"Permit me to say again, I am sorry you sent me the letter; while it in no way lessens my friendship for you, it makes me question the correctness of my former high opinion of your liberality of mind and toleration; it reminds me that the days of intolerance and severity of judgment in religious matters are not yet gone forever.

"Yours truly,
"HENRY C. SMITH."

## The True Impulse.

LOVE for God and love for man should be the mainspring of every effort in Christian Science practice, for "perfect love casteth out fear." If we fear, we are on a level with the sick and cannot be the instruments for their healing. The love of God is a tideless, shoreless sea. No human beliefs can create any disturbance in its harmonious action; no human sense of inaction, over-action, or reaction can delay or limit the operations of divine Love. God knows nothing of fear or doubt, of disease or death, and He knows all; therefore these are human beliefs, and must pass away. The love of God is shoreless, for He is omnipresent for good; no distances can separate Him from His creations, no lapse of time create imaginary spaces between God and man, for God has no sense of space or time. All these are artificial conditions in what we call mortal mind, a negative state of human thought, for the moment estranged from God. It is the realization of the Truth of Being that enables the Christian Science practitioner to heal the sick, through God. He helps to bear his brother's burden, well knowing that God will bear both the burden and the burden-bearer out of beliefs. There are no tempests, no wrecks on this wondrous ocean of God's love. Jesus demonstrated that fact, as we read in St. Matthew, 14 : 22–38. That very day Peter had witnessed the power of the Master in feeding five thousand men, besides women and children, with five loaves and two fishes; and yet when the darkness and the storm smote the lake, he was afraid, and said: "Lord, if it be thou, bid me come unto thee on the water." That little word "if" revealed his weakness, and Jesus had to help him. He outgrew that weakness, and we can also outgrow it. There are no shallows on the ocean of God's love. It never disappoints us. We can rest our all on its waters. It is deep enough to float every aspiration of the human heart, wide enough to enter into the minutiæ of our daily lives and supply every human need.

## Christianity Defined.

Mr. Editor.

The definition of the word Christian as an adjective, is "manifesting the spirit of Christ and his teachings, as 'Christian kindness, loving, compassionate,' etc.," and one definition of science is, "A systematically arranged collection of logical conclusions, based on a self-evident or demonstrated premise." The motto of Christian Scientists, upon their seal (a cross and crown), is the command of the Master, "Heal the sick, raise the dead, cleanse the lepers, cast out demons," and they are doing this (or the divine Mind is doing it through them) by studying and living and demonstrating the teachings of Christ.

Its followers, who, though but beginners, comparatively speaking, in this Science, are proving it to be an exact system, and on a demonstrable basis, every time they heal a case of sickness, do this healing not through any suggestion of one mortal mind to another, nor through any hypnotic or mesmeric effects, but by realizing God, the one divine Mind, as the giver and ruler of all, and that He shares not His kingdom with any opposite power. If He is supreme and omnipotent and good, there is no room for anything else, or any evil power, so called, as an entity or reality. If disease, sin, discord, and death do not exist in the divine Mind, they must have their sense of existence

Digitized by Google

only in the carnal mind, which, as St. Paul tells us, "is enmity against God." Then is it not Christian to exhort men to rise above the evidence of his false sense of mind, to put off the old man with his deeds, his discordant beliefs, and put on (reflect, express) the new man, the one divine Mind?

Our critic says, "There is one thing, however, that I must say for Mrs. Eddy's Science: it makes the study of the Bible a necessary duty. To this fact is due all that is really Christian in the personal character of its followers." I am glad he recognizes so much good, and approves it, but I must remind him it is not alone the reading and study of the Bible, but the putting into constant daily practice the truth contained therein, that makes Christian Scientists true followers of the Master. This they are endeavoring to do and be, and they are happy and prosperous and good in proportion as they do it. Everywhere we are admonished to be meek, merciful, honest, loving, and pure, and trust God in all things.

The teachings of Christian Science are in the highest degree uplifting, strengthening, practical, and pure, all founded upon the Bible and contained therein. As Mrs. Eddy says in Science and Health, p. 192: "We are not Christian Scientists until we leave all for Christ." And every thought, word, and deed of that good woman is consecrated to the uplifting and salvation of the human race.

Why should any one who desires God's kingdom to come on earth even as it is in heaven, object to Christian Science when it is doing this very thing? Why, rather, should they not earnestly and carefully examine its claims and see if they be not found fighting against God when opposing it? Christian Scientists are people who are trying to be and do good and mind their own business. Then why not let them alone, and if this work be not of God, it will fall of its own weight.

EDWARD EVERETT NORWOOD.

In *Charleston* (S. C.) *News.*

---

The disciples and apostles were for the most part men of little education, as the world esteems education, although from the standpoint of Christianity they were more highly educated than any men of their time, because they were instructed by the great Teacher himself, and were students of the Master metaphysician. Yet among them were fishermen called to leave their nets and become "fishers of men" and healers of the sick.

"Jesus instructed his disciples to heal the sick through Mind instead of matter. He knew that the philosophy, science, and proof of Christianity were in Truth, casting out every kind of error" (Science and Health, p. 271).

These words of Mrs. Eddy deserve special consideration at this time.

W. D. MCCRACKAN.

In *Binghamton* (N. Y.) *Herald.*

---

There has never been an argument or a law against Christian Science healing that could not have been applied with equal logic against the healing done by Peter and John and Paul. What did Peter know about pathology when he turned to the palsied Æneas and said, "Æneas, Jesus Christ maketh thee whole: arise, and make thy bed." This one case of healing converted the community, "And all that dwelt at Lydda and Saron saw him, and turned to the Lord."

Sundays and Wednesdays congregation after congregation meet in the Christian Science churches throughout the world, and every congregation is built upon cases of healing of disease and regeneration from sinful habits. Yet those who never come to these services to hear their neighbors tell of reformation and recovery through Christian Science, will nevertheless assume to pass on the merits of Christian Science practice. Conclusions are without value when facts are ignored upon which all scientific induction is based.

WILLIAM H. JENNINGS.

In *Nebraska State Journal.*

---

To those who have only a theoretical rather than a practical knowledge of Christian Science and its efficacy, it is humanly natural that a dependence upon it and the exclusion of medicine should seem a neglect rather than a help; but the Christian Scientist who has had experience, first with medicine and lastly with this Science, has proved convincingly to himself that in his dependence upon God he has chosen the better part. The adherents of this faith invite their friends to prove Christian Science by experience rather than to judge it by its theory as compared with that which they already believe. The question with the critic should not be, Does the new idea agree with older and more thoroughly established beliefs? but, Is it true from the standpoint of supreme intelligence and practical demonstration? Christian Scientists may not be doing anything in the sight of those who look no farther than the material. Jesus and his apostles were supposed to be doing something—the greatest possible thing—when they prayed for the sick, and the results proved this. Our Master was the greatest physician, the most successful one whom the world has ever known, and yet he never administered nor recommended medicine.

ALFRED FARLOW.

---

All that we know of any material thing, whether a human body or a rock or a tree, is its attributed qualities; that is to say, what we suppose it to be in accordance with the qualities which we attribute to it. We used to attribute to a chunk of iron the quality of opacity, but it can easily be proved with the X-rays that it is opaque or transparent according to the kind and quality of vision which examines it. And so everything material is phenomenal merely, so far as our knowledge of it can possibly go.

### Open the Door.

Open the door, let in the air,
The winds are sweet and the flowers are fair;
Joy is abroad in the world to-day.
If our door is wide open he may come this way.
Open the door.

Open the door, let in the sun,
He hath a smile for every one;
He hath made of the raindrops gold and gems,
He may change our tears to diadems.
Open the door.

Open the door of the soul, let in
Strong, pure thoughts, which shall banish sin;
They will grow and bloom with a grace divine,
And their fruit shall be sweeter than that of the vine.
Open the door.

Open the door of the heart, let in
Sympathy sweet for stranger and kin;
It will make the halls of the heart so fair
That angels may enter unaware.
Open the door.

## The Lectures.

### At Lincoln, Kan.

Carol Norton lectured to a fair-sized audience at the Opera Hall on Thursday evening, March 26, on the subject, "The Teachings of Christian Science." Hon. E. A. McFarland introduced Mr. Norton and spoke in part as follows:—

*Ladies and Gentlemen:*—It appears to be a custom among Christian Scientists, in whose ranks we find so many of our friends and neighbors, when their prominent speakers are about to expound the doctrines of Christian Science, to have them introduced by an unbeliever. This custom is a pleasant index to the distinctive American trait of fair play.

The very presence of this large audience of intelligent men and women, is at least an indication that we are willing to listen and to learn, if we can, something which we do not now know or understand.

The world has been gradually learning—and very rapidly during the past fifty years—that it will no longer do for any man, no matter what may be his station in life, his profession, or his intelligence, to object without investigation, simply because he does not believe, or to ridicule any statement of fact or theory of science, simply because he does not yet comprehend such theory.

Practical demonstration is the best guide for us all. Seeing is believing, is an old statement, but practical demonstration with tangible results will convince the most skeptical.

So who knows but that the Christian Scientists may have a system or a science which, when more fully understood and generally appreciated, will bring as great a blessing to the physical and spiritual life of mankind as wireless telegraphy has become to the commercial life of the world. There can be no question but that the world would be made better, physically, spiritually, and morally, if the doctrine of Christian Science were more largely believed and put into active practice.

And so in this spirit of a fair and honest investigation, in the spirit of a willingness to listen and to learn, if we can, we welcome the distinguished speaker who is to address us this evening.—*The Lincoln Sentinel.*

### At Winchester, Ky.

The Christian Science lecture given in the Opera House Monday, February 23, was well attended. The lecture was given by Judge William G. Ewing of Chicago. He was introduced by Captain Leeland Hathaway, one of the leading attorneys, who spoke in part as follows:—

To me has been given the pleasant duty of presenting the speaker of this occasion. He does not come unheralded; his fame has preceded him as a lawyer of extensive and lucrative practice, and as a judge elevated to the bench by the suffrage of an admiring constituency. If I understand the speaker's position, he will only claim that the body of Christians with which he is connected have come closer in spirit to the God of "Abraham, Isaac, and Jacob," and to his Christ; that their worship is of our God, and of our Jesus of Nazareth. If he can tell us anything which will bring us into nearer, tenderer relations with the Divine and the Infinite, I am sure that we shall hear him with glad hearts.

We know that the world is in a fever of inquiry in religious matters—the very atmosphere is sur-charged with it. There is all around us a spirit of unrest among theologian and priest and layman. I have no quarrel with those who purpose to investigate, or to propagate novel theories, or to proclaim new creeds. The words of Gamaliel, the great teacher of the Israelites, at whose feet sat Saul of Tarsus before he saw the vision and heard his call, were I think very wise words, and may be just as applicable to twentieth century contention as they were to that of the early days of Christianity. And however new the doctrine preached or the positions taken by the distinguished speaker may be to us, we will hear him respectfully and with interest, and we ought to feel and acknowledge that it may be that something has been given to him and his co-religionists, which so far is hidden from us. "Prove all things; hold fast that which is good."

I have the pleasure of introducing to you, ladies and gentlemen, the Honorable William G. Ewing of the City of Chicago.—*Correspondence.*

### At Omaha, Neb.

Carol Norton, C.S.D., lectured at Boyd's Theatre, Thursday evening, April 2, under the auspices of First Church of Christ, Scientist, The theatre was well filled, the audience being variously estimated at from seventeen to eighteen hundred. Mr. Norton was introduced by George L. Miller, M.D., a thoroughly representative citizen of Omaha and long time resident; formerly a practising physician, being a regular graduate of medicine; in earlier days prominent in politics, and at one time prominently mentioned for the vice-presidency. He spoke as follows:—

*Ladies and Gentlemen:*—I esteem it a distinct honor that I have been called upon to discharge the agreeable duty this evening of calling you to order and asking you to listen to a distinguished gentleman who will address you in a few moments.

This vast assemblage of people is an expression of a new religious thought. Religion is the universal inheritance among all the races of men, an inward monitor lifting the thoughts of men to that Supreme Intelligence which rules over all, an all-wise and benignant Deity.

We are living in an age of toleration. I am not here to approve or disapprove of Christian Science. It may be said that this is a period of unrest in the religious world and in the affairs of men. It will be for you to ascertain any delusion that may attend your beliefs. It is said that the votaries of Christian Science are opposed to the Christian teaching. I do not so understand it. This great religious movement has been marked in the short time of ten years by a power and growth which claims the respect and consideration of all men. There is too much religion which says, "I believe that I believe." There is nothing in this world better than sincerity; few things in it can be worse than insincerity under the cloak of so sacred a thing as religion.

But I am detaining you, I am afraid, from what I am sure will be a rare treat this evening, and will now introduce to you Mr. Carol Norton of New York, who will address you.

### Lectures at Other Places.

Laurel, Miss.—Judge William G. Ewing, March 3.
Exeter, Neb.—Mrs. Annie M. Knott, March 20.

The value of Christianity lies in its bringing the message of truth, and telling the things that are,—and beyond this, in its having the power to conform us to things as they are, and bring us to our true home in God. And when the message has been uttered, and has sunk down into our hearts so that we can perceive of what sort it really is, we find this infinitely great, consoling, and uplifting word at the center of it, that the real is the good; the eternally real is the eternally good: eternal being is holy and gracious: our best is the finite counterpart of the infinite goodness: and hope rather than fear, confidence rather than doubt, is the keynote of existence.

WILLIAM NEWTON CLARKE, D.D.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Significant Questions.

MARY BAKER G. EDDY.

WHO shall be greatest? The great Master said: "He that is least in the kingdom of heaven"—that is, he who hath in his heart in the least the kingdom of heaven, the reign of holiness, shall be greatest.

Who shall inherit the earth? The meek who sit at the feet of Truth, bathing the human understanding with tears of repentance and washing it clean from the taints of self-righteousness, hypocrisy, envy—shall inherit the earth—for wisdom is justified of her children.

"Who shall dwell in Thy Holy Hill? He that walketh uprightly, and worketh righteousness, and speaketh the truth in his heart."

Who shall be called to Pleasant View? He who strives, and attains—who has the divine presumption to say: "For I know whom I have believed, and am persuaded that he is able to keep that which I have committed unto him against that day" (St. Paul). It goes without saying that such a one was never called to Pleasant View for penance, or reformation; and I call none but genuine Christian Scientists, unless I mistake their calling. No mesmerist, nor disloyal Christian Scientist is fit to come hither. I have no use for such, and there cannot be found at Pleasant View one of *this sort*. "For all that do these things are an abomination unto the Lord: and because of these abominations the Lord thy God doth drive them out from before thee" (Deuteronomy, 18).

It is true, that loyal Christian Scientists called to the home of the Discoverer and Founder of Christian Science, can acquire in one year the Science that otherwise might cost them a half century. But this should not be the incentive for going thither. Better far that Christian Scientists go to help their helper, and thus lose all selfishness, as she has lost it, and thereby help themselves and the whole world, as she has done according to this saying of Christ Jesus: "And whosoever doth not bear his cross, and come after me, cannot be my disciple."

Pleasant View, April 20, 1903.

### Amendments to By-laws.

THE following sections of the By-Laws of the Mother Church have been amended to read as follows:—

Art. XIV., Sect. 1.

The Communion shall be observed by this Church annually on the last Sunday in June of each year—by reading selections from the Bible, silent prayer, the Lord's Prayer with its spiritual interpretation from the Christian Science text-book, reading the appointed Lesson-Sermon, selected from the Bible and "Science and Health with Key to the Scriptures," singing of hymns, singing, silent communion, reading the scientific statement of being, and the correlative Scripture according to 1 John, 3 : 1, 2, 3, and benediction.

Art. XXIX., Sect. 9.

The Communion shall be observed in the branch churches on the second Sunday in January and July of each year, and at this service the Tenets of the Mother Church are to be read.

Art. XII., Sect. 1.

The regular meetings of the Mother Church shall be held annually, on the Tuesday following the Communion season in June of each year. These assemblies shall be for the purpose of listening to the reports of the Treasurer, Clerk, and Committees, and general reports from the Field.

### Our Periodicals.

MUCH of the work on the *Sentinel* and the other official publications of our denomination has been done with a view of making them available and effective agencies in overcoming the many misunderstandings and prejudices engendered by ignorant and malicious criticism of Christian Science and of our Leader, and we are greatly encouraged to believe that much has been accomplished in this direction. The *Sentinel* and *Journal* have been especially useful in this regard with members of the legislatures wherein so-called medical bills have been introduced.

Another point kept steadily in view by the editors is that our periodicals prove educational with regard to the teachings of Christian Science, and carry hope, encouragement, and healing to the despondent, despairing, and sick who see them for the first time. That results of the kind indicated follow the circulation of our literature is shown by the testimonies published from time to time.

Still another thought continually present with the editors is that our publications be of good literary quality, and distinctly Christian and Scientific in tone, in order that they may appeal to people of culture and to those who are disposed, in the beginning, to look askance at the coupling of the words Christian and Science. How well this part of their work has been done must be left to the critical judgment of our readers.

All this is preliminary to our saying that if the editors have succeeded even in a degree, in preparing and selecting matter for periodicals conforming to these requirements, and the publishers have issued them in dignified and attractive form and at reasonable prices, the further responsibility for their circulation must rest with the rank and file of our church membership.

The circulation of the *Sentinel* and *Journal* is steadily increasing, and *Der Herold* has started its career with a subscription list considerably in excess of our expectations, but the opportunities for promoting a much larger circulation and wider distribution of these official periodicals are by no means exhausted, and we confidently hope for the co-operation of our readers in our efforts to double their circulation. M.

### The Retreating Foe.

WEAK warfare do we deem it, and cowardly soldiers they, who fail or falter under the fire of a retreating foe.

Nineteen centuries ago, Jesus' understanding of Truth enabled him to defeat the common enemy of mankind. At his command, discordant hosts fled the field. Not death, but life, not mourning, but rejoicing followed the bloodless victories of the Prince of Peace. The day was ours, the victory was won; but faint-hearted sentinels have mistaken the disorganized bands of a retreating foe for reinforcements, and have yielded themselves captive to the shattered allies of materiality.

One, however, brave and alert, caught anew Freedom's reveille and called men to retrieve their rightful dominion. Thousands are answering the glad summons and are valiantly striving to recover their lost estate.

Each individual life and each individual demonstration

Digitized by Google

of Truth is an epitome of this warrare for the reclamation of liberty. The way has been shown, the possibility established, it is ours to regain and to hold the field. Let us speak the word of God, the word of Life, of Love, and know that the show of resistance which would affright us is but the feeble fusillade of a defeated foe, demoralized, powerless, nothing.

The same discordant conditions of a sin-darkened consciousness, the same fear, the same doubt, the same treachery, the same resort to materiality meet us to-day that met humanity's Healer in the infant century; and to-day, as then, conscious unity with God measures our triumph over every false claim of error.

. The word of Truth is spoken; the sin that shadowed the past is vanquished. All is aglow with hope and happiness, vigor is restored, youth is renewed, and the day is ours, —but in the very midst of our overcoming, is there a return of the assault? Oh no! these are but the spiteful and random shots of the retreating foe.

Fear not! "Be sober, be vigilant." The armor of love is impervious to every shaft of malice, of envy, of despair. We are the victors. S.

## The Confusions of Human Opinion.

Two very prominent ministers in this country, representatives of the same church, but of the most conflicting philosophies, have recently taken occasion to make public reference to Christian Science in language that seems very surprising. They betray not only misapprehension of its teaching, and that commonplace prejudice which is so ill-fitting and discreditable to men of large parts and culture, but further, they evidence in the one instance a pronounced and unblushing materialism, and in the other gross inconsistency.

After commending Christian Science for "calling attention to spiritual forces," our first critic enters his protest against its declaration of the unreality of evil, and says, "An evil will, which is the only evil, is just as much a reality as a good will, and any theory which tries to put this distinction out of sight is not merely ridiculous, it is pestiferous."

This remarkable statement is made by one who subscribes to the teaching of all Christian denominations, including Christian Scientists, that God is one, that He is infinite, that He is wholly good, and that "in Him all things consist"!

It would seem hardly necessary to remind any thoughtful person, that from the "will" of such a being no evil could come, and that since He is the source of all being, no evil "will" can possibly express the being of God, whose will is good and that only. The terms are not co-ordinate, and hence an evil will cannot be "just as real" as the Good will, or the will of Infinite Good, God.

Christian Science declares that Truth is real, since it is of God, while error, all evil, is unreal because it is not of God, and here it calmly awaits the approval of every clear and unprejudiced judgment.

In the attempted refutation of the idealism of Christian Science, this writer further says,—

"The truth is, that there is a material universe, inhabited by spiritual beings, or a spiritual universe finding revelation in material forms and organisms (whichever way you choose to look at it); that we ourselves are spirits dwelling in mortal bodies and finding expression of our life through material forms and forces; that the one side of our life is just as real as the other."

In the light of Jesus' specific words, "It is the Spirit that quickeneth, the flesh profiteth nothing," and in view of the fact that the theistic idealism of the New Testament is ascendant to-day, not only in the realm of philosophy but of theology as well, this unqualified and emphatic avowal by an intelligent Christian leader that matter, the world of material sense, is "just as real" as the world of spirit, might well be added to the list of the world's wonders. It is probable that the writer used the word real to express the facts of human experience, and the seeming reality of such experiences to *material sense* Christian Science nowhere denies; but to compare the transient phenomena of our sense experience with the eternal verities of being, is to ignore a distinction which Jesus and the apostolic writers have everywhere made, and render yet more apparent the worthlessness of the assumption on which this writer has grounded his argument.

As of old, personality still presents some strange contrasts in its yoke-fellows, and our second critic administered a withering rebuke to the first when, in speaking to a body of students, he said,—

"Surely as I stand here before you to-night, I shall see ere long in these laboratories, increasing testimony to the fact that the whole philosophy of materialism, which threatened to rule in the latter part of the nineteenth century, is not only discounted but is entirely removed from the serious thought of men.

"The appearance of Christian Science may be laughable to you, but the fact is that the church put the idea of the spirituality of man out of the back window in order to accommodate the materialists of twenty-five years ago—we have had a quarter of a century of materialism in theology, all kinds of compromises arranged so that men wouldn't have to believe too much about the soul—talking about our bodies continually. And now, in at the front door, this old truth comes back. . . .

"Now, the whole future lies along the development of idealism. What force in education will hold us to the truth except the force which makes this physical universe only a symbol of that which is real. Man's spiritual nature is ultimate reality. . . . No education is thorough that doesn't make a man able to live in the thin air of a spiritual universe."

It seems to us little less inexplicable than unfortunate that one who is prompted to smite materialism so vigorously, and who espouses with such fine abandon the more spiritual concepts of idealism, should so forget the unwritten laws of Christian consideration as to speak in contemptuous terms (which we have not quoted) of a faith that not only embodies the highest idealism but which is proving the practical value and effectiveness of its spiritual philosophy by healing the sick and sinful.

"The whole future lies along the development of idealism." "Man's spiritual nature is ultimate reality." "No education is thorough that doesn't make a man able to live in the . . . fine air of a spiritual universe"!—These are the words of our brother, and they are very true and very well spoken. They convey a thought that is even better expressed in Science and Health, the text-book of Christian Science, and more careful consideration for that "eternal fitness of things," which is known as consistency, would have saved him from the grievous and uncalled-for mistake of linking a criticism of Christian Science to an apotheosis of idealism.

Christian ministers are not called on to accept or even approve the religious convictions of others, but a courteous regard for such convictions seems very much in place, and would commend their own view of the Christian life to "those that are without." W.

## Railroad Rates for the Communion Service.

We are assured that the change of date of the Communion service and annual meeting will not interfere with arrangements now being made with the railroads for reduced rates, and that the same liberal terms will be granted for the new date, June 28 to July 1, as were promised for

Digitized by Google

June 14–17. Further notice regarding rates and terms will be given as soon as the necessary arrangements are completed.

We advise those who have reserved rooms at the hotels to communicate immediately with the proprietors and thus forestall any possible misunderstanding.

It is confidently hoped and expected that this year's gathering will be the largest that we have ever had, therefore the arrangements for the convenience and comfort of visitors will be more systematic and upon a larger scale than in former years. A most hearty welcome is extended to all who will come to Boston.

## An Easter Letter.

Boston, Easter Sunday.

*Dear Mother:*—The chain which I send with this is one of several which Mr. Jewett selected and sent me to choose from for Easter, and when I saw this crimson and white one, so rich and beautiful, I immediately thought of you, and wondered if you would care for it to wear with your light summer dresses. The beads came from abroad, and I fancy may be rather uncommon.

Dear Mother, we send it with a whole heartful of love, and if you care for the chain, we shall be glad to have you accept the simple gift from us both.

May I add just one word of gratitude for your exquisite Easter poem, read to us in church this morning, and say that the love it breathed forth was, to me, the inspiration of our resurrection service of nineteen hundred and three.

Lovingly your student,
FRANCES HASTINGS JEWETT.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

## Notice to Branch Churches.

THE Clerk of the Mother Church informs us that in many instances the following notice, which appeared regularly in the *Sentinel* during February, March, and April, has failed to receive attention at the hands of those whose duty it is to forward such reports. Will the proper persons please take notice and immediately comply with this request.

"Each branch Church of Christ, Scientist, is requested to send, on or before May 1, its total membership as it stood April 1, to William B. Johnson, Clerk of the Mother Church, 30 Norway Street, Boston, Mass.

"Churches that have been organized since April 1, 1902, will please send a report of the date of organization, and the membership at that time."

## Notice.

Owing to change of date of the Communion service in accordance with the By-Laws, as amended and published in this issue of the *Sentinel*, applications for membership in the Mother Church will be received by the Clerk until June 3.

What is it, then, for Christianity to be true? When any one affirms that Christianity is true, he means, or ought to mean, that Christianity is made up of realities; that what it represents as real is real; that, in the realm of the soul, things are as it declares they are; that its affirmations accord with fact, and its experiences are experiences of reality. It is meant that Christianity sets forth the great spiritual realities as they are, and nothing but the test of genuine experiment is needed to prove it.

WILLIAM NEWTON CLARKE, D.D.

# From our Contributors.

## Unfoldment.

J. F. HILL.

NEW and deeper meanings of the words and works of Jesus, as given in the four Gospels, are constantly being unfolded as is the opening flower on my study table. There is first a plain, dry bulb, then a tiny tip of green, then the leaves are more vigorous and promising, and then I begin to see the *unfolding* of the Easter lily.

The Gospel story I have known and read for thirty years, but I have looked upon it as an historical account of the sojourn of the "Man Jesus," "Son of God," a "not as other men." I fully believed, but the record of his deeds did not seem to reach down to my own time any more than did those of Cæsar or Napoleon. That is to say, I acknowledged the Christ as Redeemer, but not as the Saviour in our every-day experiences. The only incentive for belief or trust in him was that thereby, finally, when earth for me was done, I might reach heaven.

I was never an idler in my church. I strove to do my duty and to advance the cause as I had light; but to-day as I gaze on the opening Easter lily I see that there has been an *unfolding* of my thought, a resurrection of my buried consciousness, and that henceforth the New Testament story is to be a "Living Gospel."

When I read again, "Verily, verily, I say unto you, He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," I was amazed to think that all these years I had failed to note the promise and the prophecy contained in the words "greater works than these shall he do; because I go unto my Father." I turned to the Concordance at once for a study of the works Jesus did; and it will well repay any seeker who desires the fullest light upon God's word to do likewise.

While at first I caught only glimpses of physical healing in the works, before long I began to see kindness, tenderness, and love, prompting and consummating those works. The physical works were like the green of my plant, which, when unfolded, disclosed the petals of a perfect flower.

Then the works no longer seemed the historical account of ancient days but became a spiritual realization of my at-one-ment with Christ the Saviour, as unfolded in the wonderful words, "that they all may be one, as thou, Father, art in me, and I in thee, that they also may be one in us." Being in at-one-ment with God, Good, harmony becomes the law of living; discord and evil lose their appearance of reality and become "without form and void," that is, nothingness.

Then my unfoldment brings me to a realization that the works of the Master were the products of divine Mind, and that my spiritual consciousness, made in His image, will do greater works because, following him, I go to my Father. Physical limits no longer fix the end of such deeds of love and mercy as deeds that have ceased at the cross, at least for those who depended upon the personal presence of Emanuel. Whittier seems to have caught a glimpse of the "Lo, I am with you alway," when he wrote,—

> That good physician liveth yet
> Thy friend and guide to be,
> The healer by Genessaret,
> Shall walk the rounds with thee.

I learn that so long as the believer dwells in the consciousness of the ever-presence of Love divine, so long will he find that there is no longing, but that he is fully satisfied, every hope has found fruition, and every sense of want and pain and sorrow and unrest are passed away. That "because I go to the Father," all the believers' necessities have a constant source of supply. "The indwelling presence" in our thought meets every need and the "greater

Digitized by Google

works" are ours, for we are fully and trustingly at-one with God.

This unfoldment has exalted my sense of the ideal, has stirred my aspirations, and given strength, understanding, and patience in contests which would have overwhelmed me a few months since.

But I humbly recognize, 'tis but the Easter dawn of my unfoldment, and that the Bible illumined by Science and Health will grow brighter until the noontide of that perfect day, "for we shall see Him as He is."

## Mary and Martha.

R. P. V.

THE story of Mary and Martha reveals the depth of our Master's Christ-man nature perhaps more fully than any incident in the Gospel narrative.

The two sisters received their guest in a way that marked their strong individuality.

Martha, the type of Oriental hospitality, thought first of the material needs of her guest and was "distracted about the preparations of the table," while Mary "seated herself at the feet of Jesus, listening to his discourse."

To have the audience of one who could understand his divinity was far more refreshing to him than all the delicacies of the table, and when Martha "entered hurriedly, exclaiming, 'Does it not trouble you, sir, that my sister leaves me to serve alone? Order her to come and help me,'" the Master answered, "'Martha, Martha, you are anxious and worried about many things; but one only is necessary. Mary, however, has chosen the good part, which shall not be taken away from her'" (Ferrar Fenton New Testament).

How frequently we have offended the Christ of our being, by being "cumbered about much serving," and how important it is mentally to classify the responsibilities of daily life in their order of importance, placing the spiritual first and the material second in all things.

Had Martha understood this, she would have thought first of her spiritual needs, and by paying attention to his words of wisdom and love would have afforded him a sense of spiritual entertainment infinitely more acceptable than a material meal.

The true art of service is to see another's need and supply it so naturally as to be scarcely noticed in the performance of the act.

The over-zealous housekeeper may make a guest so conscious of her preparations as frequently to cause more pain than pleasure. The science of hospitality needs to be better understood and cultivated as one of the graces of the spirit. Our capacity to entertain another's thought is in proportion to the amount that we can forget self. Mary forgot self in thinking of her Master.

Realizing that she could not afford to lose such a golden opportunity, she remained attentive to the teacher who "spake as never man spake," and "taught as one having authority."

Thus Mary set an example to her sister Martha and exemplified the genuine spirit of true hospitality.

## Love, the Conqueror.

ANNE DODGE.

WHAT is it that conquers all the ills of the flesh and, as well, all diseases of the mind? that which conquers disease, conquers also hate, revenge, envy, jealousy, malice, and "all uncharitableness," all that "worketh or maketh a lie." One little word covers the answer. One simple word with infinite meaning,—Love. Not your conception of Love nor mine, but just Love itself, reflected in the love that thinketh and speaketh no evil, that condemneth not but forgiveth all, that judgeth not but sheddeth mercy on the just and the unjust; in short, that is without hypocrisy, that does not boast of what it is, what it does, or what it gives; the love so sweet, so unselfish in its humility that it finds its gain, its reward, in another's good, another's happiness; the love that covets naught for itself but is always giving; giving itself all for others,—freely and unconditionally for others. The love that is self-abnegation, self-forgetfulness, self-sacrifice. In which there is no fear, no deception, no lie, no sin. This is the love that overcometh the world, that conquers all and lifts us into a consciousness that is blessed and divine.

To have felt this all-conquering love is to have had a foretaste of heaven. Love is the conqueror. It subdues all fear, and confers a perfect freedom. It casts out the desire to sin, and malice, hatred, envy, self-seeking, are forgotten, as we rest, with a sweet sense of security, in its "everlasting arms."

## Among the Churches.

### New Church Home in Rapid City, So. Dak.

On February 8, the society of First Church of Christ, Scientist, in Rapid City, held its first service in its own church home. Last summer, finding that there could be no permanent abiding-place without a church of our own, it was decided to purchase a small building formerly used as a Lutheran Church. Lots were secured and the building was moved, remodeled, and repaired.

The audience room is light and pleasant, with a seating capacity of about one hundred. Though small and not yet completed, it is sufficient for our present needs.

GRACE A. FRENCH, *First Reader.*

### First Church in London, England.

For many months past it has been seen that the capacity of the church building of First Church in Bryanston Street, was quite inadequate to the demands upon it. Last summer the congregation encroached on all the gangways, and, after a time, overflowed into the lobbies and down the staircases. In these circumstances it became imperative that further accommodation should be provided. The opening of the Richmond meeting relieved the Sunday services; and the hiring of Steinway Hall gave considerably greater room for those of our Wednesday meetings.

It was, however, always realized that this arrangement could only be temporary; but nowhere, perhaps, is a site more difficult to obtain than in London. The enormous value of land, as you approach the centre of the city, testifies to the keenness of the competition for its possession. The ground landlords are so opposed to the erection of churches on their property that many of them will not grant leases for such a purpose; and the estates are so jealously protected that a freehold rarely comes into the market. The possibility, in such circumstances, of a body of Christian Scientists surmounting these difficulties, was regarded as very remote by onlookers. But to those who have recognized in any measure the protection of divine Love, the words from Malachi, quoted by a church member at a meeting called to discuss the purchase of a site, speak with a depth of feeling hitherto undreamed of: "Bring ye all the tithes into the storehouse, that there may be meat in mine house, and prove me now herewith, saith the Lord of Hosts, if I will not open you the windows of heaven, and pour you out a blessing that there shall not be room enough to receive it." It was felt by every member of the church that the building to be erected should be worthy of the greatest cause in the world, that the site should be as central as possible, and that it should be a

Digitized by Google

freehold. At the moment, however, it seemed absolutely impossible that such a site could be obtained; still, as another member at the meeting already mentioned pointed out, when Jesus sent the disciples to fetch the ass and the foal of the ass, he told them to answer simply to any one who questioned them, "The Lord hath need of them, and straightway he will send them." And so, when the difficulties seemed most stupendous, the realization that the Lord's work had need of a site, brought the immediate answer; and, close to Sloane Square, near the centre of London, in a ring of great estates, a block of land was suddenly put upon the market. The site that was required was "loosed."

One of the great difficulties in making the contemplated move had been that of providing accommodation during the building of the new church. But the demonstration was complete. Occupying half the new site, is an unused Wesleyan chapel with a seating capacity of about two and a half times that of our building in Bryanston Street. The negotiations proceeded steadily and harmoniously, and on Wednesday, March 18, the Wesleyan chapel was opened as the temporary home of First Church of Christ, Scientist, in London. A week later the reading room and Sunday School were transferred to what had been the Wesleyan school in the basement of the new church, and there they will remain until the building operations render it necessary to pull down the chapel.

The new site is a rectangular piece of ground, with a frontage in Wilbraham Place and Sloane Terrace, and here it will be possible to build a church with a seating capacity of sixteen hundred, together with a reading room, Sunday School, offices, etc. The work will be proceeded with at once; and as soon as half of the new building has been erected on the unencumbered portion of the site, the services, etc., will be transferred to this, and the chapel will be pulled down.

The opening service was attended by the greatest congregation that has yet gathered in a Christian Science Church in London, and it is evident that before the new building is erected the temporary seating room will be strained to its utmost.

It is only necessary to add that in making the demonstration every worker in London has realized, to his utmost ability, the power and the protection of divine Love. Every difficulty that threatened to arrest the demonstration has vanished before the guidance of Truth, and all thankfully recognize that they have been led by an intelligence more than human.—CLEMENTINE B. DIXON, *Clerk.*

## The Welcome to Der Herold.

THE editor has received many letters of thankfulness and rejoicing for the appearing of our German publication, and he gives the Field opportunity to read some of them.

Let me add my thanks to the Publishing Society, for the production of the *Herold;* it is a perfect Godsend to those who so frequently struggle in an effort to render, in intelligent, simple German, the masterful words, in both letter and spirit, of Science and Health and our other literature.

*Der Herold* is sure to be a medium which will attract a large body of thinkers among a people where Germanic influences are so predominating. Furthermore, it enables us to bring all our Teutonic cousins in closer relationship to the thought which is fast becoming the power of the world.

*Der Herold* is offering *many* new words, *many* solutions, *many* blessings. Please accept my gratitude for this new offering; let us all do our duty to the cause.

Yours in Truth,

MAX JAGERHUBER.

New York, N. Y., April 7, 1903.

Upon receiving *Der Christian Science Herold* this morning, my heart was so full of gratitude to divine Love for meeting this need of the German people, that I wish to express it in a few lines.

I have lived in Germany and Austria for several years, and know, in part, the crying need of both nations.

I wish also to give thanks to Mrs. Eddy for her great love, manifested in watching and praying unceasingly, so that all the children of this world may be lifted out of darkness into light.

May our blindness be destroyed, so that we may see the path plainly and so be able to lead others aright. May we drink of the water of Life freely, the truths given in Science and Health, so that we can give a "cup of cold water in Christ's name" to the thirsty and the faint.

EMELIA MUELLER.

Chicago, Ill., March 30, 1903.

---

The announcement concerning an official denominational monthly in the German language has been received with great joy by the members of Erste Kirche Christi des Scientisten in Dresden, and they wish to express to the Publishing Society their deep-felt gratitude for the loving thoughts and endeavors that have brought about this fulfilment of their ardent desires. The new magazine meets a great need in this field of work, it will be the means of bringing the Truth to minds ready to receive it, but unable till now to take up the study of Christian Science.

Yours in Truth and Love,

BARONESS OLGA VON BESCHWITZ, *Clerk.*

Dresden, March 28, 1903.

---

The first number of *Der Christian Science Herold* came to us this week, and at our Wednesday evening meeting it was suggested by one of our German members that a vote of thanks be sent to our Leader, whose untiring love has made this possible, and to her faithful workers at headquarters.

The need for literature with which to feed the hungry hearts has seemed very great, but we have gone forward, knowing that He who provided manna in the wilderness and opened the Red Sea for His children is omnipotent Love, able and willing to care for and feed His own; and that she through whom Truth in all its fulness has been revealed is its revelator to all peoples. The loving faith of these dear people who have been coming to the meetings month after month, and some of them year after year, to drink in all of Truth that they could glean from the reading, has been touching beyond expression. They have accepted the fact that it is God's work, and they have but to bide His time. Those who could do so have studied English, but not all of them could do that, and now comes the light; and this first number of *Der Christian Science Herold* is rich in substance beyond all our expectations, and filled with glorious promise for the future. Ours is indeed a happy church and congregation, and expressions of thankfulness are coming from all parts of Germany. Our librarian has forwarded a number of subscriptions, and more are coming in daily.

The work is growing, new inquiries are coming in constantly for Truth, and beautiful demonstrations of the healing power are being made in our midst.

Fraternally,

FRANCES THURBER SEAL.

Berlin, Germany, April 9, 1903.

---

Difficulties are things that show what men are.

EPICTETUS.

## Testimonies of Healing.

In a recent number of the *Sentinel,* in one of the editorials, we are told to "declare the exact opposite of what the deceitful material senses testify." I would like to tell of a demonstration which was made almost instantaneously by putting this rule into practice.

My little son, five years of age, was taken with the measles. He started out to have them more severely than any child I had ever seen, and was put into the hands of a practitioner. His eyes especially were v ry much affected, being so swollen and inflamed that he could hardly see.

On the third day the health officer came to put up a sign and saw the child running around as usual. He called my attention to his eyes, and said if I did not keep him in a dark room he would always suffer with them, and cautioned me over and over again to keep the room darkened. I denied this silently as he was talking, but said nothing about Christian Science to him, and simply answered, "He will have the best of care."

After he had gone I took the child in my arms and treated him.

I then put him down and went about my work. In a little while I saw him out in the yard in the sun, and mortal mind began to talk to me. It said, "Now don't you think you are carrying this a little too far? why not at least keep him in the house;" but in Science and Health, p. 167, Mrs. Eddy says, "Only through radical reliance on Truth can Scientific healing power be realized." So I did not listen to mortal reasoning, nor yield obedience to error, but went right on with my morning's work. It was soon noontime and the children came in for their dinner. I helped them all around as usual, but when I handed little Jim his plate I suddenly realized that his eyes were in their natural condition, large and bright as ever. That same evening the entire manifestation disappeared, simply melted away like the dew before the morning sun. I well remember the tears of joy that filled my eyes as I wrote of this to my mother; it was so beautiful and so plain to me.

I cannot begin to tell of all Christian Science has done for me and mine, but I consider it the greatest blessing that ever came into my life and I feel that if this truth could be for any one class of people more than another it would certainly be for mothers. To say that I am grateful to God, grateful to Mrs. Eddy, and grateful to my teacher, but faintly expresses my feelings; for verily I owe all that I have of health, of happiness, of prosperity, to Christian Science.—M. C. W., Chicago, Ill.

---

I was first attracted to Christian Science about two years ago by the spirit of brotherly love which I saw manifested in the church, and after attending several meetings through idle curiosity, I found my curiosity developing into interest, and finally a desire to know more of divine Love which I heard talked on every side. I accordingly obtained a copy of Science and Health and began to read, and had only read a few pages when I became convinced that I had found something for which I had been longing and reaching out in a vague, indescribable way all my life. Since that time I have made the Bible and Science and Health a daily study.

In thinking over the benefits received from reading the *Sentinel* and *Journal* it is difficult to express the gratitude I feel for these valuable periodicals.

Many times in the working out of a problem, and when trying to realize God's allness, and seemingly overcome with a sense of discouragement, some clear Scientific thought, read perhaps weeks before, would stand out to my consciousness like a beacon light, clearing away the mists of error, and letting in the pure sunlight of Truth.

To the faithful workers in the field who are contributing such helpful thoughts to the noble work of Christian Science, it must be a satisfaction to know that their work is not in vain, and that every clear expression of Truth which is sent out finds its way to some responsive heart and helps in the grand and uplifting work of bringing God's kingdom on earth.

The *Quarterly* is a never-ending source of help and information in bringing out the spiritual interpretation of the Bible as given in Science and Health, and to those engaged in preparing the lessons I wish to express my gratitude for the benefits received from this branch of the work.

I believe the most acceptable thanks to Mrs. Eddy, the Founder and Leader of Christian Science, who has struggled so long for the welfare of mankind, are expressed in trying to live the truth as taught in Science and Health, and in bringing out in our daily lives the practical results of its teachings by radiating love, and helping in the destruction of error.—A. R. MacLellan, Jr., Baltimore, Md.

---

I was a miserable woman, suffering daily with headache which the best doctors could not cure. I also had organic troubles which made it impossible for me to do my work at times without terrible pain. Doctors told me that I ought to go to a hospital and undergo an operation, they said I would never be well until I did.

I was very nervous and despondent. I had been taught to read the Bible and attend church. I went to different churches, talked with ministers and other good people, investigated every religion I could hear of, but was always disappointed.

They all told me I ought to love God, and then told me that it was by His will that I suffered, and that it was right to doctor for the troubles. I could not see why, if they believed that sickness was sent by a divine God for a good purpose, they should wish or dare to call in some man to undo what God in His wisdom had done.

I read the Bible, but it seemed to contradict itself, and to tell of a God who made mistakes and corrected them in anger afterwards. At last I gave up and decided that there was no God or heaven, I was sure only of the hell here on earth. I was never satisfied and was on the verge of suicide when a neighbor asked me to go to a Christian Science meeting with her.

I went, and was impressed first by the happy and loving faces about me, and then by the way in which each one seemed to lean on the promises of the Bible and the loving Father as revealed by the life and words of Christ.

As we walked home at the close of the meeting, I asked the Reader some questions, and was satisfied by her sensible answers, that those people had found what I had been wanting all my life. I went home, and putting aside all my doubts and fears, I asked the loving Father to show me if this were the right way, and pledged myself, if I found my headaches healed, to try to understand and live for God all the rest of my life.

I was so sure that Love would make everything right, that I went to sleep happier than I had been in years. I awoke the next morning, well and strong, with the glorious assurance that my Father is Love, and that He had heard my prayer.

That was my healing five years ago, and I have had no need for drugs since. I never asked to have the other troubles healed, they simply disappeared at that first meeting.

I cannot put into words my gratitude to God. I am also most thankful to Mrs. Eddy for her pure and noble life, and to the dear ones who helped me out of the darkness of doubt and despair.

Anna I. Sperry, Sandy Hook, Conn.

Digitized by Google

Christian Science did not come to me first in the joy and peace of healing, but in the light and revelation of the Bible. The Bible was to me a new book. I can never express the glory and beauty of the word of God as revealed to me after reading Science and Health. I met with much opposition, and many tried to convince me that Christian Science was of the devil; but I knew there could be no evil in anything that helped me to understand and love my Bible.

I pressed on, and prayed for wisdom to lead me to Truth. My daily verse was: "If any of you lack wisdom, let him ask of God, that giveth to all men liberally, and upbraideth not; and it shall be given him."

Soon I had very convincing proof in a demonstration for a friend over a disease of long standing. After this I never doubted that Christian Science is the truth. Since then I have had many demonstrations, not only over sickness but over many other forms of error.

When we begin the practice of Christian Science we think sickness is the principal thing to be overcome; but as we go on we learn that we must battle with error in many forms, and we are tested where we most need testing to perfect our spiritual growth. With some, sickness is the claim which seems to be most real,—with others, a sense of lack or poverty, while to others, worldly ambition, pride, and all the *et cetera* of self. Self is the great problem, characteristics we once thought virtues, we find in the light of Christian Science to be only a false sense of self.

Jesus said: "If any man will come after me, let him deny himself, and take up his cross, and follow me." What is it to deny self? We once thought it meant to deny ourself some material pleasure or comfort. Now we see self-denial in a very different light. We know we must deny and overcome all selfhood apart from God, Good,—all that is unlike our true self, the spiritual man, made in God's image and likeness. When I think of the change Christian Science has wrought in me, my heart goes out in love and gratitude to our dear Leader, the Discoverer and Founder of Christian Science.

M. E. M., Madison, Ga.

## Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before June 3.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

## A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer,*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The annual message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus. Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

To-day the power of a Church in any community will be closely proportioned to its manifestation of brotherhood within the circle of its own membership. We make a capital mistake when we think that the preaching of the Word is the only power to win men to Christ. In a beautiful passage Peter exhorts wives to be in subjection to their own husbands, "that, even if they obey not the word, they may, without the word, be gained by the behavior of the wives." That is to say, Do not think that the Scriptures are the only means of winning men to a Christian life. They may be won "without the word." The silent, impressive influence of a Christian life may be the most effective preaching of the Gospel. And that applies to Churches as well as to individuals. A Church by its brotherliness, by its harmony, co-operation, and love, may accomplish in a community what no preaching of words can do. As a matter of fact, next to the winking at gross and palpable sin within its membership, there is nothing that will so mar the influence of a Church as a bickering, quarrelsome, unloving spirit. The community cannot hear what such a Church says, because what it does speaks so loudly. The Churches that are doing the very most to win men to Christ are just those that in a cold, selfish, and loveless world are doing something to realize the Christian ideal of fraternity, co-operation, and sympathy.

*The Watchman.*

Rev. W. H. Gould says in *The Universalist Leader*:—

"It has recently become almost commonplace to say that the secret of Christianity is to be discovered, not in a body of doctrines to be believed, but in a life to be lived. How often the remark is heard, 'It does not make much difference what one believes,' suggesting that it may be possible, somehow, to divorce conduct and character from thought and belief. On the other side, in convention and conference meeting, we often hear about the best creed and the most beautiful faith; as if the best creed or the most beautiful faith must of necessity give one a high place in the company of Christian saints.

"How good-intentioned people, acting impulsively, fitfully, uncertainly, miss the mark of permanent service and influence, just because their action lacks the control and direction of well-thought-out doctrines and clearly established principles! And how poor and mean and impotent are some intellectual ecstasies over the fatherhood of God and the brotherhood of man and the heavenly destination of all souls, just because they are testimonies of those who are seers and hearers, but not doers!"

To every Christian a resurrection time is not to be thought of as a certain day to come some time after death when he shall be raised to life in the body again but is to remember that Jesus associated the fact of a resurrection with his own existence. He said, "I am the resurrection;" he predicates it of himself; he *is* the resurrection; he will not only call to his aid some power by which he shall be enabled to call forth the dead at some future time, but he himself is now the resurrection to every believer. Such, not only shall be sure of a resurrection, but they shall virtually never die, for they live in Christ. This thought carries with it no inference that only Christians shall be resurrected, but shows how absolutely certain here and now is their resurrection to a life of joy and fulness. To prove his claim to the world, Jesus gave a demonstration of his power in life over the forces of death by restoring Lazarus from death. Where Jesus is and his life is, there is a continuous resurrection which knows no death.

*The Standard.*

Professor George Albert Coe, of Northwestern University, says in *The Christian Work*: "We are learning what Jesus meant when he said that the will to do God's will will come first, and the doctrine second. Denominationalism, from being a doctrinal squabble, has become loving emulation in good works. Putting the emphasis upon the Christly life, we come more directly to the Christ as a concrete reality that touches us here and now. The cry 'Back to Christ,' in which nearly all Christendom has joined, is bringing Christians together and is giving them a clearer, more heart-searching insight into what it is that the Master demands of us. More than ever before the significance of Christ for the daily life has come home to men; he is not merely the giver of peace, of hope, of personal security; not merely a restraint upon our impulses, but also a positive principle, the core of all that is truly progressive in our individual or collective life."

Worldliness is often spoken of as one of the causes of the present dearth of spirituality in the churches. But worldliness is rather a symptom than a cause. Paul said to Elymas, "Thy heart is not right," and that is the real trouble with the churches—or rather let us say, with the members of the churches. . . . Preaching against worldliness is like shooting blank cartridges at a mob. It may cause momentary uneasiness, but it does no execution.—*The Examiner.*

The effort to know the good gives power to be good. The moral effect of divine communings opens a whole inner world to us, so that it seems to be but a poor life that deals only with material facts. The voluntary personal relation thus established with the divine power opens a channel into our souls, through which God can radiate His love and His strength. The sun must get at the eye by the will of the eye-owner. God can expand the soul with spiritual life and beauty only as the owner of the spirit wills to establish personal relations with God. This relation established, makes us not only a child of God by our heredity, but also by our own aspirations.—*The Christian Register.*

The day is wearing away; this is a desert place; there are hungry, perishing multitudes around us, and Christ is saying to us all: "Give ye them to eat." Say not, We cannot, we have nothing to give. Go to your duty, every one, and trust yourselves to him; for he will give you all supply just as fast as you need it. Take upon you readily, have it as a law to be always doing great works—that is, works that are great to you; and this is the faith that God so clearly justifies, that your abilities will be as your works. Make large adventures. Trust God for great things. With your loaves and two fishes, He will show you a way to feed thousands.

HORACE BUSHNELL.

Rev. Charles E. Earle says in *The Examiner:* "Our most valuable friends are those who possessed with the right spirit, have different points of view from our own, and observe relations, conditions, and circumstances which we do not see. And there is no help or hope for us so long as we think we know all about a subject. Bound up in our narrow selves, bigoted and prejudiced, like clams, closing ourselves at the touch of every opposing influence, refusing light and knowledge which does not confirm our preconceived opinions, we become vain and conceited, dwarfed and contemptible, in the eyes of the just and fair-minded, the true and high-thinking."

Man's intuition is ever reaching out for something better. What he really wants is life untrammeled, unending. We do not realize it here, but the craving will not down. It was born in man when God created him a living soul. Dismayed by mortal brevity, disappointment, or sorrow, we finally declare, if God be wisdom and love there must be life beyond the earth. It is the inevitable conclusion.

*The Congregationalist.*

Recently the attempt has been made to demonstrate that the purely monotheistic religion of Israel was derived from Babylonia. On the basis of my researches, covering a period of fifteen years, I must declare that this is an absolute impossibility. The faith of the Israelites could never have had its origin in the Babylonian mountain of the gods, which is full of death and the savor of death.—H. V. HILPRECHT.

We believe that true religion speaks in actions more than in words, and manifests itself chiefly in the common temper and life, —in giving up the passions to God's authority, in inflexible uprightness and truth, in active and modest charity, in candid judgment, and in patience under trials and difficulties.—CHANNING.

We ought to be terribly afraid of being buried alive in the tomb of formalism, the white robes of profession turned into a winding sheet of cold and respectable decay.

REV. C. A. BARBOUR.

Renan says that religion is the everlasting protest of the soul against those mean and sordid desires which forever strive to kill the higher spiritual faculties of man.

If we could read the secret history of our enemies, we would find in each man's life sorrow and suffering enough to disarm all hostilities.—LONGFELLOW.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The ceremony which presented to the world the Louisiana Purchase Exposition at St. Louis was performed April 30, with the dignity and splendor befitting such an occasion. There was a parade of eleven thousand soldiers down Lindell Boulevard to the Exposition Grounds. Sixty thousand people crowded into the big auditorium of the Liberal Arts Building to hear the dedication addresses by President Roosevelt and ex-President Cleveland. There were present besides the President and ex-President, an imposing company of diplomats, Governors, Senators, Congressional Representatives, Government officials, and representatives of the Exposition. The day was the centennial anniversary of the signing of the treaty which transferred the Louisiana Purchase from France to the United States.

The War Department has made public that portion of the report of General Miles which refers to the misconduct of officers and soldiers in the Philippines. The Secretary of War has regarded the report as confidential; but receiving requests for it, and finding that General Miles was willing that it should be made public, he has accordingly given it out.

"As the result of my observations it is my judgment," says General Miles in his report on the Philippines, "that the discontinuance of the liquor feature of the canteen has been beneficial to the army. Now that the temptation has been removed from the immediate presence of the young men of the army, they are less likely to indulge in the use of liquor."

**Foreign.**

Russia has failed to withdraw from Manchuria at the stipulated time agreed to in the treaty with China. And she is now reported to have made certain demands of China relative to Manchuria which, if true, are in contravention of solemn treaty obligations and abrogate the principles of the "open door," territorial divisions, and international comity.

It is reported that China has refused to grant the demands of Russia. It is said, however, that the Board of Foreign Affairs has consented to the retention by Russia of seven million dollars now in the Russo-Chinese Bank as indemnity for the maintenance and repairs of the Shanhaikwan New-Chang Railroad during Russian occupation. Russia gives assurance that her course in the affair is only to safeguard her interests, forestall possible "Boxer" troubles, to maintain the principle of the "open door" policy, to respect the integrity of the Empire. Russia is strongly intrenched in the province and her influence and interests are paramount. It seems to be a foregone conclusion that while Russia may compromise in her demands, her hold in the territory will remain firm.

King Edward arrived at Rome from Naples April 27, and was received at the station most cordially by King Victor Emmanuel in person. The city had been elaborately decorated under the direction of Signor Bifarello, the sculptor, and Signor Matalome, the painter. Great crowds filled the streets and British and American flags were displayed in great numbers. When King Edward had entered the Quirinal Palace, the fifty thousand people who packed the plaza below acclaimed his Majesty enthusiastically until he was obliged to appear twice on the balcony. The next day he visited the Pantheon and placed decorations on several tombs. On the 29th he had an audience for twenty minutes with Pope Leo. Later in the week he visited President Loubet at Paris where he received a very cordial reception from the people and press.

The Royal Academy, London, this year exhibits 788 paintings in oil, 517 in water-color and miniatures, and 186 in sculptures, etc. Over fifteen thousand were rejected. The average merit of the pictures is higher than that of 1902. The good, sound work by women artists is notable.

At the Royal Academy, Berlin, there are on exhibition eighty paintings by American artists. At the request of Emperor William an American section was formed, although other nations are represented only by works by individuals instead of national groupings.

The Old Salon, Paris, which is also open now shows a great invasion of English and American art.

The Paris *Temps* has published the full text of an elaborate and sensational scheme for the separation of Church and State, signed by twenty-one Radical Socialist and twenty Socialist supporters of the Government, including MM. Millerand and Jaurès. The bill has been drawn by M. Pressense, who expresses the conviction that in the course of the existence of the present Legislature or after the next general election, Republican France will declare her will to see the reform carried out.

The reconstruction of the famous Campanile of St. Mark, which fell to the ground July 14, 1902, after standing for over a thousand years, was commenced April 25, by the laying of the foundation-stone by the Count of Turin, representing King Victor Emmanuel. The picturesque ceremony was attended by the ministers, a number of prelates, and by the civil and military authorities. An enormous crowd of people was present.

**Industrial and Commercial.**

A locomotive that marks a striking departure from the standard English pattern has just been built after designs by the chief mechanical engineer of the Great Eastern Railway to handle the heavy suburban traffic centering around Liverpool and Fenchurch Streets, London. The engines hitherto used have been capable of attaining a speed of only twenty miles an hour in thirty seconds from a standstill with a train of fifteen cars weighing two hundred and twenty-five tons. The new "decapod" is expected to draw a fifty per cent heavier load and attain a speed of thirty miles an hour in thirty seconds with a train carrying twelve hundred people. The engine is carried on ten wheels all of which are coupled.

Representatives of the United States Steel Corporation are said to be purchasing options on lands on the Birmingham Mineral Railroad, between Boyles and Mount Prinson, in Jefferson County, Alabama. It is also said that the corporation will expend something like ten million dollars in the erection of furnaces, coke ovens, steel mills, and a steel rail mill in Alabama, besides opening coal mines, ore mines, and rock quarries.

The largest coal land sale ever made in Washington County, Penn., and the most extensive in western Pennsylvania for several years, has just been consummated there by the purchase from farmers of seven thousand acres of the Pittsburg vein of coal, lying in West Bethel and Amwell townships, by Pittsburg, New York, Cleveland, and Philadelphia capitalists for about seven hundred thousand dollars.

A number of gentlemen around Waco, Texas, are experimenting with Peruvian cotton. The cotton in Peru grows to be a regular tree nearly twenty feet in height, and has to be planted only once in twenty years. The seed has been planted in bottom lands, uplands, postoak ground, sandy soil, and the black waxy, and results will be awaited with interest.

The New York and New England Steamship Company, with an authorized capital of $3,000,000, has been incorporated in New Jersey. The company is to build and operate steamships.

**General.**

The largest and most powerful express engine now in existence has just been built for the Chicago and Alton Railway by the Baldwin Locomotive Works from special designs. These new engines are designed for the heavy passenger trains that will be run by that road during the St. Louis Exposition, and are capable of hauling a train of twelve coaches weighing with passengers and baggage 675 tons 110½ miles in 2 hours and 24 minutes of actual running time, an average of 46 miles per hour. The total weight of engine and tender is 187 tons.

The Hancock Tavern, Boston, an old landmark, is being torn down. This tavern was first opened in 1634 by Samuel Cole, ninth charter member of the Ancient and Honorable Artillery Company, and Captain Wadsworth, who has just closed the tavern, is also a member of the same ancient command. The tavern was remodelled in 1780. One little room in the house, with crude paintings of the Boston Tea Party on its plaster walls, is said to have been the scene of the first meeting of those who took part in that famous raid.

It is reported that vast coal fields in central Illinois are to pass to the control of a corporation with a capital of $80,000,000, and that they will be operated in connection with the Hill system of railroads. The president of the Great Northern Railway Company is said to have financed the scheme, and the Burlington and Great Northern and the Northern Pacific railroads will open markets for Illinois fuel in the Northwest. The territory acquired by the combination extends through forty miles of the richest coal lands in the State.

P. A. B. Widener the well-known collector, has offered to give to the city of Philadelphia his entire art collection provided an art museum is erected at the Green Street entrance to Fairmount Park. Mr. Widener says that the collection of Mr. and Mrs. W. T. Wilstach will be added to his. The proposal has been submitted to the mayor, and it is probable that it will be accepted. Mr. Widener's collection is one of the most important private collections in the country.

Teams representing Vassar and Wellesley met at the College Chapel at Vassar April 25 to debate the question, "Resolved, That, economically, it is not advantageous to the United States to possess territory in the tropics." Vassar upheld the affirmative and was given the decision by the committee.

## Selected Articles.

### Legislation in Colorado.

W. W. BOOTH.

THE omnipotence of Truth, and the impotence of error, have again been very clearly illustrated by the action of Governor Peabody of Colorado, in vetoing the "Sanford Medical Bill," recently passed by the legislature.

The authors of the bill disclaimed any intention of restricting the practice of Christian Science, and even allowed an amendment to be adopted in the Senate, as follows: "Nothing in this act, however, shall be construed to prohibit the practice of the religious tenets of any church whatsoever," but at a very late hour in the session, and through a misunderstanding of the conditions governing the practice of Christian Science, the following amendment was added, and it was found impossible to have it eliminated. "But in no case shall such person [who is practising the religious tenets of any church] practise in contagious or infectious diseases recognized as dangerous to the public health, subject to quarantine regulations, unless they have passed the examinations required by this act."

In view of the fact that so-called contagious diseases do not at once develop, and the best physicians do not agree in their diagnosis, this amendment was recognized as one of the most subtle and dangerous that could be devised, as under its provisions a Christian Scientist who administered a treatment to a member of his own family for a severe cold, could be imprisoned if diphtheria should later develop.

The official acts of Governor Peabody have shown him to be absolutely fearless in carrying out his conception of right and justice, and no fear was entertained but that, when his attention was called to some of the objections to the bill, he would withhold his approval.

A committee of Christian Scientists and others, including prominent business men from Denver and other parts of the state, waited on the Governor by appointment, and were given the most respectful attention while they were severally presenting different phases of the question, especial attention being called to Sect. 4, Art. 2, of the constitution of Colorado which reads as follows: "That the free exercise and enjoyment of religious profession and worship, without discrimination, shall forever hereafter be guaranteed." It was pointed out that Christian Scientists in giving a treatment do nothing but "exercise" their "religious profession."

The position was also greatly strengthened by a decision of the Supreme Court of New York, March 26, 1903, which may be found in 56 Central Law Journal, p. 261, case Pierson *v.* People, in which the following language was used: "What right has the state to tell a man to call in a physician of a certain recognized and licensed school when he, or one of his family, is sick, any more than to demand of him, under more serious conditions of health, that he should receive the comforts of religion from certain recognized churchmen. If either were justified, the latter would have better reasons supporting it, to the extent, at least, that the soul is greater in importance than the body. Says the Holy Writ, 'What shall it profit a man if he gain the whole world, and lose his own soul?' but the fact should be very evident that under neither of these conditions has the state any right to interfere."

The committee received from the Governor promise of careful consideration of the facts presented, and on April 15 in a brief but very clear statement of his objections to the bill, in which the rights of Christian Scientists were distinctly referred to, he sent his veto to the Secretary of State, thereby putting himself on record as being in favor of freedom and progress, and against class restriction.

The veto message is as follows:—

HOUSE BILL NO. 83.

A careful consideration of the bill aforesaid meets with the conclusion that many of its provisions are unjust and oppressive, and that its general effect would be to curtail rather than to expand the means applied to the alleviation of the ills human flesh is heir to.

Reliable statistics show that the death rate in Colorado is as low as it has ever been since the enactment of the law, twenty-two years ago, which the proposed law is intended to amend, and that in other states having laws similar to the proposed law, no appreciable diminution in the death rate is felt through the enactment of such laws; which leads to the conclusion that such legislation as here proposed, does not have any material effect upon the public health.

Guided by the late experience of similar legislation in other states, the conclusion is irresistible, that all such legislation has a tendency to restrict the citizen in the employment of whomsoever he pleases in the treatment of his diseases, and it also has a tendency to build up, under the protection of the state, a trust or combination of certain schools of medicine, to the exclusion of all others equally meritorious.

However, the proposed law provides that only holders of diplomas issued by "chartered medical schools of the standard recognized by the State Board of Medical Examiners," shall be entitled to certificate, unless they pass an examination, "by the Board, according to the method deemed by it the most practical and expeditious to test the applicants' qualifications to practise medicine," and then only in the event, "that he shall make the general average fixed by said Board."

In my judgment, this invests the Board with powers which might, and probably would, become autocratic and oppressive.

The principal objection to the bill lies in the fact, that in the treatment of contagious and infectious diseases, recognized as dangerous to the public health, the practice of religious tenets shall not be indulged in, which is clearly contrary to our Bill of Rights.

It is only with the lapse of time that our most able practitioners diagnose many cases of contagious and infectious diseases, yet under this bill, a single administration of Christian, Divine, or kindred sciences is a criminal act and subjects the practitioner to the penalty imposed.

There is no demand upon the part of the public for this class of legislation, and while I have been urged by many eminent physicians to approve this bill, others, equally

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

eminent and quite as numerous, have urged me to withhold my approval.

Believing as I do, that the existing legislation is ample and sufficient to meet the requirements of the public health and regulate the practice of medicine in this state, and for the reasons above stated, I return this bill to the Secretary of State without executive approval.

April 15, 1903. JAMES H. PEABODY.

## Theory and Practice.

IN order to cure disease and sin, it is necessary to delve to the root of the matters and eradicate their fundamental cause.

In the healing of sickness or sin there takes place such a spiritual uplifting that one feels and knows that only the power of God has wrought the marvelous change in him. A newer and clearer presentation of God comes to his consciousness. His motives, purposes, and affections change, and so his life is improved. He becomes a better man, better father, better son, or a better neighbor.

The healing by Christian Science of the sick and sinful is one act, one metaphysical process. Both sin and sickness have the same cause and both have one cure as Jesus distinctly taught.

As the theory always precedes the practice, Christian Scientists are endeavoring most earnestly to attain the standard to which Jesus referred when he said: "be ye perfect." Nevertheless they do not claim that they have as yet succeeded in accomplishing all that their system is capable of.

The example of Jesus and his disciples in their grand work of uplifting the human race, is our method. We follow him and pray as he did to the one God. When he raised Lazarus he offered acknowledgment and gratitude to the Father, saying: "Father, I thank thee that thou hast heard me. And I knew that thou hearest me always." When they brought the little children to him it was that "he should put his hands on them, and pray." He said to Peter: "I have prayed for thee, that thy faith fail not," and again, he taught his disciples to pray, "Our Father which art in heaven," showing that our prayer must always be directed to God, the giver of every good and perfect gift. The prayer of the Christian Scientists is the prayer of thankfulness, acknowledgment, trust, and understanding. There is no wrestling or struggle to convince God that He ought to do our will. It is the constant, steadfast reliance in Him, knowing that He is God, Good. Since He is good and infinite, nothing but good can come from Him. He created all. Error,—or sin, sickness, and death,—not being good He did not create, so they were not created and are not creations at all, therefore Christian Science denominates these unreal, or having no real creation or existence.

The world objects to this estimate of sin and sickness, which denominates them unreal. Why should one make something out of sin? The reverse is what we are aiming to do, to make sin nothing. The sinner follows the pleasures of sin because he believes there is something in it for him. When it comes to his consciousness that there is no (real) pleasure in sin, then he ceases to follow what has nothing in it for him. The proof that this process is the natural and right one is that so many who had been sinful and slaves to drink and tobacco have been cured by Christian Science.

The material man, the carnal mind, as Paul calls him, the one that Jesus speaks of when he says, "the flesh profiteth nothing," is a misconception of what the real man is. Through Christian Science we are aided in putting off the old man, the material man, and putting on the new or the spiritual man. As the material conception of things is given up one grows more spiritual and that spiritual condition is the aim of Christian Science.

The tree is known by its fruit, and Christian Scientists are therefore willing to abide by Jesus' test. The good effect of Christian Science on the lives of men, women, and children is now generally acknowledged. Good results can only come from a good source, whereas those who oppose Christian Science take the contrary view, that good lives and good results can be produced by wrong and erroneous doctrines, which is entirely untrue. Here the Christian Scientist leaves the case. As Paul said, "the Spirit itself beareth witness with our spirit, that we are the children of God," and therefore he feels very secure and confident that he is on the right road and has the help of the divine Power, when he can reform lives and heal the sick, as Jesus and the apostles did. God is not a being after the nature of men subject to hate, wrath, or vengeance, but He is infinite Being, not after any human conception. He is personal in being, infinite and omnipresent. Since He is Love He can only benefit, not injure His creation. Christian Scientists therefore approach Him in the spirit of humility, knowing that His nature is not swayed by likes or dislikes, but that when we approach Him in the proper spirit, the blessings are showered down on us.

JOHN E. PLAYTER.

## True Science.

As God is Creator of all things, the only First Cause, He must therefore be the Principle of all sciences—all true knowledge. A comprehensive understanding of God includes a true knowledge of the mode and constituency of His creation; for among the things to know about God are what and how He creates.

After one has acquired a correct understanding of creation and its Principle or Creator, the next step is to measure what has thus been ascertained concerning cause and effect with visible phenomena in general, and thereby determine between fact and fiction.

We all agree that a thing is not true or real simply because it so appears. The value or authenticity of a given claim must be determined by comparing it with fundamental ideas of Truth, God, which have already been accepted and proved, and nothing can be safely adopted as being true which is not in accord with infinite Intelligence and His ideas. Since the so-called natural sciences purpose to declare facts concerning the universe, including a correct description of its elements, motions, forces, etc., they must teach in strict accord with Spirit, the Principle of all existence, otherwise, they cannot be considered scientific. Human phenomena, as perceived and comprehended through the five personal senses, seem to conflict with Jesus' teaching in respect to the nature and constituency of the universe. The question is, Which aspect is true? Paul said, "Yea, let God be true, but every man a liar."

If we fail to harmonize our peculiar views of Christianity with the teaching of the so-called scientific schools, we should note that our peculiar views of Christianity, or of science, or of both are faulty. The lack of ability on the part of scientific men to reach a point of agreement, the multiplicity of theories in respect to cause and effect, should indicate that human speculation, which has already been going on for thousands of years, will never arrive at primitive truth. Jesus' lack of respect for human phenomena, that which he named "the flesh" and which we call matter, is clearly set forth in his declaration, "It is the Spirit that quickeneth; the flesh profiteth nothing." His declaration that flesh or matter is altogether unprofitable, taken in connection with his teaching that Spirit alone animates, is equivalent to the statement of Christian Science, "There is no life, truth, intelligence, or substance in matter." Divine

Digitized by Google

Mind is the only real substance. While the universe, and all things in creation, from the least to the greatest, are real, they have no inherent life, substance, or intelligence except as they reflect the Creator.

In attributing all things to God, both good and bad, instead of holding faithfully to the Scriptural teaching concerning God's creation, "And, behold, it was very good," we have very wrongly estimated the character of Deity.

We have accepted the material claim that God's creation is subject to all sorts of chances and changes, and the natural inference is that the Creator must be changeable. In this manner we lose sight of the immutability of God and ascribe to Him all human frailty, when we should start with the understanding that God is unchanging, eternal, perfect Being, that His creation is after His kind and therefore unchanging, eternal, and perfect. Then we would be able rightly to estimate that which is not Godlike. We would cease to give it life, substance and intelligence, power and place, and would understand the meaning of the Scriptural statement, "God is all in all." ALFRED FARLOW.

## Fear and Disease.

THE following, published in *Health* and written by G. F. Meachen, M.D., is full of significance to all who will study and profit thereby.

"Fear causes more diseases than do microbes, more deaths than famine, more failures than panics; it costs more than war, is always a failure, and is never necessary. Fear weakens the heart's action, induces congestion, invites indigestion, produces poison through decomposing foods and is thus the mother of auto-poisoning, which either directly causes or greatly aids in the production of quite ninety per cent of all our diseases."

Heartily concurring in the above opinion from this eminent physician, and congratulating the world on the fact that its doctors are awakening to the truth that largely our troubles are mental, I offer a few comments and suggest a remedy, which the doctor failed to do.

In this remarkable statement, we find that fear "is never necessary." To think of a something with so much power as is here given to fear, and at the same time to be told that it is never necessary, must awaken in the thinking mind a state of wonder and speculation as to how to rid oneself of such an incubus, if it is "never necessary." The doctor did not tell us how to make it powerless, or how to stop its poisonous effects and destructive forces. When we turn to the book, whose leaves are for the healing of the nations, we find an antidote for the auto-poison (self-poison) through fear. Jesus said of those who believed, "In my name [name here signifying spirit] shall they cast out devils [evils]," and heal the sick. Again, "If they drink any deadly thing, it shall not hurt them." The process of drinking carries into the stomach the poison that produces fermentation or decomposing conditions which are destructive to physical life; this Jesus said should not hurt you if you relied on Spirit—God—as your antidote. Fear, acting through the human mind, we are told, produces just the same condition in the stomach, "induces congestion, invites indigestion, produces poison through decomposing foods, and is thus the mother of auto-poisoning." If this be true, then this self-poisoning, or mental suicide, is produced by erroneous thinking, or fear.

Our remedy for this and all other troubles, lies in having, as Paul says, the "Christ-Mind." Through faith (which is mental) we are able to understand (which is also mental) that "God is Love" or Mind, and that "perfect love casteth out fear." If cast out of mind it has no place or presence wherein to produce "decomposing conditions," and its deleterious effects being thus destroyed, it is nothing, therefore unreal. Paul gave Timothy a specific which if declared and realized many times each day, would eventually sap the foundations of fear. "God hath not given us the spirit of fear; but of power, and of love, and of a sound mind."

If God did not give us fear, then whence did it come? From the carnal mind (the human sense) which Paul says is enmity to God. Then we have a right to enter our protest against any suggestion of fear and say to it (because we are told by Dr. Meachen that it is not necessary) what the Founder of Christian Science, Rev. Mary Baker G. Eddy, teaches in all her writings, and especially in "Retrospection and Introspection," page 84,—

"Science saith to Fear: 'You are the cause of all sickness; but you are a self-constituted falsity,—you are darkness, nothingness. You are without "hope and without God in the world." You do not exist, and have no right to exist, for "perfect love casteth out fear."'

"God is everywhere, 'there is no speech nor language, where his voice is not heard;' and this voice is Truth that destroys error, and Love that casts out fear.

"Christian Science reveals the fact, that if suffering exists it is in the mortal mind only, for matter has no sensation and cannot suffer."

It is a belief in the reality of disease, produced by conscious and unconscious fear, that has mesmerized the world. Let the world by a supreme effort, grasp the reality of God's power and presence as the only power and presence, and hold to it steadfastly through faith and prayer, and this deadly monster, fear, will be cast out and destroyed, then diseases, microbes, famines, failures, panics, and even death will be numbered with things that were. Christ Jesus through his immaculate conception, his life, and his glorious resurrection having overcome them all, has made it possible that we as heirs and joint-heirs with him of eternal life can overcome all obstructions and hindrances that stand between us and our perfection in and through him.

## "First the Blade, then the Ear."

CHRISTIANITY, or the new birth, must be a matter of spiritual development and growth. The Christian era began with the birth of the Bethlehem babe at the very moment that the guiding star of the east poised over the lowly manger in Bethlehem, but the first notable sign of divine power appeared through Jesus when he had reached the age of twelve, when he confounded the wise men by his phenomenal understanding of the Scriptures, and not again until he had reached the age of thirty, when he started out on his grand and most holy mission of healing the broken-hearted, of preaching deliverance to the captives and recovering of sight to the blind, and to set at liberty them that are bruised, thus setting the example for his students whom he called early in his public career; and we find that his own works increased in magnitude during the following three years, until he reached the mighty demonstration in conquering the world, the flesh, and the devil, and finally destroying the last enemy—death.

In the language of Mrs. Eddy, "Nothing aside from the spiritualization—yea, the highest Christianization—of thought and desire, can give the true perception of God and Divine Science, that results in health, happiness, and holiness. The new birth is not the work of a moment. It begins with moments, and goes on with years; moments of surrender to God, of childlike trust and joyful adoption of good; moments of self-abnegation, self-consecration, heaven-born hope, and spiritual love" (Miscellaneous Writings, p. 15).

Digitized by Google

Christian Science is even to-day only in its infancy, and is making no claims for itself other than its actual demonstrations; but is holding steadfastly to the faith that ultimately the practical Christ will be revealed to all mankind, and the brotherhood of man, and the Kingdom of God will be established upon earth as it is in heaven.

## The Dwarfed Trees of Japan.

THE Japanese do many interesting and beautiful things with their hands, and one of their most interesting arts is the dwarfing of trees and plants. The method of doing this was a secret for centuries, but it is now known that it is done by a skilful and long course of pruning and regulation of nutrition. The *Revue Scientifique* says it is well known that the art of dwarfing the largest trees is part of the education of the Japanese upper classes—that it has its schools and celebrities. Young persons of fortune devote to it the time that our young women give to the piano, which shows a comprehension of the things of the artistic life quite different from ours. For the Japanese, in fact, the garden is the outside parlor; the parlor, the inside garden.

The skill of their gardeners consists not in making beautiful flowers simply grow and flourish. Their ambition is greater; trees grown in pots should recall by their appearance those that grow on the mountain-sides, on the edges of ravines, and, while remaining small, their majestic forms and original outlines must be preserved. The cultivation of these trees is a work both of time and patience. This dwarfing or, to speak more exactly, this atrophy of plants is the result of physiological causes which are themselves the consequence either of the processes of culture employed or of the environment of the plants. We must take account of these two influences at once in the formation of the lilliputian trees of Japan, for the Japanese climate plays a preponderant part in predisposing vegetation to remain dwarfed. Great altitude, dry heat, persistent cold, insufficiency of nourishment, cramping of the roots, lack of food in the youth of the plants, winds that bend or break the stem—these are some of the elements that determine the arrest of development of the plants that every one has observed in excursions to the mountains, among the rocks of the coast, and in arid places in general. "A conifer whose top is cut off is arrested for a time; if this operation is performed anew every time the tree begins to recover, the time of arrest will become longer and longer, and the tree will remain knotty, deformed, and dwarfed."

All the cultural operations, whether on the subject or on its nourishment—such as continued trimming, twisting, and turning of the branches, transplanting to small pots, cutting away roots—that can paralyze the vital functions, obstruct the circulation of the sap, or lessen nutrition, will provoke a stoppage of growth, showing their effects in a very noticeable reduction in height and sometimes in deformation of the plant, and thus prepare it for dwarfing. This would be merely a matter of time and perseverance, if the Japanese did not also use æsthetic feeling and a certain art in the making of their pygmy trees. The same subjects, though less dwarfed in their branches, may be met at each step on mountain-sides, in the fissures of rocks, and in all situations where plants struggle for existence against the elements. The processes employed by the Japanese are thus not so unnatural as some have affirmed.

The conifers are the plants that are chosen preferably for the formation of these pygmies; besides these, the oak, the plum, the bamboo, and the cherry trees are species that take kindly to dwarfing.—*The Springfield Republican.*

## The Lectures.

### At Kewanee, Ill.

In the Opera House last night [April 17] before a large audience, Judge Septimus J. Hanna delivered a lecture upon Christian Science. Judge Hanna was introduced by Mrs. S. E. Bone.—*Kewanee Star-Courier.*

### At Ithaca N. Y.

A representative audience of more than five hundred persons listened to the lecture of Judge William G. Ewing on Christian Science at the Lyceum last evening [April 20]. His hearers gave marked attention throughout the discourse, and that he is an orator goes without saying.

The Rev. C. W. Heizer of the First Unitarian Church, introduced Judge Ewing.—*Ithaca News.*

### At Taylorville, Ill.

Judge William G. Ewing's lecture on Christian Science Sunday afternoon [April 12] at the Opera House drew out a large and cultured audience. The speaker was introduced to his audience by Senator J. N. C. Shumway in a very appropriate little speech, and from the time the distinguished visitor began speaking until he closed he was given the closest attention by his surprised and delighted hearers. If he made no converts to his belief, he left a very favorable impression, and the thanks of those who heard him are certainly due to the little band of Christian Scientists here for an hour and a half of keen intellectual enjoyment and moral uplifting.

His manner of attacking and disarming prejudice at the outset of his lecture was superb, and possibly without a single exception his hearers recognized the justness of his remarks and liked him all the better for making them. It was a decided victory for his earnest, persuasive manner of speaking.

There was a large number of Christian Scientists here to attend the lecture from Springfield, Mattoon, Decatur, Harvel, Pana, and Tower Hill.—*The Daily Courier.*

### At Milwaukee, Wis.

The Pabst Theatre was crowded Thursday night, April 9, by an intelligent audience that listened with great attention to an exposition of Christian Science by Carol Norton of New York City. The lecture was under the auspices of Third Church of Christ, Scientist.

Mr. Norton is a very pleasant speaker, and, although he talked for nearly an hour and a half, commanded the strict attention of his hearers throughout. In the course of his remarks he paid an earnest tribute to Mrs. Eddy, denominating her the greatest religious reformer of the century. Mr. Norton was introduced by Mrs. Katherine Bangs, C.S.B., of Sheboygan, Wis., who said in part:—

*Ladies and Gentlemen, Friends:*—In the name of Third Church of Christ, Scientist, of this goodly city, we welcome you here to listen with us to an intelligent and authoritative exposition of Christian Science: a theme which is attracting the attention of the thinkers of the world.

Job said, "Acquaint now thyself with Him, and be at peace: thereby good shall come unto thee." Christian Science teaches us how to find this peace and how to obtain this good.

As representative thinkers, and students of God and Man, you are invited to this feast of scientific thought, or fundamental truth, and we bespeak for the lecturer your most thoughtful and considerate attention.

Our speaker is a member of the Board of Lectureship of the Mother Church in Boston, Mass., and comes fully

Digitized by Google

equipped to expound the message to humanity, given by our beloved Leader, Mary Baker G. Eddy.

This noble woman, grand in her God-given courage and endurance, has labored over thirty years to establish the scientific way by which we may understand and obey the Master's command: "Ye shall know the truth, and the truth shall make you free," which enables us to escape much of the suffering and despair resulting from the old ways of thinking, and for this labor of love, we naturally respond in love.

Every new system of thought coming to the world, through the one made ready for the discovery, bears its own kind of fruit; and we judge it by its fruits. If the fruits are evil, we refuse to accept, but if the fruits are good, we accept with thankful appreciation.

It is with great pleasure that I present to you Mr. Carol Norton, C.S.D., of New York City; who will now address you.—*The Wisconsin.*

---

### At Olean, N. Y.

The address given at the Opera House last evening [April 17] by Judge William G. Ewing of Chicago was listened to by an audience that filled the lower part of the house and overflowed into the gallery. There were many delegations of Christian Scientists and their friends from Bradford, Cuba, Portville, Salamanca, Wellsville, Friendship and other surrounding towns, and every one present felt well repaid for attending. Judge Ewing's subject was Christian Science. The address was one that could not but be of interest to all, and furnished food for thought to many who have given the subject of Christian Science but little attention. The members of First Church of Christ, Scientist, under whose auspices the address was given, are to be congratulated upon having given the people of Olean an opportunity to listen to such an excellent speaker as Judge Ewing proved himself to be. He was introduced by Rev. V. P. Mather of the Congregational Church as follows:—

*Friends, Ladies and Gentlemen:*—We are assembled this evening to listen to a lecture on Christian Science, under the auspices of First Church of Christ, Scientist, of this city. Contrasting the present with the past ages, that person is asleep who does not feel that the last fifty years are the most golden of them all. Considering the revelations in natural science, art, and invention, especially in the sphere of electricity, how Almighty God has whispered His secrets to men like Edison, until we are driven by this unseen power through city and country, and talk by it through telephony and wireless telegraphy, ought we not to have expected that the One Cause of all would have revealed unto us correspondingly as great secrets in the spiritual realm? I believe all thinking and reading men and women will concede that never were the stagnant pools of morals and religion so thoroughly stirred as to-day. Men and women, under whatever belief, are "feeling after God." A few years ago a woman announced to the world a revelation, or new conception of truth. We said, Never mind her; it is natural for women to have revelations. Soon other women professed discipleship. We said, It may be a few nervous women and hysterics are being helped, and that is all good. A little later we found that Christian Science had entered the best of our homes, and many of the most intellectual and revered men and women were believing in this, to us, strange teaching. Though it brought naught but blessings and healings of soul and body, we said from pulpit and press, This thing should at least be impeded. In vain our efforts! A little later we found in congress halls and throughout this entire country that Christian Science had claimed for her advocates, believers, and defenders many from the legal profession, but before we could recover from this she had called as her exponents some of the most able judges and jurists in this country, until now she numbers her adherents by the thousands,—taken from the bench and the pulpit, from the rich and the poor, from the high and the low, from all occupations and professions, until there is scarcely a country place or hamlet so small but may not have one or more Christian Scientists to represent it. When Christian Science insisted upon teaching a redeemed body, with a redeemed soul, we said to her, You can have only our chronics and incurables; as for our milder ailments,—sour stomachs and headaches,—our *materia medica* can manage these. And to a great extent, the healthy, happy looking Christian Science audiences of to-day have been builded up out of the chronics and incurables. The time has come when an audience like this comes together as truth-seekers—for "truth [love] never faileth," "Those love truth best, who to themselves are true, and what they dare to dream, dare to do." We have with us this evening an eminent judge and jurist, honored as such; also highly esteemed as a man of culture and refinement in all the walks of life—now a believer in, and exponent of, Christian Science. He comes to us from a little town in Illinois on lake Michigan —some of you may have heard of it—Chicago, and, as far as I can determine, clothed and in his right mind. I now have the pleasure of introducing to you Judge William G. Ewing of Chicago, who will address you upon the subject of Christian Science.—*Olean Times.*

---

### At Peoria, Ill.

At the Grand Opera House yesterday afternoon [April 12] Carol Norton of New York delivered a lecture on "The Meaning of Christian Science" before one of the largest audiences which has ever gathered to listen to a discourse of a similar nature in the city of Peoria. The lecture drew many from the neighboring towns of Canton, Chenoa, Eureka, Havana, and Monmouth. Mr. Norton was introduced to the audience by R. O. Campbell, who spoke as follows:—

This lecture is to be given in order briefly to define the meaning of Christian Science; to throw additional light upon a subject little understood. For centuries men have sought a religion sufficiently plain to human comprehension for its practice to restore to the world the primitive Christianity. It is recorded of Jesus in the first verse of the tenth chapter of Matthew that, "When he had called unto him his twelve disciples, he gave them power against unclean spirits, to cast them out, and to heal all manner of sickness and all manner of disease." We who are Christian Scientists believe that we have such a religion, and the sincerity of our belief is manifest in our having invited you, who are not of our faith, to listen to an exposition of Christian Science. We also believe that every good deed performed since the beginning of the Christian era has been a factor in making our religion a possibility, and we honor every advocate of thought that leads out of darkness and chaos into light and order. We supremely reverence our Saviour and Exemplar, whose resurrection the world to-day commemorates, who proved for all time the indestructible, eternal character of life.—*Peoria Herald-Transcript.*

---

What within us is good invites the good in our brother, —generosity begets generosity; love wins love; peace secures peace: while all within us that is bad challenges the bad in our brother,—distrust engenders distrust; hate provokes hate; war arouses war. Life is full of illustrations of this beautiful law.—CHARLES SUMNER.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Class Legislation Vetoed.

We are pleased to report in this issue of the *Sentinel* the defeat of another attempt at class legislation, having for its purpose he prohibition of the practice of Christian Science.

Governor Peabody of Colorado, in vetoing the "Sanford Medical Bill,' made use of the following language: "There is no demand upon the part of the public for this class of legislation." These are not the words of a partisan but the deliberate utterance of a public official charged with a great responsibility, one who is in a position to know whereof he speaks. "There is no demand upon the part of the public for this class of legislation," has long been asserted by Christian Scientists. Now we have the official statement of a governor, whose duty it is to weigh well the needs and desires of the citizens of a large and important commonwealth

If "there is no demand upon the part of the public for this class of legislation," one naturally wonders how and why similar bills have recently been introduced into the legislatures of some six or eight states. We believe that Governor Peabody in the same message answers this question in the following words: "Guided by the late experience of similar legislation in other states, the conclusion is irresistible, that all such legislation has a tendency to restrict the citizen in the employment of whomsoever he pleases in the treatment of his diseases, and it also has a tendency to build up, under the protection of the state, a trust or combination of certain schools of medicine to the exclusion of all others equally meritorious."

Our high regard for the character, unselfish motives, and good judgment of individual members of the medical profession has not permitted us to believe that any great number of them favor such unjust, coercive methods. Therefore, we are glad to note that although many eminent physicians urged the governor to approve the bill, others, "equally eminent and quite as numerous," urged him to withhold his approval.

The results of Christian Science practice, even to the healing of persons given up to die, are so well known that it is amazing that legislators can be found to father these bills or to advocate their passage. To deprive the sick of the benefit of a system that has been proved efficacious in most desperate cases, is to take a responsibility far beyond that which any legislator should assume, and we feel sure that this is becoming so widely recognized that few, if any, more of these bills will see daylight.

Our thanks are due to Governor Peabody for his just and fearless action, and we are glad to make this public acknowledgment to him. M.

## A Morning Lesson.

All nature pulsates with responsive gratitude to the glorious sun for his benefactions of light and heat. His every ray carries the same vitalizing message to bird and flower, and the earth robes herself in color and breaks into song.

A ray detached from its source would be no longer a ray, and the sun no longer perfect, all the rays detached, the sun would no longer be a sun. This constant, undisturbed radiation is, in human concept, the obedient response to, "Let there be light!"

Man is the expression of the one Mind, he reflects Life and Love omnipotent. His separation from the one infinite source, Mind, is as inconceivable as is the isolation of the sun's rays from the sun. Resultant from this unity, man, in true activity repeats the God-spoken message of life and love. The sick, despairing, perhaps, under the human sentence of fatality, catch the glad message of life and rejoice in health; the sinful, repentant, feel the helping hand of love and rejoice in obedience, and both have but responded to a higher understanding of the divine mandate. "Let there be light!"

The glad sunrise with its myriad beams flooding our world with light and life brings to us anew the thought of unity, a clearer apprehension of the Master's, "I and my Father are one," and we feel afresh the sonship and brotherhood that give power to dispel the night of sickness and sin.

With grateful hearts and the same clearer vision we open and read the lesson from our Leader's words: "If God, who is Life, were parted for a moment from His reflection, man, during that moment there would be no divinity reflected. The Ego would be unexpressed, and the Father would be childless" (Science and Health, p. 306).

S.

## Presumption and Reward.

We must take care of presumption when we measure God's plans by our theories.—Geo. MacDonald.

The story of the mother's astonishing request of Jesus, that her two sons might occupy the highest seats of honor in his kingdom, illustrates the fact that error's counterfeits embrace very much more than the seeming things that are comprised in our sense of the material world. It assumes the semblance of unnumbered impulses and activities of Good, and the detection of these more subtle errors calls for a thoughtfulness and refinement of discrimination which was quite foreign to the consciousness of this good woman.

The true man is unrestrained in his expectation, and unreserved in his appropriation of good. The utmost fulness of privilege and richness of supply are his in the promises of Love, and he freely and legitimately claims his glorious inheritance in his Father's name, "Now are we the sons of God."

Error with well-cloaked presumption has often urged a kindred right, and if it expressed the pharisaical effrontery of evil it merited the Master's prompt and annihilating rebuke. But when, as in the case cited, it revealed simply the impulse of stupidity, or the foolishness of ignorance, he met it with patient and tactful instruction.

The woman was kindly shown that the thoughtlessness of her ambition could but deny its satisfaction. So also when Peter impulsively craved the privilege of coming to Jesus on the water, he was permitted to make the trial, and he found in experience the suggestive and reproving answer to his unwarranted request.

The lesson is clear. In Science the door of opportunity is opened only with the key of fitness. "Seeking is not sufficient. It is striving which enables us to enter. Spiritual attainments open the door to a higher understanding of the divine Life" (Science and Health, p. 10).

If with a conscious longing to be good we are prompted to demand the rewards of goodness, it is well for us to remember that virtue never yields its sovereignty and emoluments to good intention, that demonstration never abdicates in favor of a willingness to be benefited, and

Digitized by Google

that presumption is quite as ineffectual in the domain of Love as in the domain of mathematics. The prodigal no doubt retained not a few good intentions while reveling in the indulgence of sense, but he did not catch the vision of home and awaiting Love, until the faithful effort of return had wrought purpose into demonstration.

The right attitude toward Truth's benefactions is attained only when we have fully accepted the fact that it knows no favoritism, recognizes no personality, and rewards merit alone. W.

---

THERE are many people who, if we may judge from their incidental references to the subject, are very much puzzled over the persistence and growth of Christian Science, and we venture the assertion that in every such instance prejudice, or solicitude for traditional opinions has closed the door against the facts of spiritual healing. He who is willing to recognize these facts and to give his judgment the benefit of their impartial investigation, cannot remain irresponsive to their convincing appeal.

No one has ever outlined a better plan for overcoming incredulity than St. James, when he said, "I will show thee my faith by my works," and a single case like that referred to in the first testimony given in this issue, suffices to prove the unspeakable blessing which the teachings of Christian Science may bring to the helpless and despairing. For obvious reasons the writer of this testimony withholds his name, but he is ready to give detailed and verifying information to sufferers who seek it.

In every part of the world are those who are without God, and without hope of relief from the ills which the inheritance and the indulgence of evil have entailed. And how could any one knowingly deny them that saving from sin and suffering which many have found in Christian Science, when, as in this instance, all other help had failed? And yet this is just what they do, who in their prejudice and misapprehension decry this gospel of good and warn the sick to turn away from its proffered aid. Certainly, though unwittingly perhaps, they would have robbed this poor man and many another of the health and spiritual illumination in which they now rejoice.

Personal influence still holds large sway among men. It gives increased proportions to the possible results of a single individual's resistance to truth, and mightily increases the responsibility of those who indulge the obstinacy of that resistance.

---

*Dun's Review* gives the following interesting figures in regard to the Louisiana Purchase Exposition, to be held in St. Louis next year:—

"The following comparisons will serve to convey some conception of the magnitude of the forthcoming exposition. The Centennial Exposition at Philadelphia covered 236 acres, the Paris Exposition of 1899–1900, 336 acres, the Columbian Exposition at Chicago, 633 acres. The World's Fair at St. Louis will cover 1,180 acres. The construction cost of the Centennial Exposition was $8,500,000, that of the Paris Exposition was $9,000,000. The cost of the Columbian Exposition was estimated at $18,322,000, and the total cost was $27,250,000. The estimated construction cost of the St. Louis World's Fair is $30,000,000, and its total cost will be upward of $40,000,000 by the time the work is completed. The various states are now rapidly fixing upon their appropriations for the purpose of being fittingly represented at St. Louis. Missouri has voted $1,000,000, Illinois $250,000 as a preliminary expenditure, shortly to be increased; Iowa $125,000, which will probably be increased, and Mississippi, $50,000, the first appropriation of this kind ever made by that state. New York has not as yet made any appropriation, but it is expected that the legislature will see that the reputation of the state for enterprise in such matters is fully maintained."

## Rev. Mary Baker Eddy's Gift.

Concord, N. H., May 6, 1903.

Through the generous gift of the Reverend Mary Baker Eddy the Christian Scientists of Concord, N. H., are to have one of the finest church structures in the Granite State. The plans for this edifice were presented at a largely attended church meeting to-night, and work will begin upon the new structure in the near future. The gift of Mrs. Eddy includes the desirable lot of land now occupied by Christian Science Hall in the heart of the city at the corner of State and School Streets, and is without doubt one of the finest locations in Concord for a church building.

In addition to the gift of this choice lot Mrs. Eddy presents to the church a cash donation of $100,000, making her total present represent the sum of $120,000.

The meeting to-night sent to the generous donor the following letter of appreciation and gratitude:—

"Rev. Mary Baker Eddy,

"Pleasant View, Concord, N. H.

"*Beloved Teacher and Leader:*—The members of the Concord Church are filled with profound joy and deep gratitude that your generous gift of $100,000 is to be used at once to build a beautiful church edifice for your followers in the Capital City of your native state. We rejoice that the prosperity of the Cause in your home city, where, without regard to class or creed, you are so highly esteemed, makes necessary the commodious and beautiful church home you have so freely bestowed. We thank you for this renewed evidence of your unselfish love."

The church will be built of the same beautiful Concord granite of which the National Library Building in Washington is constructed. This is in accord with the expressed wish of Mrs. Eddy, made known in her original deed of trust first announced in the *Concord Monitor* of March 19, 1898. In response to an inquiry from the editor of that paper Mrs. Eddy made the following statement:—

"On January 31, 1898, I gave a deed of trust to three individuals which conveyed to them the sum of $100,000 to be appropriated in building a granite church edifice for First Church of Christ, Scientist, in this city.

"Very truly,

"MARY BAKER EDDY."

The architecture will be Gothic, and in keeping with modern ideas of a church building. It is intended that the pews of the church will seat one thousand.

The trustees of the Building Fund, Fred N. Ladd, Josiah E. Dwight, and J. Wesley Plummer, will have charge of the construction of the new edifice. Francis Richmond Allen and Charles Collins of Boston have been employed as architects.

The present First Reader of the church is Rev. Irving C. Tomlinson; Second Reader, Miss Mary E. Tomlinson.

In the fall of 1897 Mrs. Eddy purchased the property opposite the High School and adjoining the State Capitol, and after remodelling the mansion into a hall and reading rooms at a total outlay of $20,000 she presented the grounds and building to the local members for their use. The building has since become well known as Christian Science Hall.

On February 22, 1899, First Church of Christ, Scientist, was organized with a membership of seventy-eight. The new church is needed to accommodate the increase in membership which has been remarkable. Since the congregation has already outgrown the accommodations of Christian Science Hall, building operations will be begun at an early date.

The citizens of Concord regard Mrs. Eddy's generosity with favor and are greatly pleased that another splendid building is to be added to the handsome edifices of the Capital City.

### A Humble and a Contrite Heart.

ELLA S. SARGENT.

Hath not thy heart within thee burned,
At evening's calm and holy hour?

It was the voice of God that spake
In silence, to thy silent heart.

I VALUE Christian Science and revere its Leader above expression in words because of the light which this religious teaching throws upon the chaos, the storm, the stress, the tempest of human life.

It is a sweet calm, a "Peace, be still!" to the sin-tortured breast. I had long prayed, "Create in me a clean heart, O God; and renew a right spirit within me;" but impatience and pride continued, waxed even stronger, as the years and my unavailing prayers went on.

I could not "ascend into the hill of the Lord." My alert but untutored conscience denied that my hands were clean and my heart pure, and St. Paul's cry, "To will is present with me; but how to perform that which is good I find not," echoed in my disappointment, for God did not seem to hear "the voice of my supplications."

As if God, "the God of all comfort; who comforteth us in all our tribulation,"—could or would withhold from his suppliant child this first and most necessary of His gifts, a humble and a contrite heart!

Then Christian Science came and illumined the teaching of Jesus. When the Jews railed at him: "How long dost thou make us to doubt? If thou be the Christ, tell us plainly," he answered them, "I told you, and ye believed not: the works that I do in my Father's name, they bear witness of me."

I was led to see that what is true of the human race, is true of each individual in that race; that as the race has had its barbaric, semi-barbaric, half-civilized, and civilized ages, so each one of us has a corresponding stage of development, and we but soften these divisions when we call them the physical or material, the mental or intellectual, the moral or spiritual.

I saw that as the Jews on their material plane, failed to recognize in Jesus the majestic control of Mind, because their untaught hearts demanded a king whose coming would break the yoke of Rome and restore their tottering kingdom; so within my breast was waging that same elemental war, which knew no abiding peace, because forever "the carnal mind is enmity against God." This mind, "enthroned in the gorgeousness of matter," lifted "its voice with the arrogance of reality" (Science and Health, p. 252), wanting only what the senses could grasp. As the Jews saw only the material man, and not the second man, the Lord from heaven, so I, blinded by "the will, or sensuous reason of the human mind" (Science and Health, p. 111), was unable to see His mercy in the heavens, His faithfulness in the clouds.

My untaught conscience, and the clamorous suggestions of my own will would not comprehend a humble and a contrite heart.

For years I had tried to assure myself of my spiritual birthright, that my mind was in accord with its maker; but the weightiest words, the profoundest petitions, could not convince my longing heart that it was at one with God.

Very gently, Christian Science taught me that only such works as I could do in my Father's name, would prove to me that I and my Father are one. That as Jesus said, "I and my Father are one," so each and every son of man must follow him, having no will but to do the will of Him that sent him, in the "ministry of reconciliation," even as it was given to Jesus to reconcile the hearts of his brethren to that "good, and acceptable, and perfect, will of God."

Then pride, impatience, ambition, all that had chafed the heart, began to disappear as I learned the clear and simple meaning of the atonement as given in our text-book.

The humble and the contrite heart is ours, has always been ours; in spite of the misbeliefs which fail to recognize everything except grandeur and arrogance in man. Man in the image and likeness of God; "the idea, or reflection, of Spirit" (Science and Health, p. 478). How false is the human consciousness which has hid these truths of being from us, to be uncovered by our Leader,—re-covered in all their beauty, as the "scientific eternal consciousness of being" (Science and Health, p. 263)—"we shall also bear the image of the heavenly."

This is the atonement, that man shall become conscious, through his works, of his oneness with his Father. This is his salvation which he must work out, in spite of "trembling and fear," to realize at-one-ment with the Father, through obedience; denying every material sense, the intellectuality of the Sanhedrim's pride of power, the personality of the Pharisees' hypocrisy and self-righteousness, the materiality of the Sadducees' disbelief in the resurrection and the Life eternal.

Even human wisdom bids us work out this obedience in that dignity of silence with which Jesus answered the Jews, the silence of divine Love perfected in works rather than in the clangor of words.

Hymn 16 of our Hymnal recalls these lines from Longfellow's "New England Tragedies," which I learned long ago, to still my heart, and which have been illumined, for me, by the new light of Science.

Let us then labor for an inward stillness.—
An inward stillness and an inward healing;
That perfect silence where the lips and heart
Are still, and we no longer entertain
Our own imperfect thoughts and vain opinions,
But God alone speaks in us, and we wait
In singleness of heart that we may know
His will, and in the silence of our spirits,
That we may do His will, and do that only.

In such silence, shall we find the atonement—the heart's sweet consciousness of oneness with the Father.

I might cite positive proofs of this power of Truth, realized in the healing of sin,—for we mortals are so pitiably sin-sick!—but these pages are filled with the records of the atonement, wrought in scientific healing.

May we not all go forth as ambassadors for Christ, in the ministry of the reconciliation, not only with valiant speech, but with clean hands and a pure heart, in sure deeds of mercy and of comfort, "that we may be able to comfort them which are in any trouble, by the comfort wherewith we ourselves are comforted of God." Our Leader has taught us that this is the true interpretation of Christ's atonement, the healing work of Truth through a humble and a contrite heart.

The tempest will then be stilled, and we shall know that "the divine understanding reigns, is *all*, and there is no other consciousness" (Science and Health, p. 536).

Thus our works, "humble in degree to-day, yet perfect in their kind," shall unfold till every Son of God shall say, with the Christ, "It is finished!" "I and my Father are one."

### Rejoice Always.

ADELAIDE FISHER.

PAUL'S experience taught him that we may count it all joy when we fall into temptation. During the last few months, the temptation to give some prominence to beliefs of intelligence in matter may have touched us.

The clergyman, the physician, the author or others of culture "seem to have felt it a duty to warn against, ridicule

Digitized by Google

or otherwise misrepresent Christian Science, but like our Master, we may reassure ourselves of the nothingness of carnal mind, even when most assertive, and lovingly pray, "Father, forgive them; for they know not what they do."

The world is helped every time that error is effaced by realization of the one infinite Love. Those who for years have been trained in theological dogmas, may have unconsciously accepted man-made theories, until it is just as applicable to them as to those to whom Jesus spoke, "In vain they do worship me, teaching for doctrines the commandments of men." Not lapse of time, but spiritual illumination acquaints us with God, Spirit.

The physician whose good motives should be recognized has been educated into "the wisdom of this world" which Paul declares "is foolishness with God." The mental apparitions, which constantly appear before him, delude, and he forgets that transformation of the body is by renewal of the mind.

When estimated aright, the work of healing which Jesus enjoined upon all who love him will not be considered a rival of allopathy, homœopathy, or any school of medicine, and condemned because it does not diagnose after the traditions of men.

The physical healing signs are promised as evidence that we are overcoming all evil in the right way.

Surely we may count it all joy when we are able to meet untrue, un-Christian criticism, scientifically. There is much profit in the endeavor to follow our Leader's advice as found in "Miscellaneous Writings," p. 224:—

"We should go forth into life . . . with an equanimity so settled, that no passing breath . . . shall . . . ruffle it; with a charity broad enough to cover the whole world's evil, and sweet enough to neutralize what is bitter in it."

## Under the Shadow of the Almighty.

W. SCOTT ILIFF.

BROUGHT up in an established church, I was, when Christian Science first came to my notice, an active member of a suburban branch of that church. Choirmaster, superintendent of the Sunday School, and other duties fell to my lot, and in the attempt to discharge them faithfully I was occupied nearly every evening in the week. The Bible was a treasured book, and I thought that I knew it. Possibly as a "book" this was the case, but beyond that it was sealed. This fact, however, was only revealed after the study of "Science and Health with Key to the Scriptures." Although so occupied in church matters I felt impelled to make inquiries about Christian Science, and when it was explained that God was not charged with the authorship of sin, sickness, and death, I was convinced of its correctness and determined to go into it thoroughly. I did so for a while, still keeping up the duties in connection with the church of my childhood, but the progress was imperceptible, and gradually Christian Science began to drop out of my daily thoughts. The seed had, however, been sown and, although I was unaware of it, was growing in me; and in God's own time appeared above the ground (self). The study of the *Quarterly* was then commenced (in conjunction with the Bible and Science and Health), but as I had not proved anything it was not what could be termed "hearty study." This was changed very shortly, as one night I was called upon to prove that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494). To me it was a severe test, as I had had no previous experience with children, and the subject was my little boy, a baby about six months old. The case was as follows:—

On returning from the office one Tuesday afternoon, my wife, who, by the way, is not a student of Christian Science, remarked that baby seemed restless. I accordingly commenced to treat him to the best of my ability, but without any apparent success. Towards night he got worse, the trouble appearing to be in his throat. As night advanced the malady increased, till at last the child was to all appearance choking. This gave opportunity to error to say, What will happen if the child dies without "proper" medical attendance? Is your knowledge of Christian Science equal to the emergency? Overcome with these and the numberless "ifs" set forth by error, I took the boy to his mother and stated that I was unequal to the occasion and intended to go for a practitioner. Her reply was to the effect that if there was anything at all in Christian Science I ought to be able to make the demonstration. Taking the little sufferer again I carried him out on to the verandah. Then it was that the realization of the omnipotence of God, that He is Love, seemed to shut out all else. All was light and peace, and I felt that I had heard God speak to me, saying, "Leave the boy in My care. He is safe under the shadow of My wings." The calm that followed will never be forgotten. I took the boy back to his cot, he was sound asleep, the malady completely destroyed, and we heard nothing more of him until the morning, when he awoke quite his usual self.

From that day to this I have never ceased the study of Science and Health and the weekly lesson, and many, and, to mortal sense, marvelous, have been the demonstrations not only for myself and others, but for animals also.

How can I, therefore, cease being thankful to Mrs. Eddy for the wonderful revelation she has brought to mankind in her invaluable book, the text-book of every Christian Scientist.

I am now learning the spiritual meaning of the Scriptures. The words of the 91st Psalm are especially helpful, for I have proved that "He that dwelleth in the secret place of the most High shall abide under the shadow of the Almighty."

## Current Counterfeits.

G. H. K.

AT a recent Wednesday evening meeting a lawyer who is an earnest seeker for the truth, expressed the thought that error, whether it be in the form of sickness or sin, is always a false claim and has just the power which we give it, and no power at all after its spurious nature is once discovered, when its falsity has been exposed to the light of truth.

In support of his statement he made use of this illustration: a counterfeit bill may pass current among the unsuspecting for a long time, and may be called a dollar; but the moment it falls under the eye of a wide-awake, expert cashier the counterfeit is detected and instantly the bill becomes worthless; that is, its reality or supposed value is absolutely destroyed, and by reason of his expert knowledge the cashier needs only to stamp the word "counterfeit" upon the face of it when no one would accept it.

The cashier in doing this renders a service which is kindred to that of the Christian Science practitioner in his dealing with patients or people who have been unwittingly accepting the counterfeit as true and real.

## Thoughts on Love.

WILLIAM H. RUSSELL.

LOVE is the sweetness of a life hid with Christ in God.

Love is the ripened fruit of spiritual manhood and womanhood.

Love is active, positive, not negative or passive.

Love is the center and circumference of being.

Love is the practice of prayer.

Love germinates in the soil of self-forgetfulness, self-sacrifice, and humility.

Love realized, is heaven come to earth.

## Among the Churches.

### Proposed New Church in Omaha, Neb.

Members of First Church of Christ, Scientist, are casting about for a favorable site upon which to build a new church, which they hope to erect in the future.

Members of the church say that a new structure may not be erected for one, two, or three years, but that the congregation is working to secure a church of its own.

*Omaha* (Neb.) *News.*

### Church Dedication in Topeka, Kan.

Easter Sunday, April 12, was a memorable day for the members of First Church of Christ, Scientist. Their church edifice was dedicated free of debt. The house was filled with light and love. The church was beautifully and tastefully decorated with palms and Easter lilies.

Special addresses were delivered by both the First and Second Readers, and letters of congratulation were read from far-away friends whose expressions of love and encouragement touched our hearts deeply.

EMMA F. MCFARLAND, *Clerk.*

### A New Church Needed in Sioux City, Ia.

The Christian Scientists in Sioux City have decided to erect a new church.

A meeting on Monday night was attended by one hundred and five persons, including members of the Sunday School, and ninety-six of those present named the amounts they would subscribe to the building fund.

It is not expected the new church will be started before another year, but the very evident future need of a large church has prompted the organization to start the movement for a new building.

The present membership of the church now numbers one hundred and thirty-seven and the Sunday School is large. It is stated that each Sunday the seating capacity of the building is taxed and the society is constantly growing.

First Church of Christ, Scientist, of Sioux City, was organized in 1890. The original membership included but twenty-six names.—*Sioux City Journal.*

### Dedication of a New Church in Salem, Ore.

The dedicatory service of the new church building of Second Church of Christ, Scientist, was held Easter Sunday.

Two very fine audiences attended the services of dedication and greeted the Salem Christian Science workers, and they were very well entertained. The perfect Easter day gave an additional pleasure to the observation of the happy event, so long looked forward to by this church.

The auditorium of the church, as well as the hallways, reception and reading rooms, and platform, were decorated with palms and Oregon grape, the state flower, now in perfect bloom, and beautiful blooms of flowering quince, hyacinths, and narcissus.

At both services the building was crowded to the doors, and the congregation overflowed into the hallway and out on to the porches.

Nearly one hundred Portland and Oregon City Christian Scientists honored the occasion with their presence. There were visiting Scientists from many other communities and all expressed delight at the demonstration of the Salem Church.

The voluntary offering of the Portland Scientists was a pleasant surprise, and gratefully acknowledged.

The *Salem* (Ore.) *Journal.*

## The Welcome to Der Herold.

I have received the first number of *Der Herold*, and after having read the same carefully, wish to express my appreciation of the magazine. The translations are good, the printing is clear, and the whole magazine reflects credit upon those who have gotten it out. We have much to be thankful for in this new effort to reach the people who seek Truth, and it shows once again the wisdom of our Leader and her untiring watchfulness to give to the hungry the bread of Life. My love and reverence for her increase each day.

Sincerely yours,

R. L. ZILLER.

Austin, Texas, April 3, 1903.

I desire to express my appreciation of *Der Christian Science Herold*. I am a German by birth, but having resided in the United States for nearly thirty years, I thought myself so familiar with the English language that the German Publication would be of no real benefit to me. The first appearance of our new periodical, however, dispelled this illusion, and I found that sentences which have been read over many times in the English, never appealed to my thought as when read in my mother-tongue; I therefore expect to derive much benefit from this latest addition to our periodicals and herewith express my sincere thanks to the faithful workers at headquarters, who, through their watchfulness, have made its appearance a present possibility; no doubt it will satisfy a long-felt want.

H. F. H.

Chino, Cal., April 6, 1903.

For seven years I have hoped for a periodical published in German, my native language. I felt the need of it very much. I wanted to impart to my countrymen who are not instructed in the English language, the great truth and light which Mrs. Eddy has so lovingly and unselfishly given to all who are willing to follow Jesus.

Last week I received the first copy of *Der Herold* with joy and gladness, and I should like to tell somewhat of the good it has already done. On Friday last week a friend came to me very much discouraged, almost overcome by mortal fear. Her husband had been very ill in bed for several days. He did not want a physician, fearing that the doctor would send him to a hospital to be operated upon. I spoke the truth and realized the omnipotence and omnipresence of God. In about ten minutes the fear had left. My friend had a new consciousness of joy and courage. I gave her *Der Herold* to read to her husband. This she did. On Sunday I went over to see the man. He was out in the stable feeding the horse. The impersonal truth had healed him. The ailment was rupture and cold. The wife was also healed through the reading.

I have had many good demonstrations, and I should like to write of them all. Divine Love has met every problem, has removed the sense of financial limitation and provided for every need. Science and Health has been my educator. Through studying the book, light and understanding have come and I no longer walk in darkness.

Jesus said, "I am the light of the world: he that followeth me shall not walk in darkness." I am very grateful to Mrs. Eddy for all the good that has come to me through Christian Science.

L. E. M., Saratoga Springs, N. Y.

We view the world with our own eyes, each of us: and we make from within us the world we see. A weary heart gets no gladness out of sunshine; a selfish man is skeptical about friendship, as a man with no ear doesn't care for music.—THACKERAY.

Digitized by Google

## Testimonies of Healing.

Since I was eighteen years of age I have been a constant drinker, and for the last ten years, a heavy one, in fact, I seldom went to bed sober, I commenced to drink in the early morning and kept it up steadily until I went to bed. For the same length of time I was also an inveterate smoker, during later years consuming sometimes seventy or more Egyptian cigarettes daily. I also used profane language, and in addition lived as fast a life as it was possible for a man of my means. I ultimately reached a condition which demanded medical aid, and I was under the constant charge of one of the best physicians in New York, receiving daily treatments (sometimes more frequent) until my system was saturated with drugs. I continued this course for many months, eight or nine, but received no benefit whatever, but rather grew worse, until in June my doctor told me I would have to start all over again, that he could not understand why he did not benefit me. He has since told me that I was beyond any material aid, and has twice expressed his amazement at my wonderful recovery.

I was in despair, and believing I could never recover, wanted to "shuffle off this mortal coil," for I suffered excruciatingly. My throat was in a dreadful condition, and I was in constant dread at meal time, because of the agony produced by swallowing even the most delicate food, and I slept with a handkerchief in my mouth to absorb the excessive secretions.

I tried Christian Science then, not because I had any belief that God would heal me, but because I was anxious to die and feared the disgrace to my people, so consequently placed myself in the hands of a Scientist, thinking I would be shortly dead and no one would know it to be a preconcerted scheme on my part but would deem me crazy over religion. I feel ashamed to say this, but it is the truth.

Within ten days all desire for liquor or smoking left me. I have never had a return of the appetite nor will I. I no longer swear nor live in any way the life I did for so long.

The treatments were not apparently of any physical benefit until between the eighty-seventh and the ninetieth, when I was entirely healed. I exhibited my throat to my old physician and he confirmed the statement.

During my treatment I suffered agonies, fought the truth every step, and tried to get away from it, and to-day I thank God it was so, because had my cure been effected quickly and without pain, my human thought was such that I would have turned back to my evil ways. During that time of suffering, however, I constantly studied "Science and Health with Key to the Scriptures," and gradually acquired a glimpse of the true Life, and it has now become so ingrained that I would not if I could turn away from this glorious pathway of life and health.

Looking backward I am amazed at the reluctance of the world to accept the teachings of Christian Science. Where I was wretched, sick, selfish to a degree, always seeking new material pleasures and sensations in every path of sin, now am I happy and healthy, knowing a peacefulness which I never knew before. I am overcoming my selfishness slowly, seek spiritual things, and love to do good.

I would add here, too, that under the care of the matter physician I lost thirty odd pounds and was steadily running down; under Christian Science treatment I immediately commenced gaining and recovered my lost weight in a short time.

My spiritual uplifting has far exceeded the physical healing I have received, and I would not part with my slight understanding of Christian Science for aught but one thing, and that is a greater understanding of the same.

For all these things, and for many others which daily—aye, hourly—come to me and mine, I wish to express my gratitude to Christian Science and to Mrs. Eddy, who has brought it to us again.—X.

A young man who was boarding with me was taken with rheumatism. He told me that he feared it very much, since he had suffered a great deal with it, lying helpless and in great pain for nine months at one time, and three months at another, in spite of all the doctors could do. He knew something of what Christian Science had done for me; so, after suffering for about a week, he asked for Christian Science help.

I put him under the care of a practitioner in New York, who gave him absent treatments. It was on Saturday that I told this lady about his case, and he was then unable to move his hands or limbs. I had to cut his food and feed him like a little child. The pain was so great that the tears would run down his cheeks when he was lying still. The lady gave him four absent treatments, and he was as well as ever; he went to New York on Friday of the next week, and told the healer that he needed no further treatment. This occurred four years ago, and he has never, to my knowledge, been troubled with rheumatism since.—A. I. S., Sandy Hook, Conn.

Between five and six years ago I turned to Christian Science for help. A short time after I had the privilege of taking class instruction from one of our Leader's students, which I have found a source of great benefit and a very present help in all times and under all circumstances. This has enabled me to have many beautiful proofs over many different troubles, of one of which I would like to speak particularly, and which happened but a short time ago.

It was that of a severe and serious burn caused by the explosion of the best grade of rifle powder. One afternoon while cleaning and looking over some packages, I found this powder, which had been prescribed as a medicine for one of my children before I came to Christian Science. I took the powder with some papers into the cellar to throw in the furnace. Opening the door, I took out some live coals on a large shovel to see whether or not I had better throw in the package. Scattering a few drops on the coals, which instantly ignited, the blaze flashed up and setting fire to the rest, which I held in my hand in a paper, it went off, not with a hiss but with a report as loud as that of a small canon. It burned the under part of my wrist, and my arm half way to the elbow, the flesh on one side of my face, neck, and lips, the front of my hair, and singed my eyebrows and eyelashes. Instantly I denied the sense of error and looked to God, divine Love, who is omnipotent and our ever-present help in all trouble, and endeavoring to realize this, I was able to go on with my work, which seemed necessary, for about half an hour.

The pain of the burn then became so intense that I stopped my material work and taking up my little book, Science and Health, commenced reading, endeavoring to realize the truth which makes man free. In about half an hour all sense of burning had gone from my face, and a short time after from my wrist.

This happened on Friday afternoon between four and five o'clock. Sunday-morning all traces of it had so nearly disappeared that by wearing a thin veil, I could conceal the injury.

This proved to me the same truth which our Master spoke of when he said, "Ye shall know the truth, and the truth shall make you free." And we find this same truth is here to-day helping us to realize what our Leader says in Science and Health, "Rise, in the strength of Spirit, to resist all that is unlike God. He has made man capable of this, and nothing can vitiate the ability and power divinely bestowed" (p. 393).

MRS. E. S. WOODHOUSE, Scranton, Pa.

Digitized by Google

Among the physical benefits received in our home was the healing of my husband of appendicitis, after having repeated attacks; the healing of our little boy of eczema, and at the coming of both the little son and little daughter the omnipotence of Truth and Love was so clearly proven that after the first day I was able to take up any work about my home.

Christian Science enables me to keep the home harmonious, is my dependence in caring for the children and in doing my work. Because the Principle of Christian Science is infinite we can solve every problem of our lives by it.

I was carefully trained by conscientious Christian parents and always tried to do right, but I never caught a glimpse of the peace that passeth all understanding until "Science and Health with Key to the Scriptures" revealed God as Love, and although I had read the Bible a great deal, it has become a new book to me and much more precious. I cannot express my gratitude to the friends, the dear practitioner, and my beloved teacher, who have helped me to see the truth; and above all to Mrs. Eddy, through whom the Science of Christianity has been revealed.

I do not have the privilege of attending church and there is but one student near me, but with the *Quarterly, Sentinel,* and *Journal* I can keep in the line of march.

ELLA COLTON KNIGHTS, Sandwich, Ill.

There is not an honest minister of the Gospel to-day who is not giving to his congregation thoughts of truth and love that God has revealed to him. Through sermon and song and other channels God is inspiring mankind to lead a purer life. The apostle James says, "Every good gift and every perfect gift is from above, and cometh down from the Father of lights, with whom is no variableness, neither shadow of turning."—L. B. COATE.

A good many of the difficulties we complain of are difficulties only because we complain.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before June 3.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer,*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

At the same time, however useful these studies may be to an elucidation of the Biblical text, one may attain high proficiency in them without perceiving the spiritual message of the book and without having his own heart respond to it. And the encouraging note at Chicago [at the Religious Education Convention] was that that great body of educators and leaders of Christian thought appeared to feel that what the Bible has to say about spiritual realities—about God and destiny and obligation and righteousness and forgiveness—is of vital importance.

We are inclined to believe that this attitude toward the Bible is coming to be characteristic of the best Christian thought. Christian scholarship has been wandering in the desert for quite forty years. The transition from the treatment of the Bible as a treasury of texts, all of which are of equal value, to a revelation of a way and a power of life has been slow and painful, but there are a good many signs that the Promised Land is not far in the distance. The most effective preachers to-day are not spending too much time on telling their congregations how we got the truth, but they are telling them what the truth is, and trusting that as truth it will commend itself to the human heart. The external evidences coming from the authority of documents are of immense value, but the self-evidence of the truth to the human soul, and its power of meeting the needs of the spirit, while interpreting it to itself, energizing its functions and creating new necessities, are also of crowning worth. In modern apologetics the authority of the Scripture is best vindicated in the experience of the soul that obeys its message. And we are coming to preach and teach the Book as a message.

*The Watchman.*

A new purpose, called by a noble courage out of a heartful of dead hopes, will be surer and swifter of fulfilling higher, more unselfish, and more truly satisfying than that which failed. Men rise to grander heights on "stepping-stones of their dead selves."

And so it is with the lives that grief and loss have saddened. Deep in the soil of such desolation are always the rarest germs, which only need the sunshine of hope to blossom forth in bewildering beauty. . . . It is the heart that has been ploughed by disappointment, harrowed by pain, and sowed by experience, and which has then lain silent under the snows of bereavement, in which the perfect flowers of happiness and content finally open.

But kindness is the strongest, sweetest, most compelling sunshine that ever fell warmly upon the winter of humanity. It breaks the ice of hate and selfishness and subdues the blasts of anger; within soil upon which it rests, seeds of envy, jealousy, deceit and other poisonous weeds shrivel and die; but the fragrant herbs and sweet flowers of human nature spring up abundantly. Whether given or received, kindness is uplifting, invigorating, warming, gladdening. It is the essence of all goodness.

*The* (Brattleboro) *Reformer.*

The Rev. William H. van Allen, in a recent Lenten sermon preached at St. Paul's Church, Boston, is reported by the *Boston Transcript* to have said: "Nothing is more significant to the open eye and ear than the popular attacks upon the Church as distinguished from Christianity. One hears of assemblages hissing the name of the Church and applauding the name of Christ. Hostility to the Church comes from a false conception of it. Think of three hundred warring sects in our own land, still subdividing daily. Christ's Church is a kingdom and is not a kingdom divided against itself. Protestantism in its division no longer holds fast to the infallible and undeceivable oracles of God, but on the contrary ignores all the Bible that is not compatible with its theories. There can no more be a new Church than a new God; there can no more be several Churches than many Gods."

The Rev. George D. Baker, D.D., of the First Presbyterian Church, Philadelphia, is quoted as follows by *The Examiner*:—

"Men are wearying of a Gospel that simply flatters them; of a Gospel that is only a patchwork of metaphysical platitudes and moral commonplaces. They are tiring of 'kindergarten religion,' of the mere playthings of outward forms. If men are falling away from the Church it is not necessarily because they are falling away from religion. Now, as ever, there is room for a Gospel, if it be Great.

"And the redemption scheme of Christ is great—very great. 'I, if I be lifted up from the earth, will draw all men unto me.'

"To the front with the old Gospel! Men are calling for it."

Occasionally I hear some one say with a pious air: "It doesn't matter what people think of me, I know my heart is right." Ah, my friend, but it does matter. Let me give you an illustration: In sight of my office window is a church tower; on each of the three sides there is a clock face. On one of these, one of the hands has been broken making the old clock tell strange tales. Of course, there are people who do not understand the circumstances and are, therefore, misled by it. At heart the old clock is all right, but that doesn't alter the seriousness of the fact that people have been late in meeting their engagements and have missed their trains because the face is not an index of that which it covers.—*The Outlook.*

Men are as ready to-day as in Christ's time to accept the benefits of Christianity, while unwilling that the principles of Christianity should rule in their lives. "Many believed in his name when they saw the miracles which he did." Such a faith meant nothing, morally or religiously, but was simply an intellectual submission. The miracles commanded the ascent of the mind, but left the heart and will untouched. Those who believed showed no new confidence in Christ, but simply a readiness to accept the gifts which he could bestow. "With the heart man believeth unto righteousness." One may be a theologian, in the scientific sense, and not be a Christian at all.—*The Examiner.*

There are thousands of professing Christians who had rather not have any company at all than the company of the spiritually minded. They can talk without limit about everything else but the spiritual life. Of this they have nothing to say, because they know nothing about it, and the atmosphere of spiritual conversation is not according to their mind. If Christian fellowship is to be maintained, Christian people must have a genuine, conscious religious experience.—*The Christian Advocate.*

It is the lives like the stars, which simply pour down on us the calm light of their bright and faithful being, up to which we look and out of which we gather the deepest calm and courage. No man or woman of the humblest sort can really be strong, gentle, pure, and good without the world being better for it, without somebody being helped and comforted by the very existence of that goodness.—PHILLIPS BROOKS.

The return of emphasis on spiritual self-culture should be most desired by those who seek most earnestly the salvation of the world. If the springs of spiritual life are becoming exhausted, while the world's need for what they have to give is growing greater, that will come to mean the cessation of the flow of streams to water other fields.

*The Congregationalist and Christian World.*

We are farthest away from God when we cannot perceive Him in our fellow-beings. The mirror of human nature is sadly blurred; but in the meanest and wickedest there are tokens of the divine childhood, occasional flashes of the Father's image through innumerable distortions. It is for us to show a clear reflection of His life in our own lives before we judge others.—LUCY LARCOM.

Remember that if the opportunities for great deeds should never come, the opportunity for good deeds is renewed for you day by day. The thing for us to long for is the goodness, not the glory.

F. W. FARRAR.

The Rev. M. J. Savage, replying to the Rev. Joseph Cook, contended that man cannot perpetually resist God's love and power. He said: "If God desire to save man and cannot, He is not God. If He do not desire to save them, while He can, He is not God."

God's truth requires a spiritual and quickened illumination both to its fullest comprehension and to its largest enjoyment. The Spirit-taught mind is essential to a right and profitable feeding upon holy things

*Presbyterian.*

The only satisfactory manifestations of religious character and life are associated with the reciprocal influences of spiritual experience and aggressive activity.

J. McC. HOLMES.

In darkness there is no choice. It is light that enables us to see the difference between things; and it is Christ that gives us light.

"Guesses at Truth."

Sacrifice brings its reward by converting simple duty into positive happiness. We have attained our end in the liberty to work freely with God.—JOHN JAMES TAYLER.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Baron d'Estournelles de Constant, the French Deputy, and a delegate of France to The Hague Peace Conference, has given out a statement regarding the political meaning of King Edward's visit to Paris, and the advancing world movement in favor of arbitration, in which he says: "While I am convinced King Edward did not utter a word on politics, yet his visit will have the happiest effect on the relations between the two countries. Only a year ago Europe sought to let The Hague Court die a silent death; but President Roosevelt saved the tribunal, first, by submitting to it the question in dispute between Mexico and the United States; second by obliging Germany, Great Britain, and Italy to take their Venezuelan complications to The Hague Court. Finally, Andrew Carnegie enriches the Court by the magnificent gift of $1,000,000. Thus, thanks to America and the Americans the tribunal is not doomed to slow death, and even Europe has been awakened to its merits. France and Great Britain should now be the first to follow the magnificent example of America and bring about their long retarded reunion. Already public opinion in both countries is aroused."

A general examination of the forests of the White Mountain region has been authorized by the New Hampshire Legislature. This examination will include a thorough investigation of the relation of the forests to the conserving of the water supply and the effect upon the water flow through the destruction of the forests. The work is under the supervision of the State Forestry Commission, and is being done by experts designated for the purpose from the field force of the Bureau of Forestry in the Department of Agriculture at Washington. This work has received the approval of several other of the New England States. The results of this survey will be made the basis of Congressional action to establish a National White Mountain Forest Reserve.

One hundred and eighty cases containing the casts and parts of casts given to Harvard University for the Germanic Museum arrived at Boston last week on board the Hamburg-American liner Adria. The casts form the larger part of the gift of Emperor William of Germany; the remainder of the casts are to be shipped here on board another steamer within a short time. The entire collection comprises replicas of nearly all the most famous pieces of sculpture and statuary in the German Empire. The final lot will comprise some one hundred and twenty cases. All the parties concerned in handling and forwarding these casts from Germany to Cambridge University gave their services gratis.

**Foreign.**

The State Department has been notified that the Venezuelan Government has named Dr. Paul as its member of the arbitration which is to meet at Caracas next month to consider American claims. Dr. Paul is a lawyer and eminent publicist of Venezuela, and speaks English. Robert C. Morris, the United States agent, has concluded the preparation of his cases. There are thirty cases in his hands, involving about three million dollars.

Final permission has reached the Italian, British, and German embassies at Washington for the allies' representatives to sign with Mr. Bowen, Venezuela's plenipotentiary, the protocol submitting the question of preferential treatment to The Hague tribunal for arbitration. The allies' representatives have agreed among themselves to sign The Hague convention separately, and have affixed their signatures.

King Edward and Emperor William have had audiences very recently with the Pope in connection with their visits to Italy and her King. President Loubet also expects soon to visit Italy, but in view of the action of France in suppressing the unchartered sectarian teaching orders, it is doubtful whether the Pope will grant him an interview.

It is rumored that King Edward will visit St. Petersburg in July, stopping three days in Berlin on his return, and that he also will visit Copenhagen.

**Industrial and Commercial.**

The present year has seen such an unprecedented demand for steel rails and structural material of all kinds, that as a result the producers in the Pittsburg district, it is said, have seen much business go to foreign markets through their utter inability to deliver the orders on time. That the trouble is not merely local and transient is indicated by the fact that railroads and large consumers in the East, West, and South have all been forced to place orders with foreign mills. The manufacturers admit that already their whole year's production has been sold.

The placing of orders for rails and structural beams, etc., in foreign markets is simply an overflow of the prosperity which has led to the record-breaking era of railroad, bridge, and other construction of all descriptions. The official records show for this year over seventeen hundred large jobs of railroad construction. An immense amount of steel is required to fill these orders, and for this reason the steel mills of the country have been working at top-notch tension for months past and are just now beginning to get abreast of their orders.

It is reported that big financiers are forming a pool to get possession of all the coal lands in the Choctaw nation, amounting to four hundred and forty thousand acres, which will be sold by public auction and the proceeds divided among the Choctaws in accordance with an act of Congress. The price agreed on by the syndicate is twenty-five dollars per acre. It is not the intention of the company to disturb the present mining companies, either large or small, or the coal leases. They will let the companies now mining coal buy the land covered by their leases, but no more. It is said some of the important mine concerns are not able to buy the land which they now have leased and the syndicate will buy it for them and allow them to operate it on a royalty of eight cents a ton, the same as they are now paying the Indians.

Negotiations are afoot, it is said, for a combination of the London flour mills with a capital of $12,500,000. There are eight big firms in London which turn out about thirty thousand sacks weekly. The importations of American flour are eighty thousand sacks weekly. The promoters believe that with amalgamation it will be possible to effect economies that will be equivalent to one shilling a sack. Instead of importing American flour, London will get American wheat and grind it there.

**General.**

Professor Stephen M. Babcock of the chair of agricultural chemistry and the inventor of the Babcock milk test, announced before a meeting of the University Science Club, Madison, Wis., as a result of twenty years of research, a theory of atomic energy that is revolutionary in the scientific world.

In brief, it is that the weight of any substance is affected by the molecular changes which it undergoes, or, as Professor Babcock stated the law, the weight of a body is inversely proportional to its inherent energy. This, reduced to its logical sequence, practically overthrows the old atomic theory and the theory of conservation of matter, leading irresistibly to the idea that all atoms are primarily identical, and that the difference in the weight of the different elements is due to the difference in their energy. This theory, according to Professor Babcock, would offer a satisfactory explanation of the law of gravitation.

Professor Comstock, director of Washington Observatory, said: "Professor Babcock's theory will be the most notable contribution to science of the last fifty years."

In a farmhouse on the shore of Lake Assawampsett about ten miles from Taunton, Mass., lives the last descendant of Massasoit—Princess Teweelema of the Wampanoags. The neighbors call her Miss Mitchell, her mother (a school teacher) having married a man of that name. A *Providence Journal* reporter recently went to see her. "The last Wampanoag princess," he reports, "invites the visitor into her living-room with the grace and dignity of a personage who has a past to uphold. Her face is of the pure Indian type that is rarely seen in these times of Government agencies and half-breeds. Out West there are still many full-blooded redmen, but few of them show in their features the intellectual qualities that this New England princess clearly shows in hers. The lines in her face are almost delicately drawn, and the sixty-seven years she has lived seem to have lessened in not the slightest degree her mental vigor inherited from a long line of noted ancestors, and strengthened by a careful education."

By an agreement between the Millinery Merchants' Protective Association of New York and the Audubon Society there is to be an absolute withdrawal from the trade and in the trimming of hats of those species of birds the use of which the Audubon Society and the American Ornithologists' Union have tried so long to suppress. This agreement will be formally announced to the millinery trade May 25, and will remain in force for three years. Under it the members of the Millinery Association pledge themselves to "abstain from the importation, manufacture, purchase, or sale of gulls, terns, grebes, humming birds, and song birds." Moreover, "on and after January 1, 1904, the importation, manufacture, purchase, or sale of the plumage of egrets or herons and American pelicans of any species is to cease, and these birds are to be added to the list of prohibited species mentioned."

If the sum of $150,000, which is being raised by popular subscription, is completed by May 25, Emerson's birthday, Harvard College on that day will lay the corner-stone of "Emerson Hall," to be devoted to the needs of the philosophical department.

Poe's manuscript copy of "The Bells" was sold at auction in Philadelphia recently for twenty-one hundred dollars. The bidding started at three hundred.

### Handling of the Serpent.

THROUGHOUT the entire Scriptures the serpent is used as a symbol of all that is wrong in human consciousness, and the command has always been to handle this serpent of deception with the understanding of Truth, and finally destroy it in all its forms. When we reach that stage in our growth of experience set forth in Revelation we will not only have handled the serpent of suggestions and deceptions, but we will then be able to see that old dragon, the devil, cast out of our consciousness.

Moses was commanded to handle this serpent and did so, yet until he handled it fear ruled him and would have carried him into all forms of error.

The serpent unhandled is the fallen state of man, a state where life is believed to be in matter, and man to be mortal, subject to all the claims of sorrow, sickness, and death—a staff likened unto "a reed shaken by the wind." The serpent handled is the understanding of true wisdom, that man in the image and likeness of God is spiritual, and even now is capable of rising above this fallen belief of things.

We see the young starting out in life, leaning with confidence upon what they think a healthy, material body, even to the extent that they sometimes forget God, who is indeed their life and strength. Later they reach that stage in their experience when the material staff gives way, they see it cast to the ground, and fearing it as a serpent they are ready to run from it, but no, it must be handled. Man in this state flees to everything he thinks will give relief and save him, resorting to *materia medica,* to dieting, to surgery, etc., asking God who is Spirit to be merciful to his sense of life, which is mortal. Now as God is Spirit man must seek spiritual help, and realize that he is spiritual, and in that spiritual consciousness he is quickened into newness of life, for it is this realization alone that can bring permanent benefit.

The serpent of Genesis presented to Adam in the Eden allegory was not handled, and as the result we see sin, sickness, and death. Many of the prophets from Moses to Jesus have to a great extent handled the suggestions of the serpent, but none so fully met and mastered all of them as our Master, Christ Jesus, and because of this he became the Way-shower and Saviour for all mankind. The deceptive argument in Genesis, that man is material instead of spiritual, was the point to be handled (understood), but it was not; so we see as a direct result, nakedness and shame. Well did Jesus say that this serpent (material concept) was a liar and a murderer from the beginning, and in that state of sin, the world's present belief of existence sprang from the Adam consciousness.

Jesus said that when his teachings were understood, serpents should be handled, and even a deadly poison should not harm us. Paul proved this true when the viper's sting failed to harm him. The material serpent is but a symbol. In every extremity we must turn to God and learn that He is our life, and live in this consciousness.

The wrong concept of God is the serpent in human consciousness to-day, suggesting the wrong idea of man and creation and causing all sin, sickness, and death. The true concept of God gives back to man the only real sense of Life and Love.

We are living in an age in which it is not only the serpent of one head that is to be handled, but the dragon of many heads, and some of them might be named fault-finding, envy, hatred, and jealousy, ending in murder and death. The cause of the growth and manifestation of these many forms of error might be summed up in one word,—selfishness.

When this serpent is scientifically handled, as it is in Christian Science, and the dragon of the Apocalypse is cast out of human consciousness, then the clouds of mortal sense will have rolled back and we shall begin to see the great spiritual fact of man's perfect being, and realize that peaceful state of Christ's reign as pictured by Isaiah, and then God's kingdom will come to our consciousness, on earth as in heaven. ### Principle not Personality.

IF it be asked, "Is there any person in all the world who has the power to heal malignant diseases?" the answer of Christian Science is an emphatic No! If, however, the questioner asks, "Is there any principle in all the world by the application of which malignant diseases can be healed?" we answer, there is just one Principle by which such healing can be done. Thank God, this healing power is a Principle and not a finite person, and so all men in all the world may come to know and obey this Principle; whereas a personal healer could not reach, nor be reached, by all mankind. Would an "infinitely compassionate" and impartial God give one person in any age or land a private and personal power to heal, and leave all His children in other times and places without this divine power? Let us at least be agreed that God is just and deals equitably with all.

