev. Charles H. Hoot of Toledo, who said that he "sought divine assistance and inspiration to expose the errors advocated by the deluded teachers of this sect."

Christian Scientists do not advocate error of any kind. They heal and teach according to the strict rules of the Bible and "Science and Health with Key to the Scriptures." The ability to do this is not obtained without many years of consecrated living, honesty and purity of thought, and a literal as well as a spiritual imitation of the life of our Saviour. Jesus said, "By their fruits ye shall know them."

Christian Scientists are not "deluded" in any sense of the term. What has been accomplished by the students of Rev. Mary Baker G. Eddy, the Discoverer and Founder of Christian Science, can be seen in almost every city in the United States.

Our critic is certainly not in a position to advise or guide the conscience of any individual on Christian Science. Even if our critic thinks he understands Christian Science, can he demonstrate it? Jesus said of every one who believed on him, "The works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Christian Science does not subtract one word from the Bible. We love the Bible as it stands.

The Christian Science text-book says: "In the result of some unqualified condemnations of scientific Mind-healing, one may see with sorrow the sad effects on the sick of denying Truth. He that decries this Science, does

it presumptuously, in the face of Bible history, and in defiance of the direct command of Jesus, 'Go ye into all the world, and preach the gospel;' to which command was added the promise that his students should cast out evils and heal the sick. He bade the seventy disciples, as well as the twelve, heal the sick in any town where they should be hospitably received" (Science and Health, p. 342).

## An Honest Endorsement.

Editor *Advertiser.*

*Dear Sir:*—In common with many other readers, I have been much interested in the controversy on the subject of Christian Science *vs. Materia Medica* that has been waged in your columns between Albert E. Miller (whoever he may be) and "Simeon" (identity not disclosed). While I have never investigated Christian Science and know little or nothing of its workings, it occurs to me that "Simeon" has utterly failed to make out a case, and an impartial judge would non-suit him. Leaving out of consideration the fact that his first article bears a striking resemblance to one on the same subject in the *Outlook* a short time previous, there remains that fact that his communications have almost entirely been devoted to abuse of Mrs. Eddy and the philosophy she teaches. "Simeon" seems to have overlooked the fact that abuse is not argument, that mere assertions are not facts, and that calling names is the last resort of a person who seeks a loophole of escape from an untenable position. Any system must stand or fall on its merits. If false, its own weight of error will drag it down; if true, persecution, ridicule, and abuse will only lead people who think for themselves to investigate and very frequently adopt it. Mr. Miller's communications, on the contrary, have been conspicuous for clearness and courtesy, have been presented with a skill that has separated "Simeon" from his logic, and will doubtless induce many readers to acquaint themselves more fully with a subject that has engaged the respectful attention of so many bright minds.

## An Important Distinction.

Mr. Editor.

In your issue of December 18 appears an editorial under the title "Christian Science," which discusses at some length its teaching and doctrines.

While gratefully acknowledging the general tenor of fairness of the article, there are several phases of it that deserve notice. There is a vast difference between the religions of Brahma, Buddha, Zoroaster, and Mohammed, and the religion of Christ as set forth in Christian Science. Christian Scientists have the proof of the correctness of their religion. They have the "signs following" which Jesus said should follow them that believe. That Christian Science does heal can be proved by thousands of witnesses, and that this healing is the power of God can also be proved by thousands brought back from the brink of the grave. No eastern religion makes any such claims, and even if it did, it has no proof that the claim is true. There is a vast difference between mere words and actual demonstration, and this is the vital difference between Christian Science and the religions mentioned by the editorial in question. Christian Scientists make no claim to superior knowledge. They know they are happier, mentally freer, physically better, have clearer ideas of God and man, and can overcome, to some degree, the myriad forms of sin that beset them, better than ever before. They make no invidious comparisons between themselves and others who do not see the affairs of life as they view them. They follow the Scriptural command, "Work out your own salvation with fear and trembling," and they strive to overcome self-righteousness the same as other sins.

The statement that the power to heal and the spiritual discernment which comes with the understanding of Christian Science "has not one scintilla of evidence to stand on" brings the issue down to a matter of fact Do men and women become more spiritual from study of Christian Science? There is only one answer to this question. They do; and this can easily be proved by the words and deeds of witnesses in every section of the United States. Is there any evidence of healing? The writer has seen consumption, typhoid fever, erysipelas, dyspepsia, cancer, eczema, and scores of other diseases cured by Christian Science treatment. The evidence is so abundant that any one can verify it for himself.

Christian Science denies that environment, inheritance, or temperament have legitimate power over man, or can determine his relations to his God. Christian Science denies that man originates in matter, and asserts that he is the reflection of God, and hence is spiritual.

Christian Scientists do not heal by suggestion and self-psychologizing as this editorial asserts. They pray unto the Father, and the Father that seeth in secret rewards them openly. Suggestion, autosuggestion, hypnotism, telepathy, and clairvoyance are as far removed from Christian Science as the east is from the west.

EZRA W. PALMER.

In *Montrose* (Col.) *Press.*

## Clerical Misapprehension.

Mr. Editor.

We note the comments in your columns of the reverend critic who says that "if Christian Science was simply a method of healing the sick, ministers would probably consistently ignore it. But it claims to be a religion." Certainly he is aware what religion is. Webster defines religion as follows: "The outward act or form by which men indicate their recognition of a God. . . . It means the conscious relation between man and God, and the expression of that relation in human conduct." Can our friend expect the word to be restricted to his finite concept of what he thinks religion to be, and then, not satisfied with that, go on and declare all outside of that opinion to be outside the pale of religion because they claim the privilege of worshiping God according to the dictates of their own conscience?

The statement of our reverend critic that food, enjoyment, music are naught, is erroneous, for Christian Scientists have common sense of the most practical kind, and get more solid enjoyment out of life than the generality of mankind. They eat three meals a day, sleep, and wear clothes like other human beings. Again, I would quote from Science and Health, page 461: "I do not maintain that you or I can exist in the flesh without breath, food, and raiment, but I do believe that man is immortal, and that he lives in Spirit, and forever." Also page 254: "To stop eating, drinking, or being clothed materially, before the spiritual facts of existence are gained step by step, is not legitimate."

Our critic states that sin and suffering are real, and that there is a real heaven on earth and a real heaven in the future. Referring to the same, I wish to say that if sin and suffering are real, they are indestructible and made by God, for He created all that is real and eternal and saw that it was all good, as the Bible tells us. Consequently, according to our friend, God created sin and suffering and consequently made some other power beside Good, and therefore there is another power, and God is not infinite, and hence not God. And if there are two real heavens there must be two Creators, two Gods.

In Isaiah we read: "I am the Lord, and there is none

Digitized by Google

else, there is no God beside me." The closing appeal that is made by our friend that "God help men to look away from all vagaries to Christ, who is the same yesterday, to-day, and forever," is seconded by all Christian Scientists.

T. R. HINSDALE.
In *Butte* (Mont.) *Miner.*

## The Saviour from all Ills.

GOD'S way of deliverance is surely the best at all times, and always a safe one. The Christian Scientists know that this divine way does not fail and is not obsolete. They actually know it; tangibly, physically know it in the same every-day, common-sense way that they know when the sun shines, or that it is dark. They know that it is an experience wherein they have met the same experience, and God has succored them with no help from man—and why not? Why not? God surely lives to-day, the same boundless Love which has delivered men in every age; which led the children of Israel out of bondage and sustained them in the wilderness; which gave back her son to the widow of Nain and cleansed the Syrian leper; which delivered the righteous from the flames, the flood, and wild beasts; which healed the sick multitudes of Judæa; fed the five thousand, and redeemed our Master from death and corruption. "For there is none other name under heaven given among men, whereby we must be saved.—*Greensburg* (Pa.) *Tribune.*

On the essentials of religion, the religion of Jesus Christ, Christian Scientists are a unit with other professing Christians; that is, they believe in one God, who is Life, Truth, and Love, and that they can only be saved through Christ, but in the practical application of the teachings of our Master there seems to be a wide difference. Christian Scientists not only believe the religion of Jesus Christ is to help us overcome sin, but believe it is to help us overcome sickness as well. All the Christian Science Churches dotting this and other lands stand as living monuments, an indisputable fact that the gospel of Christ when rightly understood was intended to heal the sick, and does heal the sick to-day, as was promised by the Master. Thus it includes all the good taught by other professing Christians, and adds the complete plan of salvation as Jesus practised and taught, to wit: Christian healing.

LLOYD B. COATE.
In *Dayton* (O.) *Herald.*

Love for man is the noblest aim in life. The same hand to span the bow upon the heavens is with us to enable each to love his neighbor as himself. "For if ye love them which love you, what reward have ye?" The love that does not hold up to view the faults of a brother, the love sustained in the face of ridicule and unjust criticism, the love to lend a helping hand to some suffering mortal, is love that does not return to us void. "Hereby know we that we dwell in him, and he in us, because he hath given us of his Spirit." Put love in thy heart, put love in thy intellect, and thou shalt "be abundantly satisfied with the fatness of" his "house."

MARTIN F. JACKSON.
In *Jamestown* (N. Y.) *Journal.*

Christian Scientists do not admit the reality of disease, else they must recognize that it is created by God. If it be admitted that God created disease, how are we to reconcile the statement of Jesus that he came to do the will of the Father, and in so doing destroyed disease? The realization that God does not create disease, and that it is therefore unreal, has given to thousands of Christian Scientists who have been healed through it, after the failure of *materia medica* to relieve them, an abiding faith in God which nothing can shake.

F. H. LEONARD.
In *Brooklyn Eagle.*

Bringing the understanding of Truth, God, to human consciousness, Christian Science causes man to view things in their right light, enabling him to realize the everlasting facts of health, holiness, happiness, and harmony. The consistent Christian Scientist cannot worry, for that would be an unworthy admission that some power other than God, Good, controls him. The ninety-first Psalm is full of helpful suggestiveness to any thoughtful reader. The ninth, tenth, and eleventh verses give the reasons why a Christian Scientist "puts all anxiety and fretting under his feet." Because he makes God his refuge, no evil befalls him, and this is not accomplished by the exercise of human will or in any human way. Acknowledging God to be all powerful Good, negatives the human sense of anxiety, limitation, or fear, and forever destroys sin, sickness, and death.

EDWARD C. BUTLER.
In *Mexican Herald.*

Mrs. Eddy says in Science and Health, page 460, "Sickness is neither imaginary nor unreal,—that is, to the frightened, false sense of the patient. It is more than fancy, for it is solid conviction." This is clear to all well-informed Christian Scientists, and the healing work is done on this basis.

The statement that disease is unreal is not a claim or admission that it does not exist to our mortal sense, but that God never created it, which fact becomes clear to all who study the subject earnestly and honestly.

While we may not all think alike, let us be kind and show due respect for the opinions of others. Let us remember that those who entertain views differing from ours are entitled to respectful consideration. Worthy Christian Scientists observe this rule and refrain from saying ill of any one. The Golden Rule is their motto.

A. WILLIS PAINE.
In *Los Angeles* (Cal.) *Journal.*

It is generally remarked by those who have investigated, that Christian Scientists are an intelligent body of people, most of whom have been healed through this true faith, after material remedies had failed to bring relief. They have found a religion that enables them to live better lives than they did before, and they appreciate and are grateful for the unselfish and loving work of Mrs. Eddy in making these results possible. The press would be deceived less often if it would honestly investigate these adverse reports about Christian Science before publishing them, and it would be found that the percentage of loss among adults and children under Christian Science treatment is much less than under medical practice. During its comparatively brief history, Christian Science has cured nearly every form of chronic and acute disease, and there are hundreds of thousands of living witnesses who can testify of its healing power.

FRANK W. GALE.
In *Sacramento* (Cal.) *Bee.*

Enlightened public consciousness is rapidly learning that fear, apprehension, suspicion, and doubt are fruitful sources of contagion. It is being daily more widely understood that "as a man thinketh, so is he;" that courage based on spiritual understanding is a better preventive of epidemics than any quarantine, and that positive health is a thousandfold more contagious than negative disease.

W. D. MCCRACKAN.

## Celestial Distances.

NOTHING in all the realm of astronomy impresses the imagination more than its enormous distances. Indeed, they are so vast that it is hardly credible that they can be measured at all.

The principle used by astronomers to determine them is exactly that of the range-finders employed by modern gunners. Bearings are taken on the distant target from two points as far apart as is practicable. Knowing the distance between these points, the distance of the target can be calculated from the difference of its bearing at the two points.

When we come to apply this method to the stars, we find that the whole diameter of the earth is far too short a base-line. Fortunately, we have a longer one available, the diameter of the earth's orbit. By taking observations of a star at properly chosen dates, six months apart, we have a base 186,000,000 miles long, and can proceed with some chance of success.

The next question is: How can we measure the bearing of the star with sufficient accuracy? The best way is to choose some small stars near the one to be investigated, and use them as points of reference. Such small stars are usually so far away that their change of bearing may be neglected, while the nearer star appears to be slightly displaced with reference to them. Occasionally the faint star chosen is no farther off than the other, or even nearer. This is the case with Rigel, which has a ninth magnitude star close to it. The measures showed that the faint star, far from being behind the other, was actually the nearer of the two. But by choosing several small stars and measuring from them all, this source of error can be pretty well done away with.

The whole observed change of bearing of the star is evidently equal to the angular diameter of the earth's orbit, as seen from the star. Half of this, or the radius of the earth's orbit, as seen from the star, is called its parallax. The nearer a star is, the greater its parallax will be.

By the methods outlined above, the distances of a considerable number of stars have been measured. The nearest one is Alpha Centauri (invisible in our latitude) whose parallax is three quarters of a second of arc, corresponding to a distance 275,000 times as great as the sun's.

The most convenient unit for measuring these great distances is the *light-year*—the distance light travels in a year. This is about 63,000 times the sun's distance, so that if we made a map on such a scale that the earth was one inch from the sun, a light-year would be represented on the map by one *mile*.

Alpha Centauri is a little over four light-years distant. Sirius, whose parallax is half as great (0.37 sec.) is twice as far away.

If a star is over one hundred light-years distant, its parallax is too small to be measured, and we must remain ignorant of its true distance. This is the case for some of the very brightest stars, and for the vast majority of the remainder. For example, all the conspicuous stars in Orion have no sensible parallax. All we can say is that they must be many times as far away as Sirius or Procyon —how many times we do not know. But it follows that they must be really much brighter than Sirius, which, if transported to so great a distance, would at best be inconspicuous to the naked eye.

HENRY NORRIS RUSSELL.
In *Scientific American.*

The lines indicating minutes on the dial of a time-piece are separated by six degrees of arc. Three quarters of a second is contained in six degrees 28,800 times, and yet astronomers are able to measure one half of even that almost inconceivably small angle.—ED.

## The Lectures.

### At San Diego, Cal.

There was a large audience at the Isis Theatre last evening [January 8], to listen to the very able address of Carol Norton, C.S.D., on "Teachings of Christian Science." Mr. Norton is an accredited lecturer of the Mother Church of Boston, and his lecture was full of thought and interest. The whole of the lower part of the house was filled and the most of the balcony. Mr. Norton was introduced by Col. C. H. Rippey.—*San Diego Union.*

### At Bloomsburg, Pa.

The lecture of Judge William G. Ewing in the Court House, last evening [January 15], on Christian Science was delivered in the presence of an audience that comfortably filled the Court House. A number were present from out of town.

The lecturer of the evening held his audience in rapt attention from first to last. The judge was introduced by Norman F. John, C.S.B., of Wilmington, Del.—*The Press.*

### At San Jose, Cal.

Carol Norton, C.S.D., was greeted by a very large audience at the Garden Theatre yesterday afternoon [January 11]. His lecture was most interesting and he carried the audience with him throughout his entire convincing argument.

City Attorney F. B. Brown presided over the gathering and introduced the speaker as follows:—

We are told in the Scriptures that all men shall be taught of God, and we are further told that man is made in the image and likeness of God. Being endowed with religious natures, it is but natural that men should seek to know the truth about God and His works. Accordingly, we find that during all the period of man's existence upon earth he has been digging and delving for the truth.

It is therefore fitting and proper that San Jose, one of the great Western centers and seats of learning, with its schools, its colleges, its Christian churches and its Christian people, should, on this occasion, turn out this vast audience to welcome an exponent of a religious teaching and healing as old as the Christian religion, and yet, in a certain sense, new.

We have been accustomed to ascribe many of the works and acts of healing related in the Scriptures to a supernatural power and to refer to the time of their performance and manifestation as the age of miracles, and to think of it as a power lost to the world of to-day.

I was much impressed, in reading the account of the very solemn services held in Westminster to ask for the restoration to health and strength of England's King, with one verse of the hymn that was sung upon that occasion:—

Thine arm, O Lord, in days of old, was strong to heal and save:
It triumphed o'er disease and death, o'er darkness and the grave.
To Thee there came, the blind, the dumb, the palsied, and the lame,
The leper with his tainted life, the sick with fevered frame.

Christian Science gives us the comforting assurance that "the divine Love . . . which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion" (Science and Health, p. 243), is just as potent and can cure disease to-day.

It teaches that such works are not supernatural but supremely natural; that we have but to put ourselves in harmony with God's teachings and demonstrate it in our daily life, and to grow in spiritual grace, to attain the full stature of our divine origin. If this be true, it behooves

Digitized by Google

us to know that truth, for we have been told, "Ye shall know the truth, and the truth shall make you free."

We have with us to-day one who will speak with authority on the subject, "Christian Science is Universal Christianity," Mr. Carol Norton of New York.

*San Jose Mercury.*

### At Stockton, Cal.

A large audience gathered in Masonic Music Hall on Tuesday, January 13, to hear Mr. Carol Norton of New York explain "The Teachings of Christian Science." Mr. Norton was introduced by Mr. John A. Plummer, a prominent member of the bar, in the following words:—

*Friends:*—The simple story of the saving thought is coming home to us in this early morning of the twentieth century in a language more definite, more certain, more intelligible than in any of the preceding ages. In the recognition of this thought, Jew and Gentile, Catholic and Protestant, former infidel and agnostic are learning of the brotherhood of man, of the allness of God, and of the oneness of life.

The barriers erected by prejudice, by passion, by ignorance, and by fear crumble in the solvent of universal love, as man comes to know of the indivisibility of man. Through the door of the Spiritual Temple the high, the low, the rich, the poor, the learned and the unlearned, the worldly good and the worldly bad, all enter on a common level. This age of ripening thought is looking through the surface into the very heart of things; the door of mind is being pushed open, and while the door-posts are yet somewhat red with fear we are looking further and further in, and as we look the miracle of life loses its mysticism and so-called death gives up its terrors.

A rational, reasonable, and spiritual interpretation of the Bible has opened wide the pages of that grand old book, and its guiding words to health, life, peace, and contentment are sinking deep into the hearts of thousands.

Listening a while to the voice of the infinite, a few short years ago, a New England woman gave to the world a message of life, of love, and of hope. Our brother has come from his home among the eastern hills, to tell us just a little of that glad message, to-night. Of him I will say but little, but to his subject I invite your attention. His lesson has been in that school of wisdom—experience.

It is my pleasure to introduce Mr. Carol Norton, a member of the Christian Science Board of Lectureship, who will talk to us on the subject, "Teachings of Christian Science."—*Correspondence.*

### At Towanda, Pa.

Honorable William G. Ewing of Chicago delivered a lecture last evening [January 12] on Christian Science in Mercur Hall, the meeting place of the Towanda Church. Judge Ewing is a member of the official Board of Lectureship and speaks with authority as to what Christian Science really is. He was introduced by William Maxwell, Esq.—*Towanda Review.*

Mr. Maxwell in his introduction spoke in part as follows:

*Ladies and Gentlemen:*—There are many people interested in the subject of Christian Science. It seems to be the province of men to differ upon many important subjects. This is not to be wondered at, so long as human knowledge is imperfect and not infinite. Many of the good people in our vicinity, believe in this Science. Our people, ever zealous to know the truth and to give all sides of a disputed question a fair hearing, so that it may be judged by its fruits, have arranged for this meeting to-night. They have a gentleman present to address them on the subject of Christian Science who is thoroughly prepared to enlighten them upon this subject. Our people are naturally conservative upon all subjects of this kind, but in the language of Pope they are "not the first by whom the new is tried, nor yet the last to lay the old aside."

I have the honor of introducing to you the speaker of the evening, Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science.

*Correspondence.*

### At Shreveport, La.

A lecture was delivered last night [January 16] in this city in the Simon Building by Judge Septimus J. Hanna of Boston, on Christian Science.

Hon. T. C. Barret, one of the leading lawyers of this city, introduced the speaker in a few well-chosen words. Mr. Barret declared it to be the plain duty of all to listen, investigate, and prove all new doctrines before condemning. He referred to many of the numerous instances in history in which the then new truths had suffered before being accepted, but which were now parts of our fundamental laws of natural science and society. He spoke very kindly of Mrs. Eddy, the Founder of the Christian Science faith, and his remarks were well received by all.

The audience was made up mostly of Christian Scientists and their friends, but it also had a good sprinkling of merchants, several ministers and lawyers, well known to all, and many of the railroad fraternity. There were several from Haughton, Mansfield, and other near-by towns.

The speaker of the evening held his audience with intense interest throughout, and all expressed themselves as being well pleased with the lecture as highly entertaining and instructive.—*The Shreveport Times.*

### At Oakland, Cal.

Before eight o'clock Thursday night, January 15, every seat in the Christian Science Church was taken and people were standing in all parts of the church. Carol Norton, C.S.D., of New York, lectured on Christian Science, and was listened to for an hour and a half with close attention.

The Rev. Elmer McBurney, the First Reader of the church, in introducing the speaker said in part:—

Thousands of the adherents of Christian Science are rejoicing in freedom from physical ills, because of the understanding of omnipotent God.

Many there are who justly antagonize their own conception of Christian Science which they have formed through ignorance or prejudice. Some who have felt the power of divine Love, who are still under a cloud, are asking with John the Baptist, "Art thou he that should come, or do we look for another?" Others who tenaciously maintain their grasp on materiality are like Thomas asking for a sign. Others like Nicodemus, who have caught but a glimpse of the glorious light, are secretly, quietly investigating, and finding their way out of the night.

Friends, in this age of freedom and enlightenment, it is our right to demand a satisfactory proof of every assertion made, whether by pulpit or press. Blind faith has had its day.—*Oakland Tribune.*

From our viewpoint, the converging sunbeams seem all to point toward and center in the sun, their source; and they draw nearer to each other as they approach that source. So men, the countless ideas of infinite Mind, as they are drawn up from the earth and into the spiritual, by striving to live the Christ-life, are drawn closer together in charity, brotherly love, and unselfishness, as they approach the Source, the one Mind.—A. L. McBride.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### "The things that be Caesar's."

SOME of the practitioners whose cards appear in the *Journal* complain that they frequently receive letters and circulars soliciting them to purchase merchandise, subscribe for the stock of newly organized corporations, embark in real estate speculations, and in various ways engage in business enterprises of which they have no information other than that the authors of the letters and circulars claim to be Christian Scientists.

It is not our purpose, nor do we understand it to be within our province, to inquire into the merits of these enterprises and pass upon the status of those engaged in them, although we are sometimes solicited to do so, but we think we may be permitted to state that practitioners do not insert their cards in the *Journal* in order to receive these business propositions, and if we may judge of the feelings of all by the letters received from a number, the communications are not acceptable to them.

If we may offer a word of advice to our friends who send out these letters and circulars, it is that every business proposition should stand upon its own merits, and that the promoters of an enterprise are liable to be honestly mistaken in supposing that it is one to be certainly successful and extremely profitable. In case of failure we feel sure that they would be considerably chagrined by the recollection that in urging others to invest their money because they are Christian Scientists, they had made use of an argument which placed the transaction upon the plane of sentiment instead of deliberate business judgment. There is a radical difference between the taking of our religion into our business and the taking of our business into our religion, and if we abstain from doing the latter we shall not be subject to the criticism that we are making merchandise of that which is most sacred.

To our friends who are in receipt of these communications, it may seem needless for us to say anything further, but we shall hazard the advice that every business proposition should be capable of surviving thorough investigation, and that such investigation should be made before money is invested in any enterprise; also that when the surroundings of a proposed investment are such as appeal to sentiment, they should not be allowed to weigh against the facts that may be ascertained through careful inquiry.

To those who are without business experience, and especially to those whose limited capital is necessary to their support, we suggest that the uncertain hope of large returns from untried and immature enterprises should be discarded in favor of the certainty of established, conservative investments, wherein safety and permanency are the controlling factors, even if the promised return seems small. M.

### Circumstances.

IT is related of Napoleon that once when some one offered "circumstances" as an excuse for failure, he arrogantly replied, "Circumstances! I make circumstances!" The sad sequel to his long-continued bravado is familiar to all. Such is always the tragic end of human will, not always so dramatic in its final desolation, but always desolate, always defeated.

And is man, necessarily a creature of circumstances? Only so far as he essays "to fight the beast with the beast," to defeat the malignity of impersonal error with the weapon of human will-power; only while he persists in his efforts to climb the ladder of a selfish ambition, which always rests on the treacherous quicksands of popularity; only so long as he expects darkness to dispel darkness, hate to destroy hate, discord to scatter discord.

Man learns through Christian Science that the measure of his dominion is the measure of his spiritual altitude. He must be "lifted up" before he can know the absolute nothingness of the threatening circumstances,—of material environments, with their sham conflict of jangling discords.

The limiting circumstances,—poverty, sorrow, sensuality, and despair,—are negatives, and vanish from the consciousness of him who dwells in the realm of the positive. The man who realizes the munificence of God's supply lacks nothing. Sorrow has no tears for him who perceives the truth of joy. The redemptive grace of purity frees the sensualist. Despair can offer no suggestion to the sweet peace and unquestioning faith of him who is on the heights.

Disease, sin, all manner of inharmonious circumstances confronted the Master, but through his clear sense of harmony and love, his conscious at-one-ment with the Father, he banished discordant conditions and freed the captives of sense. His gospel of love and liberty has reached to-day a listening ear, has found utterance again through faithful tongue and pen, and it is teaching man how to establish dominion over self; how, through Truth, to say intelligently, "I make circumstances!" S.

### There is no Refuge in Obscurity.

CLEAR thinking is distinctly Christian, and every statement of Truth and its manifestation must be sane, self-consistent, and logical.

Principle is exact, and nothing surely can be an adequate and fitting expression of it, which does not meet the most exacting tests. He who would escape from a well-nigh universal bondage to the indefinite, must awaken to the unvarying consistency of Truth's discriminations, and maintain unfailing loyalty to the logical content of its statement.

When pressed to the wall, error often retains its hold upon humanity by clothing itself in some well sounding, but seldom used generalization which, when subjected to careful analysis, reveals a far more dangerous fallacy than that from which its victims are seeking escape.

How frequently, for instance, men are prompted to say by way of self extenuation, "I can't help it, that's my nature," and how much more readily do we seem disposed to exonerate ourselves and others, ignoring if not excusing our selfish indulgence, temper, or moodiness, under the glamour of some such broad-gauge and abominable subterfuge.

Frequent illustration of all this may be found in a certain quality of patronizing and self-satisfied criticism of Christian Science. There lies before us a late issue of one of our religious contemporaries in which, without mentioning Christian Science at all, effort is made to disparage its teaching by just this process.

The writer says:—

"The religion which is to satisfy men must look the facts of life full in the face, accept them in their deepest significance, and rise above their terrible teaching by interpreting them as part of a larger order of things."

This is very high-sounding and plausible, but a moment's consideration will disclose the very great contrast between its real meaning and the impression it superficially conveys.

Digitized by Google

It recognizes the "terrible teaching" of the facts of human experience, but quite covers up the logic of these facts by dignifying them with a place in a larger order of things. What, pray, does this "larger order" mean, if not that evil, with all its nameless agonies, is to be reckoned as part and parcel of that real universe whose history is a fulfilment, in its every detail, of the plans and purposes of God? But if this necessary and essential meaning had been frankly expressed, it is apparent that it would have awakened an entirely different train of thought.

Further on the same writer says:—

"Suffering does not exist, in the Christian view of life, as an end, but as an instrument of education: it is a part of the divine order of the world; it is involved in the great process of development which is not only the unfolding of the order of nature, but of the spirit of man. It is idle to try to escape the full play of all the forces of life; they must be met squarely, honestly, unflinchingly."

The contrast between this finely worded apology for the uncondemned presence of sickness and suffering, and Jesus' attitude toward these "terrible" things in human experience, is sufficiently apparent to the thoughtful. Indifference to the distinction so clearly made in Christian Science between the seeming force of evil, and the nature of evil, and the free use of indefinite phrases, like "the divine order of the world," and the great process of the "unfolding of the order of nature," etc.,—will not lead the experienced and discriminating astray; but how many poor sufferers are educated by such teaching to be still and endure the tortures from which, as Jesus taught and demonstrated, it is the distinct purpose and prerogative of Christian faith to relieve them. The writer has remembrance of one who bore an unspeakable pain for forty years under the impulsion of this thought of the place of pain in her loving Father's plan for her betterment. She acquired, indeed, a Spartan heroism, but what were her gains as compared with all that would have come to her in the exercise of the freedom, the spiritual supremacy over disease and suffering, which Jesus assured to all them that believe.

Christian Scientists are not exempt from temptation to resort, in self-defence, to a kindred use of acquired phrases, the full content and meaning of which they are, perchance, as illy prepared to explain as are their hearers. Indeed, the venturesome daring of the enthusiastic and inexperienced in this regard, is a matter of painful recollection to the most of us. That a weakening of the moral sense must result from the habit of saying things for effect, the free use of terms and declarations which we are not at all sure we understand, but which we are confident will prove telling, is no less certain than lamentable. Better far would it be if, instead of undertaking to annihilate antagonism with the voluble repetition of those mighty statements of Truth which angels might voice with bated breath, we were to supplement the appeal of a pure, honest, gentle, and unselfish life, with the simple and unaffected statements of him that was born blind: "One thing I know, that, whereas I was blind, now I see." "If this man were not of God, he could do nothing." W.

---

We can understand but little of the glorious future where man is one with God in light and love, but we can understand Jesus, the white flower gleaming out through the darkness, the fragrance wafted to us in the night; and we know that to be like him will be crown of all our hopes.

JOSEPH WOOD.

---

What is defeat? Nothing but education, nothing but the first step to something better.—WENDELL PHILLIPS.

## From Our Contributors.

### A Personal Correspondence.

WE are permitted to use the following excerpts from two letters written by a gentleman living in a small town in England, who has had no opportunity to know anything of Christian Science save through the friend whose reply letter, in part, is also appended.

December 18, 1902.

*Dear J.*:—I have received the *Sentinel* with pleasure and many thanks, and am continuing my reading of Science and Health with increasing respect and pleasure.

I am far from reaping full benefit therefrom, for, as you say, eternity is the length of the lesson; nevertheless, I can read both it and the Bible with an entirely new intelligence. A hundred pounds would be like a godsend to me at this moment, but were you to write me, "Will you have a hundred pounds and promise never to have a copy of Science and Health," I should say, "Get thee behind me," for I cannot tell you how much I value this new light, this perfectly pure Christianity, and I shall defend it against all attacks to the best of my ability, praying and hoping and having faith that I shall at last lay hold of that grand heritage promised by the Christ, which is so clearly translated in this wonderful book. I only wish that all people could accept its teaching.

I fear I shall tire you, yet I think it is excusable. When one has been wandering around in the mist, and the sun breaks through and discloses the old familiar road home, and how familiar it does seem! surely one must fairly shout for thankfulness, and resolve never to go about again without a light. We have the light and it is a light that will not blow out, whatever the storm may be.

. . . . . .

Christmas Morning.

*Dear J.*:—Thanks to Mrs. Eddy and yourself, this Christmas Day is the first one in my life on which I have realized the real meaning and intent of that glorious birth, so long ago, in the little and despised village where Jesus the Christ was "a little child."

Last evening I turned out in the drizzling rain, feeling no discomfort, to treat myself to my own Christmas present, that is, a modest copy of the New Testament convenient for the pocket. On my return to the house the post had brought me the beautiful pocket copy of Science and Health, and the *Quarterly*. These are now my chart and compass. I cannot thank you enough for your guidance in this matter. I think the *Quarterly* is very fine.

You ask what first turned my attention to Christian Science. Well, I can assure you I am not proud of the reason for, as near as I can say, it was this: I was dissatisfied with the meagre results of my endeavors to succeed in a worldly and financial point of view.

I considered I have fair ordinary brains, a considerable experience, industry, etc., yet I don't get on. Something is wrong with me, what is it?

I then came across literature on hypnotism, personal magnetism, etc., and said to myself, this may be worth looking into, there may be something in it, this may be the solution. I consequently got hold of such literature on these subjects as I could, amongst which an article that classed Christian Science with these isms, etc. I bethought myself of you at once, and was, as you know, happily rescued.

Before this time I had marveled that you should be led away by this new fad of Christian Science, and sort of smiled, yes, smiled, in bloated ignorance, that you should be so deceived. Thank God, I know better now.

I must confess that I feel a little bit fearful that my

Digitized by Google

new thoughts may not be so much blessed as I desire, since it was not a spiritual feeling or necessity that led me towards the new Light, it was purely a worldly desire for more success that led me by a fluke into this new state of being, but, by constancy and patience and humility, I hope to gain the blessings promised. F. L.

THE REPLY.

*Dear F.:*—Thanks for your two interesting letters. . . . On the whole, I am inclined to believe that a man never has so good a chance as when the doctors have given him up; not meaning to cast any slur on the heroic and benevolent ministrations of many worthy practitioners, for Christian Scientists have no quarrel either with the doctors or the parsons, but it does make them smile way down inside when they read a bit of cold-drawn sarcasm like that about the death of King Asa with all that it implies; and they do wonder on what authority the churches so complacently repudiate Christ's explicit command to "heal the sick" as though it were a piece of gross impiety, while they accept the other half of it; viz., to "preach the Gospel," or at any rate their conception of it; but beyond correcting and contradicting absolute misstatements, careless or wilful, made by the more rabid critics of Christian Science, so far from quarreling with them, Christian Scientists cheerfully acknowledge all honest efforts for the amelioration of suffering humanity, no matter by whom the effort may be made.

I am indeed glad that you are finding so much happiness and help from the light which Christian Science throws on the new-old way, and that the new copy and the *Quarterly* arrived so opportunely.

As to other people, don't let's worry about them, for we remember it is written, "all shall know me, from the least to the greatest," all in good time, in God's time; not perhaps when we should like them, nor until they themselves want, for if free-will means anything it means that God never forces Himself upon us.

I wouldn't be too hard on myself either, if I were you, as to the precise causes or motives that led you to look for something more satisfying than you knew of before. Dwelling on an unsatisfactory past is not helpful. Mrs. Eddy says (Science and Health, p. 391), "It is error to suffer for aught but your own sins. God, or Truth, will destroy all other supposed suffering; and real suffering, for your own sins, will cease, in proportion as the sin ceases."

Let us leave the dead to bury the dead and push on in the new light and strength that Science gives us.

You will find your understanding increase with every least act of trust in and reliance on the truth of God's word and promises, and of faithfulness in the smallest things, and that as fear and superstition and every kind of man-made law of disability and limitation give place to a knowledge and practice of the truth, you will be able to step out and up with a lighter tread and lighter heart. You will often be happy where you used to be miserable, successful where you used to fail, have a sufficiency where you used to be short, and finally and best of all, will be able to help others effectively as well as yourself, where you used to be either useless or a positive disability to them.

I didn't come to Christian Science with "clean hands," as father used to say, by any means, I hardly knew, in fact, what it was I was coming to. It was a more or less idle philosophic curiosity which, in my state of confessed agnosticism, together with a strong personal interest and confidence in the intelligence, perception, and directness of my dear friends, from whom I first heard about it and who first lent me Science and Health, and sent me a tract (which I well remember receiving with a strong feeling of repugnance to all tracts as such), that first brought me to some feeble perception of what Christian Science might be to me, and later what it has been, is, and can be to me, and to every one.

Both were unbelievers at the time of their healing, the one an agnostic, the other at all events a strong Church of England member, and so are hundreds of others; indeed, I suppose very few ever come to it with meekness, willingness, and of deliberate and loving intent in the first instance, but as Flora Annie Steele says, "It's the finish that counts."

. . . . . .

You won't have much to do defending Christian Science, though you can mentally give the direct lie to all false statements of or about it, whether they be careless or malicious. It is quite able to take care not only of itself but of you. Study well the chapter in Science and Health on "Animal Magnetism," and learn how to protect yourself against the malice of thwarted evil.

Like many, you seem to have chosen the better part that no one can take from you. Mrs. Eddy says (Science and Health, p. 494), that "Divine Love always has met, and always will meet, every human need;" and the Bible says, "Seek ye first the kingdom of God, and his righteousness; and all these things shall be added unto you," even to the hundred pounds you speak of, or at any rate so much of it as you need and can properly use, for you know the Israelites weren't allowed to gather any more manna than they could eat on the day they gathered it or else it went bad, so as to compel them to rely on God's promise for the days to come.

I think the purifying and impersonalizing that was secured by the ordination, some years ago, of the Bible and Science and Health as the only preachers in the Christian Science Churches, is one of the most colossal and beneficial things that has ever been done in the world's history, and there is now a By-law limiting the term of office of the First and Second Readers to three years, which will still further prevent the growth of personality worship.

. . . . . .

J. G. RAMSBOTTOM.

## True Growth.

AGNES FLORIDA CHALMERS.

THROUGH the agency of a little child, in fact with a mere babe as teacher, I have been privileged to learn a helpful lesson showing the folly of a much used statement: "My progress in Christian Science has been very slow."

The child was trying to say her first word, "Mother." The attempt at first, was, indeed, almost a failure, but gradually, as the days passed, the patient babe was able to say the desired word with greater ease until, finally, the victory was won, and she could say, with wonderful distinctness, "Mother." Not satisfied with once pronouncing the name, the babe repeated this sweetest word in her child-world over and over, with each repetition clapping her hands with joy. She seemed never to tire of using her new-born knowledge.

There came a day when the child had two words in her speaking vocabulary. The added one was "Father."

Then quickly, by twos and threes, the words came, such as, "pretty stars," "see Baby's flowers;" and one day, running joyously to the window, the child startled us by exclaiming: "O, see Baby's pretty sunbeams." "The dear child has a happy faculty," the mother remarked, "of unhesitatingly appropriating everything beautiful."

One of the first lessons Christian Science gives us to learn is the great truth that God is Love. We may well be satisfied with this abundant thought and, endeavoring to make this wisdom ours as patiently and cheerfully as did the little child her first word, we shall assuredly come to know in full the varied definitions of the Infinite.

The babe was made happy by saying, over and over, her

Digitized by Google

first learned word. We, who are beginners in the study of Christian Science, likewise have occasion to rejoice through knowing that we have even begun to learn the Truth that makes men free.

Mrs. Eddy gives us a guide to true growth on page 485, Science and Health: "Emerge gently from matter into Spirit. Think not to thwart the spiritual ultimate of all things; but come naturally into Spirit, through better health and morals, and as the result of spiritual growth."

Love's store is, at all times, abundantly adequate. Here supply always is in infinite excess of demand, hence economy becomes, at once, petty and useless. We shall therefore do well to follow the example of the little child by appropriating for our own use all the sunshine of this healing Truth. We are cheating ourselves if we attempt to hide from the immediate benefits of the Christ-truth healing by the disparaging and useless declaration: "The understanding comes to me slowly."

If we stand by the window (our text-book), the infinite rays of Love revealed in Christian Science will gladden our lives this moment.

It is good to know that it is the privilege of all who become as little children to reach out to-day for the glorious sunbeams of Life, and to claim with happy, child-like faith, "The true Light, which lighteth every man that cometh into the world."

## "And if thou Strayest."

WILLIAM C. HENDERSON.

Blow, winds of God, awake and blow
The mists of earth away!
Shine out, O Light Divine, and show
How wide and far we stray.

WHITTIER.

IN journeying up the hill of Christian Science we find many paths open to us. Some are much traveled and are alluring, seeming to offer us an easy climb. Without hesitation, perhaps, we may start on some one of these diverging paths, or, if we stop to note our bearings and choose with careful discrimination our path, we shall observe that each path seems to lead to the summit, and some to offer peculiar advantages over the others; so that, unless we are quite sure which is right, and are firm in our resolution to take that one which we know will alone bring us safely to the summit, we shall be very apt to take one that will lead us astray. It is right here that we need our guide; for if we believe we are sure of our path and journey far wrong, we shall at length experience profound unrest, and bitter will be our disappointment when once we discover our error and realize that we must turn about and retrace our steps to a point where we can enter the right path and resume our journey heavenward.

But there is no need of our straying in this journey, if we follow willingly and understandingly the directions of Christ, our guide. Mrs. Eddy says in "Miscellaneous Writings," page 328: "Whatever obstructs the way,—causing to stumble, fall, or faint, those mortals who are striving to enter the path,—Divine Love will remove; and uplift the fallen and strengthen the weak." Isaiah says, "I will bring the blind by a way that they knew not: I will lead them in paths that they have not known: I will make darkness light before them, and crooked things straight. These things will I do unto them, and not forsake them."

It is not hard for one who has found the nothingness of the world, to turn, like a tired child, to the great heart of divine Love and there find the Christ, the spiritual Idea, as the Way-shower and guide; but it does seem hard to one who believes in the dream of life and intelligence in matter, who believes that the pleasures and pains of material existence are real. Such an one, as he awakens from this dream and finds how far he has strayed, recognizes the character of his mistake. As Mrs. Eddy further says in "Miscellaneous Writings," p. 299: "When unconscious of a mistake, one thinks he is not mistaken; but this false consciousness does not change the fact, or its results; suffering and mistakes recur until one is awake to their cause and character." "There is but one way to heaven and harmony, and Christ, divine Science, shows us this way. It is to know no other reality than Good, or God and His reflection, to have no other consciousness of Life, and to rise superior to the so-called pain and pleasure of the senses" (Science and Health, p. 242).

The mission of Christian Science is to awaken the dreamer, to show him the path that leads upward, to quiet his fears and dispel his doubts, to alleviate his sufferings, to bring in the sunshine of Love and cause him to follow his guide, who is ever saying, "'Make thine own way; and if thou strayest, listen for the mountain-horn, and it will call thee back to the path that goeth upward'" (Miscellaneous Writings, p. 328).

## Impersonal Healing.

J. W. K.

ABOUT a month since, a gentleman called on us socially but almost immediately excusing himself for his abrupt departure, he said he felt one of his frequent attacks of head pain coming on, and that he must get home right away. He attributed his infirmity to a fall from a car with attendant head injury received some forty years before. He said that a constantly recurring pressure and pain had ever since been the curse of his life, and he felt sure that he could not long survive the ever-increasing agony which many physicians had vainly attempted to relieve.

My wife and I denied the error, our hearts filled with loving pity, and we were rejoiced last evening when he called purposely to tell us that his first freedom from torture dated from that memorable night.

---

One of the things that chiefly impresses an American Christian who travels widely in heathen lands is that heathenism is far more than a superstition or a creed; it is an atmosphere and a type of character. In Benares or Hangkow, for example, you do not feel merely that you are among a race with different customs from your own; your feel that these peoples occupy a different viewpoint, they judge by totally different standards from your own, and that it is exceedingly difficult, except on the basis of the universal human sentiments—and even these sometimes are strangely corrupted—to find common ground for mental approach and sympathy.

Yet when in such a community one attends a native Christian church and talks with the converts, he feels at once that he is at home. This Indian or Chinese Christian understands your point of view and sympathizes with your standards. You would agree as to the elemental Christian requirements. You can share each other's hopes and faith. You are aware that you are both striving to realize in personal life the same ideal. Believers in Christ strike hands across the seas and centuries.—*The Watchman.*

---

The Infinite always is silent,
It is only the finite speaks;
Our words are idle wave-caps
On the deep that never breaks.
We may question with wand of silence,
Explain, decide, and discuss;
But only in meditation
The mystery speaks to us.

JOHN O'REILLY.

## Among the Churches.

### Union in Cincinnati, O.

After some preliminary consultation between First and Third Churches of Christ, Scientist, of Cincinnati, action which authorized the following letter was taken by Third Church:—

To the President of the Official Boards of First Church of Christ, Scientist, Cincinnati, O.

*Dear Brethren:*—At a called meeting of the members of Third Church of Christ, Scientist, held Sunday morning, January 4, 1903, it was decided by a large majority vote to ask that the members of this church, as individuals, be received to full membership in First Church of Christ, Scientist, Cincinnati, O.

In Truth and Love,

Third Church of Christ, Scientist,
MRS. B. N. WESTON, *Clerk.*

An immediate and favorable reply was made by First Church, and, after the settlement of some minor details, a joyful consummation of this loving demonstration of harmony and unity was realized on the morning of Sunday, January 18, when loving hearts filled the edifice of First Church. All united in the Lesson-Sermon of the day,—Truth,—and their thoughts were filled with love and harmony, giving them a clearer sense of the at-one-ment which they hope to manifest in a yet larger measure.

*Correspondence.*

### A Charter Secured in Hamilton, O.

In July, 1901, four people met for the first time to read the Sunday Lesson-Sermon. They continued the Sunday morning and Wednesday evening meetings, and the usual attendance was about nine, each succeeding meeting bringing with it greater blessings. Many times it seemed hardly worth while to hold regular services for three or four people, but remembering the promise, "Where two or three are gathered together in my name, there am I in the midst of them," these earnest seekers for Truth pressed on, learning many lessons in obedience and patience. Six months later one more was added to the little band, and then we organized, knowing that God alone giveth the increase. In just four months' time,—June, 1902,—we were comfortably furnished and settled in our present quarters, the Webster Building.

January 12, 1903, we filed papers of incorporation with the Secretary of State at Columbus for First Church of Christ, Scientist, and to-day we stand a chartered body with fifteen members.

Our Sunday School of only four children has decided to send all its collections to Boston for the new auditorium.

It is with gratitude that we send our report of progress to the Field. Indeed, we have many times been encouraged here by just such "good tidings of great joy" respecting the growth of the Cause in other places. In loving gratitude to our dear Leader for this privilege of expressing our loyalty to her.—MRS. NORA C. HARGITT, *Clerk.*

### Church Organized in Mechanicsburg, O.

For the past few months the Christian Scientists of this city have been holding services in the rooms on Main Street, and they have been well attended. Some time prior to this, meetings were held in private homes, but the attendance increasing, larger quarters were secured. The adherents of this faith now include some of the best people of our city. On Monday evening, December 29, a church was duly organized, known as First Church of Christ, Scientist.—*The Mechanicsburg* (O.) *Item.*

The following lines regarding the beginnings of the work in Mechanicsburg are taken from the Dayton, O., *Herald.*

About four years ago a lady went to Mechanicsburg with her family, to make it her home. Being a student, and a very conscientious worker, she commenced to sow the seed of Truth. She found persons anxious to know something of this new-old Truth of Christian Science. Some remarkable cases of healing followed, of such a character that one might think it would suffice to lead all to the Truth. Friends from Dayton have met with them at different times, and encouraged them, and the work has continued to grow. Perhaps there are but few instances where so much good work has been done in healing and in building up a work, in so short a period, as there. This church starts with thirty-seven charter members.

### Progress in Mobile, Ala.

First Church of Christ, Scientist, of Mobile, Alabama, was organized with seven charter members July 4, 1902. Soon after our organization was effected, we moved into a hall, where services are held and our reading room is conveniently and pleasantly located. On last Communion Sunday we received into fellowship with us, five new members, and we are striving, collectively and individually, to reflect the One Mind; praying for "that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497).—CARRIE MCGILL DICKENS, *Clerk.*

### Organization in Eaton, O.

The Eaton Society of Christian Scientists, who for the past few months have been holding services in the Universalist Church, at the conclusion of their services, Sunday afternoon [December 28], organized First Church of Christ, Scientist, Eaton, O., and will hold their first service as an organized church, Sunday, January 4, at half past two at the Universalist Church.—*The Eaton* (O.) *Herald.*

Setting aside the consideration of the ethics of Christian Science, it may be said with truth that Mrs. Eddy's reply to Mark Twain's arraignment of this religion was in much better keeping with the spirit of the times than was Twain's attack on the belief of so many people. It struck us that his essay upon the topic was a very cheap attempt at wit, and had better been left unsaid. As a matter of fact, Christian Science is making too much progress to be ridiculed down, and it is making the greatest progress among those who understand it the most. It is manifestly unfair to try to abuse anything that you know nothing about and about which you make no effort to know anything.—*Newburyport* (Mass.) *News.*

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

## Testimonies of Healing.

I wish to express my gratitude through the *Sentinel* for what Christian Science has done for me.

My youngest child was born with what the doctors called "blood tumors." At his birth they were small, but the child was never well, and although the tumors (four in number) grew rapidly, the child was extremely thin, and the head was very much enlarged. One small tumor was on the head, the other three on the abdomen; these grew so rapidly that they covered about one fourth of the abdomen.

The physician gave me an astringent powder, with instructions to apply at once, and send for him should the tumors at any time break and bleed. The child cried and worried constantly as if suffering from pain, and was very nervous.

Some time in August, 1900, our physician said there was no help but the knife. This we dreaded very much, as the child was so delicate we feared he would not survive an operation. Shortly, new troubles developed, and the physician said the child's brain was affected.

One evening, one of my neighbors called and seeing the great need of help said, "Why don't you have Christian Science treatment for that child? The doctors are not helping him and you have nothing to lose if the Scientist does not help him." I had never heard of Christian Science and asked her to tell me about it. She said she was unable to tell me anything of the teaching or logic of Christian Science, but her husband had been healed, when physicians had failed, and she offered to call in a practitioner who would explain.

As a drowning man grasps at a straw, I grasped for this new healing, and the Christian Scientist was called. I did not understand her explanation of Christian Science, but I agreed to let her take the case. Then she said, "You understand that you are not to use any material remedies while I am treating him." I said, "Supposing he gets worse and I have to call a physician?" to which she replied, "It is your privilege to do what you think best, and a Christian Scientist never persuades, but I am not going to treat him for worse, but for better. Any time you are dissatisfied with my treatment let me know and I will drop the case. We do not work when we are not requested to do so, nor for people who do not wish our help." I began to feel that my child would be healed. However, it was no small task, for although the child grew rapidly better and the Scientist advised me (as Jesus advised when he healed the sick) "to tell no man," I was so delighted when I found my child was improving that I told the good news to some of my neighbors, who seemed frightened for me and said I would lose it. Temptation came and doubt, but what was there left for me to do? Surely the prayers of the Scientist could not harm him, and the physician could not help him. The Scientist always talked encouragingly to me and I always felt stronger after her visits. She said cases often took turns which seemed for the worse, but she never seemed to have a particle of fear. In about three weeks after the first treatment the tumors began to decrease. They grew less and less, until they finally disappeared entirely. The Scientist called on me one day when the child was about two years of age and I told her he could not walk, at which she said, "Stand him on his feet." I did so. The Scientist assured me that he would walk, and sure enough, in three days he did. He is now three and a half years old and walks, runs, and plays. He seems as well as any child; in fact, I consider him in perfect health. I presume the readers of this will think I am a Christian Scientist, but I am not; I am sending this to the *Sentinel* in hopes that it may reach the eyes of some mother who needs help for her child as I did.

I am truly thankful to God for sending the neighbor who advised me to try Christian Science. I am also thankful for the Scientist who worked so faithfully and unselfishly for my child, and I am thankful to Mrs. Eddy who discovered and gave this truth to this age.

I have attended one Wednesday evening meeting here at the Christian Science Hall, and there I heard wonderful testimonies from the people who have been healed. One could not help being impressed by the earnestness and honesty of the people there. The leader of the meeting read, "The best sermon ever preached is the practice of Truth, and the demonstration thereof, through the destruction of sin, sickness, and death" (Science and Health, p. 201), and according to the testimonies that were given that evening, Christian Scientists are preaching, "the best sermon" every day, for I *know* that Christian Science heals the sick.—Mrs. Oscar Murry, Middletown, N. Y.

---

When Christian Science was first brought to my notice, I had begun to feel that life was an ugly dream with more sorrow and suffering in it than anything else. Troubles of all kinds had fallen thick and fast around us. Some were of a nature that could be risen above with a brave heart, but others seemed utterly impossible to cope with. One such had come to me in the form of eye trouble, which the doctors called inflammation of the tear glands. They kindly did all they could to destroy the seeming enemy, but all in vain. Blindness seemed inevitable. I had to go into a dark room as soon as the gas was lighted, and keep a shade over my eyes in daytime, since even the daylight was painful to me.

While I was still in this condition, and waiting to see what would be done next, thanks be to God, the giver of all good, a dear friend came to me with Christian Science. I gladly accepted it, and after a few weeks' treatment, besides what study I could see to give to Science and Health, my eyes were completely healed, and have remained so ever since, although I have used them constantly to do all kinds of fine work. Since that time, seven years ago, through our little understanding of Divine power, we have been able to overcome many other errors in our home, for all of which we are truly thankful, and now wish to express our gratitude to God for the light that has come into the world again, and has been given to poor, suffering humanity by this one most faithful woman, our beloved Leader and Teacher, Mrs. Eddy.

Hannah Stephenson, Chicago, Ill.

---

Three and a half years ago, I came from Australia to London straight to Christian Science. I don't think there could have been a more wretched, discontented, selfish, woman than I was when I landed. Many times I had tried to find God but could not, and had then made up my mind not to try any more, and each year I was becoming more unlovable and unloving.

When I read the book "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I knew I had found the truth, and the joy and peace I tasted then has helped me to hold on through the many struggles, physical and mental, I have had since.

Christian Science has enabled me to overcome hate and a sulky temper which was a misery to myself and all I was with, and in place of morbid depression, I am beginning to realize that the joy of the Lord is my strength.

Physically I feel like another woman. I have been able to overcome many troubles; some have yielded quickly, and some very slowly, and I am still battling along. Sick headaches, which were gradually growing worse, are a thing of the past; more than half my life I was bothered by a disfiguring rash over my face; sometimes better, sometimes worse, but never out of my consciousness, and for which I had used any amount of lotions, and taken medicine but

Digitized by Google

without receiving any permanent help. When I read Science and Health I found it was the thought that had to be purified, and as my thought has grown purer, slowly but surely my skin has become clearer.

I am learning the truth of Mrs. Eddy's words (Miscellaneous Writings, p. 118), "The warfare with one's self is grand; it gives one plenty of employment, and the divine Principle worketh with you,—and obedience crowns persistent effort with everlasting victory." Christian Science has taught me to love the Bible, which in the old days seemed a mass of contradictions, and which I had quite given up reading.

I join with the thousands who to-day are saying, "God bless Mrs. Eddy," and will show my gratitude by striving earnestly to live the Christ-life by following Jesus as she has shown us how.

I am very grateful to all those Christian Scientists who, by their lives, have proved the truth of Christian Science, and for the great help I have received through the *Quarterly, Journal,* and *Sentinel,* and say from the bottom of my heart, "thank God for Christian Science."

CLARE ARCHER, London, Eng.

---

It is not quite a year since I was entirely relieved of an excruciating form of neuralgic headache, or, as the oculist termed it, astigmatism. My brother and cousin, both leading physicians here, advised me to wear glasses as the only remedy, and forthwith I went to an oculist. The result was, I wore glasses four years with but slight relief. I always declared my sight was perfect, and did not need the glasses to see with. About a year ago I was almost frantic with an attack of this agonizing manifestation; I sent for one of Truth's messengers, and was told to put aside my glasses at once, which I did. I received about two weeks' absent treatment, have never worn the glasses since, nor had a recurrence of the trouble, for which I feel gratitude ineffable for the blessed ministrations of divine Love and Truth, and to the noble woman who revealed the Light to us.—MAE EYREMAN, St. Louis, Mo.

---

What else can I, a lame old man, do but sing hymns to God? If I was a nightingale, I would act the part of a nightingale; if a swan, the part of a swan. But, since I am a reasonable creature, it is my duty to praise God. This is my business. I do it. Nor will I ever desert this post, as long as it is vouchsafed me; and I exhort you to join in the same song.—EPICTETUS.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

In a recent editorial we made an observation, to which we did not suppose that any objection could be raised, that the Divine Revelation which God has been pleased to make to man is necessarily imperfect, since it is impossible for anything more than a partial revelation of the eternal things of God to be communicated to a finite and temporal creature like man. This is only to say what St. Paul said long ago, that "Now we know in part," and we might have added, with the same expectation of general agreement, that in such a revelation something must necessarily be parabolic and pictorial. The Creed itself is full of pictorial phrases, which can be at best only suggestions or adumbrations of the eternal verities which they affirm. The three greatest words of the Christian Faith—Father, Son, and Spirit—are pictorial and parabolic words, the best, truly, that human speech affords, and sufficient to convey so much of truth concerning God as it is needful for man to know, but all too feeble to define the ineffable things of God which it is not possible for man even to conceive.

Let it be granted that God cares to make Himself known to His poor human children in this world, and it must needs follow that His revelations of Himself must be in broken syllables, so to speak, and in picture words suggesting higher and still higher thoughts, age after age, as the mind of man advances from its rude state of barbaric ignorance to loftier planes of knowledge. That is what the writer of the Epistle to the Hebrews intimates when he talks of the "divers portions" and the "divers manners" in which God spake through the prophets to those earlier generations. But did the writer of that majestic epistle so bind himself to the form and fashion of the earlier revelations, or to the form and manner in which they were understood and interpreted in those former generations, as to exclude, or reject, or in any way belittle or circumscribe, the last and highest revelation which had just been made by the Son of God? He did nothing of the sort. He interpreted the earlier by the later, not the later and more perfect by the earlier and less perfect. That example is valid, and it will remain valid for all time. The larger knowledge, of whatever kind it be, must always be applied to the enlargement and illumination of earlier ignorance and obscurer thought.

*The Church Standard.*

Our great leaders are asking, "What is the essence of Christianity?" and learned volumes are coming to us from Europe and America burdened with the momentous question. They are filled with inquiries into history, into philosophy, into science, into archæology. . . . But with all their controversies and variations and antagonisms there is, with significant exceptions, striking agreement upon one point. They all unite in presenting Jesus Christ as the ideal of humanity, and his character as the goal of every man's highest aspiration. They may not wholly agree in their definition of Christ, nor as to the elements that enter into his unique personality; but they do agree in saying that he is the noblest example of manhood yet given to the world, and that every man should eagerly desire to be like him.

In this harmony of conviction and utterance there is much encouragement. The utterance is not always all that we could wish, not all that the case logically requires; still, it shows that the movement is in the right direction, and the conviction will yet work itself out to the full logical results.

*The Examiner.*

Let the visitor turn from the cathedral service, and enter one of the great popular people's temples of some Nonconforming body, and at once the whole tone of the service, the dogmatic expressions of truth embodied in the hymns, the passionate desire thrilling the prayers, the bold interpretation of the ancient Scriptures, the preacher's appeal to the understanding and thoughtful consideration of his hearers, are convincing that here one has passed from a religion of art, of form, of beauty, to a religion of reason and theory. An observer only can hardly be convinced that these conscience-driven Nonconformists have hit upon the ideal expression of religious spiritual craving. Incessant theory, constant reiterated argument, a spirit of resistance, these things must miss "the happy bourne of restful souls;" and equally do they tend to lead the convert to an isolation from the social life of the community which establishes provincial narrowness, a sort of pride of bigotry, losing sight of the chief issues of life in emphasizing some particular point of reason.

There is opportunity for something else. We are looking upon a transition period.

FREDERICK B. MOTT.

In *Christian Register.*

Allen Chesterfield, writing in *The Congregationalist and Christian World*, says, in reporting a Sunday afternoon conversation among a group of men in a country boarding house: "That frank, friendly conversation seems to me, as I look back upon it, worth rehearsing. It shows that you can hardly get together half-a-dozen thoughtful persons to-day without discovering, not only a wide variety of opinions regarding religious truth, but a tremendous interest in getting at reality. This group was typical of thousands in city and country places the land over. But what pleased me the most was the spirit in which the informal debate was carried on. Tolerance, charity, sincerity, and a constructive purpose were evident all the way through. When the afternoon began several in the room were practical strangers to one another, but they parted as friends, each recognizing in all the others the Christianity that lies beneath all forms and outward differences."

Here is a personality appearing in an obscure corner of a forgotten and lost empire centuries ago, filling the whole world with hope and ambition because it supplies all the needful concrete illustrations of a perfect life in all relations. The study of such a model, the mastery of the motive that governed it, the patient imitation of it, are among the most powerful resources which a man can weave into the organization of his life. As knowledge of the Bible is the most useful knowledge in the world, so the personality of Christ is the most fertile and productive resource which man can bring into his life.—REV. A. A. BERLE.

NEED OF REPENTANCE.—The word repentance means the change of mind of those who have begun to abhor their errors and misdeeds, and have determined to enter upon a better course of life, so that it embraces the recognition of sin and sorrow for it and hearty amendment of the life. There can be no true repentance until the hideousness of sin is borne in upon the consciousness of the unbeliever. It is the broken and contrite heart that God receives. It is the one who draws nigh to God to whom God will draw nigh.—REV. JAMES J. KEEVIL.

Christian men and women who are deeply engaged in the work of the Church need to guard themselves against becoming so absorbed in methods that they overlook the real purpose and spirit for which the Church exists. Organization, machinery, attention to details are necessary, but they are only means to an end. When they become the end they defeat the very purpose of their existence.—*The Examiner.*

The defeat of the Midianites by the little band of selected men is a picture of a great spiritual truth. Our "Midianites" are many and strong—evil passions within, evil forces without the temptations of the world and of the Prince of the world—and in our own strength we are powerless against them.

*The Examiner.*

If you wish to know whether you are a Christian, inquire of yourself whether, in and for the love of God, you seek to make happy those about you by smiles and pleasant sayings. Are you a comfortable person to live with? Are you pleasant to have about?—GAIL HAMILTON.

Do not fancy, as too many do, that thou canst praise God by singing hymns to Him in church once a week and disobeying Him all the week long. He asks of thee works as well as words; and more, He asks of thee works first and words after.

CHARLES KINGSLEY.

Christ comes to us in the form of a new truth, which will correct our errors and enlarge our hearts in some opportunity of usefulness to our neighbor, in some deep conviction calling us to a new life.

JAMES FREEMAN CLARKE.

Wouldst thou bring the world unto God? Then live near to Him thyself. If divine life pervades thine own soul, everything that touches thee will receive the electric spark, though thou mayest be unconscious of being charged therewith.—L. M. CHILD.

Duty's path always opens for us as we go on, not before we start, but as we obey and move forward. The difficulties and obstacles may be made stepping-stones by which we shall rise to higher things.—J. R. MILLER.

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00
Twelve or more to one address, each, prepaid . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES." THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

THE NEW WORLD. 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

## Items of Interest.

**National.**

Diplomacy has triumphed in the Venezuelan affair. Last Friday evening towards midnight, Ambassador Bowen, representing Venezuela, signed identical protocols with Sir Michael Herbert, representing England, Signor Mayor des Planches, representing Italy, and Baron Sternburg, representing Germany. The protocols provide for the immediate raising of the blockade; for the cash payment to England and Italy of $27,500 each and to Germany of $340,000 in five monthly instalments; for the return of all captured Venezuelan vessels; for the reference to The Hague Tribunal of the question of preferential treatment in the matter of the settlement of the full claims as against the claimants taking no part in the blockade; for the application of thirty per cent of the customs receipts of La Guayra and Porto Cabello to the payment of claims; for the creation of mixed separate tribunals—one English representative and one Venezuelan, one Italian and one Venezuelan, one German and one Venezuelan—for adjudicating the claims of each Government, President Roosevelt to be umpire in case of disagreement. The claims are divided into three classes; those of "honor," those of private citizens resulting from the Venezuelan civil wars, and those from banks and corporate institutions whose interests have been injured.

The blockade began officially December 20, although on December 9, the allied fleet entered the harbor of La Guayra, seized four Venezuelan vessels and sank three of them. On the same day the Bolivar was seized at Trinidad; the Zamara, a troopship, on the 10th, and the gunboat Restaurador on the 12th. Porto Cabello was shelled the 13th, Italy joined the allies in coercive movements on the 16th and on the 18th President Castro requested Mr. Bowen to arrange a settlement with the allies. On the 23d the allies consented to arbitration.

Arguments for and against the demands of the union anthracite mine workers took place last week before the Coal Strike Commission at Philadelphia. On Monday D. J. McCarthy of Hazelton, ex-Congressman Brumm of Minersville, and H. D. Lloyd of Chicago spoke for the miners. The arguments of the operators were presented on Tuesday, Wednesday, and Thursday. C. S. Darrow, principal counsel for the miners, took up Friday and Saturday in summing up the case and answering President Baer of the Reading Road.

President Baer for the operators made this proposition relative to the wages to be paid the miners:—

"That the rate of wages now paid shall be the minimum basis for the next three years; that from the first of November, 1902, to the first of April, 1903, all employees, other than contract miners, shall be paid an additional five per cent; that on and after April 1, 1903, for each five cents in excess of $4.50 per ton on the average price realized for white ash coal in the harbor in New York, on all sizes above pea, wages shall be advanced one per cent; the wages to rise or fall one per cent for each five cents increase or decrease in prices; they shall never fall during the next three years below the present basis.

"The average price for each region to be ascertained by a competent accountant, to be appointed by Judge Gray, chairman of the Commission, or in case, for any reason, Judge Gray cannot act, then by one of the United States Circuit Judges holding court in the city of Philadelphia. The compensation of the accountant to be fixed by the judge making the appointment, and to be paid by the operators in proportion to the tonnage at each mine; each operator to submit a full statement each month to said accountant of all sales of white ash coal, and the prices realized therefrom, f. o. b., in New York, with the right of the accountant to have access to the books to verify the statement."

For the first time the largest amount among the appropriations of Congress is that of the postal budget for the fiscal year to begin with July. This amount is one hundred and fifty-three million dollars, more than double the appropriation of 1891. In 1895 it was ninety millions. The postal bill provides also for a new "sixth" class of railway mail clerks, whose salary is to be $1,500 per annum. The salaries of the division superintendents of this service will be increased from $2,700 to $3,000. The appropriation for the rural delivery service is $12,619,300.

It is announced that the new cabinet officer required by the Department of Commerce Bill, who will be known as the Secretary of Commerce and Labor, will be George B. Cortelyou, now secretary to the President.

A measure has been introduced into the Massachusetts Legislature to provide for the transfer of the custody of the Bunker Hill Monument to the Commonwealth.

The Senate has agreed to the conference report on the Department of Commerce Bill. This passes the bill, the report having previously been agreed to in the House.

**Foreign.**

Finding it inconvenient, in the face of the sentiment of Christian Powers, to destroy the national spirit of the Armenians by force, the Turkish government undertakes to coerce it by putting Armenian school textbooks and press under strict censorship. Such words as the following have been interdicted: Star, because its Turkish translation means Yeldiz, which is the name of the Sultan's palace; astronomy, because of its relation to the word star; the chemical symbol of water, H2O, because this might be construed into H (Hamid), 2 (second), and O (cipher),—that is, Hamid Second is nothing; the word Armenia, so that the American missionaries who had founded a college in Armenia by the name of "Armenian College" were obliged to change its name into "Euphrates College;" and the words liberty, freedom, home, nation, sacrifice, thistle, obstacle, stumbling, hope, faith, emancipation, Lincoln, struggle, right, tyranny. No verses are to be published in the daily papers; the Boers are not to be sympathized with; Americans never praised; Germany never criticised, and Russia never mentioned.

The Sultan of Morocco has gained a decisive victory over the pretender. The Sultan represents the spirit of reform and progress in Morocco, while the pretender with his followers represent the reactionary spirit, as did the Boxers in China. The enlightened policy of the Sultan was the cause of the rebellion. This ruler has endeavored to collect taxes honestly, has allowed criminals who have taken refuge in mosques to be arrested. The fact of his occasional wearing of the English costume and the use, even, of the motor-car has been used by the pretender to work upon the Moorish sects opposed to reform.

A despatch says a great French shipping trust, controlling five millions tonnage, has been formed. It embraces all French steamship lines and nearly all French sailing vessels. The president of the new combination is former Minister of Commerce Lebon, the chairman of the Messageries Maritimes. The vice-president is Alfred Freycinet, a shipowner of Marseilles. The new concern will have its headquarters in Paris. Its title will be the General Syndicate of Shipowners.

Dvorak, the composer; Vrchlicy, the Czech poet, and Ferdinand von Sarr, the Austrian poet, have been made members of the Austrian House of Peers.

**Industrial and Commercial.**

The two sections of the world in which exports from the United States do not make satisfactory growth are South America and India. In each of these cases the United States imports large and constantly growing quantities of the products of the countries in question, but makes no perceptible gain in its exports to those parts of the world. The imports into the United States from South America have grown from $90,006,144 in 1890 to $119,785,756 in 1902, while the exports to South America from the United States in 1890 were $38,752,648, and in 1902, $38,043,617. From the British East Indies (which includes India, the Malayan Peninsula, Ceylon, etc.), the imports into the United States were, in 1890, $20,804,319, and in 1902, $48,421,218; while the exports from the United States to the British East Indies were, in 1890, $4,655,979, and in 1902, $4,621,876.

The Massachusetts Electric Companies, operating over eight hundred miles of trolley lines reaching from Nashua, N. H., to Newport, R. I., have given notice that after March 1, the wages of conductors and motor men will be increased from five to twenty-five per cent according to the length of time the men have been in service. This action is said to be a genuine surprise. Two thousand five hundred and twenty-two men will be affected by the new schedule.

President John Mitchell of the United Mine Workers has acted as peacemaker between the operators and miners of bituminous coal in Illinois, and succeeded in securing the adoption of a scale to which one-third of the miners were opposed.

**General.**

On the occasion of the recent forty-seventh annual convention of the American Association of General Passenger and Ticket Agents, the Grand Trunk Railway gave a highly successful demonstration of the availability of wireless telegraphy on a moving train. The experiment was in charge of Drs. Rutherford and Barnes of the MacDonald Physical Laboratory of the McGill University of Montreal. Signals were exchanged between a station and a train which was moving at the rate of fifty miles an hour. With the apparatus, simple as compared with that used in the Marconi stations, communication was maintained easily for a distance of eight or ten miles. The success of this experiment shows the possibility of the use of wireless telegraphy as providing another safeguard for the protection of the traveling public.

### The Right not to take Medicine.

THE overwhelming defeat of the bill prohibiting "the practice of Christian Science, mind and faith cure in healing" in the lower house of the New Hampshire legislature is highly creditable to the intelligence of that body and highly satisfying to those who have any conception of the menace to personal liberty involved in such measures.

No matter what may be the individual judgment or opinion concerning the efficacy of Christian Science in the treatment of disease, to prohibit its practice would be practically to deny to persons the right not to take medicine, and this would be a flagrant infraction of personal liberty. The state might as well undertake to say that only allopathy shall be practised in healing, thus denying to all the right to receive homœopathic or eclectic treatment.

The Christian Science healers give no medicine. The practitioners of both the allopathic and homœopathic schools give less medicine than they did twenty years ago. The medications are not only not so strong but increasing dependence is placed upon nursing, and upon hygiene and sanitation. The practice of medicine is necessarily an experimental science. Distressing failures to cure or give relief are noted on every hand. But the vast majority of people still have faith in medicines. Their efficacy in many ailments has been frequently demonstrated.

But independent of all discussion or speculation as to the curative power of medicine, the right of a person not to take medicine is inviolable. Deplorable as it may seem to some, this right cannot be denied without striking at the most elemental liberty of the individual. If the right not to take medicine is inviolable, then the right to practise a system of healing that does not employ medicines cannot be denied by the State.

Editorial in *Chicago Record-Herald.*

### New Hampshire Granite for Manchester, Eng.

AN order was recently received from Lady Victoria Murray, daughter of Lord Dunmore, for a corner-stone which is to be used in the new church edifice to be erected in Manchester, England. The stone comes from the famous quarries of the New England Granite Company, which furnished the granite for the Congressional Library in Washington.

The growth of the church at Manchester has been remarkable. Lady Victoria was called there something less than four years ago, and through her efforts there has grown up a movement which is now about to build a beautiful edifice of Gothic structure, which promises to be one of the handsomest of that city.

It will be remembered that Lord Dunmore and family have visited Concord as the guests of the Reverend Mary Baker Eddy. Soon after her visit to Pleasant View, Lady Victoria Murray resigned the duties and social privileges of her high position in English society and has since given her entire time to the religious movement which is making such rapid progress in England and elsewhere.

### Christian Science Saves the Bible.

I HAVE just read from a so-called liberal paper the following statement: "Christian Science is accounted for by Christianity. Christianity is accounted for by superstition." I have also noted an attack upon Christian Science based upon the assumption that prayer is ridiculous. St. Paul declared: "For the preaching of the cross is to them that perish foolishness; but unto us which are saved it is the power of God." The modern translation gives it: "The message of the cross is indeed mere folly to people who are on the way to ruin, but to us who are on the way to salvation it is the power of God."

The possibility of healing the sick and reaching the divine aid through prayer may not seem probable to the philosophical mind, but we think this is because the nature of God as well as the scientific, intelligent method of approaching Him is not understood. The materialism of the age, in a great degree, not only obscures the essence and power of God which is invisible to the personal senses, but hinders the interest in cause and effect from a spiritual standpoint. It should not be a matter of astonishment that the laymen should be skeptical in respect to the efficacy of prayer, when some of our clergymen ridicule the practice of depending upon God to the exclusion of medicine as a means of healing the sick.

It is a great strain upon one's fidelity to the Bible to attempt to explain away prayer rather than to admit that the difficulty lies in the kind of prayer employed, and that true prayer is always practical. The substitution of material means for the power of Christ in healing the sick, the advocacy of magnetic influence as a proper substitute for the Holy Ghost in converting sinners, tends to infidelity and a depreciation of the validity of the Holy Scriptures.

Christian Science coming just at this period is none too early. While it is doing marvelous things in healing the sick and reforming sinners, it is also saving the Bible itself. Material philosophies, so-called, research which does not extend into the realm of the spiritual but takes note only of human phenomena, would eventually leave the world wrapped in cold materialism.

Previous to my knowledge of Christian Science I was taught, as I now am, that God is omnipotent, everywhere present, that He is infinitely intelligent and an ever-present help in time of trouble. I believed these assertions concerning Deity because of my allegiance to the Bible and the teaching of my church, but I had no certain proof of the truth of what I had been taught concerning God. The practice of Christian Science has demonstrated the power of God and has proved convincingly every good and truthful thing that orthodoxy taught me about Him. While my former church introduced me to Divine Providence, it was Christian Science which established a thorough acquaintance and enabled me to know that what I had formerly been taught was correct. It was Christian Science

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

which corroborated the truths of the Bible and made it a book of absolute Science to me. I had been told, and I verily believed, that God would answer prayer. Christian Science has shown to me how prayer is answered, has taught me how to pray aright and therefore with results. I can now say that prayer is efficacious, having been healed of difficulties which were never reached by medicine, and having witnessed the healing of thousands through this Science, many of whom had given up all hope in material remedies. I have positive proof that mankind can do better without than with medicine; not when left without anything, but when they have Christian Science in its place.

Christian Science sustains the Scriptural teaching and the possible fulfilment of the prophecies in every detail. Some of the most sanguine skeptics of the country have been converted to the Christian religion and to a firm belief in Scriptural teaching, through this Science. Some of these who formerly ridiculed the Bible now carry it in their pockets as a weapon by which they defend their faith.

All Christian Scientists are earnest Bible students. While I formerly read the Bible from a sense of duty, now I love it, and relish every idea which it contains. Read under the light of Christian Science, it is a most fascinating book and is exceedingly practical. ALFRED FARLOW.

In *Boston Times.*

## What Christian Science is Not.

To the Editor of *Life.*

*Dear Sir:*—So many little articles, anecdotes and poems have recently appeared in *Life* on the subject of Christian Science, that it is now possible to gather from them with some degree of accuracy what Christian Science is *not.* For example, it is not "New Thought," as implied in some supposed "Love Letters," nor does any Christian Scientist consider himself a "Vibration of the Mind Universal," or a "Radiator of Hope," whatever these terms may mean. Christian Science is not "treating" anybody without his desire, nor "doing mentally" anything to anybody against his will. Therefore, it is not hypnotism, nor personal influence, nor *willing* another person.

Searching the files of *Life* for possibly accurate characterizations, we also discover that Christian Science makes no claims to being "psychic," or to giving "spiritualistic insight;" is not especially interested in "asparagus" beds, or "rats and green snakes;" and does not use the press for circulating false reports, or preach sermons denouncing other Christian denominations, or even accuse physicians, who lose patients, of having committed manslaughter.

In point of fact, *Life* credits Christian Scientists with being "happy," with having an "increasing membership roll," and with showing a "long list of the maimed and the halt now alleged to have been made whole."

What *Life* cannot forgive is that Christian Scientists "have not cured death," which is a very proper grievance for *Life* to have. It should be remembered, however, that among the many qualities which Christian Scientists have not is also that of infallibility, and, therefore, they crave from their critics a little of that kindly consideration which seems to be accorded to members of all other denominations except their own.

As a Christian Scientist, I also claim for my fellow-believers that they are not unreasonable. For instance, they do not assume that simply because a faith makes people better and happier, therefore the Founder of that faith must necessarily be evil-minded; they do not accuse the members of all the professions under the sun, of all the arts on earth, and all the occupations between the poles, of being mercenary, because they all, without exception, accept remuneration for their labor; they do not call churches "corporations for profit," because most of them maintain enormous denominational book concerns, nor do Christian Scientists abuse authors roundly for copyrighting their books and selling them to those who want to buy them, at the prices that people are willing to pay for them. Nor, so far as I can recollect, do Christian Scientists attempt to decide for these authors what the prices of their books shall be to people who do not want to buy them.

There are other mistakes which Christian Science teaches people to avoid, but I think those I have mentioned are quite important—in a way. W. D. MCCRACKAN.

In *Life.*

## The Teaching of Sound Doctrine.

To the ordinary observer it is evident that Christian Science must teach sound doctrine. Its advocates are recruited largely from the ranks of those who have had the best medical care at their command, and the records of church membership in this denomination show that two thirds of its people were in good standing in other evangelical churches before adopting Christian Science as their religious belief.

The teaching of Christian Science in respect to healing the sick is identical with that of Jesus. He not only healed others, but in turn taught his followers how to heal. His promise is, "The works that I do shall he do also; and greater works than these shall he do." In promising his disciples that certain signs should follow them that believed (or understood) his teaching, he designated, among other things, that "they shall lay hands on the sick, and they shall recover." The Christian Scientist cannot be blamed for trying to prove the teaching of the Bible on this point to be more than mere theory. Jesus proved it possible to apply a demonstrable understanding of God to the daily affairs of men, and he urged his followers for all time to do likewise. If prayer is not to be classed among remedial agencies, the teaching of the Bible on this point will have to be rejected. Interwoven with the teaching of both Old and New Testaments, we find the doctrine that prayer is the most effectual remedy for human want and woe. The Scripture abounds with verse and narrative wherein is set forth the necessity of appealing to the most High when in sickness or sorrow.

It should not be assumed that the Scientist enters practice without preparation. His line of study may differ from that pursued by a student in *materia medica,* but the standard of efficiency is none the less high, and, in addition, the Christian Scientist must needs have "clean hands and a pure heart" to bring to the suffering ones that knowledge of God's love and care which is needed to restore the sick and raise the fallen. ALBERT E. MILLER.

In *Oil City* (Pa.) *Blizzard.*

## A Distinction with a Difference.

To the extent that magnetic healing may be said to be mental in operation, to that extent may it be termed "of the Christian Science sort," but beyond this there exists even less affinity between it and Christian Science than there is between Christian Science and the method of the conscientious medical practitioner.

With no desire to disparage or in any manner detract from the earnest efforts of any school of healing to give health to suffering humanity, it seems but just to emphasize the fact that Christian Science widely differs in precept, practice, and effect from all forms of mind-cure operating through will power, magnetism, mesmerism, etc. The healing in Christian Science is not the result of any mental influence, or human power, which is "set in motion at will" by Christian Scientists, but is rather the result of an apprehension and an understanding in some degree of that ever-operative and never-changing law of being of which

Digitized by Google

the Master said, "Ye shall know the truth, and the truth shall make you free."

The physical healing in Christian Science is, so to speak, but the externalization of a spiritual betterment or regeneration of consciousness due not to the operation of any human will or personal control, but to the realization in some measure of the all-power, presence, and control of the One Divine Mind, the infinite God or Good, and the consequent powerlessness and unreality of any discordant opposite.

The mission of Christian Science is not alone to confer physical relief, but primarily to rule out of the nature and lives of men the plagues of fear, doubt, selfishness, and all evil through the cultivation of the qualities of hope, charity, honesty, and goodness, and this is accomplished through understanding faith in the ultimate supremacy of good in every man as the spiritual image and likeness of God, notwithstanding the visible evidence to the contrary. And incidental to this better appreciation of the truth of man's relationship to his Maker, he finds himself improved physically as well as morally.

DAVID B. OGDEN.

In *Portland* (Ore.) *Telegram.*

## The Laborer is Worthy of his Hire.

*Mr. Editor:*—Will you permit me to say that the matter of charging for Christian Science treatment is something that lies between the practitioner and the patient? If neither of them complain, third parties can well afford to refrain from anything in the nature of criticism. Those who have been healed of disease or sin through the action of Christian Science treatment do not complain because of having paid for these treatments. Furthermore, it is a well-known fact that every Christian Science practitioner gives many treatments without receiving any remuneration whatever.

The suggestion in one of Professor Lloyd's remarks to the effect that preaching the gospel can only be accomplished through personal sermons, would deprive us of the Bible which is certainly the greatest preacher of the gospel which has ever been given to the world. Mrs. Eddy does preach the gospel through her numerous publications, and much more effectively because more people are reached than she or any other person could reach by means of personal sermons. Christian Science does not rest upon any improper interpretation or application of the Bible, but on the contrary, rests upon a clear, logical, spiritual interpretation of the word of God therein contained. It makes no difference whom Jesus addressed in the Sermon on the Mount. As Professor Lloyd very aptly remarks, it "gives the underlying principle that applies to us all."

BICKNELL YOUNG.

In *Joliet* (Ill.) *News.*

## Christian Science vs. Materialism.

A CHICAGO minister of an orthodox church startled his congregation somewhat a Sunday or two ago by congratulating the advocates of Christian Science upon the progress they were making, and he declared that the growth of this sect "is a protest against the materialism of the age." There can be but little doubt but this Chicago minister is correct. The new sect has attracted a very intelligent and refined class of people—people in whom the spiritual element has either been developed, or is capable of being developed. It also appeals to those who are weary and heavy laden. It is altogether probable that a majority of Christian Scientists have been drawn to this church because of the fact that it is very far removed from what is known as materialism.

Putting aside the peculiar doctrines of this latest sect in regard to disease, and you find a creed very simple, if indeed it may be called a creed at all. It is simply the doctrine of love as proclaimed by Christ. And these people for the most part seem to practise what they preach. It is said of them that they seldom speak evil even of their enemies.

Extract from Editorial in *Cedar Rapids* (Ia.) *Republican.*

## Medicine and Science.

To the Editor.

In this scientific age there is a large class of thinkers who agree with Mr. Edison that material medicine is fast losing its footing. The bacteria proposition, however, is still an undemonstrated problem, but will no doubt be clearer when it is understood that things are thoughts or mental phenomena. In the language of Prof. Wilhelm Oswald of the University of Leipsic, Germany, "Matter is a thing of thought, which we have constructed for ourselves rather imperfectly to represent what is permanent in the change of phenomena." Mr. Edison is also quoted by the press as saying, "There were never so many able, active minds at work on the problems of disease as now, and all their discoveries are tending to the single truth that you cannot improve on nature." Many agree with Mr. Edison on this point; the main question, however, is, what is nature? Christian Scientists believe that the spiritual is the natural, and therefore that the law of nature, or the natural law, is the law of God, Good, and that as man becomes acquainted with this law and acts in accordance with it, he is consciously in harmony with God's government, and thus learns of his dominion over the unnatural so-called destructive laws of atomic forces, climatic conditions, etc., as well as all forms of disease and sin.

### Speak and Do.

If you have a word 'gainst wrong,
Say it now and say it strong!
Never hesitate; who knows?
It may waken, as it goes,
Echoes that shall loud resound,
Circling all the earth around,
With one earnest, faithful word
Moving souls aright, when heard.

If you have a voice of cheer,
Use it daily; they who hear
May be helped their load to bear;
Saved from overburd'ning care;
Tided o'er some heavy bar,
Where life's daily troubles jar.
Ne'er suppress a cheery voice,
If it makes one heart rejoice.

If you have a willing hand,
Bid it work at your command,
Doing service for your kind,
Nearest service you can find.
Not for praise, and not for pelf;
In that work forgetting self;
Gladly, happily, to do
As you would have done for you.

## The Lectures.

### At Lockport, N. Y.

January 29, an audience of over seven hundred gathered at Hodge Opera House to listen to a lecture delivered by Judge William G. Ewing of Chicago, under the auspices of First Church of Christ, Scientist. The lecturer was introduced in a pleasing manner by Senator T. E. Elsworth of this city. Visiting Scientists from Buffalo, Tonawanda, and Niagara Falls were in attendance.—*Correspondence.*

### At El Reno, Okla.

The large audience which greeted Judge Septimus J. Hanna of Boston, at the Opera House Sunday afternoon, February 1, was as representative in intelligence, fair-mindedness, and non-prejudice as any audience which has ever greeted a lecturer in El Reno.

Those present were drawn there to hear Christian Science explained by a member of the Christian Science Board of Lectureship, and no one could have gone away without a full and complete realization that the new thought is firmly based on Biblical foundations and inspired by the teachings of the lowly Nazarene.—*El Reno Evening Bell.*

### At Barre, Vt.

The Christian Science lecture given in the Opera House Sunday afternoon [January 25] was well attended. The lecture was given by Rev. W. P. McKenzie, C.S.B., of Cambridge, Mass. He was introduced by Frank A. Walker as follows:—

*Ladies and Gentlemen:*—It is again my privilege on behalf of First Church of Christ, Scientist, of this city, to bid you a cordial welcome to this our third annual lecture. In extending to you the hospitality of this occasion there is no wish on our part to proselyte, to ask you to become Christian Scientists, or even to believe in Christian Science, but to offer a cup of cold water in Christ's name, and emphasize the fact that "God is our refuge and strength, a very present help in trouble." No religious movement since the early days of Christianity has attracted so much attention or been more misunderstood than has Christian Science. In order to correct these misunderstandings a Board of Lectureship has been established by The First Church of Christ, Scientist, in Boston. One of the members of this Board will address you this afternoon. It gives me pleasure to introduce to you Rev. William P. McKenzie of Cambridge, Mass.—*The Barre Times.*

### At New York, N. Y.

On Sunday afternoon, January 18, there assembled in Carnegie Hall about two thousand people to listen to a lecture given by Judge William G. Ewing of Chicago, under the auspices of Fourth Church of Christ, Scientist.

Judge Ewing, who was introduced by Assistant District Attorney Osborn, spoke for about an hour and a quarter to a most attentive and appreciative audience. He gave a clear and remarkably spiritual presentation of his subject, and one well adapted to correct the many misapprehensions as to the real nature and work of Christian Science.

In introducing the lecturer Mr. Osborn said:—

It gives me a great deal of pleasure to appear on an occasion of this character. I am about to introduce to you a man who from the honor which he has had, and from the positions which he has occupied, must be one whose opinion is worth something, and this opinion he himself will announce to you. I know that it has to do with the subject of Christian Science. I myself do not know much about the Science, but I have known many of the persuasion. I have always found them to be extremely intelligent and conscientious, and I have never had the misfortune to prosecute a single one of them for crime.

It would give me a great deal of pleasure to talk about the subject of Christian Science, but I know from experience that if a speaker is to talk about a thing he knows nothing of, he has the joy of indulging in an unfettered imagination.

I claim that we should give to those who profess to have knowledge, and whose reputation for intelligence and honesty is world-wide, a patient hearing. We ought to do a little more than this; we ought to give those persons who discourse upon a subject of this nature not only a careful but a sympathetic hearing, for we know from so many people that there is much in it, and it is unbecoming all persons who claim to be intelligent to try to batter down with the hammer of fanaticism and prejudice a thing they do not know anything about.

I take great pleasure in introducing to you this gentleman, whom you will hear with much interest. In addition to being a man of extreme intelligence, he is commended to you by the very high positions which he has occupied and his undisputed standing in the community. Ladies and gentlemen, I have the honor to introduce to you the Hon. William G. Ewing.—*Correspondence.*

### At Manchester, N. H.

Judge William G. Ewing of Chicago spoke in support of Christian Science before an audience of some eight hundred people in the Manchester Opera House yesterday afternoon [February 1].

The audience was representative of the best people of the city, and included many prominent members of all denominations and sects. The interest prompting attendance at the lecture was varied. Almost the entire membership of the local Church of Christ, Scientist, was present; many others were there out of deference to wishes of friends; and it may be said that there were a great many more who attended out of curiosity, even such curiosity as is felt by those who, perhaps, are bitterly opposed to certain teachings of this new church.

Judge Ewing was introduced by Oliver E. Branch, who said:—

I believe it is an entirely conservative statement to say that Christian Science, at the present time, is attracting the thoughtful attention of more thoughtful people in the United States than any other form of Christian faith. Nor is the reason for it at all obscure. The ancient rituals, however sanctified by time and venerated associations, appeal but slightly to the religious nature of thousands of men and women, who were born and nurtured in the old faiths and doctrines. The metaphysical speculations and abstract conclusions of transcendental cults, furnished them no adequate or satisfactory explanation of the mystery of life, the destiny of the soul, or the nature and purposes of God.

If I understand correctly what Christian Science is, or claims to be, it is the revival and rehabilitation of the revelation given to the world by Jesus, as set forth in the Gospels; and the actual, positive application, in the experiences and life of men, of the truths exemplified in his career and proclaimed in his teachings. It finds its foundation in the Bible. From the Bible it obtains the assurances upon which it rests. It asserts that God is not dead, nor banished, nor an exile from His universe; that He is not helpless or confounded in the presence of the seeming complexities of human life, but that He is as powerful to order and sustain as He is to create; that God is not an arrogant monarch, enthroned somewhere in the immensities of space, who is to be placated and supplicated as a con-

Digitized by Google

dition for His benefactions to His children; but that, so far as He is comprehensible to mortal consciousness, He is the all-inclusive, all-loving Spirit immanent in every heart that is opened to its indwelling, or that is brought into unison with its influence; that now we are in truth "sons of God;" that the "kingdom of God is within" us; and that in so far as we realize our divine origin, divine nature, and real sonship with the Father, there is peace, joy, health, life, in place of discord, sorrow, disease, and death.

It affirms that Jesus Christ revealed to the world, as it had never been revealed before nor has been since, the nature of God as supreme Love, of which all that we discern by our senses or apprehend in our consciousness is only an expression and manifestation; and that in Christ there was embodied and manifested the perfection of this Spirit, so that He was in truth the "word," Immanuel, "God with us;" that the "tidings of great joy" which he proclaimed were not that of a "plan of salvation" from consequences of an imputed Adamic sin, nor of a bodily resurrection after a long-deferred immortality; but that the gospel which he preached, which caught the ears of the multitudes that thronged his way wherever he passed, asserts the ability of every human being to rise superior to every form of sin, through the indwelling presence of God, and the power potential in those who became his disciples to do the works which he did; that the one thing which most distinguished the life and ministry of Jesus Christ was the healing he wrought of sickness, infirmity, and disease; that they were not miracles in any superstitious sense, not something done in opposition to the so-called laws of nature, but were only a manifestation of Truth, that the power that created man and bestowed upon him the gift of life, is adequate always and ever to sustain that life and preserve it from decay, destruction, and death. Furthermore, Christian Science affirms the truth of the declaration of Jesus, that he was and is "the way" of life, and that to those who believe on him and follow his teachings and example there is given the power which he possessed, so that the works which he did, "and greater," they may do also; that this gospel was not a message to the poor peasants and humble fishermen of Galilee alone, nor limited in its duration to the first century, but that it was a message to all the world and for all time, and opened the kingdom of heaven to all believers.

If these are the claims of Christian Science, and if they are even measurably valid, should we much wonder that it is growing with a rapidity that confounds misrepresentation, abashes ridicule, silences skepticism, and conquers disbelief; or that its interpretation of the Scriptures, especially of the New Testament dispensation and revelation, is satisfying the questionings of multitudes who, recoiling from the incredible assertions and dark mysteries of the old theologists, were drifting down to the hopeless despair of fatalism, or into the rayless night of agnosticism?

Some of you who have come here this afternoon are already fully persuaded of the validity of the truths of Christian Science. Perhaps others of you are, like myself, friendly and tolerant investigators of its claims; but all, I am sure, will be pleased to listen to the able gentleman and distinguished member of my own profession, who has given this subject a great deal of thought, and who has come here to present to all, who are of open mind and candid temper, the reasons which ought to commend it to their acceptance and belief.

I have the pleasure of introducing to you the Hon. William G. Ewing of Chicago.—*The Union.*

### At Albany, N. Y.

A large and intensely interested audience attended a lecture given by the Hon. William G. Ewing of Chicago, on Christian Science, in Odd Fellows Hall last night [January 22].—*The Albany Journal.*

The speaker was introduced by Mr. John F. Montignani, a prominent lawyer of this city, who spoke as follows:—

*Ladies and Gentlemen:*—I have been requested to introduce the speaker of the evening. I regard that request as a high compliment, and that we are all to be greatly felicitated upon the privilege and opportunity of having presented to us, by one of its ablest advocates, the teachings of Christian Science.

This is by no means, as I understand it, a gathering of the believers of Christian Science to affirm and confirm their faith. It is rather an assemblage of earnest inquirers, who would, in the interests of truth, give to a new doctrine a fair hearing, desiring to inquire as to all things and to hold fast that which is good. In fact, I believe my own position is probably that of many of you. I am not a Christian Scientist. I am not prejudiced in favor of Christian Science, but I am willing to investigate it; and I have a profound respect for the high character and the lofty ideals of those of its followers whom I so well know. Moreover, I recognize the manifold good work that these believers are doing throughout the community, and I am profoundly impressed with the solemnity and importance of the claims that are made in behalf of this new faith. Indeed, it has seemed to me that not only this hall, but every hall in the city, should be filled upon the suggestion that we should hear to-night of the new interpretation, I almost said the new revelation, so claimed, of the doctrines and the life of the Christ.

Consider, consider, realize what that means: A new-old interpretation of the life and teachings of Jesus,—a subject of the profoundest importance, that deals with the relation of God and man; that touches the problems of life, death, and the hereafter. Our religion, our morality, our civilization, is built upon the Bible, and millions believe that in those sacred Scriptures are contained the only true rule for the conduct and the salvation of the race. And Christian Science, as I am told, claims that to this Bible, to these Scriptures, it can, after centuries of misunderstanding and misinterpretation, give the proper explanation and the true key. Is there any need, then, of further explaining our interest, our intense interest, in the subjects that are to be considered here to-night?

The gentleman who is to address us is an honored member of his profession. He has served the people long and well; has received high judicial station and promotion. Years ago, feeling convinced of the truth of the principles that he represents, he left the law and its emoluments, and, listening to the call of duty, took up the labors of the public platform, and became known throughout this country and abroad as one of the most earnest, interesting, and convincing exponents of the teachings of his church.

Ladies and gentlemen, I have great pleasure, indeed, in introducing the speaker of the evening, the Hon. William G. Ewing of Chicago.—*Correspondence.*

---

It matters not what our environment or circumstances are on this mortal plane of existence. Though our path is beset with temptations, trials, and difficulties, we can resist and surmount them all, if only we realize the omnipotence, omniscience, omnipresence, and allness of God, keep His commandments, and continue in the right pathway, with our eye ever on the goal.—Mrs. F. H. Coit, Chicago, Ill.

---

We are touched with the music of all sweet singers; the deep things of the sages stir the abysses of our hearts; the more we feel the greatness of God's strongest sons, the more are we conscious that we, too, are his well beloved.

Charles Beard.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Not "The Church of America."

CONSIDERABLE has been said in the newspapers and elsewhere about the proposed change in name of the religious denomination known as "The Protestant Episcopal Church of America," and it is interesting to note that among the names suggested are, "The National Church of the United States" and "The Church of America."

The right of a religious body to change its self-bestowed name is one that cannot be denied, and if "Protestant Episcopal" no longer describes the denomination, there can be no question of the propriety of a change, but the selection of a name implying that this particular denomination is *the* Church, that it is the State Church, or official Church of the United States, will not be relished by the American people, either as members of other churches, or as citizens of a country whose constitution guarantees religious equality.

The confidence with which the names, "The National Church of the United States" and "The Church of America" are advocated seems to betoken an utter disregard of propriety, and is in the nature of an insult to other religious organizations. The following editorial in the *Boston Herald* of February 13, the title of which we have placed at the head of this article, is a merited rebuke to what it justly terms a presumptuous proposal:—

> The lecture of Bishop Cortlandt Whitehead in Trinity Church, on Wednesday evening, was interesting, but it does not seem quite logical. He proposes to substitute for the name, "the Protestant Episcopal Church," the name, "the American Church." He objects to the designation Protestant that it has somewhat lost its primary significance and is not now well understood. This would seem to be the fault of the preachers more than of any one else. It is their proper business to make it rightly understood. We do not clearly apprehend why the church of which the excellent bishop is a prelate should suddenly have become ashamed of being known as a Protestant church. The objection to the term Episcopal in the title seems to be that it is not the only church that is governed by some form of episcopacy, or something equivalent to an episcopal order. He prefers to have his church called "the American Church." Is "American," then, so much more distinguishing than "Protestant" or "Episcopal"? Does it not seem almost absurd that one who objects to the present name for the reasons given by the bishop should propose to substitute such a commonplace as American? But there is a reason for this choice which the bishop did not mention, but it was suggested in his reference to a proposal to call it "the National Church." To call any church "the American Church" would be one of the worst misnomers of which there is any record. No church can be the American church. At best, it can be only an American church. There is "the English Church" because it is, in fact, the established church of England. But we have no established church, thank God! This proposal that a particular church may, aping the English style, arrogate to itself the name of "the American Church" is one of the most presumptuous of which we ever heard. It is in terms an affront to every other organized body of Christians. The Congregationalists or the Presbyterians, the Quakers or the Mormons, the Roman Catholics or the Jews, might just as properly proclaim themselves to be the American Church. Why a religious body with a long and illustrious history and a consecrated fame should want to discard all reference to its distinctive religious and organic character from its name and assume a common title without religious or spiritual significance is a marvel. The American constitution or the American navy means something. If our friends of that communion are bent on doing something of the kind, we will modestly suggest a more appropriate name. Let them call themselves "the Americanized Church of England."

In another column we quote from the address of Bishop Whitehead as reported in the *Boston Herald*. It will be seen that the Bishop does not favor the use of any name that includes the word "Catholic," but in that regard he differs with his brethren of the so-called "High Church" wing of the denomination, who advocate the name "The American Catholic Church in the United States." It is significant that the adoption of this name is urged by that ritualistic element which from time to time has taken on much of the ceremonial and garniture of the Roman Catholic Church. It is, perhaps, but a milestone marking the road leading to further efforts to unify Episcopalianism and Roman Catholicism. M.

### "Speak, Lord, for thy Servant Heareth."

NOT he who prays most wins most, but he who is most truly reverent; whose attitude is most receptive, most sensitive to the touch that is divine; whose inner ear is wakeful to Truth's "still voice," and who ever craves for good with extended and expectant palm,—his gains are an hundredfold.

Sad and humiliating indeed is it to find oneself in the presence of an object of great interest, be it man or masterpiece, with no conscious responsiveness to its greatness: and how beggarly poor does one feel as he turns away, knowing that even that which he had,—the content of ignorance,—even that hath been taken away from him. Yet how much sadder to discover that through ignorance, stupidity, or vagrancy of thought we have been so irreverent, so irresponsive at the moment of supreme opportunity and supreme need, as to be robbed of the strength and inspiration of the Word that was spoken for us from the foundations of the world.

The hearing ear is the true man's inheritance and possession, but for the human consciousness it is an acquirement to be gained through that watchful endeavor which means spiritual awakening. Reverent listening determines our spiritual receptivity. It brings the atmosphere of true worship, and within the temple it awaits, as did little Samuel, a Father's call, and while waiting it hears celestial harmonies. Here is childhood's vantage. The confusions of maturity have not disturbed as yet its open-eyed wakefulness to the good. It is not afraid of the ideal, and does not tremble or grow hysterical at the portals of heaven. It is more accessible, more free; and while Eli doubtingly prays and unexpectantly longs for the revelation, Samuel has repeatedly heard and answered as best he knew.

This attitude of Christian thoughtfulness is an alert and glad reverence which is equally removed from both vacant revery and fuereal long-facedness. It is childlike, but not childish; meditative, but not melancholy; pious, but not

Digitized by Google

pietistic. It withholds no joy and encourages no pretence, but is careful to be considerate for the devotional sensitiveness and privilege of others, and to be receptive always to the least suggestion of Truth.

On no plane of life does true culture count for so much, as on the religious; and a cultivated and scrupulous regard for the proprieties of the place and hour of worship contributes in no small degree to that true devotional attitude which fails not to find its own. Error would use the kindly impulses of friendly association, sometimes, to make us forgetful, and when thus tempted we may well remember that only in the hush of reverent thoughtfulness can we say, "Speak, Lord, for thy servant heareth." W.

## A Subtle Enemy.

OUR most dangerous foes never approach with blatant threat and stormy aspect, they are silent, subtle, seductive. One of these sly, insidious, innocent-appearing enemies is the demon impulse of separation, little and unobtrusive at first, but at the last, grown great and aggressive, it mercilessly divides home and Church and State. In the beginning, it seems inoffensive and easy of control as were the oozing drops from the dyke which were stayed by the palm of a little child, but which, had they been unrestrained, would with increasing and destructive force have buried thousands in a watery grave.

In the home circle, the error of separation may begin with a frank criticism or the free expression of personal opinion, temperamental sensitiveness, a defence of settled habits, and all the phases of self-justification; its masks are legion.

This same weakening impulse unrecognized, would, if not forestalled, invade even the sacred precincts of the church. By comparison and criticism of personality, fed perchance by envy or ambition, it would ripen into dissensions, factions, feuds, until through its unhallowed counsellings it would crucify again the Prince of Peace. Only by the prompt recognition and mastery of this error in its incipient stages, can these results be interdicted.

Even less than the grain of mustard was the seed of national dissension suffered to remain in the clauses of our Constitution relative to African slavery, left on the plea of its apparent necessity. It was so insignificant that our good fathers anticipated its speedy extinction. They did not measure its future baneful influence and left it in our country's soil where, its roots grown gross with greed and inhumanity, it well-nigh cleft asunder our beloved land.

It is time that we wake responsive to the call, clear and unmistakable, as it comes to us afresh through Christian Science. "Hear O Israel; the Lord our God is one." Our God is Good,—one Good, one Love. In Love is unity, not separation, and man reflects that unity, for in Science there "is no inverted image of God, no escape from the focal radiation of the Infinite" (No and Yes, p. 26), hence man reflects the unity of God and recognizes his interests as one with the general good, the universal reflection of the one God.

Love is all and Love is one, and our only protection lies in the willingness prayerfully, honestly, unselfishly, and fearlessly to lift the mask of every impulse that would separate us ever so little from those with whom we should work in loving unity in the home, in the Church, and in the State. S.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

## Advocates a Change.

"THE intrusion of the word 'Protestant' in our title is a stain upon our escutcheon. . . . It emblazons a falsity. . . . It puts us in strange and objectionable company. . . . It is an anachronism."

These quotations contain, in a nutshell form, the sentiments of Bishop Cortlandt Whitehead of Pittsburg, Pa., as expressed in his address last evening [February 11] at Trinity Church, on the desirability of a change in the name of the Protestant Episcopal Church of America.

The word "Protestantism," he declared, has degenerated in the past one hundred years, and in its general acceptation now stands as a name for sects which no self-respecting Episcopalian should be willing to have in the same category with his own church.

In effect he argued that truth itself demanded that the word "Protestant" should be dropped from the title of the Episcopal Church, and declared that a change in name was not only possible, but right, reasonable, and expedient. However, he said, it must come slowly.

Bishop Whitehead, after outlining the history of the movement for a change of name, said in substance:—

The word "Protestant" once had a very definite meaning. At the time of the organization of the church in this country there were certain well-defined reasons why it seemed expedient to make it very evident to the dwellers on these shores that this church, with its prelates and its prayer book and its methods as well as its Catholic character, was what was popularly known and understood as a Protestant body. But in the course of a hundred years to what degeneracy has that innocent word been condemned. Two hundred sects appear in our religious census, all of them Protestant. We find ourselves in strange, and certainly objectionable, company.

Many communions are Protestant simply in the sense that they will have nothing to do with Rome. They do not stand upon Catholic tradition. They are the offspring of traditional hatred of everything, not only Roman, but most that is Catholic as well. They have prejudice much more than principle to defend. They have no intelligent appreciation of the grand principles which underlie the true protest against Rome.

In the mean time this sort of thing has grown to be the popular significance of Protestantism. Then it is not possible for us to be unmindful of the general disintegration of Protestantism, so-called. A reaction has set in, and it has changed the face of Protestantism. It is now beginning to be uncertain whether the Bible is inspired, what constitutes the Bible, or whether there is any Bible at all.

But it is a fact that whatever reason may influence its supporters, a change is called for. Why "Protestant"? The word is not irenic, but polemic. It is too late in the history of the church for a body of Christians to put it into their name that they are the enemies of the Roman Catholic Church. If we must have denominations, we want in their names something positive, not negative; something that unites rather than antagonizes; something that defines rather than differentiates. There was a time when nearly the whole Christian church of Europe was Roman Catholic; then it was proper for people to protest and to call themselves Protestants; that time is now past. The churches that inherit the general designation of Protestant are stronger in influence and power than the Catholic, and there is no longer any reason for them to be putting their antagonism into the forefront; for they see very little of the Roman church, and no longer trouble themselves to antagonize it.

The bishop instanced the name proposed by Mr. Hill Burgwin, and favored by the convention of the diocese of Pittsburg in 1898, namely, "The National Church of the United States," and then considered as most appropriate,

Digitized by Google

"The American Church," which has received the adoption of popular usage, as constantly employed both colloquially, and in sermons and addresses and synodical action. It is a name as old as 1783, when the Connecticut clergy applied for the consecration of Bishop Seabury.

Then the bishop continued: Of course there will be many objections urged, but I feel confident that we shall gain nothing on any side by the use of the epithet "Catholic," simply because it is next to impossible to clarify the popular mind as to what the word means. To ninety-nine out of one hundred, and to Romanists themselves, it means simply papal, and you cannot change it. If the "American Church" seems too large a claim, there might indeed be added the words "in the United States." But it is absolutely true that the world over, "American" means the United States. It does not mean Canadian, nor does it mean Mexican, nor does it mean South American.

And, again, I remind you, with all seriousness, that there is no arrogance in a name which describes a normal and complete thing, rather than present attainment. It is the usage of Scripture to give what may be called ultimate names. Instances have been cited, Israel for Jacob, Abraham for Abram, and, we may add, Sarah for Sarai, Peter for Simon, even the name of Jesus, which still awaits the attainment of its full significance. And is it not true that God looks upon all His children, not as they are, but as they shall be? Does not the church see in the infant gathered into her arms and declared regenerate in holy baptism, not that which it has attained at that moment, but that which, by God's grace, it shall be in due time?

Excerpts from report in *Boston Herald*.

## From our Contributors.

### Practical Trust in God.

WE are permitted to use the following letter of counsel, addressed to her sister by one who well says of it, "I have no right to claim anything as of myself, it is simply a glimpse of truth revealed unto a seeker for truth, by that flash of inward light which is, I suppose, a momentary consciousness of the ever-abiding Truth within and without us."

When I read your last letter I felt as if I wanted to take you up and comfort you and make you believe that there is no need of worrying about your position. You may keep it or you may lose it, but all that matters is that you are filled with trust, and that you are happy all the time because you know that God takes care of you, and that you do not need to worry or even plan ahead very far, if you are always realizing in your thought that God is ever with you and always conscious of your needs, all-loving to provide good, all-wise to know it, and all-powerful to bring about everything He wants you to have.

You do not need to lose the buoyancy of vacation in this worry, but just to go on as happy as in the most care free hours, remembering that "on the helm there rests a hand other than mine."

Remember this every time the thought of worry comes, and because it is true it will destroy your anxiety, and bring good. It takes us all so long to learn that is a living truth. Our minds accept it, and in some of the supreme moments we rise to it in our practice, but to know it every hour and live as if we knew it! Wouldn't it be peace and happiness beyond all expression?

And why not? It only means a constant putting aside of what we know to be false, and a constant reverting to what we know is true. It is thinking and thinking day and night, "There is no cause for worry, God, Love is supreme. Divine Love does take care of me." And though we see no progress by-and-by an anxious thought comes more seldom, by-and-by if it comes it goes more easily, by-and-by we find life growing to be easy, harmonious, free from worry and discord.

Doesn't it seem strange that in the deeper things of life we persist so in clinging to mistakes? In the working out of any ordinary problems, when either we learn for ourselves or are told by those who know, that certain things are false, we eliminate them once and for all from our thought, no matter how true they seem. They enter into our calculations no longer, but we put in their place proven facts —truths. What a state of chaos would come to the consciousness of any one who insisted, despite the proofs to the contrary, that the sun does move around the earth daily, and who persisted in basing his entire thought on that mistake. Now haven't we had more definite proof of our own inability to see wisely, to act wisely, to choose wisely, and to bring about the results we plan, than we have of the truth in regard to the sun and earth? And haven't we had proofs enough of being taken care of and guided and helped by some supreme Intelligence, to make us know what is the truth of life? Why, I remember saying long ago, "I never yet got a thing by insistence and pressure, that I wasn't sorry I had it, and I never yet got a thing that proved for the best until I had quieted my desire and sincerely felt, "I will be willing either way,—only the best will come." And yet I have worried on and on, as if I, unassisted, had it all to plan and decide and carry out.

Now I'm not writing all this for you. It is for myself equally. Just as soon as pressure comes, when I don't know how to decide or how to carry out, then I am stirred up in thought and I grow tense in every nerve and muscle, and strain and worry and think, "Now surely this is the time that I can't work out my problem,—suffering and destruction must come this time." Now I'm trying the best I know to leave it all where it belongs,—with God,—to quiet my excited thought, to know that step by step the path will be opened and I shall be led on to the end which will be the successful solution. So I say to myself in the tumult, "Now be still, more than that, be happy, even now, while you cannot see the end and all is chaos and darkness." And then the thought of a child's trust helps me so much. I can remember how I would put my hand in father's or mother's and go anywhere and do anything, just walking along and being happy, though I knew nothing of the way nor the end, because they knew and I didn't need to know. It wouldn't do any good, either, if I did, because I couldn't go alone.

Sometimes I look back and think of the months and years I have worried away, when I might have been happy as well as peaceful all the time. My anxious thought did nothing but delay the coming of the good. I've usually, on coming into a moment of sanity on this subject, wished weakly and ineffectively that I might always remain therein; but with the coming of stress again, I went under, though still wishing I could keep afloat and trying unavailingly to do so. Now a thought has been received into my mind which shows me that wishing and ignorant effort are as productive of nothing here as elsewhere; but that there is a right way to go systematically to work to bring about the result we wish, just as there is in solving a problem in mathematics. It consists in putting away, as I have said, everything that is a mistake, and, if it won't stay put away, just refusing again and again to consider it, and in place of it, constantly reiterating to ourselves the principle on which the solution depends. Why, it comes to me so clearly that if we only applied to the spiritual problems of our lives the same treatment we have learned to use in all the others, we should just as surely rejoice in a correct solution in the one case as we do in the other.

One of my failings is that I only half trust to Truth. When I came to a hard problem in mathematics I used to work tremulously and fearfully, if it were new to me.

Digitized by Google

The steps were new, surely there was nothing to guide, I should fail,—I must, I couldn't help it. At last, by sticking to the principle I would come out all right, the tremulousness didn't affect the truth, nothing mattered in the solution but sticking to the truth. But the fear and trembling made me longer getting there and made the way hard. I might just as well have been enjoying a happy, strong effort if I had only unreservedly committed myself to the firm foundations I really did stand upon.

I wonder if I have brought these thoughts to you with the same clear light shining on them and through them that illuminated them for me. It is so beautiful to feel that one has been a medium through which truth has come,—just for a moment like a window washed free from dust and smoke, transparent to the light which then floods the room. And how sad to think of interposing in the window of our consciousness the opaque veil of self, retiring into darkness and saying, "There is no light!" And as the thought carries itself out to me still further, we know that we have only drawn an opaque veil of nothingness, so that what hides the light hasn't even the virtue of reality,—only a suppositional veil and a suppositional darkness!

Oh, to see life and truth always as they are in God, as Christ saw them! If it were by one supreme act of self-effacement that we could do it, it were easy, but the forty days and forty nights are ours too. The day by day, moment by moment clearing away of the veil of self, a little less opacity found, now here, now there, must result at last in an illumined consciousness in which there is no sense even of a transparent medium between. And so I suppose we must comfort ourselves as the darkness presses on us. There is nothing to be feared save that we become satisfied with the darkness and cease from working towards the light.

Many times lately as I have tried to turn away worries and cares, have tried to get my house settled and my clothes in order and all the apparently necessary details of material existence out of my path, I have heard echoing in my thought, "Wist ye not that I must be about my Father's business?" and my spiritual sense has responded to the call, but I knew no way save to try to glorify the little, every-day life, to try to rest sheltered in the peace and harmony and light of the great Reality; not to worry, or fear, or will, but just to try to know myself as my Father's willing, happy child.

I believe there is a wonderful reality before us. We must enter into it with joy.

Most lovingly yours,

E. H. M.

## The Golden Mean.

A. H.

As we grow in the understanding of Christian Science, we find in it safe guidance for thought and action in every direction; we must be willing in all things to say with the heart the words of our Leader's hymn,—

I will listen for thy voice,
Lest my footsteps stray;
I will follow and rejoice
All the rugged way.

In our efforts to follow absolutely the right way, we are tempted on every hand to listen to human reasoning and turn aside from the true way.

In the care of our children, when they come to us with their little ills and trials, we should not burden them with our sympathy and anxiety, neither should we be cold and indifferent about them; but, with loving assurance, show them that discord of every name and nature is unreal and unnecessary, because God did not make it. In our family relations we are not to cover up or smooth over wrong actions and doings, crying peace, peace, when there is no peace, neither are we to talk continually about them and hold them up before ourselves and others as realities, but bravely and honestly uncover the error and point out the right.

In seeking a position in the business world we should not sit down and fold our hands and spend the time in what is sometimes called "declaring the Truth," but which is really dreaming it, neither should we go about anxiously, intruding upon all our friends and acquaintances, begging their help in a financial way or soliciting employment but we should avail ourselves of all the activities at hand with the conscious sense that infinite Good supplies our needs, and that "In Him we [*do*] live, and move, and have our being." In our business dealings with others we should not feel suspicious and be constantly watching for some one to defraud or deal falsely with us, for we know how harmful are such thoughts,—neither should we be slack and loose in business methods and associations, but we should deal absolutely as we would wish to be dealt by, and "render to Cæsar the things that are Cæsar's, and to God the things that are God's."

In making statements about Science to non-Scientists, let us remember the words of our text-book, Science and Health, p. 14: "To be 'present with the Lord' is not to have mere emotional ecstasy or faith, but to have the actual demonstration and understanding of Life as revealed in Christian Science," and not speak with mere emotional enthusiasm, neither let us withhold, when the occasion arises, to bear our testimony for Christ, but let us with dignity and assurance (born of proof) speak only the word which the occasion demands. Zeal not according to knowledge is very apt to show itself in our expressions of gratitude and appreciation to those who have been helpful to us and are doing good work in Science; let us be sure in giving utterance to our gratitude, that we are not merely emphasizing personality, which every Scientist is striving faithfully to grow away from, but rather let us rejoice with our friend in the amplitude of this impersonal Truth, well knowing that the best possible way in which to show gratitude and appreciation to such an one is to take up the cross joyfully, and work shoulder to shoulder with him in the Cause; in this let us remember Jesus' rebuke to the one who addressed him as "Good Master," "Why callest thou me good? there is none good but one, that is, God."

We might enumerate many other ways in which Christian Scientists are called upon to test action and thought by the absolute rules of Truth; but these are enough to show that the "Way" is indeed straight and narrow.

In the Manual of the Mother Church, we find a by-law, which seems to me a most perfect Christ-like rule whereby to test all our thoughts and actions; it is read in every Christian Science church the first Sunday in each month, and is called "A Rule for Motives and Acts." What could be added thereto to make a more perfect code for motives and acts? And if absolutely adhered to by every one who claims the name of Christian Scientist, would it not revolutionize the world, and establish the perfect brotherhood of man?

## "Am I my Brother's Keeper?"

F. B. HOMANS.

We as Christian Scientists of to-day should realize the importance of this question more than any other class of religionists in the land.

Christian Science stands for perfection, and Christian Scientists are its representatives. Very many are ready to watch, examine, and criticise every act of the Christian Scientist, much as the crowds in an art gallery examine and criticise the paintings displayed for exhibition, and are quick to point the finger of scorn at any mistake or failure which may occur in its ranks.

Digitized by Google

While the love of God should be the only prompter needed, still, out of respect to the Cause represented and love for our Leader, we should be ever alert that the world may have no just cause to condemn Christian Science on account of the inconsistency or indiscretion of our lives. If to gratify some selfish desire we bring reproach upon the Cause, then may we well shrink in self-condemnation like Cain, and say, "Am I my brother's keeper?"

Jesus said, "Thou shalt love thy neighbor as thyself." When entering a crowded car or hall are we willing our neighbor should have the best seat while we take the least desirable, or perhaps stand? Does this same thought of love possess us when we enter hotels, dining-rooms, and other public places?

Does consideration for our neighbor's welfare control our motive in business? In buying, selling, hiring, and discharging? In fact, are we desirous for our neighbor's good in all our daily transactions? The eye of the world is upon all these occasions and quick to detect any questionable action on our part and any rushing, crowding, or manifest anxiety to present our claims and secure the best, is quickly detected and charged against Christian Science.

The Master said, "Be ye therefore perfect, even as your Father which is in heaven is perfect," and that should be the motto of every Christian Scientist. We should examine ourselves from that standpoint only. Every act, every deed, and every thought has its influence upon mankind, hence it behooves us to guard our thoughts as well as our deeds, that our influence may be on the side of good.

All Christian Scientists are, or should be, healers, whether they occupy an office devoted to Christian Science healing or follow their regular pursuits in life. They should always keep their lamps trimmed and burning, that when a call comes they can meet the error with Truth and so destroy it on the spot. But let us not forget the tremendous responsibility thus laid upon us, and so guard our lives that we may fulfil this sacred trust with purity and love.

When a patient applies for Christian Science treatment, in a sense, his all is placed in the practitioner's keeping. Do our lives justify us in accepting this confidence? Are our thoughts filled with love and purity? Are our impulses wholly unselfish? We may heal him of his sickness; but have we left him better in mind; with purer, nobler, higher aspirations? Science work is not properly done unless each patient is placed upon a higher plane of thought than when the case was taken. Mrs. Eddy says in Science and Health, page 179, "The Spiritual capacity to apprehend thought, so as to heal by the Truth-power, is gained only in proportion as man is found, not wearing his own righteousness, but reflecting the divine nature." Again, on page 418, "Include moral as well as physical belief in your efforts to destroy error." Also, page 17, "And infinite Love is reflected in love." "By their fruits ye shall know them," Jesus said. Let us recall the many cases we have treated and see, not how many were simply healed, but how many were in the healing turned from sin to Science.

While we have no right to interfere directly in our brother's or neighbor's life, still, by the influence we send out from our own lives, we are our brother's keeper.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time.

## Among the Churches.

### New Quarters at Champaign, Ill.

It would be hard to find a prettier suite of rooms in the two cities than that just opened by the Christian Scientists of Champaign. The second floor of the new Dallenbach Building, was built and finished according to their plans and under their supervision.

The suite consists of an auditorium, a reading room, office, two cloak and two toilet rooms, and a social lobby.

The friendly greeting and talk after meetings is a feature of Christian Science churches, hence the outer hall, or lobby.—*Champaign Gazette.*

Sunday, January 4, 1903, was a day of great rejoicing for the Christian Scientists of this city. It was their first Sunday meeting in the new hall.

In taking this last step we know it is a very important one; that it involves more responsibility and more work, but we realize and know that divine Love governs. Poverty and fear have no place in divine Mind, which is the source of all supply. We therefore desire to offer an expression of love and gratitude to our Leader, Mrs. Eddy, for revealing Truth to us, and to those who have been helpful to the growth of the Cause in this city.

MRS. A. M. VALLERT, *Clerk.*

### Opening of Chapel in Poughkeepsie, N. Y.

The opening services in the new chapel of First Church of Christ, Scientist of this city, were held on Wednesday evening, and notwithstanding the hard rain storm there was a large congregation. Many other religious denominations were represented. Testimonies of healing were given by a large number, and many were still anxious to testify when nine o'clock had arrived, but the lateness of the hour compelled the leader to close that portion of the service and invite the former First Reader, J. Edward Smith, to speak a few closing words. Among other things Mr. Smith said:—

"When I came to your city five years ago, Christian Science was almost a stranger within your gates. This splendid audience, gathered within your own neat chapel, testifies that Truth is not a stranger here, and I seem to hear, as it were, a voice saying, 'They shall all know me from the least of them unto the greatest.'

"Mrs. Eddy, our Leader, has discovered, or uncovered, for the world, God's greatest gift to man,—a demonstrable truth. As sunlight is mighty to chase away the darkness of earth, so is demonstrable truth mighty to dispel the darkness of superstition and ignorance, and acquaint man with God and with himself.

"Theories may be logical, convincing, elevating, but facts, not theories, lead to finalities; facts, not beliefs, are the foundation stones of salvation; certitude, not speculation, must be the Christian's view-point, if he would see, understand, and assimilate the beatitudes of Christ.

"What shall we do with the gospel of Christ if we disregard the command, 'heal the sick.' . . . Who will explain the doctrine of the Trinity? or the omnipresence, omnipotence, and omniscience of God? All church members subscribe to all these verities, but do they understand them? Is not the ocular proof of healing more in evidence to the senses than any of these fundamental and vital essentials of Christianity? Can any intelligent man or woman deny the fact that the sick are healed and the sinful are reformed by the power of God in Christian Science to-day? Wherefore then the reluctance to see that Christian Science and Christianity are one?"

*Poughkeepsie Enterprise.*

## Testimonies of Healing.

My last dose of material medicine was taken July 10, 1900. For ten years prior to that date I was under almost constant care of physicians. I have undergone one very severe and two other not quite so severe operations at the Presbyterian Hospital (Chicago), which gave temporary relief.

I was treated by a Christian Science practitioner, and am cured of about all my ills and have been lifted spiritually into a new being. Truly I am putting off "the old man with his deeds" very surely and almost swiftly, and am thankful to my practitioner for her teachings and directions. After being relieved of a few of my worst ills, my dear husband took up the study of Christian Science, and now we both make very good demonstrations.

We were church members and for years I prayed for relief from awful pain, sometimes growing very bitter, indeed, but Christian Science showed me I had been asking amiss, and naturally I arose to a much higher understanding of God as taught in Science and Health, which interprets the Bible, and found life and health and that peace that passeth all human understanding.

My happiest moment was when I realized that God is conscious of no error; that came to me suddenly after studying the Science a few days. I seemed to be loosed from a tight grasp of something—a flood of light came over me—I felt free and realized that I had found the Truth that makes free.

HALLIE NORVELL HARD, Chicago, Ill.

---

In the spring of 1897 I first heard of Christian Science and tried it simply as an experiment, as I had tried almost everything else, homœopathy, allopathy, electrical treatment, and patent medicine. At the time I was introduced to the first Christian Scientist I had ever met, I had just obtained a supply of medicine from my doctor. I spoke of my ailments to this Christian Science student, and she asked me why I did not try Christian Science, and told me how it had helped her. I asked her if she thought she could help me, and she said she thought she could. We talked some time and I was quite loath to let her go, I was so impressed with what she said. I know now that my recovery dated from that day, for everything seemed changed to me. I bought a copy of Science and Health and afterward took treatment. After my second treatment I laid aside my glasses, which I had worn for many years, and have since been able to use my eyes in every way and do the finest needle work. Soon after I overcame many ailments which had clung tenaciously to me for years, among which were indigestion, chronic headaches, and backache. I continued the reading of Science and Health, and that spring the usual bronchial trouble, which had become chronic, failed to appear, and now I have the feeling that I am speaking of some other person, for it seems almost incredible that I could ever have had those old ailments, they have dropped away so completely.

I have often wondered how any one could feel anything but love and reverence for our dear Leader, Mrs. Eddy, when we see how much good the simple reading of Science and Health has done. After nearly six years' practice of Christian Science I can more fully appreciate and reverence the woman who has labored so unselfishly for mankind.

While I have received so freely of the physical benefits of Christian Science, I will say that the spiritual benefits are greater. I became dissatisfied with trying to believe things that I did not understand, and being told that the Bible was a book which we were not expected to understand, and yet were expected to believe. Christian Science teaches that we can understand it, and I rejoice that I have found a religion which can be demonstrated and tested on all points. Christian Science shows us more and more clearly how to "prove what is that good, and acceptable, and perfect, will of God."—A. C. COLLINS, Washington, D. C.

---

"Ye are my witnesses, saith the Lord." To be a good witness for the Lord it is our duty to testify to Truth as it is revealed to us.

I have been a member of the Congregational Church for more than fifty years, and I have come to the conclusion that creeds amount to very little unless they hold church members together as seekers after Truth, and thus enable them to be a help to each other and to the world at large as they show forth the Christ spirit.

For several years I have been seeking for a better understanding of spiritual life, I have studied the Bible and read many books on that subject to get a better apprehension of God, and I must say that the reading of Science and Health has given me a better understanding of the Bible and the life work of Jesus than any other book I have read. I don't claim to be a Christian Scientist, but I do say that I have found much that I can endorse and that is helpful to a Christian life. As far as the healing power of Science is concerned, I have not studied with that particular thought in view. In the past, when I have read the testimonies given by some who claim to have been cured of certain diseases through reading Science and Health, I have thought it almost foolish to make such statements; but demonstrations of truth are convincing. It is now nearly two years since I commenced to read this book. Previous to that time I was often afflicted with severe headache and sciatic rheumatism for several days at a time. These have entirely left me, and I have for the last year enjoyed better health and accomplished more work than I have in any one year for ten years, and I have not suffered from being tired. Mortal mind may ascribe this to any one of many causes, but why not ascribe it to God and the means that has given me a better understanding of His word and my relations to Him, and so give Him the praise who is my life and my light.

I have reason to believe that there is much good coming out of Christian Science both temporal and spiritual.

I know a friend who was sick and suffered long. She sought help from six different physicians, some of them specialists, and also went to the hospital for treatment, but her case grew no better, apparently worse.

At last she was induced to try Christian Science; she sought a practitioner, received treatment for a short time, and was perfectly healed and has been well for more than a year.—J. W. C., Warner, N. H.

---

As a tribute of gratitude for the many blessings which have come to me through Christian Science in overcoming sorrow as well as sickness, I offer the following. Two children were confided to my care, who had lost their mother and whose father was not interested in Christian Science, but believed in all the laws of *materia medica*. One morning, he said to me, "I believe the boys have whooping cough," to which I only replied, "Do you think so?" The next morning a neighbor hearing the children coughing, came over and kindly, as she thought, gave me, in detail, what I should prepare myself to go through with.

I closed the door behind her and turned to my Science and Health. Opening it at page 380, my eyes fell upon, "Every law of matter or the body, supposed to govern man, is rendered null and void by the law of God." Then again, on page 400, "This task becomes easy, if you understand that every disease is an error, and has no character or type, except what mortal mind assigns to it." And again, on page 377, "Without the human belief any circumstance is of itself powerless to produce suffering."

Digitized by Google

Holding on to this, and knowing God's ever-presence, enabled me to destroy the claim within seven days and not one trace of it remained. For this, and the many blessings which have come through Christian Science, I am thankful to our beloved Leader.

MRS. ABBY HAGLER, Caddo, I. T.

---

I would like to offer thanks for the benefit Christian Science has brought to me. In the spring of 1901, when I turned to Christian Science for relief, I was a victim of neurasthenia, unable to sit up at all, given up by the doctors, despairing, and almost hopeless. I had been an invalid most of the time for seven years, unable to do anything except just live and suffer. I think I had hundreds of weak spells and tried various physicians and patent medicines. As a last resort, I sent for a Christian Science practitioner, and I can never cease to be grateful to the kind lady who came to my relief. I can now do my own housework and sewing, and read, and though the demonstration is not yet complete, my present state is heaven compared to the condition I was in.

MARY MILLER, Wanlock, Ill.

---

I feel that I must not wait longer before making acknowledgment of some of the benefits received from the study of Science and Health. While not yet entirely free, I have been greatly relieved of asthma and have been healed of consumption and a number of other physical ailments. Before hearing of this method of healing disease we were all sick most of the time. Now all is different. The boys and my husband are seldom sick, and we have had some beautiful demonstrations in the prevention of contagious disease. The children have been exposed to whooping cough, measles, diphtheria, and chicken-pox without any ill results whatever. I am thankful for Christian Science and the good received therefrom.

MRS. ALLIE WOODGERD, Albany, O.

---

The Bible is read to-day in more homes than ever before in the world's history. More copies of it are sold now than ever before. Fifty years ago, the British and American Bible Societies issued annually 1,820,657 copies. Now they issue annually 6,791,212, while private publishers issue millions more. In our own country the issue of Bibles has more than kept pace with the increase of population.—*Exchange.*

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

---

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Henry Churchill King, D.D., President of Oberlin College, in an article on "The New Evangelism," says in *The Congregationalist and Christian World*:—

"Three great presuppositions may be said, perhaps, to underlie, more or less consciously, the new evangelism of our time, so far as it is a fact, and to determine its tone and method. First, that *religion is life*, that to be saved is to come into a sharing of God's own character and life, that every man of us, therefore, is bound to make the fight for character, that there is no escape except by character. This is becoming increasingly clear to all branches of the Church, both for the present and the future life. And face to face with that inevitable fight for character, the solemn earnestness of life deepens upon both speaker and hearer. It is no question of transactions, human or divine, but of the real achievement of real character.

"Second, the one indispensable condition of conquest is, that a man should put himself in the presence of the great realities, *in the presence of the best*, in the presence of the supreme fact of history, Jesus Christ. . . . The very greatest mission, therefore, of the preacher, the very essence of his calling, is to make men see these greatest realities and values, above all and summing up all, to make men see Christ—so to bring these realities and values home to men, that they shall surely count and become the dominant realities of life.

"This would mean, in the third place, that the preacher must himself be *a seer and a witness*. The Christian witness must personally see and experience the spiritual world. He cannot reach it as the result of mere argument; still less can another hand it over to him as a complete product in any theological system. The preacher's first great responsibility, therefore, is to put himself in the presence of these highest values, and let them make their own inevitable impression upon him, work in him their own conviction of reality. Only so can he come into any spiritual life that is his own. He may not simply imitate or repeat the expression of the life of another; he needs life in himself, and that life will find its own expression. And the highest possible service, in turn, therefore, that the preacher can do for other men, is to help them into the presence of the great realities and values, to help them find these alive and real, to put them, so far as another can, face to face with the supreme self-revelation of God—the inner life of Christ."

We hear a deal in this day about social religion. Certain leaders would make men religious in the mass. They talk about leavening the whole lump of society with grace and truth. The idea is a good one, but those who advocate it would have us begin at the wrong end. They would make society good in order to save the individual. Make society pure, and it will be an easy matter for the individual to be pure. If we can do the work in this wholesale way it will save a world of cross-bearing, reproach, and persecution. It will make the narrow way popular and easy. That day is not yet. We must begin with the individual. Only by saving individuals can we save society.

We are just now in danger of forgetting the importance and necessity of personal religion. The old Puritans, the old Presbyterians, and the old Methodists believed in and practised a faith which would enable a man to stand alone in the world. Now we must be supported and inspired by society, by conventions, by meetings, and masses.

To stand alone one must have unwavering faith in God. Elijah's soul was anchored in God so firmly that all the waves of popular feeling and worldly influence which might sweep over him could not move him. To him God was a reality.

*The Christian Advocate.*

Rabbi Fleischer, at the Council of Jewish Women, speaking on "The Attitude of the Jews toward Jesus," said:—

"Many Jews—and usually these are of the progressive type—are beginning to examine with an increasing interest and a growing appreciation the career and the character of this most influential of Jewish teachers, this loving and lovable rabbi, Jesus of Nazareth. A few Jews are tending to accept his helpful humanity and to believe that he had a beautiful personality.

"For my part, I believe that Jews act unwisely in the attitude that they take toward Jesus. Whatever Jesus was, he was a Jew, and I am willing not only that Jews shall receive credit for him, but that also in proportion to the intrinsic merit of his life and teachings we shall find further proof of the religious genius of the Jew. For one, I am glad to recognize the greatness of this human seer who chanced to be a Jew, and to acknowledge the singular beauty of his personality."

Here is Cain, the first born of the sons of earth, and the first murderer. We say to ourselves, "I am not like Cain—I would not commit a murder for worlds." Ah, but let us not think, because we would not be guilty of the overt act, that we may not be guilty of the sin of Cain. For sin is not an act, but a moral state, an attitude of mind and heart. Cain was a murderer before he killed Abel. His sin began with self-will, developed into envy and anger, and ended in fratricide. . . . The law of God makes the guilt consist in the angry passion from which the murderous impulse springs. Jesus defines violation of the seventh commandment as the evil desire of the heart. And the same rule applies to every form of evil. It is the thought of the heart that determines guilt or innocence in the sight of God.

*The Examiner.*

Unworldliness does not consist in the most rigid and conscientious observance of any external rules of conduct, but in the spirit and temper, and in the habit of living, created by the vision of God, by constant fellowship with Him, by a personal and vivid experience of the greatness of the Christian redemption, by the settled purpose to do the will of God, always, in all things, at all costs, and by the power of the great hope, the full assurance, that after immortal years are spent there is a larger, fuller, richer life.—Rev. Dr. Dale.

Rev. H. A. Bridgman says in *The Congregationalist and Christian World:* "All these four men [Cain, Samson, Eli, and Saul] were made aware in their lifetime of their folly and their failure. It is sometimes thought that outward tokens of success blind the victim of temptation to his own failure and keep the world, also, ignorant of what he truly is. But it is not so. As Professor Griggs has recently said in his lecture on Dante: 'To be what you really are and to be conscious of it—that is all the hell a man needs in this world or in any other.' A man's conscience keeps him from being fooled by himself, and in the long run the world rates a man for what he is and for nothing more."

If you impute motives, and pretend to read hearts others will do the same towards you. A hard and censorious behavior is sure to provoke reprisals. Those around you will pick up the peck measure you have been using, and measure your corn with it. You do not object to men forming a fair opinion of your character, neither are you forbidden to do the same towards them, but as you would object to their sitting in judgment on you, do not sit in judgment upon them.

Spurgeon.

In our higher and happier moods, I think we all have visions of the truth that we never are nor can be paid for our best, save only in the doing of it. Our finest devotion is never recompensed in terms of the market. It can never be. We give ourselves, and find in return our larger life.

Frederick L. Hosmer.

Religion is not a little fenced-off enclosure, within which all is sacred, and outside of which all is secular and profane. There is no such distinction to be drawn. Religion is life, character, conduct; it reaches up to God and down into the smallest details of daily duty; it covers everything.—*Selected.*

Let us speak the fullest truth and do the plainest duty that we know; and then we shall not widely fail of what is best for us in this or any world which shares the boundless fulness of the life of God.

J. W. Chadwick.

It is worth while to do even the smallest kindnesses as we go through life. Nothing is lost. No dewdrop perishes, but sinking into the flower makes it sweeter.—*Selected.*

Every time we keep silent under insult and loving and sweet under irritation and provocation, we have made it easier for all about us to do the same.—J. R. Miller.

The man who does not want to mix his religion with his business must have a very poor quality of religion or a very shady sort of business.—*The Examiner.*

In morals as well as physics, men soon find out the difference between a candle and the sun.—Joseph Parker.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, 4½ x 6½ inches, narrow margins, each, prepaid 4 00

Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

Terms of Subscription:

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

Terms of Subscription:

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

Terms of Sale:

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

## Items of Interest.

**National.**

George B. Cortelyou took the oath of office as Secretary of the Department of Commerce and Labor on the 18th. At the same time William Loeb, Jr., was sworn in as secretary to the President. The oaths were administered by Chief Justice Fuller of the United States Supreme Court.

The new secretary's official career began in 1889 as private secretary to the post office inspector in New York. Later he was confidential stenographer to the surveyor of the port of New York; private secretary to the Fourth Assistant Postmaster General; in 1895 executive clerk and confidential stenographer to President Cleveland; in 1898 assistant secretary to President McKinley and later secretary, which position he has continued to hold with President Roosevelt.

James R. Garfield of Ohio, second son of the late President Garfield, will be Commissioner of Corporations under the act creating the new Department of Commerce. The law provides that the commissioner shall have authority to make, under direction of the secretary, "Diligent investigation into the organization, conduct, and management of the business of any corporation, joint stock company, or corporate combination engaged in commerce among the several States and with foreign nations, excepting common carriers, subject to an act to regulate commerce, approved February 4, 1887, and to gather such information and data as will enable the President of the United States to make recommendations to Congress for legislation for the regulation of such commerce, and to report such data to the President from time to time as he shall require."

Judge Grosscup has issued an injunction against the Beef Trust on the ground that their agreement concerning prices is in "restraint of trade." By the legislation recently passed by Congress to expedite cases of litigation in which the United States is a party, this case, if appealed will go directly to the Supreme Court. Unless appealed, the injunction is permanent. Considerable interest is manifested as to what action will be taken by the trust.

President Estrada Palma, of Cuba, has signed an agreement which the leaders of the Cuban Congress are pledged to ratify, giving to the United States two coaling stations, naval depots, and military establishments upon the island for the mutual security and defence of the two high contracting parties. The arrangement gives the United States two harbors, Bahia Honda and Guantanamo.

Secretary Hay for the United States and Mr. Bowen for Venezuela last week signed a protocol providing for the adjustment of the claims of the United States against Venezuela by a commission to meet at Caracas. In case of disagreement, Queen Wilhelmina will name the umpire. This will be done as a compliment to the country of The Hague Tribunal. This protocol will probably serve as a model for the other claimants.

Justice Shiras of the United States Supreme Court last week presented to the President his resignation as a member of that tribunal to take effect February 24. William R. Day of Ohio (former Secretary of State) has been selected as successor to Mr. Shiras.

**Foreign.**

King Edward, accompanied by Queen Alexandra, and surrounded by the Court and the officers of State, opened Parliament February 17. In the morning the vaults of the Houses were searched, as usual, for imaginary conspirators by the yeomen of the guard. The movements of the troops taking up positions along the route of the procession followed. The royal procession, consisting of six state carriages escorted by Life Guards, started from Buckingham Palace. Their Majesties were seated in the last carriage, which was drawn by the eight Hanoverian horses which have figured in all the recent royal ceremonies. The King and Queen reached the Victoria Tower through the Mall, the Horse Guards, and Whitehall. All the officers of state, in varied uniforms, were assembled at the royal entrance of the House of Peers to receive the King. The procession formed here, and, headed by the pursuivants and heralds, marched to the robing room, their Majesties being immediately preceded by the sword of state, carried by the Marquis of Londonderry. After the robing the procession re-formed and, with a blast of trumpets, advanced to the Peers' Chamber, the Duke of Devonshire, Lord President of the Council, preceding their Majesties with the imperial crown, which he carried on a cushion. The King then seated himself on the throne, with the lords bearing the cap of maintenance and the sword of state standing on his right and left. The Queen sat on the left of the King and the Prince of Wales on his right.

The members of the House of Commons were then summoned, and on their arrival the Lord High Chancellor, Earl Halsbury, kneeling, handed the King the speech, which his Majesty read from the steps of the throne.

It is reported that a fire in the forest of Vallambrosa, fifteen miles east of Florence, has destroyed the Villa de Medici, a point of interest to artists and tourists. Vallambrosa was visited by Dante, is mentioned by Ariosto in "Orlando Furioso," and by Milton in "Paradise Lost." In 1038 a Benedictine abbey was founded in the forest. The present magnificent buildings were erected in 1673. The abbey was suppressed in 1869, and the buildings are now used for a School of Forestry supported by the Italian government.

It is stated on good authority that the Irish group in Parliament is convinced that the Wyndham Land Purchase Bill will be satisfactory, and that agrarian troubles and grievances will cease. It is expected also that Mr. Wyndham's bill will not meet with serious opposition from any section in the Commons, but will be helped along by Radicals and Nationalists and enacted quickly.

The Canadian Department of the Interior has been advised of a meeting of the Doukhobors with Peter Veregin, their leader, and the agents of the department at Swan River and Yorktown, at which it was resolved to become British citizens and Canadians. The Doukhobors also decided to take out their patents for homesteads.

It is said that certain of the Powers are prepared to go further than Austria and Russia in their determination to compel peace in the Balkan peninsula and to require the Porte to introduce needed reforms in Macedonia.

The Italian Chamber of Deputies has passed the bill making an appropriation for the erection of a Marconi wireless station. It is expected that the rate for messages to America will be six cents a word.

**General.**

The dimensions of the new cup defender, which, it is announced, may be named the Republic, are reported to bear the following comparison with those of the Columbia:—

Length over all, 141 feet, as against Columbia's 132 feet; beam, 28 feet 8½ inches, to 24 feet 7 inches; draft, 19 feet to Columbia's 20 feet. The waterline of both craft measures a trifle over 90 feet.

A gang of one hundred expert mechanics is now engaged on the hull of the boat and on the mainmast. The plating has progressed rapidly and the entire mid-sections are nearly covered over with metal. The step of the mainmast has been completed, and the platers are laying out and riveting the deck plates along the waterways on both sides.

On a recent trip of the Etruria from New York a newspaper was published containing summaries of the latest news of the world. This was received by wireless telegraphy when the vessel was still nearly two hundred miles from the Irish coast. The dispatches were received by Operator Hughes, edited by Purser McCubbin, set up by the ship's printer, A. Harris, and managed by Assistant Purser H. D. Stainer. A copy of the edition was placed at the plate of each passenger at breakfast. There was such a demand for the papers as souvenirs that a second edition was printed. Signor Marconi was among the passengers.

The Cedric, sister to the Celtic of the International Mercantile Marine Company, arrived at New York last Friday on her initial trip from Liverpool and Queenstown. The voyage was made in 8 days, 8 hours, and 16 minutes at an average speed of 14.43 knots per hour. Her best day's run was 390 knots. In spite of rough weather she rode as "steady as a church," and the passengers report there was no *mal de mer*.

This vessel is 700 feet in length, 20 feet longer than the Great Eastern, 75 feet wide, 49 feet deep, 131 feet from her keel to the top of her smokestacks. It took twelve tugs an hour to dock her.

In the collection of George Frederick Kunz, now on exhibition at the Museum of Natural History, New York, is a diamond embedded in the center of a forty pound meteorite. The diamond is of the purest and hardest carbon, but dark in color. With several other small particles of diamond dust it rests in a small jagged area of less pure carbon about the size of a large marble. The area is surrounded by solid meteorite iron from four to five inches thick.

The seacoast of Maine is the most wonderful in the world. In a straight line it measures two hundred and twenty-five miles, but when all the ins and outs are counted the shore line is two thousand four hundred and eighty-six miles. There are 54 lighthouses and 23 fog signals between Kittery Point and Quoddy Head. The tide at Eastport has a rise and fall of 18 feet 2 inches.

Bids have been accepted for dredging a thirty-five foot channel in Boston harbor out to sea. New York is dredging a forty foot channel; but with the advantage of a much higher tide at Boston the two channels will accommodate vessels of about equal draft.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### "Looking unto Jesus."

THE Christian world is trying to look unto Jesus, and the divisions among Christians arise chiefly through the different ways in which he is beheld. Many who do long to be Christians more than they long for ease or prosperity, are to-day refusing the help and healing of Christian Science because they fear it will destroy their concept of Jesus. Scripture tells us, however, "By their fruits ye shall know them." If, therefore, Christian Science can teach you to look unto Jesus in such a way that your sufferings will cease, your sins will grow distasteful to you, and your burdens will disappear, is not this a proof that it has a better way of beholding him than the world has known? Our text-book, Science and Health, teaches us to see in Jesus,—the perfect typifier,—man made in the image and likeness of God as Scripture declares God made him. Because Jesus did see and know that nothing short of absolute perfection could be the image of God or represent God, he held to this true concept of man and manifested it to the world, and his understanding of perfect manhood healed the sick. Now the Christian of to-day must learn to look unto Jesus in this same way, must see in him the perfect pattern of manhood, and must follow it. To stand at a distance and admire this beautiful picture, to dwell upon its different excellences, to go into ecstasies over it, will never make us any nearer perfection unless we learn to do as Jesus did, to see him as he is. Jesus never spared sin its fullest condemnation. He said, Go, and sin no more. This is the only way of escape from the consequences of sinning,—to cease the sin. Let us see it as Jesus did. But Jesus destroyed sin just as the light admitted into a room destroys the darkness which seemed to be in it, or just as the truth told about anything destroys and dissipates the false beliefs about it which seemed to hold it before the truth was known. Jesus knew that the true man was like God, was made to image Him forth, therefore he knew that the claims of sin, sickness, and death do not belong to God's man, and he could destroy them with the brightness of his understanding of God and man. Do you say, "I do not understand it; I do not see how I can do these wonderful things though I do see that Jesus did them"? When you began the study of mathematics did you refuse to try to work the first problems because you could not understand those at the end of the book? No, you learned a little and proved you did understand that by working the problems, and this fitted you for more difficult ones. So it must be in your work as a Christian Scientist. You will begin by "Looking unto Jesus," just as the artist looks at his model, and you will day by day see more in your model to shadow forth in your own life. You will learn that you must "let this mind be in you, which was also in Christ Jesus." Our text-book tells us (p. 234), "Sin is thought before it is acted. You must control it in the first instance, or it will control you in the second. Jesus declared that to look with desire on forbidden objects is to break a moral precept. He laid great stress on the action of the human mind, unseen to the senses." So if we are really in earnest in "looking unto Jesus" we shall begin to manifest somewhat of the one Mind which it was his life's work to declare for the world's liberation from the fetters of sin and sickness with which it was bound. He "went about doing good," and so should his followers, and through manifesting the right understanding of God and man, they will be able to heal the sick and uplift the suffering, even as he did. He commissioned his disciples to "Preach the gospel," "Heal the sick," and he said, "Greater works than these shall he do; because I go unto my Father." Christian Science is bringing to the world the understanding of the Master's life and works, and is making the same works of healing possible to-day to all those who are learning to receive and put in practice this understanding, as it is given in "Science and Health with Key to the Scriptures."

This is what is meant by demonstration, it is demonstrating, or proving, that the Christian is "looking unto Jesus" with profit, that he is not simply admiring his wonderful life, but that he is following in the Master's footsteps.

### What is Man?

ASIDE from the question, "What is God?" there is no problem of greater importance than the consideration of "What is Man?" For ages it has engaged the attention of both sage and philosopher, but its solution will never be gained so long as we view man from a material standpoint, for the real man was, is, and ever will be spiritual, regardless of what the five physical senses may say.

The Bible account of man is presented from both a material and spiritual standpoint, one real, the other unreal, the latter to be laid off, being that to which the apostle Paul referred when he spoke of "the old man with his deeds" to be put off; the former will remain forever indestructible and immortal.

To mortal sense, the account of man and creation as given in the first chapter of Genesis seems lost, and man as God's image was unknown (in the full meaning of the term) until Jesus came, being the "first fruits" of the spiritual birth, reflecting the Christ-man of God's creating which must in the cycles of time be recognized as the true man, —God's own image.

In the second chapter of Genesis we lose sight of the real man, and have a material sense of man and the universe set forth, wherein the Lord God formed (materialized) man and creation. So in considering man from the standpoint from which we see him to-day, he appears to be of a dual nature, material in his make up, suffering and dying, with nothing to lean upon but a faint hope of immortality.

The Adam man never was God's man. In order for us to get at the truth of the matter and be able to see man aright we must start from first cause, or God. Jesus said, "God is spirit." Then Spirit must be our standard, and we must realize that the image or likeness of Spirit is spiritual. Can the likeness of a thing be its opposite? Now Spirit and matter are opposite. Matter

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

never can be God's image; it is under a curse, conceived in sin and mortality. In the spiritual account given in the first chapter of Genesis man is blessed. This is the man that was, is, and ever will be, unfallen and perfect. This state of existence we must some day realize after we have all the Adam destroyed in our natures. All that we know of God, or the real man, is what we have seen man manifesting in life as kindness, unselfishness, and love. These are the fruits of Spirit, manifesting the spiritual man, or God's image. The opposite of this condition is selfishness, envy, hatred, and jealousy. These are the fruits of the flesh,—the carnal mind, evil, or devil,—bringing about death.

Man viewed from his present state is as the lump of ore, with gold and dross seemingly combined, yet it is only a seeming, for the gold is always gold, even if hid from view; so with the dross, it is always dross. They never mingle, being entirely separate in their nature. How thankful we should be to know that when this dross in our consciousness is destroyed, burned up by the fires of purification, that then and then only, will the pure gold, which is God's image, be brought out, and man will recognize his real self in the good, the spiritual and the perfect, where it is to-day, although hid behind the clouds of matter. Who would dare to say that matter is the image of God?

A deep sleep fell on Adam and all his progeny, "For as in Adam all die [sleep], even so in Christ shall all be made alive [awake to the true consciousness of Life]." Jesus Christ is the spiritual man, the first to awaken from the Adam dream of materiality. He proved by all he said and did that he was fully awake to the Science of man's true being. Well did they say of him that never man spake as he spake. He taught and lived a pure life, one free from materiality or matter, and never once recognized the universal claim of man's carnal nature, or that man's parentage was of human origin. He said: "Call no man your father upon the earth: for one is your Father, which is in heaven." He is our exemplar and Way-shower. This is the awakening for all mankind. In Matthew, 28 : 19, 20, he said, "Go ye therefore, and teach all nations . . . teaching them to observe all things whatsoever I have commanded you: and, lo, I am with you alway, even unto the end of the world [materiality]."

The man that is born of woman, he whom we see and the world is talking so much about, who draws his breath through his nostrils, whose fleshly body Jesus said profiteth nothing, whose mind is carnal and not subject to the law of God, must be classed as nothing, no real thing, no reflection of Good. Should we wish to try to make this the image of God after all the Scriptural condemnation? Well may we cease from him with all his aches, pains, and failures, and exclaim, "What is man?" for this cannot be the real. To see this is the great awakening from the carnal or material, to the spiritual. In Christian Science we see this spiritual fact as the rejected stone, and have made it the head of the corner (the risen Christ) of our teaching.

Since this state of sin and deception exists in our mortal consciousness, how thankful we should be that it is marked with suffering and death, for were it not for the fact that sin destroys itself, sin and its effects would be immortal, and man would indeed be forever lost—shut out from the presence of Life. The true man always abode in Eden —heaven or harmony, while the mortal sense is shut out. The five material senses would have us believe this mortal to be man—the real man in the image and likeness of God, and so long as this state of belief remains, harmony will be closed to us, and continue so until the teachings of Jesus are understood and the Science of man's being is demonstrated. Not understanding the Science of Christianity, sin, sickness, and death will continue until destroyed by the fires of suffering and purification. How thankful we should be for the revelation of Truth, this spiritual awakening; for without it, how dark and dreary the grave and man's future destiny; but the truth revealed is the bow of promise, bright with immortality, and while on earth it brightens earth's dark pathway and carries our thought far into the peaceful realms of eternity. This is the bright star of hope within us, speaking words of peace, and quieting this mental storm on life's troubled sea, giving us the rest of mind and body that we so much need, that satisfying and abiding assurance that our bark is safe, even in the storm, for Christ is at the helm, gently guiding us into that safe and quiet haven of rest—the true consciousness of man.

## A Reply in Explanation.

Mr. Editor.

In the *News-Times* of the 10th inst., a Christian clergyman of your city is reported to have declared from the pulpit that Christian Science is "from the evil one," and that "it will ultimately cause the loss of the soul." When it is considered that in the last quarter of a century nearly seven hundred Christian Science church organizations have been established in this country alone, and that several hundreds of thousands of people are now worshiping God according to the religious tenets of Christian Science, the public accusation made by the reverend gentleman must be regarded as a very grave one. It is but fair that its position should be briefly defended.

What personage stands forth in history as the great exemplar in the healing of the sick by spiritual methods without the aid of drugs or other material agencies? Jesus of Nazareth. Did he teach that he healed the sick because of special powers belonging to his own personality? No. He expressly taught that his works were of God the Father, not of himself. Did he teach, like the reverend gentleman in your city, that for others to imitate his example in the healing of sickness by spiritual methods would "Ultimately cause the loss of the soul"? No. He commanded, "Preach the Gospel," "Heal the sick." And this command was not limited to any country, or race, or generation. And he gave the inspiring promise to all: "He that believeth on me [the Christ or Christ-truth], the works that I do shall he do also."

Is it not fair to say that it seems passing strange that a Christian clergyman, in defiance of the Scripture, should declare as being "from the evil one" a practice which emanated from Jesus? Indeed, is it not fair and perfectly just for Christian Scientists to answer that such an utterance as the *News-Times'* columns attribute to the reverend gentleman, not only seems to be wholly devoid of the spirit of Christian kindness and tolerance, but even partakes altogether too largely of blasphemy? The most charitable way in which Christian Scientists can deal with such an utterance is to treat it as having been given forth without any thoughtful consideration, and as belonging to that chaotic oratory which proves nothing and teaches nothing. It is the reproach of such oratory that it uses assertions instead of facts, and denunciation instead of logic.

The *News-Times* also reports the reverend gentleman to have employed in his sermon the phrase, "spiritism, falsely called Christian Science." Spiritism is defined in the Encyclopedic Dictionary to be Spiritualism. Can it be possible that the reverend gentleman does not know that the tenets of Spiritualism and of Christian Science are wholly unlike?

If so, he is respectfully advised to read a chapter devoted to a discussion of the errors of Spiritualism in "Science and Health with Key to the Scriptures" by the Leader of Christian Science, Rev. Mary Baker G. Eddy. He will surely

Digitized by Google

never make such an untrue statement again after reading that chapter. CLARENCE A. BUSKIRK.

## The Healing Faith.

To the Editor.

*Dear Sir:*—To show that "cure by faith" is not a new idea, as was pointed out in your issue of December 17, one need not go to Japan to investigate any "sect of Buddhists." Every Christian can turn to his Bible, where examples of such cures are recorded from cover to cover. The earthly career of the Founder of Christianity, according to the Gospel narratives, was marked by the spiritual healing of the sick, and his example was followed by his disciples and apostles and by the early Christians. Christian Science is a re-affirmation of this healing, and it teaches the *modus operandi* scientifically. According to the law of God in Christian Science, "faith" is advanced to understanding, so that whoever will sincerely and honestly seek this spiritual healing may apply it to his own needs and those of others.

There is a particular merit of Christian Science which must not be overlooked; namely, that it is not confined to any exclusive set or sect, but is for every honest person to learn and use.

Mrs. Eddy's personal experience led her to state, in "Science and Health with Key to the Scriptures," the Christian Science text-book: "The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love. Regardless of what another may say or think on this subject, I speak from experience. This prayer, combined with self-sacrifice and toil, is the means whereby God has enabled me to do what I have done for the religion and health of mankind" (p. 1).

To learn how to pray like Christians is it not necessary to study Jesus' prayers and to learn the meaning of his advice?

"What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them."

W. D. MCCRACKAN.
In the *Cohoes* (N. Y.) *Republican.*

## A Firm Foundation.

A FEW critics seem to have the impression that Christian Scientists discard medicine and medical attendance because of their fanatical observance of a religious belief. This is incorrect. The class which represents the Christian Science movement is acknowledged even by critics, to be highly intelligent. It is because of their large experience that they have arrived at that state of mind necessary to the acceptance of new ideas. They are farther from dogmas, creeds, and beliefs than the average people, farther from these at the time of their acceptance of this Science than at any previous period. They have outgrown many of the superstitions that are common to mortals. They have relaxed their hold upon many of the traditions of the elders, and have learned to think for themselves. Continued failures, and disappointments in the employment of material means and methods have caused them to grow weary of waiting for results from such sources, and they are ready to look beyond the veil of matter into the spiritual realm. The effects of depending upon divine Providence for wisdom, happiness, and health have convinced them of the efficacy of Christian Science, and they are loyal to it, not because of mere promises or religious convictions, but actual results. Indeed, a Christian Scientist never entertains any religious convictions, except those which are the outcome of demonstrable understanding. If Christian Science were a mere will-o'-the-wisp, something which promises but never pays, its adherents would speedily abandon it. They are a class of people who are not looking for mere assertions, theories, creeds, and beliefs. They have outgrown these and have entered the field of inquiry, investigation, and demonstration. They will not be convinced except by actual proofs. They indorse and adhere to Christian Science because it has not failed them, but has kept its promise of health and happiness and the overcoming of physical and mental troubles.

Christian Scientists note that while they may be permitted, consistently with their own conscience and unmolested by the world, to think for themselves and to pray according to their own peculiar understanding, yet such a revolution in the general affairs of mankind as Christian Science predicts to be inevitable, can only be enforced in proportion to the general concession of the people and mutual compromises between Christian Scientists and the general public. ALFRED FARLOW.
In *Boston Times.*

## The Fair Exchange of Values.

GOD'S people certainly are entitled to live. Jesus said that the laborer is worthy of his hire. Paul taught that if he administered in spiritual things he was entitled to reap their carnal things. Surely God's people are entitled to live respectably, they who are doing His work. It is not intended that they should be paupers and beggars, and it certainly would be commendable if every minister of the Gospel, all editors of the religious press, and all other people devoting their time to His service in various lines, could lay hold on God's promises as Christian Scientists are doing and begin to lift themselves and others out of poverty as well as sickness. Jesus' life clearly proved there should be no lack in this line as well as all others.

Christian Scientists are appreciative of the achievements of the race in every avenue of thought,—in discoveries, inventions, art, and science. They are grateful for every step of progress, and appreciate the many hardships endured by our fathers, which seemed necessary to bring about the blessings we enjoy to-day. L. B. C.
In *Dayton* (O.) *Herald.*

The Christian Scientists make a good point when they say, "Whatever money has come into the Christian Science movement has come from its adherents. No solicitations have been made from outsiders. The liberal contributions of the Christian Scientist to the support of their movement are due to the love Christian Scientists have for their cause." Christian churches ought to look solely to their own membership for the support of their work. They beg money of outsiders at too great a cost to the efficiency of the work.—*The Watchman.*

Whatever your occupation may be, and however crowded your hours with affairs, do not fail to secure at least a few minutes every day for refreshment of your inner life with a bit of poetry.—CHARLES ELIOT NORTON.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

## The Rubber Industry.

COMPARATIVELY little use was made of rubber before Goodyear was led by his genius to the discovery of a scientific treatment of the crude product, which gave to the world a new commercially available product of extraordinary value in advancing the arts of modern civilization. Rubber has now become a vital necessity, its production assuming vast proportions, and its consumption is a dominant factor in a great number of industries.

Altogether the rubber factories of the United States use yearly over sixty million pounds of rubber, turning it out again in thousands of different useful articles, and the manufacture of all these rubber commodities has created a demand for rubber that is simply insatiable. Rubber, indeed, ranks third among American imports, being exceeded in quantity and value only by sugar and coffee. Whence comes this vast quantity of crude rubber? What are the facts relating to the world's rubber supply?

Rubber comes from South America, from the Central American States, from western Africa, India, and the Indian Archipelago. The best rubber, however, comes from the Amazonas, embracing a certain part of southern Venezuela and the borders of the Amazon in Brazil. In his book on South America, Mr. Frank G. Carpenter, the distinguished traveler who made a twenty-five-thousand-mile journey in search of industrial information, says: "Amazon rubber is the best of all rubber; it furnishes the bulk of the product." Seventy-five per cent of all the rubber produced in the world is shipped via Para and Manaos, from either one of which ships leaving for New York often carry cargoes of rubber valued at two million dollars or more. Manaos has gained its importance as a rubber port because of its nearness to that section of the Amazonas which scientists have discovered to be the world's greatest rubber country.

It is a significant fact that the greatest of rubber regions is now conceded to be within the borders of a country toward which the whole world is looking as the great new industrial Eldorado—Venezuela.

Rubber in its crude state is a sap, and should be gathered, as is maple-sugar sap, by tapping the tree. The present production of rubber is so inadequate as compared to the demand, that manufacturers are alarmed, as there is no substitute for rubber, and the opening of new rubber forests will bring immense fortunes to the exploiters. Mr. Carpenter, the traveler before referred to, says: "It takes from fifteen to twenty years after the planting before rubber trees will produce enough sap to pay for gathering it." Scientists who have studied the conditions add that it is not possible to plant and cultivate rubber trees here, there, or anywhere, with any degree of commercial success, any more than it is possible to raise oranges in Maine or coffee in Montana. The fact remains, then, that the rubber industry for many years to come must depend entirely upon the wild trees.

These wild trees grow along the borders of rivers, and the particular series of streams involved in the rubber industry are the Amazonas before mentioned, the greatest rubber-producing section of this greatest of rubber regions being that bordering both sides of the Rio Casiquiare, between the Rio Orinoco and the Rio Negro in Venezuela.

Let us journey into this region and see what the greatest of rubber countries looks like. Tracing the location first of all on the map, we come to Para and later to Manaos, the two rubber-shipping centers of the world. Para is a city of one hundred thousand people, many of the inhabitants having grown rich either by actually dealing in rubber or in supplying necessaries to the camps.

In both Para and Manaos the most prominent feature of industrial life is the shipment of rubber, just as the shipment of tobacco is most prominent in Havana. All the exporting sections of the cities are occupied by packing-houses where the rubber is packed for export. To these packing-houses the crude rubber is brought in lumps that very much resemble hams, though if you happen to drop one of these lumps of rubber you will realize that it is not the ham it seems to be, but a very elastic substance, since as soon as it touches the ground it bounces up and down after the manner of a heavy rubber ball. In the warehouses each lump of rubber is carefully weighed, and is then packed in boxes, three hundred pounds in each box, ready for shipment.

Scientific men explain that rubber is a product obtained by proper treatment of the milky sap or "latex" of such tropical trees as *siphonia elastica* and *siphonia braziliensis*, belonging to the genus distributed throughout the section of South America now under discussion. The last United States Census report says that although rubber may be produced from any plant, such as common milkweed, having a milky sap, still it can be obtained in commercial quantities only from tropical countries and from rubber trees. The census expert adds that, like other vegetable products, rubber differs in quality according to the place of derivation; and that the best rubber is shipped from Para and Manaos, in South America.

Let us see how operations in this rubber country are conducted; let us see how the Indians, native to the region, gather the rubber. In the first place, the rubber tree resembles ordinary forest trees, such as the English ash. The reader probably supposes that rubber comes from the rubber plant which ornaments his home, or which he has seen in conservatories; but that plant produces gutta-percha, and not rubber.

In the rubber forest the rubber hunter does most of his work in the forenoon, when the sap runs most freely. He begins by tapping the tree as high up from the ground as he can reach, neither boring the tree with an auger, as we do our maple trees, nor scarifying the tree as we do our turpentine pine trees of the South. The rubber-gatherer taps the tree with a tomahawk or hatchet which has an inch-wide blade. He makes only a slight gash in the bark with his hatchet, taking care not to cut the wood beneath the bark. Immediately a fluid, as thin and as white as milk, oozes forth. The gatherer now fastens a small cup into another cut made below the gash, thus catching the fluid as it runs down. He makes three or four similar gashes in each tree, fastening a cup under each gash. About noontime he goes from tree to tree and empties the milk from the cups into a bucket. He has only a certain number of trees allotted to him, and as there is a tablespoonful of fluid in each cup when he gathers it at noontime, each tapper has about a gallon of sap to show for his morning's work.

The rubber forests are divided into what are known in the rubber regions as paths. These consist of from sixty to one hundred trees each, the paths leading in and out of the woods and crossing streams. One such path is allotted to each of the native workers who tap the trees and gather the rubber. The size of a plantation is known by the number of paths that it contains.

After the gathering, the next process is that of smoking. As the sap coagulates on exposure to the air, it is necessary to smoke it the day it is gathered. By following this rule the best rubber is obtained. Under the influence of the smoke the sap hardens. The fuel that makes the fire that makes the smoke is covered with ordinary palm nuts, which, when fired, give forth a dense smoke. In this smoke the worker holds the lump of sap or rubber on a kind of wooden paddle, turning it round and round until the operation is finished.

The lump of rubber is accumulated upon the end of the wooden paddle by first dipping it in the sap or milk, and then holding it in the smoke. After turning it round and round rapidly for a minute, as described, the milk hardens. The worker again thrusts the paddle into the bowl of milk,

Digitized by Google

and again he holds it in the smoke, repeating this process until a ball of crude rubber of the regulation size has been gathered. If a rubber tree is not abused it will produce milk in abundance continuously for thirty or forty years.

## The Philippine Aborigines.

DAVID P. BARROWS, chief of the Bureau of Non-Christian Tribes of the Philippines, in a report received at the War Department on the ethnology of the Philippines, concludes that while the great majority of the population is unquestionably of Malayan origin, the aboriginal race of the archipelago is the dwarf black people known as "Negritos," or little Negroes. He says that the people of this race are almost the smallest on the globe, and are true savages. It was thought that their numbers were dwindling, and that not more than ten thousand remained in the islands, but inquiry shows not less than thirty thousand of these dwarfs. Some of them are four feet in height, but the greater number are under three feet. They feed upon roots and small game, and do not live in villages, but roam through the mountains in small groups of a few families each. They are timid and fearful of approach, and yet to a certain extent are feared by the more civilized tribes. Mr. Barrows says,—

"The number of problems presented to the ethnologist by these little blacks is almost bewildering. Their identity with the Sakais of the Malay Peninsula, and the Mincopies of the Andaman Islands, is almost certain, but what is their relation to those other pygmies—the dwarfs of central Africa? And further, what may be their connection with the true Negro race of Melanesia, almost contiguous to them? The geographic distribution of the Negritos is such that we must conclude that at one time they were practically the sole possessors of the Philippine archipelago; and unquestionably the first to arrive and to dispute their possession of the soil and to drive them into the mountainous interiors which they now occupy, were the tribes of primitive Malayans which still constitute the most considerable element of the non-Christian population of the islands."

In contrast to the dwarfs are the tribes in the vicinity of the Gulf of Davao and Mount Apo in eastern Mindanao. They are very tall, with hair wavy rather than straight, a narrow and prominent nose, and a color of skin approaching that of the Polynesians, and according to Mr. Barrows, they are another non-Malayan element. He describes the seven Christian tribes, the Mohammedan Malays and other Malayan peoples, and says,—

"Of such diverse and varied elements, then, is the population of the Philippines composed. Of the mixtures with Chinese and European blood it is unnecessary to speak further here. The variety of problems they present is equally great for the ethnologist and the statesman. Since the first arrival of the Portuguese in Eastern waters the mind of the Malay has appeared to the European as a closed book. Both races have ever misunderstood and mistrusted each other. Out of mutual ignorance and fear have followed hatred, oppression, and retaliation. In the establishment of order in these islands this government is attempting to rear a new standard of relationship between the white man and the Malay. The success of this effort, so full of possibilities for the future of life and intercourse in the Far East, will depend in a large measure on our correct understanding and scientific grasp of the peoples whose problems we are facing."

He opposes very strongly the application of the Indian reservation scheme to the Moros, and says that his inquiries into the treatment of the Indians in this country have satisfied him that, in spite of excellent intentions, the policy has not brought forth satisfactory results, and "in a thousand cases has not done justice to the Indian."

*The New York Sun*

## The Possibilities of Life.

THE possibilities of life are inestimable just because life never has been and never can be accurately gauged. One knows little more of what is within himself than of what is within his fellows. Both the strength and the weakness of his character are incalculable except from such data as can be gathered in the collisions of persons and events. The unexpected in events is always happening, and it is always calling forth the unexpected trait or fostering the unsuspected tendency of personal life. Thus one becomes acquainted with himself upon the same terms and in the same manner as with his fellows, surprising himself as often as others surprise him, and finding cause for both elation and depression in the knowledge thus thrust across his path. We are continually appearing as we did not expect to appear, continually doing what we had not purposed to do, continually saying what we did not intend to say; and these modes of self-manifestation would have been less surprising if we had known as much of the content and quality of our lives and characters as we have so confidently assumed that we knew. We do not know, and because we do not know, we cannot anticipate what we shall do or say, or how we shall appear. It is what we actually are that declares itself under the stimulus of the unexpected, not what we think we are nor what we mean to be. We are led out of ourselves in the encounter with persons and events; and we appear in such shape and power as we must, and not as we have wished or willed.

REV. E. G. SPENCER.

My daily task, whatever it be, that is what mainly educates me. All other culture is mere luxury compared with what that gives.—W. C. GANNETT.

## "Doe the Nexte Thynge!"

FROM an old English parsonage
Down by the sea,
There came in the twilight
A message for me;
Its quaint Saxon legend,
Deeply engraven,

Hath, so it seems to me,
Teaching from heaven;
And on through the hours
The quiet words ring
Like a low inspiration,
"Doe the nexte thynge!"

Many a questioning,
Many a fear,
Many a doubt
Hath its guiding here.
Moment by moment,
Let down from heaven,

Time, opportunity,
Guidance are given.
Fear not to-morrow,
Child of the King,
Trust ye your Father,
"Doe the nexte thynge!"

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Delay of Duty.

THE man who said, "I shall pass this way but once; any good thing, therefore, that I can do, or any kindness that I can show to any human being, let me do it now. Let me not defer it nor neglect it, for I shall not pass this way again," was a philosopher who well knew the evil of procrastination, and if his deeds were in keeping with his wise words the world profited doubly by his life.

The temptation to procrastinate seems to be especially subtle when we are called upon to unite in any undertaking requiring the co-operation of many. How natural it seems for us to wait until we see what others are doing or intend to do. Frequently we are tempted to postpone our efforts until our associates have done that which we consider to be their duty; forgetting that *our* duty should be done without regard to what others are doing, and that we cannot with propriety or certainty forecast what another should do. To yield to this temptation is to retard the progress of the enterprise and frequently to prevent the very acts which we regard as pre-requisites to action on our part.

Usually we can do nothing more profitable than to do our best, irrespective of what others are doing, and without regard to whether they are doing just what we would do under similar circumstances. And when we say similar circumstances, we forget that we do not, and cannot, know what problems our brother has been compelled to solve, nor can we measure his achievement in solving them. The success of united endeavor is insured only through the unselfishness and zeal of every individual. If "each does well his part" the outcome cannot be uncertain.

A general must have the loyal support of his entire army in order successfully to execute his plans, and the greater part of his army must move forward, when the proper time comes, without knowing the details of the campaign. All the preliminary work, the drilling of the troops, the laying in of supplies, must be done befo e the campaign can be entered upon, and it would be a rash commander who would press forward or disclose his plans until that work is done. The quicker this preliminary work is done, the earlier the campaign can be commenced. And after it is commenced, the individual must continue to do his duty without procrastination and without flinching. M.

### The Recognition of Greatness.

FEBRUARY, though the least of the months, has made itself so famous through its gifts that its days are all too few for its anniversaries.

Among literary lights it has brought us a Dickens, a Hugo, a Longfellow, a Holmes, a Horace Greeley, and a John Henry Newman; among scientists, Copernicus, Galileo, Darwin, and Edison; among musicians, Mendelssohn, and Handel; among patriots and statesmen, Robert Peel, Washington, Lincoln, and Kosciusko. Of all these and many more we are reminded in this second month, and it is well if they lead us to forget present occupations in the remembrance of past achievements, for he is most worthy of his inheritance who is most mindful of those by whose labor and sacrifice he has been enriched. Moreover, we may find a stimulus to virtue in the thought that no man can be far removed from that greatness which he recognizes and gladly honors. That which we appreciate and approve in our brother is latent, if not active, in us, and we may thus know that we are akin to all that we love and revere, and so verify the saying of Pythagoras that real friends have all things in common. All this speaks for the basic oneness, in kind and capacity, of all men, their common sonship and endowment in Him "of whom the whole family in heaven and earth is named."

The pride that would link itself to greatness that it may have whereof to boast, is no less petty than abundant, but to find in the goodness and strength manifest in our fellowman, the proof of our kind and possibilities, is to recognize the splendor and dignity of true manhood and be strengthened, day by day, in our endeavor to attain it.

John Locke was right when he said, "I find, and can find, that only without, which is within." Our knowledge of the good of another individuality can only be expressed in the terms of our own, and every discovery of good in our brother encourages our consciousness of the awakening good which is our true selves. We shall be (are), like Him when we see Him as He is, and the conscious gain in our perception of the beautiful and the good in others should deepen, by so much, our knowing that the sense experience of weakness and of sin has neither maimed nor marred, but only hidden the true individuality,—that "Sin has not touched me, and cannot." This is one of the most inspiring revelations of Christian Science, and its clear light penetrates and dispels the mists of the centuries, and re-establishes that sense of Divinity within, which is humanity's only sure anchorage, its one stable ground of self-respect, courage, and good cheer.

The greatest service any man can render his race, is not that of philanthropy but of inspiration. It is the disclosure to others, through his own spiritual supremacy, that the ideal life is not only possible but immediately attainable, and this is effected in some measure by every true man, in the instance of all those who see in him an avenue through which divine Life is revealed.

Our remembrance of the great and good most honors them and is most helpful to us, as we identify their greatness and goodness, not with personality but with Principle. To think of a fine achievement as explained by reference to unique environment, equipment, or good luck, is to gain from it neither the courage nor the counsel we need. We cannot assume the place nor exact the endowment of another, and upon the plane of personality we are remanded to our own seemingly little, if not dull, way and work: but when we think of such achievement as the individual manifestation of that infinite Intelligence and Love which is behind all and in all, and which floods every channel that is open to it, without selection and without partiality, this is to understand how Simon, the Galilean commoner, could become Peter, the silver-tongued leader and liberator of men. It is to awaken to the realization that life is not a personal enterprise, but a ministry, and that by virtue of his sonship, every child of God may show forth the excellency of his greatness. W.

### My Brother's Demonstration.

"WHAT is that to thee? Follow thou me," was Jesus' rebuke of Peter's curiosity concerning John's demonstration; and in that sacred sermon which is the life-chart of every earnest Christian, he said, "Judge not."

In "Miscellaneous Writings," page 287, our Leader says, "Great mischief comes from attempts to steady other people's altars, venturing valor without discretion, which

Digitized by Google

is virtually meddlesomeness. Even your sincere and courageous convictions regarding what is best for others may be mistaken." And all wise teachers have so advised and warned and remonstrated.

Experience has added her lesson of keen regret when we have spoken unkindly, though perhaps ignorantly, of another, for charity would have counselled silence; and yet despite counsel and experience, how easy it is to yield to the temptation to measure our brother's demonstration.

There are two requisites to even an approximate estimate of another's growth. First: What is his present altitude? This we may in a measure discern "through a glass darkly;" but the second: How long and how difficult has been the way to his present altitude? this is beyond our ken. No one but our neighbor can know of his secret wrestlings, his temptations, and his victories.

I have seen a real little hero suppress his sobbing and hold his temper in half subjection with an effort that was most manly, though unappreciated, while his little sister, for sweet and natural complacency, won loving commendation from their parents, who deemed his experience a defeat, hers, a victory. But was it so?

In Christian Science, one man's demonstration may hold him in the busy marts of life, his neighbor's may take him therefrom; and the growth of each is to be measured not by his staying or going, but by the Science, the Christ-likeness he manifests, whatever his environment. This manifestation also measures his opportunity for doing good, for where the fountain is pure, there will the thirsty come and drink. Let us forego meddlesome curiosity regarding him that goes or him that stays, and avoid Peter's question: "And what shall this man do?"

Many a home to-day is blessed and beautified by the untiring patience and self-forgetful love acquired by a humble mother's daily study and hourly application of Christian Science. Through Love, she has brought sweet peace to the family fireside, banished the temptation of the saloon, protected the son, and liberated the daughter from a couch of pain.

Should we presume, by comparison, to criticise that mother's seemingly narrow field of demonstration, the Christ would speak to us to-day, "If I will that she tarry till I come, what is that to thee?"

It is also unwise for us to attempt to estimate another's demonstration of physical wholeness. We know that health is harmony and disease is discord; yet it does not always follow that those who are most robust have made the highest demonstration of health. A belief of health is far from the demonstrated freedom from disease which is gained through the understanding that there is no reality but Love and Love's manifestation.

If we, to human sense, are naturally endowed with accurate sight, sensitive hearing, elastic step, and stalwart frame, or if we have prayerfully established this physical harmony, can we not without criticism and surely without censure await the differing and sometimes lingering demonstration of him who will anon see more clearly, hear more quickly, and walk with greater freedom?

A fuller realization of the omnipotence, omniscience, and omnipresence of Love will lift our sense of responsibility and concern, and fill us with an abiding assurance that all is well with our brother. However circuitous may seem his route, the end is at-one-ment, and it is assured. S.

## Letters to our Leader.

We are permitted to publish the following recent and interesting note addressed to Mrs. Eddy by the First Reader in Concord, N. H.:—

*Beloved Mother:*—I thank you for sending us Professor Hering's loyal and loving letter. It is beautiful to see his clear vision. The letter afforded the opportunity to speak of Science and Health as God's instrument in the healing of the sick and sinful, and the importance of placing it in the hands of Concord people.

Two cases of healing by children were given last evening. A little Concord boy of eight, who had been under treatment but a week and whose widowed mother did not understand Science, healed his aged grandmother of two ailments. The dear child said, "In the afternoon grandma had a bad pain in her head and I treated her, and at night she was all right." A second time he helped her, and now the grandmother gives God the praise.

The merchant, Mr. William A. Clark, told of a little girl who, having seen a copy of Science and Health and having been told about it by her grandma, went to see her little friend who was ill, sat by her bedside in prayer, and three days later this child, who was given up by the doctors, was playing in the yard. "A little child shall lead them."

Our Sunday congregations, even in this wintry weather, fill our little hall. We are even now in need of larger quarters, and unless other arrangements are made before next summer people will be turned away.

Lovingly,
Irving C. Tomlinson.

Also the following letter from the First Reader in New Bern, N. C.:—

New Bern, N. C., February 11, 1903.

*Dear Mother:*—Your beautiful victory for God and its demonstration of His protection over you and over all following your teachings in your loved state, touched me deeply, and my first prompting was to let you know of my rejoicing with you. Just as I received the account of this victory, our legislature had proposed a bill to regulate the practice of medicine. In Sunday's paper it was announced that the bill had passed the House. Our lawyer engaged to report to us, it seems, was out of the city, and on returning found the legislation advanced to this point. On Monday he succeeded in getting the bill recalled, and is now promised by the Committee on Health that we shall be given a hearing. We are resting all in God and His dear love.

In our state the situation is unusual,—I might say unique,—not a man acting as First Reader or Publication Committee. There is one Second Reader, a male, in Asheville. Our four churches have about seventy members. We know many are in sympathy with the movement but not yet emancipated from bondage to their old church beliefs. There is not a Christian Scientist in Raleigh, our governmental city. A comforting thought to me is that God, divine Mind, is there,—the One Revelator of Perfect Truth,—its lawyer and law-maker. I felt I must write to you our situation just because you love us and we love you. Not one that I have ever brought to the light of your glorious work has raised one word against its Founder, but all have joined in thankfulness that you were with us to show forth "His wonderful works to the children of men." Rest assured we are at work bravely, not cast down, but joyous in the privilege given us to stand for our glorious Cause in the dear old North State. You once were on the soil in person, and I feel you will now be in spirit, in Mind, yea, ever-present with the Christ to see the waves still and the victory for Him, His Cause—our Cause. "The Word of Spirit is our only weapon."

With joyous gratitude to God and to you for the victory, and trusting Him in all, I am lovingly,

Mary Hatch Harrison.

Prayer is a closing of the eyes on things seen, and opening them on things unseen. It is penitence vocal, faith making its profession, and love kindling into a flame.

A. C. Thompson.

## Distribution of Literature.

G. H. M.

THAT the Christian Science publications are carrying the truth to remote parts of the world, and there finding welcome, the following letters bear interesting testimony.

In answer to a request published in the daily papers for reading matter for the soldiers, a subscription for the *Christian Science Sentinel* was presented by a Christian Science Association to each Company of United States troops serving in the Philippine Islands.

These letters, with many others of similar import, have been received by the Secretary of the Association in acknowledgment.

"Cebu, Cebu, P. I.

"*Dear Sir:*—Your letter of May 26, 1902, in reference to the receipt of the *Christian Science Sentinel* by this Company received. I have the honor to inform you that same has been received and is welcomed by a goodly number of the men of the Company. Just at present the men are new to the conditions of army life and their appetites and desires are not what they will be in a year to come. If the desires of the men (that is, of the majority) should be consulted now, they would not care to receive this class of literature. With a little longer service, however, this condition will be reversed, and as their company commander, for the good it does the few now, I hope you will continue to send the paper."

"Binan, Laguna Province, P. I.

"*Dear Sir:*—Answering your letter of inquiry, dated May 26, 1902, I have the honor to state that the *Christian Science Sentinel* has been regularly received by the reading room of my troop, for which I wish to express my thanks and appreciation. With regard to the character of your weekly, it is probably read as much as any religious weekly would be, by a class of men who are recruited from all conditions of mankind. Although not a Christian Scientist myself, I would be pleased to have the subscription of the weekly continue."

"Calanan, Laguna Province, P. I.

"*Dear Sir:*—We have been receiving the *Christian Science Sentinel* at irregular intervals, and the paper is read by some of the soldiers with a great deal of interest."

Extract from another.

"Permit me to acknowledge receipt of the very interesting and instructive paper, whose worth I assure you the men of my command thoroughly appreciate, and would be glad if your kindly offices could continue."

Another.

"The *Christian Science Sentinel* has been received regularly and has been well read. Reading matter for the soldiers is scarce enough at these isolated stations to insure plenty of attention being given to everything received, and I am sure the men appreciate your paper and would be glad to get it right along."

Another.

"It makes a welcome addition to the reading matter available for the use of the troop. One of the great needs of the army in the Philippines is to have good, wholesome literature for the use of the men, and I wish to assure you that I appreciate your kindness in remembering my command."

The welcome for Christian Science literature is no less evident among the educational institutions of New England. Science and Health and "Miscellaneous Writings" have been presented to the libraries of several colleges and universities during the past year, and in every case they have been received with ready and sometimes marked appreciation, the proposed gift in one case calling out the exclamation, "Why certainly, Mrs. Eddy's books should be in every library. She is one of the greatest religious thinkers of our day."

In public libraries, national soldiers' homes, homes for aged people, life-saving stations, lighthouses, sailors' homes, and in the reference libraries of some of the Boston daily papers, these books, together with the *Journal* and *Sentinel*, have also found ready acceptance.

While it is most gratifying to realize the vast amount of good inevitably resulting from such dissemination of the truth, equally helpful has been the influence on the workers themselves in the exalted and unified purpose resulting from the effort to share as far as possible, with all mankind the blessings of Wisdom, Truth, and Love which have come to us through the writings of our beloved Leader, Mrs. Eddy.

## Upon Accuracy and Inaccuracy.

ANNE DODGE.

To be accurate involves strict adherence to the truth in all things—"from the least unto the greatest." It means not the slightest deviation from the rule laid down by our Master, who always put truth first at any sacrifice.

The practice and demonstration of the truth is the most important thing to the Scientist, and how necessary, then, that he be accurate, even in detail,—in every word, every description, every impression given out; how more than important not to practise deception in any way, but to abide steadfastly in Truth, and to guard himself carefully from giving or receiving a wrong impression of anything.

Inaccuracy is but another word for deception, hypocrisy, and all that "maketh a lie." Inaccuracy in the least, means a mistake in the result of our working, and that we must go back, erase the mistake, and do our work all over again, and it is a more wearisome task, and grows more distasteful with every repetition; whereas, had we been accurate in the beginning, and accurate throughout the successive stages of our problem, there would be no weary retracing of old footsteps, but a joyous pressing forward to the fulfilment of our glorious "calling."

Truth is not wearisome, nor do its demands tire or harass us. It is when we step aside to take part in "the policies of error" that we are depressed, discouraged, and dejected; and had we been faithful to Truth we should have been saved such experiences.

I have had many opportunities of proving that adherence to Truth confers buoyancy, hope, cheerfulness,—an elasticity and hopefulness of disposition, that nothing can equal; also that deflection from truth, or inaccuracy, in even the little things, brings about the opposite mentality,—discouragement, depression, and a darkened view of everything.

The consciousness of having been accurate, of having adhered religiously to the truth, is in itself an elevating condition of thought, and delivers us from the "depths;" whereas the consciousness of having been inaccurate is an accuser that condemns us to a state of hopeless despair and unhappiness.

Happiness is that state of consciousness, of right-thinking and right-doing, of firm adherence to Truth, Principle, through temptation and persecution, from the love of right and of good, which comes only after a battle with evil, and victory over sin and temptation.

If we could see sin in its natural hideousness we should loathe it, but sin is too subtle and too cunning to appear what it really is,—deception in itself and all its professions It masquerades in the "livery of heaven," and only close adherence to Truth will strip off its disguise and disclose

Digitized by Google

its hideous deformities. Truth alone can reveal the nature of the deceptions of evil, and disclose the nothingness of its fawning hypocrisies and flatteries. How important, then, to abide in Truth and escape being deceived by the lie! We cannot pray too earnestly that we may ever be clear-sighted, honest, upright, so that sin in its many forms will not deceive and entrap us.

## Obedience.

MARGARET E. HALLEY.

A QUARTER of a century ago I was one of a corps of Sunday School teachers in the very poor neighborhood of Homerton, London, Eng.

We were giving our little ones an outing in the country, and only those who know what city poverty is, can understand what joy it was for those little creatures to get into or see a green field. Suddenly we were attracted by shouts of delight and exclamations of "Oh, teacher! come! I see the eggs growing." On going to see, what was our horror to find the children eady to devour toadstools. Close investigation ensued as to whether any had been eaten, then fingers that had touched them were washed, etc., and great was our thankfulness that no evil came of it.

This incident has often come to mind since coming to Christian Science. How often we mistake and call our human opinions the truth! and by holding to these opinions, stubbornly and wilfully declaring that we are right, are mentally poisoned thereby. There is no excuse for us; those children never offered to touch the toadstools after they were warned. Can't we be childlike and obedient, knowing that when we are able to understand, we shall see clearly why we were told to do this or that? In Science and Health, page 103, it reads, "The liberation of the powers of mortal mind through Science, whereby man may escape from mortality into immortality, blesses the whole human family. As in the beginning, however, this liberation does not scientifically show itself in a knowledge of good and evil, for this knowledge is unreal." Paul tells us that children are under tutors and governors. (Galatians, 4 : 1, 2.) Our ignorant human mind wishes to make us think we are full-grown men; whereas, so long as we are conscious—have knowledge—of good and evil as factors in belief, we differ nothing from a servant,—we are not freed men. At present many of us need, and need badly, tutors and governors, rules and by-laws, and if we will only be honest and obedient we shall not find them irksome. The more I advance in the study of our Leader's works, the more I see and feel with growing reverence, God's love in giving us the blessings which have reached us through her devoted life, her moral courage, and her clear realization in showing us the narrow way. She has clearly defined to our consciousness the difference between Principle and hu an opinions, that false charity is only human selfishness and self-righteousness. It is a glorious study to learn how to know that evil can be and must be condemned, and yet be impersonal. That in Science we can realize every word of the Lord's Prayer and the spiritual interpretation thereof. Our Leader tells us we can reach this "heaven-born aspiration and spiritual consciousness" (Science and Health, p. 16); and one of the results is instantaneous healing. Are we going to let anything stop this realization?

I have found one of the greatest helps to clear human consciousness in the daily reading of the chapter on "Animal Magnetism" in Science and Health, beginning page 100. There are only thirty paragraphs in the chapter, were one to study particularly one paragraph a day, as well as the reading of the whole chapter, it would be found invaluable to the "excision of error" (Science and Health, p. 462).

## Giving.

GEORGE S. TEBBETS.

As Christian Scientists, we cannot give much thought to the subject of "Giving," without realizing that, in its highest and best meaning and demonstration, it is a vital element in our profession as followers of the Master.

It is a subject that will furnish us all much food for thought, and I am thankful for the opportunity of referring to it because of the help and blessing it has been to me to ponder over it and search my own heart.

The true broad thought of "Giving" is imparting to others, it is that which is back of and which impels all action tending toward spiritual ministration or material help.

We are all more or less accomplished at "getting" or acquiring for our own good, and no doubt many of us give this subject much thought and could write volumes about it. But how much time and thought do we spend in learning how to give? how to help others with self-sacrificing devotion and consecration to humanity and our Cause?

We who call ourselves Christian Scientists are enlisted in a movement which is establishing Christ's kingdom on earth, revealing the brotherhood of man and abolishing sin, sickness, and death. Is this not truly the greatest thing in the world? and should we not ask ourselves the question: "Are we learning to give as we should of our time, thought, and means to this sacred Cause,—are we manifesting a true, helpful, Christ-like, giving spirit, and meeting the demands made upon us?"

From a recent editorial in the *Sentinel*, I take the liberty of making the following quotation. After speaking of an eminent English scholar and his life-long habit of reserve and reticence, and wasteful hoarding of knowledge, it goes on to say:—

"With less eminent people it very often happens that a laudable ambition to acquire, to gain for their own good, is apparently wanting its true counterpart, the productive impulse, an impelling desire to give out to others; and the unhappy divorce of these normal associates has marred the usefulness and consequent satisfaction and growth of many lives."

We should ponder these words most carefully, and in so doing many serious questions will present themselves.

Have we an impelling desire to give out to others? Are we giving as much of our time as we should to the needs of the church? Do we give a loving, cheerful greeting to all we meet? Do we give our loyal, loving support to the church and its officers? Do we give to the financial needs of the church as God has prospered us? Do we give encouragement and help to our business associates and acquaintances? "Are we giving as we should?"

If our thought is right and we are making our spiritual gifts and sacrifices, will not the giving of our material means follow as a natural and scientific result? If the material giving is lacking, does it not indicate a spiritual deficit? In giving we necessarily sacrifice, and we all know how this promotes our progress and brings true peace and joy.

What an example of giving and sacrificing do we find in the life and works of our dear Leader. We catch only a faint glimpse of the toil and sacrifice referred to in these lines from "Retrospection and Introspection," p. 47: "No one else can drain the cup which I have drunk to the dregs, as the discoverer and teacher of Christian Science; neither can its inspiration be gained without tasting this cup."

Also these from "Rudimental Divine Science," p. 30: "The Discoverer of this Science could tell you of timidity, of self-distrust, of friendlessness, toil, agonies, and victories, under which she needed miraculous vision to sustain her, when taking the first footsteps in this Science."

Also these from "Miscellaneous Writings," p. 213: "All that I have written, taught, or lived, that is good, flowed

Digitized by Google

through cross-bearing, self-forgetfulness, and my faith in the right."

We demonstrate Love as we "give." We have been told that love is interest. How can we manifest true interest in our brother, our church, our Cause, without giving to them of our means, both spiritual and material?

In "Miscellaneous Writings," p. 12, we find these words: "We should measure our love for God by our love for man; and our sense of Science will be measured by our obedience to God,—fulfilling the law of Love, doing good to all; imparting, so far as we reflect them, Truth, Life, and Love to all within the radius of our atmosphere of thought."

We have all proved to some extent that giving in right directions does not impoverish; nay, rather it enriches us many times over, and as we are thus blessed we are demonstrating that God is the source of all supply.

"Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of hosts, if I will not open you the windows of heaven, and pour you out a blessing, that there shall not be room enough to receive it."

## The Lectures.

### At Ashland, Ore.

The lecture of Carol Norton of New York City, at Pioneer Hall, Tuesday night, January 27, was well attended. It was a comprehensive covering of the cardinal points in the Christian Scientist's creed, including those which have aroused so much discussion and controversy.

*The Ashland Tidings.*

### At Chino, Cal.

One of the most charming speakers a Chino audience has had the pleasure of listening to was Carol Norton, C.S.D., who lectured in Odd Fellows Hall Tuesday evening, December 30. His subject was "Significance of Christian Science." He made a most eloquent plea for the doctrine of the Christian religion applied to physical as well as moral regeneration. The hall was well filled, a number coming from Pomona, Covina, Ontario, and Cucamonga.

*Chino Valley Champion.*

### At Auburn, N. Y.

Not large but representative was the audience at Music Hall last evening [January 27], when Judge William G. Ewing of Chicago began his address on Christian Science. Judge Ewing was introduced by Mr. C. I. Ohrenstein of Syracuse, First Reader of the church there, who said that Judge Ewing's lecture was, as had been said in a Syracuse paper, orthodox, that it was based on correct doctrine, the result of which is right doing and right living.

*Auburn Advertiser.*

### At Syracuse, N. Y.

Several hundred people attended the Wieting Opera House yesterday afternoon [January 25] to hear an address on Christian Science by Judge William G. Ewing of Chicago, who came here under the auspices of First Church of Christ, Scientist. Judge Ewing is an earnest, forceful speaker, and for about two hours held the closest attention of his audience, although he did not resort to any sensationalism, which many of the audience thought they would hear. Judge Ewing was introduced by Mayor Kline, who occupied a seat on the stage throughout the lecture.

*The Telegram.*

### At Eureka, Cal.

The lower floor of the Ingomar Theatre was filled last night [January 20] with an audience which listened with great appreciation to the lecture of Carol Norton, C.S.D., on Christian Science. Special trains from Fortuna and Arcata helped swell the large attendance.—*Daily Standard.*

Professor George B. Albee introduced Mr. Norton in the following words:—

*Ladies and Gentlemen:*—This is an age of individuality. An age of independence in thought and in action. A time of breaking away from old forms, customs, and practices, and a time for the rebuilding and re-arranging of man's ideas of life. Although many of us do not accept the teachings of Christian Science, yet any movement that attracts and holds thousands of our most intelligent citizens has in it much of real worth. It therefore affords me great pleasure this evening to present to the citizens of Eureka and of Humboldt County, Mr. Carol Norton of New York City, an ardent and enthusiastic worker in the field of Christian Science.—*Correspondence.*

### At Shawnee, Okla.

The Opera House at this place was well filled by an appreciative audience on last Tuesday, February 3, to hear a lecture delivered by Judge Septimus J. Hanna.

Judge Hanna was introduced by one of the leading citizens of the city, Judge D. F. Singleton, with the following appropriate and well-chosen remarks:—

For years I have attached deep significance to the third verse of the seventeenth chapter of John, which reads, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

If this simple statement be true,—that age-lasting life is the result of the knowledge of God,—then of what transcendent importance is the study of God and our relations to Him. I deem it of such vital importance as to demand of each of us, personally, an honest and thorough investigation. Grave errors are frequently taught by honest, well-meaning people and are received into good and honest hearts. We have learned by experience and observation that we cannot always rely upon the age of an accepted proposition to determine its truth. By an examination of the history of peoples closely related to us, we are sometimes amused, as well as shocked, to observe the extremely grotesque errors held to by some very bright minds, and I make bold to ask this intelligent audience, under the resplendence of all the enlightenment of this wonderful age, if it is not within the range of possibility that we may be hugging to our bosoms some errors which in years to come may then appear as absurd as do now some of those held to by our forefathers.

We would do well to remember that habits of thought are as hard to overcome as habits of body, perhaps more so. And it may be that many, many errors have come down to us through the gateways of the centuries unchallenged for long years, and when challenged, plead only their antiquity as an excuse for further toleration.

Therefore, ladies and gentlemen, if to-night our distinguished guest should bring to us, as I am sure he will, thoughts which we are not in the habit of thinking, concerning our vital relations to God, views that have not been written in our creeds and catechism, let us not on that account reject them; but in the language of that inspired philosopher, Paul of Tarsus, let us "prove all things: hold fast that which is good." And, as did the people of Berea when Paul and Silas preached to them, let us search the Scriptures daily to ascertain if these things be true.

Ladies and gentlemen, we have with us to-night one who will talk to us of some of the vital forces which connect us with the God whom to know, is life eternal. I bespeak for him a careful and an honest hearing, and now I have the honor and the very great pleasure of introducing to you the speaker of the evening, Judge Hanna.—*Correspondence*

## Testimonies of Healing.

On the evening of October 27, 1898, I was on my way to church, and when crossing the street was knocked down by a runaway horse, picked up unconscious, and taken into a drug store. My clothes were very much torn, and all said it was a miracle that I was not killed. While I never had heard of Christian Science, still I insisted I was not hurt, and would not have a doctor examine me, but after being taken home, a doctor was called and did examine me. He found the left hip-bone split, and the spine badly hurt where the shaft had struck me; I was also hurt internally.

I was confined to my bed for about six months, only able to be up for about an hour at a time and then in constant pain. The doctor said I would be well in about six months, but at the end of that time, I was but a little, if any, better, and he finally told my mother he could do no more for me. I would have to call in a specialist.

My case had attracted great attention, and my church friends, as well as outsiders, did all they could to have me see different doctors; however, I had but the regular practising physician and the specialist, who was one of the best in the city.

When the specialist was called, I asked him if I could ever be well again. He said, "You may be, but it will take a long, long time." This was said after a careful examination, lasting over two hours.

He doctored me for more than two years, and I took quantities of drugs, besides electric treatment. Every day I took two or three doses of morphine to keep me quiet, besides being almost constantly rubbed with chloroform liniment.

At last I began to think I never should be well again, dismissed the doctor, and gave up all medicine,—everything but the liniment. I couldn't seem to let go of that.

It was eight months before I turned to Christian Science. During this time almost everything in the way of healing was offered me, but I would not listen to any of it, until an old friend called and gave me a *Christian Science Journal*, told of her own healing, and said that I too could be cured. She left the *Journal*, but I did not touch it until a week later, when she called to see me again, and said she felt I was not reading it. I had just started to read it the day she called. I tell this to show how discouraged I was, and what a hold error had on me.

She wanted me to go to a practitioner, but I was so disheartened I wanted to die, and felt there was nothing for me. I prayed to die, and it seemed the more I read, the more discouraged I became, but I kept on reading all the *Christian Science Journals* my friend would bring to me. I was very much impressed by the reading of them, and thought that if others had been healed, I too could be, so on December 28, 1901, I called on a practitioner, and that was the first time I ever saw the book Science and Health. After four treatments, I was able to straighten my back without pain. When I went to the healer, I carried myself on one side. My struggle was to give up the liniment. I had said nothing to my practitioner about it, but that night, when I retired, my back ached worse than ever, and I got up three times to get the liniment, but finally decided that it must end then and there; that medicine and Christian Science would not go together, for my Bible told me: "Thou shalt have no other gods before me." I went to sleep and that was the last time I ever thought of using the liniment.

I want to say that I am a working girl. I had spent all my money and was in debt when Christian Science found me, but after five months' treatment I was able to go to work again,—the first time in three and a half years; in fact, I had been told I would never be able to work again.

I am thankful to say I have been working over eight months, and am able to do all that is necessary for me to do, have gained twenty pounds, and my many friends marvel at my recovery.

I feel that it was God who directed this good friend to our door, and surely "man's extremity is God's opportunity." I am thankful to our God, to the revelator of this great truth, and to my practitioner who was so kind and patient with me. I send this with the hope that it may benefit others who, to sense, are discouraged.

ANNIE M. DAHL, Chicago, Ill.

---

I have known something of Christian Science for about nine years and have received benefit from its teaching, but it was only four years ago that I accepted its teaching without reserve. At that time I was a hopeless sufferer from what all believed to be consumption, and also neuralgia in its worst form. The trouble was pronounced by the doctors to be incurable. For many years I could not talk or eat without severe pain.

I believe my lungs are perfectly sound now, and my neuralgia is almost a thing of the past. My eyesight is also much improved. Though I am nearly sixty-four years old and had worn glasses for more than twelve years, being unable to read even the dates on the first page of the *Sentinel* without them, I can now read all the Christian Science literature with ease without the aid of glasses.

Though I am very thankful for the physical relief, I am yet more grateful for the spiritual uplifting and the knowledge that we have an ever-present help in every time of need.

I can never be thankful enough to Mrs. Eddy for what she has done and is doing to give this knowledge to suffering humanity. I wish as well to thank the Scientist through whom I have received so much help.

I have not had the privilege of class instruction or of attending Christian Science services, as we are the only Christian Scientists in this village. Through the study of Science and Health and other Christian Science literature I have been able to overcome the ills incident to a family, as well as to help others.

MRS. MARY TURNER, Bealton, Ont.

---

Nearly two years ago, our oldest son, who is now twelve years of age, was taken with St. Vitus's dance. It was the worst case I ever saw. We took him out of school in the spring, and had him treated, but for several weeks he seemed to grow worse. We held to the truth, however, never doubting for one moment, for we knew that it was the wisdom of God, the word of God that destroys the wisdom of the serpent or error, and at the beginning of the school, the first week of September, he was entirely healed, and started to school the first day and has not lost one hour of school since on account of sickness.

For this and many other blessings I am thankful to our dear Leader, Mrs. Eddy, who, through the purity and consecration of her life has given to the world the blessed truth of Christian Science. I have had many beautiful demonstrations in the past year, and every day I have proof of the power of Truth over error.

MRS. KITTIE WOOD, Omaha, Neb.

---

My first knowledge of Christian Science, came through a friend's kindly lending me "Unity of Good" by Mary Baker G. Eddy. Just at this time I was sorely in need of help, as I was afflicted with consumption and had lost an only daughter of the dread disease, the same year.

I did not try any material remedies, for my daughter had tried everything,—medicines, change of climate, and electricity.

After reading "Unity of Good," I saw so clearly the

Digitized by Google

reality of good and the unreality of evil, that after repeating the Lord's Prayer, as was my custom the last thing before sleeping, I realized "my lungs are well," and in a short time, my cough disappeared, my lungs were well, and all the other distressing symptoms disappeared. I have never had a return of the ailment, and have been able to heal myself and others. It was seven years ago that I first read "Unity of Good."

I have been through class instruction since, and am trying to work for Truth.

I wish to express sincere gratitude to God, and my deep thankfulness to Mrs. Eddy for her untiring efforts for the good of humanity, and for the truth that makes free indeed.—MAGGIE RICHMOND, Ripon, Wis.

---

Eight years ago I was suffering with chronic stomach trouble, neuralgia in every part of the body, and consequent nervousness. I had suffered untold agony from these troubles for more than twenty-five years. Under the care of different physicians I was sent to the hospital twice, but received no lasting benefit. Through a kind friend who came to my home and read to me from Science and Health and *The Christian Science Journal*, I first saw the beauty of this truth. As I heard the words "God is Love," I at once saw that He is not the author of sickness.

When I commenced reading Science and Health I could not sit up all day, but after reading a few weeks, I was out calling. I then took absent treatment for a month or so, and was entirely healed, none of the trouble ever returning. I have never used medicine since a few days before hearing of Christian Science. After two years I had the privilege of taking class instruction from one of Mrs. Eddy's students and received great benefit therefrom. The physical gain is not to be compared to the spiritual uplifting. I write this hoping it will help others who are suffering. I wish to express my gratitude to our dear Leader for what she has done and is doing to redeem mankind.—MRS. H. J. KITTRIDGE, Camden, Me.

---

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass

## Announcements.

---

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. J. D. Reid says in *The Christian Register*:—

"The kingdom of God is not in the crowd. It is in the individual, in you and me; and nothing that takes it out of you and me can restore it to the masses. To make one man like every other man is to efface the image of God in all men, and to destroy the kingdom of God on earth. It takes the endless variety of human nature to give back the complete reflection of the glory of the divine nature. . . .

"And what is the kingdom of God? It is just our own complete life. Any life is a failure that does not come up to the measure of its own capacity. So for a man to rest content with his share, either earned or received as a gift by him, of the material products of civilization, and not to put forth his inborn powers to the nobler tasks and enjoyments of life, is to miss the true satisfaction of living. He has lived but half his life and that the meaner half. The complete life of a child of God is not to live on what we can get of the satisfactions of the moment, which bring with them no hopes for the future, and leave behind them no memories to enrich the thoughts, and in no wise deepen life's meaning for us; but it is to live like God in that we share with Him the creative impulse which sets all our experience in an ordered sequence of growth, making the lower and lesser a stepping-stone to the larger and higher. To eat the bread and drink the wine of life, and say, 'This is all there is of life, and we have tasted it to the full—in what, then, are we better than the gross elements that impart to us such short-lived pleasure? But to eat the bread and drink the wine, and know in them the body and blood of a greater and diviner life, a memory full of all tender meaning, and immortal hope, and a love that counts no sacrifice and that faileth not,—this is indeed to live; for it is not a consummation, a cup drained to the dregs. It is but a beginning, a foretaste of the joy that cannot be exhausted and of the life eternal."