The people who are sincerely seeking the facts about Christian Science in order to reach correct conclusions upon this subject, will attend the Christian Science testimony meetings, and will ask the persons who have been healed by Christian Science about the diseases with which they had been afflicted. Those who are not sincerely seeking the whole truth about Christian Science may possibly be satisfied with what the opponents of Christian Science tell them —opponents whose eyes are wide open to the mistakes made by our people, but who are pleased to ignore the demonstrations of healing and reformation that are fast filling our churches with healthy and happy faces.

Our friends will find in the New Testament that the hostile critics of Christ Jesus and his gospel were never given "a sign." Because he who sets himself up as a critic of God, and His healing and saving Christ, is too high upon the pinnacle of self-righteousness to perceive the power of God which is so plain and practical to the meek and lowly children of the kingdom of heaven on earth. To all hostile critics, ancient and modern, the works of the Master and his followers have been "foolishness" and a

Copyright, 1903, by Mary Baker G. Eddy.

"stumbling block;" "because they seeing see not: and hearing hear not, neither do they understand." "But he that received seed into the good ground is he that heareth the word, and understandeth it; which also beareth fruit, and bringeth forth, some an hundredfold, some sixty, some thirty." "Wherefore by their fruits ye shall know them."

No Christian Scientist has ever claimed to know all about God. But the teaching of Jesus, as interpreted by Christian Science, does give one a demonstrable knowledge of God. A critic says that he does not know God. If he knows nothing about God why does he preach obedience to an unknown God? Paul said that he knew Him, and he declared Him unto the Greeks. The Master said: "This is life eternal, that they might know Thee the only true God, and Jesus Christ, whom Thou hast sent." And John uses the word "know," or some form of it, over thirty times in the last four chapters of his first epistle. Mark this passage: "We are of God: he that knoweth God heareth us; he that is not of God heareth not us. Hereby know we the spirit of truth, and the spirit of error. Beloved, let us love one another: for love is of God; and every one that loveth is born of God, and knoweth God. He that loveth not knoweth not God; for God is love."

## "Hold fast that which is good."

Mr. Editor.

In a recent issue of your magazine a gentleman declares his belief that by using Bible methods, the prayer of faith would heal the sick, and the Lord should raise him up, but he does not believe that a Christian Scientist can do this.

Since he has already admitted that it is possible to heal the sick through the prayer of faith, he has put himself in a position where he must also acknowledge that it is a duty to do this. If he cannot give to us a better method of healing through divine power, he should not attempt to take away the one we now employ.

The Twentieth Century New Testament gives the following translation, "God is Spirit; and those who worship him must worship spiritually, with true insight." Other modern translators give a similar rendering.

If the "American aborigine believed in the Great Spirit" as Jesus taught it, he was a Christian to that extent. If the Jews, Gentiles, Mohammedans, Brahmins, or any other religionists believe that God is Spirit, in the sense in which the Master taught it, they are Christians to that extent. If they have builded their religions consistently upon a correct and orthodox understanding of God as Spirit, their religions are Christian, no matter what they call themselves. While I make these statements, I do not believe that all those who would say "God is Spirit" really understand the nature of Spirit or have builded consistently therewith. I am neither commending nor condemning other religions. I am simply insisting that the basic lesson of Christian Science is the basic lesson of Christianity.

Jesus himself never used material remedies, and never advocated their use. If his disciples in any instance practised contrary to his teaching, they indicated thereby their lack of understanding of it.

Since our critic has quoted the Scriptural statement, "Is any sick among you? let him call for the elders of the church; and let them pray over him, anointing him with oil," we would ask him if indeed he believes this statement to be a correct statement of Christ's method? If he answers in the affirmative, we would ask why is he not practising accordingly? Why does he not heal by prayer and anointing? If perchance one should become afflicted in some distant spot away from civilization and where no oil of any description could be found, would it be admissible and pardonable that one should omit the oil accompaniment in praying for deliverance? Or should one constantly carry with him a supply of oil? Perhaps James used the term "oil" in a figurative sense. Formality, peculiar rites, ceremonies, and material ministrations have clung to religionists of all ages, but the new method of worship which Jesus instituted was "The true worshipers must worship" spiritually, that is, without any material accompaniments. Jesus himself never used any material means, except by way of illustration. The first commandment is, "Thou shalt have no other gods before me." Giving power to material mediums tends to vitiate one's absolute and all-confiding faith in Spirit. Hence it is better not to use any material forms or means, but look to God directly, and as the only power.

I shall not attempt to explain the meaning of St. James's statement. I am holding to the teaching of the Master, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," and to his promise that God will hear and answer prayer. As to whether or not any of the disciples of our Lord failed to understand the spirituality of his methods, and therefore mixed material with spiritual means, is a question which I do not need to answer and with which I have little concern.

When Jesus said: "He that believeth on me, the works that I do shall he do also," and when he declared, "These signs shall follow them that believe," are we to understand that he expected us to do the works in a manner differing from that in which he produced results? It should be noted that his practice was always consistent with his teaching. He healed those who were absent from him, showing that he did not need to touch them. One who had omnipotent power could heal his patients before his hand could reach them. It is said that he stretched forth his hand in some instances and lifted them up. We do not attempt to explain why he did this, or if he really did it in a literal sense. It would be perfectly natural for one of his character to extend his hand to one who was in need of being lifted up. That this was not an essential means in his healings is indicated by the fact that he healed those who were absent from him when he had no opportunity to touch them with his hand or to apply clay or spittle. If the Master made exceptions to what our critic seems to believe a rule of "laying on of hands and applying clay and spittle," one certainly ought not to find fault with later-day Christians for making such exceptions.

Our critic asks, "We are told that the basic lesson of this Science is in the Bible, but where and what new was discovered?" Mrs. Eddy declares in her text-book, "Science and Health with Key to the Scriptures," that the Bible was her only text-book in her search for the truth. She does not claim to have discovered anything which is not in the Bible, but to have discovered only that which is therein contained and which she had not seen before. If the Bible is not to be understood, why do we study it; why do we have preachers to expound the Word? If others are entitled to the privilege of thinking and interpreting God's Word for themselves, why should not Christian Scientists have this right? If the various denominations have a right to build institutions upon their particular Biblical interpretations, why should not Mrs. Eddy be granted this privilege? If other religionists, in their practice of searching the Scriptures for its meaning, are not thereby charged with having added thereto and are not chided therefor, why should Christian Scientists be criticised for the same?

Mrs. Eddy, studying the character and life of Jesus from birth to ascension, has perceived the spiritual lessons which that life illustrated and has given them to the world under the name Christian Science.

Our critic refers to Dr. Quimby. I am satisfied if that good man were with us to-day he would be the first one to denounce the futile effort to attribute the discovery of Christian Science to him. He was an honest man and

Digitized by Google

frankly admitted that he could not teach his method of curing. He treated by dipping his hands into water and manipulating his patients. If he had been a Christian Scientist he would have practised consistently therewith.

The gentleman asks if I believe "the less we know or think about hygiene, the less we are predisposed to sickness?" I answer, Yes, I believe Mrs. Eddy's statement, not according to his insinuation of its meaning, but as it was intended by its author. The true hygienic laws are founded in the Scriptures, in the words of the Master, "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you." Also in the words of Isaiah, "Thou wilt keep him in perfect peace, whose mind is stayed on thee." Christian Scientists believe in cleanliness both in mind and body. They believe in exercise, for it is better to be alive than dead. They believe in fresh air, pure food, and clean clothing, because these are more nearly the God-like condition than filth. When one becomes elevated in mind, it is perfectly natural for him to desire outward cleanliness, hence Christian Scientists endorse the saying, "Cleanliness is next to godliness." It is the strained and irrational so-called hygienic beliefs and practices which Mrs. Eddy disparages.

Our critic refers to Peter's declaration to Simon the sorcerer, "Thy money perish with thee, because thou hast thought that the gift of God may be purchased with money." This statement is self-explanatory. Simon was not rebuked for any willingness to sacrifice material substance for spiritual things, but because he wanted to put the matter of obtaining and dealing out the divine power on a commercial basis. He worked wonders as a trade and desired to add the Christian method as a new acquisition to his business.

Gehazi, in his greed for material things, made an unpardonable reality of matter and paid a penalty therefor, for the same avaricious sense that caused him to be so immodest as to beg that which he had neither earned nor was entitled to, was the basis of his disease.

It is never claimed by a Christian Scientist "that the answer to prayer would be contingent upon payment of the fee." A very large part of Christian Science healing is done without money and without price. No one is ever turned away because he has nothing to pay, unless it be a mere matter of personal judgment on the part of the Scientist.

The decision of a Nebraska judge to which our critic refers was and is considered by many learned jurists to be incorrect. It was neither consistent with the law of Nebraska nor with a correct understanding of Christian Science and its practice. No other state has given a like decision, except in the lower courts, where prejudice and misconduct ruled. The Nebraska law defines the line of practice amenable to it in its declaration of the requirements of medical practitioners. It sets forth that an M.D. shall be entitled to a certificate after having passed an examination in physiology, anatomy, pathology, obstetrics, etc. If the judge in question had noticed this one point, he would have given a more correct decision. Medical practice, according to the statutes of that state, is such a practice as is qualified for by the study of the branches set forth in the law. Inasmuch as the practice of Christian Scientists does not involve any of these, they are no more amenable to the law governing the practice of medicine in that state than are clergymen who pray for their sick. Though a Christian Scientist in that state should be thoroughly educated in the branches which the medical law sets forth as a requirement for a certificate, and should be granted one by the state, it would not entitle him to the practice of Christian Science, would not entitle him to pray for his patient. It would entitle him only to the practice to which it was intended to apply and for which he is qualified by familiarity with the branches set forth in the law. Ask the Nebraska judge if a medical certificate in that state in any way applies to the holder's prayers for the sick, and he will answer, "No." Ask him if such a certificate grants to the M. D. the privilege of praying for his patient, and he will answer, "No." Then how can it be said that a Christian Scientist praying for the sick in that state is amenable to the law governing the practice of medicine? It is true the clause "otherwise treat any physical or mental ailment of another" is contained in the law, but the treatment to which reference is made, as we have already stated, is that sort which is qualified for by the study of physiology, anatomy, etc., not that which is qualified for by spiritual understanding of God and His creation.

All fair-minded people will note not only the wisdom but the generosity of Mrs. Eddy in her recent advice: "Until the public thought becomes better acquainted with Christian Science the Christian Scientists shall decline to doctor infectious or contagious diseases."

Christian Scientists are not seeking martyrdom. They are knocking at the door of public opinion, but they do not purpose to break in. They have always been law-abiding and are always careful to observe the laws of quarantine, even more carefully than many who are not Christian Scientists; first, because they have the highest consideration for the fears and apprehensions of others; secondly, because they do not care to incur the unnecessary risk and extra labor occasioned from mingling their sick with others.

If, as our critic declares, "That which is law to-day is not law to-morrow," why does he refer to a Nebraska decision which was made some twelve or fourteen years ago, when in fact in a number of states in the union decisions to the contrary have since been rendered.

ALFRED FARLOW.

In the *Journal of Medicine and Science.*

## Christian Science Misunderstood.

Mr. Editor.

Christian Science healing is the direct outcome of Christian Science praying. In the text-book of this Science Mrs. Eddy says, "A mere request that God will heal the sick has no power to gain more of the divine presence than is always at hand. The beneficial effect of such prayer for the sick is on the human mind, making it act more powerfully on the body through a blind faith in God. This, however, is one belief casting out another,—a belief in the unknown casting out a belief in sickness" (Science and Health, p. 12). She further says at the opening of the first chapter of that great work, the chapter that so courageously and keenly analyzes prayer as it is generally practised and so humbly and lovingly teaches prayer as it should be: "The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love."

The Christian Scientist exercises no faith in mortal mind, the alleged product, or else dependent, of a human brain, much less can he recognize any divinity of such so-called mind; but by his understanding of the One Mind, God, he demonstrates in some degree the dominion of man, as the spiritual son of God, conferred by his Maker in Genesis, and sung by the royal psalmist of Israel in the eighth psalm, "Thou madest him to have dominion over the works of thy hands; thou hast put all things under his feet."

As in praying, so in healing; the Christian Scientist takes Jesus as his teacher, his exemplar, his way-shower. His command to his disciples, "Heal the sick," his promise, "He that believeth on me, the works that I do shall he do also," these are the inspiration of the Christian Scientist in preaching "The kingdom of heaven is at hand" to a self-loving and materialistic community. And in the glowing words of this same Jesus, "If a man keep my saying, he shall never see death," he finds his divine authority for

Digitized by Google

going to what our clerical critic hastily calls "the insane length of claiming that there is no need of dying."

So far is Christian Science from magnifying brain power or recognizing divinity in the human mind that Mrs. Eddy says: "I find the will, or sensuous reason of the human mind, to be opposed to the divine Mind, as expressed through divine Science" (Science and Health, p. 111). "The medicine of Science is divine Mind" (p. 104).

If God "has put curative properties in the earth, the minerals, and the plants," it must be because He foresaw disease and death to which they must be the antidotes. Thus we find God again represented as the author of evil, sin, sickness, and death. Over against this teaching put the words of St. James: "Doth a fountain send forth at the same place sweet water and bitter?" and the words of Jesus: "If a kingdom be divided against itself, that kingdom cannot stand." We claim that God is supremely good. How, then, could He create the disease and sin which are infinitely foreign to Him? and how could He maintain His rule over His creations if He were Himself the instigator of rebellion?

Neither Jesus nor his disciples used drugs in healing. Mrs. Eddy destroys all belief in drugs as an agency in Christian healing in a very few words: "It is plain that God does not employ drugs or hygiene, nor provide them for human use; else Jesus also would have recommended and employed them in his healing. The sick are more deplorably lost than the sinful, if the sick cannot rely on God for help and the sinful can" (Science and Health, p. 143).

THEODORE D. WARREN.

## Practice vs. Theory.

THE world is reaching a period in its history where it is demanding something more than the theories and impracticable, time-honored systems of the past, especially along the lines of religious beliefs and curative systems. Christian Science is not at war or even at variance with any religious or curative system, but is the "advanced thought"—the child, born in due season, as the natural and necessary outcome of the desire to be delivered from pain, to know the future, and the universal longing for immortality (complete salvation).

The teachings of Christian Science promise for implicit faith in God a relief from all pain, but this implicit faith must be of the type referred to by James: "I will show thee my faith by my works"—faith based upon understanding. It is true that both the ignorant and the learned, as well as the halt, the lame, the blind, the deaf, the sorrowful, and the sinner turn to Christian Science—"this advanced thought of the day"—for relief, not merely because it promises, but because it fulfils its promises by healing them of both sickness and sin, and establishing in them a higher moral and ethical standard for the community in which they live, which may be seen by any one who will observe their daily lives.

There is a much larger following of Christian Science than is indicated by its actual church membership, for the church receives to its membership only such as have some practical knowledge of its teachings, and who are ready to subscribe fully to its tenets. Unlike some religious denominations, Christian Scientists do not proselyte or invite people to become members of their church because they believe in Christian Science, but they explain to them the necessity of their having a practical understanding before they would be fitted to assume the responsibilities of church membership, for Christian Scientists are not mere believers in Christianity, but are aware of the necessity of living Christian lives, in accordance with the Mosaic decalogue, the Sermon on the Mount, and the teachings and practice of Jesus Christ.

## The Lectures.

### At Albert Lea, Minn.

Judge William G. Ewing of Chicago, delivered a lecture on Christian Science at the Universalist Church, Friday evening, March 27. The audience was a representative one and paid very marked attention throughout. Judge C. P. Smith of Mason City, introduced Judge Ewing and spoke in part as follows:—

*Ladies and Gentlemen:*—It is recorded in John's Gospel that Jesus stated his mission in these words: "To this end was I born, and for this cause came I into the world, that I should bear witness unto the truth." I assume that he meant the truth concerning God, man, and the universe; such is the import of the record of his life which is preserved to us in the Bible. Now a witness is one who furnishes evidence or proof. Therefore it was the end of Jesus' earthly life to furnish evidence or proof of God and His creation and government of the universe, including man. Hence all Christians search and study the Scriptural record of his life to ascertain the truth; to understand the evidence and proof which he furnished. To that end they ought, and probably do, consider Jesus' acts as well as his words,—his mighty works as well as his precepts and parables. Christian Scientists study this record no less than other Christians; but they draw somewhat different conclusions from the evidence, especially from Jesus' acts and words relating to sickness and death and the effect of sin upon the health and life of mankind. It is apparent from the Gospels that Jesus furnished a great deal of evidence and proof bearing directly upon those subjects. He called these phenomena "the works" or "the work of God," and said: "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father." Whenever he commanded any one to preach the gospel, he commanded him also to heal the sick.

Jesus' acts with reference to disease and death are commonly regarded as "miraculous." Which means, according to Hastings Bible Dictionary, "that at certain critical moments in the history of the human race the uniformity of His [God's] rule has been departed from." I do not know just how Jesus' words on this subject are generally received; there is no consensus of opinion, so far as I am aware.

Did the cures wrought by the Christ mark a series of "departures from the uniformity of God's rule"? Or did they instance the normal operation of an immutable law of God, "with whom is no variableness, neither shadow of turning"? Did Jesus bear witness to the truth concerning the nature of disease and death? Did he furnish evidence or proof that man is not really subject to those phases of evil? These questions and others like them are the questions which occurred to me when I first read "Science and Health with Key to the Scriptures," the book by which Mrs. Eddy made known her great discovery, Christian Science. While pondering those questions, I reviewed the Gospels to compare them with her teachings. The more I reconsidered the Master's acts and words the plainer they accorded with the statements in Science and Health. Since then it has been proved to my full satisfaction that Christian Science is ascertained truth, a demonstrable Science.

Christian Science was discovered in 1866 by a lovable Christian woman, who now resides near Concord, N. H. Its growth was slow at first but to-day it is the religion of a large number of intelligent persons, of many states and countries.

Judge Ewing's last lecture was delivered at the City of Mexico; almost his next lecture will be delivered at Dublin, Ireland. The copy of Science and Health which I hold in my hand is one of the 268th thousand. This book

Digitized by Google

contains a complete statement of Christian Science with rules for its demonstration. It is the original source of information for all who ask, "What is Christian Science?" I believe its contents to be within the comprehension of any sincere Christian truth-seeker.—*Correspondence.*

### At Chicago, Ill.

Judge Septimus J. Hanna, C.S.D., delivered a lecture on Christian Science at Second Church of Christ, Scientist, of Chicago, Thursday, April 23. The church, which seats fifteen hundred people, was crowded by a large and appreciative audience. It is estimated that the standing space was occupied by about four hundred people, and several hundred were turned away. Mr. Lansing B. Warner, First Reader of the Church, introduced the speaker.

*Correspondence.*

### At Watertown, N. Y.

The lower part of the City Opera House was filled last evening [April 21] when Judge William G. Ewing of Chicago, gave a lecture on Christian Science. The audience consisted of church members, lawyers, and prominent citizens who were all deeply interested in the address, touching as it did on the hitherto little discussed essentials of the religion in question.

Judge C. H. Walts, of this city, introduced the speaker with a few very fitting remarks on the growth of the religion.—*Watertown Standard.*

### At Davenport, Ia.

A large audience gathered at the Burtis Opera House yesterday afternoon [April 19] to hear the lecture of Judge Septimus J. Hanna of Boston, on Christian Science and Christian Science healing. The bulk of the attendance was made up of people who were not Scientists, but many had come from Muscatine, Clinton, and other cities purposely to hear the lecture.

Judge Hanna was introduced by Attorney W. H. Wilson of Davenport. No special theme or subject was announced by Judge Hanna, and his talk was a general one upon the teachings of the sect and the methods which they used in curing and arresting disease and sickness. His lecture occupied about an hour and a quarter's time and absorbed the interest of all in the vast audience, whether they were believers or not.—*The Davenport Times.*

### At Baltimore, Md.

In full beauty of joyous springtide our second lecture of the past twelve months was delivered by Mr. Hammond on the afternoon of April 19, before a large and representative audience in Chase's Theatre. We have had at different times Carol Norton, Judge Ewing, Mrs. Mims, and Captain Linscott. Last Sunday, we had the pleasure of hearing Mr. Hammond, who has been for many years closely identified with the work here as First Reader of First Church of Christ, Scientist.

The lecturer was introduced by Professor C. W. E. Miller, of Johns Hopkins University, and present First Reader of First Church, Baltimore, in a short, comprehensive address. He said in part:—

Though Christian Science has been before the Baltimore public for many years, there is still a great deal of misreprehension among many concerning this subject, and of its Discoverer and Founder, the Rev. Mary Baker G. Eddy, author of our text-book, "Science and Health with Key to the Scriptures."

In this busy age there are many who, while they feel they cannot take the time to pore over the pages of a book treating of a subject about which they know nothing, yet will gladly spend an occasional hour in listening to an authoritative explanatory lecture. To meet the wants of this class of people and to correct misapprehensions there has been established the Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston, Mass. The members of this Board are the only persons authorized to lecture on Christian Science.

The gentleman who is about to address you is well known to Baltimoreans and hardly requires an introduction. He is one of the pioneer workers in our cause, and has had a large and varied experience as a practitioner, teacher, and lecturer. He was a student of Mrs. Eddy, the President of the Massachusetts Metaphysical College, and has his degree from that institution.

I now have the pleasure of introducing to you Mr Edward H. Hammond, C.S.D., who will speak upon the subject of Christian Science.

The *American* and *Sun*, two of our leading dailies, gave excellent accounts of the lecture.—*Correspondence.*

### At Binghamton, N. Y.

A large and representative audience heard Judge William G. Ewing lecture on Christian Science at Stone Opera House yesterday afternoon [April 19]. The judge easily held the close attention of his audience from the beginning to the close of his address.

Judge Ewing was introduced by Cortland A. Wilber, president of the Board of Education, who said,—

We are here to listen to an address on Christian Science. I assume that many in the audience are not members of this church, but are those who have come, as I have, to hear Christian Science presented and to give it a fair hearing. One who cannot give the religious opinions of others a patient hearing and fair consideration thereby proves the essential weakness of his own faith. All true followers of Jesus are broad-spirited, liberal, and kindly. Nothing so moved him to indignation as religious bigotry and hypocrisy. We do most honor ourselves when we give the widest charity to doctrines opposed to our own. The eminent ability of the speaker of the occasion and the high positions he has occupied will, I am sure, command your interest and respect. I have the honor of introducing to you the Hon. William G. Ewing.

*Binghamton Republican.*

### To those who Approve and Countersign Applications.

Those who approve and countersign applications for membership in the Mother Church, will assist the Clerk, and also avoid disappointment to applicants if they will hold,—until after the semi-annual meetings,—the applications which have been sent to them for their signature at a date too late to reach the Clerk before the closing of the entries for admission, and notify those seeking membership that their applications were received too late to be entered. The papers must reach the Clerk not later than June 3.

### Reports from Branch Churches.

Reports from Branch Churches to be read at the Annual Meeting of the Mother Church, to be held June 30, 1903, must be typewritten and be sent to the Clerk of the Mother Church in time to reach him on or before June 22, 1903.

No report should occupy more than two minutes in reading.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Question Answered.

My beloved church will not receive a Message from me this summer. For my annual Message is swallowed up in sundries already given out. These crumbs and monads will feed the hungry, and the fragments gathered therefrom should waken the sleeper,—"dead in trespasses and sins"—set the captive sense free from self's sordid sequela; and one more round of old Sol give birth to the sowing of Solomon.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., May 11, 1903.

### An Opportunity.

We are very glad that one of our valued contributors to this issue of the *Sentinel* has called attention to the desirability of immediate and generous liberality in the matter of the Building Fund of the Mother Church, and we heartily concur in his statement that "the time is at hand, now, for this entire donation to be specifically subscribed as to amount and date of payment."

Our readers have been informed of the purchase of the land upon which the new building will be erected, and that this land has been paid for. The location is, therefore, determined. The size of the building was decided last June, but there still remain for definite decision the amount to be expended and the date for commencing building operations. The pledge of the annual meeting was "any portion of two million dollars that may be necessary for this purpose," and this, of course, carried the implication that work should be commenced as soon as the money in hand justified the letting of contracts.

The spontaneous and liberal donations which enabled those having the work in charge to secure the large parcel of land adjoining the Mother Church, gives promise of the speedy accumulation of a sum sufficient to justify the decision of these remaining problems. Each person interested, must remember, however, that his individual desires, both as to the amount to be expended and the date of commencing work, will be best evidenced by the liberality and promptness of his own contribution.

The writer of the article referred to—"By Way of Reminder"—does not attempt to declare the full measure of what our Mother Church stands for; he wisely says that to do this one "must have ascended in thought and spiritual insight to the plane whereon he becomes seer and prophet." He does, however, in the sentences which follow, present sufficient reason for its existence. "This church stands for the worship of one God and for utter reliance on Him and obedience to His perfect and satisfying law of good. . . . Last, but not least, it stands as indication of what one woman who prays, and prays aright, has accomplished for the good of the race, because she was obedient to God and was guided and sustained by Him."

These statements, simple in words but great in import, appeal to every one who has felt the healing and regenerating power of Christian Science. To such as have experienced this saving power we especially commend Jesus' words: "Give, and it shall be given unto you; good measure, pressed down, and shaken together, and running over, shall men give into your bosom. For with the same measure that ye mete withal it shall be measured to you again."

M.

### A Safe Abiding.

We all want to be healed, healed of sickness and the liability to sickness, of sin and the temptation to sin.

If besetments of sin or sickness came to us at known intervals and with a measurable claim of power, we might meet them with occasional strength and dispel their shadows with a flood of unusual light.

Spasmodic effort, however, will not liberate us; it is in the *abiding* under the shadow of the Almighty that we are secure; for these false accusers,—sin, sorrow, sickness, lack, discouragement,—gain ingress through our own habitual apathy. They have no power or reality in themselves, they are simply negative, and can no more enter the consciousness of him who abides in Love than darkness can enter light.

To be healed, to be whole, then, we must dwell constantly in the atmosphere of love. We grant that we shall meet much in our journey up and down the earth, that we cannot love, cannot even respect,—manifestations of ambition, pride, envy, calumny, flattery, deceit; but we cannot afford to let these imps of darkness harry us into a state of hatred toward any body or any thing. So long as we hate anything it has not for us lost its entity, for surely we cannot hate nothing.

The first dawning of truth upon the miser or the drunkard finds him mesmerized in the belief that he loves his oppressor, but as misspent energy, wasted hours, and neglected offices of tenderness and affection speak with upbraiding from the past and threaten the future with desolation, he turns away from his gold or his glass in fear and consternation. This, however, is not dominion. Greater remorse follows,—he hates the tyrant, he curses the usurper, he despises himself, despair is dense; but this is not freedom. It is still dark and he questions with the Psalmist, "Shall thy wonders be known in the dark? and thy righteousness in the land of forgetfulness?" Never until the sin and the temptation to sin have ceased to disturb man, is he free. Then will he understand the words: "A false belief is both the tempter and the tempted, the sin and the sinner, the disease and its cause."

When the light of Love illumines the whole consciousness, and thought rests permanently in reality—then comes the true healing, and we abide in peace.

S.

### The Appeal of Christian Healing.

Fortunate is it, that the things of God stand fast, unmoved either by the condemnation of foes, or the praise of friends. Christian Scientists are not disturbed by the misjudgment of those who misunderstand their faith, but they do rejoice in every indication that the truths of their faith are appearing to those who are looked to as religious guides, and whose enlightened convictions are sure to prove avenues of healing for others.

The late Dr. Joseph Parker of the City Temple, London, has been recognized as a man of rare endowment. Spiritual perception, sincerity, earnestness, reverence, love,—all these contributed to a life of unusual glow and effectiveness. "A great man with a great theme,—it is a dull-eyed soul who saw not a great spirit with mighty experiences looking out of the windows of the house which he inhabited,"—thus has one spoken of him, who knew him well, and it is this man, a life-long student of the Bible, who has

Digitized by Google

written the paragraphs that follow respecting a distinctive teaching of Christian Science.

"If we believe the New Testament we believe that men were once 'made whole' without medicine or doctor. If this was a fact in New Testament times, why may it not become a fact in the present day? If it is a fact, it is the most beneficent fact in history, and being such, it ought, if possible, to be recalled and re-established.

"To grasp the question widely and thoroughly, we must go back to Christ's own day and think with him. We have no concern with knaveries, empiricisms, or fraud and pretence of any kind; all these must be banished from the mind, or they will create prejudices which truth itself cannot penetrate. First of all let us strive after simplicity of mind; that is essential to progress. Did Christ heal men? Yes, he did. Did Christ's apostles heal men? Yes, they did. Was the healing mechanical, surgical, medicinal? No, it was not. Was the healing spiritual, sympathetic, mental? Yes, it was. Is Christ the same yesterday, to-day, and forever? Yes, he is. Does Christ still live and work and reign? Yes, he does. That settles the case. Suffering is the same, Christ is the same, love is the same. . . .

"I have not the shadow of a doubt that the material will decrease and the spiritual will increase. . . . mind created all things, why should not Mind rule them?"

To this unreserved declaration for the gospel of healing we might append the statements of several eminent American divines who have recently taken pains to rebuke the criticism of ignorance and prejudice, and to recognize Christian Science as the bearer of a truth that is indeed healing and saving men, a truth for which all Christian churches theoretically stand and which they should make effective. More than this, the ministers referred to have called for a spiritual advance by contrasting in its favor the testimonies and achievements of the adherents of Christian Science, with the conditions that obtain in their own parishes.

One of them has said,—

"If we did our duty, this diversion of strength from the church of the great healer and helper of mankind would not be. The very existence of those extra-ecclesiastical religious movements is a reproof to the church, and an evidence that it has not been doing its whole duty."

Says another,—

"'There is no fear in love; but perfect love casteth out fear.' Sin and suffering are in the world. Christian Science denies their necessity; Christianity denies their supremacy. Christian Science points to man after man who has been released by its method from pain or the bondage of evil habits. Let Christianity also call for testimony. . . . Let us claim our own, and let us live in such wise that the claim may appear reasonable. We owe to the world, with all its hunger for life and health and strength, to cherish and maintain and enlarge our faith up to the measure of its possibilities and the world's needs."

These words are very significant, despite the sad misapprehension which lingers in the discrimination they endeavor to make between Christian Science and Christianity. They evidence a growth which will soon reach that identification of Christianity with Christian works, rather than with creedal profession, which already marks the judgment of the great body of the people.

The influence of Christian Science upon the churches at large will be greatly augmented when Christian ministers are more generally willing thus to accept the facts of healing to which Christian Scientists bear testimony, and to recognize that these works are entirely in keeping with the teaching of Jesus, are a part of the inheritance of all his followers. The day of the fulfilment of our Leader's "sanguine hopes that Christian Science would meet with immediate and universal acceptance" (Science and Health, p. 330), will thus be hastened.

It may be a long time before all Christian believers entertain the same views regarding Christian truths, but the time is at hand when the multiplied demonstrations of healing in Christian Science will not only encourage the burdened and afflicted everywhere, but will provoke to more earnest inquiry and endeavor all who seek to apprehend all that for which they are apprehended of Christ Jesus.

W.

## From our Contributors.

### By Way of Reminder.

EDWARD A. KIMBALL.

THE cause of Christian Science has grown with startling rapidity. It has attracted to itself multitudes, who have been healed of sickness and redeemed from sin, and these have silently and spontaneously aggregated themselves, as an important religious and educational denomination or society, with far-reaching activity and influence.

We are adherents of a religion which offers much, promises much, demands much. The world will require of us that we perform in accordance with our professions. We are and shall be in the glare of criticism. We shall be subjected to the closest scrutiny, the most uncompromising, exacting surveillance. We shall need greatly, to avoid the intoxication of popularity. Far better for us to endure the throes of persecution, than to exult in the flush of self-satisfied success. Numerical strength does not necessarily indicate success on the part of any "cause," nor the righteousness of such a "cause." The success of the Christian Science Church does not depend on attracting to itself thousands, or even millions of men, nor on accumulating the mere externals or paraphernalia of religious organization. The reformative and healing efficacy which inheres in Christian Science and its practice, are manifested in the spiritual, moral, and physical regeneration of men and women. Its influence is to make people honest, pure, upright, unselfish, merciful, loving. Its immediate fruitage will ever be evidenced by a grander, nobler manhood.

The continued and future success of this movement will depend, not on numbers, but on the Christ-like living and doing of its adherents. There is no acceptable substitute for spiritual growth and rightness of thought and conduct on the part of the Christian Scientist. Even though we were disposed, it would be futile to beguile ourselves with the supposition that our Cause would be prosperous for any other reason than that its people were abolishing sin and disease, and growing daily in the life and living which is like God, which is without reproach before Him.

The advent of Christian Science has induced simplicity of worship and of church and denominational organization. It eliminates a desire for and dependence on ecclesiastical formalism, and on every semblance of parade or imposing ceremony. It teaches the Christian that his one supreme intent must be to seek the kingdom of God and avoid everything that tends to obscure it. Nevertheless, while we seek to abide in the very spirit of Christianity rather than in anything that is by way of outward form, it is to be noted that our religion and the Christian Science propaganda are manifested in certain essential though simple externals. Foremost among these, stands our Mother Church,—The First Church of Christ, Scientist, in Boston, Mass.—with its church edifice.

For what does this church stand? What is the justification for its existence? How much of import has it for humanity, for the future, for you? It would be presumptuous for me to pretend to answer these questions. In order to do so adequately, one must indeed have gained a pro-

Digitized by Google

found knowledge of the reality of Being; he must have felt deeply the very touch of God; he must have ascended in thought and in spiritual insight to the plane whereon he becomes seer and prophet. But let it be said, briefly, that this church stands for the worship of one God and for utter reliance on Him and obedience to His perfect and satisfying law of good. It stands for salvation from all evil, through the divine Christ,—his teachings and his deeds. It stands for one universal Deity, one universal Christ, one universal Christianity, one theology, one religion, and for the unity of mankind in one Christian brotherhood. It stands for the power of Good over evil, for the extermination of sin and disease, devil and hell, and for the legal right of man to overcome temptation and escape damnation.

It stands for the assurance of immortality, for the "kingdom of heaven" within you. It stands for the highest education, for the effacement of mystery and superstition, and for a demonstrably scientific theology which naturally heals the sick. It stands for the tranquillity of nations, the obliteration of war and conflict, and for an equitable social and governmental reform. It stands for a new hope which answers the deepest human need and is giving greater peace to a suffering world. It stands for *your own* welfare, prosperity, health, happiness, and an increased capacity for every righteous achievement.

Last but not least, it stands as indication of what one woman who prays, and prays aright, has accomplished for the good of the race, because she was obedient to God and was guided and sustained by Him.

It is inevitable that the transforming influence of Christian Science should improve the thought, enlarge the favorable expectation, and augment the achievements of its followers. It was inevitable that this mighty impulse for good, should have externalized itself, ten years ago, in an edifice for the Mother Church. It is inevitable that this same impulsion should now manifest itself in a beautiful, ample building, embodying the best of design, material, and situation. In recognition of all this, the Christian Scientists of the world, assembled in Boston last year, declared the need of a large auditorium for the Mother Church, and pledged themselves to donate any part of two million dollars that might be needed for its procurement.

Since that time, a committee has been appointed, and progress made toward the accomplishment of this great purpose. Some money has been paid in toward the fund, and some of the churches and other organizations have taken steps in this direction, but the time is at hand, now, for this entire donation to be specifically subscribed as to amount and date of payment. No appeal has ever been made in this behalf and it is probable that none will be made or ever be needed. It is doubtful if the cause of Christian Science could prosper in any particular, on the basis of fretful or reluctant sacrifice on the part of its people. Christian Scientists are not expected to contribute money against their will or as the result of importunity or entreaty on the part of some one else.

They will provide the money necessary to this end, because they recognize the importance of the Mother Church to the Cause. They realize that there must be a prosperous parent church, in order to insure the prosperity of the branch churches; indeed, they know that it is the prosperous growth of this movement which now necessitates this onward step. They know that their own individual welfare is closely interwoven with the general welfare of the Cause. They believe that the cause of Christian Science is in accord with the Divine will, and that the erection of our church is in such accord and that whatever needs to be done, they can do and are glad to do; moreover, they believe that they will be blessed for so doing.

They know that, individually and as a people, they have received countless blessings and have been extricated from the most wretched conditions of sickness and sin. Nothing that means money or wordly possessions can measure their boundless thanksgiving and their sense of gratitude.

They are deeply concerned to open the way for others to gain the same benefits; also to provide means whereby all who will may find their way to happier lives through Christian Science. They believe that this ministry is destined to do the best for sinner, invalid, inebriate, for the poor and destitute, the ignorant, the oppressed and broken-hearted, that can be done. Hence they understand that every contribution of this kind is, at once, in the interest of religion, charity, education, and morality.

Notwithstanding the fact that as Christian Scientists we are as yet but imperfect followers of the perfect Christ, and although we may falter or stumble or loiter by the way, we know that the Leader of this movement, Mrs. Eddy, has been constantly at her post during all the storms that have surged against her for a generation. She has been the one of all the world who has encountered the full force of antagonism. We know, too, that during these years she has not tried to guide us by means of forced marches, but has waited for us to grow into readiness for each step, and we know that in all this time she has never urged upon us a step that did not result in our welfare.

A year ago she quietly alluded to the need of our Mother Church. She knew that we were ready; the response was instant, spontaneous. Later on she expressed much gratification because of prompt and liberal action, and it needs no special insight to predict that she will be cheered and encouraged to know that having seized upon this privilege and opportunity we have also made good the pledge.

Relying on the ability of our brethren to judge for themselves as to the Divine requirement and blessings, and confident that they will nobly respond to this present need and opportunity for progress, these few words are written by way of reminder, and for the purpose of suggesting that prior to the coming annual meeting, we cannot better signify our loyalty, and interest, and gratitude than by subscribing all the money that will be needed, in order to complete the proposed work.

---

## The Power of a Unit—Love.

L. C. LANG.

MANY of us have had opportunity to watch the operations of gangs of laborers along the railroad tracks of our country. The speed with which they labor and the amount of work they can accomplish in a short space of time has been a subject of much comment.

I was very much interested not long since in watching such a gang of men transferring to a flat car a pile of heavy rails which were lying in a ditch beside the track. These men stood shoulder to shoulder, and at the word of command they stooped and each grasped the rail, at another word the rail was lifted alongside the car, at another, it was tossed upon the flat car. In a comparatively short time the pile of rails had all been transferred.

While I stood there, I learned a new lesson. In that seemingly immovable mass, I could see a likeness to error, the manifestations of mortal belief filling the ditches of human consciousness; in the laborers I saw the students of Christian Science, who should stand as a unit in Love, shoulder to shoulder in the effort to overcome the varied manifestations of human belief; in the section foreman who gave the word of command, I found a likeness to the Master, whose word of command to us to-day is "Love." "A new commandment I give unto you, That ye love one another," and like a benediction came the words from Science and Health, page 242: "In patient obedience to a patient God, let us labor to dissolve, with the universal solvent of Love, the adamant of error."

The speed and ease with which we may accomplish our

Digitized by Google

purpose, as well as our success along every line of action wherein we are called to labor, will be measured by our obedience to the "new commandment," that "ye love one another," and by our unity in that obedience, then our capacity is as limitless as Infinite Mind.

## The Brotherhood of Man.

J. D. S.

WHEN the strong searchlight of absolute science is turned upon the human mind a mixed collection of cobwebs, dust, and mould is found obstructing the entrance of that light which illumines, and we "see through a glass darkly." To let the pure rays in, human thought must keep its windows pure and clear.

There is no guess-work whatever about the science of mathematics, its workings are absolutely accurate and demonstrable. The figure four, for instance, is a symbol of a fixed quantity which exists in mind, and it is impossible for that symbol to indicate more or less than that fixed mental quantity. This symbol may be presented to the eye in charcoal, chalk, or any of the brilliant rainbow hues, faintly or heavily outlined, carved in wood or stone, moulded in brass or gold, even outlined by diamonds, or traced by childish hands on the sands of the seashore; it may appear trim and straight, broad, low, small, large, crooked, wavering, half erased, distorted; it may refer to brilliant planets or clods of dirt; its value, fixed in mind, is ever and always the same, absolutely unchanging; when one endeavors to solve a problem and give this symbol less than its true value the resulting answer to the problem is never correct and can never be, and the worker only gets himself in a muddle while the basic law of mathematics remains undisturbed by the worker's mistakes.

The Science of Being is equally absolute. The Bible is authority for our understanding that God is Mind, Life, Love, Truth; that He made man in His image and likeness, and pronounced His work good, perfect, complete. Thus man exists in Mind a fixed quality and quantity, unchanging, eternal, perfect.

Man's true value in mind is ever the same. He can be no more, no less than God's perfect image. As wisdom, strength, love, intelligence, peace, life, truth, and purity are without color or form and can only be recognized in mind, so the true man can only be known in mind. Endeavoring to work out life's problem by giving man less than his true value, will never change the absolute Principle and Science of being and can only muddle our own demonstration and cause us to fail in getting right results. Only by holding the mind-picture of the image and likeness of God can we ever establish on earth the true brotherhood of man.

## Life's Boundaries Dispelled.

KATHARINE J. SMITH.

To those who have groped for many years through myriad forms of human hope, who have found life enthralled by rigid limitations, bounded by sense, the revealing white light of Christian Science comes as a divine deliverance. Until that boundary of sense is wholly dispelled, mortals are constantly searching for seeming blessings which, when finally found and grasped, are bitterness, and which prove as illusive as the winds.

When this wondrous light descends upon us, those of us who have wasted many of our precious years in search of the false attributes of life, who have gone so far to find so little, pause at the new and almost incomprehensible experience of going nowhere and finding much. It is the day of revelation when we learn that Life, in its mighty and only meaning, is a vast sunlit plain upon which no horizon descends.

Christian Science does not teach us to record our losses and failures; it does not bid us to make of our lives a history of attempts, but rather a history of achievements, and in its promise of progress the day or the year is not really lost to those who at length tear away all the old, gray wrappings of dust and find their true selves revealed.

Some of us can look back upon our self-conscious attempts at godliness, to a time when we thought our blessings and salvation must come by being scourged, and bound, and weighted down, and made footsore, as if the Master could be other than loving; but if we could make a summary of our blessings to-day, we would acknowledge that our only scourging is with the lashes of sunshine,—the light of Science.

Seekers after God are not made footsore as they follow the indicated trail of His wise intent. Surely the able Administrator of our activity will help us to find in His perfect plan, faultless, unceasing Life; and we may ask it of Him, not with majestic form and lip-orisons, but with the simple understanding that He is all. To trust in Him is the only appeal His majesty exacts; to know our blessings is to know God, and this is the prayer He loves best of all.

We would not build a frail, impractical structure if we are to abide in it, but if we have provided cedars for the beams of our house and firs for rafters, the carpenter's apprentice of Nazareth will teach us how best to construct and embellish it.

## An After-Easter Lesson.

NELLIE B. FISH.

EARLY in the week, I heard a regret expressed that the Lesson Committee had not prepared a special lesson to be read on Easter Sunday. Instantly the thought came that our faithful Lesson Committee is guided in its work, and surely the need of the people is supplied. So, in studying the lesson with the purpose of finding the Easter lesson that must surely be contained therein, a chain of thought developed which was beautiful and complete from beginning to end, leading up to the statement that "The true idea of God gives the true understanding of Life and Love [which] robs the grave of its victory" (Science and Health, p. 323), as shown forth in the triumphant demonstration of Jesus.

The great truth that "I and my Father are one" was the foundation of Jesus' teaching, and every step was a demonstration of this unity of man with God. It is this great truth that "hath rolled away the stone from the door of human hope and faith, and elevated them to possible at-one-ment with the spiritual idea of man, and his divine Principle, Love" (Science and Health, p. 45), and has made the Easter demonstration—the rising above the false testimony of the material senses—possible for all men. The behest of the cross is the laying down of all fleshliness, in order to gain this spiritual dominion—self-abnegation, the forsaking of all worldliness—for "a great sacrifice of material things must precede this advanced spiritual understanding" (Science and Health, p. 16).

The time for this reappearing of the Christ idea, this spiritual understanding which follows the complete sacrifice of material things, is now, and in proportion as the sacrifice is made, thought rises with Christ into newness of life, oneness with the Father. Now is the time for material beliefs to be crucified, that the risen Christ may "dwell in your hearts by faith," and that man may "know the love of Christ, which passeth knowledge, that ye might be filled with all the fulness of God."

Thus the lesson of the wondrous, perpetual Easter which Christian Scientists are always celebrating, was learned, and all day long the glad pæan, "Christ is risen, indeed," rang in my heart.

## Among the Churches.

### Annual Meeting at Montreal, Can.

The reports presented at the annual meeting of First Church of Christ, Scientist, Montreal, Can., were very encouraging, and show that the membership has increased, that there has been a steady gain in the attendance, and that the finances of the church are on a sound basis.

The Sunday and Wednesday meetings have been marked by increased attendance, many testimonies being given of the efficacy of Christian Science to overcome sin and disease, and of thankfulness to God and to the revered Leader of this great movement for the blessings which this religion brings.

During the year the counsel and advice of all the members has been sought when business of more than ordinary importance has presented itself, thereby extending the responsibility of the government of this church to all the members and consequently strengthening the hands of the Board.

The spirit of unity and harmony prevails, and we would honor the counsel of our Leader when she says, "Have no ambition, affection, nor aim apart from holiness. . . . Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity" (Miscellaneous Writings, p. 155).

CHARLES W. PEARSON, *Clerk.*

### Advance in Mt. Vernon, N. Y.

The members of First Church of Christ, Scientist, are very happy in being able to hold their services in a church building.

After having occupied several halls, we rented, March first, the Swedish Lutheran Church, for the Sunday morning and Wednesday evening services. It is a very pretty little church, seating about one hundred and fifty, is well lighted and heated, and plainly but neatly decorated inside.

Since beginning to hold our meetings in the church we have had larger congregations than could have been seated in our former hall.

As soon as the church had been secured the need of a place for a reading room was apparent and was quickly met, a store was secured with a suite of rooms back, the store room was fitted up for us and a partition put in making two nice rooms, with draperies between, for a library and reading room, while the back rooms were immediately rented at a price which made the amount of our rent for both places, exactly the same we paid before.

Our membership is thirty-one. All the expense of moving, etc., has been met and no one has been asked for anything. Love has provided all, and surely there has been enough.

We began as a church to send contributions to the Mother Church Building Fund as soon as the notice appeared in the *Sentinel* explaining how to do this.

Soon after, we also started a local Church Building Fund and had small envelopes in two colors printed, one Mother Church Building Fund, and the other Local Church Building Fund. The congregation was notified of these envelopes and that they were to be put into the collection basket, the money to be used only for the purpose named.

It has certainly been demonstrated that "giving doth not impoverish," for we now have a small amount in the savings bank for our local church fund, while the Mother Church fund has not noticeably decreased and our regular collections have increased.—EDWIN MARQUAND, *Clerk.*

---

It is better to win than to command.

JOSEPH JOUBERT.

## The Mother Church Building Fund.

WE append additional impersonal reports of contributions to the Mother Church Fund.

At a special church meeting this evening it was voted to reserve one half of the collection on the first Sunday in each month for the Mother Church Building Fund.

When the *Sentinel* first spoke of this fund we voted to send some part of the amount, and recently forwarded to the treasurer the sum on hand.

Wishing to take a more definite step, the vote spoken of was passed unanimously.

We are called a small organization, nine members, and we rejoice over this demonstration.

The other half of the collection on the first Sunday we shall devote to a standing lecture fund.

---

We gratefully send this contribution of forty dollars from our Sunday School of forty-two members, as their first offering to the Mother Church Building Fund. The children esteem it a privilege to have a part in the rebuilding of the Mother Church.

The interest they manifest and their joy in giving is an inspiration to the superintendent and teachers. This beautiful demonstration of Love has come through the study of the definition of church as given in Science and Health, and they are working to build the true church in their own consciousness.

---

At a meeting of the members of our church one hundred and twenty-five dollars was pledged for the Mother Church. All the members could not be present at this meeting, and before we were ready to send this sum the amount was made two hundred and nine dollars. The unselfish, loving, grateful thought for our dear Leader and the Mother Church was brought out in this meeting.

---

In fulfilment of their promise of last October, I am sending a check for one hundred dollars, our Sunday School's contribution to the Building Fund of the Mother Church.

The children feel it a great privilege to have thus become stockholders in this forward movement of Love, and like little minute-men and women are standing ready for the next command in the stately march of Mind.

---

At a meeting of our church and congregation the resolution offered by the committee in Boston at the June assembly, referring to raising two million dollars or more; was concurred in and the quota which seemed to be best adapted for the demonstration of its members and congregation was $10.000 or more.

---

At our last monthly meeting it was decided to turn over to the Mother Church Building Fund half of the offering of every first Sunday in the month; commencing May, 1903, and continuing until the need is supplied.

## Notice Regarding the Bible Lessons.

In view of the change in the date of Communion service in the branch churches from June 14 to July 12, the following will be the order of the lessons:—

June 14.—Is the Universe, including Man, evolved by Atomic Force?

June 21.—Christian Science.

June 28.—God.

July 5.—Life.

July 12.—Sacrament.

In the Mother Church the Communion service will be held on June 28, and the lessons for July will follow in the order given in the *Quarterly.*

## Testimonies of Healing.

Our readers will reçall the thrilling story of the wreck of the steamer Crescent City off the coast of California, on the morning of January 31, and the following testimony of a Christian Scientist who was on board, will be read with special interest.—EDS.

I would like to show my appreciation of the understanding that Christian Science has given me of God as an ever-present help, by sending this, my experience during a shipwreck.

I left Oakland with my month-old baby on the steamer Crescent City, January 30, to go to my home in Crescent City, and at two o'clock the next morning the steamer was wrecked on Fish Rock, Mendocino Co. I was awake when the vessel struck, as baby had been restless, and I immediately sprang out of my berth declaring that God was there and that He was all powerful. Then it seemed that I was tempted the same as Jesus was in the wilderness, for mortal mind said to me, "Why, you would not be on the rocks if God were here;" but I immediately silenced it by declaring, "It is a lie, God *is* here and He is all powerful." All the time I was putting on baby's bonnet and wrapping her in a canvas sack that had been made for her, that would protect her from the wind, covering her head and all. After having put on a life-preserver I strapped the baby to my breast with my basket straps. Then the captain and a firman came to tell me that we must get out of there quick. One of the crew came and said that he would stay by me until the last, as he could swim.

Just as I stepped out of my stateroom to go with him, the electric lights went out and left us in darkness, then a great wave came dashing over the deck and wet us and it seemed as if death was close at hand. Then the words of the twenty-third Psalm came to me, "Yea, though I walk through the valley of the shadow of death, I will fear no evil," and I had no fear after that. When we got around to the other side of the steamer we found that a portion of the rock on which the boat had struck was so close that we could land on it from the gang-plank. From this we had to climb over great rocks and up scaling ladders which the men brought with them, to get to a place of safety on the main rock of the reef, called Fish Rock; here we had to spend the night. The wind was blowing hard and it was raining, so we became very wet. We did not have any covering over our heads for some time, and had to sit on wet mattresses, so I had to know that health was of God, and was there, no matter what mortal mind said about a mother with a month-old baby getting wet and sitting in the storm on an exposed rock.

The captain came to me several times and wanted me to take whiskey as a stimulant, but I refused, and said that I did not need it. He thought I was very foolish; but I am sure it was proved, since I did not touch it, that God is my health. The captain told the owners of the ship afterwards that Mrs. Fogg had a "hunch," they said he meant that there was something wonderful protecting me, for neither baby nor I had a cold or suffered any ill effects from the exposure.

At ten o'clock that morning it seemed as if we had to face death again, for the captain sighted a steam schooner approaching and said that the ladies and children must go in the small boat to it, a distance of about half a mile. We had to climb back over the rocks again to the deck of the steamer, which was now stranded on the reef, and get into a small boat and be lowered into the surging water. At that time the ocean was very rough and the waves were mountain high, and just as we were lowered with three men to row us, a great wave struck the boat and threw it against the wreck and left us in a small whirlpool. Nothing but God ever saved us from being swamped or crushed against the wreck. I kept holding to the thought that God is all powerful, and the results proved it. One of the sailors was so frightened that he jumped, caught a rope, and climbed back to the wreck; then the mate who was with us shouted back, "My God, Captain, you are not going to send us with only two men, we can never make it!" But I thought, God is here, and that is enough. As it was now too late to give us any one else the two men commenced to row and we went leaping over those great waves just as easily as if we had had six men to pull the oars. When we came to the vessel we had to jump to catch a rope ladder at the side and climb up it. I did not wait to be told, but handed up my baby first and then watched my chance and jumped, and they all remarked when I reached the deck that I did not act like a shipwrecked woman. The men remarked how calm and cool I was through it all; I speak of all this to show what the understanding of Christian Science has done for me, for I know that I should not have been calm without it, since before I knew of Christian Science, I had always been full of fear in the dark. We were taken by a tug-boat the next day back to San Francisco, and when I arrived at my parents' home in Oakland, my father, who is a physician, was amazed to see baby and me in such perfect health. He could not understand how we could go through so much and be all right, and it opened his eyes to the truth. So I am very grateful to Mrs. Eddy for this teaching.

MRS. W. W. FOGG, Crescent City, Cal.

---

For more than seven years I was subject to many different forms of rheumatism, some of which were among the most painful,—sciatica, lumbago, and iritis. I was liable to acute attacks two or three times a year and became in consequence very nervous, despondent, and fearful. I first read the text-book of Christian Science sixteen years ago and I believed in its healing for others. I think I understood the letter of its teaching and I became a defender of the truth and an honest seeker for it. Whenever I met Christian Scientists, they were always ready to answer my questions, kindly and patiently explaining what I found perplexing. Suffering at last led me to go directly to a practitioner for treatment. Then I realized how foolish and needless the delay had been.

Neither pen nor tongue of mine can ever express my gratitude to those who took me, a stranger, in and fed me. I am well and happy. I study the Bible lessons with more interest than I ever found in Bible instruction before, and I am finding health and comfort every day in Christian Science.—EMILY R. EMERSON, Gorham, N. H.

---

It is about sixteen years since I first heard of Christian Science. It came to me in answer to an earnest desire for health and strength. For six years I had been an invalid, confined to my bed the greater part of three years. I was very susceptible to draughts and dampness, and had become a member of that class called incurables. The doctors said that I could live but a short time. My suffering at times was intense.

When the practitioner came to me I had heard of some wonderful cures being effected without medicine and by means of Christian Science. She explained briefly that it was God who did the healing, and gave me a few instances of cure. I wish never to forget the joy and spiritual uplifting of that first treatment. All fear of suffering left me. The physical manifestation gradually disappeared, and in a few months I had better health than ever before. In three weeks I was able to go out in any weather (it was in November) without taking cold. Soon after my healing, I, with a number of others, had class instruction from a student of Mrs. Eddy.

Digitized by Google

It is our earnest desire to be found with the whole armor on, standing firm and alert for Truth. We have had many proofs of God's protecting care and love in the healing and overcoming of sin in ourselves and others. I wish to express my gratitude to our beloved Leader for what she has done and is still doing for humanity.

N. E. A., Truro, N. S.

I was a sufferer for eighteen years and my case was pronounced hopeless by specialists. They pronounced it bone rheumatism in my arms and head; large lumps would appear on my skull and I had almost lost the hearing of my left ear. My arms were drawn so at times that it was impossible to feed myself. The pain in my head and arms was so intense that I would lie in convulsions for hours. I had tried mineral springs and every patent remedy that we could hear of. At last it dawned upon me that something more effective must be done.

Christian Science was suggested to me but I was discouraged and doubtful. I had tried magnetic healers, massage, etc., and always grew worse after the treatments. However, I finally consented to give Christian Science a fair trial and the healing was wonderful. I was treated only two weeks, and by going out to the Wednesday night meetings and Sunday services, and through reading Science and Health, I am entirely healed.

I thank God for this wonderful deliverance from the bondage of sickness, for it has not only enabled me to help myself, but other members of my family. It has been only four months since Christian Science was first mentioned to me. I do feel very grateful indeed to all the dear Scientists who have been so kind to me, but above all, to Mrs. Eddy for the grand illumination of the Bible revealed to us through Science and Health.

MRS. WILLIAM GRANEY, Anderson, Ind.

WE must keep silent while God speaks through any experience in order that we may hear what is spoken; but when the word has been uttered we must put the truth into our lives in some kind of action.—HAMILTON W. MABIE.

## Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before June 3.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

## A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*,
Box 56, Fall River, Mass.

## Announcements.

**The Christian Science Text-Book.**

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

**Our Leader's Message.**

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

**Communion Message, June, 1902.**

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

**Der Christian Science Herold.**

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

**Remittances.**

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

**Church Tenets.**

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

**Building Fund of the Mother Church.**

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

**Clerk of the Mother Church.**

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

**Church Treasurer.**

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

We mistake immortality if we read it merely as a future promise. It is a present gift. It is not merely the offer of a hope. It ought to be the joy of a possession. The Christian life ought to be full of Easter days,—a perpetual renewal of purpose and of being from their temporal into their spiritual shape and power.

It is a superficial measuring of life that estimates it simply by its duration. Its abundance consists rather in its intensity, in its breadth and depth and height. A revelation of immortality does not greatly interest me if it merely means an infinite continuance of years. It is not altogether good tidings just to be told that we need fear no end to these burdened and misunderstanding lives of ours. Immortality is not a thing of time or place so much as of spiritual quality. It is not a matter of continuance of life so much as of fulness of life.

I prefer to think of immortality as existing not merely then, but now; not merely there, but here; not so much beyond as within. Did Jesus speak of immortality only as a mere future rising from the grave? Are we not all the time stretching the language of Scripture, and changing the present tense into the future? "My sheep hear my voice," said Jesus, and "I *give* them"—not "will give them"—"eternal life." "This *is* life eternal, to know thee, the only true God, and Jesus Christ whom thou hast sent." We speak of going to a better world, but the Lord's Prayer gives no authority for that. Jesus prayed for a new government and spirit to come into this world, which will constitute it a new heaven and a new earth. He did not bid us look away from the things of time in order to discover the things of eternity. He did not expect us to find eternal life beyond the loves and experiences of this world, but in them and through them. Let us base our assurance of immortality not upon "proofs that do not prove," but upon the fact of our present share in the eternal life of a changeless God. Shall we not perceive that the change which a man is conscious of when he inherits eternal life is not in his prospects, but in himself; not that he shall live longer, but that he shall live differently?

If we can attain to something of this thought of Jesus of immortality, as a spiritual condition rather than an everlasting monotony, shall we not be freed from the childish dream of heaven as a place? I think one of the causes of unbelief in immortality is to be found in the exceedingly uninteresting picture of the future which it has pleased some prosaic theologians to draw. The ordinary heavenly Jerusalem is not a city where I want to dwell. The spirit's growth in vision and in activity, and the satisfaction of yearning love, are the things that make any hereafter worth while.

SAMUEL A. ELIOT.

In *Christian Register.*

William D. Little says in *The Christian Register:*—

"There is no real, permanent happiness, no lasting satisfaction for any man save in being absolutely loyal to the truth as he sees it (even though he knows it may be only relative and not final truth, in being faithful to his conscience, his reason, and his ideals,—his ideals of righteousness, of perfection, of God. And ideals forever march on before, and beckon us to still loftier living. If man would be true to himself and live up to his highest, where that light leads he must follow, what that inner voice commands he must do. Call this voice the voice of God if you will. The name is nothing, words are only symbols. To obey its commands is the all-important thing.

"When religion is divested, stripped naked of all its clothing of traditional dogma and doctrine and inherited belief; when all its concrete symbols, all the tangible, visible centres round which it has been thought to cluster, all the props which have been supposed to support it are taken away,—it does not perish from the earth, but still persists, still lives perennially in the soul of man, and it finds its refuge, its springs of faith and hope, in idealism. It does not consist or depend in the slightest degree upon the holding fast to certain *appearances* of truth, but in doing the will of the Lord as each man finds it recorded, in ever-widening reach in proportion as he obeys it in his own soul.

"And so the idealist, shaking himself clear of the last shred and vestige of dogmatic belief, divesting himself of the grossness of materialism and the more refined grossness of symbolism, rises into the clear atmosphere of purely spiritual thought and feeling. Days and seasons, books, dogmas and doctrines, institutions and personalities, lose their meaning and sink and shrivel into insignificance. They have value for him only as they help him to a higher plane of living and thinking. The narrow walls of the church crumble away, and he worships in the vast temple of the universe. He no longer needs a minister to break for him the bread of life, but becomes his own priest. No longer does he depend on the dicta of a book to show him what to do, but turns to the law of the Lord written large on the tablets of his own consciousness, the law of the Ought that suits all occasions, that fits all changing circumstances. The image and the symbol give way to the idea; the prayer of formalism is replaced by aspiration, that unseen, unheard breathing of the soul; he rises out of the narrow provincialism of popular Christianity into the broad, universal religion whose only search is for truth, whose only endeavor is to usher in the kingdom of God in the hearts of men,—that kingdom which Jesus, himself an idealist, sought to establish, and to which he was faithful even unto death."

How the world goes round! The time was when devout ministers proclaimed to the world that there was no good in good deeds unless they were performed by a Christian. Again, the time was when nothing worse could be said of a preacher than that he preached "that old absurdity" that there can be no good save it comes from a Christian's heart. Now the time is when President Eliot of Harvard says: "To my mind philanthropic work is no use unless it is prompted by love." What is the difference? There is a difference of expression and of understanding, but as for the real essence of the thing, the good old shouting revivalist of the olden time and the dignified President of our great University stand on the same platform. In all probability the old revivalist did not know what he was talking about; in all probability President Eliot does. The difference is in the men, not the thing. The child plays with pieces of glass; the man makes the telescope. The early man says you cannot do good unless you are a Christian, the later man, in some measure the product of the earlier, says, "you can do no good work unless it is prompted by love. Christianity is disinterested love. I regret the tendency which draws workers away from the Church, for Churches teach and preach disinterested love." How does the world go round!—*The Universalist Leader.*

The true resurrection may, nay, must begin in this present life. It is the rising again from the death of selfishness to the life of love, from the merely natural to the unfolding spiritual.

Few persons notice that our Lord speaks of the resurrection and eternal life as a present possession. "I am the resurrection and the life: . . . whosoever liveth and believeth in me shall never die." That is a truth of this day, this moment, not of some far-off and shadowy event dimly apprehended by the human mind. If we have gone any way along the road of regeneration, if we have ever denied ourselves for love's sake, if we have ever felt an unselfish compassion or sympathy cast out our worthless pride, we know the throb and thrill of eternal life as truly,—I do not say as fully, but as truly,—as we ever shall know it in heaven.

The whole spiritual drama of life, the contest by which our human nature sets its foot steadfastly on the beastly, and holds it under, is this very process of our resurrection.—*New Church Messenger.*

People are led to look wistfully up to heaven, whereas they ought to be engaging their attention with something nearer home. It is not outpouring that is wanted, but inletting. The prayer for the Spirit which is needed is not the beseeching of heaven to open its shut windows. The windows of heaven are not shut. They are wide open. In too many cases it is our hearts that are shut. Ah, these gates that shut the Spirit out! gates of brass, doors whose hinges are so stiff with selfish habit that they seem forever closed. "Lift up your heads, oh ye gates, and be ye lifted up, ye everlasting doors, that the King of Glory may come in!"

MONRO GIBSON.

A good deal of what goes by the name of the Higher Criticism is like appreciating the "Angelus" on the basis of the number of threads in a square inch of the canvas on which it is painted, or depreciating the artist's work because he did not weave the canvas.

*The Watchman.*

What portion of God's life, of His sanctity, of His tenderness, of His benign activity, of His untroubled peace, of His supreme regard for holiness, lives also in *us? That* is the meaning and the measure of our devotion.—JOHN HAMILTON THOM.

We never graduate in religion, because the nearer we are to God the more we see there is to be learned.—M. H. SEELYE.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS. Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The memorial arch erected to the memory of the thirteen missionaries of the American Board of Boston, who suffered matyrdom in China in 1900 was dedicated at Oberlin last week. Oberlin was selected as the place for this memorial because the majority of the missionaries were alumni of the college. The memorial is located on the Oberlin College campus. The arch spans the walk, and through it each day passes the larger part of the student body of Oberlin College. The corner-stone was laid October 16, 1902.

The arch is a magnificent structure of buff Indiana limestone. The central arch has on either side a colonnade of six monoliths, extending out about fifty feet, terminating in heavy, square pillars, surmounted by bronze torches bearing electric lights. On each side of the archway, which is about ten feet wide by eighteen feet high, are placed two bronze tablets, illuminated at night by groups of incandescent electric lights, and containing the names of the martyred missionaries.

The British Government's brief in the Alaska boundary controversy has been received by the State Department. A conference has been held already between Secretary Hay, Secretary Root who is one of the American arbitrators, and General John W. Foster, agent of the United States in the arbitration, to consider the character of the response or counter-case to be made by the United States which must be delivered to the British Government or its embassy in Washington by July 3.

The appeal of the Northern Securities Company and others from the decision of the judges of the United States Circuit Court in favor of the United States, has been filed in the Supreme Court. The arguments in the appeal will probably be heard at the next term of the court, which begins October 12. A motion to advance the case over less important cases on the docket may be made.

**Foreign.**

It is reported that the Nanking viceroy and the taotai of Shanghai have signed the United States indemnity bond and have returned the thirteen bonds presented by the other Powers. The taotai states that he has received the Government's instruction that the sum total of the several bonds must not exceed 450,000,000 taels, which amount was stipulated in the lump coupon submitted to the dean of the diplomatic corps at Peking in accordance with the Peking protocol. If payment is required in gold it is stated that the conversion must be made at the rate prevailing April 1, 1901. The taotai cannot sign the bonds of the other Powers, he says, because conditions not found in the protocol have been introduced.

An airship constructed for the Lebaudy Brothers, Paris, last week made a highly satisfactory trip of 37 kilometers (23 miles) in 1 hour 36 minutes. The machine encircled the cathedral spire at Nantes, went through a series of evolutions, was operated in a light rain and brisk breeze, was at all times obedient to her helm, and returned to her starting-point without accident.

On the same day the Santos-Dumont new airship No. 9 made an ascent at the balloon park at Neuilly, went through a series of manœuvres at a height of thirty yards, lasting about half an hour, and returned safely to her moorings.

The call for the convocation of the Columbian Congress, June 20, is believed by those who are conversant with governmental affairs to indicate that President Marroquin is confidently counting on a sufficient support to ensure the ratification of the Panama Canal Treaty.

The commission from the Lick Observatory of the University of California, which arrived at Santiago, Chile, April 23, to establish observation stations in Chile, has selected a site for an observatory on a prominent hill near the city.

It is stated that the Hotel Vieux Doelen will be purchased as a part of the site for the Peace Palace, the gift of Andrew Carnegie. The site is the best at The Hague. The price is three hundred thousand dollars.

**Industrial and Commercial.**

A syndicate of Canadian and American capitalists, incorporated by the Newfoundland Legislature as the Newfoundland Timber Estates Company, and capitalized at one million dollars, has acquired three thousand square miles of timber land in the interior along the line of the Reed Railway. It will operate eight sawmills and expects to cut fifty million feet of lumber yearly, which it will export to Europe and South America. It will also erect a pulp mill with a capacity of one hundred tons daily. The cutting of timber will be done on improved lines to prevent devastation by fire or illegal cutting.

It is announced that the Michigan Underwriting Company of Detroit has formed a combination of the peanut industries, and that the American Edible Nut Company will soon be incorporated in New Jersey with $1,250,000 of seven per cent preferred and $2,750,000 of common stock.

The new company, it is said, will absorb the eighteen plants near Norfolk, Va., where the general offices will be located. The yearly output within eighty miles of Norfolk is five million bushels.

A private syndicate formed in New York is said to be negotiating with the Jamaica Government for the purchase of seventy-four thousand acres of banana and cocoa lands formerly belonging to an improvement company. The syndicate intends to compete for its fruit business, and is arranging with a steamship line to carry all its products to the American market for ten years. The scheme involves the construction of light railroads from the plantations to the seaports.

**General.**

Thothmes IV., whose tomb has lately been opened by an American explorer, lived about 1500 B.C. His father, Amenophis II., enjoyed a short but prosperous reign, in which he sacked Assyria. His grandfather, Thothmes III., the greatest of Egyptian kings, reigned over fifty years and extended the conquests of Egypt to their furthest limits in Asia. The discovery of this tomb is of great importance. The body of the king was undisturbed in its magnificent granite sarcophagus, covered with texts and surrounded by embalmed beef, mutton, and ducks for his soul's food, and by perfect paintings on the walls. A complete chariot of full size is the most remarkable object. All these things will go to the Bulak Museum.

The Colorado Cliff-dwellings Association has been formed, chiefly among the women of the State, with the aim to preserve the ruins and to get the Mesa Verde made a State park. To this end the women have leased the Mesa, which is a strip, 20 miles by 8 in size, situated in the southwestern part of the State, from the Weeminuahe Utes, to whom it belongs, and have had it surveyed and a map made. The cañons contain 300 to 400 dwellings, including the cliff palace of 350 rooms. The association wishes to buy the property, but not to dispossess the Indians, who offer no injury to the ruins.

It is estimated that during the past seven months the Frisco system, the Choctaw, Oklahoma and Gulf, the St. Louis Southwestern, and the St. Louis and Iron Mountain have handled more than fifty thousand people through the Memphis gateway on colonists' and homeseekers' tickets.

The Duke of Loubat, at present the only correspondent of American nationality of the French Academy of Inscriptions and Belles-Lettres, Paris, has just placed at the disposal of the Academy the sum of $10,000 for this year's excavations in the island of Delos, the Greek Pompeii. According to estimates the cost of completing the excavations in Delos will be between $30,000 and $40,000. The Duke has agreed to bear the cost of the work.

The Yale Corporation has taken action that removes Greek as an entrance requirement, allowing as a substitute an equivalent in advanced mathematics, advanced modern languages, French or German. The studies of the freshman year are now made optional, though limited to eight courses, of which five are to be chosen and one at least must be a continuation of either Greek, Latin, or mathematics.

The Boston Museum of Fine Arts is again the fortunate recipient of another splendid addition to its collection at the hands of Mr. Francis Bartlett. This addition consists of about a score of Greek marbles, some fine Greek bronzes, terra cottas, statuettes, coins, etc., thus adding strength to a department in which the institution already ranks among the best.

Miss Helen Keller, now a junior at Radcliffe College, spoke at the dedication last week of the Schermerhorn pavilion of the Eye and Ear Infirmary of New York. Her brave words were followed with great interest and attention.

Of the 351 works in the current water-color exhibition at the Art Institute of Chicago, 103 were contributed by New York artists, 97 by Philadelphia artists, 76 by Boston artists, and 66 by Chicago artists.

The inauguration of Rev. Henry Churchill King, D.D., as president of Oberlin College, took place on the 13th. There were present many representatives of other colleges and universities.

The Czar of Russia is the largest individual land owner in the world. The area of his possessions is greater than that of the republic of France.

A copy of the Kilmarnock edition of Burns's poems of 1786 was sold at a London auction room recently for $1,750.

Statistics compiled by the Board of Health show the present population of New York City to be 3,732,903.

## Selected Articles.

### Radical Christianity.

CHRISTIAN SCIENCE must be radical. The world for seventeen centuries has dallied with conservative Christianity until the churches are crying out in their desperation, "Take us back to primitive Christianity." Primitive Christianity is here in Christian Science; healing the sick and reforming the sinner.

The one thing needful is a full perception and acceptance of the teachings of Jesus.

Heal as he did and then the practical experience comes that enables one to prove that his practical teachings and the application of ever-present Good is the remedy for fear, panics, failures, dishonesty, almshouses, and jails. Instead of all these evils being fostered, favored, pampered, and petted, their necessity should be done away with by the practice of Christianity in destroying fear.

Dissipate poverty by realizing God's affluent love and infinite supply; close the jails and prisons by teaching and practising the Golden Rule; by living pure lives on a high spiritual plane, thus destroying the necessity of these institutions by destroying the causes that produce them.

Jesus was not conservative, but radical because his kingdom was absolutely spiritual, in opposition to the material thought of his age. This brought upon him the anathemas of the church and the scoffs, jeers, and scorn of the material world. Yet he swerved not, but faced the mob, bore his cross, was nailed thereto, and resurrected his own body. This he did that he might prove in its highest form that spiritual power is omnipotent, and therefore radical, to the human mind.

Christian Science is a rediscovery of this radical, therefore revolutionary, power, that is to turn and overturn until He whose right it is shall reign. E. H. CARMAN.

### A Declaration of Rights.

Mr. Editor.

In considering the rights and practices of the Christian Scientist, it should be borne in mind at all times that the believer in this teaching has had, as a rule, abundant experience with medicine, and it is this experience which prompts him to prefer Christian Science. He makes his choice through no sense of religious fanaticism, but because in his judgment Christian Science gives better results than medicine.

The time is rapidly approaching—if it is not already at hand—when the right of the Christian Scientist to reject the services of medical practitioners will be unquestioned. This will come as a natural result of progress. It is not altogether improbable that within a very few years the right to take or reject medicine will no longer be looked upon, even by those who prefer medicine, as a matter concerning which there can be any question.

In this enlightened age every one is seeking for the best in all things. No subject so intimately concerns the individual as the question of his own health and the health of those for whose welfare he is held responsible, and it would seem that the final choice in matters pertaining to health can be safely left to the individual; in fact, there seems to be no way in which this choice can be legitimately taken from him and placed elsewhere.

If in our search for health our efforts are to be restricted to the confines of *materia medica,* the outlook is anything but hopeful. Thousands of men and women have found in Christian Science an open door to health and strength after years of suffering which the earnest efforts of able physicians could not alleviate. The gospel of Christian Science and the health which accompanies are inseparable, although the healing is but incidental to the teaching. The aim of Christian Science is reformation. It teaches and demonstrates that only in proportion as we abandon sin can we expect permanent relief from physical suffering. In teaching and putting into practice this wholesome doctrine, the Christian Scientist becomes a benefactor to his fellowmen.

ALBERT E. MILLER.

### Christian Science not Gnosticism.

Mr. Editor.

Over against the condemnation of the Rev. Mr. Jones, I wish to register my opinion, matured after some years of personal study, that "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy is a masterpiece of powerful English, and that its style is in keeping with the majestic message which it proclaims. It bears the marks of every great work, in that it possesses unity of purpose and diversity of detail. While never departing from the central Christian idea that God is Spirit, it alternates from fearless exposure of error in all its forms to the tenderest descriptions of the power of divine Love.

It is not to be denied that whosoever writes on Christian Science, as on spiritual idealism in general, encounters many difficulties, for language is a poor vehicle wherein to express spiritual perception. Much care and patience is required, therefore, in reaching even approximate precision of statement.

The attempt of the critic to identify Christian Science with the "Gnostic heresy" of the first century, argues a very limited knowledge on his part of the teachings of Christian Science. The Gnostics taught that the Supreme Being is wholly inconceivable and indescribable. One school called Him "the unfathomable abyss;" another, "the unnamable." Christian Science, on the contrary, proceeds at once to define God, and from this knowledge solves the problem of existence. Thus Christian Science is seen to fulfil the promise, "And this is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent."

The Gnostics further taught that it is only through several powers or energies that the infinite passes into life and activity and becomes capable of representation. They all united in the doctrine of a higher emanation-world; it was in regard to the passage from this spiritual world to the material one that important distinctions began to distinguish them, one school holding that this passage was

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

a continued degeneracy from the Source of Life, terminating in darkness and death, while another held that it was the invasion of the kingdom of Light by a self-existent kingdom of darkness. Both these schools regarded Christ as a higher *æon* proceeding from the kingdom of Light for the redemption of the lower world.

Such vague and confused beliefs have no counterpart in Christian Science, which teaches one real power and repudiates any doctrine of degeneracy or dualism.

Nor has the charge of teaching pantheism, brought against Christian Science by the critic, any true basis. The assumption of pantheism is that God is in matter, whereas Christian Science distinctly teaches that God is Spirit, and can never be in matter, or of matter.

I am surprised that the Rev. Mr. Jones should be reported as saying: "We are told that man was neither created nor evolved, but is very God of very God," for I find the following statements in the Christian Science textbook which directly contradict the above:—

"There is but one creator and one creation. This creation consists of the unfolding of spiritual ideas and their identities, which are embraced in the infinite Mind, and forever reflected. These ideas range from the infinitesimal to infinity, and the highest ideas are the sons and daughters of God" (Science and Health, p. 502).

"Man is not God, and God is not man" (Science and Health, p. 480).

It is possible that the critic may have referred to Mrs. Eddy's word about the false, material sense of man, or mortal man. This false sense of man was indeed neither created nor evolved, for it is a falsity.

As for the teaching of Christian Science concerning matter, this is found to be a proper and logical deduction from the Scriptures themselves. Judge L. H. Jones of Lexington, Ky., recently wrote on this point in the *Transcript* of that city: "Paul says: 'For the flesh lusteth against the Spirit, and the Spirit against the flesh: and these are contrary the one to the other.' Did God create that which is contrary to Himself? or, if he did, did He not create a kingdom divided against itself, which Christ says is impossible? Paul says, in fifth Galatians: 'Now the works of the flesh are manifest, which are these; adultery, fornication, uncleanness, lasciviousness, idolatry, . . . heresies, envyings, murders, drunkenness, revellings, and such like,' and Jesus says a tree is known by its fruit. Shall we make God the Creator of that which is the source of every infamy, when such an inference is not justified even by our pagan philosophy? . . . But if God made man of flesh and blood, Christ could not bring him into the kingdom without undoing what his Father had done, which would be a kingdom divided against itself; neither could such a man perceive the Christ-way, for it is 'spiritually discerned;' nor could he follow therein, for flesh and blood cannot enter that way."

It is true that certain current views concerning prayer are dissipated by the teachings of Christian Science. But these are false and futile views and have not proven a help in time of need. The prayer of the Christian Scientist is thus described by Mrs. Eddy at the very beginning of her great work:—

"The prayer that reclaims the sinner and heals the sick, is an absolute faith that all things are possible to God,—a spiritual understanding of Him,—an unselfed love. Regardless of what another may say or think on this subject, I speak from experience. Prayer, watching, and working, combined with self-immolation, are God's gracious means for accomplishing whatever has been done successfully for the Christianization and health of mankind" (Science and Health, p. 1).

As for the healing done by Christian Science, that speaks for itself. It has already been experienced by a great multitude of grateful people in a rapidly growing denomination. Nevertheless, the purpose of Christian Science is not primarily to heal the sick. On this point Mrs. Eddy writes (Rudimental Divine Science, p. 9),—

"The emphatic purpose of Christian Science is the healing of sin; and this task is a million times harder than the cure of disease; because, while mortals love to sin, they do not love to be sick."

In conclusion, permit me to say that recognizing that Christianity is pre-eminently a religion of doing, rather than of mere believing, Christian Scientists as a body are striving to live Christianity according to their highest understanding of its meaning, as contained in the Scriptures, and explained in the Christian Science text-book. The problem is individual. Each one works to the best of his or her ability, alternately succeeding and rising, or failing and falling, but always learning by personal experience, as well as by the helpful words and acts of others. Christian Scientists understand that they can count themselves to be Christians only so far as they are able to prove the Science of Christianity by actual demonstration.

W. D. McCrackan.

---

## One Day at a Time.

Jesus said: "Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

It seems impossible not to give some thought to the future, and without doubt one of the most important things in this line is to note that the success, prosperity, the general welfare of the future depends largely, if not exclusively, on our taking good care of the present. He who does not take to-day's steps to-day cannot take to-morrow's steps to-morrow, but on the morrow will be obliged to take to-day's steps. If a link should be dropped out of the chain, we would find ourselves obliged to go back and replace it, in order that the chain may be unbroken. To-morrow's work can never be done to-day, for we have not yet reached it. We cannot even determine accurately to-day what we will do to-morrow, hence the wisdom of James's words: "For that ye ought to say, If the Lord will, we shall live, and do this, or that."

To-morrow's circumstances and environments are not yet arrived. Therefore, the testimony which is to govern to-morrow's decision is not yet at hand, and he is a very unwise judge who decides his case before the testimony is in. The battles of to-day, and which we already have on hand, demand all our thought and attention, all our ingenuity and effort, and if they are being properly provided for there is little time and opportunity left for anxious thought of either the past or the future. The evil or burden of to-day, that which it is necessary to combat and overcome to-day, is sufficient, said Jesus. It is a sufficient undertaking for our strength and a sufficient task for our duty.

I have known business men to spend nearly all of their time planning and arranging for the future, and even encumbering themselves financially to the great detriment of their present undertakings, in their effort to get ready for bigger things in advance. Such men, as a rule, never get to the large affairs for which they plan, because they do not take sufficient care of their present matters to have a foundation for that which they undertake to build. What would be thought of a builder who begins the upper part of his structure—undertakes to build the top of his house—before he lays the foundation? Naturally every stick of timber and every stone placed would fall to earth with a crash. A wise builder begins with a good substantial foundation and carefully puts each successive piece in its proper place. One might look ahead to some extent, but he cannot build ahead

Digitized by Google

If our plans for the future are constantly interfering with the execution of what we know to be the best thing to do in the present, it should be evident to us that they are not made with sufficient intelligence. Our plans for the future should always be made with a proviso, for such arrangements are always made in the absence of at least a part of the environments and circumstances which may justly claim the right to indicate the proper course at that time.

ALFRED FARLOW.

In *Boston Times.*

## A Protest.

Mr. Editor.

Christian Science treatment is by silent prayer, and the Scriptures tell us to pray without ceasing. Then there is no danger of praying "too much," and if one has prayed "too little" the remedy is to continue to pray. The Bible enjoins persistence in prayer by precept and by parable. That disease may be strengthened by prayer is a queer position for a Christian to take. Does our critic also contend that sin will be strengthened by prayer?

We do admit that Christ is the great physician and only healer, but that Christ has been dead "almost two thousand years" is a new and strange doctrine to which we do not subscribe. The gospel of salvation and immortality is based on a risen Christ, and if Christ be not risen, then is our hope vain. It was the risen Christ who said, "Lo, I am with you alway, even unto the end of the world." It is the ever-living Christ—Immanual, God with us—who enables us to demonstrate life and health. If Christ is the vine and his people the branches, then if the vine is dead, so are the branches: but if the branches are alive, so is the vine. The one divine Life animates all the children of God.

Our critic insists that any one who treats the sick shall have knowledge of pathology and the other subjects taught in the medical schools. In other words, the law should give licensed physicians a monopoly of treating all diseased people. Then as soon as a man gets sick his freedom of choice is forfeited, and the licensed physicians are the legal guardians in his case. If he has a disease incurable by medical treatment, he will die of course; but his death will be according to medical law, and his family can get a permit to bury him. But if he turns away from medical practice to Christian Science and dies, his family and the practitioner are looked on as law-breakers and a coroner's inquest must be held and the county put to the expense of the inquest, before a burial permit is granted. Or if the patient is healed by Christian Science the practitioner becomes a law-breaker and is liable to arrest and trial for having given treatment contrary to the medical statutes.

Such is the statute law of Nebraska,—a state which stand for anti-monopoly and "equality before the law,"—at the beginning of the twentieth century. The people of Nebraska, have never demanded that the doctors be given a monopoly of treating disease. The monopolistic statutes have gotten through without the knowledge or consent of the people. No such plank has ever been found in the platform of any party, nor have the people petitioned for a medical monopoly.

WILLIAM H. JENNINGS.

In *Nebraska State Journal.*

## The Public Welfare.

Gov. JOHN HUNN of Delaware was recently visited by a delegation which included a representative minister or layman of each of the religious bodies in Wilmington, with the view of securing his approval of a bill repealing the voter's assistant law. Mr. John, First Reader of First Church of Christ, Scientist, was of the number, and spoke in part as follows.—ED.

*Governor Hunn:*—I am glad to be here to address you knowing that your forefathers and mine, followers of Fox and Penn, have stood and do stand for all that pertains to righteousness and to moral and upright citizenship, whose purpose it is to develop character by individual growth.

I am glad to-day to represent a body of Christian people who hold dear and appreciate any and every effort which will advance the citizenship of the city or the state—a people who believe in and earnestly strive to practise both the law and the gospel. From this view-point of uprightness, I wish to touch upon what seems the paramount issue. The most earnest argument in favor of the present law is that it stands in behalf of the illiterate voters of our state. But, Governor, it is to help this class that I address you. To legislate in favor of illiteracy which is not a qualification for good citizenship or for the voter, you virtually put a premium upon illiteracy, and thereby encourage and engender the very condition you desire to assist. The surest way to make paupers is to legislate in favor of pauperism. The best way to help paupers is to educate them to a standard of manliness and self-reliance. The best way to help the illiterate is to maintain the standard of individual character, good citizenship, and equal rights. The safety and surety of government, whether city, state, or national, depends upon the individuality of the citizenship and the standards required therefor.

As an interested citizen I appeal to the responsibility of your high office to exert every effort to raise the standard of our citizenship by due requirements as to the qualification of citizens, and not permit a premium on illiteracy to encourage the degrading influence among those classes in which we are keenly interested.

For the soul being turned by faith, as it were, into the nature of water, quenches the demon as a spark of fire. The labor, therefore, of every one is to be solicitous about the putting to flight of his own demon. . . . Whence many, not knowing how they are influenced, consent to the evil that is suggested by the demons, as if they were the reasonings of their own souls. . . . Therefore the demons who lurk in their souls induce them to think that it is not a demon that is distressing them, but a bodily disease, such as some acrid matter, or bile, or phlegm, or excess of blood, or inflammation of a membrane, or something else. But even if this were so, the case would not be altered of its being some kind of a demon.

From "The Clementine Homilies" written by Clement of Alexandria, who died A.D. 220.

These writings are of unusual interest to Christian Scientists, showing, as they do, that the early Christians understood disease to be wholly mental, and its cure effected by means above human, that is, Divine.

## Notice Regarding the Bible Lessons.

IN view of the change in the date of Communion service in the branch churches from June 14 to July 12, the following will be the order of the lessons:—

June 14.—Is the Universe, including Man, evolved by Atomic Force?

June 21.—Christian Science.

June 28.—God.

July 5.—Life.

July 12.—Sacrament.

The Mother Church will follow this order up to June 28, when the Communion service will be held, and the lessons for July will follow in the order given in the *Quarterly.*

Digitized by Google

## The Great Seal.

THE announcement that the Great Seal of the United States is to be recut, and that during the process the government employs a greater force of inspectors to keep an eye on the single workman than in the construction of a five-million-dollar battleship, gives added interest to the following sketch of the history of the seal, and its use, which we have taken from the columns of the *Boston Transcript*.—EDS.

On the 4th of July, 1776, after the Declaration of Independence had been read in the Continental Congress, Dr. Franklin, Mr. Adams, and Mr. Jefferson were appointed a committee to prepare a device for a seal of the United States of North America. In the following August that committee submitted a design for the seal, one side having the arms of the United States, with an escutcheon for each of the thirteen independent states on the shield, supported by the Goddess of Liberty on one side and the Goddess of Justice on the other side, with the motto, "*E Pluribus Unum.*" The reverse contained a device of Pharaoh sitting in an open chariot passing through the divided waters of the Red Sea in pursuit of the Israelites. It also contained a representation of a pillar of fire in the clouds, "expressive of the Divine presence and command, beaming on Moses, who stands on the shore, and extending his hand over the sea, causes it to overwhelm Pharaoh," and the motto, "Rebellion to tyrants is obedience to God." Two features of this design were preserved in the seal as finally adopted—the eye of Providence in the triangle which now appears on the reverse, and the motto, "*E Pluribus Unum.*"

The device of the Franklin committee did not meet with a favorable reception. The report was laid on the table and nothing further was done until March 25, 1779, when the matter was referred to a new committee of which James Lovell of Massachusetts was chairman. This committee reported in May, 1780. Their device had the coat of arms on the face and a seated figure of Liberty with the motto "*Semper*" on the reverse. In this device appeared for the first time the constellation of the thirteen stars and the thirteen alternate red and white stripes, but the latter were here diagonal, whereas they finally appeared as perpendicular. The idea followed naturally the design of the national flag which Congress had adopted June 14, 1777. After debate, the report was recommitted to a new committee of which Mr. Middleton of South Carolina was chairman. Two years later the records show activity in the effort to evolve a suitable device and several designs were considered, but it was not until June 20, 1782, that the seal was finally decided upon, and the model differs only in details of execution from the seal now in use.

The first seal was cut in brass, and it is found on a commission dated September 16, 1782, granting full power and authority to General Washington to arrange with the British for exchange of prisoners of war. This seal continued in use for fifty-nine years. The reverse of this seal has never been cut, and it has been allowed to go unnoticed officially to the present day. The second seal was cut in 1841, when Daniel Webster was Secretary of State, and was continued in use up to 1885. It contained but six arrows, and its dimensions were smaller than the present seal.

The seal now in use, and about to be relegated to the archives, was cut in 1885, while Mr. Frelinghuysen was Secretary of State, after the design had been approved by several historic scholars and authorities on heraldry. Under the law the Secretary of State is the legal custodian of the seal, but he has no power to affix it to any paper that does not bear the President's signature. At the present time the seal of the United States is affixed to the commissions of all cabinet officers and diplomatic and consular officers who are nominated by the President and confirmed by the Senate; all ceremonious communications from the President to the heads of foreign governments; all treaties, conventions, and formal agreements of the President with foreign powers; all pardons or commutations of sentence by the President to offenders who have been convicted before the courts of the United States; all proclamations by the President; all exequaturs to foreign consular officers in the United States who are appointed by the heads of the government which they represent; to warrants by the President to receive persons surrendered by foreign governments under extradition treaties, and to all miscellaneous commissions of civil officers appointed by the President, by and with the advice and consent of the Senate, whose appointments are not now especially directed by law to be signed under a different seal.

---

## Make Growth, not Wealth, your Goal.

THE youth who starts out in life with wealth as his ideal is a foredoomed failure. If you would succeed, let growth, expansion of mind and heart, and wealth of character, not money-getting, be your aim.

Be as large a man as you can make yourself. Broaden your sympathies by taking an interest in other things than those which concern your immediate business. A knowledge of the great world-movements, active sympathy with all efforts directed toward progress and the betterment of mankind, and the cultivation of the finer side of your nature, —fostering the love of music, art, and literature,—will not only enlarge your vision, but will also increase a hundredfold your enjoyment of life and your value to society.

Do not allow yourself to become self-centered. Give some of your energies to securing better conditions for those less fortunately circumstanced than yourself. Interest yourself in politics. Go to the primaries. Remember that you are, first of all, a man, and then a citizen, and that making a life is man's first duty.

Keep your manhood always in view. Never do anything that will throw discredit upon it, and success will mean far more to you than mere money-getting. You will find that culture, the development of your æsthetic nature, will enrich you more than the accumulation of dollars.

If you attain to true manhood; if you have developed along the lines of your higher self; if you have kept growing through all the years, no matter whether you have accumulated wealth or not, you are successful.

If, on the other hand, you have not kept growing; if you have starved your mind in order to fatten your pocketbook; if you have strangled your sympathies, your interest in the welfare of others, for the sake of increasing your business; if you have neglected your friendships, ignored the claims of those dependent upon you, or who have helped to make your business successful; or if you have been stingy, hard, and exacting, while you have been accumulating your money, you have failed, though you may have made millions.—*Success.*

### Error.

A shadow, that is all,
A dream or an illusion;
A sense of mistiness,
Of mistake or confusion;
It's just a thought which doth appear to be,
When something seems between thy God and thee!

EDNA WADSWORTH HUDSON.

## Extracts from Consular Reports.

A. M. THAKARA, consul at Havre, says in regard to the metric system in France:—

"The sooner American exporters learn the metric system of measurement, the better chance they will have of successfully meeting foreign competition in the French markets. For example: Austrian oak in France commands a higher price than American oak, and is used in preference, although in many cases the former is not as good as the American wood. The reason is that the Austrian shippers are careful in having their wood sawed to the metric dimensions called for by the French consumers, while the American shippers send their wood sawed to inches. There may not be much difference in the measurements, but there is enough to make the French cabinet-maker prefer the Austrian oak. The French customs law permits the free entry of certain woods if they are sawed to more than 2 decimeters (7.87 inches) square in the logs. If the logs measure even a small fraction under the above dimensions, they have to pay a duty of 1.50 francs (28.9 cents) per 100 kilograms (220.46 pounds). Frequently, owing to careless sawing and unfamiliarity with metric measurements, American shippers send logs to Havre which measure less than 7.87 inches, perhaps at one end only, which forces the consignee to pay the duty on the whole log."

---

Benjamin A. Ridgely, consul at Nantes, says:—

"In my report dated November 5, 1902, I called attention to the failure of the French sardine catch this year and to the consequent heavy loss to all those engaged in this important industry, of which Nantes is the centre of exportation. As stated, the failure of the catch was due to the high price and to the consequent scarcity of the bait—a sort of oily dough made of the eggs and entrails of codfish—known commercially as 'rogue.' . . . This unfortunate condition has developed a scientific research in the direction of an artificial or manufactured rogue to take the place of the real article, which is imported principaily from Norway and Sweden and to a small extent from Newfoundland. It is now claimed that Monsieur Landriene, a commissioner of marine, has discovered a substitute which will effectively satisfy the demand. . . .

"It is certain, in any event, that until the value of the artificial rogue shall have been established there will be the usual demand for the regulation bait. There is an annual demand for about 50,000 barrels of rogue, each barrel containing about 225 pounds, and the sardine packers are ready to buy from the first reliable purveyors who will offer a good quality of rogue at prices ranging from 50 to 60 francs ($9.65 to $11.58) per barrel. Incidentally, it may be stated that the American rogue, which has from time to time made its appearance in this market, is not so well thought of as the Norwegian rogue, for the reason that it is preserved with dry salt instead of in brine."

---

James K. Gowdy, consul-general at Paris, in answer to inquiries by a resident of Michigan concerning the manufacture of "Sand Bricks in France," says:—

"The manufacture of bricks from mortar—that is to say, sand and lime—was first practised at least half a century ago.

"The materials used are sand, lime, clay, and alkalies. The sand must be clean, 'bite' well (*i.e.*, must crackle when pressed between the fingers), and be neither too fine nor too coarse. The lime should be freshly made. It is used just as it leaves the kiln. For the clay, a loam answers better than a pure clay. The alkalies used are caustic potash or soda, or alkaline salts, such as carbonates, bicarbonates, silicates, sulphates, or chlorides.

"The lime should be from 6 to 10 per cent, by weight, in proportion to the sand; and the clay 30 to 100 per cent, by weight, in proportion to the lime.

"The sand is dried at a temperature of about boiling point. The lime is reduced to a fine powder, and both it and the sand are automatically weighed, to obtain the exact proportions, and then taken in elevators to a mixing machine, where they are mingled with hot water, sprayed in fine jets under strong pressure. When thoroughly mixed, the compound is removed to a 'silo,' where it remains for some time. The clay is dried and powdered in a separate machine, and the proper proportions of the lime and sand and the clay are automatically admitted into a small mixing machine, where they are again mixed with hot water in fine spray. In a few minutes, the mixture is ready to be molded into bricks. The pressure applied is considerable, as upon this depends the strength of the brick. A press makes five bricks at a time, and the process takes nine seconds—that is to say, it turns out two thousand bricks per hour. The bricks, as fast as they are made, are placed on an endless band and taken away to be hardened.

"The bricks are arranged on tables placed round the piston of a hydraulic press and lowered into a bell-shaped stove. The top table forms a lid, which the hydraulic pressure makes practically air tight. In this stove, the bricks are exposed to superheated steam, at a pressure of from 80 to 140 pounds to the square inch, for about six hours, and are then ready for use. Sometimes, a kind of glaze is given to the bricks by immersing them for a few minutes in a weak solution of fluoric acid before baking.

"The inventors claim that in durability, finish, appearance, and hygienic properties, sand bricks are greatly superior to those commonly used. If made where sand is easily procurable, the cost would not exceed that of the ordinary bricks. Sand bricks can certainly be made much more rapidly, and nearly all the work is done by machinery—an important item where labor is expensive."

---

### Admonition.

Waste not the time men call "to-day,"
Spurn not the things at hand;
The future holds no recompense
For those who idly stand
And wait
The chances of a better fate.

Your talent may be very small,
But there are none to spare;
The world has need of little things.
The men who "do and dare"
Shall see
Their efforts crowned with victory.

The diligent may win the prize
Upon the beaten way,
By working with the self-same things
Which you despise to-day.
Success
Is the reward of faithfulness.

MARY IRVING KEITH.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

## MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Elementary Sense of Right.

THE following excerpts are from a recent editorial in *The Indianapolis State Sentinel*:—

"Every citizen should have the right to seek the kind of treatment in which he believes for the maladies of himself and those for whom he is legally responsible. . . . Prayer has doubtless wrought as many cures as drugs. The *Sentinel* believes in personal liberty, and for that reason, and because it does not believe in trusts or in persecution, it says, 'Stop persecuting the Christian Scientists. They are doing good, not evil.' The *Sentinel* prefers a regular physician to a Christian Science healer every time. But if its neighbor prefers the Scientist, who shall say him nay? His chances to be healed are perhaps as good as *The Sentinel's*."

That this editorial was not written by a Christian Scientist is evident from the closing paragraph. Therefore the writer is free from any charge of bias toward Christian Science. The views expressed may be taken as representative of the desire of the American people for personal liberty in the choice of methods employed for healing disease.

Similar expressions have appeared in other leading newspapers. The following from the *Chicago Record-Herald* commenting upon the refusal of the Supreme Court of Pennsylvania to incorporate a Christian Science Church under the law by which other churches are incorporated, is worthy of note.

"One does not need to be a believer in Christian Science to perceive that such a decision violates the most elementary ideas of personal liberty. In this age of intellectual progress the tendency is toward the widest latitude in the practice of methods for healing disease. What right has a Supreme Court to say that in medicine is to be found the only cure for human ailments?"

That Christian Scientists are contending only for the rights guaranteed to them by the Constitution, is becoming more and more apparent to the newspapers and the public. The report of recent attempts at adverse legislation is strong evidence that legislators have already arrived at this conclusion. M.

## A Welcome.

THE growth of Christian Science is measured not merely by increase of numbers. It is marked more distinctively by the light shed upon the darkened paths of the sick and sinning,—"the shining light, that shineth more and more unto the perfect day."

This growth in grace is the true growth, and just here is comfort for the loyal little bands that are faithfully laboring on the outposts of our great Field. While love and unity prevail in their midst, they are gathered together in His name, and though but two or three, in fulfilment of His precious promise, there is He in the midst of them.

None know better than Christian Scientists that a membership secured through proselytism is an absolute encumbrance. It is the consecration of an adherent that measures his worth, and consecration is never the outcome of coercion, of persuasion, or of a desire for popularity. It roots itself deeper,—in conscientious conviction, in self-abnegation, in love. Christian Scientists have confidence in an all-awakening, all-saving Principle, and are convinced that when Truth speaks, His own will hear His voice, even without the agency of human utterance. So they wait peacefully, but not inactively they wait with loving hearts and willing hands, ever ready to cheer the sorrowing and lift the burden of the heavy-laden.

This peaceful, prayerful biding God's time is liable to be misinterpreted, attributed to apathy, indifference, coldness. And when the worshipers are few, so few as yet to meet in private houses or in small halls, the impression sometimes prevails among the good people of the town or village that their presence might be regarded as an intrusion, that the testimonial meetings are intended for the little band of Scientists alone. But nothing is further from the facts of the case. Nowhere is the stranger more welcome. The poor, the rich, the obscure, the influential may enter the little church home in the consciousness that they are welcomed as brothers, through the prerogative of the divine birthright; high or low estate vanishes in the solvent of brotherly love that owns

> The rank is but the guinea's stamp,
> The man's the gowd for a' that.

After the perplexing cares of the day where can the tired business man, the anxious mother, the careworn teacher find such rest and encouragement as in the little or the great churches, where earnest, happy, liberated men and women are assembled to speak their gratitude for the great discovery of the demonstrable truth that has set them free from weariness and discouragement, sickness and sin.

Is it strange that in an atmosphere of love and purity the sick are healed and the sinner redeemed? Is it surprising that scores of honest inquirers should come to see what manner of love the Father hath bestowed on these people that they should be freed from infirmity, be able to run and not be weary, to walk and not faint?

Rejoicing in the liberty that Love confers, it were impossible that these lifted from beds of pain, washed from stains of impurity, established in an unwavering faith in their Father, Love, should withhold the warmest welcome to the stranger, for they know that the kingdom of heaven recognizes no stranger and no estrangement.

> From hand to hand the greeting flows,
> From eye to eye the signals run,
> From heart to heart the bright hope glows;
> The seekers of the Light are one.
>
> SAMUEL LONGFELLOW.

S.

## Disabling Riches.

JESUS' suggestive words, "How hardly shall they that have riches enter into the kingdom of God!" have been supposed to appeal especially to those who, like the rich young man, have large wealth; but when these words are considered in the light of the Master's other saying, "A man's life consisteth not in the abundance of the things which he possesseth;" they come to have a meaning which is of much broader application.

It is not the number of things, but our thought of the end they will subserve, that gives the true estimate of our belongings. Our beliefs respecting the causal relation of materiality to the comfort and satisfaction of life, these furnish us the correct inventory of our worldly estate, and these beliefs, if not wholly subordinated to the Christ ideal, will certainly exclude us from the heaven of spiritual attainment.

Digitized by Google

The presence or absence of material things, may have little or nothing to do with the presence and dominion of these material beliefs. The so-called poor may be far more burdened and hampered by them than are the rich, and for the reason that their unsatisfied longings remain in full force and accumulate, while those who through experience have come to know the inability of material gratifications to bring happiness and content of heart, are undeceived, and so find, through experience or illumination, escape from the fetters of false sense.

We do not truly possess anything concerning which we entertain a wrong idea. The false sense in every such instance possesses us, and we are its duped and degraded servitors. The Christian possession of material things is possible only when the possessor is absolutely free from the domination and control of the thing possessed, and only in so far as this spiritual supremacy abides in consciousness may we hope to realize the meaning and fulfilment of Paul's words, "All things are yours." "Pity 'tis 'tis true" that the disabling riches of false sense are piled high upon the back of every son of Adam, and this fact appears in full relief when we see that error, through the belief in heredity, first brings to us all a very large inheritance of these baneful beliefs, and then gives us a finished education in the art of compounding our patrimony.

The inherent and downright meanness of mortal mind is well illustrated in the familiar contrast between its pledges and its performance in this field. Impelled by the alluring lies of false and seemingly malicious sense, how humanity is led to continue its persistent, brother-forgetting struggle for worldly wealth, seeking here, there, and everywhere for that which can yield, as the writer of Job has abundantly testified, only "itching and ashes."

As we awaken to the understanding in Christian Science of that which is true and that which is false, we are emancipated from the bondage of this material sense of things, and come into a possession which is real because right minded. We are then prepared to receive, to use, and to enjoy the all spiritual provision of Love's bounty. Wrested from their material enswathement in mortal thought, the lesser ideas of God appear, and behold they are, all and only, good. They now serve to enlarge and enrich the ministry and the effectiveness of the spiritual life, and to give fuller, more beneficent expression to the instincts of love. Objects which, when embraced in material consciousness, when thought of as constituting a material good, nourish selfishness and sensual gratification, and thus create and maintain the pride and social caste that render men unbrotherly and un-Christian, these assume their right place in mind, their true and wholesome relation to individual life, and thus serve to embody and disburse spiritual enrichment and affection.

It has been well said that "the sense of unburdened abundance and liberality is as much an integral part of man's nature as a sense of health," and Jesus certainly gave assurance of "an hundred-fold now in this time" before his promise of "in the world to come eternal life," but it is important that we remember the hopelessness of any endeavor to be "rich toward God" so long as the garners of thought are filled with the glittering and deceptive accretions of material sense. W.

---

In a late lecture before an association in London Professor Benslow is reported to have said with regard to the origin of life, that science neither affirmed nor denied the creative power. To this Lord Kelvin demurred, declaring that, on the contrary, science positively affirms the creative power, and that science made every one feel that he is a miracle in himself. A vital principle, he said, is now accepted by modern biologists. They had been absolutely forced to believe in a directive power.

"Was there anything so absurd," he added, "as to believe that a number of atoms falling together of their own accord could make a crystal, a sprig of moss, or a living animal? Nobody could think that anything like that, even in millions and millions of years, could, unaided, give us a beautiful world like ours. Let nobody be afraid of true freedom of thought. Let us be free in thought and criticism; but with freedom we are bound to come to the conclusion that science is not antagonistic, but is a help, to religion."

This statement from a scientist so eminent and so authoritative throughout the world, indicates the marvelous change which is taking place in that realm of thought which has been dominated for many years by assertive materialism.

The special significance of the matter, however, lies in this, that with the passing of faith in the sufficiency of matter, and the recognition of force as the ultimate fact of the universe, the scientific world is brought to the very threshold of theistic idealism. The physicist must concede that force is everywhere manifest, and that it acts as though it were infinitely intelligent, and from this recognition to the acceptance of the declaration of Christian Science that "all is infinite Mind and its infinite manifestation" is but a logical step.

The day will come when all true science will be recognized as belonging to the realm of Spirit, and spiritual.

---

### A Correction.

The wonderfully helpful lesson, "A false belief is both the tempter and the tempted, the sin and the sinner, the disease and its cause" quoted in the editorial, "A Safe Abiding" in *Sentinel*, May 16, 1903, should have been credited to Science and Health, p. 393. S.

---

### What Have we Done To-day.

We shall do so much in the years to come,
But what have we done to-day?
We shall give our gold in a princely sum,
But what did we give to-day?
We shall lift the heart and dry the tear,
We shall plant a hope in the place of fear,
We shall speak the words of love and cheer,
But what did we speak to-day?

We shall be so kind in the after-while,
But what have we been to-day?
We shall bring to each lonely life a smile,
But what have we brought to-day?
We shall give to truth a grander birth,
And to steadfast faith a deeper worth,
We shall feed the hungering souls of earth;
But whom have we fed to-day?

We shall reap such joys in the by-and-by,
But what have we sown to-day?
We shall build us mansions in the sky,
But what have we built to-day?
'Tis sweet in idle dreams to bask,
But here and now do we do our task?
Yes, this is the thing our souls must ask,
"What have we done to-day?"

Nixon Waterman.

---

If Jesus were to return among us, he would recognize as disciples, not those who claim to embody his teachings in a few catechismal phrases, but those who labored as he labored. . . . The Sermon on the Mount will never be surpassed.

## The Need of Knowing the Truth.

ELIZABETH KATZ.

THE need of knowing, as well as the certainty of knowing the truth has shown me recently the necessity of taking a higher step, and of absolute reliance upon God, divine Principle. Instead of asking, Can God deliver? and Can God furnish a table in the wilderness? we must rise higher in our understanding of His ever-presence and allness, and throw ourselves unreservedly upon Him for help, declaring, I *know* that God is able to deliver. I *know* that God can furnish a table in the wilderness, for "Then shall we know, if we follow on to know the Lord."

The Bible says, "He that cometh to God must believe that he is," and Christian Science proves to us logically and demonstrably that God is and is all, Mind, Life, Truth, Love.

Let us strive more faithfully to *know* the truth, and listen to the words, "Son, thou art ever with me, and all that I have is thine." When we do know more then we shall love more.

## Groundless Fears.

G. C. KINSMAN.

DURING a recent snow and sleet storm, which prostrated the telegraph and telephone lines, and caused the newspapers to print scarehead warnings against "live wires," one of our officials, in walking toward the station, overtook a man standing in the snow in apparent distress. Upon being asked if he were in trouble, he answered in a frightened way that he was caught in a "live wire." The official looked down, and seeing a short piece of loose wire hooked around the man's foot, said to him, "It is nothing, —simply a piece of loose wire which doesn't connect with anything. Throw it off." The man replied, "It is a live wire, I wouldn't touch it for a thousand dollars." The official reached down, pulled the wire loose, and cast it aside, whereupon the man gave a great sigh of relief, and was most profuse in his thanks. When the official told me of this I replied that we, as mortals, are ever picking up and suffering from "live wires" of fear, which have nothing at all attached to the other end.

## As a Man Thinketh.

HANSON W. WHEELER.

"FOR as he thinketh in his heart, so is he." To think that our brother is a sinner is to think evil, and we should "depart from evil, and do good." It is self-deception to assert that man is perfect, the image and likeness of God, and admit that some particular individual is not that man. Scholastic theology inculcates the belief that man is fallen, and this belief has become so thoroughly imbedded in human consciousness that man is not recognized, but only a false concept of man. When we awaken to the realization that what has appeared to us as unlike God's image and likeness, is none other than our own concept, we are convicted of sin. Retribution and repentance follow, and a consequent desire to make restitution.

The next step is to learn that this false sense does not belong to ourselves any more than it did to our brother, and then begins the process of reformation and regeneration, to be consummated in glorification which constitutes the working out of our salvation.

"The Truth of being is perennial, and the error is seen only when we look from wrong points of observation" (Science and Health, p. 265). "Jesus beheld in Science the perfect man, who appeared to him, where sinning mortal man appears in sense. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476).

## Take up the Cross.

GERTRUDE M. BRADLEY.

I HAVE been having a bad time lately. For some weeks everything seems to have been going all wrong, and only a few months ago I was so happy and getting on so well through Christian Science. I have been studying it just a year and my understanding of it and its blessings has all been proved from my own small experience, not from what I had heard or read, so it was weak and foolish of me to give way because people have tried to "talk me out of it." But I did. I began to drift and get slack about Bible study and reading Science and Health, to be careless over my thoughts, and I said to myself, "Perhaps I am wrong after all, and this fancied good is only imagination."

From that moment all my old enemies came crowding back. Worries, poverty, lack of ideas for my work, bad health, fears, bad thoughts, unkind speeches, all, till I was in despair and almost overwhelmed. Thanks to what little I knew of Christian Science I realized all through, though vaguely, that it was all my own fault, and at last in desperation I made up my mind to fight the matter out. I was tempted to write to a friend and ask for treatment, but I felt somehow that this would be merely shirking the fight: for I knew she would tell me to watch and pray; she had already told me of two things that were keeping me back and I had got slack in fighting them. So to-night I made up my mind to seek and find. I sat down with my Bible and Science and Health and a number of copies of the *Sentinel*, and prayed for light.

I skimmed through several articles until I came to one in the issue for January 15, that I read. It was what I needed and I should like to thank the writer for the message in "The Riches of Faith's True Inference."

As I read it I knew I was only another prodigal, and I began to realize that I had been dishonest in not letting God make the best of me, defrauding my loving Father. So I came back there and then, in heartfelt repentance, to ask for pardon and light to start anew.

I found myself reading Mark, 10. With that other inquirer I asked, "What shall I do to inherit?" and with him was sad at the saying, "Take up the cross." Not because I was unwilling but because it did not seem definite enough. "What is taking up the cross?" I asked myself, with a sad foreboding that it would be something intensely painful. "It is so vague." "No," came the thought, "the vagueness is mine, it is but laziness; to-night I will seek till I find."

"What is the cross—oh God, show me!" "If only I could be nearer some one who would tell me things." If only, ah! that is a weak spot. "If only" spells discontent. It means, if I dig to its root, that if I could I would change surroundings that fret me and seem to hinder my growth in Truth. "The cross"—our Saviour's hands were fastened when he was on the cross, yea his feet were fastened. It was not a free or comfortable position, it was constrained and painful, but it did not make him pause for a moment in doing his work. That was one thought, uncongenial surroundings; "Take up" that means "not only resignation, but willingness."

"And follow me." Demonstrate the Truth of Being as you learn it without fear or pause.

Here are my thoughts just as they came to me. They were the guidance needed and perhaps they may be of use to some one else who is wondering vaguely "What is the cross?"

From this failure I have learned another lesson also,—

Digitized by Google

the foolishness of being vague instead of settling down as I did to-night, to think and study definitely, and wait there till shown where and how I had been wrong. If I had done this at once I should have spared myself weeks of intense suffering of body and mind, and bitter regret; and I should not have given any one cause for the jeer, "I told you it (Christian Science) would all evaporate in a week or so, and you'd be just as bad as ever." However, this is a fresh start.

## Right Living.

A. C. H.

"We can do more good by being good than in any other way," says Rowland Hill, and he thus embodies a thought, which has come down the ages with all the force given it by the impetus of Jesus' example, and which is to-day reiterated and emphasized in the life of one whom Christian Scientists love and revere.

Our daily living must attest our gratitude for the unfathomable good which has been given us through her selfless love.

Do we sometimes wonder why we do not reflect more of the healing power of Truth? Let us examine each day's living and see if divine Love alone governs it. In our Leader's last message she says, "Love thou." Are we obeying her injunction so far as we understand it, watching every thought to see whereunto we send it?

Do we see in our brother, persistently and lovingly, only His image and likeness? If we do, we shall never allow ourselves to criticise, condemn, or dislike another. We shall never admit, even mentally, that so-and-so is handled by pride, ambition, selfishness, or any other error. Instead we shall see and rejoice over all the good our brother has brought into manifestation, knowing that Love is the watchword which allows us to pass beyond the sentinels of limiting mortal opinions about people and things into the "land of Christian Science, where fetters fall, and the rights of man are fully known and acknowledged" (Science and Health, p. 226).

He who has at least begun to learn what means that saying, "Thou shalt love thy neighbor as thyself," is alone able to touch the hem of Christ's robe of healing, the seamless garment of wholeness.

## Overcoming.

ARCHIBALD WINNE.

God is love, God is good, God is the same yesterday, to-day, and forever, so say the Scriptures. If this be true it would seem as if man reflecting God would reflect all goodness now, and that the prayer to be better would be unnecessary. We fail to see this perfect man because, through ignorance, "mortal man seems to himself to be material substance," when in reality "man is 'image'" (Science and Health, p. 301).

Jesus taught and demonstrated that it was necessary to overcome a belief like this before we could understand and enjoy the reward of this experience. The overcoming of evil was the cup he drank. So in our own experience must we meet and destroy not only our material thoughts and besetting sins, but all evils, whenever, and in whatever form they may appear. "Is the sick man sinful above all others? No! but so far as he is discordant, he is not the idea of God" (Science and Health, p. 318). Therefore sickness is a part of the error which draws man away from harmony, as surely as is the seeming pleasure of the drunkard which leads him into continuous unhappiness. In either event, our constant experience necessitates a prevention of such temptations by overcoming them in the knowledge and understanding that, "as God is substance and man is the offspring of substance,—being made in the Divine image and likeness,—man should wish for, and in reality has, the substance of Good, the substance of Spirit, not matter" (Science and Health, p. 301). Our work does not cease with demonstrating the nothingness of the disease that first turned our attention to the truth as taught in Christian Science, but is that constant, daily, working out of the problem of life, to which divine Love impels us when we turn from ourselves and seek Him.

To "'work out your own salvation,'" Mrs. Eddy tells us in Science and Health, p. 22, "is the demand of Life and Love." This is the "overcoming" in our individual experiences by which finally, "when the smoke of battle clears away, you will discern the good you have done, and receive according to your deserving" (Science and Health, p. 22).

## The Lectures.

### At Quincy, Ill.

A large audience of thoughtful people gathered at the Empire last evening [April 29] to hear Judge Septimus J. Hanna lecture on Christian Science. He was introduced by Mr. George M. Janes, who in a few well-chosen words spoke of the willingness of the people to hear the truth in whatever garb it came, and to listen respectfully to any earnest speaker who proclaimed what he believed was the truth, even though he differed from their preconceived notions.—*Quincy Herald.*

### At Keokuk, Ia.

Judge Septimus J. Hanna of Boston delivered a lecture last evening [April 30] on Christian Science to an audience that filled the lower floor of the Opera House and there were a good many people in the gallery. All seemed deeply eager to learn what they could from the Judge's talk and went home well pleased generally.—*Daily Gate City.*

Judge Hanna was introduced by Rev. Adolph Rossbach, minister of the Unitarian Church of Keokuk, Ia., who said:

The eminent gentleman who is to address us this evening commands our attention in a number of phases.

He comes to us as the official voice of an organization which has made phenomenal growth in the past decade; which has made striking claims upon our faith and reason; and I wish to say in all candor and with some enthusiasm, which presents a membership of men and women noted for sound morals, high ideals, kindly attitude, and progressive citizenship.

Whatever our differences may be, they are differences of opinion, differences of the mind, the intellect, not of moral practice or religious aspiration. The lecturer commands our attention, not only because of his ripe years and maturity of judgment, but because he comes with the judicial mind, having formerly been a judge of a Colorado court.

We may therefore expect no superficial conclusions, but that Christian Science has been subjected in the mind of the speaker to that degree of close observation, logical analysis, and educated criticism which we have been led to expect from the bench and bar.

The mystery of evil and suffering lies before us. It is still an open question to the wise and thoughtful. It has absorbed in no small degree the attention of the world's greatest minds, from the Buddha to the author of Job, from Job to Jesus, and from Jesus on down through Christian speculation to our own Emerson, and when the religious movements of the nineteenth and twentieth centuries are better understood, the work and personality of

Digitized by Google

Mary Baker G. Eddy must be recognized, especially in that field to which she has particularly devoted herself.

The final word has not been spoken, to our minds at least, and experience and education have made us receptive and eager in the pursuit of truth. In the name of that receptivity of mind, that eagerness of truth-seeking, I take great pleasure in introducing to you Judge Septimus J. Hanna, C.S.D.—*Correspondence.*

### At Oskaloosa, Ia.

A representative audience of the thinking and reading classes of the city was present at the Masonic Opera House Tuesday evening, April 21, to listen to a lecture upon Christian Science by Judge Septimus J. Hanna. The Science has been growing in favor in this city through a number of years and has an established church here that is gathering strength and numbers with the passing months. It is the effort and earnest endeavor of the church here to place Christian Science before the people and give all who desire an understanding of the creed and the tenets of the faith, and to explain things that have seemed dark to many. The Opera House was well filled and the audience was closely attentive. The speaker was introduced by Miss Carrie Loring of this city.—*Oskaloosa Herald.*

The introductory remarks of Miss Loring were in part as follows:—

*Ladies and Gentlemen:*—Jesus indicated that his teachings and healing works were founded on a divine Principle which, understood, would be available throughout all time, when he said, "These signs shall follow them that believe; In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover." And when derision and scorn assailed him and skepticism questioned his authority, he replied, "The works that I do in my Father's name, they bear witness of me;" "Believe me for the very works' sake."

Christian Science to-day rests on that promise of the Master, and offers, as its most convincing proof, the many thousand lives freed from sickness and sorrow through its ministrations. Those who rejoice in the peace which this practical religion has brought into their lives, accepted its teachings because, by repeated and unmistakable evidence, they were convinced of its applicability to every phase of human experience.—*Correspondence.*

### At Evanston, Ill.

Judge Septimus J. Hanna lectured at Evanston April 24. He was introduced by Mr. H. W. Hoyt, who said in part:—

*Ladies and Gentlemen:*—When the Apostles Peter and John, on the morning after that wonderful day of Pentecost, instantly healed the impotent lame man at the temple gate called "Beautiful," the people who had known the man to have been helpless from his birth, and who now saw him, walking, leaping, and praising God, ran together about the apostles and stood there, greatly wondering Then Peter addressed them, and while Peter and John were yet speaking, the priests, the captain of the temple, and the Sadducees swept down upon them, seized them, and put them into prison. The next morning a court of ecclesiastical dignitaries was convened, consisting of the high priest, rulers, elders, and scribes; and the prisoners were placed on trial. The story of that trial is recorded in Acts.

Awed by the simple and devout declarations of the accused, and confronted by him who was healed, the court could find no verdict of guilt against the apostles, so they were discharged with threats of punishment if they ever after spake or taught in the name of Jesus.

Nineteen centuries later, when a strong, clear, brave voice was heard as of one crying in the wilderness of human misery and woe, defending Peter and John before the bar of religious inquiry, in the name of Jesus the Christ, the singular fact was disclosed that the world was still a little intolerant of the claim that physical regeneration comes as naturally to God's children as does His spiritual redemption, that in fact the two great ideas are inseparable. It took a long time to win over a few to this religious philosophy, discovered by Mrs. Eddy, but now this gospel has spread abroad in the world and is gladly accepted by legions. It is quite true that by some it is considered a bold thing and an unwarranted one to call this beautiful religion Christian Science, and the right to do so is often challenged. To tell why it is Christian Science, to give to the world to-day a new defence of Peter and John, to bring to the great Christian heart of the evangelized earth as well as to those who sit in darkness waiting for the light, in all its purity, the thought of that wonderful woman whose matchless achievements have lifted humanity to a higher plane of love and hope and good works, the Board of Lectureship of the Mother Church, The First Church of Christ, Scientist, of Boston, has chosen a band of consecrated men and women, charged them with the duty of keeping the faith, and sent them abroad to deliver the message. Such a messenger it is my privilege and great pleasure to present to you, one whose voice and pen have long and faithfully interpreted the simple tenets of the Christian Science religion. —Judge Septimus J. Hanna.—*Correspondence.*

### At Toledo, O.

The lecture of Carol Norton, C.S.D., of New York City, on Christian Science, delivered at the Valentine Theatre last night [May 1], was a success from all points of view. The lecture itself was a concise and lucid explanation of the tenets of Christian Science, and the audience was one of the best that has gathered in the Valentine this season, both in numbers and in personnel. The speaker was introduced by Arthur E. Jennings, First Reader of the local Christian Science Church, who spoke in part as follows:—

*Ladies and Gentlemen:*—If you were to ask me why I love America, I would answer: Because of her great benevolence towards those who come under her protection. If you were to ask me why I love Christian Science, I would answer: Not only because it was discovered on this western continent by a noble and pure American woman, the Rev. Mary Baker Eddy, but also because of its beneficent influence, which through its teachings has given me a higher sense of truth, justice, tolerance, and citizenship.

We are all, I believe, searching for wisdom; for a science of living that will guide us through all eternity. The very spirit of this age is one that is reaching out towards perfection in all things. Centuries ago a wise king said: "Wisdom is the principal thing; therefore get wisdom: and with all thy getting get understanding." If you believe that the Christ truth is the way to this understanding, then you will at once see that it is the true way. With this hope in view the truth is beckoning us on, encouraging us to know and understand more of the science of God and man, educating us in the knowledge of doing good, teaching us to be healthier, purer, holier, and to help others out of the miseries of their sick and sinful beliefs.

*The Toledo Times.*

The account of the lecture at St. Louis, noted in the *Sentinel* of April 25, should have stated that it was given under the auspices of Second Church of Christ, Scientist. It was in every way a very gratifying success.

## Testimonies of Healing.

Words cannot express my gratitude for what Christian Science has done for me. First in physical healing, many years ago, when it saved me from a surgical operation, and later in spiritual uplifting. I am filled with love and gratitude for our dear Leader who made it possible for me to receive such blessings, and also to the earnest loyal workers who give us the very helpful literature. The lessons in the *Quarterly* studied daily are indeed the bread of Life to all who desire it. My earnest endeavor is that my daily life may prove the love and gratitude I cannot express in words both to our Leader and all her loyal helpers in the Cause.—MARIA C. ELLIS, Stamford, Conn.

It has been eight years since I first heard of Christian Science. I could never recount the blessings I have received during that time, both spiritual and physical. I find that God never fails us when we trust Him, and that faith and patience work wonders for us. Realizing this, I have been sustained in my efforts to heal the sick.

Under Christian Science treatment I have seen the healing of fevers of all kinds, consumption, heart trouble, pneumonia, cataract, deformity, appendicitis, and two cases of insanity. I feel that God has done wonders for me by leading me into this truth, which makes man free. My heart overflows with love and gratitude to our Leader, Mary Baker G. Eddy.—MRS. JENNIE WISS, St. Louis, Mo.

When the subject of Christian Science was presented to me a little more than six years ago, it did not appeal to me because of its healing qualities, it came to me as "a beautiful teaching." My daughter was away from home at the time, and when she commenced writing home about it, I told her it was prophesied that in the latter days there should be false teaching, and it should be clothed in a garment of light, insomuch that it would deceive, if possible, the very elect; and that she should be careful about what she read. However, after a few letters had passed between us on the subject, I was led to call upon a Christian Scientist and ask for the loan of her "Science and Health with Key to the Scriptures."

I sat down to read it, and such a thrill went through my whole being that I involuntarily closed the book and offered up a silent prayer that I might not be led into error, and these words came to me, "Ye shall know the truth, and the truth shall make you free." This destroyed my sense of fear and I read for about an hour. Before I laid the book down, I knew it was true.

I had early learned to love my Bible. To me it was the Word of God and seemed to speak directly to me. It had become my guide-book, my comforter, to such an extent that it seemed impossible to open it and not find words just suited to my needs, and yet it never healed me of my diseases until I read it in the light of Christian Science. I can truthfully say that in the first three months' study of Christian Science literature, I gained a better understanding of the Scriptures than in all my previous study of them. I was not only healed of several chronic incurable hereditary diseases, but I was lifted up into a purer, more spiritual atmosphere, and gained such a sense of freedom from weakness, weariness, care, and anxiety as I had never before known. But better than all this is the joy that comes to one in being enabled to help others rise above their false beliefs of evil in all its deceptiveness, into a knowledge of infinite Good, Life, Truth, and Love.—MRS. E. A. HALES, Chicago, Ill.

The first time that I ever heard of Christian Science with sufficient explanation to realize in a small degree what it meant, I was on my way to see a specialist for my wife. I met an old friend who inquired whither I was going, and after being informed, requested me to wait a few minutes for him, as he wished to have a visit with me. We went to a hotel office near by, and after a short conversation on various subjects he spoke of Christian Science, and this being my first talk with any one upon the subject, I was interested and amused.

While I had practically outgrown the belief of the efficacy of medicine, I had no faith in what he claimed for Christian Science, and said to him that I had come for medicine for my wife and I would have to take her some or she would feel neglected. "All right," he replied, "so long as you believe in medicine, but if she does not get the help that she is looking for, come to me."

Upon parting he requested me to look into Christian Science. I assured him that I would be pleased to do so; and I further assured him that if he had anything better than I had, that I wanted it. I wanted the best that this world has, if I could find it; at the same time I was quite satisfied with my ideas of the future. I think I was a sort of an agnostic or something of the kind.

I did not care for what he had as it had the name of religion attached to it, and anything of that brand, was a very silly thing to my notion.

I saw the doctor, and after making the required analysis, he said my wife had Bright's disease. I asked him if he could cure her, he said he thought he could. I asked him what his charges would be, he said that the first two weeks' medicine would be four dollars, and then I was to come again for another analysis. I had so little faith in his medicine that I told him I would take two dollars' worth. He put up what he said would last about ten days, then I was to come again, for another analysis. I took the medicine home and my wife commenced according to directions.

After leaving the Scientist I heard a wee, small voice urging me to hear more of Science, then something would say, "Well, it's very strange that you should want to hear any more of that silly religion," but the next day I had an opportunity to have a visit with the Scientist, and this kept up for a week or more. He gave me some tracts, and I took them home and tried to read them, but they seemed dry and uninteresting. My wife had no use for them and would not even look at them.

During all this time my wife was taking the doctor's medicine, and for the first four or five days she thought it was helping her, but after that she seemed the same as before, and after seven or eight days she commenced to complain of very severe pain. Finally I said to her, "Why not try Christian Science? it can't hurt you if it doesn't do you any good," and in reply she said, "I am willing to try anything to get out of this misery."

I saw the Scientist and told him what the decision was. He informed me that before he would take the case that he wished me to buy a book called "Science and Health with Key to the Scriptures," and that the price of it was three dollars. Well, I thought that was putting it on pretty strong to charge such a price for a book. I did not feel as though I could afford it, so I hesitated for a day or two and then decided to buy it.

When he got the book for me, his instructions were to have my wife read at least two pages in it and one chapter in the Bible every day. I took the book home with his instructions, and arranged for her to go to the city to see the Scientist. She had two or three present treatments, the rest were absent. But as to the reading of the book, my wife had no use for it, but was willing to read the Bible. I cared nothing for the Bible, but was anxious to know what was in the new book, consequently we started in by changing works, she would let me read the book to her

Digitized by Google

and I would let her read the Bible to me, as I was anxious to have her get well and also had a desire to know what the book taught. In this way we began, and at the expiration of about three weeks, her troubles all left her and the Scientist gave up her case as healed. That was four years ago, and she has never had a return of the disease.

Now as to myself. I was a worldly man in every sense of the word; used profane language, drank with moderation, had been badly afflicted with indigestion for sixteen or seventeen years and getting a little worse each year. I had not eaten any pork for twelve years nor other flesh nor fowl for ten years. No matter how particular I was as to what I ate I would suffer from one to two hours after a meal. I had given up riding my bicycle a year before on account of a belief of heart trouble. I was also troubled with catarrh and bronchitis. At the expiration of three or four weeks of this daily reading, one noon after dinner my wife remarked that she noticed that I did not suffer with gas as I always had before. I thought for a moment and realized that what she said was true. Then the thought came, Maybe I am healed. After that I ate things which formerly had been out of the question, with no bad results. Then I knew that I certainly was healed, and ever since have eaten anything and everything that others eat, and all that I cared to at any time of day or night as circumstances might demand.

The habit of using profane language left me in about the same manner and about the same time that my indigestion left me; it simply went, and I did not know how or when. It returned to its native nothingness, the same as all my other bad habits and physical beliefs. I could write a book on what Christian Science has done for my wife and me and what it has enabled us to do for others, and then not half the story would be told. Words cannot express my gratitude to those who have helped to make it possible for me to have this grand truth. It is my prayer that I may live the life that will be an honor to the Cause and the Founder of it.—C. G. READ, Eden Center, N. Y.

## Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before June 3.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

## A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer,*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy, to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

No less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Only the pure in heart are qualified to say what Jesus meant. . . . He said "Blessed are the pure in heart; for they shall see God." If purity of heart was unattainable by natural means that was cruel speaking then. Is it unattainable?

Here the matter of belief must be weighed, for it is certain, if a man does not believe in the possibility of cleansing his own heart by resolutely putting out of it whatsoever he knows to be evil and foul, and resolutely taking into it instead all that he knows to be clean and good,—if he does not believe such action to be possible, he will never be pure in heart by natural means. And blessing comes of wrestling.

Believing in God, desiring above all things to see Him, believing also in Jesus of Nazareth, that there was no deceit in his nature, none of the cruelty that can tease, that he pointed only where one might go, it cannot be counted foolish to believe the condition he named attainable.

Every truth, to be acceptable, must be demonstrable. The world should be able to show a few pure hearts. There are hearts growing every day purer through struggle and trial and praying that the growth may be completed. There are good, better, best. If one is inclined to find out all that he may about God, he will go to the man whom he believes to be the best, as naturally, as undoubtedly, as he would go down to bed-rock for a sure foundation. . . . Much of the belief of to-day is of the nature of shirking. Satisfied belief says practically, "If it would be well for me to see God, He would show Himself." That failing there is no call for upward looking.

It seems incredible that guiding so plain as this—"the pure in heart shall see God"—must wait ages for the human understanding to admit it. There is an old saying, "None so blind as he who will not see." A task need not be impossible, only just hard, for humanity to shut its eyes and refuse to see. With a clear understanding of the end to be gained,—in seeing God,—there must be a glad acceptance of the means. There is no choosing.

HOPE WEST.

In *Christian Register.*

Not all Christian activity is serviceable. This is often "busy idleness." There is a lot of machinery about Church work which is as useless as an old fashioned spinning-wheel. The idea that one must give a man something to do in the Church to keep him out of mischief is a mischievous notion. If that service is productive of no good he is being trained to a false conception of Christian service. He keeps busy, but does nothing. He fancies he is growing in grace, when he is hastening toward spiritual atrophy. It is worse than the dog in the treadmill, for the dog did churn the butter. God wants men to be active, but not just for the sake of activity. They are the "doers of the word," and that means efficiency in service. Wasted energy in Church work is more deplorable than wasted power in a manufactory. Every stroke should count for God. Keeping busy is not enough, but keeping intelligently busy with all our efforts divinely directed toward spiritual ends, is the ideal.

MYRON W. HAYNES.

In *The Standard.*

Rev. Dr. Priest of Chicago, says in a recent sermon reported in the papers: "The main reason why church attendance is small in Chicago—and indeed everywhere—is that people have lost their faith, or have never had faith, in the theological doctrines for which the Churches are supposed to stand. The theological teachings of the Churches have repelled thinking men and have influenced them to shun the places where such absurdities are taught or professed. The vast majority of churches still stand really, or nominally, for the verbal inspiration of the Bible, the trinity, the fall of man in Adam, the 'blood' atonement and the endless punishment of the wicked; they stand also for many other doctrines nearly if not quite as repulsive as these to the reason and heart of well-balanced manhood."

Love is the secret. Jesus came into the world to reveal the love of God,—he was the love of God in human flesh. His life was all love. In most wonderful ways during all his life did he reveal love. Men saw it in his face and heard it in his voice and felt it in his touch. This was the great fact which his disciples felt in his life. His friendship was unlike any friendship they had ever seen before, or even dreamed of. It was this that drew them to him and made them love him so deeply—so tenderly.

Nothing but love will kindle love. Power will not do it. Gifts will not do it. Men will take your gifts and then repay you with hatred. But love begets love; heart responds to heart. Jesus loved.—DOLAN.

Living in accordance with God's purpose is living at our best. It is at once living with God and growing toward His likeness. As children learn unconsciously in the companionship of others, we shall gain our knowledge of what perfect life may be in companionship with God. Yet this continual sense of His presence will not grow without endeavor. We must count Him a factor in our plans for every day. We must wake to Him and work with Him. We must, in the words of that Brother Lawrence who, being but their cook, preached to his brother monks by joyful living, take continual pains in "the practice of the presence of God."

*The Congregationalist and Christian World.*

Even to our day the belief prevails that religion is one thing, business another, one's personal habits still another. There are still those among us who hold that to sin within the law is permissible; that the crowning sinfulness of sin is in being found out. It is from this that Christianity suffers more than from any aberration of doctrinal tradition. The true Christian is he who wears as his constant armor the "presence of Christ," and who in his thought as in his practice is stainless and holy as his Master.

*The Christian Advocate.*

Only a few years ago the majority of theologians cited miracles as proofs of truth. They accepted the teaching of Jesus because it was miraculously attested. Now even with orthodox theologians the method is reversed. The character of Jesus and the nature of the truth he taught are brought forward as proofs of his wonderful works. Being what he was and teaching as he did, it is argued that he must have had supernatural power, and that he probably wrought the miracles attributed to them.

*The Christian Register.*

Professor A. C. Zenos, of the McCormick Theological Seminary, says in *The Ram's Horn:* "It is seen that from the earliest to the latest days of the composition of the Scriptures, there is a progressive movement; that through them the true character of God, His will and His desire regarding man are revealed more and more clearly, until in Jesus Christ the fulness of the Godhead is made visible bodily. The result of all this is that the Word of God is perceived to be a living reality, and hence destined to abide forever."

The time has come for press and pulpit to speak out, ring clear, the inspired exhortation: "Abstain from every form of evil." I am aware that to do this exposes the preacher to the criticisms of those who, like Lord Melbourne, resent the application of religion to every-day life. But a dumb church in an evil age is itself the worst of evils. It lends the sanction of its non-committal silence to the iniquities and oppressions of the times and so facilitates their progress.—REV. GEORGE C. LORIMER.

Every one of us casts a shadow. There hangs about us a sort of penumbra—a strange, indefinable something—which we call personal influence, which has its effect on every other life on which it falls. It goes with us wherever we go. It is not something we can have when we will, as we lay aside a garment. It is something that always pours out from our life, like light from a lamp, like heat from flame, like perfume from a flower.

J. R. MILLER.

A disused Bible is a wire down. Neglected prayer is a blockade of the main highway. The hurry and rush of secular life that precludes daily intercourse with God are a Chinese wall of exclusion against God. The first and sure remedy for spiritual decline is to open up all the avenues of communication with God and see that they are used.

*Sunday School Times.*

That soul is on the certain path toward light which, sincerely desiring the light, constantly submits to the claims of the light as they are made known. That soul cannot stay in darkness, any more than a flower opening its petals broadly to the sun can stay in shadow.—WAYLAND HOYT.

The serene, silent beauty of a holy life is the most powerful influence in the world, next to the might of the spirit of God.

C. H. SPURGEON.

Men elect whether or not they shall belong to the spiritually best by accepting or rejecting the gift of vision.—*The Outlook.*

If you want a really lovely world without, you must make the world within bright and lovely.—DAVID GREGG.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

**Direct all orders for above works, and make remittances payable to**

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

**One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.**

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

**For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.**

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Plans have been undertaken by a number of the patriotic societies to prevent the improvement of Manila at the sacrifice of the ancient wall of the city. The old wall is forty feet wide at the base, twenty feet high, broad enough at the top for two teams to drive abreast, and three miles in extent. It is surrounded by a moat, which is spanned at intervals by interesting and massive stone bridges. The mercantile interests desire the removal of all this, which they regard as "rubbish." The plans for beautifying the city involve the retention of the wall, the prohibition of any building to obstruct the view along the beautiful river drive between the wall and the bay, the flanking of the boulevard on the other side of the city with government and public buildings, the gradual clearing away within the walls of many of the small and unsanitary buildings and the erection of parks in their place, and the liberal setting of tropical plants, flowers, and shrubbery.

Some of the non-blockading Powers are said to be objecting to the assignment of Wayne MacVeagh to represent them at The Hague Tribunal on the question of preferential treatment, because they were not permitted to see or consider the terms of the protocols with the blockading Powers before the signatures were attached. Mr. MacVeagh, however, represents Venezuela, the United States, and Mexico on the question of preferential treatment in accordance with the terms of the protocol, and the other Powers having claims against Venezuela may adhere to the protocol if they so desire. Judge Penfield, solicitor of the Department of State, and Mr. Bowen are also on the commission.

The Bailey automobile bill has been signed by Governor Odell of New York in spite of much opposition from automobile clubs and manufacturing interests. This bill limits the speed to eight miles an hour in closely built portions of a city and to fifteen on streets where the houses are more than one hundred feet apart; it allows twenty miles an hour in a town or village; limits to eight miles an hour in passing a horse or a foot passenger or in crossing an intersecting highway; in passing a schoolhouse during school hours on school days, or a church during service hours, the speed limit is ten miles, and the speed within one-half mile of any postoffice is limited to eight miles.