God's word to the world is spoken to the spirit; Christianity is a message to the spirit. It is addressed to man as the religious being and concerns the unfolding and development of his spiritual nature. It pertains to the identification of man's nature with the vital, spiritual power which comes from God, and which it is the purpose of Christianity to identify with humanity.

It is when the soul realizes that this new energy and influence has come in upon its life that we begin to understand the Gospel as a saving agency and to recognize the naturalness of the supernatural. It is then that we realize that it is "unto salvation;" that it proposes and would secure our personal deliverance—a deliverance not primarily from outward or external evils in this world or in the next, but from evils that afflict the soul and dwarf its powers; that drag it down to the hells of defilement and render life degraded and degrading.

If we are now asked whether the thing we seek to bring to attention in all this is a miraculous or supernatural agency, we have no hesitation in answering explicitly, No. It is not necessarily anything beyond or above nature. While undoubtedly Christianity, in itself considered, is a revelation from God, and while the power is of God, the *application* of Christianity to the needs of the soul does not partake of a supernatural character. It is rather the divine education in goodness and love. We are educated along the lines of human life naturally by its instrumentality. . . . We are to grow in grace, the Lord's grace, and in the knowledge of the truth—the Lord's truth. It is the spiritual nature pluming its wings for the heavenward flight and preparing to enter upon its only proper air and light.

*The Universalist Leader.*

Rev. John Clifford, D.D., says in *The Watchman*:—

"If I were to look for that which has been the chief obstacle to the progress of a Christian Church, I should say subjection to the obsolete, surrender to the tyranny of the past, so that the Church has become incapable of meeting present needs, or dealing with present phases of thought, and of winning the sympathy and the cohesion of the advancing intelligence of men.

"Now, our discipleship is not to a Church, but to a Master; and discipleship to a Master means intellectual advance, growth of thought, the opening of the windows of the mind to all the winds that blow; readjustment of view, constant change of the point of outlook; frequent broadening and heightening of the horizon; the soul always alert for the fresh settings of old truths, a hospitality to the new ideas, whilst not expelling from the corners of the mind the old ideas which are true; the cultivation of broad sympathies with all that is human and Divine, ever ready to welcome the new thought and the new speech and the new movement, believing that God is alive, and that throughout the whole of human society He is pushing forward to greater and higher things. The mind of the disciple is a mind that is always moving on, marching forward; it is never, never at what it can call finality. Christianity knows nothing of finality; it is always looking for something bigger, wider, holier, and it is only as that spirit is cherished in the Church of the Lord Jesus Christ that it is possible to keep up its influence on the world."

President H. C. King, D.D., of Oberlin College, says in *The Congregationalist and Christian World:* "We profess to believe that the supreme revelation of God was made in the earthly life of Jesus; but are we using the new great opportunity of our time historically to know that life? It must mean great things for preaching and for the life of the Church, when the results of the modern return on the part of scholars to the historical Christ are fully recognized. This return to the very sources of our faith cannot be in vain. It is a reasonable expectation, that the best preaching and the best response to preaching that the world has ever seen lie just ahead of us. But that result can come, as has been said, only through direct, first-hand, inductive, historical study of the Bible, book by book. It is here that a man ought to find his own communion with God most real, his surest sense of God's personal revelation to him, that will enable him in his preaching to speak out of his own experience and life."

The trouble is that so often the world can see no difference between the Church-member and the non-church-member six days in the week. The world is not so cynical and unfair in this as some suppose. Public opinion is not unfavorable to the Church or to active Christian living. It is not specially keen to find half-hidden signs of saintliness in the ordinary, every-day sort of man, neither is it slow to recognize manifest tokens of real piety. The world judges us by things which we like to call little and unessential, but the very fact that we are judged by them proves that they are not little; so that if we believe ourselves to be rated below our true value we can only blame the market, or the law of demand and supply, or some equally intangible abstraction. If ours is the kind of religion that blesses society, society will learn of it sooner or later, and with the demand for that kind the rating will rise.—*The Standard.*

It may be true that God has called us to the highest and best instructed class in His world school, as many of us believe He has; but that is all the more a reason why we should be kindly in our thought of less advanced or misled brothers. Denying opinions is no reason for not loving men. No man was ever driven to right beliefs, however he may submit to forcible conformities. God has not finished His work with any of His children here on earth—not even with us to whom a clearer light is given. If it is light we must let it shine. And if it is the true light we need never fear that it will fail to prove attractive to those whose eyes are fitted to its rays.

*The Congregationalist and Christian World.*

Love is the everlasting worker of miracles. When all seem hopeless, and the soul is descending upon the road that has no turning, let it be awakened to love, and immediately all the forces of the spiritual world converge upon it to lift it toward God. Love is the saviour, love is the perpetual wonder of life.—EDWARD HOWARD GRIGGS.

There is no character without some defect of growth and symmetry. Some people see nothing but the defect, and so lose sight of the moral good health and beauty of character so often to be seen by those who look for it.—*The Christian Register.*

If your religion is something you cannot carry with you every day in the week, you may make up our mind that it is not a religion of the practical kind.—F. B. HAWKINS.

True religion is like the sun, which cannot withhold its radiance, but pours it forth involuntarily and in copious streams to light and heat the world.—*The Examiner.*

Twelve or more to one address, each, prepaid . . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The passing of the bill by Congress establishing a Department of Commerce in the Government of the United States increases the number of departments to nine. At the head of each department is a secretary, who is also a member of the President's Cabinet, all of whose members are appointed by the President. At the formation of the Government of the United States in 1789 there were but five departments,—State, Treasury, War, Justice, and Postoffice. The Navy Department was added in 1798, the Interior Department in 1849, the Department of Agriculture in 1889. Many of the functions of these later departments have been in existence from the beginning, but they were performed by existing departments until their increasing importance demanded their separation into a special department. At first the War Department had the care of the small navy; the treasury included some functions of the present Department of the Interior, and this at first included some of the duties attached to the Department of Agriculture. The bureaus of the newly formed Department of Commerce are taken chiefly from the Treasury Department.

Attorney General Knox has sent to the clerk of the United States Circuit Court for the eighth circuit the formal certificate, under the act of February 26, 1903, to secure precedence and an early argument for the case of United States *vs.* the Northern Securities Company. This act provides that the Attorney General may file a "certificate that, in his opinion, the case is of general public importance," and it further provides that, upon such filing, the "case shall be given precedence over others and in every way expedited, and be assigned for hearing at the earliest practicable day, before not less than three of the circuit judges of said circuit." It is expected that the argument will be had some time in March.

**Wayne MacVeagh, former Attorney General and former ambassador to Italy, has been suggested by the United States to the non-blockading Powers having claims against Venezuela as their representative before The Hague Tribunal in its consideration** of the questions involved in the contention of England, Germany, and Italy that they are entitled to preferential treatment in the pecuniary settlement of the Venezuelan troubles. It is proposed that Mr. MacVeagh shall be the sole representative of all the peace nations, which are the United States, France, Belgium, Holland, Spain, Sweden, Denmark, and Mexico.

When Canada agreed to submit the Alaskan boundary question to arbitration, it was with the expectation that three judges of the United States Supreme Court should be appointed to sit with three British and Canadian judges of repute. In the appointment, therefore, of Senators Lodge and Turner especially, there is a feeling that the commission is far from impartial, and this may lead to delay in the naming of the Canadian members of the committee.

Mr. Fairbanks' proposal for $25,000 as an appropriation for an experimental "rural telephone free delivery" will not be passed in this year's appropriation. As in many parts of the West almost every farmer has a telephone, it is proposed to issue a special stamp that shall authorize the postmaster to open the letter to which it is affixed and transmit the contents to the addressee by telephone.

**Foreign.**

The proposal to revise the French Constitution contemplates, among other things, making the French Court of Cassation, the highest tribunal, independent of Parliament and enduing it with power to pass upon the constitutionality of all acts of Parliament and in its discretion declaring any of them null and void, thus standing as the counterpart of our Supreme Court; by another change the President is to be chosen by the nation, not by the Parliament, and his cabinet shall not necessarily be composed of members of Parliament. These changes will cause the constitution of France to approximate closely to our constitution, as does also the new Australian constitution.

The Holy Synod has ordained that February 19 o.s. (March 3, N.S.), the anniversary of the emancipation of the Russian peasants, who to the number of twenty-three million were liberated by Alexander II., in 1861, shall hereafter be celebrated in the orthodox churches by elaborate thanksgiving services, instead of by a single requiem mass. This is regarded as being a highly important action, particularly in view of the present prominence of the peasant question.

According to a despatch from Constantinople the Sultan has instructed the Department of War to take measures in conjunction with the government to select immediately European officers for the Macedonian gendarmerie, in accordance with the reform plan insisted upon by the Powers. A circular note will be addressed to the Governments of Belgium, Sweden, Holland, and Switzerland, requesting them to point out officers suitable for the duty.

The mission of Mr. Chamberlain to restore harmony in South Africa is admitted, even by the radicals, to have been eminently successful, and a marked improvement in affairs from many quarters is reported. As the last act of his tour, before sailing for England, he promised the early release of Dutch political and military prisoners who are serving terms in Cape Colony for assisting the Boers, but the franchise will continue to be withheld from them.

General Gaspar Ochoa, who owns the Popocatapetl volcano, including the immense sulphur deposits in its crater, is reported to have sold that property to an American syndicate in which the Standard Oil interests are largely represented, says a despatch from Mexico City. The purchase price is said to be $5,000,000. The purchasers intend to build a cogwheel railway up the mountain and operate the sulphur deposits on an extensive scale.

**On last Friday, M. Jesseraud, the French ambassador, and Minister Bowen for Venezuela signed the protocol for the adjudication by a mixed tribunal of the claims of French citizens against Venezuela.**

**Industrial and Commercial.**

Boston is far ahead of all other Atlantic coast ports in the shipments of apples thus far this season. The 12,831 barrels sent to Liverpool and London last week brought the total up to 692,376 barrels. New York holds second place with 563,457 barrels, Montreal third with 476,792, Portland fourth with 230,379, Halifax fifth with 62,792, and St. John last with 37,309 barrels.

Last year at this time Halifax was the leading port of apple shipments, with 218,571, or about one-third of Boston's present total. Boston then was second, with 137,316 barrels, or about one-fifth as many as this season. New York had shipped 129,592, Montreal 122,406, and Portland 76,110 barrels. In 1900–1901 Boston had the lead at this corresponding time, with 389,671 barrels; Montreal second, 246,955; New York third, 223,692 barrels; Portland fourth, 186,061; Halifax fifth, 108,801.

It is estimated that at least eight hundred million dollars will be spent during 1903 on the improvement and maintenance of railroads in this country. More than three million tons of rails are expected to be laid during the year. Orders already booked insure the steady operation of rail mills well into 1904. Large demands are being made upon the manufacturers of structural railway material, and the capacity of concerns manufacturing railway equipment is being gradually increased to meet the accumulating demands.

A joint call has been issued by the chairman of the Transcontinental, the Western, and the Southern Passenger Associations for a mass meeting of all the Western railroads at Chicago, March 5, for the purpose of discussing the effect of the passage of the Elkins bill on passenger traffic, and the steps necessary to secure a rigorous observance of the act. It seems to be appreciated that strict adherence to the requirements of the law means millions of additional revenue to the roads of the country.

**General.**

The new Isabella Stewart Gardner Museum, Incorporated, was opened to the Boston public for the first time February 23. This is virtually a public fine art collection containing an immense number of really first-rate works artistically grouped and displayed among attractive surroundings. "With its two magnificent Titians, its three Raphaels, its two Botticellis, its Fra Angelico, Fra Filippo Lippi, Andrea Mantegna, Pinturicchio, Crivelli, Agnolo Gaddi, Fiorenzo di Lorenzo, Paul Veronese, Guardi, Tintoretto, Bonifazio, Correggio, Giorgione, and Giotto, besides the many lesser names of the Italian Renaissance, it takes immediate rank with the great Old World museums in this important specialty." The building is after the style of Italian palaces with a large court covered in by glass and beautified with plants and indoor shrubbery. For the present the museum is open on the first and third Mondays and Tuesdays of each month, and admission is by ticket.

Daniel C. French has completed his plaster model of the figure of "Alma Mater" which is to be placed in the center of the fine sweep of stone steps leading up to the library of Columbia College, New York. The figure of colossal size, is represented sitting in a chair of classic form, her elbows resting on the chair arms, and both hands raised. On her head is a classic wreath, and on her lap lies an open book. Drapery falls from her neck to her sandalled feet, only the arms and upper neck being left bare.

Rev. Dr. Kohler, senior rabbi of the Temple Bethel-El of New York City, has received a unanimous call to the presidency of the Hebrew Union College in Cincinnati, the first seminary in America for the education of Jewish ministers, and the chief seat of the progressive or "reform" Jews. **Dr. Kohler has been a pastor of the Temple Beth-El for twenty-four years.**

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Some Distinctions.

CHRISTIAN SCIENCE shows that the mortal mind, or the general human consciousness, can undo certain effects of its own, but such a process would not be considered a case of complete cure in Christian Science, because until the false mental concept which produced the discord is removed by Science, the discord is liable to return, and, in fact, is likely to do so until altogether removed by a spiritual understanding of Good as omnipotent over all evil of every sort.

If psychology is concerned with the human mind only, no mere knowledge of psychology can perform the work done by Christian Science, which Mrs. Eddy has very properly defined "as the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony" (Rudimental Divine Science, p. 1).

From the standpoint of Christian Science, to heal the sick does not consist in changing their beliefs by mental suggestion, but to expose and destroy these beliefs as incompatible with the actual facts of the Science of Being, "We should understand that the cause of disease rests in the mortal human mind, and its cure with the immortal divine Mind" (Science and Health, p. 174).

No "miracle," of course, is performed by the Christian Science treatment, although to human sense the results obtained are extraordinary. The law of Good governs the universe, and evil in its multiplied forms is the abnormal, unnatural, and unreal of human experience.

It has been said that Christian Science "is but a step towards pantheism." It is true that God is All-in-all, but the pantheist imagines God to be in matter, whereas Christian Science teaches that matter is a false human and perishable sense of things. Christian Science shows the universe, including man, to be spiritual and not material. As a matter of fact, no physicist or psychologist has yet been able to define matter satisfactorily except in terms of mind.

W. D. MCCRACKAN.

In *Elmira* (N. Y.) *Telegram.*

### The Right Point of View.

Mr. Editor.

A recent issue of your paper contains an editorial in which you set forth your conceptions of Christian Science, and quote at some length from Science and Health, the text-book of Christian Science, by Mary Baker G. Eddy.

It must be remembered that Science and Health is written from a standpoint of the spiritual and ideal man, and also that the Bible, in its clearer teachings relative to man and especially in the first chapter of Genesis wherein is given an account of the creation of the perfect and ideal man, is written from the same standpoint. Into this idealism, the material element does not enter. Man created "in the image and likeness of God" is necessarily spiritual and perfect, and it is this man, or this conception of mankind, that Science and Health recognizes as spiritually perfect and exempt from the conditions of materialism which seem to govern the human or mortal sense of things.

It will readily be seen that we approach the subject from a standpoint entirely different from yours. Christian Scientists concede that on a basis of materialism it is impossible to understand spiritual truths, and that should man and the universe be considered from the viewpoint of matter exclusively, they are subject to all that matter includes.

The first point which you raise in the argument is the question of immortality. You ask, "Did it ever strike our Scientist friends that the death spoken of in this and various other parts of the Scriptures means spiritual and not physical death? Christ said that all who believed in him should have everlasting life. Does any one suppose he meant that such people would not pass through a physical death?"

The Christian Scientist does not understand what you mean by "spiritual death." The teaching of Christian Science is to the effect that God is Spirit, and that man, created in the image and likeness of God, is spiritual. That this true spiritual man, being the image and likeness of God, Spirit, Life, necessarily partakes of that Life in its fulness and completeness. In Proverbs we read, "In the way of righteousness is life; and in the pathway thereof there is no death;" and in John: "He that heareth my word, and believeth on Him that sent me, hath everlasting life, and shall not come into condemnation; but is passed from death unto life;" and again, "And whosoever liveth and believeth in me shall never die." Paul said, "For to be carnally minded is death; but to be spiritually minded is life and peace." Christian Scientists know that from the ordinary mortal standpoint sickness, sin, and death are very much of a reality, and Science and Health, the text-book of Christian Science, also recognizes this fact and indicates the method by which they can be overcome, which is the method established by Jesus and practised by him and his disciples.

Christian Scientists recognize that mentality, properly governed, is governed by God, divine Mind, and that in this government by divine Mind there is no room for either sin, disease, or death. Every Christian denomination holds out the hope of something better than this present mortal existence; the hope that at some time, in some place, the condition of perfection may be attained. This has been termed the "Kingdom of God." Jesus said, "Neither shall they say, Lo here! or lo there! for behold the Kingdom of God is within you," and Christian Scientists are endeavoring to make this "Kingdom of God" a present fact. In their attitude towards sin, disease, and death, Christian Scientists do not repudiate any teachings of the Scriptures, or any truth which is, or has been existent in the world. They recognize that Jesus was "in all points tempted like as we are, yet without sin," and as Jesus is conceded to be the example for all humanity to follow, he must be a practical example, and one whom it is possible to follow. We find that Jesus did overcome sin, disease, and finally death, and he being the Way-shower for all Christians throughout all time, it is entirely consistent to believe that

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

those who follow sincerely and in truth will to some extent be enabled to participate in his demonstration of Truth.

There is nothing in the teachings of Christian Science that will exclude one of its followers from ministering to the sick in the method most beneficial. They are not devoid of sympathy and love for their fellow-men, and their whole effort is to cheer, comfort, and regenerate in every practical Christian way. True sympathy for the sufferer is best expressed through the destruction of the suffering; it is not kindness to the sufferer to perpetuate or emphasize his belief in suffering, through our limited sense of human sympathy. Jesus' sympathy took a more practical form; he recognized man's spiritual perfection, and brought it out through the healing. The love for man which frees him from sickness and sin, is the highest, truest expression of Love and the only expression of Love consistent with the teachings of Christian Science.

You state, "All the doctor can do, all the Christian Scientist can do, is to aid nature in effecting a cure. In a large percentage of cases nature will effect a cure without any aid."

The term "nature" is perhaps not understood in its fullest, most complete expression. The good represented in nature which brings about the healing and saving work is that of God; where you state, "Nature will effect a cure without any aid," the Christian Scientist would state, "God will effect a cure without aid."

The difference between these statements is simply the difference between your conception of the good in nature and the Christian Scientist's understanding of the Infinite All-Good,—God. Thus you will see that there is really not so much difference between your sense and that of the Christian Scientists.

You state, "There are, perhaps, a million Christian Scientists in the United States. Does Mr. Rendall assert that they are longer lived and less liable to disease than other people? Is the death-rate less among these people than among other people?"

In answer to these questions, I will say, Yes, most emphatically. The very fact that Christian Scientists are living in a right condition of thought, that they are cheerful, hopeful, prayerful Christians, looking always upon the bright side of life, and recognizing good on every side, is in itself a good and sufficient reason why, even from the standpoint of *materia medica,* Christian Scientists are longer lived and less liable to diseases than people of other denominations. This is conceded by all who have made a study of mental conditions; and when, in addition to a clear and cheerful mentality, we add recognition of God as the divine Mind and Principle governing and controlling every effect, and seek to trust Him implicitly at all times, you may see another reason for the fact that the Christian Scientists are healthier and happier than most people. A very large per cent of the Christian Science denomination are people whom physicians had given up to die; and that they are alive to-day speaks volumes for the efficacy and health-giving influences of the religious belief which they have adopted.

You are earnestly invited to investigate these facts for yourself, and you will find that there is much in Christian Science that you can heartily commend when you understand more of its teachings. JOHN L. RENDALL.

In *Creston* (Ia.) *American.*

---

Jesus does not drive his followers on before, as a herd of unwilling disciples, but himself goes before, leading them into paths that he has trod and dangers he has met and sacrifices he himself has borne, calling them after him and to be only followers.—BUSHNELL.

## In Answer to Criticism.

Mr. Editor.

In a recent issue you reported a sermon by the Rev. Orville Reed. I am sure the gentleman will not be offended if we assure him that he has altogether misapprehended the spiritual import of Christian Science. He has only considered it from a material point of view. Instead of "comparing spiritual things with spiritual," he has compared the spiritual teaching of this Science with his material views, and for this reason takes exceptions to it. He refers to Berkeley as "their philosophical founder." While good Bishop Berkeley correctly stated human phenomena, he did not even attempt the teaching of Christian Science, that God is infinite Spirit, Mind, Love, and the universe is the expression or reflection of the deific Mind. Berkeley did not even give us a hint regarding divine cause and effect. His ideas were good, and were in their sphere a very correct explanation of one's material impressions.

Our friend declares, "I am not unmindful of its good points." We would respectfully call his attention to the fact that every idea contained in the Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, is a consistent deduction from its fundamental teaching, "God is Good, God is Mind," and therefore every statement contained in the text-book is consistent with every other statement therein. So if we admit that any part of it is good, we must admit that it is all good. If it is correct and good to say that God is infinite Spirit, then every statement contained in the Christian Science text-book is correct and cannot be disproved. Why should not "men go to extremes" in their adoption of spiritual truths, since the Scriptures teach that God is All-in-all? If we ascribe aught to Deity we must give Him all power, all life, substance, and intelligence, and must recognize the universe as the product of the deific Mind, the likeness of God.

There are two species of pantheism. One assumes that the material universe, taken as a whole, constitutes God. The other, the so-called idealistic pantheism, pretends to resolve substance or creation into spirit and still insists that its sum-total constitutes God. This is nothing more than a shift from tweedle-dee to tweedle-dum.

Christian Science is entirely independent of either theory, since it teaches that God's creation is His likeness or manifestation. The extreme material belief of the age is that man and the universe are material, are separate and apart from God and independent of Him, ruled and governed by certain laws within themselves. Another extreme belief, and one which not only serves as a basis of Oriental philosophy but of many modern so-called sciences, assumes that God is Spirit and mankind partakes of the substance of Spirit and is virtually God; that eventually man will become absorbed into Deity and lose his individuality. This theory is revolting to Christian Scientists, whose teaching may be called the happy medium between the two extremes. It presents the satisfactory explanation of cause and effect, that God is Spirit, Life, Truth, Love, and creation is His expression or reflection,—not a part of God, but manifesting every characteristic of Him, hence Godlike in every sense. The abstract statement, "there is no matter," needs the fuller explanations given in the Christian Science text-book. The difficulty with critics lies in this that they do not consider what Christian Science gives in exchange for what it repudiates. To say that everything we see is nothing, is not the teaching of this Science, for all things are real, from the smallest to the greatest in creation, though they are not what they seem to the erroneous concept of the human mind. It is the misconception of creation which is denied by this Science, not the creation itself.

Mrs. Eddy teaches, "God is individual and Personal, in

Digitized by Google

a scientific sense, but not in any anthropomorphic sense; therefore man, reflecting God, cannot lose his individuality" (Science and Health, p. 336). The divine Mind could not exist without thought any more than thought could exist without Mind. Hence Mrs. Eddy's statement that God without the image and likeness of Himself in man would be a nonentity, is rational and scientific. God alone is the Creator, the Life, the Substance, the Intelligence. In Christian Science all power, all substance, all intelligence is ascribed to God.

Evidently our critic is in a maze of misconceptions regarding the teaching of this Science in respect to death. Jesus denied the common human understanding of death when he said, "The damsel is not dead, but sleepeth," virtually declaring that death was a dormant mental condition from which the victim could be aroused through the power of God, and he proved his assertion by resuscitating the damsel.

It is not claimed that Christian Science is in accord with the more materialistic philosophies or so-called science; but it is scientific from a Scriptural standpoint and is in strict accord with the teaching of Jesus. Moreover, it is but justice to the scientific world to say that most modern physicists have declared ideas very nearly in accord with the teaching of Christian Science, that all causation is mental. The noted Professor Oswald declares matter to be "a mode of thought." While our friend is declaring Christian Science to be unscientific and out of harmony with what is ordinarily regarded to be science, he should hold the great men of the ages to account for the fact that their teaching is a very close approximation to Christian Science.

Our critic is in error in his supposition that Christian Scientists believe in what is called thought transference or telepathy. The adherents of this faith do not believe in any ability to read the thoughts of others except that which is in accord with the teaching and practice of Jesus. This Science teaches that God, the one infinite Mind, governs and controls the entire universe, and that when mortals deport themselves accordingly, the possibility of any thought transference from one mortal to another is destroyed. It is because of this that Christian Science furnishes a much needed defence against the intrusion of evil thought.

Our critic asks, "If there is no power in whiskey and poison itself, why not bring up an infant on these as well as upon milk?" Here again he fails to perceive the true logic of Christian Science. St. John advised the use of the world as not abusing it. It cannot be said that whiskey and poison have no power over the individual so long as he wilfully gives it power by using it. In order to give as little power as possible to material things, we use the more simple and spurn the drug to which mortal mind gives the greatest potency. Upon this basis a Christian Scientist might advocate simple diet in contradistinction to some of the gluttonous habits of the age, not because he believes in dietetics from a medical standpoint, but from a spiritual standpoint. While our critic is discussing the question of the probability of death on the part of Christian Scientists, he might explain the meaning of Jesus' words, "If a man keep my saying, he shall never see death." He who is generally acknowledged by Christendom to be the greatest teacher the world has ever known, claimed that the strict observance of his teaching would lift mortals to that state or condition wherein there could be no death, and the prophecy of John was to this end.

While Christian Scientists recognize the fallibility of their present degree of understanding and their inability to demonstrate at this time all that Christian Science promises, they believe the words of the Master, and that though centuries may pass meanwhile, the prophecy "and there shall be no more death," will eventually be fulfilled. While they believe that in their present condition it is necessary to eat, live in houses, and wear clothes, they do not believe that spiritual individuals who inhabit the realm of God's kingdom eat to live. ALFRED FARLOW.

In *Montclair* (N. J.) *Herald.*

## Burdens.

"CAST thy burden upon the Lord, and he shall sustain thee." Who is doing this? The world is crowded with weary ones, whose burdens seem more than they can bear. These are not ignorant of God's goodness and love, yet they have convinced themselves that they have to bear these burdens, and that in some way they are doing God service by patiently bending to their weight. Jesus said, "Take my yoke upon you, and learn of me; for I am meek and lowly in heart: and ye shall find rest unto your souls. For my yoke is easy, and my burden is light." Who is getting rid of his burdens in this way? I suppose many who are believing that they are Christians are still groaning under some heavy burden, quite forgetting the help that is held out to them in Scripture. What we need is to make practical these promises, and to gain an understanding of how to avail ourselves of them.

Christian Science has revealed the way in which all who will, may lay aside the weight which has caused them so much pain and sorrow, and thus may be like the man represented in Science and Health, p. 442, "Then the prisoner rose up regenerated, strong, free. . . . All sallowness and debility had disappeared. His form was erect and commanding, his countenance beaming with health and happiness. Divine Love had cast out fear. Mortal Man, no longer sick and in prison, walked forth, his 'feet beautiful upon the mountains,' as of one who bringeth glad tidings."

Burden-bearing becomes such a habit that it sometimes takes longer to be rid of it than we think. Often we forget that "There is no burden in Christ," we are careless about cleansing consciousness of the old shadows which error casts, because we are so used to this walking in darkness that we do not realize our freedom as we should. Divine Love casts out our fear as soon as we turn toward it and let the light of Truth illumine all the darkened places, and prove to us that there is nothing real there to cast a shadow. "Now are ye light in the Lord."

All the burdens and all the shadows disappear when our faces are turned resolutely toward the light. Everything that deceiveth and "maketh a lie," is seen to be a falsity, and we no longer feel its evil presence. S. F. S.

In *Hoopeston* (Ill.) *Herald.*

It is no man's business whether he has genius or not; work he must, whatever he is, but quietly and steadily, and the natural results of such work will always be the things that God meant him to do and will be his best.

JOHN RUSKIN.

Departure from tradition at first seems irreligious; but by-and-by, we learn that religion is not dark and narrow. We have only taken down the old fences to enlarge the field. Religion is not dying out of the world to-day; it is simply widening its sphere. It is growing larger and sunnier and brighter. The trouble used to be that it only struck a few chords in human nature; now the whole vast organ is beginning to thrill and sound and sing. The religion of to-day is gathering to itself and appropriating every element of beauty and strength and truth, that may be found in the realms of literature, science, music, art, sociology and criticism!—*Exchange.*

## The American Hemp Industry.

THE recent expansion of the hemp industry in the United States entitles it to consideration as one of the most interesting of the nation's newer fields of activity. The hemp plant grows to a height of from five to fifteen feet, and when cultivated for fiber produces only a few small branches near the top of the slender stalk. The leaves are of a rich, dark-green color, and the fiber consists of numerous series of long cells in the inner bark, firmly knit together, which, when cleaned from the surrounding tissues, form tough strands nearly as long as the entire plant. This is a bast fiber, and is classed commercially among the soft fibers, with flax, ramie, and jute.

Hemp fiber is long, soft, very strong, and capable of almost as fine subdivision as flax. It is especially adapted for use where strength is required. It is used in the manufacture of fine twines, carpet thread, carpet yarns, sailcloth, and for homespun and similar grades of woven goods. Nearly all of the best grades of long fiber—"dressed line"—is utilized for making twines and yacht cordage, while the cheaper grades are converted into binder twine. The tow is used for threads and for yarns to be woven into carpets, homespuns, and linen goods, while the refuse fiber combed from the tow is used as oakum for calking ships. As indicating the possibilities of development for the domestic hemp industry, it may be noted that of the 18,000,000 pounds of hemp consumed annually in this country, only about 8,500,000 pounds are raised in the United States.

The great center of American hemp production is Kentucky, where, in nine counties of the Blue Grass region, three fourths of the American hemp fiber is produced. About two hundred acres are devoted to hemp cultivation in Nebraska, and during the last half dozen years the industry has developed in several different sections of California. A foothold has also been gained on a small scale in Texas and Illinois.

It is sometimes the practice in Kentucky to have hemp follow hemp on the same land for two or three years, but as a rule it is preferred to cultivate a series of crops in rotation. One of the chief aims of the hemp grower is to secure an even stand of plants, uniform in size, for it is well-nigh impossible to make good fiber from a mixture of stalks of various sizes.

Naturally the harvesting of the hemp is an important operation. The hemp is cut when the staminate plants are in flower, and the time of harvest therefore varies from eighty to one hundred and forty days from the date of seeding, the period of growth being dependent on the mean temperature and the supply of moisture. In Kentucky, the harvesting usually occurs in August or September, and in California and Texas in July. On the Pacific Coast, the hemp is cut with self-rake reapers or mowing machines. In Nebraska the self-rake reapers have almost entirely displaced the mowing machines. In Kentucky reapers have been introduced of late years, but the major portion of the crop is still cut by hand by means of the primitive reaping knife or hemp cutter, which has some of the characteristics of both the corn cutter and bush scythe.

An experienced workman with a reaping knife will cut the hemp from a tract of about half an acre in a day. With a sweep-rake reaper, under the most favorable conditions, from five to seven acres may be cut in a day, and with a mowing machine the daily cut ranges from seven to ten acres. After the hemp is cut it is allowed to lie on the ground from four to eight days to dry, and the unbound bundles are usually turned so as to dry both sides. When thoroughly dry the hemp is bound in small bundles with cheap twine or small hemp stalks, and stacked or set up in shocks. If the stacks are properly built the hemp will remain in this position, uninjured, for a period of two or three years, and furthermore, the quality of the fiber is improved and the breaking and cleaning rendered easier by a process of sweating or fermentation which the stalks undergo when in stack.

An essential process of hemp production is the retting or rotting, whereby the vegetable gums surrounding the fiber are dissolved and the fiber at the same time freed somewhat from the woody interior portion of the stalk and also from the thin outer cuticle. These gums are not soluble in water, but are destroyed by a kind of putrefaction which takes place when the stalks are immersed for some time in soft water or are exposed to the weather. Retting by immersing the stalks in water is largely practised in France and Italy, but nearly all the hemp now produced in the United States is dew retted; that is, spread in long rows on the ground during the fall and early winter, and exposed to the weather until the bark, including the fiber, readily slips from the inner woody portion. In Kentucky the hemp must, in many instances, be hauled two or three miles from the harvest field to the retting grounds. Retting in Kentucky is carried on during the month of November.

After the hemp has been retted sufficiently to enable the ready separation of the fiber there comes the breaking, by which the fiber is separated from the stalk and roughly cleaned. This is the final operation which falls to the lot of the hemp grower, as the hemp is, by this means, prepared for market as rough hemp. Nearly all the hemp is broken by hand breaks, but with one of the crude, heavy, wooden breaks an experienced operative can readily clean about two hundred and fifty pounds a day. The work is performed by alternately crushing or breaking the stalks between the long jaws of the break, and beating and whipping them over the break to free the coarse part or hurds from the fiber. It is a slow process, requiring skill as well as strength, but the wage usually paid is only one cent a pound. To break an average crop of fifty acres requires the services of ten skilled hemp breakers for two months, and entails an expense of about $500. This excessive expenditure of time and money has been largely instrumental during late years in forcing the hand break to give way to machinery, of which several types are already in the market.

In Nebraska and California there is in use a machine consisting of a series of coarsely fluted rollers followed by a rapidly revolving spiked cylinder, which breaks hemp and delivers the fiber in the form of tow. In the hemp factories at Lexington, Ky., are machines consisting of long series of corrugated rollers which are occasionally used for softening the fiber. Last season saw the operation in Kentucky, for the first time, of three decorticators, in which the hemp stalk is crushed in passing between rollers, corrugated for unretted hemp and smooth for retted. The hurds are then loosened by a rapidly vibrating mechanism, and the fiber is partly cleaned by a kind of carrier which gives a rapid scraping motion. These machines weigh only about one ton each and require but six horse power for their operation. The average daily output of a machine is two to three thousand pounds of rough hemp.

In some instances hemp is disposed of by the growers direct to the manufacturers, but in most cases the rough hemp fiber is tied in bales weighing about one hundred and fifty pounds each and sold to dealers in the local markets. Under fair average conditions an acre of hemp yields about one thousand pounds of rough fiber or about six thousand pounds of dry retted stalks. At five cents per pound for the fiber it is a very good paying crop, and the minimum limit of profitable production is regarded as about three and one quarter cents per pound.

## The Lectures.

### At Greenback, Ore.

The first public Christian Science lecture at Greenback Mining Camp, Ore. (formerly known as Placer), was given on the evening of January 29 to a large audience in Greenback Hall by Carol Norton, C.S.D., of New York. The practical worth of Christian Science to people in all walks of life was well shown in the attentive audience that welcomed Mr. Norton's helpful lecture. The work already accomplished by Christian Science in these mining lands in elevating the moral tone, increasing Bible study and spiritual thinking, and in physical healing, proves the great utility of this religion and the discerning judgment of our loved Leader, Mrs. Eddy. Mr. Norton was introduced by Mrs. Clara Willson Thompson, First Reader of the local society.

*Correspondence.*

### At Boise, Idaho.

Christensen's Hall was filled last evening [February 5] with a large and appreciative audience which came to hear the principles of Christian Science expounded by Mr. Carol Norton of New York. The lecturer was introduced by W. E. Borah in the following words:—

*Ladies and Gentlemen:*—I know but little concerning the great subject of which we are to hear much to-night; but it is a subject which is now engaging the attention of the best thinkers of the age, pro and con, and we are fortunate in having with us to-night a gentleman of the highest attainments, who has brought to his subject an earnest and cultured mind. Whether we are of those who accept the message in all its fulness, or those who simply wish to be instructed in regard to this fascinating theme, we are to enjoy a splendid treat this evening. I now have the honor, and I assure you the pleasure, of introducing Mr. Carol Norton of New York. I bespeak for him your closest attention.—*The Idaho Statesman.*

### At Oklahoma City, Okla.

An audience which crowded the Opera House to the doors listened on Monday evening, February 2, to a lecture by Judge Septimus J. Hanna, on the principles and tenets of Christian Science.

Judge Hanna was introduced by Attorney Frank Wells.

*The Times-Journal.*

The introduction by Attorney Wells was in part as follows:—

*Ladies and Gentlemen:*—The speaker to-night is from the good old town of Boston,—the home of the Pilgrim Fathers, who were willing to endure every hardship and brave every danger that they might worship God according to the dictates of their own conscience, and compel others to worship Him in the same way. The idea of religious toleration has grown some since then, and we no longer recognize the right of the majority to dictate the worship of the minority. A few years ago a new religion sprang up in this country called Christian Science. It has made wonderful progress. In almost every town and village there are instances of cures claimed by this new order which to us, who are not Christian Scientists, are inexplicable. These matters demand careful thought. It is with great pleasure that I introduce to you Judge S. J. Hanna of Boston, who will lecture to you on the general subject of Christian Science.—*Correspondence.*

### At Niles, Mich.

Monday evening, February 9, Judge Ewing lectured here on Christian Science. The Opera House was filled with interested people, and many came from South Bend, Ind., and Dowagiac, Mich. Judge Ewing was introduced by Professor J. D. Schiller, Superintendent of our Public Schools, as follows:—

*Ladies and Gentlemen:*—From the appearance of this large audience, I am led to believe that we have not met, all of us, as Christian Scientists, but as seekers of truth. The Great Teacher and Healer of the world gave us a standard by which we can measure all doctrines and beliefs: "By their fruits ye shall know them." All doctrines, beliefs, and creeds must be measured by this standard or go down with the judgment of the people. If there is anything in Christian Science that will alleviate the physical and mental suffering of the human race, that will lift us out of the Slough of Despond, out of self, up into a higher and purer atmosphere, into a higher plane, give us a more comprehensive view of life, we want it. We are therefore all seekers for truth, and it affords me great pleasure to introduce to you a gentleman who is so well fitted by nature, training, and profession to speak to us on this important subject. His profession has made him a student of abstruse questions and a thinker. He has become a sincere student of Christian Science, a firm believer, and a humble disciple through actual experience of what it has done for him,—a man so imbued with its benefits that he makes it the one object of his life to enrich and make wider the circle of light from the lamp of life that has been left us for guidance by Divine Providence.

I take pleasure in introducing to you the speaker of the evening, Judge William G. Ewing of Chicago, who will address you on the subject of Christian Science.

*Correspondence.*

---

Liberty is not the right of doing whatever a man pleases that does not encroach on the right of others; it is the right of freely choosing the means by which to attain to the rational and virtuous goal which he has freely prescribed to himself. I would not fetter intellect, nor seek to subject it to arbitrary codes; but, when I deem it necessary, declare, "Your means are not consonant with your end."

JOSEPH MAZZINI.

### The Power of Prayer.

Lord, what a change within us one short hour
Spent in thy presence will prevail to make,
What heavy burdens from our bosom take,
What parched grounds refresh, as with a shower!
We kneel, and all around us seems to lower;
We rise, and all, the distant and the near,
Stands forth in sunny outline, brave and clear;
We kneel how weak, we rise how full of power!

Why, therefore, should we do ourselves this wrong
Or others that we are not always strong,
That we are ever overborne with care,
That we should ever weak or heartless be,
Anxious or troubled, when with us is prayer,
And joy, and strength, and courage are with thee?

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

COMMENCING with this issue, the *Sentinel* will be published on Saturday instead of Thursday as heretofore.

## Important Announcement.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY has long contemplated the publication of an official denominational monthly, to be printed in the German language, and has patiently and hopefully awaited the time at which it could be issued with usefulness to the Cause. The Society is much pleased to announce that the steadily increasing demand for a magazine of this character indicates that the time for its publication is at hand; the first number will, therefore, be issued on April first. The name, *Der Christian Science Herold,* has been selected, and for the present each number will contain about thirty-two pages of reading matter.

It is not intended that the *Herold* shall take the place of the *Sentinel* or *Journal,* nor is it supposed that its subscription list will be confined to those who read German only. The call for Christian Science literature in the German language has come from many English-speaking people whose work has brought them in touch with the large German population of the United States and Canada, as well as from the German people themselves, and we believe that they will welcome and support this important addition to our official publications. We feel sure that our brethren in Germany will find the *Herold* a valuable assistant in their work, and that it will materially help them in making known the saving and regenerating gospel of Christian Science.

It is desirable that a large number of subscriptions should be received for the year commencing April, 1903, and we hope that our friends will be prompt in sending them in. The subscription price for the United States, Canada, and Mexico, is one dollar per year, in advance; for all other countries, one dollar and twenty-five cents. Remittances should be made to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass., U. S. A.

## The Right Attitude.

How many times do we find ourselves questioning and doubting the efficacy of our prayers, at times we are almost confident that we have asked for that which is unattainable; and how frequently do we find ourselves in that state of consciousness which prompts us to say, "I am sick," "I am unable to do what others do," and so on through the entire range of uncertainty and discouragement. We forget that in making these declarations we are working against our own right desires and denying the harmony and sufficiency of God's creation, the permanence and availability of His watchful care.

What would be thought of a traveler who continually declared his inability to proceed, or of a mechanic who persistently decried his ability to do the work assigned him. The one would make but little progress toward his destination, the other would soon find himself without employment or support, yet they would both be quite as consistent as the Christian Scientist who is but half-hearted in his declaration of God's allness, and of the immutability of the Christ-truth which fulfils all prophecy, and brings to humanity salvation and peace.

We need a more confident and constant trust in God, a keener sense of our call to "stand porter at the door of thought" (Science and Health, p. 392), a clearer realization of our ability to do all that we should do, and to say no, when we are tempted to enlist our thought and speech upon the side of error. We must bring to the solution of every problem the confident assurance and assertion of the power and reality of Good, and the consequent nothingness and inevitable destruction of the belief of evil. We must stop making declarations of limitation, and think more persistently of the unlimited manifestation of infinite Mind.

M.

## A Hindrance to Progress.

IT is manifest that intellectual advance is quite impossible for him who estimates the value of information upon the basis of its antiquity. Reverence for authority is always more or less subject to degeneration into antagonism to the unfamiliar and modern, and history furnishes abundant illustration of the mental torpor and inertness inevitably resulting from the persistent maintenance of this attitude.

This has been peculiarly and most lamentably true with respect to religious thought, and it explains the meager showing which religious progress presents when compared with the astonishing advance of physical science and civilization in general.

In speaking of this a recent writer has said,—

"If I were to look for that which has been the chief obstacle to the progress of a Christian Church, I should say subjection to the obsolete, surrender to the tyranny of the past, so that the Church has become incapable of meeting present needs, of dealing with present phases of thought, and of winning the sympathy and the cohesion of the advancing intelligence of men."

It is clear that while many of the thoughts of our fathers are of the greatest significance, their value does not inhere in their age, but in their established truth. If the revealed word had not been marred, ofttimes distorted, by the human channel through which it came, then it would abide forever, as it was spoken by saint or sage, but the human element is sure to reveal its presence and when discovered it must be discarded; otherwise there can be no gain through experience. Our fealty is to be maintained, not to the statements of a creed or the shibboleth of a sect, but to demonstrable truth, and the more ready we are to hold all else with but a tentative grasp, keeping ourselves alert and open-minded to new revelations of truth, the more sure and steady our advance. Practically to deny the possibility of further revelation, the coming to human consciousness of new and nobler apprehensions of Truth, is to court stagnation and insure decay, for lethargic satisfaction is the grave of improvement.

W.

## My own Demonstration.

IN Truth-seeking, we never blunder upon success. It would be absurd in the endeavor to solve a problem in mathematics to begin to "cipher" without a definite idea of the purpose of our calculation.

We are no more sure of the satisfactory solution of our life problem if we work in an objectless manner. To-day, swayed by the impulses of benevolence, we may bring material supply to our neighbor's need; to-morrow, impelled by pity, we may drop a tear or speak a word of consolation to the sorrowing and thus effect a certain good, but we are not, in this indefinite way, working to a

Digitized by Google

definite end in the achievement of our own demonstration, and we shall not blunder upon success.

It is highly important that we apprehend, first of all, the nature and object of life's lesson. It is a translation, and by steady purpose and prayerful application we shall ultimately be able to read the lesson, not in the language of materiality, but in the word of God. There are passages which are certainly difficult to recast. Mortal mind has so long reiterated them that they seem true, and if not alert, we shall accept them as truth and so permit them to remain and mar the harmony of our translation. These inaccuracies present themselves in the discordant influences of heredity, of temperament, of hygiene, of climate, of lack, in short in all the suggestions that would limit man's dominion, that absolute dominion which was pronounced in the language of Spirit.

In this supreme lesson, the translation of consciousness from false to true, we may turn as confident students to our text-book to read (p. 295), "Mortal mind transforms the spiritual into the material, and must give back the original, if it would escape from the mortality which follows its error."

In our demonstration of right expression, we pass through a stratum of improved beliefs, which may seem to the casual observer to contradict the conditions of Science. To illustrate, we have the assurance that, "He giveth His beloved sleep," sweet sleep that liberates the wearied human mind from care and rests the material body. But when we read, "He that keepeth Israel shall neither slumber nor sleep," we are assured of the tireless activity of the Divine image and likeness. Again, an active and retentive memory is a harmonious belief, but the omniscience of God is reflected by the *constant* all-knowing of man as the revelation of Mind, not by memory, for memory suggests a knowing that is characterized by lapse and recall.

Now in this state of awakening consciousness, our present human plane, on which Jesus said: "Suffer it to be so now," we need to be sensible and patient with ourselves. We must learn from the Master not to destroy, but to fulfil the orderly and legitimate demands of human relation, and gradually make our translation from the unreal to the real, from the mortal to the immortal, from the material to the spiritual. Such indeed is each man's demonstration, and to make it well, requires concentration, consecration, and a foreseeing and persistent holding to the one grand possible result, the realization of the perfect man.

S.

## An Age of Tolerance.

THE defeat of the anti-Christian Science healing bill in the legislature of New Hampshire by a vote of 194 to 70 reveals the fact that American traditions are still strong in New England, and that religious and professional intolerance cannot find in the Granite State a lodgment in the statute book.

It was the emphatic adverse report of the judiciary committee, the committee which sits as a tribunal for the adjustment of bills to the principles of constitutional right, that settled the fate of this appeal to sectarian intolerance and professional prejudice. Often the judiciary committee of a legislative body is attacked as a graveyard for progressive legislation; but, as in this case, it may also serve as the bulwark of fundamental principles.

Mistakes undoubtedly have been made under the name of Christian Science mind- or faith-cures. Among the thousands who have obtained relief, there is the occasional one who succumbs to disease when possibly another method might have resulted favorably. What then? Have no graves been filled by the established medical profession? Is there an orthodox medical school which by law can make no mistake? Shall there be no cures permitted, except by the use of drugs or the knife?

A few centuries ago there were orthodox theological schools which had the only correct methods of securing salvation. Law and war and the Inquisition were called into being to enforce the theories of these conflicting theologies. Each nation of Europe had an established theology which was the right one from its point of view, and all opposing religions were put under the ban of law.

It was to escape the intolerance of the old world, that population flocked to the new. Certainly, the United States in 1903 cannot be brought to the acceptance of a mediæval doctrine which was rejected in 1776. Because Christian Science rests on a different principle, and practises different methods from those of established churches and medical schools, it cannot, under the American constitution, be placed under the ban of law.

Every age has its discoveries in religion and medicine as in science and industry. Because an institution has age, it has no greater rights under American law than an institution that is young. This country has no tribunal to determine what is the orthodox church and medical school, and until such time comes the law cannot be made the instrument of intolerance and prejudice.

### Obedience.

GILBERT D. ROBERTSON.

ALL through the Bible, both in the Old and New Testaments, the obedient are commended and promised every good thing, while the disobedient are always spoken of in most condemnatory terms, and threatened with the severest penalties, even that of death. Solomon was one of the greatest characters in the Bible, one of the wisest, and certainly one of the most successful, and in the book of Proverbs attributed to him much stress is laid on the virtue of obedience, in fact it is made very plain that the wise man is obedient, and only the fool disobedient. It would be difficult to put the matter more forcibly than this, for all want to be wise, and there is nothing in the world more useless than a fool. Even life itself is made conditional on obedience, or at least promised as a reward for it, as in "keep my commandments and live;" and that man is characterized as foolish who "fretteth against the Lord," that is, sets his own sense of human will and desires against the divine will, while on the other hand, he who listens to "instruction" is highly commended.

In Isaiah we read, "If ye be willing and obedient, ye shall eat the good of the land," and in Jeremiah, God is represented as saying to the children of Israel, "Obey my voice, and I will be your God, and ye shall be my people," but they did not obey, and so we are told in the next verse that they "went backward, and not forward." Paul classes the disobedient with blasphemers, and "lovers of their own selves," certainly a very appropriate definition, and also with "haters of God." Naaman hesitated to obey when told to wash in the Jordan, because it seemed such a little thing to do; but human life is largely made up of little things, and if we neglect these, then we shall not be ready for the larger ones as they come. When Naaman did obey, he was rewarded by complete healing, and it is perfectly safe to assume that the lesson brought to him vastly more than the mere physical cleansing.

We may, however, find our strongest lesson on obedience in the first book of the Bible. In the story of Adam and Eve, disobedience to a very simple and reasonable command of God was the starting-point for all the ills that flesh is heir to. Our so-called first parents literally had the earth. Everything was at their disposal except the

Digitized by Google

fruit of one tree, and yet they were not satisfied, but must have this one thing as well.

There is no doubt that this same disposition, the desire to have that which does not belong to one, which one has not earned, possibly has made no attempt to earn in any legitimate way, or which does belong to some one else, is at the foundation of most of the troubles of mankind. Many a man will spend his time and energies in seeking something he does not, perhaps, really need, rather than in making the best of that which he already has. How often we find that the possession of a thing destroys our desire for it, and that we do not enjoy, when it is once ours, something we have worked years to attain.

God says, "Thou shalt not covet," but from the beginning of mortal history the refusal or neglect to obey this simple command has expressed one of the strongest traits in human character, and one of the most prolific in discord.

It would seem to be comparatively easy to be content to let another enjoy undisturbed the fruits of his own industry. There is enough for all, and that one man has made a success in business, or in his chosen profession, has not lessened by one iota the amount of success there is in the world, or made it one whit less available. On the contrary, he has proved practically that success may be attained by any man who will use the same methods he has employed; viz., an industrious, intelligent application to his own particular line of work. In so doing he has helped rather than hindered his fellow-man, and his example should serve as an incentive to persevere, rather than as an excuse for envy and jealousy, as is so often the case. All down through the ages, history proves that covetousness, or a desire to get hold of something, to increase one's hoard of gold or power, a never-satisfied desire to cater to self in one form or another, has been the inciting cause of the most disastrous wars, and has led both nations and individuals to commit crimes innumerable.

In the First Epistle to Timothy we are told that the law is not made for the righteous, but as society is constituted to-day it is necessary to have laws, and it is also necessary to have vast armies of those whose duty it is to see that these laws are enforced. A very large part of the enormous taxes imposed by state and municipal governments goes to the support of the law, the enforcing or protective branches of those governments, and yet universal obedience to a very simple command of the greatest, and at the same time meekest, man who ever lived, would make entirely unnecessary this burden which mortals are staggering under, and which is getting heavier and more crushing every year. Do "as ye would that men should do to you," sounds very easy, and it is difficult to see why it might not *be* as easy as it sounds to any even ordinarily honest and thinking man. With anything like a clear realization of its scope and meaning, obedience to Jesus' rule of conduct would not be difficult, and its observance would lift most of the burdens which are lying so heavily on the shoulders of mankind to-day. Christians of all denominations profess to follow the teachings of Christ, and this rule was one of two which he said constituted all the law, for love your neighbor as yourself is simply another way of saying precisely the same thing. The first rule was to "love God with all thy heart." Is it possible to love God with *all* the heart if we are doing to another something we would consider evil if done to us; or, to put it still more strongly, would it be possible for us to do, or even want to do thus if we really were loving God, Good, with all our hearts and minds?

When one begins to look deeply into this question, the benefits to mankind which would result from universal obedience to these commands of Jesus are seen to be unlimited. Sickness, or physical suffering in its various phases, is probably the most comprehensive manifestation of the woes of humanity, and yet a strict observance of the rule above mentioned would result in eliminating a very large proportion of even the diseases of mortals. Any one whose endeavor it is to alleviate the sufferings of humanity, from whatsoever standpoint he may be working, will appreciate this statement, for he soon finds that a very large part of the diseases of to-day are directly traceable to the failure of some one to observe the law as Jesus defined it.

The pride of human will would make one think that obedience is weakness, and that self-assertion and resistance to any form of authority indicate strength of character. This disinclination to submit to authority extends even to a resistance to the government of God, to the will of God, though it is absolutely certain that there is nothing which would confer such power on man as unswerving reliance on God, and an implicit yielding to His will. When worshiping God aright, and obeying His commands as revealed to them by those whom He appointed to speak for Him, the Hebrew people were able to overcome armies of their enemies which were numerically and physically vastly superior to their own forces; and Jesus, who from the beginning to the end of his earthly career had but one purpose in life, and that to obey in every particular the will of his Father, was able to perform, and that evidently without effort, tasks such as no amount of physical force or human intelligence ever have been, or ever will be, able to accomplish.

Thus we see that obedience is the very corner-stone of Christianity, and that the present chaotic condition of human affairs will never be overcome until this fact shall have been universally recognized, and all mankind shall understand, and yield loving obedience to, the one divine Mind.

The great difficulty in the past has been, that the existence of God as Mind has not been recognized. Until our Leader, Mrs. Eddy, through her unselfish and persistent labors in behalf of humanity, brought out the fact that Mind is One, and that One is Spirit,—God,—until that time the human mind was believed to be as real and virtually as necessary a part of Being as the divine, but there at the outset was the basic error of minds many, making unity an impossibility.

The teachings of Christian Science, through its text-book, Science and Health, and the other writings of its Founder, illuminating and making practical the life-work of Jesus and of the prophets of the Old Testament, have shown how this unity not only can, but must be attained, and so have made it possible for all who will, to manifest, in some measure, the mind which was in Christ, and thereby bring out that perfect obedience to the law of Truth which shall make men free; for to obey Good for Good's sake alone is the only true obedience.

---

I remember when sailing one day in a steamer, the captain's son, a bright little fellow of five or six years of age, was on board, and wanted to take the place of the man at the helm. The good-natured steersman, to humor him, put the spoke of the wheel into his little hand, which was hardly able to grasp it. But he was careful at the same time to put his own big hand on the child's tiny fingers, and took a firm hold, and moved the wheel in the right direction, and the boy was in high glee, imagining that he himself was steering the huge steamer. Now, so God deals with you. He puts His almighty hand on your feeble hand when you are ruling your own spirit, and makes His strength perfect in your weakness.—MacMillan.

## Readiness—Opportunity—Reflection.

JULIETTE M. MINK.

THESE words come to me in connection with the healing of the man born blind. Jesus was always ready, he lived in the realization of Being. Spirit was all; so, as he merely passed by, he saw his opportunity; a two-fold one, denying the power of evil and affirming the omnipotence of Good; showing that one in human form could manifest that Good; and that what was impossible to man, was possible to God; that one born blind, could by the operation of divine Love be freed from darkness.

This deep shadow and gloom was pierced and destroyed by the full reflection of Truth—a reflection pure, clear, direct, and effectual. The same light is here to-day,—the Christ-light; but the light cannot be shed unless we reflect the nature of Truth, and to reflect that nature means a close following of him who most clearly demonstrated its power. The demonstration demands self-abnegation, a consecration of self, not "once for all," but daily, the honest prayer "not my will, but Thine, be done."

When this has become our attitude we shall be ready and find our opportunities, not make them; and reflect the all-Good, in a clear and steady shining, because our lamps are filled, trimmed, and burning.

## The Dragon.

MRS. MAY KENWORTHY.

SOME years ago, in Salt Lake City, there was held a Pioneer's Carnival. One of the principal features of this carnival was the elaborate street parade.

The daily papers announced that on a certain day a great Chinese Dragon would be the attraction of the parade. Thousands were gathered along the line of march, waiting to see this unique thing. Our attention was attracted by the clashing and clanging of the cymbals, and other inharmonious sounds,—a fitting prelude,—and cries of "The Dragon."

Sure enough, there came the huge, glittering, writhing monster, hideous in every movement. It was dexterously carried by many Chinamen hidden almost entirely from view.

Why did the people press forward to get nearer so fearful looking an object? They had no fear of it; they knew it was perfectly harmless; knew that had the men stepped from under it and no longer supported it, it would have collapsed, a motionless heap.

Now we know in Christian Science that the "Great Red Dragon" is the type of the sum-total of evil of these latter days, and that God is all, and God is Love. In the proportion that we apprehend this glorious truth, our fear becomes less, and with the understanding of Love, we uncover, dissect, and destroy—reduce to nothingness—each claim of evil, be it sin, sickness, or fear of death.

Material personality or mortal man is the only support the dragon, or evil, ever had or ever will have, and this counterfeit man is not God's man, and when we can separate personality from any and all of evil's claims, the work of destroying the error is more readily accomplished; then, and not until then, can we be true followers of the Christ and be obedient to our Master, Jesus Christ, who bade his followers heal the sick, cleanse the lepers, raise the dead, and thus preach the Gospel.

Words utterly fail me when I attempt to express my gratitude for what our Leader has done for me. The darkness was dense before I caught "Christ's keynote of harmony, 'Be not afraid!'" (Science and Health, p. 410); but now I am realizing more and more "In Thy light shall we see Light."

## "Weed your own Garden."

THEODORE R. HINSDALE.

How many of us when we stand in our garden, choked with the weeds of error, instead of going to work to clear out the ground so that the flowers of purity, health, happiness, generosity, peace, and love, may bud and blossom in our consciousness, look over the fence into John Smith's garden, and say, "Oh, John, why in the world don't you weed your garden? it's full of everything that doesn't belong there. Surely your flowers never will amount to anything. Just look at that big weed, and that one."

Friends, what does the Bible say? "Judge not, that ye be not judged," and really are we minding our own business? If we all, each and every one of us, would pull up weeds in our own garden, roots and all, and continue the process until every false thought is eradicated from our consciousness, then we would find that John Smith will presently look over the fence and say, "How nice your garden looks; when you have finished won't you come over and help me weed mine?" Surely this is letting our light shine.

We read in the Gospel of John, "And I, if I be lifted up from the earth, will draw all men unto me," not with the influence of mesmerism or personality, but by the reflected love of God. When our garden is cleaned, we must guard it vigilantly. Science and Health says, page 392, "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results." We must not entertain any but the right thought; right thought brings right action, right living. We may test our position by analyzing our thought and we may always be sure that if we are not thinking good, we are certainly thinking evil, there is no half way position. "Miscellaneous Writings," on page 338, quotes,—

> Think truly, and thy thoughts
> Shall the world's famine feed;
> Speak truly, and each word of thine
> Shall be a fruitful seed;
> Live truly, and thy life shall be
> A great and noble creed.

I AM grateful for Christian Science, which teaches us how to work out a full salvation. When not working for others, we have plenty to do for ourselves, putting away every error, thought, word, and deed, that, when mirrored on the body, bring sickness and death, and putting on the divine consciousness, pure thoughts of Life, Truth, and Love, that redeem the body, and reveal immortality. As we have to see every claim of error, in the members of our body, as unreal, so have we to see our brother as a perfect member of the body of Christ (the true Church). To redeem our own body we need to see perfection in others.

"We know that we have passed from death unto life because we love the brethren. He that loveth not his brother abideth in death."—MRS. GERTRUDE E. MERIAM.

Churches are properly extensions of the homes of the people. As there is no reason why one home should dominate other homes, excepting through its superior influence, so one church should seek to dominate other churches only by its superiority in the statement of truth and the doing of good. The church which has the most wholesome atmosphere will ttract as surely as a salubrious climate and a fertile soil.—*The Christian Register.*

A childlike trust of heart, that can take a hand, and, wondering, walk in paths unknown and strange, is the prime requisite of all religion.—JAMES MARTINEAU.

## Among the Churches.

### A Word from Charleston, W. Va.

It seems appropriate that the first Christian Science Church to be organized in the State of West Virginia should have been at its capital, and that the first public lecture on Christian Science, in the state, should have been given under its auspices. The church was organized with eleven charter members, and a little more than one month later, on Thursday, December 18, we had with us Judge William G. Ewing of Chicago, Ill., who lectured to a fair-sized audience of representative people. The audience showed its appreciation by giving the lecturer undivided attention. We have held services in the city more than a year at 108 Bradford Street, but for some months now we have occupied a neatly furnished, centrally located hall, with seating capacity adequate to all present requirements. We are truly grateful to our dear Leader for blessings which have come to us through her devotion to Truth.

*Correspondence.*

### Distribution of Literature in Toronto, Ont.

Our Christian Science Reading Room Association of First Church of Christ, Scientist, undertook last summer a systematic free distribution of Christian Science literature. Our aim was to place our periodicals as freely as possible before the people of this city, and thus offset an effort made to fill the homes with spurious literature. During July and August we distributed about eleven hundred copies of the *Sentinel*, besides having copies sent to five of our public libraries each week for a year. Of course we have copies of Science and Health in the library, as well as the *Journal* in the reading room. We established also a circulating library, and among the places where Science and Health was gratefully accepted, were some of our leading hotels. They were placed where the guests could have the use of them. The steamers running between Montreal and Toronto also accepted copies of our text-book, and when navigation closes these books are collected and put in other public places. A copy of Science and Health was presented to the Central Prison for the use of the inmates. We have been encouraged by hearing good reports from the different lines of this work, and the results have altogether been most satisfactory. M. I. BROWN, *Secretary.*

### A Word from Berlin, Germany.

Berlin, Germany, January 22, 1903.

To the Editor of the *Sentinel.*

*Dear Brother:*—A Scientist from Boston, who visited Berlin a short time ago, gave me a copy of Science and Health to be used as might seem best. This was sent to the Royal Library of the University of Berlin, and I have received the following acknowledgment:—

(Translation.)

The undersigned expresses his thanks for the present that has been kindly presented to the Library of the University, and the two pamphlets about Christian Science, and I also beg to offer my thanks to the donor.

(Signed.) DER DIRECTOR.

This copy of our text-book will be a power for good. The *Sentinel* and *Journal* are a constant source of inspiration and strength to us, and grateful thanks go out constantly to the workers at headquarters, and the faithful ones all over the Field, who contribute to their success, and above all to her on the watch-tower, who is ever calling us to go up higher.

Sincerely yours in Truth,

FRANCES THURBER SEAL.

### Fifth Church in Chicago.

On account of the rapid increase in the membership of First Church of Christ, Scientist, of Chicago, which nearly equaled the seating capacity of the building, and the consequent inability to take care of the "strangers within her gates," one hundred and sixty-nine members, having long enjoyed the privilege of membership, felt it their joyful duty to ask for letters of dismissal to enable them to take the steps necessary for the establishment of a fifth church. Their petition having been heartily endorsed by the Directors and approved by vote of the church, an informal meeting was held on December 11, 1902, to make all preliminary arrangements, and on January 8, 1903, Fifth Church of Christ, Scientist, of Chicago, was formally organized, with a membership of two hundred and forty-six, all former members of First Church. The first services were held on January 11, 1903.

It is with great pleasure that we report to the Field this multiplication of churches and the growth of the cause of Christian Science in Chicago.

At this time of rejoicing over an advanced step taken, our thoughts turn with love and grateful acknowledgment to her who has revealed the true idea of God to this age and made such a church possible.

JEANNETTE R. GOODMAN, *Clerk pro tem.*

Services are now held in Rosalie Hall on 57th Street, and the membership is chiefly drawn from Hyde Park, Woodlawn, and a part of the Kenwood district. We learn that the present attendance is between five and six hundred, and that the Sunday School numbers about one hundred, though only forty-five children were withdrawn from the Sunday School of First Church.—ED.

## Just where thou Art.

Just where thou art lift up thy voice
And sing the song that stirs thy heart;
Reach forth thy strong and eager hand
To lift, to save, just where thou art.
Just where thou standest light thy lamp,
'Tis dark to others as to thee;
Their ways are hedged by unseen thorns,
Their burdens fret as thine fret thee.

Out yonder in the broad full glare
Of many lamps thine own might pale,
And thy sweet song amid the roar
Of many voices slowly fail;
While these, thy kindred, wandered on
Uncheered, unlighted, to the end.
Near to thy hand thy mission lies,
Wherever sad hearts need a friend.

*Exchange.*

Christianity excludes malignity, subdues selfishness, regulates the affections. It would unite men in one great brotherhood.

Help the grumblers to be happy and they will correct the cause of their grumbling.—*The Universalist Leader.*

I pray for strength to live
To all life's noble ends, prompt, just, and true,
Myself, my service, unto all to give,
And giving, yet renew
My store for bounty, all life's journey through.

WILLIAM C. RICHARDS.

## Testimonies of Healing.

When I turned to Christian Science for help, I was well-nigh desperate. I had no faith that I could be helped, for more than one doctor had said to me, "Christian Science is all right for nervous troubles, but it can never help you, because you have something the matter with you." However, I consented to try it for the sake of some one else.

For twelve years I had been treated by reputable physicians, and yet the suffering grew worse. There was not a day that I was free from pain.

My healing has been slow. For a long time, I could not see that I improved at all, and it was not until I decided to be obedient to my practitioner that I could see results. If it had not been for the loving patience shown me by this good friend I should have given up in despair. But at last the light of Truth dawned on my consciousness and it is gradually growing stronger and brighter. I am deeply grateful for Christian Science, very grateful to Mrs. Eddy for the sacrifices she has made, and grateful to the pioneers, whose efficient work, has made so much easier the way for later Scientists.

GERTRUDE W. CHANDLER, Chicago, Ill.

---

I have received so much help through the healing power of God since I began the study of Science and Health, and have had so many proofs of the loving Father's protecting care, that I regard it as a privilege to send my testimony to our dear *Sentinel* in which I find so many helpful thoughts.

I had heard of Christian Science through other members of the family, and although I did learn to trust God more from what they said, yet I thought I did not want Christian Science for my religion, nor did I even care to read and find out what it was, as I did not think that was the right way to heal the sick; for, if it were the way Jesus healed, the work would always be instantaneous.

In March of 1901 I found I must have help from some source, and Christian Science was suggested to me. I decided to send for a practitioner, and thought that if I were healed thus I would give God the praise.

After two or three treatments I was told that it would not be best to continue the treatment and at the same time remain under the physician's care, and as I knew nothing of the teachings of Christian Science, I preferred to have a doctor. When the practitioner first came she made the three following statements, "God is right here," "God is your Life," and "God is Love." As she left my room the last time she asked me to remember what she had told me. Every day while under the doctor's care those thoughts came to me, although I did not realize their meaning as I do now. I had about a month's treatment with the doctor, during which time my troubles seemed to become more complicated. The doctor finally told me that there was not another case on record like mine and he did not know what to do for me. I then saw that some change must be made very soon. Once more I called for Christian Science treatment, for I now felt I could be healed as others had been, but that was all I wanted of it at that time.

From the first treatment there was a marked change for the better. By the middle of May I was free; and it was then that I began the study of our Leader's work, "Science and Health with Key to the Scriptures," for I wanted to know something of the power that had done so much for me. I also began attending regularly, the Sunday and mid-week services, from which I have received much help.

Day by day I have renewed proofs of the ever-present help in all things, and that God alone is my strength, "for in Him we live, and move, and have our being." I have also had the pleasure of uniting with the branch church here, and the Mother Church in Boston.

Words are insufficient to express my gratitude to the one who so faithfully, patiently, and lovingly led me out of seeming darkness into the light; to our dear Leader who has worked so unselfishly in giving this beautiful Science to the world; but most of all to God from whom all blessings flow. I can best express my gratitude by striving to be absent from the body and present with the Lord; and by trying to silence error by the realization of the presence of God, Good.

MISS MYRTLE M. SAFFORD, Fargo, N. D.

---

It is just three years this month since I began to investigate Christian Science in Chicago, and commenced treatment for an illness of about three years' standing. After three weeks' treatment I could not see that I had improved any, and I told the practitioner that I thought I would stop. She asked me to continue another week, saying that I could quit then if I wished. I continued, and I am happy to say I felt very much better at the end of that time. I then purchased a copy of Science and Health for myself. At the expiration of two weeks more I was entirely free, physically and mentally, and what is better still have been taught by one of Mrs. Eddy's students how to make this blessed truth practical and remain free. The mental discord was greater than the physical, though the claims of chronic constipation and eczema have been overcome.

In business, Science has been a wonderful help to me, enabling me to rise above many difficulties. Part of my time is taken up in traveling, and during that time it has been my good fortune and pleasure to visit many of the Christian Science churches from the Atlantic to the Pacific, and to see how this beautiful truth is growing everywhere. It is the same in every place,—the same bright, happy faces are there to greet you and extend a cordial welcome.

All these privileges and blessings have been truly good and great, and I am deeply grateful for them, but the greatest has been the spiritual awakening and uplifting. The dark places have been lighted up and the Bible is a new book to me.

For all these and many more blessings I thank God. I am deeply grateful to Mrs. Eddy, our Leader, through whose untiring labor these things have been made possible, to the practitioner who first pointed out the light and so patiently led me, to my teacher, and to all who have helped me onward and upward by a kind, loving thought, word, or deed.—H. E. P., Minneapolis, Minn.

---

For four months I have been living in the country away from home, no Christian Science Church or fellow-worker in our cause within many miles. After spending the morning of our communion Sunday in the reading of the lesson, and of the last two numbers of our *Sentinel*, I am moved to express my gratitude for the truth contained in every line of the pages I have read.

No one who has not been separated for a long time from all the other privileges of our church life can understand what good food for those who are hungering and thirsting after righteousness, is brought to them by the Bible, Science and Health, and the periodical publications. It is indeed a "table prepared in the wilderness." The thought of how the presence and power of divine Love have guided and protected me in a new and strange life, away from all human assistance, how I have been given understanding and power, health and strength, in the presence of doubt and fear all around me, brings with it a feeling of profound thankfulness to God and to our Leader, and a new-born hope for the future.

The blessings of the past are ours; the failures cannot drag us back to live with them. Concerning them, Paul said, "Forgetting those things which are behind, and reaching forth unto those things which are before, I press

Digitized by Google

toward the mark for the prize of the high calling of God in Christ Jesus."

Christian Science found me a singularly wayward and unruly child, a puzzle to all about me, and even more of an enigma to myself. I had an intense longing for something better; and a morbid sense of discouragement. I seemed to have no power of perseverance. Temptations multiplied and I seemed to be powerless to overcome them, but I was keenly conscious of what I ought to do, and longed almost without hope for something to free me from the bondage.

Six years have passed, and in that time Truth has led me, slowly but surely, step by step, from darkness into light, from fear and doubt into freedom and peace, from despair and discouragement into hope that knows no faltering, from uncertain and spasmodic efforts into a steady, earnest purpose in life, such as must come to every Christian Scientist who sees the work before him and remembers the blessings of the past.

Having a doubting, inquiring mind, I should have floundered many a time but for the sure refuge offered me in every time of need. Science furnished ever a true, logical, and consistent answer to my questionings, understanding to guide me in my struggles, love to correct my selfishness and sin, and strength to offset my helplessness.

Blessed are the children of Christian Science. Blessed is the thought that, every day, every hour, in every place, under every difficulty, under all the various circumstances that in times past have perplexed and cast down the human mind, we can know that we have nothing to fear, that we are free to work, to grow, to learn, and to be happy, that it is ours to enjoy the "glorious liberty of the children of God," and that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

MARY A. BAYRD, Chicago, Ill.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*,
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 cents. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

C. H. Wetherbe says in *The Consecrated Life:* "Paul says, 'Love suffereth long, and is kind.' He who supposes that he possesses a large measure of pure love toward God should test himself by observing how he feels and acts toward those who plainly disagree with him. He feels and acts kindly toward the brother who agrees with him in respect to religious questions; but when the brother ceases to agree with him, and distinctly disagrees with him in reference to the same questions, does he continue to feel and act toward him just as kindly as he formerly did? Here is a practical test; do not seek to evade it. Do not say that the brother, by his now disagreeing with you, gives you just ground for not being as kind to him as you were before he changed his opinion. Love is kind, not because some one agrees with the lover, but because it is its nature, its character, its quality to be truly and invariably kind. Love is kind to the unkind. Can you bear this test? Love is kind, not because people are kind to the lover, but because they ought to be kindly treated, whether they be kind or unkind. True love is kind toward the unthankful. Does your love hold out patiently toward such ones?"

The simple Gospel which Jesus Christ went about trying to persuade men to receive, and which he sealed at last with his blood, was the Gospel of happy, trustful love toward God, and practical righteousness among men. Surely, the very heart of it all was his sense of the fatherly love of God, and of the blessedness of living in his love as his trustful and faithful children. "The kingdom of God,"—that was his watchword: it came to him from the great national hope of his people, who had been long looking for some great outward change of deliverance and glory. He showed them that the kingdom of God was *at hand* in their own hearts and lives, if they would only receive it: the world full of God,—God in the beauty of the lily and the care of the sparrow, in the good thoughts that come to the pure in heart, and the strength that upholds the weak and suffering. This present blessing, of life in the love of God,—this is the good tidings he goes about preaching; and by-and-by, when great multitudes come about him, he gives the first great proclamation of the new life in the Sermon on the Mount.

REV. BROOKE HERFORD.

In recent times especially, there has been a tendency among Protestants to emphasize what is called "preaching" as the transcendent agency for extending the Kingdom of Christ. An almost childlike confidence has been developed in the sufficiency of meetings and conventions to change human dispositions toward the truth. Now the fact is that while the impression gained from a speaker before an audience may be very vivid, it is apt to be transitory. The effects coming from the addresses of Moses and Samuel are a complete illustration of this.

Much as we rightly extol the power of preaching, it needs to be supplemented by a different agency, and that is the one illustrated by Paul's work at Corinth—the personal individual appeal of one man to another.

We have referred to "preaching" as though it were confined to the pulpit, as it is in the modern technical use of the term, but that is not the New Testament usage. There preaching contemplates the presentation of the Gospel to the individual as well as to the masses of men.—*The Watchman.*

"Come on" should be the confident call of every consecrated minister. "Come on, I know the way to happiness and heaven, follow me. I have my hand in the hand of the Divine Leader. No matter how dark the way, no matter how fearful the dangers. He knows the way. Come, follow me. I have some good news for you; I have some glad tidings for you." Why has not the world followed the ministry? Why are there so many who do not hear the call? Because so often the minister cries his good news as if he were doubtful of it himself; as if he were not quite sure. He whines a message that should be a clarion call. He apologizes to his hearers for bringing them the word they are eager to hear. He says "some people believe," instead of saying "I know." He preaches his doubts and his speculations instead of his convictions, or he does not have convictions to preach. We need a confident ministry so full of the good news of God that woe is theirs if they preach not the Gospel.—*The Universalist Leader.*

Rabbi Levy of Pittsburg, in a Sunday lecture, says: "I want you to understand that, when I speak of Jesus of Nazareth, I do so with great and sincere reverence. Why should I not? Was he not a faithful Jew, a glory to his people, and a helper of mankind? And should I, a Jew, deny that? I regard Jesus as one of the great Jewish prophets, one of humanity's uplifters, a noble and illustrious example of the spiritual force in Judaism I do not confuse the Jesus of theology with the Jesus of the Bible, nor do I blame Jesus for those awful persecutions which have been visited upon Israel during the past fifteen hundred years. But can you not imagine that the Jews of Russia, Roumania, Germany, France, and Austria, who are the victims of these awful crusades against Israel,—can you not imagine how natural it is for them to confuse Jesus with the persecutions conducted in his name?"

Professor Edward I. Bosworth writes in *The Congregationalist and Christian World:* "Not the least important result of the present great revival of Bible study which is beginning in the Church will be the realization by Christian people of the feasibility of a better fellowship with the spirit of God. There is need not only of information which is to be derived from a study of the New Testament, but also of testimony from living witnesses who are themselves experiencing such fellowship. Priscilla, Aquila, and Paul are not displaced in modern days by the written word. It is the written word which furnishes the necessary historical foundation for present experience and which checks the tendency to fanaticism that sometimes, owing to the weakness of human nature, accompanies these profound spiritual experiences."

We are glad to see that *The Churchman*, in an elaborate editorial, supports the position *The Watchman* has contended for, namely, that dispassionate scholarship is one of the most potent forces for Christian unity. Nothing that rests upon mere tradition or the necessity of sustaining a partisan interest is destined permanently to survive. What cannot be maintained by what Luther called "sound reasons out of the Word of God" should be abandoned without undue regret. Any doctrine or practice that will not bear discussion is doomed, and the service of dispassionate scholarship in opening the way for larger and broader agreements is inestimable.—*The Watchman.*

J. Hudson Taylor, M.R.C.S., of the China Inland Mission, says in *The Homiletic Review:* "The best evidence of Christianity is a Christ-like life, and the best evidence of the inspiration of the Word of God is found in the Word itself: when studied, loved, obeyed, and trusted, it never disappoints, never misleads, never fails. Why is so much time worse than wasted over criticism of its different books? What is needed is the humble, reverent, prayerful meditation of those who are determined to do the will of God; to such the guidance of the Spirit is promised, and the divine perfections of the Word are revealed."

Canon Wilberforce of Westminster Abbey says: "Unless there is remedial and restoring agency in the world beyond the grave, human life for countless thousands is but a ghastly mockery. The endless wail of a sin-blighted humanity, created with God's absolute foreknowledge under the doom of hopeless damnation, would dethrone God, bring the atonement into contempt, predicate the existence of a victorious devil, necessitate the eternity of sin, and make the so-called heaven of the saved a contemptible concentration of unutterable selfishness."

The fountain must be sweet to send forth sweet waters; and the tree must be good to yield good fruit. We must not be castaways if we would save others. If we would learn to *do* good, we must learn to *be* good; and that needs self knowledge and the knowledge of goodness. If we neglect common duties and every-day virtue, we shall rather be meddlers than helpers.

RUSSELL L. CARPENTER.

The abiding qualities are those of the heart. A man may have eloquence, learning, extraordinary insight and foresight, splendid attainments in every line of thought and knowledge, but if he lacks love for God and his fellow-men his life will be imperfect and his power for good limited. Love is not only the greatest *thing*, but the greatest *power* in the world. *Pursue after love.—The Examiner.*

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Brigadier General Leonard A. Wood, who has been ordered to duty in the Philippines, will investigate the forms of British colonial government in Egypt and India, and of Dutch colonial government in Sumatra and Java, with the view of incorporating what is best into the government of the half-civilized Moros of Mindanao and other provinces of the southern department of the Philippines. There is talk of his being made the civil governor of the Philippines, to succeed Governor Taft, in the event of Governor Taft's return to the United States, which may occur within the next year.

A temporary injunction, that may be made permanent, has been issued by Judge Adams at St. Louis enjoining the labor leaders from issuing orders for a strike on the Wabash system. According to the grand master of the Brotherhood of Railway Trainmen this injunction, if sustained in the upper courts, sounds the knell of organized labor. A motion will be filed by counsel for the employees asking for the injunction to be dissolved, and every effort will be made by organized labor to prevent this ruling from being written into the laws of the country.

President Roosevelt on March 2 issued a proclamation for the Senate to "convene in extraordinary session" on March 5. Owing to the opposition of Senator Morgan the consideration of the Panama Canal Treaty could not be brought to a conclusion before Congress adjourned. It was hoped that the Senator, who is a champion of the Nicaragua route, would relent in his opposition and allow ratification. At the extra session this and the Cuban treaty will be considered.

The announcement of the figures of this Congress shows that it has made the heaviest appropriations in the history of the Government. The appropriations of the last Congress were $1,440,489,438.87; those of the present Congress $1,554,108,514.84. This makes the excess of the present Congress over $113,000,000. Nearly half of this is the appropriation for the Panama Canal, most of the other half is due to the increase of the Post Office Department expenses.

It is reported that the Beef Trust has decided to appeal to the United States Supreme Court against the decision of Judge Grosscup, who a few days ago overruled the demurrer of the defendants to the bill of the Government and declared that the combination complained of in that bill is in "restraint of trade" and a violation of the Sherman anti-trust law.

The deadlock in the Delaware senatorial contest was ended last week by the election of ex-Congressman Ball, regular Republican, for the short term, and State Senator Allee, Union Republican for the long term.

Eight thousand enumerators under the direction of General Sanger, director of the census, have begun taking the census of the Philippine Archipelago. It is expected that the field work will be completed in about five weeks.

**Foreign.**

Recent advices from Cairo say that Mr. Davis, the American who has expended considerable sums in exploration work near Thebes, has found a splendid chariot in the tomb of King Thothmes. The fittings of the chariot are of bronze and the remainder of gilded wood. The chariot is valued at $25,000.

On March 3, Pope Leo XIII. celebrated the twenty-fifth anniversary of his coronation. He is the second Pope to surpass the "annos Petri," years of Peter. It is estimated that seventy-five thousand people were present.

It is reported that Shamrock III. will be launched March 17. The first trial spin is set for March 27. Sir Thomas Lipton becomes more and more convinced, it is said, that he will surely win the America cup.

**Industrial and Commercial.**

During eleven months ending November 30, 1902, the total imports of the Philippines were valued at $30,573,872 on which duty to the amount of more than seven millions was collected, an increase over each of the two previous years. A steady gain is shown in the exports for eleven months of 1902, as compared with the figures for each of the two preceding years. The total value of this trade during the last calendar year amounted to $25,567,269. Exportations to the United States were valued at nearly ten and one-half million dollars as compared with a showing of only two and one-half millions in 1900.

The American Window Glass Company has issued a formal notice to its workmen that its factories will close March 14 for the season. A large force of men will immediately be put to work to equip its shops with glass-blowing machines which will replace the high-priced skilled labor and produce the glass, it is said, at about one-third the cost by hand labor.

**General.**

The Annunciation by Florenzo di Florenzo, in the Gardner Museum, Boston, which was acquired about two years ago, says the *Boston Transcript*, came from the oratory of St. Francis, (called the Portiuncula) in the magnificent pilgrimage church of Santa Maria degli Angeli, near Assisi. It is an early example, and, in the words of Mr. Berenson, who secured it for Mrs. Gardner, it belongs to Fiorenzo's "splendid dawn." The Portiuncula is famous as the first haunt of St. Francis of Assisi, and is called the cradle of the Franciscan order. But few of Florenzo's works have the marvelous charm of this "Annunciation," which belongs to the same period as his "Nativity" in the gallery of Perugia and his series of panels recounting certain miracles of St. Bernardino.

It is said that the excavations which Professor Airoli is making in the Roman Forum have conclusively proved that the city existed long before the epoch to which Romulus is assigned, 753–716 B.C. It is contended that Etruscans originally established themselves on the Aventine, and that the Sabines inhabited the low ground at the foot of the hill. This Etruscan city was Rome. Peace between the inhabitants of the hill and the lowland was concluded and commemorated by building the Via Sacra, which linked the two districts. The excavations have revealed the Via Sacra as it existed two thousand years ago, and it is now flooded by the Tiber whenever the river rises, exactly as in the remote past.

At Florence in the chapel of the church Santa Maria Novella, called chapel of the Strozzi, there are two frescoes by the brothers Bernardo and Andrea Oreagna representing Paradise and Inferno, in which the artists have clearly worked under the influence of Dante's Divine Comedy. According to a recent discovery by an Italian art critic, M. Chiapelli, the fresco representing the Paradise contains a hitherto unnoticed portrait of Dante himself. If this view should be confirmed it will be important, as the only authentic portrait hitherto known to exist is that by his friend, Giotto.

Miss Helen Kellar, now a junior at Radcliffe College, appeared before the Legislative Committee on Education at the State House, Boston, recently, and spoke earnestly in favor of the bill to appoint a commission to investigate the condition of the adult blind, for whom a manual training institution is favored. "It is terrible to be blind," she said, "and be uneducated; but it is worse for the blind who have finished their education to be idle. . . . They think, think, think in the long days that are nights."

On February 23 at Galveston, Tex., the corner-stone of the sea-wall was laid with fitting ceremony. This wall is to be three miles in length and of sufficient height to give protection even against such a tidal wave as swept over the city in 1900. It is reported that the city has been exempted from State taxes for a period of eighteen years as assistance in erecting its protective wall.

An order for twenty-four thousand feet of wire rope to be used for rigging on the new America cup defender has been completed by the John A. Roeblings Sons Company of Trenton. This rope ranges in size from one-half inch to one and three-eighths inches in diameter, and shows a strength varying from four and one-half tons for the smaller sizes to ninety-four tons for the larger sizes.

Professor Hollis, chairman of the Harvard Athletic Committee, in an article in the *Harvard Graduates Magazine*, recommends that the annual football game between Yale and Harvard be discontinued. The article gives his own personal views as reached after studying the game for the past ten years and does not pretend to represent the committee.

Mr. Merriam, Director of the Census, has placed his resignation in the hands of the President to take effect May 15. He is to accept an important position with a New York business firm. Hon. David H. Mercer is to be his successor.

Owing to the unfinished condition of the War College at Washington, the statue of Frederick the Great will not be sent to the United States by Emperor William until the spring of 1904.

The United States Supreme Court has decided that Congress has the right to prohibit the carriage of lottery tickets from one State to another.

A special train chartered by Mr. George Gould made the trip recently between Jacksonville and Savannah, 172 miles, in 152 minutes.

Schick of Harvard recently made a world's record of 7 1-5 seconds for a seventy yard dash at the Columbia games at New York.

Child labor has become a political issue in the Mississippi campaign.

### The Other Side.

Mr. Editor.

The incident related by Mr. Chalmers of a physician who told the patient that he must die, and received in reply the statement that he was well and strong and would be out in a few days, is certainly to the point. On which side is our friend's sympathy? that of the doctor who, according to material law, condemned the patient to death? or that of the patient, who resisted this decree and affirmed his immortality and divine sonship?

Which was contending for the law of Christ? the doctor or the patient? The patient trusted in the law of life in Christ Jesus to free him from the law of sin and death (materialism), whereas the doctor was unconsciously trying to fasten disaster and death upon his patient. Jesus brought a more hopeful gospel than that, and proved that victory over sickness, sin, and death, is possible to man. To Lazarus he said, "Come forth." To the material senses this was absurd, it was "ignoring the physical strength of the patient."

Mr. Chalmers would doubtless explain that it was not the human mind either of Lazarus or of Jesus that raised the patient, but the divine Mind, and here he is in accord with Christian Science. Jesus said, "The Father that dwelleth in me, He doeth the works." Christian Science has been gradually coming before the public for more than a quarter of a century. If the ground upon which it is to be rejected is no stronger than is here represented, the public naturally asks what there is about this subject that it should be so frequently mentioned from the pulpit. It is well, therefore, that our friend has divulged his purpose in speaking thus apologetically of Christian Science, That he hoped to divert the thoughts of his congregation from this religion.

Religious instructors should take into account the fact that mortals are sorely pressed with sin and disease, and in their extremity seek relief, and will go where they find it. Our friend argues that there is no distinction between medicine and food. Jesus, however, made a distinction, and so does our common law.

Christianity is scientific, else the Master was unscientific and his teachings and demonstrations no infallible guide. To him Christianity was no more designed to have man sick and die than it was to have the sinner lost. Its mission is to save.

I have never known a man who understood Christian Science sufficiently to make an accurate statement of it that did not at the same time firmly believe in it.

On the other hand, one who cannot make an accurate and impartial statement of it should not be expected to believe in it, neither should he be expected to preach against it. I have some personal experience on this point, for I began to investigate Christian Science with the one view of preaching a sermon. I thought that in two or three weeks I would be amply prepared to speak authoritatively on this topic to my congregation. The three weeks extended into nine or ten months and still I felt incompetent to speak and tell the public just what Christian Science is. When Copernicus discovered the true order of the stellar system the whole world was against him and his discovery. It contradicted the evidence of the senses; but Copernicus discovered a truth and it lives. Likewise Christian Science is a discovery, and the individual opinions of those who think it contradicts some of our traditional teachings have no weight. Many thousands are testifying that it has lifted them out of sickness into health, out of unbelief into faith. Our good brother can surely join us in praise to God who has given such gifts to men.

### Love of Truth its Foundation.

SEVERAL weeks ago *The Living Church,* in an exhaustive article, drew some conclusions in regard to Christian Science which members of that church considered unfair, and in reply to which Alfred Farlow of Boston wrote a communication to the editor of the Episcopalian publication which was not printed. The following correspondence is self-explanatory:—

Mr. Editor.

*The Living Church,* in an article entitled, "The Point of Divergence Between Historic Christianity and Christian Science," draws conclusions rather unfair to Christian Science. The same paper having refused to print the inclosed article, written by a Christian Scientist who states the Christian Science point of view in a clearer light than an outsider can do, you would greatly oblige me by giving it space in your paper. The public is entitled to hear both sides of the question, and can then decide which is the real, living truth.

Yours truly,
F. WEINHAGEN.

Milwaukee, January 24.

TEXT OF THE REPLY.

To the Editor of *The Living Church,* Milwaukee, Wis.

*Dear Sir:*—In your issue of the 13th you commented upon the "divergences" between Christian Science and the belief and practice of the Churchmen. Permit me to commend the spirit of your criticism. Evidently it was meant to be kind. Believing that a fair discussion is healthful for theology, and anticipating that your readers may be interested in a Christian Scientist's view of this question, I submit the following:—

It is admitted that the Churchman, together with the Christian Scientist, believes in the efficacy of prayer. This being true, inasmuch as the teaching and practice of Christ Jesus is always taken as a model, why not consult his example as a means of arriving at the Christian method of treating the sick? He is acknowledged to have been the greatest physician whom the world has ever known. He never lost a case, never failed in a single instance. He said, "I am the way." He never used or recommended drugs in his healing. He did not say: "I heal through the divine power, but you will not be able to do this." On the contrary, he declared, "He that believeth on me, the works that I do shall he do also;" thus teaching in sub-

stance, He who understands what I understand and who relies upon the same, will accomplish like results.

Thousands in this period are alive and well through Christian Science, after having given up all hope of recovery through other remedies, and have proved convincingly to themselves that God heals more effectually when we trust Him implicitly than when we depend upon material remedies. It may be well to ask God to bless the medicine, but it is better to apply to Him directly. It has been said that God created the drug for man's use. The drunkard may claim that God made strong drink for his use with as much assurance as the patient claims divine authority for the use of medicine. The Great Exemplar never used or recommended it, and it is a demonstrable fact that God operates more effectually when we do not divide our faith between Him and lesser powers.

It has sometimes been claimed that Jesus resorted to a material remedy when he anointed the blind man's eyes with clay and spittle, but it should be noted that Jesus told his patient that he would come seeing after he had washed away the clay and spittle. Those who claim that Jesus in this act healed by means of clay and spittle indicate their lack of faith in this remedy in that they never use or recommend clay and spittle for blindness.

One complains of inconsistency because the Christian Scientist undertakes to heal evils which do not in reality exist. The Scientist overcomes sickness with his understanding of the truth just as the light dispels the darkness. If the darkness exists we must exercise ourselves sufficiently to bring in the light in order to be rid of it, notwithstanding that darkness is a nonentity to begin with. The demonstration of the Christian Scientist is to bring into manifestation the normal condition of man and to destroy the false material claims. If we say God is the author of evil, or, what amounts to the same, created that which originated it, and then created a remedy therefor because He did not desire its existence, are we not charging God with inconsistency? If God created evil He made it for man, and man ought therefore to be a sinner and is guilty of sin if he refuses to be a sinner. And yet we find the Scriptures urging mankind to avoid even the appearance of evil.

If God, the all-wise, has wilfully made man capable of evil He foresaw man as a prospective or future sinner and so foreordained. What right, then, has man to seek an evasion of sin or sickness? If God ordained evil, then evil is good and the term sinner is a misnomer.

What is the purpose of evil? Is man made better by having become a sinner and afterward a reformed creature? If man begins existence pure and perfect is he benefited by a fall followed by a complete reformation and reinstatement of his primitive condition? In such a case, would he not end as he began? Would an absolutely honest man become more true by having served a period as a liar? Who can name a rational and good purpose for evil? Does the All-wise deal in irrational and senseless schemes? Does He create evil that good may come of it? If we so credit Him we accuse Him of doing what He urges man to avoid in order to be like Him. If God's creation was good, as our critic admits, why did it need discipline? Is it more rational to believe that God made man to degenerate so that He could punish him for it, than to believe that He made him in His own eternal likeness and that he so remains, while materiality, sickness, and sin are but dreams of sense which will disappear when man learns his real God-made condition and deports himself accordingly?

It is claimed that sickness must be a reality because it can be cured. Darkness can be cured or dispelled. Will our critic insist that it is an entity? Is it not universally admitted that darkness is not something, but the want of something, the want of light? Likewise it should be understood that sickness is the want of health, evil the absence of good. Evil can be destroyed by the presence of good, even as darkness is dispelled by the presence of light. That which is real is eternal. If a thing seems to exist in one moment and is non-existent in the next, shall we not admit that it has gone to its native nothingness? Was the nothing originally something and then again nothing? It is as impossible for something to become nothing as it is for nothing to become something. Thus we illustrate that all that is real is eternal and that which is not eternal is not real.

Christian Science, by imparting or manifesting the truth, overcomes the false sense of sickness and sin. There is, however, a difference between the tenacity of sickness and sin. The sick man is glad to relinquish his sickness, while the sinner may hold fast to his sin, because he believes there is pleasure in it. Mrs. Eddy writes in "Retrospection and Introspection," page 86, "We attack the sinner's belief in the pleasure of sin, *alias,* the reality of sin, which makes him a sinner, in order to destroy this belief and save him from sin; and we attack the belief of the sick in the reality of sickness, in order to heal them. When we deny the authority of sin, we begin to sap it; for this denunciation must precede its destruction.

"God is good, hence goodness is something, for it represents God, the Life of man. Its opposite, nothing, named *evil,* is nothing but a conspiracy against man's Life and goodness. Do you not feel bound to expose this conspiracy, and so to save man from it? Whosoever covers iniquity becomes accessory to it. Sin, as a claim, is more dangerous than sickness, more subtle, more difficult to heal."

Again, "Sin is worse than sickness; but recollect that it encourages sin to say, 'There is no sin,' and leave the subject there."

In Science and Health, p. 339, Mrs. Eddy teaches: "The evil-doer can receive no encouragement from the fact that Science teaches that evil is the unreality of existence; for the sinner is making a reality of sin,—making that real which is unreal,—and thus heaping up 'wrath against the day of wrath.' He is joining in a conspiracy against himself,—against his awakening to the awful unreality by which he has been deceived. Only those who repent of sin, and forsake all evil, can fully understand the unreality of evil."

Science does, indeed, teach that we destroy sin by "a firm belief in the universal goodness to the exclusion of all evil." The understanding of the omnipotence of God and the powerlessness of evil gives hope, courage, and strength to the sinner and enables him to conquer wrong. Evil will never become unreal to him who uses it. His indulgence keeps it in consciousness and perpetuates its seeming reality to him. Is it more consistent to pray, "Forgive us our sins," and yet continue in sin, than it is to quit sinning and ask God to sustain us in our undertaking?

The prayer of a Scientist is his communion with God wherein he rises to a realization of God's omnipotence and omnipresence and a consequent understanding of the impotency of sin and disease.

If in our prayer God becomes to us infinitely great, our infirmities must become to us infinitesimal, for surely the troubles which are mountains to mortals weigh nothing in God's sight.

In his prayer the Christian Scientist turns to God as the only Power that can "deliver" him "from evil." God, because of our prayer, delivers us from darkness, dispels our false sense. Through prayer our understanding is renewed and erroneous beliefs destroyed. ALFRED FARLOW.

In *Milwaukee* (Wis.) *Sentinel.*

---

In the intercourse of social life it is by little acts of watchful kindness recurring daily and hourly,—and opportunities for doing kindnesses, if sought, are forever starting up,—it is by words, by tones, by gestures, by looks, that affection is won and preserved.—SALA.

## The Reasonableness of Christian Science.

To the Editor.

You have asked me to write briefly and tell you why Christian Science appears to me reasonable.

From considerable opportunity for personal observation of the healing power of Christian Science, I know as a truth that it has power in the healing of disease. To me all truths are reasonable and therefore the healing virtue of Christian Science is reasonable. As soon as Marconi sends messages through space for many miles by wireless telegraphy, we recognize its reasonableness.

But the healing of the body is not its only or chief concern, for Christian Science is a religion; and to me its healing power is the more reasonable because but a corollary of its religious truths.

As a religion, it is reasonable because it offers a complete and satisfactory philosophy of life. It emphasizes and insists upon the practical application to the affairs of daily life, of the teachings of him who spake as never man spake.

As a philosophy this Science of Mind teaches and enforces the superiority of spiritual power and the evanescent nature of all that is material. It teaches that man—the real man—is made in God's image and likeness, is spiritual, and that as we yield ourselves to the government of divine Mind, or the power of good, we manifest good in our bodies and in all our environment. To quote the language of Mrs. Eddy in Science and Health (p. 261), "Hold thought steadfastly to the enduring, the good, and the true, and you will bring these into your experience proportionably to their occupancy of your thoughts."

It appears to me reasonable to believe that the human mind has to do with the sickness as well as with the growth of the body and the operation of all bodily functions. We all judge the disposition of a person, or of an animal even, by the physical appearance, and that the physical appearance is the index of the mind rather than that the mind reflects the physical appearance, will be admitted. Why, then, is it not reasonable to believe that a man's sick body is caused by his sick mind?

It is not conceivable that the divine Mind, "the everlasting God, the Lord, the Creator of the ends of the earth," who "fainteth not, neither is weary," is ever sick, fearful, malicious, lustful, or selfish. On the contrary, at least you and I believe, that God is Love, and that he that loveth not knoweth not God.

And what is more supremely reasonable than to believe that God's choicest earthly gifts are, by the divine order of things, bestowed upon those who, recognizing their spiritual nature, attune themselves to the divine Mind, as the receiving instrument of a Marconi station is attuned to receive the messages which otherwise would have less effect upon it than the buzzing of an insect's wing.

Do you question that this could affect man's well-being in all his environments?

All will admit that a man who is in perfect harmony with the laws of his being, or God's laws, can be neither poverty-stricken, sick, sinful, fearful, nor unhappy. Is it not, then, most reasonable to believe that the glad recognition by any man of his spiritual or God-given nature, and that God worketh in him "to will and to do of His good pleasure," tends to material prosperity, health, comfort, unselfishness, and courage? or in other words to godliness, which is godlikeness.

In the language of another, "The oceans of the Infinite are beyond all our plummets, and Truth's unmeasured store is his who dares to know himself Truth's child."

WILLIAM M. GREGORY.

## Known by its Works.

Mr. Editor.

Since the writer of he paragraph on your editorial page for January 22, referring to Mrs. Eddy, asks for "proof" of the good she does, let me call his attention to the mass of evidence which may be consulted by any sincere person. There is hardly any one in these days who does not know of some case of reforming or healing by Christian Science. Every Christian Scientist can tell of some such cases, and there are many Christian Scientists. The sincere investigator need only attend the Wednesday evening meeting of any one of the seven nundred Christian Science churches or societies to hear testimonies of the blessed results of Christian Science. Every issue of the *Christian Science Sentinel* and *The Christian Science Journal* contains many signed statements. The Christian Science text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, contains a chapter devoted to letters from those who have been reformed and healed, many of them through the perusal and study of this text-book.

When we consider that Mrs. Eddy is the author of this text-book, as well as the Discoverer and Founder of Christian Science, we can realize in a measure the extraordinary amount of good which she does. Mrs. Eddy has stated:—

"Beyond the frail premises of human beliefs,—above the loosening grasp of creeds,—the demonstration of Christian Mind-healing stands a revealed and practical Science. It is imperious throughout all ages, as Christ's revelation of Truth, of Life, and of Love, which remains inviolate for every man to understand and practise" (Science and Health. p. 98).

I believe that the public desires to know of the work being accomplished by Christian Science, and I am glad to be able to point to authentic sources of information upon this subject.

W. D. MCCRACKAN.

In *Binghamton* (N. Y.) *Evening Herald.*

---

We have not an unkind word to say of doctors, for a very large number of them are acting up to their highest understanding and doing much good. Yet thousands of men, women, and children are to-day writhing on beds of anguish, our cemeteries are fast filling with those who have been relieved only by death, and our kind-hearted physicians are unable to relieve their pain or stay the hand of the great destroyer. Now if the Christian Scientist can allay the suffering of a small per cent of these, why not let him do it? Why demand of him the whole or none? Why decry the good he is doing because he tries to do it in a way not laid down in the medical books?

A. W. PAINE.

In *Los Angeles* (Cal.) *Post.*

---

It is the practical effect of Christian Science made evident in health restored and disease overcome that has first led the great majority of the thousands who profess this teaching to adhere confidently to it in physical as well as spiritual need. Reliable witnesses to this fact in almost every community verify beyond doubt the question of Christian Science healing.

The physical healing in Christian Science is, so to speak, but the externalization of a spiritual betterment, or regeneration of consciousness, due not to the operation of any human will or personal control, but to the realization in some measure of the all-power, presence, and control of the One Divine Mind, the infinite God, or Good, and the consequent powerlessness and unreliability of any discordant opposite.

The mission of Christian Science is not alone to confer physical relief, but primarily to rule out of the nature and lives of men the plagues of fear, doubt, selfishness, and

Digitized by Google

all other evil through the cultivation of hope, charity, honesty, and goodness, and this is accomplished through understanding faith in the ultimate supremacy of good in every man as the spiritual "image and likeness of God," notwithstanding the visible evidence to the contrary. As an incident of this better appreciation of the truth of man's relationship to his Maker, he finds himself improved physically as well as morally. DAVID B. OGDEN.

In *Harney County* (Ore.) *News.*

---

The plan of salvation outlined by Christ Jesus is very simple and includes the recognition of God the Father, Christ the Son, and the Holy Ghost, or Comforter; all of these are accepted in their entirety by Christian Scientists, who recognize the fact that Christ is the Saviour of the world, and that only by following in his footsteps is there salvation from either sin, sickness, or death. This following of Jesus' teachings includes and emphasizes all that Jesus taught, not only with reference to sin, but the healing of the sick also.

Christian Scientists are merely continuing this work established by Jesus, recognizing the fact that the same power which has governed and controlled all things throughout all time is still the governing and controlling power, namely God.

The central thought of Christian Science is not to heal the sick, but it is to regenerate humanity in every consistently Christian manner, and the fruits of Christian Science bear witness to this fact.