The State Department has been informed that the English chargé at Peking has signified the willingness of the government to accept payment on a silver basis for a term of years, reserving under bond the right to receive payment of any deficiency that might exist should it hereafter be decided that the payments should have been made on a gold basis. This very much strengthens the attitude of the United States, which had been almost single-handed in its contention for the payment of the indemnity on a silver basis.

The so-called Mueller bill, which has just been signed by Governor Yates of Illinois, provides for municipal ownership of street railways. The bill gives the municipalities of the State power to acquire, own, and operate street railways and to lease the same to any company incorporated under the laws of Illinois, for any period not longer than twenty years, on such terms as the city council shall provide. The enabling power to operate, however, must be approved by three-fifths of those voting on the question.

It is stated that the United States may obtain possession of the strategic island of Margarita, now owned by Venezuela, as a result of the friendly part taken by this country in the recent negotiations with Great Britain, Germany, and Italy for the settlement of the Venezuelan imbroglio. The belief prevails in diplomatic circles that President Castro will look with favor on such a transfer. Germany has been for some time especially desirous, it is said, of obtaining a foothold on Margarita Island.

The "liberty bell" is to be allowed by Mayor Weaver of Philadelphia to be taken to Boston for the anniversary celebration of "Bunker Hill Day," June 17.

**Foreign.**

It is reported from Peking that China is agreeing, one by one, to all the conditions defined in M. Plancon's despatch concerning Russian demands. China has already undertaken not to alienate any part of Manchuria, not to alter the present administration of Mongolia, not to open new treaty ports in Manchuria, and not to employ foreigners in the administration of Manchuria. Whether China consents or not, Russia is retaining the telegraph between Port Arthur and Mukden, while the customs revenues at Nechwang continue to be paid into the Russo-Chinese Bank, and China has agreed that Russia shall fully control the customs there, Russia secures absolute sanitary control of the port.

The first British Transvaal Parliament was opened in the Raadsaal last week by Sir Arthur Lawley, the lieutenant of the Transvaal. The chamber was filled, those present including the military officials, the judges, the clergy, and the civil authorities, all in uniforms or in robes. After the members had been sworn in the lieutenant-governor delivered his inaugural address.

The consideration of the Bagdad railroad, which was recently agitated by the Powers, is again likely to be reviewed. In the present proposition instead of Germany holding a preponderance of power in its control, all the Powers will alternate in its presidency and directorate, making it an international affair, much after the plan of the control of the Suez Canal.

**Industrial and Commercial.**

As the experiments that have been carried on within the past three years have demonstrated the practicability of raising Sea Island cotton in Porto Rico, the Walker Cotton and Industrial Company will, it is reported, increase its stock to $400,000 and build cotton ginneries and cotton and fertilizer mills. There are now from eight to nine thousand acres of this staple planted, and four thousand more will be in cultivation by July. From this it is expected to raise a bale per acre. Six thousand tons of seed will be produced, from which will be made two hundred and forty thousand gallons of oil and five thousand tons of fertilizer. The cotton produced on the island is said to be of satisfactory quality, and has the indorsement of buyers in this country as well as those of Liverpool and Manchester.

A fleet of four large steamers, to handle freight only between Vancouver, Australia, and New Zealand, is to be inaugurated by R. A. Alley & Co., of Tacoma. No application for subsidy will be made to the Dominion Government until the line is in actual operation. Assurance has been received that when this is done the government will give favorable consideration to such an application.

New Haven oyster growers are making arrangements to ship a carload of seed oysters to Oysterville, Wash. For two years similar shipments have been made and the results have been satisfactory.

**General.**

The temple library, recently discovered in ancient Babylonia at Nippur, says *The Congregationalist*, contains rooms evidently devoted to study. Language was taught there, writing, arts, and sciences. Copy-books in clay are found, grammatical exercises, specimens of free-hand drawing, clay models of trees, animals, and men. In some of these classrooms the books on the shelves show what subjects were studied there. Mathematics, history, geography, astronomy, language, have their appropriate books of reference. Religion has a prominent place. Hymns and prayers, incantations and texts were committed to memory, while mythological representations hung on the walls. It may be possible to trace the steps of the prescribed college course, which lasted perhaps three years, as we are told in the book of Daniel that it did in his time.

One of the competing aerostats for the airship prize offered by the St. Louis Louisiana Purchase Exposition will be the Stanley airship. This airship will have a total length of 228 feet and will consist of a cylinder 116 feet long, tapering at either end into a cone 56 feet long. The diameter of the cylinder is 56 feet. The machine will weigh thirteen thousand pounds. The lifting capacity of the hydrogen gas will be twenty-one thousand pounds. The inventor hopes to attain a speed of one hundred and thirty miles per hour. This speed is to be obtained by propellers ten feet in diameter making eight hundred revolutions per minute, placed at each end. A longitudinal plane twelve feet above the keel provides room for passengers, machinery, motive power, and freight.

Professor A. W. Goodspeed of the University of Pennsylvania has made an interesting announcement, based on three months of careful observation, that the human body emits light, and that its rays of light may have sufficient intensity, though invisible to the human eye, to produce a picture on a plate properly sensitized and in a room pitch dark. The discovery was made while X-ray photographs were being taken. An explanation has been given since the announcement, that these body rays "are simply secondary radio-active rays induced in surrounding bodies by X-rays."

Under the designation of "household effects," J. Pierpont Morgan will be able to bring into this country most of his art treasures, valued at several million dollars, that are now scattered through the museums of Europe or in his London house. It is reported that Mr. Morgan has ordered his agents to gather together all his paintings, bric-a-brac, and antiques, and it is probable that Americans will soon have an opportunity of seeing one of the finest private collections in the world.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### The Attitude of Christian Scientists toward Physicians.

A GREAT multitude of earnest and intelligent people here and abroad already know that Christian Science has meant "Life and Health" to them in times of crisis when other means have failed. Christian Scientists respect the altruistic motives of the medical fraternity, and wish well to all those engaged in every effort to cope with pain, disease, and sorrow. They do not force or obtrude their services upon those who desire medical attendance. In point of fact, this very reticence and respect for the rights of others has sometimes been made a cause of reproach by critics who have wished to urge Christian Scientists to interfere with the work of physicians by officious and meddlesome actions. This striving on the part of Christian Scientists to maintain a kindly and correct attitude should not fail of recognition.

The assumption, underlying the various futile attempts made in the past to regulate or prohibit the practice of Christian Science by legal enactment, is that a knowledge of material medicine is essential to heal the sick. It follows very properly from this assumption that all who attempt to heal the sick should be able to pass an examination in the use of material means. But Christian Scientists, following the teachings of the Founder of Christianity, have proved that the assumption in question is false, and that a knowledge of material medicine is not necessary to heal the sick. Hence, they justly claim that an education in the use of material means is superfluous for any one who chooses to learn how to heal spiritually. They concede that an examination in the science of material medicine may justly be required of those who wish to practise materially, and that this examination should act in such a way as to protect the public against persons pretending to practise material medicine without a knowledge of that science.

Christian Scientists make no claim to practising material medicine. They state frankly that they have not studied it, and are not qualified to administer it. Hence they refer all those who may desire medical practice to physicians, who have spent years in the acquisition of the necessary knowledge.

Christian Science is not merely "a theological doctrine." As defined by Mrs. Eddy, it is "the law of God, the law of Good, interpreting and demonstrating the Principle and rule of universal harmony" (Rudimental Divine Science, p. 7). On page 9, of the same work, she states:—

"Healing physical sickness is the smallest part of Christian Science. It is only the bugle-call to thought and action, in the higher range of infinite goodness. The emphatic purpose of Christian Science is the healing of sin; and this task is a million times harder than the cure of disease; because, while mortals love to sin, they do not love to be sick. Hence their comparative acquiescence in your endeavors to heal them of bodily ills, and their obstinate resistance to all efforts to save them from sin through Christ, spiritual Truth and Love, which redeem them, and become their Saviour through the flesh from the flesh, the material world, and evil."

I ask the readers of your esteemed journal to consider that the object of medical practice is to heal the sick, and that if there is a better way of doing this than by medication and manipulation, the physicians should be the first to learn this way. Christian Scientists, with best wishes for all in their hearts, are content to wait until the spiritual healing taught and practised by Jesus, his disciples and apostles, and by the early Christians, shall once more commend itself to all Christians as the best, the safest, and the only enduring method. W. D. MCCRACKAN.

In *American Life and Health.*

### The Demands of Christian Science.

Mr. Editor.

Our philosophical friend may find agreement with Christian Science, for while this Science anchors its hope beyond the pale of matter in the spiritually mental realm, and confides in Almighty God, it defines its workings satisfactorily to the thinking mind and fully explains how and why prayer is efficacious.

The Honorable C. C. Bonney declared before the World's Parliament of Religions held at Chicago, "When Science becomes Christian, then the world indeed advances toward the millennial dawn."

With a large portion of humanity, it remains to be demonstrated whether or not a Science based upon Spirit is truly scientific. That Christian Science is Christianity is noted in that Christian Science takes for its basic lesson the definition of God given by the great Founder of Christianity.

All Christians believe the proposition, God is Spirit, and thus divine Providence is introduced to Christendom. It is the mission of Christian Science to confirm all the good things which Christianity declares concerning God, and to establish a more thorough acquaintance with Him.

Christian Science, by a comprehensive, spiritual, and exact definition of God, even a revelation of the very nature and essence of Deity, has enabled me to demonstrate the truth of what I had formerly been taught to believe. Having accepted the basic lesson of this Science; namely, God is Spirit, Life, Truth, Love,—I have proved its truth to my own satisfaction, and have therefore been enabled to endorse the entirety of Christian Science, which is nothing less than a system of logical conclusions deduced from the premise we have already named.

While Christian Scientists do not believe that God can have a more intelligent understanding of the needs of mortals by having them related to Him, or that the deific Mind can be persuaded into giving things which He would not otherwise grant, they understand that through prayer a petitioner may be brought into such a consciousness of the ever-presence of divine power as to destroy his belief that there is pleasure in sin or power in disease.

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

If in our prayers or meditations God becomes to us infinitely great, disease must become infinitesimal. Surely no one will contend that the troubles which are mountains to mortals have any weight in the sight of omnipotent God, and inasmuch as God is correctly informed, infinitely intelligent, and sees all things as they are, and is not in any way deceived, His view-point must be the correct one, and the God-like man must see disease as God sees it, without power. In the Scriptures it is said, "The darkness and the light are both alike to Thee." In other words, to God, all is light; there is no darkness. Mortals behold the darkness. The question is, which perception is true, God's or mortal man's? It behooves us to stand upon the teaching that God is omnipotent, omniscient, and omnipresent Mind, Spirit; make this the basis of our reasoning and accept only such conclusions as may be deduced therefrom.

The physical sciences, physiology, chemistry, astronomy, etc., deal only with human phenomena and the testimony of the five personal senses. It is but just to say, however, that many noted physicists approximate very nearly to the teaching of Christian Science, that all causation is mental.

Rather than say Christian Science repudiates the so-called sciences, I would say that it gives the full, complete, and spiritual elucidation of that which the physical sciences cannot half explain. Chemistry claims that all vegetables, minerals, and animals are produced by varied unions of material elements. Can our friend explain how a blade of grass is produced? Has man ever made one by a chemical process? If not, what of positive physical knowledge concerning the process of creation? Have not so-called scientists been speculating for ages? Have they not introduced one theory after another? Why this failure to arrive at uncontrovertible and substantial conclusions? We answer, because the exclusive study of material phenomena has prevented the discovery of the spiritual facts. To use a crude illustration: If the boy who has lost his pocket-knife in the front yard should search for it only in the back yard he would not find it. Philosophers have been studying the constituency and elements of darkness instead of turning on the light.

St. Paul declared, "If in this life only we have hope in Christ, we are of all men most miserable." If science begins and ends with physics, chemistry, astronomy, geology, and nothing is true over and beyond what these teach, we are without a God and without a hope of spiritual and immortal existence.

If the gentleman will accept Mrs. Eddy's definition of God and faithfully adhere to it in his logic, he will note the self-evidence of her questioned propositions. Evidently Mrs. Eddy assumes that the student already believes in God as the only first Cause and Intelligence, and in this she is presuming no more than the mathematical teacher who assumes that the pupil already believes there are "things" before he offers the axiom or self-evident proposition, "Things which are equal to the same thing are equal to each other."

Our critic declares that Science proceeds from the known to the unknown, while Christian Science proceeds from the unknown to prove that the known is a delusion. When our friend began his study of mathematics, did he not proceed from the unknown to prove his proposition? The rule was presented to him and he accepted it as a matter of fact before he really knew it to be true. Forthwith he put it into practice, and the result or conclusion proved the truth of the original proposition. Will he insist that mathematics is not a science because he began his investigation, deduction, or solution from a mere assertion?

Christian Science declares its fundamental proposition: "God is Spirit." This constitutes the major premise of the Christian Science syllogism. The proposition that man is the product or effect of Spirit is its minor premise. The conclusion is that man is spiritual. This conclusion adhered to, we must admit that man is not material. Thus Christian Science demonstrates the nonentity of what is supposed to be known to the personal senses, and does it according to the logic contained in Paul's epistle to the Corinthians: "And base things of the world, and things which are despised, hath God chosen, yea, and things which are not, to bring to nought things that are: that no flesh should glory in his presence."

Paul also declared, "For it is written, I will destroy the wisdom of the wise, and will bring to nothing the understanding of the prudent. Where is the wise? where is the scribe? where is the disputer of this world? hath not God made foolish the wisdom of this world?"

The gentleman is unable to understand how it is possible to expel from the mind the belief in the existence of pain. A practitioner was once called to see a lady in his city who had been in extreme agony. She was suffering from an abscess on the liver and was told by the most eminent physician in the city that nothing but a surgical operation could relieve her. Within twenty minutes after the Christian Scientist reached her, the pain was entirely gone. In three days there was no trace of the disease left, and it never returned. I will be pleased to give our friend the name and address of this lady if desired. She is still living and in perfect health, so far as I know. Since there was no physical contact with the patient and nothing whatever was done in the case except to help her into a realization that God is the only power, and therefore that there is no power in pain, even as light being an eternal reality there is no reality in darkness, not only the pain in this case but the abscess also must have been expelled through the mind of the patient. Another case illustrates the point. About six years ago a patient came to a practitioner saying she had suffered constantly with a pain in the top of her head. During the treatment, which lasted only a few minutes, it left her and never returned. This case also can be authenticated. What explanation can be given of these results except that given by a Christian Scientist? Who knows what is done to bring out a given result except the practitioner through whose efforts the result is produced?

I will agree with our critic that "pain performs an important function in animal economy because the burnt child dreads the fire," but that does not vitiate the truth of the proposition that a child who is not burnt and who never errs to such an extent as to come in contact with the fire has no need of "dread." Suffering of whatsoever character, is always because of our sins. We use the word "sin" here in its broad sense, which includes all forms of wrong, even the commonest and smallest mistakes of men. It is certainly just that we should fail to find harmony in wrong doing, even as it is right that we should escape discord and punishment in well doing.

On this subject, Mrs. Eddy declares, in the 1901 message to her church: "A sinner ought not to be at ease, or he would never quit sinning." Again, "The evil-doer receives no encouragement from my declaration that evil is unreal, when I declare that he must awake from his belief in this awful unreality, repent and forsake it, in order to understand and demonstrate its unreality."

Our friend concludes his letter with the statement: "Man in his intellectual development passes through three stages: first, the unanimity of the ignorant; second, the disagreement of the inquiring; third, the unanimity of the wise." Since Christian Science has been discovered and is known to a goodly number it has gone through the first stage, and the contention of our critic illustrates the fact that it is passing through the second. We trust that he will be alive to the situation and ere long may be reckoned among the great army who are becoming "wise" through this Science.

## A Distinction with a Difference.

I HAVE read with considerable interest your story of Joanna Southcott. I have no occasion to question anything that is said in regard to the history of this woman, but inasmuch as the story is related in connection with the Leader of the Christian Science movement, I am led to believe that the attention of *The Bulletin's* readers should be called to the fact that Mrs. Eddy's career consists in introducing and establishing a scientific, demonstrable religion, which converts by its good work, and not by any faith imposed in mysterious conjurings or pretended soothsayings. Christian Science has an advantage over that which is presented as a mere ism or theory. It is demonstrable and is followed every day by satisfactory results. Whatever of confidence the Christian Scientists may have imposed in their Leader is not due to any fetishism on their part as is said of that once placed in Joanna Southcott, but to her actual merit.

Mrs. Eddy has acquired a large measure of the wisdom, goodness, and love which the faithful application of Christian Science promises to all its adherents, so that whatever gratitude may be bestowed upon her by Christian Scientists is as natural and well placed as that which is bestowed upon Washington as the Father of his country, or upon Lincoln and other public benefactors.

Christian Science does not depend upon a mere theory. It is a scientific method of producing results, and it certainly will hold its place against material methods unless, perchance, its adherents fail so to live its teachings as to be worthy of what it promises and gives. That Christian Science appeals to thinking people, to the educated and experienced, is due to its scientific and demonstrable features.

If, as you declare, Joanna Southcott's strange prophecies and theories failed, it was but natural that her following should lose their respect for her teaching, and that her movement should come to an end.

Christian Science proposes to regenerate the human race and thereby destroy the elements of sin and disease. It does not, even in the smallest degree, deal in strange and weird oracles. It is as plain and clear in its teachings, and quite as demonstrable, as a mathematical rule. The Christian Science cause, that movement which is based upon the proposition that God is Spirit, Life, Truth, Love, and the consequent teaching that man should be like Him, will only cease when mortals lose their desire for good and their craving for the spiritual and pure, and therefore determine to follow the inclinations of the flesh. In our age good dominates the lives and consciences of men in a very large degree, and it is hoped that the number of those who hunger and thirst after righteousness shall increase rather than decrease, and that the pure ethics of God which was exemplified in the life of Jesus and is in our day defined by Christian Science will become so popularized that all will serve the Lord from the least to the greatest. A. F.

## Love and Self-Assertion.

THE one great social question, particularly in a democracy, presents itself under three aspects: How shall I make the most of myself and still serve others? How far shall I develop my individuality along with the general development? How can I insist upon myself and yet not antagonize others? We are here concerned only with the religious aspect of these questions; or, I should say, with their application to the subject of correct relationship between religionists.

Manifestly it is no very encouraging evidence of growth in good-will if I can only love my fellows in faith. I must prove myself capable of including within the circle of my love those who, from my point of view, are dissenters and disbelievers—"infidels and heretics, Jews and Turks," if you will. On the other hand, it is merely suggestive of what I like to call (inelegantly, I fear) a sweet wishy-washyness, for men to make light of grave differences to the extent of ignoring facts, all for the sake of expressing kindliness and good-will. My own opinion is that this latter is a sure symptom of a dangerous spiritual condition, the lapsing of the sentiment of love into sheer sentimentalism, the degeneration of the possibly robust good-will into mere emotionalism. Almost I would prefer uncompromising bigotry to compromising inclusiveness. But neither of these alternatives needs to be chosen, since fraternal relations and self-insisting freedom are quite compatible. Indeed, Emerson got at the heart of this matter when he said that we must be "very two before we can be very one." To love another, whom I feel or believe to be like myself, is only the extension of egotism. But to love another, whom I know to be different, is the very triumph of strong, self-respecting altruism.

"The same heart beats in every human breast," yet since it beats more loudly in one than in another, more quickly in one than in another, the outward expression of the inner man, is likely to be different. Let us agree wherein we can, but let us frankly, freely, and fraternally differ wherein we must. The underlying purpose of all good persons, I doubt not, is the same or similar, though our ways of achieving it may differ. And even if these purposes themselves do vary, yet let us not weakly, emotionally attempt to gloss over these differences, but recognize and express them in loving competition and with robust good-will.

RABBI FLEISCHER.

## Utilizing Nature's Energy.

SWITZERLAND and southern France are now beginning to utilize to a large extent their own great sources of unfailing water power. The mighty snowfields which cover their mountains will never disappear. They send their glaciers down the mountains, and the glaciers begin to melt at the lower altitudes, some of them forming waterfalls of great height, while others tumble in torrential streams to the valleys below.

This water from the glaciers is being more and more utilized every year. The water is diverted into pipes and carried hundreds, or even thousands, of feet below to turn turbine wheels and generate electricity.

Mr. Nason, our consul at Grenoble, says that the use of electrical power thus generated is being extended in all directions. The electrical plant at Grenoble already gives power to the mills there and to the street-car systems.

Under a tension of 26,000 volts, the power is transmitted forty miles to factories in Moirans, Voiron, and Rives. Grenoble will soon be lighted by electricity. Six mills which are making paper, wood pulp, acetylene, aluminum, and other commodities are now established in the valley of the Romancat, which a few years ago had scarcely any inhabitants. Electrical power has wrought the change.

The amount of steam power utilized by the industries of France is equal to 6,500,000 horse-power. The hydraulic engineers of France say that the water power in her mountainous districts can produce electrical energy equal to ten million horse-power.

The enormous energy that is running to waste all over the world will some day be utilized; and one of its special advantages is that this source of power, unlike coal, will never be exhausted.—*New York Sun.*

When flesh is weak, then am I strong,
By this I know where I belong.

## Railroad Rates and Arrangements for the Communion Season.

THE New England Passenger Association; *i.e.*, all rail and steamer lines within the New England States, has granted reduced rates on the following basis.

"Round trip tickets will be sold and good going June 27–July 1, returning June 28–July 2, at the following rates:—

"Two cents per mile from points within twenty-five miles of Boston; one dollar from points from twenty-five to thirty-three miles of Boston; one and one half cents per mile from points more than thirty-three miles from Boston.

"Tickets will be put on sale only at points from which the lines interested are advised of probable attendance.

"From New York City, one fare for the round trip; tickets good going via all rail lines beginning on the eleven o'clock and midnight trains on June 26, and on all trains (excepting special limited all parlor car trains) June 27–30, returning June 28–July 2. Via Sound Lines tickets good going June 26–30, returning June 28–July 2."

From Trunk Line Association; *i.e.*, territory West of New England but east of and including Toronto, Niagara Falls, Buffalo, Dunkirk, Salamanca, Erie, Pittsburg, Bellaire, Wheeling, Parkersburg, and Charleston, W. Va., one fare plus $1.00 for the round trip; tickets to be sold and good going June 26–29, good returning June 28–July 2, but must be stamped and vised at Station Ticket Office prior to July 2.

By deposit of ticket with Joint Agent, Walker Building, Massachusetts Institute of Technology, corner Boylston and Clarendon Streets, Boston, not earlier than July 1 nor later than July 4, between the hours of 8 A.M. and 6 P.M., and payment of fee of fifty cents at time of deposit, an extension of return limit may be obtained leaving Boston not later than August 1, 1903.

From Central Passenger Association territory; *i.e.*, west of Trunk Line Association territory as above and north of the Ohio River, east of Lake Michigan, and east of and including Chicago, Peoria, Quincy, Keokuk, Hannibal, and St. Louis, one first-class fare for the round trip, tickets to be sold and good going June 25–27, with return limit and extension privileges same as Trunk Line announced above.

Stop-over may be obtained at New York on return trip on tickets reading via New York, provided tickets have been validated in Boston and are deposited with Joint Agent at 13 West 24th Street, New York City; immediately on arrival, and payment of fee of $1.00; but in no case will the stop-over at New York extend beyond August 1. Joint Agency open between 8 A.M. and 6 P.M. daily from June 29 to August 1.

Lines south of Trunk Line Association territory and west of Central Passenger Association have not as yet announced their arrangements but it is confidently expected that they will concur in above arrangements as will the lines from Canada and the British Provinces.

The Plant Line announces that it will make half rates from Halifax, Hawkesburg, or Charlottetown, good going to Boston any time during June and returning to and including July 4th sailing.

The Intercolonial Railway of Canada will make reduced rates from points on its line to Halifax, St. John, and Boston.

The Field are advised to consult their local ticket and passenger agents for full information, and it is suggested that purchasers read the contract on the ticket and have the selling agent explain any provisions not fully understood.

## The Lectures.

### At Brooklyn, N. Y.

A lecture was delivered in First Church of Christ, Scientist, Brooklyn, on April 24, by Judge William G. Ewing of Chicago. The lecturer was introduced by Mr. W. D. McCrackan. The church was crowded.—*Correspondence.*

### At Poughkeepsie, N. Y.

The seating capacity of the beautiful auditorium of the new Christian Science Church was fully tested at the lecture given on Tuesday evening, May 5, by Rev. Arthur R. Vosburgh, C.S.B., of Rochester. Mr. Vosburgh is an interesting speaker. He was introduced by Mr. W. C. Lansing, First Reader of the local church, in a short and eloquent address.—*Poughkeepsie Eagle.*

### At Bloomington, Ill.

The lecture at the Grand Opera House last night [April 14] by Judge Septimus J. Hanna of Boston, was largely attended despite the disagreeable weather. The parquet of the Opera House was filled with listeners and there was a good representation in the galleries. Judge Hanna spoke on Christian Science, and his address was listened to with interest. He was introduced by Mrs. E. M. Prince, the First Reader of the church in this city.

*Bloomington Pantograph.*

### At New York, N. Y.

On Thursday evening, April 23, Judge William G. Ewing of Chicago, under the auspices of Second Church of Christ, Scientist, delivered his lecture on Christian Science in the church edifice on Central Park West, corner 68th Street. The lecturer was introduced by Mr. W. D. McCrackan, C.S.B., with a few graceful and fitting words. Every seat was filled and chairs had to be brought in. The lecture was followed attentively by a very appreciative audience.—*Correspondence.*

### At Chicago, Ill.

Carol Norton, C.S.D., lectured in Third Church of Christ, Scientist, of Chicago, Tuesday evening, April 21. The First Reader, Mr. Ira W. Packard, introduced the speaker in part as follows:—

*Ladies and Gentlemen:*—If ever a cause has won its way on its merits alone, that cause is Christian Science; for, as you probably all well know, it has never received any help or encouragement from the world at large, either secular or ecclesiastical. It has established itself despite bitter opposition. "Despised and rejected of men" certainly describes its reception. In the face of this, the fact that it is succeeding till now its adherents in this city alone are numbered by the thousands, should occasion food for thought.

How is this growth to be accounted for? No one becomes a Christian Scientist, or joins that church for the sake of obtaining social position or standing in the community; for, in the present attitude of public thought, taking this position involves cross-bearing to a certain extent. Why, then, do people become Christian Scientists? Many of those who are now Christian Scientists, at one time were numbered among its opponents; but having been brought low by disease and suffering, and having exhausted all known material remedies and means of cure, they have, as a last resort and very reluctantly, turned to Christian Science for relief, and after experiencing its healing and purifying effects have been willing to put aside their conceit and pride of opinion sufficiently to enable them

Digitized by Google

to study and investigate it in a sane and unprejudiced manner. This is the *modus operandi* at present by which most people become Christian Scientists.

The gentleman who will address you this evening is a man who, having been raised from hopeless invalidism by Christian Science, was willing to study and investigate it; and then with the courage as well as the honesty of his convictions gave up the profession in life for which he had prepared himself, and took his stand before the world as a working Christian Scientist. What such a man has to say on "The Meaning of Christian Science," is worthy of, and I am certain will receive, your thoughtful attention.

I now have the pleasure of introducing to you Mr. Carol Norton, of New York City.—*Correspondence.*

### At Sheboygan, Wis.

The lecture of Mr. Carol Norton of New York on Christian Science at First Church of Christ, Scientist, Monday, April 27, drew out an audience that taxed the capacity of the edifice. Mr. Norton is a very able speaker and the attention of his hearers was fully absorbed as he expounded the meaning of his theme.

*Sheboygan Herald.*

The following paragraphs are from the introductory address of Principal Roeseler of the High School as published in *The Telegram:*—

When any one modestly realizes that he may be wrong and others at least partly right, he becomes broader and more tolerant.

To-day we ask no government or church authority whether we may enter this or that house of worship or read this or that book. We believe truth is mighty and will prevail while error cannot endure but must perish. We believe with Paul, "Prove all things; hold fast that which is good."

### At South Norwalk, Conn.

As the full text of Dr. Emily Pardee-Disbrow's introductory address on the occasion of Mr. Carol Norton's lecture in the Opera House last Friday night, May 8, has not been given, we print it in full below:—

*Ladies and Gentlemen:*—It is strange that in this land, where religious liberty was once so restricted and even religious thought was curbed and unexpressed, where religious bigotry was so blindly cruel and persecution unto death was not unheard of, there is to-day such a spirit of generous toleration, and earnest inquiry, as is demonstrated by the presence of this audience.

I feel complimented to be invited to stand here and welcome you in behalf of Christian Science, and will take advantage of my position to thank the local Church of Christ, Scientist (who are glad to submit their faith to the judgment and criticism of the world) in behalf of this audience for the splendid treat in store for us—if I give the gentleman a chance to speak by-and-by.

Surely the day of wilful prejudice without investigation is past, and our best men and women are thinking for themselves.

As most of you know, I am not a Christian Scientist; my wings have not begun to evolve. But I have many lovely friends who are, and who are lovelier in their friendship, gentler in their conversation, sweeter in their home life, since they became Scientists.

I believe every nature hungers for spiritual food and we reach out for something beyond the human. We sense the divine, and any religion that teaches reliance upon divine Love, that teaches the fatherhood of God and the brotherhood of man, that teaches the lessons of the cross and crown, appeals to the waiting, hungry soul and will not lead the world astray.

I suppose that every religious denomination and every school of medicine has had its opponents, has fought for and acquired its footing through great tribulation, and Christian Science, which is so stirring the minds of thoughtful men and women to-day, has suffered its share of sarcasm, of injustice.

Doubtless you have noticed how our beautiful country is flecked all over with sanitariums, as thickly as New York harbor is flecked with sails upon the occasion of an international yacht race. These sanitariums are filled largely with persons wrecked physically and mentally and morally by excesses,—eaters and drinkers and smokers. Inquire the history of the drug fiend, and you will often be told of a painful sickness when the doctor gave morphine or some seductive analgesic and the habit grew to this disastrous extent. The inebriate will tell you of the "bracer," the "nog," or the "nightcap" the doctor ordered and the use of which was continued until now it is master.

The cigarette fiend,—well, he will not know enough to tell you much, and we will not trace him; but, friends, is it not inconsistent that our medical colleges build smoking-rooms for the students and then hire professors to teach the young doctors how to treat a tobacco heart?

Now, what class of patients are these Christian Science healers going to manufacture for the asylums? I will trouble you to think of this for a moment. Possibly a sort of housemaid's knee will come upon those who contract the prayer habit in excess. Ought we not to legislate against such an irregular disaster?

To my mind, it is unjust to oblige any person who in sickness prefers the ministrations of a Science healer to employ a doctor of medicine. Perhaps I feel this more keenly because I belong to a school of medicine that half a century ago was hunted and persecuted as bitterly as Scientists have been. Yet to-day there are more homœopathists living, and living comfortably in these United States than there are Indians who once owned the whole land.

These facts make our national hymn, "The land of the free and the home of the brave," savor of unwholesome sarcasm.

My friends, I am impressed with the vital solemnity of this work and I believe if it "be of men it will come to nought: but if it be of God ye cannot overthrow it."

I confess I have never felt the propriety of calling this society or church Christian Scientist, and the application of this name, has, I am sure, prejudiced many minds.

I hope the speaker of the evening, who is an able exponent of this new gospel, will explain to us the fitness of the name as well as correct some misapprehensions, and I assure you, ladies and gentlemen, that I have unfeigned pleasure in introducing to you Mr. Carol Norton, C.S.D., of New York City.—*The South Norwalk Sentinel.*

## Notice Regarding the Bible Lessons.

In view of the change in the date of Communion service in the branch churches from June 14 to July 12, the following will be the order of the lessons:—

June 14.—Is the Universe, including Man, evolved by Atomic Force?

June 21.—Christian Science.

June 28.—God.

July 5.—Life.

July 12.—Sacrament.

The Mother Church will follow this order up to June 28, when the Communion service will be held, and the lessons for July will follow in the order given in the *Quarterly.*

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Card.

FROM the overflow of my heart I hereby send to the Christian Scientists at Boston, Mass., *thanks* for their desirable gift of additional land whereon to build the edifice of First Church of Christ, Scientist, in Concord, N. H., and to First Church of Christ, Scientist, New York City for the sum of one thousand dollars to said Church.

MARY BAKER G. EDDY.

Pleasant View, May 24.

### Now and Then.

MARY BAKER G. EDDY.

THIS was an emphatic rule of St. Paul: "Behold, now is the accepted time." A lost opportunity is the greatest of losses. Whittier mourned it as what "might have been." We own no past, no future, we possess only, *now*. If the reliable now is carelessly lost in speaking or in acting, it comes not back again. Whatever needs to be done that cannot be done now, God prepares the way for doing; while that which can be done now, but is not, increases our indebtedness to God. Faith in divine Love supplies the ever-present help and now, and gives the power to act in the living present.

The dear children's good deeds are gems in the settings of manhood and womanhood. The good they desire to do, they insist upon doing, now. They speculate neither on the past, present, nor future but taking no thought for the morrow act in God's time.

A book, by Benjamin Wills Newton, called "Thoughts on the Apocalypse," and published at London, Eng., in 1853,—Mr. Marcus Holmes, K. C., presented to me in 1903,—the first that I had even heard of it. When scanning its interesting pages my attention was arrested by the following: "The Church at Jerusalem, like a sun in the center of its system, had other churches, like so many planets, revolving around it. It was strictly a *mother* and a ruling church." According to his description, the Church of Jerusalem seems to prefigure the Mother Church at Boston.

I understand that the members of the Mother Church, out of loving hearts pledged to this Church in Boston, "any part of two millions" of money wherewith to build an ample temple dedicate to God, to Him "Who forgiveth all thine iniquities; *who healeth all thy diseases;* who redeemeth thy life from destruction; who crowneth thee with lovingkindness and tender mercies; who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's." A temple whose spiritual spire reaches the stars with divine overtures, holy harmony, reverberating through all cycles of systems and spheres.

Because Christian Scientists virtually pledged this munificent sum, not only to my Church, but to Him who returns it unto them after many days, their loving giving has been blessed. It has crystallized into a foundation for our temple, and it will continue to "prosper in the things whereto it is sent." In the *now* they brought their tithes into His storehouse, *then* when this bringing is consummated, God will pour them out a blessing above the song of angels, beyond the ken of mortals—a blessing that two millions of love currency will bring to be discerned in the near future as a gleam of reality, not a madness and nothing, but a sanity and something from the individual, stupendous, Godlike agency of man.

### The Golden Rule.

WITHIN the past few years, since the very general attendance of Christian Scientists from all over the world has become a feature incident to the Communion in the Mother Church, a custom has grown up which merits serious consideration. We refer to the holding of informal or impromptu testimonial meetings in the hotel parlors in Boston. A very serious objection to the custom is that none of the hotels are given over to the sole occupancy of Christian Scientists, and to take entire possession, as has been done, of the parlors and lobbies for these meetings is to exclude all other guests from the free use of the hotels. Certainly we have no right to obtrude our views upon the attention of those to whom they may be distasteful. Can we afford, as Christian Scientists, to be charged with disregard of the rights of others?

Beyond the question of personal right, which should be paramount, individuals have found that the excess of zeal prompting them unduly to force their religious views upon those unprepared to receive them has not been conducive to the advance of our Cause. One of the things which we as a denomination distinctly contend for is personal liberty, and of course this means that we shall be as solicitous for the rights of our neighbors as for our own rights.

Another serious objection to these meetings is that there is a certain lack of responsibility about them, yet they appear to the world as a part of the regular and authorized exercises of Communion week. A criticism frequently made in the past is that these meetings as a whole, are lacking in dignity and the atmosphere of devotion. Sometimes they have been a medium for extravagant and irresponsible expressions regarding Christian Science; and we must remember that the public will not stop to distinguish between the acts of individuals who are Christian Scientists and the official acts of the organization of which they are members.

The many opportunities for the kindly word of cheer and brotherly love which always have been afforded and appreciated during the Communion season, will not be curtailed by the giving up of these meetings, in fact, we believe that a more general and enlarged acquaintance will result, and certainly the keen interest manifested in the regular exercises will not be lessened.

The spiritual uplift and generally wholesome effect of these annual gatherings depends upon what each individual brings to the storehouse of Love. M.

### Transformation.

WE read a sad lesson from a little incident related of Leonardo Da Vinci's painting of his famous Last Supper.

The great artist searched curiously for many days among the passers in the crowded streets for a face good and pure and sweet enough to serve as a model for the Saviour.

At last he found one, classic in feature, refined in expression, spiritual in suggestion, and he painted his wonderful Christ.

Years passed, the great masterpiece, still unfinished, lacked one face, that of Judas.

Again Leonardo sought long for a model, this time, it must be a type of depravity, and at last, on the streets of Milan, he met a wretched beggar,—ragged, unclean, debauched, he looked a very Judas. When the twelfth apos-

Digitized by Google

tle was finished the artist found this model to be the same that had posed for his Jesus! The same? Ah no! The intervening years had been spent in riotous living and they had left their impress upon the once beautiful face.

We turn from the sad story with fervent gratitude that through divine revelation there has come the reversal of this law of retrogression, and all the entailed experiences which have led to the despairing cry, "Every human life is a tragedy."

A listening ear has caught the word of Truth, a loyal, loving heart has answered the appeal of sin-burdened humanity, and in unnumbered faces which once suggested the kinship of Judas, there is now seen the light of purity and gladness.

Through Christian Science God is revealing Himself as Love, and only Love; and we know that the divine idea cannot be despoiled by sin. We are learning to find, despite error's distortion, only the face of the Christ in the passing crowd, in the dingy shop, in the home, in the schoolroom, everywhere. We are beginning to know that the Judas of false belief is not a guest at the "morning meal which Christian Scientists commemorate" (Science and Health, p. 35), the spiritual communion where the apostles now gather to break the bread of Life and drink the wine of Love.

S.

## The Dawn of Peace.

**My peace I give unto you.—Jesus.**

In the presence of the ceaseless turmoil and strife of human history, men have read the words of Jesus with mingled feelings of incredulity and hope. Many Christian men, in practical approval of the material law of the survival of the fittest, seem ready to condone war as a necessity, and at the beginning of this twentieth century one may find prominent religious journals exploiting the army and navy of a so-called Christian country, and giving the most effective engines for the destruction of human life the commendation of beautifully illustrated descriptive articles! It would seem that they understood the words of Jesus, "I came not to send peace," to mean, not that the excitation and resistance of error is an inevitable *incident* of Truth's appearance, but that Truth must meet and overcome error upon its own ground and with its own weapons. And yet there stand the words of the Master, "Put up thy sword," and his voice is heard in every responsive heart pleading for the things that make for peace, and slowly but surely the tolerance of strife, the consent to its legitimacy, is passing from the Christian consciousness.

The recent gift of a million and a half dollars to erect a building for the use of a permanent International Court of Arbitration at The Hague, is but one of many incidental and encouraging evidences of growth in the world's recognition that physical combat between nations is as animal, and as degrading as it is between men; that the adjustment of international difficulties is both wise and feasible, and that the settlement of conflicting claims through mutual concession is the only course that is in keeping with national dignity.

Another significant indication of the dawn of peace is the marked tendency toward denominational union, which is asserting itself in all Christian bodies, and the entire indifference of the great majority of Christian laymen to issues which once led to fierce contentions. Men smile to-day at what seems to them the unimportance or the foolishness of the fine points over which their grandparents, if not their parents, fought.

The two great branches of Methodism and of Presbyterianism in America are steadily approaching each other, and at a recent conference in Pittsburg, between representatives of the United Brethren, Methodist Protestant, and Congregational denominations, definite steps were taken toward the union of these organizations.

In England the National Free Church Council is making rapid progress in the direction of a union of all the non-conforming churches, and in Australia and New Zealand the advance is even more marked.

Further: the era of conflict *in* churches is no less surely passing than that *between* churches. It is felt everywhere that these strifes of personality, are not only utterly incongruous but grievously wrong, and that the distrust they beget without, is but the sequence of decay within. The contempt and condemnation which non-Christians have visited upon this offence has been no less deserved than severe, and we may well give thanks that this shame and disgrace to denominational Christianity is also passing, and that humility, mutual respect for personal convictions, and brotherly love are bringing peace by casting out personal ambition, criticism, and domination, with every other demon of mortal mind. The harmony and love of a Christian church, whatever its distinctive creed, constitutes it a Bethel,—a house of God. As a city that is set on a hill, it cannot be hid, and men ever say of it, "Peace be within thy walls."

It is to be seen that every blessing of peace in the associations of nations and of men is but an expression and resultant of the establishment of peace in individual hearts. When Jesus said, "Peace I leave with you," he addressed every sincere and trustful believer, whether of the past or present. Peace is the stillness and content of the heart-home where the Christ is ever welcomed. It means that fear and anxiety have been banished, that this world's distracting illusions have lost their hold, that the narrowness of self-seeking has given place to a lofty altruism, and that love for God and for our brother man has been enthroned.

And does this seem but a far-off vision to some of us? Then we may have forgotten the requirements of a divine order whose inflexibility is its crowning virtue and gain for man. Jesus spoke this word of assurance to those to whom he had already given his love, his teaching, and his example; and we may not claim his peace if we are not reflecting his love and conforming to his life. Are we troubled in heart, disturbed, annoyed, restless, irritable in any degree or over any thing?—then let us recall again his gracious assurance "Lo, I am with you alway." His love, his word of counsel and rebuke, his example of daily living,—these are ours, to be made manifest in our lives and so bring us his peace. In the unselfishness of our consecration, the inoffensiveness of our attitude toward all men, the conscientiousness of our loyalty to our highest concept of Truth in Christian Science, and to the Cause for which we stand; in the breadth of our charity, the justice of our criticism, the genuineness of our brotherly love, and the constancy with which we mind our own business,—in the companionship and expression of these Christian virtues we shall find our own abiding peace, and so most help to bring peace to the home, the church, and the world.

W.

## Generous Donations.

**Friends of the Rev. Mary Baker G. Eddy Purchase the Chadbourne Property and Present it to the Christian Scientists of Concord to Improve the Setting of their New and Beautiful Church, the Gift of Mrs. Eddy. New York City Scientists send a Gift of $1,000.**

The building committee of the new $100,000 church which the Rev. Mary Baker G. Eddy has recently presented to the Christian Scientists of Concord, announce the gift from friends of Mrs. Eddy of the adjoining Chadbourne estate. This addition to the property presented by Mrs. Eddy will give the new church a beautiful and commodious

Digitized by Google

location on which to erect their handsome Gothic edifice. The purchase price is not made public, but the owners some time since are understood to have refused $14,000 for the land and buildings. The names of the generous donors are not announced, but it is known that the prime movers are among the leading business men and capitalists of Boston, and their gift comes as a pleasant surprise to the revered leader as it does to the citizens and the local members of the church.

In addition to the above liberal gift, the building committee were greatly gratified to receive to-day a donation of $1,000 from First Church of Christ, Scientist, in New York City.—*Concord* (N. H.) *Patriot.*

### The Children of Disobedience.

WILLARD S. MATTOX.

It requires no technical, military training to understand that the best soldier in the ranks is that one who has, among other things, the greatest confidence in the ability of his commanding officer. Tennyson has made glorious the service of unquestioning obedience, but the pathos and penalty which the world has read into the immortal lines of "The Charge of the Light Brigade," have deterred many from yielding a ready consent to commands which may mean suffering. There is, indeed, a note of sadness in the blind obedience to authority which is fallible and unproved in its wisdom, but obedience is not a task, when one can say, "I know whom I have believed." The unit in the ranks who doubts the intelligence and experience of his leader, would better be out of the ranks. He makes for insubordination and disorganization, and is a foe to the integrity, cohesiveness, and success of the body.

The man who thinks he knows enough to do anything better than he who has charge of an undertaking, is not a good server. He cannot be instructed, and because he is "wise in his own conceit," there is no mental avenue through which he can be approached. An unwillingness to obey usually means self-love, self-righteousness, or mad and headstrong self-will and ambition. Such qualities of the human mind make men poor soldiers and equally poor Christian Scientists. The Adam race has been notorious for its unwillingness to obey God, for its stiff-necked refusal to hear His word, and for its presumption in giving information to the All-Wise. The unruly mind, impatient of correction or command, is unpromising material for instruction. In business, the employe who feels that he could run the business better than the firm is doing it, receives commands reluctantly and does his work ineffectively, or fails entirely. Arrogance is fatal to progress and success.

In the Christian life, the false belief that man has a mind of his own, that he thinks his own thoughts, and that these thoughts are sufficient, this theory, in practice, has led to sin, sickness, and death. In Science and Health, p. 263, Mrs. Eddy says, "Mortals are egotists. They believe themselves to be independent workers, personal authors, and even privileged originators of something which Deity would not or could not create. The creations of mortal mind are mortal." In the practice of Christian Science, experience teaches that the healing truth comes not swiftly to the thought which is self-satisfied and unwilling to learn. Jesus said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." This should be enough for all learners who are following in his steps, but we need many lessons, apparently, to give us that simple trust which will reveal the mental realm of harmony and peace.

Jesus referred to this human reluctance to learn of God, when he admonished his students to beware of the swinish element in mortal mind. In some localities his healing was hindered by the unreadiness of those who heard the great truths about God and man which he expounded. The patient toiler to-day finds that love's labor is indeed lost on those who are satisfied with a material sense of life. Such thoughts are with difficulty lifted to that sublime altitude of meekness which receives gladly the simple story of God's goodness and allness, and the nothingness of human striving. Patients approach Christian Science, impelled by many different motives, and success in healing depends not altogether on the ability to impart, but much upon the readiness to receive. The prayer of penitence is the acknowledgment of failure in undertaking to work apart from God, and a humble declaration of entire willingness to let God do the work henceforth. Such prayers have their speedy reward in relief from pain and sorrow. The request for help which comes from the lips only, often wonders why it is not answered. The verbal petition which is not backed by a surrender of the human will, does not deserve to be granted, and never is granted. A mental reservation of old human opinions and methods is not the threshold to physical or spiritual healing. All our suffering comes from disobedience, never from obedience. Perhaps nothing is more disheartening than to work for many weary days, for ourselves or others, with oftentimes not the slightest outward result. We cast about for the most likely reason of failure, courage droops and dismay tries to hurry us into an abandonment of the case. It is not within the scope of a single article to enumerate all the possible reasons why our work does not succeed, but we cannot afford to lose sight of this, among others: unwillingness to obey. "Thy will be done," realized, heals the sick.

The greatest factor in restraining faith and retarding obedience is the devil-inspired suggestion that one must yield up all individuality in order to be a good servant. When Jesus insisted that we must obey God, when Paul pleaded with Jesus' disciples to "let this mind be in you, which was also in Christ Jesus," when Christian Science lays stress on the First Commandment, there is no hint of absorption or annihilation, but a splendid promise of enlarged usefulness and heightened capacities. Our text-book says, page 263, "When mortal man blends his thoughts of existence with those of his Maker, and works only as God works, he will no longer grope darkly, and cling to earth because he has not tasted heaven." Repeated testimony as to the ability of infinite Intelligence to govern us rightly, should inspire trust and provoke willing obedience. Multiplied evidence of our Leader's qualifications as a leader of a great Christian movement, should make obedience easy and joyous. Proofs of the unselfish loyalty of those who are directing the government of a church organization should enlist the support and intelligent acquiescence of the unit in the ranks. It is right to withhold approval, when a series of disasters proclaim the weakness of an executive, but how can we longer be in any degree *impedimenta* on the march from sense to Soul, when we do know whom we have believed?

### Concerning Testimonies.

E. L. F.

Perhaps it would be well for some of us to consider our testimonies to Christian Science healing, given in our meetings and elsewhere, and to be sure that they are always modest as all would wish them to be.

It is a well-known fact that Christian Science has saved people from death and from the most distressing forms of suffering; nevertheless, the so-called "smaller" cases are quite as apt to satisfy the craving heart, if they express

Digitized by Google

the truth; and we should remember this, and not try to make them appear "big" by using such words as "severe" and "violent," or by going into the details of error.

Sometimes there are cases given where the listener would have good cause to think the patient got well in spite of the treatment; and again there are those given of blind faith, purporting to be the work of Christian Science. And are we not too negligent of the oft-repeated counsel: not to employ terms unfamiliar to the outsider?

If Love prompts us to give a testimony, it will always be true; it will not be a rehearsal of error, or speak of work that is other than genuine Christian Science. Love will use us to convey its message to every hungering heart and will bring with it the assurance that God's Word does heal and bless all mankind. If Love prompts the testimony it will not be flippant or irreverent, and the words that breathe the spirit of divine Love will surely be the cup of cold water in Christ's name.

## The Value of Right Thinking.

JOHN L. RENDALL.

CHRISTIAN SCIENTISTS are learning the great value of right thinking. They appreciate the intrinsic worth and merit of every true statement held in individual consciousness. They recognize the value of the ability to grasp and assimilate the statements of truth which are given to mankind in the Bible, and which are emphasized and explained in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy. The recognition and acceptance of truth embodies and includes the rejection of that which is untrue. Jesus said, "Ye shall know the truth, and the truth shall make you free." Truth enters into every avenue of life, into every occupation or vocation; it permeates all things, and because it is truth it is the only and correct standard of judgment, the ultimate arbiter of every question.

In establishing our standard of judgment let us not stop short of the absolute, and for the establishment of this standard a recognition of what absolute Truth is, becomes a necessity. Truth in Christian Science is synonymous with God; therefore God and His creation is all that the Christian Scientist considers in his disposition of the problem. Any statement that fails to come up to the right standard is untrue—not of God, therefore unreal, and because unreal must be rejected. God has established the proper standard of all things. In this infinite perfection there is no room for any imperfect condition of whatsoever name or nature; hence when the temptation comes to us to say "I am sick," "I am a sinner," it comes for the specific purpose of deceiving, if it were possible, the elect. It comes to us to be given life, to be accepted as a reality. Our protection consists in knowing Truth, and herein we prove the practical nature of Christian Science.

The prevalent human thought has a tendency to attribute cause and effect to matter exclusively, and to argue that because of material events, whether remote or of recent occurrence, certain effects are produced; consequently, when a disease manifests itself upon the body, human thought at once recurs to some supposed cause in matter as the reason for the manifestation. We read in Science and Health, p. 207, "There is but one primal Cause. Therefore there can be no effect from any other cause; and there can be no reality in aught which proceeds not from this great and only Cause. Sin, sickness, disease, and death belong not to the Science of Being. They are the errors, which presuppose the absence of Truth." Again, p. 392, "Stand porter at the door of thought. Admitting only such conclusions as you wish realized in bodily results, you may control yourself harmoniously." Saint Paul writes, "Brethren, I count not myself to have apprehended: but this one thing I do, forgetting those things which are before, I press toward the mark for the prize of the high calling of God in Christ Jesus." Paul recognized a fundamental truth in thus "forgetting those things which are behind." There is not one thing in the past, not one event or circumstance that can retard, interfere with, or obstruct the progress of the sincere seeker for Truth. The past has gone: "Why seek ye the living among the dead?" "Now is the accepted time; behold, now is the day of salvation." The "now" improved is all that remains, all that we have upon which to complete our demonstration. There can never be anything but "now."

Salvation in its complete meaning includes salvation from every evil condition, not omitting the belief of a "past" or the claims of heredity, from false education, environment or anything which "maketh or worketh a lie." The good in human experience is the only real and enduring factor in life. There never was a condition or circumstance that of itself could perpetuate evil, for evil has no entity, no power, no law to perpetuate it or through which it can operate. Therefore "Hold thought steadfastly to the enduring, the good, and the true" (Science and Health, p. 261).

The beautiful poem by Whittier gives us food for thought:—

> That all of good the past hath had
> Remains to make our own time glad,
> Our common daily life divine,
> And every land a Palestine.

## Had I but Wealth.

How oft we think—had I but wealth
Then would I make the poor rejoice,
In all good works my hand you'd see
And every wanderer's friend I'd be,
Had I but wealth.

And yet 'tis love the world doth lack,
Not gold; 'tis hearts and souls that starve;
Should we then say—had I but gold,
When 'tis but wealth of love untold
The world doth lack?

Then rather say—had we such love
As doth a brother's burdens share,
Naught else we lack, but such a choice
And e'en the angels would rejoice
Had we such love.

Then let us pray—give us that love
Which in the Saviour's heart did burn;
For it all else we will resign,
We would be wholly, truly Thine;
Give us that love.

R. G. CARNEY.
In the *Universalist Leader.*

## Notice.

A COMMITTEE on securing rooms in private houses for visitors who do not wish hotel accommodations, will be in session at Mechanics Building Thursday, Friday, and Saturday, June 25–27, from 9 A.M. to 9 P.M. each day. No arrangements can be made in advance by correspondence with this committee, but all who apply to them in person upon their arrival in Boston will be cared for.

Visitors who desire hotel accommodations should make personal arrangements with the hotels, as this committee cannot undertake to make provision for them. Those who have not yet arranged for their rooms at the hotels would better do so at once, since the demand is very great.

## For the Children.

### The Wise Old Apple-Tree.

M. E.

In the old New England home where I was born there is an apple orchard which, when I was a boy, was my favorite playing-ground. I used to fancy the trees were my play-fellows, and I would throw myself on the ground and look up at them and make believe they were talking to each other, or that they were snowballing me as the wind tossed the white blossoms about. That was long ago, and I have since visited many lands and have met with many strange people, but I have never forgotten the happy days spent in the old apple orchard, and last spring when I went back to the old home, I hurried out to see my childhood's play-fellows. It was very early in the spring, and the buds had not yet poked their little heads out, but I threw myself down and looked up at the trees just as I used to do and waited for them to talk to me. Perhaps I fell to dreaming; at all events, I saw a little bug on the branch just above my head, and as I listened I heard the trees talking about it and wondering what they should do to get rid of it, "For," said one, "it will eat the little buds when they come out, and perhaps destroy the tree itself." So they talked and talked, and each tree was quite sure that his plan to drive out the bug was the best one.

After a while, an old apple-tree who had been listening to the others began to wave his branches about to get their attention, and said, "You are going about it in the wrong way; you are paying too much attention to the bug when you should look to yourselves. Water your roots and give them room to spread, and help each tree to know his own life; then the trees will grow so strong and sturdy that the little bug will be powerless to harm them."

Then they all knew that the wise old apple-tree was right, and the roots were watered and they spread and spread and the tree grew so conscious of its strength that when the little buds and blossoms appeared later on, the bug could not be found, for it had been driven away by the life of the tree itself.

Many times since my nap that spring day, the wise old apple-tree has helped me. When the little bugs of pride or selfishness or sickness have appeared in the orchard of my every-day thought, I have said, The tree must know its own life and sufficiency; that life is God, is Love; and as I have become conscious of this I have grown strong and quiet and the blossoms of good-will and unselfishness and health have appeared and the bugs have dropped off and disappeared.

### The Bright Side.

If one looks upon the bright side
It is sure to be the right side—
At least that's how I've found it as I've journeyed through each day;
And it's queer how shadows vanish,
And how easy 'tis to banish
From a bright-side sort of nature every doleful thing away.

### Reports from Branch Churches.

Reports from Branch Churches to be read at the Annual Meeting of the Mother Church, to be held June 30, 1903, must be typewritten and be sent to the Clerk of the Mother Church in time to reach him on or before June 22, 1903.

No report should occupy more than two minutes in reading.

## Among the Churches.

### The Work in Council Grove, Kan.

Although not yet organized as a church, but only a society, we now occupy two rooms that we have nicely furnished. Every need has been met as we proceeded in the work, and we rejoice in the success of our labor, knowing that it is God who worketh with us to will and to do of His own good pleasure. We have a nice little Sunday School, which kindly presented the society with the organ, so they might have a part in our progress. We all with one accord send greetings to our dear Leader, through the *Sentinel*, giving thanks for Science and Health, which has given us an understanding of the Bible, whereby all things have become new to us, "behold all things are new."

Mary W. Broderson.

### The Work in the Philippine Islands.

We completed our organization as the Christian Science Society of Manila a year ago the sixteenth of March. A literature committee was formed and good work was done, but there was such a quantity of literature on hand that another committee was appointed in July to distribute throughout the islands. Besides that which has been taken no account of there has been distributed eight hundred and fifty *Sentinels*, one hundred and ten *Journals*, five hundred Lectures, and forty-six Reprints. The Society supports a number of extra subscriptions to the *Journal* and *Sentinel* and keeps a supply of other literature on hand. We are mailing more than one hundred packages a month.

There are in the American Library three copies of Science and Health and three of "Miscellaneous Writings;" in the civil prison one of Science and Health and one of "Miscellaneous Writings," besides pamphlets, *Journals*, *Sentinels*, and Lectures; and in the military prison two copies of Science and Health, and we have recently been granted the privilege of sending our papers to the prisoners.

We wish to express here our love and gratitude to our Leader, Mrs. Eddy, and the co-workers everywhere.

George F. Gaddis, *Clerk.*

### Church Organization in South McAlester, I. T.

With great joy we announce the organization of First Church of Christ, Scientist, of South McAlester, I. T., March 8, 1903, with ten members.

About April, 1900, two seekers for truth began reading the Lesson-Sermons in the home of one of them; neighbors and friends kept increasing the number until January, 1901. Although it seemed that rooms could not be found in the business district, one of our members was able to make arrangements for the use of the Business Men's League rooms in the Diebler Building which we held as sublessees, during a change of lessees, and on March 1 of this year, through the assistance of the same member who secured the Diebler Hall, we secured the Elks Hall for our exclusive use. This is the most desirable location in the town.

On February 17, 1902, we organized as a society with seven members; the 23rd three more came in with us. We have had several of our most earnest workers called to other fields on account of business changes, but we are able to start our church with ten and to arrange for a lecture on March 20. Judge Ewing was with us, and we know this will do much for our Cause.—A. G. Peck, *Clerk.*

The widow's mite that went tinkling through the brazen throat of the treasury is sounding yet; the escaping fragrance of the alabaster box fills the world with sweetness.

Beecher.

## Testimonies of Healing.

I became interested in Christian Science somewhat over three years ago when in much need of help. I had never been strong, and as I grew older I grew weaker and at last became so ill that life was a burden to me. Science and Health by Mrs. Eddy was sent to me, in answer to prayer as I thought. I was a little afraid of all these new fads, as I thought them, but I had not read far before I felt that I had found the truth which makes us free. I was healed of stomach trouble, inward weakness, and bilious attacks.

One physician said I might have to undergo an operation before I could get well, but, thanks to our dear Leader, I have found out that the only operation I needed was the regeneration of this so-called human mind by learning to know God. In many cases I have been able to help myself and others.

Words cannot express my thanks to Mrs. Eddy, and to all who are bringing these great truths to the help of the whole world.—ELLA E. MITCHELL, Huntington, W. Va.

---

My husband having been cured of a serious nervous trouble about two years ago by Christian Science persuaded me to try the treatment.

Although convinced that nervous troubles yielded readily to Christian Science treatment, I had no faith in it as a remedy in my case. I had tried almost everything that I had ever heard of in order to find relief, but without success.

I had already undergone two operations and the doctors attending me at that time recommended another operation, but could not even then hold out hope of an absolute cure.

Christian Science treatment cured me of this trouble and others in two weeks' time. What seemed to me as the most remarkable demonstration was the healing in two treatments of what the doctors called an incurable eye disease. I was able to lay aside glasses which I had worn constantly for nine years, and to see plainly to read and write without discomfort, something that I had been unable to do even when wearing glasses. We have had many beautiful demonstrations in overcoming error for our little daughter.

Christian Science has brought a spiritual awakening which has given to me a realization of the true Life.

Words cannot express my gratitude to God, and under Him to our Leader, Mrs. Eddy, for the manifold blessings I have received through the study of Science and Health.

MRS. E. R. BIRD, Wenatchee, Wash.

---

I was awakened one night at twelve o'clock by the ringing of my door bell. On answering it I found a lady and gentleman who requested me to come with them at once to a lady who was suffering from appendicitis. The doctor said there was one chance for her life,—an operation which was to be performed in the morning. They told me of the patient's suffering and the fear of the knife, and so they had persuaded the family, even though at the twelfth hour, to try Christian Science. I told them there were circumstances which prevented my going with them, but I would treat the patient and come early in the morning. I told them to have no fear but trust in God. I then went to my room, took my Bible and Science and Health, and read until it became clear to my own consciousness that the whole thing was a mortal illusion, the patient, the disease, the doctor, the operation were but the dream of life in matter from which the patient must be awakened. I knew that man was God's way of expressing Himself in the world, therefore the idea of God could express or reflect only life and harmony, and from the sense of peace that came to me I knew the woman was healed. I arose and went to my bed. The next morning the doctors were to be there at nine o'clock, so I went at half past seven. I was shown into the patient's room. The first thing she said to me was, "I am perfectly well." I told her to arise and dress and take breakfast with her family, which she did. When the doctors came they were amazed. They found no fever, no swelling, no pains. They insisted on another examination, but could find nothing to remove. They acknowledged they could not understand it, as it had been one of the most pronounced and dangerous cases of appendicitis. This healing power is of God. No man may glory, but all may rejoice and give thanks.

MISS JESSIE WOOD, Brooklyn, N. Y.

---

I wish to give this testimony, hoping that it may help to lead others, as I was led, through the reading of some testimonies, to seek the truth of Christian Science. Only those who have been "born again of the Spirit" can appreciate what I mean when I say, Thank God for the great peace that comes with the understanding of God as all.

I have been a student of Christian Science less than one year, and yet it would take pages to tell of all that I have overcome in that time. I have studied alone, as there are no other Christian Scientists here, but I have been faithful in my effort to follow the teachings of our Leader. The *Quarterly* has been a great help.

For ten years I suffered with an abscess or, as some doctors called it, an internal abscessoral tumor. I had the best medical assistance, but the physicians told me after I had gone through two unsuccessful operations that they could do no more for me, and that I could never endure being chloroformed again; that the only thing was to try change of climate in the hope that my general health would improve. At that time I lived in Iowa and from that state I went to Utah. While there I was in better health. I stayed with my aunt who was a Christian Scientist, and it was perhaps her treatment which helped me, but I got altogether a wrong impression of Christian Science, I suppose, because I did not take up the study of it myself, but looked to her to do all the work of correcting my wrong ideas.

When I returned home I left off all thought of Christian Science, and in three days I was back in my old place in bed, with the doctor in regular attendance. I kept that up for nearly two years, and finding I could endure it no longer I came to Florida, trusting that the southern climate would afford me relief, but I did not get enough better to pay for the change. By this time the abscess was working its way to the outside, and for four years it discharged constantly, giving me great pain and discomfort.

When I took up Christian Science last summer I at once overcame the sense of fever and itching, but could not stop the discharge. I had to keep absorbent cotton against the opening, and that had to be changed four times a day, at least. Two months ago the thought came to me that it was fear that held me in bondage. I at once removed the cotton from the sore, the discharge stopped, and the sore was healed. I have not had the least trouble with it since I realized what the wrong thought was, and there has not been any discharge from the place since that time. My whole heart goes out in loving gratitude to our Leader for making her understanding of Truth so plain in her book, Science and Health, that those who truly seek for light, may be guided on their way by the perusal of it in connection with the Bible, for surely it is a "Key to the Scriptures."—M. G. L., Knights, Fla.

---

I wish to express my gratitude to our beloved Leader for her thoughtfulness in giving us our periodicals.

Christian Science found me four years ago, when I was

Digitized by Google

in a discouraging condition. My life at that time brought me nothing but sickness and inharmony, and whenever I seemed to be joyful for a while, discord and dissatisfaction seemed to follow close upon the happier experience.

One of our children had a rupture from which she suffered intensely. We depended on medical skill for three years, but it afforded her no relief. Then the physicians thought it advisable to perform an operation. I had no hope in that, for our child was physically weak and I feared for her life.

The old proverb, "Man's extremity is God's opportunity," proved true, for in that time of need, Mrs. Eddy's book, "Science and Health with Key to the Scriptures," was handed to me.

I began to read and study, and with the help of our dear teacher and friends who faithfully assisted me, I learned to know where the error was.

After five weeks' treatment in Christian Science, our child was healed. As the light shines in darkness, so Truth shone into my life and dispelled the gloom. This revelation brought healing to me, for Truth is the only healer. It awakened me to new life, full of hope and gladness, and I understood that God is Love.

Now I look up with confidence and trust to the one Mind, the one God, who is Life eternal. I learned to know that we are one with God here and now through the recognition and acknowledgment of the absolute divine Principle of scientific being.—MRS. MINNA BOHDE, New York, N. Y.

---

Thy life is hid with Christ; its faintest fire,
From heavenly inspiration born, shall glow
And sing victorious at the overthrow
Of sin and fear and death and Satan's ire;
A singing light thou shalt move ever on,
All sorrow ended, endless glory won.

### Notice.

Applications for membership in the Mother Church must be in the hands of the Clerk on or before June 3.

An application sent to the Clerk of the Church does not constitute the applicant a member until he is elected to membership by the Christian Science Board of Directors, at which time notice of election will be sent.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer,*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The doctrine of the future torment of the wicked in a lake of fire has been strenuously opposed by many. Whatever may be said about the future condition of the wicked, every intelligent observer must confess that their present condition is one of torment. Whether there be a lake of fire in the other world into which the wicked are cast after death or not, there is certainly a lake of fire in this world in which the wicked are now writhing in indescribable torment.

Sin is a fire, a very hot fire. It often tortures the body. Sin torments the memory. It is a sad and bitter thing to remember past sins. It torments the conscience. A guilty conscience is an unquenchable fire. When the sinner lies down at night the smart is on his soul, and when he wakes in the morning it is still with him.

Sin is a consuming fire. Nothing is so destructive. . . .

Sin destroys peace, innocence, hope, and happiness. Everything beautiful and glorious and lovely withers before this flame. It scorches, blisters, blackens, devours everything it touches. All sin is destructive. Not only the appetite of the drunkard and the lust of the depraved and the fever of the gambler, but all dishonesty, all selfishness, all pride and worldly ambition, all wrath and malice and envy, all evil thoughts are a fire shut up in the bones, tormenting the soul, and consuming the life.

There are men and women in the fire who do not seem to be aware of the fact. They are contented and confident. They look on the scorching flames that play about them as bright rainbows of glory. They laugh at the threatening sparks as though they were jewel-flashes of royalty. What folly is sin! How insane is the sinner when he once throws the reins on the neck of his passion and sets out for a career of sinful pleasure. "Fools make a mock of sin," says the wise man.—*The Christian Advocate.*

The Rev. J. T. Sunderland, in an article in *The Christian Register*, says:—

"How can we rise with Christ? When Paul wrote to his Colossian brethren about rising with Christ, he had no reference to any resurrection that might await them beyond death. He was not thinking about a future world. He was thinking about this world. He wanted them to rise with Christ at once in this present life. How was that possible? How is it possible for us to-day to rise with Christ? The answer is plain. We may rise into the same spirit of life that animated him. We may rise into obedience to the same ideals that commanded him. We may rise into the same faith and hope and love which shone so resplendent in all he said and did. We may rise into the same life of communion and oneness with God which he manifested so perfectly.

"What is the true Christian life except a constant rising with Christ,—rising from the lower to the higher; rising from passion and impulse to reason and conscience and principle; rising from obedience to self to obedience to God; rising from following the pattern of the world to striving after the higher pattern which we have in Jesus? How great is the need for us all thus to rise with Christ in a living and perpetual resurrection."

The foundation of God stands solid. The supreme question for us is, are we on the foundation? If we are, nothing can harm us; if we are not, nothing can save us. God makes all things work together for good—to whom? "To them that love God, to them who are the called according to His purpose."

There is great need of this exhortation to-day. The power of the Church is in the godliness of its members. A company of ungodly people cannot be a Church of Christ, no matter how rich or learned or powerful, no matter how or by whom baptized. Ananias and Sapphira were Church members: Simon Magus was baptized by Philip: but their hearts were not right in the sight of God, for they were in the gall of bitterness and the bond of iniquity. Even such can be saved through repentance and faith; but their membership in the Church, until converted, can work nothing but harm.

*The Examiner.*

Brierley speaks of the effort of modern science, especially astronomy, upon our theology. This earth is no longer the fixed point round which everything revolves, and man is beginning to feel at home in an ever-widening universe. Moreover, this widening of the outer heavens is the cosmic emphasis upon the word of Jesus: "Neither shall ye say, lo here! or lo there! for, behold, the kingdom of God is within you." Astronomy, our essayist says, puts the veto on external pilgrimages as aids to religion. We might journey from here to Arcturus and be no whit nearer God. The movement needed is of another kind, in another sphere; and he goes on to show that in religion "above" and "beneath" have nothing to do with location. "We reach heaven not through the clouds but through our own souls." The question is, what stages are we making in truth, in faith, in love, and in the roomier realm of the soul?—*The Universalist Leader.*

Dr. Lyman Abbott is reported to have said at a recent meeting of Methodist ministers in New York: "I have a respect for the old theology and to-day I cannot doubt that the change from the old to the new method of thinking in religion is important, radical, and revolutionary. The typical departure is the renunciation of what was once called the 'Carpenter Theory' of God's creation of the world. It was the belief of the old religion that the earth was turned out as in a lathe. The Bible is not a book in which fifty or sixty writers tell what religion is, but is a record of their religious experiences, and of their consciousness of God. They were human, they were imperfect men,—those who wrote the Bible. They stumbled as we stumble."

It was striking and inspiring at the meeting of the Boston Methodist Episcopal Social Union last week to hear such unvarying expressions of confidence in the zest and volume with which goodness is to dominate over evil in the new century. Methodist Episcopal bishops in their speeches and letters and Protestant Episcopal bishops in their letters of fraternal regard, all struck the same note of Christian hope and joy. The last century was one of analysis. This is to be one of synthesis. The last century was one of sectarianism. This is to be one of Christian federation.

*The Congregationalist and Christian World.*

Find that which you would lay down your life for, and you find that which will hold your soul in life forever and ever. Find it in the present, and the light of your discovery will fall back across the past to reveal the deathlessness of every noble soul, and forward into the future to reveal how no one of such souls could live on alone, but must live in the likeness of him who said, "I, if I be lifted up, will draw all men unto me."

AUGUSTUS M. LORD.

The weariness and sadness of life come from persistently closing our eyes to its greatness. . . . There is no life so poor as that which through too close a grasp of visible things has lost all conscious hold upon unseen realities. Lifted into the atmosphere of Infinite Greatness, the soul itself grows great: unfolded within the Perfect Love, the life itself becomes love.—LUCY LARCOM.

Mediævalism destroys the Gospel. There is no good news in the message that a large part of the human race has been created to live in sin and suffering forever. The good news is that there is a power in the world by which the sick may be made well, the sinful may be made virtuous, the exiles from home may return to their Father, their home, and their own true selves.

*The Outlook.*

Let him who gropes painfully in darkness or uncertain light, and prays vehemently that the dawn may ripen into day, lay this precept well to heart: Do the duty that liest nearest to thee, which thou knowest to be a duty! Thy second duty will already have become clearer.—CARLYLE.

Humility does not consist of thinking poorly of our nature, in thinking meanly of the spirit that God has given us, but in so lifting our eyes to God and to the heights of our nature that we think truly of ourselves.—JOHN HAMILTON THOM.

A large heart with a little estate will do much with cheerfulness and little noise, while hearts glued to the poor riches they possess, or rather are possessed by, can scarcely part with anything till they be pulled from all.—ROBERT LEIGHTON.

The secret of Christian morality is that duty is changed into choice because love is made the motive for obedience.

DR. ALEX. MACLAREN.

That is a sad company, but we are afraid a growing one, who feel as Richard Holt Hutton expresses it, "the spiritual fatigue of the world."—*The Universalist Leader.*

The substance of all realities is in this religion of Jesus Christ, but it can be real only to those who will do his will.

W. GLADDEN.

Whoever would fully and feelingly understand the words of Christ, must endeavor to conform his life wholly to the life of Christ.—THOMAS A KEMPIS.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

MISCELLANEOUS WRITINGS. A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

Published January, April, July, and October.

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

**One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.**

## Miscellaneous Publications.

COMMUNION HYMN. "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

THE MOTHER'S EVENING PRAYER. A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

CHURCH MANUAL. Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

THE CHRISTIAN SCIENCE HYMNAL. Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

THE MOTHER CHURCH. By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

THE NEW WORLD, 1492, 1866, 1892. A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

WOMAN'S CAUSE. By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

THE REVELATION OF CHRISTIANUS, and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass, post-office as second-class mail matter.*

## Items of Interest.

**National.**

The detailed statistics of immigration during the month of April show a large increase over April of last year and over all previous months of the present fiscal year. The total of 126,286 was so large that if the figures for May and June are no larger than for those months last year the aggregate for the fiscal year will be 803,272, thus surpassing the highest previous total for a single fiscal year, which was made in 1882, when the number of immigrants was 788,992. As May usually shows the highest figures of any month in the year and the arrivals of immigrants in June are usually above the average of other months, there is reason to believe that the total for this year will reach 860,000.

The Geological Survey has had prepared a model of the extensive dam to be constructed on Salt River, sixty-five miles above Phœnix, Ariz. This dam will be among the first and also among the largest irrigation enterprises to be undertaken by the Government under the new law. The dam is to be 188 feet thick at the base, 830 feet long at the top, 250 feet high. It will contain 11,600,000 cubic feet of masonry. The reservoir to be constructed will drain over six thousand miles of territory and add three hundred thousand acres to the tillable area in the vicinity of Phœnix.

United States Minister Bowen arrived at La Guayra last week on board the Red D line steamer Philadelphia. He was received enthusiastically by the population and the local authorities. Learning that a popular demonstration would take place on his arrival at Caracas, he signified to the authorities his desire to be received quietly. On his arrival there, however, he was met at the station by President Castro, the members of the cabinet, and all the leading foreign residents.

Judge Grosscup in the Federal Court, May 26, entered the final order in the so-called "Beef Trust" case, restraining the packers from combining to regulate the trade. The order covers all the points in the previous decision and is regarded as a complete victory for the Government. An appeal will be taken.

Professor Alexander Graham Bell has resigned the presidency of the National Geographic Society, in order to devote his entire time to perfecting his kite flying-machine. The resignation will take effect next winter.

Investigations in the Post Office Department continue to uncover irregularities and malfeasance in office.

**Foreign.**

In the House of Commons last week Viscount Cranborne, Under Secretary for Foreign Affairs, said that the British government was in communication with other signatories to the Berlin treaty in order to arrive at an agreement as to the effect of the clause prohibiting monopoly or favor in relation to the system of trade now prevailing in the Congo Free State, including the positions occupied by the companies holding concessions, and by the state in respect to the private property of a sovereign.

Recent complaints have been lodged with the Department of State at Washington and with the British government concerning cruelties practised by the Belgian officers in the Congo Free State, which will doubtless lead to investigations and reforms.

Owing to the awful fatalities and injuries that accompanied the automobile speed contest from Paris to Madrid in its first stage from Paris to Bordeaux, the continuance of the race on French soil was forbidden by Premier Combes and on Spanish soil by the Spanish Government. The course from Paris to Madrid was 712 miles. The distance from Paris to Bordeaux, 243 miles, was covered in 8 hours 7 minutes. On the road outside the city the first two cars to finish averaged sixty-two miles an hour, and at points a speed of nearly ninety miles was reached. It is believed that the results of the race will lead to governmental action in passing a stringent law fixing a maximum speed and forbidding racers to circulate in the streets or on the public roads.

Sir Thomas Lipton's fleet, consisting of Shamrock III., Shamrock I., the steam yacht Erin, and the ocean tug Cruiser, with a total crew of 170 men, sailed for Sandy Hook from Gourock, Scotland, on the 28th ult. Crowds of people had gathered to bid them farewell and their cheering was supported by bands, whistles, and sirens. There was a large gathering of yachts and excursion steamers in the bay. It is expected that sixteen or seventeen days will be required to make the passage.

Emperor William has presented the New York Yacht Club with a cup, to be known as the Emperor's cup, to be competed for the first time next fall. It is of gold, two feet high, and has on one side the coat-of-arms of the United States and those of Germany, and on the other the heads of an ancient Teuton and an Indian, and a sketch of the Meteor. The cup is being made by Tiffany & Co. of New York.

The minister of commerce is sending to the United States experts and officials of the Austrian post office to investigate the American telegraph and telephone systems. They will arrive in New York early in June, and will visit all the commercial centres.

Guglielmo Marconi has received from the Municipal Council of Rome the high honorary title of "civis Romanus."

**Industrial and Commercial.**

The plan for the reorganization of the United States Shipbuilding Company has been made public. The plan provides for the organization of a company with the title of Bethlehem Steel and Shipbuilding Company. The properties to be taken over are: Union Iron Works, San Francisco; Bath Iron Works, Limited, Bath, Me.; Hyde Windlass Company, Bath, Me.; Crescent Shipyard Company, Elizabethport, N. J.; Canada Manufacturing Company, Carteret, N. J.; Samuel L. Moore & Sons Company, Elizabethport, N. J.; Eastern Shipbuilding Company, New London, Conn.; Harlan & Hollingsworth Company, Wilmington, Del.; also all of the capital stock (except directors' qualification shares) of the Bethlehem Steel Company, owning the Bethlehem Steel Works and property in the boroughs of South Bethlehem and Northampton Heights. The capitalization will be $43,000,000.

Plans are being considered by the Brinkley Company to construct at Memphis cotton compresses and storehouses to rival anything in the South, and with facilities equal to those of Liverpool, the greatest cotton market of the world. The compresses will be in connection with the warehouses which will have a storage capacity of over one hundred thousand bales. Overhead trackage for handling the cotton will be installed, and every precaution against fire will be used, resulting in much lower storage and insurance rates.

**General.**

Arrangements are being made for a Sargent exhibition to be held at the Museum of Fine Arts as a special feature for the delegates who are coming to attend the convention of the National Educational Association at Boston, July 6–10. It is expected that the exhibition will be opened to the public this week. John S. Sargent painted eighteen portraits on his recent visit to this country, and plans have been made whereby fourteen of them will be shown at the Museum. It is probable that three more will be secured before the opening day. The portrait of President Roosevelt, which is one of the eighteen, cannot be included in the exhibition as it is hanging in the White House at Washington, and according to rules must not be removed. In addition to the pictures there will be shown a number of drawings executed by Mr. Sargent. Delegates to the educational convention will be provided with special tickets admitting them at any time to the Museum. Two mural paintings by Sargent already adorn the walls of the Boston Public Library.

A remarkable run was made by the Twentieth Century Limited over the Lake Shore Railroad between Cleveland and Dune Park, thirty-five miles east of Chicago, recently. The distance, 307 miles, was made in 292 minutes. The entire distance was covered at a speed averaging sixty-six miles an hour. The train reached Cleveland from the East an hour and thirty-two minutes late. Between Toledo and Cleveland, 108 miles, the run was made in one hour and forty-five minutes. The train covered the distance of 133 miles over the Air Line in 114 minutes, two minutes faster than any previous record. At intervals the speed between Toledo and Elkhart was ninety miles an hour. Other bursts of unusual speed were sixteen miles between Kendalville and Ligonier, Ind., at the rate of seventy-eight miles an hour, thirty-two miles from Kendalville to Goshen, Ind., at the rate of eighty miles an hour; six miles between Archbold and Stryker, at ninety miles an hour. The train got into Chicago at 9.45 A.M. on time.

"Nearly thirteen hundred tons of gold," according to a writer in *Success*, "lie in the vaults of the Treasury of the United States, the greatest hoard of the yellow metal ever gathered in the history of the world. Four hundred tons of this gold are piled, like bags of salt, within the four walls of the subtreasury in Wall Street, New York. Outside the Treasury hoard, there is in circulation through the country a nearly equal amount of gold coin, making more than two thousand five hundred tons of gold in the United States, bearing the imprint of the eagle. The value of this coin is more than $1,260,000,000."

Contractor McDonald has announced to the board of rapid transit commissioners of New York that there remain less than sixty days of excavation work on the subway. The board hopes to have the work ready for operation by the Christmas holidays.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### "What is Christian Science?"

Mr. Editor.

In seeking answers to the question, "What is Christian Science?" our critic seems to have sought everywhere but in the right place, and he reminds one of the fruitless search of the parents of Jesus, when they sought for him among their kinsfolk and acquaintances. When later they sought in the right place, they found him, and he rebuked them by asking: "How is it that ye sought me? wist ye not that I must be about my Father's business?" Rotherham's translation of this text has this footnote: "The implied answer is, 'To seek for me thus was an inadvertence on your part. It should have occurred to you at once that you would find me here.' 'Where my father's affairs are carried on, there you are sure to find me.' 'A child is to be found at his father's.'"

Does our critic find fault with Christian Science because its works approach the requirements left by our master whose injunction was: "Go ye into all the world, and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believeth not shall be damned"?

Does our critic oppose Christian Science because of its works? It is reforming the drunkard, healing the afflicted, and raising from the dead those who are sunken into the depths of despair through trespasses and sin. Why should he condemn men and women whose daily example indicates the nature of their religion? Jesus said, "This is my commandment, That ye love one another, as I have loved you."

If every citizen of Fort Worth approached the standard of Christian Science, what would be the effect upon the body politic of that prosperous city? Would there be a saloon left? Would there be a pint of intoxicating liquor or a pound of tobacco vended? All manner of sinful appetites and practices would be purged and the grace of God would abound there. "For which of those works do ye stone me?" asked Jesus.

Science and Health elucidates the teachings of Jesus and shows how it is possible to do as he demanded of his followers, and all who will may understand; but Jesus made this emphatic statement, which is as true to-day as when uttered: "Verily I say unto you, Whosoever shall not receive the kingdom of God as a little child, he shall not enter therein."

As to denial of the reality of matter by Christian Science, we learn from the gospel that "God is Spirit." God is infinite, God is omnipresence, omnipotence, and omniscience. God, spirit, being infinite, where is matter, spirit's opposite? Surely not in God, since a house divided against itself cannot stand; and such admission would limit God's allness. God declared the creation finished, and behold, "it was very good." You cannot add to infinity. Who then made sin, sickness, and death? Is God for or against sin, sickness, and death? If for them, they are eternal and good and of His creating; but John declared, "For this purpose the Son of God was manifested, that he might destroy the works of the devil." This he did, and taught his disciples to do so, as proof, by their works, of their loyalty to his teaching. Christian Science denies the existence of matter as an entity, because matter, finity, denies the infinity of God, and we desire to abide by the admonition: "Let God be true, but every man a liar."

Mr. Myers says, "We cannot but admire the loyalty with which Mrs. Eddy adheres to her theory, notwithstanding the absurdity of it. There is no such thing as physical causation." But that is not Mrs. Eddy's "theory." It is the very word of God. Note what John says, "In the beginning was the Word, and the Word was with God, and the word was God. . . . All things were made by him; and without him was not anything made that was made." If that seems absurdity to our critic, it is his misfortune. Jesus said: "Ye do err, not knowing the scriptures." In Genesis, we learn that God made all in His likeness, in the likeness of Spirit.

Christian Science, in declaring the non-existence of matter, does not annihilate but transforms. That which is, is real, and beautiful, and God-made, and eternal. We must get rid of the belief obtained through the testimony of false material sense, which calls everything matter and subject to decay, and we shall then learn the meaning of Jesus' prayer, "Thy kingdom come. Thy will be done in earth, as it is in heaven."

Regarding the claim that Mrs. Eddy has but restated what Bishop Berkeley declared a hundred years ago, Mrs. Eddy, in her Message to the Mother Church in 1901, says, "I had not read one line of Berkeley's writings when I published my work, 'Science and Health,' the Christian Science text-book." She says further: "In contradistinction to his views I found it necessary to follow Jesus' teachings, and none other, in order to demonstrate the Divine Science of Christianity—the metaphysics of Christ—healing all manner of diseases."

### The Body of Man.

IN Christian Science there are words of infinite meaning, and when we use a word in its infinite meaning we intend to have that word stand for the oneness of the idea which it conveys. For example, when we say that God is infinite, we imply the oneness of God, for there cannot be two or three infinite gods. And so when we speak of man as the divine image and likeness, we mean that man is the one and only infinite idea, reflection, expression, or manifestation of the divine Mind. The oneness and infinity of God and the oneness of man, the exact and full expression or image of God, is, as we understand it, the teaching of Jesus in such passages as these: "I and my Father are one;" and "Call no man your father upon the earth: for one is your Father, which is in heaven;" and "Be ye therefore perfect, even as your Father which is in heaven is perfect." And Paul says: "There is one body, and one Spirit, . . . one Lord, one faith, one baptism, one God and Father of all, who is above all, and through all, and in you all." Now when we say there is one God (Spirit, not matter) and one man (spiritual not material) we in-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

tend to use these words in the sense in which Paul uses them in this passage.

The Christian Science use of the word "body" in a spiritual and generic sense, is illustrated in the law when lawyers speak of a body of law; as the body of the civil law, meaning the whole collection of Roman laws; this body of law has many members or particular laws. Again, we speak of the body-politic, and this one body has many members. So when we speak of the spiritual body, or the Christian body, or the body of Christ, this body, though one, is composed of many members and includes all the children of God. In his first letter to the Corinthians, Paul explains the "body of Christ" and sums up his doctrine in these words: "Now ye are the body of Christ, and members in particular." This one spiritual body, the Christ of God, is the only body begotten of the Father, "the divine manifestation of God, which comes to the flesh, to destroy incarnate error" (Definition of "Christ" in Science and Health, p. 583).

Christian Science deals with the real, eternal, and infinite creator, cause, or Mind, and the co-eternal, infinite and real creation, effect or idea, which lives and moves and has being in the divine Intelligence. So that in the unity of Christ with God—effect (Son) with cause (Father)—we perceive the infinite Noumenon (Being, Mind) and the infinite phenomenon (appearance, manifestation or idea) composing the body of Christ (Truth).

Such is the mystery of godliness (God's likeness, the ideal and real man). The realization of life and salvation then brings out the ideal man; it is to reflect and unveil the Christ, in thought, word, and act. To reveal this mystery of godliness to the world is the work of the Master and his followers. But in the world mortals do not look at creation from the single, spiritual point of view. The false foundations of the world are laid in the supposed knowledge of good and evil. It was a lie of the serpent that said the knowledge of evil would not lead to death. The recognized fact, as Paul puts it, is that "To be carnally minded is death; . . . For if ye live after the flesh, ye shall die: but if ye through the Spirit do mortify the deeds of the body, ye shall live." The Greek word here translated "mortify" means "to put to death;" the idea is that the spiritual man is to be parted, as if by death, from the foul deeds done in the sensual body. This spiritual separation from animality is not to be put off until a future life. For in the life that now is, "as many as are led by the Spirit of God, they are the sons of God." "So then they that are in the flesh cannot please God. But ye are not in the flesh, but in the Spirit, if so be that the Spirit of God dwell in you."

Now in the passage quoted (1 Corinthians, 15 : 44), the best Greek text and the Revised Version reads, "If there is a natural body, there is also a spiritual body." And in Christian Science we would say that if there be a seeming mortal man there is certainly an immortal man, and the way to control the mortal body is through the mental or spiritual power of the eternal and divine man. Eternal life is not a future life, any more than a past or ever-present life. The tenses of time cannot divide eternity. And so when our critic says that the statement, "man is spiritual and not material," is not an assertion of fact, at the present time, he concedes that after death and in heaven our definition of man will be true, and so he quotes Paul's doctrine that "we shall also bear the image of the heavenly" (or spiritual man).

The false way through sin, disease, and death to eternal life is done away with in Christ, who taught the true gospel of heaven at hand, on earth, with you and within you; because in God you live and move and have your being. And how can one live in God without living in heaven? Is not the omnipresence of God (Good) the real heaven of universal extent and everlasting Life, Truth, and Love?

The mortal body is spoken of in Scripture as a "vision," "dream," "shadow;" as "stubble," "tares," and a vanishing "vapor." Shakespeare saw that mortals "are such stuff as dreams are made on." "Vanity of vanities, saith the preacher; all is vanity." "Cease ye from man, whose breath is in his nostrils: for wherein is he to be accounted of?" As to the mortal body and life, Jesus said, "Take no thought for your life, . . . neither for the body," etc. We understand that mortal bodies are counterfeits, fathered by mortal mind, the carnal mind, the one evil or devil, the adversary of all truth, the denier of all good, and the enemy of all life. Yet by the infinity of God this accursed accuser of the brethren and all its false accusations against God and man, is reduced to nothingness; and God and the spiritual man stand forth forever entirely separate and apart from the sinning sons of Adam, the tares which never were and never will be wheat, the lies which never will be true.

In the eternal and unchanging truth of being, what shall be is true now. Ideals or types that shall be spiritual are already spiritual, and the seeming negations or antitypes of man have no reality, since God is "All-in-all," and there is no place found in infinite good for even finite evil. Christian Scientists are therefore "of good cheer: the night is far spent, the day dawns; God's universal kingdom will appear, Love will reign in every heart, and *His* will be done on earth as in heaven" (Miscellaneous Writings, p. 213).

## Christian Science and Surgery.

Mr. Editor.

Your issue of March 21 contained a reprint from the *New Church Messenger*, in which the surgical work of the famous Dr. Lorenz was praised and the question asked: "Is not this a case of true Christian Science?"

Your readers must judge for themselves as to the Christian character of the various methods of healing the sick now in vogue. Christian Scientists rejoice in every pain destroyed and deformity reduced, and are as glad as any other readers of your paper can be for every atom of relief which the noted surgeon, Dr. Lorenz, has left in his train. Christian Scientists have nothing but respect for the good accomplished by conscientious physicians.

Christian Scientists have ample opportunity of testing their own method of treatment upon those who seek their help after all material remedies have failed. It would rejoice the heart of those who are not familiar with the beneficent results of Christian Science to know of the manner in which the hopeless and abandoned have been brought back from the very verge of the grave, and the sinful and sorrowing have been reformed and comforted by Christian Science. No captious criticism of others, no fault-finding with other faiths is taught by Christian Science, but the brotherhood of man is placed by it upon the basis of self-denial and self-purification.

At the same time it is but right that Christians should learn to appreciate the special Christian merits of Christian Science. Mrs. Eddy does not hesitate to write:—

"There are various methods of treating disease, which are not included in the commonly accepted systems; but there is only one which should be presented to the whole world, and that is the Christian Science which Jesus preached and practised, and left to us as his rich legacy" (Science and Health, p. 344).

Therefore, Christian Scientists are ready to give a reason for the faith that is in them, and are grateful for every proof of its efficacy in their own cases and in the cases of others.

W. D. MCCRACKAN.

## The Kingdom Within.

"THE kingdom of God is within you." Who is believing this? Who is living in the consciousness of this great truth? Jesus said of little children, 'Of such is the kingdom of God." And he also said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein." Yet, according to his word, this kingdom is within you. And all his words are true, and all are for man's use. Christian Science calls us to know and to understand these words. Man, of whom it is said, he is made in God's image and likeness, is, without doubt, in His kingdom, who made all that was made and pronounced it good; but mortals who to-day have wandered so far from this truth concerning man, as to forget God and His kingdom, need to awaken and retrace their steps, —their wanderings in the wilderness of material sense,— if they would find their true selves, God's children, "Spiritual and not material," as Science and Health teaches, p. 468. What is a ray of light when separated from the sun? You tell me it cannot be a ray without the sun. Neither can your true being exist apart from God, because it exists to manifest God. Let us awaken to the call of Truth and obey as the little child, "resist the devil,"—all evil,—that it may "flee from us," and then we shall find this kingdom which has always been "at hand," and "within." We shall no longer be deaf, and dumb, and blind, to what is good and true. God is unchanging Love. He changes not, but we must change, must turn toward the light, if we would not walk in the shadow which mortal sense is casting, but which does not belong to God's child at all. When we do realize the Master's word: "The kingdom of God is within you," we shall reign and triumph over all evil,— over sickness and sin, because neither can tempt us to forget God or disturb our allegiance to Him. S. F. S.

In *Hoopeston* (Ill.) *Herald.*

---

If Christian Science destroys sin and sickness, reforms the drunkard, overcomes sorrow, lightens the cares of its adherents, thus showing forth the same fruits which followed the practice of our Lord, it is indicating its Christian character by the best possible test and the only test which Jesus expected, as is indicated by his teaching. Everything which the Master said and did indicates that he considered himself the example for his followers. He said, "I am the Way." On one occasion he said, "If I then, your Lord and Master, have washed your feet; ye also ought to wash one another's feet, for I have given you an example, that ye should do as I have done to you."

To be Christian, therefore, is to know the way which Jesus taught and practised, and do likewise; and if he was right, that way which is most nearly in harmony with his way must be the most Christian. Surely an implicit reliance upon the Father is more Christian than any other practice, for the great Exemplar said, "The Father that dwelleth in me, He doeth the works." Furthermore, the results of an implicit reliance upon divine Mind in times of trouble have been to those who have practised such reliance superior to any which they have experienced while depending upon lesser powers. Thus both in theory and effect Christian Science has proved to its followers that it is more Christian than any way which they have heretofore known.

ALFRED FARLOW.

---

Christian Science has come to stay. Thousands have found the way to health and strength through its teaching. Those who turn to it have, in very many instances, exhausted all other means of finding relief from their ailments. If Christian Science in preaching the Gospel is able to bring this joy and comfort to mankind, should it not be encouraged and looked upon as beneficent?

There is no use trying to withhold a thing of this kind from those who have been taught to look upon religious freedom as the dearest and best of all liberties. As you remark in your editorial, the opposition displayed against Christian Science by those financially interested in its defeat has done much to propagate it and bring it to the attention of those who welcome it.

Let us hope that the day will speedily arrive when each one will be allowed to decide for himself in all matters of religion, and in all matters pertaining to health. In this way only can we expect to see that which is most worthy of our confidence survive and flourish.

ALBERT E. MILLER.

In *Scranton* (Pa.) *Tribune.*

---

By two wings a man is lifted up from things earthly; namely, by simplicity and purity. Simplicity ought to be in our intention; purity in our affections. Simplicity doth tend towards God; purity doth apprehend and taste Him. No good action will hinder thee, if thou be in thy heart free from inordinate affection. If thou intend and seek nothing else but the will of God and the good of thy neighbor, thou shalt thoroughly enjoy inward liberty. If thy heart were sincere and upright, then every creature would be unto thee a living mirror, and a book of holy doctrine. There is no creature so small and abject, that it representeth not the goodness of God. If thou wert inwardly good and pure, then thou wouldst be able to see and understand all things well without impediment. A pure heart penetrateth heaven and hell. Such as every one is inwardly, so he judgeth outwardly. If there be joy in the world, surely a man of a pure heart possesseth it. And if there be anywhere tribulation and affliction, an evil conscience best knoweth it. As iron put into the fire loseth its rust, becometh clearly red hot, so he that wholly turneth himself unto God, putteth off all slothfulness, and is transformed into a new man. When a man beginneth to grow lukewarm, then he is afraid of a little labor, and willingly receiveth comfort from outward things. But when he once beginneth to overcome himself perfectly, and to walk manfully in the way of God, then he esteemeth those things to be light, which before seemed grievous unto him.—THOMAS A KEMPIS.

---

## Notice Regarding the Bible Lessons.

IN view of the change in the date of Communion service in the branch churches from June 14 to July 12, the following will be the order of the lessons:—

June 14.—Is the Universe, including Man, evolved by Atomic Force?

June 21.—Christian Science.

June 28.—God.

July 5.—Life.

July 12.—Sacrament.

The Mother Church will follow this order up to June 28, when the Communion service will be held, and the lessons for July will follow in the order given in the *Quarterly.*

---

The best men never know how good they are. They just go on doing their duty, and rendering such service as is in their power, thinking so much of that that they have no time to think much about themselves. They will, doubtless, be greatly astonished when they hear the divine commendation, "Well done," and find their names written on the roll of God's saints.—REV. A. CONKLIN.

## The True Line of Progress.

[FROM an address by Booker T. Washington before the Twentieth Century Club. Reported in *Boston Transcript*.]

What is freedom, and how obtained? The child who wants to spend time in play, rather than in study, mistakes play for freedom. The spendthrift who parts with his money as soon as it is received, mistakes spending for freedom. The young man who craves the right to drink and gamble mistakes debauchery for freedom. The man who claims the right to idle away his days upon the street, rather than to spend them in set hours of labor, mistakes loafing for freedom. And so, all through human experience, we find that the highest and most complete freedom comes slowly, and is purchased only at tremendous cost. Freedom comes through seeming restriction; those are most truly free to-day who have passed through great discipline. Those persons in the United States who are most truly free in body, mind, morals, are those who have passed through the most severe training, are those who have exercised the most patience and at the same time the most dogged persistence and determination.

To deal more practically and directly with the affairs of my own race, I believe that both the teachings of history, as well as the results of every-day observation, should convince us that we shall make our most enduring progress by laying the foundations carefully, patiently, in the ownership of the soil, the exercise of habits of economy, the saving of money, the securing of the most complete education of hand and head, and the cultivation of Christian virtues. There is nothing new or startling in this. It is the old, old road that all races that have got upon their feet and have remained there have had to travel. Standing as I do to-day before this audience, when the very soul of my race is aching, is seeking for guidance as perhaps never before, I say deliberately that I know no other road. If I knew how to find more speedy and prompt relief I should be a coward and a hypocrite if I did not point the way to it.

As a slave the negro was worked. As a freeman he must learn to work. There is a vast difference between working and being worked. Being worked means degradation; working means civilization. There is still doubt in many quarters as to the ability of the negro, unguided, unsupported, to hew his own path and put into visible, tangible, indisputable form products and signs of civilization. This doubt cannot be much affected by mere abstract arguments, no matter how delicately and convincingly woven together. Patiently, quietly, doggedly, persistently, through summer and winter, sunshine and shadow, by self-sacrifice, by foresight, by honesty and industry, we must re-enforce argument with results. One farm bought, one house built, one home sweetly and intelligently kept, one man who is the largest taxpayer or has the largest bank account, one school or church maintained, one factory running successfully, one truck garden profitably cultivated one patient cured by a negro doctor, one sermon well preached, one office well filled, one life cleanly lived, these will tell more in our favor than all the abstract eloquence that can be summoned to plead our cause. Our pathway must be up through the soil, up through swamps, up through forests, up through the streams, the rocks, up through commerce, education, and religion.

If you ask me to state in detail just what will happen, and how and when it will happen,—just what attitude each race will assume toward the other, and how each will act in a given case, when the conditions of growth on which I have laid emphasis have been fulfilled,—if you ask this of me, I must answer frankly that I do not know. One can no more tell that than he can tell the day and the hour when the corn will ripen. We only know that if conditions prescribed by nature are complied with, at some time and in some manner the corn will ripen and be gathered into the garner. Duty is with us; results are with God.

I have referred to the task that my race must perform if it would effectually emancipate itself. But there is another side. The white race, North and South, also has a duty and a serious responsibility.

In connection with our presence in this country it should always be borne in mind that, unlike other races, we not only were forced to come into this country against our will, but were brought here in the face of our most earnest protest. Both as slaves and as freemen, we have striven to serve the interests of this country as best we could. We have cleared forests, builded railways, tunnelled mountains, grown the cotton and the rice, and we have always stood ready to defend the flag. We have never disturbed the country by riots, strikes, or lockouts. Ours has been a peaceful, faithful service and life.

In the face of all this I cannot believe, I will not believe, that a country that invites into its midst every type of European, from the highest to the very dregs of the earth, and gives these comers shelter, protection, and the highest encouragement, will refuse to accord the same protection and encouragement to her black citizens. I repeat here what I have often said in the South. The negro seeks no special privileges. All that he seeks is opportunity,—that the same law which is made by the white man and applied to the one race, be applied with equal certainty and exactness to the other. And when I say this I repeat also that which I have said directly to the members of more than one state constitutional convention in the South; namely, that any revised state constitution that is capable of being twisted into one interpretation when an ignorant white man is concerned and another when an ignorant black man is concerned will not represent entire justice nor the highest statesmanship. These new constitutions should place a premium upon good citizenship, for both races, and wherever they fail to do this they are weak and are not in the best interests of the state.

When in any country there are laws which are not respected, which are trampled under foot and made to mean one thing when applied to one race and another thing when applied to another race, there is not only injustice, for which in the end the nation must pay the penalty, but there is hardening and blunting of the conscience, there is sapping of the growth of human beings in kindness, justice, and all the higher, purer, and sweeter things in life. No race can degrade another without degrading itself. No race can assist in the lifting up of another without itself being broadened and made more Christlike.

Before I conclude, I want to make one request and suggestion, and I do so with all the earnestness of my soul, —with a full knowledge and realization of the present condition and anxieties of my race. That request is that you white men of the North, and the white men of the South, approach the solution of the negro question with coolness, with that calmness, that deliberation, and that sense of justice and foresight with which you approach any other problem in business or national affairs. On most other subjects white men use their reason, not their feelings; but in considering the subject of the colored man, in most cases, there are evidences of passion—a tendency to exaggerate and to make a sensation out of the most innocent and the most meaningless events. This is not the way to settle great national questions. While the North and the South argue in heated passion, the negro suffers.

The age for settling great questions, either social or national, with the shot-gun, the torch, and by lynchings, has passed. An appeal to such methods is unworthy of either race. I may be in doubt about some things connected with our future, but of one thing I feel perfectly sure, and that is that ignorance and race hatred are no

Digitized by Google

solution for any problem on earth. No one can ever lift up a race by continually calling attention to its weak points. The negro, like other races, should be judged in a large degree by its best elements rather than by its weakest.

When measured by the standard of eternal, or even present justice, that race is greatest that has learned to exhibit the greatest patience, the greatest self-control, the greatest forbearance, the greatest interest in the poor, in the unfortunate,—that has been able to live up in a high and pure atmosphere, and dwell above hatred and acts of cruelty. He who would be greatest must become the least.

Though often beset behind and before, and on the right and on the left, with difficulties that would seem well-nigh insurmountable, I have the most complete faith in the ultimate adjustment of all the perplexing questions that weigh heavily upon us. More and more, as a race, we are learning to exclaim with one of old,—

The stormy billows are high; their fury is mighty,
But the Lord is above them and almighty and almighty.

---

Divine love is perfect peace and joy, it is a freedom from all disquiet, it is all content and mere happiness; and makes everything to rejoice in itself. Love is the Christ of God; wherever it comes, it comes as the blessing and happiness of every natural life, as the restorer of every lost perfection, a redeemer from all evil, a fulfiller of all righteousness, and a peace of God which passeth all understanding. Through all the universe of things, nothing is uneasy, unsatisfied, or restless, save when it is not governed by Love, or because its nature has not reached or attained the full birth of the spirit of love. For when that is done, every hunger is satisfied, and all complaining, murmuring, accusing, resenting, revenging, and striving, are as totally suppressed and overcome, as the coldness, thickness, and horror of darkness are suppressed and overcome, by the breaking forth of light. If you ask why the spirit of love cannot be displeased, cannot be disappointed, cannot complain, accuse, resent, or murmur, it is because Divine Love desires nothing but itself; it is its own good, it has all when it has itself, because nothing is good but itself and its own working; for Love is God; "and he that dwelleth in love dwelleth in God." Just so much and so far as you are freed from the folly of all earthly affections, from all disquiet, trouble, and complaint about this or that, just so much and so far is the spirit of love come to life in you. For Divine love is a *new life* and a *new nature,* and introduces you into a *new world;* it puts an end to all your former opinions, notions, and tempers; it opens new senses in you, and makes you see high to be low, and low to be high; wisdom to be foolishness, and foolishness wisdom; it makes prosperity and adversity, praise and dispraise to be equally nothing. "When I was a child," says the apostle, "I spake as a child, I understood as a child, I thought as a child: but when I became a man, I put away childish things." Whilst man is under the power of nature, governed only by worldly wisdom, his life, however old he may be, is quite childish; everything about him only awakens childish thoughts and pursuits in him; all that he sees and hears, all that he desires or fears, likes or dislikes; that which he gets, and that which he loses; that which he has and that which he has not, serve only to carry him from this portion of evil to that portion of good, from one vanity of peace to another vanity of trouble. But when Divine love is born in the soul, all childish images of good and evil are done away, and all the sensibility of them is lost, as the stars lose their visibility when the sun is risen.

From "The Spirit of Love" by WILLIAM LAW.

Let thy face, like Moses', shine to others, but make no looking-glass for thyself.—JEREMY TAYLOR.

## A Letter and a Poem.

1097 Prospect Street, Cleveland, O.,
April 27, 1903.

Rev. Mary Baker G. Eddy.

*Dear Mother:*—Please accept the enclosed angel-song as a little token of gratitude for your wholesome message in the *Christian Science Sentinel* which came to-day, entitled "Significant Questions."

Thank you, thank you, for every word.

Most lovingly yours,
EUGENE F. VOORHIES.

### "Written in Heaven."

EUGENE F. VOORHIES.

Notwithstanding in this rejoice not, that the spirits are subject unto you; but rather rejoice because your names are written in heaven.—*Luke*, 10: 20.

The harmony and immortality of man are intact. We should look away from the opposite supposition, that man is created materially, and turn our gaze to the spiritual record of creation; for that should be engraven on the understanding and heart, with the point of a diamond and the hand of an angel.—*Science and Health*, p. 521.

"Written in Heaven," O wonderful Truth!
My character safe in perpetual youth.

My heart a great fountain
Of laughter and light.
My nature all sinless
And spotless and white.

"Written in Heaven,"
O wonderful fact!
A perfect reflection
Forever intact!

Written in glory, and beauty, and light,
Graven on pages the purest of white!

This is my resting-place,
This is my song,
This is my Saviour
From sickness and wrong.

Written in Harmony!
Lord, give me light.
Help me to praise Thee
For pages of white!

---

The world is beginning to see that people who can radiate sunshine and carry gladness and good cheer wherever they go, although they may be poor, are of infinitely greater value to society than the millionaire of money who pauperizes everybody who comes in contact with him by his close, oppressive methods. Largeness of heart and generosity of soul make millionaires of character, who are worth more to the world than mere moneyed millionaires. The time will yet come when we shall not have to depend on rich furnishings. Character will become so enriched in the upward growth of the world that the surroundings, however costly, will be considered but a cheap setting of the precious life-stone. Cheerfulness is a potent factor of success.—*Anon.*

---

### Reports from Branch Churches.

Reports from Branch Churches to be read at the Annual Meeting of the Mother Church, to be held June 30, 1903, must be typewritten and be sent to the Clerk of the Mother Church in time to reach him on or before June 22, 1903.

No report should occupy more than two minutes in reading.

Digitized by Google

CHRISTIAN SCIENCE SENTINEL

## Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### God's Giving, Abundant.

To suppose that God withholds from His children any good gift is not wise, nor is it logical to believe that He withholds anything. Being good Himself He can have no gift to bestow which does not pertain to His own nature. "A good tree bringeth forth good fruit."

To wait supinely for something to turn up, or to stand in the careless attitude that most frequently says, "The Lord will provide," is not to make use of the means by which we qualify ourselves to receive the full measure of Love's bounty. We must know that He has already given in infinite quantity and quality, and we must do our part by being ready to accept, not with the listlessness of indolent self-satisfaction, but with the vigor of conscious and intelligent endeavor. Neither is it wise to doubt God's ability and willingness "to do exceeding abundantly above all that we ask or think."

We sometimes feel the necessity of carefully weighing two propositions in order to decide which one we shall accept, and when we can see nothing beyond the finite, mutable, and material sense of things, there seems no other course open to us; but is this true where the things of God are concerned? May we not by this mental attitude limit our capacity to receive from God all that He has already bestowed upon us? May we not, by failing to place our trust wholly and unreservedly in Him, miss, for the time being, our opportunity of finding that He is very near to us, and that His beneficence is infinite?

Notwithstanding the dissent of some few whose concept of God is limited to the strictly finite sense, it is accepted Christian doctrine that God is omnipotent, the only Creator, and upon this platform Christian Scientists stand. Correlated with this proposition is the understanding that God is the only source of supply, the almoner of the universe, the unhesitating and impartial giver of all good. The narrow and unprofitable doctrine that God is subject to reserve and uncertainty, to human limitations and impulses of action, is, happily for humanity, dying out, and the reasonable recognition of Jesus, that God is infinite Love, is taking its place. Here, too, Christian Scientists are unequivocally committed to the teaching of the Master.

M.

### Meeting Present Problems.

OUR readers cannot fail to find increasing interest as they become familiar with the life and educational work of Booker T. Washington, whose address before the Twentieth Century Club of Boston is found in another column of this issue.

Those who realize the urgency and complexity of the colored race problem in this country, are very thankful that so much of practical wisdom, Christian manliness, and straightforward good sense should be evidenced by one to whom the accomplishment of so great an undertaking seems to have been committed.

To the great Southern educational movement, which is enlisting the active interest of both the Christian culture, and the capital of the North and South, and which is begetting a spirit that has been described as akin to that of a religious revival, in the spiritual earnestness which dominates it, Mr. Washington gives promise of making a contribution, the beneficent outcome of which no man can estimate.

No doubt very many factors enter into the complete explanation of the phenomenal growth of the Tuskeegee educational work, but it certainly stands for three principal ideas which make emphatic appeal to all teachers, and especially to all Christian Scientists who are alive to their opportunity and ability to help their fellow-men.

These ideas are, first, that "A man's a man for a' that;" that behind the ignorance, the stupidity and, if so be, the viciousness of the proletariat, there is an essential selfhood, the true man, and that education means first of all the recognition of this true man, and then his conscious discovery and reclamation.

Time was when education stood for acquirement, the accretion of knowledge; when the school curriculum consisted very largely in labeling and packing away information, and though prompted by the noblest Christian impulse, it seems to be very generally conceded now that much of the Christian endeavor to help the colored people, since the close of the war, has been directed by this antiquated and wholly erroneous concept, and that while accomplishing much good, it has tended in no small degree to the deposit of an extravagantly ambitious veneer, and has educated its subjects away from practical availability and usefulness.

The higher and truly Christian idea looks upon education as an awakening to the real selfhood. It declares that truth is not something which is transferred from one personality to another, but that it naturally appears in consciousness, as erroneous beliefs are cast out, and that the chief work of the ablest teacher is but to clear away the brush of human falsity and misconception, the debris of common thought.

To the genuine man, Mr. Washington makes his first and last appeal, and his courage and hope are grounded in this nobler concept of the true nature, and consequent possibilities of every son of Adam, whether white or black.

His second dominating idea is that social rights and privileges are to be secured on the basis of fitness for their exercise. These rights may be exacted under other conditions, but they cannot be retained. Faithfulness to opportunity for preparation presents the only legitimate approach to preferment, and a man's willingness to wait perseveringly for the higher calls which have always marked the hours of adequate preparation, is the only assurance of his worthiness, and ultimate success. Power succeeds competence, it never precedes it.

One other leading idea of Mr. Washington's theory of education is that fitness for dominion is to be acquired through fitness for service. "Whosoever will be chief among you, let him be your servant." He is entirely convinced and is constantly convincing others, including his own people, that "An education which makes industry intelligent," and hence attractive and efficient, presents the only way by which they may hope to advance, surely though slowly, to the realization of a higher freedom, the enjoyment of a more unquestioned right. The impulses of true progress are always mindful of conditions. They do not unnecessarily provoke hostility, and so long as conscience is honored and integrity preserved, they give consideration to the line of least resistance. Upon the plane of free labor nothing so conduces to the advancement of the best interests of the laboring class, as reliability of character and efficiency of service. Evidencing these, they steadily gain in the respect and good-will of their employers, and avoid unnumbered difficulties which otherwise appear in their way. Mr. Washington affirms and reaffirms this

Digitized by Google

thought, and the splendid results he has achieved under its guidance must have far outstripped his early expectations, if not his hopes.

The Tuskeegee enterprise is giving the world a very pertinent and wholesome illustration of what may be effected when the right idea is brought to bear upon practical problems by one who is the embodiment of sterling integrity and hard common sense. Genuine progress in any line of human betterment, whether religious, educational, or economic, is the expression and resultant of the true concept more or less clearly apprehended by one who makes a wise choice of the ways and means by which it is brought into touch with human conditions. To the degree in which we realize the infinite and practical serviceability of the ideal, the true spiritual concept, and understand the meaning of Peter's declaration that there is none other name given among men, whereby mankind must be saved, in that degree we shall see that the true Christian man is peculiarly fitted to be "a man of affairs," whose wise interest will embrace, and whose healing influence can but improve every aspect and department of human life. W.

## "Occupy till I Come."

PREPARATION means opportunity. Not one minute need be wasted in waiting. The truth is always soliciting servitors, and he who is idle must lack either desire for work or qualification for it. "Aspiration is not inspiration," some one has said, and certain it is, aspiration is not fitness.

From the aspiring mother of Zebedee's sons down to the earnest, enthusiastic claimant for woman's suffrage, the element of qualification has been too often neglected.

The first step toward achievement is not to lay claim to position or to recognition, but to prepare conscientiously for possible demands.

During the last half century we have seen the destruction of the walls of personal prejudice and cowardly conservatism which rendered the medical profession, the ministry, the college curriculum and faculty, and the law inaccessible to women. They fell, not because of the blatant argument of the ambitious, but in response to the unanswerable logic of thorough equipment on the part of a few untiring, prayerful girls, who were brave enough to get ready for their work in the by-ways of obscurity, despite the shrugs of conventionality and the supercilious smiles of assumed superiority.

We hear much of unappreciated ability, much of unrecognized worth, and we are apt to nurse a self-justifying, self-stultifying sense of our own merit which the world cannot understand and will not admit; but experience and observation force the concession that these conditions are largely imaginary.

The world needs honest, earnest, qualified workers, and the question it asks is not, "What do you wish to do?" but, "What can you do?"

The world stops not to question Rosa Bonheur's right to the reputation she has won, nor would it recall the immortelles with which it crowned Charlotte Cushman.

"There is room at the top" is an old and hackneyed proverb, and just as true as ever; and the "room at the top" is reached by untiring effort to be fitted for the heights.

Nowhere does this warrant of efficiency and discipline obtain with so great significance as in our work in Christian Science. The children of men, wise in their generation, are saying: "By their fruits ye shall know them." And Christian Science through demonstrable truth is responding: "Show me thy faith without thy works, and I will show thee my faith by my works."

No! The Christian Scientist has not a moment for idle waiting and wondering why work does not come. The seeming interims must be regarded as precious opportunities. They must be devoted, not to repinings, not to restless concern and crippling self-condemnation, but to prayer, to praise, to communion with the Most High God, so that when the faithful disciple is appealed to, he descends from the mount with a shining countenance,—a consciousness so radiant with goodness that the mists of doubt and despair, sin and sorrow, pride and poverty disappear as darkness before the day.

Christ speaks again: "Occupy till I come!" Occupy by earnest unremitting effort to realize a clearer reflection of intelligence, a warmer pulsation of love, a higher sense of purity, a more consecrated loyalty, a more active purpose to help humanity.

Can such preparation, think you, fail of opportunity? "Where the fountain is pure, there will the thirsty come to drink." There are but two steps from one's present occupation to the coveted field of enlarged opportunity; first, present duty well and abundantly done; second, manifest fitness for something higher.

Truly, waiting moments should never be wasted moments.

S.

### Blow, Winds of God.

Blow, winds of God, and bring us on our way!
We spread the sails to catch thee if we may.
The night is dark with storm and tossing spray;
But yet we trust the morning; so we say
Blow, winds of God, and bring us on our way!

We will not think we are the wild waves' sport.
A track is in the deep that leads to port.
We follow and the hardship dare to court.
If Thou but guide us we shall make the bay.

Blow, winds of God, and bring us on our way!
Sometimes the sea is lonely. There be few
Who sail with us to countries rich and new.
Some fear they might not safely weather through,
But still our way is onward and we pray
Blow, winds of God, and bring us on our way!

REV. DWIGHT M. HODGE.

In the *Universalist Leader*.

John Ruskin paints "The Way of Life" in these exquisite words: "I pray you with all earnestness to prove, and know within your hearts, that all things lovely and righteous are possible for those who believe in their possibility, and who determine that for their part they will make every day's work contribute to them. Let every dawn of morning be to you as the beginning of life, and every setting sun be to you as its close. Then let every one of these short lives leave its short record of some kindly things done for others, some goodly strength or knowledge gained for yourselves."

## Notice.

A committee on securing rooms in private houses for visitors who do not wish hotel accommodations, will be in session at Mechanics Building Thursday, Friday, and Saturday, June 25–27, from 9 A.M., to 9 P.M. each day. No arrangements can be made in advance by correspondence with this committee, but all who apply to them in person upon their arrival in Boston will be cared for.

Visitors who desire hotel accommodations should make personal arrangements with the hotels, as this committee cannot undertake to make provision for them. Those who have not yet arranged for their rooms at the hotels would better do so at once, since the demand is very great.

### Awake! Awake!

LOUISE DELISLE RADZINSKI.

We are told in the gospel of Luke that when Jesus was preparing his disciples for the demonstration he knew was imminent, he went to the Mount of Olives, as he was wont to do when he would commune with God. His disciples followed him, and when he was at the place he said to them, "Pray, that ye enter not into temptation." And he withdrew from them about a stone's cast and kneeled down, and as he prayed an angel appeared unto him from heaven, strengthening him.

And when he rose up from prayer and was come to his disciples, he found them sleeping for sorrow, and said unto them, "Why sleep ye? Rise and pray, lest ye enter into temptation." Matthew and Mark add the reproach addressed to Peter, "Could ye not watch with me one hour?"

These admonitions to awake, to watch, and to pray, were never more needed than to-day by those who would serve Truth. Error is making strong protest against the angel of Love that comes to strengthen those who pray for deliverance from temptation.

Mortal mind would have us believe that grief is right and acceptable, yet while the disciples slept for sorrow, they missed the angel visit that strengthened their Master, that would have strengthened and enlightened them if they had not been overpowered by the mesmerism of personal love and sympathy. They did not wish to sleep while Jesus prayed and wrought in the spirit; their choice would have been to fight with him all their foes; they were ready to meet the servants of material power with staves and swords, but the subtle foe, mesmerism, they were unprepared to meet, and to it they yielded, sleeping while the sweat of him they loved, and for whom they would have died, "was as it were great drops of blood falling down to the ground."

Are we awake, that we may have the strength of Zion given us? Are we awake, that we put on the beautiful garments of Jerusalem, the holy city of the God of Peace? Are we awake so the unhallowed act and the unclean thought shall no more come to us, lulling us to sleep when most we need to be watchful, prayerful, and active in the service of Truth and Love?

For now has the time come when all who know Truth must proclaim her and rejoice in her, that all who are in the darkness of human beliefs and fear may be made to see the angel of God and be set free. For now is error striving to destroy the works of Truth, as men are beginning to awake from the sleep of ages, to shake off the dreams of material sense, to pray for strength, and to watch lest they fall back into the beliefs that have held the world in bondage for so many centuries.

Now, as then, the servants of the high priests of temporal power would arrest those who seek freedom for themselves and others from the man-made laws of theology, medicine, and philosophy; and they who would know Truth, possess health (holiness), and serve God in spirit (understanding), need above all to be watchful, to be awake.

Truth, as revealed in Christian Science, is assailed on every side, to restrain those who would share with their neighbor the blessings they themselves have received through the understanding of God which has been brought to them by the Discoverer of Christian Science. Their conception of Christian Science being its antipode, they are led, by their very honesty of purpose, to malign that which they do not know, that which they ignorantly reject. "They know not what they do," but every stone cast at truth returns to the hand that threw it. Every step taken in opposition to the light carries one deeper into darkness, and those to whom Truth has been revealed, who know the joy of freedom from fear and its offspring, disease, need to labor, watch, and pray, that the light of Love may shine into the darkness of a "naughty world," and help forth those who are still prisoners of ignorance, unaware of their birthright, of all the blessings of true Science, the knowledge of divine Love.

To these we owe the Christ-message, that they too may live and know their God, no longer the stern, vengeful judge, but the creator and preserver of man, the ever-present and all-loving Father-Mother God.

As deeds are greater than words, so by our daily life can we best show the love that renews all things, when words would be useless to feed the starving heart, helpless to strengthen the failing courage, cold to the drooping sense. Only through prayer and watchfulness can this regenerating love be kept aglow, for error is ever ready to check the loving impulse, to deaden the sense of another's need, to suggest that the responsibility is not ours, and that it should not be rashly assumed.

In this, as in all things, our Leader gives us the example we need. Her untiring labors for our instruction, her perception of our needs in all phases of our growth; her readiness to meet all crises in the establishment of the cause of Truth, show us what can be accomplished through faithful watching and loving prayer. Strengthened by the angels of God, the messages of life to His devoted child, and clothed in the beautiful garments of peace, she calls to us, as the Prophet called to his people, to awake, to put on the strength of Zion! Shall we fail her and yield to the mesmerism of sleep when we should be watching with her, helping her to arouse those who are dully stumbling in the mists of sense?

### Faith in God.

WILLIS F. GROSS.

Man's greatest need is more faith in God. Faith in the supreme Being has brought whatever of enlightenment and progress the world has enjoyed, and if there is to be more enlightenment and more progress, there must be more faith which finds a resting-place higher than the things of earth.

All do not realize that this is their greatest need. They have faith in their own ability and they believe that through the exercise of their own intelligence they are able to accomplish satisfactory results and make substantial progress. But sooner or later there comes a time when man feels he can do no more. Then does he realize how great is his need of faith in God.

Because of a limited sense of God's love and power, man but feebly comprehends the meaning of the Scripture, "Now is the day of salvation." He is too apt to think of Christianity as providing a way to a future heaven, but as having little power to beget a present heaven. If he expects Christianity to do little for him in this world, he has been slow to recognize what it has already done.

Man's faith, or lack of faith, in God is the natural result of his thought of God. There is but one possible way of increasing his faith, and that is by giving him a higher concept of the supreme Being, a truer sense of the divine nature and purpose.

Tens of thousands of men and women, scattered throughout the world, representing all classes, and living in all conditions and under all circumstances, bear faithful testimony to the fact that Christian Science is teaching them the truth about God, and man made in the divine image and likeness. As the result of this teaching their faith in God's love and power to save, morally and physically, grows stronger every day. They have learned that the "effectual fervent prayer of a righteous man," avails with

Digitized by Google

God in behalf of the sick as well as in behalf of the sinner. They have learned that there never comes a time when man cannot go to God "in faith, nothing wavering" and receive the help he needs.

There are few persons who believe that there comes a time in man's earthly experience when he has "sinned away the day of grace," and it is God's will for him to suffer throughout eternity. This was at one time a teaching quite generally accepted and may have been regarded as an essential element of religious faith. But the ever-increasing brightness of divine revelation has dispelled the darkness, and in the light of spiritual understanding we read that God "will have all men to be saved, and to come unto the knowledge of the truth."

The doctrine of predestination has few adherents, and the teaching of universal salvation is not regarded with the suspicion and distrust that it was a half century ago. A man's Christianity is no longer questioned, if he declares it to be his honest conviction that through God's love and mercy all will be saved.

These changes in the human thought of God and His purpose concerning man, have resulted in a more practical religion and greatly increased the spirit of brotherly love. A man has a more vital interest in his neighbor's welfare when he regards him as a child of God, and believes it is his Father's will for him to be saved, than he could possibly have if he believed that God had foreordained his neighbor to eternal punishment.

Many persons believe that the sick man has broken a material law of nature, and for this reason it is God's will for him to be sick. There are those who believe that sickness and suffering are sent of God to teach lessons that could not, or would not, be learned in any other way.

Most Christian Scientists at one time believed that sickness was in accord with the divine will, but they are now fully convinced that it is not God's will for man to be sick any more than it is His will for man to be sinful. This conviction has made possible an active faith in God's willingness to heal man's physical infirmities as well as to save him from all his sins.

Does any one believe that God is willing to save man from part of his sins but not from all of them? Why, then, should mortals doubt God's willingness to make man every whit whole, especially when sickness is largely the result of ignorance, while sin may be wilful wrongdoing? There are few who doubt God's power to heal the sick, even without the aid of material remedies; it is therefore His willingness to heal that is apparently questioned.

The man who believes that God is not willing to save him from sin is, because of this erroneous belief, unable to exercise the faith in God that is necessary to receive the divine blessing. The failure to realize his sins forgiven is due entirely to a lack of faith in God. His lack of faith is due to a false sense of God's character. God has not withheld forgiveness, but man's own error of thought has robbed him of the blessing he so much needs. He will be deprived of the blessing divine Love is ever willing to bestow, so long as his lack of faith makes it impossible for him to receive it.

The sick man who believes that God is unwilling to heal him unless he can regain his health through the use of material remedies or through obedience to material health laws, is in a mental condition not unlike that of the man who believes God is not willing to forgive his sins. His lack of faith in God's willingness to heal him is the result of his incorrect, or imperfect, concept of God. The remedy in the one case, as in the other, is to gain a higher understanding of the divine Principle of man's being.

Christian Science is supplying this human need. It is enabling man to see that his heavenly Father is indeed a God of infinite love; that He forgiveth all our iniquities and healeth all our diseases. Christian Science is increasing man's faith in God by giving him an idea of God which is at once demonstrable and in harmony with his highest and purest conception of being. To those who have approached God in fear and trembling, not knowing in whom they have believed, Christian Science says, as did Paul to the Athenians, "Whom therefore ye ignorantly worship, Him declare I unto you."

It is impossible not to have faith in that which is understood. Jesus said that to know the Truth would make free, and then he demonstrated that this freedom which comes through knowing the Truth, is a present salvation from sickness as well as from sin and the suffering it brings.

The blessings that have come through Christian Science are not so much the result of faith in God's willingness and power to do, as the result of the understanding of what He is. God is, and man lives, and moves, and has his being in God. The understanding of the scientific fact gives man a practical faith in God and teaches him to rely upon God and trust Him.

Blessings greater than have ever before enriched human experience, are in God's storehouse awaiting man's fitness to receive. That teaching which helps man to trust in the Lord instead of leaning upon his own understanding, opens wide the door of eternal harmony. The honest and conscientious student of the Christian Science text-book has not less faith in God, but more, because he has a higher and more spiritual idea of God. He knows he has not lost even an infinitesimal part of the good he had previously gained, but his sense of good has been greatly added to and quickened. He expects Christianity to do more for him in this present time, and according to his faith, his increased spiritual understanding, he receives of the blessings of God, health, holiness, and harmony.

## Trifles.

ANNIE MARIE BLISS.

It was only a cheery "Good morning,"
That she said as I started away;
But it echoed and rang in my busy thought
As I worked through a long, long day.

It was only a smile that she gave me,
But the smile was so sweet and true
That it gilded the edge of my cloudy thought
'Till it melted the cloud in blue.

It was only a rose with a message,
And "I love you," was all that it said;
But it lifted a doubt which had seemed to be
Leaving sweet peace, instead.

T'was only a short verse of comfort
That she culled from the storehouse of Love;
But the truth was the balm for a sense of hurt,
And it lifted my thought above.

It is often the things we call "Trifles,"
(If a smile or a flower may be such),
That are sure to help others and make us grow,
For he gaineth, who giveth much.

And the sweetness from loving and doing
When the heart from all self is freed,
Is for you, and for me, and for every one,
Who is filling a brother's need.

Let no man talk of freedom until he is sure he can govern himself.—GOETHE.

## The Lectures.

### At Chicago, Ill.

Mr. Edward A. Kimball delivered a lecture on Christian Science Friday evening, May 22, under the auspices of Fifth Church of Christ, Scientist, of Chicago, this being the first lecture given by that church. The large auditorium of the University Congregational Church in which the lecture was delivered, was completely filled, and many people were turned away before the time for the lecture to begin.

The audience listened to the words of the lecturer with profound interest and attention from the beginning to the end. The statements presented by him were convincing, and evidently made a deep impression on his hearers.

Mr. Kimball's remarks concerning Mrs. Eddy, her splendid life and example, and her Christian ministry were very impressive. Mr. Kimball made use of this occasion to emphasize effectively the salient features of Christian Science by showing wherein they are fundamentally different from the prevalent theories concerning religion and the cause and cure of disease. His entire effort was in the form of a rational appeal to humanity to turn for healing and in every other need to a knowable God who has provided for man nothing but supreme good, health, welfare, and holiness. Mr. Kimball was introduced by Mr. George Shaw Cook, First Reader of the church, in part as follows:

*Ladies and Gentlemen:*—On behalf of our recently organized Fifth Church of Christ, Scientist, of Chicago, I bid you cordial welcome to this our first lecture, and we wish to couple with our word of welcome a word of thankful appreciation of the courtesy extended to us by our friends and neighbors of the University Congregational Church in making it possible for us to occupy this church edifice on this occasion.

Those who have felt the healing and regenerating touch of Christian Science need no further argument to convince them that in it is found the complete answer to the human yearning for full salvation. We have found in the demonstrable teaching of its text-book, "Science and Health with Key to the Scriptures," and in the loving, unselfish, and consecrated life of its author, Mary Baker Eddy, convincing proof of the immanence of Immanuel, or God with us.

If Christian Science were but a proofless theory, it would not be entitled to command your attention. The speaker of the evening will invite you to give heed to his statements because they are based upon absolute, exact, and demonstrable science which courts no blind belief on the part of any one, but depends wholly upon proof for the evidence of its verity.

Christian Science is a vast and ever-unfolding subject. To understand it in its entirety is the work of eternity. It may not reasonably be supposed, therefore, that any speaker can, within the limits of a lecture, cover the whole subject of Christian Science. The one to whom we are about to listen will not attempt to do so. He will not expect that those who to-night hear of Christian Science for the first time will go away from here with a demonstrable understanding of its teaching. He will simply, as it were, touch the hem of the garment, tell you something of what scientific Christianity is, what it does, something of what it has meant to hundreds of thousands of your fellow-beings, something of what it means to you.

To many of you the lecturer needs no introduction, but to all of you, however, I may say that we are indeed privileged to hear of Christian Science from one who, having long ago been restored to health and usefulness by its gentle ministry, has, since that time, out of very gratitude to God for his wonderful deliverance, given unstintingly and constantly of his days to preaching the gospel, healing the sick, reforming the sinner, binding up the broken-hearted, and teaching his fellow-man to go and do likewise.

Ladies and gentlemen, it is my honor and my very great pleasure to present Mr. Edward A. Kimball of Chicago.

*Correspondence.*

### At Jamestown, N. Y.

A severe rain storm was in progress yesterday afternoon [May 3] at the time set for the lecture on Christian Science given by Rev. Arthur R. Vosburgh, C.S.B., of Rochester, at the Opera House, but those who attended were well repaid for the effort, as the scholarly address was very interesting.

Martin F. Jackson, First Reader of First Church of Christ, Scientist, spoke in part as follows in introducing the lecturer:—

*Ladies and Gentlemen:*—Christian Science offers in support of the truth of its teachings thousands of authentic cases of healing, many of which may be found in our very midst. The Bible contains the injunction to "preach the gospel" and "heal the sick," and what is more beautiful than "to preach deliverance to the captives, and recovering of sight to the blind, to set at liberty them that are bruised."

One of the grandest sermons on life ever delivered was, "The maid is not dead, but sleepeth," and in the demonstration that followed we see the truth of that assertion.

Should Christian Scientists be censured because they seek to be perfect as the Father? Should Christian Scientists be censured because they strive to emulate Jesus and do the works that he did, and promised all might do who would believe? These works are to heal the sick and cast out evil, and we have the Scripture, "Lo, I am with you alway, even unto the end of the world."

Is it not much to have one's mind filled with sweet thoughts toward his neighbor, rather than bitter? Is it not much to give health for sickness, holiness for sin, happiness for woe? And should Christian Science, which makes possible these conditions, be condemned?

*The Jamestown Post.*

### At St. Paul, Minn.

That Christian Science is generally interesting as a line of study among thinking people, other than those who have accepted it as a religious belief, was fully demonstrated at the Grand Opera House yesterday afternoon [May 3] in the size and character of the audience which assembled to hear Judge Septimus J. Hanna, C.S.D., of Boston. Judge Hanna's address was announced as an authorized lecture on Christian Science, and its purpose was to present Christian Science as a practical religion.

As far as the ground floor was concerned the theatre was crowded, and many persons stood in the aisles throughout the entire lecture. The balcony was well filled and the gallery partly occupied. Manifestly the audience was not attracted by the fact that no admission fee was charged, but from a desire for information, and the speaker was accorded the close attention of those who sat before him as long as he remained upon the platform.

*The St. Paul Globe.*

### At South McAlester, Ind. Ter.

There was a good lecture audience out at the Opera House Friday night, March 20, to hear Judge William G. Ewing of Chicago lecture on Christian Science. The speaker was felicitously introduced by Mayor Fielding Lewis, in a brief speech.

The address by Judge Ewing was given the closest attention. There was no obtrusion of the ego, no show of religious bigotry or intellectual intolerance.

*South McAlester News.*

## Testimonies of Healing.

In a recent conversation with a lady, I was asked, "What do you get out of your Christian Science?" I replied, "Why, everything."

During the first year of our little son's life, we paid doctors anywhere from forty to sixty dollars every six or eight weeks.

We obeyed every law of hygiene, watched closely every symptom, and at times I have cried in despair, fearing he would not live. I dreaded to go to bed at night, lest I should need the physician before morning. Now my heart overflows with gratitude because through that wonderful book, Science and Health, I have come to understand that the Great Physician—the True Physician—is omnipresent and omnipotent, and that "Every law of matter or the body, supposed to govern man, is rendered null and void by the law of God" (Science and Health, p. 380).

This is only a little of what I am getting from Christian Science.—ETHEL LAVON PECK, Chicago, Ill.

My husband and I came to California last September intending to settle here in business. Owing to his ill health we could not remain East; his trouble was chronic inflammation of the bladder with which he had been afflicted for fifteen years; he was also subject to attacks of hemorrhage which seemed to result from chills.

We arrived in San Francisco on a cold, windy day and the dreaded chill was contracted. The usual remedies failed to bring relief, and he refused further medical aid. At this time we were advised to try Christian Science; so without any understanding of what it meant and with little faith in it, he commenced the treatment.

Very gradually the improvement came; we discarded all drugs and remedies and bought and studied Science and Health. At the end of one week I concluded that if there was anything in Christian Science I could heal myself of constipation from which I had always suffered, and I was entirely relieved in five days. After seven weeks' treatment my husband was well and we could help ourselves. In January, we went through a Christian Science class and since that time have been able to help others.

I write this in the beginning of March, 1903, on the eve of our return East to live. My husband is perfectly recovered, and all fear of climate or cold has left us. Our stay of five months in San Francisco has been fraught with many blessings to us, and we are proud to call ourselves Christian Scientists and grateful to all those who have helped us to the understanding of this great truth.

MRS. LENNART NILSON, San Francisco, Cal.

In August, 1894, I was brought home to die. My first physician after having prescribed for me four days said if I failed as fast for the week to come as I had the past, I would be no more.

When brought home, our family physician was called, took my case, and did all he could for my recovery. He prescribed for me from August, 1894, until March, 1895, but I received no benefit. The doctor said, "If you have any business, you had better attend to it; to-day you are here, to-morrow you may not be, life is uncertain and death is certain." I told him that since there was no help for me, and as my expenses were great, I would not take any more medicine.

Before I should pass away, I wished to see my sister. The message was sent and she replied that she wished me to see a friend of hers. I was unconscious when the letter came, but it was answered, and in a short time word came from one of Mrs. Eddy's students, saying that she would commence treatment and would come the following Monday. She was so quiet and peaceful that although a stranger, she did not excite me in the least. I felt restful in her presence. She talked with me and read a little in Science and Health. At this time, I could not lie down. I had not been able to feed myself for some time, and could not walk without help. When tea was ready my sister invited me to take tea with them. I felt very much hurt as she knew my circumstances. The practitioner said, "You can walk." I thought, "You do not know so well as I." Assistance was offered. "No;" she said, "she does not need help." The invitation was given the third time. Again the Scientist kindly but firmly assured me that I could walk. I looked at her and without help I arose and went with them to tea. When the food was passed I felt more hurt than before. They knew I could not eat, but my practitioner talked with me and enabled me to realize that God made everything that was made, and He finished His work and called it good, and so food could not hurt me. Since that time I have eaten whatever I wanted and it has not hurt me.

For nearly seven years Science and Health with the Bible has been our only medicine, and with but a little understanding of Truth, we have had many demonstrations.

MRS. C. A. W. BERGER, Seneca Falls, N. Y.

I feel it is my duty to tell of the blessings I have received through the understanding of Christian Science, and as I look back and see where I was when I first heard of Christian Science, in the valley of the shadow of death, I am very glad I was led to this blessed truth.

I had been most miserable. I could not rest, and the nights were long. I was in poor health for about three years, and my sister and I went to different doctors to see what they thought, but they gave me little hope. Later on my husband took me to a specialist and he treated me a while until at last he told my husband not to bring me any more, that I needed a doctor to come and see me every day, and that he did not leave his office. When I got home I was very much discouraged. I longed to die, but oh, it seemed as if I had never loved my two children so much, and I dreaded to leave them. I was told I had consumption, and thought there was no cure for that. I want to say for the benefit of those whose demonstration seems to be slow, never get discouraged. My cough stayed with me over three years after I commenced treatment in Christian Science. I had many a struggle and at last I saw I simply had to overcome error or it would overcome me. I had to "Rise, in the strength of Spirit, to resist all that is unlike God" (Science and Health, p. 393).

The last doctor we had advised a change of climate, and at last I was compelled to go to bed, I was so weak.

The minister of whose church I was a member came to see me. After talking to me a while he asked me if I was prepared to die. I told him I thought I was, but that I dreaded to leave my two children. He prayed a lovely prayer I thought, and I said to him, "If I ever do get well I am going to attend church regularly." He said, "You will never attend church any more in this world."

The next day my aunt came to see me and told me what she thought Christian Science could do for me. She told me how sick her husband had been, and after the doctors did all they could for him he was cured in Christian Science and was able to go to his office the third day. She said that was about all she could tell me, as she didn't understand much about it yet, and her husband had been cured only about a week. I had never heard of Christian Science before.

The practitioner was loving and patient. She encouraged me and helped me to realize the nothingness of matter and the allness of God. To mortal sense my demonstration was very slow, but I can truthfully say I am very thankful. It will soon be four years since I first heard of

Digitized by Google

Christian Science, and I can say that I feel I have been born anew.

I am very thankful to God for this message of Truth as revealed by our Leader, Mrs. Eddy, and to others, who were a great help to me.

MRS. KATIE KLINGER, Peoria, Ill.

"Out of the abundance of the heart the mouth speaketh." Christian Science came to us about five years ago when we were truly in great need. My husband was very ill, and had been away from business six or seven weeks, all caused by worrying over our financial problem, trying to work it out from the basis of dollars and cents instead of realizing God as omnipresent supply. I, too, was a great sufferer from a distressing affection of the nerves, at times being under the care of a nurse. My children were always ailing, and in fact we were perfect slaves to the doctor and the druggist. At this time Christian Science was brought to our notice. My husband accepted it and was healed; closely followed my own healing, a perfect demonstration, as I have been restored to health and usefulness. We have had in our home many and marvelous demonstrations in the healing of sickness, sin, and sorrow, and there have been no failures, for we have learned that if we are loyal to Principle, as we are taught in our text-book, Science and Health, and do our work well, trusting God and never doubting, we may be sure that God's work is always well done, and we shall receive the promised reward. To our beloved Leader, Mrs. Eddy, I am deeply grateful, for, through her loyalty to God, the way has been made clear for us, and I am also most grateful to those dear Scientists, who have so lovingly and patiently led me out of a condition of mental darkness, into the radiance of the light of Truth.—A. R. B., Brooklyn, N. Y.

Do not mourn the past, my brother; it has given place to better times. Do not dread the coming of the future; it shall dawn in brighter and safer glory. Come, and upon the altars of the faith be anointed as the Daniels of to-day, at once the prophet and the worker—the brow bright with the shining prophecy, the hands full of earnest and of holy deeds.—WM. M. PUNSHON.

The crown of the morrow lies in that approach to the Christ character, which a life of faithfulness to-day makes real and abiding.—REV. I. MENCH CHAMBERS.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. Charles A. Crane in a sermon at People's Temple, Boston, recently, is reported by the *Herald* to have said:—

"When you look this present evil age fully in the face you are bound to say that there can be naught but endless war between it and the law of Jesus Christ. Because he would not moderate his wrath against the evils of his time, they plucked him by the beard and took him out and hung him. All the authorities of that time rested on selfishness and he preached sacrifice. Tempted to leave some truths unspoken he spared not. He could have sold out to the enemy, and the world would have never known it. And can you do less than follow him? What happens when a man preaches the Gospel? A thousand enemies assail him at once.

"When a preacher begins to care so much as the snap of his finger for the world, it's all over with him. Am I not tempted daily to soften the truth that some gentle souls may not be hurt? Have not some would-be friends told me to the face that the people will not listen to truth that tells of hell? Let the man stand forth who said to me not long ago that I could not hold my congregations without some new doctrine. Why, sirs, there is naught so new in this city as the simple Gospel plainly and honestly told."

The St. Louis *Globe-Democrat* quotes the Rev. Edmund Duckworth of St. James Episcopal Church as follows:—

"We may affirm with certainty that, on the whole, the world is growing better, although it may seem at times that existence is at its worst. Similar to world development is the development of the individual spiritual life. At times we seem to be growing in grace, yet often we become discouraged, for 'the mind is an artist at creating self-alarms.'

"We feel that our lives are declining in nobility of thought and of action. This arises from the misinterpretation of the feelings in regard to the spiritual life. In reality these feelings do not denote a declining spirituality, but are signs of a deeper life.

"The holiness we think is lost has brought a greater sensitiveness to the soul. The desire for progress signifies a larger development already attained, though the very desire makes the progress seem slow.

"The growth in spirituality is gradual and mysterious. Like the diamond hidden in the dark rock, the growth for a long time may not be apparent. Spiritual growth is aided by discipline, which brings after the sorrow a profounder peace. The sense of God working in the life with a fixed purpose brings unspeakable joy."

The Rev. Floyd W. Tomkins, D.D., of Philadelphia and formerly of Providence, preaching recently in Appleton Chapel, Harvard College, said:—

"Jesus was too catholic to say, 'I am going to establish a Church which shall have the following rules and regulations.' He began by first of all saying to a few men, 'Follow me.' He took the letter of the law down and opened it, as he himself said, 'fulfilled it,' that is, filled it full of his own spirit. The garb which was around him had been torn away that men might see the humanity beneath it. This method of Christ in founding Christianity is very important.

"Christianity has many interpretations. No law was ever written that two lawyers would interpret exactly alike. So it is with philosophy, theology, morality. There must be a reversion to the primitive truth, a washing away of poisonous ideas. If you are afraid to try it because it means a breaking up of some of your customs and habits, let me assure you that it means such peace, such certainty, such release from doubt that duty is transfigured into privilege. The world is seen to be growing better."

Rev. Carl S. Patton, in the *Hartford Seminary Record*, says: "A man may have religion and enjoy it and be made a good man by it, without knowing anything about the Hebrew Prophets, or without so much as stopping to define to himself what he thinks about God. Intelligence is not the only factor in religion, any more than it is in life generally. But after all, it is a pretty important factor in everything, and perhaps more important in religion than in anything else. There is no premium upon ignorance anywhere; and especially not in the spiritual world. The same conviction that declares that God is goodness, declares also that He is wisdom and truth. What is truth for the intellect is motive and inspiration to the spirit. From ideas about God which have cost us nothing we cannot expect much. But as we come more and more to know Him as He is, we shall both know how, and be able, to serve Him more nearly as we should."

The deeper teachings of poetry are not disposed of by the superficial question, Did the writer mean all that? No, we boldly answer, and yet he said it because he saw the principle which he did not, and perhaps at that time could not, consciously analyze. This is a principle admitted by all great critics, except Biblical critics. It is only Biblical critics who say that the interpreter's task is done when he has found out what the writer consciously meant at the time, and how his contemporaries understood him. In all prophetic utterance there is an element beyond that, and it is that element which is signal and vital in prophecy. When Biblical critics receive this principle, we shall have less trouble about the interpretation of the Old Testament.

CLAUDIUS CLEAR.

He passed out of sight and left behind him a few unlearned disciples, for the most part of low origin, with all the forces of the world against their appeal, the wealth of the world against their poverty, the learning against their ignorance, the power which wealth and learning and position can command against their weakness. He bade them go and preach to this world the Gospel of the kingdom, the good news which came from the kingdom above: that God loved the world; that sin and sorrow, wars and tumults, poverty and death were not God's will, nor did they belong to His Kingdom.

ROBERT STUART MACARTHUR, D.D., LL.D.

The God of the Bible is omnipotent; the God of the Bible is omnipresent; the God of the Bible is universal in the sweep of His laws and in the compass of His love. And the Christ of the Bible is a Christ not limited to a certain era in history, not limited to the Christian Church and to Palestine. He is not merely a temporal Christ, but an eternal Christ. He is great, sublime, universal, cosmic, "the light that lighteth every man that cometh into the world."

REV. JOSEPH A. MILBURN.

To speak frankly, my friends, I do not believe of the Scripture of Christ or of the future life what I did as a boy, nor do I think that any man who thinks and is in touch with the movements of thought can believe just what he did ten years ago and in the same way. Yet the world and men are moved by convictions, and I believe that convictions to-day are deeper and stronger than they ever were.—BISHOP LAWRENCE.

The saddest spectacle in this or in any world is a rational and moral being smitten with spiritual death, alive only to what is material and earthly, living without God and without hope. Beware of this inward death, —this insensibility to the presence, the authority, the goodness of our heavenly Father.

W. E. CHANNING.

If we find feelings of resentment rising against any who do not agree with us, there is a call to consider whether we are not in danger of dropping into the ranks of those whose mistaken zeal and violence have brought condemnation on themselves and reproach on the Church of God.

*The Watchman.*

The *Churchman* relates that when once President Kruger was called a hypocrite, one who knew him well replied: "He is no hypocrite: there is nothing the matter with his sincerity; the trouble is with his religion. He has got a bad religion. It justifies action which to you seems hypocritical."

There is nothing arbitrary in God's judgments. The way of the transgressor is hard because it brings him into conflict with the world's true order and his own appointed way of growth. Prophet and poet agree that it is out of the sinner's own transgressions the penalty grows.—*Congregationalist.*

Those who read the Bible for the sole purpose of discovering "the mistakes of Moses" and other imagined errors will not derive much profit from the perusal. But to him who seeks in it light on the pathway of life will find it luminous with truth and a sure guide to the feet.—*The Examiner.*

I do not know that martyrdom will prove any harder than that discipline which renders us quick to forgive, which can look upon the success of a rival with loving pleasure, which can maintain a guileless integrity in the minute transactions of life.

GEORGE BROWN.

In a strong editorial on "The Religious Question," the *Christian Register* says: "Nothing would do the world so much good as a revival of religion set free from the bondage of creeds and sects, and directed to the moral rectification of human conduct."

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

### National.

President Roosevelt returned to Washington June 5, after a trip that lasted sixty-six days, the longest ever taken by a President of the United States. It covered nearly fourteen thousand miles and touched every State in the Union except New York, New Jersey, Delaware, the Southern States, and New England. He has made about three hundred speeches, and attended one hundred public dinners, breakfasts, and luncheons. There were no accidents to the train, no connections missed, and the itinerary was kept almost to the minute throughout.

It is said that the Venezuelan revolutionists, who have for over a year been fighting the government of President Castro, intend to petition the United States for recognition as belligerents. The request is based on the representation that they hold all the ports of importance in the country except La Guayra, Maracaibo, and Porto Cabello, and hold all the eastern portion of Venezuela, over which they claim to exercise powers of government. Failing to gain recognition from the United States, they intend to seek it from Great Britain.

The coal operators have appointed three "district" representatives in accordance with the recommendation of the finding of the "Strike Committee," but decline to recognize the three members for the miners on the ground that they are presidents of the three mining districts and represent union miners rather than the whole body of miners. The operators agree, however, to recognize these representatives if they shall be approved by a majority of the miners at a convention to be called.

The several international commissions which are to determine the amount of the claims of the several Powers against Venezuela, met last week at Caracas. It is expected that the American claims can be adjusted within a month. The work of the Caracas commissioners will be confined exclusively to the settlement of the financial claims against Venezuela. The question of preferential treatment is to be passed on by The Hague tribunal.

Major James McLaughlin, representing the Government has closed a treaty with the Uintah Indians, as a result of which one million two hundred and fifty thousand acres of reservation land will be thrown open for settlement in October, 1904.

### Foreign.

Louis Godard, the French aeronaut, is preparing to cross the Atlantic Ocean in a balloon which he is constructing. It is 94 feet in diameter, with a capacity for 13,000 square metres, and will support a weight of 28,000 pounds. He is to start from New York at a time of year when the Atlantic is swept by west, northwest, and southwest winds, and expects to move at a velocity of thirty miles an hour. Provisions will be taken for forty days for fear of adverse winds. An aluminum boat with kerosene motor will be carried.

The Milan correspondent of the *Neueswetner Tageblatt* reports that Leonardo Da Vinci's famous mural painting, "The Last Supper," in the monastery of Santa Maria is now hopelessly ruined. It had been in deplorable condition for a long time and the continued decay of the wall on which it is painted made all attempts at restoration futile. Only the head of the apostle Bartholomew and part of the tablecloth are now distinguishable. Visitors are not allowed to see the painting.

The German Chemical Society has presented the Hoffman medals to Professors Ramsay and Moissan, for distinguished chemical research during the past five years. These medals are conferred every five years upon foreigners making the most important chemical discoveries.

Minister Conger reports to the State Department from Peking that the Chinese government is about to establish a mint at Peking.

It is officially announced that King Edward and Queen Alexandra will arrive in Dublin July 21, on their visit to Ireland.

Sir Thomas Lipton's fleet sailed from Fayal, Azores, on the fourth.

### Industrial and Commercial.

It is reported that the Harmsworths, the London publishers who issue some thirty publications, including the *Harmsworth's Magazine* and the *London Daily Mail*, are to take over the lumber areas in Newfoundland of Lewis Miller of Scotland. This property consists of over a million acres of timber land on the Exploits River, Indian Lake, Lloyd's River, Lloyd's Lake, King George's Lake, Victoria River, and Victoria Lake. It is estimated these lands contain hundreds of millions of feet of spruce pulp-wood. The watershed is over two thousand square miles in area, insuring an inexhaustible water supply for manufacturing purposes. The Exploits River, after leaving Indian Lake, shoots over a shelf of rock eighty-five feet high. Here the Harmsworths propose to locate a mechanical pulp mill, a sulphide pulp mill, and a paper mill capable of producing one thousand tons of paper per week, all of which they will use in their own publications. Two or three years are estimated to be necessary in erecting the plant.

Exportation of manufactures in April was larger than in any preceding month in the history of our export trade, excepting the months of March and May, 1900. The total value of manufactures exported in April, 1903, was, in round terms, $40,000,000, against $25,000,000 in April, 1898, and $14,000,000 in April, 1893. On only two occasions in the entire history of our export trade have the exports of manufactures during a single month reached as high a figure as that of April, 1903. In March, 1900, the total exports of manufactures were $44,767,139; in May, 1900, $40,460,367; while in April of that year the total was $39,840,569.

The International Brotherhood of Blacksmiths has found a Chicago local union guilty of refusing to live up to an agreement made in good faith with the Chicago Metal Trades Association, and has suspended four hundred men. The Teamsters' Union has deprived three hundred of its St. Louis members of their cards for refusing to obey the orders of their officials to cease helping the freight handlers in their strike. This action is expected to check the promiscuous contract breaking recently indulged in.

Owing to the unprecedented drouth, twenty-five million feet of logs have been left in the woods or hung up in brook drives along the tributaries of the Penobscot River; and unless rain should bring relief, an additional twenty-five or fifty million feet more will be hung up in the Penobscot River drives.

The Baldwin Locomotive Works expects by July 1 to have turned out one thousand engines, the greatest number of completed engines in any six months in its history. The May output was one hundred and ninety, and the same in April. Most of these are for orders placed last year.

A plan is said to be under consideration by several financial institutions in Memphis, Louisville, and Nashville to merge into one large concern all the coal mine properties in western Kentucky, which would result, it is believed, in a larger output and better prices.

According to the figures given out by the New York custom house, diamonds and other precious stones worth $2,422,000 were imported in May. More than $50,000,000 worth of diamonds and other gems have been imported since the great May panic of 1901.

The Lowell cotton mills, which have been standing still for nine weeks because of the strike of the operatives, resumed operations on the second with about half the normal number of employes.

A crisis seems to confront the southern cotton mills on account of the scarcity of raw material and the prevailing high prices.

### General.

John C. Havemeyer, whose recent challenge to the labor leaders of Yonkers, N. Y., to publicly debate the labor question was accepted, the debate to take place June 3, submitted a number of questions to be answered by the representatives of the labor unions at that meeting. The most important of the questions were:—

In the methods employed to accomplish the aims of the labor unions is account taken of the suffering and the losses that may be caused widows, orphans, and others in no way responsible for real or supposed grievances and the serious and perhaps permanent injury which may result to members from idleness?

Will there be a limit to the demands for shorter hours, larger pay, and less service? If so, when will it be reached and by what rule will it be determined?

Is the impression correct that the unions are not relying upon the justice of their cause, but seek to compel employers and others interested to yield to their demands by reason of the loss and inconvenience resistance will involve? Do sympathetic strikes justify this impression?

On what ground is the refusal to work with and persecution of non-union men justified? Is it not unreasonable and unnatural that men who differ widely from each other in opinion should be forced to unite and act to join with other men in actions that may be against their judgment, and even against their conscience?

How far is the charge justified that the methods of unions, through their requirement of unquestioning obedience and the suspension of private judgment, destroy the individuality and independence, and consequently the self-respect, of the members?

Raeburn's portrait of Sir John Sinclair was sold in London recently for $73,500.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## Selected Articles.

### Mrs. Eddy Corrects a Misstatement.

THE publication in *The Literary Digest* of May 30 of an article attributing the origin of Christian Science to Ralph Waldo Emerson, has led Mrs. Eddy to make the following statement, which appeared in *The Boston Journal* of June 8. Mrs. Eddy's correction is not a reflection upon the Unitarian denomination.—[EDITOR.]

TO WHOM IT CONCERNS.

I was early the pupil of Miss Sarah J. Bodwell, the principal of Sanbornton Academy of New Hampshire, and finished my course of studies under Prof. Dyer H. Sanborn, author of Sanborn's Grammar. Among my early studies were Comstock's Natural Philosophy, Chemistry, Blair's Rhetoric, Whateley's Logic, Watt's "On the Mind and Moral Science."

At sixteen years of age I began writing for leading newspapers, and for many years wrote for the best magazines in the South and North. I have lectured in large and crowded halls in New York City, Chicago, Boston, Portland, and at Waterville College, and have been invited to lecture in London and Edinburgh.

In 1883 I started *The Christian Science Journal,* and for several years was the proprietor and sole editor of that *Journal.* In 1893, Judge S. J. Hanna became editor of *The Christian Science Journal,* and for ten subsequent years he knew my ability as an editor. In his recent lecture at Chicago, he said, "Mrs. Eddy is, from every point of view, a woman of sound education and liberal culture."

Agassiz, the celebrated naturalist and author, wisely said, "Every great scientific truth goes through three stages. First, people say it conflicts with the Bible. Next, they say it has been discovered before. Lastly, they say they have always believed it."

The first attack upon me was,—Mrs. Eddy misinterprets the Scriptures; second, she has stolen the contents of her book, "Science and Health with Key to the Scriptures" from one P. P. Quimby (an obscure, uneducated man), and he is the founder of Christian Science. Failing in these attempts, the calumniator has resorted to Ralph Waldo Emerson's philosophy as the authority for Christian Science! Lastly, the defamer will declare as honestly (?) "I have always known it."

In Science and Health, edition 271, page 68, paragraph 3, I briefly express myself unmistakably on the subject of "vulgar metaphysics." And the manuscripts and letters in my possession which "vulgar" defamers have circulated stand in evidence. People do not know who is referred to as "an ignorant woman in New Hampshire." Many of the nation's best and most distinguished men and women were natives of the Granite State.

I am the author of the Christian Science text-book, "Science and Health with Key to the Scriptures;" the demand for this book increases, and the book is already in its 274th edition of one thousand copies each. I am rated in the *National Magazine* (1903) as "standing the eighth in a list of twenty-two of the foremost living authors."

I claim no special merit of any kind. All that I am in reality God has made me. I still wait at the cross to learn definitely more from my great Master, but not of the Greek nor of the Roman schools—simply how to do his works.

### In Time of Need.

Mr. Editor.

In every age of the world's history God has revealed His truth according to the needs of the age. The discovery and application of steam, of electricity, of the art of printing, of the sending of messages by telegraph and telephone, and of late by Marconi's system without wire, did not come until there was a need for it and the age was ready to receive it. It was not the design of divine wisdom that Jesus should come in the days of Moses; the world would not have been ready for him at that time. Throughout all ages God has been speaking to mankind through God-fearing men and women, and His word is always a revelation to mankind. There is not an honest minister of the Gospel to-day who is not giving to his congregation thoughts of truth and love that God has revealed to him, and many of them have their sermons copyrighted and published. Through sermon and song and other channels God is inspiring mankind to lead a purer life. The Apostle James says, "Every good gift and every perfect gift is from above, and cometh down from the Father of Lights, with whom is no variableness, neither shadow of turning."

Knowing that from early childhood Mrs. Eddy has been a very devout Christian, a God-fearing and God-loving woman, it is not strange that God should make Himself and His ways known to her, so that she has been able to discern that spiritual interpretation of the Scriptures which enables her and her students to heal the sick and comfort the sorrowing. Insomuch as the writings of any author are the means of leading men and women to live a more upright and God-like life, those writings are inspired.

Our critic intimates that the course Mrs. Eddy has pursued has defeated God's purpose in bringing Christian Science to the mass of the people because of the price of the literature, whereas the wonderful growth of the movement shows the wisdom displayed by the leader of this great cause. It is doubtful if there has ever been a religious movement that has shown such a rapid growth among all classes of people as has Christian Science. It includes some of the most cultured people in our land, physicians who have practised medicine for years, judges, editors, lawyers, bankers, men of large business interests, and many in the common walks of life. The testimony of its adherents shows that Christian Science is a mighty power in overcoming evil, hence is of God, for such works cannot proceed from an evil source.

It is the privilege of every author to make such changes or revisions from time to time as he desires. After years of study an artist may see how he may give further ex-

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

pression to some great painting. So with authors. At first they may but faintly see the spiritual thought they desire to express, and later they may more clearly behold the truth, hence may more clearly state it.

Our critic inquires if "All is infinite Mind and its infinite manifestation," why it is we should feel called upon to speak to "erring mind," "mortal mind," and treat it all through the book as if it had an actual existence. The Bible teaches that God is All-in-all and beside Him there is no God, yet it speaks of many forms of sin that are to be met and mastered in human consciousness before we fully realize the truth of God's allness and omnipresence. We must have the true statement of being presented before we can work out the problem. Jesus taught we should be as perfect as the Father. Here is the perfection of Christianity set forth, but humanity must start from where it is and work up to that state of consciousness. To the human sense of things, sin and disease exist as a stern fact, and they are to be overcome through the right understanding of God. To the novice, false tones exist and prevent him from expressing harmony, but as his thought becomes attuned to the laws of music these false tones disappear. As mankind better understands God and is governed by His law, sin and sickness will begin to disappear in the way Christ taught. As false tones have no existence in the basic law of music, neither have sin, sickness, and death any existence in the divine Mind, God. The beloved disciple, John, speaks of the time when there will be no more pain, sorrow, sin, and death.

The honest, grateful person is always willing to fulfil the Scripture, that "the laborer is worthy of his hire," as well for help received in Christian Science as for services rendered by a physician. It would be wrong to expect a doctor of medicine to give all his time to helping humanity and receiving nothing in return; and when the physicians fail, and patients are healed in Christian Science, they are willing to make some compensation in return, but if they have no means to give they are not turned away without help.

Christian Scientists are professed Christians, endeavoring to obey to the best of their understanding what Jesus taught, and his command to heal the sick applies no more to them than to other professing Christians. Christian Scientists are endeavoring to obey this command as well as to preach the Gospel. Healing the sick through Christian means is a practical application of Gospel preaching, such as Jesus gave to the world.

A mistake on the part of a beginner to solve a problem does not prove mathematics to be false. Neither does a failure in Christian Science prove the principle to be erroneous, but such instances inspire Christian Science practitioners to strive more diligently to understand better the promises of the Master.

There is no question but that Moses could best manage the children of Israel, as God called him to this work. In Jesus' day many were dissatisfied with the course he pursued, and so it is not strange that our critic should want to find fault with the course Mrs. Eddy thinks best to further the cause of Christian Science.

The time given by Mrs. Eddy to the promulgation of Christian Science through her works is healing more people than she could possibly reach should she devote her time to personal healing. The work she is accomplishing is making it possible for her followers to heal the sick, and they are doing it beyond a shadow of a doubt. There is scarcely a city in our country where may not be found living witnesses of healing through Christian Science.

In the wilderness the devil would have Jesus make bread out of stones, but his reply was, "Man shall not live by bread alone, but by every word that proceedeth out of the mouth of God." Later, when he did his mighty works his critics said he did them through Beelzebub, the prince of the devils. When upon the cross the rulers derided him, saying, "He saved others; let him save himself, if he be Christ, the chosen of God," and the soldiers also mocked him, coming to him and offering him vinegar, and saying, "If thou be the King of the Jews, save thyself."

Despite all the persecutions and misrepresentation of Jesus, he still went about doing good, healing the sick and helping suffering humanity in every way, and while the critics of Christian Science are to-day misrepresenting its teachings, its followers are going about healing the sick, endeavoring to reform the sinful and comfort the sorrowing, meekly trying to follow in the footsteps of Christ.

LYOYD B. COATE.

In *Mechanicsburg* (O.) *News-Letter.*

## Many in One.

Editor of *The Patriot.*

From the "multitude of counsellors" that you have evoked among the women of Concord, many pregnant plans must have come as to the beautifying of our city, and one can hardly hope to add anything of value. But a few suggestions have been made to me that seem much to the point.

Obviously, one good way to make Concord beautiful is sedulously to care for the beauty she already possesses in such large measure—and a great feature of that beauty is her trees. It makes little difference what the season may be,—the naked branches thrown against the winter sky, the tender, filmy green of the spring-time, the ripe stateliness of summer, thick with shadows, or the harlequin dance of autumn,—at all times our trees are a blessing that perhaps we do not half appreciate just because we are so accustomed to it. When a man says, "Come, let us cut down a tree," he rarely thinks of the decades of sunshine and rain that have gone to make that tree, and that must go to make another like it. At the northeast corner of the new city building there stood, until a very little while ago, a shapely maple, thirty years old or so. The hearts of some of us burned within us one day when we saw how that tree had been mutilated,—"butchered," as I heard it well expressed,—in order to meet the supposed exigencies of the fire alarm system. Why? Because, forsooth, some baby cyclone, wandering down the valley of the Merrimack in a visionary future, might blow it over and break some wire! The tree will be cut down and the wires will be safe, but it reminds me, Mr. Editor, of the young woman who, sitting one day in front of the kitchen stove, burst out all at once into wild weeping. Everybody in the place rushed to her in dismay to know what the cause for such grief might be, and at last in gasps it came,—"I was thinking what if brother Frank should come on from Minneapolis next year with his wife and the baby, and one of the lids should fall off the stove and kill the baby!"

In the same connection, it would be a good thing if Arbor Day were more generally observed here. A few trees systematically planted every year would be a fine thing for our city. When a tree dies, why shouldn't the man living nearest replace it? When a new street is laid out, why shouldn't the city plant trees on either side of it before pronouncing it finished? Somebody took pains, years ago, to give us the elms and maples on Main and State Streets and the beautiful row on Merrimack Street. Somebody now ought to replace those that went down in the storm last summer. We hand down fountains and statues and government buildings for posterity,—why not trees?

One delightful custom here in Concord, happily spreading every year, is the planting of tulips and daffodils around our homes in the fall, so that, all at once, after the snow and ice, there comes a day when we tread on rainbows, and sunshine seems to burst from the ground under our feet. It is a gracious way of making our city lovely, and those who do it can hug to their hearts the assurance

Digitized by Google

that they have "wrought a good work." But like Oliver Twist, we cry "More! More!" There's a fine place for a tulip bed, later in the season to be replanted with geraniums or the like, in the corner of the Public Library grounds. The planting of trees and shrubbery on government property may be forbidden, but does the veto extend to a bed of flowers on the State Library grounds, or the post-office lawn,—or one of those beds of cannas and calladiums that we used to see? And why shouldn't more of the churches have vines and shubbery around their doors? A bed of bright flowers might prove a very effective "Come unto Me." One of the sweetest lessons of The Teacher was read from the petals of a field lily. Do you tell me, Mr. Editor, that such beds might not be safe from pilfering fingers? Then the sooner we begin to educate public morals the better.

One safe way to beautify this city or any other is to divorce politics from office. If a man knows how to make parks, let him make them. If he knows how to build roads, make him street commissioner whether he voted with the party that last won out or not,—and keep him street commissioner as long as he will serve, or until some man is found who knows more about roads than he does. Such a tenure of office, begetting ambition to study, to plan, to bring out good results, would do more for our city and our land than years of job work, and such will be the tenure of all office in the day that shall spell politics with a big P. The question of woman's suffrage grows daily more perplexed. Do you suppose, Mr. Editor, that we should feel obliged to change our dressmakers if they did not vote with us?

A last suggestion! One of Concord's needs has often been spoken of before, but perhaps another word may not come amiss. I refer to the forming of an antiquarian society whose business it should be suitably to mark historic spots, collect, in a loan exhibit if possible, historic relics, and preserve legendary and historic matter. The New Hampshire Historical Society does some part of this work to be sure, but much more might be done. Delightful as our city is, Concord is nevertheless not more remarkable for natural beauty, for architectural features, or for culture, than many another charming city of New England, but she *is* remarkable and historic above all the rest in one respect, —that here is the home of Mrs. Eddy. Just how remarkable and historic that fact makes Concord, future years will reveal, as the scope of Mrs. Eddy's contribution to the world's philosophy and life becomes still more widely understood. Meanwhile hundreds of people from all over the world are yearly our guests, to whom the work of such a society as this would be of lively interest, as well as a boon to us who are so happy as to live here.

Our city has been fortunate in having several parks given it by some of our public-spirited citizens, and the city should appropriate funds to keep the same, to beautify them, and to secure as many more as possible whenever an opportunity occurs. Very much might be said on this topic. Private individuals are doing much in improving their property in this direction which adds much to all our drives in the city. To increase this interest the city should be first and forward to help on this good work. CYRENE EMORY.

In *Concord* (N. H.) *Patriot.*

---

In the *Patriot* of a few evenings since was a news item telling how different religious organizations in this city offered the use of their churches to the members of the Christian Science Church while their new edifice was in course of erection. The spirit behind the courtesy, kindness, and thoughtfulness is one deserving of applause in every community. It evidences a breaking away from the narrow prejudices of the past, and the recognition of a broader and more catholic and Christian era of feeling.

The *Concord* (N. H.) *Patriot.*

## The Final Meeting.

THE final meeting in Christian Science Hall last night [June 3] was full of interest. A large number were in attendance not only from Concord but visitors were present from Littleton, Lancaster, Boston, and elsewhere.

The deep sense of appreciation, manifest by reason of the active preparations for the handsome new church presented by Mrs. Eddy, was accompanied by a natural regret at the thought of parting from a place so dear to all.

It was in the fall of 1897 that Mrs. Eddy purchased, and after remodeling presented, Christian Science Hall to the Concord Church. Here she preached March 4, 1898, and in November of the same year she taught a class of seventy. At various other times she has addressed her students here.

For more than five years, therefore, this beautiful hall has not only been the church home of the local congregation, but here have been the reading rooms and the headquarters of Scientists from this and all lands.

The announcement of the manifestations of fraternal good will from sister churches in Concord brought forth many expressions of gratitude. St. Paul's Episcopal Church expressed their willingness to have their Memorial Hall used as a temporary place of worship. The Unitarian Church has extended the privileges of their beautiful edifice so long as it shall be needed. This permission has been accepted, and until further notice the services of First Church of Christ, Scientist, will be held on Sunday at three o'clock and on Wednesday evening at half past seven in the Unitarian Church.—*Concord Evening Monitor.*

---

## A Grateful Response.

WE are glad of the permission to publish the following letter to our Leader:—

Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

*Dear Mother:*—I write you a word of the many thanks in my heart for your article "Now and Then" in the last *Sentinel.* It has brought me peace in the midst of a struggle with the problem of *pledges.* I could not see pledges in Principle. I could not see how one could scientifically pledge a future which is not ours; and in reality has no existence.

The temple at Jerusalem was not built on pledges, nor the Mother Church. The spontaneity and abundance of the contributions at the time the Mother Church was built, have been a light which has lighted me through many a dark financial strait, and I expect even greater help from this present demonstration.

"Now and Then" has lifted the burden from one troubled heart and probably from thousands. Thank you again, dear Mother.

Gratefully and lovingly, your student,
ELLEN E. CROSS.

June 1, 1903.
1201 North Charles Street, Baltimore, Md.

---

Let nothing disturb thee;
Nothing affright thee;
All things are passing;
God never changeth.
Patient endurance
Attaineth to all things.
Who God possesseth
In nothing is wanting:
Alone God sufficeth.

From Longfellow's translation of "Santa Teresa of Avila."

## The Lectures.

### At Auburn, Me.

Auburn Hall was well filled Sunday afternoon, May 24, to listen to the able address upon Christian Science by Carol Norton, C.S.D., of New York City.

This is the fifth lecture of the kind given in Auburn by First Church of Christ, Scientist, and was attended by a larger number of people than any previous one.

The lecturer was introduced by ex-Mayor William H. Newell of Lewiston in a few well-chosen words.

*Lewiston Journal.*

### At Johnstown, Pa.

Judge William G. Ewing of Chicago addressed an audience of fair size at the Johnstown Opera House last evening [April 14], the theatre being more than half filled and the assemblage intelligent and appreciative.

Attorney Percy Allen Rose introduced Judge Ewing, and in the course of his remarks paid a tribute to the local followers of Mrs. Eddy.

Judge Ewing spoke for something over an hour and held the attention of his audience to the last word. While he was embued with the merits of Christian Science and believed firmly in its doctrine, he did not advance anything offensive toward any of the other established sects, and impressed his hearers as being a very tolerant and scholarly man.—*Johnstown Tribune.*

### At Springfield, Mass.

Carol Norton, C.S.D., of New York delivered an address on "The Teaching of Christian Science" before an audience of more than one thousand people in Court Square Theatre yesterday afternoon [May 10]. He was introduced by Rev. Dr. Philip S. Moxom.

*The Springfield Republican.*

The introduction of Dr. Moxom was as follows:—

*Ladies and Gentlemen:*—I suppose that to me was extended the honor of being invited to introduce the speaker of the afternoon, not because I should appear as a representative or advocate of the system of religious truth represented by this body, but because, if any reason were needed, I have always believed in the right of private inquiry and private judgment, and of free speech; and the same liberty and tolerance that I would claim for myself as a religious teacher, I would demand for every other sincere and earnest soul. I am therefore willing and glad to stand here to-day to present to you one who comes from another city as an expounder of the teachings of what is known as Christian Science. It would not become me to offer either any exposition or any criticism of what it seems to me is not quite happily named, but which arises as a very significant protest against the sweeping force of materialism in our religious and social life, and which, in part at least, derives its growing power from its intense idealism, from its sense of the reality of Spirit and the spiritual life. As such I believe it is destined to great service to humanity. It stands upon its claims as verified and vindicated by experience. The supreme test of every doctrine is experience; that test is bound to be applied to every theory of the world and life with the utmost rigor. I am glad to have every system of thought which calls for the adherence and support of men come frankly into the open, that it may undergo the test of criticism and life, and I am sure that whatever system of thought does that, and survives, has demonstrated its vitality and truth, and therefore its power. I do not imagine that everything which Christian Scientists have advocated, or which they hold, will stand the criticism. If, as its friends and adherents believe, it is a true message to the minds and hearts of men, that message will stand, it will do its work, and the organization which is inspired by it will grow from more to more. If it is not a true message, then it will simply follow the course of a thousand other attempts to interpret life by new views of God and of man. I personally believe that there is a great truth, a very great truth, that has been to some extent neglected, which needs utterance and which needs all the emphasis that can be given to it by eloquent expression, and that truth is the supremacy of Spirit, and can be only good for all classes of men and women throughout the world. Therefore it is in the spirit of the utmost catholicity, with entire sympathy with every endeavor to lift up the human mind and set free the human heart and with every endeavor to make God better known, that I stand in this place and welcome him whom I shall introduce to you, Mr. Carol Norton, who will speak on the "Teaching of Christian Science."—*Correspondence.*

### At Chicago, Ill.

Judge Septimus J. Hanna, C.S.D., of Boston, delivered a lecture on Christian Science at Marlowe Theatre, Friday, May 1, before an audience of over twelve hundred people. The lecture was given under the auspices of Fourth Church of Christ, Scientist, Chicago. Judge Hanna was introduced by the First Reader, Mr. Le Noir White, who spoke in part as follows:—

*Ladies and Gentlemen:*—If I were asked, What is it that convinces you that Christian Science is of Truth, my reply would be, that its works, as the result of its teaching, furnish proof that it is the fulfilment of the promises of God.

But unbelief and misconception always have gone together in the effort to prevent the fulfilment of the promise. Bible history is full of the travail and sufferings of the Children of Israel, because of the conflict between faith and hope, doubt and unbelief. When the Christ was at last made manifest, and Jesus of Nazareth went forth preaching the gospel of the kingdom of God, his teachings were scoffed at and rejected, notwithstanding the mighty proofs he offered, wherein the sick were healed, sin was destroyed, and the dead raised to life.

But nothing could, or can, make void the eternal purpose of God, hence has come to pass, in this day and generation, the reappearing of the fulfilment of the promise; for unto mankind is it again given to know God and to understand the power of his Christ. Again are the works of evil being destroyed, sin is being taken away, disease is being overcome, and sick and sorrowing humanity is finding that a Comforter is at hand which brings liberation from the bondage of fear and of despair; and the name of the Christly message and messenger is Christian Science, whose Discoverer and Founder is the Rev. Mary Baker G. Eddy.

But again unbelief and misconception strive to keep humanity in ignorance of the blessing promised and furnished of God. In order that the subject of Christian Science may be better understood, and misconception be done away with to the greatest possible extent, The First Church of Christ, Scientist, of Boston, Mass., has established a Board of Lectureship, the purpose of which is to make proper reply to popular misconception, and to present to the public mind clearer views of the teachings of Christian Science.

We have with us to-night, one of the members of this Board, and I now have the pleasure of introducing to you Judge Septimus J. Hanna.—*Correspondence.*

## Annual Meeting and Communion Notes.

THREE services will be held Communion Sunday, June 28, in the Mechanics Hall Building, Huntington Avenue, at 9 A.M., 11.30 A.M., and 2 P.M., with additional services later in the day if necessary.

The Annual Meeting will be held on Tuesday, June 30, at 2 P.M., in the same building.

A meeting of Executive Members (formerly called First Members) will be held Saturday, June 27, at 9 A.M., in the Mother Church.

The Mechanics Hall Building will be the headquarters for all committees, and will be open daily from 9 A.M. to 9 P.M., Thursday, June 25, to Wednesday, July 1.

The Mechanics Building has been engaged for continuous use from Thursday, June 25, until after the Wednesday evening meeting on July 1, and during the time that it is not in use for the regular exercises, it will be free to visitors as a central rendezvous both day and evening.

The Wednesday evening meeting will be held in Mechanics Building, July 1, at 7.30 P.M.

Those planning to attend the Annual Meeting may have their mail addressed in care of The Christian Science Publishing Society, 95 Falmouth Street, and it will be delivered to them at the Mechanics Building when called for between the hours of 9 A.M. and 9 P.M., June 25 to July 1 inclusive.

A committee on securing rooms in private houses for visitors who do not wish hotel accommodations, will be in session at Mechanics Building, Thursday, Friday, and Saturday, June 25–27, from 9 A.M., to 9 P.M. each day. No arrangements can be made in advance by correspondence with this committee, but all who apply to them in person upon their arrival in Boston will be cared for.

Visitors who desire hotel accommodations should make personal arrangements with the hotels, as this committee cannot undertake to make provision for them. Those who have not yet arranged for their rooms at the hotels had better do so at once, since the demand is very great.

Those who are planning to find a home through the reception committee will, on arrival in Boston, please leave their checked baggage at the depot and bring their checks to Mechanics Hal., where an agent will be in attendance to arrange for its delivery when their location has been provided for.

### RAILROAD RATES AND ARRANGEMENTS.

THE New England Passenger Association; *i.e.*, all rail and steamer lines within the New England States, has granted reduced rates on the following basis.

"Round trip tickets will be sold and good going June 27–July 1, returning June 28–July 2, at the following rates:

"Two cents per mile from points within twenty-five miles of Boston; one dollar from points from twenty-five to thirty-three miles of Boston; one and one half cents per mile from points more than thirty-three miles from Boston.

"Tickets will be put on sale only at points from which the lines interested are advised of probable attendance.

"From New York City, one fare for the round trip; tickets good going via all rail lines beginning on the eleven o'clock and midnight trains on June 26, and on all trains (excepting special limited all parlor car trains) June 27–30, returning June 28–July 2. Via Sound Lines tickets good going June 26–30, returning June 28–July 2."

From Trunk Line Association; *i.e.*, territory West of New England but east of and including Toronto, Niagara Falls, Buffalo, Dunkirk, Salamanca, Erie, Pittsburg, Bellaire, Wheeling, Parkersburg, and Charleston, W. Va., one fare plus $1.00 for the round trip; tickets to be sold and good going June 26–29, good returning June 28–July 2, but must be stamped and vised at Station Ticket Office prior to July 2.

By deposit of ticket with Joint Agent, Walker Building, Massachusetts Institute of Technology, corner Boylston and Clarendon Streets, Boston, not earlier than July 1 nor later than July 4, between the hours of 8 A.M. and 6 P.M., and payment of fee of fifty cents at time of deposit, an extension of return limit may be obtained leaving Boston not later than August 1, 1903.

From Central Passenger Association territory; *i.e.*, west of Trunk Line Association territory as above and north of the Ohio River, east of Lake Michigan, and east of and including Chicago, Peoria, Quincy, Keokuk, Hannibal, and St. Louis, one first-class fare for the round trip, tickets to be sold and good going June 25–27, with return limit and extension privileges same as Trunk Line announced above.

Stop-over may be obtained at New York on return trip on tickets reading via New York, provided tickets have been validated in Boston and are deposited with Joint Agent at 13 West 24th Street, New York City, immediately on arrival, and payment of fee of $1.00; but in no case will the stop-over at New York extend beyond August 1. Joint Agency open between 8 A.M. and 6 P.M. daily from June 29 to August 1.

Lines south of Trunk Line Association territory (Southeastern Passenger Association) have announced rates via Savannah or Norfolk and Steamer of one fare plus $6.00 for the round trip, and via all other routes one fare plus $2.00 for the round trip.

The Western Passenger Association; *i.e.*, lines west of Central Passenger Association territory, have named "One lowest regular first class tariff fare to Boston and return."

The Canadian lines and lines through Canada have concurred in the arrangements, and will sell tickets at one fare for the round trip.

The Plant Line announces that it will make half rates from Halifax, Hawkesburg, or Charlottetown, good going to Boston any time during June and returning to and including July 4th sailing.

The Intercolonial Railway of Canada will make reduced rates from points on its line to Halifax, St. John, and Boston.

The Field are advised to consult their local ticket and passenger agents for full information, and it is suggested that purchasers read the contract on the ticket and have the selling agent explain any provisions not fully understood.

## Meeting of Normal Graduates.

A MEETING of the normal students of the College who have graduated under the auspices of the Board of Education will be held in the Mother Church on Wednesday morning, July 1, 1903, at nine o'clock.

### Reports from Branch Churches.

Reports from Branch Churches to be read at the Annual Meeting of the Mother Church, to be held June 30, 1903, must be typewritten and be sent to the Clerk of the Mother Church in time to reach him on or before June 22, 1903. These reports are expected from all churches.

No report should occupy more than two minutes in reading.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## The Brotherhood of Man.

In commenting upon the recent refusal in Pennsylvania to grant a charter for a Christian Science Church, *The Universalist Leader* has the following to say, "As an organized form of religion, with particular beliefs and its multitude of believers all over the country, it stands in the same relation to the general public as do other churches, and is equally with them entitled to protection and all the privileges granted to other bodies of believers. If at any time members of this singular communion so conduct themselves as to come in conflict with the law in the administration of their beliefs, let them take the consequences; but to deny the Christian Scientists the right to organize under charter of the state, is an unjust discrimination against them as a sect or body of believers. Such a decision, if formulated into law, would resemble the obsolete statutes in some of the states which denied the oath to Unitarians for non-belief in the Trinity and to Universalists for non-belief in eternal hell-torments."

This expression in behalf of individual religious liberty, appearing, as it does, in the official organ of a denomination not in sympathy with many of the teachings of Christian Science, is as pleasing to Christian Scientists as it is creditable to the broad-minded editor of the *Leader*. There was a time, not so long ago as "when the memory of man runneth not to the contrary," when the slightest mention of another's religious belief aroused feelings of anger and resentment; when persecutions from the most petty to the most barbarous stirred no protest. The progress of the world is not more apparent in the remarkable mechanical and material achievements of the century just closed than it is in the spirit of tolerance always expected and usually observed in current religious discussions.

In line with this increase of Christian tolerance are the following words of President Roosevelt on the occasion of the dedication of Grace Memorial Reformed Church in Washington:—

"We must in our lives, in our efforts, endeavor to further the cause of brotherhood in the human family; and we must do it in such a way that the man anxious to find subject for complaint or derision in the churches of the United States, in our church, may not be able to find it, by pointing out any contrast between our professions and our lives.

"This church is consecrated here to-day to duty and to service, to the worship of the Creator, and to an earnest effort on our part, so to shape our lives among ourselves and in relation to the outside world that we may feel that we have done our part in bringing a little nearer the day when there shall be on this earth a genuine brotherhood of man."

The ministry of Mrs. Eddy, the Discoverer and Founder of Christian Science, has been a gentle but persistent leading toward this "genuine brotherhood of man," and humanity has been blessed by her labors. What this brotherhood is, and how it is to be attained, is foreshadowed in her book, "Science and Health with Key to the Scriptures," p. 340:—

"'Thou shalt have no other gods before me.' (Exodus, xx. 3.) This First Commandment is my favorite text. It demonstrates Christian Science. It inculcates the trinity of God, Spirit, Mind; it signifies that man shall have no other spirit or mind but God, eternal good, and that all men shall have one Mind. Its divine Principle bases the Science of being, whereby man demonstrates health, holiness, and life eternal. One infinite God, good, unifies men and nations; constitutes the brotherhood of man; ends wars; fulfils the Scripture, 'Love thy neighbor as thyself;' annihilates pagan and Christian idolatry,—whatever is wrong in social, civil, criminal, political, and religious codes; equalizes the sexes; annuls the curse on man, and leaves nothing that can sin, suffer, be punished or destroyed." M.

## Likeness the Basis of Interpretation.

The law that like begets like, on which Christian Science bases its declaration that man, the offspring of Spirit, is wholly spiritual, is attended by another law of kindred deep import; namely, that only like can apprehend like.

This is enunciated by Paul when he says, "they that are after the spirit, do mind the things of the spirit," and by John when he links the realization of our kinship with God, to our perception of the divine perfection. (John, 3 : 2.) We have long since learned that a just estimate of men, the true interpretation of their thought and life, must always be sympathetic. We recognize that a music critic must be a musician, that an unartistic nature cannot express the true values of an artist's ideal or achievement, and for the simple reason that he cannot perceive them. Respecting many other things, the culture and common sense of the world have adjusted themselves to the law that like is apprehended only by like; but in the realm of religious thought it is to be seen that the story of the past is, in large part, a history of man's stupid or unconscious attempt to violate this law. The appeal of the spiritual has always been placed at a disadvantage in view of the pettiness and distortion of that human concept which has undertaken to predetermine the form and order of its presentation.

This tendency to array the things of spirit in the fustian and feathers of human sense has long since become a habit, and humanity has grown so accustomed to the exhibition that when at long intervals some one has awakened to the incongruity and irreverence of the performance, and has risen in protest and appeal, he has been declared heretical and excluded from the synagogue. Religionists have ever been most zealous for the preservation of their idols, and the more uncouth and forbidding the caricature, the more fervid, ofttimes, has been the rally to its defence.

Naturally the most lamentable results of this habit have pertained to the imposition of the limitations and associations of common thought upon our concept of God. The human conceit of the anthropomorphic nature of God, His impulses and ordering, may be found on well-nigh every page of the Old Testament, and it may be said that it is not entirely absent from the apostolic writings.

This is not at all surprising. Under the given conditions it could not have been otherwise. The inability of the finite adequately to apprehend or express the infinite, is no less manifest to-day than in the past, but we are awakening to the fact of the inability, and this means much. It means that the thought of the infallibility of antiquated creedal statements of spiritual truth, is fast passing away. Further, men are seeing as they have never seen before, that the highest, noblest, and therefore most authoritative concept of Truth, will be most naturally and fittingly expressed in those present realizations which are attended

Digitized by Google

by the spiritual demonstrations that Jesus said would attest the presence and sovereignty of the right idea, the Christ, in all times.

It means we are becoming more teachable, more accessible to Truth, and less satisfied with the undemonstrable propositions of our past belief.

Distrust of the reliability of human sense, is the first step toward escape from the possible deceptions of human sense. As we grow to be more God-like, our apprehension of God becomes more spiritual and self-consistent, and "Perfect God and perfect man" comes to be more and more "the basis of every thought" (Science and Health, p. 257). The stream of sequential ideas and impulses is thus purified and ennobled, and we are made worthy of that ministry to which every God-like man is called, and which renders him a source of inspiration and strength to all about him. W.

## An Evening Query.

WHO has been the guest of the day?

When the glad greeting of the morning sunshine banishes the dream of night, two guests come knocking at the door of consciousness. One radiant with gladness and gratitude, aglow with the activity of life and love, asking of the day only time for the service of God and man, and knowing but one law,—harmony; the other anxious, full of suggestions of apathy, of discontent, of fear; self-distrusting, whispering persistently of discord, arguing for heredity, for temperament, for material pleasures, material necessities, even material pain. What gruesome fascination is there claiming a power to hold us to the spectral, the counterfeit, the false, even while we know we are in the very presence of purity and peace and joy?

This our morning experience is unique, although it obtained in the Garden of Eden and has been prompt at the awaking of every son and daughter of Adam down to this very morning. Unique, in that guest is host and host is guest and both are claiming to be *I*.

Whether the days be bright and blithesome or dark and doleful depends upon which of these guests occupies the house. If we take up the joyous refrain, "I'm glad and grateful, Love is true, Life is all, and God is good, hearts are kind, happiness is mine;" then the dawning light takes on a roseate glow and the hours winged with good deeds speed away, leaving each a blessing to hallow the coming twilight.

But sometimes, as if we spoke them, the words are heard, "Another morning! dark, drizzling, dreary. I'm weak and tired of the struggle." These phantoms of error cunningly masquerade in robes of truth, and unless we agree with the adversary quickly, and recognize it while we are able to deny its reality and see the subtle suggester as not "I," but a counterfeit, our day will sink into a brooding twilight, the fulfilment of whose gloomy prophecies will be entailed upon to-morrow. Too late we shall find that we are in the shadow, that we have entertained the wrong guest.

This duality is only seeming. It is the forbidden fruit. The reality is one abiding presence, Love,—one I, Love's reflection. The host and guest are in reality one, the true man, the image and likeness of God. Let us throw open the door and entertain royally this, our only guest, right consciousness,—the true self. S.

## "A Sweet Love-Offering."

A PLEASANT incident in connection with the new church building in Concord was the receipt by Mrs. Eddy, a few days ago, of "a sweet love-offering of two hundred dollars for the Leader's Room in the Christian Science Church at Concord, N. H." With the gift was the following message:—

"With the love of the children of First Church of Christ, Scientist, New York City, for their dear Mother."

In line nineteen of the editorial "God's Giving, Abundant," of our issue of June 6, the word *infinite* should have read finite. This error appeared in only a part of the edition.

## The Ounce of Prevention.

CLARENCE W. CHADWICK.

THE twofold mission of Christian Science is not always apparent to beginners. They are very prone to magnify its curative features and even to go out of their way to tell their friends what Christian Science will do for them. It is a point that they are sometimes inclined to be over-zealous about, not realizing that the physical healing is but one step out of matter into the realm of reality. The next all-important step is to learn how to forestall disease, and then begins the practical application of a law which is found to be just as efficacious in preventing disease as in curing it.

The Master once said to his students, "If ye know these things, happy are ye if ye do them." We are all placed in just this position. We know a great deal of the letter of Christian Science, and when in need of physical help we are very devoted to our Science, declaring that we have lost all faith in medicine, and that we are very sure that Christian Science can help us. And Christian Science does help us, and in its infinite compassion it helps us again and again. But there comes a time when the desired help does not come so speedily, and we begin to wonder why.

The reason is pain to any one who has had this experience,—he has failed to make use of the ounce of prevention which would have been worth more than a pound of cure. In time of peace he has not prepared himself for war. Neglected opportunities now stare him in the face and he learns a severe lesson, but a most needed one. One makes little use of his talents if he sits idly by and only in time of dire distress applies Christian Science simply as a curative agent. It is the daily application of its teachings, especially in time of peace, that attests our love of God and our gratitude for what Christian Science has done for us. Christian Science is the panacea for all the ills that flesh is heir to, but it is not a medicine chest to be drawn upon at will. It is not a patent "cure all" system that can be bought or influenced by human will or wisdom. Christian Science reveals to us a Principle, obedience to which heals men physically, morally, and spiritually. Mere belief in this Principle does not heal or save us, but intelligent obedience to its demands accomplishes everything.

There is frequent occasion to say to students and patients, "You can well afford to labor for an understanding of Christian Science, for you will not only learn how you are healed, but you will learn how to protect and keep yourself well in the future." The tendency of human nature is to "let well enough alone," but this is fatal in Christian Science. We cannot rest upon what Science has already done for us, but must place ourselves in a position to receive more and more of its truth all the time. There must be the unselfish desire to live it and love it, and unless this desire is exercised, the time soon comes when we find little comfort or consolation in its teachings.

It is even more needful that we overcome and prevent the experience of sin than of sickness; indeed, this is the higher work that confronts every Christian Scientist. It is the key to health, happiness, and success. The healing

Digitized by Google

of sin is a distinctive feature of Christian Science that separates it from all other systems. Too great stress cannot be laid upon this one point, for the Scientist soon learns that unless he handles and overcomes sin, he fails in his effort to heal disease. Spiritual food is a daily need, and we cannot expect to succeed unless we partake of it. Do we, as Christian Scientists, partake of it regularly and systematically? Do we keep constantly in thought that we must seek "first the kingdom of God and His righteousness"? Do we rely upon Christian Science to handle every problem that confronts us, whether it be called mental or material? Are we just as earnest and industrious in using the ounce of prevention as in applying the pound of cure? If these questions cannot be answered in the affirmative, let us remember these Scriptures: "Not every one that saith unto me, Lord, Lord, shall enter into the kingdom of heaven; but he that doeth the will of my Father which is in heaven;" "For the letter killeth, but the spirit giveth life."

---

## Strife and Striving.

SAMUEL L. MYERS.

ONE in high position has given utterance to this sentiment: "The law of worthy individual life is fundamentally the law of strife."

It can readily be observed that wondrous meaning is concealed in the adjective "worthy." The question may be asked, what is an unworthy "individual life"? Also, whether there is not a strife in such a life?

Our text-book, in answer to the question "What is Life?" says, "Life is divine Principle, Mind, Soul, Spirit, without beginning and without end" (Science and Health, p. 468).

Our best authorities give the definition of strife to be, "Exertion or contention for superiority; contest or emulation, either by intellectual or physical efforts."

It can be argued from a mortal mind view, that strife enters largely into the motives and actions of human beings. Not having a clear conception of what Life is, they are led into highways and hedges of mortal existence by the *ignis-fatuus* of mesmerism and animal magnetism, either acquired or self-imposed.

Admitting that strife and its correlative thought are unscientific, the only condition of consciousness among Christian Scientists is that of a noble emulation. They best can work who best agree. From this state of mind the law of strife is excluded, as not being a "fundamental law." It is this scientific consciousness which is ever ready to listen to the silver speech of Truth in its sweetest tones, because the spiritual hearing is quickened. It is then and then only that the "law of worthy individual life becomes fundamentally the law of harmony."

The seeming strife which is manifested in some issues of the press and from the pulpit about Christian Science will have its day, and is destined to become as the tale which has been told, or an idle dream. Christian Science has already helped to cast down some idols from their pedestals and to grind to impalpable dust some of the links in the chains that held humanity in bondage. No doctrines can be apprehended as truths if they contradict each other, or contradict other truths given us by God.

The imprecations which gave a lurid coloring to some of the sermons of a century ago were hurled at hearers for many years. Reading them to-day, after the onward strivings for truth have shed a softening ray upon their adamantine severity, they leave no impression, unless it be one of pity that such brilliant men wasted their energy in beating the air.

Compare the theology of Calvinism with the message in Science and Health, and we realize the effect of truth's seeming slow but ever forward tread.

However deep the incrustations of mortal thought have seemed to cover the true apprehension, the time approaches when the striving will cease, and the Science of Being in all its beauty will bless mankind. The strife of error's claims to be recognized will cease to be heard by the devotees of truth.

The universal acceptance of Christian Science is not yet a fact. Although the strife of mortal mind is growing less and less, yet we cannot say that the millennium has arrived. The strife of beliefs still goes on.

The various methods of mortal thought manifested by the followers of the world's great moral leaders, when considered in the noonday brightness of Christian Science, are but the strivings of mortal thought to reach a higher plane; and they will in God's good time lead the misguided ones to an acceptance of the teaching and practice of the man of Galilee.

Christian Science is based on absolute facts which Jesus taught, lived, and demonstrated. While his human life was a strife against all sin and error, the ultimate and determinate fact was his resurrection and ascension, proving beyond question that it is Spirit, and not matter, that is finally triumphant.

Knowing that man is immortal, and that the infinite God loves us all, we can look upon the strife of the world, and see that it is only the hour before sunrise, that the pure light of Christian Science is coming,—so we also may lighten the darkness of mortal mind.

In reading carefully the history of Abram, we see a demonstration over the strife manifested by the herdsmen. His words to the tumult were, "Let there be no strife, I pray thee, between me and thee;" his main thought was obedience to the command of God. When we remember, that among pagans and idolaters, here was one man who took God at His word; left kindred and home to go into a strange land, not even questioning the results; his striving to demonstrate obedience is an object-lesson to our spiritual eye, whether the calls of Truth come as the "still, small voice" or the sonorous sounds from Sinai's mount.

Truth conquers, but often slowly. Error claims to have a wondrous vitality. We never know at what moment success awaits our strivings against error,—generally when most unexpected,—nor with what effect our strivings are or are not to be attended. Christian Science should not be a mere watch-tower, built upon mystery, from which to gaze at ease upon the world, with no other result than to be a convenience for the curious. The province of Christian Science is to hold the full cup of truth to the thirsty lips of mankind,—to give better and more true ideas of God.

"Strive to enter in at the strait gate: for many, I say unto you, will seek to enter in, and shall not be able." These are the words of our Master, who knew human frailties. It is not the striving which is prohibited, but it is the strife engendered by the multitude of those entering the gates opened for choice to mankind.

It is just at this point of choosing the strait gate that the Pandora box of mortal mind is presented by so-called reformers in the realm of ethics. As Christian Scientists we are not opposing the various sects in religion, in so far as they follow the Sermon on the Mount, but what we do deplore is the lamentable fact that after nearly twenty centuries of what is termed salvation, we find that sin, disease, and death have not been lessened as they need to be. Is it any wonder that mankind are striving to find another gate through which they may enter, and find health, happiness, relief from sin and sickness?

Let us lay aside the statement that "the law of worthy individual life is fundamentally the law of strife," and cling steadfastly to the great fact in Christian Science, that God whose government is harmonious, is the only Life.

As we are awakened from the dream of life in matter we

Digitized by Google

re brought "face to face with the laws of infinite Spirit, nd behold for the first time the irresistible conflict between ıe flesh and Spirit. . . . Then it is, that you (we) behold or the first time the divine Principle that redeems man from nder the curse of materialism,—sin, disease, and death. his spiritual birth opens to the enraptured understanding much higher and holier conception of the supremacy of ipirit, and of man as His likeness, whereby man reflects he Divine Power to heal the sick" (Miscellaneous Writngs, pp. 16, 17).

## The Absolute.

ELSIE FORREST EARLEY.

It is probably as much the absoluteness of Christian Science that attracts attention and condemnation as any other phase of its practice. The world likes to change, —to move to and fro in its own grooves. "Anything for a change," is one of its mottoes, though it professes to love "the one altogether lovely," who is "the same yesterday, to-day, and forever." Science comes with its mighty statement of creation, "It is good," and admits of no relative positions, no comparable measures. Its condemnation by materialism is immediate and sweeping.

Is the world right, and is the statement of Science but the reckless clamor of radicals? Should it elicit the curse of vain babblings or the blessing that flesh and blood hath not revealed it? It seems that even the recounting of its works scarcely satisfies the world, and we may quickly agree with our adversary and admit the impossibility of satisfying a thought that is so far from knowing its own desires. But to those awake to their meaning, the proofs are sufficient and the hungry multitudes are being fed.

Perceiving the absoluteness of good, does not lessen creation, so we are neither robbing nor being robbed of anything. The absoluteness of Love divine does not minimize our loftiest ideals; the absoluteness of Mind takes not one iota from the universe, and the absoluteness of Truth knows no subtraction. If Science seems to take prestige from pleasure, what does it give in return but the sweet assurance of joys forever, and is this subtraction or transformation? If it seems to take reality from life as a material existence, does it not bring immortality to closer view? Is this robbery, or is it the gift of unseen riches? If it seems to take away remedial agencies, does it not remove the necessity for such agencies, thereby restoring a lost inheritance? Can we call it robbery when more is given than is taken away?

No rule is absolute save the rule of Truth, which is without a reverse in fact. Truth is nothing less than absolute; and actuality needs no halting basis of argument, divinity needs no human measurement. The dead of human doctrines need only to bury their dead, that the living law may be made plain. The commandments of Moses reached their absoluteness in the gospel of peace; and the gifts of the apostles in the unity of Christ.

No division of the riches of eternal Truth is necessary, —no rivalry among the ideas of Mind; for the blessing of one is the blessing of all; and there is Life and Truth and Love for all.

The concentration of the affections on good and their consecration to good means the opening and the keeping open of every avenue of our consciousness to the height and depth and breadth,—the magnitude,—of Infinity. Concentration and consecration are firm and constant qualities of Being, and our apprehension of them approaches perfection only as it ceases to fluctuate and is permanent and peaceful. Absolute consecration quickens the activities of virtue; for it is the recognition and inspiration of loving service in the Father's vineyard, and the aspiration toward "the kingdom, and the power, and the glory forever."

## An Interesting Possibility.

W. P. W.

In the book "Pulpit and Press," Mrs. Eddy quotes from two poems by John G. Whittier, and adds this footnote: "About 1868, the author of Science and Health healed Mr. Whittier with one visit, at his home in Amesbury, of incipient pulmonary consumption."

In the book of "Whittier's Poems," there is one entitled, "The Clear Vision." It is dated "2nd Month, 1868." While not scientific in every part, it so clearly portrays the typical effects of Christian Science that it seems not improbable that this is a recognition of that visit. Five stanzas of the poem read as follows:—

I did but dream. I never knew
What charms our sternest season wore.
Was never yet the sky so blue,
Was never earth so white before.
Till now I never saw the glow
Of sunset on yon hills of snow,
And never learned the bough's designs
Of beauty in its leafless lines.

Did ever yet such morning break
As that my eastern windows see?
Did ever such a moonlight take
Weird photographs of shrub and tree?
Rang ever bells so wild and fleet
The music of the winter street?
Was ever yet a sound by half
So merry as yon schoolboy's laugh?

O Earth! with gladness overfraught,
No added charm thy face hath found;
Within my heart the change is wrought,
My footsteps make enchanted ground.
From couch of pain and curtained room
Forth to thy light and air I come,
To find in all that meets my eyes
The freshness of a glad surprise.

Fair seem these winter days, and soon
Shall blow the warm west winds of spring
To set the unbounded rills in tune,
And hither urge the bluebird's wing.
The vales shall laugh in flowers, the woods
Grow misty green with leafing buds,
And violets and wind-flowers sway
Against the throbbing heart of May.

Break forth, my lips, in praise, and own
The wiser love severely kind;
Since, richer for its chastening grown,
I see, whereas I once was blind.
The world, O Father! hath not wronged
With loss the life by thee prolonged;
But still, with every added year,
More beautiful thy works appear.

If thou desirest true contrition of heart, enter into thy secret chamber, and shut out the tumults of the world, as it is written, "Commune with your own heart, and in your chamber, and be still." In thy chamber thou shalt find what abroad thou shalt too often lose. . . . In silence and in stillness a religious soul advantageth itself, and learneth the mysteries of Holy Scripture. There it findeth rivers of tears, wherein it may every night wash and cleanse itself; that it may be so much the more familiar with its Creator, by how much the farther off it liveth from all worldly disquiet. Whoso therefore withdraweth himself from his acquaintance and friends, God will draw near unto him with His holy angels.—Thomas a Kempis.

## For the Children.

### The Nothingness of Evil.

A. L. R.

ONE day, when quite a young child, I accompanied my father to the field where he was at work husking corn. I amused myself for a time, running back and forth through the rows of corn which towered far above my head, but presently my childish fun was changed to fear at sight of a strange man standing in my pathway ready to grasp me with his outstretched arms. I ran screaming to father, sure that the man was following, for I could hear the leaves rustling behind me. On reaching father's side, more dead than alive, I scrambled into his arms, laid my head on his shoulder, and sobbed out the words, "Oh, papa! the man is after me!" Father quickly hurried in the direction in which I pointed, and very soon came upon the innocent cause of my fright, at sight of which I began to scream again. I shall never forget father's loud, merry laugh, and his reassuring words, "Why, my little one, it is only a scarecrow;" and then to assure me still further, he unbuttoned the creature's coat, took off its hat, and showed me just a man of straw.

Many years have come and gone since that incident of childhood, and with the passing of the years, the form of the dear father has gone from our sight. But, through the sweet revelations of Christian Science, I have still a safe and sure protector, to whom I can flee in moments of fear. I turn to my heavenly Father, and am tenderly sheltered in the arms of divine Love, until I see and know that the objects of all my fears, are, after all, only figures of straw.

---

There is a little boy nine years of age, who has been healed of organic heart trouble by attending our Sunday School, and who is the only Scientist in his family as yet. He has his own pocket edition of Science and Health, and has just sent for his own *Quarterly*. His parents are wealthy people and have taken him to California and elsewhere for treatment, but without results. When he had been instructed in Science a few weeks, he was running up stairs one day, and his mother cried out, "Oh don't run so, dear; it will kill you." But his reply was, "No it won't mamma; I'm God's child now, and my heart can't fool me any longer."—F. B. J.

---

### The Housatonias.

Half a dozen Quaker ladies,
  Straight and slim and small,
In a sunny Berkshire meadow
  By a low stone wall.

"Is thee come to Yearly Meeting?"
  "Yea." "And thee, too?" "Yea."
"Verily, and thee is early!"
  "Opens next First-day."

And in truth, the next May Sabbath
  All that meadow fair
Scarce could hold the Yearly Meeting
  Set for session there.

In their little gray-blue bonnets,
  Chatting, brim to brim,
Half a million Quaker ladies,
  Straight and small and slim.

SARAH J. DAY.

## Among the Churches.

### Church Opening at St. Joseph, Mo.

At the opening morning service in the new building of Second Church of Christ, Scientist, 910 Edmond Street, every seat in the auditorium was filled, and in the evening there also was a large attendance.

The church was formerly used by the Reformed Church. It has been entirely remodeled, painted, and papered, and is now very attractive. The seating capacity is about four hundred.

Second Church of Christ, Scientist, was organized June 25, 1900, with thirty-five charter members, and since that time the membership has more than doubled.

At the close of the regular service, Mrs. Fairleigh, the First Reader, spoke in part as follows:—

Surely the days of the primitive teachings of Christ must be coming back fast and near, when crowds meet together to hear the simple and unqualified words of God read and explained in their spiritual import without either comment or explanation from the reader, and an outsider who attends the services cannot fail to be impressed with the earnest attention which is given to the reading of these lessons that mean so much to us, as we realize that the kingdom of heaven (or hell, just as we make it) is within our hearts now, while all evil will in time be burned away by the infinite love of the Father.

Then the Lord will be seen in his holy temple, "the structure of Truth and Love," and when this our tabernacle which is not made with hands, eternal in harmony and peace, our pure white city, is seen and known of all men, then indeed will all the material "earth keep silence before Him," all material claims to intelligence, wisdom, substance, glory, will be silenced in the presence of the King of Glory.—*St. Joseph* (Mo.) *Gazette.*

---

### Church Opening at McPherson, Kan.

The first step toward our church organization was made in February, 1898, when the Christian Scientists organized into a society and rented a hall for public service.

In March, 1902, we became an incorporated body, receiving a charter from the state. Shortly after this, a lot on Main Street was purchased. Before any definite action was taken in regard to building, we learned that the church building formerly occupied by the United Brethren was for sale, and in February of this year, it was purchased, the church fund in the mean time, having grown sufficiently to make full payment. The work of repairing, decorating, and furnishing was begun at once, and by May 10, all was in readiness for the opening. A part of the church has been fitted up as a reading room.

We are but a little band of members, and we feel very grateful for this successful result of our efforts. We shall endeavor to hold the church thus established true to that which it represents, and make it a worthy tribute to our beloved Leader. The sentiment of all was expressed by our First Reader at the opening service when he said,—

"This little church is an expression of our love and gratitude to the Discoverer and Founder of Christian Science, Mary Baker G. Eddy. But we know that the best indication of our love and loyalty,—that most appreciated by her,—is living close to God, and bringing out in our daily life the fruits of the Spirit."

We wish to take this opportunity to thank those who have so kindly and willingly given us their help.

*Correspondence.*

## Testimonies of Healing.

Five years ago last Christmas, I heard the words Christian Science for the first time.

I called on a colleague and found her in a very bad state of mind. She told me that she was suffering extremely with stomach trouble, and that she could neither stand nor walk. The physicians who examined her said that she must never again wear tight dresses, and must always wear a support, which she did.

She had come to Dresden to study for the stage, and this interruption made her very unhappy, for she did not know whether she would ever again be able to sing. At that time I still had confidence in physicians, and could therefore give her no comfort. About a week later I met her in the street; she walked up to me with a happy smile and said, "I am quite well now." Upon my inquiry what had wrought this change, she answered, that she had taken treatments in Christian Science. As she was a Russian, and not able to speak English, she could give me no more information, but said that an American who was a Christian Science practitioner had wrought the change. I laughed at her, called her credulous, and said, "This must be a nice, new American humbug!" I myself was at that time under medical treatment, but receiving no help. I was suffering from nervousness, which had been brought on by trouble and excitement. I had inflammation of the ears. Paralysis of the nerves, which had made life a burden to me for several years previous, was then returning, and more severe than before. I was preparing to take my examination as teacher of vocal music, but had to be excused from several subjects, and finally was in such condition that I could not hear a musical note. At night I wandered about in my room with bare feet, because I did not wish to disturb any one else; during the day I was so tired that my whole body ached. I was also having throat trouble, believing that the climate was injurious to me.

A specialist for throat disease did all he could, prescribed tonics and other medicines, but nothing helped me.

It seemed that the only thing left for me was to give up all study and lead a quiet life in the country; but I could not do that, for I had to earn my living.

In this unhappy condition, suggestions of suicide frequently came to me. But divine Love led me in a wonderful way to God, in whom I had no faith.

During the first days of March I moved to the house where my colleague boarded, and after a few days I was advised to try Christian Science treatment. Without a particle of faith I went to a Scientist, and even after my first treatment I ridiculed Christian Science. However, I went again the next day, and conscientiously followed her directions to give up medicines and all external applications.

O, blessed liberty! They only know what freedom is, who have gained some understanding of Christian Science. After a few treatments, peace came to me; I could lie still during the night, then sleep returned, and all suffering disappeared, so that after several weeks, I looked the picture of health, and my friends inquired what had wrought this change. Instead of being tired of life, a gladness, the joy of living, came over me, and this gladness has steadily grown upon me. In fact, I have become young again. What a glorious release it is to know that there is but one law, and that all cruel, man-made laws and theories are powerless.

I dare not think what would have become of me without Christian Science, and therefore it is my great desire that I may some day see and thank her who has taught us to know the only true freedom.—C. S., Dresden, Germany.

"For by one Spirit are we all baptized into one body, whether we be Jews or Gentiles, whether we be bond or free; and have been all made to drink into one Spirit."

The fact that Copernicus' birthplace was also mine, has at times given me great satisfaction. Often have I stood at the foot of his monument and admired the courage of the famous astronomer, who dared to overthrow false views in regard to our planet; yet his mission was small in comparison to that of our beloved Leader, who, in Science and Health, gives us the key to the kingdom and shows us the way into the unexplored realm of Spirit.

Born of Jewish parents and reared in their faith, I never had any opportunity to study the life and teachings of the Redeemer. For many generations Jewish children have been taught to be afraid of him. In our home we were forbidden to give utterance to the name of Jesus. When a child, I often wondered whether Jesus had committed some terrible deed to cause such bitter feelings. Then I secretly visited the religious classes of my Christian girl friends, hoping to be enlightened on the subject, and was soon convinced that Jesus' only mission had been "to redeem the world." Our Jewish religious instructions gave me but an empty form; and I always left school with an unsatisfied feeling.

After being graduated from the teachers' training school, I left Germany with my parents, who emigrated to America. Soon after, I married and then my suffering commenced. The cheerful, happy girl became a sad, anxious, troubled woman; for a number of years I saw the darkest side of life. Death took away two of my children, and after that I lost my health completely. My husband employed the best medical aid, but it afforded me no hope. As a last resort, they sent me to California, hoping that the climate there might benefit me, but it made no difference. In my despair I went to a so-called Christian Science healer and had her give me treatments. At first I improved, and, full of hope, returned to Denver, but soon the trouble returned, all the old symptoms of stomach-trouble, nervousness, etc., began to reappear. My condition was getting worse every day.

At last the first ray of the true light came to my life; God led me to another practitioner in Christian Science, who lovingly cared for me, and in April, 1895, gave me class instruction. From that time on, my whole life was changed. A great hunger after righteousness came over me. My human mind, which had heretofore been filled with selfishness, anger, bitterness, was being purified, and I found health and peace. I became a member of the Mother Church and also of the Christian Science Church in Denver. It is my daily prayer to reflect more and more of divine Spirit, that my home may be a place of unity and peace, that nothing but blessing may pervade the atmosphere, for wherever we find faith, there is love; love brings peace; peace, blessings; where blessings flow, there is God, and where God dwells, there is no need.

MRS. CLAUDIA MARX, Denver, Col.

---

I cannot express the boundless joy that I have experienced from being healed by Christian Science. Nearly eight years ago I was vaccinated, and as a result I have suffered ever since until about a week ago. A disease of the blood followed the vaccination, so loathsome that I refrain from describing it. About two months ago, a friend lent me a copy of "Science and Health with Key to the Scriptures," and after reading it five times, I am entirely healed.

How delightful to feel that, in reality, there is no sin, sickness, or death.

Our gratitude to Mrs. Eddy no tongue can express.

MISS IRENE K. WILBUR, Milton, Wis.

Digitized by Google

I have felt for a long time that I ought to write my thanks for the many blessings I have received since coming to Christian Science. About six years ago I borrowed Science and Health from the public library. Here at last I found the book I had been looking for all my life. An acquaintance was at that time being treated by a Christian Science practitioner. She told me that the Scientists healed by their religion, and since I had always believed that the Church ought to heal, I thought perhaps I had found at last the true religion. Before finding the truth of Christian Science I turned entirely to the unknown God, and prayed as I never prayed before. The only childhood prayer I retained was the Lord's Prayer. I could not repeat "lead us not into temptation;" I used the words, "let us not fall into temptation." I knew my prayers were answered, when I read Science and Health by Mary Baker G. Eddy.

I rejoice that not a cent has been spent for medicine either for the children or myself for the last six years. I have been often discouraged, but one day it came to me very clearly that discouragement is ingratitude, and since that time I have not been so despondent. Christian Science is everything to me, it would be impossible for me to enumerate all the blessings it has brought to my home. All the ailments peculiar to children have been healed quickly by Science treatment. A lady who was a doctor saw one of the children eating oranges while her face was swollen with mumps. She said she would not have believed it possible if she had not seen the child eat the acid fruit. Whenever the children are in trouble they ask me to read to them. My little boy, five years old, was healed of measles by reading to him from Science and Health.

MRS. KATE JOHNSON, Denver, Col.

---

"Thy word is a lamp unto my feet, and a light unto my path."

This has been proved to me in every way. When Christian Science came to me I was a wreck, physically, mentally, and financially; but since the reading of Science and Health turned my thought toward the light, I have found that as far as I am willing to receive the word and live it, all comforts are supplied me. I am especially grateful for the spiritual help. I know that things which I did and thought last year I would not do or think this year, and am satisfied. Through the careful and prayerful study of "Science and Health with Key to the Scriptures" by Mrs. Eddy, I have been lifted from sickness to health, from sorrow to peace, from lack to plenty, and, the most beautiful of all, from darkness to light.

MRS. HANNAH S. COLLVER, Seattle, Wash.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines, 700 pages.

For description, price, and other information, see 1st page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund,
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Bible is a great book and contains much that is wonderful and philosophical, but after all, the Bible is the book of the common people. A religion that is to appeal to the universal heart of humanity must be intelligible to the common people. If God wrote a book that was intelligible to only a few, He intended that only a few should be saved. Do you suppose that a father whose family was in a distant land would write a message of love that could be understood by only two or three members of the family? Such a thing is absurdity itself. Jesus was always talking about commonplace things in an easy, every-day manner. He illustrated great truths with every-day objects: "A sower went forth to sow," "The birds of the air," "The lilies of the field," and such other of the commonest objects from city, field, or farm. He is ever inviting us to take up the duties of Christian service that we might learn of him and come to know him. In place of trying to do the plain, simple duties of practical life, many go into the realm of speculation and burden themselves with abstruse theories and useless controversies. After all, I do not think it matters so much "what Jesus would do" if he were here, as what you and I are doing while we are here.

G. H. SIMMONS.

There is no more certain way of bringing up a race of unbelievers than for the teachers of religion to inculcate anything not in accordance with the facts, because they fear the use that may be made of the facts. And the moment any pupil or congregation gets the impression that the religious teacher is adjusting his teaching in the interest of what he considers "safety" rather than bravely uttering his convictions, that moment his influence for good has practically vanished.

What we need in our professors' chairs and pulpits and Sunday Schools is not a nicer calculation as to the effect of certain teachings, but more thoroughly grounded convictions based upon the most candid, scholarly, and spiritually minded investigation as to what is the truth that God has given the world in the Christian revelation. No religious teacher is bound to disclose all he believes, without regard to the mental and spiritual condition of those whom he is addressing; but he is under the strongest obligation to teach nothing that, as far as it goes, does not correspond with his personal conviction.—*The Watchman.*

In an article in *The Christian Register* on "Reason and Emotion" the Rev. Howard N. Brown says: "It does seem a thousand pities, however, that the real intellectual force of our day cannot be more effectually applied toward a new enlightenment of faith, to set it free from errors through which the Church has suffered much. It seems to me that in no way whatever could more be done for the future of our race than to restore to that Christianity which is sure to shape the life of Western races for many generations yet to come something of its original purity and simplicity as it came from the lips of Christ. But this cannot be done by any reason which is practically dead to the touch of religious feeling and emotion, which lives only in its own intellectual realm, and regards as useless or worse than useless, those sentiments that were strong and mighty to save long before it was born. It cannot be done by an intellectualism which cares so little for the Church that any whim of the moment takes precedence of the claims of organized religion."

The chief help from Christ to the end of all greater life and better, is always mediatorial. He shows the possibilities. We see him, while yet amid the common ways of life, finding grace in all things. He was never alone. He saw the whole world as personal. All in all it was the temple of the spirit to him. Flowers and stars were its shrine; and all things were its oracles. The radiance, vital and life-giving, was all around wherever he stood, and the divine breath blew evermore to refresh and inspire him. All space and all time abounded with instant powers and voices. And it is to this gentle life, and better, that he came to lead a world of souls dwelling apart and alone, in desert solitudes and arid atmospheres, in dry creeds and ceremonies, and in the far country of sin. "Come," he seems to say to us, "come with me and live. Enter into my baptism: find your way hither into the noble life of man, and enjoy the light that reveals all things and be no more in darkness or death."

*The Universalist Leader.*

Bishop Lawrence in an address at Yale is reported to have said: "Is it not a fact that strength of convictions, earnestness of purpose, and a burning faith make a man narrow and unsympathetic with other movements? Do not religion and intolerance naturally go together? Must not a man of convictions fight those who are not of his convictions? There is no doubt that religion and intolerance have often been boon companions, and men of earnest purpose have often been narrow. The reason has been that beneath the religion has been a latent skepticism in the truth, and beneath the earnestness of purpose timidity of faith. Intolerance is the eternal companion of skepticism. What sort of men have touched most keenly the hearts of men in the past generation? Neither captains of industry nor political leaders nor hard conquerors, only those who have been fired with the spirit of God."

Everything has its wonders, even darkness and silence; and I learn, whatever state I may be in, therein to be content. Sometimes, it is true, a sense of isolation enfolds me like a cold mist, as I sit alone and wait at life's shut gate. Beyond there is light and music and sweet companionship, but I may not enter. Fate, silent, pitiless, bars the way. Fain would I question his imperious decree, for my heart is still undisciplined and passionate; but my tongue will not utter the bitter, futile words that rise to my lips, and they fall back into my heart like unshed tears. Silence sits immense upon my soul. Then comes hope with a smile, and whispers, "There is a joy in self-forgetfulness." So I try to make the light in others' eyes my sun, the music in others' ears my symphony, the smile on others' lips my happiness.

HELEN KELLER.

The Baptists say that they are not sectarian. "They abide solely and strictly by the New Testament" in regard to baptism, Church membership, and the Lord's Supper. Other Churches say the same thing. The possibility of so many different interpretations of the documents which are taken to be the charters of so many different Churches confirms the judgment of those who claim that the Christian Church was not founded by Jesus, by direct intention, but was a natural outgrowth of Christian life and hope. It differs now in various branches, because in various ways the life of that earlier generation has been transmitted to us. Whatever a Church now practises it attaches to some ancient saying or custom and so justifies its claim to be the one, true original Church of Christ.

*The Christian Register.*

A man's opinion depends largely on his experience. If I should tell a South Sea Islander that I had walked across a New Hampshire lake in January, he might tell me that that was contrary to reason, but I should know that what he meant to say was that it was contrary to his experience. When the evangelists tell me that Jesus walked across a Palestinian lake in April, I have no right to say that the story is contrary to my reason. It is simply contrary to my experience. But my experience is rather a diminutive affair. If I am to cut down Christianity to the dimensions of my experience, there will not be much left. The fact is, Christ transcends my experience at every point. What he said runs as far beyond me as what he did. "I do always those things that are pleasing unto him." That is further beyond me than walking on the water.

DR. CHARLES E. JEFFERSON.

*The Literary Digest* quotes Dr. Breed as follows:—

"The ministry of to-day, particularly the city ministry, has been crowded into the condition of Martha of Bethany, 'cumbered about much serving,' so that it gets with Mary to the Master's feet all too seldom. If there is one sentiment above all others which we ought to lay to heart in this connection, it is that expressed in one of our most beautiful Gospel songs:—

Take time to be holy,
Speak oft with thy God.

And many of us will answer, 'Alas, true! But I am not able to take the time. My engagements are more than I can meet. I keep the vineyards of others; my own vineyard I cannot keep.' There must be some change effected in all this by some means."

The great trouble with most of us is not that we have too little in life, but that we expect too much. The sure way to get nothing out of existence is to expect everything. A young woman complained that "life held so little happiness for her." "Have you tried putting some in now and then, and seeing how much it will hold?" was the suggestive reply. Those who put nothing in, and look for happiness to produce itself, are inevitably disappointed.—*Selected.*

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The results of the first season's trials in raising cotton in Porto Rico by the United States Agricultural Experiment Station leads to the conclusions, officially announced by Commissioner of the Interior Elliot, that the poorer, sandy soil of Porto Rico, when fertilized, will produce a remunerative crop of sea island cotton, and that the dry months of winter and early spring are adapted to the successful harvesting of this crop. A first crop raised at Rio Piedras, eight miles from San Juan market, yielded twelve hundred pounds of seed and fibre to the acre.

Mr. Andrew Carnegie has purchased and presented to Harvard University the Baron De Beyet zoological collection. The collection is especially rich in specimens of extinct birds and animals of Central Europe and Northern Asia, containing many that cannot be duplicated anywhere in the world. The baron has made a life-long study of the subject, and his classifications have been accepted by most of the European universities. Harvard is particularly fortunate in getting possession of this collection, which has already been classified.

It is stated that the Northern Securities Company will be voluntarily dissolved and that the stocks of the Great Northern and Northern Pacific will be returned to the original shareholders. It is stated, however, that the appeal now pending in the United States Supreme Court will be carried to its conclusion in order that the court of final resort may establish the status of such companies.

Sir Thomas Lipton's fleet, Shamrock I., Shamrock III., the ocean tug Cruizer, and the steam yacht Erin, arrived off Sandy Hook early Sunday morning and came to anchor at 9.30 A.M. at Tompkinsville. The fleet had fair weather and light winds. The trip from Gourock, Scotland, was made in 16 days 22 hours.

**Foreign.**

The enabling act for the new Grand Trunk Pacific Railway has advanced to its third reading in the Canadian Parliament. Construction of the line seems assured. Under the charter, a line 3,860 miles in length extending from Quebec to Port Simpson on the Pacific coast will be built. Its cost is estimated at seventy-five million dollars. It is asserted that the new route will provide the shortest route between London and the Far East, and that it will also shorten the distance between the United States and the East, as Port Simpson is about 550 miles nearer the ports of China, Vladivostok, and Manila than Vancouver or Seattle, and 650 miles nearer than San Francisco, while it is about as near as these ports to Hawaii, Australia, and other important ports of the Southern Pacific.

Through a military revolution the Obrenovitch dynasty of Servia has been destroyed and Karageorgevitch, a descendant of Karageorge who founded the nation in 1807 by driving out the Turks, has been proclaimed King, and the constitution of 1901, which had been repudiated by Alexander, again proclaimed. Alexander had become despotic and objectionable to the people, and the change is apparently acceptable. Alexis, brother of the new King, visited America in 1899.

The new $10,000,000 steel rail mill of the Consolidated Lake Superior Company at Sault Ste Marie, will probably be ready in about a month. This company expects to supply the 150,000 tons of rails annually consumed in Canada, as there are no other large rail mills in the Dominion. The tariff of seven dollars a ton on imported rails becomes effective July 1, and will tend to keep out the cheap rails hitherto disposed of there.

The German Antarctic steamer Gauss has arrived at Simonstown, Cape Colony, where she will refit before returning home. She left Cape Town December 7, 1901. The expedition has been a success and not a single casualty occurred during the long stay in the Antarctic waters. A new land, covered with ice with the exception of an inactive volcano, was discovered and named Emperor William II. Land, and numerous scientific investigations were made.

General Matos published in Curacoa last week, according to press dispatches, a manifesto addressed to the Venezuelan people, confessing that the revolution is crushed and terminated and saying he will ask President Castro to guarantee the safety of himself and all his followers, so that they may be able to return to their homes in Venezuela and work for the consolidation of peace and the prosperity of Venezuela.

President Loubet will arrive in London July 6 on his return visit to King Edward. He will remain in London three days, leaving on his return to Paris, July 9. The president of the French republic will reside at St. James Palace as the King's guest.

The loan guaranteed by the Chinese government at five per cent interest, in connection with the construction of the Shanghai-Nankin Railroad projected by a British and Chinese Corporation, is $16,250,000.

President Palma has sent a message to Congress asking for authority to sell the Triscornia Railroad, which was built by the American military government.

**Industrial and Commercial.**

The commerce of Alaska during the fiscal year which ends with this month seems likely to aggregate over $20,000,000 exclusive of gold. The most important of the articles shipped from Alaska to the United States is canned salmon, the value of which during the ten months ending with April, 1903, was $8,401,124, or more in the ten months in question than the entire sum paid for Alaska in 1867, which was $7,200,000. The next largest item in the shipments from Alaska are: Other fish and fish products, $751,984; furs and fur skins, $394,590; whalebone, $115,994, and copper, $100,513. The shipments to Alaska are varied in character, including provisions, clothing, and material for use of miners and those engaged in the canning industry. The largest single item is manufactures of iron and steel, $1,616,604, of which $730,618 is tin plates and sheets, chiefly for use in manufacturing cans for the salmon canneries; next in order are provisions, $718,273; manufactures of wood, including lumber, $562,454; manufactures of tin, $440,011; breadstuffs, $298,292; wines and liquors, $238,665; tobacco and manufactures of, $188,330; coal, $172,032; fruits and nuts, $171,601; cotton manufactures, $129,192, and eggs, $128,347.

Phenomenal success in growing macaroni wheat in Nebraska and South and North Dakota from seed imported from Europe in 1901 and 1902 is expected to result this year in a marked increase in the acreage of this wheat in the West. As a result of trials by the experimental stations of western agricultural schools the practicability of growing macaroni wheat in this country has been thoroughly established, and hereafter it may be classed as one of the great crops of the grain belt.

About one hundred and fifty thousand acres of South Dakota land was last year sown to macaroni wheat. This year the acreage will be nearly doubled. Practically the same area will be planted in North Dakota, with a considerably smaller area in Nebraska and Kansas.

There are a number of macaroni mills in Minnesota and North Dakota, manufacturing macaroni, spaghetti, vermicelli, etc. To supply the mill demand of New York and Pennsylvania, thousands of bushels of macaroni wheat are imported annually. The importation of the finished product alone amounts to fifteen million pounds annually.

It is announced that the Carnegie Steel Company will immediately begin enlarging its South Sharon plant by adding to its twelve furnaces five more open hearth furnaces. The improvement will cost about $750,000. The addition will make the South Sharon open hearth works second in size to Homestead, which is the largest in the country, having twenty-four furnaces. The plant will have an output of eighteen hundred tons of steel a day.

Statistics just compiled by the *Northwestern Miller* show the consumption of wheat by the western mills last year to have been nearly 148,000,000 bushels, which was ground into 34,135,000 barrels of flour. As the combined product of wheat in the Northwestern States last year was less than 200,000,000 bushels, the figures show that three-fourths of the entire crop was manufactured into flour here.

**General.**

The first week of June twelve steamers, mostly of the larger class, departed for Nome from Seattle with full cargoes and passenger lists. The lowest estimate of passengers already taken is thirty-five hundred. They come from all parts of the world, but the larger proportion are men who have spent several summers in the North and are returning at the earliest time possible to begin work in the mines. The amount of machinery going is said to be greater than ever before, and confidence in the richness of the country seems still unbounded.

It was decided to adopt the International Pitch as the official standard for all musical instruments at the national convention of the Federation of Musicians recently held in Indianapolis. This action of the federation solves one of the problems that has confronted musicians and manufacturers of musical instruments for many years,—the uncertainty of the standard of pitch.

A statue of William Ellery Channing was unveiled in the Boston Public Gardens on June 1. This date marked the hundredth anniversary of his ordination to the ministry. The figure of bronze is of heroic size, and stands in a canopy of granite, giving the effect of being in a pulpit.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## The Communion in The Mother Church, June 28, 1903.

### Loving One Another.

*Golden Text:* "A new commandment I give unto you, That ye love one another; as I have loved you, that ye also love one another. By this shall all men know that ye are my disciples, if ye have love one to another." John, 13 : 34, 35.

**Responsive Reading:—1 Corinthians, 13 (Revised Version).**

1 If I speak with the tongues of men and of angels, but have not love, I am become sounding brass, or a clanging cymbal.

2 And if I have *the gift of* prophecy, and know all mysteries and all knowledge; and if I have all faith, so as to remove mountains, but have not love, I am nothing.

3 And if I bestow all my goods to feed *the poor,* and if I give my body to be burned, but have not love, it profiteth me nothing.

4 Love suffereth long, *and* is kind; love envieth not; love vaunteth not itself, is not puffed up,

5 Doth not behave itself unseemly, seeketh not its own, is not provoked, taketh not account of evil;

6 Rejoiceth not in unrighteousness, but rejoiceth with the truth;

7 Beareth all things, believeth all things, hopeth all things, endureth all things.

8 Love never faileth: but whether *there be* prophecies, they shall be done away; whether *there be* tongues, they shall cease; whether *there be* knowledge, it shall be done away.

9 For we know in part, and we prophesy in part:

10 But when that which is perfect is come, that which is in part shall be done away.

11 When I was a child, I spake as a child, I felt as a child, I thought as a child: now that I am become a man, I have put away childish things.

12 For now we see in a mirror, darkly; but then face to face: now I know in part; but then shall I know even as also I have been known.

13 But now abideth faith, hope, love, these three; and the greatest of these is love.

### Restfulness and Work.

R. N.

NOTHING in Christian Science has appealed to me more than the quiet restfulness that it brings. Like many others, I had for years been tossed about by many a wind of doctrine, earnestly seeking but not finding that peace which I knew must be possessed by those who could really "rest in the Lord" and "wait patiently for Him." What useless efforts one makes, and what long distances one travels, in the search for that which we know, in Science, lies here right at hand. One is reminded of the wealthy man in Tasmania who, many years ago, failing to find spiritual rest where he lived, determined that he would travel until his desire was met. Building himself a small ship he sailed round the world, and then, an unsuccessful and disappointed man, he returned to his home. There one night he had the divine vision and entered into that life of communion with God that he had for years sought in vain. He knew then that God has no limitations; that the limitation is in mortal, sensuous man, and that God is nearer to us than hands or feet, and more ready to help than we are to ask.

The period of mental unrest, while it may betoken a hopeful condition in so far as it indicates aspirations for deliverance from sensuous bondage, is clearly one of infertility. It is a time of spiritual barrenness. What growth there is may too often be classed as mortal weeds that if allowed free play will soon permit "the cares of this world, and the deceitfulness of riches, and the lusts of other things" to come in and choke the word. But thank God, though, in the words of our Leader, "it is attended throughout with doubt," yet this is followed by those who enter upon the study of Divine Science, with "hope, sorrow, joy, defeat, and triumph," and then "when the good fight is fought, error yields up its weapons and kisses the feet of Love, while white-winged peace sings to the heart a song of angels" (Miscellaneous Writings, p. 204).

Restfulness in Christian Science comes from knowledge. "We know whom we have believed." We know the perfect unfailing, unchangeable Principle. We know that while, to mortal sense, all things are fleeting and nothing is stable and reliable, and feel that all that is worth possessing is real and eternal; and that the pitiableness of life, that which to many makes earthly existence a saddening spectacle, is a condition that can be overcome. "I had fainted," said the Psalmist, "unless I had believed to see the goodness of the Lord in the land of the living." This optimistic vision is the daily privilege of every Christian Scientist, reminding him that amid storm and the stress of life there is a "secret place of the most High" where spiritual understanding may be learned, where an abiding sense of this divine presence may be realized, and where courage may be renewed by the thought that "the path of the just is as the shining light, that shineth more and more unto the perfect day."

But restfulness is not the fruit of mere meditation even on good and holy things. Desire for spiritual satisfaction must be accompanied by action. Rest comes after labor. We value that most which has been won after earnest seeking and strenuous toil; and when, after a long period of battling with doubt and fears, of hungering and thirsting for spiritual certitude, of wanderings in the maze of religious beliefs which meet the benighted traveler on every side, there comes the first glimpse of the eternal abiding which Christian Science gives, the relief is a life-long memory, around which there encircles a perpetual halo of spiritual satisfaction. It is the objective of the Christ invitation "Come unto me," the realization of which is only possible to those who have known what it is to be weary and heavy laden, and who at last enter the Valley of Decision.

And what work we can do in this spirit of restfulness! We are free, now that our search has brought a clearer apprehension of Truth, to "voice a higher order of Science," that is a clear call, to be obeyed faithfully and to be answered loyally only by conforming to the rules. The night of doubt is past; the day of spiritual growth, of warfare with error, of practically demonstrating the Divine rule is always at hand—is indeed now. We are each called to be a "ruler over many things," to "walk worthy of the vocation wherewith ye are called." "Our watchwords are Truth and Love; and if we abide in these, they will abound in us, and we shall be one in heart,—one in motive, purpose, pursuit" (Miscellaneous Writings, p. 135).

Let us not be beguiled by the thought that the Promised Land in Science upon which we have entered is a place where we can "sit and sing ourselves away to everlasting bliss;" the field of work is more vast. It means constant watchfulness; diligent study; possibly defeats that should afterwards lead to greater victories; and a continual growth in the apprehension that Christian Science is the clearest, most practical, most spiritual, most Biblical religion that the world has known.

### Decision versus Indecision.

AGNES FLORIDA CHALMERS.

THE reader of the eighteenth and nineteenth chapters of St. John is astounded at the helpless indecision of Pontius Pilate in passing judgment upon Jesus. The ruler's reluctance to take a firm stand for Truth, followed by his unwilling consent to the crucifixion of Jesus, shows very plainly how malicious evil, if not strongly resisted, first confuses, then influences, and finally takes possession of mortal mind.

Pilate was, when first consulted, unwilling to take an active part on the side of either Truth or error. When Jesus, the representative of Truth, was presented for Pilate's judgment and condemnation, this earthly governor replied thus to the Master's accusers, "Take ye him, and judge him according to your law." Pilate virtually admitted in this statement that he had no wish to stand upon either side. Personally he believed the truth as presented by Jesus was good, but he did not care to take a decided stand for any revelation held in derision by the high priests and their servants.

When the Jews further urged Pilate to take an active part in the death of Jesus, the governor finally consented to investigate the charges against the prisoner. If Pilate had made a thoroughly disinterested study of the sinless life and career of this man of Nazareth; if he had informed himself regarding the Truth and Love set forth in the teaching of this perfect Master of the way of Life; if Pilate, the governor, had called to his hall of judgment the impotent man who had long waited in vain for the moving of the waters (mortal mind laws); if he had interviewed the man born blind, and had summoned Lazarus to tell what things he knew concerning this Jesus of Nazareth,—if Pilate, the ruler, had thus carefully examined into Jesus' true career, he would, undoubtedly, have liberated the prisoner.

The examination of Jesus promised by Pilate was nothing more than a farce. Instead of saying, "Hast thou the words of eternal Life?" he questioned, without spiritual pertinence, "Art thou the King of the Jews?" Jesus answered, "My kingdom is not of this world." So also when public opinion is led to pass judgment upon the merits of Christian Science, is not the superficial method of Pilate often used? is not the question pertaining to the material rather than to the spiritual again asked? The indisputable cures of Christian Science are not summoned to bear witness.

Digitized by Google

Pilate's views of Jesus and his reluctance to take an active part in the condemnation of the great teacher, followed by his unwilling assistance in the crucifixion, when separated from the context of St. John, read as follows:—

"I find in him no fault at all. Behold, I bring him forth to you, that ye may know that I find no fault in him. Behold the Man! Take ye him, and crucify him: for I find no fault in him. Behold your King! Shall I crucify your King? And Pilate wrote a title and put it on the cross. And the writing was, Jesus of Nazareth, The King of the Jews."

When urged to change the wording of this title to the derisive one, "He said, I am King of the Jews," Pilate displayed a greater degree of decision than he had shown throughout the trial and crucifixion of Jesus in these words, "What I have written I have written."

Upon reading this testimony of Pilate, one cannot but pity him for his weakness. The influence of mortal mind, unresisted, finally overpowered him, and Pilate found himself an unwilling tool in the hands of the persecutors of Jesus. If the ruler had closed the portal of his consciousness to the first evil suggestion,—that he assist in putting down the representative of Love, he would have found the strength to have securely barred the door of thought to the voice of malicious hatred. Pilate resisted but did not overcome the malice of the high priests. Mrs. Eddy says (Science and Health, p. 48), "Pilate—pale in the presence of his own momentous question, 'What is Truth?' and ignorant of the consequences of his awful decision against human rights and divine Love, knowing not that he was hastening the final demonstration of what life is, and what the true knowledge of God can do for man—Pilate was drawn into acquiescence with the demands of Jesus' enemies."

The struggle between truth and error goes on to-day, as in Pilate's time, in the consciousness of every one of the world's workers. Error comes with its high priests and splendor of many servants beseeching us to take an active part in the crucifixion of that which reveals Truth. We cannot be indecisive Pontius Pilates. Let us hear the eternal ring of truth in the sentence Jesus uttered, and answer every question of error with his assurance, "My kingdom is not of this world." My kingdom is the kingdom of decision in Truth, adherence to Principle, fidelity to Love, and heirship to Life.

With the first decisive rebuke given to error and the servants (so-called laws) of error, we are free to choose Truth as the master whom we would serve. If the first thought is positive in its adherence to Truth, there will be no pitiable wavering between good and evil.

Even though Pilate's position as an earthly ruler and counselor should have been expected to bring him a certain degree of historical prestige, his career is nothing more than an indecisive blurr.

Turn from this picture of unsatisfying indecision to the life of the great Demonstrator, Jesus of Nazareth. In every decisive moment of the life of Jesus (and every moment of the Master's ministry was a moment of decision), there is strength for whoever is tempted to doubt the omnipotence of eternal good. Jesus never wavered. He never wondered what was best to be done. During all his life and teaching, he never questioned the worth of one of his deeds or lessons. He never doubted the wisdom of his commands. His direct, "Fill the waterpots with water," at Cana's feast, though the material senses would have regretted the command as soon as given, was never countermanded or altered. Again, Jesus said to the nobleman, "Go thy way; thy son liveth." There is no wavering, indecisive doubt manifested in words like these. And again, when the apparent scarcity of loaves and fishes seemed to question the wisdom of extending hospitality to the multitude, Jesus did not say, Call a few men to us, we can perhaps feed a limited number, but, in my opinion, we will not have enough for all. He never uttered such weak, unsustaining words. The words he said were, "Make the men sit down,"—not a part of them but all,—even to the last man of the five thousand.

A beautiful climax to Jesus' decisive adherence to Life is shown in two sentences spoken at the tomb of Lazarus, even before his wonderful demonstration over death had been brought out to those who waited at the grave: "Father, I thank thee that thou hast heard me," followed by the command that has established for all time the certainty that Life is the master of death, "Lazarus, come forth."

I have reviewed but four incidents in the life of Jesus, and yet these four events bring us face to face with the greatest master of decision the world has ever known. Mrs. Eddy says: "The 'man of sorrows' best understood the nothingness of material life and intelligence, and the mighty actuality of all-inclusive God, good" (Science and Health, p. 52).

Without decision there is no certainty, and certainty is the golden key to peace. Uncertainty never blessed the heart with one moment of happiness. Truth has lost none of its positiveness since the day when the great Demonstrator said, "Stretch forth thine hand," and thereby restored a withered arm with his decisive understanding of good.

There is a path of demonstration that is easy to follow because of its directness. In this way there is no bend,—no uncertain wavering from right to left. Whoever enters this path must, if progress is desired, be about his Father's business. There can be no dallying in the by-ways of sense, listening to the voices of material pleasure or fear; but every earnest seeker pauses long at the refreshing fountains of living waters, drinking freely until the senses of hate and envy and malice are forever quenched. Whoever enters this path of Spirit and journeys far along the way, never again cares to return to the by-ways of sense, for in the way of Spirit the hungry heart finds in Love and Truth and Life a plentiful supply for every need. The path of spiritual understanding is the direct way Jesus referred to when he said to his students, "Whither I go ye know, and the way ye know," and this way of Truth is easy to find although it is the only one that leads to eternal Life.

In this way of Life Christian Science was discovered, and she who has labored long and faithfully for the establishment of a gospel divinely commissioned to bring "love, health, and holiness" upon earth, is well deserving of the world's best gratitude.

Step by step the Science of Life illumines for all mankind the path Jesus, the way-shower, designated in the living words: "I am the way, the truth, and the life: no man cometh unto the Father, but by me." No man comes unto the Father except he come in the way of the spiritual understanding of God as All-in-all. Jesus said, "All things that the Father hath are mine." You and I come unto the Father and establish our heirship to His kingdom through knowing that to each of us belongs as an individual inheritance "all things that the Father hath." I am merely claiming what rightfully belongs to me when I say and know that whatever of peace the Father has is mine; whatever of love, whatever of harmony, whatever of health, whatever of riches, and whatever of life,—"All things that the Father hath are mine."

---

## Gethsemane.

J. E. FELLERS.

"GETHSEMANE. Patient woe; the human yielding to the divine; love meeting no response, but still remaining love" (Science and Health, p. 586).

Digitized by Google

Christian Scientists know the depth of meaning contained in this definition. How often, alone with their own suffering or by the bedside of loved ones, have the Scientists watched in "patient woe" until the night—that ominous symbol of death and doom—was lifted by the dawn and lost in the day. When working faithfully and with understanding; when denying the claims of personal sense and declaring the allness of God, and when holding steadfastly to Truth and Love, they have been conscious of "the human yielding to the divine."

As from day to day they sought the health and happiness of others, who in many instances did not understand them; as they had their good work ridiculed and criticised, and yet were satisfied to "wait upon God," they learned that "love meeting no response, but still remaining love" is the highest standard of a Christian life, and the standard which all humanity must adopt at last.

The "patient woe" with which Jesus met the persecution and prejudice of his enemies by healing their diseases as well as their sins, taught a lesson so profoundly sublime that it took humanity three hundred years to forget it, and nearly sixteen hundred more to learn it again.

"The human yielding to the divine" cried out in the night of suffering, "O my Father, if this cup may not pass away from me, except I drink it, thy will be done," and when he prayed, "Father, forgive them; for they know not what they do," he left for our guidance the greatest demonstration ever given to the world of "love meeting no response, but still remaining love."

Love is always constant, no matter whether reward or criticism is bestowed upon it. To think of Love as becoming fretful or resentful because it meets no response, is to deny its constancy and misunderstand it wholly. Love is omnipotent. To acknowledge any other power is to rob it of its own. Love is exacting. It demands an explanation for every tear and every sigh, for every admission of pain and discord. To suffer is to say that omnipotence is not all-power. Love is not satisfied with indifference. It insists upon loyalty and steadfastness. Love is divine, eternal, everlasting. Love has always been all, is all, and will forever continue to be all. The human yields to Love all claims of power, and when we fully realize these great truths, we shall understand our beloved Leader's definition of Gethsemane.

### Praise.

There's a song—how well we know it!
Softly sung in all our days,
"God is Love—to Him all glory!"
Angel thoughts and voices raise—
"God is Love—to Him all glory,
God is All—to Him sing praise!"

EDNA WADSWORTH HUDSON.

How much trouble he avoids who does not look to see what his neighbor says or does or thinks but only to what he does himself, that it may be just and pure.

MARCUS AURELIUS.

### Railroad Rates.

For information regarding special railroad rates, etc., see the *Sentinel* for June 13.

The Field are advised to consult their local ticket and passenger agents for full information, and it is suggested that purchasers read the contract on the ticket and have the selling agent explain any provisions not fully understood.

## The Lectures.

### At Americus, Ga.

Mrs. Livingston Mims, of Atlanta, addressed quite an audience of our people Sunday afternoon May 10, at the City Hall, upon the subject of "The Spiritual Supremacy of Man through Scientific Christianity, the Religion of the Future."

She was introduced by Professor Mosley, who in turn was introduced by Superintendent J. E. Mathis, of the Americus city schools.

Professor J. E. Mathis said in part:—

Religion is a matter which ought to appeal to both judgment and faith; men ought to have the faith of the mustard seed, but they ought to know of the doctrine. Yet this will be inversely true as the sect is new or old. In any established school of philosophy its teachings are taken on faith by the larger per cent of its followers, but in the new school the order is reversed and the judgment controls in the selection of its adherents.

Every reformer in the religious world has had a bitter experience; he has been compelled at first to tread the winepress almost alone, and such has been the experience of the Christian Scientists; but, thank God, as the circle of intelligence broadens, the circle of bigotry and intolerance contracts, and any person with a message is sure of an audience.

I must confess that I know but little of the teachings of the Christian Scientists and it is to hear their side of the case, which will be presented so plainly, so logically by the distinguished people who will speak to you, that I am here.

Professor Mosley in his introduction said in part:—

The ideal of Christian Science is the ideal of Christianity, the ideal of a perfect God, a perfect man, and a perfect universe. The vision of Christian Science is the vision of Christianity, the vision of "new heavens and a new earth, wherein dwelleth righteousness." The truth of Christian Science is the truth of Christianity, the truth which makes free from all sin, disease, and death. The gospel of Christian Science is the gospel of Christianity, the good news that "the kingdom of heaven is at hand."

Christian Science does not claim to be a new religion, but the Science of the only true religion, the religion of Christ, the religion of divine Truth and Love. It is in perfect accord with all that is permanent and fundamental in historical Christianity, and at the same time is a reinforcement of those points which were dropped by the churches since the days of Jesus and the apostles, and which lay dormant until reiterated and demonstrated by Mrs. Eddy. It is "the friend and aider of all who would live by the Spirit," and a promoter of all true sanitary, educational, and moral reforms; in fact, it is in harmony with everything that tends to make life more ideal and perfect.

The historical basis or source of Christian Science is the Bible, which it interprets in such a practical and spiritual way as to make all its promises scientifically demonstrable. The fundamental doctrine of Christian Science is that of the omnipotence, the omnipresence, the omniscience of God. It makes the work of God, as revealed in the life and teachings of Jesus and in the ministry of the Holy Spirit, nothing less than the reconciliation of man to God, and man to man, and our perfect liberation from everything that is unlike God.

The ethics of Christian Science is the ethics of the Sermon on the Mount. It teaches the scientific necessity of the Golden Rule and reveals the natural as well as the divine wisdom of the Christ-way of overcoming evil with good, error with truth, and hate with love. Christian Science teaches that as we have the Mind and Spirit of Christ, as we live the Christ-life, we shall be able to do the works of the Master.—*Americus Press.*

### At Plymouth, Mich.

A good audience heard Judge Septimus J. Hanna of Boston, last evening [May 14] at the Opera House, upon the occasion of his lecture on Christian Science. The speaker was introduced by Mrs. Annie M. Knott of Detroit with a few brief remarks, and he held his audience in close attention while he talked interestingly upon his subject.

*Plymouth Mail.*

Mrs. Knott in her introduction said:—

*Ladies and Gentlemen:*—On behalf of First Church of Christ, Scientist, of Plymouth, I bid you welcome to this evening's lecture. This town is to be congratulated upon the fact that when this evening is over two lectures on the subject of Christian Science will have been given within six months, and if, as we firmly believe, the law of supply and demand is governed by the divine Intelligence, this experience is surely significant of good for all the best interests of this place. That so many are eager and willing to attend these lectures is full proof that mortal man can never be satisfied with material things, but is ever seeking the way toward the spiritual.

When the Church of Christ, Scientist, was first organized in Boston, its foundation purpose was thus expressed in the words of our Leader, "A church designed to commemorate the word and works of our Master, which should reinstate primitive Christianity and its lost element of healing" (Church Manual, p. 17). This may truly be said to be the purpose in all Christian Science work,—through its literature, its healing and teaching, and the work of the Board of Lectureship; and there can be no question that Truth is reaching humanity through all these channels and slowly but surely changing all human thought about God, man, and the laws which govern the universe.—*Correspondence.*

### At South Bend, Ind.

A highly representative audience that comfortably filled the main floor of the Auditorium Sunday evening, May 17, and spread over into the balcony, listened with much interest to the address of Judge Septimus J. Hanna of Boston, who spoke under the auspices of First Church of Christ, Scientist, of this city, giving an exposition of Christian Science.

The Auten and Norman Eddy G. A. R. posts attended the meeting in a body. Judge Hanna is a veteran of the Civil War and expressed himself as especially pleased to see his comrades march into the meeting with the flag at their head.

Prof. Charles H. Bartlett, principal of the High School, in introducing Judge Hanna, spoke in part as follows:—

We are gathered here at the close of this beautiful Sabbath day to listen to the words of one who has made a profound study of those teachings now spread abroad through many lands,—teachings that set forth the doctrines of the Church of Christ, Scientist. When a man comes to us with the statement that he has received a new light on the great and all-important truths of the Christian faith, we must listen to that man. We owe it as a duty to ourselves, to our friends, and to the world that we listen to such a man, especially if he be a thinking man, a man of learning, of judgment, and one who loves God and who yearns to help his fellow-man. And can we, of this day, learn anything new concerning the nature of God, His will, and His love for the world? In the olden time God revealed Himself in many ways,—through the voice of an angel, the words of the prophet, the handwriting on the wall. In subsequent ages men have felt that they might learn to know God through the leaves, the flowers, the birds, the wind, the storm, the sunlight. But now our age recognizes that the revelation, especially for us, must come through the triumphs of human reason and through the work of love in the human heart and in response to the deep yearnings of the human soul. Such a new light on the old truths the Church of Christ, Scientist, claims to have for us and for the world, and the lecturer of this evening will point out to us the ground on which that belief is based, the reasons for the fond hopes which are thus cherished. It is therefore with great pleasure that I present to you Judge Septimus J. Hanna, who will now address us.—*South Bend Times.*

### At Kansas City, Mo.

An audience of nearly two thousand people crowded into the Christian Science Church, Ninth and Forest Avenue, yesterday afternoon [April 26] to hear a Christian Science lecture by Carol Norton, C.S.D., of New York City. Hundreds of people were unable to gain admittance into the church.

The lecturer was introduced by Arthur E. Stilwell, president of the Kansas City, Mexico, and Orient Railway Company. Mr. Stilwell said in part:—

When Jesus was on earth he went about healing the sick and casting out all manner of diseases. He told his disciples to go unto all the world and preach the gospel and heal the sick, and Paul, who came after Jesus, also healed the sick.

He said to the messenger that John the Baptist sent, asking if he were the one who was foretold by the prophets: "Go and shew John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them." Jesus' whole life and teachings verify and illustrate the Christian Science religion, which not only brings good tidings to all mankind, but also brings health to suffering humanity.

### At Champaign, Ill.

Mr. Edward A. Kimball addressed a most attentive and intelligent audience at the Elk Auditorium, May 26. He by no means confined himself to discussion of Christian Science as a healing agency, though he treated that feature of it quite elaborately; but he discussed the subject as a religion chiefly, and he held that, while it had been much misrepresented and not infrequently traduced, it had made marvelous strides and was attracting to its ranks thousands of the most sane and thoughtful people in the world.

Mr. Kimball spoke here just about a year ago, and in introducing him on the present occasion, Mr. A. J. Cope referred to the former occasion, and spoke especially of the marked increase in the knowledge and acceptance of Christian Science which has taken place here since that time.—*The Champaign Gazette.*

### At Columbus, O.

Judge Septimus J. Hanna delivered a lecture on the general subject of Christian Science last evening [May 26] in the Board of Trade auditorium before an audience that comfortably filled the lower floor.

He spoke of the consecrated life of Mrs. Eddy, the creed of Christian Science believers, the causes and cure of sickness and sin, and the need of spreading the "healing and saving Gospel."—*The Ohio State Journal.*

### At Girard, Penn.

Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., delivered a lecture here May 17, on "Christian Science is Scientific Christianity." The lecturer was introduced by Rev. H. A. Abbott, pastor of the Universalist Church. The audience appeared pleased with the lecture. A goodly delegation of Christian Scientists was present from Erie. The local papers gave good synopses of the lecture.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Mrs. Eddy Explains.

"My recent reply to the reprint of a scandal in the *Literary Digest* was not a question of 'Who shall be greatest?' but 'Who shall be just?' Who is or is not the founder of Christian Science was not the trend of thought, but to lift the curtain on wrong, on falsehood persistently misrepresenting my character, education, and authorship, and attempting to narrow my life into a conflict for fame.

"Far be it from me to tread on the ashes of the dead, or to dissever any unity that may exist between Christian Science and the philosophy of a great and good man, for such was Ralph Waldo Emerson, and I deem it unwise to enter into a newspaper controversy over a question that is no longer a question. The false should be antagonized only for the purpose of making the true transparent. I have quite another purpose in life than to be thought great; time and goodness determine greatness. The greatest reform, with almost unutterable truths to translate, must wait to be transfused into the practical and to be understood in the 'new tongue.' Age, with experience-acquired patience and unselfed love, waits on God. Human merit or demerit will find its proper level. Divinity alone solves the problem of humanity, and in God's own time. 'By their fruits ye shall know them.'"

This clear and consistent statement of our Leader, appeared in *The New York Sun* of June 15, in the distorted form which we publish below.

It will be seen that the word *discover* has been supplied for the word *dissever,* in the second line of the second paragraph, and that Mrs. Eddy is thus made to say precisely the opposite of what she did say. The injustice of this misstatement of her thought is the more marked in view of the fact that the article was an explanation, and was made by one whose words receive the closest attention of hundreds of thousands of readers, and we protest against the wrong that has been done our Leader and our Cause under circumstances which so greatly augment its seriousness.

Those who are acquainted with Mrs. Eddy, who have been unspeakably blessed by the ministry of her life, and who know how unjustifiable was the charge which evoked her explanation, can but feel a sense of indignation that her effort to define her position was subject to this perversion.

### MARY BAKER G. EDDY EXPLAINS.

#### ANIMUS OF HER REPLY TO AN ARTICLE IN THE "LITERARY DIGEST."

"My recent reply to the reprint of a scandal in the *Literary Digest* was not a question of 'Who shall be greatest?' but 'Who shall be just?' Who is or is not the founder of Christian Science was not the trend of thought, but to lift the curtain on wrong, on falsehood persistently misrepresenting my character, education, and authorship, and attempting to narrow my life into a conflict for fame.

"Far be it from me to tread on the ashes of the dead, or to discover any unity that may exist between Christian Science and the philosophy of a great and good man, for such was Ralph Waldo Emerson, and I deem it unwise to enter into a newspaper controversy over a question that is no longer a question. The false should be antagonized only for the purpose of making the true transparent. I have quite another purpose in life than to be thought great; time and goodness determine greatness. The greatest reform, with almost unutterable truths to translate, must wait to be transfused into the practical and to be understood in the 'new tongue.' Age, with experience-acquired patience and unselfed love, waits on God. Human merit or demerit will find its proper level. Divinity alone solves the problem of humanity, and in God's own time. 'By their fruits ye shall know them.'"

The statement as it was given out by the Discoverer and Founder of Christian Science is sufficient to explain her position, and in connection with the article published in the *Sentinel* of June 13, to dispose of the statements to which she alludes; but it still remains a mystery why reputable magazines and newspapers open their columns to writers who, seemingly for the purpose of belittling Mrs. Eddy and her work, allege that this, that, or the other person was the Discoverer of Christian Science.

Some of these writers, even now, offer in proof of their assertions time-worn and disproved absurdities which have subserved an unworthy purpose for many years; others seem content to make bald asseverations without any attempt at justification, and this despite the fact that encyclopædias and biographies unite in awarding Mrs. Eddy her rightful place in the world's affairs,—the only place she claims,—that of Discoverer and Founder of Christian Science and the author of its text-book.

By far the greater portion of Mrs. Eddy's long life has been spent within her native state of New Hampshire, and her present home, where she has resided for a number of years, is within sight of her birthplace. Her friends and neighbors, who have known her in both her earlier and later years, have borne testimony to her intellectual and spiritual capacity for the position to which she has been called.

To those who have known Mrs. Eddy personally within the years subsequent to her great discovery, the words of the former editor of the *Sentinel* appeal most forcibly as representing their estimate of her character and attainments:—

"I can truthfully say that, intellectually, she is, without exception, the most acute and alert person I have ever seen; that she labors incessantly and unselfishly for the cause to which she has devoted her life, and that, notwithstanding her years, she performs an amount of labor each day which, if known, would seem incredible. As to her religious character, I speak my profoundest conviction when I say that I believe it to be as nearly Christ-like as is possible to a denizen of this earth. I cannot conceive how a person on this plane of existence could walk more closely with God or exemplify a more exalted Christian life." M.

### Welcome the Light.

IF, when traveling in the darkness, a man should lose his sense of direction, or, as we say, be "turned round," and as the night wanes, should keep his back toward the dawning light, his eye steadily fixed on the western horizon, because, forsooth, he wishes and expects the sun to rise in that direction, he would be a fair representative of that state of human consciousness which often appeals to Christian Science and desires and expects the healing to follow in the order of its prescription.

Digitized by Google

After being treated for a short time by a Christian Scientist, a man said, "My cough is no better! To be sure, I can do now with one pair of glasses, where formerly I required two, the dyspepsia troubles me less, and I hear better; but I could do well enough with my two pairs of glasses, the dyspepsia was of minor consequence, and I could bear with the deafness. It is my cough I want healed, and that is no better!"

This is a typical experience. We want help, but we want it in our way; and because it does not come as we expect, we do not recognize it as help when it does come.

We are willing to admit improvement in some respects,—a clearer thought, greater general freedom, a lighter heart, perchance, at the same time we keep on saying, "but my claim is not being met." And pray what is "my claim"? Darkness,—surely, and only darkness,—and certain it is that the admission of light in any direction must dispel the darkness.

But why doesn't help come in our way? Well, for the simple reason that our way is always determined by our greatest fear. Moreover, we may have lost the proper sense of our direction, and are looking to the body for harmony, whereas harmony is to be found by persistently turning away from the discordant material body and declaring our right to the perfectness and peace, of Mind.

When, therefore, we in any way begin to respond to the government of Truth, let us promptly and gratefully acknowledge the signs of promise, although they may at first appear in the most unexpected direction, or part.

What matter if, while we long for physical freedom, we find greater spiritual light, greater pleasure in study, less repining, less thought of self, more love for others, more patience. What matter? This is healing, and all healing is one. The day is breaking, and when the sun has reached the zenith, all darkness will have disappeared.

"The Lord our God is one God," and just so sure is our body one body. Let us not regard it as a system of material organs to be anatomized and healed individually, one after another. Healing is the recognition, the realization of Life, and "organization and time have nothing to do with Life" (Science and Health, p. 249).

We are too apt to lose our sense of direction and look to the darkness of materiality rather than to the rising sun of spirituality. It is the omnipotence of action we need to realize rather than an active organ. We should know that man reflects omniscience rather than that he has a good memory. When we understand that sight and hearing are spiritual senses, eyes and ears will no longer presume to be imperfect. We cannot measure our wealth by the number of our coffers, but by the strength and tenacity of our realization that God is our infinite supply, and that therefore we, His children, can and do want for nothing.

God is one, and error's many phases are but parts and parcels of the same nothingness, the absence of good,—God. Light shines and our belief of darkness disappears.

Our bewildered senses and predetermined opinions may cause us to linger long, gazing toward the gathering darkness, even while the light of Truth shines full and free. It is well for us to cease conjecture and follow faithfully and obediently in the path to light which clearly defined itself to her who is high enough to trace its winding.

S.

## Truth Brooks No Delay.

THE saying of the old German poet that "The mills of God grind slowly," is often repeated, and this thought has no doubt helped some of us, now and then, to practise a kind of enforced patience which accepts a situation we have seemed too stupid or too ignorant to handle; nevertheless, it is competent to convey, and is constantly encouraging a subtle and pronounced error.

God has no occasion to bide His time that He may the more coolly and calculatingly o'erwhelm His enemies; He administers no slow vengeance upon any body or any thing, and he would not encourage us to grit our teeth and endure injustice and iniquity with the assurance that ultimately He will, in His own time, annihilate the evil-doer.

We realize in Christian Science that all these concepts, which have so long held sway in human thought, are far afield, unhelpful, and unworthy. Every manifestation of God,—the forces on which we tread (Science and Health, p. 124) and which fashion the fabrics of a spiritual universe that encompasses us with its wonders and its beauty,—all these are the swift messengers of an intelligence which knows no resistance to its unfoldment, and which from all eternity has but spoken and it was done. Every condition in God's kingdom is met upon the instant of its appearance, and it is in the fact that the invariability of divine law inheres. As speeds the light to the banishment of every pretence of the dark, so springs to its instant consummation every least idea of Him with whom we have to do.

When our thought has been freed from the inertia of a grossly material sense and we enter the more ethereal though not less crowded and tangible, realm of the humanly invisible, the elimination of the time element is more and more marked. The flight of the electric impulse through the vast, uncharted stretches of space, startles us with its confirmations of that immediateness of effect, however distant the point of manifestation, which makes it one with cause. The only logy thing in the universe is no thing, it is a lie.

The disabilities entailed by this false concept are apparent and serious. Human experience and habits of thought have begotten familiarity with slow growth, and in no small degree they have led us to think of truth as time-consuming in its work. It is very easy to acquire an unconscious facility in compounding those narcotic explanations which effect permanent injury while affording a passing relief, and if we are thus led to be content with delays in demonstrations, and to explain them without due consideration of our own possible dormancy and inexactness or intermittence of thought, we are sadly astray, and the results can but be lamentable. If we are led to be any more tolerant of our own slow pace in spiritual advance, any more compromising or obliging in our attitude toward our own recognized weaknesses, or any other enemy of good, then indeed have we joined hands with a tempter who will reward us with pain.

Happily the truth is available here also, and all these dangers may be avoided if we are but alert and drink daily and deeply at that fountain which has been opened for us.

Our indebtedness to Christian Science mounts higher at this point, perhaps, than at any other, and for the reason that every possible danger and weakness of human experience is savingly reached by the right apprehension of Him in whom all things "move and have their being," the realization of His omnipresence and the instant effectiveness of His all power.

W.

### Singing Birds.

O singing birds, O singing birds, ye sing in field and sky
The simple songs of love and joy ye sang in days gone by;
I hear you in the meadows now and up the mountain stream,
And as I listen to your voice I dream an old-world dream.

. . . . . .

O singing birds, O singing birds, who pipe in shade and sun,
Ye fill the world with gladness still, ye bind us all in one;
Your songs are of untroubled days, of mornings glad and free,
And merry rivers leaping down the mountains to the sea.

## For the Children.

### Spiritual Gardening.

As the days have lengthened from spring to summer, I spend many pleasant hours in my garden, and learn many a beautiful lesson therefrom; for are we not all gardeners setting in order this garden called the human mind, striving so to till and cultivate the soil that the fruits of Love may be made manifest? I am going to enumerate some of the lessons as they came to me, lessons of love and patience working through the outer plane to the inner, struggling up from darkness into light.

FAITH.

When we plant a seed in the ground we do not surely know that in due time it will blossom into a flower, but working in faith we continue to tend it until we see a result, and the little seed we have sown in faith stands before us outwardly manifest, and will remain perhaps for years to gladden those who come after us. Had we doubted, had we first asked for a sign before planting the little seed these results would never have been secured.

PATIENCE.

It is not enough to plant in faith, we must wait for results; endeavoring neither to hurry nor impede, but on the contrary doing all that we have to do patiently, rejoicing in every gain we make. We have all heard of the child's digging up the seed to see if it were growing, and we are equally tempted at times to be impatient with the slow growth of the good seed we have sown; we watch it anxiously and at times may be discouraged, ready to cease tending, since it has shown no sign of ever blossoming; but one day, perhaps just the day when we are thinking least about it, the delicate leaves shoot forth, and soon the fair flower springs into being.

DILIGENCE.

We must also work at our garden; faith and patience are not all that it needs; good steady work will also be required of us,—seasonable work, doing the right thing at the right time, ay, and with the right tools too; with a spade that will dig deep into the ground, breaking up the resistance of mortal mind, and leaving a smooth, clean surface in which to sow; sometimes a sharp pointed instrument is necessary with which to dig out the deeply rooted weeds of error, which are choking up the good ground. We must not spare them, we must send the sharp point deep down and uproot the whole. If we are content with removing only the surface they will spring up again, and perhaps even stronger and more tenacious than before.

LOVE.

There are hidden sins with very little flowers above the surface and very deep spreading roots underneath, there are little insignificant weeds which spread their roots for many feet around, choking and impeding the growth of the sweet young grass whose hold upon the sod is so slight; for this kind of gardening we need love, love so abundant, so far-reaching, that our hand may be steady although we seem to be cutting into our own heart-strings. When the old weed is cut out we need to sow the fresh young seed, watering it perhaps with our tears, pressing it into the sod with persevering hands, tending and watching it that it may not be devoured by the birds of the air, going over the ground again and yet again, to be quite sure that no weeds have been overlooked or allowed to spread.

Yes, in this garden of humanity there is plenty to do, but as our Leader says, "the warfare with self is grand" and the reward sure to the honest gardener, to the one who knows how to prune and how to tend, how to sow and how to reap, to the one in fact who has *Faith, Patience, Diligence, and Love.*—MAY DONALDSON.

### The Golden Rule.

JESUS declared, "Whatsoever ye would that men should do to you, do ye even so to them." All sane people desire that others should do for them that which redounds to their happiness, success, and general welfare. We seldom find an individual who wishes to be misjudged or mistreated. When we have erred, we prefer to be forgiven. Though we may have fallen many times, we are still anxious for another opportunity. Though we may have wasted time, talent, and money during a period of many years, we still crave for an opportunity to win the favor of our fellows. Though we may have repeatedly injured others as well as ourselves, and even to such an extent that our neighbors have lost all confidence in us and have utterly despaired of any good from us, we still long for the privilege of demonstrating our good intentions. When we have so utterly failed and have so completely given way to the influences of evil that we are in utter despair and without hope, we still long for a helping hand.

Human imagination could not picture the condition of an individual so low that he would want his friends to turn from him and do nothing to save him. Summing up the proposition we are inclined to say that a person seldom, if ever, reaches a condition in which he loses all charity for himself—all self-pity.

If we comply with our Lord's suggestion, we must have the same undying, unswerving, unchanging charity for others which we have for ourselves. Note the love of a mother for her child. She clings to her boy, soiled and sullied within and without, as her "precious child" when all others have abandoned him to his fate and turned from him in utter loathing. Under such circumstances it is not the degradation of her offspring to which she clings, but the individuality which seems to be clouded and obscured by evil. She has not forgotten the original child and believes that somewhere beneath the rags and tatters and the accumulated evil of many years, the pure untarnished babe of her soul is hidden away.

Christian Science ought to help us to observe the Golden Rule, for it broadens the brotherhood of man, since it reveals the universal fatherhood of God. It enlarges the human family and admonishes us that all men are our brothers. Consequently it fosters a brother's love for all men and makes us more ready to forgive and forget.

The exalted teaching of this Science could never make wrong seem right, but on the contrary emphasizes the right of right and the wrong of wrong, revealing the universe, including man, as the product or effect of the infinite good, and evil as being no part of God's creation and having only the power over mortals which they give it by indulgence in it. Science makes a distinct separation between the evil and the individual. Such an understanding creates the same desire to deliver one's neighbors from evil as one would have to deliver him from the coils of a serpent or the claws of a beast.

We would not condemn a neighbor, we would not hate him nor call him names because he has been bitten by a snake, because a viper clings to his hand. We would pity him rather and would seek to deliver him immediately.

Christian Science enables us to recognize all evil as a foreign and unwelcomed intruder. Even the most vicious wrong beheld in another is the result of ignorance. The Master's words indicated this when he said, on the cross: "Father, forgive them; for they know not what they do." Shall we understand from this that the brutal murderers who slew the best man that ever trod the globe knew not what they were doing when they nailed him to the cross and pierced his side? Even so, for the wilful wrong they did was the result of ignorance. The most malicious and

Digitized by Google

intentive sin is prompted by ignorance,—a false belief of pleasure, profit, gain, or benefit. ALFRED FARLOW.
In *Boston Times.*

## Women and Christian Science.

Mr. Editor.

Accepting your kind invitation to give for publication a "theory as to the causes that make women so active in new religions," I will present some reasons why women are so active in Christian Science, which was referred to in your article as "one of the most powerful, and at the same time most admirable, of recent religious developments."

In the first place, it is generally admitted that women, as a rule, are more intuitive than men, and more quickly grasp the spiritual truths upon which religion is based. As you well say in regard to Christian Science, "A woman with an extraordinary insight into human nature is the founder and present head of the cult;" and this is true of Mrs. Eddy because of her deep spiritual insight into the laws that relate o God and man's relation to Him.

Another reason why women are so active in Christian Science is because they derive much benefit from it. They are not only healed of hysteria, but also of organic and functional diseases that have defied all other remedies, and they have gained a knowledge of how to keep well that is of inestimable value. These benefits are not the result of "charlatanry and childish credulity" nor of "auto-hypnotism," but they are gained through a spiritual understanding of God's law, which is true Science.

Under such circumstances it is not surprising that women are active in Christian Science, but they have no monopoly of its benefits. The large proportion of men who attend the Christian Science services, and the testimony of lawyers, judges, former doctors and ministers, and prominent business men, proves that it helps the men as well as the women, and illustrates a divine law that is applicable to every walk of life. In Christian Science the men are learning "that religion must really mean something to them" also, and they are obeying Paul's injunction to "work out your own salvation," in the understanding that "it is God which worketh in you both to will and to do of his good pleasure." Thus the proportion of men who are active in Christian Science is greater than in most religious movements, for it appeals to their reason and practical common sense as well as to their spiritual sense. FRANK W. GALE.
In *San Francisco Examiner.*

## The Right to Pray.

IN this day and age of progressive thought, new and wonderful things are coming to the surface. Old ideas are being discarded and relegated to obscurity and newer and better ones substituted in lieu thereof. Progress is imperative. It recognizes no limitation. It is the activity of the ever unfolding ideas of Truth, which, regardless of the impediments of timid conservatism or ignorant prejudice and misapprehension of its blessings to humanity, ever manifests its beneficent influence and sweeps onward to success. God's law has so ordained it, nd that which in its nature and effect opposes progress in any line must inevitably yield.

The Christian ministers of our country offer up prayer for the safety and well-being of their congregation, the city, state, and government officials, and all those in whom they have an interest. If perchance those prayers should be answered and some individual healed thereby, would this be inimical to public health? It would be a long stretch of the imagination so to declare; and yet, if there is not a reasonable expectancy of the prayer being answered, why waste time in praying? Christian Scientists believe that "with God all things are possible," and with Isaiah they say, "Behold, the Lord's hand is not shortened, that it cannot save; neither his ear heavy, that it cannot hear." In their expectancy that God will hear and answer right prayer, they are sustained by the teachings of Scripture and by the fundamental truth underlying the Christian religion. It is their recognition of the need for health which impels them to ask for it. They recognize that to the mortal or human sense of things, sin, disease, and death are very real, therefore dangerous, factors in human experience in the sense that Paul said, "To be carnally [or mortally] minded is death."

To assume that "prayer is inimical to public health," practically amounts to a denial of the fundamental and eternal truths of the Christian religion, as taught by Jesus Christ and the whole Scriptures; to discriminate against the prayers of Christian Scientists and forbid such prayer, is unconstitutional. The Constitution of the United States guarantees equal rights and religious liberty; our dollars say, "In God We Trust," and the United States Supreme Court has said, per Mr. Justice Brewer, in Church of the Holy Trinity *v.* United States, 143 U. S. Reports, p. 457, "No purpose of action against religion can be imputed to any legislation, state or national, because this is a religious people. This is historically true. From the discovery of this continent to the present hour [1891], there is a single voice making this affirmation. . . . If we examine the constitutions of the various states, we find in them a constant recognition of religious obligations. Every constitution of every one of the forty-four states contains language which, either directly or by clear implication, recognizes the profoundest reverence for religion, and assumes that its influence in all human affairs is essential to the well-being of humanity." JOHN L. RENDALL.

## Judge Righteous Judgment.

Mr Editor.

My experience as a Christian Scientist has only tended to strengthen my respect for the rights of others to hold such opinions as may seem to them in accordance with their highest sense of what is right. If, therefore, I ask for space to answer Mr. Barry's criticisms of my letter, I wish it distinctly understood that I have no desire but to place before your readers the standpoint of a large and rapidly growing Christian body.

Mr. B. admits his ignorance of the fact that many children have been brought back from the verge of death by Christian Science treatment. This fact is known to a great number of earnest and intelligent persons. The weight of evidence put forth by them is so great that in attempting to deny it he would be assuming a burden of proof too heavy for him to bear.

Christian Science is a religion of active well doing, and the public cannot be informed as to its teaching and practice by those who are not even familiar with its good deeds. If your correspondent believes that the health of any community has been jeopardized by Christian Science, let him point to a single instance of the spread of disease by Christian Scientists. Their practice has been before the world for over thirty years, and I do not recall such an instance in that time. On the contrary, Christian Scientists, through their fearless understanding of the power of God, are found to be public benefactors in the communities where they live. If disease is called contagious it should not be forgotten that mental and spiritual health, reflected in physical effects, is an hundredfold more contagious, if I may use such a term in describing the operation of good thoughts. Even from the standpoint of material medicine, half the battle is won when fear, alarm, and panic are averted in a stricken community.

If Jesus healed surgical cases, as your correspondent states, then this fact proves that his true followers should be able to do the same. In fact, Mrs. Eddy, while counseling conservatism in such cases, also writes, "It is but just

Digitized by Google

to say that the author has already in her possession well-authenticated records of the cure, by herself and her students, through mental surgery alone, of dislocated joints and spinal vertebræ" (Science and Health, p. 402).

In conclusion let me state that Christian Scientists have full confidence in the abiding sense of justice which characterizes our legislatures, when questions at issue are placed before them frankly and squarely. There is not the least likelihood that any of these bodies can be induced by false suggestions to place any bans in the way of any treatment by Christian prayer, to which they themselves and their families may be obliged to resort in the hour of need, when all more commonly accepted methods have failed.

W. D. McCRACKAN.

## Annual Meeting and Communion Notes.

THREE services will be held Communion Sunday, June 28, in the Mechanics Hall Building, Huntington Avenue, at 9 A.M., 11.30 A.M., and 2 P.M., with additional services later in the day if necessary.

The Annual Meeting will be held on Tuesday, June 30, at 2 P.M., in the same building.

A meeting of Executive Members (formerly called First Members) will be held Saturday, June 27, at 9 A.M., in the Mother Church.

The Mechanics Hall Building will be the headquarters for all committees, and will be open daily from 9 A.M. to 9 P.M., Thursday, June 25, to Wednesday, July 1.

The Mechanics Building has been engaged for continuous use from Thursday, June 25, until after the Wednesday evening meeting on July 1, and during the time that it is not in use for the regular exercises, it will be free to visitors as a central rendezvous both day and evening.

The Wednesday evening meeting will be held in Mechanics Building, July 1, at 7.30 P.M.

Those planning to attend the Annual Meeting may have their mail addressed in care of The Christian Science Publishing Society, 95 Falmouth Street, and it will be delivered to them at the Mechanics Building when called for between the hours of 9 A.M. and 9 P.M., June 25 to July 1 inclusive.

A committee on securing rooms in private houses for visitors who do not wish hotel accommodations, will be in session at Mechanics Building, Thursday, Friday, and Saturday, June 25–27, from 9 A.M., to 9 P.M. each day. No arrangements can be made in advance by correspondence with this committee, but all who apply to them in person upon their arrival in Boston will be cared for.

Visitors who desire hotel accommodations should make personal arrangements with the hotels, as this committee cannot undertake to make provision for them. Those who have not yet arranged for their rooms at the hotels had better do so at once, since the demand is very great.

Those who are planning to find a home through the committee will, on arrival in Boston, please leave their checked baggage at the depot and bring their checks to Mechanics Hall, where an agent will be in attendance to arrange for its delivery when their location has been provided for.

## Meeting of Normal Graduates.

A MEETING of the normal students of the College who have graduated under the auspices of the Board of Education will be held in the Mother Church on Wednesday morning, July 1, 1903, at nine o'clock.

Do to-day's duty, fight to-day's temptation, and do not weaken and distract yourself by looking forward to things which you cannot see, and could not understand if you saw them.—CHARLES KINGSLEY.

## Testimonies of Healing.

Christian Science was first presented to me in England. The friend who called my attention to the subject was a bright, intellectual American girl, whose opinion I was bound to respect and consider. I had for several years been troubled with what was called an hereditary disease, but in talking of the Science, the healing did not appeal to me particularly, although the subject itself I found new and interesting.

On returning to the United States the following autumn I visited this friend in the far West, and it was while there that I permitted her mother, who was a practitioner, to treat me in Christian Science. For many weeks I had been suffering from fatigue and anxiety, which no doubt aggravated the physical condition. After some time I graciously allowed the healer to treat me. Only those who have experienced quick healing can appreciate my surprise and pleasure at suddenly finding myself a well woman. It took me six months to believe it, but as I experienced no return of my old trouble it sealed my conviction that I had indeed been healed by something truly wonderful. I can never express my mental condition during this period. Everything was changed, everything was different,—the flowers, the trees, nature itself had a new promise. The world was full of joy and I was inexpressibly happy.