JOHN L. RENDALL.

In *Montrose* (Ia.) *Journal.*

---

Railing at Christian Scientists because they are not doing the most difficult things of their profession at the start is on a par with punishing a child in its first term at school for not writing an essay on philosophy.

The Christian Scientist knows he is only beginning to understand man's relation to God, but he knows that living up to the light he now has will bring greater illumination of power; until then he waits on God. Denying the works of Christian Science at this hour is closing one's eyes to the facts that are becoming familiar to thousands every day. CHARLES K. SKINNER.

In *Washtenaw* (Mich.) *Times.*

---

Many artists, teachers, musicians, university professors, lawyers, and others, engaged in intellectual pursuits have embraced Christian Science. Have they lost interest or power in their different pursuits? By no means. On the contrary, they universally declare that the study of Science and Health has greatly enhanced their powers.

E. W. PALMER.

In *Georgetown* (Col.) *Courier.*

---

The brave man is the elder son of creation, who has stepped buoyantly into his inheritance, while the coward, who is the younger, waiteth patiently until he decease. He rides as wide of this earth's gravity as a star, and by yielding incessantly to all the impulses of the soul, is constantly drawn upward and becomes a fixed star. His bravery deals not so much in resolute action, as healthy and assured rest; its palmy state is a staying at home and compelling alliance in all directions. So stands his life to heaven, as some fair sunlit tree against the Western horizon, and by sunrise is planted on some Eastern hill, to glisten in the first rays of dawn. The brave man braves nothing nor knows he of his bravery.—THOREAU.

## The Lectures.

### At Hutchinson, Kan.

One of the largest audiences that have assembled in the Home Theatre recently, greeted Judge Ewing Tuesday night, February 17, and listened with rapt attention to his lecture on Christian Science. He was introduced to the audience by J. U. Brown, county attorney.

Our Christian Science friends of Hutchinson are greatly pleased with the success of Judge Ewing's lecture, as he accounted for many seeming contradictions and unjust criticisms by people who have given the subject little or no attention. He made many friends while here, and his return will be greeted with an enthusiastic reception.

*Gazette.*

---

### At Salem, Ore.

The Grand Opera House was filled with a large and intelligent audience of Capital City people, public officials, and members of the legislature on Sunday afternoon, February 1, to hear Carol Norton, C.S.D., discuss progressive and liberal Christian thought, as expressed through Christian Science.

Mr. Norton's lecture was a distinct revelation of what is possible in presenting an aggressive defence of pure Christianity, without in the slightest degree intruding on the sectarian feelings of others, or claiming to have the only step-ladder to heaven. He gave credit to all physicians, surgeons, and nurses who are laboring honestly for the alleviation of human suffering, and claimed only to present a better way of doing good, a Christianity with a promise of a greater harvest of benefits to humanity.

Hon. William H. Holmes, a prominent lawyer and public-spirited citizen of Oregon, introduced the speaker.

*Correspondence.*

---

### At Portland, Ore.

Carol Norton, C.S.D., of New York City, delivered an eloquent and highly interesting lecture Sunday afternoon, February 8, at the Marquam Grand Theatre, which was filled to overflowing, the audience being a brilliant and representative one. As early as half past one a large crowd had assembled, and at the hour of the lecture there was not even standing-room. Mr. Norton, who is an extremely pleasing speaker, spoke for an hour and a half, and from beginning to end held the closest attention of his hearers.

Attorney William M. Gregory, who introduced the lecturer, said:—

*Ladies and Gentlemen:*—The Christian religion is founded, not only upon the teachings of him who gave us the Sermon on the Mount, but upon the healing power of the same teacher, who went about, not only teaching in the synagogue and preaching the gospel of the kingdom, but also healing all manner of diseases among the people.

It seems to have dropped out of sight that there is any possible connection between the teachings of the Master who gave us that incomparable Sermon on the Mount and the healing power of Jesus and his disciples.

Christian Scientists claim that there is a scientific correlation between the teachings of the Master and his healing power.

Hide it as we sometimes may, we all want to grow better, to be happier, and to throw off weakness and disease. It is not surprising, therefore, that so large an audience has gathered to learn what are the teachings of Christian Science, which have to do with these conditions.

One of the pleasantest recollections of my life is the meeting a very few years ago with a man who remembered well

Digitized by Google

and described to me my mother's grandfather. My heart warmed to the old gentleman as his seemed to warm to me, because he had known, not only my father and my mother, but my great-grandfather, and your hearts will warm toward our lecturer as did mine last evening, when I learned that he is not only near of kin to the poet Longfellow, but also a lineal descendant of that same true-hearted Priscilla with whose picture we adorn our walls. Yet after all, we are more concerned with the man himself and it is not strange that, tracing his ancestry on both sides to the early colonists, he, like his ancestors, believes in liberty of religious thought.

Ladies and gentlemen, on behalf of our Christian Science Churches of Portland, I bid you welcome, and it gives me great pleasure to present to you Mr. Carol Norton of New York, who will now address you upon the subject, "The Teachings of Christian Science."—*The Telegram.*

### At McPherson, Kan.

Last night [February 16] Postmaster B. A. Allison made a neat introductory speech, presenting to a large audience Judge William G. Ewing of Chicago, who delivered an interesting lecture on Christian Science. The speaker delivered a calm, clear-cut address that held the attention of all.—*McPherson Republican.*

### At Englewood, N. J.

The Hon. William G. Ewing delivered a lecture on Christian Science in the Englewood Lyceum on Tuesday evening, January 20. The lecture was given under the auspices of First Church of Christ, Scientist, and was well attended. Judge Ewing was introduced in a pleasing manner by Mr. Dan Fellows Platt, a well-known citizen and lawyer of Englewood.—*Correspondence.*

### At Moline, Ill.

Judge William G. Ewing of Chicago, Christian Science lecturer, delivered a discourse before a large audience in the main auditorium of the First Congregational Church last evening [February 13]. He was introduced by the Rev. W. W. Willard, pastor of the church, who referred to the phenomenal growth of Christian Science and the broad thought of the present day which is ready to hear and weigh principles which have attracted so many people.

*The Moline Dispatch.*

### At Tacoma, Wash.

Carol Norton, C.S.D., of New York, addressed a large and representative audience at the Tacoma Theatre yesterday afternoon [February 15] upon "The Teaching of Christian Science." Mr. Norton is a member of the Board of Lectureship of The First Church of Christ, Scientist, of Boston, and is lecturer-at-large in the United States and Canada. He is now touring the Pacific coast and spoke yesterday under the auspices of the local church. C. C. Eaton, First Reader of the local church, introduced Mr. Norton.—*Tacoma Ledger.*

### At Forest Grove, Ore.

One of the largest audiences that ever assembled in Vert's Hall at a lecture, gathered there Monday evening, February 9, to hear Carol Norton lecture on Christian Science. He came here at the instance of the local organization, which includes in its membership many of the most intelligent and cultured people of the city. The speaker was introduced by Mayor Kane, who briefly stated who the lecturer was, and expressed the pleasure of the people in having this opportunity to hear him. The lecture was followed with close attention by the large audience and was recognized as a clear and forceful presentation of the beliefs of Christian Science.—*Forest Grove Times.*

### At Everett, Wash.

Carol Norton, C.S.D., of New York City, delivered a lecture on Christian Science at the Everett Theatre, February 17, to an attentive audience. Mr. C. A. Missimer, Deputy County Engineer, acted as chairman, and introduced the speaker as follows:—

*Ladies and Gentlemen:*—Nineteen centuries ago there was born upon earth a new thought, and its star led the wise men of the east to the manger, where lay the infant Jesus. That thought has for centuries swayed the minds of men with religious fervor; sustained and upborne the Christian heroes and martyrs; comforted and blessed earth's teeming millions through the ages; and at times swayed the minds of men to religious fanaticism, a fanaticism that darkened the pages of history with the story of the Spanish Inquisition, the tragic night of St. Bartholomew, and begot in our own beloved country in the early years of the seventeenth century at the hands of the Pilgrim Fathers, fleeing from the bigotry and intolerance of the old world theology and church, a bigotry that gave us an Anne Hutchinson and a Roger Williams. Succeeding ages softened the tendency to intolerance, and the closing years of the nineteenth century ushered in a new era of patience, tolerance, and brotherly love among religious denominations, a recognition of the fact that, though differing from each other in minor points of faith and creeds, all were striving for the attainment of one common good, all worshiped the same Supreme Being, all followed the one blessed thought. This thought took new life and a fuller realization of the Science of Being—the allness of divine Principle—under the name of Christian Science, within the memory of the present generation. This thought that makes men free from the bondage of fear, sin, sickness, and death, was given to the world by Mary Baker G. Eddy, author of "Science and Health with Key to the Scriptures," —contemporary with the act which struck from three millions of God's creatures the fetters of human slavery.

Christian Science has made marvelous growth during this short time. It has been misapprehended, and at times misrepresented, more we believe through a lack of knowledge of its teaching than from a spirit of envy, hatred, or malice. It was to supply this information in the most general way, that the Mother Church instituted a Board of Christian Science Lecturers, one of whom is with us tonight, whom it gives me great pleasure, ladies and gentlemen, to present to you, Mr. Carol Norton.

### God and a Day.

Consider but this single day's demands,
Its dower of work, its wage of smiles and tears!
So rich with opportunity it stands!
One day, with God, is as a thousand years.

But, when the clock of time shall cease to beat,
And Heaven's high call our answering hearts obey,
There waits a service and a rest so sweet
A thousand years shall pass as one bright day.

EDWARD A. CHURCH.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Wanted—A Practical Religion.

IT is more and more apparent that the world is not satisfied with time-worn platitudes, but is demanding a religion adapted to its daily need, a religion which is removed as far as possible from purely perfunctory preaching. This demand is well set forth in the following extracts from a recent editorial in the *Boston Transcript*:—

"In these days, more than ever before, the clergy are teaching that religion is life, not a vague mysticism to be treated objectively and speculatively one day in the week. . . . Preaching the gospel is worse than profitless unless it is preached in a manner to meet the needs of men and women who are living to-day. When that is done it becomes a vitalized gospel and carries a meaning."

Jesus said, 'By their fruits ye shall know them," and urged upon his followers the necessity for practical proof of the faith that was in them. His was not a ministry of mere words pointing to a far-off and uncertain benefit to be derived from present toil, privation, and suffering. He "went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people." In exact accord with the preaching and practice of Jesus are the words of Mrs. Eddy: "The best sermon ever preached is the practice of Truth, and the demonstration thereof, through the destruction of sin, sickness, and death" (Science and Health, p. 201). Jesus preached and practised a religion suited to the immediate needs of all. So practical was it, that his faithful followers were able to demonstrate its Principle, so simple that it appealed effectively to the masses. And it is because Christian Scientists are making more earnest efforts to follow Jesus' example that their religion is supplying the wants of humanity, and their number is growing so rapidly.

The need of the hour is to have in us that Mind which was also in Christ Jesus, and so preach the gospel that it will heal the sick and reform the sinner. Only by reflecting infinite Mind can we preach the gospel "in a manner to meet the needs of men and women who are living to-day." Words alone will not save humanity, they must be reinforced by demonstration. M.

### With Open Eyes.

WE read that once as Michael Angelo passed along the streets of Florence, he noticed, lying among the rubbish, a piece of fine Carrara marble. Some unskilled hand had evidently been at work upon it, and its delicate texture bore the impress of coarse and uncomely features.

The passing crowd saw simply the failure of some poor workman, but the master's eye saw the possibilities of the stone; he had it taken to his studio where in response to his clear conception and skilful touch, the ugliness and deformity were displaced by beauty and grace.

The master's thought had transformed the unsightly thing, and in famed Florence, as "Michael Angelo's David," it has gladdened all lovers of art for centuries.

The lesson is easily read. Our daily path is strewn with just such distortions. Mortal mind through its false claim of creation has seemed to work deformity upon our fellowman, but we bear in our true consciousness the divine ideal, and see his capabilities. We see through the mists of sorrow the glad sunshine beyond, through the blackness of sin the whiteness of inherent purity. We see beyond the thraldom of fear into the realm of Love-bestowed harmony; instead of the unreality of death and darkness, we are able to see the reality of Life and light, able to recognize the divine image, man in his perfection, and seeing we evoke.

We are all artists. Christian Science has awakened in us anew the Christ ideal. Our studio is our home, our church, our office, our every field of labor. We can undo the work of the cunning counterfeiter, and help our neighbor to manifest in his life the perfect ideal, the David of spiritual perfection, which displaces the distortions of material sense. We know that however defaced the appearance, however discordant the exterior, the possibility of beauty and perfection is ever present, and Browning has more than suggested our ministry in his lines,—

> Be noble! and the nobleness that lies
> In other men, sleeping but never dead,
> Will rise in majesty to meet thine own.

S.

### Definition and Demonstration.

IN an age when things great and small, high and low, are being subjected to microscopic analysis, it is very natural that the question, What is the essential of religion? should be raised and generally discussed.

There are those who would express their opinion in theoretical terms, and for them the maintenance of a clearly defined belief is highly important. Others would voice their conception in terms of the heart, and for them religion is an experience, inaugurated and attended by deep feeling. Others would give their definition in terms of life; religion is expressed for them in conduct. It is the manifestation of honesty, unselfishness, altruism. Yet others would declare that religion is universal, or well-nigh, the expression of an instinct and capacity common to all men. "It is the effective desire to be in right relations to the power manifesting itself in the universe." This is all-inclusive, it embraces the whole brotherhood of man.

Now it is clear that all these varied definitions, if worthy of consideration, must recognize, either by statement or implication, both the source of life and its dignity and purpose; and those who honor the great Judean will therefore find a most suggestive and satisfactory statement of the essence of religion in his words: "This is life eternal, that they might know Thee, the only true God, and Jesus Christ whom Thou hast sent." To be conscious of God as revealed in the Christ-life is to embody the good of all these concepts of religion, and to escape that over emphasis of belief which has always tended toward dogmatism and narrowness; that over emphasis of feeling which has tended to emotionalism and superstition, and that over emphasis of ethical well doing which has tended to excessive liberalism and looseness of faith. The essential of religion for all monotheists must be the expression by man of the one infinite Life. The knowing of God, or right consciousness, is eternal life. Here belief is displaced by understanding, while feeling attends that progressive spiritual awakening which blossoms and bears fruitage in pure affection, and in all the amenities and activities of Christian ministry.

Christian Science has made a distinct contribution to the world's concept of religion in again centering thought upon that exposition of it which Jesus gave in his words and works, and in so far as they have practically redemonstrated the healing and saving efficacy of the Christ-thought, its representatives have certainly established the legitimacy of their claim to that Christian name which some of their

Digitized by Google

co-religionists have seemed strangely indisposed to grant them.

The most important thing about religion is not its definition but its demonstration. "The error of the ages is preaching without practice" (Science and Health, p. 241), and he who is able to impart the healing and regenerating truth of Christian Science to his fellow-man has really done more toward discovering the meaning of religion to mankind than can possibly be effected in any other way. In definition we are all liable to convey the impress of our educational bias, and at best the touch is lifeless and uninspiring, but in spiritual demonstration we give Truth opportunity to make itself known and accomplish its wondrous work, and this is being religious. W.

---

THAT was a fine, brave word from a professor in a Baptist theological school when he said recently,—

"It is disloyal to our one Master to say that a view which is not in our opinion so disloyal as to forbid it to be secretly held among us is so disloyal that it must not be openly avowed among us. For myself, I have not, and never have had, any such secret opinions; but I stand for the absolute right of every Baptist to declare views which I do not believe in, but which I dare not propose to expel him for holding. There is no secure ground for liberty except loyalty to Christ alone, and there is no secure loyalty to Christ except in liberty for Christians.

"Truth is but correct statement of reality; and reality must come to light in order to be recognized and correctly stated. The fight is on. It is arduous and confusing. Let it go on. Christ is the truth, and this will appear."

Such an expression of freedom from the coercive limitations of a conventional faith is most promising, and there is abundant evidence that it is being asserted and maintained by an ever-increasing majority of the clergy of the evangelical churches as well as of the so-called liberal. One of the subtlest temptations of an educated, open-minded minister appears in the form of a question as to the advisability of taking his parishioners into his confidence so far as to speak to them frankly respecting his convictions regarding revealed truth; and many a man has lost the esteem and confidence of his more alert and inquiring hearers by disclosing in incidental conversation that there was a great gulf between the legitimate inferences from his pulpit statements, and the doctrinal beliefs which he actually entertained. To be equivocal or inconsistent here is fatal, it strikes a death-blow at his self-respect, thus depleting his spiritual life, and at public confidence, thus ending his general usefulness.

There is nothing so intolerant of pretence as Truth, and nothing dethrones a public teacher more quickly than the conveyed impression that he is not entirely frank and fearless in the statement of his deepest religious convictions. W.

Through earth to ripen, through heaven endure.

EMERSON.

## Interesting News from Harrisburg, Pa.

A BILL was recently introduced in the Pennsylvania House of Representatives, the purport and aim of which seemed to be the prohibition of the practice of healing by any other methods than those of medicine and surgery. A public hearing was given before the committee to which it was referred, and the plea and protest of Christian Scientists and others was heard. Representative Ray, the sponsor for the bill, withdrew it soon after and substituted therefor a measure applying simply and exclusively to the practice of medicine and surgery. We give below, extracts from some of the addresses which were made in opposition to the bill, our clippings being taken from the *Philadelphia American*.—ED.

Charles H. Fahnestock, First Reader of First Church of Christ, Scientist, of Philadelphia, said in part:—

"Methods of treating diseases by *materia medica* in our boyhood, are obsolete to-day, and the methods in vogue to-day will probably be discarded a few years hence. Treatises on disease and their remedies are multiplying so rapidly that the standard works of to-day are old almost to-morrow. The whole system is admittedly largely empirical. Every medical practitioner in every case reaches the point of which confession must be made that nothing more can be done but to trust in God. The Christian Scientist claims the inherent right to trust in God from the start.

"If God can be depended on in extremes can He not be entrusted with the case in the beginning, or at all points? Is it honest to doubt His ability to cure our diseases in their inception, and then throw ourselves on Him when hope has fled?"

"We are not here to antagonize medical schools. We respect and admire the honest, conscientious labors of all who are striving to help mankind, whether their methods accord with ours or not.

"We do, however, assert our claims to the same freedom that they possess in the exercise of our firm convictions as to the proper means in which to place our reliance for ourselves and ours when overtaken with any physical ill.

"Homœopathy, in its high attenuations, practically discards the drug, and is now, after a hard battle with opposition, firmly entrenched in its recognition by the law. We go just a step in advance and say, God requires not the aid of any drug, however much diluted. Omnipotence is all-power and needs no material aid. We have His authority for trusting Him alone, and human law has no legitimate right to enter your home and mine and strive to annul our God-given privileges.

"We, as Christian Scientists, respect and abide by the law as strictly as any good citizens can, and we claim the protection of the law in our right to reliance on the Great Physician at all times and under all circumstances."

James Laws of Philadelphia, attorney for the Christian Scientists, said in part:—

"The ostensible object of this act is to protect the public from unskilled medical practitioners, and so far as it is confined to this object it is unobjectionable to Christian Scientists.

"It is only when an attempt is made to go outside of the practice of medicine, and prohibit the use of spiritual means only for the healing of the sick, that the legislation is an infringement of the personal and religious liberty of the people of this state, and creates a medical trust, which is more objectionable than any other form of trust that has been created in modern times.

"The passage of this provision, in effect, will be to compel every one who is affiicted to seek treatment only from duly licensed medical practitioners, and in extreme cases, where these gentlemen have done their best for the

Digitized by Google

patient, and have given him up as incurable, their sentence of death upon the patient will be final, unless he has the courage, and unless the Christian Science healers have the courage to defy the law and run the chance of being branded and convicted as criminals for attempting to heal, or actually healing, those who have been given up by the medical profession.

"In the state of Illinois an act with provisions similar to this one was introduced, and, after a careful hearing, it was amended so as to exclude from its provisions Christian Science healing.

"A similar attempt was made in the State of Massachusetts, and aroused a storm of protest from people who were not Christian Scientists, but who felt it their duty to appear before the legislative committee and remonstrate against its passage as a violation of individual rights, and in the interest of special privilege. Such well-known physicians, citizens, scholars, and divines as Professor James of Harvard University, William Lloyd Garrison, the Rev. B. Fay Mills, and others who are not affiliated in the slightest degree with Christian Scientists, appeared before the committee and urged the rejection of the bill so effectually that the committee, on the very next day after the hearing, unanimously reported adversely to the bill, declaring it inexpedient and unnecessary.

"In order that this committee may understand what Christian Science does in the way of healing the sick, I may state that they claim to be able to heal, through the operation of a divine law, which was established by Jesus Christ when he came into the world to preach the gospel and heal the sick. The practical effect of Christian Science work may be more clearly stated by saying that Jesus Christ came into the world to preach the gospel by healing the sick. Christian Scientists heal through the medium of prayer, and every Christian church believes in the efficacy of prayer to heal the sick.

"No medicines are administered by Christian Scientists. No attempt is made, directly or indirectly, to practise medicine, in any sense of the term. No pretence is made by Christian Scientists to the possession of any knowledge of medicine whatever. No attempt is made by them to pose as doctors or physicians, nor do they hold themselves out to the public as such.

"It has been demonstrated that hundreds of citizens of this commonwealth who have suffered from the most trivial to the most malignant diseases have been cured, and radically cured, by Christian Science treatment. It has been demonstrated that persons who have been given up as incurable by licensed physicians of both schools, and who have been told that they had only a short time to live, have been healed and restored to sound health by Christian Science treatment. It has been demonstrated that men who had become hopelessly addicted to the use of liquor, and other vices, and who had entirely lost their will power, have been saved, and right-mindedness has been restored through Christian Science healing.

"If these facts be true, then, before the medical practitioners, who must be back of this bill, are entitled to ask this committee to pass it, they should demonstrate to the committee that they control the only unerringly successful method of healing the sick that is now known to the world."

Mr. Williams of Sharon, who said he was not a Christian Scientist, opposed the bill. He admitted the necessity and propriety of more education for medical students. His specific objection, he said, was that the bill would create a gigantic medical trust. It was in conflict with the idea of civil and religious liberty. Cases where the sick had been cured by Christian Science, after having been given up to die by regular practitioners, were cited. Under this bill, he said, the nation could have been indicted in 1881, for offering up prayers for the recovery of President Garfield, and again when McKinley was shot.

## A Christian Science Victory.

THE Christian Scientists in New Hampshire have won a notable victory. Recently, a representative of the lower branch of the legislature of New Hampshire introduced a bill which imposed a penalty upon whoever resorted to the healing of physical ailments by Christian Science.

When the members of the judiciary committee of the House found an opportunity to act, they decided by a vote of 11 to 1, not to report the measure. This action has been generally commended by the people of New Hampshire.

Intolerance in religious belief has been in evidence since Rev. Mary Baker G. Eddy's teachings first attracted widespread attention. Human nature has changed but little in the past nineteen centuries, and as a result, narrow-minded people are always ready to oppose that which does not meet their views. The fact that Christian Science has been accepted by thousands of intelligent, reputable citizens should be sufficient reason for protecting the cult from the attacks of persecutive people.

Editorial in *Press-Knickerbocker,* Albany, N. Y.

## Christian Scientists Won.

RALEIGH, N. C., March 7, 1903.—Christian Scientists won their fight before the General Assembly of North Carolina to-day, when the law to define the practice of medicine and surgery, which would make illegal the practice of their faith in North Carolina, was amended to read:—

"Provided that this act does not apply to any persons who minister or cure the sick or afflicted by spiritual means only, prayer to Almighty God, without the use of drugs or any material means."

The amendment was worded by Miss Mary Hatch Harrison of the Publication Committee for the State of North Carolina. The bill passed its final reading in the Senate without a dissenting vote.—*Boston Herald.*

### For All of Me.

The king can keep his crown,
The plutocrat his gold,
For all of me:
I heave no sigh to own,
No palm I shape to hold
Their jewelry.

The men of discontent,
Who patch the world outside,
Have naught in me:
I fain would sew the rent,
Within, that it might bide
Eternally.

The king can keep his crown,
The plutocrat his gold,
For all of me:
For when mankind has grown
Into the Master's mold—
They'll cease to be.

JOSEPH FULFORD FOLSOM.
In the *Independent.*

Fear causes more diseases than do microbes, more deaths than famine, more failures than panics; it costs more than war, is always a failure, and is never necessary. Fear weakens the heart's action, induces congestion, invites indigestion, produces poison through decomposing foods and is thus the mother of autopoisoning, which either directly causes or greatly aids in the production of quite ninety per cent of all our diseases. ## Praying Aright.

B. A. M.

I WISH to express the constantly increasing sense of gratitude I feel for Christian Science, because it is teaching me how to pray.

The thought that appeals to me as most clearly defining the prayer of Christian Scientists is from Science and Health, page 16, where it is said, "The highest prayer is not one of faith merely; it is demonstration. . . . It distinguishes between the falsity of sinful sense and Truth that is sinless."

Before this wonderful truth came to me, my conception and habit of prayer was chiefly one of petition to God, beseeching His help for the removal of the many discords of life and for the achievement of good, the realization of my ideals.

I did not think of applying the term prayer to the mental process of distinguishing between the false and the true. This I considered a moral duty, but I needed Christian Science to teach me that this is the highest form of prayer, and to make it possible for me to do this with the assurance that my conclusions were true and accurate, the result of reasoning from a fixed Principle and not mere opinions.

I find that the application of the teachings of Christian Science, which necessitates a constant and conscientious distinction between the falsity of sinful material sense and Truth, is sinless.

To pray in this manner, it is necessary that we be able to decide with positive certainty regarding every thought, condition, or circumstance, with which we have to do. If we are incapable of thus accurately knowing, and our decisions are merely guesswork and supposition, our prayers cannot be truly answered. Jesus said, "Ye shall know the truth, and the truth shall make you free."

We know that the testimony of the material senses and human reason cannot be depended upon; the former may deceive,—the latter be mistaken. We must have a higher basis from which to judge; this, Christian Science gives us and it is spiritual understanding. From the first insight of the truth of Science, this mental process begins, the process of sifting the chaff from the wheat, and it goes on constantly as we progress in the understanding and application of this truth. We find much that we classed as real, and therefore true, to be false. Thus, for a number of years, I prayed to God to give me health, while firmly believing in the reality of suffering and accepting it as a legitimate condition; with the result that my prayers were unanswered.

When, through Science, I learned that sickness is unreal, however real it seems, I changed my method of prayer, and began to recognize, mentally, that health is the truth of being, and I found that in the proportion that I was able to do this, I was attaining harmony.

I have proved many times, for myself, and others, that this scientific method of prayer,—which is really knowing the truth about God, man, and the universe,—is effectual, is demonstration.

I am learning that our prayers are answered as we learn to pray aright, and this ability comes through practice, and growth in understanding of eternal Truth and God's unchanging laws, which are ever operative in bestowing all good.

I wish to acknowledge my gratitude and thankfulness to our Leader for her teaching in regard to prayer. Through the broader, higher, and more practical sense which she has given us of it, it is possible to fulfil the demand, to "pray without ceasing."

## Incidents along the Way.

HARRIET PRICE.

WITH a heart full of gratitude to Christian Science and to our dear Leader for the many blessings which have come to me and other members of my household, I wish to add my mite to the columns of the *Sentinel*.

For eleven years I have been the recipient of many blessings through wonderful experiences in Christian Science. When I first took up the study I did not even hope for physical healing, but felt that it would give me peace of mind. Because of mental and physical suffering, I had for a number of years been seeking the baptism which would enable one to enter the kingdom of heaven, but could not be satisfied with the baptismal forms of any of the churches. At the first Christian Science meeting which I attended, the entire time was filled with the topic of baptism and the kingdom of heaven. It was such a revelation to me that from that time to the present I have never had the least sense of doubt that Christian Science is the truth that Jesus taught and demonstrated, and as the baptism has gone on mentally the physical healing has been manifested. Ailments have disappeared which doctors had pronounced incurable. I wish to relate a little incident from which I drew a very helpful lesson.

One afternoon as I sat on the step at my home my attention was attracted by a large brown worm crawling on the gravel walk in front of me. A little black ant came towards it and at once the worm seemed to give some attention to it, as if trifling with it; in an instant the ant fastened itself upon the worm with a firm grasp; the worm did not seem to notice it but went crawling on its way. The ant evidently had a way of attracting other ants, for very soon there were dozens of them, which one by one fastened themselves on the worm until it was completely covered, and instead of being a brown worm it had the appearance of being a very large black one. As the ants got more and more control, the worm began to roll and flounder and turn in every direction, making great efforts to shake off the mass of intruders; but its efforts were all in vain, not one of them would loosen its hold. The worm's mistake was in allowing the first to take hold, and now it was too late—there were too many for its unwary indifference.

As I sat watching the struggle, I thought it a very good object-lesson, and found myself likening the little ants to the little thoughts of error which come hourly to us. Our work in Christian Science is wholly with thought, and failing to clear our mentality of the first wrong thought, it enters, fastens itself firmly as something or somebody, and begins its work of inviting other errors until a great cloud is formed and we begin to see through a sense of error which, claiming to be our mentality, tells us that the error is elsewhere, and we, like the worm, allow it to turn us completely from expressing Truth to the exact opposite, and very soon we feel the effects of it in suffering; then we begin to flounder and turn in all directions to see where the error came from. We take up our mental work with a great cloud before us, and after declaring the letter of Science for some time with a sense of inadequacy, we call for aid and ask wonderingly, "Why did I not meet this? Why did I not get relief?" The answer comes, "Through lost opportunities, you have allowed mesmerism to fasten a sense of error upon you and it takes the light of divine Love to separate the error from your real self and to set you free."

This searchlight of Truth, gives us an individual opportunity to see the errors that have formed the cloud, what they are, and how to correct them; but when peace is realized error will still be busy trying to get control again by leading us to settle down content in a sense of pleasure in physical freedom, and so keep us from "working while

Digitized by Google

it is day;" but if we are prayerful enough, that light that has broken the clouds will lead us to see the allness of Good and the unreality of evil, and we can again start to watch our thought, and if, through past suffering, we have grown in wisdom, we shall grow to be more careful.

## "Thou Shalt be as my Mouth."

ELIZABETH KATZ.

A STATEMENT that has been made over and over again by my teacher in Christian Science, and which gives much food for thought and expansion, is this: "We are God's mouthpieces.

One day in reading the Bible I came across this passage, "If thou take forth the precious from the vile, thou shalt be as my mouth," and there are other passages of Scripture which assure us that every word that goeth out of the mouth of the Lord is established. These show how the healing is done in Christian Science. The healer must first separate the vile from the good in his own consciousness, so far as he is able, and when he speaks from the standpoint of spiritual consciousness he is God's mouthpiece, and the word that goeth out of that consciousness establishes health and holiness.

## The Habit of Criticism.

EDWARD C. AVERY.

IN Galatians, 6 : 1, we read, "Brethren, if a man be overtaken in a fault, ye which are spiritual, restore such an one in the spirit of meekness; considering thyself, lest thou also be tempted," and Paul covers the whole ground in that single verse. If we were to consider the way in which we undertake the restoration, we should find that the fault is suggested, we listen, talk it over and condemn; and often our self-righteousness underlies the judgment. A fault in one we love is overlooked, while it is mercilessly condemned in one for whom we have no affection. Charity covers a multitude of sins, and we should allow our seeming enemies the same consideration that we do our friends. What the world most needs is brotherly love in its highest sense, and to bring this about was the great effort of Jesus of Nazareth,—to bring man to love his fellow-man and thereby to know and love God.

To criticise is really a silly pastime, and we should avoid it, since criticism is so often based simply upon our likes and dislikes, which are outgrown by the understanding that God is Love.

"Blessed are the merciful: for they shall obtain mercy," said Jesus, and Science and Health, page 17, reads, "And infinite Love is reflected in love." What we manifest is largely the result of the atmosphere of thought and circumstances under which we have grown, and we should always ask ourselves, Shall we help or hinder our brother's growth by this statement? "The quality of mercy is not strained," and if shown by us to all to whom it rightfully belongs, we shall find the same in our inheritance when in need of that most beautiful characteristic of Love.

"It is not to taste sweet things," says Carlyle, "but to do noble and true things, and vindicate himself under God's heaven, as a God-made man, that the poorest son of Adam dimly longs." This dim longing for what is noble and true, the still small voice which calls to one imperatively in moments of temptation, is the safeguard which, if hearkened to, not only protects one in severe trials of manliness or womanliness, but also incites to the formation of a fine character, without which all acquisitions, all graces and accomplishments, all talents and all learning, are but as "sounding brass and a tinkling cymbal."

## The Building Fund of the Mother Church.

THE following are selected from reports of meetings in behalf of the Building Fund of the Mother Church. For obvious reasons, they are made impersonal.

We are glad to give a report of a special meeting held November 13, called to consider the subject of our contributions to the Mother Church Building Fund.

In order to place the subject before the meeting for discussion a resolution was offered to the effect that this church subscribe the sum of ten thousand dollars or more to the Mother Church Building Fund, and during a session of three hours and a half many persons spoke to this resolution in words which proved beyond a doubt a deep and consecrated love in this branch church, for Christian Science.

One speaker reviewed the movement of Christian Science, and declared that an overwhelming love for humanity and for God is needed to accomplish even the slightest result in Christian Science. In this work he had learned to prove the bounty and breadth of good which is available to every one willing to make the effort to gain it.

Another speaker gave her experience when the present Mother Church was building, and said that a good many weeks passed before she could accumulate even one dollar to send, but she persisted, and finally sent this one dollar; soon afterward another followed, and later many others followed, until she learned somewhat of the infinite supply taught in Christian Science.

A lady said that Christian Science had healed her of poverty; although she had always had a supply of material things, even with this supply the fear of want was always with her, and that had she possessed a million dollars she would still have been poor. Christian Science had healed her of this fear and limitation, and unfolded to her such an abundance of good, that she had been able to contribute to the building of several Christian Science churches, and yet had not found herself with less means, but more.

Another speaker declared that Christian Science had brought freedom to her, not only from physical disease, but from burdens and cares. She said: "Through this beneficent Gospel has come to me an entire transformation of life, with new hopes, a quickened love for my brother man, a deep and joyous love for God, and a satisfied trust in His ability to do all things for me. Do you think for all this good I can render a sufficient return with money? Do you think money can in any way measure this bounty and freedom given to me by Christian Science?"

It was figured that the sum necessary for each person to subscribe, provided but two hundred made subscriptions, was fifty dollars, and with eighteen months given for payment this would mean not quite three dollars per month. When it was seen what a really trifling effort this sum of ten thousand dollars demanded, a sense of its modesty dawned on many, and a unanimous and vigorous yes was given the question.

It might be said that this church has a membership of two hundred and sixty and has not yet built its own church edifice, and has been organized less than three years. We count not ourselves to have attained, but in humility and obedience we give this account as an expression of gladness, from hearts purified and uplifted by this Gospel of the Living God, given by our revered Leader.

Our Sunday School, composed of twenty-four members, voted to send fifteen dollars to the Mother Church Building Fund and the same has been forwarded. We wanted to be represented in this fund, even though it is in a small degree. The children were very glad when the subject was brought to their attention and entered heartily into the suggestion.

## Testimonies of Healing.

"What shall I render unto the Lord for all his benefits toward me?" What, indeed, unless it be my "vows" in the presence of all his people; in other words, the addition of my testimony to that of the ever-increasing company of those who have stepped boldly to the front in life's arena, proclaiming: "As for me and my house, we will serve the Lord!" It is two years since I fully and freely said in my heart, "God forbid that we should forsake the Lord to serve other gods!" It is with a heart full of love and overflowing with thanksgiving and praise that I take up my pen to speak of the wonders of God's grace. For a long time there had been dawning upon me an ever-deepening sense of something so wofully wrong that I determined to seek, with all my heart, for the inner meaning of the truth that makes "free indeed." The accepted interpretation of God's word did not meet all its requirements, neither did it fulfil for me all that was claimed for it. From time to time there came faint glimpses of something that pointed to a fixed law, definite, absolute; thus, while groping in a half dazed way, I grew into a conscious belief that it was man's conception not God's purpose that was at fault; in fact, I became a skeptic, though it was not God's, but man's, interpretation that I doubted. Yet, how foolish I often felt when I found myself arraying my ideas and questions against the centuries of thought and study of master minds. During my transitions from belief to belief, and from one position in faith to another (all of which I soon learned were shifting sands) I had many an uplifting and soul-refreshing season when thought and pen were busy, there were times of eager seeking, silent waiting, of "standing still" and pressing forward for a broader vision of the something (unnamed) that I was so sure led to light, joy, and the promised understanding (1 John, 5 : 20), which I was persuaded was so near, yet veiled in a mist through which my mortal gaze could not penetrate. My frequent departures into new fields of thought and research, my wanderings over the latitude and longitude of dogmas, creeds, and isms, became a source of amusement to my friends and the despair of my would-be religious guides. From every avenue along life's highway came experiences laden with truth-bearing seed, until, in the fulness of time, I was called to silently learn of divine Principle. Right here I wish to emphasize the importance of an understanding of the allness of divine Principle. It is that which is All-in-all. The outward demonstration is the witness of the inward spiritual grace, a natural sequence of our spiritual birthright. Never shall I forget the utter abandonment of that hour when it seemed as though every inch of ground had been surveyed and condemned. Without prop or stay, I just let go, and, in all due reverence, but with a most heart-felt earnestness exclaimed, "God, it's just you and I now." I assure the reader I meant no irreverence,—it was the only way in which I knew how to voice my extreme limit, the end of all things, as it seemed to me. Was it the rending of the veil that had been hiding the Shekinah? The earthquake and whirlwind, had fulfilled their mission, and now a still, small voice wooed me into the garden of Truth and Love, where I met my risen Lord. To my cry of "Rabboni" the sweet music of the answer ever lingers, a soul-refreshing strain, a living, vital, ever-present testimony of the cancelled tomb, and resurrection. I heard the "Come forth," but the grave-clothes of material sense still impeded my progress.

At this stage of my experience, and in the providence of divine Love, some of God's faithful ones crossed my path. Now comes the most astonishing part. I was bitterly opposed to Christian Science. I had read and heard the opinion of others and believed that I was verily doing God service in denouncing it on every occasion, for I misunderstood its teachings, and they seemed to undermine the very principles of the Christian religion, but the love and knowledge "which passeth all understanding" was not always to be anchored to error.

Have you ever been in a foreign country where for days not one familiar word was heard, and then have unexpectedly caught the sound of your native tongue? How you start! What a wave of pleasure envelopes you! Thus it was that I first overheard a remark dropped by a Christian Scientist which I caught as when one listens to a dear and familiar strain. I began to ask questions, then I studied the Bible to see how the answers and the Word agreed. A natural sense of justice, tempered by the late revelation of divine Love, led me to look into this new religion with the same interest and thought that I had given to others, so I ventured to invest in a copy of Science and Health.

A climax came about this time. I was weary and worn with bodily infirmities and human limitations; yet health-seeking had not been the primary cause of my search for light. I was after the Truth which I believed was the underlying and supporting Principle of all existence, and by which all the woes of mankind are cancelled. How to find it, was still veiled. The burning desire with which I followed up this thought (unuttered prayer) (Romans, 8 : 26) found answer in the quickening of my spiritual sense. There suddenly came to my consciousness the truth that there is a divine law of God which renders null and void every man-made law; my lips all unconsciously caught up the refrain, voicing this, to me, new thought, when, lo, what marvel had been wrought! I stood released from the bondage of my physical infirmities. Great was my rejoicing at this demonstration, yet far more priceless was the knowledge of Truth which makes "free indeed." I began at once the study of "Science and Health with Key to the Scriptures," and what a revelation awaited me; it was like a series of flashlights revealing the rugged way of an old battle-ground, viewed from the threshold of "new heavens and a new earth, wherein dwelleth righteousness." Is not this an enrolment under the "banner of love"? a holy of holies wherein "the work of righteousness shall be peace; and the effect of righteousness quietness and assurance forever."—R. C. P., Stony Creek, Conn.

---

In January, 1897, we turned from old surroundings where we were in bondage to mortal mind laws, bodily infirmities, and spiritual unrest, from which conditions we had failed to find relief in the promises of mental philosophy, *materia medica,* and orthodoxy. We entered into new surroundings, which offered new opportunities and new promises. In these new surroundings there were no old landmarks, except the Bible, which was companioning with "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. With that Key to interpret the meaning of the Scriptures we soon began to see the nothingness of our mental illusions, and with increasing knowledge, our old bodily infirmities commenced to "move out." Having gained these two new conditions, we were soon given freedom to enjoy in part the promise, "Ye shall know the truth, and the truth shall make you free." And now, after six years, we rejoice in a constantly increasing realization of the "power of Truth over error." We have been happy, healthy, and contented in our change from the old way to the new, in which promise is daily becoming fulfilment.

In this New Year we are continuing our search for a clearer perception of divine Love and hope to fill a niche in a new field of Christian Science endeavor, in connection with the growth of the cause in Chicago, and as members of Fifth Church of Christ, Scientist, we will

Digitized by Google

help in keeping the "oil of gladness" burning in the Lamp that lighteth on the way to the "house not made with hands." We have found Christian Science a practical, satisfying, every-day support; one that heals the sick and purifies and ennobles mankind just in proportion to the honest, earnest desire of the suppliant at its gate.

JAMES D. COOK, Chicago, Ill.

---

In my early life I had read the Bible a great deal, but with no profit. After that for about thirty years I discarded the Bible, seldom looking in it.

I am now sixty-eight years old and I can truly say that the past four or five years have been the happiest of my life. The physical healing in my case has been wonderful, but the peace of mind, the changed thought, is of far greater value. I feel that Truth has made me free. The Bible and our text-book, with the *Journal* and *Sentinel*, are now my chosen companions.—J. A. BREWER, Irvington, Cal.

---

All I have seen teaches me to trust the Creator for all I have not yet seen. Whatever it be which the great Providence prepares for us, it must be something large and generous, and in the great style of His works. The future must be up to the style of our faculties, of memory, of hope, of imagination, of reason.—EMERSON.

---

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

---

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*,
Box 56, Fall River, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Announcements.

---

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Der Christian Science Herold.

A monthly magazine, printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Address orders to

The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass., U. S. A.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

## Religious Items.

W. N. Thomas says in *The Standard*:—

"Lives may be lived dominated by the worldly or the religious. The worldly shuts out the high thoughts, narrows the sympathies, and limits the range of life. The religious shuts out from nothing worthy in any sphere, but widens the range of effort, multiplies the points of contact for life, and opens new fields of promise. The worldly is the source of despair. The religious is the spring of hope. To be dominated by the religious is to recognize that there are gains that do not lend themselves to ordinary measurements, but are none the less real. . . .

"He who lives the life worth the living always garners larger income for his work than can find an equivalent in money. Even where character is not appreciated by the busy business world, it still has its worth and power in self and for the world. But it is of these facts that men and women need to be persuaded. Their faith must be taught to grip these facts so that no world defeat can tear them from their souls. They can be shown that the highest work of the spirit, and therefore the best work for the world, may be found where eyes see only defeat. Jew and Gentile called the life of Jesus a failure and rejoiced in their victory over him. But history has reversed the decision and declared a cross the means of triumph and a tomb the birthplace of life. Such faith would turn the thought and work to the future. It would give to all human activities the glow and zest of the forward look. Despair would flee away from the soul that worked to share in all that is done and is to be accomplished."

True religion lies between two extremes of thought. On the one hand is the multitude who have eyes and see not, and ears and hear not, those who live for to-day, those who never seem able to anticipate the evil or the holy day to come. On the other hand are those zealots and fanatics, and contortionists whose unhealthful dreams set one shivering with fear, and another one burning with horror. True religion surrenders to neither the one nor the other. It insists upon the necessity for vision. It forever seeks an open window toward the sky. It points humanity toward the hereafter. It appeals to all men to square their lives with the base line of eternity. But the sights which true religion sees, the visions which fill it with delight and hope, the sounds which ever come to it from beyond the stars, are not those with which the literature of superstition reeks and foments. Its dream is not of horrible pits and vials of wrath. Out of the great heart and mighty works of humanity it lifts the majestic arch of prophetic faith. It crowns our life to-day with a glimpse of a higher life. It looks away into the future, and, through toil and tears and struggles and defeats, it watches man forever climbing, forever aspiring, forever vital, and heroic, and victorious in spite of all his shortcomings and humiliations.

*The Universalist Leader.*

The first condition of any permanent hold on any truth is this, that the truth itself should be live enough and large enough to open constantly and bring to every new condition through which we pass some new experience of itself. I know, indeed, how much a merely traditional religion will inspire men to do. I know that for a faith that is not really theirs, but only what they call it, "their fathers' faith," men will dispute and argue, make friendships and break them, contribute money, undertake great labors, change the whole outward tenor of their lives. I know that men will suffer for it. I am not sure but they will die to uphold a creed to which they were born, and with which their own character for firmness and consistency has become involved. All this a traditional faith can do. It can do everything except one, and that it can never do. It can never feed a spiritual life and build a man up in holiness and grace. Before it can do that our fathers' faith must first, by strong personal conviction, become ours.—PHILLIPS BROOKS.

Rev. W. F. Skerrye says in *The Christian Register:* "To believe in the overruling presence of God, we must make for ourselves lives into which God may fitly enter. Every one believes most in that to which he most yields himself. If, then, we yield ourselves and our powers to the highest and best that we know or can conceive of, we are preparing, whether we know it or not, for a higher revelation. For every such volition is a step toward God, and it is wonderful how fleetly the soul can travel when given its way. Love is born of service. Each one, then, must serve the time and place in which he is. There, not elsewhere, will God appear to him. If dull days of drudgery be appointed him,—and all work worthy of the name brings many such,—there, most of all, is he likely to find his God. For God dwells not in temples made with hands, but in a realm built of a human heart's brave patience, unselfish, unstinted sympathies, toils, self-denials, and losses made good by still unfaltering trust."

Craig S. Thoms, Ph.D., writes in *The Standard* on "Fundamental Truths in Genesis:" "It is not necessary to understand from the narrative that the murder of Abel occurred immediately or even shortly after the sacrifices of the two brothers. The writer is portraying the consequences of sin. Years have doubtless elapsed. Under the influence of a sinful life Cain's heart grows harder and his life becomes more bitter until he murders his brother. The first consequence of sin, therefore, is that it gains ever more and more power over the man until it leads him to the most inhuman wickedness. The narrative now proceeds rapidly. With every new syllable a consequence of sin is pointed out. One sin leads to another—Cain tells a lie to cover up his murder. Sin shall not remain hidden—Abel's blood cries from the very ground against Cain. Nor can the sinner escape punishment—God hears the cry and curses Cain. The sin of Cain waxes worse and worse in his progeny."

A religion that does not take hold upon a man's heart, transforming his life, opening his purse-strings, and putting willingness for service into hands and feet and tongue, lacks the essential proof of its genuineness. The religion of Christ, as revealed in the New Testament, does all that; but there are many variations from the New Testament model masquerading in the garb of Christianity, that satisfy the worldly mind, but leave the heart untouched and the life unchanged.—*The Examiner.*

Rev. James Watts Alexander, D.D., pastor, 1851–1859 of the Fifth Avenue Presbyterian Church, New York, said: "The great reason why we have so little good preaching is that we have so little piety. To be eloquent one must be earnest; he must not only act as if he were in earnest, or try to be in earnest, but *be* in earnest, or he cannot be effective. We have loud and vehement, we have smooth and graceful, we have splendid and elaborate preaching, but very little that is in earnest."

Christianity has only one purpose—holiness. Christianity ends in conduct. Christianity begins in motive, but it ends in character, in manhood. We are to be perfect men in Christ Jesus; we are to be as he was on the earth; we are to breathe his spirit, repeat his deeds, follow his footsteps, and represent him to mankind, so that we cannot be Christ himself, but we can be Christ-ones, Christians.—DR. JOSEPH PARKER.

Believe always that every other life has been more tempted, more tried than your own; believe that the lives higher and better than your own are so not through more ease, but more effort; that the lives lower than yours are so through less opportunity, more trial.—MARY R. S. ANDREWS.

Dr. Bushnell once put the truth in his effective way when he said: "If God is really preparing us all to become that which is the very highest and best thing possible, there ought never to be a discouraged or uncheerful being in the world." If there is such a one why is it? asks *The Sunday School Times.*

"Christians," wrote the sainted Christlieb, "are the world's Bible." The believer cannot escape that responsibility if he would—and surely he ought not to wish to if he could. It is high honor to be "a letter of Christ, written, not with ink, but with the Spirit of the living God."—*The Examiner.*

In the Christian life "putting on" is preceded by "putting off." We cannot cover up the old rags of self-righteousness with the robe of Christ's righteousness. The old must be laid aside. "Cease to do evil" precedes "learn to do well."—*United Presbyterian.*

Washington Gladden says: "The minister has no business with social subjects except as vitally related to the kingdom of heaven. The minister to whom religion is not the central and dominating power has no right in the Christian pulpit."

Only the spirit-taught can give spiritual teaching.—*The Ram's Horn.*

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 33 pp.

Hearings on proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Buswell Trial. 24 pp.

The Christian Science Movement. 22 pp.

Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men. How should the Sick be Healed? The Lesson Sermons.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

## Items of Interest.

**National.**

Mr. Allison of Iowa offered a resolution last week authorizing the Committee on Rules to re-examine the rules of the Senate with the view of ascertaining what change if any, are necessary, and especially to make inquiry whether it is expedient in any way to limit debate in the Senate, and if so to what extent. The rules at present allow unlimited debate, and advantage is taken of this to obstruct and delay legislation.

It is reported on what is considered good authority that two professors in the Harvard Law School will be appointed to important positions in the Court of Siam. One of these positions will be that of legal adviser to the King. This, owing to Siam's relation to international questions in the East, will be a position of importance and responsibility.

The Panama Canal Treaty with Colombia has been favorably reported without amendment to the Senate Committee on Foreign Relations. A vote on the measure was to be taken Tuesday.

**Foreign.**

Professor Banks of Columbia University expects soon to receive permission from Turkey to undertake excavations at Tel-Abraham, Mesopotamia, the supposed site of the tomb of Abraham. Professor Banks left Washington with a fund of money subscribed by people interested in Biblical history to explore the country around Ur of the Chaldeans, the birthplace and home of Abraham. A preliminary investigation gave promise of important discoveries, but the grand vizier of Turkey refused to grant him a permit on the pretext that it was unsafe for foreigners to go into that part of the country, and the government would not be responsible for their lives and property. Protests were of no avail. He then made application for permission to excavate at the site of Cothah, now known as Tel-Abraham, a city of Biblical history in Babylonia, whence, in 727 B.C., came the progenitors of the Samaritans. This site lies near the ruins of Babylon. Permission was again refused. It is believed that the requests would have received favorable consideration had they been accompanied by a proper amount of backsheesh, which is usually effective with Turkish officials. Professor Banks seems to have been more successful with the new grand vizier.

Dr. Kuyper, the Dutch premier, has introduced in the second Chamber of the States General three important bills dealing with questions arising out of the recent railway strike. The first authorizes the formation of a railway brigade, whose duty it will be to maintain regular traffic in the event of strikes. The second provides for the protection of all employees who may be willing to work and for the punishment by imprisonment for six months of those who absent themselves. Under the third measure a committee is to be appointed to examine the conditions of the railway employees and to fix regulations by which their interests will be protected under the guarantee of the State.

As a result of Ambassador McCormick's inquiry on behalf of the State Department as to whether American contributions to the Finnish relief fund would be welcome, and how much aid was needed, the Russian Government has restored to the Finnish railway fund seven hundred thousand dollars, and a railroad will be pushed north from Idensalmi to Kayana. This road will facilitate relief measures in the famine districts in the future, and greatly develop the natural resources of the country.

The Czar has issued a decree providing for freedom of religion throughout his dominions, establishing in some degree local self-government and making other concessions to the village committees. The public hails it as the proclamation of a new era, promising early improvement in Russian internal administration.

An enthusiastic conference on the Pan-American Railroad project favoring a continuous line from New York to Buenos Ayres has been held in Washington. It is estimated that two hundred million dollars would be required to construct and equip the connecting links.

In a recent note to the United States Government the Argentine Republic recognizes and endorses the Monroe Doctrine. This is the first nation of South America to acknowledge and accept the doctrine as a principle of American public law.

The Siangeli copper fields, which extend on either side of the boundary between Norway and Sweden, have been sold to an American company for $1,000,000.

**Industrial and Commercial.**

The stockholders of the Pennsylvania Railroad Company in annual meeting, March 10, voted to increase the capital stock of the company by $150,000,000, making the total authorized capital $400,000,000. The first vice-president said that for the first time in its history the Pennsylvania Railroad Company is unable to meet the demands made upon it. Vast improvements have been made and are contemplated in order to furnish facilities for handling the rapidly increasing business. In the past two years, he said, the company had purchased a total of forty thousand freight cars and on an average, one locomotive daily.

Representatives of the passenger departments of the Pennsylvania, the Baltimore and Ohio, the Chesapeake and Ohio, the Lackawanna, the Erie, and the Lehigh Valley railroads have agreed upon the issuance from May 1 of a mileage book which will be received on all divisions of the allied lines east of Buffalo, Pittsburg, and Parkersburg, W. Va.,—a total of eleven thousand miles. The book will contain one thousand miles transportation with a time limit of one year. It will be sold for $30, with a $10 rebate, to be paid when the mileage is exhausted.

Prospectors for serpentine have come upon a rich vein of malachite six miles west of Delta, Penn. The vein underlies a dozen or more farms, traversing them for five miles. Specimens of the malachite are beautifully striped and mottled with the green shades peculiar to malachite and the soft red tints of cuprite which gives the famous Russian product its beautiful markings.

A large find of valuable iron ore in the Riverhills, near Wrightsville, Penn., has just been made and is considered by the State geologist to be one of the most important ever discovered in Pennsylvania. The ore is of the hematite variety, containing a large percentage of metallic iron and little dross.

At a recent meeting at the Tilden Club, New York, one hundred furniture manufacturers and dealers from all over the country organized the Furniture Association of America. The membership includes nearly one thousand concerns with an aggregate of more than fifty million dollars of capital.

**General.**

The Greek Archæological Society has decided to restore the Doric Temple of Jupiter, at Nemea, situated near the haunt of the famous Nemean lion, the slaying of which formed one of the feats of Hercules. The edifice was overthrown by a succession of earthquakes, and only three columns are now standing; but the fallen shafts that lie around the temple are so little injured that it is believed it will be possible to re-erect them and the fallen entablature without much difficulty or expense, and without having recourse to new material. As soon as the ground around the temple has been cleared of the litter of fragments that now encumber it, the Greek Government intends to begin excavations on the spot, and hopes to make valuable discoveries.

Orders were given some time ago by the authorities of Venice to remove, if possible, Tintoretto's famous mural painting, "Glory of the Blessed in Paradise," which occupies the entire east wall of the council chamber in the Ducal Palace. Defects in the building had aroused a fear lest the wall might go to pieces, and a committee of artists was appointed to make the removal. The work, however, has been found to be impossible, owing to the crumbling condition of the wall, and has been abandoned. The painting is said to be the largest in the world. It is 84 feet long by 34 feet high. It was made in 1550.

The *Shipping Gazette* says it understands that the International Mercantile Marine Company has decided not to build any more leviathans, like the White Star line steamers Cedric and Celtic, until improved port facilities enable the company to exercise greater economy in working the vessels and render their construction a less risky financial undertaking. The *Gazette* also says it believes the new White Star Line steamer Arabic, of 15,800 tons, will represent the limit to which the combine is prepared to go under the present circumstances.

The first step toward the establishment of a municipal electric lighting plant was taken last week in New York. The Board of Estimate, on the motion of the mayor, practically decided to try to have the necessary bill passed before the Legislature adjourns. This was done after a report had been made by a commissioner of the department of water supply, gas, and electricity, wherein he says he has found that New York is paying far more in proportion for its lighting than any other city of importance in the country.

The cut of logs in Maine this season is estimated at eight hundred million feet. To cut all these logs an army of about six thousand men and forty-five hundred horses has been employed at an expense in wages of about four million dollars. To drive the logs on the Penobscot alone twenty-five hundred men will be engaged at much higher wages than the woodsmen receive.

## Selected Articles.

### How Christian Science Heals.

Mr. Editor.

The writer of an exceedingly suggestive article in your issue of February 22, entitled "Faith, Nature, and Health," discusses the *modus operandi* of healing the sick. In this connection he makes special references to Christian Science which I desire to review briefly. This task will be the more agreeable because Oregon Richmond has expressed his opinions with quiet conviction, as far as possible removed from the manner of stormy denunciation which was once quite common. Indeed, he asks why the medical profession should ridicule the work of Christian Scientists and others. He gives it as his opinion that it is not now a debatable proposition that the Christian Scientist, among others, is "frequently instrumental in the restoration to health of persons who have been declared to be incurable by members of the medical profession." Especially striking is his statement that: "No honest physician can yet say 'I cure disease.' He stands just where the priests of Æsculapius stood thousands of years ago. He is powerless except to 'assist nature.'"

According to this writer, then, the healing power resides in nature, and the *vis medicatrix naturæ* heals the sick. Here is a point which needs to be carefully examined. It is certain that all Christian Scientists will agree with him if this *vis* or power is understood to be the underlying Cause governing the universe including man; namely, omnipotent Mind or God. This is, indeed, the teaching of Christian Science, and herein is a point of agreement.

But if the *vis* he mentions as healing the sick, is supposed to be a material agency of some sort, a property resident in matter, or if he attributes power to matter itself, then Christian Science will repudiate this notion, for matter can never be said to be the cause of action or to produce results, since back of every material manifestation stands law, and law implies and requires Mind as its Cause. On this point, Mrs. Eddy has stated:—

"Mind is the grand creator, and there can be no power except that which is derived therefrom. If Mind was first chronologically, is first potentially, and must be first eternally, then give to Mind the glory, honor, dominion, and power everlastingly due unto its holy name" (Science and Health with Key to the Scriptures, p. 143).

"The world would collapse without Mind, without the intelligence which holds the winds in its grasp" (p. 209).

It is the understanding of God (Good) as the infinite and omnipotent First Cause which heals the sick in Christian Science, and when this understanding is applied to specific cases, it is not necessary to speculate about the effect of Omnipotence upon "the unit-cell of the living form—the creative cell," "life-cell" or whatever we may choose to call various subdivisions of matter.

While it may happen that "Belief in the supernatural authority of him who claims to heal by divine appointment acts as a most potential excitant," such an "excitant" is not requisite to the Christian Science treatment, and, in point of fact, is not desirable, if it assumes a purely personal aspect.

Mrs. Eddy has written on this aspect of the question:—

"Sometimes it is said: 'Rest assured that whatever effect Christian Scientists may have on the sick, this effect comes through rousing within them a belief that these healers have a wonderful power, derived from the Holy Ghost, in the removal of disease.' Is it likely that church-members have more faith in some Christian Scientist whom they have perhaps never seen, and against whom they have been warned, than they have in their own accredited and orthodox pastors, whom they have seen, and been taught to love and trust?

"Let any clergyman try to cure his friends by their faith in himself. Will that faith heal them? Yet Scientists will take the same cases, and cures will follow. Is this the result of their faith in the Scientist, rather than in their pastor? I have healed infidels whose only objection to this method was, that I as a Christian Scientist believed in the Holy Spirit, while they, the patients, did not" (Science and Health, p. 358).

Whatever cures Oregon Richmond may have witnessed in Barcelona or in Bombay, unless they were effected by the understanding of the Omnipotence of God (Good), the First Cause, over evil of every sort, they cannot be reckoned as examples of spiritual healing such as Christian Science makes possible. I have no desire to criticise any method of alleviating suffering to which mankind may resort. I only take the privilege of differentiating Christian Science practice from any other method with which it may be confounded, and of pointing out the spiritual understanding which is demanded by Christian Science.

W. D. McCRACKAN.

In *Elmira* (N. Y.) *Telegram.*

### "Equality among Healers."

To the Editor.

Your editorial, "Equality among Healers," in the issue of February 13, contains much that Christian Scientists will indorse. No class of people advocate a higher standard of ethics than the Christian Scientists, and having, as a rule, had much to do with physicians in the effort to regain health before taking up with Christian Science, they see the necessity of exercising the greatest care to keep the ranks of medical practitioners free from charlatans and incompetent persons.

The medical bill under consideration, however, aims to do more than merely regulate medical practice. It aims to shut out all ways and means of bringing aid to the sick and suffering except by the ministrations of those who have graduated from medical colleges.

The question of how the sick are to be healed is a very broad one. Until *materia medica* can be proven to be an exact science there will continue to be well-founded opposition to any legislation which makes dependence upon doctors of medicine the only means whereby the sick can legally look for relief.

There have been repeated attempts in many state legis-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

latures to establish laws which leave to the citizen no choice in questions pertaining to health; but only in one or two instances have legislatures been found willing to place laws of this kind upon the statute books, and the constitutionality of such legislation is open to question.

The fact that the medical profession seeks protection of this kind indicates a lack somewhere. If their efforts to heal were universally successful no such protection as they now seek would be needed. The claim is put forth that this legislation is sought for the "protection of the people." At the public hearing granted by the committee having the bill under consideration no clamoring on the part of "the people" for this "protection" was noticeable; at least no representatives of the people came forward to urge the passage of the bill. The only advocates of the bill present on that occasion were the physicians themselves. On the other hand, a very respectable and intelligent portion of our citizenship was represented by delegations of Christian Scientists from all parts of the state to protest against this intended infringement upon their rights of religious belief and practice.

Prayer to God ever has been, and ever will be, an effectual remedy, and the Christian Scientist has proven his right to rely upon prayer, and prayer alone, as his remedy for disease. He has proven it by his works.

There need be no fear that Christian Science is bringing disaster to its believers. As a rule, its numbers are largely recruited from the ranks of those who have had abundant experience with medicine, and it is that experience which prompts them to prefer Christian Science. The fact that its advocates are increasing in number is the best answer to the charge that it does not heal the sick.

The attempt to make our state say that one method of healing shall be followed to the exclusion of all others savors strongly of paternalism. If adopted, a law of this kind would be the first step toward specifying what practice shall invariably prevail and what drugs shall be administered for each and every ache and pain. The Christian Scientists are confident that the lawmakers of this Commonwealth will not be inveigled into favoring unjust discrimination of any kind, and especially of the kind contemplated in the act now under consideration. ALBERT E. MILLER.

In *Philadelphia Public Ledger.*

## A Loving Rebuke.

CHRISTIAN SCIENTISTS, the same as other professing Christians, believe in God, the only true and living God, who is Spirit, Life, Truth, Love. They believe they can only be saved through Christ, and this is what other professing Christians teach. Because they take God at His word for physical healing as Jesus taught and practised, while many other professing Christians do not, this surely is no good reason why other professing Christians should take it upon themselves to misrepresent their teachings.

If all professing Christians are to become one united brethren in Christ, should not those who name the name of Christ manifest love toward one another? If all are to be of "one mind and one accord," should we not begin to put into practice the Lord's Prayer, and say "Our Father which art in heaven, hallowed be thy name. Thy kingdom come"?

No one would say that in years gone by the religious wars that have stained and disgraced the pages of history were any part of Christ's kingdom of on earth peace, good-will toward men. Neither is it any part of the uncharitable position assumed by many professing Christians leading them to speak disrespectfully of other Christian denominations.

When Jesus taught we should pray, "Thy will be done in earth, as it is in heaven," he certainly inculcated a degree of toleration for the rights of individuals to think for themselves, and not condemnation for all ideas differing from our own narrow views.

If professing Christians, regardless of denomination, will obey the Lord's Prayer and heed the admonition of the apostle, we shall soon in spirit be one united brotherhood in Christ, no longer fighting one another, but one body in Christ united in fighting sin. LLOYD B. COATE.

In *Dayton* (O.) *Herald.*

## The Purpose and End of Christian Science.

CHRISTIAN SCIENCE is not on the plane of any system of medicine or human mode of treatment, and its work is far beyond the mere healing of sickness. Its whole purpose is to demonstrate the supremacy of Mind, the only Cause, of which man is the manifestation.

Had that divine Mind been obeyed by mankind and the life-rules of the Man of Galilee been adopted by applying his Principle to concrete problems, the world would never have sunk into the darkness of the succeeding ages. But when the Holy Spirit was cast out of religion, and false ambition, worldliness, and temporal power crept into its precincts, the realization of the divine law of Life was lost. Then, in the suffering which followed error, the appeal was made to faith in some material means of relief, instead of to the power of righteousness and spiritual law, which are the antidote for sin and all its consequences. Thus the leading religious systems of the times advocated less the importance of spiritual renewing to remove the cause of sickness, than the retrograding alternative of resorting to matter in the desire to neutralize the effects of sin. Christ Jesus, however, when healing, showed the necessity that sin be forsaken and forgiven, that is, destroyed; and in explaining the inevitable penalty for sin and the way to gain freedom from suffering, he said, "Sin no more, lest a worse thing come unto thee."

It may be useless to conjecture how long ago we might have had the kingdom of God on earth had Jesus Christ's system of healing—relieving the human mind of error by the Science of divine Mind-healing—been universally accepted. We know, however, if we believe the Lord's Prayer, that His kingdom is to come to us as we become individually responsive to the demands of the divine Life, and aid in the establishment of this kingdom of Truth and Love in the hearts and experiences of men. The question we should each ask ourselves is, What am I doing to help in the upbuilding of this kingdom? How useful have I been in leading others so to live that we can say, "The kingdoms of this world are become the kingdoms of our Lord and of His Christ"? How much have I done to verify that prayer of the Master and further its efficacy in the understanding and lives of others?

As Christian Science teaches that we cannot sin without suffering, even so it teaches that all right-doing has its reward. The penalty for sin is not alone in the degradation of character, the dimming of spiritual perception, but also in a train of consequences, which, sooner or later, compel repentance and reformation. "Be not deceived; God is not mocked: for whatsoever a man soweth, that shall he also reap." The mere physical manifestations of cancer, consumption, or any other disease, are less harmful than moral offences,—diseases of character. Man lives best and most by doing all the good he can in pursuance of God's will. He does not then look for health in a state of the flesh, nor for ease in materiality. He learns that "it is the spirit that quickeneth; the flesh profiteth nothing." He sees that he must rise to this realm of the ever-present Real through spiritual consciousness, a life redeemed by following Christ in his glorious works and glorified being.

To acquire this elevation, we must meet the divine de-

Digitized by Google

mand to love God supremely and our neighbor in the way most helpful to him. "Love worketh no ill to his neighbor: therefore love is the fulfilling of the law." Any ill wrought to another, immediately brings to the wrong-doer forfeiture of the power and presence of the God who is Love. Hence, it is impossible for a wilful evil-doer to demonstrate Christian Science, or to remain a Christian Scientist, if he has been called by the name.

Christian Science expresses the activity of those qualities which constitute the divine Nature or Spirit, and it frees mankind from the control of the lower mental and physical elements; while hypnotism is an emanation of the mortal or corruptible mind, which acts through the suggestions of the material senses. Every genuine Christian, reflecting the Mind of Christ, can neither hypnotize nor be hypnotized. Evil, claiming to be mind, is really not intelligence, for it cannot produce divine and orderly results. But in the Science of divine Mind, the Christian has a safeguard, and can defend himself against the suggestions of sin, disease, and death, inasmuch as he is governed by the Christ-mind and claims only the righteousness of the Lord.

The latter-day evils of hypnotic control, evil suggestion, and all other misuse of mind power to harm another's health, morals, or happiness, can be overcome with good, with the Love that worketh no ill, but seeketh another's good.

The action of Christian Science in the household, as well as with the individual, is to produce harmony. Its demonstration brings out goodness, reciprocal kindness, and wholesome conditions in the home, and it adds a deep sacredness to all the ties therein which uplift, comfort, and bless. It prevents estrangement and dishonor in the family, and upholds the perpetual ideal of a beautiful life permeated with the graces of Christian virtue. In "Miscellaneous Writings" (page 100), one of the most important works on Christian Science by Mary Baker G. Eddy, we read, "Pure humanity, friendship, home, the interchange of love, bring to earth a foretaste of Heaven. They unite terrestrial and celestial joys, and crown them with blessings infinite."

We have practical life-laws for our daily guidance and advancement in the Mind that was with Christ Jesus, expressing the infinite and ever available meanings of divinity embracing humanity. These laws are for the government of all, so that each may rise, through spiritual force, to the grandeur of man who is the reflection of infinite Good, limitless Life, Love, and Truth. ALICE JENNINGS.

## The Czar orders Reforms.

THE late ukase of the Czar has awakened no less interest than his initiation of The Hague tribunal, and despite the Manchuria and Finland episodes, the world will be disposed to attribute these acts of Nicholas to a sincere desire to minister to the welfare of all the people. Those who are familiar with the constitution of the Russian state will understand how great the inertia which opposes the advance of every religious and economic reform, even though it have the unqualified approval of so absolute a monarch.

The text of the Imperial decree upon which comment is made in our editorial columns, is as follows:—

On ascending the throne of our ancestors by the providence of God, we made a solemn vow before the Almighty and our conscience to guard sacredly the centuries-old pillars of Russian power and to dedicate our life to the service of our beloved fatherland in indefatigable solicitude for our subjects. We chose, in order to assure the well-being of our people, the way indicated by the memorable deeds of our predecessors, especially our never-to-be-forgotten father. God pleased to interrupt the deeds of our father by his early death, and thus laid on us the sacred duty of completing the consolidation of order and truth begun by him in conformity with the exigencies of national life. The troubles agitating our country, which to our deep regret have partly been sown by designs hostile to the state and partly engendered by doctrines foreign to Russian life, hinder the general work of ameliorating the well-being of our people. These troubles confuse the public mind, remove the people from productive labor, and often ruin families dear to our heart, and young energies, among high and low, necessary to the internal development of the country.

In demanding the fulfilment of this our will, while remaining strongly opposed to any violation of the normal course of national life and having confidence that all will loyally discharge their local duties, we are irrevocably decided to satisfy the needs for which the state has become ripe and have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian empire, which, recognizing the Orthodox Church as the ruling one, grant to all our subjects of other religions and to all foreign persuasions freedom of creed and worship in accordance with other rites, and we are further resolved to continue the active carrying out of measures for the improvement of the material position of the Orthodox rural clergy, while enabling them to take a larger share in intellectual and public life.

In accordance with impending measures for the consolidation of the national economy, the efforts of the state credit institutions, and especially the nobles' and peasants' banks should be directed to strengthening and developing the welfare and fundamental pillars of Russian village life and that of the local nobility and peasantry. These principles marked out by us for the revision of the laws of the rural population are, when formulated, to be referred to the provincial government councils, so that with the assistance of persons enjoying the public's confidence they may be further developed and adapted to the special conditions of individual localities. In this work the fundamental principle of the inviolability of communal property is to be maintained, while at the same time means are to be found to render it easier for the individual to sever connections with the community to which he belongs, if he so desires.

Without delay measures must be taken to release the peasants from the present burdensome liability of forced labor. Thorough reform is to be effected in the provincial governments and district administrations by the local representatives, while attention will be devoted to securing closer co-operation between the communal authorities and parochial trustees of the Orthodox churches wherever possible.

Calling upon all our subjects to co-operate in strengthening the moral foundations of family, school, and public life, under which alone the well-being of the people and the confidence of every one in the stability of his rights can develop, we command our ministers and chief officials concerned in this matter to submit to us their views regarding the execution of our intentions.

It is not of lofty or heroic deeds that the enduring pattern of character is woven, but rather of the seemingly small things of life: little unheralded acts of helpfulness, slight self-denials that bar against selfishness, conscientious attention to trifling details of duty, standing firm to the right in spite of banter and contempt,—really the most difficult thing for young or old to withstand,—adherence to scrupulous honesty in word and deed, even in what others consider of no import, sticking to Principle, though one may be called "old-fashioned," "unprogressive," or "puritanical;" there are the golden strands which, woven into the fabric of daily living, make men and women invincible.

## Irrigation in the Southwest.

THE Rio Pecos might be called the Nile of America. Flowing from the eastern slope of the Rockies southeastward through New Mexico and Texas, until it runs into the Rio Grande on the border of the United States, it passes through a desert as desolate and as barren as Sahara, whose few trails are marked with the skeletons of men and animals who have perished in their endeavor to cross its sands. A part of the Llano Estacado, or Staked Plain, is included in this waste.

For years this region was known principally for its sage brush and rattlesnakes. The only human beings who defied its terrors were bands of southwestern Indians, such as the Apaches, a few half-breeds, and the Indian fighting troopers like those who followed Custer and were with Generals Miles and Wood in the pursuit of Geronimo.

The Rio Pecos has another title in Spanish and Indian which means "welcome water." It is indeed an apt title, for there are places in the great Southwest where one must travel a distance of fifty miles from its banks before reaching even a rivulet or well of water which is fit to drink. Here and there ponds can be found, but the water is so impregnated with alkali that a draught means death to man or beast.

The sand hills of the desolate plateau through which the river passes for many miles are so white that in the distance they resemble heaps of snow; the sand is so loose that a horse sinks above his knees in floundering through it, and so hot at noonday that it burns the skin like a red-hot iron. There are sections of this region twenty miles in extent absolutely destitute of any vegetation except cactus and sage brush, and in some spots even these will not grow.

As the course of the Nile can be traced as far as the eye can see by the groves of trees on its banks here and there, so the dark line on the desert horizon of the southwest has saved the life of many a traveler, inspiring him to make a last effort to reach it, assured that there would be found water. Approaching nearer, the line resolves itself into woodland, which forms a sort of beacon to guide one to the river.

Like the other water courses of the Southwest, it is a capricious stream, being one week so dry that its bed can be crossed, scarcely wetting the horse's feet, and a fortnight later it may be rushing toward the Rio Grande in a muddy torrent which nearly fills its banks.

The southwestern desert still stretches away from the river as far as the eye can reach, in places, and even many miles beyond the range of vision, but in some portions of it a wonderful transformation has occurred, all the more marvelous when contrasted with the picture of barrenness beyond it. The skill of the engineer in confining the waters of the river by a great barrier of masonry, similar to that at Assouan, has wrought this change.

Literally it has peopled the wilderness with a community of one hundred thousand, and has converted the surface of the plain into grain field, garden, pasture, and orchard. It has even created towns and cities where fifteen years ago not even an Indian would have camped for the night. It has resulted in connecting this corner of the country with the rest of the world by a highway of steel which takes the place of the bone-strewn trail of the past.

But a few years ago the idea of damming was conceived by the engineers, who little thought of the benefit which would result. They found a site where the river could be transformed into a lake which covers ten thousand acres, and from this lake the waters have been spread over the desert to furnish the element to fertilize the soil.

Before the wall of stone was half completed settlers began to come into the region with their "prairie schooners," and to secure the sand patches which the government called land. When the engineers had finished the work, and the waters were turned into canal and ditch, these pioneers of civilization planted seeds, shrub, and tree, even the door-yard garden was not neglected, and the Biblical saying, "The desert shall blossom as the rose," has been literally fulfilled.

As the visitor glances through the window of the railroad car, a magical panorama passes before his eyes. The day before the only vista which presented itself was the monotonous landscape of sand-hill and plain with its growth of sage brush and cactus. Here he sees a pasture with its herd of Herefords and Durhams grazing, for the fields of alfalfa nourish some of the highest grade cattle in the United States.

If it is cotton time, he can see patches of one hundred or one hundred and fifty acres white with the fleecy staple. Next to the cotton field may be a mile of trees laden with apples, peaches, or other of the numerous varieties of fruits which grow in abundance. Fields of beets containing one hundred to five hundred acres are plentiful. Gardens with vine and bush laden with vegetables and small fruits form one of the most attractive phases of the picture. Here and there the canals, fringed with forest trees, stretch away in the distance.

The tourist might imagine himself in one of the fertile valleys of the East were it not for the cotton and other reminders of a southern clime.

Altogether, nearly two hundred thousand acres have been taken from the desert and made fit for habitation by utilization of the waters of the Pecos. They furnish pasturage for over five hundred thousand cattle and almost as many sheep, some single herds and flocks running into the thousands.

The sugar-beet crop supplies several of the largest factories in the country, which have been built in the same section, while the fruits and vegetables are shipped by the car-load, and even train-load, to the markets of the West and Northwest. The yield of the apple, peach, and apricot trees is so great that some of the horticulturists secure ten thousand dollars from the harvest of a single orchard.

The spreading of the water over the land has resulted in the founding of communities which are cities in point of population and progress. Although located on an oasis which is separated by a hundred miles of barrenness from other habitable parts of the country, thanks to the railroad they are in touch with the balance of civilization, and are as modern in their improvements as many of the cities of the East which are ten times their age.—*The Boston Herald.*

## A Polyglot City.

PROFESSOR BUCK of the philology department of the University of Chicago has been looking into the linguistic conditions of that city, with results that are somewhat astonishing. Of all the cities of the world, he awards to Chicago the front rank for cosmopolitanism, there being no less than fourteen languages besides English, spoken there by colonies of at least ten thousand persons each. Newspapers appear regularly in ten languages, and church services may be heard in about twenty languages. Chicago is the second largest Bohemian city in the world, the third Swedish, the third Norwegian, the fourth Polish, the fifth German. In all, there are some forty foreign languages spoken by numbers ranging from half a dozen to half a million, and aggregating over one million. Professor Buck carried on his investigations by temporary residence in the various colonies in Chicago, which are really little cities within the metropolis, each speaking its own language, clinging to its hereditary customs. It is found, however, that the children can generally speak English, and that the grandchildren, as a rule, never learn the foreign language and speak only English.—*The Boston Herald.*

## Among the Churches.

### Progress in Lisbon, N. H.

The Christian Scientists of this place have taken a step in advance and moved into a new hall in Parker's Block. They held their first service in their new quarters March 1. There were sixty-five or more present. The hall is of commodious size and is very prettily furnished. Best of all, we have the exclusive use of it.

Our Society numbers but thirteen members, but a spirit of harmony has always prevailed. An earnest desire manifested on the part of the members to do what they can, has brought us this better place for our worship.

C. C. MOORE, *Sec.*

### Advance in Hoosic Falls, N. Y.

The Christian Science society here has grown slowly but surely for several years, and on the first day of December last, our articles of incorporation as a church, were filed with the county clerk, and January 18 we moved into our new quarters in the new Easton and Sharpe Block. We have a suite of five beautiful rooms. The reading rooms and office in front, and audience and Sunday School rooms in the rear.

For this manifestation of the unfailing provision of our Father-Mother God for the comfort and support of His children we are indeed grateful, and our hearts go out in thankfulness to our Leader who has shown us the way of Life through Christ Jesus.—MRS. ANNA S. CARPENTER.

### Second Church Organized in London.

The organization of Second Church, London, Eng., will be of interest to the Field.

For some time past it has been evident to many earnest students that the work, so near to our hearts, would receive a fresh impetus by the formation of a Second Church, and in love this step has been taken. We organized with a membership of sixty-five, and we are growing rapidly, and although we have a seating capacity of between three hundred and fifty and four hundred, it is evident that in a few months we shall have to look for larger quarters. Our book-room is now well stocked with all the literature, orders having been sent for about five hundred dollars worth. We have two rooms: one for the sale of Christian Science literature and the other for reading. From the position, right in the business center of the great West End, it is noticed that during the noon hour people drop in just for a few minutes' quiet reading, and this will, I feel sure, lead to a great work with store clerks and busy professionals.—*Correspondence.*

The following "Impressions of Christian Science," received at a Wednesday evening meeting of this new church, are taken from the columns of a London periodical, *Study and Lounge.*—ED.

Passing along Queen's Road, one Wednesday evening a short time back, I noticed that the entrance to the Elysee Gallery was brightly lighted up, and I also observed a number of people going in. I found that a Christian Science meeting was to be held, by a Second Church of Christian Scientists. I had already visited their church in Bryanston Street, and although on that occasion I went as an absolute unbeliever, I could not but be impressed by the beautiful simplicity of the service and the rapt, reverent attention of the congregation.

Passing through the attractive entrance hall, I found myself in a large, pleasant room, at the further end of which a cheerful fire was burning in a grate.

After a while I noticed that people were coming in pretty fast, so I sat down and waited. At eight o'clock by my watch, a lady with an expression which "told of days in goodness spent," opened the meeting by reading the words of a hymn: "Shepherd, show me how to go" by Mrs. Eddy, the Founder of Christian Science. The congregation of about one hundred, rose and sang it in a whole-souled manner. Then came the reading, which was from the Bible and Mrs. Eddy's book, 'Science and Health with Key to the Scriptures." The reading was succeeded by a brief interval of silent prayer, concluding with the repetition aloud of the Lord's Prayer, and I have never taken part in anything more beautiful or impressive than were those few moments.

The second hymn was sung in the same hearty way, and this completed, a few facts in connection with the church services and the reading rooms were announced, and the meeting was opened for the giving of testimonies. The first speaker was a gentleman whom I afterwards discovered to be a doctor, who rose and related in a lucid and interesting manner several of his own experiences as well as some remarkable facts in connection with others, serving to illustrate the efficacy of the Christian Science treatment. This was followed by other testimonies, all told with a sincerity and depth of feeling which gave them interest even where the speaker could lay no claim to eloquence. I would recommend those who are interested in Christian Science to visit one or the other of the places which have been converted into churches by its adherents, and I feel confident that if the visitor does so with an open and unprejudiced mind, he cannot but be impressed.

In a well-thumbed autograph book of Abraham Lincoln, found by H. A. Barker, the following paragraph is underlined and re-underlined: "A wisely trained character never stops to ask, What will society think of me if I do this thing, or if I leave it undone? The question by which it tests the quality of an action is whether or not it is just and wise and fitting when judged by the eternal laws of right." Does not this favorite passage of the boy foreshadow the greatness of the man who, amid the strife of party, the horrors of civil war, the defection of friends, and the abuse and calumny of enemies, stood unflinchingly by the "eternal laws of right"?

### Live in the Sunshine.

Live in the sunshine, don't live in the gloom,
Carry some gladness the world to illume.

Live in the brightness, and take this to heart,
The world will be gayer if you'll do your part.

Live on the housetop, not down in the cell:
Open-air Christians live nobly and well.

Live where the joys are, and, scorning defeat,
Have a good morrow for all whom you meet.

Live as a victor, and triumphing go
Through this queer world, beating down every foe.

Live in the sunshine, God meant it for you!
Live as the robins, and sing the day through.

MARGARET E. SANGSTER, in *Everywhere.*

President Roosevelt says that the two chief vices of our civilization are hardness of heart and softness of head. Much trouble also follows softness of heart and hardness of head. Truth is that life daily becomes so increasingly complex that to generalize about it is to state only half truths.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### The Czar's Decree.

ONE of the most striking proofs of the progressive spirit of the twentieth century is the recent decree of Czar Nicholas of Russia. The opinion that it is "the most significant act of state since the emancipation of the serfs" seems well within bounds, and the statement that "the public hails it as a proclamation of a new era, opening bright prospects of the early improvement of Russian internal administration" seems justified.

The declaration, "Without delay measures must be taken to release the peasants from the present burdensome liability of forced labor," reads somewhat like a proclamation abolishing slavery, and it is hardly conceivable that such a condition has existed within the present generation. It has generally been supposed that the liberation of the serfs by the grandfather of the present Czar, had abolished personal servitude, although it did not confer political equality. That there will be no delay in this regard will be the hope of all liberty-loving people the world over.

What will appeal to many as the most significant and most liberal clause of the decree, is that which grants religious liberty to those outside of the state church. The following words seem sufficient to guarantee religious freedom and protection to all. "We are irrevocably decided to satisfy the needs for which the state has become ripe, and have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian empire, which, recognizing the Orthodox Church as the ruling one, grant to all our subjects of other religions, and to all foreign persuasions, freedom of creed and worship in accordance with other rites."

Religious liberty must be co-existent with political and industrial liberty, else there cannot be a free people, and that the Czar recognizes this fact means much for the future of Russia.

The closing paragraph of the decree expresses the thought of a patriotic and progressive monarch: "Calling upon all our subjects to co-operate in strengthening the moral foundations of the family, school, and public life, under which alone the well-being of the people and the confidence of every one in the stability of his rights can develop, we command our ministers and chief officials concerned in this matter to submit to us their views regarding our intentions."

M.

### The Dead Past.

ONLY the ingrate would fail to acknowledge the blessings that are ours from the toil and talent, the heroism and self-sacrifice, of past generations. But let us be careful that while the past with one hand confers blessings, it does not with the other encumber us with traditions and beliefs that would proscribe our possibilities, fetter our free limbs, and manacle the present with the faults and failures of the past.

Many a poor sufferer would go free, could he realize that "Every day is a fresh beginning," could he know that the past can touch the present only with the power of Good; if he could realize that expiation, remorse, regret, despair, cannot be fastened upon man in God's present, and that sin and sickness, the gloomy shades of yesterday, must vanish when the light of Truth breaks along the horizon of to-day.

Mark Anthony, in his artful appeal to the rabble of Rome, says,—

> The evil that men do lives after them;
> The good is oft interred with their bones.

How well it sounds! how it catches the ear and fastens itself in the memory! But is it true? Is not good immortal, is it not the evil that is interred with men's bones?

As Christian Scientists, we recognize that loyalty to Truth's ideal inevitably antagonizes error and involves burden-bearing on this plane of consciousness as we follow the footsteps of the Master; but we are daily asserting and demonstrating, so far as we can, the nothingness of error in the present, why, therefore, should we immortalize the error of the past? Why ponder and emphasize the doleful lessons of history and predicate of every good deed inevitable persecution? Is it ordained of God that the virtuous must be sacrificed? Is it not rather that mortal mind precipitates its own sentence through our fear of precedent, and our superstition?

In our old belief of two powers,—good and evil, with evil more than half the time in the ascendancy,—this slavery to past mistakes, ignorance, and sin was consistent; but with the nobler teaching which Christian Science brings us of the omnipotence of Good and the impotence of error, we can, both as a people and as individuals, refuse to accept as our legacy from the past anything but good.

Reformation righteously and rightfully dismisses the sins of the past with, "I never knew you!" We are not affrighted by the phantoms of misspent yesterdays since "we acknowledge God's forgiveness of sin in the destruction of sin, and in the understanding that evil and sin are unreal, hence not eternal" (Science and Health, p. 497); and our glad hearts believe, with our own Whittier,—

> That all of good the earth has had
> Remains to make our own time glad,
> Our common daily life divine,
> And every land a Palestine.

S.

### "There is no Strife."

THE oneness of Truth and the harmony existing between all its varied expressions is constantly suggested in the unconscious revelations of our inner life.

In moments of supreme experience and of perfect naturalness, the prejudices and conventionalities which have separated men, fall away, their sway is broken, and in the accents of a common language all men witness to their essential likeness in thought and aspiration, and this gives that value and authority to the moral judgments of the people as a whole, which have led all great statesmen to recognize in such abiding convictions the voice of God, *vox populi, vox dei.*

The most commanding sense is a universal one, and the things which most distinguish and exalt individualities are those which point to their oneness of nature, of capacity, and of endowment.

The desire for happiness and the impulse to secure it, are not more common and impelling in humanity, than is the instinct for Truth in man; and the brightest, most prophetic, chapters of human history are written when this instinct, either consciously or unconsciously, controls our thought and guides our pen. Christian Scientists are not infrequently reminded of these things while reading the comments of their well-meaning critics, many of whom in the honesty of their purpose become unconsciously responsive to a higher sense, and so stultify the darling errors of the dogma they had set out to maintain.

Digitized by Google

Said one such, recently,—

"In essence there cannot be a false religion. If it is false it is unreal, a counterfeit, a sham, assuming to be what it is not, and actually non-existent. That which is of the very essence of religion must be wholly and exclusively true, absolutely unique, without any competitor or substitute. There cannot be two essential principles of anything. To say that there are two is to say that one or both must be fraudulent. This reasoning is correct, whether we reason about God or about the simplest substance which the chemist examines."

Christian Scientists could hardly state the reality and supremacy of good, the unreality and nothingness of error, more clearly and convincingly than has this honest brother whose prejudices would stand aghast did he know that the teaching of Christian Science is being buttressed at his hands.

The realization of this oneness of the true man with God, and the consequent harmony between all the sons of God, serves a most practical end in supplying a basis for the impersonalization of error.

The recognition of man's indissoluble relation to God not only explains that kinship of thought and aspiration which is involuntarily revealed despite the superficial antagonisms of human mentality, but it locates these antagonisms in that false sense which, though it has seemingly usurped man's place, is entirely foreign to spiritual individuality; it belongs wholly to error.

The thought of an offensive person is thus displaced in consciousness by the divine idea, in perfect at-one-ment with the Principle it images, and in perfect accord with all other divine ideas. Error thus differentiated from personality is robbed of the sole support of its asserted being and powers, and is no longer present to our consciousness of God, and of man in His likeness.

Those who look upon the conflicting opinions which separate men as inherent in individuality, would aver that but for these contradictions the mental universe would be characterized by the dulness of insipid uniformity, and thus argue for the necessity of error; but they forget that the highest sense of harmony is not effected by the retention of discords, but by their elimination, and that the freshness and vital interest of life springs not from the contentions of error, but is the fragrance of Truth's spontaneous and eternal unfoldment. W.

---

A late editorial in the *Portland Oregonian* which, while relatively courteous and kind, discloses the greatest misapprehension of the teachings of Christian Science, ends with the following lines which speak well for the impression that Christian Scientists are making upon the general public. It says, "The Christian Scientist is an impossible hypochondriac or pessimist. He is also sure to be a person of clean life. Christian Science never corrupted a home nor started a young man on the downward path."

The life that is characterized by purity and good cheer can but uplift and win, and such a life Christian Science certainly inculcates and begets.

## From our Contributors.

### "Divine Love always has met, and always will meet, every human need."*

JOSEPH G. MANN.

RECENTLY, while earnestly conversing with a fellow-student about the urgent want, seen and felt everywhere outside of Christian Science, the above oft-repeated and overflowing quotation from our text-book brought to me a new burst of light. Having in mind relief from some pressing circumstances,—human necessities as judged from the standpoint of the physical senses,—my friend, with the usual complacent and selfish expectation, quoted this well-proved and unselfish promise. While in deep reflection and almost before realizing what I was saying, I answered: "Yes; divine Love meets every human need, and the human need is to love, and always to reflect Love."

Would I could tell the unfolding to me of the spirit and substance of that text since this new dawning! The difference between my present sense of those inspired words, and my past, is the difference between selflessness and selfishness.

Now my "every human need" is to strive for, and to *gain*, that true sense of love which is the reflection of Love,—of God. This love "seeketh not her own," but enables me to understand the thirteenth chapter of First Corinthians, and to realize with St. Paul that the greatest of all attainments, which "now abideth," is love. When starting from this highest standpoint of "human need," everything is changed for the better; and the good effect upon mankind generally is clearly shown in Science and Health (page 518), in that paragraph, so filled with promise, containing the sentence, "Blessed is that mortal who seeth his brother's need and supplieth it, seeking his own in another's good."

In the consecrated life of our beloved Leader we have the exemplification of her own words, and the proof that she is following the Master, who lived but to give,—a constant reflection of Love. He said to his disciples: "A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another" (John, 13 : 34).

Through the full and living sense of the Love that is God, Jesus healed the sick and raised the dead, and so brought joy to mortals. The Christian world rejoices in the endless blessings that have come through the Master's love,—this healing presence. Do even the Christian Scientists of to-day realize that the same benign love which brought joy to the sisters of Lazarus when it raised their brother from the dead, may have seemed cruel to Peter, when Jesus rebuked him, saying, "Get thee behind me, Satan: for thou savourest not the things that be of God, but the things that be of men"? (Mark, 8 : 33). No Christian to-day doubts that the dear Master always understood what was needed, and so spake and gave accordingly; though, to the sinner, he did not always appear to be actuated by Love, that Love which healed the sick and the sinner.

Christian Science awakens us to the sense of Love possessed by Jesus,—the sense that is "impartial, impersonal, and pure." This is our need, and we are satisfied with nothing less. This Christ-like sense has healed us of sickness, and will heal us of all sin, and so deliver us from the cause, and thereby forestall the further effects, of evil,—whether poverty or pain.

Doubtless Peter was more pleased when his wife's mother was healed of the fever by the Master, than when he received from him such a scorching rebuke for his presumption, and when, in his puerility, he would have rebuked his Master. That Peter wisely bore, and so profited by, the

* Science and Health, p. 494.

Digitized by Google

severe side of love, is seen in that he afterwards received the "keys of the kingdom," and emulated his Master in raising the dead.

So shall we progress to greater Christian ability to do good, provided we have love enough to "murmur not over Truth, if we find its digestion bitter" (Science and Health, p. 559).

So long as we are deceived into thinking that something less than divine Love will satisfy—meet the desire—we shall not call for Love; and, looking for other ways and means will not compensate for our ignorance of failure to look aright. We must be unselfish enough to see there is nothing in this world that we need but a true sense of divine Love. The more this human need is felt, the more willingly do we grapple with the hardest problems, accept, and even seek, self-sacrificing tasks which lead upward to love's source. The greater the divine demand for the righteousness of good works, right lives, the fuller must be our attainment in Christian Science of that understanding of the divine Love which enables us, as it enabled the Master, to say: "My yoke is easy, and my burden is light."

If too blind or sinful to see or admit our only unselfish need,—the need of love,—or if, through human subterfuges, we try to escape from bearing the "cross," which alone calls for, or brings it, we cannot hope to receive the blessing of divine Love. Do we expect our *bank* to pay us needed money,—when we have it on deposit in abundance,—without our making proper draft upon it, and giving sufficient proof that the money is ours, establishing, satisfactorily to the banker, our identity? "And he said to them all, If any man will come after me, let him deny himself, and take up his cross daily, and follow me" (St. Luke, 9 : 23).

## Counsel by the Way.

We are permitted to publish the following letter from a Scientist to an inquiring friend.

*Dear Miss R.*:—I have yours of the 31st ult., in which you state that your Bible is filled with promises of healing, and that you believe every one of them, but that you cannot seem to make them apply to yourself. You believe, of course, that God is omnipotent, omniscient, and omnipresent, and that He is Spirit, as your Bible states. Suppose you get the dictionary and ascertain from that the meaning of these definitions, so far as our language is competent to explain infinite themes. These definitions will enable you to see and realize that since God is all, there can be no other reality except this infinite Principle and its infinite ideas,—that it applies to, and governs everything that is or can be; that this infinite Principle and its infinite action, never had a beginning, and can, from its very nature, never have an ending. Your Bible tells you that God is Good,—that He is "of purer eyes than to behold evil," which is simply another way of saying that evil only exists as a human consciousness. You would not think of saying that a dream was real, yet it seems real to the human consciousness until that consciousness is awakened. It even affects the action of the heart, the circulation of the blood, and changes the tissues just as surely and more rapidly than malarial or typhoid fever or contagion, yet we are apt to think one is a dream and the other a reality, while in fact one is no more real than the other; neither is of God or known to Him who is infinite Good, infinite Spirit. When you say two and two are four, you state a truth, which has always existed, and which always will exist. In precisely the same way we state that God is Principle, that He is Truth. The child does not know that two and two are four without learning it, but when it is understood, it can be given to others a thousand or a million times without the giver having less. On the contrary, the more that is given, the more there will remain, *i.e.*, the more clearly it is apprehended that this Principle is the same, and its action the same, in Taylorville or Decatur, in Egypt or China,—the same as the air or the sunshine,—each can have it all without depriving another. In the first chapter of Genesis you will find that God created man in His own image and likeness, and that he has dominion over all the earth; and since God i Spirit,—the real man must be spiritual. The prophet Isaiah says: "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" In other words, get away from the material conditions, and look to the spiritual, which is the only real existence.

You state that you have had many talks with Mrs. W., but somehow she could not heal you. If you went to a dressmaker and talked with her about the styles, would you expect that to provide you with new gowns? or if you talked with your grocer about his goods, would you expect to find a supply delivered at your house upon your arrival; or would you have to go to them in a business-like way, willing to give something for what you expect to receive? If we go into a dark room, and shut the doors, we cannot expect to obtain much of the sunshine. We, as mortals, all want to do right, and to have health and peace of mind, but the education of centuries is strong within us, and leads us to seek these blessings entirely through material ways instead of going directly to God,—the source of all good and of every blessing, and opening our hearts and minds to Truth. We are educated to think that God is some great and terrible being,—some wonderful power, far off or beyond our reach, instead of realizing the fact that He is ever-present,—always ready to help, heal, and save, and that the only reason we do not see and know this is that the carnal mind which "is enmity against God,"—the old devil, Satan, or error, whom Jesus said was a lie and "a liar from the beginning,"—is ever parading before the human consciousness and manifesting itself on the physical body. This is always the cloud that hides the sunshine. Did it ever occur to you that the sun shines just the same on the cloudy as on the rainy days, but that we simply do not see it? Just so, Truth, Life, and Love are everywhere, and it is our right to receive and reflect all, not only now, but through endless eternity. We are apt to think that heaven is a locality,—a future home for which we are preparing. Jesus said, "The kingdom of God is within you." It is a condition of thought entirely,—a condition that should enlarge and become purified until we grow entirely out of all discordant material or physical conditions.

I have not had time to read the advertising matter which you sent, but you may be very sure that the person in Nevada who sent it, and whom you speak of as having something very much like Christian Science, has nothing at all like Christian Science, else he would not be placing it before the public in a manner so foreign to Christian Science practice. Christian Scientists do not intrude upon the mentality of others, but accept the Bible statement that each must work out his own salvation. They believe in seeking always not only to do good, but to think good and not evil, and so far as their practice is concerned, that must, under the present conditions, be based upon business principles. I do not think I have ever known of any Christian Scientists who sought patients, but when love and duty call them to engage in this work, to which they must give much time and study, it is plain that they should be paid reasonably for it; thus only can that fair exchange of values be effected which under present circumstances is certainly best for all concerned.—G. C. Kinsman.

For never in this world does hatred cease by hatred:
Hatred ceases by love; this is always its nature.
Dhamma-pada.

## "I Came to Fulfil."

H. S. A.

WE are all familiar with the statement that sickness and death come to us as discipline from God. If this be true, why did Jesus heal the sick and raise the dead and command all his followers to do likewise? Was not discipline needed as much then as now? and if it were the will of God that men should achieve a holier and more spiritual life through suffering, why should Jesus subvert this law of the Father? He says, "I am not come to destroy, but to fulfil," and it is impossible to believe that Jesus could do aught not in perfect accord with God's law.

Jesus never told any man that it was God's will that he should suffer, so why should we say what is totally at variance with his teachings and practice? There is one place, it is true, where we are told that the mighty works were not done, but what is the reason? not because of any unreadiness on his part, not because it was the Father's will to perfect His children through suffering,—no, we are told that it was because of their unbelief. With His help we can as readily keep the command to heal the sick as to preach the gospel; in fact one includes the other. May we not assume that when we fail to receive physical as well as spiritual blessings from God, it is not because He withholds them, but because of our own unbelief?"

## A Child of God.

ALICE ADAMS RUSSELL.

A CHILD of God! What name can ever seem so precious to us as this? What thoughts of love and trust it awakens, as we realize the full significance of this title! What a revelation it is of our divine birthright!

If God is our only parent, then we inherit from Him alone all of His perfection, and we may lose the fear of that old law of heredity which the ages have made for us. The past fears and worries which have made life a burden drop away from us one by one, as we realize this great truth: that we are children of the one Father-Mother God, who governs and controls all in perfect harmony, each child reflecting all good, health, strength, and wisdom.

The material father and mother, though still as dearly loved as ever, take a different place to us, and while we turn to them always as our dearest and best on earth, the realization of our spiritual birth and oneness with the infinite Mind gives us a new and better understanding of our human relationship, and through our love for the divine Father, we grow in love for our earthly parents, while realizing still that good is our only inheritance.

This old law of the flesh, which has made so many of us tremble in fear of the days to come; that has made us watch our every action and symptom as if our salvation lay in thus guarding our fleshly selves, never realizing that through this very fear we were shutting out the power to save ourselves from this law of mortal mind; all this grows less real to us as we begin to understand this blessed truth, that God is our only real parent.

When we know that He is this loving Father, the only law-maker, who governs in harmonious action alone, then we cease to give to the body that anxious care which has helped to create sickness, and we trust to divine Love, whose care is unceasing, to keep us in harmony and health.

With this assurance of our perfect birthright, and the knowledge that we have a perfect spiritual inheritance, we realize that we are set free from the laws of matter that have so long held the world in bondage, and that we can demonstrate this freedom if we earnestly strive for the understanding of this great truth of our oneness with God.

Science and Health says, page 256, "Mind, not matter, is the Creator. Love, the divine Principle, is the Father and Mother of the universe, including man."

Let us cling fast to this thought, knowing that divine Love is forever holding us in arms of strength; that there is no material law that can interfere with our knowing and living this truth; that we are each and every one of us the perfect child of God, and that we can express our perfect inheritance by living in obedience to the laws of Spirit, and each day drawing nearer to the Christ-truth and the Christ-life.

## The Lectures.

### At Victoria, B. C.

Carol Norton, C.S.D., of New York City, delivered a lecture on "The Teachings of Christian Science" to an audience which nearly filled the Victoria Theatre on Thursday evening, February 26. The audience, which was a fairly representative one and included a number of clergymen and physicians, paid the closest attention throughout, and warmly applauded at the close.

This lecture, which is the first given in this city, was under the auspices of the Christian Science Society, and its success equalled all expectations. The chair was acceptably filled by Mr. C. A. Cushing, President of the Port Angeles Eastern Railroad Co., who introduced the lecturer in a few well-chosen, appropriate words. Mr. Cushing is well known in Victoria, and was accompanied to the city by a number of Christian Scientists from Port Angeles, Wash., who came over to attend the lecture.—*Correspondence.*

### At Vancouver, B. C.

Before a large audience in the Theatre Royal last night [February 27], Carol Norton, C.S.D., delivered an able lecture on Christian Science.

The chair was occupied by Police Magistrate Russell, who said in part:—

To be invited to preside over such a large gathering of the ladies and gentlemen of Vancouver, I regard as a great distinction. To be present with you for the purposes for which we are met this evening should be regarded as a privilege by all of us.

Two thousand years ago lived one who painted the truth large so that all who came to knowledge of his gospel believed; yet the sayings of that grand Teacher have received innumerable colorings. Each church, each sect—and there have been many of them—claimed the right to interpret the Scriptures as to each it seemed right. They are all seeking the truth. It is known to you how, in the earlier history of religion, from the beginning of the Christian era to the time of the Reformation and through to the present century, many suffered for their beliefs—beliefs which are now accepted as readily as any other matter of our every-day existence.