An amusing incident happened at this time. I asked my friend, who had returned to Boston, to send me some Christian Science literature, as I was eager to begin an investigation for myself, but when twenty dollars' worth of small black books tumbled out of an express package, sent C. O. D., I must say that I had a slight sense that I was getting Christian Science in large doses. It has proved, however, to be the best investment I ever made. I might also add that my friend knew my requirements and included a Bible in the collection.

I returned to Europe with all of Mrs. Eddy's writings, hoping and expecting to do much good, and while my limited understanding did not prove equal to the ancient arguments of mortal thought, all the pressure brought to bear of every name and nature did not blot out the fact to me that I had been healed by Christian Science. That experience was mine, and I knew it. How grateful I have been for this deep-seated conviction, for in a dark hour of grief,—the passing away of my dear mother,—it led me gently but finally to the true understanding of Life as eternal and exempt from all suffering and sorrow. Since that time I have had class instruction and have had many occasions to prove for myself and others, that the demonstrable truth expounded in Science and Health is as exact as the law of mathematics.

For four years I have been a constant reader of all the Christian Science periodicals, and regret the necessity of admitting that never before have I expressed my appreciation for the manifold benefits received from these various publications. That the presentation of any subject has much to do with its acceptance is generally admitted, and among the intelligent people who are coming into the ranks to-day there should be no difficulty in securing such articles as will best promote the cause and its progress.

A story told by a Scientist who has been doing beautiful work in the mining sections of Colorado revealed to me more than ever before the immense amount of good accomplished by the distribution of the *Journal* and the *Sentinel*. It seems that in these districts very little reading matter is to be had, and those who are fortunate enough to have gleaned some understanding of the Science are eager to hear more and to help others. I was deeply impressed by the picture drawn of these rough miners, whose life and occupation cut them off, as it were, from the outside world, gathering themselves together around a

Digitized by Google

bright camp fire to hear read aloud the testimonies in some stray *Journal* or *Sentinel* which had found its way into their camp. This lady told of their faith, their hope, their charity, their radical reliance on God in every emergency, and of their reverence, often touching and profound, for Mrs. Eddy, whose personality they had never seen, but whose thought in her writings had touched their hearts and changed the current of their entire lives.

I am only beginning to realize the scope and universality of Christian Science, and with this realization has come the understanding that the individual's interests are not bounded by local environment nor his capacity for good confined to geographical location. With this expanding thought has come a genuine appreciation and love for our Mother Church, sentiments which need to be cherished in the spirit as well as in the letter.

I rejoice to say in the dawn of a new light and a greater faith that my heart overflows with love to her who protects herself and her church from the darts of the enemy and declares the supremacy of Life, Truth, and Love. What cannot Love do! The turning and overturning will go on until He whose right it is shall reign.

IDA RUTH STEWART, New York, N. Y.

---

Although I am a member of the Christian Science Church, an old friend, whose friendship I cultivated when I was a German school-teacher, has been trying to exercise power over me. Old Adam would make us believe that this friend, a tobacco pipe, can drive away the blues, and I had never made an earnest attempt to cast it away. I either could not or would not see that it was a false friend; I still attributed power to it, I believed that it aroused me to new activity and all such nonsense, and all reading of Science and Health seemed to be without success in regard to this mesmerism. Finally the hour came when the devil had to surrender this rampart, with many others that had been erected in me.

About four or five months ago, a man who was editor of a newspaper here died, and the physicians declared it to be cancer of the throat, caused by smoking. This made such an impression upon me, that I determined to give up smoking, and part with my false friend, which my wife called my idol. I tried to get rid of this devil of smoking, through will-power. But there I reckoned without my host; the desire for the weed was stronger than my will, and I had to say with Luther: "We can do nothing with our own power." So I determined to rid myself of this evil with the only remedy,—Truth as revealed in Science and Health. In short, I started aright to overcome the foe.

One treatment destroyed the enemy (whom I formerly believed to be a friend), and so entirely that I am convinced it can never return. When I now look back upon that time and think of that first week, when smoking ceased to be an enjoyment for me, I cannot help seeing the funny side of it. How old Adam resisted in me. The first day I made believe to long for my pipe and lighted it. I really used will-power to take a few whiffs, then laid it down on my desk. This manœuvre went on every day for about a week, until I, or rather old Adam in me, was convinced that there was no longer any enjoyment in it, and that these burnt offerings, which had heretofore been daily lavished upon the devil of smoking, must cease.

I wish to add that my wife, my children, and I have received many, many blessings through Christian Science, for which we thank God with all our hearts, and we wish to thank Mrs. Eddy for her wonderful work, for Science and Health, which reveals to us God and His word in the true light.

It was a great joy for me as well as the other Christian Scientists in this city, when we heard that a Christian Science periodical was to be published in the German language, and how glad we were when we held the first number of *Der Christian Science Herold* in our hands. May it become a true herald, a messenger of peace to all Germans here as well as in our Fatherland.

A. B., Oshkosh, Wis.

---

The following testimony is taken from John M. Harrison's introduction of the speaker, upon the occasion of Carol Norton's lecture in Haverhill, Mass., June 2.—EDS.

*Ladies and Gentlemen:*—It was but a few years since I was sick, miserable, and in the depths of despair. I had known nothing but ill health from my birth, and this discordant condition had steadily increased until I could go no farther. I had consulted the best physicians of the communities in which I had lived, and each of these good men had earnestly labored, with the best light he possessed, to heal me, but without anything more than temporary success. Finally one, who proved to be the last to whom I went, frankly told my wife that any one who had suffered so long as I had need expect no permanent relief. My business was in a condition of stagnation; I was without means, without health, and now without hope of health. Even the prospect of a speedy passing away was denied me; the future presented not one ray of brightness.

Reared under a pious, God-fearing mother, a member from her childhood of one of our largest orthodox denominations, I had repeatedly gone to my Bible and endeavored to find in it a way of escape from my troubles. I read there that Jesus healed the sick, that his disciples and the apostles did likewise, and his statement as related in the last chapter of Mark's gospel that all who believe upon him should do the same. The healing of sickness appeared to be the natural accompaniment of the gospel he preached, of the Truth he taught. I earnestly prayed to God for health, but I received no evidence that my prayers were heard.

It was at this critical moment that a friend suggested that I try Christian Science. I had ridiculed Christian Science, made all manner of fun of it and of its adherents, but upon this occasion I stopped to consider the question. It was the only thing of which I knew that held out any hope to me; even should it not help me it could not hurt me; I had nothing to lose by trying Christian Science, and I determined to go under Christian Science treatment. The next day after I did so I was better, the day following I was further improved, and from that time I have known no remedy for any ill but Christian Science.

I secured a copy of Mrs. Eddy's book, Science and Health, and began to read it. I found it clear, sensible, and logical, and the light which it threw upon the Scriptures made it a new book to me. Passages which heretofore had been obscure I could now understand and see their practical import. I was convinced that Christian Science was the truth, and I made up my mind, God helping me, to live my life as nearly as I could in accord with its teaching. Upon beginning to do so my health continued to improve, my business began to straighten out, and every avenue of life grew brighter; and I can truthfully say that from that day to this, in the proportion that I have lived in accord with the precepts of Christian Science, I have experienced health, harmony, and happiness.

This personal experience is in substance the experience of every Christian Scientist, and we would be lacking in common humanity, and that spirit of brotherly love practised and commended by Jesus of Nazareth, if we did not exert every proper effort to spread this gospel, which we indeed have found to be "good news," that all may have the opportunity of sharing these blessings which we enjoy.

---

About nine years ago I was healed by Christian Science. I had been sick nearly two years, and although not confined to my bed all the time, I was not able to work. The doctors told me that it would be a long time before I could

Digitized by Google

get well. Medicine did me no good. My sister, who was interested in Christian Science, induced me to try the treatment, and I wrote to a Scientist who treated me for a week. This healed me and I then wrote to her that I could get along without further help, when she advised me to get Science and Health and read it. Since my sister had one I used hers, but soon discontinued reading it. I was so well I thought I had all I needed. In a few years I was married, and when our first baby was born it passed away, and I was brought back to Science. Two children have come to us since, and had we accepted Christian Science from the first, it would have saved us much suffering. I have had some demonstrations with the children lately that have proved that God is ever-present and does not forget His children if they only obey.

MRS. AMELIA ECKEY, Mount Union, Ia.

---

I always felt that I would like to express my gratitude for what Christian Science has done for me, and now I have also *Der Christian Science Herold* to be grateful for. I am German, and I know it will be a great help among my people. I lent the *Herold* to one of my friends who was very much opposed to Christian Science, and her thought has changed by reading it. Now she expresses love for the Science.

About seven years ago I came to Christian Science for healing. I had been suffering for over nine years, and during the last part of that time I was never a day without pain. I had tried different doctors, but found no relief. Before I went for healing I resolved to try Christian Science for a year. My healing was slow, and I am grateful now that it was so, for by it the Bible was made a new book to me.

The Bible and Science and Health are my daily companions. Sometimes I felt discouraged, but the thought always came to me, "Keep on; if it helps others, it will surely help you." Month after month passed by and I felt no change, when, to my great joy, a still, small voice said to me one day, "God is the only power." From that time I grew stronger, and now I am perfectly free. I have had many demonstrations of the power of Truth in healing sickness in my family, and my children have made many demonstrations for themselves, but I am most grateful for the spiritual understanding which I received through my healing. I am unable to find words to express my love and gratitude to Mrs. Eddy.—L. W., Berlin, Ont.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The vernacular in which God speaks to man is human experience. The unique value of the Bible is that it is the record of the experience of men who stood in peculiar relations to the unfolding of God's plan which culminated in the human experience of Christ and the building of the Church under the guidance of his Spirit. Cut the humanity out of the Bible and there will be little divinity left. Behind that humanity always remains the sense of the presence of God. The world, too, speaks to us in human tones, but in its greetings, its demands, its grief and laughter, too often the sense of the presence of God is absent or hidden out of sight. We need to read the Bible daily as a corrective for the world's forgetfulness of God, and for the training of our thought in using His presence and His will as a test and measure of proportion for the work and play of life.

That human language which God speaks finds its purest and its clearest utterance in the life and words of Christ. All the Bible is of him. In its pages all the long preparation is depicted and the story of his life on earth is given. The personal relation to him, and through him to the social uses of the world, must always be the central sphere of life for the disciple. The Spirit, we are told, shall take and declare of Christ unto us. But unless we are familiar with the record of his life and works and words, how are we limiting the power of God's Spirit to do this work?

*The Congregationalist and Christian World.*

Professor Josiah Royce of Harvard says in *The International Journal of Ethics:* "Humanity's important business has generally been mismanaged in proportion to its significance. I remark merely that this holds true in the case of the highest of all humanity's interests. My proof is in the best-known facts of history. The variety of contending faiths, the cruel, mutual misunderstandings that the followers of opposing faiths have cherished toward one another, the religious wars, the multiplication of sects, the confusion of the essential with the trivial in religious life, the substitution of the conventionality in religious practice for spirituality in religious experience, the enormous waste of energy over confused thinking about religious matters,—these are a few of the evidences of the truth of my principle. Religion has fared, in even comparatively recent history, far worse than the cause of human liberty, far worse than philanthropy, incomparably worse than the care of physical health. Nothing has man treated worse than his own and his brother's chances of spiritual salvation. Nowadays, to be sure, the religious situation is much improved. The religious wars have almost ceased. But many evils remain."

F. N. Peloubet, D.D., author of "Select Notes on the International Lessons," says in *The Homiletic Review:*—

"Any one who has been in close contact with educators and educational matters during the last ten or fifteen years, as I have been compelled to be on account of the earnest desire to improve the Sunday School and its teaching by means of all that can be utilized by day-school methods and principles and pedagogical theories, can recognize the truth of the picture. Never before has there been such a conflict of opinions, such a storm of criticism, such a condemnation of the established order, such a whirl of new theories, such a battle of ideas, such a series of experiments.

"Sometimes when we hear these sharp criticisms of the Sunday School in conventions and papers we are inclined to be troubled and discouraged, till we listen to what is said about the day schools, and recognize that the criticisms of the Sunday School are but a summer breeze compared with the storm hurled against secular education and its methods."

Rev. W. H. Rainsford says in *The Outlook:* "One of the secrets of a successful ministry is to preach what you believe to be true and nothing else. If it is true, it is going to win. . . . Now I have no definite system such as I once had, a tradition received from my fathers. But in giving up the old systematic faith I have felt no loss; this other is so much richer and bigger. I had a delightful sense of exhilaration when I grasped this great principle capable of universal application,—that people are the children of God. I tell them that and it thrills me as I say it, no matter how commonplace the words are. If a man has a spark of the divine in him when he is born into this world a crying, helpless baby, that spark is not going to be extinguished; God is not to be undone. . . . There is something in the soul of every man that responds to the divine reality in a messenger, if he is a real messenger. I believe that as firmly as I believe anything, and I repeat that to the young clergy, and my boys and girls, and all over the land wherever I have a chance."

The Rev. F. R. Leach, in an article in *The Standard* on "What I would do were I a Layman," says: "Above all else, if I were a layman, I would try to live a life that would be a witness for Christ. I would seek to do business with men, so that they would want to do business with Christ. I would deal with men in business, so I could deal with them in religion. Some laymen do their own business in such a way that they cannot talk to their business associates on the King's business. I would put making a life above making a living. Laymen can do more than they dream of by taking Christ with them to their places of business. Christ is shut out of business, and out of the hearts of men. He longs to enter both. The Christian layman has a great field before him. It is yet undeveloped."

Love is power. . . . We see an illustration of it in Jesus of Nazareth. He had no mechanical devices at his command. He was not supported by financial, political, military, and social power. He did not appeal to science to aid him. Yet we behold in him wonderful power. No military leader ever commanded such an army as the Captain of our salvation commands. No statesman ever contributed so much to shape the currents of history as Jesus. No teacher or thinker ever controlled the thought of men as he has done. What is the secret of his power? His love. Not his miracles. Not his teaching. His love is drawing all men unto him. Love will give men power over themselves, over their children, over their neighbors, over the lost, over their enemies.

*The Christian Advocate.*

The second day's session of the Presbyterian General Assembly at Los Angeles, Cal., was devoted entirely to receiving reports of special committees appointed by the last General Assembly. The most important of these reports was that of the committee on evangelical work. Dr. Roberts announced that all the eleven amendments to the confession of faith had been adopted by the presbyteries by an almost unanimous vote. Not a single overture received less than 195 affirmative votes nor more than nine negative votes. Three presbyteries voted against the revision as a whole.

If we would gain light either on the theory or the practice of religion, we must sincerely desire the light. We must use the light we already have. We must patiently seek light in the double way of prayer and rational inquiry. Never as long as the world stands will any religiously benighted soul thus patiently desire and pray and labor for the break of day, without at last seeing the eyelids of the morn unsealed, and the painfully dusky east gradually redden into the sun.—E. F. Burr.

This love of one another was to be the mark and seal of Christians; it was to distinguish them from other men, so that those who were not Christians, looking upon their lives and seeing them free from the jealousies, the quarrels, the violent and bad passions of other men, might confess that God was in them of a truth, and that so heavenly a fruit could proceed from nothing else than the tree of life eternal.

Thomas Arnold.

G. G. B., a Baptist, says in a letter in *The Christian Register:* "It seems to me that the lesson for Unitarians to-day in these three particulars is the lesson for us all,—less of the formal, more of the real; less of that which tends to make a man think he is religious because he has said or sung something, and more of that which drives men to action because they see that it is true."

There is no possible way of getting into the kingdom of God here or hereafter, save by the laws of the kingdom of God, and those laws are clean hands and a pure heart. Clean hands mean honesty, uprightness, integrity everywhere. And a pure heart means a heart that has the life and the love of Jesus Christ as its love and the work of Jesus Christ as its work.

Rev. J. Stanley Durkee.

The faith of our deeper need is that faith which means steadying vision of the divine unseen and the divine eternal; profound consciousness from moment to moment of what the poet has called "the deep below the deep;" nobler conviction within us that the real value of things is a spiritual value.

Rev. Quincy Ewing.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

MARY E. SPEAKMAN, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

The American squadron on the European station is to be at Kiel, Germany, during the whole of regatta week, June 23 to June 30. England is very anxious, it appears, to have the same squadron present at some event in British waters, either the review of the British fleet at Spithead or the yachting regatta at Cowes.

An invitation was recently extended to Professor Booker T. Washington of Tuskegee Institute by Lord Gray of the British South Africa Company to visit South Africa and make a study of the racial conditions on British Territory and report to the company plans for bettering the educational, moral, and industrial conditions of the people; but as it would take him away from the institute for some time he has declined the offer.

If the plans of the New York Fine Arts Federation do not miscarry, says the *Boston Transcript*, the city will shortly have a large and imposing building for the exhibition of works of art, something after the model of the Paris Salon. It is stated that funds have been promised already by an anonymous donor, and that the sum is large enough to insure the success of the scheme.

Miss Annie L. Peck, the well-known mountain climber and lecturer, has sailed to South America with a party of scientists who will attempt to scale Mt. Sorata, one of the highest mountains in the world, with its elevation of over 20,000 feet.

Herbert W. Bowen, United States minister to Venezuela, has just returned to New York on a two months' leave of absence, after which he will go to The Hague court where certain matters of the Venezuelan imbroglio will be considered.

Andrew D. White, former ambassador to Germany, is reported as favoring a Pacific port for Russia in Manchuria. The interior development of Siberian Russia would in consequence, he says, be greatly facilitated.

**Foreign.**

The Salon Medal of Honor, which consecrates the successful career of great French artists by the suffrage of their peers, has been awarded to M. Gabriel Ferrier, who is spoken of as not a great painter, but a good one. He won the Prix de Rome in 1872, won a second medal in 1876, a first in 1878, and a gold medal at the Exposition of 1889.

The whaling ship Gjoa has sailed from Christiana with a party under Captain Ammundsen to endeavor to locate the northern magnetic pole. The expedition, as planned, will follow a new route which will take the party directly across the North Pole. The Gjoa can be handled by a crew of seven, and is provisioned for a four years' cruise.

Servia has formally accepted Karageorgevitch as king. He will be known as King Peter. Russia has officially recognized him as king. The sentiment in the European capitals is for the punishment of the assassins of the late King Alexander and his household.

Leong Kai Chew is addressing his countrymen in various cities of the United States in favor of the reform movement in China.

**Industrial and Commercial.**

The *Scientific American*, commenting upon the French express engines of the de Glehn type, says: "The work accomplished by these engines, when judged in the light of their weight and fuel consumption, is undoubtedly better than the performance of any class of locomotives in the world. The Chemin de Fer du Nord, which for several years has been notable for its fast expresses, provided during the season of 1902 twenty additional express trains, whose running speed averaged from start to stop 55 miles an hour and upward. Eighteen of these trains were scheduled to run at 56 miles an hour and upward; twelve at over 57 miles an hour, nine at 58 miles an hour and over, three at over 59 miles an hour, and two at over 60 miles, the fastest train being scheduled at 63.5 miles an hour. The trains are by no means light, averaging about the same as our Empire State Express, or say 200 tons. The most remarkable work done by these engines has been in hauling heavy express trains on up grades when very high speeds have been reached and maintained. Thus, with a 225-ton train on a run of 78¾ miles from Paris in 77 minutes and 44 seconds, a steady speed of 65 miles an hour was maintained up a grade of 1 in 200. On another run a speed of 64.6 miles an hour was made on an upgrade of 1 in 250, the run ending at Arras, the 120 miles from Paris having been made in 115 minutes and 25 seconds, or in 102¾ minutes after deducting delays, of which there were several. The average start to stop speed was exactly 70 miles an hour. An even more remarkable performance in some respects, was a run from Paris to St. Quentin with a load of 350 tons behind the tender, when the distance of 95¾ miles was made in 99 minutes. On this occasion the engine took its load of 350 tons up a grade of 1 in 200 thirteen miles in length at a steady speed of 62.1 miles per hour. In all the history of locomotive performances, either in America or Europe, there is no authentic record of anything to approach this uphill work by an engine weighing only 63 tons."

The perfected organization of the Bluff City Oil Company at Pine Bluff, Arkansas, capitalized at $100,000, is reported, and a plant to be ready for the new cotton year will be erected; additions to the Lowe Manufacturing Company and to the Eastern Manufacturing Company at Huntsville, Alabama, will double their capacity; the new Apalache cotton mill under construction at Greer Depot, South Carolina, capitalized at $350,000, will have 17,000 spindles and 375 looms; additions are planned for Tupelo, Mississippi; Jamestown and Kings Mountain, North Carolina, and many other places in the South.

The value of raw cotton exported from the United States during the eleven months ending with May, according to the preliminary figures of the Treasury Bureau of Statistics, is $308,747,095, which exceeds by $5,000,000 that of any previous corresponding eleven months. The quantity exported is not equal to that of the years 1898 or 1899, but owing to the higher price the value is greater.

**General.**

Professor William Crookes, before the International Chemical Congress at Berlin recently, according to press despatches, dealt with the possibility of reducing all the elements of matter to one ultimate basis by finding what each and every element is resolvable into a single form of energy.

The subject was "Modern Views of Matter—the Realization of a Dream." Sir William cited the utterances of Sir Humphrey Davey and Faraday as anticipating the possibility of reducing the elements to simpler bases, and sketched the significance of the Roentgen rays and Becquerel rays and the experiments of Curie and others. He said:—

"All these observations find internal connection in the discovery of radium, which is probably the basis of the coarser chemical elements here. Probably masses of molecules dissolve themselves into the ether waves of the universe, or into electrical energy. Thus we stand on the border line where matter and force pass into each other. In this border-land lie the greatest scientific problems of the future. Here lie the final realities, wide-reaching and marvelous.

"The nineteenth century saw the birth of new views regarding the nature of atoms, electricity, and ether. While our views about the composition of matter are generally satisfactory to-day, will that be the case at the end of the twentieth century? Do we not again see that our investigations have only a temporary value? Will we be content to see matter dissolving into a multitude of revolving electrodes?

"Such a mysterious dissolution of atoms appears to be universal. It occurs when a particular place is rubbed with silk. It is present in sunshine, in a raindrop, in lightning, in a flame, in a waterfall, and in the roaring sea."

During the present year there will be placed in the Dover-Calais service the first turbine propeller cross-channel passenger vessel ever built, marking an important event in ocean travel. Her length will be 310 feet; beam, 40 feet; number of turbines, three; number of propellers, five; speed, 21 to 22 knots. The median shaft will have one propeller, the two lateral shafts two propellers each. The propelling machinery will consist of three Parsons steam turbines the center one high pressure and the two lateral ones low-pressure. When steaming ahead, the steam is admitted to the high pressure turbine and after expanding about five fold passes to the low-pressure turbines where it expands about 25 fold. It then passes to the condensers, the total ratio of expansion being about 125 fold, as compared with 8 to 16 in ordinary triple-expansion reciprocating engines. Steam can be admitted by suitable valves into the low-pressure engines only, which can also be reversed. The builders claim this gives a manœuvring efficiency equal to the ordinary twin-screw steamer.

Among the advantages claimed for vessels equipped with turbine steam engines are complete absence of vibration, increased economy in steam and coal consumption resulting in an increase of speed and decrease of weight, increased stability because of lowered center of gravity of machinery, perfect balancing of engines permitting lighter foundations, reduced diameter of propellers permitting greater immersion and obviating "racing" in rough seas.

It is said that the world's rubber industry is likely to be revolutionized by the introduction of a fibrous rubber obtained from the roots of a plant discovered by a French botanist on the sandy plains of French Congo. Specimens of the plant, scientifically named Lundolphia Thrallonii, had been previously collected in seven places, including Lower Guinea and the Lower Congo. Very recently a French firm realized its possibilities, and has since produced excellent rubber.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From our Contributors.

### A Responsive Heart.

HATTIE P. WILLIAMS.

HAVING had almost continuous consciousness of health during seven years of Christian Science experience, and therefore so few demonstrations over physical errors to give, and yet desiring to add my mite to the support of our periodicals, it has become clear that the expression of an awakened and regenerated thought, is a contribution; also that as it is not difficult for a plant, nourished by the sun and dews of heaven, to bud, expand its blossoms, and throw open its heart laden with fragrance to a waiting world; so the Christian Scientist, nourished by his daily food of truth, should find no difficulty in giving to a waiting world the results of daily growth, fragrant with the perfume of Love. It should be a glad outpouring of that which has been received, assimilated, and increased tenfold, until there is no room in consciousness to hoard it for one's own use, but one realizes that it must be given out freely and unselfishly to swell the voice of that mighty testimony that is filling the earth with its notes of joy and peace, sweeter than any sound that has yet reached the human ear, telling of freedom from the bonds of false thoughts of God and man.

Obedience to a lie is the enslavement of hypnotism, and mortal man has therefore during all his seeming span of earthly existence been under a hypnotic spell, for he has been believing a falsehood about God and man. He has been believing that there are mortal, physical laws which he must obey, when all the while the truth remains that there is but one law, the law of Spirit. This truth appears first to mortal man as a faint light, and as he follows it, guided by divine wisdom, it grows brighter. He realizes the impotence of the supposed laws which he has heretofore obeyed, and rejoices in the growing sense of freedom from material beliefs; he realizes the utility and practicality of the law of Truth and Love in his daily affairs. The burden of fear is lifted from shoulders bowed beneath its load, and the things that once seemed real, are understood to be mere ghosts of mortal belief. He learns to walk leaning more and more upon the One Mind, One Love, for guidance and support; his constant endeavor is to realize his unity with this Mind, Love, and to understand the wondrous meaning of "God is All," which understanding will usher him out of the realm of unreality into the kingdom of reality where no intruding belief can mar the perfect harmony of spiritualized consciousness.

A great and most helpful means for gaining entrance into this kingdom of reality, is a cheerful and earnest study of the Lesson-Sermons, accompanied by the prayer that the truth enfolded in each subject may be disclosed. These lessons are efficient aids to the growth of every Christian Scientist, and we should be very careful that we do not look upon this study as a mere duty, but rather as a privilege for which we are increasingly grateful.

### Faith in Understanding.

KATE SWOPE.

IN our first steps in Christian Science much seemed to depend on the miracle to keep us established in faith. We needed a sign, we wanted to see the footprints of our progress as evidence that we had advanced. We encountered many disappointments because it was effect we sought, rather than cause. We looked to phenomena to support our faith, instead of looking to our faith to produce phenomena. The mind action was not always correct. The Science of Mind is exact, so much so, that any deviation from its rule results in failure. As a man thinketh so is he, and as is his thought, so is his result. If he looks to phenomena to sustain his faith, instead of trusting in his faith to produce phenomena, the true order is reversed, and he is not working in Science. He is not governed by law; in his timidity he is looking to effect, not to cause, for manifestation. He thinks if he could but see some little result he could have more faith, whereas just the contrary is true; if he had more faith he could see some result.

"Seek ye the kingdom of God; and all these things shall be added unto you." The kingdom of God, Jesus taught, is within you, and by seeking the illuminated consciousness within, we shall find dominion over all things.

I know a Christian Scientist who went to a Wednesday evening testimonial meeting the third day after she had most successfully proved for herself the power of Christian Science in obstetrics. Said a surprised friend, "Why, I can hardly believe my eyes to see you here," and the Scientist answered, "It should not be hard for you to believe it after it has happened; I believed it before it happened." That is the mind action which carries demonstration with it,—the believing before it happens. There is no failure in such a prayer. It conforms perfectly with Jesus' teachings: "whatsoever ye shall ask in prayer, believing, ye shall receive;" and again, "all things are possible to him that believeth." Jesus said, to one who approached him for healing, "Believe ye that I am able to do this?" We need often to face the Word of Truth, in the treatments we realize, and ask, Believe ye that Truth is able to do this? It is Truth,—believest thou that?

The comparison of Christian Science with the Bible will show such an illumination of its texts, such an identity of teaching as to convince one that this is restored Christianity. This alone produces the marvelous increase of faith and sense of security found in Christian Scientists. Faith is that sensitiveness to Truth which knows it by its touch alone. Faith is of God; it is the recognition of the unseen; it is the "substance of things hoped for." Faith needs no external evidence to support it, and neither leans upon, nor begs of phenomena to sustain it; rather does it control and bend all external means to its own end,—the thing hoped for.

Man was made to have dominion over all things, and he is not manifesting this dominion so long as he leans on the thing he seeks to govern, for support in demonstration. If he is so controlled by phenomena as to be dependent on its evidence for encouragement, how can he expect to

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

govern it by making it follow his faith? Naturally such a procedure produces discouragement. The young Scientist may wish to see some marvel, and, like Thomas, make his believing dependent upon sight, whereas a better way is to make one's believing produce something to see. Not seeing a result when and where and how he has planned it, he may become discouraged. But our ways are not God's ways. Our mind action is not always scientific.

We have known beginners, with ardent enthusiasm, to grapple with prodigious problems of destiny, with a zeal out of all proportion to their patience, and to become discouraged because a few treatments did not produce a complete regeneration in mind, body, and destiny itself. It is a discouragement that comes from blindness, from a lack of grasp of the needs of the occasion, lack of insight into the enormous odds against him on the mortal side, lack of sense of proportion. A good general makes a careful survey of the enemy.

Understanding goes beyond faith in that it is wisdom and sight; yet understanding must forever include faith. If one contemplates escape, it is wise to make a careful survey of the country one is in. Sometimes the way to detect a counterfeit dollar is to examine it minutely, carefully, and cautiously. The advancing Scientist is more patient because of a general grasp of the needs of an occasion, and I have known such an one to dwell in faith, in the substance of things hoped for, for years; and we have seen such faith become so established that it thrived without sign, token, or testimony for encouragement. Such faith in right thinking never faileth.

"Fear not, little flock; for it is your Father's good pleasure to give you the Kingdom," clearly expresses the will of God. Christian Scientists understand the will of God, and must have faith in that understanding. Even if the faith be no larger than a grain of mustard seed, yet must it be used faithfully and confidently in behalf of further growth. All that is necessary to correct one wrong thought is one right thought. One error needs but one reversal. One lie needs but one correction, and so Christian Science treatment is very simple. It meets the will of evil with the omnipotent will of good,—God. The confidence in Christian Science treatment is based on a knowledge of the will of God. The Christian Scientist is in no breathless suspense of fear in contemplating the will of his God, for in understanding God, he perceives His will also. Therein understanding transcends faith, yet must he have a perfect faith in that understanding.

He must live in cause, not effect; seeking Mind rather than manifestation. He must not lean on the shadow of himself. His faith is the substance (the reality) of the thing hoped for. What the eye of faith sees is the real, rather than the later appearance of its form. If the thought runs after effects, seeking support from a sign to sustain a realization of Principle,—God,—the hour of dominion over the external is not yet at hand. He is not then mastering matter; he is its leaning, begging servitor, and the Master is not as yet unveiled within him.

"Believe also in me," the Master said; and again he said, "I am in you;" and again, "whosoever . . . believeth in me [the Master within] shall never die;" and again, "Ye believe in God, believe also in me." Believe was his most frequent word; believe in God and in His man, he said. "I can do all things through Christ which strengtheneth me," expresses a perfect faith in the spiritual understanding. How superior this power to the "I will" of human strength!

What are we believing in? What are we relying on? On the power of the Word, on the statements of Truth, on our understanding of God? or on some external sign of its efficacy? Is our confidence erect in the knowledge that Christian Science reveals Truth, Life,—the law which is annihilation to everything that is unlike God? Do we know the Truth that makes one free? and further, do we know that we know it? Have we faith in our understanding? Do we believe that Truth destroys error? Do we believe that Truth is able to do this,—to heal? Let us remember Jesus' query, "Believe ye that I am able to do this?" Let us believe in the power of the Christ, that Light which lighteth every man that cometh into the world, that spiritual perception which is the recognition of being, and which is the healer. Let us proceed confidently, believing that the Word is able to heal, knowing that the same spiritual law is in operation to-day, which thundered throughout the void, in the dawn of the ages, when God said, "Let there be light," and when manifestation echoed and re-echoed throughout a vaulted firmament that glorious afterthought, "and there *was* light."

## The Lesson of Obedience.

JACK MULOCK JACKSON.

As one who has been greatly helped lately by learning the lesson of obedience in Christian Science I would like to relate somewhat of my experience, in the hope that it may aid others even as I have been aided. It is often said that fear and worry are responsible for much of our trouble, and failure to come out of discordant conditions. So they are, but they are not the original cause.

The primary cause as I have learned it, is disobedience, the consciousness of being disobedient to our highest knowledge of Truth, right, and spiritual law causes fear. No two persons can be judged by the same standard, as to what they are expressing in their lives, therefore let none of us fail to pursue a certain line of duty simply because we say our neighbor is not doing so. What may be a progressive condition for our neighbor, may be only marking time for us. We must go forward.

Many of us have said, figuratively, perhaps literally, "Yes, Christian Science is a grand truth, and I believe in it, but I cannot (or will not) do such and such a thing" or "give up such and such a thing," reserving to ourselves some particular specific course or pursuit which we know to be unscientific, but which we decline to abandon. Such has been my own attitude for years, but having seen the error in its true light, I should like to warn others.

I wish I might convince every one who reads these words that this mental attitude of conscious resistance toward Truth, or any spiritual duty, is the cause of a great deal of discord, mental and physical. After years of very painful experience, during which my efforts to find relief would literally fill a book, I can confidently declare that nothing but Christian Science fully and freely accepted and expressed will solve this problem.

Until I decided to reserve to myself no particular error of any sort, but to yield myself absolutely to the call of Truth, I could not begin to tell how irksome and discordant were my business conditions. "A hell of discord," is not too strong a phrase to describe what I endured to sense. Others may be in this pit, and it is for them I write. With amazing repetition, all my efforts in a material way to escape this torment, failed utterly, and so will all such efforts to the end of time, so long as there is a conscious mental resistance to the leading of divine Mind.

Finally it was borne in upon me that material conditions can neither confer happiness nor discord. All that is real is spiritual, and in the spiritual forever abide and all is harmony.

Great is the peace of mind which comes from obedience, it can be experienced but not adequately described, for it transcends all material definition.

In connection with this experience, there has come to me a parable which seems apropos. Christian Science or harmony is as a great river flowing ever irresistibly to the boundless sea of divine Love. If we are always and unreservedly obedient to its law and claim upon us, we

Digitized by Google

are in this great river, supported by divine Mind, enjoying the wealth of God's goodness, with nothing to harm us or make us afraid. If we are disobedient, even if it is only in one (to us) small particular, we are as a chip which lies on the river's brink, very close, it may be, to the river and yet not in it, and experiencing none of the harmony which lies at hand and which may be ours if we permit it. The chip on the bank might as well be a thousand miles away, and the one disobedient practice cuts us off completely from the river of harmony.

We cannot be too grateful for this priceless gift of Christian Science, which has come through the unprecedented obedience of one noble woman, Mrs. Eddy.

## The Message of Christian Science.

THE world has had, in this age, a message,—a message which adds nothing to the Christianity of Christ, takes nothing from it, but one which so interprets the life-work of the Master that to the Christianity of the people an immeasurable degree of the knowledge of God is added and a weight of doubt and fear and misery is taken away.

This message is called Christian Science. The messenger is a woman of pure and consecrated life who has been given the wisdom to deliver and protect this message. Those who have heard it are striving to be Christian Scientists—Scientific Christians.

First, one, or two, or three in a community heard this message, responded to its demands, and received its blessing. As the value of it grew upon them, they gathered together "in his name" to study the Scriptures in the light of this revelation which had brought peace and healing to them.

The trials of pioneer days strengthened and purified, and out of it all there have grown many companies of happy Christians, who are so enriched and blessed that the upspringing of beautiful church buildings is a natural and spontaneous expression of their joy and gratitude. All over our land these eloquent witnesses have been established, and it is cause for much rejoicing that the faithful workers are enriching us all by the evidences of their fidelity.

The real reward which is coming to the Christian Scientists in this hour is not in the beautiful church buildings, in the external signs of prosperity which mark the progress of our cause, but in the ever-increasing knowledge of God which is coming into the heart and life as the result of sacrifice, obedience, and loyalty.

Jesus said, "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you." Those who are obeying this are learning that in finding the kingdom, in abiding in its safe shelter, in excluding from thought everything unlike that kingdom, lies the real reward, the real joy.

The external building has been "added" because it is the honest fruit of right thinking, right living. It stands as the symbol, the witness, not as the thing itself.

It bears witness to fidelity, to unswerving allegiance to a perfect ideal, to consecrated toil in the endeavor to make that ideal a living, practical reality. It is a testimonial to the meek and consecrated life of our Leader, whose teachings have aroused this generation to a clearer comprehension of the saving, healing mission of Jesus the Christ, and it gives glorious evidence that "God is with men" and that the demonstration of His loving redemption of "the children of men" is at hand.

In the presence of this we cannot be proud, we cannot give or receive congratulations; we can only be grateful, and endeavor to live such lives as will be worthy the great trust given to us.

From the address of MRS. BLANCHE H. HOGUE at the dedication of Second Church of Christ, Scientist, Salem, Ore.

## A Grateful Heart.

ROSA MOTSCHMAN.

I SHOULD like to express my deep and long-felt gratitude to our Leader, Mrs. Eddy, for the wealth of literature she has given us,—a world of knowledge meeting every want, satisfying every craving of the hungry and thirsty. Well may we rejoice that privilege is given to put our heart-felt love for her and for our Cause into action through the establishment of the Mother Church Building Fund. "And the Lord spake unto Moses, saying, Speak unto the children of Israel, that they bring me an offering: of every man that giveth it willingly with his heart ye shall take my offering." May divine Love spread its wings over our beloved Leader and her work.

## My Prayer in Christian Science.

M. E. W.

To be ever conscious of my unity with God, to listen for His voice, and hear no other call. To separate all error from my thought of man, and see him only as my Father's image, to show him reverence, and share with him my holiest treasures.

To keep my mental home a sacred place, golden with gratitude, redolent with love, white with purity, cleansed from the flesh.

To send no thought into the world that will not bless, or cheer, or purify, or heal.

To have no aim but to make earth a fairer, holier place, and to rise each day into a higher sense of Life and Love.

## Eternal Day.

MARY IRVING KEITH.

ETERNAL day! Eternal day!
One prayer the multitude shall pray.
Gone is the need of sect or creed
Where "Israel's God is God indeed."
With one accord all hearts will say,
"Lord, this is thine Eternal day."

Eternal day! Eternal day!
Earth's gloomy shadows flee away;
Past is the night; the Lamb, the Light,
Our robes are glistering and white,
And in Love's pure effulgent ray
The world has found Eternal day.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## The Lectures.

Special interest attaches to the following report of the first lecture on Christian Science ever delivered in Ireland, and of the lecture in London, Eng. The currents of progress and civilization have in the past been uniformly to the westward, but America is now reversing the order, and the shores of the lands from which our Fathers came are being laved by a return tide of spiritual good.—EDS.

### At Dublin, Ireland.

The first Christian Science lecture in Ireland was delivered by Judge Ewing in the Antient Concert Rooms, Dublin, May 5, before a very large and representative audience. The subject was "The Religion of Jesus Christ." It was very impressive, and throughout the lecture the most marked attention was given by the audience.

The lecturer was introduced by the Earl of Dunmore in a few appropriate words.

The following cablegram was sent to Mrs. Eddy on behalf of First Church of Christ, Scientist, Dublin:—

"Rev. Mrs. Eddy, Pleasant View, Concord. Grateful thanks for sending Judge Ewing. Lecture much appreciated, large audience. LADY ASHBOURNE."

To which the following reply was received:—

"To Lady Ashbourne, Merrion Square, Dublin. Accept thanks. Glad Judge Ewing pleased you. EDDY."

*Correspondence.*

### At London, Eng.

Under the auspices of Second Church of Christ, Scientist, London, the Hon. William G. Ewing, late Justice of the Superior Court of Illinois, last night [May 25] delivered a lecture on Christian Science to a large audience in St. James's Hall. The address was not in the least sensational in character, for, as Judge Ewing pointed out, he was anxious to show members of the old Christian Churches how much they had in common with Christian Scientists, rather than to dwell upon their differences. He ventured to say that not only were there many religious beliefs in which they were in perfect accord, but he went further, and declared that after fifteen years' study of the subject there was no solitary principle which for the last five hundred years any intelligent man had held in the old churches which he would have to surrender if he became a Christian Scientist. Healing was merely subsidiary to their belief. They believed that God was their strength and their Redeemer, and they went to Him for a cure for every ill which came to humanity.

*The Daily Chronicle.*

### At Dover, N. H.

Mr. Carol Norton, C.S.D., of New York City, delivered a lecture on "The Meaning of Christian Science" in the Unitarian Church, Sunday afternoon, May 17. The church was very kindly offered for this occasion by the pastor, Rev. Ward R. Clarke, who also introduced the speaker. The church has a seating capacity of about two hundred and fifty, and nearly all the seats were occupied by a thoroughly attentive and appreciative audience.

Rev. Mr. Clarke, in introducing the lecturer, spoke as follows:—

Four years ago in the Opera House at Meadville, Pa., I listened with pleasure and profit to an earnest apostle of Christian Science. After the lecture I went to the special meeting in an upper room across the street, and there, with a quiet enthusiasm, the speaker bade his brethren be faithful and never to hit back when persecuted. It seemed to me like a meeting of apostolic days with Paul addressing his little company of believers in one of the ancient cities, and urging them to be Christ-like in their bearing toward all men, especially toward those who opposed them. I have not followed that speaker's career during the past four years, but we meet to-day on the same platform. Since I believe him to be an earnest searcher after truth, I welcome him to this Unitarian pulpit which stands for a reverent devotion to the God of truth and goodness and beauty.

Truth for man has many aspects, since humanity is extremely complex, and I believe that each phase of truth should gladly come into relations with all other phases, that in life's great variety there may be unity.

Wherever Christian Scientists are helping people to better health and to nobler and purer and kinder living, I bid them God speed. It gives me pleasure to introduce to you Mr. Carol Norton of New York, one of the authorized lecturers on Christian Science, who will now address you.

*Correspondence.*

### At Cambridge, Mass.

On Tuesday evening, May 12, under the auspices of First Church of Christ, Scientist, of this city, Mr. Carol Norton of New York delivered in Union Hall an eloquent and able lecture on "The Meaning of Christian Science."

The hall, which was tastefully decorated for the occasion, was filled to its utmost capacity by an attentive and interested audience, numbering about fifteen hundred people.

The proceedings were opened by the First Reader, Mr. Wilfred G. G. Cole, who welcomed the audience on behalf of the church, and introduced as chairman the Rev. William P. McKenzie, also a member of the Board of Lectureship.

Mr. Norton was introduced by Mr. McKenzie as follows:

*Friends:*—I have been invited as a citizen of Cambridge to introduce to you the lecturer of the evening. It may be of interest to you to know that he is of distinguished New England ancestry, and is through his mother's family related to the poet whose home in Cambridge is a shrine for visitors from far, and whose love for its beautiful surroundings was commemorated by the reservation of Longfellow Park. Dr. Norton is himself a poet, as either in feeling or expression all those must be who find the deeper harmonies of life. And of these harmonies he has come to speak. He will tell how Christian Science eliminates the discord of disease, and establishes the wholesome and concordant condition of health; how its influence weans men from ill habits, and vicious tendencies of temper and morals, and enables them to enjoy the frictionless, well-ordered activity of right-doing. It seems fitting that this city of Cambridge, which bears a shining name throughout the land for the intellectual culture of its citizens, this city wherein is the seat of the most ancient university on the continent, should be hospitable to news of this great modern religious movement; and this hospitable reception to truth has been shown by the assembling of audiences larger than the halls could accommodate at the two previous lectures of the series offered to the public by First Church of Christ, Scientist.

The lecturer has been lately at the Pacific Coast; indeed, from Canada to Texas, and from Washington Territory to Maine, he has been busy as he has gone about to "preach the gospel of peace, and bring glad tidings of good things," which glad tidings have found their statement for this age, and proof of their present value, through the simplicity and devotion of Mary Baker Eddy, the Discoverer and Founder of Christian Science. I have now the honor to present to you Carol Norton, C.S.D., of New York City.

*Correspondence.*

Digitized by Google

### At Buffalo, N. Y.

The lecture delivered by Mr. Carol Norton in the Teck Theatre on May 3, was attended by a good-sized audience which listened with profound interest.

The lecturer was introduced by Mr. Everand A. Hayes of this city, who said:—

*Ladies and Gentlemen:*—Thought is a power capable of being cultivated and directed. It cannot be seen, yet its effects are visible to the material eye. All good thoughts are the offspring of infinite Mind, and this fact is more universally recognized to-day than ever before. There seems to be an abiding desire on the part of the people to become better acquainted with God. Humanity is yearning to understand more of divine Principle. Weary of the weight of mortality's woes, weary of dogmas and deceits, weary of unsatisfactory creeds and misleading sects, the children of men are fast turning to the living waters of Christian Science. Earnest desire is honest prayer. Persistent longing for spiritual knowledge betters mankind. The clouds of error will gradually disappear and the patient seeker for Truth will sooner or later awaken from this mundane dream miscalled life, and find himself in the glorious presence of the omnipotent King in the realm of heaven. He will then be surprised to learn how near God has been to him all the time, and how thin the veil that hides His presence.

A very small opaque disk held close to the eye will shut out from sight the marvelous beauty of earth and sky; yet the beauty has at no time been absent notwithstanding its seeming disappearance. Error is the disk that dims our spiritual vision, it is the "beam that is in thine own eye." Cast it out, and the manifestations of God will appear a thousand times more glorious than the material beauties of the celestial and terrestrial universe.

Uncomprehended, the Bible is a barren book; when, however, its pages are scientifically and spiritually understood, it becomes the greatest civilizer and educator known to earth. The advance of the Cross and the white banner of Love is rapidly redeeming nations, states, and individuals from superstition, sensuality, and unwisdom. Christian Science is the leaven that is fast leavening the whole lump. It is a sacred, practical religion rigidly requiring its adherents to be pure in thought and word and deed.

Its believers now compose a vast army following Christ, Truth. This army is constantly becoming more numerous and powerful as it advances. Its enemies are the beliefs of sin, sickness, and death; but they are being scattered and swept away as withered grass disappears in consuming flames. Behind this army are not the wounded and dying. Blood and desolation are not in its track. Disease and woe follow it not. But instead thereof the lame walk, the blind see, the deaf hear, the sick recover, and the sinner ceases sinning. Where once there were vice, disease, and misery, now there are health, prosperity, happiness, and a joyful peace to those who have found the truth. The old man with his aches and sorrows has been put off, and the new man, reflecting divine Love, put on. Christian Scientists seek to follow the immortal Way-shower, to emulate his example, and to obey his bidding, "Go, and do thou likewise."

With us this afternoon is one of the foremost of Christian Science workers and a disciple of that world-famed, noble, and God-blessed woman, Mary Baker G. Eddy. On behalf of Second Church of Christ, Scientist, of this city, I now introduce to you Carol Norton, C.S.D., of New York.—*Correspondence.*

### At Decatur, Ill.

On Sunday afternoon, April 26, Judge Septimus J. Hanna delivered a lecture on Christian Science at Powers Grand Opera House under the auspices of First Church of Christ, Scientist. There was a large audience present, and from the attention and appreciation that were shown during the discourse, it was apparent that many were deeply interested. The lecturer was introduced by Mr. Robert I. Hunt, a prominent business man of this city, who spoke in part as follows:—

It is only just that I should state that I do not stand here this afternoon as the exponent of any creed or the representative of any particular theological belief. We are fortunate in having with us one who is to tell us about a religion founded upon the ever-living Truth and Love. Any belief based upon underlying and fundamental Principle must work for the highest there is in life, must stand for the best there is for humanity.

Something like thirty years ago this afternoon it became my duty to stand before a religious organization and enunciate the Biblical injunction, "Prove all things; hold fast that which is good." This afternoon Judge Hanna of Boston, representing the Board of Lectureship of the Christian Science Church, will address us. He also will no doubt adjure us to "Prove all things; hold fast that which is good." It is my pleasure to introduce Judge Septimus J. Hanna of Boston.—*Correspondence.*

### At Braintree, Mass.

A lecture on "The Meaning of Christian Science" was delivered on May 22 by Carol Norton, C.S.D., in the Town Hall. An audience numbering about five hundred people drawn from Braintree and surrounding towns listened attentively throughout the whole of the able address.

The speaker was introduced by Rev. F. M. Burrows, pastor of the First Congregational Church of Braintree, who said:—

*Ladies and Gentlemen:*—It is the somewhat differing lines of thought that engage us which furnishes the true occasion and fitness of my presence on this platform to-night. I am here as an expression of Christian fellowship. It is my privilege to assure the speaker of the evening of the open hospitality and unprejudiced mind of this Braintree audience which he addresses. This does not mean that we, as the Athenians of old, have idle and itching ears for strange things. I hope that the time will never come when our Anglo-Saxon civilization shall so far lose its character as to be indifferent to the moral tendency of the teachings that are uttered from its platforms. We, at least, are not thus indifferent, and I could not consent to the performance of this pleasant duty to-night but for a feeling which I hope is well founded, that there is between us a real basis of fellowship in our mutual striving after the higher ideals of human life as these lie revealed in the person of our common Lord and Master, Jesus Christ. I am therefore grateful to the Christian Science organization of Braintree for according to me the privilege of making this expression of Christian fellowship and introducing to you the speaker of the evening, Mr. Carol Norton of New York.—*Correspondence.*

### At Sheldon, Ia.

Mrs. Annie M. Knott lectured here March 16, to a fair-sized audience who listened throughout with marked attention and interest. It was evident that a sincere desire existed for information on the subject of which she spoke. The lecturer was introduced by Mr. Charles F. Butterfield.

*Correspondence.*

### Notice.

The State Publication Committees are requested to meet with Mr. Alfred Farlow at Huntington Chambers, Boston, Monday evening, June 29, at eight o'clock.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Communion.

BEFORE this issue of the *Sentinel* will have reached all our readers, thousands of Christian Scientists will be assembled in Boston for the Communion in the Mother Church and for the Annual Meeting. The *Sentinel* extends to all a cordial and fraternal welcome. What profit their journey will afford them largely depends upon their own receptivity, but still more upon what each one has brought to this "great bridal feast of Truth and Love."

To the extent that we are fulfilling our solemn "promise to strive, watch, and pray for that Mind to be in us which was also in Christ Jesus; to love one another; and to be meek, merciful, just, and pure" (Science and Health, p. 497), will we receive "good measure, pressed down, and shaken together, and running over." By bringing to these annual gatherings a pure and abiding love for our neighbor, yea, for all mankind, we secure a spiritual uplift and blessing beyond our most earnest expectations.

Our faithful and beloved Leader has devoted herself unreservedly to the interests of humanity; by precept and example she has lovingly and unselfishly led us in our Master's footsteps, and in so far as we have profited by her wise leadership and loving counsel are we prepared to commemorate our Lord's "last spiritual breakfast with his disciples in the bright morning hours, at the joyful meeting on the shore of the Galilean Sea" (Science and Health, p. 34). She has, in the following words, expressed the significance and purpose of our communion: "This spiritual meeting with our Lord, in the dawn of a new light, is the morning meal which Christian Scientists commemorate. They bow before Christ, Truth, to receive more of his reappearing, and silently commune with the divine Principle, Love. They celebrate their Lord's victory over death, his probation in the flesh after death, its exemplification of human probation, and his spiritual and final ascension above matter, or the flesh, when he rose out of material sight" (Science and Health, p. 35).

May our Communion be truly a "joyful meeting," and may each one of us return to his individual duties and bear its blessings to others with a larger sense of God, a purer and holier purpose; then shall we know that we have communed with infinite Love, and that we have gladdened the heart of His servant. M.

### A Complete Concordance to Science and Health.

WE are pleased to announce that some time ago Mrs. Eddy, ever mindful of the needs of students of our text-book, arranged for the preparation and publication of a complete concordance, and that this book has just been issued by her publisher.

Students have long felt the need of a complete and thoroughly accurate concordance, and have hoped that such a book might be compiled for their use, but few have had any conception of the great labor and expense involved in the publication of a work of this kind. Some idea of the magnitude of the undertaking may be gained when it is known that the concordance is a book of five hundred and ninety-five pages, 6½x9½ inches in size; that it contains eighty thousand references, and that more than ten thousand principal words are indexed. The compiler and several assistants have been engaged upon the work for more than a year and a half, and have used the utmost diligence.

Our inspection of advance sheets justifies the opinion that the plan followed is well calculated to produce the best results, and that the work has been thoroughly and intelligently done. That the book will meet with a hearty welcome is certain.

Our Leader is entitled to, and will receive, the thanks of all Christian Scientists for the latest addition to our literature, and for her watchful care for our needs. The following is the Publisher's announcement. M.

### THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the latest revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. The following is reprinted from the Preface with Mrs. Eddy's permission:—

For many years there have been calls for a more complete index to "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," and although the index prepared by the late Rev. J. H. Wiggin about the year 1885 was quite large, neither it nor subsequent indices fully met the requirements of the students of our text-book. It finally became apparent that the only satisfactory way to meet this need was to prepare a complete Concordance, which should include all prominent words and phrases which the student may desire to find. I am confident that this work will fully meet his demands.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., May 15, 1903.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES; 595 pages, bound in cloth, marbled edges. Price, prepaid, single copy $5.00. Twelve or more to one address $4.50 each. Direct all orders and make remittances payable to JOSEPH ARMSTRONG, Publisher, 95 Falmouth Street, Boston, Mass.

### Rumor.

SHOULD we paint Rumor in her real vestments, every earnest Christian would shrink aghast and deny all kinship with this thousand-tongued adventuress. And yet perhaps not even the best Christian can declare himself wholly free from the seductive habit.

Rumor knows neither kindness nor exactness, she is untrue to confidence and regards not courtesy. Secrecy with uplifted finger casts her treasures to the wind when she confides the slightest hint to Rumor. Of vivid imagination, fluent speech, sensational and unscrupulous, how easy it is for Rumor to exaggerate and distort while multiplying a harmless statement of the morning and make the evening ring with a malicious jargon, until the originator of a remark finds himself, like poor Gabriel Grubb, confused, bewildered, and wholly unable to adjust the fugitive to its original impulse and expression in a moment of unsuspecting honesty and unguarded trust.

The weedy domain of Rumor may seem too remote from the clean and wholesome pathway of the Christian Scientist to contaminate it with a growth of tares and thistles. But we must be careful lest the baneful seeds find rootage and crowd out life's sweetest blossomings.

Christian Science defines for us the manifestation of love, of charity, of scrupulous honesty, of kindness, and in contrast with the old requirements of an unattainable

Digitized by Google

perfection, it teaches how to live a life which is inoffensive because of its exaltation.

Evil cannot be barred by force from human thought, it must be nullified by the conscious indwelling of good, and this is the true basis of reform in all departments of human experience. Legislation may lay the heavy hand of the law on corrupt literature, upon the unchaste drama, upon any vice, and so do much good, but the invulnerable defence against the invasion of any error is the pre-emption of good.

The wise mother, recognizing the social needs of her children, makes their home attractive to good companions; thus their taste is refined, their standards raised, and coarseness and insincerity find no welcome.

It is said that, "An idle brain is the devil's workshop," so also do hands and ears and tongue serve him unless they are about the Father's business. The adequacy of the preoccupancy of good is sustained by our Leader: "The way to extract error from mortal mind is to pour in Truth through flood-tides of Love. Christian perfection is won on no other basis" (Science and Health, p. 201).

In the home where Love reigns we find no ear for rumor, no tongue for gossip. There is so much to tell of gratitude and joy and beauty and truth, so much of good news (the Gospel) that there is neither time nor voice for the idle or mischievous rehearsal of the imperfections of personality, or the vapidities of rumor.

It is not enough to consider whether a rumor which we are tempted to repeat be harmless; the ingress of error may be made easy simply by a negative. We must be assured that it will bear a blessing to some one or some thing, and that we are actuated by a kindly motive in its utterance, otherwise we may well pray, "Set a watch, O Lord, before my mouth; keep the door of my lips." S.

## The Illogic of Discouragement.

AT the sunset hour of his long earthly day, and as a climax to the earnest reminders, instructions, and appeals with which he had sought to prepare the people for future temptations and struggles, Moses uttered those memorable words of cheer which have been an inspiration and encouragement to fainting hearts through all the centuries: "Be strong and of a good courage, fear not, nor be afraid: . . . for the Lord thy God, he it is that doth go with thee; he will not fail thee, nor forsake thee."

The great law-giver had experienced unnumbered trials during his life-long leadership of a nation of foolish, petulant, and heady children, and at the last, when within his reach, the satisfaction of his one great longing and aspiration was denied him; nevertheless, in this hour of supreme disappointment, he expressed a triumphant and reposeful confidence in God, and thus revealed how thoroughly he had learned his lesson, how well fitted he was to commend to others the truly courageous faith,—

> that will not shrink,
> Though pressed by every foe;
> That will not tremble on the brink
> Of any earthly woe.

Temptations to discouragement multiply rapidly. They germinate in every assertion of human weakness, and are nourished by every least concession to the power of evil, and for those who give them entry they speedily become a prolific pest, the harbinger of depression and defeat.

Discouragement is the only phantom to which many good people, including some would-be Christian Scientists, still cling. It is their pet bogie which, under indulgent patronage, daily exercises its prerogatives and extends its sway. To its efficiency as a convenient instrument of self-torture, we can all bear testimony, and certainly no guarantee of failure is more reliable, no road to the desert of despair more direct. It may be conceived in that which is but a mere passing incident, and yet may culminate in a chronic hopelessness of indifference, or atheism.

The Christian people who are still deceived by its falsities are many, and among them may be found those who have not only "received the promises," but for whom God's fulfilling presence has been abundantly demonstrated; even their joy is often dispelled, their efficiency cancelled by this seductive mesmerism, and for them, verily, it is sin.

The distinctive feature of this weakness, when found in a professed Christian Scientist, is its incongruity. It is entirely out of keeping with his faith, and is no less needless than unworthy. It has, and can have, no touch or alignment with either Principle or its manifestation, and yet it is always declaring its legitimacy and reasonableness. It is most alert and companionable in the hour of weariness, and would even pose as a comforter while covertly inciting our imagination to make mountains out of mole-hills. Recognizing its subtlety, and the folly and sin of its indulgence, we are prepared to have done with it, to join hands with wholesome, well-grounded courage, and be happy.

Courage inheres in genuine faith, and is inseparable from it, and the contrary thought that it is an added acquirement, to be gained only through long experience in overcoming, is very much to our disadvantage. Courage is strengthened and established by the activities of faith, but in every period and degree of its realization it is an incident of spiritual knowing. This explains its frequent and splendid exhibition by those who are novices in point of experience, but clear and responsive in their apprehension of Truth. It is the normal attitude of him who knows in whom he has believed, and who perceives the temporality and nothingness of error's every claim. It pertains naturally and inevitably to all who are "strong in the Lord and in the power of His might," who have accepted the assurances of God's ever-presence and are proving them true, and nothing but inexplicable stupidity or the force of chronic habits of erroneous thought can, even temporarily, separate them from its rightful possession.

In the passage we have quoted, Moses names but a single basis for stable and fearless courage, and for the reason that this is all-inclusive and all-sufficient. "The Lord thy God, he it is that doth go with thee; he will not fail thee, nor forsake thee." Spiritual maturity will bring us added wisdom and varied riches, but the courageous spirit is imperatively needed, in the early as well as the later stages of our advance, and this need is to be continuously supplied in the consciousness of omnipresent good,—the daily dwelling "in the secret place of the most High," where no evil can befall.

The explanation of our Leader's unfailing courage is clearly disclosed in her impressive words,—

"Entirely separate from the belief and dream of material living, is the Life divine, revealing spiritual understanding and the consciousness of man's dominion over the whole earth. This understanding casts out error and heals the sick, and with it you may speak 'as one having authority'" (Science and Health, p. 14). W.

## A Neighbor's Comment.

IN addressing the Brotherhood of St. Andrew recently, Bishop Burgess took occasion to speak disparagingly of women as leaders of thought, and expressed himself in discourteous terms respecting the Founder of Christian Science.

Among other things he said that "all great and noble religions had been founded by men, and that women seemed to lack the faculty of originating, possessing only the faculty of imitating."

Digitized by Google

In an editorial commenting on his exhibition of bad taste, the *Brooklyn Times* says:—

"Is not this rather an unusual attack to come from the Bishop of a Christian denomination? The greatest offence of Christian Science lies in the fact that it asserts that the days of miracles are not past. Is there anything unusual in that? There are other denominations and religions that assert that the days of inspired teaching and preaching are not yet over. If the inspired teacher still lives, why does not the divine healer still exist?

"Christian Science has grown during the last ten years. Undoubtedly jealous eyes have turned toward it. Splendid buildings for worship have gone up in many parts of this city, while other denominations have shown little progress in material growth. But there seems little cause for calling the belief 'absurd,' and placing it among 'superstitions.' It is particularly insulting to label it 'profitable.'

"If Christian Science is assailed as Bishop Burgess has attacked it, its future growth is assured."

## Regarding Return Tickets.

ALL tickets will be good June 28 to July 2 inclusive for return passage when stamped and vised, prior to July 2, at Station Ticket Offices of terminal lines; tickets reading by Boston & Maine R. R. at North Union Station, those reading by Boston & Albany or N. Y., N. H. & H. R. R., at Trinity Place or Back Bay or Terminal Stations.

An extension of return limit to August 1, will be made on all tickets, except those sold from New York City, provided tickets are deposited on July 1, 2, 3, or 4, and payment of fee of fifty cents, with Joint Agent.

The Joint Agency will be open for business in the Walker Building, corner Boylston and Clarendon Streets, July 1 to August 1 from 8 A.M. to 6 P.M. week days, and from 4 to 7 P.M. Sundays.

Stop-over may be obtained at New York on return trip on tickets reading via N. Y., provided tickets have been validated by Terminal or Joint Agent at Boston and are deposited with Joint Agent at New York immediately on arrival, with payment of fee of $1.00; but in no case shall the stop over at New York extend beyond August 1. The Joint Agency will be located at 13 West 24th Street, New York City, and will be open from 8 A.M. to 6 P.M. daily June 29 to August 1.

Stop-over at Niagara Falls, Philadelphia, Baltimore, and Washington not exceeding ten days under usual regulations, will be allowed within final limit of August 1 returning.

Tickets reading via Michigan Central, Wabash and Grand Trunk Railways between Buffalo and Detroit will be good by the Detroit and Buffalo Steamboat Co.

Plant Line tickets good to return up to and including sailing of July 4. No extension.

## Annual Meeting and Communion Notes.

THREE services will be held Communion Sunday, June 28, in the Mechanics Hall Building, Huntington Avenue, at 9 A.M., 11.30 A.M., and 2 P.M., with additional services later in the day if necessary.

The Annual Meeting will be held on Tuesday, June 30, at 2 P.M., in the same building. Cards of admission (for members only) can be secured by personal application at Mechanics Building. This should be attended to at once.

A meeting of Executive Members (formerly called First Members) will be held Saturday, June 27, at 9 A.M., in the Mother Church.

The Mechanics Hall Building will be the headquarters for all committees, and will be open daily from 9 A.M. to 9 P.M., Thursday, June 25, to Wednesday, July 1.

The Wednesday evening meeting will be held at Mechanics Building, July 1, at 7.30 P.M.

## The Mother Church Building Fund.

The following impersonal reports will be of interest to our readers.

---

I am happy to tell you that I have sent Mr. Chase to-day twenty-five dollars, from our Sunday School, for the Mother Church Building Fund. The attendance in our Sunday School is about fifty.

---

The Sunday School of our church has contributed one hundred and one dollars to the Building Fund of the Mother Church. Nearly all this money has been earned by the children in real hard work, some of it by self-denial. Instead of using their dimes for candy, etc., they have chosen to give it to the Mother Church, which they love.

---

With loving greeting to the Mother Church, the children of the Sunday School forward their first contribution to the Building Fund for the new church edifice in Boston.

On Easter Sunday it was unanimously voted to give twenty-five dollars as an expression of love, and to-day the amount is complete.

We will strive to make our daily deeds an offering sweet and pure, by healing the sick and destroying sin.

---

I teach the Sunday School of five little ones, and have put by our contributions (the baby pennies they are called), ever since our organization, for the dear Mother Church. I know how glad you will be for this little pioneer church.

One dollar of the money came from two children, about six and seven, and neither parent has ever been to a Christian Science service. The children made the offering to-day. Their mother let them work for it.

---

At a special called meeting it was decided to save the offering of the last Sunday of each month, commencing in May, for our contribution to the Mother Church Building Fund, and when it should amount to the sum of twenty-five dollars it should be forwarded. Our numbers are small but we were all united in wishing to make this demonstration.

---

At the annual meeting of our church last December, it was voted to pay over to the Treasurer of the Building Fund of the Mother Church, the Sunday collection of the first Sunday of every month until the church is built. The amount raised thus will be duly forwarded to the Treasurer. Our church was organized three years ago with thirteen members. We have made slow but steady growth. On our last communion we received six new members.

---

I have been advised by our official board to acquaint you with the fact that, including the enclosed remittance, we have to date sent seven hundred and twenty-five dollars to the Mother Church Building Fund, and we expect to continue to make monthly remittances to that fund so long as the necessity seems to warrant it. Judging from payments already made on the subscriptions, it is estimated that the total will reach twelve hundred dollars by the first of next January—that is, four hundred and seventy-five dollars more than our total payments to date. We hope the amount will increase beyond our estimate, however, but at this writing we are not warranted in increasing the estimate.

## Among the Churches.

### New Meeting Place in Foxcroft, Me.

The opening services of the Christian Science Society of Dover and Foxcroft were held Sunday morning, April 26, in their new hall on North Street, Foxcroft, and were attended by local members, their friends, and visiting Scientists from out of town.—*Piscataquis Observer.*

### Improvement in Fond du Lac, Wis.

The Christian Scientists, who have been holding their meetings in the Boyle Flats for the past year and a half have outgrown their present quarters and have fitted up an attractive hall in the Cole Savings Bank Building. The hall is handsomely decorated and is seated with chapel chairs.—*Fond du Lac Commonwealth.*

### Progress in Davenport, Ia.

First Church of Christ, Scientist, has opened its new church on Sixth and Perry Streets. The residence, which was purchased by the congregation, has been entirely remodeled until it bears but little resemblance to its old self.

The grounds surrounding the new church are beautiful beyond description. One of the features is a species of olive-tree which, bent and gnarled, rears itself above the stone wall on the Perry Street side, the fragrance of which pervades the whole place.—*Davenport* (Ia.) *Times.*

### A Growing Church in Waupun, Wis.

Last August we organized as First Church of Christ, Scientist, with twenty-six members, and we now have an average attendance of about forty.

We have our own church property, a most desirable and favorable location on which stands a dwelling house sufficiently large for our meetings, etc. We have given two lectures,—the first by Edward A. Kimball and our second, March 29, by Judge William G. Ewing.

We have two copies of Science and Health in our city library; two of Science and Health and one "Miscellaneous Writings" in the penitentiary located here, and copies of *Sentinel* and *Journal* are kept in the hotels of the city. The beautiful way in which our supply for our lectures was met by divine Love, removes all fear and doubt in undertaking any future work for the advancement of God's kingdom.

We gratefully and humbly rejoice in this fear-destroying and saving Gospel, and we are deeply thankful to our dear Leader for her loving, unselfish labor of love and faithfulness to Truth's revelation, and to the faithful workers at headquarters.—K.

---

Let us learn to be content with what we have. Let us get rid of our false estimates; set up all the higher ideals,—a quiet home; vines of our own planting; a few books full of the inspiration of genius; a few friends worthy of being loved and able to love us in turn; a hundred innocent pleasures that bring no pain or remorse; a devotion to the right that will never swerve; a simple religion, empty of all bigotry, full of trust and hope and love; and to such a philosophy this world will give up all the empty joy it has.

DAVID SWING.

---

Think all you speak, but speak not all you think.
Thoughts are your own; your words are so no more.
Where Wisdom steers, wind cannot make you sink.
Lips never err when Wisdom keeps the door.

DELAUNE.

## Testimonies of Healing.

The following is an extract from a letter written to me by a mother whose child up to the age of nine had never walked, and could neither stand, nor use her legs to creep like other children until healed through Christian Science:—

"We are only too happy to give you our testimony about Ida. We never can feel grateful enough to you for what you have done for her. You can always refer to us and rest assured we cannot tell half of what has been done for her. She was very helpless when you commenced your treatment, now what a change—she is going all around the house. We feel as if a great burden had been lifted from us and our hearts are full of gratitude every time we look at her. We can hardly realize that it is the same child. She was out a little while this morning, and when I took her into the house she stepped up on the steps just as well as any one and walked up into the house. I did not have to lift her as I used to do. In fact, I cannot remember when I last lifted her, it was so long ago.

"God bless you both for your kind endeavors in our behalf. We never can feel grateful enough to you."

Her father writes me: "It is just happiness to see her get about." That patients can be healed at a distance, as Science and Health declares, is seen in the above case, for all her treatments but one were absent.

J. E. B., New Bedford, Mass.

---

To Christian Science I owe all. I know now that it sustained me through all my weary life of suffering. I never knew what it was to go a day without an ache or pain. When a child I never could enjoy any kind of play or exercise without crying with pain afterwards. I dared not enjoy myself as others seemed to, for fear of the after effects. After marriage there seemed to be a doubling of ills. There never was an hour that I was free from pain, and at times the suffering seemed more than I could bear, and would last for days. I was treated by six good physicians and two specialists, and they all pronounced my case a marvel. They had never seen or read of such a case, it was so complicated. All my physicians were good men, and did all in their power to alleviate my suffering and cure my diseases. I used magnetic treatment and electricity, all to no avail. I used all kinds of patent medicines, but none of them ever brought me anything like permanent relief. After the birth of my only child, it seemed for a few months as if I might get well, but soon all the old troubles began to return, and I continued to grow worse and worse until I accepted Christian Science. Surely there never was a more miserable woman on earth than I was, up to that time. I prayed day and night (for it was precious little sleep I got) for relief, and I never could or did feel that it was God's will that I should die and leave my dear ones.

I have often caught myself asking God what pleasure it was to Him to have me suffer so, and in my ignorance would pray to God to reconcile me to my suffering and fate, for doctors, preachers, and Christian women would all tell me that it did seem as if there ought to be something to cure me, but I must be patient and bear the suffering without a murmur, since God had sent it on me for some good purpose, and that after death I would not have to suffer; but, thanks be to our omnipotent, omniscient, omnipresent Father-Mother God, I have to a great degree realized Him to be an omnipresent God, right now. I have realized His healing love, and I have been brought to this knowledge through the teaching of Christian Science, as given us by our dear Mother in Israel, Mary Baker G. Eddy, whom to know is to love, for she knows and teaches nothing but the understanding of Love. To-day I am able to do any kind of housework with ease and pleasure, whereas until Christian Science came to me, I was a helpless, hopeless invalid, with life seemingly fast ebbing away.

Digitized by Google

Besides my own healing, I have been witness to other great cures. I love Christian Science, it is everything to me, for I know—I don't merely believe—I know it is God with us, the Christ-truth, and my constant prayer is to know more and more of Him each day. My little boy loves Christian Science. I am alone here in the acceptance and belief of this truth, but am willing to labor alone until others around me shall recognize God's omnipresent, omnipotent hand. Nothing can ever take Christian Science from me, for it has given me spiritual joy, the "peace of God, which passeth all understanding," and health.

MATTIE A. MCK. CUMMINS, Puxico, Mo.

---

About nine years ago, I first heard of Christian Science. My husband had been a sufferer for years with nervous dyspepsia. He had spent a great deal for medicines, but grew worse, and the skill of the doctor in the vicinity had evidently been exhausted.

When a friend told me of her wonderful healing, I persuaded my husband to try it. He went to a practitioner in Memphis, and after taking several treatments was made entirely well. Since that time he has been healed of a severe attack of erysipelas.

After my husband was healed, I had a trouble which seemed at first very stubborn but is now yielding to the truth.

We are both members of First Church of Christ, Scientist, Memphis; we take all the literature we possibly can, and demonstrate over many claims of error.

MRS. W. J. MASSEY, Massey, Tenn.

---

About ten years ago, I heard of Christian Science through a friend, who told me that a new church had been organized here under the name of Christian Science; and it was said that this healed the sick. I had a good hearty laugh at it and said, "I shall not believe that until I see it with my own eyes." And I paid no more attention to it until about five years ago.

About two months ago, a neighbor of ours, a German whom we have known for twenty years, came to us. He had been troubled with rheumatism and had spent a great deal of money for doctors and drugs without receiving help. We advised him to turn to Christian Science, although we ourselves did not believe in it, but wished to see how it would affect him. To our great surprise he was perfectly healed in four treatments. He came to my house shortly after, and in order to convince me of his healing, he danced up and down the room like a young man, although he is over sixty years of age. This made a great impression upon me, and yet I still would not believe it. My wife had suffered for several years, was afflicted with several diseases, the worst was rheumatism, and year in year out the bottles of medicine, pills, plasters, etc., were always kept on hand; however, she kept growing worse instead of better. About four weeks ago, she was suffering a great deal, could not sleep, nor even stay in bed at night, and we did not know which way to turn for help. I myself could not sleep and suffered with her. Then I, the unbelieving Thomas, advised her to go to Christian Science, and said that if it would help her I should put everything else aside and accept the doctrine of Christian Science, which seemed to me a tremendous step, for my wife and I had from our earliest childhood been brought up in a form of religious doctrine which taught that it alone could save.

My wife was healed in a very short time, perfectly healed, freed from all pain; she is now happy and enjoys good sound sleep. I myself felt better after I had listened to Christian Science a few times. We are yet far from regarding ourselves as good Christian Scientists, for it takes time to grow in understanding, yet our hearts are overflowing with gratitude for what Christian Science has done for us, and words fail to express it.

Here we now stand at a turn in the road; God has led us thus far and He will help us farther and show us the right way. Again I wish to say, I am very, very thankful for all that Christian Science has done for us.

PETER DE CLAIRE, East Marinette, Wis.

---

Before accepting Christian Science I was subject to severe and frequent pains in my side, which would keep me in bed at times for twenty-four hours.

I was treated for this trouble often during my first year in Science. Finally my teacher told me she felt it was nothing but my fear of this excruciating pain which kept me in bondage.

A short time after this I was in the East among relatives who had no knowledge of Christian Science, when I felt this dreaded pain again. I excused myself, realizing that I must then meet it and my fear too. For about two hours I held steadfastly to the truth, knowing that God is Love, and that perfect Love casteth out fear. When I came from my room after that blessed two hours I was free and have never since felt, for one instant, a twinge of the pain. If this were the only time during the four years that I had received benefit, it would be enough to make me wish to lead a better life and help others, but I must tell of the healing of a case of jaundice in the family. The disease was not healed for about a week, but we found that resentment was being strongly held by the patient, and when the nothingness of this was pointed out, the healing was almost instantaneous, and all sallowness disappeared during the day.

Our last baby was born under Christian Science treatment, and after the first twenty-four hours I was dressed, and the third day my nurse left me in an absolutely normal condition. What a blessed freedom from the laws of mortal mind! I thank God many times a day for this great truth and am very grateful to our Leader, whose life has been so unselfish and so pure that she has been able to reveal this truth to us.—G. M. L., Chicago, Ill.

---

As I read the first article in the January *Journal*, my heart was filled with gratitude to God, and to the writer, for the light and help it brought to me.

Since coming to Christian Science, it has been my most earnest desire to pray aright, and very often the question of how to pray, and what to pray for, has puzzled me; but the clear statements set forth in this article, have removed all questions and doubts for me. Words cannot express my gratitude for help received from all our publications.

I would like to say to those who are discouraged, because of slow healing, if you will cultivate a spirit of thankfulness for blessings already received, and keep your hearts filled with love toward your fellow-men, the clouds of mortal sense will grow thinner and thinner until the glory of His presence so shines that it will dispel all else. Do not fear that you will not be able to meet and master error with truth. God never leaves nor forsakes us, but we turn away from Him, when we believe that error has power to control us. I find it is by persistent effort in the right direction that error is overcome.

C. V. WILSON, Miami, I. T.

---

Christian Science came to me at a time when everything was so dark that life seemed a burden. By a dear friend I was told of Christian Science, and I wish to express my gratitude for what it has done for me and my household. I cannot praise God enough for what he has shown me through Christian Science teaching. I have

Digitized by Google

had many wonderful demonstrations in my family. Love doth magnify itself, and every day it shines more bright, as hearts and minds unite in praise to God.

"Beloved, let us love one another: for love is of God; and every one that loveth is born of God, and knoweth God." "God is Love. Can we ask Him to be more?" (Science and Health, p. 2).

MRS. GEORGE CARTER, Centredale, R. I.

---

Christian Science had been but a name to me for years. I classed it with faith-healing, mind-reading, etc. A year ago, a friend who was a Scientist suggested that as a practitioner had come to Geneva, I should send my daughter to her. This daughter had, since childhood, suffered from severe sick headaches. No remedies, no doctor ever helped her, and we were glad to try something new. Her cure has been gradual, but she has gained in health and strength, and the attacks are more rare and not so severe. I myself was quickly cured of rheumatic gout of years' standing in two or three treatments. Another daughter was relieved of a painful swelling in her foot. For five years she had suffered intensely from this trouble, but a few treatments caused it to disappear.

Several other cases have come under my notice during the year, including the lameness of a young girl, deafness, insanity, and white swelling of the knee; they all have yielded to treatment. One remarkable case was that of a boy who had suffered a year with paralysis of the nerves. All one side of him was affected, including the eye, which had sunk back into his head. A woman affected with hernia for fourteen years has been cured, as well as her paralytic child, by Christian Science treatments.

A case of a man afflicted with heart disease, was most interesting. He was refused a life insurance policy by the company's doctor, after which he turned to Christian Science, and after two months' treatment returned and renewed his application for a policy. He was found to be in good condition, with no trace of heart disease.

Cases of family inharmony and financial trouble, have been relieved. In many cases the physical healing has been accompanied by regeneration of the spiritual nature, thus proving a double blessing to many Swiss people, who would never otherwise have known the great benefits demonstrated through Christian Science.

I. P. P., Geneva, Switzerland.

---

After reading the article, "Take up the cross," in the *Sentinel* for the second time, I said, "How glad I am to see that in print," for I had met just the experiences referred to as I entered the path that regenerates and makes us anew. I even took back the books, Science and Health, and Journals lent me by the Scientist who so patiently and lovingly said, "You will come back," when I had told her never to mention Christian Science to me again. I had reached the point where error would say to me, "Why it's too much work to reverse, to just turn upside down all you have been taught these thirty-three years" and it seemed as though my head was much confused at such times.

Well, indeed I did go back, when I had been to receive my brother, who was on his way from camp in Jacksonville, Fla., and who looked as if he could not live. They called it typhoid. I hurried to this little Christian Science friend, who not only told me that my brother would be all right, but that he *was* all right, and so put out my fear, which had made me tremble on that hot day as if I had a chill.

The brother did get well and is all right to-day. He and his wife are interested in Christian Science. I then bought the book.

The following winter I had an acute attack of inflammatory rheumatism. To please my husband, who did not then believe in Science, I was treated by one of the best physicians in Chicago for four months. All this time I clung steadfastly to my little book. The doctor was very full of fear for me, but I clung to the little friend like a child, and how many times through the singing of "In Thee, O Spirit true and tender;" "The Mother's Evening Prayer," and other hymns, did the misery become nothing.

The following fall I was allowed to have Christian Science treatment, and was healed in a week, and that was three years ago last fall.

My husband and I now belong to the Mother Church. To understand what Christian Science has done for us, one would need to know us before we began to study it, and see the difference between then and now. My mother, who cautioned me to be careful not to let it come between my Bible and me, wrote me lately that she wished she understood Christian Science better, and that were there a church in her town she would go to it in preference to any other. Thus this truth has reached our family. My husband's mother and father in southern Florida are earnest seekers also, the mother having been healed of yellow fever, through absent treatment.

I have learned that obedience to the still, small voice means much. There is only one way I can express my gratitude to Mrs. Eddy, my teacher, and my little friend who was so patient, and that is, by trying each day to reflect what has been given to me.

MRS. SOPHRONIA E. JENNINGS, St. Louis, Mo.

---

After twenty years' trying through material remedies to get relief from physical suffering, Christian Science was presented to me. I took the book Science and Health and pondered a small portion at a time. What I learned enabled me to give up the old belief that a diseased body caused an unhappy state of mind.

It was not hard for me to part with the old remedies, since I had lost nearly all faith in everything. I now know that personal hatred was my most serious enemy.

In the first Epistle of John we read, "Whosoever hateth his brother is a murderer." Mrs. Eddy says, "Hate no one; for hatred is a plague-spot that spreads its virus and kills at last" (Miscellaneous Writings, p. 12). I have pondered these and kindred statements in the Bible and Christian Science, and my experience has convinced me of the wonderful truth there revealed. I have been healed of painful maladies of long standing through the spiritual understanding I have gained of Truth.

The *Journal, Sentinel,* and *Quarterly* have been a great help to me and I love them all. I join a happy throng in gratitude to our strong and noble Leader.

ETTA L. PUTNAM, Houlton, Me.

---

My two boys, one nine and the other eleven, went out nutting one day with a little neighbor boy. The oldest one, Earl, fell from a walnut tree about twenty feet high. He lay there as one dead. A man at work in a stone quarry on top of the hill, saw what had happened, and came at once to help them. The first thing he said was, "Why, he is dead." At this the little neighbor, not a Christian Scientist, ran home to his parents and said, "Earl fell from a tree and is dead;" but the youngest of my two boys, Clarence, stood right by his brother and said, "He is not dead, God is his life, and God can't die."

By this time a woman came and wanted to use camphor, but Clarence held his hands over Earl's face and said, "We are Christian Scientists, we don't use such stuff." Earl began to show symptoms of life, and the man stood him on his feet, then Clarence put his arms around him and led him home, about a mile and a half.

When they reached home, I was not there. My daughter

Digitized by Google

and I had gone out for a ride. On our way a friend came out and stopped us and said that she had received a message through the telephone to stop me and tell me that Earl had broken his arm. I was protected with these words that came to me as a light instead of fear, "Lead, kindly light, amid the encircling gloom, lead Thou me on."

When I reached home, the house was full. All the neighbors were there, and my poor boy was screaming at the top of his voice. I went to him with these words, "Earl, be still; God will help us." It wasn't five minutes before he had quieted down and made no complaint of pain.

I had never seen a broken bone before, and knew nothing of the setting, so I took him down to the doctor and had the bone set. Earl was unconscious from that afternoon until the next morning. When he awoke, he went to the neighbor's and played the same as usual. The next week he went to school and used his hand as well as ever. About two weeks after this, he was at the neighbor's and was told that his arm was not set right, that he would have to have it broken and set again. I examined it and, to the senses, it showed very plainly that the arm was not set right. But this time instead of going to mortal man for help, I turned to God. From that time on the arm began to mend. The healing had come in the right way and it was complete.

I thank God for this wonderful healing.

MRS. AMANDA E. LAY, Burlington, Ia.

---

Few have more reason than I to thank God for Christian Science. I was treated for fatty degeneration of the heart nearly three years ago, and now, thanks to Christian Science, I have a healthy heart.

Many other illnesses have disappeared one by one. I am cured of the liquor and tobacco habits; I was so saturated with tobacco, after nearly fifty years of its use, that many physicians, though saying that I was suffering from its effects, assured me that I could not survive the stopping of its use. But, thanks be to God, Christian Science has proved their judgment to be wrong.

I had previously had slight attacks of apoplexy and vertigo, which sometimes lasted from five to seven hours, during which time I lay helpless.

I had double vision, seeing two of everything, but now my eyes are better and stronger than when I was a boy.

Nasal polypus and catarrh in its worst form developed, and my doctors said my liver and kidneys were diseased. Insomnia made the nights worse than the days and locomotor ataxia so fettered my limbs that I walked short distances with great difficulty.

To-day with a grateful heart I testify that I am a healthy, happy man, and have found a practical religion that meets all my needs. The Bible and Mrs. Eddy's writings are my constant study.—BENJAMIN ST. JOHN, Darien, Conn.

---

I have felt for a long time that I owed the *Sentinel* and *Journal* something, but thought I had no demonstration to give, as I did not come into Science for the physical healing. Upon looking back over the last five years I see that many ills have been overcome, and realize more than ever that even a little understanding of the supremacy of Mind is much to be thankful for. My father has had great fear of paralysis, as his mother and sister passed away with it. Last winter mother called me to come quickly, as father was ill. When I got upstairs he could speak only by making a great effort, and then not plainly at all. I commenced treating him at once. In a few moments he was better, and by night the only trace of the trouble was in his speech, which was thick and unnatural. In less than a week that was overcome. I feel very thankful to Mrs. Eddy for showing us the way.—M. E. G., Cliftondale, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Rev. Francis L. Strictland says in *The Christian Advocate:* "But the most encouraging signs to-day—and there are many of them—are those which point to the oneness in sympathy, purpose, and aims among all Christ's followers; to a unity in effort toward that great end to which the Church is instrumental. Far more important than organic unity is this *community* of spiritual life. This must be realized first, for it is the only basis for organic unity that means anything. And it is being realized. The theological terms that were once party watchwords are becoming obsolete. Many dogmatic differences are fading. There is great freedom in passing from one Christian body to another, even among the ministers. Foreign missions and city evangelization have shown the imperative necessity of Christ's disciples working shoulder to shoulder in the great battle against sin and darkness. The days of dogmatism and of narrow sectarian spirit are passing away, thank God. Out of the smoke of theological controversy has come insight and larger charity. The present century is to witness splendid triumphs for the cross of Christ. And one of these will be a diminution of the number of denominations, due to the great strengthening of those mystic ties of love and loyalty to the common Master which bind together all who are his true disciples."

Newell Dwight Hillis, D.D., says in *The Homiletic Review:* "It is perhaps more important than ever before for Christian people to study the teachings of Jesus Christ, to practise simplicity, and to learn how to live on the higher levels. Christ offers to free us from needless anxiety and to teach us rest and victory. If religion is the eternal life, manifest in terms of time, under the eye and presence of God, then worry is a sin. Sickness that comes from fret is also a crime against God and His Son. Happiness and the sense of victory are duties. I know not how others feel, but for myself I believe there is a vast unexplored remainder here,—ore undug, veins uncovered, springs of water that are hidden, energies that we have not touched. And so long as the Churches and ministers and people in the pews ignore these teachings of Christ, that long will the Church and world suffer a great loss. God cares for you, therefore take no anxious thought. Oh, what a realm of happiness is hidden here! Because we ignored it, the 'Scientists' took it up and taught it." . . .

More and more the emphasis has been shifted from being good to doing good. Because good conduct is the only satisfactory evidence of a good inner purpose and spirit, it has been concluded that "deeds not creeds," acts not professions, are the primary things in religion. How much of this proceeded from the Church and how much by reaction from the world on the Church, it would be difficult to make out. But the tendency has been continuous and strong in the whole of the present generation, to accept a man's outward acts as the test and, indeed, the full equivalent, for his religion. If he prays, but does not do, his religion is vain.

I. M. A.

In *The Universalist Leader.*

Jesus truly said that in his teachings and in his character men would find the bread of life. These become the nourishment of the inner man as one accepts, appropriates, assimilates the truths and enters into the spiritual experiences of Jesus; seeks to live as he lived, in devotion to truth and duty, and in love to God and man. While we cannot live in the same conditions that surrounded Jesus, we have need of his convictions, his faith, his trust and love, and his loyalty to divine ideals. Possessing these in the degree that they mould and inspire our lives, we are fed from the eternal and unfailing sources of spiritual sustenance.

*The Universalist Leader.*

And Jesus might well enough say to the people of his time, standing on that dead level of old Judæa, "I am come that you may begin to live and may go on to life in greater abundance." And so it was to a higher style of life and living that we must refer the great words. It was not life in the senses, but life in the soul, the enlarged and amplified spiritual life, the life that takes hold of the things of God, the divine realities of the spirit, that Jesus would fasten in the minds and hearts of men. The well-remembered words of St. Augustine came to impress the same truth: "Thou hast made us for Thyself, O God, and we are restless until we find rest in Thee."—*The Universalist Leader.*

Something of large importance in the history of Christianity seems certain to come of the movement inaugurated at Pittsburg last month [April] looking to the union of Congregationalists, Methodist Protestants, and United Brethren. The same business reasons exist for the merging of denominations doing the same work in the same field on the same principles, as exist for the merging of great business enterprises. But for this movement there are also other higher and more potent reasons. Already we are receiving letters heartily approving the effort, and pastors are explaining its meaning to the Churches.

*The Congregationalist and Christian World.*

I am glad to hear each sect complain that they do not now hold the opinions they are charged with. The earth moves, and the mind opens. I am glad to believe society contains a class of humble souls who enjoy the luxury of a religion that does not degrade: who think it the highest worship to expect of heaven the most and the best; who do not wonder that there was a Christ, but that there were not a thousand; who have conceived an infinite hope for mankind; who believe that the history of Jesus is the history of every man, written large.

RALPH WALDO EMERSON.

Were it not well, then, to begin with the substance, to learn to apprehend the reality of that kingdom which is all around us now, whether we recognize it or not,—to take our aims and endeavors into it, that they may be made a part of it however small,—to surrender ourselves to it, that our lives may do something towards its advancement, and that we may become fellow-workers, however humble, with all the wise and good who have gone before us, and with Him who made them what they are?

J. C. SHAIRP.

The voices that speak to the best within man are many and are sure to be heard by him who listens. Nature is thus vocal in many ways. No one who communes with her and seeks to interpret correctly her messages fails to receive help from her many communications. Beauty in its varied forms speaks to the finer sensibilities and invites to refinement in thought and feeling. Objects in which beauty and sublimity are combined incite to nobility and strength of character.—*The Universalist Leader.*

I maintain that infidelity, so far from increasing, is rapidly decreasing. A comparison of the religious condition of the older colleges to-day with that of the same institutions fifty years ago will show indubitably that there is in them to-day far more sturdy belief in fundamentals of the Christian religion. Further than this there is to be found to-day religious interest in our colleges which is absolutely unparalleled.

PRES. WILLIAM R. HARPER.

There may be no visible gathering of the nations, no palpable dividing of the sheep from the goats, yet daily, hourly, in all the myriad lives that throng this world, that solemn parable is coming true, and men are passing, little by little, away from right, away from God, farther and farther from peace and blessedness, or are "coming up higher," into the fuller, nobler life to which all true living ever tends.

BROOKE HERFORD.

People who write the sign of equation between Church membership and discipleship, who fancy that through the performance of certain rites and ceremonies they have acquired a certificate entitling them to the joys of heaven, men and women who say "Lord! Lord!" and then serve their own selfish purposes will never contribute anything of value to the settlement of the race problem.—*The Standard.*

The strength of a man's determination and desire almost decide his destiny. If he does not desire earnestly and strongly to be a really good man, he has a poor chance of becoming so. That poor, cold, languid half-wish that is all many men's religion ever rises to is seldom worth anything. At any rate, it cannot lift him into the higher regions of the religious life.—*Selected.*

It was not only a small boy, but one with a small amount of food that Jesus selected by which to work a miracle. Small gifts are not to be despised if we will let Jesus use them. What he wants is not the amount, but the willingness.—*The Standard.*

The world has no remedy for its miseries but the cure of its selfishness. The cross of Christ, the spirit of that sacrifice, can alone be the regeneration of the world.

F. W. ROBERTSON.

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

CHRIST AND CHRISTMAS, an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

RETROSPECTION AND INTROSPECTION. A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

PULPIT AND PRESS. A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

UNITY OF GOOD. It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

RUDIMENTAL DIVINE SCIENCE. An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

NO AND YES. A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

CHRISTIAN SCIENCE *versus* PANTHEISM. The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

MESSAGE TO THE MOTHER CHURCH. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

OUR LEADER'S MESSAGE. The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

COMMUNION MESSAGE, June, 1902. The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

CHRISTIAN HEALING. A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

PEOPLE'S IDEA OF GOD. A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

FEED MY SHEEP. Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

All the arrangements have been completed for the reception at Portsmouth, Eng., of the United States squadron on July 7. As soon as it arrives Admiral Hotham, commander-in-chief at Portsmouth, will pay an official visit to the Kearsarge, the United States flagship, and Admiral Cotton and his officers will be invited to dine at Admiralty House. On the same evening Captain Percy Scott and the officers of the gunnery school at Whale Island will entertain some of the American officers. On the following day Admiral Cotton and a number of his officers will leave for London to be present at the state ball. It is probable that the King will entertain the American and English officers at dinner on July 9. Admiral Cotton will dine at the United States embassy on July 10.

The grand jury which has been considering the investigations into the postal department, has returned an indictment against five individuals on the charge of conspiracy to defraud the Government. There are twelve counts under the indictment.

The investigations will probably be extended to the division of the Third Assistant Postmaster General, which deals with classification of mail matter and also to the Money Order Bureau and the Dead Letter Office. No formal charges have been preferred against these departments, the investigation being merely a matter of precaution.

The ancient manor house of Mount Airy, famous in history as the home of Lord Baltimore, the birthplace of George Washington Parke Custis, the historian, the stopping-place of Washington on his journeys from Mount Vernon to the Continental Congress, and the fireside around which gathered the Calvert, Custis, Washington, and Lee families, has just passed out of the hands of the direct descendants of the Calvert family to which the title of "Lord Baltimore" belonged, and becomes the property of Mrs. Mary Gibson of Cleveland.

The United States battleships Indiana and Texas, the frigate Hartford, and the torpedo boats Bainbridge, Dale, Barry, Chauncey, and Decatur were present in Boston harbor last week to participate in the exercises attending the unveiling of the monument to Major General Joseph Hooker on the Capitol grounds. In he parade were survivors of the Mexican War, of whom the youngest was seventy-six and of all the conflicts since.

The *Washington Star* thus describes the bronze group typifying War, one of the parts of the Sherman monument last completed: "A gigantic figure of an old hag stands erect on the body of a dead soldier. Her face expresses vicious wrath; her hair is unkempt; her figure gaunt; her arms are masculine in form. She is bound from head to foot, and strives with set determination to rend the ligatures."

The members of the German Agricultural Society who have been making a tour of the United States and covered a distance of over ten thousand miles under the guidance of John L. Schulte, assigned by the Department of Agriculture at Washington to accompany the party, sailed from New York last Saturday.

The Pension Bureau reports that up to May 1 there had been received 57,046 claims for pensions from soldiers of the Spanish War, and 8,390 from widows and dependents. Of the total nearly one-third have been rejected outright, and only about thirteen thousand granted, leaving the balance to be adjudicated.

Emperor William has cabled to the President his pleasure at the presence of the American squadron at Kiel and his satisfaction with its appearance. He personally inspected the Kearsarge, the flagship of Admiral Cotton. The President has cabled his thanks for the kindly words of the Emperor.

The President has decided to transmit to the Russian Government the petition presented to him by the executive council of the B'Nai B'Rith regarding the treatment of Jews in Russia. This action has been taken after mature consideration.

**Foreign.**

The Cunard Steamship Company has withdrawn from its agreement with the International Mercantile Marine Company. It is not known that any reduction in rates will follow this action. The company intends to bid for a larger passenger traffic and is now booking steerage passengers to and from the Continent. The German lines, it is understood, will continue their agreement with the trans-Atlantic conference.

The American company, which is building the railway from Guayaquil to Quito, has inaugurated the station at Guamote, situated ten thousand feet above sea level and 126 miles from Guayaquil. The authorities and people from all parts of the republic attended the ceremony. The most difficult part of the work on the railroad has now been accomplished.

It is announced that all efforts to arrange for a meeting between Pope Leo and President Loubet in his official capacity have failed and that the President's visit to Rome may consequently be postponed a year.

President Diaz of Mexico has consented to stand for the presidency for another term of four years. He was the only National candidate at the presidential and gubernatorial elections, which began June 7.

The lieutenant governor of the Transvaal, Sir Arthur Lawley, has remitted the remainder of the sentences of the majority of the former burghers convicted of military offences during the late war.

Prince Karageorgevitch, now known as Peter I., has taken the oath of allegiance to the Servian constitution.

**Industrial and Commercial.**

By a unanimous vote on June 21 the Textile Union of Lowell declared at an end the strike in the cotton mills, begun March 30, last, for an increase of ten per cent in wages. The agents of the mills say no discrimination between union and non-union men will be shown in taking back the men. The investigation of the Massachusetts State Board of Conciliation and Arbitration had shown in April that the operators, with the exception of one mill, were unable to make the increase in wages demanded. It is estimated that the loss in wages to the operatives from March 30 to June 1 was about $1,300,000, and to store-keepers about $225,000. About fifteen thousand operators were affected by the strike.

A committee of the Planters' Society has made a report on a special mode of growing cane sugar which has been tried at Havana. It consists of planting the cane in rows twelve feet apart and three feet in the row, thus allowing the roots and foliage full scope. Only those shoots and pieces of cane which are full grown are cut, the smaller ones being left to ripen. It is said that the yield in weight of cane of the piece of land on which the experiment was made was one hundred per cent greater than is obtained by the present method, by which the cane is grown much closer. Further experiments will be made.

The South Chicago plant of the Illinois Steel Company on June 25, turned out 1,84 tons of steel rails, breaking the world's record, which had been 1,772 for a day's work.

**General.**

Recent investigations into the nature of matter are leading to modifications of the atomic theory. The old theory that the atoms or elements consist of indivisible units of matter has now been definitely discarded. Instead we are told that each atom is a whole stellar system of infinitely smaller, but absolutely identical, units, all in orbital motion. A hydrogen atom consists of seven hundred such units, or ions. The nature or identity of each substance depends upon the number of such ions contained in each atom, thus 11,200 ions in each atom produce what we know as oxygen, and 137,200 of the same ions if combined in a single atom would yield what we regard as gold. The nature of these ions is, for want of a better word, electrical. In other words, electricity and matter are one and the same thing.

The value of the Suez Canal as a highway increases from year to year. Last year the net tonnage of shipping which passed through the canal increased 424,573 tons over 1901, and 1,510,251 tons over 1900. The receipts for this tonnage last year amounted to $20,744,004, which is the largest amount received during any one year since the opening of the canal. Of the 3,708 vessels which passed through the canal last year, 2,105 carried the British flag.

The toast-master at the complimentary dinner given to the American friends of Chinamen at New York recently by the American section of the Chinese Reform Association, made the announcement that five hundred Chinamen in New York had discarded their "pig tails" during the last month as the result of the propaganda of reform. This, he said, was sanctioned by the Chinese reform Emperor.

It is reported that the Hamburg-American line intends to build a new steamer that will surpass in size the two White Star liners, Celtic and Cedric, each of which is 700 feet in length, 75 feet beam, and 49 feet in depth. The new liner will be 725 feet long, 77 feet beam, 50 feet deep and will have a tonnage of about 25,000 tons.

An expedition has been sent out under Dr. George Shattuck to make a scientific survey of the Bahama Islands. In the party are members of the faculty of Johns Hopkins University and officials of the United States Museum. They will study the trade winds by means of huge kites equipped with registering apparatus.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## The Communion and Annual Meeting.

In its attendance, its reverential spirit, and its manifestations of love, the Annual Meeting of 1903 surely takes rank above all its predecessors. The weather was simply ideal and the provisions for the comfort and convenience of the thronging multitude were so ample, so well organized, and so quietly and systematically carried out that the highest degree of satisfaction seems to have been secured to all. The remembrance of this fact will bring the general management and local members an especial joy. They know that the task was made relatively easy by the unselfish patience, the unfailing good nature, and the modest requirements of the dear friends who came to us from so many lands, and yet they cannot forget their indebtedness to that loving and alert brother whose all-round efficiency did so much to put their good purposes into tangible expression.

As usual, the friends from the more distant fields arrived first. Representatives from Melbourne, Sydney, and other points in far Australia were some days in advance of the host. Next Italy, Germany, the Northwest Provinces, and California were heard from, and then came the English delegation, led valiantly "through the paths of the sea" by the Earl of Dunmore and Judge Ewing. At the Wednesday evening service the Mother Church was crowded to its utmost capacity, and many grateful and appealing testimonies were given of physical and spiritual redemption through Truth as revealed in Christian Science. On Thursday and Friday the armies of the South, the great central West, and the Eastern Provinces arrived, and at sight of this "great company," whom no man has yet numbered, Boston capitulated and opened wide her gates. Many thanks are due the railroads, both for special rates, and for special efforts to accommodate the multitude, and to the press for its uniformly kind interest and excellent reports, from which we would be glad, were it possible, to publish larger extracts.

From *The Sunday Post* we quote:—

Yesterday was a busy day at Mechanics Building, the headquarters of the visiting Scientists.

Through the day and late into the night toiled the attaches of the various bureaus, enrolling new arrivals, arranging for lodgings, and issuing membership cards for the Annual Meeting, and the large spaces of the hall presented a very animated scene.

Mr. James A. Neal of Boston with a small army of assistants was in charge.

The annual meeting of the Executive Members of the Mother Church of the Christian Science denomination, The First Church of Christ, Scientist, in Boston, was very largely attended. Members of this board were present from New York City, Buffalo, Providence, Philadelphia, Concord, N. H., New Haven, Hartford, Colorado Springs, London, Eng., and other cities, as well as the resident members. Among those present from England was Lord Dunmore. The session was an unusually interesting one.

The following dispatch was sent to the Rev. Mary Baker G. Eddy:—

Boston, Mass., June 27, 1903.

*Beloved Teacher, Leader, and Guide:*—We, the executive members of The First Church of Christ, Scientist, in Boston, Mass., the Mother Church, in annual session assembled, send to you our greeting of affection, tender love, and gratitude.

We desire on this occasion to reaffirm our implicit confidence in your leadership and guidance of our great cause, knowing as we do that you look to God in "all your ways."

We reaffirm our confidence in your ministry, which is leading the human race, in the way of Christ Jesus, out of the wilderness of non-science which has resulted in the worship of gods many, to the worship of the one and only God in spirit and in truth.

We congratulate you and all your adherents on the wonderful growth of the Christian Science movement under your wise and benign guidance,—a growth without parallel in the history of religion.

In corroboration of our affirmation that Christian Science is the religion of our Master, we point to many thousands of our fellow-men who have been redeemed from the bondage of sin and sickness.

We can truthfully say that in our own experience the more closely we have followed your instruction and example the more rapid has been our progress in the understanding of the divine law of life and health and peace, and of man's unity with God.

Septimus J. Hanna, Gertrude Dunmore, Caroline W. Frame, Archibald McLellan, Julia S. Bartlett,
*Committee.*

### The Communion Services.

From the Monday Morning *Globe* we quote:—

There was room for everybody at Mechanics Hall, yesterday, and the way they were handled was interesting.

The first service was set for nine o'clock in the morning, and the doors of the hall were opened at half past seven in preparation for this. Even at that hour there was a small crowd waiting on the steps. James Landy was the head usher, and he had a corps of seventy-five men under him, all carefully trained in their duties.

Before half past eight the vast hall, including the balconies, was filled.

Prof. Hermann S. Hering, First Reader, and Mrs. Ella E. Williams, Second Reader, conducted the service.

The opening hymn, No. 163, written by Mrs. Eddy and familiar to all was grandly sung by the congregation.

> O'er waiting harpstrings of the mind
> There sweeps a strain,
> Low, sad, and sweet, whose measures bind
> The power of pain.

The seventeenth chapter of John was then read, followed by silent prayer and the repetition of the Lord's Prayer in unison, with its spiritual interpretation as given in the Christian Science text-book. Hymn, No. 166 followed, after which Mr. Edward A. Kimball of Chicago read the following dispatch to Mrs. Eddy, from the Christian Scientists assembled.

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

The Rev. Mary Baker Eddy, Pastor Emeritus,
Concord, N. H.

*Beloved Teacher and Friend:*—Availing ourselves of our sacred Christian privilege, thousands of Christian Scientists are again assembled to celebrate the holy communion ordained by our Master and lovingly observed by our church.

Like all the generations of earth, we are a people who, in times past, were in bondage to nearly every sin and every disease. We well know what it means to endure the fierce pangs that have ever distressed the human race. We have sounded the depths of fear and despair,—the gloom of the world's hopeless struggle against disease.

Many of us have been redeemed from the most obdurate sin. Others who once were dying have been restored to health and usefulness; the lame have walked; the blind have gained their sight; the cold hand of death has oft been turned aside, and the very grave has been robbed of boasted victory.

Coming thus, as a peculiar people, to bow in mute gratitude before our God, we give thanks to Him for the Christian salvation which legitimately heals the sick as well as the sinful.

We have no boast, save that we are gaining through God an understanding and power which are gradually asserting mastery over disease.

As adherents of a theology which discloses the supreme power and willingness of God practically and lawfully to heal the sick, we obtrude upon the world's attention for no reason except to testify to the most essential benefits that have touched the experience of men for centuries, and to plead for the universal espousal of the life which is without sin, without need of punishment, and without disease.

You have so largely discerned the spiritual import of the Holy Scriptures, and of the mission of the divine Christ, that you give to the world an exposition of Christian Science which is without the slightest equivalent in the literature and philosophy of the ages. You have for a generation devoted God-bestowed courage, energy, and wisdom to the re-establishment on earth of the healing work begun by Jesus nineteen centuries ago.

You have founded a religious denomination of vast proportions which irresistibly justifies its existence by its fruit. As a Leader in the holy crusade which aims for universal moral reform, you have through unnumbered sacrifices labored and loved and prayed and triumphed over evil, in order that the glory of God might be made manifest in the moral and physical regeneration of all men.

We believe that there is no more conspicuous or oft-repeated promise in the Bible than that man, obedient to and governed by God, may, through divine means, conquer sin and disease.

We believe that Jesus' entire mission was in demonstration of this promise. And we believe that for these sufficient reasons it is entitled to the gratitude and respectful applause of all mankind.

We are confident that your ministry of reform has been in humble and faithful obedience to the example and command of our Saviour and in exact accord with the divine purpose.

We who not only believe these things, but have ourselves received unspeakable benefits from your wise leadership and example, send you this despatch of loving gratitude, in the hope this will be to you renewed assurance of our loyal confidence and respect. WILLIAM B. JOHNSON, *Clerk.*

This communication was unanimously endorsed and sent to Mrs. Eddy by telegraph.

The reading of the church Tenets and the singing as a solo of the Communion Hymn written by Mrs. Eddy, was followed by the Lesson-Sermon on *"Loving One Another."*

The Communion service proper was introduced by the following invitation. "I now invite all present, whether members of this church or not, to unite with us in spiritual, holy communion with the one God, infinite Love. Our revered Leader thus beautifully defines our Spiritual Eucharist: in "Science and Health with Key to the Scriptures:" "Our baptism is a purification from all error. Our church is built on the divine Principle, Love. We can unite with this church only as we are new-born of Spirit, as we reach the Life which is Truth and the Truth which is Life, by bringing forth the fruits of Love,—casting out error and healing the sick. Our Eucharist is spiritual communion with the one God. Our bread, 'which cometh down from heaven,' is Truth. Our cup is the cross; our wine the inspiration of Love, —the draft our Master drank, and commended to his followers' (p. 35); and now, in the words of the Psalmist, 'O come, let us worship and bow down: let us kneel before the Lord our Maker.'" Then devoutly kneeling the great company silently Communed with ever-present Love.

After the singing of the Communion Doxology, Professor Hering read a letter from Mrs. Eddy which appears in another column.

The service closed with the reading of the scientific statement of being from Science and Health, the correlative Scripture passages, and the following benediction, "The grace of our Lord Jesus Christ, the love of God and the communion of the Holy Spirit, be with you all. Amen." As soon as the congregation had retired the second congregation, which had gathered in the adjacent corridors of the building, was admitted and the service was repeated, as it was again at 2 P.M. The total attendance for the day was estimated at twelve to thirteen thousand.

### THE VISIT TO CONCORD.

The invitation to visit Concord brought great joy to unnumbered hearts, and to make adequate provision for so large a company to go on so short a notice, involved many hours of strenuous effort for the faithful committees in charge. Such prompt measures were taken, however, by the railroad company that before Sunday evening several special trains were announced, and in due time all needed accommodations were provided.

About ten thousand responded to the invitation and reached Concord before 1 P.M. These found their way, by carriages or on foot, to Pleasant View. The day was cool and pleasant and a quiet joy pervaded the multitude.

We quote from the *Boston Herald's* report of events.

By noon the thousands who had come from Boston, and others who had journeyed to Concord from other points, waited admittance.

Shortly before 1.30 P.M., the gates opening on the street were thrown back and the crowd passed through, seeking the places nearest to the east balcony, from which Mrs. Eddy was to address her guests. The time for her appearance had been set at 1.30 P.M. When Mrs. Eddy came out on the balcony her appearance created a profound impression. There was no demonstration save the waving of handkerchiefs by many of the women. The men stood with bared heads.

Mrs. Eddy looked over the throng for a moment, advanced to the front of the balcony and with hands folded in front of her began to speak. Her words came clear and distinct, and all within ordinary earshot heard these words of greeting to her visitors.

*Beloved Brethren:*—Welcome home! to your home in my heart. Welcome to Pleasant View, but not to varying views. I would present a gift to you to-day only that this gift is already yours. God hath given it to all mankind. It is His coin, His currency, it hath His image and superscription. This gift is a passage of Scripture, it is my sacred motto, and reads thus: "Trust in the Lord, and

Digitized by Google

do good; so shalt thou dwell in the land, and verily thou shalt be fed. Delight thyself also in the Lord; and he shall give thee the desire of thine heart. Commit thy way unto the Lord; trust also in him; and he shall bring it to pass. He shall bring forth thy righteousness as the light, and thy judgment as the noonday."

Beloved, some of you have come long distances to kneel with us in sacred silence, in blest communion, unity of faith, understanding, prayer and praise—and to return in joy, bearing your sheaves with you. In parting I repeat to these dear members of my Church, Trust in Truth, and have no other trusts. To-day is fulfilled the prophecy of Isaiah: "And the ransomed of the Lord shall return, and come to Zion with songs and everlasting joy upon their heads; they shall obtain joy and gladness, and sorrow and sighing shall flee away."

At the close of her words she looked smilingly, but with manifest emotion, upon the thousands of upturned faces below and waving them many good-bys passed within.

As she disappeared, the throng took up the words of one of her favorite hymns, "Shepherd, show me how to go," and as the music swelled forth, those farther away took up the refrain, until all were singing. As the hymn was finished, Mrs. Eddy appeared again at her study window and waved her handkerchief in acknowledgment. The Communion Hymn was sung and the Lord's Prayer was repeated in unison, and then the gathered thousands sang the Doxology.

At 2 P.M. Mrs. Eddy came out and entered her carriage, which was driven slowly between the lines of waiting people. Men stood with bared heads, while the women waved their handkerchiefs. In response Mrs. Eddy bowed right and left. The carriage windows were down and an excellent opportunity was afforded for a close view of the Leader of the Christian Science faith.

Commenting upon the scene the *Boston Journal* has said:

One of the remarkable features of the incident was the lack of curiosity. Those who could not come within the sound of Mrs. Eddy's voice or even in view of her, expressed no undue desire to do either by crowding and jostling. When held for an hour in the street outside the grounds of Mrs. Eddy's home, ushers said that the way should be open and the line should be straight, and the way was open and the line was straight, and all were satisfied.

On the return trip all the train men were pleasantly remembered with an expression of appreciation of their kindness in bearing added burdens, and a spirit of gratitude and good will filled all hearts.

Nothing occurred to mar in any way the orderliness and peace of the day. The good people of Concord extended many courtesies to the visitors, and the Wonolancet club house, by the unanimous vote of the directors, was tendered as a headquarters for them.

Another long to be remembered opportunity and privilege had been enjoyed by those who cherish for Mrs. Eddy the deep respect and tender love which has been awakened by one who, through God, has brought to unnumbered lives an unmeasured good.

The following editorial which appeared in the Boston *Evening News* shows such proper appreciation of the reason for our visit to the home of our Leader, and of the spirit in which it was made that we are glad to publish it here:—

Boston is used to conventions and big gatherings. Possibly for that reason the feat of the Christian Scientists in filling Mechanics Hall three times on one Sunday for a strictly religious service has not attracted undue attention.

But even Boston is not accustomed to seeing seven or eight thousand people arrange within eight hours for an all day excursion, have tickets printed and issued and special trains engaged inside that time, and actually be on their way before the invitation to go was twenty-four hours old.

That is something that usually follows weeks, even months, of careful planning, and yet the Christian Scientists did it in hours. Moreover, everything went as smoothly as if the details had been worked out by rule and rote. Not even a railroad official lost his temper, and there was not the semblance of an accident reported.

The vast gathering was handled, both in Boston and in Concord, by the volunteer ushers of the church. They did the policing and the directing. The people themselves did the rest.

Whatever one may think of Christian Science, whatever he may think of this visit to Concord, which outsiders persist in terming a "pilgrimage" and which insiders say was nothing of the sort, its success as a mere exhibition of how a crowd can be handled and can handle itself is sufficient to classify it among the extraordinary events of the moment.

What did this visit really signify to the Christian Scientist, since, as already has been stated, he did not regard it in any sense as a pilgrimage?

While recognizing the full force and the full importance of unity, Christian Science is, nevertheless, an intensely individual matter.

The Christian Scientist does not believe in going about promiscuously reforming the world. He tries to reform himself, for he is logician enough to perceive that when every individual is reformed there will come a reformed world without any further difficulty.

It is a fact that comparatively few persons have identified themselves with the Christian Science movement except as they have become interested in it through great suffering.

With some this suffering has been from disease; with other it has been mental, and with others moral.

Whatever it has been, the Christian Scientist is thoroughly convinced that he has been able to escape it through the application of the rules of Christian Science for right thinking and right living.

He recognizes Mrs. Eddy as the formulator of these rules, by means of which he has been helped, and consequently his gratitude to her is natural and his desire to give expression to this gratitude keen.

It is the feeling of sincere gratitude which sends the Christian Scientist to Concord after he has been invited.

In the first place, he considers it the part of courtesy to accept the invitation. In the second place, it is a matter of great personal gratification to see Mrs. Eddy and to hear her speak.

This is not worship, but it is unusual evidence of strong affection and loyalty.

Aside from the satisfaction of seeing Mrs. Eddy and hearing her speak, the characteristic of the Concord visit which most seemed to please and impress the Christian Scientists was the hospitality with which they were received by Concord itself.

The city did not turn out to receive them—that they would have found disconcerting and unpleasant; but it did throw open to them its doors—even the doors of its clubs and private residences.

A conspicuous leader in this particular was the Wonolancet Club, whose spacious house in the heart of the city was placed absolutely at the disposal of the Scientists.

The club's officials were on hand to receive all comers, and there the visitors ate their lunches and drank copiously of lemonade and ice water provided by their hosts.

It was a most graceful compliment to Mrs. Eddy, as well as a tribute to the trust that Concord knows from experience that she can place in Mrs. Eddy's guests.

Digitized by Google

To how many promiscuous gatherings of excursionists from all over the world would the Wonolancet Club care to throw open its home without restraint?

These evidences in Concord are little in themselves, but in the aggregate they are a great deal. Mrs. Eddy has made Concord her home for a number of years, and her followers have visited Concord constantly in that time.

Christian Science in a way is more in evidence in Concord than it is in Boston, for Concord is a smaller place, and it is in Concord that the utmost confidence is placed in Christian Scientists.

We all have our little weaknesses, and Christian Scientists may have theirs. But it would appear from a candid examination of their case that they also have some qualities which are worth almost any one's emulation.

At least they know how to conduct themselves like ladies and gentlemen when they go on excursions, and that of itself is a bit of a virtue.

### The Annual Meeting.

The Annual Meeting of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., was held Tuesday afternoon, President John R. Reeder presiding at the opening.

After the singing of hymn 183, "Shepherd, show me how to go," written by Mrs. Eddy, selections were read from the Scriptures and Science and Health and all bowed in silent prayer.

The following word of thanks was read from Mrs. Eddy in response to the dispatch sent her from the Communion service.

"Give my sincere thanks to my dear church for this loving, comprehensive dispatch."

The officers for the ensuing year were announced as follows:—

President, Rev. Irving C. Tomlinson; Treasurer, Stephen A. Chase; Clerk, William B. Johnson. The President-elect delivered a brief address, and the reports of the Treasurer and Clerk were then presented. The latter will appear in the next issue of the *Sentinel*.

The following communication to Mrs. Eddy was read by Mr. Kimball and unanimously approved.

*Beloved Teacher and Leader:*—We wish to express our high appreciation of your helpful and loving letter to the Mother Church and rejoice that we have been inspired by its gentle entreaty to strive for a holier consecration to God and to Christlike service in His cause.

We beg that you will accept our thanks for your cordial hospitality which welcomed us to your home at Pleasant View and made possible for us a most enjoyable and profitable visit. We were very much impressed by the gracious generosity of the people of Concord, which contributed so largely to our convenience and good cheer, and we desire to make known to them our grateful thanks.

This regular business meeting of our church is being attended by many thousands of its members. It is gratifying to report to you that in all particulars the growth of our church and its denominational activity has been constant and rapid. During the past year sixty new churches and societies have been established, making the total number at present 769, many of which have erected large and substantial church edifices. The number of additions to the membership of the Mother Church in Boston for the year was 3,696, 2,695 of whom were admitted at the last communion.

Owing to this widespread and unprecedented growth, the demand for our literature and regular periodicals has greatly increased, but, notwithstanding the large free distribution of such literature, our publishing society is able to report itself as being in a sound and prosperous condition.

We know that words of ours cannot compensate your never-failing devotion and labor in behalf of this success of our cause and of our own heavenward progress, but we believe that you can interpret without words the song of our enduring gratitude.

The following vote of thanks to the management of the Boston & Maine Railroad was adopted:—

To D. J. Flanders, General Passenger and Ticket Agent, and D. W. Sanborn, General Superintendent, Boston & Maine Railroad.

*Gentlemen:*—We hereby acknowledge our obligation and convey our thanks to you for your satisfactory services in our behalf in connection with our recent visit to Concord. The accommodations were ample, convenient, and so promptly arranged to meet our every need as to reflect much credit on your road and to command our high appreciation.

Thanks were also tendered to the Directors and local Scientists for their faithful and highly successful efforts in providing for the welfare of visiting Scientists. A cablegram conveying the greetings of First Church, London, and kindred telegrams from other points were read.

The order of the day,—the reading of reports from the Field,—was then taken up. Of these we shall have more to say in the future.

## God does not Kill.

God does not kill! Neither by the flashing lightning, the whirling wind, the roaring water, nor the relentless storm. God does not kill with poison, pestilence, plague, famine, or flame; God does not kill with disease or disorder, with heartache, or headache, with vice or with venom. God does not kill anybody, anywhere, or at any time!

The doctrine that God takes away a child to punish or afflict a parent; takes away a husband to humble the wife, or the wife to humble the husband; that God comes into a family, like a besom of destruction, to kill and afflict and sadden; that God ever draws a tear or forces a sigh; that God bankrupts or burdens any one, good or bad—the doctrine of providential affliction and distress and sorrow—this unloving, godless and pitiless doctrine, has its place in the thought of to-day only because it has had the sanction of hoary ages. Not because it is true, or reasonable, or good, or acceptable, or helpful, or hopeful. Not because the Bible, or philosophy, or history, or science would have us believe it. But simply because we have been taught it, and have not had the courage to deny it.

God pities and helps, and guides and leads, and teaches, and hopes for us, but does not destroy us, or hurt us, or hinder us. The theologian may have to teach us opposite thought to harmonize his system of so-called truth, but we know better; and in all justice and fairness let us quit accusing providence of inspiring crime and promoting disease, and encouraging death. If a friend or brother dies, let us look to God for pity and help in our bereavement. Let us not accuse him of killing the loved one—of "removing from our midst, a dear brother."

From Editorial in *Fort Worth* (Tex.) *Register*.

If you wish to be miserable, you must think about yourself, about what you want, what you like, and what respect people ought to pay you; and then to you nothing will be pure. You will spoil everything you touch. You will make sin and misery for yourself out of everything which God sends you. You will be as wretched as you choose.

Charles Kingsley.

## The Lectures.

### At Providence, R. I.

A public lecture entitled "Christian Science and the Freedom of Man," was delivered before a large and attentive audience at the Providence Opera House yesterday afternoon [May 31], by William P. McKenzie, C.S.B., member of the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass. Mr. McKenzie was introduced by Mr. Gilbert C. Carpenter, First Reader of the local church.—*Evening Telegram.*

### At Haverhill, Mass.

About five hundred people assembled in City Hall last evening [June 2] to listen to an interesting lecture on "The Teaching of Christian Science" by Carol Norton, C.S.D., of New York, which was held under the auspices of First Church of Christ, Scientist, of this city. The speaker handled his subject interestingly and was listened to with deep attention by those present.

John M. Harrison, the First Reader of the local church, introduced the speaker.—*Haverhill Gazette.*

### At Benton Harbor, Mich.

The first lecture ever given in this city on the subject of Christian Science was delivered by Judge Septimus J. Hanna of Boston, May 12, at the Bell Opera House to a large and appreciative audience. There was a good attendance also from St. Joseph, our sister city over the river. The lecturer was very ably introduced by the Hon. L. C. Fyfe of that city, who spoke as follows:—

It gives me pleasure to be able to announce that we have with us to-night Judge Septimus J. Hanna of Boston, an old lawyer and a ripe scholar.

From around the shores of Massachusetts Bay have come the great movements that have given light and life and liberty to this great nation of ours. It is exceedingly fitting, therefore, that this new and noble movement of Christian Science, which seeks to spiritualize and elevate the life and being of man, should have its cradle and its center in the great city of Boston. The movement has gone forth with a vigor and energy and success that commands our respect and our attention, even if it has not gained our adherence. It comes to us filled and laden with the aroma of truth, and while it is to-day simply in its springtime, yet it is a beautiful springtime,—a springtime like unto the glorious beauty of our own surrounding gardens and orchards, and with, let us hope, the like promise of a large and beautiful harvest.

Although this new religion is but entering upon its life and course, yet the evidences of the fruit it has already borne and of the good it has already done for many cultured and intellectual people have come to us, not only from every city and almost every hamlet in our own land, but from across the great water,—from enlightened Europe, from dark Africa, and from far-away Australia. With such evidence before us, it becomes a matter of duty on our part to give to the thinkers and to the teachers of this new Christianity a patient hearing. If after we do this they fail to convince us, if they fall short of arousing our interest, then it is not altogether our fault; but if we refuse in the first place to listen, then surely we may be blamed.

It is our privilege this evening to listen to a man whose training and profession, whose study and experience, make him peculiarly fitted to lay open before us to-night the teaching and the truths, the hopes and the aspirations, the material advantages, gifts, and benefits, as well as the spiritual comforts, reliances, and rewards of Christian Science.

I take pleasure in introducing to you Judge Hanna.

*Correspondence.*

### At Grand Rapids, Mich.

The lecture on Christian Science at the new Powers Theatre last evening [May 15] by Judge Septimus J. Hanna, C.S.D., was delivered to a large and interested audience. Long before the time for the lecture the people began to flock in, and by eight o'clock, when the speaker was introduced, every seat in the body of the theatre was occupied and the balconies and gallery held many more people.

Heretofore Judge Hanna has been known to the people of this city by reputation only, but he has endeared himself to many through reports of his unselfish labors for humanity and the part he has taken as a Christian Scientist in the betterment of the moral, physical, and spiritual conditions of his fellow-men.—*The Grand Rapids Herald.*

Judge Hanna was introduced by the Honorable Alfred Wolcott, Judge in the Circuit Court, who said in part:—

I feel sure of this, at least, that whatever the lecturer may say will be the earnest and profound conviction of a scholarly, well-trained, and judicial mind, and as such entitled to a fair and impartial hearing.

The lecture is to be on the subject of Christian Science. It has been true of nearly all new forms of religious belief, that they have had at first to contend with a certain measure of distrust, or prejudice, or open hostility on the part of the adherents of the older religious denominations. Some twenty centuries ago it was said of the then new sect of Christians, that it was "everywhere spoken against." Christian Science has passed through the various phases of this experience.

It is not my province on this occasion to undertake to say anything as to the merits of Christian Science, but only to say this, that in my judgment there is room and a place in the world to-day for any religion which honestly seeks to know the truth, and reverently to follow in the footsteps of the Nazarene; a place for any form of faith, under whatever name, which seeks to make more practical among men the teachings of the Sermon on the Mount, which aims to inspire men to higher ideals, to nobler living, and to better thinking, and which brings to weary and discouraged men and women the gospel of cheerfulness and courage and hope.

The world certainly has no reason to complain if it is possible to make more real in this busy, active life of ours the words of Whittier:—

> The healing of his seamless dress
> Is by our beds of pain;
> We touch him in life's throng and press.
> And we are whole again.

Whether we accept the tenets of Christian Science or not, still, in all fairness, we must admit that, measured by its results, its ministry has been for good. This fact of itself, ought to disarm hostility and give it welcome as one of the great Christian agencies for the betterment of humanity.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Letter of the Pastor Emeritus.

THE following letter read at the Communion services, was worthily supplemented by the brief address which Mrs. Eddy delivered from the balcony of her residence in Concord on Monday last. The latter was remarkable for the fact that the speaker, apparently without effort, succeeded in being heard by practically all of the assembled thousands. To address an audience of this size, in the open air, is a task which few public speakers would undertake with any hope of being heard by more than a limited number, but Mrs. Eddy's strong, clear voice was distinctly heard even by those a long distance removed.

These utterances of our Leader contain much food for thought, and if we are wise we will carefully ponder their import and take into our hearts their loving counsel, and endeavor to imbibe their exalted Christian sentiment.

The following is Mrs. Eddy's letter read at the Communion service; the address delivered at Pleasant View appears on page 696 of this issue. M.

*My Beloved Brethren:*—I have a secret to tell thee, and a question to ask. Do you know how much I love you, and the nature of this love? No: then my sacred secret is incommunicable, and we live apart. But, yes: and this inmost something becomes articulate—and my book is not all you know of me—but your knowledge with its magnitude of meaning uncovers my life, and your heart has discovered it. The spiritual bespeaks our temporal history. Difficulty, abnegation, constant battle against the world, the flesh, and evil, tell my long kept secret—evidence a heart wholly in protest, and unutterable in love.

The unprecedented progress of Christian Science is proverbial, and we cannot be too grateful, nor too humble for this—inasmuch as our daily lives serve to enhance or to stay its glory. To triumph in truth, to keep the faith individually and collectively, conflicting elements must be mastered. Defeat need not follow victory; joy over good achievements and work well done should not be eclipsed by some lost opportunity, some imperative demand not yet met.

Truth, Life, and Love will never lose their claim on us. And here let me add:—

> Truth happifies life in hamlet or town;
> Life lessons all pride—its pomp and its frown—
> Love comes to our tears like soft summer shower,
> To beautify, bless, and inspire man's power.

With everlasting love,
MARY BAKER G. EDDY.

### Communion Week.

WE feel sure that our readers will be satisfied to wait until another issue for any extended editorial comment upon the events of the past few days,—the Communion, with its three immense congregations of quiet, earnest, reverential people; the letter from our Leader; the joyful acceptance of her invitation to visit her at Pleasant View; the hastily planned but successful trip to Concord; Mrs. Eddy's words of loving hospitality and Christian appeal; the generous welcome by the citizens of Concord; the great Annual Meeting; the two inspiring Wednesday evening meetings, —all speak for themselves. Never before has there been so satisfactory a gathering, never before such an outpouring of love. Much of the detail of our experience may be obliterated as the days pass, but the spiritual uplift and the renewed consecration to the service of God which came through this Communion can never be lost.

The words of our Leader repay us for our attendance at these meetings, because they give pause to human strife and turmoil, and direct our thought to God, ever-present Love, "who healeth all our diseases." These great meetings stand forth as an endorsement of her ministry, and of Christian Science as the embodiment of the teachings of Jesus Christ which bring healing to the sick and spiritual quickening, joy, and peace to all mankind. M.

### The True Patriotism.

To many people "my country" means little more than a tremendously big "me," with the accredited disposition and ability to say, "Stand off" to the other fellow; and they are likely to hurrah the loudest when they are reminded of the time that this national giant asserted himself vigorously, and made his point.

This concept is very human and no less unethical than egotistic. It nourishes a sense of material self-sufficiency and is boastful if not bellicose. It conduces to the survival of the physically stronger rather than the more deserving, and its history is a tragic tale of national aggression and militarism. It may awaken the enthusiasm of loyalty, and beget a devotion that is indifferent to sacrifice, even of life, but it is far from ideal, and it cannot insure stability of empire.

Right thought, here, begins with the recognition that the people constitute the country as the family constitute the home, and that true patriotism signifies an altruistic devotion to the highest interests of human brotherhood.

A true estimate of the character, real worth, and probable continuity of a nation cannot be based upon the extent of its domain, the richness of its resources, the strength of its defences, or the form of its government, but solely upon the ideals of its people, the quality of its citizenship. If we think of our country as a great brotherhood, patriotism will at once be recognized as a spiritual impulse, and we shall see that right concept, the perception of Truth, can alone effect redemption. The Christ-idea must solve all problems, whether individual or national, and it is to be brought into saving touch with the communal life through us. "To be patriotic," one has well said, "is to live altogether for the spirit, for worship, for the love of man, for beauty, and for the service of mankind." The responsibilities of citizenship, which are now so lamentably ignored by even Christian people, will then be appreciated and honored, and one of the greatest menaces to the public weal be removed.

As we realize that we are linked to all men by the bonds of a common parentage, common rights, common needs, common aspirations, and a common goal, we can but see that our disabilities and our interests are also common, and we are thus impelled both by love and true self-interest, to that intelligent activity in the advancement of the communal welfare which must precede the righting of our social and economic wrongs.

The true patriot is a citizen of the world. Indifference to the interests of the men of other lands is as impossible to him as is indifference to the interests of his fellow-countrymen. A Lafayette, a Kossuth, or a Mazzini may busy his hands with a local issue or undertaking, but his cause is universal, and his heart is wedded to the larger

Digitized by Google

humanity. Such men are great even in their lesser doings. The smaller undertaking often makes the greater demand upon one's fealty and self-control, and for the reason that its setting is so commonplace. Obscure devotion to duty lacks the mesmeric glamour of a great occasion, and this explains the fact that men usually find it easier to go to the front in time of war, than to go to the polls in time of peace.

The true and abiding inspiration to the fulfilment of those little duties which make for large, though often unseen, results, is the greatness of the impelling idea. Truth is all-inclusive, and it is only as we feel the quickening of its larger appeal that we are fitted to become the instruments of its lesser application. Our failure and apparent incapacity to manage the individual undertakings successfully, results in no small degree from our lack of enthusiastic identification with the greater idea and movement. There is and can be no pettiness in patriotism; loyalty means large mindedness, and for Christian Scientists this is no less true with respect to their Cause, than it is with respect to their country.

In the conduct of this Cause we cannot have failed to see that amplitude of thought regarding the meanings and ministry of Christian Science, has ever been made the basis of determinative judgment, and in the work which our hands have found to do we may not hope to share our Leader's success if we have not in this respect emulated her example.

Next to love for God, love for country has always dominated the noblest men. It could not have been otherwise, since for them love for country has always meant love for humanity. This is the patriotism which is needed today, and which, as Christian Scientists, we are under peculiar and lasting obligations to exhibit. The question of the hour is this, Can our economic and political problems be solved on the basis of ethics? All Christians know full well that nothing is settled until it is settled by right, and yet how very many Christian men are pitifully lacking in the courage of this conviction; while on the other hand great masses of the people are cynically indifferent, and thus practically, if not openly, opposed to this moral idea.

If all men are brothers and Love is the only law, then all men are entitled to a fair chance, and justice must obtain. We may be patriotic, however, in the sense that we have and maintain the right idea, and yet not know just what to do. Many are in doubt and troubled at this point, and they have need to remember that persistent, unswerving loyalty to the ideal has ever brought and will ever bring the means and opportunity of its realization. The unqualified pledge has been given: "The kingdoms of this world are become the kingdoms of our Lord, and of his Christ; and he shall reign for ever and ever," and as Christian Scientists it is ours to present the human occasion of its fulfilment by a fearless and unhesitant devotion to the ideal, and an alert readiness to profit by every opportunity for its effective assertion. Thus and thus only can we be true patriots. W.

## The Destructive Impulse.

WHEN Christian Science breaks the fetters that bound us to a thousand erroneous theories and practices, and we begin to see that many of our pet schemes and actuating motives are the expressions of human will and misdirected effort, we are disposed to discard them all and at once. We feel that we must be immediately translated into a new environment which will give us a fresh impulse and make it easy to adjust things to our lately acquired and Christianly scientific point of view. In this transition stage of our experience, we are filled with fear as we recognize the materialism of our pursuits and occupations.

We are liable at such a moment to yield to the impulse of an undiscriminating destructiveness, and may be tempted to flee from that which has cost us years of untiring effort in literature, in art, in social acquirement, in everything. Like Moses we are frightened at what now seems to be the logical outcome of obedience, and it is just here we need to be reminded that "Jesus was a Saviour, not a destroyer;" that he came to fulfil, not to annul, and that the teachings of our Leader, in strict conformity to those of the Master, lead not by the way of condemnation and destruction, but discrimination and transfiguration.

Just so sure as Moses had to go back and handle the serpent, shall we be obliged to demonstrate our way out of old environments. We need to recognize the good, the redeemable, in the old and adapt it to the Master's use; to see the falsity of the evil, the irredeemable, and cast it out by destroying it in our own consciousness. Thus, and thus only, will our past experience become a rod on which to lean.

Doubtless we find among the wheat many tares, and in our zeal we hasten to uproot them, quite unmindful of the Master's injunction to let all grow together till harvest,—the recognition and adoption of the good and the true which is continuous and progressive. The tares which to-day seem inextricably interwoven with the wheat, may loosen themselves naturally to-morrow because of our awakening sense of Truth. Old opinions, old habits, old amusements which are no longer in keeping with our apprehension of Truth, will exit with apologies for having lingered so long.

There is no human occupation that tends to the betterment of mankind where Christian Science is not needed and where it would not be welcomed were it wisely lived and not unwisely talked. Every Christian duty, however small, is worth while; every field of honest labor offers opportunity for the demonstration of harmony, and every demonstration of harmony is a step heavenward. The sheaves we have gathered by the toilsome way must not be destroyed, but made serviceable. Many of the books we have collected, the pictures we have loved, the orchards we have planted, the songs we have sung, are the human expression of the activity and intelligence of the one Mind, and their suggestions of an increasing appreciation of purity and perfection mark an advance to a fuller understanding of Truth.

The cause of Truth has a theme for the poet's pen, an inspiration for the painter's brush and the sculptor's chisel. It has a place for the conscientious business man, for the cultured college fellow who brings the fruitage of years of application and self-discipline, for the skilful artisan, the careful housewife, the patient teacher. Truth welcomes them all and leads them to a higher, holier interpretation of common duties and responsibilities.

These common interests enable us as Christian Scientists to grasp with fraternal appreciation the hand of humanity, and we cannot afford to discard or ignore, anything which, while putting us in touch with our fellow-men, commands their respect and esteem. So far, then, as our acquirements are compatible with spiritual growth let us be thankful for them, and rest assured that we shall need them all. S.

## Editorial Department.

THE following have been elected Editors of *The Christian Science Journal, Christian Science Sentinel,* and *Der Christian Science Herold:*—

*Editor in Chief,* Archibald McLellan.

*Second Editor,* John Buckley Willis.

*Assistant Editor,* Mrs. Annie M. Knott.

*Assistant Editor of Der Christian Science Herold,* Miss Louise F. Kollmorgen.

Mrs. Knott will actively assume her duties upon her return to Boston after a temporary absence.

## Letters to our Leader.

WE are glad to publish the following letters received by Mrs. Eddy. We feel sure that it has given her much joy to note the appreciation of her recent article, "Now and Then:"—

Cincinnati, June 17, 1903.

Rev. Mary Baker G. Eddy,
Pleasant View, N. H.

*My Precious Mother:*—A few lines of loving gratitude for your message "Now and Then."

It awakened me to the necessity of doing *now* the good I could instead of "dreaming of great things to do by-and-by."

Alice Cary says:—

True worth is in being, not seeming,
In doing each day that goes by
Some little good—not in the dreaming
Of great things to do by-and-by.
For whatever men say in blindness,
And in spite of the fancies of youth,
There's nothing so kingly as kindness,
And nothing so royal as Truth.

Dear Mother in Israel, alone of us all, you comprehend the full significance of this hour. We stand in awe before it and assure you that two loving, loyal hearts (here in my home) are daily working, watching, and praying, with you, for that "same Mind to be in us which was also in Christ Jesus." Loyally and lovingly,

EMMA A. ESTES.
JULIA C. ESTES.

Enclosed please find a little "love currency" for our dear Concord Church.

---

Boston, June 25, 1903.

*Dearest Mother:*—Please think of these communion flowers as messengers of my love and gratitude for your continuous labor and watchful, tender care.

Especially let me thank you for your recent gifts. Your article "Now and Then" was such an inspiration to our church at home, that we immediately and most joyfully raised our pledge to the Building Fund to ten thousand dollars or more.

The dear special service for next Sunday is a benediction indeed. Truly it has come "with healing in its wings."

For the new Concordance to our precious text-book, I have not words to tell my thanks. It meets a longing of many years' duration. It is just what we so needed,—an unfailing guide to disclose instantly the treasures of thought in that store-house of Truth, "Science and Health with Key to the Scriptures."

All the peace and blessedness of Love be yours through these and all the days.

With deeply grateful love,

Your affectionate student,
MARY BROOKINS.
Minneapolis, Minn.

## An Impartial Editor.

ONE thing especially favoring the propagation of the Christian Science idea is that it approaches people with intentions that appear to be most benevolent in character. Its adherents are thoroughly Christian and are entitled to be regarded as among the most devoted believers in the Scripture revelation which all Christians honor and revere. This much alone gives them clear title to respect. For the rest, they are open to investigation, and this they profess to court. The day is passed when careful people wholly scout and disregard any subject which deeply engrosses the attention of large numbers of their fellow-beings, and already perhaps it may be said that those who think most meanly of so-called Christian Science are found almost wholly among those who know least about it and its claims. Involved in it somewhere, there may be—and those who believe there is are numbered by thousands—a germ which will develop into an immeasurable blessing to mankind.

## Among the Churches.

### Christian Science in Manchester, England.

The following extract from "the leading organ of public opinion in the north of England" records a most interesting event in the history of our Cause, and the loving thought of the entire Field will be given these earnest workers in "The Old Home." We have received two interesting communications respecting the work, from representatives of the Manchester Church, for which our crowded columns offer no space.

The members of First Church of Christ, Scientist, who have met for some time past in modest premises in Manchester, have decided to build a more suitable place of worship in Victoria Park. There will be seats for five hundred people, and the ultimate cost of the work will be £5,000. At present, however, only the nave is to be completed, at an estimated expenditure of £1,800. The site chosen is pleasantly situated at the corner of Daisy Bank Road and Hope Road. The ceremony of laying the corner-stone was performed on Saturday afternoon, May 30, by Lady Victoria Murray, who was accompanied by the Earl of Dunmore, Lady Mildred Murray, the Hon. Frances Gibson, the Hon. William G. Ewing (formerly Judge of the Superior Court of Illinois), and many adherents of Christian Science in Manchester and elsewhere.

The simple service in the open air was conducted by Lady Victoria Murray. First she read 1 Corinthians, 3, and a passage from Ephesians, 2. This was followed by an extract from the letter written by Rev. Mary Baker Eddy upon the occasion of the laying of the foundation-stone of the Mother Church. Next there was an interval of silent prayer, after which those present united in the recital of the Lord's Prayer. Then Judge Ewing delivered a brief address. Without entering at length into an exposition of the doctrines of Christian Science, he explained that it was trying to build up the same kingdom of God in the world as other Christian churches were laboring to establish. "We believe," he said, "in the same all-wise and ever-present God and in the same divine Christ, and we are exercising all the energies of our lives to bring about the accomplishment of that beautiful day spoken of (it is a promise, and a promise to be kept) when a whole nation shall be born in a day, when God's kingdom shall come into this world, and His will be done as it is done in heaven."

Referring again to other churches, the Judge said: "A striking difference between our belief and theirs lies in this, that we shall be judged by what we do, and not by what we say we believe. This little church is simply a product of that conviction, and I am sure that the time will come when we shall realize that our thought is the truth, that no good has ever come or will come to us in this world that is not the reflex of some good that we have done to some one else." After the Judge's address the corner-stone was duly placed in position, and Lady Victoria Murray, "in the name of the Great Architect of the universe," declared it to be well and truly laid. The service ended with singing of the hymn, "Shepherd, show me how to go" (written by Mrs. Eddy the Discoverer and Founder of Christian Science).

The corner-stone is of rough granite, and bears the following inscription: "This stone, from Concord, U. S. A., was laid by Victoria Murray in gratitude for the spiritual truth and physical healing found in Christian Science.

'Heal the sick, raise the dead, cleanse the lepers, cast out demons.' 'These signs shall follow them that believe.'—Jesus."—*The Manchester Guardian.*

### A Corner-stone Laid in Grand Rapids, Mich.

The corner-stone of the new First Church of Christ, Scientist, has been laid with impressive services.

In the corner-stone were placed the Bible, the works of the Rev. Mary Baker G. Eddy, the Manual of the Mother Church in Boston, and the history of Christian Science in Grand Rapids, etc.

The new structure is to be built of gray pressed brick and Bedford sandstone, and it is of the Roman classic style of architecture. The structure will be 101½x80½ feet and will have an auditorium which will contain seven hundred and fifty seats. In addition it will have a foyer that will accommodate five hundred.

The church was organized in 1893. At first it had only eight members. On next communion day it will have one hundred and fifty. The Sunday School is one of the features of the society. It has an enrolment of ninety-seven.

The society hopes to be in its new quarters by the first of January. The exterior will be done about the first of October.—*The Grand Rapids Herald.*

### Church Organized at Oxford, Mich.

As the outcome of a gradual growth in this community, the Christian Scientists met at the home of Mrs. E. A. Rixford in Oxford on Wednesday, June 3, and formally organized First Church of Christ, Scientist, of Oxford, with fourteen charter members. Services will be held regularly hereafter each Sunday in the Christian Church on West Burdick Street.—*The Oxford* (Mich.) *Leader.*

## Faith.

ADA J. MILLER.

JUST to keep your thought true, steadfast,
Just to know that God is here,
Just to feel His arms about you,
Just to trust, and have no fear.

This is what the Father wishes,
This is what He asks of each;
This is all of life's real burden,
This, through faith, we all can reach.

Faith to know He is unchanging,
Faith to listen for His voice,
Faith to rest in every promise,
Faith to trust, look up, rejoice.

Walk among men, imparting of your peace and love to those in need, and your influence for good shall be felt afar in the world. Then shall thy soul become as sweet and fragrant as the air of morning, and peace and love the wings that bear thee onward amid circling spheres of light.

GEORGE A. FULLER.

Don't think you can do anything worth doing in a fit of enthusiasm, but train yourselves carefully to any work that you are called on to do, and think nothing too small to do carefully, or to train carefully for, that is for the good of your fellow-creatures.—FLORENCE NIGHTINGALE.

## Testimonies of Healing.

Last Saturday I was taken with a severe cold and sore throat. I decided to pray for myself; not as usual, ask my wife to do it for me. I was suffering from another illness at the time, and had been treated three weeks. I decided that it was for me to work out my own salvation. I seemed to make slow progress, but feeling that any gain was proof that God was with me, I kept declaring the truth.

Monday a bundle of *Sentinels* came. I had subscribed in the middle of the month, to commence May first. Although coughing incessantly, I asked my wife if I should read to her, as she was very busy. She looked up in astonishment, but said yes. At first it seemed impossible, but I kept declaring the truth. After reading several articles, I came to one headed, "Fear and Disease," and before I had finished it, I realized that the trouble had been met, the coughing ceased entirely. I also soon found that my other sickness had been healed.

While at Topeka, Kan., last winter, the fireman of the hotel called me into the wash-room one morning, and said to me, "I overheard you talking last night to that cripple about Christian Science. Could it do anything for a man who was down very low in the drinking habit? I am working here for my board and whiskey; at one time, years ago, I had a fine position here in this city. I have spent money enough on drink to buy this hotel, have tried many times to stop, but have failed every time." "Are you ready," I asked, "to try Christian Science?" "Yes," he said, "anything. It seems to me there is a chance for me in it." I immediately went to my room, got some *Journals* and *Sentinels,* said to him, "If you are in earnest, I will help you to the best of my ability, so will my wife, who is with me." He said, "I will follow your directions implicitly." I said, "Here is some reading matter, read as much of it as your duties will allow." I went down to the boiler room several times, and found him diligently reading, once at midnight. The second morning, he came into the dining room, all cleaned up. The other guests, as well as we, noticed it, for he was not used to dining there. He was never seen clean and neat, but was withal an intelligent man. I could hardly wait to finish my breakfast, after he left the dining room. We met at the door; he reached out his hand and said, "I want to tell you first of all, I have given notice that I will not work here any longer for board and whiskey, for I am through with whiskey forever." I asked him how he knew. "I know," said he, "that I am cured forever. How am I ever to repay you?" "My dear friend," I replied, "I am more than repaid. The sight of you coming into that dining room was worth worlds to me." "Well," he said, "do not fear that I shall ever return to this habit. I have secured work at the Central National Bank, setting up a safe, at three dollars per day." I asked him to go to a Scientist if he found he needed any help. He promised, but never had need to go.

With one exception, when I have sent my testimony to the *Journal,* I have had a fear that I could not write on Science matters well enough to try it, but I am through with that fear forever, thanks to the dear ones who contribute so much to the uplifting of all who read their articles. I can and will more than ever before, distribute our reading matter, for have I not seen the evidence of its helpfulness? A commercial traveler for thirty-seven years, what opportunities I have to sow the seed, and how many present blessings I receive. Still I feel that I have very much to learn and overcome, but with God's help I will do it.

It is impossible for me to voice my thanks to our beloved Leader, and to the contributors to our periodicals, but I will do it by giving a cup of cold water in Christ's name, wherever opportunity offers.—S. PATRICK, Chicago, Ill.

Digitized by Google

We were members and earnest workers in a Protestant church of our community for thirty years. For twenty-eight years I did not know what it was to be well. I suffered at various times from a complication of diseases, including nervousness, and chronic constipation, besides being of a "worrisome" disposition.

When Christian Science was first presented to me three and a half years ago I said, "I am perfectly willing to give it a fair trial providing it does not interfere with my church." I was told it would not, and after taking two weeks' treatment, I was entirely healed and have not tasted medicine since.

The spiritual enlightenment I received while under the care of the practitioner was so beautiful, that three members of my family and I at once began to study our Leader's book, "Science and Health with Key to the Scriptures," in connection with the Bible.

To-day I rejoice to say that we are members of First Church of Christ, Scientist, at Cincinnati, and also of the Mother Church in Boston, and we, too, can say as Mrs. Eddy says in her Message of 1902 (p. 5), "I never left the church, either in heart or in doctrine; I but began where the church left off."

All manner of diseases both functional and organic have been healed in the family through Christian Science. My mother, who is in her eighty-fourth year and unable to read the English language, finds *Der Christian Science Herold* a great comfort, and one day while left alone reading the *Herold,* she was healed of rheumatism in her foot.

We thank God continually for the faint ray of light which has dawned upon our consciousness, enabling us to assert our true birthright as children of God. We also thank the dear one through whom my healing was accomplished.

Our unceasing gratitude goes out to our Leader through whose life and writings we are led into greater light and wisdom.—MRS. ELIZABETH K. RASTERT, Cincinnati, O.

---

In the spring of 1893 I first heard of Christian Science, and the efficacy of its healing power. I was at first loath to give up my belief in the potency of medicine, although I had lost faith in *materia medica* as a science. However, after much persuasion I reluctantly consented to give Christian Science a trial, and was surprised to note how rapidly my body gained strength when I put my faith entirely in God and let go of all material means of healing. After one month's treatment I was raised from death's door to health, hope, and joy. My friends marveled at the great change and asked many questions about this mysterious healing power, the explanation of which is beyond my ability.

I have heard people say, "I have read the Christian Science text-book, Science and Health, and received no benefit." I can understand that one might obtain the letter of Christian Science by perusing the Bible and Science and Health, for the letter without the Spirit killeth. The spiritual consciousness so vividly described by John in Revelation, 21 : 1, 9 can, however, be reached on this plane, and unless we plant ourselves somewhere near to that altitude of perception, "the sin, which one has made his bosom companion, comes back to him at last with accelerated force" (Science and Health, p. 569).

My first summer in Christian Science was passed on a farm, and away from the turmoil of the world. Its unfoldment was a sweet revelation. I progressed and learned how to destroy the sense of pain, though the full control of the body came later, after I passed through what the sense-man would call a crisis, which lasted two weeks and was spent in close confinement with the Bible and Science and Health. The following passage from our text-book, p. 283, "Mind is the source of all movement, and there is no inertia to retard or check its perpetual and harmonious action," was my message of deliverance, for on its realization I arose and in a short time returned to my business. As a commercial traveler I visited many cities, and the subtlety of error led me into the byways of various schools of false teaching, until finally the day of reckoning came and I was again a prisoner to mortal sense. I resorted to homeopathy, which gave me temporary relief, but a worse condition was yet to come; however, my later experience of sleepless nights and physical tortures taught me a great lesson. When my nervousness had reached a state where I could not bear the sight of any one, I again opened Science and Health, which had for ten years been a closed book to me. There was, of course, a great upheaval as the truth began to take fresh growth, but calmly and persistently I worked day and night, with faith that the Christ would again be found in me, and the light came before I expected.

I began to attend the services in a church near my residence, and the warmth of love shown me by its members has helped to plant me on the solid rock of Truth, from which nothing will ever again move me.

I have been redeemed through the teachings of Science and Health.—A. T., New York, N. Y.

---

He who was called the beloved disciple writes, "Beloved, let us love one another: for love is of God; and every one that loveth is born of God, and knoweth God. He that loveth not knoweth not God; for God is Love," and in "Miscellaneous Writings" Mrs. Eddy writes of Love, "Over what worlds on worlds it hath range and is sovereign! the underived, the incomparable, the infinite All of Good, the alone God, is Love" (p. 250).

To-day as mortals emerge from the material into the spiritual understanding of all things, through the teaching of Science and Health, we can truly testify that God is Love, and will and does do more for us than all the wisdom, wealth, and love of the world can do, no matter how earnest and persistent our efforts may have been to gain help from the material. Of this love which was taught and practised by Jesus and his chosen disciples, I to-day stand a living witness, for whereas I was once doomed to a life of total blindness by *materia medica,* now through the understanding that God is Love, my eyes are perfectly healed.

I was reared very carefully in the orthodox church by God-loving parents, and loved and worked in this church earnestly until I became too blind to attend longer; and in those dark days I would wonder and ponder where this God of Love was, that I should be doomed to a life worse than death to me. Then my earnest prayer each night was that I might die before the morning. Death had no terror for me, for I had always been taught that God was a loving Father and would take me straight home to himself. But oh the horror and fear that came to me when I found that I did not die, but lived on in this open grave. Only those who have lived in this frightful darkness can tell of the blankness and despair of a life shut out from the world. In the depths of darkness mental and physical, the still small voice of Truth which I was ever listening to led me to take Christian Science treatment, although I then had no faith in it; my minister for whom I had the highest regard having bitterly denounced it.

My father had been a wealthy banker and had spent about fifteen thousand dollars on me, and my friends argued, Could Christian Science cure me when all this had failed? They said no; but in the face of all this opposition I took Christian Science treatment, knowing it was absolutely my last resort. This was seven years ago this month (June). The Christian Science practitioner's charges were sixty dollars. I have never taken a treatment for my eyes since, and no one has stronger or better sight, and truly

Digitized by Google

I can testify to-day that God is Love, and this love will, in this day and age, heal every disease just as surely as Jesus and his followers did, for he said the very works I do ye shall do.

In the first chapter of Genesis, man is defined to be the image and likeness of this God which is Love, and this is reiterated in Science and Health. God is not a material or corporeal personality, therefore it is not the material or corporeal man that is God's image and likeness, but the beautiful, spiritual thought which reflects Love. This leads us to the statement of Jesus: "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind, and with all thy strength," and "Thou shalt love thy neighbor as thyself;" "on these two commandments hang all the law and the prophets;" "there is none other commandment greater than these."

Divine Love makes no concession to human opinion, but as the human mind turns to a careful study of this God who is Love, as taught by the Scriptures and Science and Health, it will find in this state of consciousness there can be no disease or sin; for God is light, and in Him is no darkness at all.

FANNY CARSTARPHEN BRADY, St. Louis, Mo.

---

For five long, weary years I was a victim of what the physicians termed nervous prostration, accompanied with dyspepsia, heart trouble, and other physical difficulties. During this time I was unable to sit up for more than two hours each day, and then only for a few minutes at a time. I could eat very little solid food, and for some months took nothing but a small quantity of liquid nourishment each day. As evidence of what a nervous wreck I had become, I would state that my nights were a sleepless agony, and the slightest jar, even the vibration caused by playing a musical instrument in the room, would cause me acute pain.

After being attended by many of the leading physicians within the radius of a dozen miles of my home, and after trying all sorts of medicine without benefit, I was finally led to Christian Science. Within a comparatively short time after beginning Science treatment I was made "every whit whole," and for nearly two years have been free from all the old troubles. I can now eat anything that I want and enjoy it. I do all my housework unaided, and have even painted and papered several rooms recently without feeling tired, because I realized that God is my strength. I am deeply grateful to our heavenly Father for revealing the truth to our beloved Leader, Mrs. Eddy, and am thankful also to the faithful practitioner who helped me out of darkness into light.

MRS. NELLIE A. OAKES, Sangerville, Me.

---

There is one special verse in the Bible which I early committed to memory: "Jesus said unto them, I am the bread of life: he that cometh to me shall never hunger; and he that believeth on me shall never thirst." The whisper of hope expressed in this verse often came to me in moments of extreme need with an intense yearning to know when, where, and how, this fully satisfying bread might be obtained.

For years, my life seemed summed up into one continual hungering to get well,—a hungering for something that physicians, medicine, the world, could not give.

That human cry for health was answered through a radical healing in Christian Science, a satisfying answer to years of seemingly ineffective prayer. That faint hope of the past is being fulfilled to me through Christian Science, in the gift of present satisfying food.

MRS. MARY MCGEORGE, Kansas City, Mo.

I am so grateful for the many benefits I have received through Christian Science that I feel I should express through the *Sentinel* some of my thankfulness.

In the fall of 1885 I was injured by a threshing machine. I was under the doctor's care at my home for some time, but grew worse. After that I came to Winnipeg, and was under medical treatment both in hospitals and privately for fifteen or sixteen years. I was in the hospital twelve times with what the doctors called two incurable diseases,—Bright's disease and stone in the bladder. I also had a double rupture for which I wore a truss for years, and had at times a dreadful cough which racked my whole body.

The doctors said they could do nothing for me, except inject morphine to still the fearful pain. I carried morphine pills in my pocket for years. I used to have such bad attacks that twice I was picked up on the street for dead, or the next thing to it, and taken to the hospital.

About eleven years ago I was ordered to the Home for Incurables, but refused to go and suffered on.

As nearly as I can remember it was five years ago in April that I was first treated by Christian Science. Since that time I have worked hard almost all the time. I am a laboring man and sixty-seven years of age. My diseases were all healed and my truss destroyed long ago. If at any time any ailments have appeared since, they have been quickly banished by Christian Science. I am very thankful that when all else failed, God helped me. I am glad to tell this for it may encourage some other hopeless, helpless sufferer, who has no other help, to go to the same source and there find health and peace.

ROBERT B. THOMPSON, Winnipeg, Man.

---

During July, 1902, I became very ill, and was told by the doctor that I was suffering from an internal growth which would probably result in cancer. I was also suffering from dyspepsia, hemorrhoids, and nervous prostration.

About this time I received from some friends copies of the *Christian Science Sentinel* and decided to ask for treatment from a gentleman practising Christian Science in Sydney, and although the growth disappeared, I, ignorant of the rules of Christian Science, continued to consult the doctor, until a lady friend who is a Christian Scientist called to see me and advised the giving up of drugs and doctors; which advice I followed, and from that date, about the beginning of September, I began to improve.

I am thankful to say, that I am now perfectly well, entirely rid of my many ailments. Although sixty-four years old, I feel quite strong and able to perform my household duties without fatigue. I also feel a sense of happiness and peace that I never had before.

I study Science and Health daily and words cannot express my gratitude to Mrs. Eddy who has revealed the truth to us, and to the practitioner through whose kind ministration I was healed.

MARY CONGDON, Forbes, N. S. W.

---

It is not fair to withhold any longer the testimony of the benefits I have received from Christian Science. I came to it with a bound, after seeing what it was doing for others, about ten months ago, and I could tell of many beautiful demonstrations through the wonderful power of God. I feel that I have been blessed and my cup is running over, so I will tell of a very recent trial which Truth overcame.

About six weeks ago I returned from St. Louis, where I went with relatives to see the dedication, and, in a hurry to finish cleaning house, started to hang lace curtains. I stood on a high stool and in stepping back missed my footing, and tumbled with all my weight on the top of a chair.

Digitized by Google

The chair went down with me, and for a moment I lost sense of everything. On recovering myself, I was very forcibly repeating over and over, "God is Love;" "There is no death;" "There are no accidents in God's kingdom." I treated about ten minutes and then felt all right and went on with my work. But at bedtime error screamed again, and we called my practitioner. The end of the spine was badly bruised, but after a week or ten days I recovered completely. I am trying to think good, which is thanking God constantly.—MRS. A. C. BARBER, Chicago, Ill.

---

It is now a little over five years since I first heard of Christian Science through a sister who lives at a distance but was visiting me a few days at the time. She had her Science and Health with her, and as soon as I began reading it I was thoroughly convinced it was the truth. Although I believed every word of it, I was not healed instantly, as I had hoped to be. I tried to grasp it all at once, but Science and Health (p. 485), says, "Emerge gently from matter into Spirit," and I have had the lesson of patience to learn.

I had suffered with nervousness for several years, and was afraid of everything, especially myself. I am now almost entirely healed of nervousness, and was healed of constipation. Shortly after I began reading Science and Health, my little girl was also healed of the same disease.

There are no Scientists around here. I have never had the privilege of attending a Sunday service, and only one week-day meeting about four years ago. How I long to attend services, for I love Science. I have taken the *Journal* and *Sentinel* for several years, and also study the *Quarterly*. I have four children and none of us ever taste medicine. I cannot begin to enumerate the many little blessings that have come to me through the study of Science and Health. If any discord comes up for the children, they always come to me to be treated and they have treated me more than once with good results.

MRS. LILLIE EDDELMAN, Hollenberg, Kan.

---

One word in regard to the alleged mysticism of Christian Science. All things may be said to be mystical which we do not understand. That a very large number of people do not comprehend the letter of Christian Science or imbibe its spirit is not to the discredit of this healing religion or those who do understand it, but the seeming misfortune of those who do not. A. WILLIS PAINE.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

A great many recent utterances of leading men have implied that the future welfare of the United States was so assured that nothing could seriously retard it. Our readers will easily recall utterances of prominent men and journals that sound much like the boast of Nebuchardnezzar: "Is not this great Babylon, that I have built for the house of the kingdom by the might of my power, and for the honor of my majesty?" In the prosperity that has come upon the country during the past four or five years, there has been an increasing tendency to overlook the part of God in it. We have attributed it to almost everything but to Him. Now in the midst of it, the withholding of the rain for a few weeks transforms every outlook. It makes us realize that there are other factors in the prosperity of the country than the energy of our people or the skill of our financiers, or the enactments of Congress. Whatever else may have been our sins, we realize that we have not glorified God, "in whose hand our breath is, and whose are all our ways.—*The Watchman.*

Rev. George A. Gordon, D.D., in an article in *The Christian Register* says: "Finally, there is the religious need, the profoundest need of all. The most significant thing in our life to-day is the cry among our best people for a profounder religious experience. We are weak and poor and miserable, of little worth to ourselves, and of less to the community because of our superficiality. That is more and more recognized among all our serious people. Stand by your individual thought. Stand by your individual feeling. Stand by your individual purpose, but at the same time open the depths of your moral being to the sovereign presence of God. All lasting unity finds its source there. The space that is below is a divided space. It is divided by streets, by houses, by fences, by rivers, and by seas. The space that is above is undivided, continuous, entire. The earthly mind is the fountain of our division, our strife, our prejudice, our isolation. The heavenly mind is the great mother of union and power."

President Angell, in his baccalaureate sermon at the University of Michigan, as reported in the *Detroit Free Press*, said: "In the prayerfulness of our Lord we find a most worthy example for the scholar. If there was a being on earth who, it would seem, could afford to dispense with prayer, whose unaided resources would suffice for any exigency, that being was Jesus Christ. But his life was pre-eminently a life of prayer. The windows of his soul were always open heavenward, and in answer to his prayer gales of inspiration from heaven were always filling his heart. The very source of his life and power was in his constant and prayerful communication with his Father. He taught his followers in all persuasive ways by word and by example that they should go to the same source for strength and light."

It is not strength of brain that saves a man, or orthodoxy of creed, or connection with a Church. All these have often proved to be but ropes of sand. They are not proof against the tides of temptation. There must be firm, heaven-implanted principle—for no one is safe in business, or in politics, or in social life, or anywhere, when conscience is unloosed from God. The parting of the cable may be unseen for a while, it may even be unsuspected; but it is a mere question of time how soon the backslider may strike the rocks. Jesus Christ never insures any one who unites with his Church, and yet has no "anchor of the soul, both sure and steadfast, and which entereth into that within the vail," and "binds fast to Christ himself."

THEODORE L. CUYLER, D.D.

Rev. S. A. Eliot, D.D., president of the Unitarian Association, at the recent Anniversaries said:—

"Our task is not so much to conceive new ideals as to achieve the ideals we have already discovered. Our peril lies in the fact that, having apprehended great ideals, we do not live up to them.

"Religious liberty is not a competition in which the prize is taken by the individual or the Church that can exhibit the greatest singularity. It does not consist in neglect of the counsels of common Christian experience. We are not, because we are free, obliged to indulge in whims and eccentricities, and to strain the bonds of brotherhood to the uttermost."

Dr. Maurice H. Harris of New York, in an address before the New York State Conference of Religion, remarked, that if the Conference ventured to formulate an interreligious creed it would run somewhat in this way: "Religiousness is the ultimate orthodoxy; wickedness is the ultimate heresy; materialistic life is virtually atheism; mammon is always a false god; hell and heaven are of our making and our time." Some other and more explanatory articles were mentioned, and the whole matter summed up in an eighth proposition, "Good life evolves the best faith and readjusts false views to the truth."

I. M. A.
In *The Universalist Leader.*

There is only one way by which a man can be made peaceful, and that is by his being made good. Nothing else contributes to the tranquillity of a human spirit except its conformity to the divine will. It is submission to the divine commandments and appointments, it is the casting off of self, with all its agitations and troubles, that secures our entering into rest. What a man needs for peace is that his relations with God should be set right, that his own nature should be drawn into one and harmonized with itself, and that his relations with men should also be rectified.

ALEXANDER MCLAREN, D.D.

The real and satisfying interpretations of life lie with those who are spiritually minded, and therefore in harmony with the divine will and order. One who had drifted far from the moorings of his early faith, but had returned after many years of pitching and tossing upon the sea of unbelief, said that our estimate of the worth of life depends upon our belief in God and the immortality of the soul. There must be vital association with spiritual things in order to give real value to life, to disclose its deeper meanings, and to bring one into possession of its richest treasures.

*The Christian Advocate.*

The only salvation is life. In the deepest sense of the word it is character, the character of God repeated in us. He only is saved who has within himself a pulsating, spiritual life. The life in us may be humble, but just as the acorn has in itself the promise of the oak, so our life has enwrapped in it the loftiest attainment. It is potential perfection. And God looks upon us, and in His grace accepts us, not solely as we are, but as through Christ we shall be.

RICHARD M. VAUGHAN.
In *The Standard.*

Opportunity is duty no matter when it meets us. The world needs Christians who are ready at any time to speak a word or do a deed by which the kingdom of God may be advanced. Such an one keeps his soul aglow and finds the deep truth in the words of our Lord, "It is more blessed to give than to receive."—*The Standard.*

There is one thing that makes life mighty in its veriest trifles, worthy in its smallest deeds, that delivers it from monotony, that delivers it from insignificance. All will be great, nothing will be overpowering, when, living in communion with Jesus Christ, we say as he says, "My meat is to do the will of Him that sent me."—MACLAREN.

It is not in understanding a set of doctrines; not in outward comprehension of the "scheme of salvation," that rest and peace are to be found, but in taking up, in all lowliness and meekness, the yoke of the Lord Jesus Christ.—F. W. ROBERTSON.

Theology, anyway, is no more than speculation; it always stumbles along in the wake of spiritual experience. Experience comes first, and theology afterward.

REV. R. J. CAMPBELL.
In *Homiletic Review.*

No man is the mere resultant of his past misdeeds, but each has in himself a fountain of incalculable spontaneity, and lies all open to the inundation of the moral forces of humanity and the benignant spirit of the world.—J. W. CHADWICK.

That is the theology best suited to the age which is put forth by living men of the age, drinking of the living Word for themselves by the power of the living Spirit.

JAMES MCCOSH, D.D.

Professor George Albert Coe, in an article written for the *Morning Star*, says: "Denominationalism, from being a doctrinal squabble, has become loving emulation in good works."

We are not to wait *to be* in preparing to be. We are not to wait *to do* in preparing to do, but to find in being and doing preparation for higher being and doing.—HENRY GILES.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18

Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00

Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00

Twelve or more to one address, each, prepaid . . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00

Twelve or more to one address, each, prepaid . . 5 75

Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.

Price (cloth), each, prepaid . . . . . 2 25

Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00

Twelve or more to one address, each, prepaid . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00

Twelve or more to one address, each, prepaid . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.

Single book, prepaid . . . . . $3 00

Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

## The Christian Science Journal.

Founded April, 1883,

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1865, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.

Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

**National.**

At 10.50 P.M., on July 4, this message was sent by the President from Oyster Bay:—

"To Governor Taft, Manila: I open the American Pacific cable with greetings to you and the people of the Philippines.

"THEODORE ROOSEVELT."

Governor Taft's reply follows:—

"MANILA, July 5.—To the President, Washington: The Filipino people and the American residents in the islands are glad to present their respectful greetings and congratulations to the President of the United States, conveyed over the cable with which American enterprise has girded the Pacific, thereby rendering greatly easier and more frequent communication between the two countries. It will certainly lead to a closer union and a better understanding of each other's aims and sympathies and of their common interest in the prosperity of the Philippines. It is not inappropriate to incorporate in this, the first message across the Pacific from the Philippines to America, an earnest plea for the reduction of the tariff on Filipino products in accordance with the broad and liberal spirit which the American people desire to manifest toward the Philippines and of which you have been an earnest exponent."

The landing of the Commercial Pacific Company's cable at Honolulu, Friday, July 3, completed the entire line of cable from San Francisco to the Philippine Islands, a distance of more than eight thousand miles. The route has four great ocean stretches of 2,270, 1,254, 2,593, and 1,490 miles, with an average depth of about three miles. On the first, between San Francisco and Hawaii, the mean depth is 2,500 fathoms, with a maximum of 3,073; on the second, between Hawaii and Midway Island, the mean depth is 2,000, the maximum 3,026; on the third, from Midway Island to Guam, the mean depth is 2,600, with a maximum of 4,960, and with sudden and great fluctuations; on the fourth, from Guam to Luzon, the average depth is 2,200, the maximum, 3,400 fathoms. In 2,900 fathoms, with the ship steaming at eight knots an hour, no less than twenty-five miles of cable are in suspension in the water. Two and a half hours are occupied in such case by any particular point in the cable from the time of leaving the ship to touching the bottom.

The series of trial races between the Reliance the new cup defender, Columbia, and Constitution, was finished at Newport last week. All three of these boats were built by the same designer, all three are the fastest in their class, and all three sailed within the record time. The Reliance not only broke a record of ten years' standing for a thirty-mile windward and leeward race in three separate races on three separate days, but she also lowered by several minutes the record time for the triangular course. There are no more races off Newport until the last week in July, when the Astor cup and Eastern Yacht Club races occur. The official trial to select the cup defender will begin July 30 and will be sailed every other day until August 8.

It is reported that the statement is authorized that the Russian government most positively and absolutely denies the report that it has offered any official explanation to the American Government, either through the Russian embassy at Washington or the American embassy at St. Petersburg, regarding the Kishineff incident, and declares that it has never been addressed by the American Government upon the subject. The Russian government will categorically refuse to receive from any Power, any petitions, representations or communications relative to its internal affairs.

It is understood at Peking that the United States, acting in concert with Japan, will make a formal demand for the opening of the Moukden and Tatungkou in Manchuria, as soon as Mr. Conger can arrange an interview with Prince Ching, head of the board of foreign affairs, and that when this point is settled the commercial treaty with the United States can be signed.

More than twenty thousand teachers are being entertained in Boston this week during the annual meeting of the National Educational Association. At Denver the annual gathering of the Christian Endeavorers has called together twenty-five thousand or more.

An investigation into the Dock Department of New York City is being made. Gross irregularities are alleged to have occurred.

**Foreign.**

Reports from Peking indicate that China is in financial straits. She still wishes to liquidate in silver her indemnity arising from the Boxer trouble. The United States and Great Britain have accepted such payment provisionally. The other Powers refuse to do so. They allege that no attempt at economic reform has been made at the Chinese Court, and that the amount of money squandered there would go a long way toward meeting the indemnity.

The international automobile race for the James Gordon Bennett cup was run in Ireland, July 2, and was won by Jenatzy of the German team, who covered the distance of 370¾ miles in 6 hours 36 minutes 9 seconds including stops imposed by the regulations. Only one minute divided De Knyff and Farman of the French team. There were no fatalities. The American team made a very poor showing.

When the American squadron reaches Portsmouth it will not lie at Spithead, which is the usual place for foreign warships, but will be brought into Portsmouth harbor itself. Never before has such an honor been paid to a squadron of a foreign Power, for it will place the American warships actually within the gates of the empire's chief arsenal.

Sweden has officially accepted the invitation to participate in the St. Louis Exposition, after having previously twice declined. Through the efforts of Minister Thomas it is now definitely decided that she will be represented.

The arbitration tribunal to settle questions at issue between Venezuela and a number of the Powers will meet at The Hague September 1.

**Industrial and Commercial.**

The *Iron and Machinery World* in its week's issue says: "The heavy steel rail buying for 1904 delivery, which about a week ago began on a large scale in the East, has become epidemic, and the Chicago market has been remarkably lively for the past few days. The track requirements for 1904 can now be fairly well estimated by most of the roads. The needs will be large, for an unprecedentedly heavy traffic, carried in heavier trains by heavier locomotives, has shortened the life of the twenty-five million tons of steel rails now in use, making replacements more extensive than usual, while second track and extensions will also call for a heavy tonnage. There seems little doubt that considerably more than three million tons of rails will be needed in 1904, and of that amount nearly five hundred thousand tons have been purchased in this present spurt. Almost every western system has opened negotiations and many have already purchased."

A railway across Canada from ocean to ocean, built and owned by the Dominion government, is announced by the Canadian government. The new road will begin at Moncton, N. B., with the present government road, the Intercolonial, from Cape Breton. It will then make a straight cut to Quebec, and will then cross northern Ontario to Winnipeg. From Winnipeg the Grand Trunk line will construct the road to Port Simpson, B. C., the government guaranteeing seventy-five per cent of cost. The rates and all other details will be under government control. The road will be a national highway from end to end. During the first five years all roads will have a free use of the tracks; after that they will pay five per cent of the gross earnings.

The Manila Electric Railroad and Lighting Corporation of Hartford, Conn., with an authorized capitalization of $6,000,000, has filed a certificate of incorporation with the Secretary of State. According to the terms of the charter, the purpose of the company is to acquire, construct, equip, own, lease, and operate in the city of Manila, Luzon, P. I., and elsewhere, street railroads, lighting, power, and ice plants, ferryboats and vessels. The company is authorized to conduct its operations in any of the possessions of the United States, and to have its offices outside of the State of Connecticut.

The new turbine steamer Queen, which is to run between Calais and Dover in connection with the London-Paris service, made its final trial trip on the 27th ult. and behaved to the complete satisfaction of the inventors and builders. The trip to Calais was made in an hour and ten minutes, the distance being twenty-five knots. The performance of this type of engine is being closely watched by marine interests.

Judge Kirkpatrick has announced at Newark, N. J., to the counsel representing the complaining bond holders of the United States Shipbuilding Company, that he found the corporation insolvent. He has accordingly appointed a receiver.

Charles M. Schwab has been relieved, at his own request, of his duties as president of the vast United States Steel Corporation and W. E. Corey, Jr., will become acting president.

**General.**

A party of El Paso citizens who have just returned from Casas Grande, in the heart of the Sierra Madre Mountains, report the discovery of a smouldering volcano, hitherto unknown except to a few of the natives. The volcano showed signs of a recent eruption.

Nearly half a million people visited the National Gallery of London in 1902 and 1903, 534 on the thirty Sunday afternoons on which it was open.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## The Annual Meeting.

THE limitations of our space interdicted more than a brief reference to the Annual Meeting in our last issue.

After the opening exercises, Rev. Irving C. Tomlinson, President-elect, was introduced and spoke as follows:—

Beloved Co-workers:—For this expression of confidence I am very grateful to our dear Leader and our faithful Board of Directors. Our blessed Master said, "The tree is known by his fruit," and our beloved friend and Mother has just told us that "the unprecedented progress of Christian Science is proverbial, and we cannot be too grateful nor too humble for this—inasmuch as our daily lives serve to enhance or to stay its glory."

It is our joy that the world is beginning to see with unprejudiced eye that the fruits of love are the traits of a living Christianity; and the press and the public are voicing their wonder over love lived by a multitude. We cannot do otherwise than be faithful to this great responsibility. Our comfort is our neighbor's new-born confidence in our cause and our Mother in Israel. Let us work, watch, and pray to be ever faithful to the loving message which on yesterday at Pleasant View she so tenderly gave us: Trust in Truth, and have no other trusts."

The Clerk, Mr. William B. Johnson, then presented the following report:—

Beloved Brethren and Sisters of The First Church of Christ, Scientist:—

What joy must fill the heart of our beloved Leader and Teacher to know that this vast audience has gathered to-day in earnest reverence of her life and teachings. To review for a moment the great changes that have taken place in the years between October 19, 1879, the date of the first meeting of the first Church, and this date in the year of our Lord 1903, is to look over a rapidly moving panorama of the spiritual progress of the world.

In 1879 the world knew little of Mrs. Eddy, her life, her work, and her book, Science and Health, and she stood alone in her inspired endeavor, yet with the high inspiration of her great discovery being daily demonstrated by healing, and other spiritual works, she labored in Christ's name and led her little flock into fields and pastures new. Were the pictures of that time and of to-day placed in juxtaposition they would by their own value impress themselves upon your thought, and the perspective of the years would show you the planning, the sowing, and the steady increase in the harvest.

The first fruit of the planting was the formation of a church and its first meeting was held in Charlestown in a private house, Sunday, October 19, 1879. At this meeting it was unanimously voted that Dr. and Mrs. Eddy merited the thanks of the society for their devoted labors in the cause of Truth. At the annual meeting December 1, 1879, it was voted to instruct the clerk to call Mrs. Eddy to the pastorate of the church, and at this meeting Mrs. Eddy accepted the call.

Sunday, January 4, 1880 the church celebrated its first communion, and the records state that it was a very inspiring season to all, and that two new members were added to the church.

With the steady and rapid growth of Christian Science there has been a marked change in the opinion which the world has entertained of Mrs. Eddy. In 1879, when her first church was formed, it was but a little church in the wilderness. However in those days of rough pioneer work, when she guided her flock safely through dark and dangerous passes, they were no less thankful and appreciative of her efforts than they are to-day when represented by this great congregation, for the records of the year 1881 show that the members of the Church of Christ, Scientist, tendered to their beloved pastor, Mrs. Eddy, the heartfelt thanks and gratitude that were shared by all who had attended the services, in appreciation of her earnest and arduous labors, and her successful efforts in imparting the instruction which heals the sick and reforms the sinner through metaphysical truth, or Christian Science.

From November, 1883, until April, 1884, Sunday services were held at the Hawthorne Rooms on Park Street. When Mrs. Eddy preached at these services she received ten dollars per Sunday, afterwards she received fifty per cent on the collection in the contribution box when she preached. As her duties allowed her little time to officiate, the pulpit was occasionally supplied by members of the church and by pastors of other denominations, among whom was Rev. A. P. Peabody, D.D., of Cambridge.

The records of 1885 show that there was a steadily increasing interest in Christian Science, and when Mrs. Eddy preached, the Hawthorne Rooms were inadequate to hold those who came to hear her. An item of interest in regard to this from the *Boston Traveler* reads as follows:—

"The Church of Christ, Scientist, had their meeting Easter Sunday at the Hawthorne Rooms, which were crowded one hour before the service commenced, and half an hour before the arrival of the pastor, Rev. Mary B. G. Eddy, the tide of men and women was turned from the door with the information, 'no more standing-room.'"

Owing to the numbers unable to gain admittance to the Rooms it was decided to procure a larger place for the services. Chickering Hall on Tremont Street, was secured, and the first service was held there October 25, 1885. On this occasion Mrs. Eddy preached and the hall was filled. Also at this date a Sunday School was formed.

The Sunday services were held in Chickering Hall until March, 1894, and during the last year it was often crowded to overflowing. As this hall was to be remodelled, the church was obliged to seek other quarters. A suitable and more commodious place was found in Copley Hall on Clarendon Street, in which services were held until the Mother Church was ready for occupancy, December 30, 1894.

During the time the congregation worshiped in this hall, there was a steady increase in the attendance.

December 30, 1894, is the date of the first Communion service in the Mother Church edifice, and at that date there had been admitted to membership, 3,881. The membership to-day is 27,796 of which number 3,696 united during the last year. The admissions of this June is the

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

largest in the history of the Mother Church, being 2,695 which is 201 more than the largest previous admission.

Reports from branch churches give a total membership of 31,909. The number of branch churches is 566, a gain of 55 during the last year, and the number of Societies which hold regular services is 203, which shows a gain of 19 Societies in the same time.

During the past three years there have been sent out to branch churches, to teachers, and to members of the Mother Church over five thousand printed requests which ask for the following information:—

"Whenever it comes to your notice that a member of the Mother Church has passed on, will you kindly notify the Clerk at your earliest opportunity."

The result of the information thus gathered shows that the death rate in the Mother Church is 4.48 per thousand against the death rate of 18.73 per thousand in the city of Boston for 1902.

The mortality in the membership of the Mother Church is lower than that of a year ago, as will be seen by the comparison 4.48 for this year and 4.64 for 1902.

This church has been singularly blessed in its guidance by the self-sacrificing and ever vigilant labors of our beloved Leader and Teacher, Mrs. Eddy. Undaunted by the obstacles that have been thrown in her path by antagonism and envy, she has worked with full confidence in Christ's teachings, and through prayer and her understanding of prayer has guided this church in its progress toward apprehension of the one Mind.

Mrs. Eddy stands to-day as the highest exemplar of trust in the efficacy of prayer and of moral stamina, and she is the sincerest follower of Jesus, daily fulfilling his command, "Love your enemies, bless them that curse you, do good to them that hate you, and pray for them that despitefully use you and persecute you." For thirty years our Leader has met the antagonism of the world, and in her righteousness has returned good for evil.

To protect this revelator of health, hope, morals, and life, is the duty of every member of this Church. His armor is the teaching of the Master, and his weapons are Love and Truth.

It is our duty to be constantly watchful against the wiles of evil, and to annul with love every effort to mar the reputation of our Pastor Emeritus or to lessen the influence for good of that noble life which has been devoted to the betterment of mankind.

The regular order of the day was then taken up and the balance of the time consumed in reading reports of progress from the churches. Of these reports 210 were received, but only a limited number could be read in the allotted time. Reports were received from the following churches:—

Akron, O.; Albany, N. Y.; Albert Lea, Minn.; Allegheny City, Pa.; Amsterdam, N. Y.; Asheville, N. C.; Atchison, Kan.; Atlanta, Ga. (1st and 2nd); Auburn, Me.

York, Neb.; Youngstown, O.

## The Wednesday Evening Meeting.

THE demonstration is naturally the closing and all conclusive fact of our progressive experience in Christian Science, and it was eminently fitting that the last gathering of the series should be a testimony meeting.

Surely no one could look upon that vast body of wholesome and happy people without being impressed with the significance of Christian Science as a religious movement and as a redemptive experience in individual consciousness. Here the character and value of the tree is revealed by its fruits, and the word of cheer and assurance is spoken which brings hope to drooping hearts and stimulates to that honest individual endeavor which is the forerunner of freedom. The daily papers gave very full reports, and we quote from the *Boston Herald* as follows:—

The Christian Science meetings of the last four days were brought to a close last evening with the regular Wednesday evening testimony and experience meeting of the Christian Science Church, which was held in Mechanics Hall to accommodate all who wished to attend. It is estimated that eight thousand Scientists were present. Mechanics Hall was packed. Every seat was taken and

Digitized by Google

hundreds stood. An overflow meeting was held in Exhibition Hall at which two thousand people were present.

The time for testifying was limited to three minutes for each person, and in the overflow meeting the limit was finally reduced to one minute. At times two and three persons were on their feet at the same time, endeavoring to make themselves heard, so anxious were they to relate their experiences.

At the close, when it became apparent that only a small part of those who wished to speak would have the opportunity, Prof. Hermann S. Hering, who presided at the big meeting, called upon all who had been healed by Christian Science to stand. In an instant the great audience was on its feet. Only a very few of the thousands present remained seated. At the overflow meeting Mr. Edward A. Kimball of Chicago, who presided, made a similar request, and fully two thirds arose.

Both meetings were opened with singing of selections from the Christian Science Hymnal. Passages from the Bible were read and followed by selections from Science and Health. A moment of silent prayer was followed by the repetition of the Lord's Prayer aloud. Another hymn was sung and then the meeting was opened for testimony.

Professor Hering on opening the Mechanics Hall meeting said,—

"This meeting is now open for testimonies and experiences in Christian Science healing,—the healing which has been made possible by the spiritual understanding and knowledge of God as discovered and given to us by the Rev. Mary Baker G. Eddy. Many of us would not be on earth to-day, and most of us would still be in the throes of misery were it not for this self-sacrificing, faithful, consecrated, Christian woman, who is living so close to God as to be able to receive His message. Now let us hear what her glorious discovery and her masterly leadership have done for us,—how they have brought the signs of Immanuel or 'God with us.' "

Mr. McKenzie of Cambridge, said,—

"I bring greetings from First Church of Christ, Scientist, in the university town. It early seemed to me incredible that God should ordain to destruction the greater portion of the human race. In due time I attended a university and studied the metaphysical systems of the ages, and found no answer. I worked in the city slums trying to reach and help people in the depths of lethargic despair and wickedness, and, broken in health, was sent by my doctors to the Rocky Mountains. There I came in contact with wickedness so unblushing and unbridled that I wondered where there was a God and what the theology and the teaching I had had could do to reform mankind.

"I then took a theological course in a seminary and still found no answer to the questions of my heart, and this ceaseless and sleepless agony of mind brought my health into such a state that I was for thirteen months helpless in a sanatorium, and there I found no real healing.

"There came a time when I stood face to face with the Discoverer and Founder of Christian Science, and there, for the first time in all my years, I saw that there was some one who had solved the problem of life, and who understood the teaching and the life of Jesus Christ, not theologically, but spiritually; and when I told her of the travail of my soul, and saw that she understood, it seemed as if life began again as a little child. I could not, were I to use all the resources of the language, tell what the love of this devoted, patient, tender-hearted, forgiving woman, appointed by God to help us, is to me, but I think always of the words of Jesus. In speaking of himself, remembering his toil and his struggles, he said: 'For their sakes I sanctify myself,' and the explanation of all her toil and her devotion is for our sakes, that we may be partakers of the salvation which she has understood."

C. I. Ohrenstein of Syracuse, N. Y., said,—

"A difficult case of Christian Science healing is one of a young man who suffered with hereditary heart disease, aggravated by a long-continued and excessive tobacco habit. This young man also suffered with Bright's disease, and when he began treatment he was emaciated to the last degree and hardly able to remain on his feet. He was puffed and swollen from his feet to the top of his head. In less than a week's treatment the tobacco habit left him entirely and his appetite for food came back to him. After three weeks' treatment he took up his own work and he is now a healed man."

Mrs. Anna W. Campbell told of her work in Manila. She said,—

"The work in Manila proves that Christian Science will heal all manner of disease. Last year, while Asiatic cholera was raging, a woman who knew only a little of Christian Science wakened in the night in great pain. Her husband sent for a physician, who named the disease cholera. She sent for a Christian Scientist who treated her two days, and in less than a week the woman was well. The next case was that of a child healed of violent diphtheria. Time fails to tell of the healing of all kinds of diseases induced by a belief of climate,—Oriental dysentery, insanity, skin eruption, etc."

At the overflow meeting, which was held in Exhibition Hall, it was estimated there were about two thousand persons present. Mr. Edward A. Kimball of Chicago presided. The exercises were opened by the singing of Hymn 161 from the Christian Science Hymnal, "Shepherd, show me how to go." Mr. Kimball then read the twenty-third Psalm, followed by a brief extract from Science and Health. After silent prayer followed the audible repetition of the Lord's Prayer and hymn.

Mr. Kimball then opened the meeting for testimony, telling his own experience.

"Seventeen years ago," he said, "I was fearfully sick. I made every effort to recover my health, but I know enough now about the cause and cure of disease to know that sixteen years ago, had it not been for Christian Science, I should have been dead; nothing other than Christian Science known to mankind would have healed me."

T. L. Roberts of Utica, N. Y., said that, although he had been cured physically, yet the spiritual religion which has come to him is his greatest cause for thankfulness. He also emphasized the great help which Christian Science has been to him in his duties as supervisor of schools.

The next speaker, a man from Poughkeepsie, stated that before hearing of Christian Science he spent six months trying to get well enough to attend to his work the remaining six months of the year. His condition was a result of extreme dissipation, which had also broken up his home and ruined his business. He was healed by reading some of the Christian Science literature.

Mr. Harry Beverly Day of New York stated that he had had almost everything in the way of disease and was also a drinking man and a slave to tobacco. He had numerous attacks of rheumatism, and at last the doctors pronounced that he had Bright's disease, from all of which he has been entirely cured through Christian Science, being out of bed in three treatments, and in three weeks healed so that he went away from home on a vacation. "But," added Mr. Day, with much emotion, "best of all, I found my God."

A man from Comstock, Neb., stated that last Christmas he hadn't five cents to buy some beans for his Christmas dinner, having lost his health, business, and all through dissipation and consequent ill health, whereas he is now sober, happy, his family is reunited, and he is on the road to prosperity in business.

Lady Victoria Murray of London spoke very briefly, referring to the work in Manchester, Eng. The growth of the cause there had been chiefly through the cases of

Digitized by Google

healing among the mill operatives, including a cure of blindness.

Mrs. Riley, wife of Dr. Frank Riley of London, Eng., gave an interesting account of the work of Christian Science among the poorest classes in the slums of London. The work here has been founded entirely upon the healing of sickness, drunkenness, and filth. The people are now learning to read and write that they may carry on their own work. Within a very few months the numbers have grown to such proportions that they are now worshiping in their own little chapel.

Mr. Kilgrove of San Francisco, having suffered all his life from constitutional sick headaches, went into a service one Sunday, and remarked afterward to the Reader that he would like to be treated for them. She told him if he would go home and realize the allness of God he could cure himself. Though knowing nothing of Christian Science, he followed her advice, and became so imbued with the thought that when he came out from his room he was entirely well, and has so remained since—eight years.

Mr. Rothchild of Hartford told of how he came to Christian Science through the healing of his wife. "About two years ago, upon my last visit to Concord, I lost the habit of smoking after thirty years of smoking. I want to pay my tribute of love to Mrs. Eddy."

Mrs. G. McKay of Toronto told of a tumor. The physicians pronounced it incurable, and that it would have to be removed by a knife. She came to the city to go to the hospital to have it removed. Some friends who knew of Christian Science told her to try Christian Science. In three weeks' time the tumor was entirely removed, and without any knife. This was five years ago. The woman is between sixty and seventy years of age. She is well, and has Science and Health, and is trying to help those without it.

Mr. George H. Kinter of Buffalo, N. Y., said that before coming into Christian Science he was in the railroad service, and glad to have learned how to do things on time when there was a demand for quick action. "For several years," said he, "I was troubled with a serious difficulty of the eyes, which baffled the skill of some of the best physicians in Philadelphia, including the doctor at the head of that department in the University of Pennsylvania. I was also afflicted with chronic indigestion and with as severe headaches as ever a man lived through, which troubles also failed to yield to the attendance of various eminent physicians through long years of painful suffering. I was entirely healed of all these difficulties by reading the Christian Science text-book in 1888, and have continued in rugged health ever since."

Toward the end of the evening Mr. Kimball rose and remarked: "We have not exactly been raised from the grave, but many of us stood for a long time looking into it, until Christian Science gently led us away. One man such as this I now see over in the corner, but it was so long ago I suppose he may have forgotten it, since he has not told us about it."

Judge Ewing was then introduced, being received with warm applause. He said,—

"What I want to say about healing is simply this: So far as it affects my own person, I say to you that every breath I have drawn for eighteen years I owe absolutely to Christian Science.

"I want to tell you a little incident: Among the presents which came to me last Christmas was a letter telling of the complete healing of a man who attended a lecture on Christian Science which I had delivered in a city in Massachusetts last fall. Before taking to drink several years ago, he was one of the most brilliant lawyers in your state, but, as the result of this terrible habit, he had lost his manhood, his law practice, and his self respect. At the conclusion of this lecture (which he entered in an intoxicated condition, with a bottle of liquor in his pocket), he found himself sober and remarked to the friend who took him there that it was the first time in years that he had drawn a sober breath. And to-day I had the great pleasure of meeting that man in this building. He is not only sober, but a reformed, restored, cultured gentleman."

Mr. Kimball then remarked, "I suggest that all of you who have been healed through Christian Science should rise." Fully two-thirds of the large audience promptly rose; and this overflow meeting then closed with singing.

## A Kindly Letter.

Boston, Thursday, July 2.

To the Editor of the *Sentinel*.

*Dear Friend and Brother:*—As there were so many speakers at the great testimony meeting last night in the Mechanics Hall, I did not find the opportunity of adding my little word to the many interesting and helpful testimonies which were given by Scientists from every quarter of this great Republic, and I therefore feel I should be much wanting in gratitude to our revered Leader, Mrs. Eddy, who has given to the world the true Science of Christianity as contained in "Science and Health with Key to the Scriptures," were I to omit to testify to the many and great benefits, both moral and physical, which have accrued not only to me individually but also to my family through the teaching of Christian Science. Although I might find the time yet I doubt whether you, Mr. Editor, could find sufficient space in your columns to enumerate them all.

I also wish, on behalf of my family as well as myself, to take this opportunity, on the eve of our departure for England, to thank all the Christian Scientists over here, especially the Scientists of Boston, for the many loving kindnesses and warm welcome they have extended to us all at this Communion. We rejoice with them in that we were all privileged to journey together to Concord when we were accorded the joy of seeing Mrs. Eddy at Pleasant View and listening to her loving words of welcome.

The grateful remembrance of that day will always linger in our hearts.

At the Wednesday evening meeting it was to me a great matter of rejoicing to see representatives for the first time from far-away Australia, especially as I was in that country when the work began and saw it grow. I feel that the annual gathering at headquarters of Christian Scientists from the various and far-off fields, at the Communion season, cannot fail to have a beneficial effect on our great Cause. I look upon it as the annual forging of a new link in that chain of brotherly love which, in encircling the world, brings all Christian Scientists into one great loving family.

Yours in Truth and Love.

DUNMORE.

IF Jesus had left nothing but the Parables, his name would have been imperishable in literature; if he had bequeathed to posterity nothing but the simplicity of his speech and the irresistible logic of his argument, he would have had a permanent place among the orators of the world; if he had given to the world nothing but the commandment, "Thou shalt love thy neighbor as thyself," enforced as it was by his own example, this one gift would have been sufficient to outweigh all the wealth of all the world; if he had left no record but the Sermon on the Mount, it alone would have made his natal day worthy of perpetual celebration—but all these added to the matchless majesty of a perfect life and the inspiring influence of an all-pervading love, are turning the eyes of an ever-increasing number to the path that he trod from the manger to the cross.

*The Commoner.*

## The Lectures.

### At La Grange, Ill.

A large audience of intelligent people listened attentively to Judge Septimus J. Hanna, C.S.D., in the Town Hall auditorium, Tuesday evening [May 19], as he explained the beliefs of that rapidly growing religious body, the Christian Scientists. Judge Hanna is a scholarly gentleman and his address made a deep impression.

The lecturer was introduced by Mr. Charles H. Knapp, First Reader of First Church of Christ, Scientist, La Grange, in part as follows:—

*Friends:*—Christian Science has become of very general interest, owing to the fact that it has been found practical and efficacious in the healing of sin, sickness, sorrow, fear, jealousy, envy, hate, lust, malice, and all the many kinds of discordant thoughts which go to make up the material man. If I were to state briefly what Christian Science is, I should say that it is the simple teachings of Jesus put into practice. Jesus said, "He that believeth on me, the works that I do shall he do also;" and, "The kingdom of God is within you." St. Paul wrote, "Be ye transformed by the renewing of your mind;" also "To be carnally minded is death; but to be spiritually minded is life and peace." Hundreds of thousands of men and women have been healed and brought out of great tribulation through this teaching. That they should feel a sense of love and gratitude to their beloved Leader, Mrs. Eddy, who, through her spiritual interpretation of the Scriptures and her long and arduous labor of unselfed love for the cause of Christian Science, has made this healing and regenerating possible, goes without saying.—*The Suburban News.*

### At Downer's Grove, Ill.

The first Christian Science lecture at Downer's Grove was given last Thursday evening, May 28, in the Auditorium by Edward A. Kimball, C.S.D., of Chicago. It was a large, representative, and attentive audience of the thinking and reading class that greeted Mr. Kimball and listened to his address. The lecture was well received and comments were most kind and liberal. A few were disappointed in that he did not tell them Christian Science was what they thought it was.

None were disappointed from a scholarly standpoint. One point in the lecture, the divinity of the Christ, was made clear to many; also the Saviour and that in Christian Science the Saviour was a complete salvation from all evil, error, sin, disease, and death.

Mr. L. W. Winchester, one of the leading lawyers of the village, introduced the speaker, and said in part:—

Some few days since two of the estimable gentlemen of our village waited upon me and tendered me the honor of presenting to you the gentleman whom we shall have the pleasure to hear to-night.

I was inclined to question the wisdom of their choice, because I am not a believer in Christian Science as I understand it—or possibly more nearly correctly, as I do not understand it.

But, notwithstanding this, I am individually liberal and broad-minded enough to believe that Christian Science is not all bad; and I presume that one thing tending to influence me toward this view is the fact that in my life I have known so many persons of lofty and sterling character, of such noble and beautiful attributes of heart and mind, who have sincerely espoused the cause of Christian Science.

A hearty round of applause greeted the lecturer at the close.—*Downer's Grove Reporter.*

### At Pittsburg, Penn.

Rev. Arthur R. Vosburgh, C.S.B., of Rochester, N. Y., delivered a lecture here, May 28, on "Christian Science is Scientific Christianity." The lecture was delivered at Carnegie Music Hall before an audience of some thirteen or fourteen hundred persons.

The lecturer was introduced by Mr. Silas Cobb, who said in part:—

*Ladies and Gentlemen:*—The speaker comes this evening to tell us that Christian Science is Scientific Christianity; to tell us of the true, the beautiful, and the good. He comes to tell us of God,—the God of Abraham, of Isaac, and of Jacob, the God of Jesus, the God of the Bible. He comes not to tell us what he can do, or what some other prominent person can do, but what we all can experience through Christian Science. He comes to tell you that you can be healed through divine Mind, God, of sin, disease, sorrow, aye of poverty, it may be; that those in pain, sorrow, or trouble of any kind, can be brought into new environments, so that life may bud and blossom anew as the rose in the desert. He comes to tell you of the old, old story of Jesus and his glory, through which you may know how to do the things that you would do, and how to avoid the things that you would not do; to tell you that the kingdom of God is within you, that there is one Physician only, and that you and I can learn how to avail ourselves of that Physician. He comes to tell us that when Jesus said, "He that believeth on me, the works that I do shall he do also; and greater works than these shall he do; because I go unto my Father," he meant this age, every age,—that he meant you and me, and that he meant God would not only heal our sins, but our sickness also, and would "wipe away all tears."

Christian Science is no longer a stranger within your gates. It is no longer unknown in the land. To it the people are no longer listening with incredulity as to the whisperings of fancy. The promises of the ages are now being fulfilled. The deaf hear, the dumb are being healed, the blind see, the lame walk. Gladness and joy have come to this age, and sorrow and mourning are fleeing away.

As Gamaliel of old said, "If this counsel or this work be of men, it will come to nought; but if it be of God, ye cannot overthrow it; lest haply ye be found even to fight against God." If we understood what Christian Science is, we would not oppose it, but we do not all seem to understand what it is. Many of our dear friends in the churches, out of which so many of us have come, do not seem to know that our God is their God, that our Christ is their Christ, that our Saviour is their Saviour, the Saviour that healeth all our diseases,—that our Bible is their Bible, although our concept of this God, this Christ, this Saviour, this Bible, is not quite the same. Hence these lecturers are appointed to explain somewhat Christian Science and correct false impressions concerning it. Whilst the speaker this evening cannot explain it all in one brief hour, yet he can tell you much.

I now have the great pleasure, ladies and gentlemen, of introducing to you the lecturer of the evening, the Rev. Arthur R. Vosburgh of Rochester, N. Y.—*Correspondence.*

---

Even more sad than love's hasty and thoughtless words are love's neglectful silences. Oh! the pity of it, that we should fail to speak the word of affection, appreciation, and praise to our friend, when he needs it sorely, and without it cannot know our joy and pride in him.—*The Wellspring.*

---

You must live to-day at your very best;
The work of the world is done by few;
God asks that a part be done by you.

*Anon.*

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients does not consult on disease, nor read letters referring to these sub jects.**

### The Most Telling Fact.

It is quite probable that the event of Communion week which appealed most strongly to those who are not Christian Scientists was the Wednesday evening meeting. Certainly nothing could have created a more profound impression than the almost unanimous response to the invitation to all who had been healed by Christian Science, to testify to the same by rising to their feet. That some eight thousand persons should thus publicly acknowledge their indebtedness to the healing power of Christian Science is of itself a tremendous fact and one worthy of most serious consideration. Yet it is but corroborative of the testimony of the many individuals who told of their rescue from the most serious physical conditions, even impending death.

Our Master said, "These signs shall follow them that believe," and the New Testament is so filled with the thought of his "mighty works" that we wonder why and how the world's concept of his mission became so narrowed as to lose sight of this practical side of his ministry. That these signs followed the preaching of Peter and the immediate disciples of Jesus is shown in the following passage from Acts: "And by the hands of the apostles were many signs and wonders wrought among the people; . . . insomuch that they brought forth the sick into the streets, and laid them on beds and couches, that at least the shadow of Peter passing by might overshadow some of them. There came also a multitude out of the cities round about unto Jerusalem, bringing sick folks, and them which were vexed with unclean spirits: and they were healed every one."

Now, as of old, the healing of the body is but a phase of the gospel of salvation, because man must be "every whit whole," and to be in this condition he must be endowed with all the Christian virtues; he must "render therefore unto Cæsar the things which be Cæsar's and unto God the things which be God's;" he must love his neighbor as himself.

Having been healed, we know whereof we speak, and can give competent testimony in that regard, but apart from this the world will form its judgment of our Cause and of our spirituality through observation of our conduct.

Our Leader, through whose teachings the unnumbered blessings of Christian Science have come to us, thus writes of herself, "To-day, though rejoicing in some progress, she finds herself still a willing disciple at the heavenly gate, waiting for the Mind of Christ" (Science and Health, Preface, ix.), and we know that this attitude of spiritual receptivity is the explanation of her own wonderful demonstrations of the healing and saving power of Truth.

M.

### A Wholesome Enthusiasm.

The Communion, the Annual Meeting, and the great gathering at the home of our Leader are over, and as an experience, has passed into the religious history of the world. That it was an event of the deepest human significance none can deny.

Every assemblage is representative, embodying certain elements of thought—the recognized forces seeking expression in society, and entering the channels of education, politics, or religion. In analysis we can see readily some of these elements, and from the predominance of certain qualities, we venture to predict the success or defeat of any movement.

A well-known educator has declared that the first, or pre-requisite, element of power is always enthusiasm: the final, growth. This may be said to be a self-evident proposition, and needs no comment for those who attended our meetings. If, however, a stranger were to ask the cause of the quiet enthusiasm displayed at these gatherings, the best answer would be found in the testimonies given so spontaneously and reverently at the Wednesday meeting, the proof offered that thousands of earnest, but erstwhile disappointed seekers after Truth, had at length found its sacred shrine, and were satisfied.

If we turn thought backward to the days of Jesus Christ, and take our impressions from the gospel narratives, we shall see that the multitudes who thronged around him, were in much the same mental conditions, and had the same needs as are experienced by mortals to-day. If we were to analyze those conditions we should find evidence of ignorance and superstition, pride and fear, the belief in sin, disease, and death; but we should not stop at this, we would rather go on and witness the great changes which took place when the healing Truth had been poured in, and the divine saving power experienced.

The precedent had been established for time and eternity, and though for long centuries it seemed to have passed into desuetude, to-day it is proclaimed as of old, and with signs following. As in the great Venetian drama, human love and pity aided by great wealth were powerless to save, until Portia, with courage born of desperate need, announced to the astonished court and the trembling victim, a long-forgotten law, which rescued him from impending doom, so to-day are many snatched from the brink of the grave by Christian Science when nothing known to human wisdom has power to save. In the world's extremity a woman's voice was heard declaring that God is the same to-day as in the olden time, and that the understanding of the spiritual law annuls the penalties inflicted by the human belief in evil.

Now what might be expected if ten thousand grateful Antonios were gathered together to look for a few brief moments upon the face of the woman who had braved the opinions of the whole world in order to bring to the despairing and helpless the knowledge of a law which provided for their complete deliverance?

The question contains its own answer, and it echoes around the globe.

In our great gathering the elements of old time superstition and fear were noticeably lacking. They were replaced by calm, steady enthusiasm springing from an ever-unfolding sense of God's nearness, goodness, and all-healing love. That this will move the world we do not doubt, and all that is truest and best therein will awaken, respond, and at length understand.

K.

### An Aftermath.

A rebuke for our narrowness of concept, our paucity of faith, and our meagerness of expectation of good, is often conveyed to us in the richness of Love's unreserved bestowals. Often we may have been prompted in our truth-seeking by motives which were not wholly free from curiosity or the desire of self-gratification, and yet we have found an enrichment of blessings which were felt to be merited only by those of the purest, most unselfish impulse.

Very frequently of late it has been said, "I simply can't tell you how much it has meant to me," and though to the humble heart such an experience of unforeseen good may

Digitized by Google

seem altogether out of keeping, it must be regarded as entirely natural when we remember with Faber that,—

the love of God is broader
Than the measure of man's mind,
And the heart of the Eternal
Is most wonderfully kind.

The highest and most helpful apprehension of the meaning of experience is usually an aftermath. It is in our meditations upon the divine beneficence toward us that we give the greater thanks "at the remembrance of His goodness." As we have returned to our homes and again taken up the duties pertaining to our place and opportunity, the larger, deeper, more important meanings of our annual gathering have come to us with a quickening appeal, and our strength will be renewed, our vision broadened, our love increased, and our good works multiplied thereby, in the days to come.

One of these after realizations surely is this, that giving is the explanation of growth. We can but have noted, these spring and summer days, how every seedling and swelling shoot has seemed to be planning some kindly benefaction. However obscure their place or simple their undertaking they all hasten to their privilege as though impelled by the thought of the sweetness and beauty and nourishment it is theirs to bring to our lives, and ere the winter days have come their free and unmeasured gifts will have filled all our garners. Thus have these little ministrants of the fields and wayside shown us how they grow, how we may secure the greater gains of love's unselfishness, and as we have come together the significance of their teachings has been newly realized.

In all those great gatherings and in every joining of hand to hand, how freely was love given and glorified. The rivulets of brotherly affection were gladly joined to make a great sea of spiritual fellowship upon whose bosom Truth's richest argosy is being borne to every land.

Can any one recall a loving word left unspoken in all those days, a generous purpose left unfulfilled, a kindly deed left undone? and who shall rightly estimate the gain of that universal giving?

We cannot have secured a richer return surely than this deepened consciousness, that in Christian Science there is but one impulse, and that is to give; but one law, and that is Love; and as this ennobling sense is borne to the altars and firesides of every part of the Field, shall anything hinder its bringing to each the same sweet unity and peace in which we have been dwelling and growing together? Love is impartial, it yields the same fragrant blossomings, the same golden harvests wherever it is welcomed and cherished. Love alone can remove the conditions and dispel the thought that would beget friction and disharmony. Love alone can restrain the "unruly member," curb the self-assertion, purify the purpose, eliminate the personality, and cast out the baneful desire for place and dominion which are ever seeking to dethrone the Christ-idea.

In the manifestation of love to friend, to neighbor, and to our self-named enemy, said Jesus, are we to evidence the genuineness of our discipleship, the constancy of our obedience; and as Christian Scientists there has been set before us such an example in the conduct of our Leader, and such an opportunity in the call of humanity, as can but render our inconsistency the more inexcusable, our unworthiness the more flagrant, if the practical Christianity which Jesus enjoined and exemplified does not become, in every place and event, our "queen of life, with the crown of Love upon her brow" (Science and Health, p. 451). Verily, "If a man say, I love God, and hateth his brother, he is a liar:" but "If we love one another God dwelleth in us, and His love is perfected in us."

Very recently have we been reminded by our Leader that defeat need not follow victory, that gain does not find normal culmination in relapse. It is ours now to demonstrate that the realization of Love's affluence which has come to us in this experience is not to be chronicled as an episode, but a constant, in the history of our Cause.

W.

## The Visit to our Leader.—Editorial Comments.

One onlooker was heard to say he never saw such a vast number of uniformly intelligent people of all classes together. One might think that one object of this unparalleled assemblage is to come together to be happy and contented.—*Boston Herald.*

If, as seems probable, a sincere regard for the rights of others is a part of the creed of the Christian Scientists, there was a splendid demonstration of it working yesterday in the way the crowd moved to Concord and back again with no one injured and no one disgruntled. The testimony of the railroad officials is to the effect that this regard was observed, and surely that is to be considered not only as expert but as unprejudiced attestation. No matter what creed the rest of us hold most dear, it probably would permit us to add this clause about regarding the rights of others, and if we all took advantage of the permission the time might come when every crowd bound everywhere would be as well managed from the inside as was this memorable one of yesterday.

*Boston Transcript.*

The scene was one long to be remembered. There is nothing more affecting than humanity in the mass; and as one looked upon the dense throng of men and women, bright, eager, animated, and attractive in appearance, well gowned and groomed, drawn from all sections of the earth, representing all callings and professions, and all animated by the one spiritual purpose, the impression was one not lightly to be effaced. Above them stood her to whom they looked up, not only that they might see, but that from her they might receive inspiration,—and their wish was fulfilled, for the gracious lady gave them a cordial welcome and hearty greeting and left with them words of sweetness and humility to be treasured in memory, to be pondered over, and to be interpreted into righteousness of conduct through all their days.—*Concord* (N. H.) *Monitor.*

Concord was making history Monday; but without knowing it. The gathering here, at the home of a living Leader of a living faith, of well-nigh twelve thousand people, each animated by an identical religious impulse, was the most remarkable religious demonstration known in ecclesiastical annals in this country. To have witnessed the marvelous gathering at Pleasant View Monday afternoon was to have seen one of the great events in the progress of religious belief; to have been one of the number, even though imperfectly comprehending its meaning, was to have shared in a demonstration which can be declared no less than epochal in its significance.—*Concord* (N. H.) *Monitor.*

## Corner-Stone Laying at Concord, N. H.

FIRST CHURCH OF CHRIST, SCIENTIST, of Concord, N. H., announces the laying of the corner-stone of the new church, the gift of our beloved Leader, the Rev. Mary Baker G. Eddy, for Thursday, July 16, at two o'clock. A cordial invitation is extended to all.

The attention of our readers is called to the "Announcements" on page 722 of this issue. This column contains new matter from time to time, and should be examined each week.

Digitized by Google

## For the Children.

### Tell it Again.

G. S.

Tell them over again to me,
Wonderful words of Love;
Let me more of their beauty see,
Wonderful words of Love.

ONE day while I was waiting for a friend in a hotel parlor I noticed a little girl curled up in one corner of the room. I went over and spoke to her. She sat up, keeping her arm over her face, and peeped out at me with eyes that seemed very red and inflamed. I sat down beside her and put my arm around her and began to talk to her. My words were in the form of a story and suited to the need of the moment. I had no thought of making a demonstration but only of comforting the dear little heart because she was suffering. When I stopped, she nestled up to me and said, "Tell it again." I told the story again, and this time I did realize that because it was a true story it must help her, and I think the child began to realize that she was the *true* little girl I spoke of, whom God sees and loves, who never had known or thought of the least little pain in all her life; for God gave the *true* little girl every thought she had.

Just then the nurse came in and the child slid down from the sofa and ran out of the room and hid. The nurse looked for her for some time, but finally gave up the search and went away. When she had gone the little girl came back, her arm still over her eyes, and crept into my lap. "Now tell it to me again," she said, with a comfortable sigh.

Not a doubt came to her sweet little thought when I told her God saw her eyes perfectly well, because He could only see His love for her and her love for Him shining in her bright little eyes.

A third time she said, "Tell it again." Each time this wonderful story was a little longer, and the one who told it was more clearly realizing how true it was, every word.

The next morning when this dear little girl walked into the dining room her face was no longer shadowed by her arm, and her eyes were shining and well.

### A Vacation Song.

I HAVE shut my books and hidden my slate
And tossed my satchel across the gate.
My school is out for a season of rest,
And now for the schoolroom I love the best!

My schoolroom lies on the meadow wide,
Where under the clover the sunbeams hide,
Where the long vines cling to the mossy bars,
And the daisies twinkle like fallen stars;

Where clusters of buttercups gild the scene
Like showers of gold-dust thrown over the green,
And the wind's flying footsteps are traced, as they pass,
By the dance of the sorrel and dip of the grass.

My lessons are written in clouds and trees,
And no one whispers, except the breeze
That sometimes blows, from a secret place,
A stray, sweet blossom against my face.

My school-bell rings in the rippling stream,
That hides itself, like a schoolboy's dream,
Under the shadow and out of sight,
But laughing still for its own delight.

My schoolmates there are the birds and bees,
And the saucy squirrel, more dull than these,
For he only learns, in all the weeks,
How many chestnuts will fill his cheeks.

My teacher is patient, and never yet
A lesson of hers did I once forget,
For wonderful lore do her lips impart,
And all her lessons are learned by heart.

Oh, come! oh, come! or we shall be late,
And autumn will fasten the golden gate.
Of all the schoolrooms in east or west,
The school of Nature I love the best.

KATHERINE LEE BATES.

## Selected Articles.

### The Establishment of Truth.

CHRISTIAN SCIENTISTS are not worried because the world at large has not as yet accepted their faith, since they know that it is only a question of time when all shall know the truth "from the least to the greatest;" that Isaiah's prophecy will be fulfilled, "And they shall not tell every man his neighbor, saying, Know the Lord, for all shall know me, from the least to the greatest."

The apostle in this instance may have referred especially to those who had passed away from this life, but it applies with equal force to those who are asleep in error and not awake to a sufficient understanding of Truth. Paul foresaw the final and complete triumph of Truth and knew that, though some might at present be asleep, they would not always remain in that condition, but in some way would eventually be awakened. Hence, he said, in substance, to his brethren, I would have you alive to a hope in the final establishment of Truth. You are not in the condition of those who have no hope, therefore you have no occasion for sorrow on this behalf.

Spiritual lessons are acceptable to those only who, having had a sufficient experience with materiality, are ready to let go their grasp on matter and cling to Spirit. Christian Science being purely metaphysical—and spiritually so—must begin its mission where it is received and must spread from that point as the world becomes prepared for it. Every Christian Scientist finds enough work to keep him busy, and this is sufficient for the present. It is the belief of Christian Scientists that mankind are to be saved by spiritual growth and regeneration, not by merely believing certain doctrines. Hence Paul's declaration in respect to putting off the old man with his deeds, and putting on the new man, which is renewed in knowledge after the image of Him that created him. Mortals must be led from one stage to another as they are willing to progress and understand how. The best persons on earth must advance all the distance from their present condition to perfection in order to reach what has been called heaven. Barbarians cannot make the journey from their present condition to heaven in a single bound. They must first advance to civilization, thence to spiritual culture, and still on to a perfect life.

Truly the gospel must be preached to every creature, but each requires such lessons as he is able to bear. If Jesus had many things that his devoted disciples could not bear, his gospel must contain much that those still more benighted are not yet ready to hear.

The leaven of Truth is planted in the universal consciousness of mankind, and it will eventually leaven the whole lump.

ALFRED FARLOW.

## A Brief Statement.

Mr. Editor.

Let it be granted that "strength of will and determination" produce seeming results, affect "imaginary ills," and create certain tendencies. The question then arises whether such results are beneficial or lasting. Christian Science makes a sharp distinction between the general human consciousness, so aptly denominated "mortal mind" by Mrs. Eddy, and the Immortal Mind, Spirit, or Soul, synonymous with God. The theory and practice of Christian Science have been concisely summed up in the following words:—

"This is Christian Science: that mortal mind makes sick, and Immortal Mind makes well; that mortal mind makes sinners, while Immortal Mind makes saints" (Miscellaneous Writings, p. 219).

Nor is the term "imagination" a correct one to apply to the therapeutic agent employed in Christian Science. Spiritual understanding is requisite in order to heal and reform according to the methods of this Science. Even "faith," as the term is commonly used, needs to be supplemented by this understanding of the Omnipotence of Good over evil in all its forms.

Mere blind belief is not sufficient to "know God," but we are assured in the Scriptures that "This is life eternal, that they might know Thee the only true God, and Jesus Christ whom Thou hast sent."

Christian Scientists are striving for the Christ Mind, and this distinction is as absolute and necessary as the distinction between Good and evil. Great possibilities of peace and happiness await those who follow the guidance and control of the One Will and the One Mind.

W. D. McCRACKAN.

## Honesty in Religion.

To consecrate is to set apart as sacred. Jesus said, "Where your treasure is, there will your heart be also." The Apostle Paul said, "Present your bodies a living sacrifice."

To consecrate our lives to God, includes our means and our business, whatever our vocation may be. It is conducting business on the basis of the Golden Rule, a strictly honest and just standard, not on false measures and misrepresentations. A practical consecration of our lives to God in the business world is illustrated in the method adopted by a business man who became a Christian Scientist and instructed his clerks to sell goods just as they are, "cotton for cotton, and wool for wool, else let them perish on the shelves." Since adopting this basic principle in business his sales have increased.

Another business man whose wife was healed in Christian Science of a very serious illness informed me that he began to investigate the subject, and commenced to conduct his business on its basis, pursuing a higher course of honesty, and as a result his business has increased and never was as satisfactory as at present.

While there is a longing to see all classes of people come to Christian Science, we are always pleased to hear of the business man becoming interested in this subject and conducting his business on its basis, because it restores confidence. Christian Science destroys all desire to misrepresent and deceive through the medium of advertisement.

The natural effect of Christian Science on the lives of individuals in every vocation,—the housewife, the farmer, the clerk, and the mechanic,—is better enabling them to live a life that will honor God. L. B. C.

## Testimonies of Healing.

I wish to express my gratitude for the numberless benefits which I have received through the works of Mrs. Mary Baker G. Eddy.

I have lived in this country of freedom for many years, have suffered from what we call hardship and the bitter side of life. Seven years ago I found the wellspring which quenched my thirst. Christian Science is the only enduring, satisfying religious system that I know.

May some one find new courage through these few words, which are sent with deepest conviction after many years of experience.—MRS. E. J. E., Aberdeen, Wis.

About three years ago, my wife's attention was called to Christian Science by a dear friend. She became so interested in it that she induced me to borrow for her from the city library here, Mrs. Eddy's book, Science and Health. Sometimes she would read aloud to me, but I could scarcely listen through one page at a time, for the new interpretations aroused a great commotion in my thought, yet I could not take my mind off this Science. I felt that it would affect all humanity and show us the only star of hope,—the conviction that man must become regenerate, in order to be constantly in good health; that health does not depend upon eating, drinking, and medicine, but that man must awake to a higher consciousness, to a purer love, to a better mode of thinking and acting; he must learn not to take away from his neighbor but to give. Then the question presented itself to me: "What will not man do for his health? Is he not willing to make the greatest sacrifice for it?" The answer came, "You cannot buy health with money, you have it with you; every one has it, poor and rich." This book says: Man, be better, purify thy thoughts.

What a power for the future! the social problem will be solved through this revelation, for it is the truth; thousands have testified to it. Thus I gradually grew calmer.

Through the understanding that my wife had gained, she was healed of a regularly appearing sick-headache and was very happy in this new atmosphere of thought.

Then our trial came. For years, she had suffered from abdominal weakness, had been treated by many physicians, who would sometimes relieve her suffering and now and then the trouble seemed to be entirely removed. We are very grateful to them for their kind endeavor. But the trouble soon returned and we learned that we must rely upon a higher power, else the whole beautiful structure at which we had worked faithfully, would crumble into dust. My wife fought bravely, declared there was no pain, performed hard work, and all the while used great energy and will-power, for she believed that to be the way to overcome evil, so limited was her understanding of Christian Science. Of course, her endeavors were in vain; she grew worse, and became very ill. We called for a practitioner; my wife felt the help of divine power, but at intervals suffered much, and in a few days lost so much flesh that we became alarmed.

One night she suffered agony; the slightest touch hurt her, it seemed as if her whole body were one sore. She asked me to read the ninety-first Psalm to her. This brought a few moments' peace, after that it seemed worse than before. A few minutes passed in anxiety; I fought with myself and was almost in despair, but all this time I prayed for light; I repeated the ninety-first Psalm aloud, then I declared, I realized the Love of God, and the light dawned in that moment of greatest distress. Suddenly my wife felt very much better, we felt a great calm, a peace; she fell asleep and the next morning she awoke with the consciousness of gratitude to God. Although she still

Digitized by Google

suffered some slight pain, it soon disappeared, and in a few days she got up and walked about in our home; we then stopped the treatments. Since then she has had a few little battles to fight, but for the last two years she has been perfectly free from any pain.

We have had many small demonstrations in overcoming evil, physical and moral. I am constantly praying for a higher, better understanding of Truth. The result of this life of prayer brings us happy hours of a higher, a holier peace, which is not dependent upon matter, but destroys it and proves its nothingness.

The testimonies to the power of Truth which are given here in our Wednesday meetings and in discourses with our friends have often given us new courage and energy. The banner of victory, which is unfurled and held aloft before us, calls: "Follow me, God is true."

H. F., Zurich, Switzerland.

---

I wish to express my gratitude for the blessings of Christian Science. Nine months ago I first saw Science and Health, and I date my health and happiness from that day. After reading this text-book of Christian Science for two weeks I was enabled to take off my glasses, which I had worn for six years, and which the oculist had told me I could never go without. The apprehension of the truth expressed in Science and Health: God is all-seeing, God is my sight, healed my eyes. When this truth dawned upon me I took my glasses off, and afterward sold them in a jewelry store for old gold, and with the proceeds I bought a copy of the book.

Ever since I was a child I have been afflicted with very round shoulders. When about twelve years old my father, who was a physician, put shoulder-braces on me, but they did no good. After I grew to womanhood, I studied physical culture, with the Delsarte movements, but nothing seemed to accomplish the desired end. I was still taking these exercises when I began reading Science and Health, and after my eyes were healed, I left off these exercises for I thought that divine Love, which had healed my eyes, would straighten my shoulders, too. I had read Science and Health four months, when my shoulders were made right.

I am very, very grateful for these physical blessings, but there is a greater blessing still that came with the physical healing, the wonderful spiritual uplifting. The greater blessing to me lies in the realization of the words: "Lo, I am with you alway!" Or, as our Christian Science text-book puts it: "Not only in all time, but in *all ways* and conditions" (Science and Health, p. 317).

I wish to express my heartfelt thanks to our beloved Leader, also to my teacher and to all the other dear ones who have helped me in word or deed or thought into "the way everlasting."—GUSSIE HOWARD, Chicago, Ill.

---

It was about Easter time last year that through the kindness of a friend I learned of Christian Science. She lent me her Science and Health to read, and since then I have been gradually "coming to Life." Not straight off, without a relapse, but with much the same movement that brings a cork ashore bit by bit on the incoming tide, and it may be of use to other beginners to know the causes of one or two of these despairing relapses.

For some time after having treatment from a Scientist friend and being healed, I was very happy and well. Then, unaccountably, I began again to get almost crippled with rheumatic gout. In despair I wrote again for treatment, but felt utterly hopeless of ever being safe.

She began absent treatment, but this time I got no relief, and told her so. Then she wrote and most lovingly pointed out the reason of my non-recovery. Truth had shown her —First, that I was letting resentment for some injury abide in my thoughts and so was shutting out Love. Secondly, that I was giving my affections to some human person rather than to God. He was not first in my thought; therefore I was shutting out omnipotence.

This letter was rather a shock, because both these things were become so much a part of me that I did not realize their existence, and even had I done so, I should, in my own unenlightened thought, have felt justified, for the resentment was over some unjust treatment from an acquaintance, and the affection was given to a friend who deserved it in every way. I knew the error had been uncovered by Truth indeed, for both things were known only to myself.

I wrote and told her she was right, and that I would guard thought and struggle with those two things, and I tried, but until I tried, I had not realized how much those two faults had become, as it were, part of my every breath. But help came each time as I struggled, and with the surrender of those things to God came physical healing and a great uplifting and enlightening of spirit.

This taught me how hidden are the errors that drag us down from the freedom of Truth. Sometimes it may be some half-suspected thing one does not want to see, to which one is clinging with an unconfessed hope that perhaps such a little thing wont matter. Sometimes, one really doesn't know what the hindrance is. Then one must turn his mentality inside out, shake out all the crinkles, as one shakes a moth-eaten garment in the sunshine, and the light will kill the moth and disclose the bad places.

GERTRUDE M. BRADLEY, Brockton, Eng.

---

I have been in Christian Science since August, 1902. The first of May, 1902, to please my wife I changed my doctor. He immediately pronounced my trouble locomotor-ataxia. I would not believe this, so I took him over to see a doctor that I had been with ever since I was seventeen years of age, and he said that the other doctor was wrong.

I was extremely nervous and I made up my mind that I would have to go away for a little rest. I left Chicago the last part of June and went to Hyannisport, Mass. When I got there I was a physical wreck. It was very hard for me to walk in the daytime and I had to have somebody's arm and always had to carry a lantern at night. I was obliged to pull myself upstairs by the banisters and had to support myself when I went down. I kept taking my medicine, but I found that it did me no good.

When we left Chicago a friend gave my wife Mrs. Eddy's book, Science and Health, and I finally threw my medicine away, knowing that it did not help me. One day I was very sick and a Christian Scientist with whom we were staying came to see me. She talked to me for an hour and a half, and after that I could eat anything I wanted. Both of my feet and my legs to my knees would go to sleep, and it was very hard for me to wake them up.

After this I met an old neighbor who had been a complete wreck for two years. She had gone south and west for her health but received no benefit. Finally she went to a sanitarium where her nurse was a Christian Scientist. She was recommended to a practitioner, and in three weeks she was a well woman. This old friend introduced me to a practitioner who gave me treatment until I returned home. I neglected to say that my left arm was in such a condition that I lost control of it for a week. When I arrived at Chicago I went to a practitioner and worked with him in Christian Science for three months, and finally I was able to walk straight. I walked from nine o'clock in the morning until half past five in the afternoon every day except Sunday.

I attended First Church of Christ, Scientist, in Chicago, every Sunday morning and every Wednesday night, and

Digitized by Google

I got so that I could go up and down stairs holding a glass of water without spilling it. In many other trying experiences I have proved the practical balm of Christian Science.

In March I had an attack of appendicitis which was cured in three weeks. Later I fell from a car and injured my knee. I knew that my knee was bleeding, but I went about my business until I could get to my office and put a handkerchief around it. Now I am a perfectly well man. I had worn glasses since I was seventeen, but I don't carry them with me any more. I wish to thank God and express my gratitude to Mrs. Eddy, and to my practitioner for what they have done for me. While I was not a man that ever drank very much, I have not used any liquor in seven months. I used to smoke a great deal, but I have not smoked for three months.—C. M. McC., Chicago, Ill.

---

Words cannot express what a blessing Christian Science has been to me, in leading me to the understanding that Mind is All-in-all. I had been wearing a truss for over eight years for double rupture. On reading Science and Health I was greatly exercised and wondered whether or not I could leave the truss off. I had some heavy lifting to do in my work and the thought came to me to leave the truss until the following day, which would be Sunday; but I knew that would not be faith in divine Love. There and then I decided I would trust and not be afraid. So in the morning I took the truss and put it out of sight from my wife, but she happened to catch sight of it, and coming out to me, in a frightened way asked me why I was going without the truss; and I replied, Is not divine Love almighty, and is He not able to keep from all evil, as He hath promised?

We finally agreed to demonstrate through the day whenever doubt would dare to come. I was caught once in an awkward position and a heavy weight was left on me, but I was assured in divine Love and all was well. From that day to this, I have not put the truss on, and never shall; I have almost forgotten I ever wore such a thing never having any pain.—M. J. CAVANAGH, Dublin, Ireland.

---

It is now four and a half years since I learned what a wonderful change Christian Science brings to all who become interested in it, and what a blessed release it brings to all sufferers, whether in mind or body.

My experience has been like that of others who have been freed from the bondage of sin and consequent sickness, but I have not yet voiced this through the *Sentinel*, and do so now. I have nothing remarkable to relate, but I know that speaking a word for Christ cannot come amiss.

Learning of the Christ-love, has so transformed me, that I no longer spend half my time on the lounge recovering from sick headache, from car sickness, which almost invariably followed a journey, no matter how short, enduring backache, also intense exhaustion, from which I was never free, struggling with morbidity which made each successive day a burden, and sensitiveness so that all men seemed against me, and I knew not which way to turn.

Having been through two operations, I decided to drop doctors and their medicines. I knew there must be a God, and that He must be good, and felt there must be some way out of such despair. So I started on my search for this new remedy, which I have found a beautiful religion.

By it I have been made whole, and all my former troubles have been proved illusions. Previous to this, several physicians had told me I need never expect to be strong; partial invalidism was the brightest prospect set before me. But all this was but a seeming, for I can now endure often more than those about me who claim to be stronger. Indeed, I find I can accomplish all things through Christ who is my strength and shield.

I am absolutely free from all troubles, so that joy is ever-present, and the wonderful peace that comes from a knowledge and understanding of the Christ-love is beyond expression.

It cleanses and purifies, it ennobles, it frees from hatred and envy and all uncharitableness, from sickness and suffering. It makes all things new, so that life is one glad song of praise to my Creator, whom to know is to love.

All tears are of the past, and sorrow and sighing are unknown.

My earnest thanks are extended first to Mrs. Eddy, our strong, unwavering Leader, through whom I have learned that life and not death is true, that health and not sickness is real; also to my teacher, whose clear reflection of the grace of God has helped me to the freedom I now enjoy. To these, and to all friends who have given me encouragement I feel deeply grateful.

MRS. HARRIETTE F. DRURY, Portsmouth, N. H.

---

In a recent *Sentinel* this quotation was given, "The past is something that was, but is not." The error in the past never did exist and does not now, and our belief of it must be destroyed. It is a joy to know that the steps, though slow, are truly steps heavenward.

In the summer of 1888, a copy of Science and Health was sent me by my mother, who was healed by one of Mrs. Eddy's students. The most appalling of my mother's many troubles was that of hereditary cancer; the symptoms were apparent but as yet the growth was but slightly manifested. Every vestige was destroyed by the treatment, and change in thought expressed in letters was wonderful to me. It was the first I had ever heard of Christian Science or the book.

As soon as possible I read Science and Health, studied it, and accepted it fully without debating a single proposition. It seemed perfectly clear, practical, and beautiful, just what I wanted, but I could not prove a single statement.

In a few weeks my mother returned and we were amazed to see her transformed in appearance. A friend said to her, "Why, you look twenty years younger than when you went east."

Since my mother had received many valuable suggestions how to work, she was prepared to assist me, and we were very happy working and reading together.

We did not talk much to our friends at first, but they noticed the change in thought and expression, and were anxious to learn what this new Science could be. Soon several became interested and we found others in neighboring towns who had been healed and were studying. The work thus has grown into a church organization, with many faithful workers.

The next step in our growth was class instruction from an earnest, faithful student; after the second or third lesson we began to prove our faith by demonstration, and at the conclusion of the lessons were ready to help others. We did not at that time see the way to devote our time exclusively to this new field of work, but took it with us into our daily life. At the time I was teaching, and the help from Christian Science in that work was invaluable. The dull pupils and the incorrigible gradually disappeared and my work seemed no longer burdensome or tedious. When we know there is but one Teacher it lifts the burden from the struggling ones who look to self.

Many cases of healing resulted from these early months of work. We rejoiced constantly in this new Life, and our hearts turned in gratitude to Mrs. Eddy for all.

The following year a position as teacher was secured in the schools at Omaha. Then came a struggle with pride, love of popularity, and fear of losing position if known as a Christian Scientist. During this time, many physical ailments were manifested and I seemed unable to meet them.

Digitized by Google

Finally, I understood the trouble, took up my cross, left the church I had attended, and devoted myself to the work.

The revised edition of Science and Health has done so much for me that I cannot close without expressing my love and gratitude to Mrs. Eddy. My unceasing prayer is that I may be worthy the name, Christian Scientist.

E. M. H., Phœnix, N. Y.

---

Gratitude and justice induce me to state the following facts regarding the sickness and cure of a member of my family by Christian Science treatment.

About last Christmas time my daughter's health was impaired. Her digestive organs were entirely out of order, causing her distress. The physician made very light of it at first, but soon found the disorder to be of a more serious character, and prescribed medicine quite freely without affecting a change. He then expressed a wish to call a consulting physician, as in his opinion there was an obstruction in the gall duct and an operation was unavoidable. The consultation supported the opinion of the attending physician and they asked our consent to an operation, which was reluctantly given. The patient was transferred to the hospital and operated on as we supposed, but we were told later that it was impossible to perform the operation, as the physicians found a cancerous growth covering the parts, and it was predicted by them that she could only live a few days, and would pass away in great pain. I was not willing to abide by these prophecies, and following the advice of a member of the Christian Science Church I called a practitioner and secured Christian Science treatment. Almost immediately I noticed a favorable change in the condition of the patient. There was no pain except such as customarily follows an operation. Soon she could eat heartily and digest her food, and she left the hospital to stay with her sister, where she daily gained strength. She is now fully recovered and is home again. It must be mentioned that no kind of medicine has been administered since the attempted operation.

A. KUENER, Sheboygan, Wis.

---

The world is full of slow and commonplace people, and in no way can we more practically reveal our own wisdom and refinement of character than by manifesting patience and delicacy in our dealings with such, hiding from them alike their imperfections and our own superiority.

*The Wellspring.*

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

Address all orders to
Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

James H. Ecob, D.D., in an article on "Church Federation" in *The Christian Register*, says:—

"I hope that some day a scholar will arise, large enough in learning, broad enough in vision, to give the world the true story of that most destructive of all heresies, the verbal inspiration of Scriptures. It has mothered more of the sins and abominations of history than all other heresies combined. When Protestantism arrived with its doctrine of the inalienable right of private judgment, a new and terrible weapon was placed in the hand of this arch heresy. At least a degree of safety lay in numbers when synods and councils turned to the record for a God-given word. But when every man, whatever his equipment in learning, or insight, could turn to an infallible book and get his 'Thus saith the Lord' at first hand, it was like the letting out of waters. Private interpretation, personal idiosyncracies, vagaries, conceits, ambitions, cruelties, avarice, lust, slavery, intemperance, war, each with its proof-texts, set out to the conquest of the world. Each must do thus, and no otherwise; for did it not carry, as a banner, its divinely inspired word? It was philosophically inevitable, therefore, that, after the first great unifying impulse had somewhat abated, Protestantism must begin to divide. Nothing can arrest that process of division so long as that cause is operative; namely, the right of private judgment to exploit a verbally inspired Scripture. There lies the logic, and there is the tremendous underscoring of history. Protestantism has gone on dividing and subdividing till to-day we have the 'scandal of Christendom,'—hundreds of sects, sects of sects. . . . The Bible to-day is a unifier, not a divider, because intelligent men and women the world over are more and more demanding its ethical contents.

"The original cause of division, a verbally inspired book in the hands of private judgment, being historically vacated of meaning, its corollaries, as represented in the various sects, having gone to seed on the parent stem, what do we find to-day as the product of the evolutionary process? We find a group of denominations looking one another in the face and asking earnestly, even solemnly: What next? No adequate reason of being exists within ourselves. What has survived of our historic sect-life is chiefly 'corporate ambition.' We can accredit ourself to ourself as a body of religious men and women, but not as a body of denominationalists. Evolution has cut that ground from under our feet. We are too small-minded for our God. When we call Him Our Father, we are ashamed to look our historical selves in the face. Either we must become larger, or get some narrower name for Him. . . .

"If a thousand souls were hungering and thirsting after God, as by their constitution they must, you must give them the substance of faith. Faith is axiomatic to soul-hunger. That which we know to be true by experience, that which is constitutionally attested by soul-peace and soul-health, that the world desperately needs; that the Church must give, or be put out of commission by both God and man. If you offer instead denominational whims and notions, for bread you have given a stone; for fish, a serpent.

"The world must have religion. The Church has religion to give; therefore, the Church must proceed at once to its business. Every man and woman ethically sensitive to cosmical weather knows that this is the condition. Select your religious man at random among the sects, speak to his heart, and his shibboleth rings true."

Henry S. Pritchett, LL.D., of the Massachusetts Institute of Technology, speaking before the Unitarian Festival in Tremont Temple, Boston, recently said:—

"Perhaps you will allow me to speak a moment concerning the attitude of students toward religion. There is a feeling, and perhaps a well-founded one, that a constantly diminishing number of young men in the student bodies are being drawn into the religious life; that, upon the whole, the influence of the Church upon the student body is not what it once was.

"I believe there was never a time when young men in institutions of learning were in more direct relation with truth itself than the young men whom one finds to-day in the colleges; but this relation is, in large measure, independent of Church relationship.

"If more among the great army of students are to be drawn by the Church into the spiritual life, they must be touched by leaders able to understand and appreciate the circumstances of their lives. Their training has been vastly different from that of the young men of fifty, or even twenty-five years ago. They have little regard for traditions and small respect for vested authority. The whole trend of their intellectual life has led them to demand the where and how. They will be satisfied with no half-way explanation. On the other hand, they are reasonable, they are intellectually sincere, they have been trained to follow truth as no other generation of men have been trained to follow it. They will be quick to respond to the touch of spiritual truth and the knowledge of a spiritual life if only there is the leader to point the way. Leadership has to-day the same power it always had, but it has also the same requisites. The opportunity before the Christian Church was never greater; but that opportunity is less than ever a matter of authority and of organization, and more than ever a matter of leadership."

The intellectual and spiritual world has progressed infinitely during the last hundred years. The old conception of God nowhere, perhaps, is better shown than in the old hymns, one of which began:—

The Son of God goes forth to war,
A kingly crown to gain;
His blood red banner streams afar,
Who follows in his train?

That is a thoroughly barbaric and soldier conception of God, and shows the savagery of man carried into his religion.

The superstructure of religion may be comprehended in the single word love; even self-sacrifice is good only so far as it is moved by, caused by, and represents love.

PRESIDENT ELIOT.

How wonderful is the telephone! Speaking into a little tube, you converse with your friend a thousand miles away. Yet there are people using this marvelous instrument every day who scout the idea of a prayer reaching the ear of a present God. A savage who had never seen a telephone would doubtless disbelieve the story of the wonder, but would his disbelief alter the fact? Multitudes of people know by experience that God does hear and answer prayer. That other multitudes have not had such experience is no proof that prayer is a delusion.

*The Examiner.*

We would be wise if we so adjusted our relations with others that all our days we should be under the sway of the good, the worthy, the pure-hearted, the heavenly. Then as their friends we should seek ever to bring into the lives of others only the highest, the most uplifting and inspiring, the most wholesome and enriching influence. We should aim always so to live Christ that the Christ in us shall become the very breath of God to every one whose life we touch. If we do not we are living below our possibilities in the character and reach of our influence.—*The Watchman.*

The life of the Church, as of the believer, is divine—an inbreathing of God; heavenly in its nature and origin, heavenly in the source of its support and sustenance; heavenly in its strength to stand and withstand, heavenly in its power for work and service, heavenly in its principle of growth and increase, with nothing earthly about it save the poor human nature which is the object of its heavenly benefactions, the humble suppliant and recipient of the bounty of Him whose fulness filleth all in all.

F. D. STOREY.

When one speaks the whole truth about any important phase of human life and sets it forth in fitting form, although unnoticed at first, it will gain power as it comes to the knowledge of men, and finally reach a commanding position where all take note of it. Like the rejected stone which becomes the head of the corner, it comes to honor; and then men imagine that it has always been an object of reverence as it now is.

*The Christian Register.*

No man or woman of the humblest sort can really be strong, gentle, pure, and good without the world being better for it, without somebody being helped and comforted by the very existence of that goodness.

PHILLIPS BROOKS.

Neglect of one duty often renders us unfit for another. God "is a rewarder," and one great principle on which He dispenses His rewards is this—through our faithfulness in one thing He bestows grace upon us to be faithful in another.—ICHABOD SPENCER.

The Church must pour itself out into streams of influence, rather than keep itself dammed up in an ecclesiastical pond, into which men may come for refreshment.

REV. H. A. BLAKE.

There never has been a great and beautiful character which has not become so by filling well the ordinary and smaller offices appointed by God.—BUSHNELL.

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is It Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

PRICE:—Single copies, two cents each, postpaid; ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 53 pp.

Hearings on Proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Christian Science Movement. 22 pp.

Healing Through Christian Science. By Septimus J. Hanna. 36 pp.

Prayer and Confidence. 40 pp.

The Los Angeles Case. 64 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth Resigned to the Will of God. Lessons from a Workshop. To Business Men. How should the Sick be Healed? The Lesson Sermons.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.

(THE CHRISTIAN SCIENCE WEEKLY)

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Last week the European squadron of the American Navy, after the conclusion of its visit to the manœuvres of the German fleet at Kiel, proceeded to Portsmouth, England.

As soon as the Kearsarge was berthed Sir William Dupree, the mayor of Portsmouth, boarded her and greeted Admiral Cotton, saying: "The people of Portsmouth welcome the American squadron and extend to its officers and men all the courtesies they can offer." Admiral Cotton replied, expressing his pleasure at the welcome extended to the squadron and thanking the mayor on behalf of the United States Government and himself.

On the departure of the mayor Rear Admiral Milne, commander of the royal yachts, specially detailed by King Edward to welcome the Americans, arrived on board the Kearsarge and was received by Admiral Cotton and Captain Hemphill. Admiral Milne expressed the gratification of King Edward at the arrival of the squadron, and in behalf of his Majesty welcomed it to England. Subsequently, Admiral Cotton, Captain Hemphill, and the staff officers visited the naval officials, escorted by an admiral's guard and a band.

Immediately after Admiral Cotton returned on board the Kearsarge, Admiral Hotham and his staff returned Admiral Cotton's call. Subsequently the American officers ended their official visits by calling on the mayor of Portsmouth. Admiral Cotton and the other American officers while in London will be quartered at various hotels as the guests of the nation.

King Edward signally honored the officers of the American squadron at the state ball given at Buckingham Palace—the climax of the visit of President Loubet. His Majesty formally received Admiral Cotton and his officers, and Queen Alexandra later gave them the same distinction. The ball—the first since the accession of King Edward—was a brilliant function, twenty-two hundred guests being present, including President Loubet and his suite, practically all the ambassadors and ministers in London, the majority of the members of the royal family, prominent representatives of the nobility, and the officers of the American and French squadrons now in British waters.

Later the Lord Mayor of London gave a luncheon in the historic room, the hall of the Mansion House. The toasts were very happy in their reciprocal expressions of cordiality and good wishes.

All the diocesan conventions of the Protestant Episcopal Church, except those of New York, Oregon, and California, have now passed upon the proposal to change the name of the Church and have defeated it. The clerical and lay delegates in thirty-two dioceses gave a majority against change; seven dioceses took no definite action; in eight the clergy and laity were divided, the clergy in seven favoring a change; only nine dioceses were decidedly in favor of a change; Colorado gave a tie vote of both orders; of the missionary dioceses six were against a change, three in favor.

The counter cases in the Alaskan boundary matter have been exchanged within the time limit. The counter case of the United States was delivered on the 3d inst. to the British charge of embassy at Newport, and at almost the same moment in London the British counter case was handed to the American embassy, so that each side is now ready for the next step; namely, the preparation and submission of the arguments which are to be laid before the commission in London, September 3.

Probably the most successful meeting of the National Educational Association ever held was brought to a close on the 11th. The teachers speak in the highest praise of the arrangements and the attractions and hospitality of Boston. There was an attendance of over thirty-five thousand.

**Foreign.**

President Loubet, the first president of the Republic who ever represented the French nation as the guest of the British Court, arrived at Dover on board the French cruiser Guichen early last week. When the Guichen was sighted the Sheerness flotilla of torpedo-boat destroyers steamed out to meet her and escorted the French cruiser through a double line of British battleships and cruisers extending two and one-half miles, and forming the most imposing naval display ever seen off Dover. All the vessels were dressed from stem to stern, and their crews manned ship and mingled their cheers with the roar of the guns firing salutes, and the strains of the "Marseillaise" from the naval bands. Each ship gave the president a salute of twenty-one guns as the Guichen passed, and the bands of the vessels in turn took up the "Marseillaise." As soon as the Guichen had anchored off Dover and exchanged salutes with Dover Castle, the admirals and captains of the British fleet immediately went on board the French cruiser and paid official visits to President Loubet. These courtesies over, the president stepped ashore and the Duke of Connaught, accompanied by the French ambassador, M. Cambon, and a number of officials appointed to be in attendance on M. Loubet during his visit, extended King Edward's welcome to the president.

The party then took train for London, where they were greeted at the Victoria railway station by King Edward and the Prince of Wales, accompanied by the cabinet ministers and a host of other distinguished persons. An enormous crowd had gathered to catch a sight of the visitor when he should arrive. The station itself was handsomely adorned with a plentiful use of the national French colors and of the monogram "R. F." (Republique Francaise), and an abundance of flowers in lines of red, white, and blue.

On the 9th the president left London amid the enthusiastic acclaim of the populace. He was met at the station by the King, the Prince of Wales, the Duke of Connaught, Lord Lansdowne, Premier Balfour, other ministers, members of the French embassy, and a crowd of military and other officials. At Dover he set sail for Calais on board the Guichen, escorted by a British torpedo flotilla and followed by farewell salutes from the fleet and castle.

The Panama Canal Treaty is now before the Columbian Senate for discussion. It is said that four members of the House Canal Commission are in favor of the treaty, three against, and two doubtful. It seems that neither Congress nor the President wishes to assume the responsibility of the ratification of the Hay-Herran canal treaty. Dr. President Caro, who is politically opposed to President Marroquin, is doing his best to prevent Congress from approving the treaty.

The Assouan reservoir has been emptied of its winter's stock of water for the first time. The results are most satisfactory. The area of cotton is largely increased, and the success of the summer crops is assured in the entire area tributary to the dam.

The receipts of the Cuban government for the fiscal year ended June 30 were $17,767,000; the disbursements, $15,339,900. The amount in hand is $3,172,500. Of the year's receipts, $14,705,500 were derived from the customs.

**Industrial and Commercial.**

More than $30,000,000 worth of diamonds and other precious stones were brought into the United States in the fiscal year just ended. This is the largest importation of diamonds and other precious stones ever shown in a single year of our commerce. Prior to 1887 the total was usually below $10,000,000 per annum; in 1893 the total reached $15,000,000, and fell to $5,500,000 in 1894, $7,500,000 in 1895, $6,750,000 in 1896, and $2,500,000 in 1897. In 1898 the total increased to nearly $9,000,000, in 1899 to over $14,000,000, in 1901 to $20,000,000, in 1902 to $23,000,000. The total importations of diamonds alone in the eleven months ending with May amounted to $24,000,000, and of other precious stones $4,500,000. Of the diamonds imported $10,000,000 worth were uncut, a large increase compared with the importations of preceding years.

Exports from the United States to Canada in the fiscal year just ended show a larger total than any preceding year. Eleven months' figures just completed by the Bureau of Statistics of the Department of Commerce show that the increase in the exports to British North America has been $12,000,000 in the eleven months of 1903, compared with the corresponding months of the preceding year. This is a larger increase than in any year in the history of our commerce with Canada, except 1898, when the increase was slightly greater than that of the last fiscal year.

**General.**

The Discovery, now in the South Pole waters has, according to the report of the captain of the relief ship Morning, located between four and five hundred miles of new coast line and worked her way as far south as latitude 77 degrees 59 minutes; a sled party reached 82 degrees 17 minutes; a lot of new marine fauna and flora of a low order has been discovered; valuable geological and meteorological data have been secured.

Definite steps toward the erection of a three million dollar art museum in Chicago have been taken. The trustees of the National Art Museum have elected officers and selected the Illinois Trust and Savings Bank as a repository for the funds of the organization.

The London and Northwestern company has announced its intention of putting on a train between London and Carlisle which will make a trip of 209 miles without a stop. This is 105 miles longer than any similar run in Great Britain.

The discovery has been announced at the Lick Observatory that the star Omicron Ceti, which has been known to vary at intervals since 1596, is at present undergoing extraordinary fluctuations in brilliancy.

Forty students from Yale, Harvard, Cornell, Princeton, Columbia, and Lafayette have left for the harvest fields of Kansas. They belong to athletic teams in these institutions.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From our Contributors.

### The Denial of Matter.

F. W.

CONSIDERABLE argument has been indulged in against Christian Scientists because of their stand for the unreality of matter. The fact that Science and Health teaches the nothingness of matter from the spiritual point of view has given rise to unprecedented incredulity from the most unexpected quarters on the one hand, and has given the Christian Scientists an impregnable defence and source of spiritual refreshment on the other. Many of the common objections to the position of Christian Scientists can be answered successfully from any of the ordinary authorities on physics. Our libraries are abundantly supplied with discourses on the subject of matter, but upon investigation one finds that he is no nearer an understanding of his subject when he has finished his inquiry than when he commenced. He will probably, as one of his results, see matter from more points of view than before, and this we are pleased to style education; but, so far as coming to any definite conclusion, the reader will very likely fall into line with the author, and conclude that the subject is beyond explanation. When you turn to the Christian Scientist for light, you are referred to the Bible. You are not asked to study somebody's ideas of matter. Neither are you asked to study matter itself to find out what it is. You are advised simply to turn from it, for in no other way can matter be understood. You cannot find out what it is by studying it, or by examining its manifestations, for the reason that it is error, and the Christian Scientist refers you to the teaching of Jesus because there you find truth.

Many minds which are not to be convinced by the ordinary arguments of material scientists, are responsive to his teachings. If the Christian Scientist is permitted to give his authority and prove his position from the Bible, it will speedily appear that the Bible and Science and Health are at one on the point, and that Science and Health is indeed the Key to the Scriptures.

What Jesus the Christ taught, the Christian Scientist claims to teach also. What Jesus proved by his demonstration the Christian Scientist is proving by similar demonstration. Jesus taught, from first to last, the nothingness of matter. When he arose from the dead, he declared it necessary for him to complete his demonstration of the nothingness of matter by ascending above the perception of mortal vision. He left no matter (body) behind. The Christian Scientist understands that the explanation of this seemingly wonderful circumstance lies in the fact that there is no matter, it exists only in belief. Otherwise, the matter body of Jesus would have been left to be buried, as are the matter bodies of all those who have not made his demonstration. His demonstration of the nothingness of matter was complete, and hence nothing which we call matter remained to be discerned. This disappearance or dematerialization of the body of Jesus, offers an absolute proof that the Master, whom Christian Scientists seek to follow, demonstrated for and before them the nothingness of matter and the allness of Spirit.

When the material scientist can explain what became of the material body of Jesus, to the satisfaction of the world, he will have explained it to the satisfaction of the Christian Scientist, for he will then have become a Christian Scientist himself, and his explanation will be Scientific. The disappearance of the material body of Jesus gives the ultimate demonstration over matter.

### Compassion.

WILLIAM P. MC KENZIE.

PITY is both sought for and resented. Those who are unfortunate endeavor to awaken sympathetic grief in the hearts of men by recounting their distresses; yet when they have awakened pity, they find themselves made inferior by the recognition of their weakness and misfortune on the part of those who pity, and this often arouses indignation. The real desire of those who seek pity is to gain special and undeserved favor, and in this how often are they disappointed, getting commiseration instead. "How miserable I am!" is the plaint; and if the reply be, from one standing aloof, "Indeed you are very miserable," what uplift is there?

It has been said that pity as a mere emotion produces almost nothing in the way of benevolence. The sorrows of the unfortunate heroine in a play may be so presented that pity overflows in the hearts of the listeners, yet these same persons who looked at imaginary sorrow with streaming eyes, usually experience a reaction into a state of callousness when genuine sorrow and need call for action.

Sympathy is better than pity, for it indicates fellow-feeling and implies equality, or some bond of union with the sufferer. There is no looking down from a superior condition of good fortune upon the condition of misfortune, but rather the warm sense of kinship which urges on to helpfulness. When pity is accompanied by the inclination to help, it has risen to sympathy; yet even at that stage it may be the suffering and distress of others upon which the thought is concentrated, and their misfortunes, pains, and sorrows may continue to be viewed as part of reality, even when effort to relieve them is contemplated.

Mercy commonly implies the expression of clemency or good will to the undeserving. When the just deserts of wrong doing are contemplated in a particular case, pity may be aroused, and the offender may then be treated with less severity than the law demands. Such treatment is usually considered merciful; but the word is more exactly applied when a man is able to be kind to his enemy whom he finds in his power. One definition of the word is "forbearance to injure others when it is in one's power to do it," as when a robber might listen to the plea of his victim and refrain from cruelty to him; but the word appropriately has a more gracious and kindly sense as well. If one were to remit a penalty, that would be pardon. Dismissing from the mind displeasure or resentment towards one who has wronged us, is properly forgiveness. But one

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

who has the will to bless the offender, and actually seeks his welfare because of benevolence in his own heart, such an one shows mercy.

Compassion is higher than all these. A man may be pitiful and merciful, and yet sorrow and pain may be to him such realities that he can do almost nothing to relieve them. Sympathy with present suffering may be so sentimental that the wrong-doer is comforted and pitied so soon as the effects of his error come upon him to reform him. "Compassion combines with the tenderness of pity, the dignity of sympathy, and the active quality of mercy."

When Jesus was moved with compassion, there was a yearning sense of tenderness excited by the need of the people; but his actions showed that he did not rest in any sense of mere pity. He turned from the seen to the unseen,—from the pitiful need of man to God's infinite provision of good. Compassion, then, is more than an inclination or an impulse to relieve suffering and distress; it implies a fellow-feeling not so much with man the sufferer, as with man the child of God, and it raises him to a recognition of his true estate.

Compassion does not seek so much to remit the penalty as to change the criminal tendency; it does not merely forgive the enemy but transforms him into a friend; it not only has the willingness to bless, but through its vision of reality knows how to bring what is good into a demonstration,—to prove the good to be the actual fact.

Christian Scientists turn their attention continually Godward, because of their desire to have done on earth, as in heaven, the will of God; and because they do not attend to the recitals of woe which the self-pitying offer, nor listen to garrulous conversations concerning the conditions of the sick, nor enjoy morbid discussions in regard to the details of disease, they are sometimes accounted unsympathetic. But what is most needed for the blessing of man, more emphasis given to his fear of disease, or more knowledge of the overbrooding, divine Goodwill who healeth diseases? Therefore he is a benefactor to the race who uplifts his thought to heavenly places, and thither helps, by the sweet compulsion of love, the weary and those whom sickness and sorrow oppress. This he cannot do without learning compassion. Any one acquainted adequately with the Christian Science movement knows what teaching has been given, what example shown, by its Founder, Mary Baker Eddy, so that men may become compassionate. People fail to understand her dealings until they perceive that her purpose is always to heal and to save, and that she excludes none from the circle of her compassionate interest.

It is through compassion that healing, the work of God, is realized. "How ill you look," says Pity. "I am sorry for you," says Sympathy. "I would I could help you," says Mercy. But Compassion is able to say, "Rise and walk;" and it thus gives proof that love is reality and not sentiment. Before the glowing sense of love in the compassionate heart, how quickly fear departs; how quickly the doubting mind is reassured! and why? He who taught us "by his own glory and virtue" showed us that to be moved with compassion was but the preliminary to realization of divine Love as ever-present and all-satisfying.

## Our Literature.

A. F. BLUNDELL.

HAVING been for the past two and a half years living in a foreign country, in one of the few places where Christian Science has scarcely yet broken ground, I have to a greater or less extent felt the loss of personal association with other brethren in the truth. In many ways this has brought an experience that has been helpful and strengthening, as it has taught me to realize more fully than ever before, the immediate presence and protection of divine Love.

When I left home I brought with me the bound volumes for seven years past, of the *Journal* and also all the bound volumes of the *Sentinel*. It would be impossible to express in words, the company, comfort, and blessing that this literature has brought to me, covering as it does such a wide range of experiences passed through and victories won, containing so many words of comfort, instruction, and love, so that it is never hard to find a parallel problem to the one we may have in hand at any given time, and one which has been solved by some other brother or sister who has passed over the same ground. These silent companions are always ready to be of service, and unlike ordinary literature, will bear reading over and over, giving us each time a little more truth, thus making our vision clearer for the next reading. We know the reason for this is, that the writers are each expressing in their own way what they have already learned from our wonderful textbook, Science and Health, and we can discover, in the loving, grateful efforts of the contributors, the newly awakened student, happy in his new light; the hopeful, bright child thought, or the older brother and sister who have learned what it means to work out one's own salvation, and who are encouraging us to press on when we might perhaps be tempted to falter, or stop to count the bleeding footsteps. (Science and Health, p. 426.)

In this connection, a statement made by a friend has been very helpful. He said that each day his desire for our literature became greater, because he realized that when he was reading Mrs. Eddy's writings, he was as to that extent and during the time so occupied, living in the consciousness of her revelation of Truth and was benefited accordingly.

It may take us some time to discriminate as to what is profitable reading, but it is nevertheless a necessary decision, and when rightly made is sure to give the most satisfactory results, and accelerate our growth in the understanding of Truth.

## Not Magic, but Understanding.

H. W. NELSON.

MANY strangers come to our churches, expecting to learn a magic word, a set form of words, a creed, which will give to them the art of healing. This expectation is entirely unauthorized, and they are really harboring thoughts pertaining to a primitive order of superstition. The healing as practised by Christian Scientists, though only incidental to the Science of Christianity, is very necessary since it is a proof of right apprehension and true discipleship. By thus proving they carry out one of the commands of the Master, and at the same time demonstrate to humanity their understanding of Christian Science. There is not any mystery in this practice; the ability to heal is really a growth upward in one's human consciousness, due to an appreciation of the eternal fact that God's eyes are too pure to behold iniquity. In other words, that a supreme cause, perfect good, cannot create imperfections and discords. In the degree that the argument, that the only real effects are good effects which result from a good cause is accepted, is one's growth in Christian Science secured.

The Sermon on the Mount, including the Lord's Prayer, gives full instructions for one's individual work as a student or disciple of Christianity. The apostles of Jesus have given much valuable explanation and assistance to the world, by reiteration of these instructions in the best words that their vernacular afforded. Mrs. Eddy in her work, "Science and Health with Key to the Scriptures," has endeavored to reach the thought of the present age with a very logical and clear reiteration of these same instructions, and the magnificent growth of the Christian

Digitized by Google

Science movement bears witness to the success of her efforts. The expressions sometimes used by Christian Scientists when narrating an instance of healing work, done in demonstration of their obedience to the Master's instructions, are possibly misleading to the superficial observer: "I held the right thought;" "I said over the scientific statement of being several times," etc. These are not talismanic thought conditions; they mean simply that the people expressing themselves in this manner were composing their thought in prayer, and thus gaining a realization of an infinite Father-Mother God, who is the giver of health, and all good.

## The Real and the Unreal Man.

J. D. K.

HOLY WRIT abounds in explanation of the difference between the real man—God's image and likeness—and the unreal or material man. The real man, we are told, is that product of the seed of Divinity which can never bring forth anything less than perfection; while the unreal man is a product of mortal belief, which must be lost sight of in order to bring out the real. The real man, or God's image, has the grandest and noblest of missions to his fellow-man; viz., to reflect his Creator. When we can realize this, we begin to understand what is brought to bear upon one whom we wish to help into a life of health and holiness.

We as Christian Scientists should so reflect divine Love as to create an atmosphere of holiness all around us, which would bring Truth to the consciousness of others to such an extent as to dispel every form of error. The unreal man,—"the liar in whom is no truth,"—when allowed to predominate in our consciousness, presents to the world the opacity of a solid body which completely hides that image and reflection of "the One altogether lovely!" and instead of being a blessing, such an one is a curse to his fellow-man, depriving him of the light of Truth which he has a right to demand from one who calls himself a Christian Scientist.

If one could only realize what it means to live a *selfless* life! One who is thus living in harmony with his Principle, cannot be disturbed by the criticisms of others, for the real self cannot be touched. Man stands in the same relation to his material manifestation,—which is all his enemies can reach,—as the Christ stood to Jesus whom the Jews put to death in order to exterminate the divine Principle which actuated him. The selfless man has no dealings with anger, hate, jealousy, or with any link in that chain of evils which is welded together by the belief of materiality. It is impossible to conceive of one who is truly actuated by the truth of the Christ Science as indulging in unkind feeling toward even the meanest of his fellow-men. He should remember that the pure in heart see God in all mankind. The spirit of criticism must be entirely eliminated from the life that is "hid with Christ in God."

Actual Christian Science demands entire selflessness, an understanding that there is no self but the real self,—God's image. When we can fully awake to this understanding we shall be able so to demonstrate the truth that the world will be quickly redeemed to Christ. Let us follow the injunction of Paul, and "lay aside every weight, and the sin which doth so easily beset us, and let us run with patience the race that is set before us, looking unto Jesus the author and finisher of our faith." When we can do this, actually do it, materiality will flee away and the birth of the Christ child will have begun in our hearts, and "of the increase of his government and peace there shall be no end."

## Echoes from a Sunday School.

ELOISE CAMERON MAC GREGOR.

A CHILD when asked how old she was replied, "No years, God is my Father and He doesn't have any birthday." Surely if we accept Jesus' definition of Life, "This is life, . . . that they might know thee the only true God," then we are "alive" only in so far as we "know God" well enough to reflect naught but good in every thought, word, and deed; so the mere lapse of time, or birthdays, will never make us "grow up."

This new-old standard of Christian Science accords respect and reverence, next to that for "our elder brother," only to those who know God as man's only Father in such a practical way that they bring forth the fruits of character, spiritual discernment, and the Christ-likeness which heals the sick and sorrowful as well as the sinner. "Till we all come in the unity of the faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fulness of Christ."

This child's speech reminded me of some very helpful ideas which were brought out in my Sunday School class.

At a time when we were studying the second commandment, a child of five cited his absence of fear when a thunder-storm had come up while he and his people had been driving in the country, as a proof that he had refused to make unto himself any graven image [any belief in the power] of anything that is in the heaven above.

In considering the practical application of the third commandment, "Thou shalt not take the name of the Lord thy God in vain," which has been, by a limited sense so generally supposed to refer to verbal profanity, a little girl when asked its meaning said, "Taking the name of the Lord in vain means talking about good and not doing it!"

Again, one spring day when the subject was "Life," I went to the class supposedly well prepared with the thought of Life, first, as symbolized by unconquerable growth emerging from the seeming death and desolation of winter.

In order to introduce the subject of progression and regeneration as activity, I asked a child, "How can you tell when anything is alive?" Instead of answering as in the old thought, "When it moves," or "When it grows," the reply came at once, "When it is Truth."

Turning to another child I queried, "And how do you tell when anything is alive?" Quick came the response, "When it is Love."

The first part of the carefully formulated programme was thrown to the winds and we all went to work to build more clearly in consciousness a knowledge, through faith and understanding, of the one and only *Life*, independent of all seasons and conditions, shining resplendent over any sense of growth, improvement, or evolution.

"Science knows no lapse from or return to harmony, but holds the divine order, or spiritual law, to have remained unchanged in its eternal history, wherein God, and all that He creates, are perfect and eternal" (Science and Health, p. 470).

Then when the subject was Truth, the responsive reading brought out the thought that Truth is the water of Life.

We had mentioned the use of this water,—declaration of Truth,—as a cool drink when one had a sense of being warm and dusty with impatience, discouragement, or other error; so the cleansing properties of water were next considered. In seeing that any naughty, sorry, or sick thought was what would soil the garment of consciousness, we decided that the only way to keep it clean was to use this water of Life,—declare the Truth. "But," I said, "suppose the dress shouldn't seem thoroughly clean then?" Clear and direct was the reply: "Wash it again!"

"The robes of Spirit are 'white and glistering,' like the raiment of Christ. Even in this world, therefore, 'let thy garments be always white'" (Science and Health, p. 267).

## Joining the Church.

KATHRYN FOLK BROWNELL.

How many of us stop to realize the true significance of uniting ourselves with the church? Some people say, "I do not believe in organizations and do not like to bind myself to anything." Is this step truly bondage? Not when we look at it in its true light.

In Science and Health, p. 583, we find the spiritual interpretation of Church: "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle." Then when we unite with this are we not uniting ourselves with all that is highest and purest and best? Is it not possessing ourselves of absolute freedom instead of bondage?

To look upon the church as a material structure where people congregate at stated times, and never beyond it to that of which this is but a type, is like looking at the suffering, erring human body and believing it to be man—the true child of God.

We read that "Jesus beheld in Science the perfect man, who appeared to him, where sinning mortal man appears to mortals. In this perfect man the Saviour saw God's own likeness, and this correct view of man healed the sick" (Science and Health, p. 476). This is for us to do in the correction of our thought of the church just as it is in our effort to help mortals. Our narrow material sense of the church needs to be healed just as does our false sense of man.

If all would realize that it is really spiritual freedom, and hasten to avail themselves of this privilege, looking away from the shadow to the reality, they would rejoice in a healing demonstration of corrected sense which would draw all men unto them.

### The Child in the Garden.

When to the garden of untroubled thought
I came of late, and saw the open door,
And wished again to enter, and explore
The sweet, wild ways with stainless bloom inwrought,
And bowers of innocence with beauty fraught,
It seemed some purer voice must speak before
I dared to tread that garden loved of yore,
That Eden lost unknown and found unsought.

Then just within the gate I saw a child,—
A stranger-child, yet to my heart most dear,—
He held his hands to me, and softly smiled
With eyes that knew no shade of sin or fear:
"Come in," he said, "and play a while with me;
I am the little child you used to be."

HENRY VAN DYKE.
In *Atlantic Monthly.*

The Christ stands before us and says, "Come to me." You say, "Must I?" And he answers, "You may." He will not even say, "You must." You may. And duty loses itself in privilege, and the soul enters into independence and escapes from its sins, fulfils its life, lays hold of its salvation, becomes eternal, begins to live an eternal life in the accepted and loving service of Christ.

PHILLIPS BROOKS.

The sentiments which Jesus introduced into the world are really ours. His perfect idealism is the highest rule of a pure and virtuous life. . . . He was first to proclaim the sovereignty of the mind. . . . The foundation of all true religion is verily his work. Since him it only remains to fructify and develop it.

ERNEST RENAN.
In "Life of Jesus."

## The Lectures.

### At Des Moines, Ia.

Judge Septimus J. Hanna spoke at Foster's Opera House last night [June 2] on the subject of Christian Science. The lecture was free, and there was a good attendance, both of the adherents of the Christian Science faith and of those not of that belief.

Judge A. H. McVey of the Polk County district bench introduced the speaker. Judge McVey said it was the history of the human race that new things were received with incredulity, and it was a sad commentary that the most intelligent people were impatient and unwilling to listen to that which was contrary to their political and religious ideas. In the modern day, however, this had been in some measure outgrown. Judge McVey counseled that every one should not only willingly hear others and those of opposing beliefs, but, moreover, should hear with open mind. He said there was perhaps no more important subject than that of religion, and he was there himself as a listener and a hearer, without much knowledge of the subject to be considered, yet glad of the opportunity offered to learn more of it through Judge Hanna.

*Register and Leader.*

### At Grand Forks, N. Dak.

The lecture on Christian Science given under the auspices of First Church of Christ, Scientist, of this city by Edward A. Kimball, C.S.D., at the Opera House Sunday afternoon, May 31, was highly gratifying to the friends of the Cause. A large audience, mainly non-Scientists, filled the lower portion of the house, and gave close attention throughout. Afterward a number were heard to speak of the many forceful arguments brought forward by Mr. Kimball in exposition of his subject, and the scholarly and fitting language in which the ideas were clothed.

Mr. Kimball's broad charity and very apparent lack of antagonism toward those who entertain views differing from his own, were particularly pleasing to his hearers. He was introduced by Senator J. D. Bacon in the following words:—

*Ladies and Gentlemen:*—I consider it a great pleasure, as well as a privilege, to have the opportunity of introducing to you, one who will address you upon so broad a subject as Christian Science.

I have always been so intensely material that it would be presumptuous for me to say that the theory of Christian Science is right, and that the other denominations are wrong; or that other denominations are right and Christian Science wrong. The speaker upon this occasion will, however, endeavor to make plain to you some of his reasons for believing that the teachings of Christian Science are right. In this great industrial period, the trend of the human mind seems to be toward the avenues of business and material things, rather than spiritual ones. But, my friends, allow me to say, that in this age no thinking man or woman allows the mind to become so completely absorbed with business cares as to prevent them thinking occasionally of things spiritual.

My belief is that all churches and all church organizations are good, and that their object is to elevate the human mind and bring morality to a higher standard. Each denomination has its influence, and I want to say in this connection that the Christian Science Church and its followers are entitled to a full share of credit, and I offer in evidence of this statement, the happy followers of this faith, who have increased in numbers to hundreds of thousands, from a mere handful who professed the faith in 1894, when The First Church of Christ, Scientist, was built in Boston, and was called the Mother Church.

Our speaker this afternoon will not attempt to tell you

Digitized by Google

all there is to be said of Christian Science, or all that he knows of Christian Science, as it would be impossible in the limited space of time; but he will endeavor to correct some of the misstatements and misrepresentations that have been made regarding Christian Science, as well as to show you something of the Christian Science religion in comparison with other religious denominations, and something of Christian Science healing.

My friends, I have the honor of presenting to you a member of the Christian Science Board of Lectureship, Mr. Edward A. Kimball of Chicago.—*Grand Forks Herald.*

### At Elgin, Ill.

Judge Septimus J. Hanna, C.S.D., expounded the doctrines of his faith before a large audience at the Universalist Church, Monday evening [May 18]. Mr. Hanna's discourse was free from criticism of other denominations, and the straightforward manner in which he presented his side of the question commanded the attention and respect of the audience.

Rev. E. L. Conklin, pastor of the Universalist Church, introduced Judge Hanna.—*The Elgin Courier.*

Mr. Conklin in his introduction said:—

The privilege of introducing the speaker has been conferred upon me. We are told that the Athenians were accustomed to assemble to say or hear some new thing. Such, I believe, is not the spirit of this age. We have learned, or are learning that truth is hoary and that the most we can expect to do is to restate it in modern terms. So far as I know the principles of Christian Science I believe that between them and those which I endeavor to teach, there is genuine harmony of purpose. We occasionally find a mind so small that, to it, there can be no truth in any statement that goes beyond or differs from its own limited conceptions. I do not stand to prophesy, nor do I deem it my right to take up the time which belongs to the speaker of the evening, yet I feel certain that the day is fast coming, has dawned, when men in general will accept the sublime fact of the brotherhood of man, and rejoice together in any earnest endeavor to place humanity on a higher plane. Believing this to be the spirit of the evening, and that we are to listen to a helpful word, it is my pleasure to introduce to you Judge Septimus J. Hanna, who will now address you.—*Correspondence.*

### At Eau Claire, Wis.

The lecture on Christian Science given under the auspices of First Church of Christ, Scientist, of this city, by Edward A. Kimball, C.S.D., at the Opera House, Sunday afternoon, June 7, was highly gratifying to the friends of the cause. A large audience filled the lower portion of the house and gave close attention throughout.

In introducing Mr. Kimball the Rev. Martin Sindall said in part:—

Whenever I confront an audience like this I cannot help thinking of the splendid opportunity which is granted the speaker. For in an audience like this there are many who are bearing burdens, some being burdened by business cares and anxieties, some by sins of one kind and another, while others are weighed down with some grievous disease. To all such there is one panacea, one cure-all, and that is Truth.

The workings of Truth are as possible to-day as in the days when Jesus walked in far-off Palestine, and I may say also that the effects of truth manifested on God's children are a source of astonishment as much as in the early days of Christianity. The good book says of the results of Jesus' teaching and work, "They were astonished at his doctrine: for his word was with power." To-day if a man once wretchedly wicked is healed of sin, people are astonished at the manifest change in him. It is even more true if a man has been afflicted with some bodily ailment and becomes well through the power of Truth. But it should not be a source of astonishment, for Jesus said plainly, "Ye shall know the truth, and the truth shall make you free."

Truth is God's knowledge, God's knowledge is Christian, therefore God's truth is Christian knowledge, which is synonymous with Christian Science.

We are gathered this afternoon to listen to an able exponent of Christian Science. He does not expect to tell us all about Christian Science, for that is impossible in an hour or a day, for it is as large as God's universe and as endless as eternity.

All he asks of you is that you become willing listeners, unprejudiced and teachable. You will in this way learn that which, if applied to your lives, will make you happier, healthier, and more prosperous, for all good things are promised to children of Truth.

You may think it strange that a man who has been pastor for some ten years in one of the oldest denominations should become a Christian Scientist. But when we learn that the earnest seeker after truth has the promise of finding it, such a step on a person's part is not so strange after all.

Being desirous of becoming more helpful to both sick and sinful, I was led to study Christian Science literature, and finding it in absolute harmony with the spiritual interpretation of the Scriptures I accepted its teachings and practice, one result of which is my presence here to-day, and the privilege of introducing one who can speak authoritatively on the subject of Christian Science. I esteem it a pleasure, therefore, to be able to present to you Mr. Edward A. Kimball, C.S.D., of Chicago, who will now address you.

*The Telegram.*

### At Denver, Col.

An audience that completely filled the Broadway Theatre assembled on Sunday afternoon, May 31, to hear Mrs. Annie M. Knott, C.S.D., deliver a lecture on "The Religious and Scientific Value of Christian Science," and listened with marked attention.

The speaker was introduced by W. W. Booth, Second Reader of the Denver Church, who spoke in part as follows:

The greatest need of the age, is a religion which will appeal to the business man, will bring him rest and comfort, which will so clear his mental vision that he will find it not only possible, but profitable to introduce the Golden Rule into all the relations of life, literally to do unto others as he would that they should do unto him; a religion which will broaden the smile of humanity and bring health, happiness, and prosperity to all mankind, and which will cause us all to pray daily, "Help us to help each other, Lord, each other's cross to bear."

Mrs. Eddy tells us in the Christian Science text-book, that "Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494), and in giving to the world this beautiful religion she has proven the statement to be true. *Correspondence.*

What canst thou see anywhere that can long continue under the sun? Thou thinkest perchance to satisfy thyself, but thou canst never attain it. Couldst thou see all things present before thine eyes, what were it but a vain sight? . . . Leave vain things to the vain; but be thou intent upon those things which God hath commanded thee.

THOMAS A KEMPIS.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Religious Joy.

A DISTINCT impression conveyed by those who attended our recent Communion and Annual Meeting was that they were actuated by a deeply religious sentiment which was manifest on all occasions, yet the evident happiness of each individual comprising this great throng was so marked as to cause comment in the newspapers. Every visitor seemed to be happy and to enjoy the many opportunities for renewing old friendships and forming new ties, yet this fellowship was subordinate at all times to the primary purpose and desire of the gathering. There was no evidence of holiday-making, no feverish striving after amusement, though there could be no doubt about the enjoyment and satisfaction of each one present. That it was a gathering of religionists intent upon receiving more of the good news of Christ that they might more efficiently succor the sinning, suffering, and dying as they themselves had been succored, was most noticeable, and at no place was this more apparent than at the home of our Leader in Concord.

The subdued and decorous bearing of the thousands of men and women assembled in Boston and in Concord evidenced their serious appreciation of their mission, their realization that Christian Science means present salvation from sin, sickness, and death, and that it is their privilege to give this regenerating and healing gospel to their fellowmen.

One who has known any considerable number of these people, both before and after their introduction to Christian Science, cannot fail to appreciate the reason for the cheerfulness and joy which mark these gatherings, and he will not mistake their joy for the thoughtless flippancy of mere pleasure-seekers, but will know that the benefits received by Christian Scientists through their religion fully justifies this good cheer. To have been healed of hopeless sickness, to have been freed from intemperance and other sins, is certainly good ground for an abiding happiness.

M.

### The True Standard.

IF it were always possible for the children to have right standards given them, the results actually attained in after years would be so very different from ordinary experience as to contradict the popular expectation awakened; but it is sadly true that in youth, even in childhood, the acquirement of wealth and position is continually held before thought as the goal of endeavor. Steady effort is needed to attain success in any direction, and in the race of life the workers soon begin to show an advantage over the idlers or dreamers, and are placed in the opinion of their fellows on the side of success, but when the days of youth are over, and character is, so to speak, crystallized, it is found that something is wrong, for the possession of wealth and fame does not satisfy either the heart or the intellect, much less the higher nature.

It does not follow, by any means, that the unsuccessful man, from this material point of view, is any happier, since it is quite likely that he may have missed his opportunities, and done even less in the development of character than the successful.

This one thing is sure, however, that, soon or late, all must be brought face to face with the realities of being, and be measured by the one and only true standard,—the divine demand for perfection in all things.

Here a great lesson is speedily brought to every earnest inquirer into Christian Science; viz., the utter impossibility of meeting this demand through materiality. Then begins the first real effort in the right direction, for the spiritual foundations laid of old are Scientifically discerned, and their blessing sought and appropriated. It is soon found, also, that without any conscious human effort the standards are changed, and the value of Truth is simply beyond price.

When one has had even a glimpse of what mental freedom means,—freedom from the dominion of the body, from the oppressing thoughts of mortals, from the weight of doubt and uncertainty about God, one's self, and the future; when, instead of all this, there is not only present health of mind and body, but the knowledge of Truth which is needed in order to enjoy this perpetually; when "the meanest flower that blows," tells the sweet story of infinite Love and wisdom, we are beginning to comprehend what it is to be "rich toward God." And it is this realization which brings the thousands together annually in Boston, that, regardless of material sacrifice, they may breathe the mental atmosphere surrounding those who have been set free like themselves. As they return to their homes, they are constantly giving out this thought on their journey, "No words can tell the value of that which we have received, for who can estimate the treasures of Mind, of love, joy, and peace. With Solomon we may say, 'If a man would give all the substance of his house for love, it would utterly be contemned.'"

K.

### The Passing of Personality.

THE artist is always unobtrusive. He never eclipses the ideal he would honor, and self is not even an episode of his song. It is only the novice, the egotist, or the blunderer who projects his own personality upon the object or the opportunity he is called to serve. And here the finest art is the art of true living. Jesus said, "If any man will come after me, let him deny himself." This is the preliminary of all Christian growth and usefulness.

The greatest service we can render light is in the removal of the hindrances to its radiation, and of these, self is for each the chief. In so far as a reflector attracts attention, in so far it reveals its imperfectness and fails in its ministry, and the discovery of the inherent opacity of so-called human personality has been an inevitable outcome of self exploitation.