Now, it is the fact that many in this hall differ upon several important points—matters of religion, matters of education, matters of general interest to the particular community in which we live; but on this one thought we are all agreed, that there is room for a higher and a better civilization in this great world of ours. The question is, how to reach this better life? To-night we shall have the opportunity of listening to the thoughts of one of the teachers of the Christian Science faith.

It has been said, and well said, that what we would say has been said in the past and said better; but as man and society alter, so does the need to restate emotion or repeat the great truths in some new form; hence the need for sermons, new books, and lecturers. To-night our minds should be open; we should free them from all prejudice

Digitized by Google

and give the lecturer an opportunity of convincing us that the things he wishes us to believe are in fact the old truths, the great truths which go to the foundation of all life and true happiness.

Ladies and gentlemen, I have great pleasure in introducing to you Mr. Carol Norton, C.S.D., of New York City.

*The Daily World.*

### At Kingston, Ont.

There was a large attendance at the City Hall last night [March 5] to hear a lecture on the subject of "Christian Science and Its Discoverer," by Rev. Irving C. Tomlinson, C.S.B., of Concord, N. H., who is a member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.

He was presented to the audience by the chairman of the evening, Mr. E. J. B. Pense, M.P.P., who said that it gave him great pleasure to introduce again to a Kingston audience the Rev. Irving C. Tomlinson of Concord. He (the speaker) had performed the same office four years ago, and neither he nor Mr. Tomlinson had been injured by it. He referred to the progress of Christian Science, saying that its followers, while they did not make any vain boasting, forged ahead in their own quiet way and refrained from interfering with any other religion. He promised Mr. Tomlinson, on behalf of his hearers, an attentive hearing.—*The Kingston News.*

### At Olympia and Seattle, Wash.

The city of Seattle and the town of Ballard are such close neighbors that a lecture in each place seemed uncalled for; at the same time the church at Ballard, unwilling to profit by the work of the larger church without sharing in the expense, suggested the possibility of broadening the lecture work by arranging, in addition to the lecture in Seattle, for one to be given in Olympia, the state capital, where there is neither a Christian Science Church nor Society. This lecture was accordingly given on February 16. The audience was not a large one, but it was an intelligent one, and much interest was manifested by those present. One direct result of the lecture was that some dozen individuals, who are more or less interested, came forward to meet the speaker, and thus became known to each other. In several instances each supposed himself alone in his interest in Christian Science. Finding themselves so many, they decided to begin Sunday services in the capital at once.

On Sunday, February 22, Mr. Norton lectured in Seattle at the Grand Opera House to more than two thousand people. The boxes were filled with officers of neighboring churches and prominent people of the city. Standing room was taken and hundreds were turned away for want of room. The audience was interested and most attentive. The seventeen hundred *Sentinels* provided for distribution did not meet the demand.

The speaker was introduced by Allen H. Armstrong, C.S.D., who said in part,—

*Ladies and Gentlemen:*—On behalf of First Church of Christ, Scientist, of Seattle, and of its sister organization in Ballard, I give you hearty welcome.

Let me remind you that this is the twenty-second day of February, a national holiday. If we older men and women do not think much about it ourselves, we yet expect our children to be taught at this season something about the great struggle that gave a nation birth, and especially of the man whose history is so closely connected with that struggle, whose unselfish devotion and untiring energy, together with his ability to inspire others with a like devotion, made a victory for right possible. It is not necessary for me to recount the incidents of that struggle. Time forbids that I should recite the history of the man whose labors we so gratefully remember.

But need I remind you that the struggle for human liberty is not yet over. Not a single political problem is yet satisfactorily solved. Our teachers labor diligently for a conquest over ignorance; our physicians resist energetically and philanthropically the bondage to disease; our clergy just as energetically the bondage to moral disease. Moved by kindred high purpose, our lecturer is here to plead for human liberty from sin and suffering through God's power and love, as the only means of emancipation from physical ills as well as mental and moral bondage.

A hearty round of applause greeted the lecturer at the close.—*Correspondence.*

### At Montgomery, Ala.

Mrs. Livingston Mims of Atlanta, Ga., wife of ex-Mayor Mims of that city, delivered an address on Christian Science at the Montgomery Theatre Sunday afternoon, February 22, to a representative and intelligent audience. Mrs. Mims was presented to the audience by Judge J. B. Gaston, in a few complimentary remarks. Her subject was "The Spiritual Dominion of Man through Scientific Christianity, —the Religion of the Future."

*The Montgomery Advertiser.*

Speaking to a *Journal* reporter, Mrs. Mims paid a beautiful tribute to Mrs. Eddy, the head of the Christian Science movement.

"It is my privilege," said Mrs. Mims, "to speak of Mrs. Eddy from my own personal knowledge of the beauty of her life, the spiritual inspiration of her presence, the exquisite charm of her personality. Born of an old and intellectual family, environed with the most scholarly and gifted men of her native state, she was unusually fitted for the high mission destined for her. Educated in part by her elder brother, one of New Hampshire's most gifted sons, she had every facility for a classical and accomplished education. This brother, Alfred Baker, whom she tenderly loved, was a law partner of President Franklin Pierce, and a relative of the family lately informed me that the President in his inaugural address, paid a beautiful tribute to his gifted friend who had just died. Mrs. Eddy was a well-known and much-admired author herself. Of her philanthropy and unselfish love for humanity, words are inadequate to express its fulness.

"Perhaps no other person has effected so much good for so many people, as has she through her life and teachings. When the veil of prejudice which blinds the world of sense to its great spiritual leaders is removed, her life will shine out in a radiant light that will command the admiration of the world, and illumine the ages, who will call her blessed."

The *Montgomery* (Ala.) *Journal.*

### The Reward of Service.

The sweetest lives are those to duty wed,
Whose deeds, both great and small,
Are close-knit strands of an unbroken thread,
Where love ennobles all.
The world may sound no trumpets, ring no bells;
The Book of Life the shining record tells.

Thy love shall chant its own beatitudes
After its own life working. A child's kiss
Set on thy singing lips shall make thee glad;
A poor man served by thee shall make thee rich;
A sick man helped by thee shall make thee strong;
Thou shalt be served thyself by every sense
Of service which thou renderest.

ELIZABETH BARRETT BROWNING.

## Testimonies of Healing.

Most important of all Christian Science teaching is the understanding of God; for proportionately to this understanding is he realization that divine Love is the only presence and power; through this understanding we gain better health, more patience, increased capacity for enjoyment, purer thoughts, and that love for our neighbor which establishes the brotherhood of man.

Until about two years ago, when this truth was presented to me through "Science and Health with Key to the Scriptures," I had groped in darkness searching for Truth. I read everything I could procure on the subject in which I was so much interested, hoping to find peace, something that was satisfying. I almost stopped reading the Bible, especially the Old Testament, for I could not understand it. However, the sayings of Jesus were always sweet, but I did not know how to make them my own, how to bring them into my life. I seldom prayed, for it seemed that my prayers were never answered. I belonged to an orthodox church, but my longing was not realized, somehow there was much lacking, I could not tell what.

Finally, after weary years of suffering, both mental and physical, I have found through Christian Science, a practical, demonstrable Christianity, which brings the peace that passeth all understanding. The Scriptures are now illumined. When walking in darkness I believed in the reality of sin, sickness, and death; that evil had equal power with good, or even greater. Now, I find that these conditions are real only to our false human sense, and do not belong to the facts of being. Divine Mind subdues all these beliefs, hence health and harmony are realized.

As the light began to dawn on my sense, how eagerly I drank in the words of Jesus: "Come unto me, all ye that labor and are heavy laden, and I will give you rest." "And ye shall know the truth, and the truth shall make you free," and "The kingdom of God is within you."

Mrs. Eddy says, "Christian Science presents unfoldment" (Science and Health, p. 68). That word "unfoldment" appeals to me in a special manner. Each day Love unfolds some new truth, some new beauty to our consciousness, until we awake in His likeness.

MRS. INEZ DROKE, Fayetteville, Ark.

---

I feel that it would be wrong longer to delay my testimony of what Christian Science has done for me.

I have been healed of severe nervous trouble, and several other ills, but think the spiritual uplifting and a better knowledge of the Scriptures through a careful study of Science and Health, of far greater value.

My little girl was healed of stuttering by a dear friend, who advised me to take up Christian Science. Since that time, we have had several demonstrations of its healing power. I am a constant reader of the *Journal* and *Sentinel*, and am truly thankful for the good received through them, and ever grateful to my dear friends, who have helped me to know this truth and also to Mrs. Eddy for the great blessing she has given to all who are willing to receive.

MRS. FRANK ROBERTS, Maple Rapids, Mich.

---

It is about a year since I received the blessings of Christian Science, and what a change it has made in my life! In the home where discord and sickness were present, now all is harmony, health, and happiness. I was healed by reading Science and Health. My trouble was a very serious one. I doctored for a year, and finally submitted to a surgical operation. This only served to make it worse. I became interested in Christian Science through the healing of my husband, who was healed in one night of hasty consumption, after three physicians had pronounced the case hopeless.

At first I did not understand Science and Health, but being assured that it contained the Truth, I was determined to have it. I was not healed at once, but I continued reading and studying, and with the understanding came the healing. I was healed in about six months. I am very grateful for Christian Science, for to me it is the most beautiful religion. The physical healing is only a part of the blessing, for the spiritual uplifting has been to me a transformation from darkness to light. It is with a heart full of love, that I wish to thank Mrs. Eddy for her unceasing efforts to reveal to us the Christ-truth, which makes us free.

M. E. P., St. Joseph, Mo.

---

I was first told of Christian Science in 1897. I was taking a vacation in a little country town not far from Rochester, N. Y. I had gone there with a lot of medicine furnished me by one of the best allopathic doctors in Buffalo. I had been under his treatment five months, without the least benefit, and for thirteen months previous to his taking my case I had been under homœopathic treatment, also without being helped. The doctors called my disease chronic nervous dyspepsia, and besides that, I had been afflicted for years with inflammatory rheumatism and bronchitis.

Two days after reaching the little country town, a lady arrived with her husband, and becoming acquainted with them, they soon heard of my affliction, and the lady told me about Christian Science and how it had cured her of Bright's disease, saved her when her physicians had given her up and she was entirely hopeless. She told me of the healing Truth in Christian Science, and lent me her Science and Health, the reading of which was a revelation to me. A few days after she told me about it, I went to Rochester, received treatment, and was helped at once. I was not perfectly healed in one treatment, but I received great benefit spiritually, and I knew from that time that I had found the pearl of great price, the Truth which maketh free. What impressed me more than anything else was that while I sought the physical healing, I was healed morally. From having been a great smoker of tobacco for thirty-five years, I soon lost all desire for it; and it was the same with the use of liquor and profane language. The Scriptures truly say, "Therefore if any man be in Christ, he is a new creature: old things are passed away; behold, all things are become new." That is what happened to me. I have become a new man; from being a hollow-eyed, thin, sickly-looking man, I am to-day the picture of health, having gained about twenty-five pounds in weight. I have not only gained in flesh, but also in spirit. I have had class instruction, and have been not only able to help myself, but also able to help others. For this understanding of Truth we are indebted to our dear Leader in Israel.

J. W. S. BERGMAN, Buffalo, N. Y.

---

Nearly five years ago I was a hopeless wreck in the eyes of the people. I had tried everything that *materia medica* could offer, but finding no help, was carried to New Orleans to a well-known doctor, who pronounced my case hopeless if an operation failed; that the knife was the only hope. This made my mother heart-sick and she secretly asked God that moment if there were not another way to health. A thought was presented that there was,—to go to God, the Great Physician.

We started home immediately, and on our arrival, a very dear friend sent me a copy of the *Sentinel*. I picked it up and the first testimony I read was the healing of a case similar to my own,—a tumor of the stomach. That very instant, I had my mother throw away every drop of medicine that was there for my use, then I wrote to a prac-

Digitized by Google

titioner, and began treatment. I was healed in three weeks, and have been in perfect health ever since.

Christian Science has done much for me in various ways. I have had some wonderful demonstrations for myself and others. What a comfort to know that God is All, and there is none beside Him. I have not only been helped physically, but morally, through Christian Science.

L. K. B., Poplarville, Miss.

---

Some, while theoretically acknowledging God's allness, fear the power of error or that error has power. This fear denies the power of Truth and prevents success in understanding Truth. If we occupy our thoughts by fears that we shall not receive abundantly of God's plenty, we are impeding our progress and placing obstructions in the way of success.

We should never shackle ourselves by fear of limitation and so experience a sense of it, but we should know "that there is plenty and more than plenty of God's abundance for every one of His ideas whom He never leaves destitute nor forsakes in need." By holding thought steadfastly to this truth we shall come into the realization of it, and thereby free ourselves from all sense of limitation. Divine Love frees us from the bondage of fear.

S. M. FRIEDLANDER, Chicago, Ill.

---

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

---

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

---

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Announcements.

---

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

---

### Der Christian Science Herold.

A monthly magazine, printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

---

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

Digitized by Google

## Religious Items.

There is one sure way to find out God's method for any coming world: it is to study His method with us in this world. What is that method? Always away from things to thoughts, away from sensations to sentiments and convictions. The child begins life wholly immersed in the physical and material. But every hour of his existence points him steadily onward to the unseen spiritual life. At first he is noisy and busy, his hands full of toys. After a time we find him sitting silent by the hour with a book in his hand. He has advanced to another world, the world of thought and feeling. Just in proportion as one has freed himself from the influence of the material and lives in the invisible world of affection and imagination and truth, we call him an educated, cultivated, well-disciplined man. In this direction lies all true greatness. Now in precisely this line proceeds the curriculum of the Bible for spiritual education. This word finds us immersed in the temporal and earthly. It says: I must awake this sense of the eternal, the spiritual. They must be made conscious of their true life. So all the mere attendants or conditions of life are steadily, consistently depreciated, and life itself is exalted. "Your life consisteth not in the abundance of things which you possess. The life is more than food and raiment. Your life is hid with Christ in God. The kingdom of God is not meat and drink, but righteousness, peace, and joy in the Holy Ghost. This is eternal life,—to know God and Jesus Christ whom He has sent. What shall it profit a man though he gain the whole world and lose his life? What shall a man give in exchange for his life? The fashion of the world passeth away, but he that doeth the will of God abideth forever." "I am come that ye might have life, and that ye might have it more abundantly." Now where this consciousness of spiritual eternal life is once kindled in a soul, the one overmastering revelation is made. To that soul "life and immortality are brought to light."

JAMES H. ECOB, D.D.
In *The Christian Register.*

Rev. A. Depledge-Sykes, pastor of a large Congregationalist Church in London, in a sermon speaks thus:—

"John moves by intuition, not by logic; by figures, not by abstractions. He paints pictures; he does not discuss principles. His make-up is mystical, not rationalistic. He apprehends; he does not argue. The kingdom of God, he tells us in this picture, has twelve gates of admission—on each side of the compass alike, three, which is John's way of saying religion is not a simple, but a complex thing; it is not sectional, it is universal; it is not according to this man's shibboleth and creed, but also that other man's whose dogma seems utterly at variance with his; it is not of one Church to the exclusion of others, or of one Church more than others, but of all Churches and of none at all. Men enter the kingdom from the North and South and East and West—*twelve gates.* That is what John means. Do not think, he says, that you are the only saved man, and that everybody else must of necessity have your experience and pass through your gate; do not flatter and befool yourself with the notion that you, whether a Church or an individual, are Peter, and have the keys of the kingdom. You may have one key which will admit you and your party, or if you are very little, that will admit you and yourself, but there are eleven more doors on the North and South and East and West, regions of the spiritual compass which you have never even conceived. That is what John says. He administers a rebuke often needed in history and needed to-day, a rebuke against spiritual arrogance and exclusive intolerance and selfishness, against spiritual stubbornness and monopoly."

So of the Bible. It is of value for its truth, not its method of composition. Every one has known of old that it had faults of grammar and other human elements of style; we may admit that it has faults of fact, imperfect presentations of duty, even of religion, due to its human element, and yet its general teaching and drift may be, and is, divinely true and the noblest inspiration that the soul of man has ever received.

Thus the doctrine of inspiration has slowly receded in the theology of the Church, and in place of it we put a doctrine of divine revelation. It is the men that are inspired more or less, rather than the book. By what processes God has revealed Himself to His prophets, and still reveals Himself, we do not inquire too closely. We "judge the spirits;" we ask of the teaching which comes to us from whatever source, Is it *true?* We find that somehow, in some way, the truth of God has been revealed to man. We see it in the record of holy men of old, and in the teaching of wise men now, but best, most authoritatively and essentially in the teaching of love and spiritual life and worship which comes to us in Jesus Christ. Coleridge was right—"it finds us." We make less and less of the way in which the truth came to the prophets and apostles, and more and more of the truth which they uttered and which we test and find to be true to our own souls.—*The Independent.*

Rev. John W. Day writes in *The Christian Register:* "'No knowledge can contradict the pure religion of Christ,' wrote Martineau, 'so that a life steeped in its spirit and given up to be the organ of its power will continue to be the regenerator of the world, and win reverence from the secret hearts of men.' This is an ultimate statement of the matter: we cannot dig deeper. Time was when a didactic sort of authority was the only sort admitted as to Jesus, when men thought his truth in statement was its whole power. The more we learn of human nature, the more we are persuaded that the life was the light of men, that no abstract truth can be comparable with the force of the person who lives it. Christianity is becoming less dogmatic and more personal, and those who search for truth must not stop short of this truth. The faith is doomed that does not, while making the truths Jesus taught clearer in their simplicity, as strongly make his influence felt."

The Rev. A. J. Cardall in a Lenten sermon in *The Universalist Leader* says: "Spiritual culture does not consist in not knowing sin; rather is it in knowing it so well that it is able to overcome it. Self-complacency is, therefore, one of the severest drawbacks to Christian development, in that it forfeits knowledge of the sinful tendencies of the individual. But when through the thorough and constant examination of one's self day by day, his sense of sin is made keen because of the very contrasts between sin and righteousness, which meditation reveals, then new light is shed and new purposes formed. For no man is wilfully sinful when he knows the true inwardness of sin. The remaining in sin is due largely to a lack of appreciation of sin and its awful consequences. Self-knowledge through examination of self, reveals sinful tendencies, thus making clear the way to repentance and forgiveness."

At the Hotel Savoy, New York, at a recent clerical gathering, technically Presbyterian, but with representatives also from the Episcopal, Methodist, and Baptist denominations, Dr. McConnell, rector of All Souls' Episcopal Church, is credited by the *Chicago Examiner* as saying:—

"I can see no reason why there should be Presbyterian and Episcopal and Baptist and Methodist Churches in this city, and I look forward to the day when men of power in the community will have effected a union of the Churches with that wonderful skill of combination which to-day is so apparent everywhere but in Church life.

"I believe that the Churches are at fault. They have erected barriers that have made it unduly difficult for Christian people to get in. If the Churches are to draw to their membership all, or a majority, of the Christian people of this community, they must get on common ground, so that all good men can stand by them and not be shut out."

Percy T. Fenn in *The Homiletic Review* says: "Believe me, my brethren, you can do nothing for your fellow-men unless you love them. You may dole out your charity with the tips of your fingers. You may profess to be intensely interested in your fellow-men and their amelioration, but unless you can make them feel that you really love them all your efforts will be unavailing."

The words of the Bible are of far less importance than its thoughts, and its thoughts are indefinitely less important than the spirit that prompted them. Hence words and thoughts are comparatively useless unless they bring us to the living spirit.

W. W. FENN.

Probably the most of the difficulties of trying to live the Christian life arise from attempting to half live it.

HENRY DRUMMOND.

Christ will keep that which we have committed unto him; and we must keep that which he has committed unto us.

GEORGE BOWEN.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

By the decision of the Anthracite Coal Strike Commission the miners get a little less than half of what they struck to achieve. On the union issue, which at first was their most vital demand, but which later they virtually dropped, the commission made no specific award, but recommended a separate anthracite union to deal with the questions in the anthracite fields, a conciliation committee of six, one member chosen from each of three districts by the miners and one from each district by the operators to deal with questions arising under the award. In brief, the commission awarded a general increase of wages, amounting in most instances to ten per cent; some decrease of time; the settlement of all disputes by arbitration; fixes a minimum wage and a sliding scale; provides against discrimination of persons by either the mine owners or the miners on account of membership or non-membership in a labor union, and provides that the awards made shall continue in force until March 31, 1906.

The report was unanimous, all seven members concurring. Intimidation and boycotting by the miners, blacklisting by the operators, and discrimination by both were severely condemned. The ignoring of the rights of the general public by both parties in the controversy was scored. The losses resulting from the strike were estimated as follows: To mine owners, $46,100,000; to mine employees in wages, $25,000,000; to transportation companies, $28,000,000; a total of $99,100,000. The amount of percentages due to the miners on their earnings between November 1 and April 1 will amount to about $2,000,000.

General Wood will leave Washington this week for Naples. He will be accompanied by Colonel H. T. Scott, Seventh Cavalry, and Lieutenant F. R. McCoy, Tenth Cavalry. It is expected that the party will arrive in Manila about the middle of June. General Wood will have command of the Department of Mindanao, until he is advanced to the command of the division of the Philippines.

Venezuela last week paid the German minister at Caracas the first instalment of the "honor claims" in accordance with the protocols signed at Washington by Minister Bowen and the representatives of the Powers. This promptness is especially gratifying to the authorities at Washington and to Minister Bowen, as confirming good faith on the part of Venezuela.

The Senate has approved the nomination of Mr. Hamilton Fish of New York for Assistant Treasurer of the United States.

On Tuesday of last week the Senate in executive session ratified the Panama Canal treaty by a vote of 73 to 5.

President Roosevelt has tendered the position of Census Director to Mr. Samuel N. D. North.

**Foreign.**

A woman has applied for admission to the English bar, this being the first time that such an application has been made. The applicant, whose name is not divulged, seeks admission to Gray's Inn, one of the four Inns of Court. The benchers are surprised that such applications have not been made before, in view of the fact that women practise law in the United States and France. They will consider the request in April. An application made by a woman for admission to the Scottish bar in 1900 was refused.

The four Inns of Court are the Middle Temple, the Inner Temple, Lincoln's Inn, and Gray's Inn. These inns are governed by benchers, under whose superintendence lie the admission and education of students for the bar, the calling of barristers, and the regulation of the profession.

Shamrock III., Sir Thomas Lipton's challenger for the America's cup, was successfully launched at 1.15 P.M. March 17. Lady Shaftesbury, wife of the commodore of the Royal Ulster Yacht Club, christened the yacht in the presence of a number of distinguished guests.

In the international chess tournament just concluded at Monte Carlo, Tarrasch takes first prize with 20 points, Maroczy secures second prize with 19 points, and Pillsbury wins third prize with 18½ points.

The American universities cable chess team will enter upon the fifth annual match with Oxford and Cambridge this week for the first time with a clearly defined expectation of winning.

Sir Robert Reid (Liberal, formerly Attorney General), in the House of Commons last week suggested, in view of the rivalry in naval armament, that His Majesty's Government open friendly negotiations with the three Continental Powers concerned in this rivalry, with a view of arriving at an understanding in regard to the limitation of naval armaments.

The Reichstag has adopted the appropriation of $375,000 for the St. Louis Exposition, being the first quota of the $750,000 to be appropriated to defray the expenses of Germany's exhibit at the fair.

**Industrial and Commercial.**

The Lockhart Mills Company, Columbia, S. C., has contracted for all the machinery and material for its new No. 2 mill, which will be of five stories, 130 by 450 feet. At first twenty-five thousand spindles and seven hundred and fifty looms will be installed, and when they are in operation the instalment will be doubled.

The new Stone Cotton mills of Starksville, Miss, has begun operations. The equipment is one hundred and fifty looms and five thousand spindles. The machinery for an additional twenty thousand spindle mill at Clinton, S C., is said to have been purchased and the mill assured. The capacity of the present mill is seventeen thousand spindles. The new Merrimack mill, Huntsville Ala., will contain sixty-three thousand spindles and two thousand looms, increasing the capacity of the concern to about ninety thousand spindles. New mills in process of building or contemplated are reported at Magnolia, Miss., Clinton, S. C., Phœnix, Ga., Louisville, Ky., Pell City, Ala., Dillon, S. C., Columbia, S. C., Rossville, Ga., and Tupelo, Miss.

The Great Lakes and St. Lawrence Transportation Company of Duluth is building ten steel steamships for the export trade between the upper lakes and Europe. The first of these ships has just been launched and the last will go into the water in June. Three are building at Chicago, and two each at Buffalo, Detroit, and Duluth. The cost of the ten ships is put at $1,500,000.

This fleet, opening new trade, will run from the head of the lakes through to Quebec and Montreal, where their cargoes will be transshipped for final destination. Owing to the limitations made necessary by the size of the Canadian canals they are not more than two hundred and fifty-five feet long, making them small ships for the lakes, but they have a capacity for twenty-six hundred tons, and will carry twenty-two hundred tons on the fourteen-foot draft permitted by the present Canadian canals to the sea. The same companies will have ocean ships for the transatlantic trade

The contract has been awarded by the Dan River Power & Manufacturing Company, of Danville, Va., to build two mills of forty thousand spindles and twelve hundred looms. It calls for the erection of two buildings, one 130 by 147 feet, the other 75 by 200 feet, three stories high. The plant will be operated by electricity through power secured from a dam now under construction.

Two million dollars, according to report, will be spent at Dallas, Tex., in enlarging the terminal lines of the St. Louis Southwestern property and making it one of the greatest terminal systems in the South.

**General.**

The class of '79, Harvard, has subscribed one hundred thousand dollars to erect a Stadium on Soldiers' Field for indoor athletics. The length over all will be five hundred and eighty-five feet, the width four hundred and forty. The width of the enclosed athletic field will be two hundred and thirty feet. The structure will be fireproof. The permanent seating capacity will be twenty-seven thousand, with provision for four thousand more, besides a temporary stand to seat ten thousand. The enclosure will be suitable for all kinds of athletic events except baseball.

Excavations in the catacombs of St. Cecilia have revealed what is believed to be a large underground basilica that was used by the early Christians. Traces of an altar and an Episcopal chair were found, and a number of ancient paintings in excellent preservation, including a Greek portrait of Christ. Three tombs that were discovered are declared by local archæologists to be those of St. Mark, St. Marcelinus, martyred by Diocletian, and Pope Demasus.

The famous old Cortez plantations, Chivora and Tarifo on the lines of the Tehuantepec Railway, where the Spanish leader spent many days after the conquest of Mexico, have been transferred by Julian Maquero, their recent owner, to Timothy Coirtbine of Kansas City, Mo. The two plantations contain 163,985 acres, and it is said the price paid was about $200,000.

Georgia's clay deposits are becoming to be known as among the finest in the world, equaling, it is said, the famous French deposits from which Haviland and Sevres chinas are made. The clay belt extends across the State from Augusta to Columbus, and is about one hundred miles wide.

Students representing Wellesley and Vassar will debate the question: "Resolved, That economically it is not advantageous to the United States to possess territory in the tropics." The Vassar girls uphold the affirmative side of the question and the Wellesley girls the negative.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Semi-annual Lecture of the Mother Church.

THE semi-annual lecture on Christian Science, under the auspices of the Mother Church, will be delivered by Judge Septimus J. Hanna, C.S.D., in Symphony Hall, corner Massachusetts and Huntington Avenues, Thursday, April 9, 1903, at eight o'clock P.M. The lecture is free and the public will be cordially welcomed.

## Selected Articles.

### Legislation in North Carolina.

WE are in receipt of very full reports of the defeat in the North Carolina legislature of a bill entitled, "An act to define the Practice of Medicine and Surgery," in which these terms were construed to mean "the management or treatment for fee or reward of any case of disease, physical or mental, real or imaginary, with or without drugs, surgical operation, surgical or mechanical appliances, or by any other method whatsoever: Provided, that this shall not apply to midwives, nor to nurses acting under the direction of a registered physician."

The interdiction of the practice of Christian Science healing was one of the undenied purposes of the bill, and its discussion awakened much interest throughout the state. Christian Scientists rallied in goodly numbers from many points and they have the credit and satisfaction of having won a notable victory through the many friends of religious liberty whose numbers increased steadily during the three weeks between the introduction of the bill and its defeat, near the close of the session.

Full advantage was taken of the recent decision of the Supreme Court of North Carolina in the case of the State *v.* McKnight, an osteopath, in which it was declared:—

"The special verdict finds that the defendant's treatment of his patients did not consist in the administration of drugs or medicines, but in manipulation, etc. . . . It cannot be said that one 'practises medicine and surgery' when he uses neither drugs, medicine, nor surgery.

"The practice of medicine is a pursuit very generally known and understood, and so, also, is that of surgery. The former includes the application and use of medicines and drugs for the purpose of curing, mitigating, or alleviating bodily diseases, while the functions of the latter are limited to manual operations, usually performed by surgical instruments or appliances.

"Certainly a statute requiring examination and license 'before beginning the practice of medicine or surgery' neither regulates nor forbids any mode of treatment which absolutely excludes medicines and surgery from its pathology. All that the courts can declare upon the facts found in the special verdict is that the defendant's practice is not 'the practice of medicine or surgery,' and no license from the medical board of examiners is required."

The opposers of the bill were ably represented by counsel, Mr. Busbee and Mr. Clark, who spoke more particularly respecting the unconstitutional aspects of the measure.

In answering a statement made by Dr. Lewis, the sponsor of the bill, that Christian Science cannot cure a cancer, Mr. Busbee said that there was a gentleman present whose wife had been cured, and that this man was Mr. G. A. Phillips of Washington, N. C.

Mr. Phillips then told of the faithful work of two of his local physicians in their efforts to save his wife, and of her healing through Christian Science. (His statement is given in full in our Testimony columns of this issue.)

Referring to this testimony, Judge Thomas B. Wornock said,—

"I am exceedingly glad that Mr. Phillips gave the Committee the benefit of his experience with his sick wife. It tells us how the Scientists seek to cure diseases and bodily ailments by one remedy, and by one remedy only, the remedy in whose efficacy they have the greatest faith; that is, by prayer to Almighty God. They believe in the efficacy of prayer in a way that you and I, Mr. Chairman, do not believe. When that good woman, the Christian Scientist healer in Baltimore, sat by the bedside of Mr. Phillips's wife, and she sick with a cancer; when the most eminent physicians at her home and in Baltimore had despaired of her life, all that she did was to bow her head in earnest, faithful prayer to Almighty God to cure both her soul and her body, and the Great Physician answered that prayer and she is a well woman to-day, and has been for six happy years. Is it a wonder that she and her husband believe in this new doctrine? Are we prepared to say that prayer to God for healing the sick shall be prohibited in North Carolina? Yet that will be the effect of this bill if placed upon our statute books."

Mr. W. A. Self of the House, speaking in opposition to the bill, said,—

"It has been stated here that opponents of this measure represent 'fair clients.' I desire to say that, in this matter, I have no client but my conscience and I hope for no fee or reward save a sense of having performed a duty. I make no fight against the doctors. I believe in them and have paid them many dollars. They are loyal men and good citizens; and for their representation here I have a high and sincere regard. Still they are human, and they are advocating and asking this body to support a measure which, in my humble judgment, is un-American, unworthy of North Carolinians, and which savors of the most cruel intolerance.

"I have not studied Christian Science and do not profess to know what it is or what it is not; but I do know that in the realm of thought every man is a king,—a king whose domain is the whole vast universe. On this principle is builded the greatness of our government, and without this principle, its glory cannot endure. Strike at the rights of the individual citizen, and you strike at the very heart of democracy. Along with freedom to think, is the right to act as conscience may dictate and your will direct, so long as you do not trespass upon the equal right of another.

"Intolerance has been the cause of more misery in this world than any other curse that has afflicted humanity; and to me it is most remarkable that, in this era of enlightenment, saved, as man has been, from the disease of the dark ages, released, as he has been, from the ghastly nightmare

Digitized by Google

of the Inquisition, to me it is most remarkable that the representatives of a great and brave and free people should be gravely asked to turn their faces from the light of the new day and reach out after the departing shadows of the sombre past. That there may be no wrong impression made,—no sailing under false colors,—I feel that I am called upon to tell you that I do not subscribe to any creed; yet, for the sincere followers of Christ and for their work in making man better, I profess and feel that regard which borders on reverence. Things not dreamed of in our philosophy compel me to believe that a power is manifested in this world which bids defiance to so-called natural law, and I am advised by the amendment offered on their behalf, that those against whom this bill is especially directed invoke this power,—rely upon its efficacy,—to cure disease. Now I come to you as men having greater faith in and deeper knowledge of, Christianity than I have or profess to have, and I read to you from this Book.

"'And Jesus went about all the cities and villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing every sickness and every disease among the people. . . . And when he had called unto him his twelve disciples, he gave *them* power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease.' Mark, then, if you please, the language of the commission given to the twelve under the authority and seal of the Master, 'And as ye go, preach. saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils.' But I am asked, Did they make people *pay* for these services? Surely, gentlemen, it cannot be that the liberal, highminded, self-sacrificing men who compose the medical fraternity in North Carolina are impelled to the prosecution of this measure by mercenary considerations. I do not believe it. And yet the ever-recurring inquiry is, Did they *charge*—did they charge anything? In reply, I quote just a little more from the words of the original commission, 'Provide neither gold, nor silver, nor brass in your purses, nor scrip for your journey, neither two coats, neither shoes, nor yet staves: *for the workman is worthy of his meat.*'

"That statement seems to be clear. Do you believe it? The language is plain. Have you any doubt about it? Is the purpose of it to delude? The gentleman asks me if the statute of limitations might not be invoked against this doctrine. In reply I say to him that it is never regarded as a meritorious plea, but if he chooses to set up the statute of limitations against this Book, it is his affair, not mine, and the burden is upon him.

"But it may be objected that the power to heal was not vouchsafed to any except those first commissioned by the Master. Let us see. I quote from the letter of James to the 'Twelve tribes which are scattered abroad.' 'Is any among you afflicted? let him pray. Is any merry? let him sing psalms. Is any sick among you? Let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord. And the *prayer* of *faith* shall *save* the *sick*, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him. Confess your faults one to another, and pray one for another, that ye may be healed. The effectual fervent prayer of a righteous man availeth much.' And note the argument which follows: 'Elias was a *man* subject to like passions as *we* are, and he prayed earnestly that it might not rain: and it rained not on the arth by the space of three years and six months. And he prayed again, and the heaven gave rain, and the earth brought forth her fruit.'

"Does that impress you at all? Is there anything in it? Is it true? Thousands of people do believe that every word of it is true, and cling to their belief with as much earnestness and fervor and devotion as bind you to your most cherished opinions, and you are called upon to forbid them. by legislative decree to act and live in consonance with their faith. Against this I do protest. The doctrines of Christian Science may be without foundation in truth, and of this it is not within our province to judge; but Christian Scientists, so long as they demean themselves as loyal citizens and have regard for the peace and good order of society, are entitled to the same consideration and protection that the constitution guarantees to you and to me.

"Again I am reminded by the gentleman that *fees* are charged by Christian Scientists. 'Still harping on my daughter.' Surely the 'fee's the thing.' Let me again beg you to note that the Master—the Great Physician—declared that 'the workman is worthy of his meat.' And why should it be otherwise? Is there, can there be, any reason why a man who finds himself set free from pain and suffering by this mysterious Power should not allow his heart to swell with gratitude or his hand to give in token of his thankfulness? Is there any more reason why I should be required to lay my dollars in the hand which administers dangerous and nauseous drugs than to reward the hand which has been uplifted in petition for my restoration by spiritual power?

"These good people are our fellow-citizens. They have the right to make contracts. No one is forced to seek their services or to agree to pay for such services. Let us not forget the constitution. Let us not forget that we can never trample upon the liberty of another without endangering our own. We are living in the twentieth century, not in the dark ages. We represent a brave and noble people, lovers of freedom and believers in justice and right. We cannot afford to allow this bill to become a law."

Mr. Clark said in part:—

"I want to address you from the standpoint of a lawyer. I want to speak of the practical effect of this bill; of the question as to whether or not it violates any fundamental constitutional right.

"When the Federal Constitution was proposed, North Carolina was one of the five states to decline to ratify it. And why? One of the chief reasons was that there was no guarantee in the instrument, of religious liberty. The agitation began in Virginia and Mr. Jefferson drew the resolution which was passed in the State of Virginia to protect the people of that state. At the next session the proposed bill was not only defeated but another for establishing religious freedom provided by Mr. Jefferson was passed. In the preamble of this Act, religious freedom is defined in such terms that you cannot interfere with freedom of faith and creed unless it appears that the overt practice threatens the safety, happiness, peace, or comfort of a community. Here you have the principle which justifies legislation. Now let us apply it to this bill. The bill says that the overt act of these good people is dangerous to the peace and safety of the community and, therefore, they ought to be suppressed, and in order to suppress them you do what? Do you prevent them from practising their evil arts? do you throw a safeguard around the private life and health of the citizen? Oh no, you do not do that. What do you do? You say if they charge nothing they are free as the air to go whither they will, to practise their arts to the destruction of the community, but if they charge five cents then they must be suppressed. Now let me give you an extreme illustration. I propose a bill to be passed in this body. This government has just been organized; its criminal law has not been framed; I propose this measure, that every citizen of North Carolina, or any other person within her territory, who shall take human life maliciously shall be guilty of murder, provided, they do it for reward; but if they do it gratuitously, then there is no condemnation. What do you gentlemen think of that proposition? Can you as the guardians of the home, can you as the guardians of health of the citizens, say that

Digitized by Google

you are justified in allowing a thing to be practised which threatens that home and threatens that life, simply because it is done gratuitously? If you desire to prevent these good people from holding to their faith, if you desire to prevent them from giving expression to their faith in overt act, then in order to escape the condemnation of your constitution you must justify it upon the ground that it is a menace to the people of your commonwealth, and can you say that a menace which deserved such legislation should be passed unnoticed if the dollar mark does not stand before it? . . . It is put upon the ground that something is threatened, that the safety of somebody is in jeopardy, and yet those who drew the bill say that if we can punish the guilty criminal by taking the means of existence out of his pocket, we do not care what becomes of the victim. Now is not that a strange proposition? When you propose to legislate in the interest of an alleged victim, you say if you can punish the criminal your regret and responsibility for the victim are satisfied. You do with him as you please. Some gentleman has said, 'They charge for healing.' Well, suppose they do. The inference was to be drawn from his remark that the divine Christ whose teachings they follow, when he was on earth, taught and healed gratuitously, and if they desire to practise and heal they should do it for charity's sake and gratuitously. Do you desire to apply the same principles to all the relations of life that existed then? The disciples of the Lord Jesus Christ preached his gospel for nothing. Are you going to put upon the statute book a penal clause that makes it a misdemeanor if a Christian Scientist is paid his salary, because in the early days the disciples did not receive one? Are you going to say you are going to limit the amount of his compensation to that which is necessary to the economical support of his family? Are you going to put a check upon high-priced preachers? Say that instead of getting an average of twenty dollars a sermon and five dollars a prayer, it shall be reduced to five dollars a sermon and three cents a prayer? If you want to carry out to its ultimate conclusion the suggestion which arises from that inquiry, do not make these people a scapegoat. It is a poor rule that does not work both ways.

"Now, I say, gentlemen, You are attacking the religious faith and liberty of a class; you are justifying it through this measure, upon the ground that they profit by it. You put it upon the ground that it is essential to punish those who practise it, not for the protection of those who may suffer, not if it is an evil art. If men are going to be killed through the practice of this faith, then have the manhood, have the courage, have the boldness to prohibit it altogether.

"Do not say to these people that the first article of the Bill of Rights which guarantees to you the enjoyment of the fruits of your own labor, applies to everybody in North Carolina except Christian Scientists. They are not asking you to exempt them from legislation, they are asking you not to single them out and make them a special mark for legislation which is intended to threaten their belief because they believe that their religion requires them to practise the healing art. It makes no difference whether it is paid for or not. How does that affect the question? It cannot affect it with you. It cannot affect it with me. It cannot affect it with one who views it from the proper standpoint. The only question is this: does the safety of the community demand this interference, and are we justified in interfering with it?"

By special request, Miss Mary Hatch Harrison, C.S.B., an earnest worker of New Bern, North Carolina, spoke before the committee as follows:—

"The Science of God must be a perfect Science, is perfect Science. The Christian Scientists are not establishing in the way of competition a system of healing. They are bearing the message of God through Christ, to man. They are learning hourly to live nearer to God, and so to benefit man.

"Mr. Chairman, I can truly say I have never heard a Christian Scientist speak against the medical profession. It would be useless should our religion allow it. It is well established. We do not compete with it. It is as separate from our task as earth from heaven. They do not touch and never will. We leave you and the law-makers of North Carolina to yourselves. We come as a body simply to ask to be let alone. We ask no favor of this Assembly, but the privilege of living as we are taught by God. A simple request at your hands for the womanhood, to whom God first spoke through our Leader, Mrs. Eddy, and for the womanhood and manhood of North Carolina, which is represented here.

"We come not to wrangle, but to manifest the spirit of Christ. All we ask is not to be hurt by those who should protect us. As to the healing of Christian Science, it is useless for me to speak. I am not here to convince people they should be Christian Scientists; I am not here to ask any one to consider this subject; I am not here to convince the doctors that they are wrong, and that the Christian Scientists are right. I would not if I could. That motive of a man's heart that is not led by God is unstable, and there we rest.

"It were useless to say that Christian Science does not heal, and with due respect to the Superintendent of Health of North Carolina, when he accuses us of being a menace to the health of the people at large, I ask, are the teachings of Jesus Christ, demonstrated through faith which heals, a menace to your people, from which they should be protected? If so, drive us out; if not, all we ask is that every law that can be made in this state be made to protect the medical profession, to establish it, and to protect it from every quack. We will take you hand by hand and urge it as a class, but do not tell us we cannot pray without being scoffed at. Do not tell us we cannot heal the sick. You have been told here that cases diagnosed have been healed. I, myself, am a case that was diagnosed by Dr. Porter, of the Massachusetts General Hospital, as incurable. I am to-day a perfectly well woman, all through the understanding of Christian Science.

"Here, in this assembly to-night are Christian Science people who have been healed of almost every mentionable disease, goitre, consumption, diphtheria, cancer, hernia, appendicitis, etc.

"The demonstrable truth of Christian Science applies from a finger scratch to the last enemy, else it would not be of God.

"It seems strange that we should be so misunderstood, and yet such misunderstanding attends every step taken toward God, and we wait on Him. I would like to say to this Assembly that I was asked if we were to have outside legal talent to fight our battle. I said no. Christian Scientists in North Carolina are North Carolinians. If the legal profession of North Carolina cannot sustain its laws, if it cannot protect citizenship, if it cannot regulate its affairs, why then we are at sea.

"We come trusting in the law of North Carolina; trusting the Assembly; trusting the Board of Health, and we submit simply our request to be let alone, and in answer to the inquiry of the Superintendent of Health, 'Are we to leave open the gateways for quacks?' I will say let us leave the gateways of the old North State open for God, and let the battle be fought and won for Him through His Son, Jesus Christ."

As a result of the agitation before the Committee and the discussion in the House the following proviso was

Digitized by Google

adopted by an almost unanimous vote, less than a dozen voting against the bill as amended.

"Provided, that this act shall not apply to any person who ministers to, or cures the sick by prayer to Almighty God without the use of drugs or any material means."

The bill amended was presented at once to the Senate and referred to the Judiciary Committee. As the Scientists went over to the Senate the following note was sent to the leader of the movement: "Your prayers have won. The bill has gone to the Judiciary Committee of which I am chairman." At 3.30 P.M. the Committee met and, be it said to the credit of Dr. Lewis who saw the victory on the floor of the House and who admitted he could not longer "fight both God and the women," that before this Committee he advised that the bill be passed with the amendment protecting the Scientists.

So the bill passed its final reading in the Senate soon after four o'clock without a dissenting vote by any one present.

Thus the most triumphant victory was won, although it was stated that at least twenty in the House were ready to speak for the opponents of the bill, and the Senate was even more strongly fortified. So the Christian Scientists feel grateful to the noble men of the Assembly who guarded the right, as well as the rights of all entrusted to them.

## Applied Christianity.

As its name implies, Christian Science is a body of religious teaching. It is applied Christianity, and is founded upon the interpretation of the Scriptures set forth in its text-book, "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. It is not primarily occupied in healing the physically sick, although the cure of disease is one of the results of its teachings which has attracted marked attention. As the Founder of Christianity, his disciples and apostles, and the early Christians healed the sick by spiritual means, so modern Christian Scientists strive to follow this example.

Christian Science should be sharply distinguished from mere philosophical speculations, or from systems employing human will-power, such as animal magnetism, mesmerism, or hypnotism. The Christian Science treatment consists of a prayerful realization of the omnipotence of God (Good) over evil of every sort, whether mental, moral, or physical. The Christian Scientist does not take personal control of his patient, he does not treat any one as a "subject," nor induce any sleep or trance of any sort. On the contrary, he knows that spiritual understanding liberates the patient and sets him free from the erroneous mental concepts which induce sin and sickness.

Christian Scientists do not claim infallibility for themselves. They are ready to acknowledge their own failures when these occur, but they claim with justice that their results should be measured by the same standard as is applied to all other systems. When this is done, it is found that Christian Science has been for some thirty years, and is to-day, with increasing efficiency, healing vast numbers of the sick and sinful whose cases had been abandoned as hopeless by the various medical or ecclesiastical systems to which those persons had applied for relief. The growth of Christian Science, described by outsiders as phenomenal, is due solely to the definite and demonstrable good which it is doing to those individuals who seek its help and find in it health, happiness, and some measure of holiness.

Christian Science is not a revelation in any supernatural sense, but was reached by logical steps consistent with clear reasoning, and is, therefore, strictly scientific in the proper sense of the word.

Genius is only a superior power of seeing.—RUSKIN.

## In Due Time.

THE question has often been asked, If Christian Science is really the religion of Jesus Christ, why was it not discovered before? Why was it left for Mrs. Eddy to bring forth, and why is it necessary that one should have the assistance of Mrs. Eddy's book, "Science and Health with Key to the Scriptures"? Why not go to the Bible directly? The same question could be asked concerning the advent of Jesus, Why did he not come sooner? If his coming into the world was of importance to the salvation of mankind, why did he not come ealier? The Scriptures state that in due time he came. Without doubt, Truth working in the consciousness of mankind prepared the way for the coming of the Godlike man, Jesus Christ.

In Science and Health, p. 561, Mrs. Eddy declares: "John the Baptist prophesied the coming of the immaculate Jesus, and he saw in those days the spiritual idea as the Messiah, who would baptize with the Holy Ghost,—Divine Science. As Elias represents the fatherhood of God, through Jesus, so the Revelator completes this figure with woman, as the spiritual idea or type of God's motherhood. The moon is under her feet. This idea reveals the universe as secondary and tributary to Spirit, whence it borrows its reflected light, substance, life, and intelligence."

The fatherhood of God, that is, the fact that Spirit is the only creator, is illustrated in the conception and birth of Jesus; while the life which he lived in the flesh, comprising what he taught and demonstrated, being understood by mortals, constitutes Christian Science and reveals that God is not only the Father of all creation, but also the Mother thereof. The coming to human consciousness of the truth which Jesus understood and practised and by means of which he accomplished his mighty works, reveals and establishes the conjoined proposition of Christian Science that God is Spirit and Spirit is the only substance. the universe being His expression. This completes in human consciousness the revelation of the fulness and completeness of divine parenthood, that God is not only the Father, but also the Mother of the universe, and teaches that God in His nature and essence may as properly be called Mother as Father.

Truth presses for entrance into human consciousness even as the light seeks admission through the wall and enters the moment there is a chink. Mrs. Eddy was the one to whom the veil of matter had grown so thin, through her understanding of the utter emptiness of mortal existence, that the light of Truth broke through. That she was more advanced spiritually than any individual of her time was manifested in that she discovered and presented to the world the most spiritual thought of her time, even the perfect idea that God is Spirit and His creation spiritual. That no other individual was prepared to discover Christian Science is clearly manifested in the mere fact that no one else did discover it. That Mrs. Eddy has discovered it and presented it to the world is certainly proof that no one else can. Like America, it is already discovered. We may not be discoverers of America, though we may all enjoy the fruit of Columbus' discovery. We have many privileges, many inventions and discoveries in these latter days which were unknown to the past, and yet we do not spend our time in regret because they were not brought out in former years, but we rejoice in the advantages of the present.

One thing is certain, Christian Science has been discovered, a demonstrable understanding of God and His creation has been given to the world, and if we fail to reap the benefit thereof we are without excuse. So far as teaching is concerned, we have all that we can ask. Truth has surely been expressed, and it remains for us to demonstrate it.

### Correction.

In an interview with Mrs. Mims published in *The Montgomery* (Ala.) *Journal* and reprinted in the *Sentinel* of March 21, 1903, page 464, Mrs. Eddy's brother was named as Alfred Baker. This was a mistake; our Leader's brother was Hon. Albert Baker.

## Among the Churches.

### Church Organized at Downer's Grove, Ill.

With much joy we report the opening of this branch church organized November 16, 1902, with a corporate membership of twenty members. The work was commenced here in August, 1902, and has steadily though slowly advanced as people have become aroused and benefited morally, physically, and spiritually.

The increased interest and desire to learn concerning the way of life as taught in Christian Science, has now seemed to warrant the opening of a place for public worship. The Masonic Hall on Main Street has been secured. Regular Sunday services are held, also our Wednesday evening testimonial meeting. A Sunday School has been organized for the children and a reading room opened.

SARA J. MCCULLOUGH, *Clerk.*

### Church Organized in Sydney, N. S. W.

We are in receipt of a very full report of the beginnings and growth of this planting in a far-away vineyard. Services were begun in April, 1900, with but five present. Within a half year the interest had so grown that the use of a beautiful hall was secured.

Sunday evening services were inaugurated soon, and the attendance at this second service has steadily increased. The sale of literature has been most encouraging, and many public institutions have gladly accepted the same. The Sunday School is flourishing and has made a generous contribution to the Mother Church Building Fund.

The report includes the following expressions of affection:

"Our hearts overflow with love and gratitude for all that Christian Science has done for us, not only in showing us the way out of bondage to the flesh, which is in reality discovering to us the true identity of man as God's idea,—unfallen, pure, and holy; and the reality, the substantiality, the all-power of Love in destroying sickness and sin.

"We are grateful to God for the way we have been led in this great Truth, and for the message that has reached us in this far-off land under the Southern Cross. We also wish to express our heartfelt gratitude and love to the one through whom Truth has been revealed to this age, our beloved Leader, Mary Baker G. Eddy. We have proof of her statement that 'Divine Love always has met, and always will meet, every human need' (Science and Health, p. 494).—C. H. GIBBS, *Clerk.*"

## The Question of Library Supply.

ONE year ago The Christian Science Publishing Society very wisely decided to discontinue supplying libraries with our periodicals free of charge after one year, and placed the responsibility of this work upon the Christian Scientists in the various localities where public libraries are to be found.

A plan of action was soon agreed upon and entered into jointly by the churches in Philadelphia. A committee was organized to represent the churches in this work, and a sum pledged by the churches to the amount of one dollar for each enrolled member per annum. This gave an assured income which has been supplemented by gifts of money and literature from individuals.

The plan has worked very nicely as the results accomplished show. Not only are our *Journal* and *Sentinel* supplied to libraries, but also complete sets of our Leader's works are placed upon the shelves.

A few paragraphs from the report recently rendered to the churches in Philadelphia, may be of interest:—

"In summing up this report, it is interesting to note several important features. For instance, through a subcommittee, whose duty it is to visit prisons and charitable institutions, back numbers of the *Sentinel,* etc., have been distributed with good effect. All this in addition to the books which have been placed on the shelves.

"In the Holmesburg County prison have been placed two copies of Science and Health, one copy 'Miscellaneous Writings,' and other literature.

"In the House of Correction have been placed one copy of Science and Health, also *Journals* and *Sentinels,* and in the editorial libraries of the *Philadelphia Press Bulletin, Telegraph,* and *North American,* one copy each of Science and Health.

"The librarian, Dr. Jastrow, of the University of Pennsylvania, displayed unusual interest in our literature and, in a letter addressed to the Committee, requested that they be supplied with anything new that may appear. The Free Library of Philadelphia, has also shown a willingness to accept as much literature as we are able to give them.

"ALBERT E. MILLER, *Secretary Library Committee.*"

It is all right to believe, and to practise what you believe in the most enthusiastic manner; but do not fail to grant others the same privilege.

"By their fruits ye shall know them." If one's belief gives cheerfulness, where before there was despondency; hope, where there was discouragement; courage, where there was timidity; health, where there was sickness, would you take it away from him?

We are all searching for the truth and most of us must cut a sorry figure groping about in the darkness of our own conceit and ignorance.

Before you condemn any man's belief, see what it is doing for him. If life is fuller, and richer, and cleaner, and sweeter for him and his because of his belief, is it for us to say, he is a fool to believe such stuff?

Let us think and let think.—*Exchange.*

## The Message of the East Wind.

AMY RUTH WENZEL.

OH, east wind blowing from the sea,
My heart a question hath for thee!
What message dost thou bring to me,
Sad east wind blowing from the sea?

I bring the message of the rain.
The silver fingers of the rain
Make music on your window-pane,
'Tis the sweet message of the rain.

My message is, "Dear heart rejoice,"
Give place to sadness, yes, rejoice,
Though minor-keyed the east wind's voice.
My message is, "Dear heart, rejoice!"

There are two good rules which ought to be written on every heart—never to believe anything bad about anybody unless you positively know it to be true; never to tell even that, unless you feel that it is absolutely necessary, and that God is listening while you tell it.

DR. HENRY VAN DYKE.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### "Unalienable Rights."

WE are devoting considerable space in this issue of the *Sentinel* to the defeat in the North Carolina Legislature of a bill, ostensibly for the regulation of the practice of medicine, but in fact for the prevention of the practice of Christian Science. It is to the credit of the legislature that the arguments which prevailed were based upon purely constitutional grounds and in accordance with the Declaration of Independence which says, "We hold these truths to be self-evident,—that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are Life, Liberty, and the pursuit of Happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

The question primarily involved in the justice of such legislation, must be whether medicine is recognized by all intelligent people to be a necessity, or whether they differ on this question. Under our law, a man has a right to use his faculties in matters where mankind have not reached definite and fixed conclusions, and where intelligent people are not agreed. With this test applied, prohibitive legislation of this character must fail.

The courts have taken cognizance of the fact that the practice of medicine is not an exact science. In the case of Corsi *v.* Maretzek (4 E. D. Smith, [N. Y.] 1.), the court used the following language: "That the practice of medicine has been characterized in a greater degree by fluctuations of opinions as to its principles and modes of practice, than, perhaps, any other pursuit. That it has been distinguished by the constant promulgation and explosion of theories, that it has been alternating between the advancement of new doctrines and the revival of old ones, and that its professors in every age have been noted for the tenacity with which they have clung to opinions and the unanimity with which they have resisted the introduction of valuable discoveries. They still continue to disagree in respect to the treatment of diseases as old as the human race; and at the present day, when great advances have been made in all departments of knowledge, a radical and fundamental difference divides the allopathists from the believers in Hahnemann, to say nothing of those who believe in the sovereign instrumentality of water."

We do not quote this decision in a spirit of unkindness, but in order to show that the practice of medicine does not hold such a place before the law as will justify these frequent attempts to secure special legislation in behalf of the medical profession.

The following language of the United States Supreme Court is good reading at all times. "The right to pursue one's happiness is placed among the inalienable rights of man, with which all men are endowed, not by grace of emperors or kings, or by force of legislative or constitutional enactments, but by their Creator; and to secure them, not to grant them, governments are instituted among men" (Powell *v.* Pennsylvania, 127 U. S. Rep., 678, p. 692).

M.

### A Rainy Day.

HUMAN belief would not only encumber us with the errors and failures of the past, but it would dim the future with dread and doubt. Old saws replete with experience crowd about us and with warning word bid us prepare for a rainy day.

Before we busy ourselves with the hurry and care of building greater storehouses and hoarding our harvests, why not stop and look fairly and fearlessly at this threatened day. What is the cloud that hangs about the horizon of our to-morrow, veiling its glad promise? It is fear. Fear of what? Fear that God's munificence will cease to be infinite; fear that He will cease to be able to "spread a table in the wilderness;" fear of lack and desertion; fear that divine Love will fail to care for man as for the sparrows and lilies. And so with feeble hands would we heap up our little store against the failure of omnipotent Love! would prepare for age, disease, declining vigor, and thus by our fear pave the way for the very disaster we would avert. The poor go hungry from our door and shiver shelterless in the storm, the halls of learning remain closed to our children, because, forsooth, we are stinting and saving for that rainy day, crippling our present usefulness because we are afraid of the future.

Christian Science banishes the phantoms of the future as well as the spectres of the past, and brings to man unfaltering trust in omnipotent Good, omnipresent Love, and thus smooths away time's wrinkles from the brow of him who understands that life is neither young nor old. For him the true life is the reflection of Life, unaffected by the passing years, "the same yesterday, to-day, and forever." The fear of time's flight is removed by the knowledge that the eternal now knows no reckoning of dial or calendar.

When Christian Science disarms disease in the present, our dread of its power in the future is removed. The scientific understanding that man's strength is supplied from the unfailing fount of Omnipotence dismisses the dread of weariness and weakness. The terrors of the rainy day are but the threatening limitations of material law which vanish before the harmonious law of infinite Mind; for, "Mind constantly feeds the body with supernal freshness and fairness, supplying it with beautiful images of thought, and destroying the errors of sense which each day brings to a nearer tomb" (Science and Health, p. 248).

No longer slaves to regrets for the past or forebodings for the future, we are free to "Act, act in the living present," and to follow the injunction of our Master: "Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

S.

### The World's Attitude toward Reform.

THE grateful recognition of the character and labors of John Wesley, expressed upon the occasion of the late bicentennial anniversary, is worthy of the great body of earnest Christian believers constituting the church of his founding. Like all successful leaders of religious reform, Wesley was quickened and impelled by a new apprehension of Truth, which in its unfoldment freed him, despite his hesitation, from bondage to tradition and the limitations of a conventional ritualism. Truth found in him a more open channel, a more transparent medium, and during the long period of his immediate supervision of the movement, his wisdom and authority grew apace until the ever-increasing tide of his enriched and enriching spirituality flowed out into well-nigh every highway and byway of England and America.

The remarkable growth of Methodism was the natural result of the coming of a great nourishing religious thought to a vast area of barren human need; moreover, "the grace

Digitized by Google

of God" which had awakened and transformed this Oxford youth, was expressed in that active and unswerving persistence which led him to travel an average of eight thousand miles a year, it is said, in the ceaseless and untiring ministry of a long life. That such a man, dominated by a revolutionary idea, should have awakened antagonism was inevitable, and those who honor Wesley will not forget the patient endurance with which he bore grievous and long continued persecution, misrepresentation, and ridicule at the hands of the so-called Christian and cultured, and even worse at the hands of the common crowd, while, as Macaulay has said, "devoting all his powers, in defiance of obloquy and derision, to what he sincerely considered the highest good of humanity." They may remember, too, that Wesley lived to be welcomed and honored in many a town where he had once met with indignities while laboring in the most unselfish way for the betterment of all.

The deep spirituality, the tender forbearance, the unselfish devotion, the unexampled activity, and the unfailing love which made Wesley's life so useful and so illustrious, and which are now so gratefully appreciated by all Christian people, are no less praiseworthy and commendable in our times than they were in Wesley's, while the inconsiderate misjudgment of one who signally manifests these same qualities, is certainly far more inexcusable than it was two hundred years ago. These facts have made it rather difficult for Christian Scientists to understand how any of those who have been quick to appreciate and honor Wesley could add their word of disparagement to the unkindness which has been visited, in our day, upon the woman in whose life the gentlest, and most heroic Christian virtues have shone forth conspicuously.

The writer is one of very many Christian Scientists who were once enrolled among the active exponents of Methodism, and who by virtue of present loyalty to their highest sense of Truth, still honor and claim adherent fellowship with him who with heroic indifference to the unappreciative misjudgment of men, stood first and last for a more spiritual interpretation of the Word, and for the possibility of a larger and richer experience of religious freedom for all.

These Christian Scientists are entirely sure that the spiritual aspiration which led Wesley to follow so faithfully the light of Truth which dawned upon his consciousness, is one with the spiritual aspiration which is leading so many of those who honor Wesley none the less, to honor and revere the Leader of our day, whose yet clearer illumination is guiding an innumerable company into a far more glorious inheritance. W.

---

The receipt of many letters expressive of thankful appreciation, as well as of an encouraging number of subscriptions, gives assurance of the welcome which is to greet our new periodical—*Der Christian Science Herold*. The first volume begins with the April number, which is just issued and we hope our German friends and others, will do all they can to acquaint German readers with its appearance.

---

## Letters to our Leader.

WE are privileged to publish the following interesting letters, addressed to Mrs. Eddy. They will be welcomed and appreciated by our readers.—ED.

Washington, D. C., January 14, 1903.

*Dear Mother*:—May I be permitted, as a student's student and as one who loves our blessed Cause and its beloved Leader, to use this dear name? Daily in the past dozen years, has my heart gone out in love to you, and often have I thought to put this love and gratitude into words, but your busy life and the hesitancy to intrude in any way has as often deterred me. But now my heart overflows in words, and if this missive should never reach your eye, still it is my debt to God and His messenger, and I follow the leading.

All that I am and all that I have I lay at the feet of Christian Science. I thank you as His revelator for it all, for showing to me the God I had groped for in vain. The book came into my hands before I had even heard the name of its author, or had known anything of Christian Science. As I read, I felt that my prayers had been heard, and God had sent His angel to show me the way. To know that God was Good, to know that He saw and permitted no evil, to know that *His law was inevitable* and that He was no respecter of persons, forever dispelled the mists. Words fail me in trying to express what this revelation was to me, but it was a glimpse of heaven, and though I have walked through deep waters since, and oft the narrow way has seemed to have no turning, still that Light has never left me nor failed me, and I can truly say to-day that I have reached the place where the path widens and the future is far brighter than the fondest dreams of the past ever promised. Surely God feeds His flock! The last edition of Science and Health has brought a spiritual illumination which is indeed the bread that cometh down from heaven. This sentence from page 72 of Science and Health, "In Science, individual good derived from God, the infinite All-in-all, may flow from the departed to mortals," has shed a new and most profound light upon the personal Jesus and the impersonal Christ. I see now why and how Jesus talked with Moses and Elias on the Mount of Transfiguration, what Jesus meant when he said, "I go to prepare a place for you," and that there was nothing miraculous when he spoke to Saul in the way and said, "Saul, Saul, why persecutest thou me." The past and the future are lost in the glorious present, the one consciousness, the one place, the one voice, the company of saints! Death has claimed my youngest born but hope born of understanding has dispelled the grief, and this transcendent light has wiped out the here and there. God is everywhere, surely there can be no lost children. What more can a mortal ask than that God should be an ever-present help and carry one safely over the tempestuous sea of mortal beliefs. This has He been to me through your great spiritual illumination, your unselfed love, your self-sacrificing life.

I am but one among thousands whose hearts overflow with love, but my gratitude is as great as though it were God's special gift to me and I gladly give this simple acknowledgment to His chosen one.

Your loving child,

KATHARINE P. BORLAND.

Brooklyn, N. Y., December 18, 1902.

Rev. Mary Baker G. Eddy.

*Beloved Teacher and Leader*:—Your student, Mrs. P. J. Leonard, on her return to Brooklyn delivered to her students here, your inspiring word, that the healing must now be brought out, as proof of Christian Science.

This has awakened the students to a renewed sense of love and gratitude for the revelation of Christian Science, and for your unselfish work in uplifting mankind, and destroying sin and suffering.

This fresh message of healing comes so near to the Christmas tide that we hail it as a precious Christmas gift, and send to you our love and gratitude and Christmas greeting.

May each Christmas as it comes find us more closely united to the Gospel which you preach.

Loyally yours,

FRANCES D. TURNER.

For Mrs. Leonard's students in Brooklyn.

## The Faithfulness that Saves.

J. E. FELLERS.

I HAVE somewhere read of a blacksmith who was employed to make a chain strong enough to support the anchor of a ship in time of heaviest storm. He selected the best material that could be found. He fashioned every part with precision and care, knowing that no chain is stronger than its weakest link. He tempered and tested every piece of iron that went into that chain as if he would teach it how to do its part when the critical moment came. Many said he was unnecessarily careful, but to their criticisms he turned a deaf ear and worked away at his task. After the chain was finished, he tempered and trengthened it by every process known to the iron-worker. None so perfect and strong had ever been made before, because the secret process which gave it such unequalled strength was known only to him.

Finally it was taken to the deck of a large ship. For years it was carried back and forth across the ocean without being used. One night a wild storm arose and the ship was in great danger, for it was among the rocks. The small anchors one after another were dropped into the sea but the chains could not stand the force of the storm. Finally the great anchor was thrown overboard, and the blacksmith's chain was drawn full length. There was intense anxiety among the voyagers, for it seemed that one more swell of the ocean would drive the ship upon the rocks. Fearful hearts called aloud to God. Some bowed their heads in silent prayer. Some wept. All watched the issue of that moment. The strain on every voyager's life seemed equal to the strain upon the chain. Throughout the night the blacksmith fought the storm, but as the light of morning overspread the east the vessel settled down upon a calm sea. What would have been the result if the blacksmith had made one weak link in that chain? Did he not act wisely in using only the best material and rejecting all substitutes?

In giving Science and Health to the world, our Leader wrought well. When in prayer and tears she was writing that marvelous book, many said it was useless and would never be needed or used, but these criticisms did not prevent her from doing perfectly the work she had been called to perform. God had impelled her to write that book and she must write it well. It must contain absolute Christian Science. It could not stand the test if it contained adulterations. The truth it taught must never break bread with human opinions, and after the last link was finished it must be protected and preserved. Thousands upon thousands give grateful testimony to-day that in times of greatest peril, when every other anchor had failed, this wonderful book preserved them from danger and brought them out of darkness into light.

Every test to which Science and Health is subjected, every trial and heartache that drives us to its pages, and every criticism of its teachings, give intimation of the days when alone, misunderstood, and well-nigh friendless, Mrs. Eddy toiled on in her effort to set Christian Science as the brightest jewel in the greatest century the world has known.

I cannot enumerate the blessings which a careful study of Science and Health has brought to me and my home. If I were asked to name that for which I am most thankful, except for Christian Science, Mrs. Eddy, and the book itself, it would be that the teacher from whom I took class instruction and who led me through the days of doubt and uncertainty, taught me to cling steadfastly to the teachings of that book and the Bible, no matter how sore the trial.

As in our school days it was of small moment who taught us mathematics if we did not apply what we learned, so it means but little how well we are taught Christian Science, or by whom, if we do not afterwards live closely to these books and take the lessons they teach into our daily lives. That Christian Scientists have not yet learned how to overcome all the errors that seek to bind them to false beliefs, should be no more cause for criticism, than that a conscientious artist should be censured because he has not yet put upon canvas all the beauty and grandeur his soul conceives.

## Christian Science in Business.

ISIDOR JACOBS.

AT last Wednesday evening's meeting, the remarks of the Reader concerning the rapid spread of Christian Science among business men, and the testimony of a commercial traveler from the East impelled me to speak a little on similar lines.

The commercial traveler is said to be "the advance-guard of civilization," and many of them have become, as well, the advance-guards of Christian Science. They, of course, echo to a considerable extent the ideas on the subject of the varied business interests they come directly or indirectly in contact with, and they carry the truths of Christian Science into many towns and business houses, thus becoming the forerunners of this practical and common-sense teaching.

It speaks well for the future of Christian Science that so many business men are becoming ardent and enthusiastic supporters of it, also that so many commercial travelers are coming to an understanding of its teachings. It is tending to change the morals of the business world, for by eradication of fear and worry, and by overcoming the tendency to influence or be influenced, either by hypnotism or suggestion, the business man of to-day in Christian Science is stronger in every sense of the word, and is in a position to face with a clear thought all the business problems of the day, without fear or favor.

The commercial traveler who takes hold of Christian Science appreciates how necessary it is. He frequently meets with disappointments, and at best, his life is one of hardship. He is continually on the go; gets to a town or city and perhaps has to waste two thirds of a day, waiting to make train connections for the next town or city. Many temptations surround him, and frequently he yields to despondency, worry, and fear. Many brilliant commercial travelers have been wrecked by yielding to this despondency and fear. When he gains an understanding of Christian Science he is sustained by realizing that so long as he performs his duty from the standpoint of divine Intelligence, there is a constantly operative Principle that is above all: and that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

His time no longer hangs on his hands, and while waiting to make train connections, he has something to think about in his leisure moments,—something that is only good; something that brings to him harmony, truth, and love, and not discord and error. If he has time, he can find people in nearly every town who are one with him in an understanding of this great truth, so fraught with benefit to all mankind. Hardly a town or hamlet now, but has some Christian Scientists within its gates. So he wends his way, energetic, fearless, and determined; by his force of character succeeding in his efforts, and at the same time dropping along the way those seeds of truth and love which, blossoming forth, scatter again other seeds to the winds, which, taking root, perform their work as destined by divine Love. The Christian Science commercial traveler creates this moral atmosphere wherever he goes and is effective in changing the thoughts of the

Digitized by Google

many business men he comes in contact with, so that through the spread of this truth, the business world is becoming purer and better, and there is a higher standard of business ethics being established throughout the country.

## Learning to Love.

ELLA LANCE WILLIS.

IN Christian Science Mind and Love are synonymously used to express the highest sense of Deity, hence the activity of Love must be identical with the activity of Mind. To love, therefore, is the art of forever possessing in consciousness the ideal of God's creating, and it can be mastered by mankind, only by right thinking.

Jesus said, "Love thy neighbor as thyself," and Christian Science teaches that to love a brother is to be helpful to him; but the questions arise, How can I love the neighbor who is a drunkard, or, may be, worse, and who awakens within me a sense of repugnance and disgust? and how will loving him help him? To love a neighbor is not to admit this repulsive picture to consciousness with an effort to make one's self believe it is not repugnant, but to turn away from the picture, refusing to listen to what material sense has to say, while thought is opened to receive and reflect the impartation of Spirit regarding the true man; it is to think rightly about the neighbor, to think of him as God thinks him. The material picture is loathsome and remains so. It will never be erased while man's thinking is based on material testimony, for so long will he have an untrue consciousness which is but a channel for mortal mind to reach one who is already disabled.

So, if in the struggle with error, a comrade is wounded by a sin-poisoned arrow, is found guilty of a moral offence, Christian Scientists should be tenderly human, and more. At such a moment a brother especially needs the help which can be rendered only through love. The arrow should be removed by a sympathetic hand, the mesmerism antidoted by truth, and the brother nursed back to the health of holiness through the watchful tenderness of a truly loving heart.

How cruel to leave the wounded alone on the field of battle, torn, and bleeding, slowly succumbing to the subtle influence of sin's poison, or to become his enemy because he has fallen before the foe's well-directed aim,—and we do indeed become his enemy if we permit the argument of material sense to repeat itself in our thought, or to use our lips to make his weakness known in the realm of gossiping mischief. To be loving toward our brother is to be obedient in thought and action to God's ideal, and to allow the Father to will and do His good pleasure in us. If we are thus obedient, no disposition to judge and condemn will abide in us, but rather the compassion of the Master.

"Love your enemies, or you will not lose them; and if you love them, you will help to reform them" (Miscellaneous Writings, p. 210). Man cannot love his enemy so long as his thought regarding that enemy is governed by mortal mind, for its reign is one of discord. All the evil thinking and purpose of a so-called enemy is disarmed before a consciousness that ever abides in the Christ thought concerning him. Maintaining this consciousness we shall both bless our enemies and insure our own spiritual progress.

As the human consciousness of man is imperfect, deformed, dying, so is it of the world. But Isaiah says,—

> The wolf also shall dwell with the lamb,
> And the leopard shall lie down with the kid;
> And the calf and the young lion, and the fatling together;
> And a little child shall lead them;

and if we would put off the mortal sense of our present environment, and realize and inherit the World Beautiful, the sweet harmony of relation which exists between all the ideas of God as depicted by the prophet, we must learn to love the birds, the flowers, the trees, all created things, and this by the same rule of right thinking.

To think right is to establish the basis of true loving; it is to dismiss, without reserve, every suggestion that is contrary to Love's ideal, to open wide the door of one's mind towards Principle, and to abide consciously in "whatsoever things are true, . . . whatsoever things are pure, whatsoever things are lovely."

## The Lectures.

### At Montreal, Can.

First Church of Christ, Scientist, was filled with a representative audience last Tuesday evening, March 3, to hear the lecture by Rev. Irving C. Tomlinson of Concord, N. H. The lecturer was introduced by Mr. W. Roach, First Reader of the church. Rev. Mr. Tomlinson's manner and delivery are scholarly, and his earnestness and logic carried conviction and held the close attention of the audience to the end.—*The Westmount Advertiser.*

### At Herkimer, N. Y.

A lecture which was largely attended was given under the auspices of First Church of Christ, Scientist, of Herkimer, on January 27, at the Grand Opera House, by the Hon. William G. Ewing of Chicago. This church was organized November 28, 1902, with fifteen charter members. Our congregation has grown rapidly and a larger hall is needed at once. We know that Love leads and guides us in each step in this glorious march.—*Correspondence.*

### At Port Townsend, Wash.

Carol Norton, C.S.D., of New York City, delivered a lecture on Christian Science at Odd Fellows Hall under the auspices of the Christian Science Society of this place, February 19. Allen H. Armstrong, C.S.B., of Seattle, introduced the lecturer in a few well-chosen words. The audience of more than five hundred was a representative, attentive, and appreciative one. This is the first lecture on this subject delivered in our seaport town.

*Correspondence.*

### At New Orleans, La.

Judge William G. Ewing, late Judge of the Superior Court of Cook County, Ill., and a member of the International Board of Lectureship of the Mother Church of Christian Science, The First Church of Christ, Scientist, of Boston, lectured last night [March 8] at the Athenæum on the subject of Christian Science. He was introduced by R. G. Henderson. The audience was a large one, and the most earnest attention was given the Judge, who is an attractive and polished speaker, a fine scholar and thinker, and a very interesting man in every way.—*The Daily Picayune.*

### At Walla Walla, Wash.

"Teaching of Christian Science" was the subject of the lecture deliver d at the Opera House last night [March 1] by Carol Norton, C.S.D., of New York City. The audience was large and the closest attention was given the speaker.

The lecturer was introduced by Mayor Gilbert Hunt, who spoke in part as follows:—

*Ladies and Gentlemen*:—Christian Science is a subject that is receiving a great deal of attention in all parts of the world; the benefits received and acknowledged by its adherents have been marvelous. It was brought to my

Digitized by Google

attention about fourteen years ago, through its healing power, and I am free to acknowledge that the more I learn of the truth and power of Christian Science the better I am satisfied with its teachings.

All Christian Scientists the world over consider it a duty as well as a privilege to place the matter before their friends in its proper light. I take pleasure in introducing Mr. Carol Norton of New York City.

*The Union-Journal.*

### At Scranton, Penn.

Rev. Arthur R. Vosburgh of Rochester, N. Y., delivered an interesting lecture on "Christian Science is Christianity," before a large audience at the Dixie Theatre last night [March 8]. A fluent, graceful speaker, his views were presented in a forceful manner.

Mr. Vosburgh was introduced by Mr. B. T. Jayne, who was present as chairman of the evening. In a short address the latter said that while not personally of the faith, he believed Christian Scientists should be accorded all the rights and privileges enjoyed by other religions. He then gave a brief history of the church since its inception, referring in conclusion to the local membership as being made up of some of the most prominent citizens of the town. He then introduced Mr. Vosburgh.

*The Scranton Republican.*

### At De Funiak Springs, Fla.

It was a large, representative, and attentive audience that greeted Judge Ewing of Chicago, last Friday afternoon [February 27] at the Methodist Church to hear his lecture on Christian Science, and we doubt not that outside of those who are active workers in the matter, nine out of every ten were disappointed. Not that from a scholarly point of view, or as a clear exposition of Christian Science as he views it and as it is, it was a failure; for on the contrary, few men have ever appeared before an audience here that had so much to commend them in every way as did the speaker in this address, but the disappointment was in that he did not say what they expected him to say, or to put it in another way, he did not say that Christian Science was what they thought it was.

To sum the matter up, for space will not permit an extended review of his splendid address, Christian Scientists believe in the same Christ, the same God, the same Bible, as do the members of the "old churches." They do not believe that God ever makes any one sick. They do believe in the efficacy of prayer, and that prayer is answered now as it ever was; and further, that the same Christ who healed the halt, made the blind to see and the dead to rise when he took on the form of man, has the same power to-day, and exercises it in the same way.

Should he or any of the other members of the Board of Lectureship come this way again they would be assured of a larger hearing than this time.

. . . . . .

The trustees of the Methodist Church did a very sensible thing when they opened the doors of their church to Judge Ewing for his lecture last Friday. It was not in any wise an endorsement of what he believes, but simply one of the many evidences that Christian charity is becoming more of a reality between the denominations, and that there is less and less place in religion as in all things else for those who can look through a key-hole with both eyes at the same time without squinting.—*The Breeze.*

Judge Ewing was introduced in a neat speech by R. W. Storrs, editor of *The Breeze*. He congratulated the workers on having secured so distinguished a representative of the Cause after so short a period of organization. Regular services were started only two years ago. Many visitors in attendance at the Chautauqua Assembly (the nineteenth annual session being now assembled) were present.—*Correspondence.*

### At Troy, N. Y.

A large audience gathered at Music Hall last evening [March 10], the occasion being an address on "Scientific Christianity," by Rev. Arthur R. Vosburgh, C.S.B., of Rochester, and not only was every seat taken, but the hall was taxed in its standing-room capacity. The purpose of the lecture was to give the general public an opportunity to form a more correct conception of the doctrine and aim of Christian Science.

The lecturer was introduced by Mrs. E. K. Betts, who said in part:—

All Christians believe that Jesus of Nazareth, the great Master, Teacher, and Prophet, the son of man as well as the son of God, taught the full and true law of Life, and his philosophy, understood and practised, will solve all the vexed questions of human existence. But the world has almost forgotten that he came to destroy all evil; that his mission included the annihilation of pain, disease, and death, as well as that of sin. Having signally failed to follow his law in daily life, and therefore having failed in bringing out the natural results of that law, it is taking refuge in declaring that his so-called miracles were a special gift to him. Yet his first students healed disease whenever and wherever they taught his system. In these days Christian Science is reviving the spiritual comprehension of the gospel, with such results as prove the teaching to be scientific as well as Christian. In every sense the Church Militant is becoming the Church Triumphant.

In the restoration of the two-fold mission of the gospel, the physical healing often seems to be unduly emphasized. This is because it is the most apparent effect, and the one most easily argued. The higher and greater results are shown in the betterment of the moral, intellectual, and spiritual nature. It is easy to see that real happiness cannot be won without peace for the physical as well as for the spiritual. Christian Scientists believe the cure for all the trials, cares, disappointments, sickness, and despair of the daily life may be found in the teachings of the Galilean Prophet, when these teachings are understood rather than merely believed.—*The Troy Record.*

## Our Daily Choice.

SAMUEL GREENWOOD.

EACH day unfolds before us
A way of love or hate;
Sweet love that lives victorious
O'er every selfish state,
Dark hate that bears the curse of Cain
Through regions desolate.

The passing moments find us
With base desires or good;
With heavenly links they bind us
To God's dear Fatherhood,
Or sink us to abysmal depths
Of evil servitude.

To open wide the portal
Which lets God's angels in,
Or shut out joys immortal,
To live with self and sin;
O human heart, one thou must choose,
Thy life to lose or win.

Digitized by Google

## Testimonies of Healing.

The following testimony was given by Mr. Phillips before the hearing on the bill to interdict the practice of Christian Science which was recently defeated in the North Carolina legislature, and a report of which is given in this issue.—ED.

"It was in 1896, my wife was taken ill, and I called our family physician, Dr. Nicholson of Washington, N. C. He diagnosed the case, and told me that an operation was necessary to save her life, and that it had to be done very quickly. I remonstrated with him, because he insisted that I take her to Baltimore for an operation. I told him I did not think she was able to take the trip. He insisted that she must go. I prevailed on him to call in a consulting physician, and he said that he would. He called in Dr. Dave Taylor. The two made an examination, and retired to the parlor, and I went with them. Dr. Taylor concurred in the diagnosis and said that an operation was necessary. I asked him if he thought she could stand the trip to Baltimore, and he said he thought she could, though I noticed that he said it very reluctantly. I afterwards saw him by myself, and asked him if it would be better to perform the operation there. He said, in his judgment he thought it would be. Dr. Nicholson showed me what the operation consisted of, and what was necessary to be done. It occurred to me that that operation could not be performed, so I decided to take Nicholson's advice and take her to Baltimore. He went with me. We went to the City Hospital after we arrived in Baltimore. Dr. Opie there made an examination, had a consultation, and he said that an operation would be of no permanent benefit to her. He said, however, he might perform a partial operation that might prolong her life, at the farthest, six months, but in her present condition he did not think it advisable to operate upon her. I want to pay a tribute here to the medical profession, because of their conscientious position on that occasion. They were conscientious men, knowing that the fee had been agreed upon and could have been made in a few minutes, they refused to do the work, because they were conscientious, and did not believe that it could result in any permanent benefit to her. The physician I had with me, our family physician, said, 'I do not see anything else for you to do but to try Mrs. Judge Brown's doctor.' She had told us, as she happened to be on the boat, of her cure through Christian Science. I went to the lady, a quiet, unassuming, Christian woman, and told her the circumstances. She said, 'After the physicians have said what they have about your wife, I think you should give her the full benefit of Christian Science.' I did not know what Christian Science was, but I was determined to try it, because there was nothing else left for me to do. I would not have gone to them if there had been any hope whatever anywhere that I could have seen or felt could have been any relief to her. That Christian woman took my wife's case on Tuesday evening. (I neglected to say that she was so ill that she had to be taken to Baltimore on a stretcher), but she took the case on Tuesday evening, and we left Baltimore to go back home, and she was able to walk a very short distance. We went back home on Thursday evening, and on Friday she was able to walk a distance of five blocks to our home, and it was an utter astonishment to her friends to see her walk back home in that condition. In three weeks she was a perfectly well woman, and she has been a perfectly well woman ever since. Of course this wonderful demonstration led me to investigate what could have had such a wonderful influence on a case that was pronounced incurable, and I have investigated the subject honestly and sincerely, and I have found that Christian Science, when understood, is the power of God to heal men from sin and sickness."

*Question.*—"Mr. Phillips, allow me to ask you a question. What did they do to your wife? What was this demonstration that you speak of?"

*Mr. Phillips.*—"When the lady called to see my wife, she requested me to leave the room; excused me, and I went out in the street, and I walked around for about an hour, and I came back again, and then the lady left, and I said to my wife, 'What did she do?' She said, 'She did not do anything but sit silently by my side, as though she were praying,' and she did that repeatedly morning and night for two or three days, what time we stayed there, and then when we left, this lady said that she would give her absent treatment, and when I got home, and reported that she was well, why she sent her bill, which was very moderate, and I got off with the sum of seventeen dollars."

---

During the last eight years an abdominal weakness seemed to be growing more troublesome until last fall, when I could hardly endure it. My knowledge of Christian Science was not sufficient to meet the case, and finally when my daughters insisted that I should wear a supporter, my son, who believes in Christian Science, said that if I would employ a good practitioner he would meet the expense, and I at once wrote to a healer in Chicago for absent treatments. I was relieved in a few days, but kept up the treatments several weeks to make sure. I am cured of the disease and am truly thankful—thankful to God, the source of all goodness, thankful to Mrs. Eddy, the Discoverer of this truth, and thankful to the many excellent men and women who can apply this Science.

MRS. SARAH HALL, Watervliet, Mich.

---

When our attention was first called to Christian Science we were in a critical situation. My sister, who was singing in the revival services, was entertained in the family of a Christian Scientist, and while there she heard of Science. Soon after this my mother was restored to health after our physician had pronounced her case hopeless, and that she had only a short time to live. I immediately placed myself under treatment. At that time my stomach seemed in such a diseased condition, that my diet was very plain and scant and my suffering from stomach trouble, nervous headaches, and neuralgia, was at times almost unbearable. It was a time of rejoicing when, soon after taking treatment, I could eat a reasonable amount of any kind of food I wished.

We are grateful to our practitioner for his help and instruction, and to Mrs. Eddy, our beloved Leader, for making known to the world the glorious gospel of salvation from all error, but we are most grateful to our heavenly Father.—EDITH S. GRISWOLD, Greensburg, Ind.

---

For thirteen years I had tried every available material means for the restoration of health. I underwent all sorts of treatment in the different sanitariums. "Incurable" was the verdict. As I had inherited rheumatism, every joint was affected and drawn out of shape. After beginning Christian Science treatment, all the pain and swelling disappeared, and all the joints except the hands have returned to their natural size and shape; the hands are loosening out gradually. I can go about in all kinds of weather without the slightest fear of a return, for I know there is no re-action in Truth. As thought rises to the consciousness of God's allness, the fetters of materialism vanish, and I walk onward knowing that Love is the only power. We must work faithfully, if we would find the Principle by which man's heritage is revealed. "Seek, and ye shall find." We do find life eternal in God. Dwelling therefore in good, all is peace and harmony. We lose nothing by becoming Christian Scientists, but we gain all. I attended

Digitized by Google

the second meeting here in Manchester, two and a half years ago; there were nine present; now we have an organized church with a membership of sixty-one. I think its growth clearly shows that the seed was sown on good ground, for it beareth much fruit.

EMILY WRIGHT, Manchester, Eng.

---

Two years ago I spent the summer near the ocean. Before learning of Christian Science I was very fearful of cold winds and dampness, since, for years, I was never free from neuralgia. There came a painful night with its dark suggestions, but with the morning's light, came also the resolution to assert my God-given dominion. I consecrated two hours to the service of God, Good, declaring what God is, what creation is, what Love has done and is constantly doing, and denied every thought unlike Good. I realized that the omnipotence of God shuts out any painful sense, that in infinite Love, evil has no name or nature, that the "carnal mind is enmity," but "led by the Spirit" I am under no material law, that the Mind which was in Christ Jesus brings peace. The remainder of the day I spent on the veranda unconscious of atmosphere, until some one remarked that I was dressed very thin, and was sitting in a draft. Where had the neuralgia gone? All material conditions said to produce it were the same. Once again had I proved this mighty truth of Christian Science as given us through our text-book, Science and Health, by our great benefactor, Mrs. Eddy.—C. W. B., Chicago, Ill.

---

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

---

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine, printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Professor Henry Van Dyke, D.D., LL.D., of Princeton University, Moderator of the Presbyterian General Assembly, in an article in *The Homiletic Review*, says:—

"The sacred testament of the Egyptians was called the 'Book of Death.' Our book ought to be called the 'Book of Life.' Its central truth is that mortals are brought to life in Jesus. 'He that believeth in me hath everlasting life.' Not, will have it some day. Do not read your New Testament that way. It is, 'hath everlasting life,' now, here, in this masquerade of a world, 'hath' something which makes life. 'I am come that ye might have life, and that ye might have it more abundantly.' Hear what Jesus said to the tempter in the wilderness: 'Man shall not live by bread alone.' That is the denial of the great heresy of worldliness, which is that man shall live by bread. Christ says he 'shall not live by bread alone.' Then in the sixth chapter of John, when he gave the explanation of his saying, he said, 'I am the Bread of life.' 'The words that I speak, they are life,' and that is the denial of the heresy of the world that man shall live by bread. There are two heresies of worldliness, that man shall live by bread, and that you cannot have everlasting life in this world. Christ denies both. He says, 'He that believeth hath everlasting life,' and again, 'The words that I speak, they are spirit and they are life.'

"Surely that is a mystery, but just as surely it is a reality. Souls are being raised from the dead in the world every day—yes, every hour; inward men and women are being renewed while outward men and women are perishing. Souls are being born again continually 'not by the will of the flesh, but by the Word of God,' which 'Word' is Christ. Men are living by bread, but not by bread alone. Nobody is living by bread alone—nobody. People seem to be but it is an illusion, a masquerade. They are not living, they are dying by bread alone. Men are living by bread, but not by bread alone. Underneath the bounty they are touching the hand which fills every spiritual longing. In the wilderness they find heavenly manna."

The late Joseph Rabinowitz of Russia was a Jew; but after long study of the Old Testament and the history of his people, he became convinced that the Jews made a mistake in not accepting Jesus as the Messiah; that it was hopeless to expect another, and that the true course of the Jews of to-day is to acknowledge the error of their forefathers, and truly own and loyally serve Jesus of Nazareth as the Messiah foretold by the Hebrew prophets, the king and Saviour of the world.

Mr. Rabinowitz gained a large following, and in recent years the circulation of the New Testament in Hebrew has largely increased on the continent of Europe. It has been stated that there is a large and increasing number of Jews in Europe who are convinced, like Rabinowitz, from a study of the Old Testament and the history of the world, that the time for expecting the Messiah is long past, that no Hebrew Messiah can be expected in the future, and they are turning more and more to Jesus as the true Messiah of the Jewish people. These have not been affected in any degree by modern Christian preaching or missionary effort, but have come to their position from a Hebrew point of view and simply by an intelligent study of the Scriptures and history of their own people. They have no affiliations with modern Christian bodies, and there is nothing in their attitute to draw them to any particular denomination. It is one of the most interesting questions of modern religious progress, what shall be the outcome of this remarkable movement.—*The Watchman.*

The Church of God began when Abraham built his altar to the unknown God and gathered his household about it for worship. It became the Jewish Church when Moses came down from the Mount with the Tables of the Law and brought to encamped Israel the promise that God would be their God and they should become a nation of priests. It became the Christian Church when the disciples after the crucifixion of their Lord, gathered in an Upper Chamber and waited for the revelation of the resurrection. The Church is as old as human history; as universal as social order; as vital as religion. So long as God is God and man is man, so long will men seek to unite and serve their God; and this union of men with one another, because they are with God, is the Church of the living God. . . .

The Church is more than the creed on which it seems to depend; as the vine is more than the trellis to which it clings. The Church is more than the worship it employs to express its life; as the vine is more than the blossoms which fill the air with their fragrance. The Church is more than all the Churches; as the Vine is more than all its branches. The Church is Christ ministering to the life of men, through the life of men. It is the Republic of God. . . . The Church of Christ has a divine origin: it was born in the resurrection of Jesus Christ. It has a divine message: it is the herald of a Healer and a Helper, who for us men and our salvation has come down to earth.

*The Outlook.*

The Rev. J. Murray Atwood says in *The Universalist Leader*:—

"It has sometimes seemed as if the Church forgot its first duty, not to make Universalists or Unitarians or Methodists, but Christians. It has laid the greatest stress upon the need of setting forth the right doctrine. It has devoted the major part of its time to persuading men to accept these rather than to winning them to the right life. It has rejoiced over a new convert when any one has come saying, for instance, 'If that is Universalism, I am a Universalist.' But this may not mean any addition to the practical power of Christianity. It may be only an intellectual matter, not a genuine Christian conversion. The determinative spot within may not have been reached, the actual life may be unchanged. . . .

"What man needs is not merely knowledge of the truth, but the religion that is life. He must have the truth; but truth only becomes powerful when it is incarnated in the life of a man and dwells among us. The superiority of Christianity to other religions, the might by which it conquers, is not in that it teaches what others do not, nor in that it gathers the truths of all into one universal system, but in that the eternal truth is here illustrated, expressed, and realized in the person of one man who thus speaks directly to the hearts of men, moves them, wins them, and lifts them unto himself."

We do not all see alike: beliefs are many, creeds are varied; but of this we can be absolutely sure,—that amid all the mutations of human thought and belief the eternal facts remain the same, unchanged and unchangeable. And if the peculiar faith of any man lead him to know the Eternal and to walk humbly with him, if it lead him to possess the spirit of the Christ, to do justly, to love mercy, then the end for which he reads and thinks, for which he goes to church and listens to sermons, is accomplished; for is it not true that the end and aim of all religion is the perfecting of character.—WILLIAM D. LITTLE.

Professor Edward J. Bosworth says in *The Congregationalist and Christian World:* "It is this desire not to part company absolutely and forever with all that is inconsistent with the Christian profession which leads men to hope secretly that they are Christians without making any public confession of it. They feel that there would be no easy retreat if they were to make a public declaration of their discipleship. A fundamental source of weakness in the lives of some professing Christians is their unreadiness to cut entirely loose from whatever might lead easily back into the old life. . . . Power in the Christian life is conditioned upon unreserved renunciation of all that ministers to evil."

The Rev. Dr. Amory H. Bradford says: "I dare to hope that, sometime and somehow, . . . after all the fires of Gehenna have consumed the desire to sin, after Hades and Purgatory have been passed, the souls which, for a time, have dwelt in these mortal bodies . . . will be given the beatific vision and permitted to realize the height and depth, and length and breadth, of 'the fulness of Christ.'"

I notice in the ordinary, average man a tendency to think more about environment and heredity than about individual responsibility, and on the whole a very much lowered sense of the depth and the power and the universality of transgression. And that is why, to a large extent, the Christianity of this generation is so shallow a thing as it is.

ALEXANDER MACLAREN.

Certain thoughts are prayers. There are moments when, whatever the attitude of the body may be, the soul is on its knees.

VICTOR HUGO.

In other words, our charity measures our capacity for receiving charity. Is there any more unnoticed sin than this?

REV. I. O. RANKIN.

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

February figures of the Bureau of Statistics show the largest exports of any February in the history of our commerce, and also show that the exports of the three months ending with February were larger than those of the corresponding period of any earlier year. On the import side the figures also show a continuation of the growth which has characterized the last two years, and the figures of the eight months ending with February suggest that the imports of the United States in the fiscal year 1903 may exceed $1,000,000,000, while the export figures seem likely to exceed $1,400,000,000. The February exports amounted to $125,502,105, which is $12,000,000 in excess of any preceding February, and more than double the figures of February, 1893, in which month the total exports were $59,931,984.

President Roosevelt has declined the invitation of Emperor William of Germany for the United States squadron to visit Kiel on the occasion of the annual yachting season. It is understood in Berlin that the Washington view of the case was that the visit of the squadron to German waters would have been considered by the European cabinets to be in the nature of a friendly demonstration unless the warships also touched at other shores, and the United States Navy Department was not willing to enter upon a prolonged social campaign.

Sir Chen Tung Liang Cheng, K. R. M. G., the new Chinese minister to the United States, arrived at San Francisco last week on the steamer Korea.

**Foreign.**

The Irish secretary, Mr. Wyndham, introduced the government's long anticipated Irish land bill in the House of Commons last week, and it passed its first reading as soon as he was through speaking. The bill proposes a free grant of $60,000,000 for the purposes of the bill. The measure further provides that tenants will pay 3½ per cent interest on loans from the government, that untenanted farms and grazing lands will be sold to neighboring tenants, and that three commissioners will supervise the sales. The advance to tenants, through the provisions of the land bill, are limited to $2,500 in the congested districts and $5,000 elsewhere. The scheme may involve $500,000,000. The bill becomes effective November 1.

King Edward's projected Mediterranean cruise is expected to be somewhat extended and internationally important. It is planned to leave Portsmouth on March 30 on the royal yacht. He will call at Lisbon, where he will visit King Carlos. Thence he will proceed to Gibraltar, Cannes, and Villafranca, where he may possibly meet President Loubet. Subsequently he will go to Genoa, where an Italian naval review has been arranged, which will be probably attended by King Victor Emmanuel, and thence he will go to Malta.

The *Electrical World and Engineer* says it is proposed to adopt electricity on the crown railroads of Sweden. The estimates have been based upon the adoption of the system of an American electrical engineer, whose ideas and plans have been taken up by one of the great Swiss manufacturers, and are now being introduced in Europe. Another interesting feature is the proposition to utilize not only the water powers but the peat beds of Sweden, in order to secure the necessary electrical energy.

The Hawaiian Legislature has passed a law providing as a flag for Hawaii, the same which was the emblem of the islands before they had been annexed by the United States. The law also provides that the flag of Hawaii shall be the flag for the Territory, and shall rank as such on land and sea, second to the United States flag.

The Dowager Empress has ordered an appropriation of half a million taels to be made for the Chinese representation at the St. Louis Exposition. The plan of the dowager, formerly reported, to take over the telegraph lines of China for governmental control has been abandoned.

It is rumored in parliamentary circles in Copenhagen that the Danish Commission which is now sitting in the West Indies, has sent home the most pessimistic views regarding the economic future of the islands if they remain in the possession of Denmark.

President Gerald Balfour of the Board of Trade, last week announced in the House of Commons that a formal agreement between the government and the International Mercantile Marine Company would be ready for signatures before Easter.

**Industrial and Commercial.**

According to reports Dallas, N. C., is to have a new yarn mill with 5,000 spindles; Gulfport, Miss., an extensive cotton-seed oil and fertilizer mill with a capital of $250,000; Concord, N. C., a new 10,000-spindle mill; Rockingham, N. C., a new mill with 200 looms and 2,500 spindles; Siluria, Ala., a new $250,000 mill; McCormick, S. C., a plant with 10,000 spindles; Thibodaux, La., a new $100,000 mill; Seguin, Tex., a mill with 10,000 spindles and 300 looms. Considerable enlargements are contemplated in cotton mills at Columbia, S. C., Gastonia, Mt. Holly, and Charlotte, N. C.

An automobile association is forming among the leading makers of gasoline and liquid-using machines. The association will include about thirty manufacturers, who, owning or controlling four hundred patents, will be able to dictate the trade. This association, it is thought, will result in the withdrawal of many cases of litigation concerning infringements and violations of patents now pending in the Federal Courts.

Figures just received by the Treasury Bureau of Statistics show that the imports into Cape Colony and Natal in 1902 amounted in value in round numbers to two hundred and forty-five million dollars against one hundred and seventy million in 1901. This increase is not merely a recovery from the depression of the war period, but an actual gain over conditions existing prior to that time.

The steamship Lowenburg from Calcutta and Colombo recently arrived at Boston with a cargo of tea, jute, shellac, indigo, and other eastern commodities amounting to about eight thousand tons and with an estimated value of about one million dollars.

By contemplated changes in the Denver and Rio Grande and the Rio Grande Western Railroads more than three hundred miles will be cut off in the distance between Denver and Los Angeles and a saving in time of many hours.

A new ship-building concern capitalized at $1,000,000 has been incorporated at Belfast, Me.

**General.**

The Morning, which sailed last July from England to relieve the Antarctic exploring steamer Discovery, has returned to Lyttelton, New Zealand, and reports that the expedition reached latitude 82 degrees, 17 minutes south, a point two hundred miles nearer the pole than that reached by any previous expedition. An extensive mountainous region, hitherto unknown, extending to 83.2 was discovered. The scientific work of the expedition includes a rich collection of marine fauna, including many new species. Sea and magnetic observations were taken, as well as seismographic records and pendulum observations. A large collection of skins and skeletons of southern seals and sea birds was made. A number of excellent photographs were secured and meteorological observations made. Extensive quartz and grit accumulations were found horizontally embedded in volcanic rocks. Lava flows were found in frequently recurring plutonic rock, which forms the base of the mountains.

Professor Crookes finds that radium, the mysterious substance which he has lately been investigating, maintains its own temperature at a point 1.5 centigrade above its surroundings. This is equivalent to saying that the actual quantity of heat evolved is such that the pure radium salt would melt more than its own weight of ice every hour, or that half a pound of radium salt would evolve in one hour heat equal to that produced by burning one-third of a cubic foot of hydrogen gas, this evolution of heat going on constantly for indefinite periods. The world is thus made acquainted with a heat sufficient to raise mercury in a thermometer 2.7 degrees Fahrenheit, the output of which is maintained indefinitely without any visible compensation to the heat-giving body.

The first regular daily newspaper in the world depending entirely on wireless telegraphy for its general news service has been started at Avalon, Catalina Island, twenty-five miles out in the Pacific Ocean. The new paper is called *The Wireless*, and is published under the auspices of the *Los Angeles Times*, from the office of which an epitome of the news will be telegraphed each morning. The first issue was but a small four-page sheet, but the demand for the paper and for advertising space has been so great that it will be enlarged at once. Heretofore the news of the world has not reached the island until the arrival of a steamer at 1 P.M.

The Metal Polishers, Buffers, Platers, Moulders, and Brass Workers' Union No. 73 of Meriden, Conn., has filed with the Secretary of State articles of incorporation. The objects of the proposed corporation as given in the application are reduction of the hours of labor, municipal ownership of public utilities, government ownership of national monopolies, abolition of government by injunction in controversies between capital and labor, the enhancement of wages, and the general welfare of all laboring classes.

At a recent sale of miniatures in London a portrait of a lady by Richard Cosway brought $3,150.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### A New Hampshire Woman.

FROM the *Butte* (Mont.) *Miner* we take the following extract of an introductory speech made by Mrs. Ella Knowles Haskell, formerly a New Hampshire woman, in presenting Mr. Carol Norton, who is lecturing in the far west. The extract is of interest also, because it tells of the wide spreading interest in Christian Science whose founder makes her home in our city; and it is interesting as well, in New Hampshire, because it proves how proud of the old Granite State her sons and daughters are when they are far away, and how they make use of every opportunity to sound her praises in strange ears.

"Fully fifteen hundred people were in attendance at the Broadway Theatre last night [March 10] to listen to the able lecture of Carol Norton of New York City, upon the basic principles of Christian Science. The lecture was given under the auspices of First Church of Christ, Scientist, of this city, and those having the management of the affair in charge are to be commended for the perfect manner of the arrangement of things, so that the big audience was handled in such an easy way for the comfort and welfare of all. Mr. Norton was introduced by Mrs. Ella Knowles Haskell, who said:—

"'The eminent lecturer and speaker who will address you this evening brings a message to me from my native state, for I was born within sixteen miles of the birthplace of Mary Baker Eddy, the Founder of Christian Science.

"'Time and again mighty influences of thought and power have gone forth from the old Granite State into the great world of men, molding and transforming human conditions and human ideals. New Hampshire's sons and daughters have left a lasting impress upon the annals of time by their contributions to statesmanship, science, religion, and philosophy. All history has produced but one Daniel Webster, and I think we may safely say that all history has produced but one Mrs. Eddy.

"'Long after the names of the presidents of the United States have become as unfamiliar to the people of distant centuries as are those of the consuls of Rome to-day, the name of Webster will live in fame's bright galaxy by reason of the gems of literature that he contributed to the English language, and who may say that the name of Mrs. Eddy will not also live in fame's bright galaxy as the founder of a great religious philosophy?

"'It appears to me from the standpoint of an outsider and observer,—for I am not a member of the Christian Science organization,—that no religious association has increased in number so rapidly during the last few years, as has that of the Christian Scientists. The followers of Mrs. Eddy now number more than a million in the United States, and it must be conceded that the Christian Scientist is generally happy and cheerful. I have known of morose and disagreeable people coming into contact with this doctrine, and by some process, whether metaphysical or not, of their being transformed or changed into pleasant, cheerful individuals. This is a benefit to society, and I am sure we shall all be interested to learn more of the basic principles of a religion which has accomplished so much in so brief a time, and I take pleasure in introducing to you one of the best-known and most able of the Christian Science teachers and lecturers.'"

*The Concord* (N. H.) *Patriot.*

### The Doctrine of Christian Science.

Mr. Editor.

During the last eight years I have had a very favorable opportunity to study the doctrine of Christian Science and to observe, at first hand, its practical workings. When my attention was first called to Christian Science, about eight years ago, I was prejudiced against it. But the restoration to health at that time of a member of my own household through its ministration, induced me to try to learn whether its teachings were true or false. Three able allopathic physicians had signally failed in the case, and Christian Science had succeeded. But this did not convince me. For myself and for my family I wished to feel very sure that I was not leaning upon a rotten staff. So far as I have been able to do so, I have studied the subject from the viewpoint of its religious claims, its philosophy or metaphysics, its influences over human conduct and character, and its merits as a curative agency in the various ailments which are manifested in the body. I cannot ask space, of course, even to outline my studies and observations along those lines, but I wish to render my testimony in behalf of the cause of truth. I wish to testify that I recognize in Christian Science the religion taught by Jesus of Nazareth, freed from the barnacles which have been fastening upon it during its voyage through nineteen centuries in the form of man-made creeds, dogmas, and theological subtleties and blasphemies.

Christian Science is a working religion. Jesus did not do much preaching, but he went about doing good: healing the sick, comforting the sorrowing, cleansing lepers, helping the blind to see, the deaf to hear, the lame to walk. That he depended upon these works to persuade mankind of the truth of his teachings, rather than upon sermonizing, is proved abundantly in the Scriptures; notably, for example, in the answer which he sent to John in response to the inquiry as to who he was, bidding the messenger to tell John about the works he was performing, not what creedal theology he was preaching. And where is there a safer rule of evidence than that which he gave us, to judge of a tree by its fruits?

Jesus taught that the primary causation of disease lies in human mentality; as, for example, when he bade the lame man to "go and sin no more," carefully explaining that it essentially meant the same thing as his command to take up his bed and walk. Jesus relied upon spiritual methods, not drugs, hygienic rules, hypnotism, or other like agencies, in healing the sick, always teaching the supremacy of the spiritual over the material. He uniformly taught that the works which he thus performed were not through any powers belonging to his own personality, but that they were of God, the Father, and in obedience to the spiritual law

Digitized by Google

governing all. "Have faith in God!" was his exhortation; "He that believeth on me [the Christ], the works that I do shall he do also," was his promise and prophecy; "preach the gospel [good news]," "heal the sick," was his command to his followers of all generations and all countries.

Christian Science teaches that God is the Great Physician, that it is in Him we live, and move, and have our being; and so does the Bible. Christian Science teaches that God is Love, Spirit, Life, Good, infinite and eternal, omnipotent and omnipresent, the same yesterday, to-day, and forever, and without variableness or shadow of turning; and so does the Bible. Christian Science brings into full light the fact that argument without works is dead: resembling faith in this respect. And the Bible teaches that "a doer of the work, this man shall be blessed."

Christian Science is but little known as yet, but its great mission is to spiritualize and elevate men's lives, motives, conduct; it has already accomplished much in this beneficent mission by persuading men and women that agnosticism, infidelity, materialism, and atheism, in all their subtle and multiform disguises, are false beliefs; and its agencies for such persuasion are the works which it does, seeking to obey the commands and realize the promises of Jesus, and to follow humbly in his footsteps without faltering, however much its doctrine and practice may seem to antagonize. Its adherents do not revile the religious convictions of others. Their works in healing the sick as the practical proof of their religion are already known throughout the world, altogether too well for any well-informed person to gainsay them. Its influences have been conceded again and again, in all communities where it is best known, to be for good morals and good citizenship.

## A Plea for Fair Judgment.

Mr. Editor.

In a recent editorial you declared, "The medical science of the present day is the result of a building up, through generations, of the slowly acquired knowledge of the physical system of man." Then you declare, "The regular physician does not pretend to be infallible; he does the best that his judgment will permit." All this we readily admit, and graciously accord to the noble army of honest physicians all the credit that is due them.

Do you expect Christian Scientists to obtain a full and perfect knowledge of the unseen spiritual power in thirty-five years while, according to your admission, the medical schools in their four thousand years' study of the visible material have acquired "but a fraction of what may later on be discovered concerning human ailments and their method of treatment and cure"?

Our good editor seems to have a wrong impression as to what Christian Scientists claim. While they assert that they are faring better under Christian Science than they formerly did without it, and that they have found Christian Science a far better preventive and cure of disease and sin than any other religious or medical system of their using, they are well aware that they do not at present witness in results all that Christian Science promises. It is not fair that others should claim for Scientists what they do not claim for themselves.

They assert that God is infallible, and, like other Christians, they believe that He is worthy of perfect confidence, but they realize that divine aid is available only as they understand how properly to approach deity. No fault can ever be found with the divine remedy. The want lies in our inability to avail ourselves of it. We must not only have a good way, but we must know how to use it.

We do not, however, overlook the fact that perfection is [illegible] of that which is new, while the old has won a license to fail. It cannot be denied that Christian Science, as a rule, begins where *materia medica* leaves off, and has saved multitudes who had failed to find relief by other means. It is as correct to assume that the efforts of the devotees of any given medical system, if natural, normal, and God-given, should be "infallible," as it is to assume that the practice of a Christian Scientist should be infallible. Will any system, be it ever so perfect, produce perfect results unless perfectly used?

We will grant that when the "Ruler of the universe" "acts" supremely "through a human medium for the purpose of effecting a cure, a defeat cannot be tolerated;" but when mortals have only a slight understanding, and but a small faith in the divine power, they receive accordingly, and it cannot be said, under such circumstances, that the "Ruler of the universe" is in full action. Those who believe in the efficacy of prayer generally concede that prayer avails only in proportion as it is in harmony with the divine will. Answer to prayer does not depend upon the ability and willingness of God, but upon mortals' ability so to divest themselves of material doubts and fears as to utilize the divine power always ready. That one's effort to obtain divine aid is unsuccessful, does not prove the Source to be fallible, but shows the fallibility of the effort. Furthermore, failures in the application of a given method do not necessarily prove it fallible, but may be by reason of an imperfect understanding and application of it.

Christian Scientists are not "apologizing" for their failures. They are simply protesting against unfair judgment. They make no promises of ability to heal. They expect Christian Science to gain in confidence with the people only in proportion as its adherents rightly apprehend and administer it. While the devotees of this faith have proved convincingly to themselves that they have found a most excellent remedy for human ills, they are making no boasts of what they can do and no excuses for what they cannot do. What they deplore is the irregular and unjust practice of advertising their failures to cure. If critics desire voluntarily to witness to the comparative results of Christian Science practice, they should govern themselves by the same just rule which is applied to witnesses in court. They should not only "speak the truth" by advertising the failures of Christian Science, but they should "speak the whole truth," by announcing in the same manner the numerous cures under Christian Science treatment, and should not neglect to advertise the failures of medical practice in the same way, as well as to refer to their cures. They should also use care to speak "nothing but the truth" by refraining from attributing failures to Christian Scientists which are not justly due them.

Your contention assumes that the healing power of a Christian Scientist is a gift instantly measured out to him, and overlooks the fact that it is a knowledge which must be studiously acquired, and that a pupil of this Science can only heal in proportion to his spirituality and understanding. He fails in his ability to produce results for exactly the same reason that other Christians fail. If a Christian Scientist, in his present modest spirituality, is fallible in his efforts, it is for exactly the same reason that he failed utterly before he had any understanding, and yet, with his limited knowledge, he witnesses marvelous results, and patiently waits for better days.

ALFRED FARLOW.

In *Boston Herald.*

## Practical Christianity.

Mr. Editor.

Christian Science makes no "miraculous claims" in the generally accepted sense of the term, if by miraculous is meant a special divine intervention, but its cures of mental, moral, and physical discord are rather the result of an application in consciousness of the universally operative law of

Digitized by Google

God, divine Mind. Wholesome and reliable witnesses of the fact that Christian Science is eminently practical and effective are well in evidence in almost every community, so that its claims to healing are a matter of sight rather than faith in the miraculous.

It is a misconception of its basic teaching to attribute "the rapid rise of Christian Science" to "mysticism" or to "dreams." Its teaching is an earnest protest against mysticism in every form, and its effective appeal to Jew and Gentile alike is due to the fact that an understanding thereof annihilates dogma and mystery by reason of its simplicity and rationality.

As you truly say, "There is no likelihood that Christian Science converts love their children less devotedly than parents in general," and it is for this very reason that they naturally provide for them in time of need that means of healing in which they have greatest confidence. It certainly should not therefore seem inhuman that the parent, who, perchance, has been a bed-ridden sufferer or chronic invalid in the past, and has found health through Christian Science after years of faithful but ineffectual dependence upon material means, should in time of physical distress trust the care of his family to Christian Science rather than to the old methods which have failed him, and that in so doing he feels he has sought the very best means of cure.

DAVID B. OGDEN.

## A Thoughtful Reply.

Mr. Editor.

Now that the Rev. Mr. Chalmers has denied in your columns the correctness of many of the statements he was reported to have made concerning Christian Science, and has given the actual text of what he did say on the subject, permit me the courtesy of one more opportunity to correct the misleading impressions contained.

1. Regarding the diseased and suffering patient hopelessly doomed by *materia medica,* and who is pictured as rousing herself in defiance of this sentence, arises from her bed, goes about her work declaring that she is a child of God and therefore well and strong, the picture does not make it clear to the reader if the invalid is really healed, or made better, by this source, or if it is only a kind of "make believe" or "will-power," by which the patient defies his situation and for a time manages to console himself. In Christian Science the patient is healed not by the human mind "defying" the diseased body and declaring "its own supremacy," but by knowing—absolutely knowing—that God is the only power and action, and that with Him all things are possible and good. If the human mind can affect somewhat the human body, what will not the divine Mind do for man when he perceives that the exercise of will-power and human material methods hinders spiritual vision and reliance on God.

2. Another error implied, is in the statement that Christian Science as a movement is merely "a re-action against the acknowledged powerlessness of physical science in all cases, to banish physical disease, pain, and death." If this is true, then Christian Science is not a discovery and a science, but a human expedient merely. The human mind, tired, bending beneath its weight and helplessness, finds that by turning aside into a new channel it experiences relief. This change for a time relieves but is unlike a cure based on a scientifically understood principle which permanently banishes disease. Jesus' works were not accidental or personal to him alone. Christianity is not a "re-action" but a statement of eternal truth. It is the mortal fleshly man not yet attuned to divine truth that acts and then finds that he has gone wrong and must retreat. In truth there is no re-action, all is steady and flawless.

To assert that the human mind can affirm its own supremacy and heal and free itself is not Christian Science at all, much less "in its noblest form." The only use of the human mind in Christian practice is to discover its own helplessness. Surrender, not self assertion, wins the crown.

3. Again, if God is the only power and source of supply, then in the strict scientific sense He is the Great Physician and His medicine is spiritual, not material. Because the statements of Christian Science are absolute regarding the nature and existence of God and the nature of His creation, that does not discredit the noble efforts of men to benefit mankind, nor does it set aside the spirit of the age for discovery and progress along so-called material lines. Christian Science is not hostile to existing conditions, it says, "improve them." It believes in overcoming through growth, not in suppressing issues. To the pupil scarcely yet master of the multiplication table it says, do not attempt a problem in Euclid, do not say that you have accomplished what you have not proven. Do the simpler problems and step by step you will prove your ability to meet the greater ones also.

4. Christian Science defines "the current of Christian faith" as the human effort to escape sin, sickness, and death by attaining that knowledge of Truth, the kingdom of heaven, which will emeliorate and destroy these mortal falsities. In regard, then, to the place which Christian Science is to occupy in reshaping the course of history (human events), may we not just leave that to the providence of God, assured that the heavenly Father who doeth all things well will sift wisely and finally.

From every quarter has come the cry: "Back to Christ." Christian Scientists have the assurance that in a large measure they are fulfilling the demand of that human outcry, and now after nineteen centuries of this materialistic current, they are again doing the works which Jesus and his disciples did. If, indeed, Christian Science is a "re-action against the current" of this historic Christianity, may we not hope that the stream as it has flowed through the centuries may be purified of the material taint which early entered it, that the Christian church may return to the Christianity of Christ wherein God was the ever-present power and medicine of men, and every preacher was also a healer.

CHARLES D. REYNOLDS.

In the *Manchester* (N. H.) *Union.*

We read in the Gospel of John, "If ye abide in me, and my word abide in you, ye shall ask what ye will, and it shall be done unto you." Now supposing a student of Christian Science believes what Jesus here said, and that he tries to live a pure, religious life, following as nearly as he can the footsteps of the Master. Suppose he gives to the poor, never speaks ill but always well and in a kind way to his neighbor, is always truthful, sober, honest, loving, and forgiving, in fact, supposing that he always did to his neighbor what he would have his neighbor do to him, and that he abides in him and his word abide in him and he ask what he will, shall it not be done to him? Does any one deny that this is a proper exposition of the case? And then supposing that Jesus meant what he said, and we do our part, and we ask that we may be free from sickness or disease or distress, and our prayers are granted, has not the law of God kept the body free from disease, and rendered null and void the so-called law of the body? Further, if we by our faith in God's word are able to keep the body free and clear of all disease, should not we get more credit than if we contracted some disease and then had to use a disinfectant to destroy after effects? Is not the prevention by a reliance upon the promise of Jesus better than the cure after the disease has been contracted by reliance upon the so-called laws of the body?

## The Future of Astronomy.

THE impression that the mechanics of the universe presented in the future fewer chances for discovery or advance in knowledge than in the past, could only have sprung from ignorance and underappreciation of the magnitude of the problems confronting astronomy and still to be worked out on the broader stage, not merely of the next century, but of the next millennium.

To begin, we must get down to some elementary definitions and make some sharp but fundamental distinctions as to the nature of astronomy which are ordinarily overlooked by the layman in science. All that I can do now is to show how vast is the domain which astronomy has yet to cover in its survey and how puerile is the notion that its methods have exhausted the subjects for their application, and that it has reached its term as a perfect science, or is in any respect devitalized.

First, as to definition and distinctions. Astronomy merely has to do with the positions and motions of the heavenly bodies, and its sole aim is to be able to predict these for any future time. This sums up the whole science, and we must not wander from it. The physical constitution of the past, present, or future conditions of the sun, the planets and their satellites, the stars, and the nebulas, are absolutely out of the range of its consideration. Astronomically, these are of no interest. They belong to the science of physics. Purely and simply, astronomy is the science of celestial mechanics.

Now as to its history. Its real beginning is much more recent than is ordinarily supposed. The first faint dawn of a real astronomy appears among the Arabs in the Middle Ages, but the distinct beginning of daylight in the science came at the end of the sixteenth century with Tycho and Copernicus. The former, as observer, the latter, as interpreter, by a correct system, of the apparent celestial motions, founded the science of astronomy, as Galileo had done that of astro-physics. Then came Kepler's great empirical discovery of the laws of motion in the solar system, and finally Newton placed the capstone, the law of gravitation, which crowned the structure and bound it together with a principle that banished all that was arbitrary and made astronomy a deductive science. Thus with the eighteenth century the true problem of astronomy came to verify, by rigorous comparison with all the known facts of observed motion, the law of Newton as a true law of nature and to ascertain whether it was an all-sufficient explanation, or required supplementing by some other principle to account for the phenomena. Only when this was accomplished could astronomy be regarded as having advanced to the stage of a science of prediction, capable of being used confidently to trace out in advance motions and relations yet unrevealed to observation.

Astronomy is a science both of theory and observation, which mutually support and control each other. It might be supposed from their interdependence that they would go hand in hand, and that their natural mode of progress would be simultaneous and equal development. The curious fact is that such contemporaneous advance is exceptional. It is true, however, that the combined efforts of mathematical and observing astronomy during the eighteenth and nineteenth centuries have brought the knowledge of our solar system, from a strictly astronomical point of view, into an extremely perfect condition. There still remain, indeed, very important problems; but it may be said, speaking in a relative way, that the astronomy of the solar system is now under control of mathematical analysis, and that we may confidently anticipate the successful explanation of some minor anomalies that yet remain. So that, if our vision were circumscribed by the solar system and the region in which its attendant comets and meteors circulate, we might look forward to a time within one or two centuries when the account would be closed and astronomy would become a perfect and, therefore, a dead science.

But the solar system is only an atom in the universe. Beyond it, at an almost immeasurable distance, lies the broad expanse of space, filled, to a limit extending beyond all powers of imagination, with an innumerable host of suns and systems. Here the astronomer has hardly begun his work, although he has not been idle. But the labor he has bestowed upon it has to a considerable extent been undertaken for an object quite secondary. He has been obliged to determine as accurately as possible the positions on the face of the sky of a very large number of stars in order to use them as reference points in determining the motions of the bodies belonging to the solar system.

During the nineteenth century a beginning was made in this great sidereal survey. The ground has been staked out, and what is in the nature of a preliminary reconnoissance undertaken. The astronomer has learned that it is highly probable that Newton's law extends to the stars and governs their motions. He infers this important proposition from the relative motions observed in a moderate number of binary stars, and feels sufficiently confident of it, at least, to pursue it as a working hypothesis in further investigation until he meets facts that contradict it, or require its modification. He has also learned by persistent and laborious measurement that a large number of the stars, at least a few thousands out of the enormous number of myriads existing, are not stationary in space. He finds reason to infer that such motions exist generally. Again he has ascertained that the sun is in motion among the stars, and the approximate direction and linear amount of this motion. He has succeeded in measuring directly or absolutely the distance of, perhaps, one or two stars from our solar system; and indirectly or relatively has established a superior limit for the distances of a small number of others, perhaps a hundred in all, with more or less certainty. The smallest of these known distances is about 280,000 times the distance of the earth from the sun, but the majority are ten to twenty times greater.

This sums up fairly, I think, in a rather general way, the knowledge obtained by direct measurement. Beyond this we do not know much for certain, but by resort to assumption more or less plausible a number of interesting inferences have been drawn which may prove to be true. But the annals of astronomy are strewn with wrecks of exploded ideas based on what seemed at the time plausible grounds.

I have said enough, perhaps, to indicate the immensity of the problems which now confront astronomy and how foolish is the notion that it is in any sense a complete and perfect science. On the contrary, it has hardly put its foot over the threshold of its kingdom. It has but just begun the solution of the greater problems which must occupy the attention and labor of astronomers for many centuries. It is a labor of self-sacrifice, of sowing that others may reap. The astronomer's satisfaction in it must come from confidence that, if intelligently planned and conscientiously carried into execution, its value lies not in immediate availability but in its long-postponed, ultimate, and enduring usefulness.

From an article by Dr. Seth C. Chandler in *Boston Transcript*.

## Semi-annual Lecture of the Mother Church.

THE semi-annual lecture on Christian Science, under the auspices of the Mother Church, will be delivered by Judge Septimus J. Hanna, C.S.D., in Symphony Hall, corner Massachusetts and Huntington Avenues, Thursday evening, April 9, 1903, at eight o'clock. The lecture is free and the public will be cordially welcomed.

Digitized by Google

## Increasing Interest in the Bible.

CRITICISM of the Bible, the discussion of its errancy or inerrancy, of the parts that are inspired and of those which are history, science, poetry, or otherwise, together with the researches into "the rubbish heaps of forgotten centuries," has created a remarkable interest in the sacred book; it would not be correct to call it a revival, because within a century, and during a number of centuries, there has been no marked decline in Bible reading. The Reformation furnished the great impulse, and among English-speaking people the Puritan *regime* gave wider circulation to the text of the Scriptures than at any period in English history, though the philosophers and poets who preceded that era—Bacon and Shakespeare, for instance—abound in Biblical quotations. The latter appealed to the educated and cultured, while Cromwell's followers, who had a text for every thought and action, were themselves a part of the masses. Though they misapplied the Scriptures quite as often, in all probability, as they made a proper use of them, the texts remained fixed in the minds of the masses, while the misfits faded from memory.

It thus happened that for many years, especially during the reign of Charles II., the ignorant were more familiar with the Word of God than the higher classes of society. This homely knowledge of the Scriptures was passed on from generation to generation, and in due time transferred to this country. It became so much the common speech of the people that they often used the text of the Bible without knowing its origin. It had a most beneficent influence upon the language by fixing its strongest and best expressions and maintaining its purity, for the Bible as literature has no equal in the range of letters. Its simplicity, purity of diction, and idiomatic strength are unsurpassed. This is conceded by all good writers, and the greatest statesmen are indebted to it for their happiest and most telling illustrations.

This increased interest in the Bible, no matter for what reason, cannot be otherwise than beneficial. It must not be supposed, however, that such interest has ever flagged. The agencies so potent several centuries ago were supplemented during the last century by organizations of an aggressive character, which aimed to put the book into the hands of every household on earth. While they have not yet accomplished this herculean task, they have done a mighty work, and there are few humble households without a copy of the Scriptures. That the study of the Bible among the educated and cultured did languish for a considerable period will scarcely be gainsaid. For many years some of the highest institutions of learning regarded it as a negligible study, and men were sent out into the world to leaven their fellows who were unable to recognize a Biblical text when they heard it. Thanks to the higher criticism, this has been changed.

Controversy is a great awakener. The more bitter the controversy the more fully is the mind aroused, first to the matter of the dispute and then to its merits. This has been the case with the Bible. While the masses continue their readings as of yore, the educated—and they are becoming a large part of the people—are turning back to the forgotten pages, so familiar in childhood, to discover great truths, wonderful beauties, and a style that is inimitable. It has been said that a thorough knowledge of the Bible is an education, and it is scarcely an exaggeration. Aside from its religious character, it contains the loftiest philosophy ever propounded, the sublimest poetry, and the varied phases of human nature are depicted in such perfectly simple and graphic style that no dramatists can hope to institute rivalry. Able and learned men are now engaged in lecturing on the great book in institutions where some years ago it attracted little attention.

The higher criticism, "the toil and trouble in distant, inhospitable, and danger-ridden lands, the expense in ransacking to their utmost depths the rubbish heaps of forgotten centuries," is accountable for this increased interest. The Church owes a debt to this higher criticism for this result. It need have no fear from an intelligent study of the Scriptures, though it may fear the gradual disappearance of interest were there not a wholesome stimulus to arouse it afresh.—*The Baltimore American.*

## Truth will bear the Light.

WE are given to regard those who proclaim views which run counter to the traditional beliefs of men as heretics and dangerous innovators. We are by nature averse to having our opinions upon cherished subjects disturbed, or subjected to a review which may weaken and perchance overturn them. But it must be admitted that individual enlightenment and the advancement of the race depend upon the renewed effort to understand those things which have come down to us from the past, and which our ancestors accepted as settled and self-evident.

There is nothing that can stand the sunlight so well as the truth, and there can be nothing so beneficial to the cause of genuine religion as to shed full upon it the sunlight of reason and research. Our views about the Bible and its contents have changed materially as a result of the scientific investigation to which it has been subjected at the hands of learned, conscientious and deeply religious men.

In the first chapter of Genesis down to the fourth verse of the second chapter, we have one account of the creation of the world, and from there on through the second chapter we have another account that completely reverses the order of creation. No matter how hard we may try by all the cunning devices known to letter-worshipers to harmonize these two narratives, we cannot succeed.

I take it that it is much more important that the decalogue should be inscribed on the tablets of our hearts than that we should cling to certain traditional views as to its authorship. We have the prophet's word that God's truth must be written in the mind and soul of man, and we shall not easily surrender it for that dogma which would confine it to a parchment scroll or shut it up in a book, which, however precious it must be for us, has itself but come out of the soul of man, illumined by the same divine light.

RABBI SAMUEL SALE.

Hall Caine is reported to have said recently of the Bible, "There is no book in the world like it. The finest novels ever written fall far short in interest of any one of the stories it tells. Whatever strong situations I have in my books are not of my creation, but are taken from the Bible." The distinguished Mr. Dana, the man who made the New York *Sun*, affirmed in his lecture on journalism that of all the books absolutely necessary to the education needed in the journalistic profession, the one book the knowledge of which was most useful, effective, and indispensable, is the Bible.

*Exchange.*

Thou, thine own true self, in God hath place;
Forever thus through His dear grace.

To God, to thee, are sin and death unknown;
They have no part among His own.

Thy work, thy seeming self to overcome,
That thou may'st truly say, "Thy will be done."

M. P. H.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Enthusiasm Tempered by Discretion.

In last week's issue of the *Sentinel* we published the testimony of Mr. G. A. Phillips before the North Carolina legislature. We refer again to this testimony, not because the healing of Mrs. Phillips was more remarkable than the healing of many others, but because it is a fair exposition of what has been accomplished through the practice of Christian Science, and because it will serve for an answer to the question so frequently asked: "Why are you a Christian Scientist?"

Mr. Phillips testified that his wife was taken ill in 1896, that their family physician stated that an operation was necessary to save her life, and that it had to be done very soon; that another physician called in for consultation agreed in the diagnosis, and upon their advice Mrs. Phillips was taken to Baltimore, on a stretcher, to have the operation performed at one of the hospitals in that city. When the surgeon at the hospital examined Mrs. Phillips he said that the operation would be of no permanent benefit to her, that he could perform a partial operation which might prolong her life for six months, but that in her present condition he did not think it advisable to operate. In this hopeless state, Mr. Phillips turned to Christian Science. He said, "I did not know what Christian Science was, but I was determined to try it, because there was nothing else left for me to do." This was on Tuesday, and on Thursday evening they left for home. On Friday Mrs. Phillips was able to walk five blocks, and in three weeks she was well, and has been well ever since. In explanation of his present interest in Christian Science, Mr. Phillips stated, "Of course this wonderful demonstration led me to investigate what could have had such a wonderful influence on a case that was pronounced incurable, and I have investigated the subject honestly and sincerely, and I have found that Christian Science, when understood, is the power of God to heal men from sin and sickness."

Mr. Phillips's statement before the legislature was quiet, dignified, and convincing, and we would that all who have been marvelously healed, or whose friends have been healed, were wise enough to restrain their enthusiasm, and to speak upon all occasions with the same calmness and discretion.

We rejoice with all our friends in their joy over restored health, nevertheless we commend to them the following words of Mr. Alfred Farlow:—

"For a long time I have believed that the existing misapprehensions of Christian Science on the part of the general public are very largely due to the unwise sayings and doings of Christian Scientists. The Publication Committee has undertaken the duty of correcting the misapprehensions of this Science and it must be apparent to all that this cannot be done without eliminating the real cause of the difficulty. Our Master said, 'Neither cast ye your pearls before swine.' There is more or less of the swinish element of unappreciation in all of us. He said to his disciples, 'I have many things to say unto you, but ye cannot bear them now.' There are many good things which we cannot make the public understand. Admonitions and instructions which are not appreciated and used are better withheld than given. To scatter broadcast the sweeping declarations of Christian Science which are not acceptable to all one's hearers must of necessity give wrong impressions and provoke antagonism which otherwise would not exist. In such practice one does not really teach Christian Science but a misconception thereof. It is better to be altogether silent than to be unwise. If in the various localities Christian Scientists, refraining from giving reports and interviews, would send all inquirers to the authorized Publication Committees, who are likely to be thoroughly posted on all subjects pertaining to Christian Science, and whose business it is to be wise and to be skilled in the answering of questions, we should be spared much confusion in the press. Solomon prayed for wisdom. This is the appropriate prayer for Christian Scientists. Mark our Leader's words to Christian Scientists in her most excellent article entitled, 'Wherefore?' 'and not overlook the fact that there are those lying in wait to catch them in their sayings.'"

M.

### Christian Science and the Bible.

Slowly the Bible of the race is writ,
And not on paper leaves or leaves of stone.
LOWELL.

Whether prompted by the love of literature, the spirit of criticism, or the impulse of that simple faith which

Just knows, and knows no more,
Her Bible true,—

certain it is that the interest of so-called Christian peoples is centered on the Scripture writings to-day, as it is on no other body of aggregated thought.

Prominent among the many things which have conspired to stimulate this interest, are the wonderful achievements of archæological exploration, the discovery and comparative study of new manuscripts, the adoption of the international course of Bible lessons, the revision of the authorized version, and, above all these, that spirit of wholesome unrest which was precipitated by the doctrine of evolution, and which has led to a re-examination of every ground of religious belief, and so brought about the long-drawn contention between traditional interpretation and the assertions of modern scholarship and investigation.

It will be seen, however, that all these things have had to do with the human expression and chronicle, generally referred to as the Bible, rather than with its essential spiritual meaning, the Word of God. Their service has been valuable but not vital, the husk of form, environment, circumstance, has been helpfully exploited, but the kernel of truth has remained comparatively untouched, and the real spiritual advance has been correspondingly slight. Indeed, devotion to technical questions has often engrossed thought and effort which might have been far more profitably given to "the weightier matters of the law."

As we come to realize mortal man's inability to furnish an adequate and inerrant means for the expression of infinite Truth; that it is only "through spiritual sense you may discern the neart of Divinity" (Science and Health, p. 258): and that a profound knowledge of the text, authorship, and historic setting of the various books of the Bible is possible to one who yet remains quite ignorant of the quickening word of Truth, then the infinitely greater importance of a demonstrable understanding of this life-giving word begins to appear. In re-awakening the world to a truer estimate of values, and again bringing into practical application the satisfying tests which Jesus instituted, and which must therefore be the natural and essential evidence of Truth's reappearing, Christian Science has conferred a blessing upon mankind the unmeasured richness and significance of which will be more and more clearly seen

Digitized by Google

as the years go by. It is Easter time in religious history, and the stone has been rolled away from the sepulchre where human sense would have entombed Love's Messenger, and Life and Immortality are thus brought to light.

Despite the general interest referred to, the religious press is constantly deploring the individual ignorance of the Scriptures upon the part of even professed Christians and regular church attendants. This lamentable fact would seem to evidence that with the passing of the theory of verbal inspiration, and as men have come to think of the Bible as the history of the development of the religious consciousness of the race, the book has lost its hold upon them. In so far as this is true, it illustrates the fact that increased intelligence always brings an inevitable reaction from any point of view which is grounded in superstition.

It has been demonstrated, however, that the moment the living Word is reached by these same church members, and Truth, as revealed in Christian Science, is again brought into touch with the problems of their every-day life, as it was in Jesus' time, that moment the Scriptures take on a new meaning and interest, so that churches of enthusiastic Bible students have become tangible facts the world over. The Lesson-Sermons are studied with relish and profit every day of the week and then listened to upon the Sabbath with eagerness and joy! This, though very unusual, is no marvel, for by the reaffirmation of Truth's omnipresence, and the realization that the essential human aspect of all revelation is but the apprehension of Truth in consciousness, every faithful student is being led in the acquirement of a Bible which is his very own, a spiritual understanding which is for him the only field and avenue of divine revelation.

While recognizing the importance of every illumination which scholarship may bring to the Scripture text, Christian Science lays its emphasis not upon the incidents of revelation, the imperfect human sense and expression of Truth, but upon its present and practical availability in the individual consciousness, its power to annul sin, sickness, and death. Said Jesus: "If . . . my words abide in you, ye shall ask what ye will, and it shall be done unto you." W.

## "Talking it Over."

"LET'S talk it over." We are all familiar with the expression, and some of us have been unwise enough to adopt the policy of talking over our troubles, and have even imagined that in thus imposing our burdens upon others, we have lightened them for ourselves. But Christian Science uncovers the error of this course and it is seen to be a subterfuge of mortal mind, whose object always is to increase, never to decrease or even to mitigate, evil. It is a false philosophy, very apparently false, when we face it fearlessly.

Error has no existence in reality, its only pretended existence is in the mortal concept, the counterfeit. Now, be the trouble physical, mental, or moral, what does this indiscriminate talking it over do? It fixes the lines of the gruesome picture in one's own false consciousness, and gives the sympathetic listener a distorted image to carry away to others.

Circumstances may sometimes impel a pardonable confession of weakness or fear from one who solicits the counsel of experience; but only selfishness could induce us to darken our neighbor's vision with the rehearsal of that which seems to obscure our own, and especially if he himself is perchance struggling to rise above the mists. At the very best, it is a longing for human sympathy, a desire to have some one bear for us or help us to bear a burden that should not be borne, but disowned and at once and forever cast away.

What a different impulse prompts us to flood the life of another with the sunlight of Truth, with our highest thoughts, our cheeriest words, our most generous deeds. What an offering upon Truth's altar would be a single day lived in strict obedience to Paul's injunction, "Lie not one to another," a day in which we uttered not one word but that voiced our highest understanding of Truth.

We have been taught that error is mindless and powerless, therefore it ought to be *speechless*. We can still its babbling mischief-making only by persistently and prayerfully knowing and declaring in word and habit, that error cannot voice itself to us, through us, or about us. It will plead in the same garrulous way it pleaded with the Master to be let alone; and in the same way pretend to recognize the messenger of Truth, and we must just as instantly and with no less authority repeat his command: "Hold thy peace!" He "suffered not the devils to speak." Evil was then and is now dumb in the presence of God. Until we can bless others with true words, it were better we should maintain a possibly surprising, but certainly wise and healthful, silence, and so refuse ever to "talk it over." S.

## Our German Periodical.

ALL subscribers to the *Sentinel* have had opportunity ere this to see a copy of our German periodical, *Der Christian Science Herold*, and we are sure that those especially who have been able to read it, will unite in witnessing to the fair promise of this initial number and to the great and good work it is destined to accomplish in advancing the knowledge of Christian Science among the German people of this and other countries. We are confident that it will prove of special interest also to a great many English-speaking Scientists who will find it a most helpful means of advancing their knowledge of German, for it will not only familiarize them with good German expression, but there will be a supplementary gain in the thought conveyed which will be of yet greater value.

## Communion in the Mother Church.

WE have received a number of inquiries regarding the date of the Communion in the Mother Church, and in order to remove all possible misunderstanding, we quote the following from the twenty-eighth edition of the Manual of the Mother Church:—

Article XIV., Section 1. "The Communion shall be observed by this church annually on the Sunday following the second Monday in June of each year." The date for this year is therefore June 14.

Article XII., Section 1 of the By-laws provides that the Annual Meeting shall be held on the Tuesday following the Communion.

The students in Boston have always taken great pleasure in meeting their fellow-workers on these occasions, and they are looking forward to this year's gathering with pleasant anticipation. They hope that every Christian Scientist from every quarter of the globe will be present.

Surely, if I know myself aright, I need not send my judgment upon circuit to try other men, for I can give it full occupation in my own Court of Conscience to try the traitors within my own bosom.—C. H. SPURGEON.

Quit yourselves like men; speak up and strike out, if necessary, for whatever is true and manly and lovely and of good report. Never try to be popular, but only to do your duty and help others to do theirs; and, wherever you are placed, you may leave the tone of feeling higher than you found it, and be doing good which no living soul can measure to generations yet unborn.—THOMAS HUGHES.

## From our Contributors.

### An Appeal to Caesar.

WILLARD S. MATTOX.

This man might have been set at liberty, if he had not appealed unto Cæsar. AGRIPPA.

IN the earliest beginnings of time, evil was evil; and in the remotest, hoary cycles, so long as a belief of material existence remains, evil will be evil. Events which are separated, in sense, many years from our individual problems, seem lost in the shadows, and so vague as to have little worth as present-day helps. This belief is in itself mesmerism, for by the operation of such a supposition, the Holy Scriptures have become to some, only an example of pure English, pure style, and pure ethics, with but little that is practical. The value of understanding fully the simple axiom that evil is always evil, and its corollary, that good is always good, cannot be over-estimated. By means of the illumination which it brings, we are able to heal by reading the Bible, because every statement of Truth is a present statement of a present Truth, every *expose* and denunciation of error is, for us, a demolition of the particular phase of material sense which at that moment is causing us distress. It is probable that herein lies the reason for the Christian Scientist's zealous study of the Bible. Our perspective is a near one. Bursting through the mists that popularly enshroud the Old Testament figures, and even Jesus and his apostles, we span the centuries with an instant realization, hear the thunders of Sinai, and understand the Christ, when he says, "Lo, I am with you alway, even unto the end of the world."

No matter what the period or epoch, or how primitive the state of society we may study, the only real differences are, after all, superficial; such as speech, customs, and manners of living, costume, and like trivial details of outward life that do not make up the man, even in a human sense. Stripped of all century marks and every characteristic of clime and race, evil is always evil, and—nothing.

When Paul stood in the cool, tiled Roman judgment hall, before a special tribunal, he seemed alone. The keen eyes and impassive face of the most noble Festus gave no promise of help. As, from his elevated seat, he swept the hall with a Roman's look of conscious dignity, there may have been in his glance some of the Roman's scorn for a conquered people, a fine disdain of an unmartial, politic, and cringing race, who brought their private religious disputes before a civil or criminal court. Paul would have looked in vain for a sign of sympathy or encouragement on the immobile faces of the court attendants or Roman guard. He knew better than to expect that a plea for justice, for toleration, or even for reason, would be heard by his accusers. The hall was filled with eager zealots, those Jews "which came down from Jerusalem" to arraign him before Festus. Perhaps among those who "stood round about" Paul, before the judgment-seat, were some who had taken part only a few years before in that mournful tragedy, when his dear Lord and Master was crucified. The same hate and malevolence which offered taunts to the patient Jesus, were gathered about this other man of God, to goad him to his death. Paul may have felt that his supreme test had come, he may even have sought among the throng a single friendly face, grateful if he could feel the encouragement of a brother's presence. And then to him there must have come that ineffable bliss which bathed Jesus in its glory on the night in the garden when he turned for the last time to man, born of a woman, and realized that God alone was his life and his strength! How might Paul have finished his race, if this consciousness could have been abiding!

The accusations were made. They "laid many and grievous complaints against Paul," though they could not prove them. And then there was disclosed a carefully manœuvred plot by the cunning Jews, who, mayhap realizing the futility and illegality of their charges against Paul, were resolved to murder him, if not in one way, then in another. Information had been brought to Paul, no doubt, which led him to believe that he was to be sacrificed to the rage of the Rabbis, and when Festus said to him, "Wilt thou go up to Jerusalem, and there be judged of these things before me?" Paul had confirmation of the rumor that he was to be ambushed and killed on the journey to the Holy City. The biographer tells us nothing of the loneliness, or discouragement, or fear, which may have contributed to Paul's mental state. We only know that there, in Cæsarea, when confronted by the aggravation of envy and hate of mortal mind, he said, "I appeal unto Cæsar."

The mistake in making this appeal was recognized even by mortal mind's man, for Agrippa told Festus that Paul might have been released if he had not elected to carry his case before the emperor.

No remote incident has value unless it lays bare certain universal propositions regarding God and man, and the claims of evil. In our ability to get at the actuating principle, operating in every specific event, and our further ability to make the application to ourselves, lies our success in Christian Science. This is made plain in Science and Health, p. 243: "The divine Love which made harmless the poisonous viper, which delivered men from the boiling oil, from the fiery furnace, from the jaws of the lion, can heal the sick in every age, and triumph over sin and death." Cæsar stood then, and stands to-day, for an assumption of authority, power, law, and government. Jesus clearly stated the distinction between the self-constituted authority of mortal mind, and the genuine control of divine Mind, when he said, "Render to Cæsar the things that are Cæsar's, and to God the things that are God's." It is not possible that Jesus would thus have differentiated these two powers, if they had had the same characteristics, or if Cæsar had been the viceroy of God. Jesus came to fulfil the law, as he himself declared, and if law had been vested in a temporal form of government, he would have been the first to recognize it and require obedience thereto. On the contrary, his whole earthly career was a protest against reliance on any power less than the divine. Whatever, in theory, invests matter, or material forms, with power, is a tendency away from Mind, and is, therefore, to be avoided. Belief in any such lesser authority is born of ignorance, fear, or a willing preference for "other gods." Through one of these avenues, mortals are still being induced to make an appeal to that which cannot afford aid, because it has nothing of the Divine in its makeup. The history of the human race proves that an appeal to Cæsar brings no favorable answer to the petitioner. Remembering the axiomatic and therefore scientific statement that the nature, quality, and modus of error remain unchanged until destroyed, we may avoid the disaster which results from recourse to the mythical and unreal. Cæsar in office or person was a type of cruelty, hardness, austerity, and selfishness. Mortals should have made the discovery by this time, that every application for relief to such a pretence of power will fail, because no good, no love, no compassion, inheres in Cæsar.

In his practice of Christian Science, the individual finds himself often pushed into a corner by a semblance of events which mesmerism clothes with all the horror of reality. With the appearance of such a predicament, comes the suggestion to appeal to Cæsar, and what we are learning is that the very evil which presents to us a threatening experience is the same evil which suggests the purely material way of escape. To disregard the threat, and the accompanying invitation to apply to the threatener for help, is the only scientific way, the way Jesus demonstrated so many times, and to which he so persistently called attention. That which produces disease, cannot heal it, that which induces

Digitized by Google

poverty, cannot undo it, that which creates discord, cannot give concord.

The Christian Scientist finds, then, that he heals quickest and best, who gets farthest away from the false sense of discord. To reach out timidly for Divine aid, is to discredit and discount the ability of the Divine Nature. To treat matter, or disease, or personality, means that we are not rising above a sense of the actuality of these illusions. In "Unity of Good," p. 67, we read, "To say there *is* a false claim, called *sickness,* is to admit all there is of sickness; for it is nothing but a false claim. To be healed, one must lose sight of a false claim. If the claim be present to the thought, then disease becomes as tangible as any reality. To regard sickness as a false claim, is to abate the fear of it; but this does not destroy the so-called fact of the claim. In order to be whole, we must be insensible to every claim of error." Our individual discovery that Cæsar is the cause and not the cure of human woe, gives impetus to our prayers, and turns thought toward the "Life of all Being Divine." The individual must discover this for himself, but he is aided in his efforts by the failures and successes of those who have preceded him in the work of exploration, and happy is he who can make the application for himself.

## Love Gives.

ELLA S. SARGENT.

"O ISRAEL, thou hast destroyed thyself."

In these words of Hosea lies all the pathos of human life: "destroyed *thyself!*" Yet in his added word, lies the full hope of the blessed promise, iterated and re-iterated to the children of Israel: "But in me is thine help." God is Love; and love is the law of life. As we love God, love our brother, abide in love, we regain life.

The later words of St. Paul to the Romans pierce my heart to-day, "Thou that makest thy boast of the law, through breaking the law dishonorest thou God?"

"By breaking the law dishonorest thou God?" Who of us can say, "I keep the law: I honor God"?

Love means "giving." Love cannot contain itself, live to itself, it must give. Its action is outward; a full, free, out-pouring, giving of its first and best.

My little girlhood was spent in the South in the years of the Civil War. For three years no stores were brought through the lines; consequently our giving could never be anything that was "boughten;" our gifts must be something that grew, or that were made with our own fingers.

My dear, wise parents taught us the fundamental law of love, expressed through giving. I can recall my clear-sighted father saying, "Teach the children to be generous: if they learn to give, they will learn to forgive. If they learn to give what they would like to keep when they are little, they'll be broad-minded and fair when they are grown." And so, when the luscious plums ripened, and the peaches reddened, we would carefully criticise our apron harvest. As I remember now, everything that grew in that fair clime was without blemish, yet many serious moments were spent in selecting the very best for some one whom we loved, perhaps our black nurse; and they were the best chickens, the plumpest, and the yellowest-legged, which were sacrificed on our love altar to some family needing delicacies, whose father or big brother was in the ranks. And we would spend waiting hours under the tall persimmon tree, having laid big green leaves on the ground as exactly under the fruit as our youthful eyes could measure, to catch the frost-ripened persimmon. Those which dropped with mellow thud on to the sand would do for us, but mother's must fall on the leaves and so be saved from grit and gravel; hers must be "all pulp and no sand."

And the home-made candy, pulled lighter and lighter till little blisters on our tender palms attested our devotion, was to go to the "cripple lady;" black molasses would do for us.

Later, we were taught in the church, that as the early fathers gave the first-fruits of their fields, the firstlings of their flocks, so we must give our first and best thoughts to God; our first and best loves to our brethren.

The Israelites had sunk back into love of self. We hear Hosea and Malachi pleading with their people for a return to God. Malachi appeals to the priests, and to the people. Their priests were debasing the ritual; the grossest forms were creeping into their services. The priests knelt and kissed the calves before offering sacrifices; the people offered to Jehovah stinted sacrifices, their poorest instead of their best.

I read in my Bible Dictionary what may interest others; that "to Malachi the priests represented a moral and spiritual force. That men starved their priests by withholding their tithes, is a proof that men are not interested in the ideals which the priests represent." The Dictionary further says of our present day, "when the clergy in any community are underpaid, it often means that men are not interested in their religion. And a prophet may point to the outward fact, as a sign of the inward cause."

Malachi saw priests wearying and snuffing at the length of the proscribed service; people bringing the lame lamb, the blind heifer, the aged ram; and he plead with them again, showing them the spiritual motive, the true worship, the worthy offering. He said, "From the rising of the sun even unto the going down of the same my name shall be great among the Gentiles; and in every place incense shall be offered unto my name, and a pure offering."

It was revealed to St. John that incense was the "prayers of saints."

In every place, where love is known and shown, prayers shall arise and hearts be purified, even amongst the heathen. And now the question is, Do we as Christian Scientists, as the founders of a new church, give our first and best thoughts to God? Why, see the example that He set us! "God so loved the world, that He gave His only begotten Son,"—His first, His best, He gave to us.

Is our first and best for Him: for our brethren? Again, are we giving our first and best to the church? Are we interested in the ideals which our church with its Readers, its lecturers, its Journals, is trying to represent? When we meet within its walls, do our first and best thoughts go out to those who have given time and consecrated thought in fuller measure than we may have done, to the preparation of the lesson and the teaching of our text-book? Does our first and best love sustain and encourage those who tremblingly testify to spiritual struggle with evils?

Malachi promised to those who returned to God, Love, that the Sun of righteousness shall arise with healing in his wings." (Malachi, 4 : 2.)

Christian Science teaches us that as we love God, we reflect Him, or give His love to others. "Infinite Love is reflected in love" (Science and Health, p. 17).

On our love altar, we may offer to God our grateful hearts. Our Teacher has taught us to give love that not only in our own minds and in our own bodies, may we know righteousness and health, but that to our neighbor we can give the established truth that *to-day* "shall the Sun of righteousness arise with healing in his wings."

The child of God does not look backward to gain fresh energy. His energy is the energy of hope and not of retrospection. He presses forward; his glance is ever onward. He anticipates revelations of God ever more and more glorious.—STOPFORD A. BROOKE.

## The Lectures.

### At Rochester, N. Y.

Rev. Arthur R. Vosburgh, C.S.B., of this city, gave an address of interest last evening [March 22] at the Lyceum Theatre on the subject of "Christian Science, the Idealism of Jesus." The lecture, in brief, outlined what Christian Science is, and was well attended by an appreciative audience.—*Rochester Democrat and Chronicle.*

### At New York, N. Y.

An interesting lecture was delivered on Thursday night, March 19, by the Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., on the subject of "Christian Science, the Idealism of Jesus." He was attentively listened to by a large and appreciative audience at the Ellerslie Hall, No. 82 West 126th Street, where Third Church of Christ, Scientist, of New York City, holds its regular services.

*Harlem Local Reporter.*

### At Joplin, Mo.

The lecture delivered last night [March 17] at the New Club Theatre under the auspices of First Church of Christ, Scientist, was very largely attended.

The speaker for the occasion, Judge Hanna, of The First Church of Christ, Scientist, Boston, Mass., was introduced to the audience by Mayor John C. Trigg, and proceeded at once upon a forceful presentation of the subject.

The local church in this city has been instrumental in bringing before the Joplin people a number of lecturers, and the attendance last night indicates that many are attracted to this interesting religion.—*Joplin Daily Globe.*

### At Ogden, Utah.

The lecture on Christian Science at the Grand Opera House yesterday afternoon [March 15] was a grand success for the local church. More than a thousand people attended notwithstanding the rain. Quite a large number of Scientists from Salt Lake City came up on a special train to hear the speaker.

Rev. E. I. Goshen of the Congregational Church presided at the meeting and introduced the speaker in a very pleasing manner, showing at once his liberality and his freedom from narrowness, and his zeal for the cause of truth as he understands it. His introductory remarks gave to the lecturer, Mr. Carol Norton, C.S.D., of New York, a cordial welcome, and at the same time was an earnest plea for an unbiased hearing of the subject to be presented.—*The Standard.*

### At Missoula, Mont.

Mr. Carol Norton, C.S.D., of New York City, lectured at the Union Opera House, March 9, under the auspices of the local church. The lecturer was introduced by Dr. O. J. Craig, president of the Montana State University who said:—

It is an established principle that truth can never come in conflict with truth whether in the realm of nature or of spirit. Because this is true, we always hail truth with pleasure, whether it be in accord with our previous prejudices or not. The more we can know of truth the more pleasant and profitable our lives will be, not only to ourselves but to all with whom we come in contact.

The seacher after truth is always to be honored, and truly great is that one who contributes a new fact to human experience.

The human race in its career in this world has spent a great deal of time in getting acquainted with its environment. Man is born into the world to-day just as ignorant a he was in the days of the dark ages or of the Roman Empire. Whatever advantage he may have in the twentieth century is because the truth discovered by others has been preserved and does not require rediscovery.

Man in all ages has been a truth-seeker. It has not been given to any one man or any one age to know the whole of truth. That which we know to-day as truth has been added little by little and age by age.

I take pleasure in introducing to a Missoula audience Mr. Carol Norton, who will address you on "Christian Science Teaching."—*Correspondence.*

### At Spokane, Wash.

One of the largest and most intellectual audiences that has ever gathered in the Auditorium assembled there Sunday afternoon, March 8, to hear Carol Norton's lecture on Christian Science. It was a splendid platform talk.

Mr. Miles Poindexter, assistant prosecuting attorney, introduced Mr. Norton, and said in part,—

We pride ourselves here upon the meeting of many minds, and it is unquestionably true that from the interchange of experiences from every state and from every nation on the globe which meets here upon common ground, the general fund of public knowledge is increased and that all may learn something from each and every one. When the Constitution of the United States was being formulated James Madison struck out of the draft of that instrument the word "toleration," with reference to religion. For he conceived the idea that the power to tolerate implied the power to supervise, to regulate, to control or suppress; and from that day to the present the most priceless jewel in the crown of our institutions has been the idea that religion is a gift of God, implanted in the breast of the individual, and that it is not for man, nor for the state, to interfere with its exercise or expression. If older nations and older sections become narrow in their conservatism, it has ever been for the West—for the advancing West—to cherish the spirit of liberalism and freedom. So it is that we are always ready to give a willing ear to the reasonings of any faith which purports to be for the betterment of mankind. And it is altogether fit and proper that any man who has a message for the world should deliver that message; for "neither do men light a candle, and put it under a bushel, but on a candlestick; and it giveth light unto all that are in the house."

About thirty-seven years ago there was promulgated the doctrine of Christian Science, and after a period of obscurity, and a longer period of slow and patient growth, in recent years it has sprung into a movement which numbers among its followers many thousands of intelligent people. To-day this movement is attracting the attention of thinking people in different parts of the world. Even those who do not agree with all its teachings—even those of us who are not in entire accord with the doctrine of Christian Science—must admit that it contains much that is beautiful and true. We have the pleasure and privilege this afternoon of hearing an exposition of the principles of Christian Science from one of its authorized exponents. I have the pleasure and honor of introducing to you Mr. Carol Norton of New York, who will now address you.

*The Saturday Spectator.*

---

Pleasure is very reflective, and if you give it you will feel it. The pleasure you give by kindness of manner returns to you, and often with compound interest.

SYDNEY SMITH.

## Testimonies of Healing.

Nothing can longer keep me from publicly acknowledging Christian Science as my salvation. I had always thought much about God, and had tried to live a life consistent with my understanding of Him, but I found no joy, no satisfaction, and life was one long struggle to be happy and contented.

To outward appearances, it seemed that I could do anything I wished, but I knew no one, with seeming health, more limited by laws of *materia medica* and hampered by self-consciousness and fear, which kept me from excelling in any accomplishment.

Christian Science was brought to my notice by an aunt whom I visited, but I was not ready to see that the religious belief I was in was not the final revelation of Truth, and I was proud of an ancestral line of physicians.

After I married and entered into another life with bigger problems to work out, both the *materia medica* and the religious doctrines failed to give me the help I needed. Then, after looking vainly in the orthodox churches and in books on mental science, I humbled my pride, as I then expressed it, and turned to Christian Science, which I had before criticised and patronized.

Since then, four years ago, it has met my every need. At first I had to be helped like a baby over every difficulty, but now the light is growing clearer and the temptations to acknowledge error are becoming less awful. I am beginning to realize the power of the word.

I have four little children, two born under Christian Science treatment. The wonderful effect which Christian Science has upon their training, both moral and physical, would, if known, be an inducement to every mother to study this truth. It also solves the servant problem. In fact, there is nothing which cannot be rightly adjusted by the understanding of the nature of God and our relation to Him.

In proportion to my spiritual growth is my appreciation of the self-sacrificing life of Mrs. Eddy, our Leader.

LOUISE E. THORNE, Winnetka, Ill.

---

One evening my husband came home with his head bandaged, and said that a stick of wood from a machine had hit him on the cheek, cutting its way entirely through the flesh, and loosening a tooth. We had a doctor wash and dress the wound, and he said that all he could do was to keep it clean, as he could not stitch it. The flesh healed quickly and painlessly, which latter circumstance caused the doctor some alarm, but we met every error voiced, and to-day there remains only a small scar.

About a week after this happened, my baby of two years, awoke one morning very sick and in a high fever; after much battling, fear was destroyed in my own mind, and at the same time every manifestation of fever left him. Although the child lay on the lounge or on my lap all day, still the improvement was so marked that we seemed to see the healing advance. We slept well that night and the next day there was only an appearance of extreme weakness, which was overcome by noon that day.

I would like to mention the great help that the story of Daniel was to me in making these demonstrations. Whenever tempted to see the physical manifestation I would remind myself that Daniel, after realizing the powerlessness of evil, did not again turn to it to see the forms it assumed, nor did he look to see if the lions were coming nearer, but turned absolutely away from the evil, as is represented in the familiar picture, and *looked up*. So I turned away from the error and looking up tried to realize God's presence and the perfect man, and that destroyed even the manifestation of evil. The looking up and away from error is all there is to any demonstration, and it has been a slow and difficult lesson for me to learn, but, thank God, the light is breaking and I begin to realize that there is only God and His creation.

One morning about ten o'clock a call came to me asking treatment for severe pain. It was impossible to attend to it immediately except with a simple denial, but in a little while I took my Science and Health and read. At noon, word came that the pain was gone, so I thought no more about it, and all was perfectly harmonious until the middle of the night, when I was awakened. The pain had returned and the sufferer could not lie down. I got up once more and proposed reading from Science and Health. My offer was accepted. In about three minutes the groaning ceased and the sufferer lay down, every sign of pain or unrest disappearing; in a very little while he was fast asleep, and slept restfully and quietly until morning, when he awoke at the usual time, perfectly well, nor was there any return of the trouble.

I have since been told that there was a large and very hard lump in the right side, breathing was very painful, in fact the whole body was racked with pain. The beauty of this demonstration lay in the fact that there was no treatment in the accepted meaning of the word, as I simply read Science and Health, seeking earnestly to realize its statements, putting personality out of sight, that the Truth might, without obstruction, flow into the sufferer's consciousness.

This is but one more proof to me that the revelation of infinite Love, called Christian Science, is absolutely true. It brings the healing power, taught and demonstrated by Jesus.

MRS. A. P., Salem, Ore.

---

Remembering the blessings that come to us through the study of our Lesson-Sermons, I must acknowledge the benefit I have received and also tell of some of the work which I know has been done.

One summer while visiting a relative she became interested in studying the lesson with me, and after I had returned home she wrote for treatment, at the same time buying Science and Health. Her earnest study of our text-book has been rewarded in many ways. In a letter received she writes as follows:—

"I had a complete demonstration of healing fear instantly, also over a seemingly bad accident. A. stumbled over the dog and stepped on the rocker of a chair while holding a knife and fork. I did not see her but she began to scream; the fear was allayed instantly by realizing God's allness, and that nothing could harm in His presence. The blood was running down her face from near the outer corner of the eye, also from the inside of the nose with a ridge as large as a pencil across the top of the nose.

"I said aloud 'Fear not, for you are God's child and nothing can harm you. You are not dependent on eyes for sight, for God is your sight; neither are you dependent on blood for life, for God is your Life,' and in less than fifteen minutes her tears were dried, the swelling gone, and only the spot from which the blood flowed was visible. I continued the treatment for an hour or more, realizing constantly that matter has no sensation and cannot become discolored, inflamed, or swollen. I denied every form of error and told her to do the same; in the morning she went to school as usual, and so surely by degrees I am entering in."

Another one writes me:—

"I spent three hours or more in the dentist's chair, had three gold fillings put in. Yesterday when I was there he said he did not think he could fill with gold, for the nerve was all exposed. They are front teeth, so I went this morning and asked for treatment.

"The dentist, a stranger to whom I was recommended,

Digitized by Google

lined the tooth and filled with gold, and, really, I almost went to sleep, never felt even the drilling, and scarcely moved the whole three hours that he worked, steadily.

"He stopped in his work to ask me if I were a Christian Scientist. Before leaving I said to him, 'Why did you ask me that if you did not know it?' He answered that he had worked for Christian Scientists before and they were never hurt."

So the work is going on and we are entering in and I am thankful to be one of those with my face turned toward the Light.—MAUD VROOMAN, Plymouth, Mich.

---

On my way to a Wednesday evening meeting, not long since, this thought came to me, "You must express your gratitude for all Science has done for you;" then another thought followed, "You had best wait until you work out some of the hard problems that you have, before you say anything," then this thought came, "No, give praise at midnight." Since then many problems have been solved by reading that story of the apostles shut in an inner prison with feet fast in the stocks, and with no visible way of escape. We read they prayed and sang hymns of praise at midnight, and the prisoners heard them; then came the great earthquake, and the prison doors were opened and their bonds were loosed, not of a few, but every one that heard.

I feel deeply grateful that a disciple in this age had the courage and faith in God to sing praises at midnight, and because of her understanding and love for good, the prison doors are being opened and the bonds are being loosed for the weary ones who have heard and are turning to the Father-Mother God that has been revealed to us.

I. B. G., Memphis, Tenn.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

---

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it will stand April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine, printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B. Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Any one who observes closely the words and phrases in current use for teaching religious truth is impressed by the fact that a new phraseology is establishing itself wherever earnest men with a real message try by tongue or pen to gain the attention and the assent of their fellow-men. . . .

We believe that this disposition is for the betterment and enrichment of religion. Some persons, it is true, affirm that the new phraseology means a casting aside of the old truths, and that the men who employ it have ceased to hold the beliefs which their fathers did about God, Christ, sin, and the moral struggle; but it by no means follows that, because a man strives to make himself understood by the people to whom he speaks, he has completely modified his theological standard. To be sure, fresh visions of truth can hardly help giving rise to new forms of statement; but perhaps, after all, it is not so much a question of conservatism *versus* liberalism, as of a preacher's profound yearning to voice his message most effectively. As *The London Examiner* says, people are not nearly so interested in the average pulpit themes as the average minister is apt to think. We would go farther and declare that a good deal of the language used in the pulpit and on the religious platforms fails to carry any distinct meaning to the modern man. He has heard from childhood the familiar phrases so constantly that their bloom and beauty have entirely disappeared, or, lacking such a background for his life he hears, when he occasionally does go to Church, phrases so totally unlike anything he hears in the shop, the market-place, and on the street, that he is bewildered and mystified.

*The Congregationalist and Christian World.*

Those who keep in sympathy with the religious sentiment of the day—its changes and its evolution—will be convinced that we are at the threshold of a new era. Old divisions begin to appear irrational; and there is a drawing together, not only of affiliated sects, but the question arises, Why shall not those which have been antagonistic recognize the fact that the questions over which they have fought have thinned out into invisible air? . . .

In the *Biblical World* Rev. Dr. Merrill of Chicago shows that the problem is no longer one of mere good will and fellowship, or a restoration of harmony between scattered parts of a common faith. He declares that the whole Church, in all its parts, has come to a pass where it demands and must have a new statement of Christianity. He thinks that the very vital and common questions that have been supposed to make up Christianity must be reconstructed in form and in answer. . . .

Mr. Merrill is quite as emphatic and frank in a further statement. He says that we are trying to turn from the formalities of Christianity to the vital and the spiritual, and yet we are compelled to ask for a new definition of the spiritual life. There is a new definition necessary, also, for the Holy Spirit and for fellowship with God. . . .

We believe that Mr. Merrill has largely solved all his problems in his statement of a third problem. He says that it is necessary in the first place to make clear that the Church has a function in society, a part of supreme importance to play in human progress and well-being. But just here he finds the difficulty, that the Church does not really know what it wants to be or what it needs to do.

*The Christian Register.*

It is so much easier to try to have a right life by conforming to some rule of conduct or outward regulation of living than it is to get the heart in such a condition that it will be easy to do right. This practice has always been the fault of humanity. All races and ages of mankind have had some idea of what they ought to do and be, and it has usually found expression in some kind of outward conduct. All forms of idolatry and penances, and even higher orders of religious ceremonies and regulations, have grown out of this mental process. In our own day and in the best expressions of our religious life there is the same danger of falling unconsciously into the idea that the outward acts of worship, such as Church attendance, and religious exercises and giving, have in them the power of keeping our lives right.

The moralist and reformer say we should *live* right. Jesus says we must *be* right. The only genuine righteousness is heart righteousness. We must admit that Jesus is the only safe teacher upon this subject, for "he knew what was in man." See how he analyzes and illustrates and defines true righteousness! We are all agreed that anything that will produce this righteousness must affect the man himself. The effect of such righteousness must make us right in the sight of God and not simply appear to be so. This then will necessitate our being right in our dispositions, desires, and affections. To the man who would be right, the law by which he is to become so is removed from the sphere of action to the sphere of right motives.—*The Standard.*

The Rev. D. Baines-Griffiths says in *The Congregationalist and Christian World*:—

"Is it not entirely Christian to believe that a man may have vital religion and be well-pleasing to our Lord, though he follow not with us? The disciple of Jesus can adopt no rôle of superior person toward them that are without the law. The truth is, we are all more human than theological unless we happen to be striking an attitude.

"No one in these days is protesting more stoutly than Professor James of Harvard against a naturalism that knows no evangel of moral recovery. He keeps step with the gospel in preaching that men are not so completely the victims of all that has gone before that they may be labelled and classified once and for all. There is an incalculable element in human nature, because choice remains. Our lives may open toward a Power under whose influence the tides of conduct may be reversed."

Since man is God's child the law of God is also man's law, written in his mind, and heart, and conscience. The real interpreter, therefore, of God's law, is he who lives in God, and in whom God lives. And it follows that the highest son of God is the truest interpreter and revealer of God. Is not this the place of Jesus in the universe? He is the witness of God to men. He is the finished and perfect representation and representative of God, not so much by formal teaching as by his nature, and distinct moral and spiritual personality. His life and character interpret, that is, give a new meaning and power to, all human life. He lived the life of truth, of law, of love in this world, and so illustrated and established a filial dispensation in which and under which every child of God can become a son of God, as Christ was the Son of God. The law of life is God as source and consummation.

*The Universalist Leader.*

Jesus was heavenly minded. His thoughts were fixed on the Father and the invisible world. No one ever was so completely taken up with the realities of the invisible. Yet no one was ever so useful among men. His heavenly mindedness was his chief fitness for earthly ministries. The more one fixes his mind on heavenly things the more free and strong he is to grapple with earthly difficulties and subdue earthly evils. The men who have done most for this world were men who were in this world but not of it. They never would have accomplished anything for this world if heaven had not come into their hearts and lives.

*The Christian Advocate.*

The countries far north are cold and frozen, because they are distant from the sun. What makes such frozen, uncomfortable Christians, but their living so far from heaven? And what makes others so warm in comforts but their living higher and having nearer access to God?

RICHARD BAXTER.

The impression of God is kept up by experience; not by logic. And hence when the experimental religion of a man, of a community, or of a nation, wanes, religion wanes—their idea of God grows indistinct, and that man, community, or nation becomes infidel.—HENRY DRUMMOND.

If men would cease reading into the New Testament what is not there they would much more frequently see eye to eye than they do now. It is not what is drawn out of the Sacred Oracles, but what is injected into them that gives rise to isms and schisms.

*The Examiner.*

There is perhaps no truer sign that a man is really advancing than that he is learning to forget himself, that he is losing the natural thought about self in the thought of one higher than himself, to whose guidance he can commit himself and all men.

J. C. SHAIRP.

The contemplation of celestial things will make a man both speak and think more sublimely and magnificently when he descends to human affairs.—CICERO.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

**National.**

The surplus of Government receipts to the end of the third quarter of the current fiscal year over expenditures is $33,831,911. On the same proportion the surplus for the year would reach about fifty million dollars. Owing to the payment of heavy deficiency appropriations made upon the adjournment of Congress, and of $3,000,000 for Philippine relief, the March addition to the surplus was only $450,434. If payment should be made on the Panama account before the close of the fiscal year, June 30, the entire surplus would be used.

For the month of March the total receipts were $45,435,434, made up of customs $23,709,968; internal revenue, $18,823,751, and miscellaneous, $2,901,715. The expenditures amounted to $44,985,000, made up of civil and miscellaneous, $13,107,000; war, $12,279,000; navy, $7,374,000; Indians, $1,052,000; pensions, $10,698,000, and interest, $484,000.

The first meeting of the Alaskan Boundary Commission has been deferred until next autumn by an agreement between the State Department and the British Foreign Office. The arguments and evidence will be submitted according to the treaty before May 3. The case of the United States is being prepared and printed by ex-Secretary John W. Foster. The counter cases are to be presented on or before July 3. At the end of two months more each party has to deliver "a written or printed argument showing the points and referring to the evidence upon which his Government relies." After that the tribunal of six commissioners may hear oral arguments, if it desires. Its decision is to be rendered December 3, unless the commission is continued by mutual consent of the two Governments.

The *London Times* last week headed its Foreign News column with two New York despatches of about two hundred words each marked "Marconigraph." An editorial stated that the cost was only a little in excess of the cable rates between England and France. These messages are sent by telegraph to the Marconi station at Cape Cod, thence by wireless to Poldhu, thence by telegraph to London. The transmission at present is only a series of messages which that paper expects to receive daily and is little more than an interesting but successful experiment.

Mr. Bowen, Venezuela's plenipotentiary, has signed with Senor Ojeda, the Spanish minister, the Venezuelan-Spanish protocol providing for the adjustment of the Spanish claims by a joint commission at Caracas. W. E. Bainbridge of Iowa, former second secretary of the legation at Pekin, has been selected as the representative of the United States on the American-Venezuelan commission which will meet at Caracas to adjust the claims of this country against Venezuela.

Henry White, secretary of the United States embassy at the Court of St. James, was recently one of three men elected to membership in the Athenæum Club, under the rule empowering the annual election of nine persons "of distinguished eminence in science, art, literature, or the public service." His name was proposed by Sir Leonard Lyell, Bart., and seconded by Premier Balfour.

The Lake Superior iron ore movement for 1903 has already begun. The movement last year was 27,500,000 tons. The estimate for this year is placed at three or four million tons higher.

**Foreign.**

The treaty of reciprocity between the United States and Cuba, as amended by the United States Senate, has been approved by the Cuban Senate by a vote of 12 to 9. In accordance with cabled instructions, Cuban Minister Quesada at Washington has signed the amended treaty on behalf of President Palma. This outcome of the measure gives great satisfaction and it is expected that Congress in special session before December 1 will approve the measure, at which time the treaty will be proclaimed.

It is reported that arrangements are being made between the Russian and Chinese Governments for all the funds of the latter to be deposited at Pekin with the Russo-Chinese Bank, a Russian governmental institution. If this should be done, a protest would doubtless be presented by the British institutions which have acted as bankers to the Chinese Government.

Mr. Bowen, Venezuelan plenipotentiary, has refused absolutely to accept the insertion in the protocols signed with the blockading powers, of an article requiring Venezuela to defray the cost of the blockade in case The Hague Tribunal decides adversely in the matter of preferential treatment. A few verbal changes were accepted.

The statue of Mr. Gladstone has just been erected in the north transept in Westminster Abbey. It occupies a prominent position near the statues of Sir Robert Peel and Lord Beaconsfield, and fills the last remaining space available for a standing statue in the transept. It is of white marble by Thomas Brock, R.A.

The Second Chamber of the Netherlands Parliament has begun the discussion of the Government's anti-strike bill, which provides various penalties for coercion of non-strikers, strikes by public servants, and for instigating refusals to work by public servants.

**Industrial and Commercial.**

In the United States District Court at St. Louis, last week Wednesday, Judge Elmer B. Adams handed down a decision dissolving the injunction granted March 3, restraining officials of the Brotherhood of Locomotive Firemen and Railroad Trainmen and other labor leaders from influencing in any way or ordering the men employed on the Wabash Railway system to strike. The restraining order of the Court, however, has had the effect probably intended; time has been gained, and it is probable that the trouble will be arranged without a strike.

The greatest irrigation project in the United States and the third largest in the world has been started in Idaho under the management of a corporation originating in Salt Lake City. The plan contemplates, it is said, an expenditure of almost $5,000,000 and reclamation of 271,000 acres of the best agricultural lands in the great Snake River Valley of southern Idaho.

The Krupp Company is about to spend five million dollars in enlarging its works, chiefly in constructing a plant for the manufacture of rails at Rheinhausen on the Rhine, in accordance with American methods. The ore will be unloaded from the boats to the furnaces and come out finished rails without cooling.

Grain men who have visited the wheat belt of Kansas and Oklahoma agree that the present condition of the plant portends the greatest wheat crop ever grown in the West. Estimates agree that Kansas will harvest 100,000,000 bushels, Oklahoma, 40,000,000, and Nebraska 60,000,000.

The American Window Glass Company has advertised for sale seventeen of its factories in the Indiana gas belt, rendered unnecessary by the adoption in its factories of glass-blowing machines.

The census office cotton bulletin shows total actual crop of 11,078,882 commercial bales, equivalent to 10,620,945 five-hundred-pound bales.

**General.**

In pursuance of the plan of the Carnegie Institution to establish a laboratory for the study of plant life peculiar to the desert regions of America, a site has been selected near Tucson, Ariz. It comprises some sixty acres. An adobe building of one story will be erected on the crest of the mountain. The interior will be divided into a large and a small laboratory, a storeroom, workroom, library, and office. It is expected to be ready for occupancy by September 1.

The eighth annual international chess match between America and Great Britain for the possession of the Newnes challenge trophy, ten players on a side, was played last Friday and Saturday. America has won the trophy four times, Great Britain twice, and one match ended in a tie. In all sixty-eight games have been played in the successive matches. Americans have won thirty-six and the Britishers thirty-two. The present match was won by the Americans by a score of 5½ to 4½.

A new star between the eighth and ninth magnitude has been discovered in the constellation Gemini. Photographically it is about a degree brighter. Its spectrum exhibits many bright lines, hydrogen bands being conspicuous. Indications point to its soon becoming a nebula.

In a recent test by the gunners of the Indiana the thirteen-inch turret guns made twelve hits out of thirteen shots at a five mile range, which makes a new world record for accuracy, the previous record being fourteen out of sixteen shots.

William Blake's "Illustrations of the Book of Job" was sold by auction at London last week for $28,000. The volume, which was published in 1825, contains the forty-three original proof impressions of engravings and original designs in colors.

At a recent London sale of old English silver at Christie's auction rooms, a fifteenth century spoon, eight inches long, with the earliest known hall-mark, fetched $725. An Elizabethan cup, with the initials "E. R." brought $1,225.

Shamrock III., the new cup challenger, took her initial spin last week in a light breeze in company with Shamrock I., the challenger of two years ago, and gave a good account of herself, proving herself faster than Shamrock I.

England won the fifth international university cable chess match by a score of 5½ to 2½.

### Legislation in Texas.

ROBERT L. ZILLER.

THE legislature of Texas has again expressed itself as opposed to oppressive medical legislation. A bill prepared by the State Medical Association was introduced in the Senate in the early part of February by Senators Hicks and Davidson of DeWitt, which appeared to have for its object only slight and unimportant amendments to the existing medical law. The bill was quickly passed through the committee to which it was referred without any one on the outside having a hearing. Those on the committee had no objection to the bill, as they did not discover that through its innocent-sounding amendments there was removed one of the most important clauses in the existing medical law, the clause which exempts from the operation of the law those who do not use drugs in the healing of disease. The removal of this clause from the existing medical law was really the purpose of the bill. So adroitly had the matter been managed that before this was pointed out there was practically no opposition to the bill. In the attempt to remove this exemption clause the main blow was aimed at the practice of Christian Science, though all practitioners who used no drugs were included. This became evident when the bill came up for discussion, when Christian Science seemed to be almost the only issue.

It was learned that the State Medical Association had been contemplating this move for the past two years, and when the bill was brought up in the Senate on the morning of February 25, such a conflict was precipitated as has doubtless never before been witnessed in legislative halls on the subject of Christian Science. Concerning it, the *Galveston News* says, "With the exception of that upon the drawing for terms, the debate has been the warmest that has taken place in this Senate."

When the bill came up a motion was made to postpone until another day. Senator Hanger arose to oppose postponement unless it should be indefinite postponement. He was opposed to the bill, and made a forcible speech in defence of his position. He disclaimed any knowledge of or belief in Christian Science, but held that this is not a subject for legislation. He concluded by saying, "Because I do not believe in Christian Science I have no right to say to my neighbor, you have no right to your belief, when he says he has been healed. Every man has a right to select his own method of cure. I know little about it, but I know that in this measure is involved the fundamental principle upon which the government is founded, and to pass it would be to take away man's constitutional rights."

Senator McKamy was in favor of taking a vote at once on the adoption of the amendment offered by Senator Hanger and himself, which provides that the exemption clause be put back into the bill, so as to exclude those who do not use drugs from the operation of the law. Among other things he said, "I want to see this matter settled now. I am opposed to quackery, but where are we to say that quackery begins. This is no new measure, it is an old familiar face. It has been coming up for years in the legislatures of this state, and when I was over in the House this same question was discussed there and the legislature after careful investigation adopted this amendment. Now the schools that were then given their boards are here trying to force everybody else out. I don't know much about Christian Science, but I could talk for hours of the cases that have been healed." He here cited a number of cases of healing, and told of one man who had been treated by a regular physician for a number of years for a wound. "The wound finally healed," he said, "but the man did not gain strength and complained about it to his doctor, when he replied, 'It will now take you about two years longer to get the medicine I have given you out of your system.' Every man has the right to decide what sort of treatment he wishes. I believe that the world wants them all: the allopath, the homœopath, the eclectic, the osteopath, the magnetic healer, and the Christian Scientist. What would the 'Old Alcalde,' and the grand old men who framed our state constitution say could they know that such a measure, tending to rob citizens of their rights, was pending in this Senate. I will never lend my influence to such an act."

Senator Hicks insisted that the regular practitioners were not seeking this legislation for selfish purposes, but in the interest of the public health. He said that people who held out hope to the hopelessly sick ought to be restrained from practising, especially when they take money for their efforts to help them.

Senator Davidson of DeWitt, read from a marked copy of the February *Christian Science Journal* containing testimonials given under oath. He referred to several cases therein mentioned, and said that though they were given under oath, and doubtless believed by those who gave them, no sensible person would accept them as evidence or believe them. He insisted that they were all frauds.

Senator Hanger replied and said, "I do not arrogate to myself all the wisdom on any one subject, but I know that in my city some of the best citizens are Christian Scientists. They are as intellectual, law-abiding, and as high a class of people as any man here. If the senator from DeWitt desires to see Christian Science spread let him put into effect the proposed measure.

In the afternoon session a substitute to the amendment was offered by Senator Savage. This substitute had for its purpose the recognition of osteopathy, but the exclusion of the practice of Christian Science. Senator Savage, who is a minister of the Christian Church (Firm Foundationalist), took the floor in support of his substitute, and his speech, which lasted for more than an hour, was bitter in the extreme, stormy, and characterized by great prejudice against Christian Science, and a complete misunderstanding of the subject. He quoted copiously from the Bible in the attempt to show that Christian Science was not based on the Scriptures.

Senator McKamy asked whether he, Senator Savage, did not believe that the regular physicians lost more patients than the Christian Scientists.

*A.*—"If so it is because they have been in existence longer."

*Q.*—"Have you never heard of Christian Scientists heal-

Digitized by Google

ing people after they had been given up by all other doctors?"

*A.*—"I have so heard, but have never seen anything of the kind. Has the senator from Dallas ever seen them perform such a miracle?"

"Yes, I have seen a great many cases that were pronounced incurable healed by Christian Science both around here and in Dallas."

Senator Savage then asked, "Did you see the treatment administered?"

*A.*—"No, sir."

*Q.*—"Or did any other man?"

*A.*—"Some of these people were my own relatives, and many are my friends." Here he called the names of many well-known people who had been healed, and also related an interesting case of a relative.

Senator Savage replied, "I do not deny that Christian Scientists may do some healing," and then he went into a discussion of the belief of Christian Scientists.

Senator Hale, while disclaiming any knowledge of or belief in Christian Science, made a strong defence of the rights of Christian Scientists, declaring that they were "being made a stick horse upon which to ride this measure through the Senate in the interest of two or three schools of medicine. If Christian Scientists are denied the right to practise, how long will it be before the school in which I believe and which I employ will be prevented from practising? The regular school don't heal all the patients, as we well know.

Senator Douglass, M.D., spoke in favor of the bill, and against his conception of Christian Science along the usual line of argument. Senator Patteson followed in a brief but strong speech, in which he advocated freedom for all to practise, avowing that any person who could heal the pains of another, no matter in what way, should have the right to do so, and that the sick man should have the right to employ him.

Senators Perkins and Cain spoke briefly in advocacy of the bill, and against the practice of Christian Science, Senator Cain stating that no one knew much about Christian Science. Here a motion was made to table the substitute offered by Senator Savage in lieu of the amendment offered by Senators Hanger and McKamy. The vote to table resulted in a tie. The substitute was afterwards lost by a close vote. An amendment to the original amendment was then offered by Senator Douglass as follows: "Provided that no charges are made for their services." A motion to table prevailed.

Senator Grinnan here made an eloquent speech in favor of the original amendment which exempts Christian Scientists. He argued that legislation against Christian Science would have no support under the constitution; that the legislature had a right to pass laws to regulate the practice of medicine, but that as Christian Science is not the practice of medicine the legislature had nothing to do with it. He characterized the proposed legislation as unjust and tyrannical, and unworthy of consideration by the Senate of Texas, and said he would never record his vote in favor of it. He here read from a decision of the Supreme Court of Ohio regarding the practice of osteopathy as follows, declaring that the ruling was even more applicable to the practice of Christian Science. "The result of the view urged in support of the exception is that by this act the General Assembly has attempted to determine a question of science, and to control the personal conduct of the citizen without regard to his opinions, and this in a matter in which the public is in no wise concerned. Such legislation would be an astonishing denial of the commonly accepted views touching the right to personal opinion and conduct which does not invade the rights of others. From the operation of constitutional provisions designed to establish and perpetuate freedom of thought and action in matters pertaining to religion, it results that in things which are of the first concern we are imperatively denied the guidance of legislative wisdom" (55 N. E. Reporter, Supreme Court of Ohio, Oct. 24, 1899). His arguments were strong, and his speech was delivered with impassioned earnestness.

Senator Hicks again took the floor and stated that he had asked postponement of the discussion in order to get certain information. That information had now been secured, and he produced Science and Health, which some physicians had just brought him, and proceeded to read passages from the book beginning at line 17 on page 153. He criticised the explanation of a boil there given, and averred that it was a pity Job did not have a "high attenuation of Truth" in his time. His misconception of what he read aloud to the Senate on the nature of contagion led him to say that Christian Scientists were a menace to the state in their practice, as they did not believe that there was any such thing as contagion, or that bubonic plague or smallpox exists, and he thought, therefore, that were Christian Scientists given free rein there would be little or no purpose in having quarantine laws, as they would not observe laws to govern what they believed had no existence. Senator McKamy offered a correction to Senator Hicks, saying that he was reliably informed that all Christian Scientists had strict orders to report cases of contagion to the authorities, and otherwise fully comply with the laws governing such matters. Senator Hicks accepted the correction.

During the debate it was several times insinuated by those who opposed the practice of Christian Science that the believers in its teachings were for the most part a class of ignorant or superstitious people, who had no claim upon the people of Texas for recognition. This fallacy met a just rebuke in the following incident: Upon the walls of the senate chamber there hangs the large and famous painting of the battle of San Jacinto. The mere sight of that picture, with the memory it recalls, stirs the pulses of every patriotic Texan, for on that battlefield Texas won independence from Mexico, and became a great republic. The faces thereon portrayed are said to be true to life, and among them are two who afterwards became presidents of the republic, Mirabeau B. Lamar, second president, and Anson Jones, the last president. The writer drew the attention of some of the senators to this picture and explained to them that the venerable wife of President Anson Jones was an earnest student of Christian Science, and that the daughter of President Lamar had but recently come to Austin to enter a class in Christian Science which was taught almost within the shadow of the Capitol. When it became known that such people, around whom cluster memories dear to every Texan, were to be classed as "impostors" and "fanatics" because of their acceptance of Christian Science, a just indignation was aroused.

When Senator Hicks had concluded his remarks, Senator Hale took the floor and again spoke in defence of the rights of Christian Scientists. He said that he had inferred from the remarks of several senators that the believers in Christian Science must be an ignorant class of people; that he did not know much about that side of the question at the time, and had in his previous speech defended their rights to practise from the standpoint of justice. "Now," he said, "if I have before in any way believed such things, I want to say that I have had reason to change my mind. I find that they are not a set of ignoramuses, but from what I see have even more than ordinary intelligence." He said Christian Scientists had been unjustly ridiculed and their attitude misrepresented, and that he was glad to have learned more about them. In ringing tones he denounced the tyranny that would oppress Christian Science and those who desired to become beneficiaries of its practice. The situation here grew almost dramatic, and was peculiarly suggestive to a Christian Scientist. Without it was grow-

Digitized by Google

ing dark and stormy, and the constant roar of thunder reverberated through the senate chamber, while fierce flashes of lightning played before the windows. Suddenly a large electric star hanging above the senator burst into a blaze of light, illuminating a copy of Science and Health which the senator held aloft as he stepped into the aisle and cried, "Do you mean to tell me that this book which has been criticised is the work of a fanatic or an ignoramus? Do you mean to say that those who have the intelligence to read and understand the philosophy of this book are ignoramuses? I am astonished at what I have heard. Listen to these words of this woman, listen, I say, and see whether they are the utterances of a fanatic. 'The profession of medicine originated in idolatry, with pagan priests, who besought the gods to heal the sick, and designated Apollo as "the god of medicine." He was supposed to have dictated the first prescription, according to the "History of Four Thousand Years of Medicine." It is here noticeable that Apollo was also regarded as the sender of disease, "the god of pestilence." Hippocrates turned from image-gods to vegetable and mineral drugs for healing. This was deemed progress; but really it only introduced another form of mythology, and of pagan practice. The future history of material medicine may correspond with that of its material god, Apollo, who was banished from heaven, and endured great sufferings upon earth. Drugs, cataplasms, and whiskey are stupid substitutes for the dignity and potency of divine Mind, and its efficacy to heal. It is pitiful to lead men into temptation through the byways of physiology and materia medica,—to victimize the race with intoxicating prescriptions for the sick, until mortal mind acquires an educated appetite for strong drink, and men and women become loathsome sots' (Science and Health, p. 158). Yes, to victimize the race, as this woman says, is indeed pitiful. These seem the words of one inspired, and truer words never came from the lips or pen of man."

The previous question on the amendment and bill was then ordered, whereupon Senator Savage moved a call of the Senate, which motion prevailed. Senator Hanger moved to excuse the absentees, but there were not sufficient votes to do so. The Senate therefore continued in session with locked doors until nightfall, and finally adjourned with the bill as pending business for the next day.

The next morning the bill was again brought up, when Senator Henderson made a strong speech in favor of the amendment and the liberty of all people to choose their own method of healing. Senator Savage again spoke in favor of the original bill, and Senator Hanger moved the previous question on the amendment, which motion prevailed. Senator Savage again moved a call of the Senate, and there not being enough votes to excuse the absentees, the Senate continued in session behind locked doors. Thus matters went on, the bill being displaced from day to day, until March 4. The opposing forces were about evenly divided, and during this interval each was watching the other closely. The press generally spoke of the battle as one of the hardest fought on both sides of any that has taken place in the Senate.

The *San Antonio Express* of February 28, in a strong editorial on this subject, quoted from Prof. Elmer Gates on the relation of mind to material things, and said, "We may not be able to catch the full meaning of his inspiration, any more than we do the exact theory of magnetic healing or the efficacy of Christian Science, but from the beginning there have been faith doctors who preached the power of mind over matter, and of healers who cured by the laying on of hands. As these drugless doctors employ no medicine, why should they be required to pass a medical examination? If they do some good and no harm, why should they be placed under the ban? Why should the Austin lawmaker measure everybody's corn in his own half bushel?"

On March 4, the bill came up again, and in the words of the Houston *Chronicle*, "both sides eagerly rushed to the fray, and for a time the atmosphere was lurid with oratory." Senator Davidson of DeWitt, wanted to postpone the matter again, saying that he wanted to give the senators a chance to hear from the people. He devoted some time to a denunciation of Christian Science. He concluded by saying that the Christian Scientists had been most persistent; that his desk had been filled with letters about healing, sworn testimonials, marked magazines, and decisions of supreme courts, in favor of Christian Science as well as marked copies of papers containing a governor's veto message of a medical bill, and that he wanted to hear from the outside.

Senator Hanger took the floor to oppose further postponement of a vote. He said, "That the senator admits he has been given such splendid evidence on the subject, and has had such authority laid before him on the inadvisability of this legislation, is, indeed, his misfortune. I do not object to the interest shown, nor to these letters, for every man has a right to express himself on matters that are of interest to him, and since the senator from DeWitt has spoken of these letters, I am going to read one of them to the Senate." He here read as follows: "'I have lived in Texas seventy years. I knew it as a wilderness. I see it now teeming with prosperity, an empire in its magnificence. I can almost say I "fought, bled, and died" for this grand state. I suffered all the hardships of a soldier when I fled from the merciless foe in 1836. I heard every gun that was fired on the famous twenty-first of April. When the liberties of this country were assailed, the forefathers flew to arms and gave their lives, a willing sacrifice, that we might be free in every sense of the word; but alas! alas! in my old age and feebleness the right to be healed by Christian Science mental treatment is about to be taken from me. Some interested parties are trying to force a bill through the Senate to deny me this dearest right. Thoughtless and uninformed, indeed, must be the person that would vote to foist such a bill on the liberty-loving Texan; the right to take medicine or not to take it. Christian Science has healed me, it has strengthened and soothed me when medicine could not, it is my life, my comfort, my stay. And now by the shades of Bowie, and Crocket, and Milam, and hosts of others that have given their lives when our rights were being assailed, can this unholy thing be done? You are the guardian of my rights. Will you not pause and think before you lend your name to this unjust measure? What Christian Science is to me it is to thousands of others. I raise my voice to make this appeal for our individual liberties.'" Pausing, he turned to some who had decried the believers in Christian Science and said, "And who do you suppose this letter is from? Not from a fanatic, not from a knave, or an impostor, or a fool. No, it is from one who is honored and revered. It is signed by Mrs. Anson Jones, the wife of the last president of the Republic of Texas and now President of the Daughters of the Republic of Texas. The only reason that can be given for wishing to postpone a vote on this measure is that more pressure can be brought to bear on the senators, more political influence, and more coercion from the physicians. I have been told over and over that I should be opposed hereafter unless I supported this bill, and this threat has been flaunted in my face with the statement that they would 'smoke us out.' The time for this has ceased. I am pleading for the rights of American citizenship, and I want to see this matter settled."

His speech was delivered with great force, and upon its conclusion Senator McKamy took the floor and likewise advocated a speedy ending of the matter. He said he had

Digitized by Google

also met with the same threats that Senator Hanger had mentioned, and he read one such threatening letter aloud to the Senate. He declared he was fighting for the rights of the people, and no coercion could turn him from his fixed purpose. "Who of you," he said, "have ever heard of a Christian Scientist coming here to threaten with political influence? Their side has been presented in a very different manner, and with a solemn plea for their rights. They demand nothing but justice at our hands, and now because I have been opposing this bill in the interest of justice and the rights of humanity, I am told that I shall meet with future opposition. Be it so; I purpose to adhere to my position. I have never yet deserted a friend in need, nor would I swim out of a river and leave my friend in the water. I have entered this fight, and I purpose to fight it out until the victory is won or my light goes out." The senator's speech was a strong plea for the rights of Christian Scientists.

The absolute quiet in the senate chamber was a matter of comment. The usual hum of voices in the lobby and among the senators was not heard, for all were listening eagerly to what was doubtless the most remarkable discussion of Christian Science that has ever taken place in a state legislature. The divine utterance was being felt, and it was soon seen by the advocates of the bill that their cause was lost, and to avoid total defeat a motion was made to recommit the bill, and this motion prevailed. It was generally understood that by sending the bill back to the committee it would there be quietly buried, and no attempt has been made to resurrect it. All honor to the noble defenders of the rights of man in the greatest Cause the world has ever known.

## Freedom of Choice.

Mr. Editor.

Certain judicial decisions have called public attention forcibly to the practice of healing the sick by other than material remedies.

Christian Scientists have proved, by a great multitude of cures effected, during the last thirty years and more, that "faith" when interpreted as spiritual understanding and not as mere blind belief, is a natural and highly efficient means of preventing and healing physical disease, as well as mental and moral discord. Their experience has led them to the conclusion, and statistics, as far as the latter can be gathered, confirm this, that the teaching of Christianity is the most efficacious means of restoring health and harmony.

To the question in your editorial: "Has the parent the right to sacrifice to his own belief a helpless child for whom he is bound to care?" I would state without reservation that he has no such right, but in using the word "sacrifice" care should be taken not to fall into the assumption that the lack of material remedies constitutes a sacrifice. Parents have the unquestioned legal charge of their children up to a certain age. They prescribe what they shall wear, eat, and drink, where they shall live and what education they shall receive. Is it not legally just, therefore, that parents should also select the particular form of treatment which their children should have in case of sickness?

Now, upon what reasoning is this choice made? Naturally, upon that derived from previous experience. In the case of the family to which reference was made in your editorial, these good people had lost several children under accepted medical treatments, the mother herself had suffered for some twenty years under the same systems, without receiving benefit. When she was healed of her long-standing trouble by Christian Science treatment, and after she had been able to bring up her sickly youngest child to robust health, as the result of study of Christian Science, would it not have been the acme of human folly for her to have returned to the systems which had been discredited by her personal experience and that of her family in their hour of need?

Much of the discussion raised by this question is based upon the assumption that the various commonly accepted systems of material medicine are exact and certain in their results. The truth is, of course, that they are the very reverse, and that the law, therefore, allows free choice to all citizens in order that they may procure that which experience has taught them to be the most efficacious.

It is quite necessary that the public and press should do their own thinking on this whole matter, and not allow intrenched tradition and custom regarding the treatment of disease to warp their views into certain channels, simply because the latter may be labelled "accepted."

W. D. McCRACKAN.

## Satisfying Evidence.

Mr. Editor.

All who have at heart the welfare of the race rejoice when human suffering is relieved. Appreciation for this relief is not necessarily lessened when one fails to understand or endorse the method employed. If relief is actually afforded, and health and happiness are brought into thousands of homes throughout our land, all fair-minded people are willing in a measure to look at the individual, through whose teaching and practice this good work has been accomplished, as a public benefactor.

An examination of Mrs. Eddy's writings would disclose the fact that she makes no claim that the phenomena of mortal existence which we call death, or that matter itself, is not real to our mortal sense of things. Insistence that matter is as nothing in the sight of God, however, is surely in line with consistent Christianity. Jesus had no good to say of matter. He urged his hearers to look away from the material into the spiritual. He said: "It is the Spirit that quickeneth; the flesh profiteth nothing."

On page 348 of "Science and Health with Key to the Scriptures," the text-book of Christian Science, Mrs. Eddy says: "I have never supposed the world would immediately witness the full fruitage of Christian Science, or that sin, disease, and death would not continue for an indefinite time; but this I do aver, that, as a result of teaching Christian Science, ethics and temperance have received an impulse, health has been restored, and longevity increased. If such are the present fruits, what may not the harvest be, when this Science is more generally understood?"

## Real Estate Purchased.

THE last parcel in the block bounded by Falmouth, Norway, and St. Paul Streets, in the shape of a triangle, has passed to the ownership of the Christian Science Church, the deed being taken by Ira O. Knapp *et al*, trustees. In the purchase of this parcel which is known as the Hotel Brookline, a four story brick building also in the shape of a triangle, from Gilbert C. Carpenter, it gives to the above society the ownership of the entire block.

During the past two weeks considerable activity has been going on in property on these streets, no less than ten estates having been conveyed by deed to the Christian Science Church, and now comes the purchase of the last parcel on St. Paul Street by the above society, which gives them the ownership of the entire block.

Just what use the society will make of the property has not been stated, but it is said that a number of changes will be made that will enable the church to expand, and to do so it was necessary to have this property. No block is so well situated for church purposes as this one, being in a fine part of the city.—*The Boston Globe.*

## Among the Churches.

### The Mother Church Building Fund.

WE append additional impersonal reports, which will be read with interest.

At a joint meeting of our Board of Directors and Trustees, it was voted to send one hundred dollars each year for two years to pay on the addition to the Mother Church.

Eleven months ago we organized our Sunday School with three children. We now have fourteen, and having read in the *Sentinel* what other Christian Science Sunday Schools have contributed toward the Building Fund, we thought we wanted to send something, so it was unanimously decided that we give ten dollars. We have had many demonstrations during the year, and have often proved that a little child shall lead them.

A meeting was called at our church the evening of February 11, and held after the regular Wednesday evening meeting of that date, at which it was unanimously agreed that we contribute the sum of five thousand dollars to this fund, by January 1, 1904.

"For as the earth bringeth forth her bud, and as the garden causeth the things that are sown in it to spring forth; so the Lord God will cause righteousness and praise to spring forth before all nations."

At a special church meeting last September we appointed a treasurer to receive contributions toward the Building Fund of the Mother Church. To-day (March 7) he forwarded one thousand dollars to the treasurer of the Mother Church, reserving a small amount as a nucleus for the continuation of this labor of love. We earnestly pray for a clear discernment of spiritual abundance, whereby we may be enabled to reflect and make manifest, by greatly increased donations, our gratitude for Christian Science and our love for the Mother vine of which we are a young branch.

In December last a special business meeting was held, for the purpose of making definite plans for giving toward the building fund for the Mother Church. Ten members were present, and all seemed to consider it a privilege to contribute, and joyfully responded to this opportunity of helping our dear Mother Church.

It was decided that we send one hundred dollars or over, the first payment to be forwarded by the first of May.

Our desire is to give until no more is required, and we know it is God who giveth the increase to all who bring their offerings with love and gratitude.

The thought of sending a contribution to the Mother Church Building Fund was presented to our Sunday School of nine members. They then had $10.14 in their treasury.

The children were asked what amount they were ready to send, and one little fellow of ten years said, "I think, eleven dollars." The children all agreed to the amount, and the time decided for sending it was a week from the following Monday. The offerings brought in then made the entire amount in the treasury, $11.13.

Reports came to us of how earnestly the little ones work during the week to bring their share of the amount needed.

Our church, at the December annual meeting, appointed a committee to receive pledges for the Mother Church Building Fund, and report at the March meeting. The latter meeting was held this week, and the committee reported pledges aggregating $256 from nineteen members, which is at least eighty per cent of the total membership. This, therefore, is our pledge to the fund, one half payable June 1, the remainder December, of this year, and we have so advised the Treasurer. While having many expenses to meet consequent upon the purchase of church property, we want to be represented in the Mother Church as a live, healthy branch.

### Plans for a New Church in Pittsburg, Pa.

There is to be another handsome East End church erected in the near future, but looking as little like the conventional ideas of a church as could be imagined. The new building is to be that of First Church of Christ, Scientist, of Pittsburg. The church congregation some time ago decided to erect a building of its own, and a convenient and suitable piece of ground was purchased for the purpose.

The intention is to have a church capable of seating a congregation of six hundred or so, although the present number of members is something less than three hundred. The experience of Christian Science churches in other cities has been that within a year after getting into its own building a church will double its membership.

*The Pittsburg Leader.*

## Appreciation of the Herold.

I AM so filled with joy and gratitude that I wish to express, through our *Sentinel*, my thanks to God and all who have helped to bring us the *Herold*.

It is another proof, indeed, as our beloved Mother and Leader says in Science and Health that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). No doubt the *Herold* will be a great blessing to our Cause until we all come unto one language,—spiritual understanding.

MRS. KATHERINE RUDOLPHI, Chicago, Ill.

Our new little magazine, *Der Christian Science Herold*, is such a joy to me that my heart overflows with gratitude to our beloved Mother for this added proof of her ever-watchful, loving care for all our needs. It will do a great work among the Germans, and is a beautiful channel through which we can reach out and help to bring the truth to them. I enjoyed the translation from Science and Health, and the good articles and testimonies. Though my German has become very rusty through disuse, and I am not accustomed to the Scientific terms, yet I find I can read the *Herold* understandingly and enjoy it, where I could not now read the ordinary German book.

MAY S. BROWER, Albany, N. Y.

### Cards in the German Periodical.

Application blanks will be supplied by The Christian Science Publishing Society to practitioners who wish their cards inserted in the directory of *Der Christian Science Herold*. These applications should be properly endorsed and forwarded to the Society. The rate for advertisement will be the same as now prevails for the *Journal*. It is desirable that those who offer their names in this way should be able to communicate with patients and inquirers who speak the German language only.

Many busy people are shameful wasters of time and opportunity, simply because they do low things when higher ones are possible. They read a poor book when they might read a better one. They squander time with bad companions when good ones are possible. They waste time in half-doing things, in botching, bungling, and blundering, in doing things over and over because they were not done right the first time.—*Success.*

CHRISTIAN SCIENCE SENTINEL.

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Class Legislation Defeated.

OUR very full account of the recent legislative battle and well-won victory in Texas will be of interest to our readers, as showing that in the matter of ministering to the sick another state has declared in favor of individual liberty and against class legislation. One by one the states are coming into line on this subject, and it would seem that we are approaching the day when attempts to proscribe the practice of Christian Science can no longer masquerade under the title, "An act to regulate the practice of medicine."

No part of the graphic and interesting report of our correspondent will appeal more strongly to those at all familiar with the history of Texas than the reading by Senator Hanger of the letter written by Mrs. Anson Jones, President of the Daughters of the Republic of Texas, and wife of the last president of the Republic.

The seventy years of Mrs. Jones's residence in Texas covers the successful struggle for national independence, the brief existence of Texas as a republic, and its career as one of the United States. She says, "I knew it as a wilderness. I see it now teeming with prosperity, an empire in its magnificence." The battle of San Jacinto on April 21, 1836, in which Anson Jones took an honorable part, won the independence of Texas, and it is not surprising that this letter from one so highly esteemed should have awakened memories dear to every Texan, or that it should have stimulated patriotic impulses which decided the fate of the pending bill.

In no other state where legislation against Christian Science has been urged, has there been disclosed such an entire misconception of the character and standing of Christian Scientists, and it may be a blessing in disguise that our fellow-workers have had an opportunity to put themselves and our Cause in the proper light before the people of their state. While these experiences are not pleasant, and are not courted by our people, we must not shrink from them. In this instance we cannot help believing that "our friends, the enemy" have rendered a distinct service to our Cause. "Surely the wrath of man shall praise thee: the remainder of wrath shalt thou restrain." M.

## The Easter Light.

LUKE'S references to the diversity of nationalities and tongues which was found in Jerusalem "when the day of Pentecost was fully come" (Acts, 2), is best appreciated by those who have been privileged to spend an Easter in the City of David. A motley gathering of pilgrims, representatives of every clime and Christian sect, is then surging through its narrow streets, and on Easter morning the Church of the Holy Sepulchre and its approaches are packed with an innumerable company of those who seem to have little in common save pale-faced weariness and hungry hope. Very many of them are Russian peasants who have come from every quarter of the empire, to witness the elaborate and imposing ceremonies attending the Easter festival of the Greek Church, which dominates the many factions that crowd each other contentiously at the threshold of well-nigh every sacred spot in Palestine.

Each of them has an unlighted candle or lantern of some kind, in readiness for the appearance of the holy flame. This, as believed by the credulous, leaps from out the unseen at a solemn moment in the service, and is given by the officiating Patriarch to the people, among whom it is passed from wick to wick with joyful haste, to be religiously cherished and borne with ceaseless vigil to the far away homes and altars there to dispel with its sacred and suggestive glow the darkness and discouragement of unnumbered lives.

We may not all find it possible to "go up to Jerusalem," but we can all come to the "Mount of clear vision," and light our torch upon its illumined summit. We can ascend in the realization of humanity's escape from the self of material sense.

The compass and glory of the spiritual life is beginning to appear in our consciousness when we apprehend that it embraces every triumph as well as every trial of the Master; that these are all reflected in that experience of spiritual unfoldment at whose beginnings the Bethlehem song is again heard. In our spiritual awakening we shall be witnessed to at the Jordan, be ministered to in the hours of exhaustion and need, be strengthened by communion with "the Father" in the night seasons, and find our Easter morn resplendent with supernal light.

The most glorious declaration of human privilege is that triumphant word which is no less surely said of us at the moment of our every spiritual overcoming, than it was said of our Master on his Easter morn, "He is risen." W.

## The Day Breaks.

IT is morning, the shades of the night vanish before the herald of the day.

It is spring, the purple tints rest upon the distant woods, and the new grass which at first doubtingly touched the southern slopes, is creeping, creeping up from the brook-side and warily peeping into the chilly corners where winter lingers late.

It is Easter, the season of gladness, of gratitude, and of growth. A sense of responsive sympathy and peace whispers to man's awakening consciousness: "The universe is one."