An acquired distrust, and an intelligent control of this presumptuous element of human consciousness, is one of the many gains of the true Christian Scientist, and the representative of our faith whose daily life does not reveal his increasing mastery of this lesson, cannot avoid being a detriment to the cause he would serve, nor can he escape that judgment of the observing world which is legitimately pronounced upon inconsistency.

Apprehension is considerably in advance of demonstration with most of us in this matter, but there are many encouraging indications of progress as a whole. Great thankfulness for the impersonal preaching in our churches, and for the impersonal teaching of the text-book and of our periodicals, is constantly expressed; a steady growth in the expectation and realization of impersonal healing is manifest, while conscious superiority to the claims of "somebodyism," and childlike reliance on ever-present

Digitized by Google

Truth and Love are rapidly replacing every sense of dependence upon personality for wisdom and guidance.

The supreme importance of getting self out of Truth's way, in every line of endeavor, is being apprehended more and more clearly, and we know that when self-suppression shall have become habitual and complete, then the human channels of Truth and Love will be accessible and filled to overflow. The kingdom of heaven will have come in us.

In our late gathering there was a controlling, if not a clearly defined, recognition of the truth of Jesus' words, "Whosoever exalteth himself shall be abased; and he that humbleth himself shall be exalted," and the atmosphere of all the meetings was sweetened by the fragrance of an unselfishness that was prompted thereby. It has thus been pressed upon our thought again that with the disappearance of self-assertive personality, the irritants and disagreeables must and do disappear from every condition of experience.

When the beauty of divine reflection is unmarred, we can but be interesting, agreeable, and stimulating to each other. The attraction of Spirit is irresistible, and the Christ-idea, when "lifted up," does draw all men, and this explains the charm and helpfulness of that fellowship with the saints which is wholly free from the taint of self-interest—an affiliation with our brother men which is made possible only by our common touch with God.

"Trust in Truth, and have no other trusts." These appealing words of our Leader rephrase the injunction of the first and greatest commandment, and epitomize the wisest counsels of Christian experience. W.

## An Editor's Reply.

In his pulpit in the Ruggles Street Baptist Church, last Sunday, Rev. A. C. Dixon devoted his time to abuse of Christian Science and Christian Scientists and their Leader.

Just what wrong, real or imaginary, these people have done this man is not made manifest. He seems to think that the Christian religion is endangered by the advocacy of Christian Scientists, and that dire results are sure to follow unless some strong apostle like him undertakes its defence.

He denounces Christian Science as an apostasy, the believers in Christian Science as conspirators, and their Communion service as a spectacular display. . . .

Christian Science, when reduced to its essence, simply means that Love and law rule the world, that God is Love, and that love is the fulfilling and the fulfilment of the law.

But the utterance of the reverend gentleman that called forth these few lines in *The Patriot* is the following:—

"I have recently visited Concord, N. H., the home of Mrs. Eddy, and learned other facts of interest. It is well known that she has gained control of the newspapers of Concord, so that they publish only what they know will please her."

Mr. Dixon may have come to Concord, but nowhere here could he discover that Mrs. Eddy has gained control of the newspapers of Concord. We very much doubt that the self-respecting better class of the good people in Concord, N. H., who highly respect Mrs. Eddy vouchsafed such information.

There are in every town and city purlieus and invidious natures in which every form of vile suspicion finds lodgment and is circulated, and it is possible, nay probable, that in such place and among such people the Reverend A. C. Dixon may find sufficient to justify his absence of correct judgment.

*The Patriot*, speaking for itself, is free to inform Mr. Dixon and others that Mrs. Eddy does not control one line of space in its columns, but in the same paragraph, let it be stated that *The Patriot* rejoices in the opportunity to say good things of Mrs. Eddy and of all other persons who are loyal to Concord and love Concord people, who are living lives of self-denial and righteousness and striving ever to assuage pain, relieve suffering, lighten sorrow, who are striving to substitute fear with courage and hope and bring sunlight and gladness into the lives of all.

A short time ago a merchant from a neighboring city sought to secure space in this paper to vend a line of goods that came into direct competition with Concord merchants. We refused to sell the space because we felt it our duty to stand by those who made their homes here, who employed our people, who paid the taxes, who upheld our schools, our churches, our public and private institutions.

Did our action in this prove that the merchants of the town controlled this newspaper? Suppose some one who lives in a world of uncharitableness and envy, were to seek to use our columns to abuse some good and patriotic citizen of this city, and fill our columns with his rash conclusions and vile suspicions, and we refused, would that good citizen, whom we sought to protect, necessarily control this paper?

Mrs. Eddy has just given an hundred thousand dollars to the erection of a house in this city in which people may assemble to worship God; she has contributed thousands to the building of a fine highway to the St. Paul School, she has given practically five thousand dollars to the support of the State Fair grounds in this city; she distributes annually among the poor, shoes and clothing at a season when aid is most acceptable, and in countless ways she is manifesting her great love for our people and her intense interest in our affairs; and yet Mr. Dixon would criticise the local newspapers because they will not yield their space to revile a citizen who by her splendid life, unmeasured generosity, and continuing kindness, has won the abiding love of our people.—*Concord* (N. H.) *Patriot.*

### The Bible Lesson Quarterly.

Readers and students will make the following corrections in the current *Quarterly.*

Page 15, Sec. IV. (References for editions prior to 226th), the third selection should read, 301—23 to 26, 32 to 9 next page.

Page 18, Sec. VI. (References for editions prior to 226th), the third selection should read 106—7.

Page 32, Sec. V., Second Bible reference should read Hosea, 4 : 7.

The writer of the testimony signed C. V. Wilson in the *Sentinel* of June 27, wishes us to correct a mistake which he made. He intended to mention the February *Journal*, and not the January issue.

### The Song and the Deed.

There was never a song that was sung by thee,
But a sweeter one was meant to be.

There was never a deed that was grandly done,
But a greater was meant by some earnest one.

For the sweetest voice can never impart
The song that trembles within the heart.

And the brain and hand can never quite do
The thing that the soul has fondly in view.

But enough that a God can hear and see
The song and the deed that were meant to be!

BENJAMIN R. BULKELEY.

## Selected Articles.

### A Friendly Critic.

In a recent issue of the New York *Independent* was an article by Rev. Washington Gladden on "The Truths and Untruths of Christian Science." The fact that an orthodox clergyman can find anything good in this comparatively new claimant for religious acceptance shows a great change in the attitude of orthodox ministry. Not long ago it was pronounced to be of the devil, a delusion and sham, a pestilent heresy, wholly unworthy the consideration of any right-minded person. It strikes an impartial onlooker, however, that if any one really wanted light on the subject, wished to know what it is and what it does, they would go to those who know something about it through long and careful study and practical application. Such is the course a sensible person would take if he sought a correct understanding of any other science, and it seems as though the rule would apply here equally well.

No one can really say what a doctrine is worth until they know what fruit it bears. This test was given by the great Teacher and is of universal application. The fact that God is omnipotent, omnipresent, and omniscient is universally accepted by Christian people, at the same time many believe in another, an evil power, hardly less in all these manifestations. This latter Christian Scientists do not believe, and they act accordingly. They believe an evil will is no more in potency than the person allows in his own consciousness. So much yet no more.

Further, they seem able to keep themselves and families in comparatively good health without the aid of drugs or the attendance of doctors of medicine. The good which Dr. Gladden sees is its high idealism and great spirituality, opposing the rank materialism of these times. One thing, of vital importance, however, that he scarcely touched, is the fact that the Scientist looks to Christ as the Saviour from ills of every sort and name, physical as well as spiritual, and they find in the Christian Science text-book how this may be done. The clergyman prays that God will bless the means employed for the recovery of the sick; the Scientist, casting all drugs aside, has such an understanding of divine law that healing of bodily ills follows.

Christian Scientists point to the precepts and example of Christ and the practice of the early church as their guide and rule of faith, and have proved the availability of this method through the recovery of many thousands of cases given over by the doctors as hopeless and incurable. These are facts which may be proved by witnesses in almost every city, town, and hamlet in the land. The only good reason one can give for this success is that they deal not with the weak things of matter but the mighty things of God, and of the Spirit that creates and sustains all life.

One of the most pleasing evidences of the spirit manifested by Christian Scientists is the kindly way in which they refrain from returning railing for railing. We understand they have a tenet in their church rules, read publicly and assented to once every month, that their members shall practise this law of love and forgiveness. There have been so many criticisms, both kind and unkind, of the adherents of this faith; they have been so wronged in statement, so misunderstood as to what they really do believe and practise; their literature so garbled and given a meaning not designed; its practical benefits so overlooked or ignored, that many excellent people have a most unfavorable opinion of it. The universal testimony of those who have studied the text-book, which has had a sale of more than two hundred and seventy editions of a thousand copies each, shows there are a great multitude who have been benefited and blessed through its teachings.

Again, the public seems to have laid down a rule for the Christian Science practitioners required of no others; namely, that they must succeed in every case and fail in none; or, failing, be subject to great annoyance. Did doctors always succeed they would not be calling on the legislative bodies to pass laws and regulations of a class character for their personal benefit.

A doctor, with all the skill, care, and experience possible, will lose cases frequently, and it is all right. The public says, all has been done that could be done, the failure is "the will of God;" but let a Science healer lose a single case and woe betide him. May we not hope that the coming century will witness a more just and tolerant attitude in this regard, and that these people will be tested by the same rule that others are. As the understanding of the method becomes more perfect, no doubt more perfect and rapid results will follow; but even at present their success has been such as it would seem should obviate any blame, much less prosecution, in case of some occasional failure.

### Evil to be Overcome.

Mr. Editor.

Will you permit me to say a few words in relation to a splendid sermon by Rev. O. P. Gifford, reported in *The Standard* of April 18? What appeals to me particularly in this sermon is the repeated statement that evil must be overcome by good. This seems to me so fully in accord with the teachings of the Saviour of men that it is always welcome, and it is somewhat surprising that preachers so rarely base their sermons upon this eternal fact. Dr. Gifford shows the power of love as a practical reality, and also calls attention to the fact that all Christian endeavor must be active and not passive. He points out the responsibility for evil and the necessity of overcoming it. His slight digression in which he condemns Christian Science for declaring the unreality of evil seems to me a misunderstanding on his part of the teachings of Christian Science. Christian Science teaches that evil is unreal, but in no flippant manner does it utter this doctrine. The aim is to overcome evil, and in thousands of instances the denial of the reality of evil has resulted in the destruction of evil. The denial is made for this purpose only. Christian Science shows that evil must not be thought, acted, nor manifested in any way, and when this has been accomplished by an individual, it shows the practicality of this teaching.

BICKNELL YOUNG.

In *The Standard.*

Much healing results from the study and public reading of the Christian Science Lesson-Sermon. In the Bible we are told: "He sent his word, and healed them." The Christian Scientist believes implicitly in the ability of God's word to heal, and has abundant proof of it in the healing which has come to thousands through the reading of God's word in this way.

ALBERT E. MILLER.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

## For the Children.

### The Passing of Fear.

M. B. J.

Two little girls aged three and five years were asking for something to do; this was last summer and they were living in the country. It was suggested that they go and pick dandelions. They were delighted, so taking their little baskets, they started. An auntie carried the smaller one down the terrace where the flowers were growing in profusion. She found upon arriving that there seemed to be a bee to each dandelion. Her first thought was to bring the children away, but as they were learning not to fear, for Love was always with them, she said, "You see the bees are having their dinner, wait till they have finished, then pick the flowers." She left them in Love's protection, and returned to the house. About an hour later they came in with their little baskets full of the dandelions, saying, "See, we waited until the bees had their dinner, then we picked the flowers."

The little one of three seemed to have a fear of going to any part of the house, which is a large one, alone. One day she wanted to play with her dollies. The play-room is on the third floor, and she and her auntie, who were on the first floor, were the only ones in the house at the time. Running to her auntie she said, "Will Love go with me if I go upstairs and play with my dollies?" Her auntie said, "Yes, Love is there." She started off, and was heard repeating the words all the way up the stairs, "Love goes with me." When she arrived on the second floor her courage seemed to fail, for back to auntie she trotted, and said, "Auntie, did you say Love goes all the way?" She was again assured that Love was with her; this time she was heard all the way to the top floor saying, "Love goes with me." Nothing was heard from her until two hours later she was found playing Sunday School with her dolls.

Are mothers who have accepted this glorious Truth, rejoicing enough that their children are learning to know this blessed way, and proving by their works they have the protection wherever they are?

### The Miner's Little Daughter.

My father dear works in the mines,
Down in the tunnels dark.
I sing so much he often says
I am his "meadow-lark."

Our little cabin on the hill
Is 'mid the tall, straight pines,
That seem to whisper all the day
To me about the mines.

I've twined some vines about the door,
I keep the house with care.
My father calls our cabin home
His "castle in the air."

I never put my clean gown on
Till just before our tea,
Because when father first comes home
He's black as black can be.

*Anon.*

### A Gleam.

ANNIE THERESA JONES.

FAR away to westward glowing
Just a tiny ray,
But enough to guide me safely
Home, at close of day.

## Testimonies of Healing.

I gladly and thankfully testify to the benefits received by me through Christian Science. All who are blessed by it, spiritually or physically, should regard it a privilege, a pleasure, to tell how they have been helped; that the good tidings may reach other unfortunates, enabling them to realize the full import of the passage of Scripture that says, "And the prayer of faith shall save the sick, and the Lord shall raise him up; and if he have committed sins, they shall be forgiven him."

For eight years I was an invalid, suffering from a complication of diseases,—heart trouble, indigestion, constipation, chronic inflammation of the bladder, and a severe form of nervous prostration. I was a wreck, enduring daily martyrdom. My mental agony from the neurotic condition was so acute I would have welcomed death gladly, as a release from torture. We employed eminent physicians, some of whom candidly told me they could not promise a cure, but hoped to make me more comfortable. Change of environment was tried.

During three years my husband and I were exiles from home, traveling from place to place seeking health, which like an *ignis fatuus* ever eluded us. I was in a hospital a month, but the relief obtained there was only temporary. I left greatly reduced in flesh and strength. In our extremity we were led by God's guiding hand to the home of some Christian Scientists. We did not seek them with any thought of taking treatment. The supposed knowledge which we possessed of Christian Science, gleaned from adverse newspaper criticism, had not inclined us to look upon it favorably. Our desire was simply to find a quiet place where possibly the boon of restful sleep, long unknown, might be vouchsafed us while we formulated plans for the future. Our friends told us of wonderful healing effected by Christian Science, and I decided to try it, though with little hope of its being successful, since I was daily growing worse, and was completely discouraged.

That was January 11, 1903. In four days I was better than in eight years previous. At the end of two weeks the organic troubles passed into oblivion, like mist, before the radiant sunbeams of God's love, and were effectually vanquished by the all-conquering power of Truth.

I was still a slave, however, to nervousness; but on February 2, just twenty days after throwing aside medicines, I was instantaneously manumitted. In the twinkling of an eye, Love, Truth, freed me from bondage. My husband also was cured of a physical disease of long duration.

Words can but feebly express our gratitude to God; to that great benefactor of mankind, Mary Baker G. Eddy, who has so nobly demonstrated her love for suffering humanity, by dedicating her life to their spiritual uplifting and physical healing, and to those patient, tender, loyal Scientists, our teachers and practitioners, who were instrumental in arousing us from the terrible nightmare of sickness that, like a veritable old man of the sea, was dragging us down into the depths of an ocean of tribulation and misery. Our dear Leader truly is the greatest discoverer the world has ever known. No other discovery can compare with this understanding of divine Principle which lifts those prone in disease, sin, poverty, death, into the light of health, goodness, prosperity, Life.

Our heartfelt desire is that the slight understanding we have obtained may enable us to help others to see that when cradled in the arms of divine Love, all are protected from the seeming power of error. Thus shall we glorify our Father in heaven, who has given us irrefutable proof that He will strew the pathway of His obedient children with the abundant blessings of Life, Truth, Love.

MRS. H. D. SQUIRE, Philmont, N. Y.

Digitized by Google

Feeling grateful for many benefits received in Christian Science, I desire outwardly to express that which inwardly I feel. Having been healed in Christian Science, I was led to investigate its teachings. It at once appealed to me as a beautiful religion, and I eagerly devoured the pages of Science and Health, while I strove to practise its teachings. We are enjoined by our Leader to "Take up divine Science. Read it from beginning to end. Study it, ponder it. It will be indeed sweet at its first taste, when it heals you; but murmur not over Truth, if you find its digestion bitter" (Science and Health, p. 559).

It was indeed sweet when I had only to read and ponder, but bitter, too, when its teachings were to be practised, and Truth to be demonstrated.

Every struggle has been rewarded with many blessings. Claims of sickness, lack, and fatigue have been met. Two children born to us since we became Christian Scientists, teach us to realize the value of its teachings and learn, by their faith and receptiveness of Truth, that of such is the kingdom of heaven. God, the Giver of every good and perfect gift, and all who have helped me, I wish to thank.

HATTIE BARR, Evanston, Ill.

---

Feeling that I should like to express my gratitude through the *Sentinel* for the help derived from Christian Science in the care of my children, I give these glimpses of my experience.

When my youngest child was seven months old she was healed of bronchitis and a cough thought to be inherited.

A few weeks ago in attempting to move a piano across the room, I called to my little daughter, aged eight, to pull out something that seemed to be in the way. Her efforts being unavailing, and not knowing her hand was there, I let the piano down very suddenly. She screamed, and on looking I found the end of one of her fingers was nearly pulled off. I bandaged it quickly, declaring the truth meanwhile as best I could. There seemed to be so much fear that I sent for treatment, which was given, and the child suddenly exclaimed, "Mamma, I'm all right," the finger causing her no more discomfort.

There was much comfort for her in the thought that she was doing right, and that God would not punish her. The finger has healed perfectly. May our daily prayer be, that we may be "faithful over a few things," that we may be made ready for more.

MRS. ANNA L. PHARO, Jamestown, N. Y.

---

In passing along one of Chicago's busiest thoroughfares recently, my attention was drawn towards a gathering of men and boys, who were watching, and some of the boys jeering, a man who was badly intoxicated, and talking incoherently.

I at once stopped, away from the crowd, and began my work as a Scientist, declaring for my erring brother, an environment of sobriety, kindness, strength, and sympathy. He soon attempted to walk along, leaning against a building, but after a few steps sank to his knees. He was assisted to rise, and resumed a resting position against the same building. Error seemed to have him, and most of the surrounding crowd in its grasp, but I knew that Truth is divine, and all-powerful, and continued my declarations of denial, with the realization of God's allness and ever-presence to help and bless.

Very soon the man made another effort to walk, and although shaky and a little unsteady at first, he soon passed me, crossed a busy street unassisted, and walked away without staggering. I offered a few encouraging words as he passed me, and in my heart of hearts prayed that his relief might be permanent.

Another instance of the efficacy of applying our everyday religion practically, wherever we are, for our own benefit and for humanity, was in the case of a young man, also intoxicated, who with a companion boarded an open street car near where I was standing. He was exceedingly profane and foul in his language, principally directed to his comrade, and interfered with the duties of the conductor by ringing the gong of the car frequently. Without speaking to the young man, I declared the truth as in the preceding case, and within a few minutes had the satisfaction of seeing him drop all ungentlemanly conduct, and for several minutes afterwards, until I left the car, he was perfectly quiet and well-behaved.

Words cannot express my gratitude to our Leader for a life and service which has led so many, like myself, to an abiding realization of God's presence, power, and love.

J. VAN INWAGEN, Chicago, Ill.

---

I have testified frequently to individuals as to what Christian Science has done for me, but never in public or for publication. To very many of my friends my transformation is remarkable enough to have brought out the statement, from some of them many times, that no other testimony is necessary for them to be convinced of the efficacy of Christian Science than their observation and knowledge of my experience.

I had been for many years addicted to the liquor habit, —the periodical type,—and had been clever enough for a long time to keep the cause of my absences, on this account, from business and other respectable places, from the knowledge of everybody, except my most intimate friends and family, and even the latter I was often successful in deceiving. But at last my wits failed me, and it seemed to me that all my friends were finding me out.

In 1894 I tried the Keeley cure, with the result that for a period of little more than two years I used no liquor. Resolutions were frequently and honestly made, and I suppose I had the will power of the average person, but every now and then there would come over me a temptation which seemed irresistible, and a debauch would follow.

In 1901, in the middle of the last month of that year, my brother, who had been interested in Christian Science and been benefited by it physically, challenged me one day to do him a favor. I gladly assented, but upon being informed that this favor consisted in my accompanying him to the home of a "true Christian Scientist," as he termed it, I immediately withdrew my consent, and invited him to command my good offices in some other behalf, and at the same time undertook to wave his proposal off as something too ridiculous to consider further. He insisted, however, that if I desired to please him I would meet him that very evening for an interview with the individual referred to, promising that if I then did not want to try Christian Science he would be satisfied. I reluctantly agreed.

The result was that before I came away from the home of the practitioner in question I asked for treatment, and in a week's time I was changed. A process of transformation was begun on that memorable evening which has changed my thought, my disposition, my character, and my appearance, "as the spring changeth the trees," so indeed have I been changed. I am "born again."

Other habits which a man of the world is usually in bondage to also left me. A decided change for the better took place in my business affairs, and I never knew, as I know now, what genuine happiness is.

I never before knew God as I know Him now. I never knew how to appeal to Him as I am learning to know how to do this; to love the Lord my God with all my heart, with all my mind, with all my strength, etc., was to me formerly an impossible command; to love my neighbor as myself was another; and the commandment to "love your enemies" was an absurdity. Now I am learning how consistently all these commandments may be obeyed.

Digitized by Google

With the aid of the book "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, I have learned to love to read and to study the Bible; and this I have been doing ever since that month of December, 1901, with an avidity that is almost incredible, whereas before I practically never looked at the Bible. "The Lord is my light and my salvation; whom shall I fear? the Lord is the strength of my life; of whom shall I be afraid?"

Need I say more? Need I say that I am grateful to all concerned? to my brother; to the "true Christian Scientist" referred to; to Mrs. Eddy, and to the many Christian Science friends through whom I have gained help and inspiration?

My great concern now is that I may deserve the name of "true Christian Scientist," like the one to whom I was introduced and who was the first, by his patient and conscientious work, to lead me into the right path.

C. F. BERGER, Chicago, Ill.

---

Mine is an experience which positively cannot come to any except to those who have lost their sense of beauty in materialism. To the man who says that for him the great question of all questions is answered by Darwin's theory, or by Spencer's synthetic philosophy, or by his own pet notion of what constitutes his true relation to God, the Father, it is an experience which will be pronounced either a mere humbug and fraud, or an honest but mistaken conception of cause and effect.

In the first place, I should like to say (speaking to the non-Christian Scientist, but to him who is not content with his present belief in God) that my experience, from the Christian Science standpoint, effectually disposes of the oft-repeated and confident statement that Christian Science is all very well for "nervous diseases," but that for organic diseases it is useless. The idea that God's arm is shortened does not hold in Christian Science.

My trouble was spoken of by the dental surgeons as a "fistula in antrum." It arose more than a dozen years ago, when I was about twenty-one years old, and in good health. It made its appearance upon the pulling of a badly ulcerated tooth in my upper jaw, a molar. Every day during all the years, until I was healed, a teaspoonful to a tablespoonful of pus would form in the antrum cavity which I ejected either from the nostril or my mouth. My only method of relieving the intolerable nuisance and frequent painful spells was to use a wash of any one of a couple of dozen different solutions, by means of a dental syringe. I kept one at home and one at the office. The fact that I was a salaried man, and that the case was one which, for such men at least, the ordinary dentist did not care to handle, resulted in my being shuttled around from one dentist to another, each one making a vague sort of a statement that he thought So-and-so could help me, or to come in again. Once in a while I would find a man who would consent to treat it for a while, for they all seemed afraid to operate upon the cavity. Some three or four years ago I had a short but expensive experience with two of New York's specialists in dentistry. Consultations were five and ten dollars each, and the advice of one was that in a few months the trouble would disappear, and of the other that probably it never would disappear. I remember that I worked a long time considering which one of the specialists I ought to side with.

A year ago last August, at a time when my whole system seemed about to give way, I was nervous and thin, lacked energy and ability or desire to work, and was feeling generally very much discouraged. I spoke of my condition to a friend, a dentist whom I met on the train daily, and he asked me to call on him. I did so and his advice was to stop running around to dentists who were using me only as a foot-ball, and go to a hospital, and have them take out the dead bone which must be the cause of my trouble. I felt much encouraged by his advice, and in less than a week's time I was an inmate of the New York Hospital. I was there something over a week. On leaving, the surgeons made the admission that although they had hunted faithfully for the cause of the trouble they could not find it, but they believed that a cure would result from the operation in that they had established a better drainage from the cavity, and he suggested the use of a silver tube which I bought, and kept in my mouth, eating all the time on the other side of my face.

It was the following June that I met a friend on his return from Boston where he had been attending the annual Communion service of The First Church of Christ, Scientist, in that city. In the course of the few moments' conversation we had, he promised to send me some literature on the subject of Christian Science. He sent me the current (June, 1900) issue of the *Journal* containing a lecture by Mr. Kimball. I read this lecture and decided that I would talk with a Christian Scientist. I went to Brooklyn on that day, and interviewed a practitioner. I bought a three-dollar edition of Science and Health. The next day I took my first treatment and was treated every day for about two weeks I think. Since that time Science and Health has been my constant companion. I have learned one great mistake was the belief in the reality of a diseased condition of my face. From the day of my first treatment to this moment, I have used none of the remedies which had been in daily use for so many years, either for this trouble or any other, and the discharge of pus seemed to have entirely stopped. At the end of about ten days, however, I was aware that the trouble was not altogether gone, although the nature and extent of it was entirely changed. The discharge was altogether from the nostril and slight in quantity and nothing like so offensive. The condition continued to improve slowly until about three weeks ago, when I found myself suffering from a severe cold. My mental work for three days seemed to have little effect. On the evening of the third day I was conscious of a severe pain in my face at the point where my old trouble had been. I went to bed and to sleep suffering great pain. At about two o'clock in the morning I awoke, and on putting my hand into my mouth I felt what was apparently the cause of the pain, a hard substance protruding from the gum. Almost without any effort I pulled the substance out. It proved to be a piece of black bone, about the size of a pea, being the end of the root of the tooth which had been extracted more than twelve years before. The exhibition of this piece of bone has been a source of astonishment to many of my friends, although many theories for the happenings are advanced which scoff at the connection of Christian Science with it. You can imagine how rapid and marked the improvement has been since this piece of bone came away. There is now hardly any trace whatever of the trouble.

The day when I took my first treatment was July 6 last. I weighed at that time one hundred and twenty-three pounds. To-day I weigh one hundred and forty-six. I have lost some things also. I no longer have the slightest taste for liquor, for tobacco, or for coffee or tea.

Perhaps the average person would say that the story I have taken so many words to tell covers all that I have gained. But no, I assure you that I would willingly forfeit all that I have gained in physical betterment, in exchange for what I have gained in the knowledge of God and my true relation to Him. I believe, of course, that such an exchange is impracticable in that a knowledge of God which results in the denial of other gods, destroys physical limitations or disease; that it is by knowing that God is God, and not a mixture of good and evil, that I am made unconscious of sickness and sin.

Christian Scientists will realize that the promptness with

Digitized by Google

which I saw the light was due to the fact that I had reached what seemed to be the extremity which was God's opportunity. I was in despair. I had lost faith in everything. And now, because of the faith that is in me I am growing daily. I know that all is mind; that "Spirit is the real and eternal; matter is the unreal and temporal" (Science and Health, p. 468). It is now a glorious pleasure to live and work in striving to demonstrate the truth, and to forget the dream which seemed to give reality to the thought that flesh and blood can inherit the kingdom of God.—H. D. HARTLEY, Ridgewood, N. J.

The above was written about two years ago. Mr. Hartley corroborated this testimony at the Wednesday evening meeting in Mechanics Hall, July 1, 1903.—ED.

---

I should like to have the Field know what Christian Science is doing for me, and the great help it is to me from day to day. It brings much comfort to know that we are all God's children, and that God is always near to give us help when we most need Him.

Two weeks ago last Friday error began to show itself. My mouth began to swell, also my tongue; then it began to turn black and blue. With great difficulty I could drink a little water, but could not eat anything. However, I held to Truth. The following Sunday it seemed no better. I sent word to a dear friend who is a Scientist, and Sunday afternoon the trouble began to yield and Monday noon it was entirely gone.

I should like to add my gratitude and love to Mrs. Eddy, the Discoverer and Founder of Christian Science, also to the laborers in the cause of Truth and Love.

L. ADAMS HAYWARD, Salem, Mass.

---

A testimony given in the *Sentinel*, telling of fear overcome in a shipwreck, has come to me many times with great comfort during recent severe storms. To know that good is the only power dispels all fear.

Christian Science is invaluable to me in overcoming fear of disease, accident, storms, discord, and particularly fear of what the future may bring. These are all being overcome. Recently fear of so-called measles suggested itself, as mortal mind said I had been exposed. Also fear of discord and separation from a friend was banished by knowing that God's ideas are harmonious and know no disagreement.

The *Sentinel* is filled with words of encouragement and love for me.—JESSIE FRANCES SMITH, Villisca, Ia.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Professor Edward C. Moore of the Harvard Divinity School, speaking at the recent Unitarian Festival in Boston, said, as reported in *The Christian Register*:—

"The isolation of theology is over. The times are passed in which religion was deemed a concern by itself. Religion is the doing of good in love. Theology is nothing more nor less than the adjustment of such thoughts as men have concerning religion to their other thoughts, and that adjustment is best achieved where these thoughts are at their freshest and most intense. The supremacy of theology is disputed by many. But even those who believe in its supremacy believe that it must vindicate its leadership as other departments of learning, as men and institutions vindicate their superiority, in the actual work of the world and in contact and comparison among men.

"A friend said to me the other day, 'The evils of our time will bring us round to religion.' Very possibly. But I should be sorry if that were the only outlook or hope that I had. The good of our time will bring us round to religion. The good of our time has brought us round to religion. The good of our time is religion. If a man's faithfulness in his daily work, I care not what that work may be, is not religion, then what is it? if a man's fulfilment of the duties of life to his family, neighbors, to the State, to mankind, is not religion, then what is religion? If the love of truth for truth's sake and the fearless obedience to it at any cost, in any task that may be set us, is not religion, then what is religion? And, if the institutions which call themselves religious are seen of men to exist in order that they may encourage, fortify, and uphold men in consecration to the life of duty which I have described, to aid men to the life which is religious and to the religion which is life, then, I say, men will come round to our institutions of religion."

Rev. N. S. Burton, D.D., in an article in *The Standard* on "Religion and the Public Schools," says:—

"There are indications that the question of the relation of the public school to religious instruction is about to undergo a rediscussion. If in some quarters it has been supposed that this question had been settled and laid upon the shelf, it is evidently not lying quietly there, and will have to be taken down and re-examined.

"Do not the facts of history show that the standard of morality in any nation or community is determined by the conception the people of that nation or community have of the moral character of the God or gods they believe? Is there not painful evidence that however readily men may assent to the moral principles which they were taught in their youth, these principles have too weak hold upon them to enable them to withstand the temptations which assail them in our modern life, because they are not anchored in religious convictions? Great numbers of children in our public schools come from homes (if they are to be called such) where they are in constant contact with vice and immorality and even crime. Can it be hoped that even the best moral precepts, repeated in their ears day after day, with no reference to a righteous Ruler or accountability to Him, or a Heavenly Father, will avail to counteract the demoralizing influence of their environment, and make good citizens of the State out of such material?"

The Rev. C. C. Searle, in speaking upon "The Religious Condition of Our Churches," is reported in the *Boston Transcript* as saying: "Much mischief is done by substituting civilization for Christianity. It has no repentance, faith, nor regeneration in it. The condition of the Church is spiritual inactivity. Many men profess Christ, but there are not many who are really Christians. Prosperity tends to avarice and worldliness. The automobile is the product of an age that has no moral purpose. It means to go. Not to get anywhere in particular, but just to go. We have no time to be religious. It is strange how emotionally religious some people can be and not be truthful. They can move people to tears in a prayer meeting and yet be grossly immoral. We must have a foundation of true morality. It depends on you and me, brothers, what our Churches shall be."

It cannot be too often insisted upon that the Gospel requires of a man only what is reasonable, practicable, and essential. It imposes no hard conditions, exacts no impossible service. Love, faith, obedience—these are the simple requirements, and divine aid is promised in fulfilling them. The obedience demanded is not to ceremonial observances grievous to bear, but to laws that promote happiness, peace of conscience, and physical as well as moral and spiritual well-being. Men have piled up exactions which are a burden to the tender conscience; but the yoke of Jesus is easy, and his burden light.—*The Examiner.*

And if the Gospel is finally to prevail in the earth, it must be through the appeal to conscience. There can be no graver peril to Christianity than the notion that Christian pulpits and Churches can temporize with or palliate unrighteousness, no matter where it manifests itself. A man accepts Christ by precisely the same processes as those by which he chooses honesty rather than fraud, and heroism rather than cruelty and cowardice. And when a Church condones unrighteousness, so far as in it lies, it cuts away the very grounds upon which it can preach the Gospel.—*The Watchman.*

The evangelical synod of Missouri of the Lutheran Church, composed of the Lutherans of sixteen States and Canada, recently in session at Pittsburg, has started a movement to unite all the Lutherans in the United States and Canada in one body. A general conference will be held in Chicago this fall, when plans for consolidation will be outlined.

We do not have to seek Him in the heights or in the depths. He is at hand, waiting the opening of our hearts to enter and abide. Faith and love, obedience and service, transform us into companions of His work and witnesses to His person. For where God dwells with man His light will shine through man to help and bless.

*The Congregationalist.*

Life is the test to which the Scriptures submit themselves as the warrant for their divine authority. No one as yet has been able to formulate a satisfactory *theory* of inspiration; but no man or woman who has ever ordered life by the principles of Scripture, in the spirit of Scripture, was ever long in doubt as to the *fact* of inspiration.

*The Christian Advocate.*

Much so-called prayer is not born in the heart, and it never rises above the head. It is body without soul, the utterance of the lips while the heart is far from God. But the true prayer of a true soul, at one with God through faith in Jesus Christ, has always been, and is to-day, a mighty power in the world.—*The Examiner.*

Rev. Rufus A. White of Chicago, says in a recent sermon: "The devil against which the modern Church must needs fight is ignorance, greed, selfishness. How much time have the forces of modern Christianity wasted in theological discussions. Let the modern Church and ministry become interested in this world and let the next world take care of itself."

Rabbi Hirsch, in a lecture before the Epworth League in Chicago recently, said: "If Jesus Christ should return to the earth tomorrow, he would be welcomed in every Jewish Synagogue in the land. . . . So far as the modern Jew is concerned, they regard Jesus as one of the noblest spiritual teachers that ever appeared in the world."

I am thankful to have this special opportunity of once more expressing an intense conviction that the manhood of Europe has been to a fearful extent alienated from Christianity, because our Christianity has been too speculative, too sentimental, too individualistic.—HUGH PRICE HUGHES.

*The Outlook*, in an editorial "For a Moral Revival," says: "Encouraging notes of the awakening conscience demanding a moral revival and reformation have been sounded recently in various branches of the Church, and it is none too soon."

We are not answerable for the results of consecrated effort for the salvation of our friends and neighbors—God will take care of that. We are answerable for the use we make of our opportunities—and none of us lack them—for putting forth such effort.

*The Examiner.*

Will not God have something against us because we fasten so readily upon the adverse things in life and fill our mouths with sore complaint when all the time God's other gifts cluster about us unheeded?

ELSWORTH LAWSON.

The best perfection of a religious man is to do common things in a perfect manner. A constant fidelity in small things is a great and heroic virtue.—SAINT BONAVENTURA.

Every day is a judgment. Every day Christ's fan is in his hand; every day he is separating the chaff from the wheat.

*Outlook.*

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

A settlement of the Manchurian question satisfactory to the Government has been reached. The Chinese Government has given assurances that it will in the near future open as treaty ports several ports now closed to the world's trade, and the Russian government, through Count Cassini, ambassador at Washington, has also given assurances that it will not in any way oppose such opening. The ports will probably be Moukden, the principal inland port of Manchuria, and Ta Tung Kao, at the mouth of the Yalu River. The recent meeting at Port Arthur of Russian officials now appears to have been for the purpose of systematizing and centralizing Russian administration there, and of conserving her proper interests.

The State Department has made public the correspondence between the United States and Russia created by the wish of the B'nai B'rith committee to forward to Russia, through diplomatic channels, a petition against the cruelties occurring at the massacre of the Jews at Kishineff last Easter. The correspondence consists of the instructions to Mr. Riddle, United States chargé d'affaires at St. Petersburg, stating the details of the petition and instructing him to forward the same to the Foreign Office if it were willing to receive it. Mr. Riddle cabled that the Foreign Office would not receive it under any consideration, and Secretary Hay has so informed the petitioners. The incident is now closed.

The United States rifle team recaptured the Palma trophy at Bisley, Eng. Her team scored an aggregate of 1,570 points out of a possible 1,800, and beat all the best shots of Europe, South Africa, Australia, and Canada, congregated for the first time on English soil to compete for the world's premier shooting trophy. Great Britain was second with 1,555, and Canada third with 1,518. With the exception of the eight hundred yard range, at which the United Kingdom beat them by three points, the United States team demonstrated superiority over all comers.

The captain of the United States flagship Kearsarge, one of the vessels of the European squadron visiting England, has received instructions to clean the ship's propellers, fill her bunkers with the best coal, and go at top speed with natural draft from Portsmouth, Eng., to Frenchman's Bay, Me. The trip began the 17th inst. and is designed to show the speed possibilities of a vessel of her tonnage and class.

The Pacific Commercial Cable Company intends shortly to make surveys for a cable from Manila to Shanghai. The steamers Anglia and Colonia, which laid the cable from Guam to Midway and then to Honolulu, are to return home, and one of them will be sent out with the new cable.

Secretary Hay has invited the Czar of Russia to name and appoint from the members of the permanent court of The Hague three arbitrators to constitute the tribunal which is to determine and settle the questions submitted to it under the Venezuelan claims treaty.

James Abbott McNeil Whistler, the celebrated American artist, passed away on the 17th at his residence, Chelsea, London, at the age of 69 years.

Emperor William has conferred gold medals on John S. Sargent and Edwin A. Abbey, the American artists.

The attendance at Detroit at the annual convention of the Epworth League was estimated at fifteen thousand.

**Foreign.**

Replying to a recent question in the Commons as to whether the Government would adhere to the dispatch to the British ambassador at St. Petersburg, in the early part of 1902, in which Lord Salisbury accepted the Russian proposal to a conference to discuss the best methods for a diminution of armaments, Mr. Balfour said the British had not altered their views on this subject. If any of the great Powers would take the initiative on this subject, the British Government would be glad to join it. But as the British fleet alone, or almost alone, of all the fleets in the world, was mainly for defensive purposes, and other nations could make no such claim, for that reason he thought the initiative should be taken by some other Power than Great Britain.

The Philippine Commission has tabled both the "opium bills," one creating an opium monopoly in the Archipelago and providing for its sale to the highest bidder; the other, a substitute bill introduced by the Commission, making the importation of opium unlawful except by pharmacists, and permitting the disposal of the drug on a physician's certificate. A special commission was appointed to visit the Oriental countries and investigate the regulations dealing with the disposal of opium.

At a meeting of the executive committee of the Pilgrims' Club, London, recently, says a press dispatch, a committee was appointed to give effect to the recent suggestion to erect a statue to George Washington in London. Archdeacon Sinclair, in submitting the plan of the society, said: "Englishmen have at last fully recognized the great qualities of Washington." He announced that he was authorized to offer a place for the statue in St. Paul's Cathedral.

The European squadron of the United States Navy, under command of Rear Admiral Cotton, left Portsmouth on the 17th inst. amid much enthusiasm. Salutes were fired and hearty parting cheers were exchanged between the American and British sailors. The squadron proceeded to Lisbon, where the King of Portugal received it with fitting festivities.

By a vote of 40 to 33 the Municipal Corporation of Dublin voted not to present an address of welcome upon the occasion of King Edward's visit.

The Venezuelan government has paid to the representatives of the allied Powers the last instalment of the indemnity as stipulated in the protocol.

The visit of King Victor Emmanuel of Italy to France has been definitely fixed for October 1.

Pope Leo XIII. passed away July 20, universally respected.

**Industrial and Commercial.**

The net earnings of the United States Steel Corporation for the six months ending June 30, amounted to $61,568,235. The unfilled orders on hand July 1 footed up to 4,666,578 tons.

The ore shipments from the Minnesota mines for June amounted to 2,292,000 gross tons, breaking all records and making the total for the season over five million tons.

It is reported that the United States Steel Corporation will absorb the American Can Company. Fifty million dollars is said to be involved in the transaction.

The Southern Railway Company, in order to relieve its car famine, will purchase one hundred new locomotives and seven thousand new cars.

The Baltimore and Ohio Railroad Company is to buy forty thousand tons of steel rails for 1904 delivery. This represents an outlay of $1,120,000.

**General.**

The largest factory of chemicals in the world is said to be the aniline and soda establishment of Baden, in Ludwigshafen-on-the-Rhine. The works employ 148 scientific chemists, 75 technical engineers, 565 clerks, and more than 6,000 workingmen. There are 421 buildings for factory purposes and 548 dwellings for laborers and 91 for officials. One hundred and two boilers furnish steam for 253 engines with 12,160 horsepower. Gas is extensively used as fuel. Five large steam hoists on the banks of the river are used for loading and unloading. The works own a vessel, with a capacity of 600 metric tons, for the transportation of sulphuric acid. A network of railways, having a total length of 27 miles, connects with the state railroad system. Three hundred and eighty-seven cars are owned by the factory.

The current number of the *National Review* contains an article by Alexander J. Finberg on "The Blight on Landscape Painting," in which the writer compares the works of the modern English painters with those by Turner, Gainsborough, Wilson, and other older painters, very much to the disadvantage of the moderns. The modern pictures show, in his opinion, how vapid, prolix, and full of boredom the so-called "transcripts of natural facts" may become. He concludes with a savage assault upon the Royal Academy, which he calls a "quasi-official organization for the extinction of fine art."

A paper mill to manufacture its product from the refuse of saw mills is to be established, it is reported, at Lake Charles, under the same auspices as the one recently exploited at Orange, Texas. The capital is $250,000.

The Great Western Railway Company claims to have made a world's record with one of its trains recently. It ran from London to Plymouth, a distance of 246 miles, in 233¾ minutes.

The British government has conferred a pension of twelve hundred and fifty dollars yearly on Justin McCarthy for his services to literature.

Three English motor cars are running between Dungu and Lado, the first motor car service in the Congo Free State.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## The Laying of the Corner-Stone in Concord.

THE ceremony of laying the corner-stone of the new church, the gift of the Rev. Mary Baker Eddy to the Christian Scientists of Concord, took place at half past twelve o'clock, to-day. In accordance with the wish of Mrs. Eddy the services were of a simple nature.

But few members of the church from abroad were present, and less than one hundred people resident in the city witnessed the ceremony from places of vantage in the square on which the church is being constructed. But for the expressed desire of Mrs. Eddy the attendance would have been very large, as people from various parts of the country, to the number of two or three thousand, had arranged to be present.

Some five minutes before the time appointed for the services to begin, a procession formed at the Eagle Hotel, which was led by the Rev. Irving C. Tomlinson, First Reader of the local church, and Prof. Hermann S. Hering, First Reader of the Mother Church in Boston. Some twenty-five ladies and gentlemen, including the Directors of the Mother Church, walked in the procession to the site of the new church, where they took places upon a platform erected there and around the corner-stone, which was a plain block of granite simply inscribed, "A. D. 1903."

At half past twelve o'clock, before this small company, the following order of exercises was conducted by Mr. Tomlinson.

Scripture reading, 1 Corinthians, 3 : 9–14.

For we are laborers together with God: ye are God's husbandry, ye are God's building.

According to the grace of God which is given unto me, as a wise master-builder, I have laid the foundation, and another buildeth thereon. But let every man take heed how he buildeth thereupon.

For other foundation can no man lay than that is laid, which is Jesus Christ.

Now if any man build upon this foundation gold, silver, precious stones, wood, hay, stubble;

Every man's work shall be made manifest; for the day shall declare it, because it shall be revealed by fire; and the fire shall try every man's work of what sort it is.

If any man's work abide which he hath built thereupon, he shall receive a reward.

And also: Ephesians, 2 : 19–22.

Now therefore ye are no more strangers and foreigners, but fellow-citizens with the saints, and of the household of God;

And are built upon the foundation of the apostles and prophets, Jesus Christ himself being the chief corner-stone;

In whom all the building fitly framed together groweth unto an holy temple in the Lord:

In whom ye also are builded together for an habitation of God through the Spirit.

This was followed by silent prayer and the audible repetition of the Lord's Prayer.

Mrs. Eddy's beautiful letter was then read:—

"First Church of Christ, Scientist, Concord, N. H.

"*Beloved Brethren:*—This day drops down upon the glories of summer, it is a glad day, in attune with faith's fond trust. We live in an age of Love's divine adventure to be All in all. This day is the natal hour of my lone earth life; and for all mankind to-day hath its gloom and glory—it endureth all things—it points to the new birth, heaven here, the struggle over—it profits by the past, and joys in the present—to-day lends a new-born beauty to holiness, patience, charity, love.

"Having all faith in Christian Science we must have faith in whatever manifests love for God and man. The burden of proof that Christian Science is Science, rests on Christian Scientists. The letter without the spirit is dead; it is the Spirit that heals the sick, and the sinner—that makes the heart tender, faithful, true. Most men and women talk well, and some practise what they say.

"God has blessed and will bless this dear band of brethren; He has laid the chief corner-stone of the temple which to-day you commemorate, to-morrow complete, and thereafter dedicate to Truth and Love. O may your temple and all who worship therein stand through all time for God and humanity.

"MARY BAKER G. EDDY."

The corner-stone was then laid, with the following articles deposited in it:—

The Holy Bible; all the published works of the Discoverer and Founder of Christian Science, the Reverend Mary Baker G. Eddy, including the text-book of the denomination, "Science and Health with Key to the Scriptures;" "Miscellaneous Writings, 1883–1896;" "Retrospection and Introspection;" "Pulpit and Press;" "Unity of Good;" "Rudimental Divine Science;" "No and Yes;" "Christian Science *vs.* Pantheism;" "Message to the Mother Church;" "Christian Healing;" "People's Idea of God;" "Christ and Christmas," an illustrated poem; Our Leader's Message; Communion Message; Church Manual. Also The Christian Science Hymnal; the current numbers of *The Christian Science Journal, The Christian Science Quarterly, Christian Science Sentinel, Der Christian Science Herold;* the By-Laws, and a complete list of the members of First Church of Christ, Scientist, in Concord, N. H.; the name of the donor of the new church edifice, the Reverend Mary Baker G. Eddy; the names of the Building Committee, the architect, and the builder.

The exercises concluded with a repetition of the following prayer from the Church Manual:—

"'Thy kingdom come;' let the reign of Truth and Love be established in me, rule me, and rule out of me all sin; and may Thy word, in Christian Science, enrich the affections of all mankind, and govern them."

The trowel used upon this memorable occasion was presented by Lady Victoria Murray, daughter of the Earl of Dunmore. It was a beautiful implement of solid silver with ivory handle.

The lot upon which the new church edifice is being built, at the corner of School and State Streets, is one of the choicest locations in Concord. It is opposite the High School, and is in close proximity to the State Capitol, the

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

Government Building, the State Library, the new City Hall, and the Unitarian Church. The lot has a frontage on State Street of one hundred and two feet and a depth on School Street of one hundred and fifty-five feet.

The church, of Gothic architecture, will be eighty feet wide and one hundred and twenty feet deep and will seat one thousand people comfortably. It will be built entirely of Concord granite. A handsome tower over one hundred feet high, and three beautiful entrances, will adorn the front.

The building committee consists of Messrs. Fred N. Ladd, Josiah E. Dwight, and J. Wesley Plummer. The architects are Mr. Francis R. Allen and Mr. Frederic Collins of Boston, and the builder is Mr. E. Noyes Whitcomb of Boston.—*Concord* (N. H.) *Patriot.*

### Bringing forth Fruit with Patience.

SAMUEL GREENWOOD.

THE fruits of a righteous life are prized by even the ungodly, though they shrink from the toil and time which are the price of their possession. In his desire for better things the awakening sinner often overlooks his accumulated transgressions, which can only be cancelled through reformation; and he whose vision has been opened in Christian Science to discern somewhat of the perfect Life divine, is apt to forget the valley of human beliefs through which he must pass as victor to reach the summit of his spiritual freedom. From afar he gains a glimpse of Love's dominion over man; this thought illuminates, uplifts, heals him; and in his joy he feels that it is but a short journey to that ideal life. Let not the neophyte in Christian Science be disappointed when this expectation is not realized, nor let his failures discourage him. The disciples were exalted to behold the glory of their Master's transfiguration, but they descended again into the valley and had many struggles with fear, cowardice, and failure ere they received the baptism which enabled them to follow him in demonstration.

Jesus with his wonderful spiritual insight discerned the nature and extent of human error and the magnitude of the work necessary to accomplish the salvation of mortals. When explaining to his students the parable of the sower, he declared that the seed in the good ground are those honest and good hearts which, "having heard the word, keep it, and bring forth fruit with patience." He was teaching spiritual truths and must have referred to the results of spiritual understanding, or the knowledge of God as Spirit. In Paul's epistle to the Galatians these fruits are spoken of as "love, joy, peace, longsuffering, gentleness, goodness, faith, meekness, temperance." These are the fruits demanded of all Christians, and in their production patience fulfils her "perfect work."

In the ardor of our first faith in Christian Science we may have felt that any evidence of error must quickly yield to our declarations of Truth, and though this has often been the case, a fuller experience has taught us that the way in Christian Science is the way of Christianity, and that much prayer and fasting are needed to bring out its higher demonstrations. There is a cross to be taken up and borne, a race to be run, a battle to be fought ere we shall gain the full fruition of the Christian's hope. There is no sudden transition from evil to good; it is a toilsome journey, a constant struggle, and requires patient work and waiting.

The healing of the sick is thought by many to be the chief fruit of Christian Science, but a closer acquaintance with this Science reveals its larger Christian work of regenerating the human mind. The production of the spiritual fruits, as enumerated by Paul, is a much greater demonstration of Christianity than the mere removal of physical disease, since barrenness of these fruits is the foundation upon which all pain and evil rests. This is not intended to minimize the value of physical healing but rather to emphasize the greater need of healing the disease of sin. When first introduced to Christian Science the sense of bodily need may have been so great as to eclipse all else, but when this need has been met, further progress will disclose the mental and moral deformities and defects which hide the true image of God in man. In this growth toward the Christ-ideal, sickness of body is often the first condition to be outgrown, though the Christian ability to prove God's power in healing disease will accompany the entire journey out of materiality.

People are wont to come to Christian Science believing in the reality of matter and sinful manhood, and all the dire conditions of slavery to the material senses. In their endeavor to reverse these beliefs and overcome their consequent discords, they find that many of the mistakes of past thought and training are very stubborn in their resistance and require persistent effort for their overcoming. Some fault may have apparently been conquered when it again appears; and so we learn the great need of humility as to what has been accomplished, and constant watchfulness lest these errors, through their seeming tenacity, have dominion over us. The patient application of truth and obedience to it which produced their disappearance in part, will destroy them utterly. The persistent rejection of every claim of evil, as a mistake which does not obtain in God or man, will, in the fulness of time, accomplish our deliverance, for our own acceptance of evil is the rod by which we have been afflicted.

The fact that patience is requisite in every line of work in order to succeed, implies that impatience must effectually hinder that success. To rebel because our work is not more quickly done is not the state of mind enjoined by our Master, for even he did not attain perfection at once, nor did he expect it of his followers. Knowing the deep-rooted love of sin in the human heart, he foresaw for mortals a long struggle from their sense of life in matter to life in Spirit.

The injunction against impatience holds no excuse for tardiness. It is true, God gives us all time in which to work out our salvation, but we have no time given us for idleness or procrastination. Patience means constancy in prayer, watchfulness, and work. Why should we expect our spiritual work to be successfully done without the same tireless perseverance that is necessary for success in the ordinary affairs of life? If our effort to demonstrate harmony in any needed direction is not at first successful, we know it is because our knowledge of Truth is not yet sufficient for the demand; the next time we may do better. All we can do is what others have done before us,—keep doing our best in the right direction, for God is working with us in every right endeavor. It is "the patient continuance in well doing" which inherits the promise.

The patient worker does not stop to measure the little he has accomplished with the task yet before him, but toils hopefully on, gladdened by the joy of a little done and confident in his ultimate triumph over evil. The impatient worker is ever looking back to see how much he has done, and is disheartened that it is not more. He is the wisest pilgrim who forgets "those things which are behind." What if error seems at times to conquer us, and many of the spiritual fruits have not yet blossomed on our branches! Let us remember that patience is one of the virtues to be added to our faith. If we are leaving nothing undone that has come to our hand there is nothing further now required of us, and up to that point we are doing all that Jesus did.

In "Unity of Good" (p. 6) our Leader, Mrs. Eddy,

Digitized by Google

›wingly warns us against the frightened sense which ıinks it must work out "every Life-problem in a day." Ve would do well to remember this when in the stress f anxiety to reach the end of our labors, or when in the ense of self-condemnation because our life is not more ruitful. Looking back over the one year or five years nce our first acceptance of Christian Science, we cannot ail to discern the elimination of numerous fears and wor-ies, the disappearance of many painful conditions, the oftening of the asperities of temper and selfishness, and a eneral brightening of thought and character. While these nay not be the positive fruits we are looking for, they re the needful preparation for better fruit-bearing; even s the gardener's treatment of a neglected field, ridding it of noxious weeds and cultivating the poisoned soil that t may be fit for good seed and good yields. If we are loing all that we can,—not all that is convenient, but all hat our present position makes possible,—our experience vill contain all the good we are now capable of knowing ınd doing, with our talents on the increase and the light growing brighter. The love that works for God because ts God is Love, never complains about the quantity of fruit, ›ut thanks God with gladness that it is learning how to live. We progress fastest when in place of lamenting our small grain of truth we give God thanks that so small a grain can do so much.

---

## "Canst Thou not Minister to a Mind Diseas'd?"

ROLLIN E. SMITH.

Canst thou not minister to a mind diseas'd,
Pluck from the memory a rooted sorrow,
Raze out the written troubles of the brain,
And with some sweet oblivious antidote
Cleanse the stuff'd bosom of that perilous stuff
Which weighs upon the heart?

In the foregoing lines, Shakespeare, that great analyzer of human weaknesses, has indicated that in his opinion a trouble of the mind is beyond the reach of material aid, and when one sees how successful Christian Science treatment is in ministering to minds diseased, one can but compare the different methods that are employed in healing. A testimony, one of the most beautiful I had ever heard, recently given at a Wednesday evening meeting, brings this out strongly. The speaker told of a young girl who, from some great shock, had entirely lost the power of speech. She could not articulate a word, nor even whisper. The physician who was called acknowledged that he could do nothing, but gave the sufferer some hope by saying that time might remedy the difficulty. But the weeks went by without relief. Other doctors were consulted, and the months passed on without bringing the desired help. Then specialists, as "expert" after "expert" was heard of, were visited. Thus hope was kept alive until months passed into years, but always with the same melancholy result. Finally, hope was abandoned, and by the time ten years had passed, a settled sadness and melancholy had taken full hold of the sufferer, now a woman. Nothing further could be done, as far as she and her family knew, for the most celebrated specialists had proved their inability to bring back her voice. The inevitable was accepted, and no further attempt at restoration was thought of.

One day, however, some friend came to the family with a story of what Christian Science was doing. The afflicted one showed no interest, while the family, utterly discouraged, were loath to go to any further expense after so many failures,—after ten years of disappointments. But it finally came about, through the insistence of her friend, that the young woman came to Minneapolis for Christian Science treatment. When she arrived at the home of the Scientist, her expression was that of one who had ceased to hope, ceased to enjoy, and who held life itself as of small value. Her eyes gave expression to a "rooted sorrow;" and long ago there had died the expectation of "some sweet oblivious antidote" which would make her whole again. Within a week after beginning the treatments the young woman was taken into the practitioner's home, and from the first day her expression became brighter, her eyes lost the set expression of melancholy, and hope seemed to be starting into new life where there had for years been nothing but despair. The old look rapidly faded away, and in its place there came a bright, hopeful expression, which seemed the reflection of a harmonious mind.

Now fully to realize what this change meant that came about during a few days of Christian Science treatment, one must bear in mind that absolutely no promise of healing could be made to her. She had no assurance that her ailment could be cured, while, in the ten years of suffering, she had had every assurance that no human power could give her help. Then why this change, while her physical defect was as great as ever, and no assurance could be given that it would ever be less? For years she had thought that if only her voice could be restored to her, she would be happy and light-hearted again, that this was the one thing and the only thing that could bring any joy into her life. When the hope of this had vanished, melancholy took possession of her. It was this error that Truth, through Christian Science treatment, took hold of and eradicated,—cleansed "the stuff'd bosom of that perilous stuff which weighs upon the heart." Her mind was ministered to before there was any sign of physical healing. But that did come, suddenly and completely, on the fifth night after entering a home that stood for the power and truth of Christian Science. In the morning early the patient found that she could speak; then she sang for gladness, and when the practitioner arose, she found her patient in the yard, singing back a glad greeting to the birds among the trees.

One of the proofs of Christian Science is that it does minister to the mind diseased, as bear witness many thousands of people who have found not only physical healing, but a harmonious mind: and only a harmonious mind can bring "the peace of God, which passeth all understanding.

---

## Harmony.

E. L. CURRY.

When we study Christian Science we learn that our real condition is harmonious, that in reality there is nothing to worry over, that God's creation reflects only love, peace, and happiness, and that we ourselves are a part of that one harmony. But there is a false claim of worry, unhappiness, sickness, ingratitude, and other discordant conditions in mortal mind, and how are we Scientists to rise above these and show forth in our lives our real selves? By trying to meet every assertion of evil that arises in our consciousness with the knowledge of the only creation, and by realizing that anything inharmonious is only in our thought. There is one Mind, and in that is all good, therefore we know that what seems evil to us is only a false belief, and we have only to think aright and harmony will appear.

Often we plan to do certain work in a day and something seems to hinder. Often we worry over this instead of knowing that we are living in eternity now, and there is no need of haste, for whatever is right and needful for us to do can be done. If we can understand this the demonstration will be made.

Truth is omnipotent, and by its power any material environment may be harmonized. I do not mean to say that this demonstrable understanding of Truth is gained easily or by one struggle. It requires constant self-denial

Digitized by Google

and unceasing prayer, and we must patiently and constantly deny that there are "minds many," which would argue ingratitude, sickness, and other evils. We must keep close to God, and by living up to our highest understanding of the one Mind we shall manifest harmony in our lives.

In Science and Health, page 489, we read, "Outside the material sense of things, all is harmony." Should we not be grateful to our Leader who has through her pure life and constant self-denial been able to give us this great revelation? How can we best prove our gratitude? By obedience, and by trying to overcome everything inharmonious, knowing it is only a lie or illusion, we can have heaven right here and now, for harmony is heaven.

## Faith Following.

O. P. K.

As I look back over the past I feel constrained to express publicly my heartfelt gratitude to God and to those through whom Life, Truth, and Love have been revealed to me. I have been brought from the "outer darkness," where I wandered without hope and apparently without God, and when every avenue of escape seemed to be cut off, to the strait path which our Master trod, which has been pointed out anew by our Leader, and which is so beautifully represented in a picture in her book, "Christ and Christmas." If what I am writing should ever be read by any who are bearing their cross up the hill, and whose path seems beset with fearful odds, let me say, it is not so important how far we have gone, or how far we must go, as it is that we keep going in the right direction. We can do this only by keeping our eyes on our model and following meekly and humbly our guide. The way grows wider, the cross lighter, and the light brighter as we journey on. No effort for good is ever wholly lost, even if to mortal sense it seems so. The good we desire is for us, and it will come to us if we put "self" out of the way. This we must do little by little in order that immortality may come to light. "Not as though I had already attained," but I rejoice in the "grain of mustard seed" or the "little leaven." May God bless Mrs. Eddy and all who contribute to the *Sentinel*, which every week brings some helpful message.

## The Bank of Love.

EMILY D. WILFONG.

SUPPOSE some one should proclaim to the world that a bank had been opened whose capital was infinite. That it was free to all to draw upon and for all the money they needed, would not this proclamation bring joy to the minds of many and take away their haunting fear, their dread of poverty? Well, this is just the news that has come to Christian Scientists in the understanding that there is a supply of Love that is able and willing to meet the needs of all mankind.

It would certainly be foolish for any one to refuse to benefit himself by the supply from the material bank, and it is not less foolish, surely, for those who know the truth that Love is the real substance, not to avail themselves of their privilege in drawing on this bank. So when a question of need arises, we should go right to this bank in perfect trust and confidence, and let our consciousness of supply be controlled by what is ours there.

In the material case, those who understand the use of money, would make the largest demand for it, so those who best understand the distribution of Love, will make the most demands upon the bank of Love, and in doing this, they will surely find, as our Leader says, that "Giving does not impoverish us in the service of our Maker, neither does withholding enrich us" (Science and Health, p. 79).

## Believing, then Understanding.

IDA L. BAKER.

IN studying the eleventh chapter of John's Gospel, we see how clearly Jesus taught that believing comes before understanding. Christian Science teaches that believing in God is the door through which we pass to faith, and that faith becomes understanding; and that there is no other way given whereby we can be saved,—know and understand God, Mind, Spirit. Jesus said unto Martha at the grave of Lazarus, "Said I not unto thee, that, if thou wouldest believe, thou shouldest see the glory of God?" If we are firm and constant in believing, we shall see—understand—God.

Jesus said, "Take ye away the stone." Unbelief is a stone. Not one ray of understanding was ever reflected through it. Unbelief demands, "Come down from the cross, and we will believe;" but the believing heart says, "We walk by faith, not by sight."

Doubtless many of us remember when we first heard of this Christ method of healing and did not believe. Like Nicodemus, we questioned, "How can these things be?" and we called for "signs and wonders" that we might believe.

Jesus taught, however, that seeing the outward signs is not always attended with believing. After feeding the five thousand, he said to those doubting hearers who murmured at his words, "Ye also have seen me, and believe not."

The faith of Christian Scientists is founded upon the divine promises of Holy Writ. They believe that these promises are as sure as the eternal Truth which governs them. They have proved that standing steadfast in this faith, there is to them a constant unfolding of the knowledge of God,—an ever clearer conception of the divine Principle of healing as taught and demonstrated by Christ Jesus more than eighteen hundred years ago.

## The Healing Truth always at Hand.

MARIE H. SEYMOUR.

JESUS came pre-eminently to heal the sick and to cast out sin and death. If this work was to be done through material means, could anything short of a thorough diagnosis and classification of all diseases, and a definite pointing out of each remedy designated for the removal of each particular disease,—would anything short of this, I say, have been a complete work?

All admit that the work of Jesus was complete. If complete, then surely it must contain a perfect system, and it is self-evident that that system was not material, for we cannot put finger on one disease and point to a drug which Jesus used in healing.

It is thus very evident that this is not what Jesus meant us to do when he said, "Heal the sick."

That a perfect system of healing was taught by him, none will deny. That Jesus expected all who called themselves his followers to use this system is very evident. Since we must admit these two propositions, we must conclude that it is possible to know and use this system now, to-day, since we as Christians claim to be his followers, and would in all loyalty follow in every essential that he taught.

Christian Scientists do recognize this and have in "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy the explanation of the Christ method of healing. All Christian Scientists apply this truth to every discord and find that in so far as it is understood it is just as emphatically unfailing as in Jesus' time.

## The Lectures.

### At Shellman, Ga.

At Shellman, Ga., Monday evening, May 11, Mrs. Sue Harper Mims of Atlanta, lectured on "The Spiritual Supremacy of Man through Scientific Christianity, the Religion of the Future." The auditorium of Shellman Institute was filled with a large and appreciative audience.

Mrs. Mims was introduced by Col. R. F. Crittenden, who spoke in part as follows:—

*Ladies and Gentlemen:*—Looking back down the dim vista of past ages, we see everywhere that woman has ever shed a halo of glory over the pathway of life. In reading sacred history we find her last at the cross and first at the tomb, carrying the glad tidings, He is risen, He is risen. In every-day life we find her the mainstay of our churches, the hope of our missions, and the leader in all our charities. So it has transpired that the nineteenth century, so rich in the material and spiritual developments, should have given to us a Mrs. Eddy, who has given to us a Christian Science, or rather, uncovered from the ages the healing power once displayed by the apostles.

*The Cuthbert* (Ga.) *Leader.*

### At Wheaton, Ill.

Judge William G. Ewing delivered a lecture on Christian Science at Library Hall last Tuesday evening [April 7]. Mr. S. L. Rathje introduced the speaker as follows:—

*Ladies and Gentlemen:*—There is one thing upon which the world has always agreed, and that is that truth is eternal. It cannot be made; it cannot be changed; we can in no way interfere with it. As it is, it always was and always will be. But as to the discovery of truth and what it is exactly, that is the question.

From time to time, individuals have discovered what they believed to be the truth and a faithful band of followers have always adhered to those discoverers of truth, and as they would advance a new doctrine it was always in the face of prejudice, always in spite of opposition.

And it seems the greater the truth, the greater the prejudice, the greater the opposition. Every truth that has been advanced and discovered has been tried by the fire of prejudice. A new doctrine is judged, not by what it is, but by the name that it bears or by what people believe it to be.

We have with us to-night a friend who is a pioneer of a new doctrine or truth. He is a man who is sincere in whatever he says, and if we hear him with the same degree of sincerity with which he speaks, it cannot result in anything but good.—*Wheaton Illinoisan.*

### At Brainerd, Minn.

Edward A. Kimball, C.S.D., spoke to a large audience June 9, at the Brainerd Opera House on the subject of Christian Science. Judge W. A. Fleming introduced the speaker, saying in part:—

I have been asked to preside at this meeting and introduce the speaker of the evening. I do so with pleasure. It should make no difference to any body what the subject is, provided it be lawful and moral. It can harm nobody. So far as Christian Science is concerned, I can see nothing in its teachings that is not sanctioned by the Scriptures. If the Saviour made any promise, and he did, he certainly made the promise that some should have the power to heal the sick. This cannot be denied. I have neither accepted nor rejected Christian Science, but I am curious to know just when and how it came to pass that this promise of our Saviour has lost its force. When did it cease to be that none should exert this power over disease as he certainly did. Not only the Master himself, but Peter and John, as well as the great Apostle to the gentiles,—blessed Paul,—possessed the healing art. Why not to-day as well as then? I take great pleasure, ladies and gentlemen, in introducing Mr. Edward A. Kimball of Chicago, who will now address you.—*Correspondence.*

### At West Superior, Wis.

Mr. Edward A. Kimball of Chicago, Ill., delivered a lecture on Christian Science Monday evening, June 8, under the auspices of First Church of Christ, Scientist, Superior, Wis. The audience listened with profound interest from the beginning to the end.

Mr. E. C. Kennedy, a prominent lawyer and former mayor of the city, introduced the lecturer. His introductory remarks were as follows:—

*Ladies and Gentlemen:*—The subject under discussion is one which has not only attracted widespread attention throughout all parts of the world, but has enlisted the sympathies and energies of some of the most learned and thoughtful men and women of the age.

Living, as we are, in the full enjoyment of modern inventions and discoveries, we may well wonder why the scientific employment of the simple agencies of nature which have wrought such wonderful changes in the industrial world, remained for centuries hidden mysteries.

Keeping pace with the industrial, can any one say aught against the application of scientific principles to the mysteries which for centuries have surrounded and impeded the progress of the religious world?

While I am not a Christian Scientist, I have every reason to believe that the fact I am not is attributable to my own stubbornness more than to any other cause. I believe that no man or woman who has studied the subject, who aims to lead a pure and Christian life, who searches for light unclouded by rituals or creeds, or who seeks for Truth not mystified by doctrines or articles of faith, can make the least objection to the teachings of Christian Science, the sum and substance of which, to my mind, is a higher understanding of God's laws, the laws of nature, and a better knowledge of Christ and his teachings.

The First Church of Christ, Scientist, founded at Boston, has an authorized Board of Lectureship, and it is my pleasure this evening to present one who is not a stranger to an audience in the City of Superior, and who is an accredited member of that Board; I bespeak for him your courteous and considerate attention. Mr. Edward A. Kimball, C.S.D., of Chicago, will now address you.

*Correspondence.*

### What Time is It?

Time to do well; time to live better;
Give up grudge, answer that letter;
Speak that kind word to sweeten a sorrow,
Do that good deed you would leave till to-morrow.

ANON.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

## Mrs. Eddy Expresses Sympathy.

In response to the following letter from the editor of the *Concord Evening Monitor,* Mrs. Eddy gave out the statement which appeared in the *Monitor* and in the leading papers throughout the country.

Concord, N. H., July 20, 1903.

The Rev. Mary Baker Eddy,
Pleasant View.

*My Dear Mrs. Eddy:*—In case you care to make any public comment upon the death of Pope Leo XIII., which occurred at Rome this afternoon, the *Monitor* would be pleased to become the vehicle to transmit your tribute to the public.

Faithfully yours,
GEORGE H. MOSES.

The sad, sudden announcement of the decease of Pope Leo XIII., touches the hearts and will move the pen of millions. The intellectual, moral, and religious energy of this illustrious Pontiff have moved the Church of Rome for one quarter of a century. The august ruler of 250,000,000 human beings has now passed through the shadow of death into the great forever. The Court of the Vatican mourn him—his relatives shed "the unavailing tear;" he is the loved and lost of many millions. I sympathize with those who mourn; but rejoice in knowing our dear God comforts such with the blessed assurance that life is not lost, its influence remains in the minds of men, and divine Love holds its substance safe in the certainty of immortality. "In Him was life; and the life was the light of men" John, 1 : 4.

MARY BAKER G. EDDY.

Pleasant View, Concord, N. H., July 20, 1903.

## The True Prayer.

THE following published extract from a sermon by President Angell at the University of Michigan, so emphasizes the need for prayer, and places it upon so true and rational a basis as to command more than passing notice.

He is quoted as saying:—

"In the prayerfulness of our Lord we find a most worthy example for the scholar. If there was a being on earth who, it would seem, could afford to dispense with prayer, whose unaided resources would suffice for any exigency, that being was Jesus Christ. But his life was pre-eminently a life of prayer. The windows of his soul were always open heavenward, and in answer to his prayer gales of inspiration from heaven were always filling his heart. The very source of his life and power was in his constant and prayerful communication with his Father. He taught his followers in all persuasive ways, by word and by example, that they should go to the same source for strength and light."

Jesus not only taught his immediate followers that prayer is essential, but he taught them how to pray. Throughout all ages man has prayed, and to the extent that he has prayed aright he has received a blessing.

A distinctive and much emphasized point in Christian Science is the constant consistent prayer which recognizes God, infinite Mind, as the supreme and only ruler of the universe. The prayer of the Christian Scientist is always, "Thy will be done in earth, as it is in heaven," and this prayer is offered in the spiritual sense that our Leader has given us on page 17 of Science and Health, "Enable us to know,—as in heaven, so on earth,—God is supreme."

That which is accomplished by prayer, the healing of the sick, the redemption of the sinner, the giving of joy for sorrow, is not accomplished because God has changed His purpose in response to our supplications, but because health, righteousness and joy are realities of being, and they are made manifest through right thinking which corrects the necessarily erroneous results of wrong thinking.

Jesus said, "When thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret shall reward thee openly." Of this our Leader says, Science and Health, page 15, "In order to pray aright, we must enter into the closet and shut the door. We must close the lips and silence the material senses. In the quiet sanctuary of earnest longings, we must deny sin and plead God's allness. We must resolve to take up the cross, and go forth with honest hearts, to work and watch for wisdom, Truth, and Love. We must 'pray without ceasing.' Such prayer is answered, inasmuch as we put our desires into practice. The Master's injunction is, that we pray in secret, and let our lives attest our sincerity." M.

## The Explanation of Peace.

THE harmony and orderliness which characterized the late visit of Christian Scientists to Concord, N. H., has awakened very general newspaper comment, and those who have had to do with excursion parties express their astonishment that such a very large body of people could be handled on such short notice without friction, accident, or even confusion. Great credit is due those who had matters in hand, but the final explanation, as we all know, resides in the fact that the people were all dominated by the spirit of unselfishness and love, and hence were all good-natured and manageable. We doubt if a single disagreeable word was spoken, or a single selfish impulse indulged by that great company during the day, and the result was not only ideal, it was entirely natural.

There is a lot of trouble going on in this world even among well meaning people, and sometimes it is found in Christian churches and Christian homes, where self interest has been permitted to intrude its ugliness and claim the choicest seat. In a large gathering or organization it is not necessary that many be disagreeable in order to disturb the peace. One ill-natured child can easily blight the happiness of a home, and a half dozen self-seeking, unmanageable members have been known to wreck many a noble organization; but where all are actuated by the one Mind, how sweet the peace and harmony that must prevail! There may be those who are known to the world as Christian Scientists, whose lives are not always characterized by that self-forgetfulness, that seeking of another's good, which their faith enjoins, but they certainly were not in evidence at the gathering about the threshold of our Leader's happy home.

The spirit of Christ is the spirit of self-surrender,—the denial of the claims of personal interest, the assertion and reflection of omnipresent Love,—and as no other professed Christians in all history are we called on to exhibit in every time and place that quiet modesty, humility, unselfishness, and loyalty to the larger interest which always marks the Christian gentlemen, and which removes the occasion of friction from every association of life.

Surely no pleasanter recollection was borne away from our meetings, than this of the uniform exhibition of true Christian courtesy which marked them. W.

## A Significant Address.

It may be questioned if any body of religious thought is undergoing more rapid change than that of Judaism. The shameful persecution to which the Hebrew people are still subject in some countries, and at the hands of so-called Christians, finds a significant rebuke in the frequent and emphatic expressions of veneration and love for the character of the founder of Christianity by the more progressive Jews.

Rabbi Hirsch of Chicago has recently said in a public address, we "regard Jesus as one of the noblest spiritual teachers that ever appeared in the world. . . . The so-called disciples of Jesus have persecuted the Jews for ages and the Jews have borne these persecutions with lamblike gentleness and silence. If Jesus Christ should return to the earth to-morrow he would be welcomed in every Jewish synagogue in the land, and every Jew would say with David 'Lift up your heads, O ye gates; and be ye lift up, ye everlasting doors; and the king of glory shall come in.'" It is of further interest to note that this thought was expressed before the Epworth League of the St. James Methodist Church of Chicago. Verily "the world do move!"

One other passage from the Rabbi's address will be a surprise to many. He said, "The Jews do not believe at all in original sin and inherited depravity. They believe that every man is a responsible free agent, and is not involved in the guilt of his fathers or his children. . . . They do not believe the story of the fall of man in the book of Genesis in its literal sense, . . . they consider the story of the Garden of Eden an allegory."

A very large body of Christian believers who have tried to explain the suffering of the innocent as an incident of the law of heredity which is of divine ordering and therefore good, may be led by the Rabbi's words to re-examine the teaching of the Old Testament upon that subject, and if so, they will find in the eighteenth chapter of Ezekiel the pronounced and specific condemnation of the claim that this law is of God, or that it expresses His purpose or government: "The son shall not bear the iniquity of the father, neither shall the father bear the iniquity of the son." This teaching is in keeping with the universal recognition of the divine justice, and on it Rabbi Hirsch evidently grounds his faith. Not infrequently religious critics refer to the teaching of Christian Science,—that the so-called law of heredity is an error of mortal mind,—in terms which would indicate that they are quite unfamiliar with the Scripture referred to, and with the interpretation of the Old Testament by its most devoted and intelligent students among the Jewish people.

W.

---

## Individuality.

In spite of the tendency towards the pursuit of material knowledge, evinced by most of the writers on the subject of evolution, the ethical element is ever seeking notice from those who really desire to find something which will prove that Mind underlies the processes of nature.

No one was ever truly great as sculptor, painter, poet, or prophet, who did not see and apply the lovely lessons given to mankind through all the symbolism of nature's vast school.

Jesus often turned thought in this direction. To a pastoral people he spoke of the shepherd and the sheep, the pastures and the fold; and again of the sower, the seed, and the harvest. In all these lessons the individuality of the listener was kept constantly in view, and here we find a secret of all truly efficient healing and teaching.

A teacher of botany in explaining the peculiarities of certain plants, held in his hand some sweet peas, and said that the individual blossoms were as different, the one from the other, as are the faces of persons belonging to the same family.

Science and Health says, page 240, "Nature voices natural law, and divine Love," and when we begin to study nature's book with a sincere desire to know good, we shall learn in time that every object in the universe, when spiritually discerned, is but a letter in the alphabet needed to express the name of infinite Love.

It is undeniable that one great need is to know ourselves, and in gaining this knowledge we must of necessity turn frequently from the unfolding expression to the creative Mind and its perfect idea.

In doing this a new and clearer sense of individuality grows upon us, and we begin to understand that there is no need for one to crowd another, since the attempt to take what belongs to another only beggars him who thus turns away from the one inexhaustible source. We learn, too, that the attempt to make others see through the lens of our experience is useless, because they have their own, which is as truly theirs as ours is ours.

To recognize and obey the divine Principle of our being, is the surest way to provide for the unfoldment of our individual characters into beauty and power, and this includes the best means of aiding others to reach the truth of their being.

This idea is wonderfully brought out in "Science and the Senses" (Miscellaneous Writings, p. 104), and especially by the statement, "In obedience to the divine nature, man's individuality reflects the divine law and order of Being. How shall we reach our true selves? Through Love."

In conversation with some students on a certain occasion, our beloved Leader sought to inspire them to noble endeavors, and said that the loftiest achievements are possible, "could you but see the grandeur of your outlook, the infinitude of your hope, and the infinite capabilities of your being." These words can never be forgotten by those who were privileged to hear them, and they have helped to strengthen others, growing weary by the way.

When the true sense of individuality comes to us we do not make room for ourselves by displacing others, but on the contrary make room for others by displacing the limiting beliefs of fear and ignorance, and by growing large in truth and love.

This is strikingly illustrated in the lives of all truly great men and women, who rise like new stars in the boundless realm of Mind, and who "Shine forth as the sun in the kingdom of their Father."

Growth has been named "an element of power," and we may therefore learn a lesson from the climbing plants.

In their early days, the struggle for existence seems to be all that they are capable of, but that is something. If a little vine loses its hold upon that which should carry it upward, it may fall back to earth, and its tendrils seize upon an object which will hold it down, or perhaps twine around its own stem and thus become self-imprisoned, until a skilful hand loosens them gently and lifts the vine up to its support. In such cases the plant seems to suffer greatly from the untwining process, but in a short time new tendrils unfold, and grasp anything which helps to carry the vine upward into the sunlit air, where it fulfils the law of its being. When the vines cling too closely to each other, their weight is apt to bring them down; but where their tendrils clasp firmly the rock or wall, they stand alone in sturdy independence.

The climax of this lesson is to be seen in the marvelous results which appear when the law of growth has overcome the difficulties and dangers of the incipient stages of development. When this law is fully established, the progress seems to be out of all proportion to anything which might be predicated of the earlier stages of the vine's existence.

Is it any wonder that Christ said, "I am the true vine,

Digitized by Google

and my Father is the husbandman. . . . If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you"?

This, then, is the life-problem of the Christian Scientist, to discern and love the infinite individuality revealed by Science; to abide in Life, Truth, and Love, and to know that this infinite All, now is; that when the senses of Soul are our guide and monitor, the errors of material sense will vanish, and in their place we shall behold what we cannot help loving, God's children, the ideas of infinite Love, each filling a place no other can, and all governed by the one Mind, one Principle. K.

## A Letter from Business Men.

Chicago, June 25, 1903.

*Dear Mother:*—A number of business men in Chicago meet daily at luncheon. With no other bond of union than that welded by love for God and their fellow-man planted in their breasts by the right understanding of God as revealed in Christian Science; with the strife for gain stilled for a few minutes in the middle of each busy day by the recognition of the Christ ever-presence; with "who shall be greatest" giving way to "who shall be purest" they have welcomed an opportunity to show to you their calm, rock-founded gratitude for the good that has come into every minute of their business lives through your labors, your sacrifice, your love, and your triumph.

They wish the enclosed check to be applied toward the furnishing of *your* room in the Concord Church. If it can add one comfort to your heart in return for the flood of light and joy poured out to them through you they will feel blessed indeed.

Yours faithfully,

J. U. HIGINBOTHAM, for the above gentlemen.

To Mrs. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

## Board of Lectureship.

THE following are the appointments of the year beginning June 29, 1903, on the Christian Science Board of Lectureship of The First Church of Christ, Scientist, in Boston, Mass.

Rev. Irving C. Tomlinson, C.S.B., Concord, N. H.

Rev. William P. McKenzie, C.S.B., 1010 Massachusetts Avenue, Cambridge, Mass.

Carol Norton, C.S.D., (address to be given later in the *Sentinel*).

Edward H. Hammond, C.S.D., 1901 Linden Avenue, Baltimore, Md.

Mrs. Sue Harper Mims, C.S.D., 575 Peachtree Street, Atlanta, Ga.

Rev. Arthur R. Vosburgh, C.S.B., 23 Triangle Building, Rochester, N. Y.

Judge William G. Ewing, C.S., 2932 Indiana Avenue, Chicago, Ill.

Edward A. Kimball, C.S.D., Post-office Box 518, Chicago, Ill.

Bicknell Young, C.S.B., 41 Roslyn Place, Chicago, Ill.

Silas J. Sawyer, C.S.D., Room 301 Masonic Building, Milwaukee, Wis.

Miss Mary Brookins, C.S.B., 925 New York Life Building, Minneapolis, Minn.

Judge Septimus J. Hanna, C.S.D., 1532 North Nevada Avenue, Colorado Springs, Col.

F. J. Fluno, M.D., C.S.D., 1319 Grove Street, Oakland, Cal.

William N. Miller, K.C., C.S.B., 6 Sumner Terrace, S. Kensington, London, Eng.

By a change in the rules, lecturers are no longer assigned to particular districts, but each one becomes a lecturer at large. Any lecturer may be invited by any Church or Society of the denomination, and will respond in so far as his engagements will permit. Lecturers who are also First Readers give only three lectures yearly; and to save them correspondence it is announced that Mr. Tomlinson and Mr. Miller are First Readers.

Requests for lectures and all correspondence connected therewith must be sent to the individual lecturers, and not to the Publishing Society.

### APPLICATIONS FROM CLERKS.

The Manual of the Mother Church wherein are given directions for the orderly conduct of business, makes provision that applications from branch churches to the lecturers should be made through their clerks. Even where there is a special lecture committee, it will be possible to conduct the correspondence through the officer appointed for this purpose by the church or society. In order to facilitate this and other business it is now requested that all clerks of churches or societies shall, as soon as possible, send to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass., their names in full, with exact post-office address, and in cases where the address for telegrams may be different from the mail address, that should also be given.

Copies of the circular issued by the Board of Lectureship will be sent to clerks on receipt of their addresses.

## An Editorial Excerpt.

THESE visiting Christian Scientists teach us something. They teach us, first of all, something of the character of the very great number of those who have found the truths of this faith. If "from one we may judge all," much more may we learn from the ten thousand who came to us Monday, how much of joy and hope in believing, is found with these who are Christian Scientists. Again, they teach us much of courtesy in the mass. An American crowd is always good-humored, but it is not always considerate, each of the other's comfort. But this crowd of the thousands who were at Pleasant View Monday was always thoughtful. There was every excuse for selfishness. They were there to look upon their Leader, a woman more fond of the retreat of her study than of the publicity of crowds; a woman whose every word is precious to hundreds of thousands, whose face few of the widely scattered followers can be privileged to see and whose voice fewer still of their number can be privileged to hear. If ever there was a time when there was an excuse to scramble for the choice positions, for the front row, for the best place to see and hear, this was the occasion. But there was nothing of the sort. Nobody crowded, nobody was crowded. Each took the most natural place and, to quote President Roosevelt's exact phrase "stayed put." It was a lesson, we say, of courtesy in the mass. That order which is heaven's first law was well exemplified by our visitors Monday.

We should be glad to have these lessons oftener. We are always glad to welcome the Christian Scientists to Concord. They do us all good.—*The Concord Monitor.*

We must not wait to do great deeds
Which all the world shall see;
Our part is just to sow small seeds,
And God will grow the tree.
Look not to see the branches mount,
Just leave it with the Lord.
Who toils for God and keeps account
Shall never reap reward.

POLARIA.

## For the Children.

### Safety in God's Hands.

M.

FOR the children who love to know of children's work in the Field, I want to say that about four years ago my three-year-old son was very ill with the grip, and as I had been studying Christian Science only a few months, I felt that I was rather an incompetent practitioner; but as I had no help in the house, no telephone, and my husband was away, I decided to do my best without asking for outside help, since I knew that God does the work.

I spent the greater part of one day reading and demonstrating with only a slight improvement. At five o'clock my mother came in and said it was a shame to do nothing for the child; but I told her he was safe in God's hands. She said, "Well, I will go home and get supper for the folks, then return and stay all night with you." As soon as she had left the house, I took the child in my arms and apprehended as clearly as I could that God's work was done, and that my dear child was perfect. So long as I held him, and held to this truth he said he was free from pain, but as soon as I put him on the couch he cried for help. I told him I would have to get supper ready, but that I would all the time know the truth for him. My older boy, then four years of age, said, "I'll treat him;" and when I left the room to get supper he knelt by his brother's couch and prayed with his understanding of Christian Science all the time I was absent.

The child was healed and sat up to the table and ate a hearty supper. It was indeed wonderful to think of the dear earnest little child's help in making such a beautiful demonstration.

When their grandmother returned she was surprised to see the child all right, and said she could not understand it.

I have since had class instruction and have tried to teach my boys the truth in a systematic way; many are the beautiful demonstrations we have had both for ourselves and others. Thanks to God, and to our dear Leader, Mrs. Eddy.

### "Count the Sheep and Go to Sleep."

As soon as the fire burns red and low,
And the house up-stairs is still,
She sings me a queer little sleepy song,
Of sheep that go over the hill.

The good little sheep run quick and soft,
Their colors are gray and white:
They follow their leader nose to tail,
For they must be home by night.

And one slips over and one comes next,
And one runs after behind,
The gray one's nose at the white one's tail,
The top of the hill they find.

And when they get to the top of the hill
They quietly slip away,
But one runs over and one comes next
Their colors are white and gray.

And over they go, and over they go,
And over the top of the hill,
The good little sheep run thick and fast,
And the house up-stairs is still.

And one slips over and one comes next,
The good little, gray little sheep!
I watched how the fire burned red and low,
And she says that I fell asleep.

JOSEPHINE DODGE DASKAM.
In *McClure's Magazine.*

## Testimonies of Healing.

I was injured by a fall when about two years old resulting in hip-disease, from which I suffered almost constantly until Christian Science released me, a little over two years ago. As a child I have no recollections of good times, such as other children had. I lay strapped to a board for many months, and was operated upon twice before I was twelve years old. After that for a while I seemed to be better and was able to walk without crutches, only wearing a high cork sole on my shoe. But after a year or two the disease appeared again, this time accompanied by rheumatism and sciatica. A friend spoke to me of Christian Science and gave me Science and Health to read, which I did secretly, being afraid to let any one know that I had it in the house. All our family are identified with an orthodox denomination, and I was as active a member of that church as it was possible for me to be. I read Science and Health, but could not understand very much of it, only I could see it was different from what my church seemed to teach, so I became afraid of it, and finally told my friend she must never speak to me again of that subject.

I then underwent another operation, which failed to make me any better, and later on, having another attack, I had a weight put on and spent some weeks in bed, which the doctor said was necessary in order to avoid another operation. At this time I asked the doctor if it was not possible for me to get well and stay well, as I wished some day to become a hospital nurse. He told me honestly that I must not think of it, that the disease was always liable to return, and I must be very careful, not work too much, or try to walk without a cane, and must wear a high heel on my shoe. No one knows just how I felt when I heard that verdict, as I did so want to be of some use to somebody.

About two years ago, after watching a Christian Scientist very closely for a year, I decided to ask for treatment, though I told him I did not believe all they claimed, and did not want to leave my church. I had treatment every day for over a year, and the result is that I am able to walk without any material support, and without any pain at all. I have no fear of ill consequences, in fact fear seems to be almost eliminated from my consciousness in regard to that condition. I wear no high heel, though I still limp slightly, but it does not cause me any inconvenience. I am also free from care and worry as to my future, am able to earn my own living, never having missed a day from my office for two years. I am sincerely happy and cheerful, not, however, because I force myself to be so, as I used to. The sense of opposition and discord in my family, on account of my course, has to a great extent been overcome, and in fact I could not ask for space to tell of all the change that has taken place in my consciousness.

I cannot in words express my gratitude to God for this truth, nor to our dear Leader, Mrs. Eddy, for pointing it out to us. All I can do is to try to prove it by my daily life.—MARGUERITE TEBBS, San Francisco, Cal.

It is now two months since I began studying "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy.

Some days ago something happened that left me so weak from a feeling of incapacity that I could simply hold on to the words, Lord, help me! In my agony error even tempted to self-destruction. Science and Health was near me, and I took it up saying, "Dear friend, what have you to tell me?" With a heart throbbing with grief I fell on my knees beside my bed, and on opening the book my eyes fell upon the paragraph beginning, "Dost thou 'love the Lord thy God with all thy heart?'" (p. 9); I read through to the end of the page, and rose from my knees

Digitized by Google

comforted but struggling. Later on I was enabled to make a demonstration of love, and then there came over me that calm, sweet peace that succeeds the storm. As is said in Isaiah, "When the enemy shall come in like a flood, the Spirit of the Lord shall lift up a standard against him." To-day I can say Science and Health is the standard that the Spirit of the Lord has raised up for me against the enemy. I say with the Psalmist, "Though an host should encamp against me, my heart shall not fear." I will go forth in the strength of the Lord, in the power of His might. The studying of my Bible has been nothing new to me, thank God; but Science and Health has brought me something new; that is, it has brought to me the understanding of my relationship with God, a knowledge that I would not exchange for all the precious things of earth.

Thank God for Christian Science! When I think of the struggles Mrs. Eddy must have passed through before she reached the summit of the hill of Science, it gives me courage to press forward.

MARGARETTE H. RHULE, Caballriga del Norte, Costa Rica.

---

About three years ago I was having some bridge work done at my dentist's, and one afternoon when he was preparing the teeth for the bridge he noticed the projections of the roots of an old tooth which had gradually decayed until these only remained. On seeing the roots he advised that they be taken out. Several other dentists had wanted to pull them, but I had always had such a terror of having a tooth pulled, they were unable to secure my consent, but when this dentist turned to me and said they must be pulled, I consented before I thought, and when I realized that I had told him to go ahead, I was seized with a great sense of fear. I immediately asserted my freedom in Truth.

The dentist asked me if I did not want to take an anæsthetic, since there would probably be a good deal of pain. I said no, and to say that word was a big demonstration for me. He went ahead and pulled the roots, after having cut into the gums twice so as to reach them. During the entire operation I felt no sense of pain. The only sensation was that of some one pressing on my gums. After he had finished his work for that day, I went over to a wash stand, and in turning on the water knocked over a bottle. The doctor looked around and when he saw what I had done he exclaimed, "Man alive! that bottle contained a mixture of two very powerful acids which will burn almost anything they come in contact with." I had spilt it on both hands and also on my trousers, but I simply wiped it off my hands and again looked to God. When the dentist first told me what the bottle contained I immediately felt a burning sensation, but in a moment this ceased, and I never felt the slightest sense of pain afterward. I then realized what a demonstration had been made, and that even mortal mind's most powerful laws were powerless beside the laws of omnipotent Truth.

J. W. THOMPSON, JR., Evanston, Ill.

---

Since accepting the guidance of divine Love, the new-old truth that makes free, the peace be still to weary, troubled hearts, joy and peace have had an abiding-place in my consciousness, also a longing for others to turn from the husks of materiality to life in God, and share in the song of rejoicing.

The Psalmist truly sings, "Thou wilt shew me the path of life: in thy presence is fulness of joy; at thy right hand there are pleasures forever more." In Christian Science we know and realize the truth of this sweet assurance.

Science and Health tells us (page 516), "Truth imparts its own true peace and permanence. Love, redolent with unselfishness, bathes all in beauty and light." Happy indeed are they who listen to the still, small voice,—the loving call,—"come unto me." This is the leading of divine Love into the true harmony of being, into the secret place of the most High. In this truth is exemplified our Master's wonderful teachings showing the way of life, holiness, spirituality.

Christian Science was presented to me at a very dark time in my life There seemed not a ray of hope to brighten my path. Almost from childhood a member of a church, striving to follow its precepts and teachings and to understand and know God. Yet when deep sorrow came, —ill health and other serious troubles,—to my tearful supplications there was no tender response, no comforter. The God whom I had endeavored to serve was far away. As time passed, there was a growing indifference in my heart toward the old thought. Gladly I turned to the arms of divine Love, to divine Principle; for, "He healeth the broken in heart, and bindeth up their wounds."

I was despairing and hopeless when I went to the practitioner through whose pure thought, patient work, and gentle guidance have come restored health, so many blessings, and so much peace. I am grateful to her indeed.

My heart goes out in love and gratitude to our beloved Leader who has so unselfishly shown us the way. Her words in "Miscellaneous Writings," p. 397, mean much to me.

> My prayer, some daily good to do
> To Thine, for Thee;
> An offering pure of Love, whereto
> God leadeth me.

S. W. C., Brookline, Mass.

---

I most thankfully give my testimony as to my healing through Christian Science. I have delayed doing this for a time so that I could say that I am cured. In 1890, I was attacked with indigestion and stomach trouble to such an extent that my life was often despaired of, though I tried to get relief from the best doctors I could find. I could not eat solid food of any kind for over ten years, and for about the same time I could not and did not have a natural action of my bowels, having to use artificial means every day. I supposed, and the physicians said, that my bowels were paralyzed, so that I never could be cured. I had given up hope of ever being cured, since over twenty doctors had treated me and failed to help my case. I suffered extremely at times, and medicine taken internally would not relieve me; nothing but hypodermic injections of morphine would relieve the terrible suffering in my stomach and bowels.

I was introduced to Christian Science through my daughter, and as a last resort I submitted to treatment by a Christian Scientist, which began in September, 1902. At that time I was also badly affected with rheumatism in both arms and in my breast. In October, 1902, my bowels began to act regularly without the use of any medicine whatever. I could and did digest my food regularly, no trouble arising from eating anything, and my appetite was and has continued good. My rheumatism all left me, and none of my ailments have ever returned. I have increased in weight about fifteen pounds, and have been and am still able to eat all I want, and since last October I have been able to work every day.

I feel as well as I did twenty-five years ago, although I have reached sixty-seven years of age. I feel truly thankful to be able to give this testimony, and I willingly and thankfully give the credit to the Christian Science treatment, which effected a cure that I could not get in any other way.—G. W. PAUL, Painsville, Ohio.

Digitized by Google

There is never a day but gives us occasion to be grateful for Christian Science.

While sitting by the bedside of my daughter who was ill, I became alarmed at the symptoms. I was alone, and it was after midnight. We were in a strange place with no Christian Scientists near us, and a feeling of isolation came over me. As the child moaned I became more and more alarmed, as I thought, "What if it should be small-pox or scarlet fever, and what if she should die!"

I determined to call in another Scientist in the morning, for it seemed I had used every argument to destroy error, but seemingly error refused to be dismissed. Then the thought came to me, "There is work to do *now*, and *you* must do it. You have Science and Health and God, you need no more." I began to repeat the 23rd Psalm, and when I came to the sentence, "I will fear no evil," I repeated it over and over as I grasped more and more fully the truth that there is nothing to fear,—no small-pox, no fever, no death,—"For Thou art with me."

In less than an hour, the fever was gone and my child resting. As I went back to bed my little boy awakened and was frightened by a shadow on the wall. As I explained to him it was but a shadow and could not harm him, I realized that the claim of illness was but a shadow.

It was such a comfort, through the experience which followed, to know it was but a shadow, that only health, life, and God are real.—MRS. H. S. WELCH, Winnipeg, Man.

---

I wish to say that two years ago I became interested in Christian Science from reading a copy of the *Journal*. Since that time I have taken instructions in Christian Science under a gentleman of this city who helped me to understand its truths. I had long searched for Truth in every direction, as I thought, through human theories, creeds, and doctrines, but found it not, for the kingdom of God is within. I am grateful to understand that the great need of to-day is mental regeneration, not medical or surgical treatment. If thought is right, the basis of every action is correct.

I and my family have overcome many physical troubles through God, as He has been revealed to us in Christian Science. My wife was cured of asthma; one of my little girls of habitual fever and weakness; another of convulsions from a kick in the abdomen; our baby cut all his teeth without the slightest difficulty, which was unusual for our children; lastly, I was cured of the tobacco and other objectionable habits; biliousness, colds, and other physical troubles; all without a single material remedy, either internal or external. The sun of righteousness (right thinking) is coming again to the nations with healing in his wings. Forgetting the things of the senses, we grasp the things beyond, and it is only a question of time when we shall all know God, from the least unto the greatest.—WILLIAM B. PAGE, Tallahassee, Fla.

---

It is with heartfelt gratitude and deepest humility that I offer the following testimony as to the healing effects of Christian Science.

A little over two years ago I was given Science and Health to read, but I was so absolutely blinded by materiality that it seemed the most foolish and uninteresting book I had ever read. From the little I read of the book this fact seemed paramount; that in order to be well one was required to keep the commandments. To hold one's temper in check, to love one's enemies, and to forgive a wrong seemed an utter impossibility with me.

I was tangled up in such a network of sickness, trouble, worry, doubt, fear, and rebellion against God, that not only did I make myself thoroughly miserable and unhappy, but my friends and relatives as well. Of course there were momentary glimpses of happiness, when I had an occasional well day.

While attending the dedication services of Second Church of Christ, Scientist, I was so impressed with the happy and intelligent faces I saw there, that the desire rose again to investigate. I commenced reading the testimonies in the *Journal*, and as my health seemed to grow worse and extreme nervousness, almost amounting to insanity, became more apparent, I commenced taking treatment from a practitioner. After three days my heart trouble (of many years' standing) disappeared; my courage rose; I felt lighter hearted; dislike for people vanished, and life seemed worth living again.

I am now a well, contented woman, and when looking back I wonder how I ever lived without God, "the ever-present help in trouble." Dear friends, I could write for days of the many blessings received, of the demonstrations over sin and sickness; and words are inadequate to express the love and gratitude I feel towards our Leader who stands at the head of the Christian Science movement. My earnest desire is so to live this truth, that I may be worthy to keep in the front ranks. I deem it a great privilege to be a student of Christian Science.

B. C., Chicago, Ill.

---

A few days ago, an attack of inherited valvular heart-failure came over me, also the temptation, "Go look in the mirror, and see if your lips are turning blue." But these glad words came to me, "Do not look in that mirror, but go look in the mirror of Truth." Understanding the message, I obeyed. Turning to where my inseparable books were lying, the Bible and Science and Health, I looked within Truth's mirror, for Truth had healed me long ago of asthma, goitre, polypus, and other ills, and gave me a song of rejoicing.

Only those who have felt the illuminating light, power, and comfort of Christian Science can understand why we love God more than ever before; why we feel the gratitude we try to express toward one divinely enabled to unfold the deep spiritual message of the glorious gospel to mankind. May we ever make glad the heart of our Leader, Mrs. Eddy, by the radiating, transforming influence of Christian Science over our own lives and the lives of others whom we bring to drink at the fountain of living waters.

R. AGNES CLARK, Brule, O. T.

---

Desiring to help others I send my testimony as to the benefits received from Christian Science. My experience is a long one and impossible to give in detail. It is enough to say that for many years my mental and physical condition was becoming more and more hopeless. I was very unhappy and *materia medica* afforded no relief to my bodily suffering. I was told that my condition must prove fatal unless relieved. I then turned to Christian Science, at which I had scoffed. I was treated at different times but I seemed no better. At last I determined to learn more of the truth for myself, and I finally gained enough understanding to demonstrate in part the freedom for which I had longed. I now see that through all this time health and happiness have been growing from the seed sown in the beginning. I am now well and happy, and have lost only a few days from my business during the last four years, though before that I was constantly prostrated by weakness and suffering. During these years of suffering I told no one of the greater trouble, and therefore no one can ever fully appreciate the peace and freedom which I now possess.

How thankful I am to Mrs. Eddy and to many other

Christian Scientists, I will not attempt to say; to work faithfully in the cause of Science must be the best expression of my gratitude.—W. AUSTIN AMORY, Chicago, Ill.

A little more than four years since, I was led to Christian Science. I was afflicted with many chronic ailments. I was also unhappy as the result of disappointments and troubles of various kinds. The world seemed a blank to me, and I cared very little for any thing or any one except my three children, and was always wondering what would become of them, as I had no idea of living to bring them up.

A kind and loving Christian Scientist, who, as it has always seemed to me, was sent by divine Love, moved into the house next door, and she at once began telling of this healing truth. I thought it sounded more beautiful than all the things I had ever heard, but I did not see at once that it was for me, or that I could be healed. Yet I thought I had never heard of such a good God, so ready, so willing, so able to destroy all sickness, sin, and death. I told her I had never believed in God, as He had always been presented to me. I could not and would not accept such a God.

Well, I soon learned that I had never heard of God, for He had never been shown to me. The God I had always heard of was only the human mortal-mind idea of God.

In a week or two I began taking treatment, yet I felt as if perhaps I could not be healed, and my healing seemed very slow. I think I took treatment about eight weeks, and was completely healed of inward trouble and of eczema, and greatly relieved of rheumatism and catarrh.

As I have grown into the spiritual understanding, these errors have become less and less, and now I scarcely ever have a symptom of one of these old false beliefs. I have simply been transformed into a new being, and everything seems beautiful and grand; old things are fading out and all things are becoming new.

Immediately I took up the study of Christian Science and advanced very rapidly in the understanding, and I soon had the grand opportunity of class instruction by one of Mrs. Eddy's faithful students. During the time I have been studying Christian Science, I have had many proofs of its healing power through demonstrations in my family and for many outside of my own household. Words utterly fail to express my thanks above all to God, to Mrs. Eddy who is working constantly for the world's benefit, guarding and guiding the cause with such loving and tender care, and to my kind practitioner and teacher.

MRS. MITTIE ANGEL, Alamogordo, N. Mex.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Rev. George C. Lorimer says in *The Watchman* in an article on "Church Attendance:"

"This problem means more than how to bring people to church on Sunday. When they are there, what then? When Easter comes the sanctuaries are crowded, and it is conceivable that attractions might be devised which would induce thousands to fill the now poorly attended services. But when they have been brought together in those vast numbers, what then? Have the masses been 'reached' by this simple process? No; the problem we are considering comprehends more than the mere enlargement of congregations, and contemplates the ennobling of character, the transformation of the soul, the purification of conscience, the exaltation of motives, the regeneration of life.

"Not for conventional observance of a duty, not for diversion, not for social recognition, not for smug sanctimonious self-exultation, ought the millions to seek the house of God, but for the joy of experiencing the enthusiasm of righteousness and the inspiration to high endeavor that comes from a deep sense of God's Fatherhood or human brotherhood. And were we who officiate so endowed with spiritual genius that we could make what we call 'divine service,' and which is now too often lacking in warmth, intellectual force, and spiritual power, a real and heavenly agency for getting at the better nature of man and imparting to him the joys that rise from the wells of religious feeling, we should never lack for congregations, and congregations would never need to be urged to return again.

"The mass of our fellow-beings are not indifferent to what opens to them the wonders of existence and braces them for more earnest efforts for the right; and if they are not anxious to go to church it must be, in part, at least, that we who are in the pulpit have lost the sacred art of meeting their legitimate longings."

If Christianity has any message to men it is to their inner life—to the realm of thought and feeling and volition. It seeks to cleanse and invigorate the human soul. Speaking in one of the most miserable lands of any age, Jesus said: "Come unto me, all ye that labor and are heavy laden, and ye shall find rest to your souls."

Familiar as this truth is, it is precisely the one that, under various sorts of pressure, the churches of the present time are in danger of neglecting. In our day the multiplication of material luxury, and the possibility that any given man may achieve great wealth have made the ideal of success in life the unlimited command of money. That is popularly conceived as of great good.

Unless we greatly mistake, the preaching and methods of Church work that will most effectively reach men to-day center about man's relation to God. The first and great commandment is first because it is primary. In no age or mood of thought is it secondary. And in a time like this its primacy is transcendent.

The Churches are becoming responsive to the truth at which we hint. Evangelism rather than sociology is the watchword of the awakening Church. The movement in the staid and rigid Presbyterian Church is very significant. The keynote of our anniversary meetings last month at Buffalo was evangelism. And evangelism means the Church is about to address itself with new insight and devotion to impressing upon men's minds those truths that have to do with the inner life, with immortality, with responsibility to God, and with the possibility of fellowship with Him through the grace of the Gospel. That is the only appeal that is vital enough and strong enough to transform the love of the world into the love of God.—*The Watchman.*

Rev. E. M. Chapman says in *The Congregationalist and Christian World*:—

"Has the Christian life of Vermont as embodied in the Churches which we represent the comfort and efficiency which saved life ought to have? Do we find anxious and sorry people coming to the Church and saying: 'You have something which I lack—something that gives you peace and power and joy amid the restlessness and impotence and sorrow of this world. The world never seems to catch you unaware and at disadvantage. You seem ever adequate to the day's needs; always armed against the day's threat. Share your secret with me—break to me the bread of your wholesome life. Tell me what to do to be saved'?

"To ask that question is to answer it. No, we say, we do not see this happening. Our corporate Christian life makes no such impress as this upon the world about us. It neither convicts nor encourages men as it ought. And yet! and yet! When sober second thought comes we may make some claim for it. Some men are helped and saved. Some hearts are cleansed and cheered. Some impress upon the heedlessness and selfishness of the world's life is made. The confession to which we are forced is one of inadequacy rather than apostasy.

"The Church of to-day is in the Way of Salvation certainly enough. But by no means so far along that way—by no means so winsome and compelling and authoritative in its appeal to men who are out of the Way as it should be."

A hopeful outlook for the harmonious relations of religion and science, of the religious life and the intellectual life, was the burden of the message which the Rev. Reginald John Campbell brought to an academic audience of men and women that crowded the convocation tent on the University of Chicago campus.

"Science to-day," declared Mr. Campbell, "has reversed the idea of materialism. Materialism as a speculation has gone by the board, and the face of the times has changed. There never was a more hopeful outlook for the harmonious relation of science, philosophy and religion than now. Lord Kelvin, the leading scientist in Great Britain, believes that the time has come when science cannot deny the idea of God. The only question between science and religion is, 'How much shall be read into that idea?' It is not the fact of God, but the connotation of the term that science and religion have to agree on. . . .

"Religious orthodoxy to-day is not fashionable," he continued. "The fashionable attitude of mind is that of suspended judgment, or agnosticism. I hold no quarrel against agnosticism. There is a place for a certain amount of it, even within the borders of Christianity. No man can say that he knows all about God. I take it that agnosticism is the result of the habit of mind engendered by the inductive method of modern science."

*The Chicago Tribune.*

The Rev. R. J. Campbell in *The Watchman* says: "There is a somewhat different mood observable in the younger ministry of the evangelical Churches. The intellectual sermon per se, itself a reaction against an unintellectual type of Gospel preaching, is giving way to a more spiritual form of address, which without ceasing to be thoughtful, appeals to the spiritual instincts of the hearer and quickens the moral sense. With comparatively few exceptions, congregations do not ask either for scientific lectures, or literary theses in the place of sermons. They do not seek ornate and pompous discourses on the one hand, or conventional platitudes on the other; but they hunger for something strong and deep and true, suggestive of heaven and holiness, and the living, loving Christ. The more direct and simple the style, and the more rich and real the spiritual experience of the preacher, the more the people welcome the message. They crave the note of certainty."

Dr. Adams, at a recent installation, said: "We may preach the brotherhood of man with all our eloquence and all our logic, and all our sense of justice, right, and charity; but we cannot give it feet to run, nor wings to fly, till we have mated it with a deep and vital sense of the fatherhood of God. We have, to change the figure, a splendid motor, but we have no power by which to make it move, till we have geared it to the religious impulse, the unfailing, abundant, ample power of the love of God, and the desire to do His will. This 'piety' which we rate so lightly to-day, is, after all, the only motive-power which will ever regenerate our society."

There are two phases of life that are being talked about a good deal at present—the "simple life" and the "strenuous life." But the simple life which blandly ignores all care and trouble, all evil and conflict, soon becomes flabby and invertebrate, sentimental and gelatinous, and the strenuous life which does everything with set jaws and clenched fists and fierce efforts soon gets to be strained and violent, a prolonged nervous spasm. There is a golden mean between the two, a life that has strength and simplicity, courage and calm, power and peace, and that is the life of the man who strives to overcome evil with good.

DR. VAN DYKE of Princeton.

A soldier who should go into battle with a doubt in his mind whether his sword was of tempered steel or only a tin imitation of it would be apt to lose courage as the enemy came sweeping toward him. In the same sad predicament is the preacher who is not sure whether the sword he bears is of divine origin or a blade of human manufacture. How can he fight with courage when he doubts the quality of his weapon.

*The Examiner.*

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD, and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . 5 75
Orders for Science and Health in lots of twelve or more to one address may include any or all of the different styles of binding.

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in the CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . 5 00
Twelve or more to one address, each, prepaid . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.
No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Scien[illegible] 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

PUBLISHED EVERY SATURDAY BY

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

95 Falmouth Street, Boston, Mass., U. S. A.

ARCHIBALD McLELLAN, Editor-in-chief. JOHN B. WILLIS, Second Editor.

ANNIE M. KNOTT, Assistant Editor.

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month.

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Injunction proceedings, it is reported, will be begun if any further attempt is made by Philadelphia city councils to send the old Liberty Bell on further excursions like the recent one on the occasion of the celebration of Bunker Hill Day at Boston. Not only will restraint by law be sought by the lineal heirs of John Wiltbank, but the plaintiffs will set forth the fact that the bell is not the property of the city, State, or nation, but the personal property of the descendants of a man who took the cracked emblem as part payment of a debt due to him by the city of Philadelphia for casting a bell to take the place of this one, which was cracked upon the occasion of General Lafayette's visit to the city. The old bell was not destroyed and Wiltbank insisted that it remain in the possession of the city, though he never relinquished his claim to it.

Suit has been instituted in the United States Circuit Court by the Mercantile Trust Company of New York for the fore closure of the $15,000,000 mortgage on the properties of the United States Shipbuilding Company. The suit is brought because of the default of the payment of $400,000 interest on July 1 and the failure of the company to establish a sinking fund.

The plants covered by the mortgage are those of the Union Iron Works, San Francisco; the Bath Iron Works, Bath, Me.; the Hyde Windlass Company, Bath, Me.; Crescent Shipyard Company, Elizabeth, N. J.; Samuel Moore & Co., New London, Conn.; Harland & Hollingsworth Company, Wilmington, Del.; the Canada Manufacturing Company, Cateret, N. J. The Bethlehem Steel Works are not included in the property covered by the mortgage.

Two resolutions were adopted at the conference in Berlin of the United States and Mexican International Money Commission and the financiers appointed by Germany to discuss its proposals. One was that a uniform circulating medium in China is urgently desirable, and the other that, provided there is no serious alteration in the value of silver, the uniform face value of coins in silver-using countries should be in relation to gold as 32 to 1.

The steamship Indramayo sailed from New York on the 18th ult. with a large shipment of Philippine coin, 15,560,000 pieces in all. No attempt will be made to count the money, but one thousand pieces of each denomination will be weighed as a basis of estimate.

The United States battleship Kearsarge made the trip from Portsmouth to Frenchman's Bay in the record time for its class of 9 days, 4¼ hours. She arrived in splendid condition.

Wayne McVeagh, who is to represent the Venezuelan claims before The Hague Tribunal, has sailed on the steamship St. Paul.

The number of emigrants who came to the United States during the fiscal year ending June 30, was 857,046.

**Foreign.**

King Edward and Queen Alexandra, accompanied by Princess Victoria and their suites, arrived at Kingstown early on the 21st ult., on board the royal yacht Victoria and Albert. The decorations in honor of the event were elaborate. The gaiety of the occasion was subdued by the announcement of Pope Leo's demise. Their Majesties were received by the lord lieutenant of Ireland, the Earl of Dudley, and a number of officials and were conducted to a pavilion, where an address of welcome was read in behalf of the king's municipal council. His Majesty, replying, said he remembered the kindness with which his Holiness had so recently received him, and the interest Pope Leo took in the welfare of the English people. The king said he shared in the sadness of multitudes of his subjects over the news of the pope's death. He added that his visit came at a time when a new era is opening for Ireland.

The entry of King Edward and Queen Alexandra into Dublin was made the occasion for a general holiday. The decorations, especially along the route of the procession surpassed those of any previous occasion, even those of Queen Victoria's last visit.

During his stay in Dublin King Edward visited various public institutions; he was particularly interested in the "slum" sections, where he personally met many of the inhabitants and even remembered some of them with gifts of money. He was enthusiastically received there as elsewhere. From Dublin the king proceeded to Belfast. Here he was presented with an address of welcome by the Municipal Corporation, besides some fifty other addresses. The royal procession was then formed and traversed the streets to the City Hall, where he unveiled a statue erected in honor of Queen Victoria.

Senator Caro, former president of Colombia and President Marroquin's political rival and leader of the opposition to the Panama Canal treaty, has declared that, although personally still opposed to the treaty, in his opinion the opposition would be beaten and the treaty would be ratified. This expression of the most prominent foe of the ratification of the treaty has been received with great satisfaction by the friends of the canal on the isthmus.

It is announced that the British Government has completed arrangements with the Cunard Steamship Company, which will be shortly submitted to Parliament and the shareholders, by which the Government will pay over five million dollars for the construction of two additional steamers and that the whole fleet of vessels will be at the Government's disposal as cruisers. The agreement provides for an improved mail service.

A committee of Englishmen, including Archdeacon Sinclair, canon of St. Paul's, and C. M. Bell, assistant manager of the *Times*, met recently and discussed the project for the erection of a statue of Washington in London. The suggestions for the location of the statue included St. Paul's Churchyard and Waterloo Place. The project is yet tentative, but those approached seem interested.

The report of the Irish Land Bill has been completed in the House of Commons after a number of technical amendments in fulfilment of Irish Secretary Wyndham's promise while the bill was in committee. The measure passed the third reading on the 21st ult. by a vote of 317 to 20. It was then sent to the House of Lords, where it has already passed the first reading.

A. B. Aylesworth, K.C., Toronto, has cabled from England an acceptance of the offer to act as commissioner of the Alaskan boundary tribunal in the place of the late Justice Armour. His appointment will be recommended at once to the imperial authorities.

President Palma has signed the bill providing for a Cuban exhibit at the St. Louis Exposition.

**Industrial and Commercial.**

The General Electric Company has completed the largest electric locomotive in the world. It is for the Baltimore & Ohio Railroad, and will be shipped in a few days to Baltimore, where it will be used in taking heavy trains through the tunnel there. The locomotive weighs 180 tons and is designed to haul a freight train weighing fifteen hundred tons up a grade of 1.5 per cent. Its capacity is two thousand horse-power. The locomotive is made up of two units, each weighing eighty tons, and is so arranged that any number of units may be coupled together, making it as much larger as is desired. There are eight 42-inch drive wheels on each unit, making sixteen driving wheels on the locomotive.

The Commercial Pacific Cable Company announces that its entire system from San Francisco to Manila is now open for public traffic. The rate from San Francisco to Honolulu will be reduced from fifty cents per word to thirty-five cents per word. Other rates per word from San Francisco are: To Midway Islands, 60 cents; Guam, 85 cents; Luzon, $1.05; China, $1.10, Japan, $1.41; Formosa, $1.21.

The Louisville and Nashville Railroad Company in anticipation of a large fall trade has ordered 55 new engines of the Baldwin Locomotive Works for September delivery.

The wheat crop of the Northwest is estimated at 172,000,000 bushels.

**General.**

The auditor of Ohio announced on July 1 that for the first time in forty years that state is out of debt. According to the New York *Sun*, the addition of Ohio to the number of states free of debt brings up the total to six, the other states having no outstanding debt being Illinois, Iowa, Nebraska, New Jersey, and West Virginia.

The Boston Museum of Fine Arts has just purchased two paintings by Rembrandt, one an early example, painted about 1630 and believed to have been painted from the artist's father as a model; the other, Danäe, with the artist's signature and the date 1636. There are now four paintings by this artist in the Museum collection.

Singapore, in the Malay Peninsula, is perhaps the most cosmopolitan city in the world. The British and Foreign Bible Society sells Scriptures in over seventy-five languages, and nearly forty dialects are spoken among six hundred boys of the Anglo-Chinese College in that city.

An eruption of Mt. Vesuvius began on the 22d ult. The lava stream is reported twenty feet wide and three feet deep, and is flowing in the direction of Pompeii. The cone of the mountain has been engulfed in the crater.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From Our Contributors.

### The Giving of Testimonies.

FANNIE R. WINCHELL.

It is manifestly difficult for some to make the demonstration of speaking at our Wednesday evening meetings, and my heart goes out to the timid ones who would fain rise and testify to the great blessings they have received through Christian Science, yet who are held down by fear, self-depreciation, or some other form of error.

Having struggled through the worst part of the timid and quaking stage myself, I can perhaps give a few useful hints to those who are now making their first attempts at speaking. I do not think I am expressing myself too strongly in saying that when the duty of testifying in public first confronted me, I was simply appalled. Being at that time one of the most timid of the younger Scientists, I am confident that the fulfilment of the duty would have been put off to a very distant day, but for the fact that my slight understanding of Truth enabled me, by persevering effort, to put self aside for the sake of helping others. To relate my experience in Christian Science so that I might hold out to others a "cup of cold water" was to me a beautiful and inspiring thought, and a strong incentive.

Having made my first venture, and two or three subsequent ventures, with this end in view, I was somewhat encouraged, but soon found that continuance of this work required persistent effort. I was happy, however, over having made a beginning, and thus having put my hand to the plow I could not be satisfied to turn back.

I have spoken many times at our meetings, but I cannot say that I have ever found it easy. With me, the demonstration has been slow, yet I have been helped and encouraged in many ways. I think most of us have learned that the things which are most worth the doing are not apt to be easily done. I have looked upon this giving of an occasional brief testimony as a part of the active work of all who are trying to be Christian Scientists, and a work which is no more to be shirked or put off merely because it is sometimes difficult, than is the healing of sickness and sin. I have learned that one must bring to it the same courage, persistence, and reliance upon God that one brings to the treating of patients, or to the solving of other deep problems. We do not allow fear or weakness or self-depreciation to hinder us from working out these problems, why then should we let them prevent us from making this other demonstration? Bearing testimony to the works of Christian Science is one of the strongest and most effective means of spreading the truth, and it would be a claim of error that denied our freedom.

I have divers sombre recollections of having gone to the meeting prepared to speak; with inward perturbations which I was only partially successful in subduing, but with a Spartan resolve to take part in the meeting, and have, instead, sat throughout the evening in ungracious, undutiful, and unhappy silence. As the result of struggle and experience I have learned that there is one thing which is indispensable in speaking, and that is, indifference to criticism. It is well to have ease and grace of manner, but what are these if the spirit of Truth and Love be lacking? If we keep in mind our purpose to glorify God and aid others by voicing our gratitude for all the blessings of Christian Science, no unworthy fear of criticism can hold us.

At times, when I have yielded too long to the temptation to be silent, I have been incited to greater faithfulness by these words of the Master coming to me, insistent yet tender, "If ye love me, keep my commandments." How, indeed, can we truly love him and not wish to keep his commandments?

Let us remember this beautiful promise, "They that be wise shall shine as the brightness of the firmament; and they that turn many to righteousness as the stars for ever and ever."

Let us do our part as well as we can, not reluctantly, but gladly, bearing ever in our memory the grave, sweet words of our great and loving teacher, "If ye love me, keep my commandments."

### Words.

BLANCHE H. HOGUE.

Among English speaking people, the widespread lack of care as to the exact meaning of words in common use has given rise to many of the difficulties which beset the pathway of the investigator in Christian Science. In the ordinary experiences of conversation many misunderstandings arise from the differing concepts which two or more people may have regarding the meaning of a word or a sentence, and the failure to recognize this is often the occasion of one man's putting the color of his interpretation upon another man's meaning. An honest explanation, giving further statement as to the original thought intended, will frequently furnish a common basis upon which to stand, and thus remove the confusion.

One cannot become a student of the Christian Science text-book, however, without being impressed with the author's significant use of English in giving to the world "the things of spirit." Experience has shown that those who fail to understand the statements made by Mrs. Eddy in her book, "Science and Health with Key to the Scriptures," do so largely because they do not unite with her in a common understanding as to the root meaning of many of the words used. The man who turns to his lexicon when tempted to quarrel with the statements of Science and Health, will usually find himself enlightened as to the correct use of the word in question, and will gain an increasing appreciation of the author's comprehensive and significant use of the terms employed.

To illustrate: The theologian, should he object to the word Principle as applied to God, will find that the Standard Dictionary defines Principle as being "A source or cause from which a thing proceeds. A power that acts continuously or uniformly. A permanent and fundamental cause that naturally or necessarily produces certain results." Webster's International defines Principle as "A source or origin; that from which anything proceeds;

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

fundamental substance or energy." The Century Dictionary gives: "Cause, in its widest sense. That by which anything is in any way ultimately determined or regulated." Both Webster and the Century unite in giving the root of the word Principle as "beginning, first, commencement."

If the theologian will pause to consider, he will admit that in his heart he has always believed God to be just what these definitions declare Principle to be; and if he will add this definition to that of the loving Fatherhood of God which he has hitherto accepted, he will find his conception of Deity enlarged and expanded by this wider grasp of the nature of God, and His relation to His universe.

Again: The materialist, who may declare matter to be the only substance, and who cannot reconcile the application of the word Substance to an unseen God, will find that the root of the word Substance is "to stand under." It is defined as "That which underlies all outward manifestations." "The abiding part of any existence as distinguished from an accident." "The permanent subject or *cause* of phenomena, whether material or spiritual;" and the Century Dictionary presents that which leads to an ultimate conclusion in defining Substance as being "That which exists by itself." Surely every man will admit that everything in the visible universe depends upon a cause for its own existence as effect, and consequently that there is nothing which "exists by itself" save the one Great Cause,—the one Creator.

The students of Christian Science who have themselves accepted the teaching of Science and Health and no longer question its authority, are sometimes responsible for perpetuating confusion regarding the proper meaning of the words in ordinary use. The familiar phraseology of the text-book may be so thoughtlessly used that the statements, as quoted, may often mislead rather than instruct the listener.

This is well illustrated in the careful or careless use of the word "unreality." People who have heard but little of the statements of Christian Science frequently bring upon it the accusation that it teaches that all sin and pain and sorrow are "imaginary." This conclusion is reached because unreality and the imagined are to them synonymous terms.

While it is true that everything which is imaginary is unreal, it by no means follows that all unreal things are imaginary. To the sense of sight the earth is flat, the sun moves from east to west, the clouds touch the tree-tops at the horizon, the mirage appears under certain atmospheric conditions. These phenomena cannot be classified as imaginary effects, yet in appearance they are contradictions of reality. The car rails which seem to meet in the distance, the colorless landscape seen through smoked glass, are not the result of imagination, yet these effects as they appear are not in accord with the existing facts. The process of thought termed imagination does not enter into the false conclusions to which the eye bears witness, yet these conclusions are none the less untrue and unreal.

Counterfeit coin is by no means imaginary, yet by every one who knows the genuine currency, the counterfeit is recognized as a deception, depending upon ignorance or dishonesty to gain acceptance. Picture for a moment an isolated community in which counterfeit currency has for a long time been in general circulation. The community would be held under the blight and mildew of a dishonest system, and would be kept by its own ignorance under the burden of distrust, apart from the interchange of commercial interests. The counterfeit would seem the reality.

Should a messenger come from another community, or a discerning prophet rise among their own people, with the announcement that this currency is but the worthless counterfeit of a genuine thing, the first declaration of the message which exposed the deception and falsity would be, "This is not real." An effort to introduce the real currency and to educate the community to the knowledge of its necessity and value, would follow this exposure, but from the first instant the message, "This is not real," rang through the country, the destruction of the counterfeit would be assured.

Christian Science to-day is calling upon the world to destroy much more than imagination. It has exposed the entire carnal mind of sin, sickness, and death as a counterfeit of the Mind of Christ which knows only holiness, health, and truth. It brings to each one who hears and understands the message, the inheritance of a mighty discontent with the things that are counterfeit, and an abiding joy in finding and doing the things of reality. The man who loves and obeys this message is striving to attain that Mind which was in Christ Jesus, the Mind which associates not with evil, and just as rapidly as he can loosen the knotted complications of the false education and environment in which he has been living, he unfetters himself from the effect of the counterfeit system of thought, and emerges into the realm of reality. As he works he bears witness to the same ringing testimony, "This is not real." And those about him, seeing him lose the sorrow and pain and burden of the old ways, seeing him rejoice in a growing measure of the "fruit of the Spirit," call back to him, "Help us to walk with you,—help us to see that this is not real."

And so a mighty multitude is rising to the support of the message which is interpreting our Master's life work, which is revealing its scientific Principle and practice to be fully adequate to man's needs to-day. A great people have discerned the truth and value of the message, and are patiently and obediently at work to aid the establishment of the real,—the effacement of the unreal.

Is this saying that sin and suffering are imaginary? Is it treating lightly and unpityingly the ills of earth? On the contrary, the genuine Christian Scientist deals most compassionately with the sufferings of others, for he is learning that only as the tenderness and beauty of the healing Christ shine upon the sufferer, is he willing to abandon the old ways and means of relief; only as something which gives greater satisfaction than sin is revealed to the sinner, is he glad to turn from the false promises and pleasures; only as a sure haven of refuge, satisfying reason and heart, is offered to the doubter, does he seek release from the fears and tempests of the old beliefs.

This lesson shines clearly in the life work of Mrs. Eddy as Leader and Teacher. Not until she could clearly define the real, did she expose the unreal; not until she could reveal to the world the beauty of perfection, did she point out the hideousness of imperfection; not until she could offer God's promise of "beauty for ashes, the oil of joy for mourning, the garment of praise for the spirit of heaviness," did she call mankind from the idols of materiality. When to her came the mighty conviction that evil exists not as a factor in God's universe, but as a counterfeit claiming rightful place in His kingdom,—only *claiming* it,—she weighed the conviction, tested its truth, and proved beyond question that upon this basis alone, Jesus demonstrated evil to be powerless and destructible.

Patiently abiding in this conviction, Mrs. Eddy calls the world to awake to the revelation, and journeys on, still proving that the evils which confront mankind are not real or right or true. She has stood undismayed amidst the raging attempts to stay the destruction of the counterfeit, and has pointed steadfastly to the revelation of the reality. The message of Christian Science deals with more than imagination, when it offers, in exchange for a worthless counterfeit kingdom of false pleasures and desolation, the kingdom of holiness, health, and peace,—Christ's salvation; and it destroys more than imagination when it delivers mankind from the sum-total of human misery, in its varied forms of sin, sickness, and death.

"The proverbs of Solomon the son of David, King of Israel;

"To know wisdom and instruction; to perceive the words of understanding.

"A wise man will hear, and will increase learning; and a man of understanding shall attain unto wise counsels."

## The Passing of a Dream.

LETITIA H. GREENE.

WE are told in Science and Health, p. 418, that "Tumors, ulcers, tubercles, inflammation, pain, deformed joints, are all dream-shadows, dark images of mortal thought, which will flee before the light," and this has suggested an illustration which has been particularly helpful to me. Every discordant condition of the body is really like a lantern slide picture. When the room is dark the picture is clearly defined upon the sheet, but suddenly the curtains are drawn aside, the room is flooded with sunlight, and there is now no picture upon the sheet whatever, though the operator, the apparatus, and the sheet are exactly as they were, and nothing has been changed; but in place of darkness, there is light, and the sheet is absolutely free from the picture which it once presented. So does the sunlight of Christian Science destroy the mental pictures evolved in the darkness of mortal thought, and the tablet of our mind is revealed, pure and undefiled.

## The Law.

JULIA M. C. TOMLINSON.

THE law of the Lord is the theme of Psalm 119, which has been pronounced the most precious of all the Psalms in its glorious expression of love for that law. The eighteenth verse is of special significance: "Open thou mine eyes, that I may behold wondrous things out of thy law." What is this law?

God is the acknowledged law-giver. Moses, whose history is full of pathos, meekness, and might, was chosen of God to deliver Israel from Egyptian bondage and become the great Jewish law-giver. He had been educated as an Egyptian in the priests' college at Heliopolis, and must have been familiar with Greek, Chaldean, and Assyrian literature, as well as Egyptian; he was a favorite at court and might have become the adopted son of Pharaoh, had he not been the champion of his own people and their faith. He chose "rather to suffer affliction with the people of God, than to enjoy the pleasures of sin for a season."

Moses enjoyed the divine communion, but he soon made it manifest that he had not yet come under the dominion of law, for he doubted and was hesitant, and Aaron was then chosen to share his rejected honors and opportunities.

The book of Exodus is full of historic and legislative interest, recording, as it does, the dawn of Israel's national life. In the twentieth chapter, the law, as embraced in the ten commandments, was promulgated, and the following ten chapters include a course of instruction for Moses which tested his patience and obedience. And God "gave unto Moses . . . two tables of testimony, tables of stone, written with the finger of God."

Then follows an account of the people's idolatry in violating the commandments. Their disobedience to law resulted in the breaking of the tables of stone. God graciously renews His kindness, however, and having seen the glory of God reflected in the face of their leader, and having learned something from the results of their ingratitude and disobedience, the children of Israel were more willing to be guided by divine wisdom. All Scriptural history teaches that there is no evasion of God's law that goes unpunished, and joyful obedience to that law is its own reward.

Following the Scripture genealogy we are led to Bethlehem, where we find "Mary of the house of David," with her child, and here, too, we discover the fulfilment of the law.

Reverently we bow, at the name of Jesus, the world's new law-giver. At the age of twelve this child was found in the Temple "sitting in the midst of the doctors, both hearing them, and asking them questions." Joseph and Mary sought him and were amazed when they found him in such an exalted place. Mary chidingly asked, "Son, why hast thou thus dealt with us?" The child replied, "How is it that ye sought me? wist ye not that I must be about my Father's business?" We are sure he was a faithful student and a loving and obedient son. It is believed that he learned the carpenter's trade. It was a law that every Jew should learn a trade, and neither education nor wealth exempted any one. "To unite the study of the law with a trade keeps away sin, whereas study alone is dangerous and disappointing," was a proverbial saying of the Gamaliel family.

The first recorded words of the man Jesus honored the law. They are given in his reply to John the Baptist, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness," and he was baptized by John in the River Jordan. He thus began his ministry by recognizing the law and purifying the Temple.

Jesus, in the Sermon on the Mount, laid down the law which obtains in his kingdom. "For the law was given by Moses, but grace and truth came by Jesus Christ."

Centuries ago Moses, "the man of God" handed down the First Commandment, "Thou shalt have no other gods before me," and centuries later Jesus spoke these words, "Think not that I am come to destroy the law, or the prophets; I am not come to destroy, but to fulfil. For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law."

He explained the law and work of redemption, and fulfilled it according to his own prophecy.

Our Master taught his followers, by precept and example, to honor and utilize spiritual law, in his command, "Heal the sick, cleanse the lepers, raise the dead, cast out devils." After his resurrection he reiterated this command, and added, "These signs shall follow them that believe."

When nearing Calvary and almost within the shadow of the cross, he exhorted and comforted the disciples with the words, "If ye love me, keep my commandments. And I will pray the Father, and he shall give you another Comforter, that he may abide with you forever."

The crowning glory and blessing of the nineteenth century was God's gift to suffering humanity of one who received a Divine commission to lead His children out of bondage and out of the "wilderness of sin." In meekness and might she has also obeyed God's command.

As I take a deep look into the mission of Moses, and recognize the significance of our Leader's work, I bow my head and pray anew, "Open thou mine eyes, that I may behold wondrous things out of thy law." The "little book," Science and Health, thunders the law of Sinai, reiterates the Sermon on the Mount, and brings to the sick and sorrowing satisfying proofs of God's presence, power, and government. Every page of this book inculcates the commandments, of which Jesus said, "On these two . . . hang all the law and the prophets."

It was malice and ignorance that held the children of Israel in bondage, that mocked and crucified Jesus, and that still pursues the spiritual idea.

Christian Science has removed the veil which obscured the light, and has revealed, through scientific demonstration of the Christ-truth, the fulfilment of the law and

Digitized by Google

gospel, as expressed by St. Paul. "And we all, with unveiled face, reflecting the glory of the Lord, into the same image are being transformed from glory into glory exactly as from the Lord the Spirit" (Rotherham's version).

Our Leader's favorite text is "Thou shalt have no other gods before me." Her gentle, loving life and fulfilment of this command has been a mighty rebuke and lesson to mankind. "What is written in the law? How readest thou?"

## Bad Habits.

A. K. FRAIN.

How use doth breed a habit in a man!
SHAKESPEARE.

"HABIT is a disposition or tendency leading us to do easily, naturally, and with growing certainty, what we do often" (Webster). A bad habit, in its last analysis, is an error in thought. It is based on the mistaken or false belief that pleasure, or good, will come therefrom. Later, when we waken to its hideous mien, we too often find ourselves helpless victims in its coils; but in its incipient stages we probably do not even consider "habit" as a possibility, much less a bad habit. This is perfectly clear when seen in the case of a boy who is learning to smoke, to swear, to cheat at marbles; or in the young man taking his first drink, or the first dollar that is not his own, and it is equally apparent in the profligate and the miser.

While the train of evil following in the wake of these well-recognized bad habits is so plainly seen by all, Christian Scientists are learning day by day, more and more surely, that every evil known to mankind has its birth in that same error in thought, that same false sense of pleasure or good which, by use, breeds bad habits, bad morals, bad health, and whose ultimate is death.

We have learned, or are learning, that petulance, intolerance, selfishness, egotism, hatred, anger, despair, and all phases of sin, sickness, and sorrow, spring into belief of existence from that same source; and that this error in thought is being manifested in our lives and producing its train of suffering in exact proportion to our cultivation, use, or entertainment of it, and that it may appear to human notice as hate or hay fever, as excesses in food, drink, or dress, or in any of the myriad forms of sin and disease.

We have learned, or are learning, through the closer study of our text-book, Science and Health, and through our daily, hourly provings of its rules, that we are not left helpless or forsaken in the snare of the enemy, but that we have a certain, effectual, and never-failing cure for every bad habit whenever we recognize its presence and desire its removal. This practical working and study has taught us that Christian Science is the bad-habit breaker for the world. No matter how powerful the engine of error seems to be, or how heavy its load of bad habits, Christian Science can turn the entire train into the abyss of nothingness, tear up the rails, burn the ties, and supplant the whole hideous concept with one born of God, good; thus changing despair to hope, weakness to strength, sickness to health, sorrow to joy, anger to love, annihilating every foul taste and substituting therefor the odor of the rose where that of whiskey or tobacco did before abound.

And you ask: How is this all done? We tell you frankly it is not by any legerdemain, hypnotism, mesmerism, human will-power, personality, or blind faith; for these are, indeed, bad habits themselves. It is, rather, that perfect understanding of what Christian Science teaches God, good, really is; what "man in His image" really means. It is learning to behold this perfect man, even as Jesus did, where sinning, mortal man appears to us. This is not beyond, but within our easy reach, and all can begin at once to prove its truth by conscientiously and studiously reading our text-book, "Science and Health with Key to the Scriptures," and by following its rules as implicitly and faithfully as we did Davies' rules in geometry at school. Do this, and if we have a bad habit that we don't want, —be it sickness or sinfulness, bad digestion or bad temper, tobacco or profanity,—the clamps that are binding us will be broken and we shall be freed from its bondage as we gently emerge into the light of Truth which will be opened to our comprehension and understanding, day by day, as we pursue the study of this book.

Having reached this point you will cease to wonder why Christian Scientists love and revere their Leader, Mrs. Eddy, the author of our text-book and the Founder of Christian Science, but will recognize in her, as we do, a messenger from God revealing to the comprehension of this age that truth which, old as eternity, infinite as the Creator, she brings again to the world "with healing in its wings." You will then understand, as all Christian Scientists understand, that it is not Mrs. Eddy who heals, not her student, not the practitioner, not the book; but solely and only this wonderful law of perfection,—of infinite Love, divine good. This scientific understanding of God and man,—perfect God, perfect man,—as taught and explained by our Leader in Science and Health and her other publications, opens for humanity the door to eternal freedom with surcease of all suffering. It is the privilege of all to come under this law, as Christian Scientists are doing, little by little, step by step, and prove their way as they go until bad habits fall out of their consciousness one by one and they reflect, instead, meekness, purity, health, strength, happiness, life, love.

## His Children.

MARY E. WATKINS.

WE know that Jesus, who said, "I am the way, the truth, and the life," acknowledged no earthly parents, but said, "One is your Father, which is in heaven." This we can call the new understanding which has no place in the old belief of life, that is here to-day but gone to-morrow. Error has often said to me when demonstrating for my children, that if they were not mine how much easier it would be for me to know the truth for them. One day when I had been praying for my little boy, who was sick, these words came to me which I had read when a child, in one of our school readers: "Oft I'd heard my mother pray for me till the gushing tears relieved her and she rose and softly whispered, 'God will ever keep my child.'" The more I thought of those words, the more fear they brought until I realized that God will ever keep His child; not my child, for in truth we are all God's children, and how glad we are when we can prove this truth in even a little measure.