The seemingly solitary, human struggle is over, and a conscious unity with Life and joy floods the glad heart, for it is Easter, all the world's Easter, and

> Every clod feels a stir of might,
> An instinct within it that reaches and towers.

In this sense of unity, the ascending love of the Master sweeps away the centuries; we hear again his words of wisdom and rejoice as we look upon his victories. All feeling of separation is gone and the heart utters its glad "Rabboni!"

From matter's unworthy and inhospitable cradling, to the rolling away of the stone of material sense, Jesus walks and works with us as brother, teacher, physician, friend; and we follow in his footsteps, sometimes gladly, sometimes reluctantly, always with profit.

We are wont to linger, however, too long at the door of "the Inn," failing to realize that the Prince of Peace is to be found for us in the sanctuary of our own consciousness alone. We may tarry too long in Jerusalem, debating with the doctrines of the worldly schools. We work, work, work, often more than eighteen years, performing our duties to home and humanity, a holy preparation, indeed, for our spiritual ministry, if our work-a-day life be as honest and prayerful as was that which brought the Master into touch with the common concerns of men. He dignified

Digitized by Google

the toil of the artisan by actual labor, he blessed the happy human rites and enriched them by his first miracle. His brotherly love went out to meet the hungering multitude with loaves and fishes for their understood need. His compassion caught the faintest appeal of repentance, and even while the Pharisees remained rigid and cold in their self-righteous condemnation, the sinner was forgiven and set free. At his touch the sick and deformed rejoiced in health and beauty, and his Gethsemane anticipated our struggles with the apathy and indifference that would make us sleep even though the living Christ were crucified. In our darkest moments or deepest gloom, even when we seem to stagger under the cross of materiality, we take fresh courage, for we know that the glory of his ascension is the glad light that breaks across our Easter sky. To-day the tomb is rent asunder, "He is risen!" We no longer seek our Master in the sepulchre of sense. The angelic mandate, "Go quickly, and tell his disciples that he is risen from the dead," has been obeyed, and we are learning through our Leader's teaching how to observe all things whatsoever he has commanded, and to live in the comforting assurance of his words: "Lo, I am with you alway, even unto the end of the world." S.

---

A RELIGIOUS life must always precede religious statement and phenomena, and this important point was cleverly stated by the unknown writer who has said that "Somebody must be religious before anybody can be a theologian. But after religious experiences have been observed, studied, classified, accounted for, one can be a theologian at second hand without being religious at all."

Great religious movements have always been the outgrowth of a deeply spiritual life, and this fact presents a most perplexing problem to those who are disposed to question the truth of the gospel delineation of the person and character of Jesus. It is far more difficult to account for the exalted ideal and teaching of the Gospels without the historical Nazarene than with him, and hence questioning unbelief must make the larger demand upon the world's credulity.

Some of the critics of Christian Science have forgotten this fact, and in their questioning of the inspiration and spiritual wisdom of the Founder and Leader of Christian Science they have apparently failed to realize that their position, in the presence of the undeniable phenomena of this movement, precipitates a problem for which they offer and can offer no solution, since it contains mutually contradictory factors. The presence of a devout understanding which heals the sick and quickens and exalts the spiritual life, is beyond all question, and that this high and effective degree of spiritual perception should have been reached by one of ordinary spiritual attainment is simply self-contradictory. W.

---

We are glad for the following sound and sensible comments respecting paternalistic legislation, from a cotemporary editor, even though he takes occasion to close with a rather uncomplimentary crack of his whip. We are confident our brother would hesitate to commend the use he has made of the word "cult," for the expression of Christian courtesy.—ED.

"Much as legislators and judges may distrust or disapprove Christian Science, the American spirit of individualism, of unwillingness to interfere with personal matters so vital as religion and health, makes them disinclined either in their judicial rulings or in their laws to give such unqualified indorsement to the old school methods of dealing with disease as the New Hampshire legislator had in mind who introduced this proposed law, and still less to say that all faith-healing or mind-cure dealing with disease, if it prove ineffectual, shall subject the healer to the charge of manslaughter. It is a step in the direction of paternalism which the American legislator is not ready to take yet, and will not until the practice of medicine becomes much less empirical than it now is. In saying this, of course, we but record a fact. We believe as firmly as ever in the enforcement of all laws of a sanitary sort in an impartial manner, and our opinion of Christian Science as a cult is no higher than it has been."

---

## The Right to Act.

LEGISLATORS with misguided zeal have introduced in various state legislatures bills prohibiting the practice of healing by Christian Science. In New Hampshire, the only state in which the measure has been voted upon, it was defeated by an overwhelming majority, a fact that attests the absence of bigotry among the people of a state which seldom comes into the public eye.

That Christian Scientists have as much right to attempt healing as a Catholic has to attempt the preservation of his health by living in accordance with the decrees of the divinity, is a proposition that admits of no room for discussion. That the Scientists have failed to effect cures in some of the cases treated by them, is not to their detriment, and is no reason why the law should prohibit them in the exercise of a liberty which is theirs. The doctors lose patients, yet there is no agitation for prohibiting the practice of medicine. The popular notion is that when a person becomes ill he requires medicine to get well, but, as a matter of fact, honest physicians discourage the taking of medicine in most cases.

The ability to heal is a matter of faith, a religious conviction, with the Christian Scientist. Religious bigotry disappeared with the birth of the new world, and it is written in the constitution of the United States that man shall be free to worship as he pleases. Legislatures are properly without the right to interfere with this form which the Christian Scientists' worship takes.

## An Easter Song.

ARISE, my heart, and sing thy Easter song!
To the great anthem of returning bird,
And sweetening bud, and green, ascending blade,
Add thou thy word.
Long was the winter and the waiting long;
Heart, there were hours, indeed, thou wert afraid,—
So long the Spring delayed.

. . . . . .

Arise, my heart; yea, go thou forth and sing!
Join thou thy voice to all this music sweet
Of crowding leaf and busy, building wing,
And falling showers;
The murmur soft of little lives new-born,
The armies of the grass, the million feet
Of marching flowers.

How sweetly blows the Resurrection horn
Across the meadows, over the far hills!
In the soul's garden a new sweetness stirs,
And the heart fills.
And in and out the mind flow the soft airs.
Arise, my heart, and sing, this Easter morn;
In the year's resurrection do thy part,—
Arise, my heart!

RICHARD LE GALLIENNE.

## From Our Contributors.

### The Practical Faith of Luther.

T. VON HODENBERG.

SINCE the necessity of obeying Jesus' command, "Heal the sick," has been urged upon the Christian world by Christian Science, its followers have frequently met with excuses for neglecting this vital part of Christianity, and with endeavors to justify a faith without healing power on the part of members of other religious denominations. Bearing in mind this fact, it is rather striking that the view and example of the pioneers and leading exponents of Protestantism afford as a rule no justification for such a position. Luther, for instance, as is well known, on several occasions was rewarded with speedy recovery from severe illness in answer to his prayers, and he has given practical evidence as to his view regarding this important question. In Dr. A. J. Gordon's work, "The Ministry of healing," we read,—

"Martin Luther, 'whose prose is half a battle,' would be likely to speak strongly on this subject, if he spoke at all. Martin Luther, whose prayers were victorious battles, so that they who knew him were wont to speak of him as 'the man who can have whatever he wishes from God,' would be likely to plead efficaciously in this field if he entered it at all, and so he did. The testimony of Luther's prayers for the healing of the body are among the strongest of any on record in modern times. He has been quoted, indeed, as disparaging miracles, and the explanation of this fact is perfectly easy for those who have investigated his real opinions. . . . But if we turn from Luther the controversialist to Luther the pastor, we find a man who believed and spoke with all the vehemence of his Saxon heart on the side of present miracles."

Perfect recovery is recorded in several instances where he prayed for the sick. The most notable one is that of Philip Melanchthon. An account of this recovery, which seems to be trustworthy, is given by the historian Seckendorf. Melanchthon had fallen ill on a journey and a messenger had been despatched to Luther. The story continues: "Luther arrived and found Philip about to give up the ghost. His eyes were set; his consciousness was almost gone; his speech had failed, and also his hearing; his face had fallen; he knew no one, and had ceased to take either solids or liquids. At this spectacle Luther is filled with the utmost consternation, and turning to his fellow-travelers says: "Blessed Lord, now has the devil spoiled me of this instrument!' Then turning away towards the window he called most devoutly on God." The narrative goes on: "After this, taking the hand of Philip, and well knowing what was the anxiety of his heart and conscience, he said, 'Be of good courage, Philip, thou shalt not die.' Melanchthon writing to a friend says: 'I should have been a dead man, had I not been recalled from death itself by the coming of Luther.'" Luther speaks in the same manner writing to friends: "'Philip is very well after such an illness, for it was greater than I supposed. I found him dead, but by an evident miracle of God, he lives.'"

Such is the witness of the great reformer, and if needful, it might be strengthened by reference to other remarkable instances of his power in prayer for the sick. That of Myconius is well known, who wrote of himself: "Raised up in the year 1541 by the mandates, prayers, and letter of the reverend Father, Luther, from death."

Luthard furnishes this version of the event: "Myconius, the venerated superintendent of Gotha, was in the last stage of consumption, and already speechless. Luther wrote to him, that he must not die: 'May God not let me hear so long as I live that thou art dead, but cause you to survive me. I pray this earnestly, and will have it granted, and my will will be granted herein, amen.'" "'I was so horrified,' said Myconius afterwards, 'when I read what the good man had written, that it seemed to me as though I had heard Christ say, "Lazarus come forth,"' and from that time Myconius was, as it were, kept from the grave by the power of Luther's prayers, and did not die till after Luther's death" (Luthard's Moral Truths of Christianity, p. 298).

The stout lion heart of the reformer revolted against the grotesque miracles of the anti-Christ; but the believing heart of the Christian took the promises of God, and pleaded them and proved them and he gained what he regarded as the greatest of conquests: that of having demonstrated Scripture, so as to be able to say of one text of the Bible: "This I know for certain to be true."

Thus we see plainly that Luther has set to his followers a grand example of utter reliance on God as the true physician and healer of disease, and we may safely infer that any adverse criticism of such trust would hardly meet with his approval. These incidents from his life, viewed in the light of Christian Science, are also of special interest, as they show distinctly that he possessed more than what is commonly understood by *faith;* his prayers were no mere supplication, they lifted his mind to an attitude from which he spoke to the sick with authority, and expected their recovery without any doubt. His words addressed to Melanchthon: "Nor become the slayer of thyself," prove that he recognized the influence of the human mind on the body, and the necessity to relieve it of fear and despondency.

The above work by Dr. Gordon contains many illustrations of the same subject, a few of which may be added here:—

"Richard Baxter writes: 'I had a tumor rise on one of the tonsils or almond of my throat, round like a pease, and at first no bigger; and at last no bigger than a small button, and hard like a bone. The fear lest it should prove a cancer troubled me more than the thing itself. I used first dissolving medicines, and after lenient for palliation, and all in vain for about a quarter of a year. At last *my conscience smote me for silencing so many former deliverances that I had had in answer of prayers;* merely in pride, lest I should be derided as making ostentation of God's special mercies to myself, as if I were a special favorite of heaven, I had made no public mention of them. I was that morning to preach just what is here written, and in obedience to my conscience, I spoke these words which are now in this page; viz., *'How many times have I known the prayer of faith to save the sick when all physicians have given them up as dead,'* with some enlargements not here written. When I went to church I had my tumor as before (for I frequently saw it in the glasse, and felt it constantly). As soon as I had done preaching, I felt it was gone, and hasting to the glasse, I saw that there was not the least vestigium or cicatrix, or mark wherever it had been, nor did I at all discern what became of it. I am sure I neither swallowed it nor spit it out, and it was unlikely to dissolve by any natural cause that had been hard like a bone a quarter of a year, notwithstanding all dissolving gargarisons. I thought fit to mention this, because it was done *just as I spoke the words here written in this page.* Many such marvelous mercies I have received, and known that others have received in answer to prayers."

Of Edward Irving the book contains the following: "He was no mere theorist. He not only exhorted his flock 'to live by faith continually on Jesus from the body as well as the soul,' but he has told us the story of his casting himself on the Lord when mighty disease laid hold of him; and how his faith was tried to the last extremity till with swimming brain and deadly sweat he stood holding on to the sides of the pulpit, waiting for God to fulfil in the eyes of the people his word, 'The prayer of faith shall save the

Digitized by Google

sick;' and how his Redeemer at last appeared for his help and loosed for him the bands of sickness, enabling him to preach on that morning with such demonstration and power of the Spirit as he had rarely known."

We can but admire the childlike simplicity and splendid devotion of these men, who overcame the enemy even with a faith that had not yet reached an understanding of the unreality of disease; we know, that such faithfulness and moral courage applied to the work of Christian Science will be followed by speedy progress and carry us over any obstacle that would try to obstruct the way; and grateful indeed we may be to her who has made the way so plain that the overcoming of disease through the prayer of understanding is no longer the exception.

## Christian Science in the Ascending Scale.

ANNA W. K. MATHEWS.

THE beauty of Christian Science is that it teaches that life is not in the descending, but the ascending scale.

To feed, clothe, and move the body about, to prevent it from lapsing into a state of neglect and careless habits, has ever seemed a most monotonous, though unavoidable, round. However, this is the daily programme, and unaided by Christian Science it proves a tiresome and poorly rewarded task, even to the physically healthy.

Scripture says of the claim of the flesh, matter, "Dust thou art, and unto dust shalt thou return," and yet we see mortal man in his ignorance engaged in the hopeless task of trying to get something out of nothing, or, in other words, expending almost his whole energy in the effort to care for and preserve the physical body, only to have it defeat his attempts and literally return to dust. This exposes the utter uselessness of starting with wrong premises and expecting to avert the necessary conclusions.

With a considerable number of people it has reached the point where the grooming of the body occupies the first place in thought, and this senseless task takes the place of useful employment.

Those ultra careful of the body find that eternal vigilance is the price of their semi-liberty, for liberty it cannot be called since the task is one that is constantly doubling up on the one engaged in it. It stands to reason that thought thus centered on the body, will increase its defects and make necessary constant effort to preserve its so-called perfections.

But Christian Science teaches the necessity of making clean the inside as well as the outside of the platter. It teaches that evil proceeds from the mortal mind and is manifested on the body. Thus for a fair exterior the renovation of character is necessary.

Our papers are full of articles treating of ways and means for accomplishing various results on the body. This simply indicates that the leaven of Truth is working and that many theories and beliefs of the past are undergoing a change, for there must first be a mental change to inspire these vigorous efforts.

The question is, does the worshiper at the shrine of the body gain happiness therefrom? We answer, no, because that condition of thought which supposes a material body is not an emanation of Mind, and there can be no genuine satisfaction resulting from wrong premises.

Instead of dust or matter, man as the image and likeness of God, is spiritual, therefore the real body must be spiritual. The faith and knowledge taught in the Scriptures must be our basis for eliminating the belief of physicality, and only in proportion to our understanding and application of the truth about the body, will it cease to be a dead weight.

As Christian Scientists, we long for the freedom of thought that will result from the loosening toils of materiality, and patiently await the time when we shall know ourselves as we are known of God.

## The Awakening.

M. V. P.

A STONE rolled away,—a tomb that is empty,—and weeping friends who do not understand.

This is the apparently hopeless background of the picture of the first Easter Morning. Love had they—and despair; but hope, even on that, one of the greatest of days, was yet to come. But there came from the tomb, an illumination, an earnest of the resurrection, and then—as truth is always followed by larger truth—they saw the Christ, and believed.

Oh! the grandeur of the moment when, from the ashes of some divine despair, the fire begins again to glow and glow until a new hope supplants in transcendent beauty, the old weaker love that could yield itself to depression and defeat.

What a strange, what a glorious day, when death was proved no longer victorious. As time passes and we are able to get a fuller and truer meaning out of God's plans, the Easter thought grows less strange but more glorious, more sweet and tender and hopeful each year, until now the resurrection forms the very warp and woof of the Christian's thought.

So many things are the symbols of the new life. The transformation in nature from apparent death to life; the similar constant warfare for the supremacy of good in the spiritual nature; each new sunrising that brings to every true man the thought, not of an added day of selfish enjoyment and careless living, but of lofty aiming at still another day of noble life,—this is but the consummation of the highest worldly idea of Easter time.

It would seem that God is ever revealing Himself to us in just the way He did to the disciples so long ago. We have a want, a buried hope, a disbelief; there come at last mysterious voices from something in shining apparel, that is unmistakably unworldly,—a flower, a sunset, perhaps a murmur of the wind, an appeal of art, sweeping in from the unknown to us, and then out again into the unknown, all speaking of a life beyond, of eternity, and then we too say, as did Mary, Rabboni, and we are saved in the recognition of Life.

## "The Battle of San Jacinto."

THE following clipping from an Austin, Tex., paper has an added interest from the fact that this picture is the one referred to in Mr. Ziller's report of the discussion respecting Christian Science in the Texas legislature.—ED.

H. A. McArdle, the man who painted the superb picture of "The Battle of San Jacinto" now occupying a prominent position in the senate chamber, is a visitor to the city from his home in the Alamo City. He is here for the purpose of conferring with the committee appointed to consider the question of purchasing the picture. It is valued at $55,000, and represents about seventeen years of study and labor.

In compiling the necessary material for this picture, Mr. McArdle was forced to exercise extreme caution and great pains in order that it might be true to life. How well he has succeeded is evidenced by the naturalness of the finished painting. During his researches he corresponded with Santa Ana, the Mexican general, who was that day defeated and subsequently taken prisoner by the Texans, and he has many letters from the veteran commander of the vanquished Mexican hosts.

## The Lectures.

### At Chanute, Kan.

Judge Septimus J. Hanna of Boston, lectured on Christian Science at Williams Opera House last night [March 20] to a large audience and gave one of the most interesting lectures of the kind ever heard in Chanute. He was introduced by Mrs. Mary A. Woolridge of Independence, in a few well-chosen words. *Daily Tribune.*

### At Iola, Kan.

At the Opera House on Thursday evening, March 19, Judge Septimus J. Hanna of Boston delivered an able lecture on Christian Science. For almost two hours he held the closest attention of his audience. The chair was occupied by Congressman-at-large, Charles F. Scott, who introduced the speaker in a few well-chosen and appropriate remarks.—*Correspondence.*

### At Hattiesburg, Miss.

The Christian Science lecture last night [March 6] at the Christian Science hall by Hon. William G. Ewing of Chicago was well attended. The audience was composed of the representative people of the city, and we have heard many expressions that Christian Science is a different kind of religion, that is, a better religion than the general idea of what it is. Many express themselves as being well pleased and highly entertained by Judge Ewing, as he has that wonderful power to hold the attention of audiences.

*Hatticsburg Daily Progress.*

### At Fort Smith, Ark.

About five hundred people gathered in the theatre building yesterday afternoon [March 15] for the purpose of hearing Judge Hanna's exposition of Christian Science, and the audience was made up of the intellectual class and not of the curiosity seekers.

The speaker was introduced by Colonel Mechem in a three-minute talk which was of itself entertaining in view of the fact that Colonel Mechem is not of the Christian Science faith, though of that broadness of view of which there is too little in this life. Judge Mechem in introducing Judge Hanna said,—

We welcome any idea or thought that represents the name Christian. We have passed the time when it is believed that any one sect or people have the whole truth. This age welcomes all who will help in uplifting Christianity and help in evangelizing the world. We are not afraid of Christian Science. There is room for all. All new ideas have passed through intolerance, persecution, and prejudice.

Man cannot change truth. He may get closer to it, may learn something of its strong points, its bulwarks and towers, classify them and talk more freely of these strong points, but none of them will he ever be able to change in the least. Truth is like a sphere; it presents the same aspect of equilibrium and symmetry viewed from any direction. If Christian Science is to aid humanity by alleviating sin and sickness,—and no one will question this need,—we can welcome Christian Science.

*The Fort Smith Times.*

### At Fort Dodge, Ia.

Mrs. Annie M. Knott, C.S.D., of Detroit, Mich., delivered a lecture on Christian Science, at the Midland Theatre, Sunday evening, March 15, to a full house, and an appreciative audience.

Judge W. S. Kenyon, who introduced Mrs. Knott, said, in part:—

*Ladies and Gentlemen:*—I consider it a great honor as well as pleasure to be invited to present to you the speaker of the evening.

I confess that I belong to that class of people who are entirely ignorant of the teaching and doctrines of Christian Science, but I do not belong to that class of people who through ignorance are critics of these teachings and doctrines. I have observed in the daily walks of life, in the little matters that arise day by day, in contact in a business way with members of this denomination, that there is something in it that brings to them a peace of mind and gives them a conscientious fidelity to duty that is seldom found; and I am one of those who believe that every church in this world of ours is working to bring about all possible good to the human race, and peace and happiness to the human mind.—*Correspondence.*

### At City of Mexico, Mex.

After a stay of four days in this capital, the Hon. William G. Ewing of Chicago, Ill., departed yesterday afternoon on the Aztec limited northward. Judge Ewing came to Mexico to deliver the first lecture on Christian Science ever given in this ancient city, and the lecture was delivered last Thursday evening [March 12] to an audience of about three hundred people, an intelligent and appreciative gathering. His subject, "Christian Science: Physician and Redeemer," was handled in a manner so logical, concise, and convincing and with language so eloquent, and at times so sublime, as to carry his audience, captivate them, in fact. With rare sweetness of manner, with a loving earnestness that was impressive without being simply emotional, the speaker led his audience with him. He brought out the double import of the subject in a very remarkable manner. His tribute to conscientious and hard-working physicians, who endeavor to alleviate the sufferings of humanity, to the best of their ability, was one of the most pleasing portions of the lecture, while his remarkable pronouncement of the points of agreement between Christian Science and the old churches was very surprising. He made clear the fact that Christian Science practitioners differ from doctors and ministers of the old churches in an absolute declaration against sin, sickness, and death as supposed necessities. One point in the lecture has set many people to thinking,—that it is not so much what a man believes as what he does that determines his status as a Christian.

The lecturer was introduced by the First Reader of First Church of Christ, Scientist, in this capital, Edward C. Butler.

On Friday afternoon Judge Ewing paid a pleasant call on the Hon. Ignacio Mariscal, secretary of foreign affairs, and was then driven to the palace in company with the committee of First Church of Christ, Scientist, under whose auspices he made this, his first, visit to Mexico. At the palace he had a pleasant audience with President Diaz, with whom he was extremely charmed.

*The Mexican Herald.*

---

Into all our lives, in many simple, familiar, homely ways, God infuses the element of joy from the surprises of life, which unexpectedly brighten our days and fill our eyes with light,—and it may be with a tear, as our heart is touched with the thought of his unlooked-for goodness.

SAMUEL LONGFELLOW.

---

If you would advance in true holiness you must aim steadily at perfection in little things.—ABBE GUILLORE.

## Testimonies of Healing.

I desire to give the readers of the *Sentinel* my testimonial of healing by Christian Science and what it can do for suffering humanity. A year ago found me a great sufferer from nervous prostration and heart trouble. The physicians told me I would never be well again; but thanks to a dear sister who had been healed through Christian Science, I was completely cured. I wish to tell of a demonstration I had a short time ago over what seemed to be a badly burned face. I was preparing to do some baking and had lighted the gas in the oven. In some way the door was opened and the draft had extinguished the blaze, and when I went to look into the oven, on opening the door, the gas ignited from an upper flue and the blaze enveloped my face and burned it badly. The first thought was, "You will be dreadfully scarred," but immediately I took Science and Health and began reading. Soon the smarting ceased, and when I looked in the glass, as mortal mind always does to find something that is not, great was my surprise to see that the redness had nearly disappeared, and now not a single scar is left. I cannot be grateful enough for Christian Science and for what it has done, and is doing daily for me.—C. S., Wellsville, N. Y.

---

I became interested in Christian Science through reading a copy of *The Christian Science Journal* which was sent me by a friend who is a Christian Scientist. I was at once impressed with the fact that I had at last found the truth which Jesus said would make us free. The third day after this I was freed from the smoking habit and have never had the least desire to smoke since that time.

I secured a copy of Science and Health, and after reading it for about two months I found myself healed of a rupture which I had had for about seventeen years and which I thought would always remain with me. Since then many proofs of the ever-presence of God, Good, have come to me.

Although the physical healing did not attract me to Christian Science, my health has been uniformly good during all this time and I have not missed a single day from my business on account of ill health.

I am indeed very grateful to God that I am living in this age of Christian Science, and to Mrs. Eddy through whom this great blessing has come to mankind.

WILLIAM H. ART, Chicago, Ill.

---

Little more than two years ago, I was treated by a Christian Scientist. For fifteen years I had been a great sufferer, never knowing what it was to be free from pain more than two days at a time. My worst trouble was with my eyes and head. Every ten or twelve days, I would be confined to a darkened room, tasting neither food nor water from one to three days. Sometimes the spell would be so severe that I would have to be chloroformed.

A number of physicians attended me, but I found only temporary relief. Sometimes the interval between the paroxysms would be lengthened, and then they would return worse than ever. I wore a blister on the back of my neck most of the time for fifteen years. We tried everything. I was fitted to glasses by a noted oculist, and he told me I would never see again without glasses, but if I would wear them and be careful with my eyes, he did not think I would suffer. I wore the glasses and did just as he told me, but I got no better. Four years later, I went to an oculist living in our city, and one who is somewhat noted for his success in treating eyes, but the results were equally unsatisfactory.

Later, a specialist, who came to our city, was having good success with others and I went to him. After he examined my eyes he said they were in a terrible condition, but he thought he could help me, and for four weeks he treated me every day, not allowing me to read, write, or sew. Under his treatment, I seemed to be improving somewhat, when one day he said to me, "I am going to dismiss you to-day. I believe you are a Christian lady, and I as a Christian cannot let you pay me any longer, when I know I have exhausted my skill and can do no more for you."

On my way home I thought, Jesus healed the blind man and he can heal me and he will, and for five years I believed I would receive my health and sight, despite what the doctors had said. In August, 1900, I accidentally got something in my right eye and had to send for an oculist to take it out, which he did. He told me to wear dark glasses, or stay in a semi-darkened room. After he left me, I sat down to think over my troubles and wonder why God thus dealt with me. I had trusted Him and had tried to live a Christian life. I had family prayers, frequently prayed in public; often visited the sick taking my Bible with me to read and pray for them.

In this sad frame of mind a friend came into my room and said, "There is a Christian Scientist here who has helped several, perhaps she can do something for you. If you will let me I will go and bring her to you." I said, "Well, go, for if I ever get better it will be through divine power, not human."

When the healer came she had me take off the dark glasses at once, and from that day I have not worn them. She told me to eat whatever I wanted, and the next day for my dinner I ate heartily and felt no discomfort whatever from it. My practitioner brought me her Science and Health and told me to read, but I could not see. However, on the eighth day I read from Science and Health twelve lines, then I could not see to read any more. I locked up and every one in the room was in tears. That was Friday night. On Sunday I read fifty pages, and now I read, write, and sew without my glasses. I have written this testimony at night. I have never been in a darkened room with those terrible headaches, and I have not taken a drop of medicine since I was treated in 1900. I am glad to know that God did not send those afflictions on me, and my heart is full of gratitude to dear Mrs. Eddy for showing me that "God is Love, and fills all space."—J. F. E., Rome, Ga.

---

With gratitude and thanks to my Father who is in heaven, and with my heart full of love for our Leader. I feel it my duty to acknowledge an abundance of benefits received from the study of Science and Health, and also the help received from kind practitioners. An old stomach trouble disappeared entirely at the first treatment, and I shall never forget how happy I felt that night when I went to sleep.

I was also troubled with palpitation of the heart, and had not dared to sleep on my left side for years, but now I can sleep well in any position. My eyesight had been poor for some time and I used glasses when reading, but now I can get along very well without them. I would catch cold on the slightest change in the atmosphere, but since I came to Christian Science about three years ago, I have not had a single cold, and lots of other ailments have been entirely destroyed.

But the best of all is the understanding I have gained of my Bible. I always thought I was a fairly good man and a Christian, attended church like others and thought the minister would do the rest for my salvation, but in my own heart I was an infidel, although covering the fact so no one would think so. My Bible was never used, but I had it so I could show it to other people. I did not understand it, but used to argue about religion and scoff at Christian Science whenever it was mentioned. Now the Bible and our text-book are my best friends.

Digitized by Google

I had a great fancy for medicine, and used different kinds of it every day for years, but since I commenced studying Christian Science I have not used a drop of medicine, and am happy and well. I was a ruined man, both financially and morally, but thanks to Christian Science, I am now on the road to plenty and independence, and also in a moral way I am striving to push forward, and I feel and understand, that divine Love is with me, with blessings for all my undertakings. I have learned it to be the truth, that if you first seek the kingdom of God, your material needs will surely be supplied. How inspiring is the study of Christian Science. I have tested and found the Lord to be good, and I will try to walk in the path of righteousness for the rest of my days. Of all my fifty-six years I will say, that the last three have been the best and happiest.

I. L. ERICKSON, Thief River Falls, Minn.

For the purpose of encouraging some one as unfortunate as I once was, I will add my testimony to the healing power of Christian Science, which has delivered me from the bondage of using morphine in large quantities. More than twenty years ago, partly through my own ignorance of the consequences, and partly through the carelessness of a physician, I contracted the habit, and for over fifteen years I have tried to get rid of it, and have spent hundreds of dollars on material remedies, but in vain. As a last resort, I turned to Christian Science, and in a comparatively short time was enabled to give up the drug and enjoy life without it. Other bad habits, among them tobacco smoking, were cured.—JOHN NELSON, Shreveport, La.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it stood April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization and the membership at that time.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June. 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. A. Francis Walch, in an article in *The Universalist Leader*, says: "Jesus was bent on saving men into a life that should exhibit a growing likeness to his own. With a divine presumption that he was offering to men a most desirable thing for them, he said, 'Follow me;' 'I am the Light of the World;' 'I am the Way, the Truth, and the Life;' 'I am come that they might have Life;' 'I am the good Shepherd;' 'The Son of Man is come to seek and to save that which was lost.' So to be saved by Jesus must be to be led along his way of life, until we shall come to be like him; until in thought and affection, in service and sacrifice, we are dominated and possessed by the same spirit that dominated and possessed him. The salvation which Jesus promised is thus the fulness of life to those for whom God had purposed it. It had its origin in and received its power from a loving Father. Jesus claimed himself to be the earthly expression of that Father's love; a love that persistently refused to be denied or defeated, but that would go out willingly and gladly on its way, into every 'far country' and each dark mountain, until every man at last should own its power and live in the midst of its beauty. Here is the very heart of the message of Jesus. A message of love and helpfulness; of helpfulness as the best expression of love; of love as the broadest and deepest impulse to helpfulness. Then in view of the fact that Jesus looked out into the world as filled with children of God to be saved from all sin and smallness and to become like himself, it is right to say again that this is a most natural thing for him to do. When we come to understand that the real purpose of Jesus was to save men and women, and to save them in such a manner that they should feel it to be according to God's purpose that they should be saved, and that they should feel that it was as the children of God that they were being saved, then I think we feel that this is a most natural service for him to render, and one justifying all his sacrifice and devotion. Every promise of Jesus, to save, is made with the largest possible assurance. There is a confidence in all his promises that seems to reach down into the very heart of man's need of salvation and looks up into the very midst of God's abundance, where every soul is to find its complete satisfaction."

Rev. John M. Davidson says in *The Christian Register*:—

"There is that element of divinity in us that will inevitably, sooner or later pull us out of imperfection and draw us to God. . . .

"Not even to provide for contingencies arising from our liberty of choice between good and evil need there be special enactments of law. This same law of growth, this divinity that draws us God-ward, is sufficiently broad to cover all such contingencies. This is in part true, because the law itself curtails, in one sense, our freedom. We would not deny freedom of will to God, and yet we say that God cannot sin. We, too, claim, and rightfully, to have free wills; and yet we probably shall find that we cannot forever sin. In our short views we feel only the freedom of the will, which certainly we have; but we can only know the insistent, imperative demands of this law of progress—which in one sense curtails our freedom—through acquaintance with the history of thousands of years. Many æons hence, perhaps, we shall see that we have been under an unwavering law of progress, which, despite local and temporary infractions, in the end would not, could not, be denied."

There is, fortunately, accompanying the noticeable movement of our times toward interdenominational fellowship, a marked increase in tolerant and self-respecting denominationalism. It would seem to us that with charity for the opinion and conviction of every school of thought and every denominational tenet, it cannot be other than that men of different training or capability, or power of discernment with relation to the truth as applied to religion or morals, will be compelled, as they always have been, to give emphasis to some truths over others, or to some truths which others do not emphasize. . . .

All truth should be emphasized wherever or by whomsoever found. What would seem to be needed to-day is not less emphasis or a denial of emphasis, but a kindly loving recognition and consideration of those truths which men of sincere thought and of religious conviction do emphasize. In this way alone, it would appear, can any age or any movement come to a clearer and more comprehensive view of that great body of truth which finds its harmony and its completeness in the fulness of God Himself.

*The Standard.*

The other desirable thing of which there is growing promise is a new statement of faith, really representing the belief of the great multitude of Christians who cannot now state the differences which separate them. The doctrinal barriers have fallen. How shall the new inclusive wall be erected? Dr. A. B. Bruce says: "A fresh intuition of Christ and a new Christian enthusiasm would have for one of its results a fresh formulation of Christian belief, bearing an entirely different stamp from that of the historical Protestant confessions. Till the new life come we had better let the making of a new creed alone."

The new life is coming through the spirit of unity among Christians working and praying together for the regeneration of humanity. It is not confined to the Churches. It is a work in which teachers, legislators, statesmen, and others share, believing that men of every race can be renewed into the image of their Creator and Father. This belief will in due time find formal expression, and we trust will be a creed which disciples of Christ will everywhere welcome because it will represent his spirit and mission to mankind.

*The Congregationalist and Christian World.*

Moral and spiritual light is at the command of all who seek it. What the sun in the heavens is to the earth, Jesus is to the moral and spiritual nature. He came to be a light in this unseen yet most real realm. He that follows Jesus—in his thinking, his principles, his doings—cannot "walk in darkness," for he has "the light of life." It is the mission of this Divine light to make clear every pathway in this world, to dissipate darkness of every kind, and to make individual lives bright and happy. The light is streaming from the spiritual heavens. It is for us to walk therein that our lives may be filled with light and joy. All who have sought and found this light have a duty surely; they are to be transmitters of the glorious light of the Gospel, that its beams may be extended to ever-widening circles of people, until at last the whole earth will be encompassed by its illumining and healing rays.—*The Universalist Leader.*

Professor James Denney, D.D., of Free Church College, Glasgow, says in *The Watchman:* "Where there is no faith even Christ cannot do any mighty work, and we ought to remember these two things: that God's work is always waiting to be done, that God always needs us, and surely also that if it is little we can do, it is all the more urgent that we should do that little and leave nothing of it undone. It is the man who has only one talent who is most tempted to go and bury his talent in the earth and make no profit out of it at all, and yet of all men that man has most need, if he can, to enrich himself by trade."

Christianity differs from all other religions in that it deals with the source of conduct rather than with the conduct itself. It does not lay down rigid rules for right living, but so transforms the affections and desires that right living becomes the natural bent of the heart. It purifies the fountain, so that only sweet waters issue from it. When the heart is right, action will be right.

*The Examiner.*

The moment the Gospel conflicts with a man's selfish interests that moment antagonism is excited. Perhaps the most relentless foe Christianity has is worldliness. Many a man resists the Gospel because he finds his business methods inconsistent with the self-denial and self-sacrifice which the Gospel demands.—*The Christian Advocate.*

Not in husbanding our strength, but in yielding it in service; not in burying our talents, but in administering them; not in hoarding our seed in the barn, but in scattering it; not in following an earthly human policy, but in surrendering ourselves to the will of God, do we find the safe and blessed path.—F. B. MEYER.

Inspiration is the breath of life in a work or a man. Revelation is the unveiling of a truth or principle which clears or enlarges our thoughts. We know more through revelation; we feel more through inspiration.

From *The Temple Bible.*

I am learning more and more to let things take care of themselves. No, that is wrong. I am learning to escape the atheism of anxiety.—JOSEPH PARKER.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The United States Circuit Court last week handed down a decision in the suit of the United States against the Northern Securities Company, enjoining the company from voting the stock of the Northern Pacific or Great Northern Railway Companies, but allowing the return of such stock as had been delivered to the holding company. The opinion was unanimous, and was written by Judge Thayer. This case has been pending during the past year. It will be appealed to the United States Supreme Court. The decision rendered in this case, that the Northern Securities Company was a combination in "restraint of trade," applies equally to other combinations and trusts.

The presentation by the American financial agent to the Chinese Government for signature of a silver bond for the American indemnity is said to have stirred the other members of the International Financial Commission, who hold out for a settlement on a gold basis. It is stated by Secretary Hay, however, that the silver bond follows strictly the language of the protocol and involves no change in the policy on the part of the American Government.

Secretary Hay has been informed by Baron Sternburg, German minister to the United States, that Ambassador Holleben has been retired by the German Government and that Emperor William, as a mark of special favor, has bestowed upon him the order of the Red Eagle.

**Foreign.**

The Second Chamber of the Netherlands Parliament has adopted the anti-strike bill by 81 to 14 votes. The Socialists and Liberal Democrats voted with the minority. The punishment clause of the anti-strike bill was adopted by 78 to 15 votes. This bill has aroused intense opposition throughout Holland, and resulted in the present struggle and precipitated the recent general strike which involves all labor engaged in land and water transportation throughout Holland.

The royal commissioners of Denmark, who, soon after the refusal of the Danish Government to ratify the sale of the Danish West Indies to the United States, were appointed to inquire into the conditions and future possibilities of the Islands, have finished their investigations and sailed for home. Their report has not yet been made public.

More than fifty trains were requisitioned to convey the Chinese court and its paraphernalia on its annual pilgrimage to the western tombs. In view of the plea of the Chinese authorities of inability to pay the Boxer indemnities in gold owing to depreciation of silver values, this is considered in some quarters as great extravagance.

An American system of automatic signaling is to be installed in England on the Northeastern Railway. The system was investigated last fall by the general superintendent of the railway, and a contract signed by him for its installation.

The Spanish Government has advised Arthur Hardy, the American minister, that Spain will officially participate in the Louisiana Purchase Exposition at St. Louis, and that the Cortes will vote funds for the purpose.

It is reported that Mulai, brother of the ruling sultan of Fez, has been proclaimed sultan by Riff tribes.

**Industrial and Commercial.**

The *Manufacturers' Record* says no period in the South's textile history has shown a greater advance in the addition of spindles and looms than that of the past fifteen months. It is especially worthy of notice, as has been the case for several years past, that arrangements looking toward finer goods production continue to be made. One particular advance now under way is that which will make the South a greater producer of denim. At the present time no less than $5,250,000 is being expended on the erection of mills to manufacture that class of cloth.

Referring to the more immediate subject of the total spindles and looms for January, February, and March, it notes that during these three months there were 287,680 spindles and 6,243 looms reported. The aggregate expenditure for this machinery may be conservatively estimated at $5,700,000. Of the total equipment, there are 200,680 spindles and 4,903 looms accredited to enlargements being made by established mills. An expenditure of about $4,000,000 is, therefore, to be made by men thoroughly versed in Southern conditions for this important industry.

The Minnesota, larger than any vessel ever built in this country, and only excelled in size of all the world's fleet by the Celtic and Cedric of the White Star Line, will be launched in New London, Conn., on April 16. Miss Hill, daughter of James J. Hill, president of the Great Northern Steamship Company, for whom the new ship was built, will christen her. The Minnesota will have features and conveniences found in no other vessel until her sister ship, now building, is launched. She is 630 feet long, 73 feet 6 inches beam, and 56 feet from keel to upper deck.

The Pneumatic Cotton Harvester Company of Memphis has applied for a charter to manufacture a new cotton harvesting machine. Its principal feature is a rotary fan which exhausts an air chest with which are connected pneumatic tubes. As the machine is driven along the rows of cotton plants the tubes, manipulated by hand, are applied to the cotton bolls which are quickly stripped from the plant by the suction in the tubes. It is claimed each tube will do easily and well the work of four or five hand pickers.

Twenty-seven viaducts have been erected on the Uganda Railway. Six thousand tons of steel were used in these structures which, notwithstanding great difficulties, were completed in fifty-one weeks. The work was done by an American concern.

**General.**

The inroads made by the sea into the east coast of England have alarmed the authorities, not only local but general. Three times within living memory the lighthouse at Lowestoft has been removed further inland. Two hamlets not far away have been taken down to prevent their toppling over into the ocean. Dunwich, once a flourishing town with a harbor and fishery extending to Iceland, is wiped out. Also several other parishes have been practically blotted off the face of the earth by the encroaching sea. Only a few crumbling walls denote the ruins of the sole surviving church on the cliff. Many years ago a score of churches stood miles from the existing shore, where the ocean now reigns.

A meeting of prominent representatives of coastwise and transatlantic steamship companies was held recently to consider means for securing relief from the menace of derelicts floating in the various steamship routes. At times there are twenty or more of these afloat. They float on an average about thirty days and occasionally for several years. The recommendation was made that the Navy Department construct a vessel especially adapted for disposing of these waifs of the ocean.

Seamen generally believe that the frigate bird can start at daybreak with the trade winds from the coast of Africa and roost the same night upon the American shore. Whether this is a fact has not yet been conclusively determined; but it is certain that this bird is the swiftest of winged creatures, and is able to fly, under favorable conditions, two hundred miles an hour.

The historic Hill of Tara has been sold to a woman at auction for $18,500. The Hill of Tara, the shrine of the loyalty of every true Irishman, has figured in the annals of Irish history and inspired the poets and musicians of the Emerald Isle to their tenderest strains. Until the sixteenth century Tara was the royal seat of the kings of Ireland.

A letter of Nathaniel Hawthorne dated West Newton, Mass., May 2, 1852, to Mr. Whipple, asking him to read the manuscript of the "Blithedale Romance" and suggest an appropriate name, was sold at auction in Boston recently for $147.50; and a manuscript copy of "The Chambered Nautilus" signed in full and presented to Whipple in 1879 at Christmas brought $65.00.

The cable steamers Anglia and Colonia have sailed from England to lay the remaining sections of the Commercial Pacific cable from San Francisco to Manila. It is expected that the cable from Honolulu to Manila, by way of Midway (Brook) Island and the Island of Guam, will be completed July 4.

In a twelve to fourteen knot breeze last week Shamrock III. bested Shamrock I. five minutes, eight seconds in a twenty-mile race to leeward and windward; and in a fifteen-mile race to leeward in a light breeze and a beat home she won by 17 minutes 26 seconds, but in a third race under strict racing rules over a thirty-four-mile course, with a reported ten minute allowance to Shamrock I., the new craft was beaten by a few minutes.

Experiments in growing cotton are being made in West Africa, West Indies, Nyasaland, and the Soudan by the British Cotton Growing Association. A syndicate has also been formed to grow cotton in Rhodesia.

The Hon. Carter H. Harrison was last week elected mayor of Chicago for a fourth term.

President Roosevelt last Thursday began a sixty-six-day tour of the West.

The buildings of the Louisiana Purchase Exposition at St. Louis will be dedicated April 30–May 2.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Semi-annual Lecture of the Mother Church.

THE semi-annual lecture in the Mother Church was delivered by Judge Septimus J. Hanna, C.S.D., in Symphony Hall, Thursday evening, April 9, before an impressive audience.

Every seat was taken and every available foot of standing space was occupied, and hundreds were compelled to turn away before the hour of the lecture had arrived.

The *Boston Globe* referred to the speaker as commanding "the closest attention of his audience during his address, which occupied an hour and twenty minutes. He spoke of his personal knowledge of the laborious and consecrated daily life of Mrs. Eddy, the Founder and Leader of the movement, and gave a clear, simple, and comprehensive summary of Christian Science as a practical religion."

Judge Hanna was introduced by Archibald McLellan, who said:—

Our eminent and distinguished friend who will address us has endeared himself to us during the ten years or more of his residence in Boston, and because of this, and of his unselfish labors for humanity, because of his share as a Christian Scientist in the betterment of the moral, physical, and spiritual conditions of his fellow-men, I take pleasure in welcoming him to this platform.

The Cause in whose behalf he will address you is the cause of humanity. He will tell you of Christian Science. He will speak to you from personal knowledge of facts which have appealed to his well-trained judicial mind, he will tell you that Christian Science heals the sick, that it reforms the sinner, that through the ministry of this religion, joy and comfort and peace are given to the broken-hearted, and that all this is done in Christ's name.

He will tell you of the Christian woman through whom this nineteenth-century revelation has come, the woman who stands to-day a prophet honored in her own country, Mrs. Eddy, the Discoverer and Founder of Christian Science. He will tell you of her unbounded love for humanity, of her unceasing labors for the reformation of the race, of her devotion to her Master's service, and of our gratitude for her leadership.

The lecturer is a member of the Board of Lectureship of The First Church of Christ, Scientist, in Boston, and his comprehensive and practical knowledge of Christian Science has qualified him to address you. I now have the pleasure of introducing Judge Hanna.

### JUDGE HANNA'S LECTURE.

FRIENDS:—I come to tell you somewhat of Christian Science, not to tell you all about it, for that were impossible. I say to you at the outset, that Christian Science is a deep and sacred subject; the deepest and most sacred that can occupy human thought and purpose, for it treats of God, man, and the universe. It teaches God's omnipotence, His omnipresence, and His omniscience. It teaches that God is the one and only Principle of man, and the one and only Principle of the universe. Of this, more hereafter.

It is the duty of the lecturer upon this subject to speak, primarily, to those who are not Christian Scientists. I shall endeavor to follow this rule, but I cannot see how I may speak of Christian Science at all, without saying some things to and for Christian Scientists as well.

If I were here to discourse upon the subject of astronomy, for illustration, you would naturally and properly expect me to refer you to an authorized work or text-book upon that subject. You would wish to know the source of the information I sought to impart. If I referred to such a text-book, you would as naturally and as properly expect me to give you some idea of the author of the text-book and the founder of the system of astronomy whose principles I essayed to expound, as you would expect me to speak of the text-book.

I assume, therefore, that you will expect me to tell you something of the Christian Science text-book and also of its author, the Discoverer and Founder of Christian Science.

### THE TEXT-BOOK.

A few words, then, as to the text-book. This book, of which the Rev. Mary Baker G. Eddy is the author, was first published in 1875. As revised and enlarged at various times since then, it has reached at the present time over 270 editions of one thousand copies each. It bears the title of "Science and Health with Key to the Scriptures," and contains within its covers, in comprehensive and comprehensible form, the entire text of Christian Science. It is true that Mrs. Eddy has written many other books and numerous articles and essays for magazines and newspapers, as well as messages to the Mother Church in Boston, but these are in explication of the text-book. This book is a treatise on healing through the power of God, or the divine Mind, and is, therefore, properly called an exposition of Mind-healing. More specifically, it is a thorough exegesis of the Scriptural method of healing all manner of diseases, and of curing all manner of sin through the understanding of God as all-present, all-powerful, all-wise, and universal Mind. In short, this book is a spiritual interpretation of the Bible; hence its title: "Key to the Scriptures." I am aware that I am making for the text-book of Christian Science a tremendous claim, but I shall endeavor to make good this claim before I close.

### THE DISCOVERER AND FOUNDER.

Mrs. Eddy is at once the Discoverer and the Founder of Christian Science. She discovered for herself how God had healed her of a sickness, the result of an accident, which, according to all ordinary evidence, had placed her at the very door of death. This may be said to have been her original discovery. This aroused within her a burning desire to know how God had healed her, and also to impart to others the knowledge of how the sick are healed. This led her to search the Scriptures that she might find the healing Principle. She pursued her search until she found the healing Principle to be God. She proved this by healing all manner of diseases, and she proved as well that the same understanding of God which healed sickness also destroyed sin. Having so found and proved the healing Principle, she proceeded to teach others, to found a college for teaching this healing system, to found period-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

icals for its propagation, to found a church wherein the healing Gospel could be preached and expounded through public services; and she adopted, from time to time, such other propaganda as became necessary to the establishment of a healing and saving religion. That such a system has been successfully established I need not say, for it is matter of common knowledge. Thus I say, Mrs. Eddy is both a discoverer and a founder.

### LIFE AND CHARACTER.

And what of the life and character of one who has accomplished so much? I am sure a few words in reference to these will be welcomed by every sincere inquirer.

Born amid the beautiful but rugged hills of Bow, near Concord, New Hampshire, of sterling and strictly religious parents, descended from a long line of worthy and distinguished ancestors, Mrs. Eddy was favored by nature and nature's God with advantages which fitted her for her future career. Her early environments were such as to nurture and enlarge her inherited gifts. She was a student by natural bent and intuition. This native trend was strengthened by careful training in schools and academies, as well as by competent private tutors, among whom was her brother, Albert Baker, a graduate of Dartmouth College and a distinguished lawyer, although he died when a young man. Among her other instructors were such well-known educators as Mrs. Sarah J. Bodwell Lane, Mr. Corser of Sanbornton Bridge Academy, and Prof. Dyer H. Sanborn, author of Sanborn's grammar. This early training has been supplemented by long years of careful and thorough research and study. She has studied deeply in many of the higher branches of learning and in general literature. She is, from every point of view, a woman of sound education and liberal culture.

### HER RELIGIOUS CHARACTER.

It may not be amiss for me to say that for nearly ten years, as former First Reader in the Mother Church in Boston and editor of the official periodicals, I have had opportunities which enable me to speak intelligently of Mrs. Eddy's life and character as well as of her labors and literary attainments.

Speaking from this vantage ground, I can truthfully say that, intellectually, she is one of the most acute persons I have ever seen; that she labors incessantly and unselfishly for the cause to which she has devoted her life, and that, notwithstanding her years, she performs an amount of labor each day which, if known, would seem incredible, even if done by one yet in the adolescence of life. As to her religious character, I speak my profoundest conviction when I say that I believe it to be as nearly Christlike as is possible to a denizen of this earth. I cannot conceive how a person on this plane of existence could walk more closely with God or exemplify a more exalted Christian life.

And do not the wonderful results of her work, even thus far, prove this? To the many thousands all over the globe who are the conscious beneficiaries of her work, she has indeed proved herself to be a religious reformer and a Christian evangel. Yet, notwithstanding her highly spiritual nature, she is withal an intensely practical person. She keeps close watch of current affairs and acquaints herself with the world's doings. Her message to the Mother Church in Boston of last June shows this in an especial manner.

I pass now to a consideration of the precepts and principles of Christian Science.

### WHAT IS THE CREED OF CHRISTIAN SCIENCE?

So far as Christian Science has a creed it is found in the Tenets of the Mother Church, which constitute its declaration of faith. All who become members of this church must solemnly subscribe to these tenets. They are as follows:—

1. As adherents of Truth, we take the inspired Word of the Bible as our sufficient guide to eternal Life.

2. We acknowledge and adore one supreme and infinite God;—we acknowledge one Christ—His Son Christ Jesus; the Holy Ghost or the divine Comforter; and man His divine image and likeness.

3. We acknowledge God's forgiveness of sin in the destruction of sin, and in the understanding that evil and sin are unreal, hence not eternal. But the belief in sin is punished, so long as it lasts.

4. We acknowledge Christ's atonement as the evidence of divine and efficacious Love, unfolding man's unity with God through Jesus Christ the Wayshower.

5. We acknowledge that man is saved through Christ—through divine Truth, Life, and Love, as demonstrated by the Galilean Prophet in the healing of the sick and the overcoming of sin and death. Also, that the crucifixion of Jesus and his resurrection were designed to elevate human faith and understanding to the spiritual perception of the eternal existence of the good and the real in man.

6. We solemnly promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure.

(Copyrighted and used by permission of Reverend Mary Baker G. Eddy, the author.)

Mrs. Eddy is the author of these tenets. It will readily be seen that the Rock Christ Jesus constitutes the corner-stone of this Church. One can proudly recommend such a declaration of faith to the earnest perusal and study of every minister of the Gospel of Christ, and to every person who desires to be a Christian.

I will briefly consider these tenets as we are taught to interpret them by our text-book. The first tenet declares the Scriptures to be the sufficient guide to eternal Life. He who subscribes to this tenet, then, adopts the Bible as his, as the Word of God, and declares it to be his mentor and guide. The members of this Church, therefore, cannot be said to be disbelievers in the Holy Scriptures. The fact is, they are the most implicit and ardent believers in the Bible. They read and study it daily. It is their constant companion.

The second tenet declares for one supreme infinite God, one Christ, and one Christ Jesus. No one, in the light of this declaration, can truthfully say that Mrs. Eddy and her adherents are a Godless and a Christless people. Nor can it truthfully be said that Christian Scientists believe in more than one Christ or more than one Jesus.

The third tenet declares what the Scriptures teach as the true and the only forgiveness of sin, that is, its destruction. When one ceases to commit a particular sin he is no longer guilty of that sin, and is thus forgiven. When the sinner ceases from all sin he is forgiven all sin, and his salvation is thus worked out.

The fourth tenet declares the atonement to be unity with God, or AT-ONE with the supreme Good. This is the true doctrine of atonement, and Christ Jesus was the Wayshower to this oneness with God, for he himself in his character and works was at-one with God,—he was always about his Father's business. Those who live his life and follow his example, come thus into at-one-ment with the Father.

The fifth tenet declares for universal salvation, the salvation Jesus taught and proved in his life,—the salvation from sin, sickness, and death; the only full and perfect salvation. This salvation is free to every one of God's children, and every individual who ever appeared or who ever shall appear on this earth is, in his real selfhood, a child of God, for there is but one Creator and one creation. Man made in the image and likeness of God is the true

Digitized by Google

man, the real man, the perfect man; and somewhere in the cycles of time, the perfect man of God shall be manifested. Man is God's universal and eternal idea. God is man's divine Principle, and Principle and idea cannot be separated. God's image and likeness cannot be effaced or destroyed any more than God Himself can be effaced or destroyed. If man could be effaced or destroyed, he were no image and likeness, and the declaration in Genesis were a falsity.

The sixth tenet is a *resume,* as it were, of the preceding tenets. It comprehends them all. My beloved friends, think for a moment, you who are Christian Scientists as well as you who are not, what it is solemnly to promise to strive, watch, and pray for that Mind to be in you which was in Christ Jesus. What a mighty, yet what a glorious, demand! To have the Mind of Christ is to live the life of Christ. In grand epitome Paul, in the context, delineates the character—the Mind—of Jesus Christ. Was it anything less than divine guidance that led to the adoption, as a final tenet of the Christian Science Church, of this sweeping and all-inclusive apostolic injunction?

Is it an impossible injunction? Did Paul mean what he said when he thus enjoined the Philippians? We think no believer in the great apostle will contend that he was enjoining what he knew to be an impossibility. If Paul meant what he said and knew whereof he affirmed, it is possible for mankind to have in them the Mind of Christ. for Paul manifestly spake not only for his day and age, but for all days and ages. If what was possible in his day is not possible now, the world has retrograded since then, and Christianity has ever since been on the decline. If this is true what of our boasted present-day Christian civilization and advancement? Is the Christian world willing to admit that retrogression rather than progression is the history of the Christian religion?

Christian Science maintains that this Pauline injunction is not impossible, but in the natural order of Christian growth. What, then, is it to have in you the Mind of Christ? Every thought you think which is for your good and that of your neighbor is, to that extent and in that sense, having in you the Mind of Christ. Every good motive or purpose is, in relative degree, having in you the Mind of Christ. Every act which makes for your betterment and that of your neighbor, is, in its due measure, exemplifying the Mind of Christ. However simple or apparently insignificant, measured by the world's standard, if it be done in a spirit of kindness and of charity, such act is, to the extent of its goodness, an expression of the Mind of Christ. All can begin thus the ascent of the ladder whose top reaches to the full measure of the stature of manhood in Christ Jesus. Paul's injunction was not impossible.

### CHRISTIAN SCIENCE NOT UTOPIAN.

It is sometimes said that Christian Science is Utopian, impractical. This is a misapprehension. While it seems so because of its uncompromising spiritual premises, it is not so in its effects, for they are most practical. The world must learn that the spiritual is the practical.

Christian Science, understood and applied, brings good health. This is practical—nothing more so. Good health is one of the chief sources of happiness. Happiness is practical. The whole world is seeking happiness, although it is slow to recognize true happiness or the means of securing it.

Christian Science, understood and applied, brings peace and comfort. These are practical. It removes the causes of unrest and discomfort, and when these are removed, rest and comfort remain, for they are man's rightful heritage.

Christian Science, understood and applied, improves material conditions; by this I mean financial circumstances as well as other material affairs.

Sickness is a prolific source of expense. It impoverishes thousands upon thousands. It is becoming more and more expensive as the facilities for handling it from the material medicine standpoint increase. Remove sickness and its long train of financial drain, and the financial condition is often vastly improved, nay, in many instances, financial ruin is thus averted. This is practical. The varied forms of dissipation—including licentiousness and the drinking vices—are sources of enormous financial expenditure. Remove these, and financial success is assured to myriads who suffer from these follies, while many are ruined by them, financially and otherwise. Whatever will destroy these vices, and bring consequent prosperity, is practical.

Christian Science, understood and applied, aids the business man in every honest business effort and enterprise, because it awakens him to the fact that the only true rule in business is the Golden Rule, and he finds that, as a rule, the more he sincerely endeavors to do unto others as he would have them do unto him, the more those with whom he is brought into business contact respect and trust him. Respect and trust are the prime factors of the business world.

The man who daily goes about his business in a conscious realization of the all-power and all-presence of God —the divine Mind—and that he is under the care and control of that Mind, has a sense of confidence and trust in his own destiny and ability that he cannot and does not otherwise possess. To the extent that one is a true Christian Scientist he has this constant realization, and this brings practical results.

Christian Science, understood and applied, removes fear. When I say this I make a tremendous assertion. If you think for a moment of the myriad phantoms of fear that haunt and harass the great majority of people, you will begin to appreciate the happy effects which flow from removal of these phantoms. Fear is instilled into the minds of most children from the moment of their birth. These early impressions remain until by some means they are destroyed. Unfortunately, in too many instances, they are never destroyed in this mortal phase of existence.

Fear is one of the great causes of sickness and sorrow, and all that these terms imply. It is a too frequent cause, even, of death. Fear is simply a lack of trust. Supplant fear with an ever-present and abiding trust, and its long train of consequences is no more. Whatever destroys fear, then, is practical.

One of the most disastrous fears which infest the human mind is the fear of death. Do you ever think what terror mortals are under because of this? I will not dwell upon it. I refer to it only by way of a reminder, that if this single element were removed from the mind of mortals, this world, almost by that alone, would be transformed into a paradise.

Remove this fear by a sweet and abiding consciousness that death is a human *belief,* not a divine *fact,* and you have brought into the household of your thought an angel messenger whose constant whisper is: "Perfect love casteth out fear."

I have thus hastily run over the ground to emphasize the fact that Christian Science is working out for those who accept it the most practical results known to mankind. It cannot, therefore, be justly called Utopian.

### NOT A NEW THING.

Christian Science is not new. It comes clothed in a new garb. It is presented in a somewhat new form, adapting it to present-day uses, but it contains nothing that is not contained in the spiritual essence of the Bible, and especially of the Mosaic Decalogue and the Sermon on the Mount. Jesus' works and teachings were but an amplification of the Decalogue and Sermon on the Mount, and the Christian Science text-book says Jesus was a true Chris-

Digitized by Google

tian Scientist: "the most scientific man that ever trod the globe." It also declares Christian Science to be as ancient as the Ancient of Days. It is based on divine Principle, and divine Principle is changeless and eternal. God may reveal Himself to mankind in different ages, in seemingly new ways, but the revelation is new only to mortal sense. Truth is eternal, and God is Truth. That system or method of revealing God to man which accomplishes the most good for man may, in an ascending scale, be regarded as new, but its newness consists only in its further revelation. In this sense Christian Science may be said to be new, but its essential Christianity and Science are as old as the eternal Truth.

It is a mistake, then, to regard it as a recent invention or new religious fancy.

### CHRISTIAN SCIENCE PREACHING.

One of the unique features of Christian Science is its method of preaching the Gospel. The Bible and the Christian Science text-book are the only preachers. That is to say, a lesson-sermon is made up of selections from the Bible and correlative selections from "Science and Health with Key to the Scriptures," these selections being made, and the lesson-sermons prepared, by a committee appointed for that purpose. These lesson-sermons are published quarter-yearly in pamphlet form, convenient for reading and study. In the churches and societies, they are read in public, in connection with a Scripture lesson, prayer, and singing. Thus in towns and cities public services are held much like other church services, excepting that the personal sermon is supplanted by the impersonal lesson-sermon. Throughout the entire Christian Science field, then, the same sermon is put forth each Sunday, thus giving out, at substantially the same time, a discourse, whose single purpose is to aid in uplifting, healing, and reforming mankind.

These sermons are not for sensational or catching purposes; they are to give out sober, healing truth. They do heal and reform. Thousands who hear and study them have testified to this. As I have said, they can be heard at public services in the towns and cities. They can be read and studied during the week. Many read and study them each day of the week, and then go and hear them read at public service. They can be carried about in the pocket and read and assimilated on board ship in mid-ocean, on railroad trains, in the mountains or at the beach, in the cottage of the working man, in the palace of the millionaire, on the farm, in the workshop, in the store, in the counting-room,—anywhere where one can read anything. And thousands are thus reading and studying them. Nor are they idly or curiously read. They are read because they are known to contain helpful and vital truth. They are read, in large part, by those who have been healed of sickness and sin by the works of Truth and Love and Life which they contain.

A convenient preacher, surely! A sermon always at hand! A divine service for each day of the week! A method of preaching which may truly be said to be up to date and in accord with the spirit of the times.

### A CONVENIENT METHOD OF HEALING.

Not less convenient than the Christian Science system of preaching is its method of healing. Its Physician is always at hand. He may be summoned instantly, and if rightly called He responds with lightning speed. If one needs help in the city, he is relieved of the delay of calling for the physician over the telephone, and the further delay of the physician's coming, even in his automobile. He is not subject to the yet further delay of sending to the drug-store and awaiting the physician's prescription. If one needs help in the country, the oftentimes long and tedious delay of the physician's coming is avoided. If sickness occur in a remote place, beyond the reach of the human physician, he is none the worse, for he can call his Physician there as well as anywhere.

### THE CONNECTION BETWEEN SIN AND SICKNESS.

The world would seem to have lost sight of the relationship between sin and sickness. This relationship is ignored not only in theory, but in practice. The medical profession have too much ignored it. Theology ignores it. Philosophy has either neglected or overlooked it. It is even yet boldly maintained that there is no kinship between sin as cause and sickness as effect. The Christian Science text-book insists that there is a direct connection, and it bases its contention upon the unmistakable teaching of the Bible, and especially of Jesus. As a theological question, the correctness or incorrectness of this contention must be proved by the Bible. Jesus said of the man sick of the palsy, in reply to an accusation of a certain scribe that he blasphemed, "Whether is easier, to say, Thy sins be forgiven thee; or to say, . . . Arise, take up thy bed, and go unto thine house." He cast a devil out of a dumb man, and the dumb spake. Jesus here treated dumbness as evil, or what we term human error. These instances are recorded in the ninth chapter of Matthew. In the tenth chapter we are told that "when he had called unto him his twelve disciples, he gave them power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease." Here, surely, sin—unclean spirits—and sickness are classed together. Many similar instances might be cited, but they are all summed up in his Great Commission to the twelve apostles, wherein Jesus said: "And as ye go, preach, saying, The kingdom of heaven is at hand. Heal the sick, cleanse the lepers, raise the dead, cast out devils." Here he distinctly couples sickness and sin together, and it will be observed that sickness comes first on the list.

These declarations and acts of Jesus are, of themselves, sufficient to throw the burden of proof upon those who deny that Jesus taught that sin and sickness were one. These citations could be fortified by voluminous passages from the Gospels, but enough have been quoted to prove my point.

If it was good theology in the time of Jesus to heal sickness, why is it not so now? Has what was once a good thing become by lapse of time a bad or a useless thing? Certainly not, unless something better has taken its place.

### SICKNESS THE RESULT OF HUMAN ERROR.

One of the leading points in Christian Science is that sickness is not of God; that God never created it and never sent it. When we speak of sickness we do not mean merely physical sickness, but every kind of discord, sorrow, and disease. These, according to Christian Science, are all the result of human error, not of divine Truth. Jesus came to prove this, and he did prove it in his own sinless life and in his resurrection. He pleaded with and prayed all—yea, the whole world—to follow him in his great demonstrations, and prove for themselves the possibility of doing as he did. On the eve of his final departure from his earth-life, he besought his followers to go and teach all nations the things he had taught them. Nay, more, to teach all nations how to do the works that he had done, and even greater works. He came to destroy sin, sickness, and death. He did destroy them in numerous instances. Yet, as he himself said, he came not to destroy, but to fulfil the law. If sin, sickness, and death were in accord with God's law, Jesus, in destroying them, was not a servant, but an opponent of God; not a friend, but an enemy of God; not a son, but an apostate. No Christian will assert this. Is not Christian Science, then, in its contention that sin, sickness, and death are not of God, but the dire consequence of straying away from God and His benign government, true to the teachings and life of Jesus?

Digitized by Google

### THE CAUSE OF SICKNESS.

It is apparent from what has thus far been said that Christian Science teaches that sickness is the result of sin, in its broad definition as human error. Let me briefly explain. All will agree that the sin of lust, or licentiousness, is a prolific cause of sickness. It is the source of loathsome and fatal diseases. Physicians will agree to this. Licentiousness is the outgrowth of impure thought. Purify thought and impure conduct ceases. Thus, with the purification of thought and conduct, the fearful and death-dealing diseases resulting from licentiousness are destroyed.

Another fruitful and appalling cause of sickness and death is drunkenness, the excessive use of intoxicating liquors. Destroy the appetite for liquor, remove the drinking habit, and the varied and horrible forms of sickness flowing therefrom will cease.

Christian Science has proved efficacious in destroying the causes of licentiousness, as well as the appetite for liquor. Thousands of your fellow-citizens and mine have risen up and testified to this, and the number is daily increasing. Many of the cases of redemption from these distressing sins are as pathetic in their circumstances as they are glorious in their outcome.

These are among the grosser sins of mortals. They are admitted by all to be wrong. They are the cause of more sickness than all other causes. Remove them, and you have taken away a percentage of this source of sickness that would go far towards transforming this earth into a paradise.

But these are not all there is that produces sickness. Sorrow, grief, the multiplied forms of disappointment, discouragement, and depression, these mental conditions act upon the physical and bring about many of the disorders and complications which are called physical diseases.

If I were to single out another prolific cause of sickness it would be the disorders arising from business worry and disappointments. These are mental, although producing myriad forms of physical disturbance. How many men and women have been driven to sickness and death by reason of these untoward conditions! Remove this single cause of sickness and death, and you have wrought mightily for harmony and peace on earth. But the Christian Scientist goes further in his analysis of the causes of sickness. He is aware that there are many other qualities of the human mind that are health-destroying. I enumerate these briefly as hatred, malice, revenge, jealousy, dishonesty, distrust, and kindred qualities. Need I remind you that these cause sickness? Remove them, and again you have brought heaven vastly nearer to earth, and you have done an enormous work toward establishing good health.

Now, my friends, let me ask you, can these multiform mental causes of sickness be cured by any other than moral and spiritual means? Will material medicines reach and destroy mental conditions and moral defects? The soporific effect of a drug may stupefy the mind so as to produce temporary relief, but cure it cannot; heal, finally and effectually, it does not, for it has dealt, at best, only with effect; it has not reached root-cause.

Nor can the surgeon's knife cut out mental conditions or moral defects. The utmost it can do is to remove the physical effects of these.

In saying this I wish to cast no reflection upon the noble army of men and women who are practising medicine and surgery. They are working up to their highest standard of the healing power. Their purpose and effort are to relieve human suffering and stay the ravages of disease. The question here submitted simply is, are they practising the highest and best method of healing? Have they reached the true remedial standard? If not, and a better exists, then the truly unselfish and sincere of their class will welcome and endorse that which is better, as soon as they become convinced that there is a better.

In view of the plain and well-known facts in human experience to which I have adverted, may I not again ask, Do not these facts distinctly coincide with Jesus' treatment of sin and sickness, and do they not clearly indicate why he almost invariably said to those whom he healed, "Sin no more, lest a worse thing come unto you?"

### THE CURE OF SICKNESS.

Is there, then, no balm in Gilead; no Physician there, do you ask? I answer, Yes, there is. God, the eternal and all-present Mind,—He who is Love, and Life, and Truth, now and forever,—He is your Physician and mine. We can go to Him daily, hourly, momentarily, in sweet and silent prayer, and if we pray aright He will heal us of all our diseases and remove from us all our infirmities. We can know, in the very depths of our being, that He is our Physician, our Comforter, our Life, our Health, our All-in-all, and in the fullest and most absolute sense, a very present help in trouble; and that in Him we live and move and have our spiritual and our physical being.

May I not, then, appeal to all good people, of every belief or sect, to aid us in spreading this healing and saving Gospel? May I not deeply, earnestly, and in the most fraternal spirit, ask you to rejoice with us that God, in these latter days, is sending around the world a mighty current of healing truth, and may I not ask you to unite your voice with ours in pleading for a higher and more general recognition of God as all-power, and of all that is opposed to Him as baseless and impotent before His almightiness?

May I ask if the day has gone by when God should cease to be almighty? when human error—sin—should no longer be overcome and destroyed? when sickness, sorrow, misery, and distress should no longer be striven against until they are annihilated? I ask, in all sincerity and candor, Has the healing and saving Christ been withdrawn from human reach because there is no longer need of such a Christ? And, in this sense, Has the day of healing miracles passed because there is now no necessity for them? As Christian Scientists we maintain, however, that divine healing is miraculous only as it is not understood. All true healing is done through the understanding of ever-operative law.

In the closing words of the Preface, the author of the Christian Science text-book thus tenderly launches her precious volume upon the ocean of public thought: "In the spirit of Christ's charity,—as one who 'hopeth all things, endureth all things,' and is joyful to bear consolation to the sorrowing, and healing to the sick,—she commits these pages to honest seekers for Truth."

Is not this a re-echo of the great Nazarene's sweet appeal to the world's great family of sufferers: "Come unto me, all ye that labor, and are heavy laden, and I will give you rest"?

### Notice.

Judge Hanna's address will hereafter be 1532 N. Nevada Avenue, Colorado Springs, Col.

### The Passing of Winter.

A gentle warmth is in the air that breathes
Of rarest days, and even to the snow
A kind of tender radiance bequeaths
That seems to speak of life that hides below.
E'en now, the shapes of trees,
Softened in outline, dot the distant leas
Or climb the nearer slopes where visible show
The fair new buds, and everywhere they throw
Shadows more mazy at their feet,
And gayly mock as winter's hosts retreat.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Lectures.

THE very large attendance at the semi-annual lecture of the Mother Church given in Symphony Hall, Boston, when several hundred persons, probably a thousand, were turned away for lack of room, indicates that suffering and disheartened humanity is still seeking a practical means of escape from pain, sin, sickness, and sorrow, and that the means heretofore employed for relief from these relentless task-masters, have been largely unavailing.

The increasing attendance at these lectures marks the steady growth of interest in Christian Science. The persons comprising these large audiences are more than ordinarily attentive, and it is noticeable that they remain until the close of the lecture. This indicates that idle curiosity is not their motive.

That this interest is not confined to any particular section is shown by the reports received from different places at which the lectures are given. In one instance a church in one of the smaller cities reported an attendance of four hundred at its first lecture, and about a year later an attendance of eight hundred at its second lecture. In another instance we are informed that it was necessary to give the lecture two evenings in succession in order to accommodate all who wished to hear it.

These lectures were inaugurated for the purpose of meeting the demand for an authoritative presentation of Christian Science and to correct the many misunderstandings and misapprehensions which have grown up in public thought, therefore this means of placing our Cause and its Leader in a proper light before the world should be used without stint. We regret to find, however, that some churches are not thoroughly awake to the benefit to be derived from a liberal interpretation of the by-law permitting each church to arrange for two lectures a year. We cannot refrain from urging upon the churches everywhere a liberal policy in this matter, and would suggest to them that when providing for their yearly expenses, the cost of two lectures be included. M.

## Open the Door.

ALL are familiar with Holman Hunt's great picture lesson, "The Light of the World." Jesus with saintly figure and love-lit face stands at the door and knocks The door is overgrown with ivy, it has long been closed, —and the latch-string? No half-hospitable "Come!" will admit the Master, for the latch-string is indrawn, and he who would entertain the stranger must rise and open to make him welcome.

Are we yearning for the truth? longing for the entrance of Love into our lives, while we sit with the door of consciousness closed, and indifferently call "Come!" forgetting that we must arise, lift the latch, and open the way for "Light" to enter.

Our earnestness is measured by our activity, mere protestations of love are but "sounding brass or a tinkling cymbal." Our faith in the Science of Christ is a demonstrable faith, "We are what we do."

As the shades of evening fall upon each day, what is the reckoning? How often, at the knocking of the truth, have we unhesitatingly sprung to admit the higher thought, to welcome the "Light of the World."

Our love is measured by our obedience. Jesus, wearied perchance with the professions of personal attachment, said: "If ye love me, keep my commandments." The tendency of aspiring but unregenerate humanity is to many and great professions, and to a self-satisfying belief that we want to be good, we want to be well, we want to be Christian, while at the same time we are unwilling to manifest the activity and love that expresses itself in prompt work and glad obedience. While we dwell with admiration and reverence on the wonderful works of the Nazarene, while we believe, and rejoice in the re-illumination of human thought through our Leader's light, while we acknowledge gratefully the help of self-sacrificing practitioners, we must not forget that the latch-string is within, and that it is ours to arise and open the door. S.

## Christian Science in Mexico.

THE first lecture delivered in Mexico, on Christian Science, a report of which appeared in the *Sentinel* of April 11, dated an important era, we are sure, in the spiritual life of that country.

"Our Next-Door Neighbor" has been subject to numerous peaceful invasions at our hands, especially those of our capital, our products, and our business enterprise, which have been continuous and ever-increasing during recent years; but the implanting of Christian Science is a far more significant event, and its love-impelled trespass upon this young republic will bring unmeasured blessings to a people who have always evinced a deep religious instinct, an earnest seeking after God.

Prescott tells us that, impelled by religious zeal, the Aztecs sacrificed unnumbered human lives that they might propitiate their cruel concepts of deity; and under the tutorship of their Spanish conquerors they have been no less earnest, devoted, and self-sacrificing. The visitor to their land today is constantly noting the evidences of a religious aspiration, a zeal for God which is not only striking but sadly pitiful because, as Paul would say, it is "not according to knowledge."

To these patient, gentle-hearted people the healing word has come and its demonstrations are telling of the actual dawn of that Golden Age which their cherished traditions have associated with the just and beneficent rule of Quetzalcohuatl—"The Fair God."

In addition to the promising work of Christian Science in the capital, a society has recently been formed in San Luis Potosi, and there are Scientists in Monterey, Tampico, Tuxpan, Mazatlan, Cordova, Oaxaca, Guadalajara, and the isthmus of Tehuantepec; so that from all these points its truths are being radiated, and we are informed that everywhere the interest is increasing. "The common people" have again "heard him gladly."

In leaving Mexico for the States one may take a steamer which sails from Vera Cruz late in the afternoon, and if the evening be fair the last view of this land of adventure and of tears will prove of surpassing beauty and impressiveness. Upon the foreground of the placid gulf is spread the luxuriant tropical belt of the low country, above which rises the unbroken wall of the great plateau, while in the center of the picture the faultless outlines of the mighty peak of Orizaba are thrown upon the background of a sunset sky. Isolated and peerless its snow-clad heights tower above the world in calm and roseate splendor, fitting symbol of that eternal Truth which, amid all the changes

Digitized by Google

of human belief "abideth forever," and which yields perennial inspiration and refreshment to the sons of men.

May this glorious mountain, crowned with unsullied purity, prove a symbol also of that Church of Christ, Scientist, which is founded on demonstrable truth and which is destined in the years to come to gladden and enrich all the people of this goodly land of the Montezumas. W.

---

THE many commendatory and appreciative letters received since the first number of *Der Christian Science Herold* was issued prove that this addition to our literature was well timed to meet the needs of our Cause, and that our estimate of the desire for an official publication in the German language was correct.

In order fully to meet the needs of those who do not have access to the "Directory of Christian Science Practitioners" in *The Christian Science Journal,* we shall publish a similar directory in *Der Herold,* commencing with the June number. This feature will not curtail the number of pages of reading matter, however, since we intend to continue to give our readers more than the thirty-two pages promised in our announcement.

---

### The Heart of the Woods.

I hear it beat in morning still
When April skies have lost their gloom,
And through the woods there runs a thrill
That wakes arbutus into bloom.

I hear it throb in sprouting May—
A muffled murmur on the breeze,
Like mellow thunder leagues away,
Or booming voice of distant seas.

In daisied June I catch its roll,
Pulsing through the leafy shade;
And fain I am to reach its goal
And see the drummer unafraid.

Or when the autumn leaves are shed,
And frosts attend the fading year,
Like secret mine sprung by my tread
A covey bursts from hiding near.

Alert of life, of fervent wings,
A compact source of feathered power,
Their drum is music in the spring,
Their flight is music every hour.

*Anon.*

---

The Lord knoweth whether I shall ever see your faces more; but whether the Lord hath appointed that or not, I charge you before God and His holy angels to follow me no further than I have followed Christ. If God should reveal anything to you by any other instrument of His, be as ready to receive it, as you ever were to receive any truth by my ministry; for I am very confident that the Lord hath more truth and light yet to break forth out of His Holy Word. For my part, I cannot sufficiently bewail the condition of the reformed churches, who are come to a period in religion, and will go on further than the instruments of their reformation. The Lutherans cannot be drawn to go any further than what Luther saw, and the Calvinists, you see, stick fast where they were left by that great man of God, who yet saw not all things. This is a misery much to be lamented; for though they were burning and shining lights in their time, yet they penetrated not into the whole counsel of God, but were they now living, would be as willing to embrace further light as that which they first received.

From JOHN ROBINSON'S address to the Pilgrims on their departure from Holland.

## From our Contributors.

### Our Father.

ANNIE H. WILSON.

IN the first word of the Lord's Prayer lies the key-note of Jesus' teaching: "Our Father." No longer is there any division, any separation, but all are in holy unity. Jesus is its first exponent. In the understanding of that word lies the claim of each on the other, and in it the joy of giving. Where there is no division, who could wish to have any possession while another is in need? And may not the most timid come without fear and accept his portion as a human brother for whom the one and only Father has made provision as for the rest? Here the strong learn to help the weak, whose weakness is theirs; and the weak no longer fear the strong, whose strength is theirs; no longer is there mine and thine, but all belongs to our Father. "One family we dwell in Him."

If the fulfilment of the prayer still seems lacking, "hidden in the mist of remoteness" (Science and Health, p. 576), and a sense of disappointment tells us that its achievement is not yet, even among those who have become known as Christian Scientists, still we rejoice in the hope it gives us in the assurance that each individual victory over sin, self-love, self-will, self-justification, selfishness of any kind, is a positive step to a sure goal, and an attainable one.

George Eliot said, "Justice does not exist without us, as a fact, but within us as a great longing."

Is it not true of all that constitutes true love, and true happiness, that we recognize first the longing for them as something we have not; then we begin to be just, to be loving, to cause happiness for some one else? And thus our thinking changes, until we can "think God's thoughts after Him,"—thoughts of peace, and not of pain, of joy, and not of sorrow, of justice, love, happiness, within and without, as all that have any claim whatever to existence.

---

### A Letter to our Leader.

Rev. Mary Baker G. Eddy, Concord, N. H.

*My Dear Mother:*—I have been thinking that perhaps it might give you pleasure to hear from one who loves your words, how very beautiful those that you have given us for our Communion Hymn sounded in the solo in church last Sunday morning! To me, at least, they carried a meaning higher and deeper than ever before, and, indeed, with the opening of the song came an experience most beautiful. It seemed to me as if two mighty wings suddenly unfolded and spread over and above the congregation. So strong was my sense of this, that involuntarily I lifted up my eyes, as if to see them, and as I did so, I felt shaken, literally, as if by unseen power, and then so lifted up and strengthened, so triumphant, as the words and music came pouring forth and rising upward, and became to my consciousness a veritable psalm of triumph and thanksgiving, and for that moment I could realize the words also that you have given us in Science and Health: "for the accuser is not there, and Love sends forth her primal and everlasting strain" (Science and Health, p. 568).

Mr. Jewett, who has been away traveling, had just that morning reached home in time for service, and turning to him, after the experience just related, I saw him touched as never before by the singing of that hymn, for his face was quivering and his eyes filled with tears, so that I knew I was not alone in the realization of the greater meaning that your words were conveying to your church. Hoping, dear Mother, that my telling of this may give you some comfort and joy,

I am your loving child,

FRANCES HASTINGS JEWETT.

Boston, March seventeenth, nineteen hundred three.

## Metaphysical vs. Material Understanding.

REV. W. W. MC ARTHUR.

AFTER gaining a little understanding from the study of the Christian Science text-book, one finds that it is indeed a "Key to the Scriptures." It unfolds to us a basic law of Life and shows us how to apply this law to every-day affairs. In short, it gives us the metaphysical understanding of the Scriptures, which we find necessary for their application to our present needs.

Let us notice the advantage of the metaphysical sense of the Scriptures regarding some of the questions which interest mankind.

One of these is, "What is God?" The Scriptures, spiritually understood, answer this question satisfactorily to all. Interpreted materially, they present a sense of God, man-like in form and temperament, loving the good and hating the evil, responsible for all the ills as well as the good of humanity; and many thoughtful people reject such a conception of God. When we get a metaphysical sense of the Scriptures we have the spiritual conception of God, who is defined in Christian Science as "universal, eternal, divine Love, which changeth not and sendeth no evil and no sin upon man" (Science and Health, p. 140). We can never rise from the idea of a God who loves and hates, to a God who *is* Love, except through metaphysics.

Another question of interest to all, is, "What is man?" This question is grandly answered in the Scriptures, when spiritually understood. The Scriptures declare that man was made in the image and likeness of God and must, therefore, be perfect. Misinterpreted, this would mean physical man. But the perfect physical man does not appear. The metaphysical sense of "man, made in the image and likeness of God," gives us our true selves, not material, but spiritual.

When Jesus says, "Be ye therefore perfect, even as your Father which is in heaven is perfect," he means that man is to recognize himself as he really is,—as God's image and likeness,—which can only be done through this metaphysical interpretation.

The history of the Israelites in their Egyptian bondage, their liberation, and journey from Egypt through the wilderness to the land of promise, metaphysically understood, signifies much. No matter what the physical condition may seem to be, man finds himself in bondage to some evil appetite or desire, finds himself controlled by something he is not willing to call himself. Metaphysically speaking, he is in Egyptian bondage, but he can look to the God of Israel to liberate him and lead him safely across the desert, from the false sense of self to the true consciousness of his being, in God, where he is free and sovereign.

Again, when we study the life of the Master, we find that he performed many works, which indeed are marvelous to our material sense. Among these were the feeding of the multitudes with a few loaves and fishes, the walking upon the water, healing the sick, and raising the dead. And regarding these he makes this remarkable declaration to his disciples, "Greater works than these shall he [ye] do." Did the Master mean that his disciples were to do these works through a material interpretation of his teaching? From a metaphysical standpoint, we may see that he did mean that we should do likewise, and did also show us how to do it. These works are to be done through the consciousness of our oneness with God in Christ. Jesus said, "I can of mine own self do nothing;" and again, "The Son can do nothing of himself, but what he seeth the Father do," and Paul reiterates this when he says, "I can do all things through Christ which strengtheneth me."

Having this Christ-consciousness, we can destroy the false sense of man and heal the sick. As we metaphysically understand his teaching, we are able to do the work our Master did, and in this way follow in his footsteps.

## Church Finance.

W. E. B.

PERHAPS no phase of thought perplexes the beginner in Christian Science more than the subject of finance, and this is not due to the Christian Science aspect of the subject, for this is normal and just, but to past education in false theology. Under the old thought men were wont to regard the church as a sort of worthy object of charity, whose very existence depended upon their convenience in the way of contributions. This view shows clearly that the church was not the one important factor in man's existence which it was originally intended to be. All this is changed in Christian Science. The student soon realizes that the Church of Christ, Scientist, is the all-in-all of human life. When correctly apprehended, it takes its rightful place in his earthly experience; his financial duty to the church organization becomes just as important as any other obligation he assumes, and is met just as regularly as his grocery or rent bill; indeed, it is the most important account of all, since it is enabling the church to spread the "good news," so that others may enjoy the manifold blessings Christian Science has brought to him.

Here arises the question of liberality and justice in giving, which of course must be a matter of individual demonstration; but perhaps one is aided in this by remembering the saving made in *materia medica* and surgical bills, tobacco bills, and many losses and expenditures avoided by knowing the truths of Christian Science. If one bears in mind these benefits in deciding on the amount for church contribution, the church will provide itself with substantial structures wherever needed, dedicated free from debt. More than this, plenty of funds will ever be in the treasury to meet the growing demands of the Cause and to pay just salaries to all those required to give time in carrying on the work of the church organization.

In the payment of these salaries the old charity aspect is prone to show itself again in the offering of amounts not commensurate with the work and time required to fill properly the positions. During several years as a member of a church board of directors, the writer frequently observed, that whenever salaries were to be adjusted, mortal mind was ever ready to suggest an inadequate amount as ample, and to use as an argument that Mr. —— would be glad to fill the position for nothing. This nothing attitude would at once indicate that such persons were not competent applicants, for this attitude discloses a lacking sense of justice, and as justice is an attribute of divine Mind, this quality must be expressed as well as all others, in order to bring out a rounded demonstration of ability.

In this connection, and in regard to inadequate compensation, it has been said that this is one of mortal mind's methods to keep capable people out of Christian Science work.

There is no legitimate reason why a Christian Science corporation should not pay its employees as well as any business corporation, and it is not just to ask any one to give time and ability, without being willing to give in return just and adequate compensation.

It is a source of gratification to note that Christian Science is helping to destroy erroneous views of church finance and also enabling us to conduct church affairs in a business-like way and bring a realization of the importance of conforming to the state law under which one's particular church may be incorporated. Thus, while living under the law of grace, Christian Scientists remain law-abiding citizens, who realize the necessity of conducting all human business transactions in accordance with the most perfect system known.

Christian Science demonstrates the highest sense of perfection and order.

## Perseverance.

C. A.

ISRAEL'S journey through the wilderness teaches numerous lessons to those who are beginning their journey out of materiality. One sees plainly how unnecessarily long and weary they made their journey by their discontent, impatience, idolatry, and lack of faith in God. They were willing to leave Egypt because of their misery there, but then they expected to be brought straight into the promised land without in any way fitting themselves for it, not understanding that in their state of consciousness harmony was impossible for them, and that they needs must be purified and thus made ready to receive the fulfilment of the promised blessings.

How many of us to-day are willing to leave our misery, sin, and sickness behind us, just because it is misery, and expect, because of this willingness, to be lifted at once above our troubles, not seeing that we are doing just as the children of Israel did in their day, prolonging our journey by impatience, discontent, selfishness, and lack of faith.

There is a seeming wilderness for each one of us to go through while we are breaking the bands of selfishness and reversing our false beliefs concerning God and man; and we can go through this wilderness either as Moses did, overcoming and forgetting self, and cheering and urging others on, or as the children of Israel, discontented, selfish, lazy, and impatient. The promise is to him that overcometh, he shall inherit all things. Let us remember that the clouds are his chariots. The trials and temptations that sometimes seem hard may be mastered so that they shall draw us nearer to God "who is our refuge and strength, a very present help in trouble."

## The Challenge of Error.

L. A. M.

"ARE you going to believe that lie?" These words were addressed to a discouraged person whose business seemed on the verge of collapse. After everything had been done from the standpoint of Truth, and things failed to look brighter, the business man was stating the condition of affairs to a Christian Science friend. When the question "Are you going to believe that lie?" was asked, error was ready with its reply, "Well, I can't meet my bills."

Just think of one of God's ideas being unable to pay honest debts! Amid the gloom, that question "Are you going to believe that lie?" would come again, and the answer changed before business changed. "No; I won't believe that lie; my Father is rich, my Father is all compassion, His promises are sure,—no good thing will He withhold from them that walk uprightly," and the gloom was dispelled. It always will be if we listen to the voice of Truth.

The Bible records Joshua's command, "Shout; for the Lord hath given you the city," then the walls fell flat.

Whenever there is inharmony,—discouragement, sickness, lack in finance, lack in love, lack in church attendance,—it is ours to know and declare the truth, the allness and the abundance of God our Father, remembering He that keepeth thee will not slumber; then, having done all we can, stand.

God made mothers before he made ministers; the progress of Christ's kingdom depends more upon the influence of faithful, wise, and pious mothers than upon any other human agency.—THEODORE L. CUYLER, D.D.

They who know not how to act agreeably, though they have learnt many things, are still ignorant.—CURAL.

## The Lectures.

### At Kearney, Neb.

Notwithstanding the inclemency of the weather there was a very good attendance at the Opera House Thursday evening, March 26, when Judge S. J. Hanna of Boston, lectured on Christian Science. Judge Hanna was introduced by K. O. Holmes.—*The Kearney Daily Hub.*

### At Springfield, Mo.

Judge William G. Ewing of Chicago delivered a powerful address at the Baldwin Theatre yesterday [March 22] to a large audience. He was introduced by Charles J. Wright, a leading lawyer, and spoke at length on Christian Science. The burden of his address was to show that the belief of the Christian Scientists is in exact harmony with the teachings of the Bible, and that the Lord has the power to heal now as He always had, and will do so now and in the future as He did in the past.

*The Springfield Leader and Democrat.*

### At Birmingham, Ala.

Mrs. Livingston Mims of Atlanta addressed, at the Bijou Theatre, yesterday afternoon [March 22], possibly the largest audience ever assembled for a lecture in Birmingham. The inclemency of the weather, no doubt, prevented many from attending the lecture, but the loggias were filled, the parquet was almost filled, and there were many people in the balcony. Mrs. Mims came to Birmingham upon the invitation of First Church of Christ, Scientist, but her audience yesterday was made up of every denomination in the city.

Mrs. Mims made a deep impression, and the close and undivided attention which her lecture received indicated that its depth and thought and her power of expression were being thoroughly appreciated.—*The Age-Herald.*

### At Helena, Mont.

An audience of comfortable proportions gathered at the Helena Theatre last evening [March 17] and followed with the closest interest the words of Carol Norton, C.S.D., of New York, in a lecture on "Teachings of Christian Science." The lecturer was introduced by Judge Henry C. Smith.

"It is my privilege," said Judge Smith, "to introduce to you the speaker of the evening, who will lecture upon the subject, 'Teachings of Christian Science.' I do this with the greater pleasure because of my intimate acquaintance with many good men and women who are of the Christian Science faith.

"Not being a Christian Scientist myself, or a disciple of any particular creed, dogma, or doctrine, I feel that I shall not be misunderstood in paying this small tribute to the sincerity and worth of those Christian Scientists whom I know. And I desire to bespeak for the lecturer this evening the closest attention. He comes to teach us how to attain better health and better morals, and we should accord him not only a respectful hearing, but a heartfelt welcome.

"We live in a wonderful age; an age of progress and new things; of research and discovery not only along material lines, but in mental and moral channels as well. I understand that Christian Science is claimed to be the Science of Mind—of God—the Science of God, who is All-in-all. All religions are acknowledgments that man is mortal and finite, and that God alone is infinite. We are ignorant of our future, afraid to face the great hereafter, powerless to change our allotted destinies, and so we reach out for something to cling to—some one to save us.

"No human being can contemplate the fact of his own existence without acknowledging that God lives. And so

Digitized by Google

we should and do welcome one of His ministers who comes to show us how to bring His teachings into our daily lives.

"Personally, I know of some wonderful changes that have been wrought in friends of mine, morally, mentally, and physically, by the teachings of Christian Science. I am requested to inform you that on account of many misrepresentations of Christian Science there has been established a Christian Science Board of Lectureship composed of those who are in a position and who have authority to speak on the subject.

"Mr. Carol Norton of New York is a member of that board, and I take pleasure in presenting him to you."

*The Helena Independent.*

### At St. Joseph, Mo.

The lecture delivered here by Judge Hanna on March 24, given under the auspices of First Church of Christ, Scientist, brought out the largest audience that has yet attended a Christian Science lecture in this city. Mr. C. M. Howe introduced Hon. Benjamin J. Woodson, a prominent attorney of the city, who in turn introduced Judge Hanna. The audience was a representative one in every respect, and paid very marked attention throughout.

We all feel greatly encouraged that such a good demonstration has been made, and also to see the increasing interest that is being manifested in the community. Certainly a new era has begun, wherein a greater work will be accomplished. Judge Hanna's lecture was published in full in one of our daily papers.—*Correspondence.*

### At Cheyenne, Wyo.

Carol Norton, C.S.D., of New York delivered a lecture Friday evening, March 20, in Keefe Hall, under the auspices of the Christian Science Society. The lecture was attended by a large and appreciative audience.

Mr. Norton was introduced by Judge Clark, a prominent lawyer of the city, who said in substance:—

To-day, throughout the civilized world, thoughtful men and women observe, as never before, the many evils which afflict and scourge society, and they with one accord recognize the fact that those evils have their birth and their development in the stunted cultivation of the moral and spiritual qualities inherent in men, and admit that the panacea for these spiritual and moral ills which so grievously afflict society and individuals, is only to be found in permitting our daily conduct to be controlled to the fullest extent by those two grand, harmonious principles taught by the Master nearly two thousand years ago, summed up in that beautiful expression, "The fatherhood of God and the brotherhood of man."

As I understand it, the Christian Scientist goes but one single step farther; he fully admits that the application of this principle to our daily conduct will furnish a complete cure for all the spiritual and moral ills which torment the individual and society, and he asserts that God's power as exhibited and manifested in the teachings of Christ is not limited in its potentialities to the cure simply of moral and spiritual ills, but that it is broad enough, and far-reaching enough, and altogether sufficient for the complete and perfect cure of all the ills to which flesh is heir, whether they be called moral ills, or whether they be called spiritual ills, or whether they be called physical ills; and the reasons for this assertion and belief the speaker of the evening will give you. I bespeak for him your earnest and close attention.

Ladies and gentlemen, I now have the pleasure and honor of introducing to you Carol Norton of New York City.

*Correspondence.*

### At Pocatello, Idaho.

Thursday evening, March 12, Mr. Carol Norton of New York, N. Y., delivered the third regular lecture upon the subject of Christian Science, in Pocatello, under the auspices of First Church of Christ, Scientist. The audience was much larger than on previous occasions, indicating a growing interest, and was thoroughly representative of the thinking and progressive people of the city. The lecturer was introduced by our fellow-townsman, the Hon. F. S. Dietrich in the following words.

*Ladies and Gentlemen:*—Like many of you I presume, I am not identified with the organization under the auspices of which the lecture of the evening is given. It seems to be the custom of this society to have its lecturers introduced by one who is not a member thereof.

As I understand, the lecturer comes to answer, in part, or to discuss in some of its phases, that fateful question asked centuries ago and still unanswered, and which possibly will never be fully answered in this world, "What is truth?" Generations have come and gone, wave after wave of unusual mental activity has swept over the earth, and still humanity is unsatisfied with the result.

There was, as you remember, after an age of apparent darkness, a great awakening, referred to in history as the Renaissance, a period of great mental activity, a period of eager search for the ideal in form and color, and yet the world turned away from the masterpieces of art and literature of this period, still unsatisfied.

Then there was the great awakening of the religious world, following close upon the heels of the intellectual revival, commonly referred to as the Reformation, with the intensity of thought and feeling born only of religious zeal. Fruitful as was this great movement, still the question was unanswered.

Then followed the epoch of political revolution, the rise of civil freedom, and the world for a time fondly thought that all truth was personified in the goddess of individual liberty, and still the question remained unanswered.

And now is the age of great industrial activity. Human thought is intent upon the laws governing the great forces of nature, and their application to the production of the comforts sought by man. The rapid increase of unbounded wealth has been a marvel. We speak of the Almighty Dollar. Men are imbued with the spirit of materialism. And to me, watching the movement, though from afar, it has been a wonder how this new organization emphasizing the spiritual, as it does, so as to render it suggestive of mysticism, and projected, as it has been, into the very midst of an age so intensely materialistic, should have had such a marvelous growth.

As before suggested, many of you have not accepted the distinctive views or doctrines of Christian Science. Still, I feel sure that I need not bespeak for the lecturer your respectful attention. In this age, and especially in this western country, a question of religious toleration would be a strange one. We have gathered here from different states, if not from different countries, and from various environments, each with his own traditions of truth and religion; and freedom of thought and expression is taken as a matter of course. Therefore, without further ceremony, I assure you that it gives me great pleasure to introduce to you Mr. Carol Norton, the lecturer of the evening.—*Correspondence.*

---

As the reflecting of the sun is the sunlight's being, so the knowing of God, the reflecting of Truth, is man's being; and as nothing can ever come between the sun and its manifestation, the sunlight, so nothing can possibly separate God and His expression, man.—H. S. H.

## Testimonies of Healing.

In the second chapter of first Peter, ninth verse, I read "that ye should show forth the praises of him who hath called you out of darkness into his marvelous light." The periodicals so wisely established by our Leader give us one means of showing forth the praises of Truth.

From the darkness of physical pain and weariness into the light of wholeness and joyousness in work and living,—from the darkness of a clouded sight into the light of clearer vision,—from the darkness of doubt and discord into the marvelous light of the reality of Good,—this is what a reading of the Christian Science text-book has done for me.

At the time the book was lent to me, I was teaching in the public schools of Chicago, and absences from my work on account of illness were of frequent occurrence.

For five weeks I had been under the care of a specialist for an organic trouble, and he said I would have to come as many more months before a cure could be effected. At this time, Science and Health was brought to my notice. I never thought of such a thing as being healed by the reading of the book, but my thought was so changed that I was healed, not only of the organic trouble, but of blurred eyesight, fatigue, and a train of other discordant manifestations. I did not go back to the physician until four months later to pay my bill (which, by the way, was more than five times the price of the Science and Health I had purchased). From the time I read the book I taught steadily without losing time from my work. I was helped, too, with my work in many other ways.

Through reading the text-book I learned that God has given us strength to do all we have to do, and that they are the things we do not have to do (the envying, strife, emulating, vainglorying, and so on) that leave in their wake fatigue and discord.

Gratitude to our beloved Leader, Mrs. Eddy, and to her faithful students, with whom I afterwards became associated, can be expressed only by daily efforts to put into practice what has been taught. As a child, my daily prayer for years closed with these words of the Psalmist: "And lead me in the way everlasting," and through Christian Science it became clear to me as never before how Christ is "the way, the truth, and the life."

T. H. A., Madison, Wis.

---

When Christian Science was first presented to me, to my darkened sense it seemed a jumble of contradictions. However, I was tired of old theories and mere form, and I persevered in the study, saying, "If this is of God, it is for me, too."

I was seeking a higher sense of God, but as the Truth slowly dawned in my consciousness, healing followed as a natural result. That was nearly three years ago, and I can scarcely name all the proofs we have had of God's presence through the study of Science and Health; and with the help of our dear, patient practitioner many illnesses have been overcome, among them two cases of pneumonia which were seemingly very serious, and which were perfectly healed in a week's time.

This alone was worth much to me, for I learned to know something of the perfect Love that casteth out fear.

Words cannot express my gratitude to our dear Leader for her years of patient, self-sacrificing labor to give to humanity this inspiring truth. When clouds darken and mists of error seem to surround me, then the "Peace, be still!" of our Master comes as a sweet assurance, "There is no power but of God."—R. L. M., Mechanicsburg, O.

About a week after my little daughter, then seven years old, was healed of scarlet fever, by the prayer of understanding, I took her to her grandmother's in South Norwalk, Conn. There was a man there who suffered a great deal with dyspepsia. The day after we got there this man ate some strawberries and was complaining that they distressed him terribly. My little girl went up to him and said, "If you are in pain don't you want me to give you a treatment?" He did not understand what she meant, but said, "Yes, if you want to." The child said no more but went to the next room, and when she returned a few minutes later, she smiled at me and whispered, "It is all right."

The subject was not mentioned again during our visit, but two years later he told me that he had never had a touch of the old trouble since that one prayer, and he began studying Science and Health at once.

A. I. S., Sandy Hook, Conn.

---

Twelve years ago the name of the "evil spirit" that beset me was "legion," but with a few treatments in Christian Science I was permanently healed of several physical troubles, and given the hope, courage, and understanding that I could be every whit whole in just so far as I learned to acknowledge only the reality of Good in my daily life. My consciousness was changed from a sense of gloom, despondency, and uselessness, to a knowing that all good is mine, and that as the child of God, He has work for me. This was soon proved by my being able to sow the seed of Truth and thus interest enough people to begin the study of the Bible Lessons.

This little band was soon increased by three or four other Scientists, and thus the foundation of our present First Church was laid. How little we know in what unexpected ways God will use us if we but stand ever ready to serve Him.

I have been much impressed with the thought that the home atmosphere should be one of healing, and within the past year three people who have been employed in my home have testified to better health, although no "treatments" were given.

Three years ago my father visited me. At that time he was using a stomach pump whenever he became so hungry that he was unable to resist eating solid food. He used the pump but twice after entering my house, and within two months was eating everything he liked, and said he was free from pain for the first time in twenty years. For several weeks my mother's fear was so great that as I would be helping him at table, she would take hold of my arm to restrain me, saying, "Child, if you had seen him suffer as I have you would not tempt him." I saw him two years later and he was still eating what was set before him and giving God the glory.

While visiting in a home where several young ladies were boarding, one was healed of heart and stomach trouble, and from sorrow, by the spoken word. The change was so pronounced in her physical appearance and in her manner that all noticed it. Another spoke one day of a felon on her finger, saying she had just come from the doctor's office and he told her to come in in the morning and have it lanced. The next morning there was nothing to lance.

These are the experiences of all earnest Christian Science workers and they show the activity of Truth and that it will be manifested to the unresisting thought.

As Scientists we have often to light the candle, sweep the house, and look for the piece of silver (Luke, 15 : 8); but if the lamp is really lighted, if thought is elevated by understanding God's omnipotence and omnipresence—the silver, yea, the pure gold of divine Love will be found, and we shall become conscious of health, happiness, and success.—L. Emogene Moore, Joliet, Ill.

Digitized by Google

When I first heard of Christian Science, seven years ago, I supposed that it was spiritualism under a new name. In the little Texas town where we then lived there were two or three Christian Scientists who met at the home of one of their number to read the Lesson-Sermon. Meeting one of them one day, I asked if unbelievers could come to their meetings. She said that they could if they wanted to. I went, expecting them to do something that I could laugh at when telling my friends about it. How surprised I was to find out that they didn't do anything but read the Bible and another book which they called Science and Health. I still thought it all foolishness, but resolved to go to their meetings until I found out all they believed. I continued to go until I began to understand a little of what they knew, not what they believed; and instead of spending my time telling others what a silly thing Christian Science is, I am now trying to find words to tell what a great and wonderful thing it is. I have been healed of so-called incurable spinal disease of ten years' standing by studying the Bible and Science and Health. Science and Health has been my only teacher, and I wish to send my thanks to our dear Leader.

There are no other Scientists near where we now live, but I have the *Quarterly* and study the lessons by myself. I have five small children and Christian Science is invaluable to me in controlling them, and in overcoming their common ills. They often help themselves and each other to destroy their little hurts and fears.

MRS. MILLIE HANSON, Oleta, Okla.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it stood April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization and the membership at that time.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico. one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Rev. Joseph C. Allen says in *The Christian Register*:—

"This brings us to the point, then, of observing that the true Christian life is not one of compromises, evasions, petty virtues, or mere negative goodness of doing nothing wrong. The Ten Commandments are matter of course with it. But to be a true Christian demands more than keeping these ordinary moral precepts,—there is a law of Christ as well as a law of Moses. Too many persons have a timid, uncertain way of interpreting and applying the practical requirements of the Christian life. Too often it is made to appear as if a genuine Christian is merely one who does not do certain things which worldly persons are given to doing.

"The plea, then, is for a religious earnestness among Christians that shall make their principles felt in all their thought and life,—a Christianity without cant or weakness, a love for God and righteousness that controls the life, a love for man that does not fritter itself away in sentiment, but gives money, time, and enterprise for the good of the people, and at the same time treats every man as a brother. Such a religion as this is as possible now as at any time; for there are conspicuous examples of noble men and women who live in its spirit. They may not have much to say about their religion. They are known by their fruits. Some of them do not call themselves Christians. Nevertheless, in all essentials their life is in accord with the teachings of Jesus; and if they as outsiders (nominally), Gentiles without the law, doing by nature the things that are commanded in the law of Christ, do they not show that the spirit of genuine practical Christianity, in this age as much as in the ages that are past, has persuasive power for the race? Woe be unto the Church, woe be unto the pulpit, that does not preach this vital message! and woe be unto the people that do not exemplify it in their lives! Perhaps it is because of shortcomings in this direction that Churches in our generation have lost so much of the influence they formerly possessed."

While, then, we care nothing for the external show, let us not fail to recognize the inner significance of the lenten season. Let us reject the childish ideas of propitiation and the barren substitutes for good thinking, but study and obey the true laws of sacrifice. The ascetic is all wrong when he forgets or denies the rich teachings of God which come through bounty, and not through denial; all wrong when, in trying to diet his soul, he starves it; but let not our brighter faith, our joy in all God's good things, make us forget wherein the ascetic is right,—in his earnest fight with pride and passion, in his genuine effort to subordinate the lower nature to the higher. The true Lent is in quietly and resolutely putting aside the things that soil and degrade human life and opening the door of the soul to sweeter influences. There is nothing formal or mechanical about it. It must be reasonable, it must be very personal, it must be alive and glorified with motive.—SAMUEL A. ELIOT.

Rev. George R. Gebauer in *The Christian Register* says: "True religion not only enlightens, but warms. The worshiper in truth must also worship in spirit: he not only thinks the God whom his mind dimly feels after, but feels in every pulse-beat of his heart the God whom he thinks. And, finally, the feelings which his God in turn arouses in him will indicate to him if his thought of God is true. If the God whom we feel does not give us the peace which passeth understanding, if He fail to give us the courage of life, if He does not inspire us to become lovers and saviors of men, we have not the God of truth in our heart. The feeling of love and trust will test our conception of truth, just as this conception will test the validity of feeling. Emotion and reason go together in life; they work together as the right and the left hand do. They must be united in all true religion."

In an address recently delivered at Milwaukee the Rev. W. H. Harrington, for many years chaplain of the Minnesota State Prison, declared that the theological doctrine of vicarious punishment was responsible for a vast deal of crime. He is quoted in *The Universalist Leader* as saying: "In just so far as this dogma is a living force it is wholly pernicious, blinding the judgment, confusing the conscience, furnishing a ready excuse to those inclined to self-indulgence by having ready another person to shoulder the punishment of guilt while they go free on the profession of a certain belief. This doctrine makes nonsense of all laws of cause and effect, supplants the Scripture statement that 'whatsoever a man soweth that shall he also reap,' ignores the principle of moral sequence and of every established law of science."

The accusation of which the Churches nowadays seem most afraid is other worldliness. Our social aspirations and efforts, the tendency of the ruling evolutionary philosophy, a growing interest in world problems which more and more tend to become common to all nations and of concern to all thinking men, unite to fasten our attention upon the age in which we live and the world in which we have to do our part. The future of the individual is less frequently urged as a motive for self-denial or for action. The eternal life can bear postponement in our thought rather than the pressing choices and opportunities of to-day. *The Congregationalist and Christian World.*

It depends very much on the attitude of mind in which one comes to the Bible whether it yields spiritual or merely intellectual profit. The man who approaches it with a heart longing for the truth will find it a treasure-house of wisdom and knowledge. He who takes it up in a cold, critical spirit will discover in it literature, and literature only. All those precious revelations of God's will and purposes which the first finds so helpful and inspiring, to the other is only matter for curious critical study.

*The Examiner.*

T. M. Huckleberry declares in *The Standard*: "We need a stalwart faith that will believe the word of God and accept it as the only authority in the things of religion. We need great believers in our pulpits and in our pews. We need a people that will hear the voice of God as He speaks by His Spirit and by His word, and will go where He wants them to go, do what He wants them to do, and say what He wants them to say. Then we may expect the men of the world to be stirred as they have never been stirred; then we will have a Church separated from the world; and then we may hope to have the unsaved people of the world coming to the Church, asking, 'What shall we do to be saved?'"

We have got our institutions to a point where we must give ourselves, heart and soul, to the creation of a public spirit against selfishness; and here is where comes the opportunity of the Church. We are menaced by difficulties that cannot be checked by law: here is the opportunity for wakening a public conscience. The Church must make patriotism and Christianity synonymous. We may have to antagonize a dulled and perverse Church conscience; yet it is in the Church that we are most likely to find the men inspired by ideals of righteousness, who are willing to work for the betterment of mankind.—PRES. ARTHUR T. HADLEY.

Character is not determined by a single act, but by habitual conduct. It is a fabric made up of thousands of threads and put together by uncounted stitches. Some characters are stoutly sewed; others are only basted. A Christian ought not only to have his spiritual garments well sewed, but kept clean; in fact, as a representative of Jesus Christ, he ought to present such an attractive apparel before the world that others should say to him: "Where did you get this? I want one just like it."

THEODORE L. CUYLER.

It is not rare gifts that make men happy. It is the common and simple and universal gifts; it is health and the glance of sunshine in the morning; it is fresh air; it is the friend, the lover; it is the kindliness that meets us on the journey; it may be only a word, a smile, a look; . . . these, and not any rarity of blessing, that enter into God's gentle art of making happy.—G. H. MORRISON.

It is not with a rush and a spring that we are to reach Christ's character, and attain to perfect saintship; but step by step, foot by foot, hand over hand, we are slowly, and often painfully to mount the ladder that rests on earth and rises to heaven.

THOMAS GUTHRIE.

"Enthusiasm is never a bad thing in any denomination, when it is the fruit of deep and sincere religious conviction, and is accompanied with the practical living of the Gospel day by day," says *The Observer.*

Christ gave to his disciples but one commandment: That ye love one another, as I have loved you. His example is our only rule of conduct; his spirit of love our only law of life.—*The Outlook.*

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur H. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 33 pp.

Hearings on Proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Buswell Trial. 24 pp.

The Christian Science Movement. 22 pp.

Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents, twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

TRACTS.

Expressions Concerning Christian Science. Rich Blessing. Beauty of Christian Science. Theory *vs.* Realization.

PRICE:—One hundred, fifty cents; two hundred, seventy-five cents; five hundred, $1.25; one thousand, $2.00.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the Will of God. Lessons from a Workshop. To Business Men. How should the Sick be Healed? The Lesson Sermons.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The new American bond for the payment of the Boxer indemnity stipulates that the payment be in the equivalent of gold dollars at the rate of exchange provided for in the protocol, which, according to the American interpretation of the protocol, makes it practically a silver bond. The bonds of the other nations specify that the payments be in the equivalent of gold at the rates of exchange prevailing on the dates of the payments.

The gross receipts of the postal service for the quarter ended December 31, 1902, were $35,223,094, and the expenditures $34,586,490. The receipts showed an increase of $3,000,000 over the same quarter a year previous, but owing to liberal appropriations and extensions of service, the surplus was $350,000 less than the corresponding quarter in 1901.

An investigation has been ordered by Postmaster-General Payne into certain alleged irregularities in the Manhattan post-office department. The investigation will doubtless be extended also into other cities from which complaints have been received, and possibly to the whole Department.

A conference of Comanche Indians has been called near Lawton, Okla., to consider a proposition made by citizens of Chihuahua, Mexico, to move the Indians to that country. They are offered two million acres of land free to make the change.

Mr. S. N. D. North, who has been appointed director of the United States Census Bureau, has resigned as Secretary of the National Association of Wool Manufacturers in order to accept the position.

**Foreign.**

As the result of the experiments with the high-speed electric locomotives upon the Berlin-Zossen military railroad, it has been decided to increase the speed of trains of the Prussian State Railroads running between Hambourg, Hanover, and Berlin. Of the competitive designs submitted at the invitation of the State by builders of steam locomotives, five have been selected. The designers of these have been requested to study further the problem, and to submit new designs for engines capable of running one hundred miles per hour with a light load and ninety in ordinary traffic. The results with the heavy electric trains showed that they produced great wear and tear on the rails, and the makers of electric engines are now endeavoring to eliminate these defects; consequently there is keen competition between the makers of steam and electric locomotives.

President Palma of Cuba in his last message to Congress dwelt at length on the condition of the public schools, and showed that they are making creditable progress. There are now 1,373 public schools and 3,328 schoolrooms, and the enrolment for the present year is 148,272. There are also 428 private schools with an enrolment of 25,675 pupils.

It is reported that an agreement has been reached whereby England, France, and Germany share equally in the control of the proposed Bagdad railway passing through the Euphrates valley to the Persian Gulf, the revenues of which will be guaranteed by the Turkish government.

President Loubet of France last week sailed for Algiers where he was received by an imposing array of warships representing Great Britain, Russia, Italy, France, and Spain.

**Industrial and Commercial.**

It is reported that the United States Steel Corporation has obtained an option on a vast iron ore deposit which was recently discovered in the State of Guerrero, Mexico. This deposit is about six thousand acres in extent, including a mountain of ore six thousand feet high which assays sixty-eight per cent iron. The option covers a tract of land aggregating one million five hundred thousand acres. The proposed purchase price is not to exceed $10,000,000. It is the opinion in well-informed business circles of Mexico that the Steel Trust is preparing to establish large steel works in the country with a view of competing directly with the great steel plant that was recently established at Monterey at a cost of $10,000,000 by independent capitalists.

The Minnesota, the largest steamship ever built in America, having a larger freight carrying capacity than any vessel afloat, and exceeded in size by the Cedric and Celtic only, was successfully launched at New London, Conn., last week. She has five full-length decks, three partial decks amidships, fifty water-tight compartments, accommodations for four hundred, first, second, and third class passengers, and one thousand steerage. Her equipment for speedy handling of her cargo is very complete. Her length is 630 feet, beam 73.6, and depth 56. She is built for a 14-knot speed and is designed for service between Seattle, Honolulu, and Yokohama.

Reports in financial circles are that on account of the decision rendered in the Northern Securities case the general officers of the United States Steel Corporation have decided to hasten the greater merger of all the iron ore mines, steel mills, furnaces, coke ovens, railroads, steamships, coal mines, and everything now operated under individual charters into the single ownership and operation of the parent corporation. It is claimed that this plan will place the corporation as a whole out of the reach of any possible clause of the law under which the Northern Securities Corporation was attacked.

The United States Geological Survey has issued a preliminary statement of zinc production in the United States in 1902, showing a total of 158,804 short tons against 141,822 in 1901. The production was distributed as follows: Illinois and Indiana, 47,096 short tons; Kansas, 86,564; Missouri, 11,087; Colorado, 1,927, and Eastern and Southern States 12,130. The principal additions to production came from new plants, notably in Kansas.

The *Noroe Vremya* (St. Petersburg), announces, without giving any details, that a Russian engineer has discovered a deposit of natural radium on the Russian Steppes, near the Asiatic border. The statement is not confirmed, but, if true, it is obviously of great importance, in view of the extreme scarcity of the mineral, the costliness of which hampers experiments with it.

**General.**

A most interesting archæological discovery was recently made at Abusir, Egypt, by a German scholar. This was a papyrus roll containing an ode by Timotheus, the Greek poet and musician, and was found in a mummy case dating back to the time of Alexander or even earlier. *The Independent* thus speaks of it:—

"With infinite pains this roll was opened and, where broken, pieced together. It proved to be forty-three inches long and contained five columns of Greek writing. The first column was in a ruinous state, the second was not complete, but the last three were intact and gave the concluding verses of a poem, in which by good luck the poet speaks of himself by name. It was at once clear from the theme that we had here a portion of the 'Persians,' a famous *nome* of Timotheus, of which two or three fragments were already in our anthologies. . . .

"Only the Greek scholar can taste to the full the sweets of such a discovery, but it must possess no slight interest even for 'the man of one tongue.' First of all, it is the oldest Greek manuscript book known to exist, dating as it does from the fourth century before Christ. . . . It is the only fragment of any considerable length of the Greek *nome*, a form of ode or hymn which was originally employed in the worship of Apollo, but which had gradually become secularized until Timotheus completely altered its nature by making it a choral song. And it is furthermore the only fragment of any magnitude from the works of a great and much debated poet and musician.

"The poem is brilliantly executed but can scarcely be ranked among the greatest treasures of Greek poetry. . . . Historically, however, the poem is of immense interest, and its discovery gives greater warrant to our hopes that some day a comedy of Menander, or the works of Sappho, or another much-desired treasure may be found lying in a mummy-case, where it was placed thousands of years ago to give entertainment to the departed soul on his long and perilous journey."

The results of the anthropological excavations and explorations conducted under the auspices of the University of California in Peru, where Inca traditions led scientists to believe that Peruvian civilization antedated the coming of the Spaniards by only a few centuries, seem to establish the fact that a great civilization existed there two thousand years earlier, and that a cultured race, superior even to the Incas, was in existence earlier than the date of the Trojan War.

The Cunard Steamship Company proposes that its vessels sailing from Liverpool on Tuesdays shall hereafter carry only second and third class passengers, second-class passengers occupying what has been hitherto reserved for first-class accommodation, and third-class passengers having two, four, and six berth rooms, formerly the second cabin. The Aurania and Carpathia will sail alternately in this service.

The American Natural History Museum, New York, will soon have on exhibition the immense collection of thirty thousand objects gathered during the last three years by the Jessup expedition in northeastern Asia, representing the culture, life, customs, and religion of that country, which until recently have never been studied by travelers. It is a unique collection and the most complete in existence.

A collection of East Indian antiquities, probably the most complete ever brought to this country, is being put in place in the National Museum at Washington. The entire collection of Dr. Carl Hanson, the traveler and explorer, was bought by the Government.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Reliance on God.

ONE advances in Christian Science by living "as seeing Him who is invisible," and by seeking right as the only means to good. Human policy, prestige, and place are not stepping-stones to divine honors, and worldly honors derived from self-seeking belong not to immortality and the heavenly order. Man's true glory is in the triumph of Soul; it is the outgrowth of exalted Christian character, which necessarily expresses itself in such usefulness to humanity as promotes health, happiness, and general well-being. Not through ambition, but through obedience to divine Mind and helpful love and esteem for others' virtues, does one rise to upper realms of thought and action.

It is impossible for man to lose his place in God, his individual relationship to immutable Good. Growth in life's harmonies is attended by retirement from the chief seats, rulership, and phenomena of corporeal observation to prayer and the abiding in the secret place of the Most High. Spiritual elevation or promotion is acquired by laying up treasures in heaven, the treasures of well-used opportunities, of ministration to want and woe, of the power of goodness to aid mercy and justice, of tender regard for the needs and right of others. As we thus build for heaven, we are journeying to the New Jerusalem, and we have the company of all who understand that Christianity has a divine Principle by which we enter into Life, Love, and Truth.

Good motives are understood by the good-hearted. If these are not understood by some, one way to correct misapprehension is by taking new courage and in meekness doing more good. God watches over those who live to do good. He who knows the sparrow's way is their defence. They fear not what the world can do. The shepherding, infinite Love, that "tempers the wind to the shorn lamb," protects and enfolds them tenderly. He binds up the broken-hearted, and he has said, "Blessed are they that mourn: for they shall be comforted."

It has been asked why a Christian Science teacher should live just to help, heal, guide, and bless others, when in so doing there is sometimes very little recompense and praise, and perhaps even neglect and injustice in return. It is because such a teacher knows that only in exalted thought is the way found that makes the life and deeds meet for the Master's use, and that often adverse circumstances afford great opportunities for learning the invaluable lesson of complete reliance upon divine Love and Truth. Nothing can harm where divine affection and purpose are a shield and buckler.

In trembling and weakness one may work in Christian Science to aid in liberating the world from suffering; but God always supports such faith, and wings such endeavor above the archer's shafts into realms of light and bliss. Then rivalry, slander, envy, jealousy, and malice are powerless. If one makes great sacrifices for the sake of helping others, God Himself becomes the reward, the eternal powers of Life flow in, and His love beckons the unselfish heart to pastures of sweet refreshment. He encourages and cheers the innocent and faithful, and instructs them in the way of following Christ.

Christian Science counsels all to be just amid injustice, to return kindness for unkindness, render good for evil, and to forgive freely. God will make the crooked things straight, the rough places smooth, open the prison to such as are bound, and set the deserving free.

We have a heavenly Father who knows the heart's needs and answers them. He will not leave comfortless those who labor to please Him. If they endure human wrongs, the nearer He will come to console, uplift, and give strength to stand and to gain brighter realms of joy and activity.

Truly, "the earth helps the woman." To-day the Christian Science text-book, "Science and Health with Key to the Scriptures," has shown us how omnipotent aid comes to the man or woman who in prayer forgets self and strives against sin and sufferings for mankind. Christ stills the storm and feeds the hungry. His grace is sufficient. The Father's love abounding in the fruitfulness that meets each moment's demands, is always ready for man's use, if he but be receptive. Let us not limit its amplitude, but reach out with faith and responsiveness.

If we look aright, we may find each day divine answers to uplifting expectancy. As Sarah Chauncey Woolsey has so sweetly said:—

> Every day is a fresh beginning,
> Every morn is the world made new.
> You who are weary of sorrow and sinning,
> Here is a beautiful hope for you,
> A hope for me and a hope for you.

When we need Him most, then is He nearest, then does He most tenderly bless, sustain, console, and give light to our lives with the irradiance of His love, wisdom, and goodness. For our guardianship He gives the angels of His presence, and they lead us to the gates of heaven that shut not, day nor night.

### The Human Problem.

IF "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468), why is it we should feel called upon to speak to "erring mind," "mortal mind," and treat it all through the book as if it had an actual existence? The Bible teaches that God is All-in-all and besides Him there is no God, yet it speaks of many forms of sin that are to be met and mastered in human consciousness before we fully realize the truth of God's allness and omnipresence. We must have the true statement of being presented before we can work out the problems. Jesus taught that we should be as perfect as the Father. Here is the perfection of Christianity set forth, but humanity must start from where it is and work up to that state of consciousness.

To the human sense of things, sin and disease exist as a stern fact, and are to be overcome through the right understanding of God. To a novice, false tones exist, and they prevent him from expressing harmony, but as his thought becomes attuned to the laws of music, these false tones disappear. As mankind better understands God

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

and is governed by His law, sin and sickness will begin to disappear in the Christ way. Sin, sickness, and death have no existence in the divine Mind, God, and the beloved disciple John speaks of the time when there will be no more pain, sorrow, sin, or death.

Christian Scientists are professed Christians endeavoring to obey to the best of their understanding what Jesus taught, and his command to heal the sick applies no more to them than to other professing Christians. Christian Scientists are endeavoring to obey this command as well as preach the gospel. Healing the sick through Christian means is a practical application of Gospel-preaching such as Jesus gave to the world.

As to results obtained, Christian Scientists are willing to compare their record with that of any system of healing with medicine. The fact that the disciples failed in an instance of healing did not prove Christianity false. Jesus' reproof, if heeded, would inspire them to strive all the more to attain the same understanding he had. A mistake on the part of a beginner to solve a problem does not prove mathematics to be false. Neither does a failure in Christian Science prove its statement of Principle to be erroneous, but such instances inspire Christian Science practitioners to strive more diligently to understand better the promises of the Master.

The application of all Bible promises to mankind is a matter of experiment on the part of each individual until he tests them and proves to his own satisfaction their truthfulness.

## Miracles.

PERHAPS no little word in the English language by the simple perversion of its original meaning (as marvel or wonder) is and has been responsible for such un-belief, infidelity, and agnosticism, as has this one little word, miracle.

This perversion consists in the belief that the miracles of the Scriptures (or marvels of the Scriptures) are due to the suspension of law, instead of being natural expressions of God's love and watchful care ever at hand, only waiting for recognition to be available for every human need.

The human mind, expanding through observation, study, and experiment out of its old ignorance, bigotry, and superstition, recognizes a divine order and reign of law—a harmonious adjustment of relations and movements. The great sun as well as the wonderful comet (a seeming alien in the skies) obeys this newly discovered law.

The joy over this emancipation from old limits and superstitions has caused a great upheaval in thought, and for a brief period material evolution has seemed to satisfy the human reason.

This theory, however, fails, since it involves the illogical conclusion that the first great and only Cause or Creator, the Supreme Mind or Intelligence of man and the universe, produces opposite and conflicting effects. That is, it makes God, eternal Good, responsible for evil and discord as well as for harmony and health. This false conclusion is repeatedly exposed as unscriptural by Hebrew prophets and Christian apostles both in familiar illustrations and in positive declarations.

"Out of the mouth of the most High proceedeth not evil and good." "Doth a fountain send forth at the same place sweet water and bitter?" "Do men gather grapes of thorns, or figs of thistles?"

By these homely illustrations the teachers in the Scripture point to the sublime reign of the spiritual law of life and love and harmony.

St. James tells us that every good and perfect gift cometh down from God out of heaven, "with whom is no variableness, neither shadow of turning."

If I were asked to state in the very simplest terms what is Mrs. Eddy's mission and work, my answer would be this: To point with unerring steadfastness and fearless persistence to Christ Jesus as the Wayshower and scientific demonstrator of the spiritual law of life which "hath made me free from the law of sin and death," while her inspired books explain him and show us how to act and follow him.

For centuries the Christian world has talked and preached much and well about the words and doctrines of Jesus, and those words shall not pass away, but will abide and bear fruit as long as time endures. A little more than thirty years ago Mrs. Eddy sent out a clarion note to the scientific, the philosophic, the Christian and religious thought of the world, saying: "Behold the works as well as the words of Jesus Christ." It was the works he said we should do if we believe in or understand him. These works have been almost entirely ignored. To science she says, *"Ecce Homo"*—"Behold the Man." Jesus, the ideal man or divinely natural man; demonstrated his divine dominion, illustrated the spiritual law that "transcends matter and the tyranny of the flesh," stilled the tempest, walked over the waves, came back from the tomb, and finally rose out of limited human vision into the radiant reality of the spiritual realm, where man is eternally one with the Father—as one with his divine Principle. By the simple, straight line of spiritual demonstration He arose superior to the devious, doubtful, and dangerous ways of the so-called science that is the admixture of good and evil, and Mrs. Eddy's teachings show us in Christian Science that his mighty works were not contraventions of law nor suspensions of law, but logical, divinely natural demonstrations of unchanging Principle, that annuls a false and material sense of law. To philosophy it reveals the temporal unreality of this material existence as the prophets and apostles have declared it, a "vapor, a dream, a false sense of alienation or separation between God and man, Principle and idea, cause and effect." Jesus shows us how to dispel this mist and attain our indissoluble unity with Life, Love, Good. It declares, "Awake! thou sleeping one; 'now are we the sons of God,'" now are we free, through the understanding of the sonship and heirship of God.

## The Proofs of Demonstration.

Mr. Editor.

The writer of the "Letter on Christian Science" contends that demonstration does not prove the efficacy of Christian Science nor of anything else. If demonstration does not prove the truth, what does? Mere assertions? How do we know when we have arrived at the truth?

To the physical senses darkness appears to be real. The light is admitted and the darkness vanishes. Thus it is demonstrated that the light is the real, and darkness is a nonentity. So the understanding of the Divine power and presence is ushered into human consciousness and disease disappears, the power of sin is broken, and the sinner is enabled to depart from it. In this demonstration nothing has been added to the material condition of the patient, but in proportion to his increased spirituality his materiality has disappeared. It has vanished sufficiently so that the patient is in a better condition and so appears. To the material senses new material conditions seem to have been produced, but in reality this is not so. The patient is less material than previously and therefore looks and is better.

Rather than say material manifestations prove the effects of Truth upon the body, it would be more correct to say that the overcoming of material phenomena demonstrates the power of Truth.

Digitized by Google

What did Jesus mean when he said: "These signs shall follow them that believe"—signs of what? Did he not refer to the disappearing of disease and sin, the casting out of evils as indications or "signs" of one's faith in God?

In Science and Health Mrs. Eddy mentions that when John the Baptist sent to inquire if he were actually the Messiah, Jesus did not answer by mere affirmation, but replied, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the Gospel preached to them."

Jesus did not identify himself by mere assertion, but pointed to his demonstrations. The so-called powers of evil claim proofs in material phenomena, but that there are many human counterfeits does not prove that there is not a genuine original. The distinction between the true and the false will finally be established, though continued experimentation may be required. The Egyptian magicians denied that the demonstrations of Moses proved that his God was the true God and a greater God than theirs. They imitated the demonstrations which Moses produced, but in the course of events they failed, and admitted Moses' power, when they said, "This is the finger of God."

A death or failure under Christian Science treatment is not a true demonstration, but a false one, like the wrong figure in an erroneous mathematical solution. It is a continuation of the seeming power of error because the understanding of Truth in the case is not sufficient to overcome it. The phenomenon to those who have not an understanding of the spiritual, may appear to be altogether material, but it should be noted that in the case of the development of disease the human manifestation is increased while in the healing of disease it disappears.

The ability of the Christian Science practitioner to overcome disease and sin is as truly a proof of his understanding of Principle, as is the ability of a student to solve a problem in mathematics.

## A Christian Science Reply.

IF the many hasty critics of a Christian Science which they do not understand and have never even studied, would evince a candid and honest spirit of sincere inquiry, humanity might receive benefit instead of injury from their efforts.

Your correspondent, "Daw," should not confound the present attainments of Christian Scientists with the ultimate goal which Christianity sets forth. Jesus said, "These signs shall follow them that believe; . . . if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." This is a definite promise, but exactly how much of this promise an individual Christian Scientist can prove depends upon how much of a Christian he is.

Your own difficulty is in the supposed inconsistency between the Scientist's understanding of divine Mind, God, as the only healer of disease, and his attitude of submission to human statutes requiring vaccination, quarantining, etc. In this attitude he is simply applying the principle or rule laid down by Jesus, his divine Master, "Render to Cæsar the things that are Cæsar's." The Christian Scientist recognizes and teaches the absolute control of divine Mind over all the universe that He has made; and he claims and has demonstrated the possible divine healing of all forms of contagious or infectious disease. But to his neighbor in the flesh, who does not yet know God as the Lord "who healeth all thy diseases," he may readily concede the relief of knowing that the medical precautions against the spread of disease, through fear, have been strictly observed. The compliance of the Christian Scientist with regulations of health boards proceeds from his respect for the rights of others who do not believe as he does and from his position as a good citizen of the community, not from any belief that such regulations are necessary in the cases of those who have a proper understanding of Christian Science.

When thus applying the Golden Rule to the situation, shall he be taxed with inconsistency? If so, what matter? Mrs. Eddy says, "The charge of inconsistency, in Christianly scientific methods of dealing with sin and disease, is met by something practical,—namely, the proof of the utility of these methods; and proofs are better than mere verbal arguments" (Science and Health, p. 355).

## An Important Point.

THERE is no statement in any of Mrs. Eddy's works, which I can recall, that the mere terms, "existence" or "body" represent dreams or unrealities. Her teaching is that the concept of existence as being "mortal;" *i.e.,* temporal and ending in extinction, is a false concept, hence the belief in a "mortal existence" is aptly comparable to a dream; while the belief that the real man, made in the image and likeness of God, can be material, is likewise a false concept or an unreality. Neither "existence" nor "body" are denied, but it is not the least of Mrs. Eddy's services as a religious teacher that she points out the immutable fact that existence is eternal, without beginning or ending, and that the real man, made by God (Spirit), must also be spiritual.

In other words, Christian Science does not teach the destruction or annihilation of anything, but the wiping away of a false sense of life and of man, which would make us believe that the former is measurable by time, and the latter can be expressed in terms of matter.

In metaphysical questions of this sort there is room for much quiet thought. I do not ask Mul to accept the views taught by Mrs. Eddy, but I can assure him that they have opened for me a wider prospect of health, happiness, and a measure of holiness than I had imagined possible. This is the verdict of many good people who wish well to their fellow-men.

W. D. MCCRACKAN.

In *Brooklyn* (N. Y.) *Citizen.*

Jesus nowhere laid down any laws of hygiene, drugs, or sanitation. He had much to say about keeping the thought clean and not merely looking at, and caring for the outside of the platter. We are commanded to overcome the flesh, which to a Christian Scientist means poverty, pride, woe, sin, disease, and death. We can do this only by following the example of the Master and destroying in our consciousness all that is evil or opposed to the reign of the one infinite Mind. We do not attain this by diligently following material directions of drugs or hygiene, but by striving earnestly for the things of the Spirit. "To be carnally minded is death; but to be spiritually minded is life and peace."

On the other hand, Mrs. Eddy as well as loyal Christian Scientists everywhere, bear in mind the admonition of Jesus when he said, "Render to Cæsar the things that are Cæsar's, and to God the things that are God's," therefore they obey all sanatary regulations as promulgated by the authorities, not only in deference to the law as law-abiding citizens, but in respect to the rights of others who do not recognize, as Christian Scientists do, the power of God to protect them from disease as well as sin.

## The Migration of Birds.

THE migration of birds at certain seasons of the year has excited the notice and the wonder of mankind for ages. That the hawk is wont to "stretch her wings toward the south" was as well known to the writer of the Book of Job as it is to the Nile boat-traveler of to-day. Aristotle quotes the proverb, "One swallow does not make a summer;" and Homer compares the noisy march of the Trojans to the clamorous flight of a flock of cranes, "which flee from the coming of winter and sudden rain." The Arabs are said to have been helped in the compilation of their calendars by noting the times of arrival and departure of migratory birds; and the Indian of the far Northwest has received much the same aid from the birds of another continent.

In spite of this ancient and world-wide observation, the migration of birds is even yet a profound mystery; in the words of Professor Newton, "perhaps the greatest mystery which the whole animal kingdom presents." Theories there are by the score; but, notwithstanding all the careful records and the laborious work of ornithologists during late years, much more evidence must be collected before we can hope for a solution of our difficulties.

By far the most important and valuable results ever achieved in any country have been gained from the enormous mass of information collected during eight years by a special committee appointed by the British Association in 1880. The committee were greatly indebted to the keepers of the lighthouses and lightships round the coasts of the British Isles, these men having most cheerfully and very intelligently filled in the schedules sent to them, and in this way no less than one hundred thousand detailed observations were recorded in the eight years covered by the inquiry. The investigations already accomplished make it now possible to give an accurate survey of the main facts of the migrations of birds.

It is common knowledge that the swallow, the cuckoo, and many other birds travel northwards in the spring and return southwards in the autumn; that they have their nesting-places in the north and their winter quarters in the south. This is true of all strictly migratory birds breeding in the northern hemisphere; and the observations so far made prove that individuals of every species, even the most sedentary, migrate to some extent at a certain season. It must not be supposed, however, that all birds perform the same migrations, or that all the individuals of any particular species resort to the same breeding-grounds and the same winter quarters. The woodcock, although essentially a migratory species, affords an example of comparatively restricted migration. It breeds as far north as the limit of tree-growth in Europe; but its migrations in winter barely reach to Africa, or a distance of at the most two thousand miles. On the other hand, the jack-snipe, a near relation to the woodcock, although going as far north to breed, pushes its migrations in the winter to Abyssinia. A much more remarkable journey is performed by the gray plover. This bird breeds in Siberia and in the barren wastes of arctic America, nowhere south of about latitude sixty degrees north, yet in winter it is found as far south as Madagascar, Guatemala, and even Australia.

We cannot ignore these well-ascertained facts; but we do not always fully realize the significance of such an occurrence until it has come under our personal notice. Thus it was not until I had seen a remarkable, though by no means an extreme, instance of the long journey performed by a small and feeble bird, that I fully appreciated the wonderful feat. Far to the south, in the spring, I had often seen birds which I knew only bred far to the north; but, as these were all birds of strong flight, their long journeys did not seem very remarkable. However, in the year 1900, on the White Nile, many miles south of Khartoum, I saw a red-throated pipit—a delicate little bird, smaller than a lark, a feeble flyer, and, as far as I could see, quite alone. A year before I had found the nests of the same species north of the Arctic Circle, and I knew that the bird had never been known to breed many miles south of the land of the midnight sun. Here, then, was subject for thought; and the more I thought about it and recollected my own journeys to and from the same points, the more I wondered at the bird's extraordinary power.

The distances covered by birds are often very difficult to determine accurately, owing to the extended areas over which many species are distributed in summer and winter. Many thrushes which have bred in the British Isles move southward during September and October to winter in warmer climes, and their places are taken by numbers of thrushes from northwestern Europe, which invade the northeast coast of Great Britain and spread over our islands. The thrushes, therefore, shift their quarters by replacing each other in an orderly sort of progression southwards in autumn and northwards in spring. The skylark and a number of other birds with a widespread breeding-range undoubtedly do the same.

It cannot be doubted that the movements of individual birds are conducted with the greatest regularity, both as regards time and place. Those least observant of bird-life must have noticed how punctual is the return to this country of the swallows, the cuckoos, the landrails, the night-jars, and other migratory birds; how regularly they leave us; and, moreover, how persistent they are in resorting again year after year to some favorite nesting-site. A most extraordinary instance of this persistence is referred to by Professor Newton. A pair of stone-curlews, a migratory species, were in the habit of breeding for many years in an extensive and barren rabbit-warren. Gradually this ground became the centre of a large and flourishing plantation; yet these birds, which are essentially lovers of open country, continued to breed there. Such persistence, of which many instances might be given, shows a true love of home, and undoubtedly proves that the same birds return to the same nesting-haunt after a winter spent, perhaps, thousands of miles away. So punctual are migratory birds that dates can be fixed when they are due to arrive or depart, while in many places one species is heralded as the certain forerunner of another, and seldom are these prognostications at fault. On the Yorkshire coast, for instance, the tiny golden-crested wren is called the woodcock-pilot, because a few days after the arrival of these little wanderers the woodcock may with certainty be expected. This idea is firmly implanted, and with good reason, in many of the inhabitants of the coast.

The study of migration is complicated by the manner in which it is conducted. In some cases the males travel apart from the females, and in many instances the young make their first journey to the south alone. Nearly a century ago, Colonel Montagu remarked that in the spring male nightingales always arrived in this country before the females; and since that time many observations have confirmed this statement regarding the nightingale and many other birds. Herr Gätke has gone beyond this, and affirms that the forerunners of the spring migration to the north are invariably old males, next come the old females, then younger males and females, and finally only birds of the previous year. Supposing these birds all start at about the same time, it is conceivable that during the long journey they would "tail out," and the strongest birds, usually the males, would gradually obtain a lead.

The usual order of arrival in the spring is generally reversed in the departure for the south in the autumn, as far as concerns the young and the old; while regarding the males and females there is little evidence, owing to want of observers at the southern termination of their journeys. In many cases of departure the young leave

Digitized by Google

before the old, and perform the long journey alone, with apparently no knowledge, other than that which they have inherited, of the direction they are to take or the goal they are to reach. It is easy to understand that the old birds are often kept back by the cares of a second brood when the want of food or some other cause induces the already fledged young of the first family to depart.

The idea prevails that birds migrate in great numbers; but this is by no means generally the case. Sometimes they congregate before migration—the swallows, for instance, occasionally do so—and leave in vast flocks; but as a rule birds migrate in ones and twos or in small flocks. The great "rushes" of migrating birds often noted in the autumn are caused not by any preconcerted action on the part of the birds themselves, but by the weather conditions prevailing at their starting-point.

The "rushes" of migrating birds have often been witnessed on a truly magnificent scale. Herr Gätke thus describes such a flight witnessed on Heligoland: "The whole sky is filled with a babel of hundreds of thousands of voices, and as we approach the lighthouse there presents itself to the eye a scene which more than confirms the experience of the ear. Under the intense glare of the light, swarms of larks, starlings, and thrushes career around in ever-varying density, like showers of brilliant sparks or large snowflakes driven onwards by a gale, and continuously replaced as they disappear by freshly arriving multitudes. Mingled with these birds are large numbers of golden plovers, lapwings, curlews, and sandpipers." During such a rush no less than fifteen thousand larks were captured in three hours on Heligoland. It is impossible to estimate the numbers of birds that are seen on such occasions, while of the multitudes that never come into view at all we can have no conception. At all times of the year migration is usually carried on in the hours of darkness, and at such a height that we can see but little of it. From the observations of Herr Gätke it would seem that only the shorter and more local journeys are performed in the daytime, and that on these occasions the voyagers are at a comparatively low elevation. Herr Gätke maintains that although differing greatly in the height which they attain, the majority of migratory birds travel at an elevation which represents the limit of human vision. The best evidence as to the actual height at which migrating birds fly has been furnished by the ingenuity of two American observers, Messrs. W. E. D. Scott and F. M. Chapman, who have both made observations through astronomical telescopes of birds flying across the face of the moon. By careful computations Mr. Chapman reckoned that the highest of the birds he saw were at an elevation of fifteen thousand one hundred feet, or nearly three miles. So clear a view of some did he obtain that he was able to recognize several Carolina rails and a snipe by their flight.

It is much more difficult to ascertain the time occupied by migrant birds in performing their journeys or the pace at which they fly than it is to determine the height. Indeed, as to their speed we have scarcely any reliable evidence. There are several instances reported, supported by good testimony, of enormous distances being traversed by birds in a single flight; and, did we know how long birds can exist on the wing without alighting, we should be able at all events to estimate approximately the time occupied in these flights. The American golden plovers, for example, seem to accomplish at a single flight the enormous distance of one thousand seven hundred miles. The birds breed in the Arctic regions between Alaska and Greenland, and when autumn comes they pass through Nova Scotia and strike boldly out to sea on the way to their winter quarters in the West Indies. A glance at the map will show that the Bermudas form the only land on which they could alight; but they are only seen there occasionally during unfavorable weather, and many witnesses have declared that they have seen flocks of these birds flying southwards many hundred miles to the east of the Bermudas. It seems incontestable, therefore, that the American golden plover usually covers the distance in a single flight.

It appears from Herr Gätke's observations that the stomachs of the birds are empty when they migrate, and it therefore seems unlikely that the American golden plover can be long in accomplishing this enormous flight; but it would be unwise to attempt, on that basis, to estimate even approximately the bird's speed. That some birds fly at a great speed is undoubted, as is proved by the force with which they strike lighthouse lanterns, the thick glass of which is sometimes smashed by such a bird as the duck.

From even a slight consideration of the foregoing such questions as these at once arise in the mind: What is the cause of migration? What first led birds to undertake these journeys? Why do they continue them? How do they find their way?

HARRY F. WITHERBY.

In *Chambers Journal.*

## Growth of Mechanical Power.

IT would be difficult to obtain better proof of the great industrial advancement of the United States than is furnished by the fact that there is employed in the United States one horse power in manufacturing establishments for each seven of the population, and that ten years ago the figure was one to ten, and twenty years ago one to fourteen. It is estimated that the horse power now available in this country for manufacturing purposes foots up to the enormous total of 11,300,000. This is almost double the figures of ten years previous, which were less than 6,000,000, while twenty years ago the total was less than three and a half millions. Not only has the power that can be utilized in our manufactures increased with our population, but it has actually advanced in greater ratio than have the number of workers. These figures, be it understood, include only power used for manufacturing, and they make no account of the locomotives on railways or of the power in electric light plants or other similar establishments. Of this total engine power, fully three-fourths is obtained from steam. Water power provides for perhaps fifteen per cent, and the rest is divided among miscellaneous sources of mechanical power. While electricity is now credited with only a small per cent, the growth in the use of this power is remarkable, and it bids fair at no far distant time to rank second only to steam. According to the figures of the last census, there were employed in manufacturing and mechanical pursuits in the United States about 7,113,000 persons, and on this showing there would be over one and one half horse power available for the use of every person employed in the manufacturing industries of our country.—*Boston Herald.*

## Easter at Christian Science Hall, Concord, N. H.

SERVICES appropriate to the day were held yesterday by First Church of Christ, Scientist, in Christian Science Hall. The attendance was large and the floral decorations beautiful. From Pleasant View, through the kindness of the Reverend Mary Baker Eddy, came a very large and handsome scarlet azalea, around which were grouped Easter lilies, cut flowers, ferns, and palms.

The subject of the sermon was "Doctrine of Atonement," and the Golden Text: "All things are of God, who hath reconciled us to himself by Jesus Christ, and hath given to us the ministry of reconciliation."

The musical programme was beautifully rendered and consisted of Easter carols of the sixteenth century, "Angels Roll the Rock Away," and singing by the congregation.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Significant Questions.

MARY BAKER G. EDDY.

WHO shall be greatest? The great Master said: "He that is least in the kingdom of heaven"—that is, he who hath in his heart in the least the kingdom of heaven, the reign of holiness, shall be greatest.

Who shall inherit the earth? The meek who sit at the feet of Truth, bathing the human understanding with tears of repentance and washing it clean from the taints of self-righteousness, hypocrisy, envy—shall inherit the earth—for wisdom is justified of her children.

"Who shall dwell in Thy Holy Hill? He that walketh uprightly, and worketh righteousness, and speaketh the truth in his heart."

Who shall be called to Pleasant View? He who strives, and attains—who has the divine presumption to say: "For I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day" (St. Paul). It goes without saying that such a one was never called to Pleasant View for penance, or reformation; and I call none others, unless I mistake their calling. No mesmerist, nor disloyal Christian Scientist is fit to come hither, I have no use for such, and there cannot be found at Pleasant View one of *this sort*. "For all that do these things are an abomination unto the Lord: and because of these abominations the Lord thy God doth drive them out from before thee" (Deuteronomy, 18).

It is true, that loyal Christian Scientists called to the home of the Discoverer and Founder of Christian Science, can acquire in one year the Science that otherwise might cost them a half century. But this should not be the incentive for going thither. Better far that Christian Scientists go to help their helper, and thus lose all selfishness, as she has lost it, and thereby help themselves and the whole world, as she has done according to this saying of Christ Jesus: "And whosoever doth not bear his cross, and come after me, cannot be my disciple."

Pleasant View, April 20, 1903.

### The Publication Committee.

THAT the most popular misconceptions of Christian Science, its teachings and practice, have given place to more general understanding and greater sympathy, must be apparent to even casual readers of the daily press, and it is no less true that, as a whole, public misrepresentation of our Cause and its Leader has steadily decreased within the past few years. There is, of course, a reason for this.

Primarily, the credit for the public's improved attitude must be given to our Leader, who so wisely provided means to an end when she instituted the Board of Lectureship and the Publication Committee, but much credit is also due to the lecturers and to the members of the Publication Committee who have so faithfully and successfully stemmed the tide of prejudice and ignorance which sought to overwhelm our Cause.

The work of the Board of Lectureship has generally met with very ready recognition and support, but in a number of instances the State Publication Committees have practically been thrown upon their own resources, or a few of the larger churches have had to bear the burden of their expenses. This has, to some extent, interfered with the usefulness of the committee. Such an unsatisfactory condition is largely due to lack of proper appreciation of the importance of the work, and failure to understand the necessity for a large circulation of our official literature as well as of the papers and magazines in which articles by the Publication Committee appear.

Speaking from the standpoint of personal experience, we can assure our fellow-workers that there is no department of our denominational affairs in which a liberal policy is more necessary. It is a work through which great results are being accomplished. We bespeak for those who are doing this important work the most cordial and hearty support. The financial burden of the Publication Committee when equally and cheerfully borne by all the churches will be found quite insignificant if compared with the good accruing to the Cause and, therefore, to individuals.

M.

### Is it Right, or Wrong.

FAITHFULNESS to one's highest light is a necessary condition of growth.

No matter how commonplace may seem the situation, or how trivial the occasion, there is a right and perfect way of meeting it, and loyalty to this right way is a far more potent factor in one's development than is indicated by the apparent results.

We are too prone to justify ourselves with "Oh well, it's a very small thing, and it makes little difference which way I go, I'm only one," when really the question of right or wrong is involved. True I am only one, and my being right or wrong may seem to make no difference to the great on-sweeping current of a popular error, but it does make a great difference to me whether I'm right or wrong, be it ever so little, and it does influence others far more than we usually admit.

To illustrate: one bird removed from one bonnet with a hand impelled by thoughtful tenderness, and the determination that vanity and cruelty shall not overrule mercy and humanity, may seem insignificant, but it is the result of a regenerating thought, and no one can estimate its influence.

A Christian Scientist has no right and no desire to interfere with another's demonstration, but when wrong is being perpetrated through ignorance of existing conditions, is it right to be silent? A gentle, loving woman who has enlisted to lessen suffering and sin cannot but recoil from encouraging the atrocities committed in the slaughter of birds, however, exquisite may be the personal decorations so secured. But really, disregarding the cruelty of tearing the wings from the live birds that the plumage may retain its brilliance; disregarding the thousands of nestlings left to starve, disregarding the sad silence of our groves as the thrushes, the blue-birds, the orioles, and the mocking-birds disappear one by one under this heedless craze of fashion, how inconsistent and inharmonious is the effort to enhance the expression of youth and beauty with the spoils of cruelty and death.

This barbarous habit of decoration which involves the sacrifice of life might better be tolerated in savagery, where the genius of manufacture, and the consideration of sentiment are undeveloped; but for us the flower artist has caught the whole range of hue and color from the first tinted suggestions of spring's mayflower, to the rich colorings of summer's nasturtiums, and if we find ourselves still unsatisfied, we may well wonder whither this title of fashion would bear us.

It is after all not so small a thing that "five million song

Digitized by Google

birds are annually required to supply the demands for the ornamentation of the hats of American women, that in one month one million bobolinks were killed near Philadelphia, and that seventy thousand song birds were supplied from a single Long Island village to New York dealers for millinery purposes." Mr. A. J. C. Norris, in a terse little article on "Christianity and Millinery" (ornithologist's report), says: "It is difficult to harmonize Christianity and cruelty; they are not consistent. . . . How many beautiful women enter the churches every Sunday and bow their heads in prayer to the Father of all, while their bonnets testify how little they protect and love His little ones."

The illustration expands itself into a matter that concerns the common weal, and we feel sure that it cannot be indifference that lends encouragement to this unholy traffic; it must be simply ignorance. But ignorance is not excusable when so many have already awaked to the enormity of the butchery involved, and are telling the public the results of their investigation. Their statistics are reliable and available, and ignorance is therefore no excuse.

This wearing of the plumage of slaughtered birds is but one of the myriad "little things" that are great because of the right or wrong involved. They link themselves inseparably to our spiritual growth, since only as love and harmony and loyalty govern the homeliest, the most insignificant, details of living, do we demonstrate our scientific relation to the one Love, the one Life. Our ascent is always from the summit of our highest understanding.

S.

## "As He Thinketh."

In a late address before the Homœopathic Medical Society of Chicago, Dr. Arthur G. Sax has made some declarations which bear directly upon the contention of Christian Science respecting the causal relation of given states of mentality to bodily conditions. He is reported to have said that anger and fright lead to the secretion of poison in man, no less surely than in a reptile; the latter, however, has an advantage in the fact that he can store up his deadly venom and so remains uninjured, while man inevitably poisons himself with the product of his desire to injure another. The doctor has thus called attention to a mortal law which has a very comprehensive range of influence in human affairs, and with this professional testimony there has come to us another illustration of its dominion, which has an entirely different setting.

A correspondent in Mexico City writes:—

"An incident occurred at the big bullfight, given Sunday before last, which was not only very interesting but very suggestive. A man afflicted with paralysis sat in the front row of seats with his crutches. During the performance one of the bulls broke through the wooden fence that surrounds the ring, and dashed into the crowd. Men, women, and children screamed and ran for their lives, and among those who ran the liveliest was the 'paralytic.' He did not stop for his crutches,—he simply forgot that he had the paralysis. The Mexican paper mentioned the facts but did not undertake to explain them."

It would seem that no thoughtful person could deny the statement of Christian Science that all causation is mental, unless he were a radical materialist, and he who accepts this fundamental proposition is led to the logical explanation of every manifestation of disharmony or disease as the outcome of a disordered mentality, either in the individual or in the general mortal thought, which, unconsciously to the individual, controls the major part of all his physical activities and conditions. One such state or law of human thinking may dominate another in belief, so that its consequent manifestation of disease may temporarily disappear, as in the case of the paralytic, but it is clear that the only permanent remedy for these manifestations is that abiding right-mindedness, that spiritual poise or wholeness which is realized only through at-one-ment with the eternal Mind that is above all, and in all,—God with us, blessed forever more.

Christian Science has taken ground and is demonstrating results in this field, the revolutionary significance of which is just beginning to dawn upon the thought of the world.

The practical superiority of spiritual healing is seen in the fact that it reaches and corrects the mental source of our mortal limitations and ills, and by the removal of the cause accomplishes that which cannot possibly be realized in the treatment of effects.

W.

## The Church Universal.

The growing disposition among Christian believers, to forget the petty particulars that have separated them, and join hands in a united effort for a common cause, is but one of many encouraging things which may be traced to the passing of the theory of verbal inspiration, for it is apparent that as attention is more and more centered upon the spiritual significance of the Scriptures, the dogmas and beliefs which have found their beginnings in an over-emphasis of literal statement, and which have led to so much of denominational cleavage and dissension, must be relegated to the realm of the unimportant.

At an interdenominational meeting of clergy recently held in New York, the spirit of practical affiliation was unusually pronounced, as is seen from the following excerpts taken from a newspaper report.

Said Dr. McConnell, "I can see no reason why there should be Presbyterian and Episcopal and Baptist and Methodist churches in this city of New York, and I look forward to the day when men of power in the community will have effected a union of the churches with that wonderful skill of combination which to-day is so apparent everywhere but in church life."

Commenting on this, another said, "The pith and marrow of the speaker's address centered in a story that he told apropos of the little Scotch town in which he was born. In that town, a Scotch Covenanter community, there lived one Jamie Stewart, who was a stumbling-block to the churches, 'not because he was a sinner, but because he was a man of transparent goodness and yet outside the church.'

"If Jamie Stewart is a true man," said he, "then there is no escaping the conclusion that he is a Christian. And the world is full of Jamie Stewarts—men of sterling manhood, of irreproachable character, of unquestionable uprightness of daily life, of remarkable ethical perfection.

"The poet Wordsworth was one day asked if he were a 'Christian.' 'Yes,' was the poet's reply, 'when I am good.' Goodness is Christianity. Christ was good. Not 'goody,' but good—straight with the moral law, plumb with the old eternal sanctities of things.

"If Christ should meet Jamie Stewart he would grasp his hand and say: 'Jamie, thou art my true yokefellow. The unco good have not recognized thee, but I recognize thee, and for the rest let not thy heart be troubled.'

"Truth, love, honesty, purity—can you give them any particular denominational label?

"Christ did not come to upbuild sectarianism, but to uplift humanity; and all who are willing to work with him should be recognized."

## Railroad Rates for the Communion Service.

Arrangements have been, or are being made with all the principal railroads in the United States and Canada for reduced rates to Boston for the Communion Service and Annual Meeting, June 14–17, 1903.

The railroads in the New England States (New England

Digitized by Google

Passenger Association), have made a substantial reduction; from New York City one fare for the round trip, and it is confidently expected that from all other principal points one fare for the round trip will be granted, due notice of which will be announced later.

In the mean time, it would be well for the Field to keep in touch with their local railroad agents as to what the rates and arrangements will be.

## From Our Contributors.

### Impatience.

L. W.

In the last recorded words of Christ addressed to his disciples, after the resurrection, we find this statement: "It is not for you to know the times or the seasons, which the Father has put in his own power. But ye shall receive power, after that the Holy Ghost is come upon you." These words may teach every one of us a lesson to-day.

I think many of us, when first coming to Christian Science, delay our own demonstrations by our impatience, a false belief in time, which our Leader, in Science and Health, designates as error. (P. 595.) Eternity is limitless, "a thousand years is as a day with the Lord," impatient haste to tread where we have not conquered, and to occupy a place we have not proved ourselves worthy to fill is neither worthy not profitable. Let us study again the lesson taught by the experience of the disciples. They had worked the greater part of the night, the sea was rough, and a great wind was blowing, and they were getting anxious and afraid, as we often are when error is tumultuous around us and our understanding of Truth seems small. As soon as they saw Christ walking on the sea and took him into the ship, "Immediately the ship was at the land whither they went." This helped me much, for I saw that, just as soon as we are ready to lay down self, willing to leave off hugging "our tatters close about us," willing to recognize Christ, Truth, letting him come unto our lives, to guide and govern in all things, then at once are we at our destination, and the demonstration is made. "One moment of divine consciousness, or the spiritual understanding of Life and Love, is a foretaste of eternity" (Science and Health, p. 598), and we can with thankful hearts say "Thy will be done," and mean it too.

### A Spiritual Structure on a Material Foundation.

C. D. REED.

Why put so much stress upon physical healing? Why not become spiritually-minded and use any and all means to try to keep the body in subjection? By allowing a physical body to regulate my going or coming, my health or sickness, pain or pleasure, business prosperity or failure, I soon learn to think that a physical body is I, and it is then next to impossible for this I (physical body) to be, or to understand that I am spiritual.

But, says one, the spirit is *in* your body. Well, if I am this kind of a double, then which should control? Or does each have equal power? Or are they independent of each other? With matter, or physical body, constantly asserting its superiority or control, by making me a slave to its pains and pleasures, I am in no shape to realize my real, or spiritual existence. To build a spiritual structure or understanding on such a foundation is very difficult and impracticable. Jesus knew a better way, and the only way, and demonstrated the uselessness of our trying "to climb up some other way."

The first glimpse of true spiritual understanding, is obtained when we learn to dispel mentally the seeming physical, or material discord. "Become conscious for a single moment that life and intelligence are purely spiritual, —neither in nor of matter,—and the body will then utter no complaints" (Science and Health, p. 14). When Jesus met the people he supplied their immediate necessities. If hungry he fed them, if sick, he healed them; and experience shows that it is impractical to begin at the top to realize our spiritual existence, rather must we work out of the material beliefs by the same process on which Jesus laid so much stress.

For years I tried to believe that I was saved from sin, but I had no thought of its being possible to include sickness and death in this salvation, much less of being able to profit by Jesus' example and demonstrate this salvation, even in the least degree; but when I found that the truth of the above quotation from Science and Health could be actually demonstrated, then began the unfolding of a new life of understanding instead of a life of hope, based upon fear and ungrounded faith.

The poor suffering heart needs its rightful nutriment. (Science and Health, p. 366.) We understand, according to the degree of our demonstration, that we are right consciousness which controls by divine power and authority, instead of being controlled by lower powers or physical conditions. Then will we be conscious of a structure, or body, which is eternal, whose builder and maker is God, Good.

### Church Needs and Supply.

EDGAR G. WILLSON.

To my sense the benefit to be derived from the article in the December *Journal* on parliamentary rules and usage will be far-reaching and prove a blessing to many a worker in the field.

To form church, or society, on a scientific basis, so as to stimulate a spiritual growth from the start, requires "help from above." The law of God, Good, must be understood. All personal thought as to what constitutes good government must be subservient to the universal law of love, equality, and harmony.

Personal ambition for place or power is a condition of mortal thought that must be guarded against. God's will must be supreme in our affections. It requires the constant watchfulness of the student who has the work in charge to protect the tender plant in its early growth from the thorns and briers by the wayside.

Students should have the love and confidence of those associated with them. The Manual of the Mother Church should be their guide and Christ should be their ideal.

One of the greatest drawbacks is the unreal law of limitation, especially in finances. As Christian Scientists we must and do know that God, Good, is the only source of supply; that the one Mind governs, not partly but wholly; that there is no limitation except our own sense of it. If we are not bringing out these fruits to prove that we do understand and can demonstrate we are Scientists in name only. There is more and more expected of us and we must let our light shine, and that brightly. If we do this we shall have plenty.

The source of all our strength is indicated in 1 Chronicles. 29 : 9–20. The fourteenth and sixteenth verses are very significant. These verses show conclusively that what we call ours, in a material sense, is a false possession, and in giving of this material we simply relinquish our claim of that possession, and in proportion as we do this, and rely upon God as the only source of supply, we rise spiritually.

David had a clear sense of what constitutes the true possession. Also Acts. 4 : 32–35, elucidates a clear meaning and mutual understanding among the Apostles. Jesus gave us the key when he said, "Seek ye first the Kingdom of God, and His righteousness," thus showing definitely that His righteousness is sufficient, as he further adds, "And all these things shall be added unto you," meaning

Digitized by Google

the material necessities, proving conclusively that Spirit or God is the only source of supply, and now it remains for us to go and do likewise if we wish to come into our true inheritance.

It is not always the man who has the most money who gives most liberally, but he who possesses the spirit of love for humanity and, seeking his own in another's good, trusts his own well-being to God, "in whom we live, and move, and have our being."

Another practical requisite is moral courage, not boastfulness, egotism, or a superior sense of our own importance. Moral courage is shown in humility, meekness, patience, and love. When we can meet the shafts of malice and hate with an unruffled demeanor and neutralize their effects with love, when we can speak the truth unflinchingly and live it, no matter what the seeming obstacle may be, it cannot stand against us, because of the resistless influence of an honest, upright, pure, truthful character.

He who lives up to his highest understanding of Christian Science need not fear for the future. He is fully capable of coping successfully with any problem coming his way, because he represents the truth that is mighty and must prevail.

The writer has had many beautiful demonstrations in many ways, physically, spiritually, and financially; providing when a scarcity seemed imminent. The condition of the one Mind, the one Source of supply, is always normal, and by holding this in thought we can bring out the harmony of being.

May our beloved Leader, Mrs. Eddy, reap the reward of her unselfed love and sacrifice for the human race.

## Self-Analysis.

HERBERT W. BECK.

OUR humanity is a mine, and we are the miners. When we first find Christian Science, visions of joy and ease come to us, but this is in the surface soil. The "pay streak" goes down deeper, and we must follow if we would find the true riches.

As the shaft is sunk, constant analysis is made. Very often in the assayer's report we see besides the pure gold many baser parts and too often a high percentage of impurities.

As the ore is brought to the surface, are we fearful of analyzing it? If so, our dump will soon be all we have. We must be fearless, willing, if necessary, that what we consider "pay dirt" turn out to be valueless. If we are wise we will know that this is necessary development work, and do it. Many disappointments will come to the surface but as this refuse is cleared away we can hold to and follow the vein. Therein is our hope to be realized.

Often good is hidden in our beliefs of good. Perhaps the stamps of experience will be adequate to the emergency, and if so the refuse rock will be crushed away and the gold saved. Analysis means much and is necessary to our development. It must be constant, immediate, and exact. Suppose we find only second-class ore, is thought humble enough to admit that our vein, in its present development, is not equal to our neighbor's? We must ask self many questions and analyze its honesty. Many times this thought of honesty has been "salted"—it is but a semblance, not genuine ore. Are we ready for its analysis?

We speak of honesty, but what is honesty? Many think themselves honest,—honest with themselves and their brother, while endeavoring to make their thought of honesty a quality of self. True honesty is found only in the kingdom of heaven. Why then try to find it in the so-called realm of matter? If honesty or justice is in God's operative law, it cannot be that this same honesty is found in spirit's seeming opposite, matter. If so, matter would be in God's kingdom, for honesty would govern it and it could never defraud, and hence would be spirit and not matter. If honesty does not pertain to matter, then dishonesty must, and the latter being self-destructive, we can see its end.

The dissection to its ultimate of each thought or belief is most important. Take a good, true idea and analyze it. By this would we destroy or condemn God's work? Verily no, but we would come into the understanding of it. Upon the other hand, how helpful to uncover a falsehood about God or man, and so to find the good and the true. Every misstatement is about a fact or truth, and when the former is destroyed the latter is apparent. Let us not be afraid to ask the pedigree of good, or of so-called evil. Let us demand of all impulses their passport before giving them admission to consciousness. If good, they will press forward for our examination, if evil, they will try to flee, for evil is a coward before the light. But let it not escape with the thought that this is demonstration. Take it up in thought, and demolish its pretended existence, for otherwise it will return at some future and unguarded day. Let us "fear not: for they that be with us are more than they that be with them."

Self is indeed the mine to be delved within. It has been truly said that if we analyze any error, this analysis will lead us into the kingdom of heaven. So if we analyze self we will at last come to the one true self which is God manifest. Thus we demonstrate the nothingness of all error through our willingness to have the claims or demands of evil upon us investigated in the court of divine justice. What have we to fear in God's presence? He it is that passes judgment. So, too, let us not be fearful of error's endeavor to stop our mining, our development work and analysis. We have but error—nothingness—to lose, and all good to gain by honest scrutiny.

As anatomy is a synonym of analysis, we may read with profit from page 462 of our text-book: "Anatomy, according to Christian Science, is mental self-knowledge, and consists in the art of dissecting thoughts, in order to discover their quality, quantity, and origin. Are thoughts divine or human? That is the important question. This branch of study is indispensable to the excision of error. The anatomy of Christian Science teaches when and how to probe the self-inflicted wounds of selfishness, malice, envy, and hate. It teaches the control of mad ambition. It unfolds the hallowed influences of unselfishness, philanthrophy, spiritual love."

## The Robin's Song.

LAVILLA E. ALLEN.

THERE was a pretty robin with a lovely russet vest,
And he sang so quaint and queerly as he sat beside his nest.
That little children listened to hear the glad sweet song.
And this is what he sang to them, the whole day long,
"Cheer up, dearie, cheer up."

Above his head the apple blooms arrayed in pink and white,
Took the message and responded with a perfume of delight,
And every dainty blossom seemed wide awake to hear
The robin gaily singing, with voice so blithe and clear,
"Cheer up, dearie, cheer up."

A child looked up and whistled the pretty song of love,
And the robin bent to listen from his leafy nest above,
Then joined the happy chorus till the orchard rang with joy,
At the singing of the robin, and the whistling of the boy,
"Cheer up, dearie, cheer up."

And some whose hearts were weary took courage at the song,
The way was not so dreary, the path was not so long,
For Love Divine had lightened the burden of the day,
And each went gladly singing along a shining way,
"Cheer up, dearie, cheer up."

## The Lectures.

### At Manhattan, Kan.

Judge Septimus J. Hanna of Boston, lectured in the Opera House, Monday evening, March 23, on the subject of Christian Science before an interested audience of about four hundred people, among whom were doctors, college professors, business men, and other prominent persons, and visiting Scientists. Judge Hanna was fittingly introduced by Miss Katrine Krudop, First Reader of the local church. *The Manhattan Mercury* published the lecture in full.

*Correspondence.*

### At St. Louis, Mo.

Mr. Carol Norton of New York City, who is a member of the Christian Science Board of Lectureship, delivered a lecture at the Odeon last night [April 5] on the subject, "Teaching of Christian Science." A large audience was present to hear the noted speaker, and they were well repaid for their attendance. Mr. Norton handles the subject in a manner which displays the student. His lecture covered the points clearly.—*St. Louis Globe-Democrat.*

### At Charlotte, Mich.

The first public lecture given in this city upon the subject of Christian Science was delivered by Hon. William G. Ewing at Thomas's Opera House Tuesday evening of this week [March 31]. The Opera House was filled by an audience seldom equaled in this city for intelligence and culture, and the interest manifested so plainly at its opening continued until the closing sentence was spoken. Judge Ewing is an interesting speaker, holding his hearers by what he says rather than through the magic of sophistry or oratory. He told his new-old story plainly, mildly, with no promise of meteoric flights or finales. He seemed to brush away the temporal things, and anchor to the realities of Being. As he interpreted and taught Christian Science it emphasized the necessity of right living, as well as right doctrine. Without the former the latter is comparatively worthless. The lecture was calculated to stimulate a desire for better living. He spoke no unkind word, but told his story simply and well. The speaker was introduced by Hon. George Huggett, who in well-selected words gave a brief *resume* of the growth of the organization from the time of its founding until the present. The local members of the Christian Science Society are entitled to much credit for the success attending this event.—*The Charlotte Leader.*

### At Vermillion, S. Dak.

A considerable number of our citizens attended the gathering of Christian Scientists last Sunday [March 29] at the City Hall for the purpose of listening to an exposition of that religious faith, and all were much pleased with the speaker and his treatment of the topic: "Meaning of Christian Science." Mr. Norton was introduced to the audience by Attorney Charles J. Gunderson, who, in performing that pleasant privilege, spoke in part as follows:

*Ladies and Gentlemen:*—To know and to live the truth is to make us free. But what is truth? is a question that has been asked since the beginning of time. In spiritual matters we have men and women without number, who, reading from the same inspired book, have discovered such important truths in their opinion that they must out upon the byways and call their fellows from error. Friends, there is such a thing as being bound to old forms, customs, and practices even in spiritual things, and we must go back to the fountain-head of truth. But let us not forget the advice of Paul to "Prove all things; hold fast that which is good."

Ladies and gentlemen, we have with us this afternoon one who has accepted the teachings of Christian Science. Let us give him an honest and respectful hearing. I now have the pleasure of presenting to you Mr. Carol Norton of New York City.—*The Dakota Republican.*

### At Atchison, Kan.

Judge S. J. Hanna lectured before a fine audience in the theater in this city, on the afternoon of Sunday, March 22. The audience listened with marked attention. The speaker was introduced by the Hon. James W. Orr, Mayor of our city, who spoke in part as follows:—

In no other civilized country of the earth is the belief in the existence of a Christian God so universal as in this. The fool who hath said, in his heart, "there is no God" has little company here. In the Declaration of Independence we appealed to the Supreme Judge of the world to bear witness to the rectitude of our intentions; and even the metallic currency of our country bears the motto, "In God we trust." Our chief points of difference arise from our individual understanding, or perhaps misunderstanding, of who, what, and where God is, and we all, in a way, have selected one plan or another to determine those questions, some as Episcopalians, Methodists, Baptists, Roman Catholics, or some other denomination or creed; and we each insist, with more or less energy, that at least the name of the plan selected by us is the correct one. I say name, because many of us have stood by and seen the articles of our faith and tenets of our respective denominations changed, restricted, and in many cases obliterated to such an extent that the founder of the particular denomination would fail to recognize it; and this, in some instances, without protest or remonstrance, so long as the name remained unchanged. We are prone to insist, almost to the point of quarrel with members of other denominations, that the one selected and upheld by us is the correct one, and that all others are built upon sand; but if a new plan of salvation or form of religion is offered we readily unite with each other in opposing—even denouncing—the new comer as an interloper and heretic, and we promptly agree that a common interest requires us to stand together in opposing new doctrines.

Christian Science, my friends, is not a new doctrine: indeed there is nothing new about it except the name. The doctrine itself is coeval with God, and its application and practice are as old as the Christian religion. Permit me, therefore, earnestly to urge you to lay aside whatever prejudice you may have against this so-called new religion, and constitute yourselves a jury, determined to hear the evidence without bias, resolving to find a just verdict, as it were rendering unto Cæsar the things which are Cæsar's; and unto God the things that are God's.

A part of the plan for disseminating the doctrine of Christian Science, is through a board of lecturers, and we have with us to-day a representative of that Board. Being a profound lawyer, an eminent and distinguished judge, his training and habits of life must have given him exceptional qualifications to investigate, and ability to weigh the evidence and adopt the right course. I am, therefore, confident his remarks will be both interesting and instructive.

Ladies and gentlemen, it is my privilege as well as my great pleasure, to introduce to you your speaker, Judge Septimus J. Hanna of Boston, who will now address you.

*Correspondence.*

## Testimonies of Healing.

It is now more than seven years since I was induced to investigate Christian Science, and only those who have been a slave to medicine as I was, can realize the fear I had of giving up what seemed to me to be the only thing that had saved my life and spared me to my family for years.

I do not wish it to be understood that I did not think there was a God, an overruling power, or that I had no faith in Him.

For more than twenty years I was treated by physicians, many of whom were considered eminent. Weeks and months at a time, I was confined to a bed of sickness, and at times unable to move or scarcely to be moved. But through all those years of suffering I felt I had much to be thankful for: A kind, loving husband and children, and many friends, who stood with willing hands ready to care for me. I feel it would be ungrateful if I did not add, that I know the physicians did all they could for me.

Through all this I did not forget to thank God each day for sparing my life, and I now thank Him that He has led me, through Christian Science, to know that there is a greater power than medicine, that He is the Great Physician who can and will heal all sickness, disease, and sin.

And, mark the contrast in our home, where once for every ill some drug was administered, now for over seven years no material remedies have been used, and there is not a member of our family but has been healed of some sickness through Christian Science.

In regard to myself many diseases have been healed and others are fading into nothingness. Although I am able to do the work for a family of six, often working from early morn till late at night, there are troubles that are yet to be subdued, and I am confident divine Love will meet and conquer every one; for did not Jesus say, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you."

For more than eighteen years I had worn glasses, and when I gave them up I was unable to read even coarse print without them; but I soon became able to read Science and Health and now read newspapers or any common print and do sewing for my family. While writing this evening, a prayer of thankfulness goes up to God that He has shown me, through Christian Science, that He is my sight, and that we need not depend upon material help. Perhaps I have been anxious and impatient for the physical healing, yet I often feel I should not regret the slow healing, for had I been instantly healed, I might not have been led to search for the understanding of Truth.

The *Journal* and *Sentinel* are like rays of sunshine in our home, and to the contributors and all who have done so much to bring this truth to me, I feel I owe a debt of gratitude. I would express my loving thankfulness to our Leader, but oh, how small it seems to offer in return for all the love and patient labor she has bestowed upon us, and while deeds are stronger than words, let us show our appreciation by striving to follow her teachings, loving one another, and honoring the words of the Psalmist, "Be still, and know that I am God."

MRS. LEWIS SUMNER, Batavia, N. Y.

---

After the birth of our daughter in 1887 my wife was a complete wreck for eight years. Being unable to eat, walk, or ride, she was simply carried about from place to place in pursuit of health. We tried all schools of medicine in Bar Harbor, Ellsworth, Bangor, Boston, and Philadelphia. The last doctor consulted was one of Bangor's leading practitioners, who said, after a very careful diagnosis, that she could never be well without having a serious surgical operation, and recommended her to go to a hospital in Boston. After consulting the hospital surgeon there, it was decided that her case was too serious to be operated upon.

As a last resort, a stranger who saw her at the hotel advised her to try Christian Science. It was new to us, and we, like all others, were skeptical, but like the drowning man we were ready to grasp even the smallest straw and so consulted a practitioner, a perfect stranger to us, but with the happy result of immediate help and confidence in the beautiful realities of Christian Science. Mrs. Grant was healed, and for eight years has enjoyed good health and strength and we have not had one drop of medicine in our house nor consulted a doctor since April, 1895. Our hearts are filled with gratitude to God, and we are very thankful to Mrs. Eddy, through whose understanding Christian Science has been brought to this age.

GEORGE H. GRANT, Ellsworth, Me.

---

All that I am I owe to Christian Science. I am more than thankful for the little understanding I have of this blessed truth. It helps me to overcome all the seeming difficulties that come up in our lives. We have had many demonstrations in our family, my husband being healed of appendicitis, also of an abscess in the head. Many illnesses such as measles, catarrh, and a rupture have been overcome in our family, through the understanding of Christian Science. But the physical healing is the least it has accomplished for me. The spiritual longing which I have always had has been satisfied. The Bible is a new book to me. Through the study of Science and Health, I have been enabled to grasp the truth the Bible so plainly teaches. I am grateful to our dear Leader, Mrs. Eddy, for the many blessings I have received through her teachings.

MRS. ANNA NICKLE, Winnipeg, Man.

---

Christian Science has done so much for me I should like to tell others how it has helped me. About a year ago I suffered from a very severe illness which terminated in an ulcerated stomach. I was living with Christian Scientists, but I did not believe in Christian Science, it was all so new to me. I had never heard of it. I tried to battle with myself for a little while, but at last had to give up as I was in terrible pain day and night, and although I could take nothing but a very little cereal food, I was sick the whole time, and could scarcely move about. Then I determined to try Christian Science treatment, as I had no faith in doctors. I had a week's treatment, but received no benefit, because I had quite decided it could not do me any good. The next week I got much worse. This seemed to rouse me up, so I went to a healer, and again I got no benefit. Then I felt it must end one way or the other, for the agony I was in was too terrible to endure. Then I set to work in good earnest to test the truth for myself, and at the end of the second week I was wonderfully better, and at the third week I did not require any more treatment. Soon after my healer told me I did not look as if I had had a day's illness, and all my friends are astonished at my healthy appearance. This healing has meant a great deal to me, as I lived in continual worry and fear that I should have to give up my work, but now I have no fear, for I am daily proving the beautiful words of Mrs. Eddy which are painted on the walls of our meeting room here: "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

ANNIE BROWN, Manchester, Eng.

---

Two years before studying Christian Science I was trying to overcome a thought of resentment, and reaching

Digitized by Google

out for a more charitable and forgiving spirit when, one day, the counsel came to me,—

Be thou full of love and faith,
Shun all sin and bear no hate,
Cling to wisdom, in its sense,
Thou wilt find Omnipotence.

Although I experienced more peace of mind and possessed a desire for higher ideals, a full realization of these words never came to me until I had studied Christian Science and had read Mrs. Eddy's words of Truth, "Keep your minds so filled with Truth and Love that sin, disease, and death cannot enter them." Since that time, when tempted and tried with seeming difficulties, these words always bring much quietness and peace.

When we came to this little mining camp we held regular services at our different homes, as a few had been interested in Christian Science prior to our coming. At first some of the people tried to interfere with our meetings, but our little band realized the full import of the sentence in Science and Health, p. 571, "Clad in the panoply of Love, human hatred cannot reach you," and our services continued unmolested. My heart overflows with love and gratitude to God and with thankfulness to our dear Leader, Mrs. Eddy, to all the Christian Scientists who have so patiently and lovingly led me in the way of understanding, and to the *Journal* and *Sentinel* and the contributors thereto. The study of the Lesson-Sermons is also enabling me to know each day that God is blessing humanity through this channel everywhere.

MRS. MARY C. M. BEACH, Ophir, Utah.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before May 20.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### Branch Churches.

Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it stood April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

Churches that have been organized since April 1, 1902, will please send a report of the date of organization and the membership at that time.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the reasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*,
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents. Subscriptions received for six months at half above rates.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B. Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

There is hardly a congregation in which there is not some saint, who, without many advantages of education, by spiritual meditation, by prayer, and the inward illumination of the Spirit, has gained an insight into the Gospel that the pastor of the church may well covet. And this is true, though the pastor and the saint enjoy the same knowledge of the facts, as Apollos and Priscilla did not. However we may explain it, there is an insight into spiritual truth and a power in using it that does not come from investigation and reasoning, but from what Luke calls the reception of the Holy Spirit.

And yet while we acknowledge in the fullest sense the correctness of this statement we should not forget that Luke distinctly recognizes the fact that the attainments of Apollos equipped him for a service which the lowly artisan could not render. After Apollos had shared their experience he was endowed for the largest usefulness. Acts, 18:28 is a case in point. It is said, "He powerfully confuted the Jews, and that publicly, showing by the Scriptures that Jesus was the Christ." [R.V.] Priscilla might have done that for a little company of sympathetic spirits. Apollos could do that on a great scale against opposition. His hearers felt that they had a match on their own plane, and that his disciplined power commanded respect for his distinctively spiritual message. And if we adopt the venerable tradition that the epistle to the Hebrews is from the pen of Apollos, every time we read it we are aware of how transcendent human gifts may be utilized by the Spirit.

It is a mistake, therefore, to assume that because the Spirit imparts a knowledge of the Gospel to be derived from no other source, therefore the only instruction needed is that of the Spirit. Human faculty has an invaluable service in the work of extending the Kingdom of God. By itself it is not enough. But when it is informed, vitalized, and inspired by the inner illumination, we have the man of God thoroughly equipped for every good work.

*The Watchman.*

There are signs that Pentecost has fully come. The spirit of Christ, unhurt on that Calvary of greed upon which he has been so often crucified by ecclesiastic and politician, has left a spirit of truth which has come into our political economy. That Pentecostal spirit is taking the things of his and showing them unto us. Christian ideas and ideals of society are being reconsecrated to the missionary effort in the upper room of thought and hope. As these conceptions reappear we know how much of our vaunted progress has been only Babel building, and that such principles as have most ministered to man's self-confidence under the form of economic orthodoxy cannot form a tower about which to unify the race or create a Prometheus to redeem humanity. The undisturbed genius of our wealth-producing era has been half worshiped as our Prometheus. It is a true Prometheus in this sense, that it has robbed God. It has not, however, attained the divine secret. Our age has declined to let its heart be fired with the altruism of Pentecost, and great has been our confusion of tongues. Statesmanship now knows that we must rid ourselves of Babel and substitute Christ and Calvary for Prometheus and Caucasus.

REV. F. W. GUNSAULUS.

Rev. Clara E. Morgan writes in *The Universalist Leader:* "Jesus insists upon love, faith, and spiritual verities, but not as the old theologians taught, to get men into heaven, but rather to get heaven into men. He said very little about heaven, but assumed that after his disciples had entered the kingdom here, they would expect to be a part of it in the next world, for it shall have no end. Hence he says to them, 'In my Father's house are many mansions: if it were not so, I would have told you.' Jesus talks to them of immortality, of what to do to gain eternal life, as no one else has spoken. Plato, after all his arguments for the soul's immortality, admits that the arguments are but rafts on a stormy sea and to attempt a voyage by them is perilous, and he hoped some day a divine word would come that should make the journey safer. That hope has its realization in the words of the Master."

Beyond all systems of ethics and all scientific hypotheses, man is driven back for the best results and the most permanent benefit to the realization that there is a divine something within him which still responds to duty and manliness when all other influences and forces have failed. The new man who shall be the true man, and the new society to be hoped for, will find their greatest moving power in the convictions which the Creator has implanted in every life. The great and final appeal which God makes to man is through the conscience, which is more reliable than any theory for securing results of righteousness. There are extreme wrongs in society and fearful evils in human lives which the age can never hope to reach and correct except as it shall keep the conscience of mankind tender. The best police force in the nation's life is an awakened conscience.—*The Standard.*

The Rev. Quincy Ewing, Rector of St. James Episcopal Church, Greenville, Miss., is thus quoted by *The Examiner:* "But what kind of faith is it for which we have special need to pray that it may be increased? For a dogma—some metaphysical proposition—some verbal formula? Nay. It is that faith which means a steadying wisdom of the divine unseen and the divine eternal, 'the deep below the deep, and the height beyond the height;' a consciousness that the real value of things is a spiritual value, and their real end a spiritual end. If our doctrines do not inspire such a faith they become as sounding brass and a tinkling cymbal. God has made us to live that our earthliest efforts may be noble enough to bespeak a heavenly meaning, and our earthliest hopes heroic enough to prophesy a heavenly consummation."

Rev. Theodore T. Munger says in *The Congregationalist and Christian World:* "The dangerous point to the higher life is that between the good and the best. The good has its charm, its use, its necessity. It keeps the laws; it is the enemy of evil habits, the friend of things lovely and of good report; and it says, Is not this enough? It is, unless, in some rare moment, one has caught sight of the ideal hidden in that mystical word: 'If thou wouldst be perfect.' Then the good retreats before the best, and a divine restlessness drives one in search of the deeper meanings of life. Then one is ready to lay down all and follow after the Ideal that cares not for lands and herds and the delights of life, or holds them as though they were not."

Our life should be an ascent. There should be no violent contrast between spiritual experience on earth and spiritual experience in heaven. And the next thing to do is to step into heaven.

The judgment day, too, can be so anticipated as to become as one of the natural days of the common week.

JOSEPH PARKER.

"The world is held back from true progress, not so much by the badness of bad men as by the obstinacy of good men who have stopped growing," said an after-dinner speaker recently at a college alumni meeting. The worst of it is that such good men think their immovable stand in what they call the old paths is their chief virtue.

*The Congregationalist and Christian World.*

Believers find heaven begun below. The hope of a heaven beyond is founded on the possession of heaven here. When our prayer is answered and the Lord "cleanses the thoughts of our hearts by the inspiration of his Holy Spirit," we quickly learn to love heavenly things.—DR. T. W. CAMPBELL.

The best proof of repentance is the abandonment of sin. Words mean nothing unless supported by deeds. The name of Jesus is magnified when men repent, believe, and live holy, self-sacrificing lives, devoted to Christ's service and ministry of love.—*The Examiner.*

This is the beginning of all Gospels,—that the kingdom of heaven is at hand just where *we* are. It is just as near us as our work is, for the gate of heaven for each soul lies in the endeavor to do that work perfectly.

WILLIAM C. GANNETT.

There are multitudes in our congregations who are just *waiting* when they ought to be *acting*. They must work, if they would have God work in them. There can be no religion without obedience.—ICHABOD SPENCER.

In his last discourse Theodore Parker said: "The soul's power of recovery from wickedness is infinite; its time of healing is time without bounds. . . . In all the family of God there is never a son of perdition."

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

## Items of Interest.

**National.**

There are ready for shipment to the Philippine Islands 2,500,000 pesos, coined at the Philadelphia Mint. On March 2 the Act of Congress providing for the coining of money for the Philippine Islands became operative, and orders were at once sent to the San Francisco and Philadelphia mints to prepare to hurry the work of coining the pesos. The coinage in this case is equal to the minting of the same number of American dollars, and it has required the handling on an average of 100,000 pesos daily. During this time the mint also added to the Philippine coinage 9,100,000 pieces of bronze, valued at $91,000, and 3,600,000 nickels, valued at $180,000.

Judge Grosscup last week entered an order in the United States Circuit Court of Appeals at Chicago enjoining six railroad companies from discriminating against small shippers in the Western territory. The decision is especially important as being the first under the new Elkins law. The ruling applies to fourteen railroads, six of them defendants in the United States District Court at Chicago, the others under the jurisdiction of the United States Court at Kansas City. Judge Grosscup announced that Judge Phillips of Kansas City would render a like decision.

Circuit Court Judge Sanborn handed down at St Paul last week a decision granting the request of the attorneys for the Northern Securities Company to be permitted to pay Great Northern and Northern Pacific dividends to the Northern Securities Company.

An appeal from the late decision of the United States Circuit Court has been filed by the Northern Securities Company which alleges thirty-four points of error and takes exception to every paragraph in the decree.

It is announced at the Navy Department that the European squadron which is to be present at the naval demonstration at Marseilles upon the return of President Loubet from northern Africa, will go north and be present at the Kiel celebration in order to show the friendship of the United States for Germany and to reciprocate the kindly expressions for America that have come directly from Emperor William.

A formal order of default has been entered by Judge Grosscup against the Beef Trust packers who have failed to answer the Government's complaint under the anti-trust bill. The rules of the court allow thirty days before the entry of a final order. An appeal, if made, must be made before June 22. The default is interpreted to mean that the packers consider the contest hopeless.

It seems probable that Great Britain will not insist on referring to The Hague the question whether Venezuela or the allies shall stand the cost of the blockade. The proposition that Venezuela pay the cost of the blockade was not in the original protocol signed by the Powers, and when suggested later, its insertion into the protocol was promptly refused by Mr. Bowen.

**Foreign.**

Premier Balfour has announced in the House of Commons that the Government, contrary to previous reports, does not intend to participate in the Bagdad Railway scheme in which Germany and France are interested. Public opinion is strongly against the plan.

The main Bagdad Railway is to run from Konia to Karamanereyl, Mossul, Bagdad, and Basra, with branches to Aleppo, Ufra, and the Gulf of Alexandretta. Germans obtained the concession for the line, and, according to a despatch sent from Constantinople on February 12, the Turkish Government is to guarantee an income of $2,200 per kilometer and an annual contribution of $900 per kilometer, to be used in payment of working expenses, for the first portion of the line from Konia to Bagdad.

The Taotai has informed the Bankers' Commission that China, in compliance with the pressure put upon her by the Powers, had issued instructions for the immediate signature of the indemnity gold bonds.

An imperial edict just issued orders Prince Ching, the grand secretary, to reorganize the financial system of the empire by establishing a monetary standard for the entire country and starting a mint at Pekin to supply the provinces with uniform coinage.

The Chancellor of the Exchequer last week for the first time in four years announced in the House of Commons a peace budget. The expenses for 1903–4 were estimated at about seven hundred and twenty million dollars and revenues for the same period promised a surplus of fifty million dollars. The expense of the Chinese and African wars for the past four years was about one billion dollars. The total national indebtedness, including the war debt, now amounts to $3,991,745,000.

According to tradition April 21 was the 2656th anniversary of the foundation of Rome, termed Rome's birthday. Prince Colonna, the mayor of Rome, received thousands of telegrams wishing the Eternal City a glorious future. These came mainly from the many foreigners who are in Italy and who went there for the purpose of attending the historical, agricultural, or Latin congresses.

According to a report Mulai Mohammed, brother of the Sultan, has been proclaimed emperor at Fez. Another report says the Sultan has offered the crown to his brother, who refused it, and that both he and his brother were acting together against the pretender, Bu Hamara. The adoption of many modern ideas by the sultan does not please his warlike Mohammedan subjects.

In his recent budget speech the Minister of Finance announced for the current fiscal year the largest surplus Canada has had since confederation, amounting to about five million dollars. Only three times since confederation has the public debt been reduced by a surplus—in 1871, 1882, and 1900.

It is expected that the Norwegian government will take steps to check the immigration to the United States, which threatens to denude the country of the best class of its working population.

**Industrial and Commercial.**

The importations of raw silks, as shown by the figures of the Treasury Bureau of Statistics, amounted to $37,000,000 in value for the eight months ending with February of this year, as against $29,000,000 in the eight months ending with February, 1902, and $15,000,000 in the eight months ending with February, 1901. Measured by quantity, the figures for the eight months ending with February, 1903, amounted to 10,000,000 pounds, against less than 9,000,000 for the eight months ending with February, 1902, and less than 5,000,000 for the eight months ending with February, 1901. The importations of manufactured silk have also increased, the figures for the eight months ending with February, 1903, being valued at over $25,000,000, as against less than $23,000,000 in the preceding eight months' period, and $18,000,000 in the eight months ending with February, 1901.

In 1870 importations of raw silk were but 500,000 pounds; in 1880, 2,500,000; in 1890, 7,500,000; in 1900, 13,000,000, and in 1903 seem likely to be 16,000,000 pounds. The value of the raw silk imported was, in 1897, $19,000,000; in 1899, $32,000,000; in 1900, $45,000,000, and in the present fiscal year seems likely to be $50,000,000.

The Massachusetts State Board of Conciliation and Arbitration has reported as required by the Legislature concerning the strike in the Lowell cotton mills, and finds after careful investigation of the books covering in most cases the years 1900–1902 that, with the exception of one mill, the operators are unable to pay the increase of ten per cent in wages demanded by the Lowell Textile Council.

The Baltimore and Ohio Railroad Company will order from one hundred to one hundred and fifty new locomotives for delivery during 1904. These additions will represent an outlay of from $1,500,000 to $2,300,000.

Of the total gain of 4,920,249 cotton spindles in the United States from 1890 to 1900 fifty-three per cent, or 2,747,839, were in the South.

**General.**

Forty-six landed proprietors of the German farming districts recently sailed for this country to visit the stock farms of the South, the orchards and gardens of the far West, the wheat fields of the central States, the packing houses of Kansas City and Chicago, and to study in general the agricultural methods of the United States.

May 25 is the birthday of Emerson. Ministers of all denominations are invited by the secretary of the Congress of Religion to observe May 24, or the nearest convenient day, as the Emerson centenary, either by appropriate sermons or in such manner as may appeal to their judgment and taste.

The new Salon this spring contains thirteen hundred and fifty-six oil paintings, thirty-six hundred water colors and pastels, and three hundred sculptures. Of the five hundred and twenty-two painters who exhibit oil paintings, forty-one are Americans.

The present great seal of the United States has become so worn by its years of constant use, that a new seal is to be cut at once. The utmost precaution is taken by the secret service to guard this operation.

James McNeil Whistler, the noted painter, has just received the degree of LL.D. from the Glasgow University. An exception was made in his case in conferring the degree *in absentia*.

President Roosevelt, during his stay at the Yellowstone Park, laid the corner-stone of the massive masonry arch at Gardiner which is to mark the entrance to the Park.

The Geographical Society of Paris has conferred the La Roquette gold medal on Captain Sverdrup, the arctic explorer, for his explorations in 1898 and 1902.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Looking at Things Unseen.

MANY careless or thoughtless people declare: "I will believe nothing that I cannot see, or know through the senses." This declaration may lead others to put off the day of learning of the real and eternal, because it sounds to them like being on guard against what is unreliable.

A little thought, however, will show such an one that he is believing many things that his material senses have not taught him because their testimony is opposed to what he knows is true. He sees the sun seem to rise in the east and set in the west, but he knows that this is caused by the revolution of the earth from west to east. He sees a flat earth, but he does not believe it is flat, as did people in olden times, for he knows that science has proved that the earth is round. He certainly cannot see or perceive through material sense, the passage of sound through the telephone, nor the transmission of messages by wireless telegraphy. He will find so many things all about him that he accepts because they have been demonstrated to be true, yet which he can neither see, hear, feel, taste, nor smell, that he will be forced to admit his mistake.

Now let him turn to Paul's words: "For the things which are seen are temporal; but the things which are not seen are eternal," and he can, if he will, begin to awaken to know something of the real. All that you love in those dear to you—gentleness, patience, faithfulness, joy, kindness, meekness—indeed all the good things of which Paul speaks, saying, "Think on these things,"—are among the "things unseen" which are the real and the eternal.

Christian Science teaches us of these "things unseen," and proves that they are the spiritual facts, while the "things which are seen," or perceived through material sense, are temporal, lasting for a time, only to disappear when the opposite truth is presented. Hence if we have taken only the material sense of the Scriptures, we have not been gaining the imperishable riches that it has for all who seek and find its spiritual meaning. Science and Health tells us, p. 128: "If one would not quarrel with his fellowman for waking him from a cataleptic nightmare, he should not resist Truth, which banishes—yea, forever destroys with the higher testimony of Spirit—the so-called evidences of matter."

Mortals are gradually awakening, gradually finding that the unseen things are the spiritual and eternal, and this perception of Truth is bringing to them the real joy which is one of the "fruits of the spirit." Christian Science has been and is awakening all who are ready for its message, that they may perceive this "higher testimony of Spirit" which does destroy the "so-called evidences of matter" by showing that they are the things "which are seen" and are temporal.

It is thus that the sick are healed, and the sinners are reformed. They are awakened by the voice of the Truth from the unnatural state which the dream of materiality has produced and thus are enabled to enter into some realization of the "things unseen" which are the real and the eternal. It is not the natural condition of God's child to be either sick or a sinner. Yet these are very plainly among "the things that are seen." Shall one be called unreasonable who endeavors to help his brother to awaken from this false condition, even if he tells him that there is no truth in the sickness, and no power in the sin, except what he is giving it by believing it true and powerful?

This is a common complaint made against the work of Christian Science, that it denies the reality of these errors. And it is made through an ignorance of the subject which in these days of enlightenment is quite unnecessary. All truth is contained in the Bible, but its spiritual interpretation, as given in Science and Health, is needed to make us understand the "unseen things" which are the real and eternal. With this understanding all true followers of the Master will be "about the Father's business" as he was, and they will heal the sick and reform the sinner through knowing what reality is. They will learn to "take forth the precious from the vile" that they may win the promise given in Jeremiah, 15 : 19: "Thou shalt be as my mouth." The real cannot combine with the unreal, the true cannot mix with the false. It is the attempt of error to produce these combinations which causes all the discords.

Christian Science teaches us so to understand and make practical the Bible promises that truth alone remains where error has seemed to have place, and when this great separation is made between the precious and the vile, the real and the unreal, the seen and the unseen, it is done through knowing that "man shall not live by bread alone, but by every word that proceedeth out of the mouth of God," and when these words are spoken, the truth appears, which makes health apparent. The promise reads: "Thou shalt also decree a thing, and it shall be established unto thee."

### Opposition to Mind.

DIVINE MIND or Life is the Principle of Christian Science healing and it is the only reformatory and saving element; if understood and practised, it is the scientific remedy for all evil; and this is logically and scientifically true, because Truth is the only remedy for error, Love is the only remedy for hatred, and Life the only remedy for sin and its consequent death.

What is it that opposes this divine power in saving mankind? It is the one evil or the evil one. Paul calls it the carnal mind, and says, 'The carnal mind is enmity against God;" it does not know God, neither, indeed, can it know Him. It is the testimony of the five physical senses, the adversary, which persistently argues that both cause and cure are found in matter; this theory dethrones the omnipotence of God and places the science of existence on a material basis; but no law of the carnal mind, or so-called "psychic forces," is on a divine basis; therefore, it is without God (Good); and is destitute of Principle and uncertain in effect.

This carnal mind, or serpent-talker, has had its phe-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

nomena in all ages. The enchanters, witches, wizards, and soothsayers aped divine power and withstood Moses. Peter said to Simon the sorcerer, who had been producing some phenomena in matter and deceiving the people, "Thy money perish with thee, because . . . thou hast neither part nor lot in this matter."

In modern times, this same carnal mind assumes various phases. Matter controlled by the human mind is always mesmerism and is injurious to mind and body. It is the very opposite of Christian Science as taught in Science and Health by Mrs. Eddy.

One of the evidences that these so-called psychic effects are not of divine origin is that the operator may be successful in producing them and yet not believe in God nor that Good is necessary to his success; whereas, Christian Science healing depends upon an understanding, as well as the practice of a high ethical and Christian life and much sacrifice of self-gratification. Simon the sorcerer was in a low state of ethics or he would not have offered Peter money for his power to heal. The divine Mind, or God, is the Principle of all Christian healing, and successful practitioners must know something of self-sacrifice, and live close to God in daily life. LEWIS B. COATES.

## An Interesting Point.

Mr. Editor.

In your issue of March 10 I note comment on Christian Science, as follows:—

"A bill has passed the Virginia Senate forbidding Christian Scientists to accept fees for their services unless they have a license from the State Board of State Medical Examiners. This looks like pretty sound common sense."

One point has seemingly been overlooked by the writer, and that is this: If Christian Science is pernicious, is it not a bit inconsistent to prohibit its practice when paid for, but to allow it all the freedom desired so long as its advocates refrain from accepting pay for their services, and gain their financial support in other ways?

Christian Science is not a business; it is a ministry. The requirement in the Bible that the followers of Jesus Christ shall heal the sick as well as preach the Gospel is as binding upon any one of his followers as upon another, and yet we find the Virginia legislature willing to rule that those Christians who fulfil both requirements, as to preaching and healing, shall have all financial support withheld, while those who confine themselves simply to the preaching can have unlimited support. Jesus said, "These signs shall follow them that believe; . . . they shall lay hands on the sick, and they shall recover." According to this new law, woe unto any minister or other professing Christian whose prayers result in the recovery of the sick! Their income from religious work must cease at once, or if they continue healing the sick through prayer, and are so successful that their entire time is taken up in ministering to the sick in this way, they must either become a public charge or else take a four years' course in medicine.

The inconsistency of demanding that people who have religious scruples against the use of medicine shall be compelled to take a course in a medical college in order that they may practise their religious belief in the power of God to heal and to save is at once apparent.

No class of people advocate a higher standard of ethics than do Christian Scientists, and, having as a rule had much to do with physicians in the effort to regain health before taking up with Christian Science, they see the necessity of exercising the greatest care to keep the ranks of medical practitioners free from charlatans and incompetent persons. But Christian Scientists will naturally object to the requisition that they take a course of instruction in a system of healing which cannot enter into their practice, and which is in no way essential to it.

The question of how the sick are to be healed is a very broad one. Until *materia medica* can be proved to be an exact science, there will continue to be well-founded opposition to any legislation which makes dependence upon doctors of medicine the only means whereby the sick can legally look for relief.

There have been repeated attempts in many state legislatures to establish laws which leave to the citizens no choice in questions pertaining to health; but only in one or two instances have legislatures been found willing to place laws of this kind upon the statute books, and the constitutionality of such legislation is open to question.

The fact that the medical profession seeks protection indicates a lack somewhere. If their efforts to heal were universally successful, no such protection would be needed.

Prayer to God ever has been and ever will be an effectual remedy; and the Christian Scientist has proved his right to rely upon prayer, and prayer alone, as his remedy for disease. He has proved it by his works.

There need be no fear that Christian Science is bringing disaster to its believers. As a rule, its numbers are largely recruited from the ranks of those who have had abundant experience with medicine, and it is that experience which prompts them to prefer Christian Science. The fact that its advocates are increasing in number is the best answer to the charge that it does not heal the sick.

The attempt to make any state say that one method of healing shall be followed, to the exclusion of all others, savors strongly of paternalism. The law passed in Virginia is the first step toward specifying by statute what practice shall invariably prevail and what drugs shall be administered for each and every ache and pain. The Christian Scientists are confident that the law-makers of this Commonwealth will never be inveigled into favoring unjust discrimination in matters which so intimately pertain to rights of citizenship. ALBERT E. MILLER.

In *Philadelphia Item.*

## A Friendly Disagreement.

BECAUSE Judge Henry C. Smith of the Lewis and Clarke County District Court introduced Carol Norton, a speaker in behalf of Christian Science, in an address in which he commended Dr. Norton's views to the tolerant and earnest consideration of the audience, the Rev. Dr. MacCarthy, pastor of the First Congregational church of Helena, delivered a sermon Sunday in which he arraigned Judge Smith.

Preceding the sermon Dr. MacCarthy wrote to Judge Smith the following letter:—

"*My Dear Friend Judge Smith:*—If the *Independent* has correctly reported you, permit me to say that I think you have not manifested your usual good judgment in giving such an unqualified endorsement to the so-called Christian Science. You must certainly know that the courts and the medical fraternity are constantly called upon to protect the weak victims of this modern fake. I think I shall refer to your endorsement in a 'prelude' next Sunday, and I drop you this line to say that I shall do it with the hope of correcting a mistake which I think you have made and shall do it with the best spirit, and hope that it will in no way lessen our personal friendship, which I prize very highly."

In reply to this, Judge Smith wrote:—

"The *Independent* has correctly reported what I said. While your letter will in no way lessen our personal friendship, I am sorry you wrote it; sorry that you felt called upon to write it. I believe if you had given the matter a little more consideration you would not have written it. What you say regarding my 'usual good judgment' is of course

Digitized by Google

gratifying to me, and I have obtained a copy of the *Independent* and very carefully gone over my remarks, with a view of ascertaining whether I had inadvertently said anything that might possibly be construed as a reflection upon any creed or religious sect, or as in any way criticising or finding fault with any man's religious views. It certainly was not my intention to do anything of the kind, and after re-reading my words I cannot see that I have been guilty of that fault.

"The older I grow the more respect I have for the honest opinions of others. It makes no difference to me what religious belief a man holds; if he is sincere in it, he has my respect and will be free from my criticism. A man's religious belief is generally held to be his most sacred possession, and I am inclined to the opinion that the enlightened thought of the twentieth century is disposed so to regard it and not to characterize it by harsh terms, no matter how unreasonable it may seem to some people.

"I believe that all religion does good; and my respect and esteem for every sincere worker in God's vineyard is unbounded. I am filled with admiration and reverence for all the noble men and women who are devoting their lives to His work. The day will come when denominations and sects will be lost sight of in one great Brotherhood of Man, under God's care. Any creed that teaches 'Faith and Hope and Charity and Love,' is good, no matter what notions are attached to it. Human charity ought to take care of and cover and hide and indulge the weak parts of every brother's honest belief. Whatever is done in purity of heart and good faith is entitled to respect and respectful comment at least.

"You say I gave the 'so-called Christian Science' 'an unqualified endorsement.' I may have been unfortunate in my choice of words, but even assuming that to be true, I doubt if you are justified in placing any such construction upon what I said. I distinctly stated that I am not a Christian Scientist, or a follower of any particular creed, sect, doctrine, or religious denomination. I said 'I understand' that Christian Science 'is claimed to be' a certain thing, to wit, the Science of Mind, etc. I did say that I know many good, true, and sincere men and women who follow that faith, and your letter gives me a welcome opportunity to repeat and emphasize that statement. My introduction of Mr. Norton was simply a courtesy such as I should be glad to extend to any lecturer, and my remarks amounted to no more than a request that he should be made welcome to our city and accorded a respectful hearing.

"I had certainly hoped that the cry of 'crucify him' had not been allowed to follow the human race into this century. While every man has the undoubted right to disagree with another's religious belief, I doubt the right, and, in a minister of the gospel charged with the saving of souls, the wisdom, good taste, or propriety, of declaring that any branch of the Christian religion is a 'modern fake.'

"I do not know why you wrote me as you did. You certainly were not required to explain or excuse to me any course your conscience tells you that you ought to pursue as a minister. I have no objection whatever to your referring to me in your 'prelude,' because you are so clearly in error, both in the interpretation you place upon my words and your intolerant attitude toward those who are engaged in the same pious work that you are, but with whom you do not happen to agree in some particulars, that I can well afford to meet you on the issue presented; but of course if you do so, your sense of fairness will lead you to read this letter and thus avoid giving the matter an *ex parte* appearance.