If you trust your waking to God, God will meet you in the morning as you wake with His divine sunshine and love, and He will give you the consciousness that through the day you have God to take charge of you continuously with His almighty power.—ANDREW MURRAY.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

## The Lectures.

### At Momence, Ill.

The lecture on Christian Science given under the auspices of the Momence Christian Science Society by Edward A. Kimball, C.S.D., Friday evening, June 19, was very gratifying to the society. The audience, mostly of non-Scientists, was very attentive throughout the lecture. Mr. Kimball was introduced by James Van Inwagen, Jr., in the following words:—

*Fellow-Citizens, Ladies and Gentlemen:*—I suppose I was selected to introduce to you the lecturer of this evening for the reason that I have known Mr. Kimball longer than any one in Momence. While I was not attracted to Christian Science through the healing of sickness, but because it appealed to common sense, I have since known of its healing my father of deafness and I was myself healed by a single treatment of a severe illness.

The lecture this evening is given you by the Christian Science Society of this city, because they feel that they have something good that others have not, and as Christian Science teaches us to love our fellow-men, it becomes our duty to share this good with you. I therefore take great pleasure in introducing to you the lecturer of the evening. Mr. Edward A. Kimball.—*The Momence Press-Reporter.*

### At La Junta, Col.

The lecture delivered by Judge Septimus J. Hanna at the La Junta Theatre last Sunday afternoon [June 14] was very largely attended. He gave a clear, simple, and comprehensive summary of the principles of Christian Science, and much of it was a revelation to his auditors. Ex-Mayor Fred A. Sabin presided, and in his introductory remarks said in part:—

*Ladies and Gentlemen:*—I believe we have all assembled substantially for the same purpose, not to criticise, but to learn; not to teach, but to be taught. No one can be more profoundly ignorant of the doctrines of the Church of Christ, Scientist, than I, but I understand that it purposes to do something for the body as well as for the soul; and that there is a reward, according to its tenets, for right thinking and right acting before we leave this vale of tears. Christian Science teaches nothing new; because it teaches of Truth, and Truth is eternal, reaching back to the infinite and extending forward into ages unknown. It simply teaches a new way of applying old methods which are none other than the methods of him who said, "In my name shall they cast out devils; they shall speak with new tongues; they shall take up serpents; and if they drink any deadly thing, it shall not hurt them; they shall lay hands on the sick, and they shall recover."

*The La Junta Tribune.*

### At Muskegon, Mich.

The spacious hall of the Woman's Club House was filled by a notable gathering Sunday, June 21, on the occasion of a lecture on Christian Science by Edward A. Kimball, C.S.D. The lecturer was introduced by attorney F. A. Nims, who said in part:—

It is not to be expected that the speaker in an address of an hour and a half, will cover the full scope and extent of so important a topic, and inquiries may suggest themselves that will not now be answered.

As one of the invited guests on this occasion, I appeal to you, therefore, to extend to the speaker and to the message he may deliver, a generous and cordial reception. Keep your minds and hearts open,—your minds open and candid, your hearts open and sympathetic. Be just, be fair. And if you hear something which at the moment you do not understand, or are not ready to accept, take it into the council chamber of your mind for your more deliberate consideration and judgment.

It may well happen that his message will bring to some doubter, decision; to some one in darkness or the shadow, light; to some one that is suffering, comfort; joy to those who understand; and to all of us, sweet charity and toleration.—*Correspondence.*

## The Menace of the Tower.

In storied Venice, down whose rippling streets
The stars go hurrying and the white moon beats,
Stood the great Bell Tower, fronting seas and skies—
Fronting the ages, drawing all men's eyes;
Rooted like Teneriffe, aloft and proud,
Taunting the lightning, tearing the flying cloud.

It marked the hours for Venice: all men said
Time cannot reach to bow that lofty head:
Time, that shall touch all else with ruin, must
Forbear to make this shaft confess its dust;
Yet all the while, in secret, without sound,
The fat worms gnawed the timbers underground.

The twisting worm, whose epoch is an hour,
Caverned its way into the mighty tower;
And suddenly it shook, it swayed, it broke,
And fell in darkening thunder at one stroke.
The strong shaft with an angel on the crown,
Fell ruining; a thousand years went down!

And so I fear, my country, not the hand
That shall hurl night and whirlwind on the land:
I fear not Titan traitors who shall rise
To stride the Brocken shadows on our skies—
Not giants who shall come to overthrow
And send on earth an Iliad of woe.

I fear the vermin that shall undermine
Senate and citadel and school and shrine—
The Worm of Greed, the fatted Worm of Ease,
And all the crawling progeny of these—
The vermin that shall honeycomb the towers
And walls of state in unsuspecting hours.

Edward Markham.
In the *Independent.*

## Appreciation.

While the growth of the organization which bears the name of Christian Science has been matter of common observation hereabouts, very few were prepared for such a demonstration of its continental and even its world-wide extent as this gathering has given. It has been a revelation to the general public; and, moreover, it has been a very pleasant one. These Christian Scientists are people whom we are very glad to have with us. Never was there a convention held in Boston in which the participants were more thoroughly representative of the sturdy, happy, energetic American character. In the best sense of those much-abused words this was a gathering of gentlemen and ladies,—not the factitious gentility of wealth, although they are manifestly well-to-do, but of courtesy, intelligence, and humanity. They are welcome to Boston whenever they may come here.—*The Boston Post.*

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### Effects rather than Causes.

THE following is from a late issue of *Midland Druggist*, a well-known medical journal:—

"'A wit once remarked,' says *Medical Talk*, 'that the science of medicine consisted in pouring compounds of which we know little into bodies of which know still less.' It is interesting in this connection to note that although the Christian Scientists dispense with medicine and drugs altogether, the mortality amongst them is no greater than amongst the drug-taking population. This causes one to wonder just what has been gained by our modern science of therapeutics. That the science is of some use, we cannot deny. Any formulated and organized system of facts is valuable and can be put to some practical use.

"The answer to the paradox probably is that the cures effected by drugs amongst the run of people are counterbalanced by diseases brought about by the excesses in which these people indulge. It is a recognized fact that the Jews are less subject to disease than are other persons, and the fact has been explained by the frugality of their habits. The same reason might be urged in the case of the Christian Scientists. This sect is eminently temperate, their morals are on the whole good, they take a hopeful attitude toward life and thus escape the nervous troubles that are caused by worry, and their systems are not debilitated by the use of drugs which they ignorantly or wilfully misuse."

This is quite interesting in its admission that "although the Christian Scientists dispense with medicine and drugs altogether, the mortality amongst them is no greater than amongst the drug-taking population," but this admission does not go far enough to do justice to the facts.

Figures recently given out in the annual report of the Clerk of The First Church of Christ, Scientist, in Boston, Mass., indicate a much lower death rate among Christian Scientists than that of the "drug-taking population," yet this is not the point to which we shall refer particularly.

If the majority of Christian Scientists had entered upon their experience as Christian Scientists in a normal or even average condition of health, they would have much reason for thankfulness in having so maintained their standard as to win this tribute from our medical contemporary; but the fact is that a very large proportion,—almost the entire number,—did not start under these favorable circumstances; furthermore, a great many had reached a condition of hopeless invalidism, and no inconsiderable number had been given up to die.

To say that their good health is the product of their good morals and temperance is no more correct than it would be to say that their good morals and temperance is the result of their good health. Neither their good health upon the one hand nor their temperance and good morals upon the other hand are causes. Both are effects, and both are effects of the same cause. The operation of the healing power of Christian Science is the destruction of both sin and sickness, and in this its name,—Christian Science,—is justified, and it is proved to be the healing and saving pathology and theology of Jesus Christ.

That "Jesus healed the sick and destroyed sin by one and the same metaphysical process" (Science and Health, p. 210) is an established fact, and this is so well known to Christian Scientists that they expect moral regeneration to accompany the cure of physical disease, for they heal their patients and keep themselves well through the right understanding of God, and of man's relation to Him.

M.

### "Thou art the Man."

FEW human impulses are more alive to opportunity than that which leads us to dispense to others the counsel or rebuke which is peculiarly fitted to our own needs.

We feel much gratified sometimes that the sins and weaknesses of others are being opportunely reproved, when the same weeds of error, perchance, are growing even more rank in our own gardens, and at the moment when we might profit by the gracious ministry of Truth we are remembering our neighbors so generously that our own wants are wholly neglected.

David could wax indignant at the recital of the petty thievery and imposition portrayed in Nathan's story, and pronounce immediate and unreserved condemnation upon it, and yet remain so wilfully stupid and self-forgetful as to find no reminder in the tale of his own hideous and much-loved sin. He thus illustrates in vivid colors a characteristic tendency and disposition which we all very much need to recognize, and against which we should be on our guard. The temptation to part with that which begets a sense of humiliation and self-contempt is peculiarly subtle and alluring, and it easily becomes controlling, unless we learn rightly to value rebuke, and see clearly that the unworthy self it reveals is our greatest enemy; then the appeal of both humility and gratitude will lead us to welcome the sword that cleaves to its center this coddled seeming of sin.

Our attitude toward this self of material sense is one of the most reliable tests of character,—the degree of our present spiritual awakening. If its inherent ugliness and falsity are so apparent to us that we gladly hail the coming of any word from any source which acquaints us with its unsuspected presence and domination, if we greet rebuke with the fair and ready assumption that its coming is an evidence of our personal need, and so appreciate and profit by it ourselves that we have neither time nor disposition to see how well it suits another's faults, then we may be encouraged to think that we are in a wholesome, growing condition; but if, on the other hand, we have acquired the habit of so dressing our feathers with self-complacency as to be impervious to even a shower of merited reproof, then we may be sure that in denying a hearing to our best friends we have closed the door on improvement, and that Nathan's "Thou art the man" is addressed to us, whether we will or no.

"Evil which obtains in the bodily senses, but which the heart condemns, has no foundation; but if evil is uncondemned, it is undenied and nurtured. . . . Evasion of Truth cripples integrity and casts thee down from the pinnacle" (Science and Health, p. 448).

Jesus located the essence of wrong-doing in motive and found occasion to liken to ghastly sepulchres those who were occupying the highest seats of self-satisfaction. and remembering as we must that the human impulse still dishonors every command of the decalogue, in our mortal thought, even though we would shrink appalled from its externalization, we can but know that no rebuke of evil can possibly be expressed which has not a vital application and significance to each,—that no uncovering of error can ever come to us which we do not need humbly and thankfully to appropriate.

If as Christian Scientists we each devote our entire at-

Digitized by Google

tention to the gathering of good for ourselves from every corrective statement which Love may send us, leaving our neighbors entirely free to practise the same virtue without any intrusion whatever of our unsolicited aid, then surely we shall be known as a blessedly "peculiar people," and the angels of peace and prosperity will hover over us as though the day of our redemption had fully come.

No alert Christian Scientist can ever forget the exemplary humility expressed in those words of our Leader, "During many years the author has been most grateful for merited rebuke. The sting lies in unmerited censure,—in the falsehood which does no one any good" (Science and Health, p. 8). W.

## Knowing as we are Known.

ONE of the most inspiring promises given in the Bible is that at some time we shall know as we are known.

This statement is found near the close of Paul's great discourse on love which formed the basis of our Communion sermon, and the higher meaning of that lesson which dawned upon those who listened to it is finding expression in many grateful hearts and uplifted lives.

No one can deny that Paul's admonitions, as contained in the thirteenth chapter of First Corinthians have challenged the obedience of every Christian since the day when this message was sent out into the world's consciousness with its imperative demand; yet few can claim that it has been obeyed either in the spirit or the letter.

There is little doubt that many earnest Christians are seeking to live in harmony with the law of love, and the many admitted failures to do so prove simply that understanding rather than sincerity of purpose is lacking.

Although in this discourse the limitations of human knowledge are pointed out, thought is not allowed to rest there, but is impelled beyond the domain of mortal belief, and does not pause until the goal is reached and perfection declared to be all that really exists, for "that which is in part shall be done away."

It is neither possible nor necessary to consider the orderly processes presented in this remarkable chapter, but in the light thrown upon them by Christian Science it becomes very clear that not only is perfection attainable, but the way to attain it is so practical as to be comprehended easily by those who are willing to obey.

Divine Love is held up as the model in every conceivable experience, and, as Christian Science teaches, it is found to be ever the same unchanging Love.

The highest human sense of love is often associated with the idea of sacrifice; "giving our goods to feed the poor," or the "body to be burned," but in a careful analysis we usually find that a sense of sacrifice is merely the measure of one's imperfection. It would lighten many a burden simply to know that we give because to love means to give, not to sacrifice, for Love always gives.

As this grows clearer to us through obedience, we begin to know as God knows, to comprehend the divinely scientific processes by which Truth impels us onward and upward, and we understand better the demand for rapid progress which has marked the entire history of the Christian Science movement.

When a lesson has been learned well it opens the way for a higher, and thought is not allowed to linger on problems outgrown. "Now that I am become a man I have put away childish things" (Revised Version).

It is said that one of the most famous Greek painters, after completing a beautiful painting, spent most of his time in looking at it and in seeking praise for his work. One day his master appeared on the scene, and quickly discovered the danger menacing his pupil. Responding apparently to the request that he examine the picture, he stepped forward with a brush in his hand and with a swift movement effaced the fair outlines which had been the work of months of devoted toil.

It is easy for us to guess at the grief of the young artist, but the master was wise, and in this act he laid the foundation for his pupil's greatness. The lesson was learned, the fire of true genius was but quickened, for the painter afterwards helped to immortalize Greek art.

In the annual message to the Mother Church of 1901, Mrs. Eddy says, "We are not transcendentalists to the extent of extinguishing anything that is real, good, or true;" but at the same time she points out the necessity of eliminating from our consciousness that human sense which interferes with the expression of the divine nature.

The Scriptures offer no promise of peace or happiness, except by becoming partakers of the Christ-mind; by ceasing to believe in the necessity or actuality of evil in any of its manifestations. Mortal sense clings to the traditional belief that God is conscious of evil, and is even sad when Truth would remove this assumed consolation.

This was brought out on a certain occasion in our Leader's presence, and her tender smile lighted up the sense of all her listeners as she expressed the thought that her joy was in going into the secret place of the Most High and in realizing that the Father knows His child is neither sick nor sinful.

This consciousness gives the true healing power, helps us to know our Father's children, helps others to recognize our motives and aims rather than their sometimes imperfect expression, and at length we shall know, even as we are known. K.

## Appreciation of the Concordance.

Bow Mills, N. H., July 23, 1903.

Please accept my hearty thanks for "The Concordance" received yesterday.

It is a very elaborate and careful work, a splendid example of book-making, and as useful as attractive.

[HON.] HENRY M. BAKER.

To Rev. Mary Baker G. Eddy,
Pleasant View, Concord, N. H.

## Board of Lectureship.

A COMPLETE list of the names and addresses of the members of the Board of Lectureship was published in last week's *Sentinel*. The following changes of address have just come to us:—

Carol Norton, C.S.D., 321 Pearl Street, New York, N.Y. (Mail address only.)

Dr. Silas J. Sawyer, C.S.D., Room 462 Masonic Building, Milwaukee, Wis.

F. J. Fluno, M.D. C.S.D., 1368 Franklin Street, Oakland, Cal.

## An English Letter.

WE are permitted to publish the following extracts from a letter written by a Scientist in Durham, Eng., to his brother in America. ED.

"There has been a discussion on Christian Science in a church meeting at Newcastle at which I spoke. In connection with the church in the Parish of St. Thomas there has been a monthly meeting, open to men, to discuss present-day questions. The discussion has been general and there has been no lack of expression of opinion. The closing session was to hear a paper by a Rev. Harrison, D.D., one of Newcastle's Church of England ministers, on 'Substitutes for Religion, including Christian Science.' When it was announced I was informed that it would be open for any one to attend and reply or make any comment.

"The speaker was introduced by the vicar, and he spoke

Digitized by Google

for some fifty minutes of Positivism, Socialism, Christian Science, and Theosophy in the order named. He soon got through with the first, remarking it was undeniably a dying-out movement. Socialism was spoken of almost entirely in regard to a series of articles in the London *Clarion* on 'Science and Religion.' He then turned the attention of his audience to Christian Science, and from his first words to the last fairly seemed to 'take their breath.' Had they come there to hear a Balaam curse it? If so, they went away disappointed. Any one could tell he had not only a ripe experience, but had profited by it. 'Don't,' said he, 'be hasty to pass judgment on a new phase of thought. Wait until you are in a position to judge properly before condemning. There is much beauty and goodness in the teachings of Christian Science, and they certainly have what our Church has not, the power of healing, and (speaking emphatically) the Church ought to possess it. In the States Christian Science has made great headway, but it is not yet a force to be reckoned with in this country, as it is only spreading, as yet, in London.' and so on.

"When he had sat down and the applause had died away, there was a silence that could be felt. Then I asked if I might make a remark or two, and the vicar was glad in assenting. I thanked the speaker for his fair, and gentlemanly speech on Christian Science, and gave some figures as to the growth of Christian Science churches, the numbers and kinds of cures, its growth in this land, etc. I had nearly ten minutes during which I emphasized that Christian Science has nothing in common with Theosophy, and when I had concluded, Dr. Harrison replied, saying he had seen too much good resulting from Christian Science in the way of change from dissolute life and character as well as physical healing, not to be quite frank and acknowledge there was good in it. He said that he had read Science and Health through six times, but had not been able to understand it. As he said this with so much underlying kindliness, I couldn't help remarking mentally, 'Thou art not far from Christian Science.'

"One thing was very remarkable. I had expected to hear some quotations from critics of Christian Science, but nothing in this line was said further than that 'the articles written against Christian Science are very numerous, but they are all useless.' I thought that the *bon mot* of the evening, and worth remembering.

"The vicar was the last to speak, and said that it had been the most instructive of all their winter meetings, and that they had heard something that night to go home and think over."

## Legislation in Florida.

It may be interesting to other fields to know that a medical bill, introduced in the recently adjourned legislature of Florida, was defeated. As early as last July, the Medical Association drafted a bill designed to prohibit the practice of Christian Science, which they proposed to have introduced at the 1903 session of the legislature. A copy of this bill, with request for an expression of opinion regarding its passage, was sent to each of the candidates for the legislature. Section 5 of said bill read as follows:—

"For the purposes of this Act, the words 'practice of medicine' shall mean to suggest, recommend, prescribe, or direct, for the use of any person, any drug, medicine, appliance, apparatus, or other agency, whether material or not material, for the cure, relief, or palliation of any ailment or disease of the mind or body, or for the cure or relief of any wound, fracture, or other bodily injury or any deformity, after having received, or with the intent of receiving, therefrom, whether directly or indirectly, any bonus, gift, or compensation."

The bill was introduced, with the wording of Section 5 slightly altered, but its meaning practically unchanged. The bill was quickly and favorably reported from the Committee on Public Health. At this point First Church of Christ, Scientist, of Jacksonville, sent a representative to Tallahassee, and with the assistance of the Scientists there some effectual work was done. Copies of the *Sentinel*, containing an account of the defeat of medical legislation in Texas and North Carolina were placed on the desk of each senator and representative. The bill was on the calendar for Wednesday morning at ten o'clock. Our committee had waited on Dr. De Witt Webb, the author of the bill, requesting him to allow an amendment exempting the practice of Christian Science, which he declined, but agreed to strike out the words "or any other remedy." It was decided, however, that this would not cover the ground sufficiently, so Hon. Ben Hopkins of Leon County said he would offer the following amendment: "Provided that nothing in this act shall be construed as affecting the practice of Christian Science."

In the mean time, many of the representatives had been seen personally, and with only one or two exceptions, received the Christian Scientists most kindly. They seemed glad to hear of Christian Science, and signified their willingness to support the amendment.

In due time the bill was reached, and the amendment given above was offered by Mr. Hopkins. Immediately Dr. Webb took the floor in a speech in opposition. Mr. Hopkins replied to him in an eloquent talk. Among other things, he said that he was not a Scientist, but that he had known of much good Christian Science had done in alleviating human suffering. He deplored class legislation, and entered an earnest plea for religious liberty.

A *viva voce* vote was taken, the amendment being adopted by a good majority. Mr. Strozier of Marion Co., offered an amendment striking out the enacting clause, which was adopted; this is a favorite method in the Florida Legislature of killing a bill. Dr. Webb moved to reconsider the vote by which Mr. Strozier's amendment was adopted, and it was made a special order for the next day at ten o'clock. That evening and next morning Dr. Webb and his friends were very industriously at work in behalf of the bill, but when it came up next day, the motion to reconsider was laid on the table. A duplicate bill was introduced in the Senate. The Senate Committee on Public Health, at our request, struck out Section 5, containing the objectionable features, entirely. It passed the Senate thus amended, but when presented to the House, was again defeated.

Dr. Webb and his friends worked faithfully for its passage, but there was much opposition in the House of Representatives, and it stood little chance of becoming a law, even after it was amended to suit the Scientists.

The work was done quietly, but very effectively, and proved a decided victory for the Christian Scientists. It resulted in bringing Christian Science favorably and prominently before the leading men of our state.

It is due to the Scientists in different parts of the state, to say that we had their hearty support and co-operation, as they had been duly advised of the fact that such legislation was pending. In this second attempt at medical legislation we record most gratefully another victory for our cause in this State. In this we recognize the guiding hand of an all-wise Father.—*Correspondence.*

You admire this tower of granite, weathering the hurts of so many ages. Yet a little waving hand built this huge wall, and that which builds is better than that which is built. The hand that built, can tear it down much faster. Better than the hand, and nimbler, was the invisible thought which wrought through it, and thus ever behind the coarse effect, is a fine cause, which, being narrowly seen, is itself the effect of a finer cause.—Emerson.

## Among the Churches.

### The Work in Australia.

As a visitor from Sydney, Australia, I would like to express to the Field my gratitude to God for the great spiritual uplifting I have received since coming to America. This unique Love Feast has far excelled all expectations, and the time and money consumed in traveling ten thousand miles has been compensated for a hundred times over.

Of the many Love-replenished tables prepared for us, none delighted me and my family so much as our visit to Concord on Monday, June 29. This will ever live in our memory, and the words of our Leader have meant and will mean more to us than we can express. They will go with us to help us ever on our way "from sense to Soul."

We have a message of joy to bring to the Field. The work in Australia is advancing steadily. There are many earnest students, both men and women, in the Sydney Field who are doing what they can to spread the knowledge of this healing Truth. Christian Science literature has been sold in quantities to people far away in the country, and much has been distributed freely where it was acceptable, so that people of all ranks are interested. As an example of the growth of Christian Science I will give a little incident. Three years and a half ago I came to Boston and had class instruction from one of Mrs. Eddy's students. On my return to Sydney I decided to give up every other occupation and to devote all my time to my Father's work. I applied for an office in one of the principal buildings in the city of Sydney, which the owners refused to let me have for Christian Science work, and they were quite indignant that I should ask for it for such a purpose. I convinced them of my social standing by bringing a letter from the mayor of the city. They then allowed me to have an office on the understanding that I would leave at any time if requested to do so. I opened the office and remained for one month without any one coming to enquire about Christian Science. I did not get discouraged for I knew that "Patience must 'have her perfect work'" (Science and Health, p. 454). Soon after one person came and then others. I remained in that office over two years and a half, and the day I left it to start for Boston there were more people coming for help than could be attended to. I wish to express my heartfelt gratitude to our dear Leader for what she has done and is still doing for humanity. I would also like to thank the dear workers at headquarters, for all they have achieved.

CHARLES H. GIBBS.

### A New Church Home.

Services were held for the first time in their new home, corner of Bluff and Ninth Streets by the Christian Scientists last Sunday morning. The property was purchased about two months ago by the church and is regarded as a permanent location for First Church of Christ, Scientist. The house on the corner was remodeled into a church building for present needs, and the changes made have transformed the building completely.

*Dubuque* (Ia.) *Globe Journal.*

### Advance in Mt. Vernon, O.

The Christian Scientists of Mt. Vernon have just opened reading rooms as a preparatory step toward the organization of a church in this city. The great increase of interest in Christian Science here has necessitated the church organization, and the Scientists expect to erect a handsome church building in the near future.

The *Mt. Vernon* (O.) *News.*

## Testimonies of Healing.

I want to give my testimony to the *Sentinel,* and tell some of the many blessings Christian Science has brought to me and mine. This wonderful "Good News" first came to me six years ago and found me sick and heart-broken. I had always been delicate from childhood, and my dear parents were in constant fear of the worst. I was on the road most of the time, traveling to different climates, hoping and longing to be well. At times I considered myself so, but error was never subdued for any length of time. After the birth of my first child I was left a complete wreck, having so many troubles it seemed a human impossibility for me ever to be well. *Materia medica* had condemned me to a life of invalidism, and I felt myself "without hope and without God in the world," for my faith in God was almost a thing of the past, since I could not see what wickedness I had committed that was worthy of such suffering. It was at this time, while staying in California, that a friend kindly loaned me Science and Health, about which I had made a great many unkind remarks. When I read this wonderful book I realized that it was the truth.

The "hill of Science" has been a steep and rugged pathway for me and I have paused many times in the past six years to struggle with error, but with every victory has come fresher and stronger courage to continue the ascent, and I know it will "grow brighter unto the perfect day" if I only take up my cross and bear it, and realize Jesus' words "my yoke is easy, and my burden is light," for I shall have that peace of God which "passeth all understanding." Since apprehending Christian Science to be a revelation of Truth I have been healed of lung trouble, weak back, and other serious ailments for which *materia medica* prescribed two operations; but I have never had them, and now I walk a good deal, play tennis, ride on horseback, in fact do everything I had never expected to do again before I heard of Christian Science. My little boy has also been healed of scrofula.

I love God for revealing to this age through our dear Leader, Mrs. Eddy, this gospel of Christian Science which our Master first came to prove. May the darkness all be transformed by this glorious truth.

MRS. EMMA M. MARGESON, Aiken, S. C.

---

I was working with my father, who was a physician, when I was healed of pneumonia by reading Science and Health, which had been kindly lent to me by a neighbor. To mortal sense my father was angry; he wished me to work with him, and when he died intended leaving me this work and the fruitage of his invention which he considered the cure of all disease. My being healed was a great disparagement of his methods and he exhibited much antagonism, thinking through persecution to tire me of my purpose. I brooded over these things, and struggled in great poverty until I became familiar with right thinking through reading Science and Health given to me by my husband.

I am now coming to understand, slowly but surely, that man as God made him is no more the mortal man, than the gentle, kind, manly man, is the ugly ragged urchin of previous years. Mind is our medium of exchange, and we must give what we expect to receive. To talk this new language is one thing, and to know its meaning and be conscious of it, is another. God is Mind, and the only way for me to apprehend God is to think good, and just to the extent that I think this good will I receive benefits therefrom: as Mrs. Eddy says in Science and Health to the effect that words are inadequate to express the truths of being! This seeming growth "from sense to Soul," is the removing of the mortal blot from the canvas

Digitized by Google

of life by the divine artist. Christ Jesus was a law-giver who spoke to this earth mind years ago, and his appealing word of Truth has been re-echoed in our time by a woman who with a firm and loving hand is breaking to us anew the bread of life.—Mrs. D. B. Fitten, Nome, Alaska.

---

Christian Science treatment has healed me of the following diseases and conditions: nervous prostration of long standing, jaundice, malarial typhoid fever, and grief and sadness resulting from bereavement of several relatives. Better than all else it has brought me increasing spiritual activity and caused the proportionate decrease of sinful tendencies and susceptibility. Confidence, gratitude, and consolation now have taken the place of the former fear, doubt, and condemnation.

The knowledge of God in His quality of goodness brings peaceful reflection.—E. P. Prophet, Mobile, Ala.

---

One night I awoke with a severe headache, an intense fever, and a bitter taste in my mouth. I knew this meant the grip. At first I wondered how I should go to work at it, then the following words came to my mind: "We are the children of God: and if children, then heirs; heirs of God, and joint-heirs with Christ," and in God are love and peace for me.

I clung to this assertion, and after about an hour's thought, I was filled with love and peace. The grip had disappeared. This occurred about three months ago.

I am very grateful to God for all the love and mercy which He has shown me through Christian Science.

Mrs. Louisa Raddatz, Oshkosh, Wis.

---

It always seemed to me to be of greatest benefit to attend our church services. I have never missed them if it could possibly be avoided. I have had visitors and excused myself, and everything came out all right.

The day of our last communion I was fully convinced that all else should bend to the church service.

I had been trying to make a demonstration for three days with the youngest of my family, a child two years old, and as no one knew of the trouble but myself, I thought, "I will take him to church if I have to, but if he is left at home he will get the benefit of the services." It was cold, and we had to ride two miles, but I took him. In the midst of singing our Leader's hymn, "Saw ye my Saviour,' the healing was made manifest,—a complete, instantaneous demonstration.—Mrs. Lydia DeVoe, Rock Valley, Ia.

---

There is a part of Christian Science which beginners seem very unwilling to accept, and it is that of healing animals. Like every other phase of Christianity this comes from lack of understanding, or spiritual insight. The Bible teaches us to "overcome evil with good." This is all of Christianity. It is all of Christian Science. When the eyes see an animal manifesting discord instead of harmony, expressing the mortal thought instead of the divine, is it too much for any Christian to know that all God's creatures are under the perfect law of a perfect God and not subject to anything but good? Is it too much to know that He cares for all, even the sparrow?

To me it is a great privilege to know the truth which makes free even the least of God's creatures. We try to live, and love, and know the one law, the one Truth, the one good that overcomes all evil. This, and nothing short of this, is what frees man and beast, and it is Christianizing the whole world and making mankind truly Christlike.

E. M. T., Denver, Col.

My gratitude for Christian Science is boundless. I was afflicted with a fibroid tumor which weighed not less than fifty pounds, attended by a continuous hemorrhage for eleven years. The tumor was a growth of eighteen years.

I lived in Fort Worth, Tex., and I had never heard of Christian Science before leaving there for Chicago in the year 1887. I had tried to live near to God, and I feel sure He guided me in all my steps to this healing and saving truth. After being there several weeks I received letters from a Texas lady who had herself been healed, and who wrote urging me to try Christian Science.

Changing my boarding place, I got with a lady who owned a copy of Science and Health, and in speaking to her of having seen the book, she informed me she had one, and she got it and told me I could read it. The revelation was marvelous. I seized it and exclaimed and exclaimed aloud, laying the book in my lap to ponder. This awakening sense never left me, and one day when walking alone it came to me very suddenly that I was healed, and I walked the faster declaring every step that I was healed. When I reached my boarding place, I found my hostess and told her I was healed. She looked the picture of amazement. The tumor began to disappear at once, the hemorrhage ceased, and perfect strength was manifest.

There was no joy ever greater than mine for this Christ cure, for I was very weary and heavy laden. I thought very little of either sleeping or eating, and my heart was full since I knew I had touched the hem of his garment.

I am ever grateful to Mrs. Eddy for her writings and for her work for humanity, and cannot love her too dearly.

The Communion season which has just passed, the visit by invitation to our beloved Leader's home, and, last but not least, her letter and words of love, have stirred my heart to its depths and I want to say, Dear God, make me, make us all, indeed thankful for these thy blessings.

I must add that the reading of Science and Health, and that alone, healed me, and it was the second copy I ever saw.—Sallie Loughridge, Fort Worth, Tex.

---

For a long time I have felt a desire to add my mite to the columns of the *Sentinel*, the weekly visitor to our home, by which I have been so often helped and encouraged; yet error would say, You cannot word it like such a one; but when the desire came again I realized it was Love that prompts, and God is Love. The words of the hymn also came clearly to me, "Ceasing to give we cease to have, such is the law of love." I realize to-day more than ever this blessed truth. If our dear Leader, Mrs. Eddy, had not shared with us what Love had revealed to her, I should not have had this blessed understanding; so with these thoughts I say, How grateful and thankful I am for the many benefits received in Christian Science.

I could give many demonstrations of Christian Science in physical healing. One is a case of quinsy, which was met for me in Christian Science after the doctor had given up the case. He attended me two and three times a day, and at last he gave orders to get a spray, and if this did not relieve me, he said that was all he could do, for if it did not break within a certain length of time I would choke to death. This was the third time I had suffered from the trouble, and the doctor told me when I had it the second time, if I had it again I would never get over it; and the law seemed to be all powerful, for I had got to a stage where I could not speak, nor take a drop of liquid, not even the medicine the doctor left, nor could I lay my head on a pillow to rest. This was my condition for two weeks; but, thank God, I found and proved that this law of error had no real power.

A gentleman came to see my husband about some work, and he invited him into the parlor where I was propped up in the rocking-chair. He knew he was a Scientist.

Digitized by Google

but I did not. My husband then commenced to tell him my trouble, as I could not speak, and he in reply quoted the Scripture about Mary and Martha, and as my name was Martha my attention was arrested. He talked for a while, telling me that God's word was sharper than a two-edged sword, and that there was help for me; he also told me that God never made anything to discomfort His children.

As the night came on I seemed to get worse, but those words still stood forth, There is help for you, God's word is sharper than a two-edged sword; so I wrote on a paper to my husband that if there was any good in Christian Science I must have it, and I told him to go and ask this gentleman to treat me. Before he returned I had relief, and was able to drink a cup of cocoa. The trouble soon disappeared and I never heard any further from it, as I had done at other times when it seemed to disappear. So to-day, with a grateful heart, I testify to this wonderful truth which brings life, and which comes from the Giver of all good.—Mrs. Martha Long, Port Hope, Ont.

---

Only one who has suffered the consequences of sin wilfully pursued, with all the attendant hate, malice, envy, and jealousy, can understand how severe is their punishment.

Last summer I was attacked by a great sense of nervousness and fear. I thought if I should take a little vacation and place myself under the care of a physician I would soon recover, but as time went on I grew worse, lost all appetite, and could not rest at night. At last my faith in material means was exhausted, and I knew that I must have help from some other source. I found it in Christian Science.

After my first treatment I was much better and in about a month I was perfectly well. Since that I have been healed of many other troubles, one, the habit of chewing and smoking tobacco. This habit simply left me while reading Science and Health.

The physical benefit was very great indeed, but the spiritual quickening, I think, was still greater. I am very thankful to Mrs. Eddy for the Science she has given us, and to the practitioner who helped me in time of need.

E. A. Mundt, Dennison, Ia.

---

Nine years ago last spring my daughter was healed. The doctors had given me little hope that she would ever be healthy, if she lived. I will not picture disease to the reader, but no one knows the torture of those eighteen years of sleepless nights and weary days, watching over my darling one. My daily prayer was, "God, spare my child to me." All that loving care and gentle nursing could do was done. Still the doctors shook their heads. It was so pitiful to see her fade day by day; and then, being an invalid, it was torture to me. When my dear child was where earthly help was of no avail, I heard of a practitioner who had done good work. I sent for her and she came like an angel of light. The shadow was lifted. In one week my darling could walk, and in a few months she was healed. To-day she is the picture of health, and she now weighs one hundred and sixty-five pounds. Before her healing she was a mere skeleton. She is a living witness of what Christian Science has done, and is its loyal supporter.

I thank God that through the light of Christian Science we know that we are His children, made in His likeness, and filled with His love. I feel that the debt we owe Mrs. Eddy and our faithful healer is great, but God said, "Let there be light: and there was light."

Mrs. Belle M. Walker, Eastendale, Mass.

When I first heard of Christian Science I condemned it, as I thought, very severely, but I know now, and am glad to confess, that it was my own malicious opinions that I condemned, and *not* Science.

When I decided to take up the study of Christian Science, it was not for physical benefits, although many discords have been met and overcome. I was seeking a higher and truer sense of Life. I need not add that my desire has been fulfilled, for those who seek shall find.

It is useless to attempt to express my gratitude for Christian Science, for it is more than human tongue can voice; and the true way to prove ourselves faithful to our Leader, Mrs. Eddy, is to love, not "in word, neither in tongue; but in deed and in truth."

Willingly I gave up the old for the new, and with "Gladness to leave the dark landmarks, and joy to see them disappear" (Science and Health, p. 324).

I have not the pleasure or the opportunity of attending church services, but with Science and Health, and the *Journals* and *Sentinels*, I am better satisfied with life than ever before.

"He shall cover thee with his feathers, and under his wings shalt thou trust: his truth shall be thy shield and buckler."—Hallie Lewis, Blue Creek, O.

---

I desire to express my gratitude for the blessings received at our Communion service at Boston, and also for the peaceful benediction at Pleasant View.

When I realize the great good to humanity which Christian Science is bringing, words cannot express the gratitude due our beloved Leader, Mrs. Eddy, for the great revelation of Truth which she has given us; and as Truth is continually unfolding to us all, I realize more and more an individual responsibility to maintain the high standard she has raised and held aloft as a protest against the materialism of mammon. I have enjoyed very much the literature of Christian Science, and can readily see that all the questions before the world to-day must be handled successfully through Christian Science alone.

Especially true is this in connection with economics, of which I have had some knowledge before coming into Science, but upon which I have received a great deal of light when viewed from the ethical standpoint of Principle. Christian Science has been an ever-present help in every matter that has come before me in the past three years.

R. E. Carey, New York, N. Y.

---

I see that I have made a mistake in not giving my testimony simply because the trouble which led me to investigate Christian Science has not yet been overcome. It is not unfortunate for me, perhaps, that my healing progresses slowly (partial deafness being the trouble), for I am led to know God as the All-in-all, and in this way mental error is being overcome, which must be destroyed before physical harmony can be restored. I am grateful to God for the light Christian Science throws upon the Bible, thus making it a helpful study, full of truth. It is a new book to me.

I had taken but a few treatments when I was healed of constipation, which had troubled me since childhood. Again, I am grateful to the dear friends who helped me to see the truth, and to our Leader, Mrs. Eddy, who through her selfless love has given to humanity this richest of blessings "Science and Health with Key to the Scriptures."—Grace M. Brown, Prophetstown, Ill.

---

Several years' experience in proving Truth's supremacy over error, merits some word from me. During that time croup, measles, whooping-cough and other diseases incident to a growing family have been met and overcome without any use of drugs; also carbuncles, chills, and bronchitis have been healed, and many anxieties have been quieted

Digitized by Google

by the sweet sense of the ever-presence of the loving Father-Mother God.

Among the many blessings, I feel that the establishment of the Publication Committee is an important one. While the articles serve to enlighten public thought and correct misconceptions, their work is proving to be of incalculable benefit to the working Christian Scientist; for the many practical applications of quotations from the Bible and Science and Health fortify him anew for his own individual battles with mortal mind, and strengthen his faith, thus giving added power to his efforts.

From an overflowing heart, I give loving thanks first to the Giver of all good, next to our dear Leader, then to all in turn who are laboring to bring into consciousness here and now, the reign of Harmony.

MRS. M. B. LITTLE, Memphis, Tenn.

---

Error has withheld me from making a just acknowledgment of the daily benefits of Christian Science, extending over a long period of years.

Certainly, we can never express sufficient gratitude to our Leader, Mrs. Eddy, whose consistent unselfishness made it possible for her to catch the light of Truth and Love, and so reflect it that all may receive its blessing in proportion to their willingness to part with materiality. Truly, one life of consistent spirituality in a material age is a miracle in itself.

Like all Christian Scientists, I now wonder how I ever lived without our chart and compass, our "Key to the Scriptures;" and indeed, it was a very poor attempt at living, mostly a combination of mental misery and physical discomfort. Whenever one is inclined to be discouraged with slow progress and seeming obstacles to growth, he need only compare the two conditions of life, with and without the understanding of Christian Science, to gain meekness and humility of thought before God, and a wholesome sense of shame at the pretensions of a selfhood in matter.—KATE K. BLATTERMAN, Atlanta, Ga.

---

This thought came to me after reading the article headed "By Way of Reminder," which appeared in the *Sentinel* of May 16: What a glorious opportunity is ours, right now, when so many demands are seemingly made upon us,—namely, to give as Abraham gave,—all, all that was dear, for God, good. Who is able to rise to the occasion? This is a testing time for those who are able to stand the test, and place themselves in a position to receive what the world can neither give nor take away, God's richest blessing.

C. A. G.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

## Announcements.

### The Christian Science Text-Book.

Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

### Our Leader's Message.

The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

### Communion Message, June, 1902.

The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

### Der Christian Science Herold.

A monthly magazine printed in the German language, containing about thirty-two pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

### Remittances.

Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

### Church Tenets.

The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

### Building Fund of the Mother Church.

Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

### Clerk of the Mother Church.

Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

### Church Treasurer.

Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

Rev. Walter M. Walker, D.D., in an article in *The Standard* under the caption, "What Shall We Do with the Prayer Meeting?" says:—

"So much for the past; when we turn to the present we find that one of the characteristics of this service to-day is a declining attendance. Apparently the great majority of Christians have lost their interest in this mid-week service. Inquiry made of many pastors reveals the fact that, upon an average, this service is attended by only about one in ten of the membership, while in some Churches the attendance is only one in twenty-five. The great majority think no more of going to the house of God on Wednesday evening than they would if they did not belong to the Church at all. They have wholly dismissed it from their calculations.

"As a result of this declining attendance there is a lessened interest. . . . The failure of many, who are active in the Church, to attend this service helps to create the impression that it is really unimportant, and so the interest is lessened or destroyed.

"A third characteristic of the prayer-meeting to-day, in many Churches at least, is a lack of spiritual power.

"Now in view of these characteristics the question comes, What shall we do with the mid-week service? We can let it remain as it is. We can allow a few faithful souls to continue to meet and seek God's blessing. We can be content with the fact that the Church maintains a mid-week service even though the great majority of the members take no interest in it. We can say to ourselves that conditions are no worse with us than with other Churches, and let things drift along as they are.

"But if any are not satisfied with this suggestion, there is a second alternative. We can dispense with the prayer-meeting entirely and pray at home or in the house of God upon the Sabbath day. In the past the prayer-meeting has been a source of spiritual power. It has been one of the services of the Church which God has used and honored. But it may be that this service has outlived its usefulness, and that the time has come when we can better do without it. No matter how useful an institution may have been, its past influence is never a justification for its continued existence. In the history of the race, many a time-honored custom has been outgrown and discarded. Forms, liturgies, religious services, in themselves are of value only as spiritual life is manifested through them. And when the life is wanting it were far better to discard them. When an institution is dead, we may shed bitter tears of sorrow over it, but after all the only thing to do is to bury it. We may be certain that in the providence of God there will be something else to take its place."

Professor George A. Coe of Northwestern University, speaking at the Harvard Summer School of Theology on "The Problem of Religious Education in its Relation to Modern Conceptions of Christianity," is thus reported in the *Boston Transcript*:—

"It remains now to point out that the new appreciation of the historic Christ for the first time makes it possible to recognize his true place in the education of men. We have thought of him as a Prophet, Priest, King, Saviour, Revealer, but scarcely as educator in the modern sense of education. He has been in our thought the Redeemer of sinful men, who also loved little children. Always the starting-point of thought has been the adult; almost always the work of Christ has been looked upon as primarily the making over of men rather than the making of men. That he should enter into the whole development process of humanity as something belonging there rather than as something added to it—this idea, though it is no novelty in theology, has educational significance that, so far as I am aware, has never been worked out. The Christian philosophy of history needs to be coördinated with the philosophy of education; the saving of men needs to be coördinated with the formation of men; the spiritual processes of the adult mind need to be seen in their true relation to those of the child-mind and the youth-mind.

"Obliged to face the practical problems of character formation, we have again and again found ourselves saying that it is life that educates, and that the process of education rests upon the sharing of life between the older and the younger. We have discovered, further, that education is simply one phase of the actual spiritual life of an age or a Church. The Church or the age that practises a simple, vital piety becomes thereby a true power in education, while one that turns aside into formalism, either logical or hierarchical, loses its capacity to educate. This fact makes it possible to consider the work of Christ as educator without attempting any formal separation between his relations to adults and his relations to children. As far as he is really life to the mature, he is life to the immature also."

President Hyde thus secured a composite creed from a class of sixty students, most of whom were seniors, in Bowdoin College. Each member of the class, having written his own creed, from them all a statement was prepared, including everything which any student had affirmed except what some one of them had denied. This statement was submitted to each member, and after full discussion, with amendments and concessions as called for, it was adopted by unanimous vote. It represents, of course, the minimum of religious belief of them all, being accommodated to the view of the one who could accept the least. But it stands for so much that we need not fear for the faith or faithfulness of men who hold and are ruled by the convictions expressed in the following creed of the Bowdoin class of 1903:—

"I believe in one God, present in nature as law, in science as truth, in art as beauty, in history as justice, in society as sympathy, in conscience as duty, and supremely in Christ as our highest ideal.

"I believe in the Bible as the expression of God's will through man; in prayer as the devotion of man's will to God; and in the Church as the fellowship of those who try to do God's will in the world.

"I believe in worship as the highest inspiration to work; in sacrifice as the price we must pay to make right what is wrong; in salvation as growth out of selfishness into service; in eternal life as the survival of what loves and is lovable in each individual; and in judgment as the obvious fact that the condition of the gentle, the generous, the modest, the pure, and the true is always and everywhere preferable to that of the cruel, the sensual, the mean, the proud, and the false."

*The Congregationalist and Christian World.*

Great forces are at work in the world. Nobody can help seeing that what was and is behind the forces is the Christianity of Christ. The demand is for moral and spiritual leadership, and to that end we must both cultivate scholarship and conserve theology and religion. The question is how to do this in a strenuous age. We want ministers of the Gospel, but not of the old sort. The world has no use for the man of cant and ministerial convention. There is room in the Church for manly men, men of native power, of fine culture, of moral and spiritual conviction,—men who think the thoughts of men, and who know how to carry them to other minds.—DR. CAPEN.

Much of the preaching, so-called, to-day is argument to prove something the minister himself is not quite sure of. What inspiration is there in the suggestions of doubt? How can timidity stir to action? People will follow the confident leader. Speak to the people out of a full heart and mind that which you know to be true. . . . The minister must have a message, a confident, whole-souled message. Imagine the angels singing, "Behold, I bring you some tidings which I shall now attempt to prove to you are good, though there are some conscientious angels who doubt it!"—*The Universalist Leader.*

There can be no abiding power until that day comes when we keep our conduct abreast of our profession; there must be something back of our profession; that something is a consistent life. It is a beautiful thing to hear one who is gifted in speech and in prayer in the prayer-meeting, but I am persuaded that there is something far more beautiful, and that is, for one to be able from Monday morning until Sabbath night to live Christ. Here is a power infidelity cannot assail nor unbelief deny.

DR. J. WILBUR CHAPMAN.

Attention is our first duty whenever we want to know what is our second duty. There is no such cause of confusion and worry about what we ought to do, and how to do it, as our unwillingness to hear what God would tell us on that very point.

H. CLAY TRUMBULL.

If the duties before us be not noble, let us ennoble them by doing them in a noble spirit; we become reconciled to life if we live in the spirit of him who reconciled the life of God with the lowly duties of servants.—F. W. ROBERTSON.

"The prime cause of the childless Church is the prayerless home," says *The Outlook*.

The reward of one duty is the power to fulfil another.—GEORGE ELIOT.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75
Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75
Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . 4 75
Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . . 5 75
Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

**A COMPLETE CONCORDANCE** to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid. . . 5 00
Twelve or more copies to one address, each . . . . . 4 50

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00
Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. . . . . 4 00
Twelve or more to one address, each, prepaid . . . . 3 75
Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

## Items of Interest.

**National.**

Acting Secretary Loomis has been notified by the Russian Charge d'Affaires that hereafter passports issued to American citizens who expect to visit Russia will be vised only at the Russian embassy in Washington and the consulates in New York, Chicago, and San Francisco. This cuts off Savannah, Mobile, Pensacola, Baltimore, Philadelphia, Portland, Ore., Galveston, and Manila, at all of which ports passports have heretofore been indorsed by the Russian consuls or agents. This results from the requirement that the vise must be in Russian, which is not used by the agents at the latter places.

A statement prepared by the Bureau of Insular Affairs of the War Department shows the customs revenues in the Philippines for the first four months of 1903 to have been $2,931,782, against $2,901,011 in the same period in 1902, and $1,215,657 in 1899. A comparison of the customs revenues under Spanish administration during the ten years from 1885 to 1895, with the period from August 20, 1898, to April 30, 1903, under American occupation, shows the volume of business to have increased about fourfold.

Judge George Gray has accepted his appointment as the fifth member of the Alabama Coal Strike Commission, and has so telegraphed to the other members of the commission at Atlantic City. He makes his acceptance conditional, however, upon the commission's work being done during August, as he will have to preside over a session of the United States Circuit Court of Appeals beginning the second week in September.

King Charles of Portugal visited the United States squadron on the 1st. A most cordial reception was accorded Rear-Admiral Cotton and his officers earlier in the week by the King and Queen Amelia at the royal castle at Cintra. The Admiral also visited Queen Maria Pia, mother of the King, and the Duke of Oporto, brother of the King.

The Reliance has been officially announced as the new America Cup defender.

**Foreign.**

The text of what purports to be an agreement between Russia and Japan signed at the time of the visit of the Russian Minister of War to Tokio last June has been published at Berlin. The agreement stipulates that Russia shall effect the evacuation of Manchuria at the earliest possible date, may retain a police force there to protect her railway and other legally acquired interests without threatening the independence of China or prejudicing the trade of Japan; Russia shall offer no objection to the opening of free ports at Fengtien, Yenkou, and Tatakong, and the establishment of Japanese consulates at these places; Manchurian administration for the present shall remain unchanged, the legal liberty and interests of Japan shall be respected, and Japanese immigration within certain limits be unchecked.

A despatch from Constantinople to a German paper from Vienna says that Russia has asked Turkey to allow her warships to pass through the Dardanelles en route to China. The Porte hesitates giving permission, fearing that the Powers will protest. A large vessel belonging to the Russian volunteer fleet carrying arms to Port Arthur, is expected to pass through the Straits in a few days.

King Menelik of Abyssinia is to have a mint of his own at the capital city, Addis-Abeba. It will probably be in operation by the first of the year. It is understood that he has a very large amount of gold bullion on hand besides a large amount of silver. His coinage has hitherto been minted in France.

Ratifications of the Anglo-Chinese commercial treaty have been exchanged. This treaty was signed by Sir James T. Mackay and the Chinese commissioners at Shanghai September 5, 1902.

Cardinal Sarto, Patriarch of Venice, was elected Pope of the Church of Rome August 4 on the seventh ballot. He assumed the title of Pius X.

**Industrial and Commercial.**

According to estimates made by the agents of the trans-continental railway lines, the total number of settlers passing through St. Paul for the Northwest was 130,000. Of these 85,000 went to points in Minnesota, North Dakota, Idaho, and Washington, and the rest to the Canadian Northwest.

The land department of the Yazoo & Mississippi Valley Railroad Company has just sold three thousand acres of richly timbered hardwood property to a Memphis firm, hardwood manufacturers. The sale is the largest ever closed by the land department of the Illinois Central road.

A merger of ten car wheel companies, including plants in Buffalo, Wilmington, Baltimore, and several western cities, is said to be nearing completion. It is stated that the combination will not include any of the New England concerns.

The National Novelty Corporation, a new five million dollar concern incorporated in New Jersey, expects by August 1 to have completed the combination of some thirty toy concerns located in different sections of the country.

The Knickerbocker Sugar Refining Company, a new plant being erected at Edgewater on the Hudson, expects to be producing six hundred barrels of sugar per day before the end of the year.

A hundred carloads of fruit, a thousand tons a day, are now coming East from Sacramento, according to reports.

The wheat yield of Canada is estimated at over sixty million bushels.

**General.**

"At the twenty-fifth annual meeting of the American Library Association at Niagara Falls recently, Mr. J. L. Harrison, of the Providence Athenæum," says *Public Opinion*, "presented a report of the library gifts and bequests from June 1, 1902, to May 31, 1903. A significant part of the report showing some of the effects of the Carnegie gifts, is commented on by the New York *Nation*. 'The year has seen 158 Carnegie libraries added to a list which has probably passed one thousand and increases with almost daily rapidity. In other words, Mr. Carnegie, in the year ending last May, provided three library buildings for every one furnished at the public expense or by private beneficence. Or, if one chooses to regard Mr. Carnegie's gifts from the viewpoint of expense, he has given during the year $6,679,000 out of total library gifts (excluding, however, 96,247 volumes) of $10,306,407. In fine, Mr. Carnegie contributes two-thirds of the money and three-quarters of the buildings.'"

At a sale at Christie's, London, a set of Henry VIII. silver apostle spoons, 7¾ inches long, and the rarest known to connoisseurs, sold for $24,500, a record price. They were the property of a gentleman in whose family they had descended as heirlooms for many generations. The handle of each spoon is surmounted by an image of Christ or one of the apostles. The set weighs thirty-two ounces and nineteen drams. Each spoon bears the London Hall mark date, with the letter of the year 1536, and the maker's mark, a sheaf of arrows.

The trip from San Francisco to New York has just been completed by an automobile party which left the Coast May 23. The party speeded up the coast eighteen hundred miles and then turned eastward through Nevada, Utah, and Colorado. In the sixty-three days a distance of more than six thousand miles was covered; an average of 110 miles a day was maintained to Chicago, thirty-six days travel. The only accidents to the machine were the breaking of the stud bolt of the connecting-rod and one broken axle.

The ruins of a large city are reported to have been found in a dense forest in a remote part of the State of Pueblo in Mexico by an archæologist who has reported his find to the authorities at Mexico City. The city contains large pyramids and extensive fortifications and a large amount of excavation will be necessary to disclose its true extent and importance.

At the International Chemical Congress held in Berlin not long ago, Dr. A. Haarman, of Osnabruck, stated that about two hundred and forty-seven thousand tons of steel fly away in dust from the railroads of the world every year. Of this amount, he says, nineteen thousand tons is lost through friction on the German railways alone.

The Cape-to-Cairo Railway is progressing. Twenty-five hundred men have just begun work on the section between Wankie and the Zambesi at Victoria Falls. The branch line between Bulawayo and Guanda has been built one-third of the total distance of 104 miles.

An explorer recently returned from Unimak Island, one of the Aleutian group, says the island contains thousands of tons of carbonate of iron, pronounced practically pure and worth $20 a ton. The only other deposits are said to be in Bavaria.

The North German Lloyd line steamer Kaiser Wilhelm II. recently made the trip from New York to Plymouth in 5 days, 15 hours, and 55 minutes, thus lowering her best previous eastern record by one hour and thirty-five minutes.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From our Contributors.

### Seventeen Years a Witness.

JOSEPH G. MANN.

"THAT which was from the beginning, which we have heard, which we have seen with our eyes, which we have looked upon, and our hands have handled, of the Word of life; . . . that which we have seen and heard declare we unto you, that ye also may have fellowship with us: and truly our fellowship is with the Father, and with his son Jesus Christ" (1 John, 1: 1, 3).

Through the medium of the *Sentinel* I desire to make a humble acknowledgment of my seventeen years of blessing in Christian Science. My first experience in this line of light was my own marvelous healing, a great blessing. But during all these years a still greater blessing has been mine, the blessing of thinking and speaking the word of truth through which hundreds of others have been healed. All Christian Scientists have shared in a greater or less degree the blessing of being healed, and of seeing others healed; but all have not acknowledged to the world their individual experiences; for if they had, the world would resound with their united voices with the praises of still more wonderful healing than it has yet witnessed.

I have told my story of early healing over and over, and never tire of repeating it for the good of others. There are now thousands rejoicing in like blessings, where there was one at the time I was healed. I shall leave it to them to testify to the physical healing, while I yield to a prompting to bear witness to a still broader healing through growth in the understanding of Christian Science. The healing to which I now refer is the enlarged sense of honesty and justice which comes after the new birth in Christian Science.

First let me say that I am thankful to be among those who are privileged to serve in the home of our beloved Leader, Mrs. Eddy. It is now nearly six years that I have had this privilege. Six years of post-graduate instruction from the President of the Massachusetts Metaphysical College where I was given the primary course about fifteen years ago; six years of witnessing in our Leader's life the exemplification of her teachings; six years of extraordinary opportunity to practise in my own every-day life such a sense of honesty, absolute justice, and fidelity to Truth, as the world outside of Christian Science little dreams of, and of which even Christian Scientists outside of Pleasant View have more of the letter than of the spirit, as they would see if they judged themselves by the standard of the natural daily conduct of their Leader, rather than by the world's standard.

Far be it from me, however, to criticise the great Field of honestly striving students. Indeed I am glad to recount the praises of them as a body. After the splendid gathering of about ten thousand Christian Scientists in Concord recently, many of our most esteemed citizens spoke with commendation of the statuesque morale of Mrs. Eddy's followers. The ladies were spoken of as ladies in fact, as well as in appearance. And it was remarked that not one man in all this vast concourse was known to indulge in intoxicating drink or to use tobacco. Christian Scientists are grateful to the world for this just observation of the clean lives of Mrs. Eddy's followers. But shall we let the world's praises satisfy us? Shall we not rather tell the world that we have scarcely entered upon the Christ-like life of our beloved Leader whom we are striving to emulate? The world in reading Mrs. Eddy's writings may see the standard she has set in all her teachings. But few are privileged to know her as those who have studied with her personally, know her. Because of my special privilege in witnessing her self-sacrificing efforts for her students and the whole world, let me at this time call attention to her own words in "Miscellaneous Writings" p. 303: "If ever I wear out from serving students, it shall be in the effort to help them to obey the Ten Commandments, and imbibe the spirit of Christ's Beatitudes."

Who that has spent one hour in the home of Mrs. Eddy has not had his own slothfulness rebuked by her indefatigable labors to bless others? Then am I justified in longer keeping silent after having witnessed six years of her life, a life that knows no compromise with sin and is a constant rebuke to selfishness? I am sure that if all her students could know our Leader's inside home-life as I know it, they would all consecrate themselves anew to the service of Love; and they would understand that the world may praise their present Christian attainments as remarkable because the world is satisfied with so little. When the world rises to the "secret place of the Most High" the great work of our Leader will be appreciated.

The disparaging efforts, either ignorant or malicious, to obscure the vitality of our great cause, will finally benefit it. All honest students know that they were healed by hearing the facts about Mrs. Eddy and by knowing the truth in Christian Science as revealed through her, and this is leading them on to the greater healing in themselves, the moral and spiritual uplift which assuredly blesses all. In view of these well-proved facts I have prayed for this opportunity to share with the Field (and the Field, according to the Master's interpretation, is the world) what I know positively to be true. Zechariah declares: "These are the things that ye shall do; Speak ye every man the truth to his neighbor; execute the judgment of truth and peace in your gates."

God has introduced our beloved Leader through her own works. But a busy world does not always see and read for itself, and so fails to receive His introduction; meanwhile many cherish a false sense, which comes to them they know not how, and must prove unreliable and harmful. One would not accept an introduction from a stranger, nor a letter of introduction with an unfamiliar superscription.

As a member now of her home, and for a long time of her household, I should require too much space to recount how often Mrs. Eddy has taught me as by "precept upon precept, line upon line," never to practise upon an individual in thought from a selfish standpoint or to harm him, but on the contrary always to strive in every possible way to do good. Her constant instructions are that we may see ourselves and others as God sees us, and return good for evil. But notwithstanding the many personal exhortations to her household, I must say, my grandest lessons in Christian Science have been gleaned from witnessing our Leader's genuine and positively Christian long-suffering; her steadfast overcoming of evil with good; her unfailing prayer to

bless all, even her enemies, and scrupulously to fulfil the "Golden Rule" as it was fulfilled by our Great Master, whom she teaches us to follow, more by her living example, than by precept.

## Does it Pay?

SAMUEL GREENWOOD.

THE hope of gain and the fear of loss are ever restless thoughts which give mankind but little peace, for no material conditions have been found that can satisfy the one or subdue the other. Along every line of human aim or effort the incentive is to accumulate, whether it be riches or knowledge, whatever is deemed desirable. The sense of constantly adding to present possession, of pulling down barns and building greater, is perhaps the nearest approach to satisfaction which mortals have reached; but it is only an approach, for the instability of earthly things is a bridgeless gulf between them and content. The pathos of worldly riches is the shadow of uncertainty that constantly attends them. Mortals do not know the day whose close may not see them bereft of their material treasures. An accident, a panic on 'Change, fire or flood,—these take place in an hour and have no mercy. Mortal existence, even at its best, is a pitiful thing to pin one's happiness to, for its gilded pomp is but a passing show, and the moth and rust invade its treasures.

The ideal of life which Christianity embodies is the only one which excludes the elements of chance and change through separating the true man from matter and sin, and presenting to mortals a way of spiritual living whose gains are permanent and whose losses are salutary. The measure of success achieved by the different religions of Christendom has depended solely upon the degree in which this ideal has been accepted and practised.

Christian Science differs from the older established Christian religions in its absolute acceptance of the Christ-ideal and its insistence upon the perfect adaptability of Christianity to meet the varying needs of men and remove from human experience its uncertainty and sorrow, its pain and godlessness.

The attitude of men towards Christian Science, or Christianity, is much the same as with other affairs of life; the uppermost question is, Will it pay? Wherein is the advantage or the profit of becoming a Christian Scientist?

The ranks of the Christian Scientists are composed of men and women whose motive for their change of view has been that of spiritual advantage. They have come from nearly every phase of religious or non-religious belief with the common hope of the betterment of their condition, and their readiness to adopt a new system of religious thought has been because of the inadequacy of their former beliefs to meet their need. The question naturally arises, Have their hopes and expectations been realized? What has been the loss or gain of the incoming to their lives of Christian Science?

The founder of Christianity said, "Whosoever he be of you that forsaketh not all that he hath, he cannot be my disciple;" and we must infer that to be a true disciple or student of our Master necessitates a loss or relinquishment of certain conditions which are not compatible with Christian living. What have Christian Scientists lost, or dispensed with, in consequence of the larger faith in God and broader view of Christianity which they have found in Christian Science?

They have lost the unwholesome, un-Christian fear of God which has made of the belief producing it an unlovely and unlovable thing. The writer remembers when a child a shrinking sense of dread at the thought of some day meeting God face to face; and later, when a member of an orthodox Christian church, this thought did not give him as much prospective joy as the thought of meeting an earthly parent. This morbid fear has been lost in Christian Science, for it holds no picture of the divine Being as humanly passionate, or as a revengeful, angry judge capable of consigning the inexperienced child, who may have slipped or fallen in the stress of temptation, into a night of eternal despair. This pagan belief has been dissolved in a sweeter, kindlier thought of God as of one "altogether lovely," who pitieth us "as a father pitieth his children."

They have lost the haunting horror of death, that universal legacy of the Adam-race which no human philosophy or religion has succeeded in removing. This has not been accomplished through the belief that dying performs any spiritual office for man, or that it exists with the divine approval, but in Christian Science they have perceived the fact that God is the Life of all, and that death has no right of rule or power; that it is a usurper whom Christians must dethrone through obedience to the law of Life. They have learned that death is the dream of sin to be overcome through an awakening to righteousness; that it cannot affect man's relationship to God, can neither separate nor unite the Son and the Father.

They have lost, in a large measure, their desire for sin. Though they still struggle with sinful tendencies inherent in human nature, and with the belief of sensuous pleasure, it is because they have not perfectly discerned their spiritual selfhood so as to overcome all fleshliness. Their pleasure in sin has disappeared as they have realized it to be the way of pain and death, which confers no joy on man.

They have lost from their experience much, and in most cases all, of their former sickly conditions, with the diseases and disabilities which, to their sense, had become hopelessly incurable. They have abandoned their belief that a sick or sinful man is the product of God or of His laws, and so was never the divine image and likeness. In their endeavor to be the man and woman of God's creating, and honor their Father as Jesus honored Him, they have been deprived of many of the conditions which are reckoned by mortals as among their actual and rightful possessions, such as worry and fretting, the enslaving fear of future punishment, of poverty and pain, the restless desire and need of amusement, and all the et ceteras which have robbed men of their joy in life and their confidence in God.

These are some of the losses entailed through the daily study and practice of Christian Science. Are they to be mourned? Have they detracted in any degree from true manliness or womanliness, or lessened the capacities for happiness and usefulness?

And what of the corresponding gain, the clear profit, which Christian Scientists have to show as the result of their change of thought and life? What advantages are theirs above the popularly accepted method of Christian practice? If, other things being equal, they have a substantial balance of gain over their former conditions, no one with common business or religious sense could decry the wisdom or the prudence of their course.

Through Christian Science they have gained a greater love for God and man, a clearer conception of the Divine nature as infinite Love, and a more abiding sense of God's ever-presence enfolding man and the universe. They have a higher and sweeter realization of life and happiness, a more constant sense of peace and safety, purer thoughts and better morals. They have gained dominion to a large extent over various adverse conditions which mortals have regarded as sources of misery for the race. They have a more practical discernment of the spirituality of man, and his unity with the divine Principle of his being,—God. Not the least of their gains is their growing apprehension of Christianity's daily demands upon its believers for a loyal obedience to our Master's words and works as constituting the only rule and practice of Christian living.

The scope of this article is inadequate to present in detail

Digitized by Google

the advantages which Christian Scientists have derived from their changed thought of God and their enlarged understanding of Christian power and truth. Their healthier and holier living is the peerless gain of godliness, the fruits of an inspired faith and knowledge. Their losses are not regretted. Their espousal of the Christian Science cause may have cost them some worldly friendships, and perhaps the approval of loved ones; but they could but welcome the greater light of Truth which has appeared to them in Christian Science, and follow its divine leading.

## Upon Judging and Condemning.

ANNE DODGE.

JESUS, that great Teacher whose inspired words are the rock upon which Christianity is built, said in his greatest discourse, which really covers all questions regarding salvation and proper living, "Judge not, that ye be not judged. For with what judgment ye judge, ye shall be judged: and with what measure ye mete, it shall be measured to you again. And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam that is in thine own eye?" I could recount experiences of my own wherein I have been tempted to judge others, and when I have resisted, and turned the lens of Truth inward I have found the error was in myself, and that I was at fault; whereas the person whom I was tempted to condemn had a good reason for his course of conduct.

So often I have heard judgment passed on those perfectly innocent when the inner voice of Truth whispered to me, The real offender is the critic who meted out such a severe condemnation of those who had given offence, but had meant no wrong. It is the motive that God weighs, not the result. Duty may often lead to deeds of extreme self-sacrifice, and yet I have heard people harshly judged for performing what had been to them the difficult task imposed by a sense of duty which involved great self-denial, as duty often does. If we would but stop and think when tempted to judge another, and ask ourselves the question, Is not the beam in my own eye? If we would but be charitable, and give our brother the benefit of the doubt, how much more Christian and commendable our course would be!

Saint Paul says, "Therefore thou art inexcusable, O man, whosoever thou art that judgest; for wherein thou judgest another, thou condemnest thyself; for thou that judgest doest the same things."

If we see a fault in others let us first make sure that the same fault is not in ourselves in any degree. Let us weed out the errors first in the garden of our own consciousness, then perhaps we shall see more perfectly our fellow-creatures as they are, and there will be no room, no occasion for fault-finding, for the faults will have disappeared. Love will have dissipated them. Such is its glorious mission.

## Unconscious Misstatement.

CLARENCE A. BUSKIRK.

THERE seem to be many unconscious as well as many unconscionable, deceivers on this earth. These unconscious sinners are so numerous that we find them nearly everywhere,—on the street-cars, on the corners, at social gatherings, in churches, in stores, and conspicuously at weddings, funerals, and picnics. Prevarications seem to run out of their mouths as easily as water runs from an inverted bottle that has lost its stopper. And yet they seem to be wholly unaware that they are deceiving at all. They are suffering from the effects of unfortunate associations and teachings. Many of them are highly intelligent people in most things, and many of them are governed by excellent intentions. These considerations greatly mitigate, if they do not wholly extinguish, their moral guiltiness; but they cannot prevent the multitudinous evil consequences from the falsehoods which perpetually proceed out of their mouths.

These unconscious sinners have many modes and methods in telling their untruths. A large class of them are addicted to the vicious habit of remarking that the weather is very bad for sick people and for catching colds; and responsive shiverings and coughings may frequently be witnessed on the part of themselves or of those near them. Another class is sadly given over, as soon as their heads begin to be frosted, to the counting of their years, and to the recounting of beliefs about rheumatism, etc., so that they keep groaning increasingly to the end of their tether. Another class becomes immediately prominent when such words as "measles" or "whooping-cough" get abroad in their neighborhood, and such learned words as "bacteria," "germs," and "microbes" afford them peculiar delight.

The harm which is constantly being done unwittingly by these croakers and gossips is very great. Yet it did not seem to be recognized, and no serious endeavors were put forth to check it, until Christian Science uncovered and revealed its enormity. Medical practitioners might have been heard recommending cheerful words for the sick-room, and rebuking gloomy looks and prophecies in the presence of their patients. The need for this had been brought to their attention by their every-day observations. But, strange as it may seem to us now, this did not lead the medical profession to any broad and scientific analysis of the mental causation of disease; and the unlicensed freedom of garrulous tongues everywhere talking sickness and error, thereby inflicting immeasurable mischief upon humanity, continued unabated. If the medical profession had not been so exclusively engrossed in experimenting with the different drugs which, one after another, they have tried, extolled, and then abandoned as worse than useless, it is probable that they would long since have reasoned out and learned that the mental causes which they fortuitously have found to affect the sick are also operative upon all persons. If Christian Science had accomplished nothing else than the broad awakening among the better-informed classes of our people to the urgent need for bridling our tongues against gossiping about sickness and evil, it would be entitled to the lasting gratitude of our race.

Religious thought is also being slowly aroused to the perception that Christian Science is declaring a great spiritual fact when it teaches that all such gossip is a lie. There is a Christian awakening to the perception that it is either a lie, or else atheism is right. The mill of the logic which leads to this perception may seem to be grinding slowly, but it is grinding inexorably.

Christian Scientists cannot be too positive in their denial of these misstatements, for it is peculiarly true in respect to them that is that which cometh out of the mouth which defileth a man.

We read in Homer that Achilles hated liars, because their mouths were the gates of hell. Unconscious offenders who form the subject of this writing, however unwitting their sin may be, are indeed making their mouths "the gates of hell." From those evil gates are constantly issuing hosts more numerous and malignant than those which Milton's imagination depicted. They seize upon old and young alike, and paling cheeks and dimming eyes witness the terrors of their presence. Christian Science says to them, "Avaunt!" And confidently marching against them under the shining and unconquerable banners of Truth, the ever-growing army of Christian Science is already proving itself able to drive from the earth the phantom-army of error.

## A Lecture Appreciated.

CHARLES W. PEARSON.

IT is impossible to estimate the amount of good that is being accomplished by the Board of Lectureship in correcting the misapprehensions about Christian Science, and at the same time bringing to public notice the grandeur and sublimity of Christianity and its efficacy in dealing with sin and disease. Through Christian Science the teachings of the Bible are proved to be practicable, and this is being presented to the public by the noble men and women who compose this Board.

This fact has been brought to our notice by a lecture recently delivered in our church, where the speaker held his hearers for an hour and a half and they were so interested that they remained seated for some moments after he had concluded; it seemed as if no one wished to rise and disturb the peaceful feeling which brooded over the audience. As the people passed out it was interesting to hear the remarks which were made about the lecture, and to note their earnestness in speaking about what they had heard. One man said, "That statement about fear affecting the body and evil thoughts doing us harm, is the most common-sense thing that I have heard for a long time; it has taught me a lot, and I can see that the remedy for these evils is right thinking and living, and this sheds a new light upon St. Paul's words, 'Let this mind be in you which was also in Christ Jesus.'" Another was heard to remark, "After what I have heard to-night, I am so interested that I will procure a copy of Mrs. Eddy's book and begin to study the subject." An elderly gentleman said, "I took a seat near the door, because I had an appointment and did not wish to disturb the meeting by leaving before the lecture was finished; but I became so interested in what I heard that I remained, and I am glad that I did so." These are samples of many of the expressions which we overheard, coupled with thankfulness for the privilege of hearing the truth about Christian Science and its Discoverer. As we watched the passing faces and saw so much happiness, and saw also that a new hope had sprung up in many a heart, our thought turned in loving gratitude to Mrs. Eddy, our revered Leader, who in her wisdom and great love for mankind, made such meetings possible by giving us this Board of Lectureship. She foresaw the good which is being accomplished by it in preaching the gospel of peace, and educating the people. It gives them a new understanding of the Bible so that they can apply its teachings to their daily needs, both in health and sickness, thereby developing a greater faith in God and proving that the religion of Jesus is demonstrable.

## Light.

W. B. T.

ALL mundane ties bide here their hour and go,
And earthly friendships find their eventide;
Life's sun, to seeming, sets on all below,
Yet shines again, with shadows scattered wide.

For Love is Light, our God, our steadfast sun,
Which, risen as Truth, will ne'er leave dark our sky;
But light to their true meaning, one by one,
These earth-ties fleeting, in God's by-and-by.

Make yourselves nests of pleasant thoughts. None of us yet know, for none of us have been taught in early youth, what fairy palaces we may build of beautiful thoughts, proof against all adversity,—bright fancies, satisfied memories, noble histories, faithful sayings,—treasure houses of restful and pleasant thoughts, which care cannot disturb, nor pain make gloomy, nor poverty take away from us—houses built without hands for our souls to live in.

RUSKIN.

# Selected Articles.

## Love Begets Love.

KIND thoughts and kind acts beget love, and love creates each day a new world for all who love. Such a world is a spiritual world, and God is in very essence and truth its center.

There is no act nor thought so small or circumscribed but what, if the purpose behind it be loving regard and wholesome well-wishing for the comfort and welfare of one another, blessings untold will flow from them.

Yesterday we were told of a beautiful loving-cup presented to the Wonolancet Club Saturday evening by Christian Scientists, to whom the doors of the club were thrown open on their visit to our city about a week ago.

The above thoughts were suggested by that act, and what flowed from it.

It seemed a small and unimportant thing for the club to do,—nothing more than a duty which the club owed to itself and to the strangers who came in such numbers at so short notice, but we should not forget that the club is not a religious organization and the house is not a public institution.

The visitors bore no relation to the club, civic, religious, political, or otherwise, and to its members the coming of the strangers was, in a measure, but little concern of theirs; but there was, and there is, a civic and neighborly and kind relation between her whom these strangers came to see and the members of the club, and while the officers had in view a desire to make things pleasant for the thousands who came, there was unquestionably behind it all a desire to evidence their regard for Mrs. Eddy, who loves Concord and Concord people.

Out of this expression of love on the part of the club in contributing its share of entertainment, comes back to its members a like expression of love from those to whom the kindness was extended, and thus does love beget love, and create a new world in which those who love live.

How much better this is for all; how it tends to eliminate petty jealousies and narrow prejudices; how it breaks down and sweeps aside barriers that should never be permitted to stand between man and man; how it draws all men together and makes the whole world kin.

Editorial in *Concord* (N. H.) *Patriot.*

## The Adequacy of Christian Science.

To admit that many are healed by Christian Science of functional disorders, but claim that any "disease that involved the change or waste of tissue" has not been cured, is absurd, for there is an abundance of as conclusive evidence of the healing of organic and malignant diseases by Christian Science as there is of functional disorders. The reliability of the diagnosis is not dependent upon the knowledge of the Christian Scientist alone, as thousands of cases that have been diagnosed by eminent physicians and given up after all material remedies had failed, have been cured by Christian Science. If the disease was not what the doctors said it was, then their diagnosis was at fault, and they were blind guides leading the blind; but the fact remains that in many cases, after years of suffering, the patients were healed by Christian Science of diseases that physicians had pronounced incurable. Those who are healed are generally willing to give all reasonable information about their cases to those who are sincerely seeking the truth, and they are giving their testimonies at the Wednesday evening meetings of the Christian Science churches throughout the land, but they do not consider that they are under any obligation to submit themselves to medical examination for the benefit of some critic who denies the

Digitized by Google

healing power of Christian Science, for such a one would not "be persuaded, though one rose from the dead."

While Christian Scientists recognize the humanitarian motives of the "faithful and devoted physician," yet they believe that Christ Jesus is the true example for Christians to follow, and he did not show his trust in God "by making use of the abundant means nature and man have provided to cure disease." On the contrary, the Master healed the sick through a spiritual power and without drugs, and said to his followers, "Ye shall know the truth, and the truth shall make you free." His disciples proved the truth of this by healing the sick and the sinful, and that it is as true to-day as when it was uttered is being demonstrated through Christian Science.

The sense in which Christian Scientists deny the reality of disease does not prevent them from helping the needy, but enables them to do so, for they base this denial on that fact that God,—divine Truth and Love,—is not the author of disease, and they can trust Him to destroy its seeming reality. As a dreamer suffering from a nightmare needs to be awakened from his dream in order to be freed from his suffering, although we know the objects of his dream have no real existence, so one suffering from a belief in disease needs to know that it does not exist in divine Mind, which is man's true being. According to the law of cause and effect, like produces like, and good is not the author of evil. As God is Spirit, His image and likeness, man, is spiritual; and as there is no disease in Spirit, there can be none in the manifestation of Spirit. The Christian Scientist does not believe that his prayers will subvert any of God's laws, but that they bring him into harmony with those laws, and thereby the supposed laws of matter are annulled. As Paul said, "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." While sin results in suffering, when the sin ceases the suffering should also cease.

Christian Science emphasizes the fact that the gospel according to Christ includes healing the sick as well as reforming the sinner, but this healing comes through a spiritual understanding of God and man's true relation to Him. Jesus said: "This is life eternal, that they might know Thee the only true God, and Jesus Christ, whom thou hast sent." If this knowledge is "a kind of epidemic," it is a good one, and should be encouraged, for it can only lead to the physical, moral, and spiritual elevation of mankind.

As our critic admits "that life, which seeks its own continuance, tends to repair itself, often without our help;" claims that "all physicians recognize the marvelous influence which the mind has over the body;" cites cases where mental conditions alone produce disease and bodily changes, even to the extent of a burn which left a deep scar as a result of a vivid mental impression and acknowledges that "the mind can check a morbid growth and restore a healthy state;" why should it seem incredible that every form of disease can be healed through the power of the divine Mind and without material means, as taught in Christian Science?

It is written that "Jesus went about all Galilee, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of sickness and all manner of disease among the people," and he said to his disciples, "He that believeth on me, the works that I do shall he do also." This promise was verified during the first three centuries of the Christian era, and thousands of children and adults that material remedies failed to cure are to-day testifying to God's healing power as manifested through Christian Science.

In "Science and Health with Key to the Scriptures" (p. 98), Mrs. Eddy says: "Beyond the frail premises of human beliefs,—above the loosening grasp of creeds,—the demonstration of Christian Mind-healing stands a revealed and practical Science. It is imperious throughout all ages, as Christ's revelation of Truth, of Life, and of Love, which remains inviolate for every man to understand and practise."

FRANK W. GALE.

In *Fresno* (Cal.) *Democrat.*

---

Christian Scientists in their profession go no farther than other Christians. Their works, however, are the logical outcome of this profession, and should be so recognized. God's word rightly understood ever has healed and ever will heal the sick, and neither Christian Scientists nor any one else can alter this fact any more than the sun can be restrained from casting its rays upon the earth. To contend that Christians are not justified in relying entirely upon prayer for the recovery of the sick, is to charge the Founder of the Christian religion and his disciples with being at fault. He advocated no other means and bade his followers look to God through the medium of prayer for relief from all ills.

Christian Scientists make no attempt to practise medicine. They rely entirely upon prayer. They practise only upon themselves and upon those who apply to them for relief, and in no way do they try to force their beliefs upon others.

ALBERT E. MILLER.

In *Williamsport* (Pa.) *Sun.*

---

No one who has sat beside those whose cases have been abandoned as hopeless by material means, and has seen the fever fade from the face, the breathing become regular, and the suffering vanish under the benign influence of Christian Science prayer, no one who has witnessed the frequently instantaneous resuscitations of such patients by their deliverance from the curse of fear, and has been privileged to receive their deep-felt gratitude, could ever again be induced to speak slightingly of the "denial of evil." Nor could any one who has heard the story of moral regeneration by means of Christian Science from the very lips of those who were formerly debauched and depraved, ever express anything but respect for the teachings which produce such results.

W. D. MCCRACKAN.

In the *New York Sun.*

---

To those who have not been close observers of the gradual trend of thought and events in Baltimore, the rapid progress made by Christian Science in this city during the past few years comes as a somewhat startling surprise. The surprise becomes greater when it becomes known that the foremost adherents of the doctrine and its warmest supporters are not among the classes naturally given to experimenting on such subjects, or who accept credulously the latest psychological novelty offered, but the members of the so-called smart set, to whom pleasure and pleasant living are supposed to be the chief and, indeed, the only objects of existence.—*Baltimore* (Md.) *American.*

---

The testimony of unnumbered people who have read Science and Health, who through its teachings have been healed of diseases that medicine failed to relieve, and who through its teachings have learned to love the Bible, and to make it their daily companion, to have increased confidence in God and a greater desire to walk in the footsteps of Christ, weighs mightily against misinterpreting critics, and should serve as a rebuke to one who fails to see that which has brought so much peace and happiness to others.

LLOYD B. COATE.

---

Sculpture and painting, rival arts,
Ye can no longer soothe my breast;
'Tis love divine alone imparts
The promise of a future rest;
On that my steadfast soul relies—
My trust the Cross, my hope the skies.

MICHAEL ANGELO.

CHRISTIAN SCIENCE SENTINEL

# Editorial.

MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

## An Essential.

AN essential postulate of Christian Science is that it involves the healing of the sick as well as the reforming of the sinner,—that the teachings of Jesus contemplated deliverance from both sickness and sin; and it is because Christian Scientists believe that salvation from both sin and sickness are equally possible at this time through the teachings of our Master, that they are pronounced unwise and impracticable.

That Christian Science is the truth has been demonstrated by the healing of thousands, and that its method is the Christ-method is forever established through the moral regeneration which is as noticeable as is the physical healing. It is important to the people that they have opportunity to pass judgment on the claims of Christian Science, and it is for this reason important that the healing should be done, that it should be made known through the testimony of those having a knowledge of the facts, and that, wherever possible, this testimony should come from the beneficiaries of the healing power.

Every sick person healed, and every sinner reformed stands for a fact which cannot be offset by any amount of theorizing, and is of more value than a thousand academic disquisitions. It is therefore important that every Christian Scientist should be "about his Father's business," not only that individual cases may be healed, but that the accumulation of testimony shall be so great as to remove all questioning from the minds of those who doubt and who hesitate to avail themselves of this present salvation from sin and sickness.

Our Master prescribed a test for all time, "By their fruits ye shall know them," and to the extent that we are fruitful in good works can we be rightfully known as Christian Scientists. We sometimes think that other matters which engage our attention are very essential to the advancement of our Cause, and in this we are not mistaken, but we must not forget that healing the sick is for the many the most convincing proof that Christian Science is truly Christian, and that we are indeed disciples of the Nazarene. The Science of Christianity is taught in our text-book, and it remains for individual Christian Scientists to show forth their growing understanding of its Principle, through healing the sick. M.

## The Waning of Materialism.

NOTHING more surely points to a welcome for the new than distrust or disqualification of the old. Habits of thought and the prejudices of clan and education always give tenacity to the grip of venerated theories, but when they have been compelled to recognize the absolute untenability of these theories, then men are usually willing to part even with pet opinions and so give access to new ideas.

Many would, perhaps, fain content themselves with a materialistic philosophy, but the dawn of Spirit will not tarry, and the threatened disappearance of the very cornerstone of the system, the essential atom, must surely hasten the acceptance of a less vulnerable explanation of things than that which has received such reverent consideration at the hands of physical science and theology for a long time past. Though we have no scientific or historic record whatever that an atom was ever seen; its assumed substance, dimensions, nature, and habitat have been referred to as verified facts for so long a time that the intimation which has recently emanated from the laboratory that it is, after all, only a wee little ghost, has given mortal thought something of a shock.

One of our exchanges which, in the past, has laughed loud and long at the idealism of Christian Science, has of late devoted much space to a discussion of the passing of the atomic theory, and we quote the following interesting excerpts from its columns:—

"All really intelligent and reading men are, of course, aware, in at least a vague way, that there has long been a philosophic theory which wholly eliminates matter from the world of pure being and expresses all material phenomena in terms of the mind."

"Scientists have gone on slowly, but persistently, year after year, pushing their investigations closer to the heart of the secret of the universe, till now, within the last few weeks, the foremost of them have asked us to accept a new theory of matter which practically does away with matter altogether, making it disappear in a world of pure energy."

"We must now substitute units of an identical kind for the diverse atoms which have heretofore been considered to be the foundation of the so-called elements, and then the whole idea of the elements is done away with."

"If the new theory be true, then matter itself disappears from the world, . . . becoming only variant forms of energy in action."

"To give the meaning of the new theory in its most striking form, we may say that it not only leads to the conclusion that there is no such distinct thing as matter, that what we call matter, stuff, substance, body, or what not is really only a manifestation of energy. . . . It also points to the conclusion that the thing thought about, the thinker, the act of thinking, and the thought all converge back to one primal force."

The very great significance to physical scientists of the dissipation of this materially convenient and supposedly stable atomic theory can hardly be over-stated.

Professor Crookes in commenting before the International Chemical Congress at Berlin upon the situation, is reported to have said recently, "We again see that all our investigations have only a temporary value. . . . In the determination of the nature of the atom lie the greatest problems of the future, here lie the final realities, far reaching and marvelous."

The material atom is the ultimate fact and stronghold of all physical hypotheses, and yet its doom seems now to have been pronounced no less surely by chemical research than it long has been by the "spiritual interpretation of nature."

This recognition of energy as the all-pervading fact marks a distinct advance toward the theistic idealism of Christian Science, for to think of an infinite force which exhibits inscrutable intelligence in all its manifestations, at all times and in every place, is to have a concept of the final cause which is closely allied to the fundamental declaration of Christian Science that "all is infinite Mind and its infinite manifestation. . . . God is All-in-all" (Science and Health, p. 468).

It would seem also that he who thus thinks of an infinite force as the basis of nature, would be ready to accept the teaching of Christian Science, that the infinite power and wisdom which finds universal expression is omnipresent Spirit, and "they that worship Him must worship Him in spirit and in truth."

It may be a long time before the world is ready to deny and forsake the asserted pleasures of material sense-indul-

Digitized by Google

gence, but the time is certainly not far removed when intelligent thought will have entirely given up this old-time material philosophy. W.

## Sowing and Reaping.

AT this time of the year Nature is whispering to us of fulfilment through garnered grain and ripening fruits which in the springtime were folded up in sweet promise. All are deeply interested in the harvest time, since the comfort and prosperity of all depend so largely upon it.

There is, however, a spiritual lesson to be learned from this season which is of more vital importance to all, though few perhaps see its application to everything that concerns our universal humanity.

At the close of Jesus' momentous interview with the Samaritan woman, and after he had defined the meaning of the true worship of the "only true God," Spirit, he quoted to his disciples a familiar proverb, "One soweth, and another reapeth."

It is not unlikely, from the words which follow, that he may have been seeking to remove a false impression entertained by his disciples, a belief that as his followers very much hardship awaited them, many trials were to be borne, and that by way of correction he said to them, "I sent you to reap that whereon ye bestowed no labor: other men labored, and ye are entered into their labors." In any event this interpretation comes to us with the authority of truth, and should beget in every one of us a deep feeling of thankfulness and humility.

In the history of our country we can easily see and should gladly acknowledge how great has been the sowing of the springtime, for the men who were brave and true heeded neither the clouds of dissenting opinion at home, nor the rain of invective and denunciation abroad. They sowed the good seed of a lofty ideal of government and committed results to the sure processes of the "divine right," which never fails.

And what of the great Teacher who taught his disciples that they must be content to sow for others' reaping as he was doing? Although his teachings brought upon him the bitterest persecution, his vision of the future embraced the harvest time when the seed had sprung up and its fruitage was supplying the need of the whole world.

One of Jesus' statements made on this occasion, is very helpful and suggestive; he said, "He that reapeth receiveth wages, and gathereth fruit unto life eternal: that both he that soweth and he that reapeth may rejoice together." As the sowing and the reaping follow each other in nature, so do they in the mental realm, and the law of co-operation obtains in both.

The Discoverer of Christian Science began by reaping for herself and others the harvest of Truth sown by the Master so long ago, and the joy of Truth's healing was the first fruit gathered.

As the wise husbandman selects with the utmost care the very best seed and removes from it all that should not be put into the soil, so has our Leader labored with untiring care that only the good seed of truth may spring up, unmixed with error, and that our harvest may be indeed a season of joy.

As in husbandry, old and cumbersome methods are replaced by those which economize time and lighten labor, so in Christian Science has every effort been made to encourage and aid the earnest student in his work. The addition to our literature of the Concordance is another proof of our Leader's desire to provide the best means for our sowing and reaping. Of this loving interest we have had abundant evidence in all that concerns the advancement of our cause.

Look in what direction we may, one cannot fail to see that we are reaping what others have sown. He who feels this most deeply acknowledges his obligation by sowing with the glad certainty that in this way he will help the whole world toward the goal.

This should inspire us all to braver, loftier efforts while the words of our hymn appeal to us with a deep appropriateness:—

> Oh could our inward eye but view,
> Our hearts but feel aright,
> What faith and love and hope can do
> By their celestial might,
> We should not say, with lonely dread,
> The power of miracle is fled!

K.

## Anglican Liberalism.

CANON HENSON of Westminster Abbey has recently said that the church has no right to withhold the sacrament from any Christian man who lives a consistent life and who has fulfilled the apostolic requirements of faith and baptism; "members of Christ's mystical body they are; and how can they be refused permission to affirm the fact? Neither the spirit of the Prayer Book nor of the New Testament," said he, "authorizes the exclusion of any of Christ's flock who come to partake of the Lord's Supper, and such a course is wholly inconsistent with Paul's benediction: 'Grace be with all them that love our Lord Jesus Christ in sincerity.'"

Rev. Dr. Abbott, rector of St. James Church, Cambridge, Mass., has taken yet more liberal ground in proposing that any baptized person shall be permitted to address his congregation "on occasions, himself being present." This privilege and exercise he does not think comes under the proscriptive rule of the church which forbids that the ministers of other religious organizations shall be permitted to perform any priestly function. These, and many kindred indications of a true Catholicity of spirit, are among the encouraging signs of the times, and offset the tendency toward greater exclusiveness which has occasionally been manifest in the Anglican body.

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

"Yea, though I walk through the valley of the shadow of death, I will fear no evil: for thou art with me; thy rod and thy staff they comfort me."

Since it is only a false consciousness of sin, disease, and death that can die or return to nothingness, the Psalmist in this beautiful and comforting verse surely referred to these mortal beliefs.

The passing out of these long cherished and unjustly honored falsehoods does cast a shadow, and we fear to go forward lest we find nothing better then Love bids us leave. Then Truth provides the rod and the staff,—the rewarded effort, the requited affection,—which comfort and sustain until we come unto the glorious sunshine of Spirit, where our shadow is ever behind us and we are prepared for the rarefied air of the mountain's summit.—A. L. L.

## Modernizing Jerusalem.

As usual in Oriental countries, the admirable works constructed in ancient times for the water-supply of Jerusalem were long ago allowed to fall into a lamentable state of disrepair. The aqueducts no longer served their original purpose, or only did so when they happened to be in repair, and quite recently a serious water famine was only averted by the timely assistance of the railway company. Since then, a water system upon modern lines has been established, and water is now brought to the city from the so-called "Pools of Solomon," situated at a distance of about seven miles. A portion of the old stone aqueduct, says the *Builder,* has been utilized in parts where it could be repaired without unnecessary expense, but for the greater part of the distance four-inch iron pipes have been laid. Two public fountains have been erected for the use of the inhabitants, one within the enclosure of the Great Mosque, and the other inside the walls. The supply is still far from adequate, but the risk of water famine is much reduced. In connection with this subject it is interesting to recall the inscription at Siloam referring to the rock-cut tunnel leading from the Ophel ridge to the Pool of Siloam. The most recent translation thus describes the construction of this ancient engineering work: "(Behold) the excavation! Now this is the story of the tunnel: While the miners were still lifting up the pick towards each other, and while there were three cubits (to be broken), the voice of one called to his neighbor, for there was an excess in the rock on the right. They rose up—they struck on the west of the tunnel—the miners each to meet the other pick to pick. And there flowed the waters from their outlet to the pool for twelve hundred cubits, and (three-quarters) of a cubit was the height of the rocks over the heads of the miners." From this account it appears to be clear that the tunnel was excavated by two gangs working in opposite directions, a method requiring a considerable amount of skill and accuracy.—*Manchester City* (Eng.) *News.*

## Condemnation.

OUR Church Manual, in "A Rule for Motives and Acts," bids us: "Daily watch and pray to be delivered from all evil, from prophesying, judging, condemning, counseling, influencing or being influenced, erroneously." If this law were universally observed then Love would rule triumphant. It is mortal mind which condemns another. Science and Health says, p. 542, "Let Truth uncover and destroy error in God's own way, and let human justice wait on the divine. Sin shall receive its full penalty, both for what it is and what it does."

We cannot be too watchful against the habit of condemnation. Looking carefully for its origin, we are apt to find it in a sense of self-will, self-love, and self-justification, which our text-book tells us are "the law of sin and death" (p. 242). Truth does uncover error, and when it is uncovered to us through our apprehension of Truth, what should be done with it? Ignorance of man's true being would suggest that it belongs to our neighbor, and that he is to be condemned for it, but divine understanding shows it to be a claim of an evil power, or a power other than God, hence it is false and cannot belong to God's children, and knowing this will remove the weight of condemnation from the brother who ignorantly voiced it, and will help him to see its nothingness, and thus it is self-destroyed, having no truth in it. The Scripture tells us, "There is therefore now no condemnation to them which are in Christ Jesus," and "It is God that justifieth. Who is he that condemneth?" And again, Judge not, and ye shall not be judged: condemn not, and ye shall not be condemned. By this we are not to consider that we are to call evil, good; far from it, but we are to know errors for what they are, as Jesus said: "Ye are of your father the devil," and "there is no truth" in them. Thus they are destroyed and gotten rid of, when we face them boldly and know that they have only the weight or power that we give them, by ascribing personality to them. Rather let us "judge righteous judgment," knowing that Good must reign and triumph. Our brother does desire better things, and we can help him to see and know the truth by lifting from him the world's judgment and condemnation, and ceasing to prophesy evil or to influence any one to believe in, or to voice it. A little self-examination along this line will awaken us to see many places where we have neglected to close the door upon wrong thoughts, which are easily excluded when Love is conscientiously present with us, because there can be no place left for any opposite to Love,—the All-in-all.

S. F. S.

## Appreciation of the Concordance.

I wish to take this early opportunity of expressing my deep and sincere gratitude for the latest gift from our Leader; namely, the Concordance to Science and Health. Although I have been in possession of a copy for the past few weeks only, no book has been more constantly in use, bringing that perfect satisfaction and gratification which such a complete concordance as this alone can bestow.

Not only can any quotation be instantly found, but it proves to be a book to which the student can turn to learn more fully one of the most important needs which confronts him continually; that is, proper capitalization. Also, in the endeavor for correct speech and expression, the book is again available, because of the many combinations of words and phrases which we know can be accepted as correct and authoritative.—W. A. REED, Chicago, Ill.

This morning I received a copy of "A Complete Concordance to Science and Health with Key to the Scriptures," and in its completeness I feel I have an answer to my yearning desire for a key to the higher teaching of the one Mind, and I am impelled to put forth renewed effort to help my brothers and sisters. Great wisdom is revealed in the intelligent arrangement of the work, and it will enable us to find new treasures in Science and Health. Words fail me to express my gratitude and love for the untiring effort to aid the student of the Bible and Science and Health by supplying them with this complete Concordance.

SARAH E. MORRISON, Bradford, Pa.

## The Heavens in August.

DURING the latter portion of the month Venus will set between seven and eight. On the 12th she will assume her maximum brilliancy, being then about thirty-nine degrees distant from the sun.

Mars is in Virgo, but will enter Libra toward the close of the month. This planet sets between nine and ten o'clock. On the 22d it will be very close to Alpha Libræ, the brightest star in the constellation of that name. Jupiter is still in Aquarius and Saturn in Capricornus, the former rising between eight and nine o'clock and the latter culminating a little after nine. The four brightest of the planets—Venus, Mars, Jupiter, Saturn—being evening stars, lend to the evening skies an especially attractive appearance.

*Boston Transcript.*

Morality must be taught as a real science, whose principles will be demonstrated to the reason of all men, and to that of all ages. It is only in this way that it will resist all trials.—TALLEYRAND.

## For the Children.

### A Little Thought.

HON. CONSTANCE GIBSON.

I WAS bicycling along a hot and dusty road, and trying to overcome as I went along a feeling of depression and weariness which had hung over me all day. As I rode on I became conscious of a sweet fragrance filling the air. I rode more slowly, looking all around to see whence it came, and after looking for some time in vain, I espied a clump of honeysuckle growing on top of a high hedge. I tried to pick some, but it grew beyond my reach, so I pursued my own way, leaving the honeysuckle growing on the hedge. But though I left the flower behind, the sweet scent still filled the air and made the sun seem less hot and the road less dusty by its fragrance; and as I rode on, breathing in its sweetness, the burden of my own troubles seemed lifted.

The honeysuckle lived so high above the road that the dust could not cover its petals and dim its beauty, nor could any hand pluck it from its root for selfish purposes and then leave it to wither and die. But though it lived so far above the road its beauty and fragrance were shed abroad for all alike. The most degraded tramp passing along that road, if he looked, could see the same beautiful flower and breathe its sweet fragrance as surely as could a little child. Yet all the flower did was to live its own pure life where God had planted it, showing forth all the beauty of the nature He had given it.

Then a sweet peace filled my heart, for I knew that the "Good Shepherd" had led me to himself and taken me in his arms. No dust could dim the brightness of that light; no unkind hand could pluck me from his care. All I had to do was to nestle close to him, and then the love would flow out all the time and fill the world with its sweetness,—healing, comforting, uplifting all who were in need, because living so close beneath the shadow of his wings I could reflect no other than his nature.

### A Hint.

IF only you'll think of it, dearie,
When people are vexing and rude,
And be pleasant for two,
When one's scolding at you,
You will conquer the contrary mood.

If only you'll think of it, dearie,
When a certain troublesome elf,
With peas in his shoes,
And a look of the blues,
Comes calling upon you, himself,—

If only you'll think of it, dearie,
And laugh, like the sun, in his face,
He will scamper away;
You'll be happy all day;
And I'd like to be in your place.

MARGARET E. SANGSTER.

### A Little Prayer.

OUR Father who art in heaven,
We thank Thee for Thy care,
And all the blessings Thou hast given
We would with others share.
May we Thy loving children be
And find our life and joy in Thee.

W.

## Testimonies of Healing.

Twelve years ago I heard of Christian Science. I was out on a shoreless sea, without compass or chart. I was seeking a home in some church where there were no creeds nor man-made doctrines when I heard of Christian Science through the healing of a young man who had been a cripple for four years, and was given up by some of the best medical skill in the town as incurable, and who was healed in a very short time, to the astonishment of friends and neighbors, and has enjoyed good health ever since. I knew of the case and asked what had wrought the miracle as I thought it must be, and was told it was Christian Science.

"Prove all things; hold fast that which is good," those words of Paul came to me, and I knew as soon as I began to look into it that it was the truth that I was looking for, and needed. The Bible was a sealed book to me and I could not read it with any satisfaction; now it and all our dear Leader's works are my greatest treasures.

I was healed of an old trouble that was held over me when quite young, the belief in consumption. When the neighbors said I would never come out of the house until carried out, I was healed in a very short time, to their surprise. My heart goes out daily in humble thanksgiving to God for our Leader, who was found worthy to bring this truth to a needy world. God bless her, is my daily prayer. Through the understanding of our text-book, Science and Health, I have been able to help myself and others, for which I am very thankful. I saw that I must work out my own salvation, but never felt like giving up. There was much to be cast out. According to the mortal sense I am far advanced in years.—M. E. REED, Pittsburg, Pa.

I feel in duty bound to publish my experience, that other sufferers may receive help therefrom.

Happiness and hope are awakened in our hearts when we hear of Christian Science for the first time. Thanks to the Creator of all good, that He has sent one who understands the true meaning of the Bible.

What I suffered mentally and physically I can hardly describe. My greatest sorrow was that my eldest daughter had weak eyes. She was healed in a short time from stagnation of blood and has needed no glasses since then. Knowing the love of God, we know that she will never need them again.

When I first heard of Christian Science, I immediately went to church, not only once, but three times a week.

As I entered the church, my eyes rested upon the words: "Come unto me, all ye that labor and are heavy laden, and I will give you rest," also these from the Christian Science text-book:—

"Divine Love always has met, and always will meet, every human need" (Science and Health, p. 494).

This suited me exactly, it called me to a rest which I had never before known. I had worn glasses for over eight years, but after two weeks I laid them aside, and now I find that the more I read of the Bible and Mrs. Eddy's works, the better I see.

Before I heard of Science I could not take a drink of cold water without suffering pain in my stomach, but now, thank God, a drink of cold water tastes very good to me, for it is not God's will that we should suffer. I was troubled with insomnia, had been in bed for three months with nervous prostration, and suffered always from car-sickness. I prayed to God with the understanding of Christian Science, denied the suffering, and Truth made me free.

With the improvement in my mental condition my physical health improved, for which I desire to thank God constantly, and I wish to express my gratitude to Mrs. Eddy, our faithful Leader.

Digitized by Google

For our *Sentinel* and the German *Herold* I am unable to express my gratitude, I receive so much good from these periodicals. I also am thankful to all the dear friends who have helped me on with their love and good deeds.

MRS. JOHANNA BROWN, Chicago, Ill.

---

For fourteen years I suffered from nervous disease in consequence of stagnation of blood, and suffered intensely from insomnia.

To this affliction there was added, two years ago, a disease which almost drove me to despair.

One evening, about ten o'clock, I suffered from a severe pain and a spasm of the heart, which seemed to affect my whole body. After midnight I could not remain in bed and sat crouched in a chair, gasping for breath. In this condition I passed several hours. Many remedies were tried, but all of no avail.

During the first part of the following year I attended a meeting of the Christian Scientists. What I heard there gave me confidence, and about the last of January I applied for treatment. After a couple of weeks I was healed of insomnia by the mercy of our God.

To-day, after three months, I feel better than I ever believed I should. I sleep well, am entirely free from pain, and can eat and drink what I desire, while in former years I had to be careful about my food and was afraid of coffee.

Not only have I received physical health through Christian Science, but it has awakened faith and a hope in me, and has re-established a joy of life, which was unknown through all those years of suffering.

I shall never cease to be grateful to Mrs. Eddy and to the practitioner who opened my understanding to Christian Science.—MRS. M. BUDKE, Berlin, Ger.

---

"In the way of righteousness is Life; and in the pathway thereof there is no death." Such were the words, spoken with realization, that fell upon my listening ear six years ago, dispelling with their cadence, the discords of sickness, sin, and death which flooded my whole mind and made my whole heart sick.

Lying close to the death valley, with the cold sweat of agony on my brow, silent and weak, with every hope gone, the unutterable minor chord of life's mournful diapason piercing my senses with indescribable bitterness, I lay a wreck, mentally and physically, with just one cry left: To die, oh, to die! to find relief from conditions of physical and mental suffering that had shut out even the smallest joy of earthly existence. I had spent four years and a half in abject torture of mind and body, seeking relief by the aid of skilled physicians in my own town and with three physicians of American note, in Chicago, Battle Creek, and Wheeling, W. Va.

Physicians generally agreed in the diagnosis of my sickness as extreme nervous symptoms, resulting from a severe complication of womb and spinal trouble, which appeared in an alarming form after the birth of my second child. With these conditions came a diseased condition of my blood so that my body and its action, was in a most unnatural condition. Losing the use of my limbs, which would not bear my weight, I was confined while at the hospitals to a wheeled chair when not in bed, and under the care of a nurse day and night. During this period of time I submitted to three operations, which made severe tests upon me, and I grew weaker and more despondent in every way at each attempt at restoration. Every material appliance and care were used,—electricity in every form, baths of all kinds and descriptions, massage, diet, and all sorts of mechanical contrivances to stimulate the normal action of the body, together with very frequent injections of nitro-glycerine. Finally, when my body could no longer endure physical treatment, I was started on a three months' rest cure; namely, extremely low diet, and not a movement of my body. At the end of two months, my stomach collapsed, and would not retain any food. All means for the restoration of this organ were resorted to, without profit.

Sinking fast from this severe test of prolonged abstinence from food, and all resources of *materia medica* being exhausted, I turned, as many times before, for spiritual aid, and called for the bishop of the church. He did not come, but sent his assistant, who came to my bedside. I implored him, if it were within his power, to pray and restore me to health, telling him of my great need, my home and family, and my desire still to live and be of use in the world. I assured him that I did not believe that God could heal me, and that I had prayed hard to be delivered from the condition that threatened me as a result of my trouble and sickness, quoting to him the words of James, "Is any sick among you? let him call for the elders of the church; and let them pray over him." He looked troubled, and said in a solemn way, "My child, miracles cannot be performed at the present time; God wishes you to die, and you must be at peace, therefore prepare to die, and I will bless you."

I was in a private sanitarium at the time, and the physician in charge declared that three days at the most was the limit of my earthly career. Relatives were summoned to my deathbed; and despite the entreaties of those in charge, who assured them of the impossibility of my ever reaching home alive, I was conveyed to the train on a stretcher, and thence to my distant home. I remember nothing of the journey.

For days I lay in a comatose condition. At intervals after that I became conscious for short periods. A physician was in attendance who told the members of the household that it was only a question of a short time until my heart would cease to beat. The door-bell was muffled, the ceremonies of the church for the dying were administered, and the guest was awaited with sadness and awe. And behold, the guest ushered into that chamber of death was none other than a Christian Scientist. My eyes rested upon a sweet-faced woman, a neighbor whom the family, through the earnest solicitation of a friend, had called, and without a spoken word, the allness of God, good, and the omnipotence of divine Life, Love, as ever-present, dawned upon my consciousness and fulfilled the words of our loved Leader's poem (Miscellaneous Writings, p. 396):—

O'er waiting harpstrings of the mind
There sweeps a strain,
Low, sad, and sweet, whose measures bind
The power of pain.

And o'er earth's troubled, angry sea,
I see Christ walk,
And come to me, and tenderly,
Divinely talk.

Presently the practitioner smiled, and asked me something concerning returning health, which was somewhat indistinct, as one speaking from a far room whose voice is heard, the voice, not the words, conveying the meaning.

I answered feebly, "Yes, but you know I must die. Everything has been done, and now I must die." Then in the sweetest words ever given mortals to hear, she said, "But there is no death, my child," and in that moment, "in my flesh did I see God." As though the gates of heaven opened wide, I beheld for the first time, Life; for death was overcome by the wonderful demonstration of Christian Science. Lifting myself up from my bed unaided, those standing near were affrighted, and called to me to lie still and not move. I arose to a sitting posture and said these words, "Oh tell me, tell me, if there is no death, what is Life?"

She handed me a little book, and said I would find my answer there. And this book, "Science and Health with

Digitized by Google

Key to the Scriptures" by Mary Baker G. Eddy, has not been beyond reach of my hand since that hour.

I lay back on my pillow and remained in that perfect state of ecstasy for two days, resting in that wonderful thought of Life, so peaceful, the sweetest joy stealing over me at times and unfolding the divinest hope. The practitioner was called the third day, and when told that I had partaken of no solid food for two months and a half (all food being injected), she began openly to declare that food could not hurt me; and my fear having been destroyed in the meanwhile by her absent treatments, food was brought and I partook freely, after which I arose from my bed, and sat for an hour listening to the words from the pages of Science and Health. And oh, how I thrived upon that word of God! My healing took place in January. The following April I received class instruction and my experience in Christian Science has been one constant unfolding of infinite Love, in the way our Master taught, and as our Leader in Israel has lived and demonstrated.

I may say that Truth not only brought peace but a sword into my experience, for I have endured the severest tests in the loss of things material, and though my healing was so marvelous as to be overwhelmingly convincing, error has been very active. But as the ear, attuned to harmony, and holding to it outgrows the painful sense of discord, and ceases to hear it and believe it to be anything, so in my life I have demonstrated somewhat through life's demands the allness of Love, with signs following.

My gratitude for Christian Science and what it has done for me can best be expressed in meekness and love to the Saviour who walked life's thorny pathway and enjoined us, "If ye love me, keep my commandments," and to our Leader, Mary Baker G. Eddy, by working, watching, and praying unceasingly, to live the life she has exemplified.

AGNES GANNON ROBERTSON, Fort Dodge, Ia.

---

I am truly grateful for the blessings that I have already received through Christian Science. It has been clearly demonstrated in my home, and I realize the power of God more and more each day of my life. My wife and self are the only Scientists in this city. We have the works of our Leader, Mrs. Eddy, and my wife has been entirely healed through Christian Science from a very severe spell of fever. We have been married over two years and we have never used any material means since we were married.

We have in our home a sweet little girl ten months old. In God we put our trust and He has guided us and given us understanding to demonstrate over all our troubles, and we find that our yokes have been made easy and our burdens light. We are striving each day to walk in the path that Jesus, our exemplar, marked out.

It is our desire to express our heartfelt gratitude to our dear Leader, Mrs. Eddy, for the uplifting of humanity.

O. F. ALLEN, Newman, Ga.

---

I feel that should I defer longer to write of the wonderful benefits received through Christian Science, I might seem to be wanting in gratitude to God, to our dear Leader, Mrs. Eddy, and to all our friends who have so kindly and unselfishly helped us out of the ruts of old and false beliefs, such as jealousy, envy, malice, greediness, etc.

We are a family of six, and there is not one of us but what has been healed of one or more sicknesses, such as pneumonia, piles, a knee lameness of several years standing which was healed by absent treatment, scarlet fever, throat troubles, and cholera infantum. I have also had teeth extracted without pain.

These are only a very few of the benefits received through Christian Science, and our earnest thanks are extended to our beloved Leader and to all who have so kindly helped us.—E. A. JOHNSON, Euclid, O.

The testimony of my healing may help some one who is in doubt as to the efficacy of Christian Science to heal where *materia medica* failed.

I had a throat disease for ten or twelve years which was treated off and on during all that time. Sometimes when acute attacks would come on I would be treated every day for weeks at a time, sometimes by specialists but oftener by the family physician.

The doctors told me that the trouble was chronic and constitutional, and that I would always have it, that I would never be healed of this condition, as it had become a part of me, but that it would not be likely to prove fatal. If my constitution became depleted the condition of the throat was worse.

One physician recommended going to the seashore where I could inhale the salt air as a tonic, and bathe in the salt water.

This was done, but it brought no permanent benefit, for after being at the seashore for one whole summer, I returned home with an acute attack worse than any previous one. This went on for years until the doctor gave me very little or no medicine, as it did not seem to reach the case in any way. Finally the condition of the throat grew worse and I stopped going to the physician.

About this time Christian Science was brought to my notice and I was quite stirred up and antagonistic with regard to it. I forbade my mother and sister talking of it in my hearing, telling them that if they wished to talk Christian Science they could do so in their own rooms, but not to do it where I could hear them.

A couple of months passed, and during that time I heard of many wonderful cases of healing. The thought came to me, "If Christian Science can heal such cases as these. there is no necessity for my having this throat trouble any longer, for it can be healed." I did not realize that it was a religion, but only thought of it for the healing of disease.

I asked for something to read on the subject of Christian Science, and "Retrospection and Introspection" by Mary Baker G. Eddy was handed to me. I read it, was very much interested, and decided to take some treatments. After the first treatment I bought Science and Health, the text-book of Christian Science, and from the first was very much interested in reading the book. Although I did not understand it, I knew others did, and I thought that if they understood it, there was no reason why I could not.

After three weeks' treatment I was healed of this throat trouble that had been doctored in *materia medica* for ten or twelve years. I was very grateful, for with the physical healing came the strong desire to know more of this Truth that had healed me.

Since that time I have overcome many things for myself, both mental and physical, and have seen many diseases healed for others: acute colds, the grip, tumor, kidney and bladder troubles, broken bones, acute tonsilitis, and typhoid fever; and many other ailments removed through the understanding of Truth as revealed to us in Christian Science. I have had class instructions and many other blessings, for all of which I am very grateful.

I want especially to thank our beloved Leader, Mrs. Eddy, for what she has done and is doing for all mankind, and for this truth given to us in such a way that we may comprehend it and be free.

MRS. MINNIE P. GOOD, Chicago, Ill.

---

I send you this testimonial of gratitude for the help I have received from Christian Science.

It would take volumes to express my heartfelt thanks for what Mrs. Eddy's writings have been to me. I have rejoiced every time I have heard of a tribute of praise awarded her. I have also rejoiced knowing she is safe in

Digitized by Google

God's care where no harm can come to her whenever I have heard of an unkind or ungrateful word spoken against her.

No mortal belief can ever rob her of her God-given inheritance or withhold from her the reward of her faithful work.—LUCY KEEN, Plainfield, Ill.

---

I have never expressed my love and gratitude for our literature, but I never read it that I do not feel deeply grateful. It has often caused me tears of joy to think of the pearls we find therein.

One time I saw in an article that the time would come when we would lean on divine Principle, instead of always looking to personality, so when an ailment presented itself that at a previous time had required the services of two doctors before relief was found, the thought came to me at once, "I wonder if I ought to have help for it," and I said, "No, the time has come for me to depend on God alone, and I know He does not want me to be in such bondage." The trouble was met instantaneously and has never returned.

At another time I read this thought in the *Sentinel*, that Christian Scientists have no right to feel discouraged, and now every time thoughts of discouragement present themselves this suggestion helps me very much.

Surely our dear Leader's writings are as a well of sweet water, springing up in us all unto everlasting life.

I have not sufficient words in which to thank this noble woman for her work of love, and through these pages I send her my best love and gratitude.

I thank God for leading us into Christian Science while our children are still small. What a storehouse of love and help this beautiful truth is for them! They do not have to be slaves to the old bondage of fear as we were, but may ever enjoy the sunshine of God's dear love.

MRS. TAPITHA MARX, Detroit, Mich.

---

My mother and I wish to tell through the pages of the *Sentinel* how grateful we are for Christian Science. By reading the Bible and Science and Health, and with the kind help of a dear practitioner, we have been able to drive error away to its native nothingness several times.

My dear mother used to have bad stomach and heart troubles which have had to flee away because we let Truth in instead of error. We feel very thankful to Mrs. Eddy and all those who are working for the cause of Christian Science, and we thank God for all good.

MRS. CHARLOTTE LINDLEY, Chambersburg, Ind.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer*.
Box 56, Fall River, Mass.

## Religious Items.

The Rev. Minot J. Savage, in a sermon reported in *The Boston Herald*, says:—

"The advance of truth never destroys anything that is real. No truth can destroy anything that ought not to be destroyed. It can only discover error and substitute for it that which is real. He who is afraid of the advance of knowledge shows that he does not trust the integrity of God, the integrity of the human mind. The changes that have taken place mean simply this: Humanity started in this world ignorant and feeble. It has been growing, and growth means outgrowth—outgrowing ideas which are no longer large enough to fit the facts.

"This doesn't mean the decay of religion. It means only those changes of theological thought and theory which must come if the world bravely faces the facts of the universe and dares to think, with all the theological results of its thinking. It means, however, a larger, grander, nobler kind of religion than the world has ever known before. Religion is not declining, nor is it going to decline. So long as God lives, so long as the universe exists, and so long as in the universe there is a man capable of thinking, of feeling, of acting, so long will men think concerning the relation existing between themselves and God, and so long will they attempt to make better that relation.

"There are many in the world who think the Church is beginning to hold a less and less important place. They misunderstand, it seems to me; they misconceive the great, deep truths which are involved. Religion is not dying, and the Church is the practical organization of the religious life. And as such it is the most important institution on the face of the earth. If true to its mission it creates life, and is the only organization which has for its distinct, definite aim the making of men and women what they ought to be."

The heredity fad is often a deplorable form of palliation for sins that ought in right to come home only to one door, the door of him who commits them, and lie there until they awaken a sense of shame and remorse, a resolution to overcome the evil taint if it exists.

We have no right to lie down comfortably under the burden of heredity while we place the blame for our trespasses on others, feeling that the hand of fate is on us, and we are mere pawns on the great chess-board of life, moved by some grim, inevitable influence, some strain of malignant power that began far back in the dark ages of family history, and cannot be expelled. We ought to look away as far as possible from inherited tendencies to ourselves as the efficient cause of much that harms us. . . . The soft and emasculating tendency of excusing evil because some forefather or foremother was addicted to like irregularities has penetrated society very deeply. It has caused a kind of mania of sentimentalism toward certain classes of criminals from the point of view that they are victims rather than responsible agents, and as such worthy of tenderness dangerous to the social order. We cannot weaken without peril the support of free will and personal responsibility. We cannot stretch the principle of heredity very far without breaking down the props of character.

*The Christian Register.*

It may be said that theology is but a tentative interpretation of the Bible. There is no final theology as yet, and the latest text-book will be antiquated and rejected very soon. It will be long before the last word is spoken on any great religious doctrine. Our creeds need constant revision, and if we refuse to revise them formally, the penalty is that we come to use their words in an unnatural sense, and to say the things that we do not mean or believe. Hence, one result is that, among thinking men, we have a constant contention about our imperfect apprehension of nature (science) and our imperfect apprehension of the Bible (theology). Between nature and the Bible there can be no strife, for both have God for their one author, and both are intended to reveal and glorify Him. Some day we shall understand them fully, as God understands them; our theology and science will then be, not tentative and partial, but complete and definite; and the conflict between them will cease.—*The Examiner.*

Rev. Dr. Gunsaulus, of Chicago, has a word of deep import anent John Wesley and the present labor troubles: "Wesley stood in England when the labor problem was most hopeless, the greatest labor reformer since Jesus Christ, and talked to men on the docks and at their work of Christ and his laws. Talk as you will; these problems can never be settled by law. You may expect your president to arbitrate; but the question will not be settled until it is settled according to Christ's law; there will never be any peace until the heart of the one power is in touch with that of the other, and each touched by the finger of Christ."

*The Universalist Leader.*

He who sows a sin sows a seed which will spring up and bear fruit after its kind. The sowing men call pleasure, but the harvest all agree is suffering. It is a hard life to suffer for old sins, and harder still to see others suffer. For no man can sow evil and be sure none of it will ripen in his neighbor's fields. To reap the evil harvest is bad enough, but to see it ripening in the lives of those we love is harder yet. Our increasing knowledge has only emphasized this certainty of penalty following transgression. The warnings of the Book are continually illustrated in the experiences of the world.

*Congregationalist.*

In place of proof-text and dogma we must return to the preaching of the personal Christ. He does indeed appeal to the intellectual man and has done more to make the average man intellectual than all other voices out of the past. But the cogency of his appeal lies in the unique fact that he holds the secret of a reawakened, quickened, and clarified emotional manhood. The task of the pulpit is to make the Christ again live among the men of to-day, and let him win them as life alone can do.

DR. PHILLIPS.

Each human life is a whole orchestra in itself. But it is not always in tune, and before it can begin to make sweet music its many chords must all be brought into accord. This is the work of spiritual culture. It is achieved only by the submission of the whole life to God. This is the work which divine grace sets itself to do in us. If we would have this result achieved we must sweetly and earnestly yield ourselves to God that He may bring us into tune with His own Spirit and teach us to make heavenly music in this world.—*The Watchman.*

"The statement that one battleship costs more than the value of the ninety-four buildings of Harvard University has been questioned," says *The Watchman*, "but official reports state that the Oregon, which is the most expensive battleship in the United States navy, cost $6,575,032.76. The valuation of all the buildings and land of Harvard University is $5,300,000. It is not difficult to decide which will do most to maintain righteousness and peace in the world."

We preach most definitely and profitably to "the day" by preaching the truths which belong to unlimited time; any other course will elevate accidents into principles, and invest with exaggerated importance the abortive assaults which are made upon the Christian kingdom.—*The Watchman.*

The religion of Christ is not a law, but a spirit, not a creed, but a life. To the one motive of love God has intrusted the whole work of winning the souls of His redeemed. The heart of man was made for love.

*Selected.*

This idea of the divine fatherhood goes down so deep into the human heart that it becomes the source of a childlike obedience, trust, submission, patience, hope, and love.

JAMES FREEMAN CLARKE.

*The Outlook* believes that "The Churches of to-day are too much mere worshiping assemblies. They do little to carry the message of life as heralds to the non-elect and the uncultivated."

Nothing that man ever invents will absolve him from the universal necessity of being good as God is good, righteous as God is righteous, and holy as God is holy.

KINGSLEY.

The sermon that tells is the life that tells. The religion that counts on Sunday is the religion that all through the week exerts its quiet, powerful influence.

REV. H. A. BRIDGMAN.

There never has been a great and beautiful character which has not become so by filling well the ordinary and smaller offices appointed of God.—BUSHNELL.

Dr. Van Dyke has said, "Some Christians are among the most depressing and worrisome people in the world—the most difficult to live with."

Not what the world is to us, but what we are to the world is decisive of our happiness.—WILHELMINE VON HILLERN.

---

### LITERATURE FOR DISTRIBUTION.

SUPPLEMENTS TO THE SENTINEL.

Christian Science: The Religion of Jesus Christ. By the Hon. William G. Ewing of Chicago, Ill.

Christian Science: Its Worth and Work. By Rev. Arthur R. Vosburgh of Rochester, N. Y.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: Is it Christian? By Mrs. Sue Harper Mims of Atlanta, Ga.

Christian Science: Its Work and Scope. By Carol Norton of New York City.

Christian Science: The True Idealism. By Annie M. Knott of Detroit, Mich.

GERMAN SUPPLEMENTS.

Christian Science: Its Promises and their Fulfilment. By Edward A. Kimball of Chicago, Ill.

Christian Science: The Christianity of Christ. By Rev. Irving C. Tomlinson.

PRICE:—Single copies, two cents each, postpaid, ten or more copies to one address, one cent each; one hundred copies, seventy-five cents; five hundred copies, $3.25; one thousand copies, $6.00. Orders for supplements may be assorted as desired.

PAMPHLETS.

Legal Aspects of Christian Science. 72 pp.

Scriptural References Sustaining the Doctrines of Christian Science. 63 pp.

Mr. Kimball's Lecture. 33 pp.

Hearings on Proposed Medical Bills. 23 pp.

Answers to Questions in Christian Science. By Edward A. Kimball. 24 pp.

The Christian Science Movement. 22 pp.

Healing through Christian Science. By Septimus J. Hanna. 36 pp.

Prayer and Confidence. 40 pp.

The Los Angeles Case. 63 pp.

PRICE:—One copy or more, six cents each; twelve copies to one address, sixty cents; twenty-five copies to one address, $1.15; fifty copies to one address, $2.25. Orders for pamphlets may be assorted as desired.

REPRINTS FROM THE JOURNAL AND SENTINEL.

The True Law. Healing the Sick. The Brotherhood of Man. The Real and the Unreal. Service and Stipend. The True Orthodoxy. There is Rest and Peace on Earth. Resigned to the will of God. Lessons from a Workshop. To Business Men. How should the Sick be Healed? The Lesson Sermons.

PRICE:—Ten copies, five cents, prepaid; one hundred copies, fifty cents; two hundred copies, seventy-five cents; five hundred copies, $1.75; one thousand copies, $3.00.

Address all orders for above literature to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# WORKS ON CHRISTIAN SCIENCE.

## Written by Rev. Mary Baker G. Eddy.

**SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES.** In one volume, 700 pp. Enlarged and Revised, 1902. THE ORIGINAL, STANDARD and only text-book on CHRISTIAN SCIENCE MIND-HEALING. Cloth binding, each, prepaid . . . . . $3 18
Two to twelve books (cloth only) to one address, each, prepaid . . . . . 3 00
Twelve or more books to one address, each, prepaid 2 75

Full leather, stiff beveled boards, gilt edges, same paper as in cloth binding, each, prepaid . . . . . 4 00
Twelve or more to one address, each, prepaid . . 3 75

Morocco, limp, round corners, gilt edges, Oxford India Bible paper, convenient for pocket, each, prepaid 5 00
Twelve or more to one address, each, prepaid . . 4 75

Levant, divinity circuit, leather lined, round corners, gilt edges, silk sewed, heavy Oxford India Bible paper, wide margins, each, prepaid . . . . . 6 00
Twelve or more to one address, each, prepaid . . . . 5 75

Orders for Science and Health, in lots of twelve or more to one address may include any or all of the different styles of binding.

**A COMPLETE CONCORDANCE** to Science and Health with Key to the Scriptures, 595 pp., 10 x 7. Bound in cloth, marbled edges. Price, single copy, prepaid. . . 5 00
Twelve or more copies to one address, each . . . . . 4 50

**MISCELLANEOUS WRITINGS.** A book of 471 pages, containing articles published in THE CHRISTIAN SCIENCE JOURNAL since 1883, with revisions and additions.
Price (cloth), each, prepaid . . . . . 2 25
Twelve or more books to one address, each, prepaid 2 00

Morocco, limp, round corners, gilt edges, convenient for pocket, narrow margins, each, prepaid. . . . . 4 00
Twelve or more to one address, each, prepaid . . . . 3 75

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum; One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, postage paid, each, 12½ cents.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD, 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and red initials. One copy, $1.25; six copies to one address, $6.50; twelve copies to one address, $12.

**For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.**

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Judge Lochren, in the United States District Court on the 1st handed down his decision in the case of the State of Minnesota *v.* the Northern Securities Company, the Great Northern Railway Company, the Northern Pacific Railway Company, and James J. Hill as president of the Northern Securities Company, and individually, in which he sustained the contentions of the defendants and dismissed the bill of complaint of the State. The judge finds that the Northern Securities Company has not violated the State laws forbidding the consolidation of parallel and competing lines of railway through its ownership of the stock of the Great Northern and Northern Pacific Railways. He refuses the injunctions asked by the State of Minnesota to restrain the Securities Company from voting the stock of the two railroad companies or either of them.

This conclusion appears contrary to the decision rendered by the United States Circuit Court in April in the case of the United States *v.* Northern Securities Company, and will possibly on appeal be reviewed by those judges in another court.

Unlawful solicitation of immigration will be an important part of the report of Commissioner Sargent, who through a special inspector, has been investigating the methods employed by steamship companies and others in Europe in procuring immigrants. It is believed that, directly and indirectly, the steamship and railway companies in this country are soliciting immigrants through agents in violation of law. Secretary Cortelyou will consider the matter in his report, and it will probably be brought to the attention of Congress for action.

The mast of the old cup defender Columbia has been unstepped. It is considered doubtful whether she will ever be used again as a trial horse. It is rumored that a New York yachtsman is negotiating for her, and that he will re-rig her as a schooner.

The per capita circulation for the people of the United States on August 1, was $29.55.

**Foreign.**

The agreement between the Admiralty, the Board of Trade, the Postmaster General, and the Cunard Steamship Company has been made public. The Government advances $13,000,000 for building two new twenty-three and one-half knot steamships, pays a fixed sum of $340,000 for carrying the mails yearly after the first sailing of the second of the two new steamships, requires speedier mail facilities and that all the company's steamships between Liverpool, Boston, New York, Mediterranean ports, and Havre shall be at the disposal of the Admiralty. The vessels must be under the British flag, the masters, officers, engineers, and three-fourths of the crew of all the vessels must be British subjects. On the Campania, Umbria, and Lucania, until the new vessels have been completed, and thereafter on the new vessels, all the certified officers, other than the engineers, and not less than half the crews, must belong to the Royal Naval Reserve. Foreigners are prohibited holding stock in any way in the company. For these concessions the Government subsidizes the new vessels at $375,000 each per year.

A great gathering of sovereigns is expected at Darmstadt, Grand Duchy of Hesse, on the occasion of the wedding of Prince Andrew of Greece to Princess Alice of Battenburg. The Czar, the Emperor William, King Edward, King Christian of Denmark, and King George of Greece have already promised to attend.

A sub-committee appointed by the Royal Commission on London street traffic will come to the United States in September and study American street railway systems in New York, Boston, Chicago, and elsewhere.

The Duke of Devonshire moved the second reading of the Irish Land Bill in the House of Lords last week.

Pope Pius X. was crowned Sunday, August 9, in the basilica of Saint Peter's.

**Industrial and Commercial.**

Plans for the installation of ten thousand horse-power dynamos and twelve thousand five hundred horse-power water wheels are preparing for the Great Northern Power Company of Duluth. A hundred and fifty thousand horse-power can be developed. There is a fall of water of 350 feet above the wheels. Power will be available for many industries in Duluth and for mining plants in the Mesaba range. The initial cost, it is said, will be $3,500,000.

More than 5,000,000,000 pounds of sugar, valued at over $100,000,000, was brought into the United States in the fiscal year just ended. This is a larger importation of sugar than at any preceding year in the history of the country, and the value is greater than in any preceding year, except the importations of 1891, 1893, and 1894. These figures include the sugar brought from Porto Rico and the Hawaiian Islands.

The Pennsylvania Railroad intends to make a thorough test upon its own rails and roadbed of the high class French locomotive, the De Glehn four-cylinder compound, which it has ordered for delivery next year. The comment of the *Scientific American* upon this type of locomotive may be found in the *Sentinel* for June 27.

The largest shipment of starch ever made, consisting of a train of twenty-four cars loaded entirely with starch and carrying a million packages to the wholesale grocery trade of the western States, left Oswego, N. Y., a few days ago. Each car carried a banner bearing the buyer's name and the car's destination.

One hundred crates of Elberta peaches carefully packed were shipped recently from Marietta, Ga., to London as an experiment by the United States Department of Agriculture. The owner was guaranteed the New York price for the fruit. It will require twelve days for the shipment to reach its destination.

At the meeting of the United States Steel Corporation last week the resignation of Charles M. Schwab as president and director was accepted, and thus his official connection with the corporation was wholly severed.

It is expected that two million spindles will be idle in the north during August owing to the high price of cotton and the hesitancy of buyers of cotton goods.

The record of the production of aluminum for the past twenty years shows that in 1883 the production was 83 pounds, and in 1902 it was 7,300,000 pounds.

The export of sawn lumber this year from Newfoundland is expected to reach fifty million feet for the several concerns interested.

**General.**

"In his excavations at Abydos in Egypt, Prof. Flinders Petrie," says *The Independent*, "has brought to light at a depth of about twenty feet no less than ten successive temples, ranging in age from about 5000 to 500 B.C. In the plans of these temples built one upon the ruins of the other, something can be seen of the changes from age to age through the whole Egyptian history. In some places the walls of mud and brick were so mixed up with the soil that the spade had to be laid aside and sections cut with a sharp knife. It has been discovered from various signs that Osiris was not the original God of Abydos, but that a Jackal god and the god of the West were honored here down to the XIIth dynasty; and it is seen that about the IVth dynasty the temple was abolished and only a great hearth of burnt offerings is found, with votive clay substitutes for sacrifice. This corresponds exactly with the story of Herodotus that Cheops had closed the temples and forbidden sacrifices. Of Menes, the founder of the first dynasty, he discovered part of a large globular vase of green glaze with his name inlaid in purple, and thus polychrome glazing is carried back thousands of years before it was previously known to exist. Pottery of forms and material hitherto unknown in Egypt belonged to this remote age, and proves to be like that in Crete, of the late neolithic age. The head of a camel modeled in pottery carries back the connection of that animal with Egypt some four thousand years; hitherto no trace of it had been discovered there earlier than Greek times.

Advance sheets of the statistical tables prepared for the new edition of Lloyd's Register Book show that the shipping of the world consists of 29,943 steamships and sailing vessels, representing a tonnage of 33,643,131 tons.

These figures show an increase over last year of 315 vessels and of 204,368 tons. The advance, however, is entirely in steamships. Fewer sailing vessels were built in 1902 than in any previous period in the history of the industry, and a large decrease took place in the number and tonnage of those on the registers of the various countries—290 vessels and 118,000 tons. Of the total tonnage of 33,643,131, nearly one-half is owned in the United Kingdom and colonies. America stands second and Germany third.

The number of bicycles in France last year was 1,250,000, or ten times more than in 1895. Roughly speaking, the number of bicycles has increased by 125,000 yearly for some years. The last census showed six thousand automobiles. Bicycles and automobiles are most numerous in the Department of the Seine, especially around Paris, but they are plentiful in all North France and down the valley of the Rhone and along the Mediterranean.

A grass has been developed at the Iowa Agricultural Experiment Station which, if it meets the expectations it seems to promise, will make it possible to convert much of the semi-desert land of the world into profitable grass-producing areas.

# CHRISTIAN SCIENCE SENTINEL

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From Our Contributors.

### The Integrity of Christian Science Literature.

EDWARD A. KIMBALL.

THE students of Christian Science are learning that whatever is needed in the way of literature for the benefit of themselves and the Cause is always supplied in due season. They are learning also that the Leader of our Cause is fully competent to discern all needs in this direction, and equally competent to meet those needs.

This conviction has been recently confirmed by the publication of the new Concordance to Science and Health. This work is comprehensive, accurate, and adequate; indeed it may be said that the measure of all desire on the part of Scientists for something of this nature has been greatly surpassed and exceeded by the measure of the response: so ample, satisfying, and valuable is this work.

Our text-book, Science and Health, contains an exposition of the theory and practice of Christian Science which is amply sufficient for the natural, abundant growth and education of its student. For this reason he cannot study it too much nor with too great expectation that it will supply his needs in the way of statements, rules, and helpful amplification.

The new Concordance, which will instantly facilitate this study, is therefore of incalculable value, and is destined to add largely to the prosperous growth of the student and the Cause.

The continuous endeavor to maintain the integrity of Christian Science literature has been criticised in a mood of careless disregard of the fact, that every religious denomination does, or should exert the same supervising scrutiny. It is declared by this reckless form of criticism, that there is a disposition to monopolize this particular branch of our religious enterprise.

On the contrary, this endeavor is very largely because of deep concern for the good of our own people and of the public. It is because of paramount necessity for keeping the text of our literature pure, in order that it may be *safe* for those who do not yet understand how to discriminate between the truth or error of many statements which in various ways, are put forth as though they were representative of Christian Science.

If there were several drinking fountains in the public square of a city, one of which was acknowledged to be pure and safe and all the others were either suspected to contain some traces of impurity, or to be at least of doubtful or uncertain character, from which of these fountains should the people drink? If, perchance, some people ignorantly drank from an impure fountain on the plea that it seemed to be a pleasing variety, or even more palatable, would they be wise or foolish? Christian Science is *exact, profound,*—infinite in range and application. It cannot tolerate or coalesce with any error of premise or conclusion. Only those students of this science who have a technically correct knowledge thereof are at all qualified to compose, edit, or revise its literature, and no wise student should be willing to jeopardize his own safe progress by reading or giving heed to any literary production on the subject of Christian Science which is for any reason doubtful as to authorship or correctness of statement.

The habit of circulating copies of letters, "notes" of class teaching, of "talks to students" by lecturers, and many other papers of similar import, is in direct violation of the prudent rules which are designed to safeguard our entire educational system. The use and circulation of these fragmentary and unauthorized papers is harmful, because it has the effect of flooding the Field with an illegitimate *quasi* literature, and for the further reason that the alleged authors thereof have generally found them to be so distorted and defective that they repudiate them as being perverted and unsafe. For these reasons our people should know that these things ought to be utterly and promptly discarded as a whole, and this habit abstained from for the sake of every one concerned and the general interest of the Cause.

If one yields to the temptation to turn for enlightenment in the direction of unauthorized, irregular, and perhaps faulty literature, he is apt to obscure the fact that Science and Health contains all that he needs for successful practice, and by so doing, he is likewise liable to bereave himself of the unspeakable benefit which may be derived from this book by one who turns to it in confident expectation that it will meet his needs.

One of the first things for the beginner in Christian Science to learn is that the newly acquired and constantly increasing understanding of Christian Science is sufficient for him day by day. He should learn that it is equal to the mastery of every error that presents itself. A supreme need is that he should use to the utmost what he already knows (although it seems but little), instead of procrastinating his advancement because of the suggestion that he has not sufficient understanding with which to begin or successfully to proceed. He will gain more by using what he has, and should always resist the temptation to think it unimportant or unavailing.

We believe that Christian Science is Truth's own utterance and revelation, whereby to designate the Christ way of salvation and the deliverance of humanity through the transforming influence of the divine Mind, but this revelation would be a mockery if it were not immediately available,—if it were not an instant and ever-present help.

The entreaty of Christian Science is, Take God at His word,—"My grace is sufficient for thee." "Be not afraid." Fear is neither you nor yours. It is utterly foreign to the naturalness of your being. It has no business with you, and you have no business with it.

### The Spirit of Obedience.

W. B. T.

THE problem of instilling into the minds of children not merely the habit, but the spirit of obedience, is one of exceeding interest to every conscientious parent, and to the Christian Scientist above every other. If conscientious, we are in a teachable attitude. "The conscientious are successful" (Miscellaneous Writings, p. 340), and we need no better maxim to insure the undertaking.

It is the parents' sincere desire to see their children giving

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

heed to admonition and performing their allotted duties out of love of right, and of them. That perfunctory obedience, which is forthcoming simply because the children accede to their parents the right of command, is heaviness to every parent's heart. Fathers and mothers have before them a glorious task, and those upon whom the benison of Christian Science glows, should herald its accomplishment with unbounded faith and zeal.

It must at once be recognized, however, that with the parents, first and last, by far the more important part of all the problem lies.

The children will unconsciously assimilate and reflect that which is given out to them from those who guide them. Hence it is of the utmost importance that the consciousness of the parents contain the seed which is to bear fruitage in the child. "He who first brings to humanity some great good, must have gained its height beforehand, to be able to lift others toward it" (Miscellaneous Writings, p. 338), and this must mark the way upon which parents shall proceed.

Throughout the early years of child life and often well into youth, the true parenthood is suggestive of God to the child, and a peculiar responsibility attaches to this fact. Until he is able to separate between type and prototype, between reflection and reality, it is of supreme importance that the child discover nothing in the parent that is not Godlike. When the moment arrives in which he seeks to know God directly, what appeal could be more reaching to the child who has been blessed with consecrated parents than David's "Like as a father pitieth his children, so the Lord pitieth them that fear him"? What more filled with tender assurance than those words of Isaiah from the mouth of the Lord, "As one whom his mother comforteth, so will I comfort you"?

Parents must be Godlike if they desire to insure Godlikeness in their children; and to become Godlike it is essential to hold communion with God. A true parent will never for an instant lose sight of this all-important fact.

Those who unite prayer and purpose to evoke from their children a natural and sweet obedience to good, must themselves yield willing obedience to all that is highest and best. They must be living examples of the true, the upright, the pure.

In the joy and peace of living near to God they will love tenderly and govern wisely. The children will imbibe the spirit of obedience which they see lived, and yield it spontaneously again to God, to good. Parents will become good models and children will shine forth as patterns, a joint power in the community which they bless and adorn.

Unflinchingly truthful in thought and deed, and realizing from the outset the sacred responsibilities which rest upon them, parents should seek early to establish their parenthood upon principles which shall endure. Looking to the one Mind, to the supreme intelligence which begets and guides every manifest expression of intelligence to its righteous end, and confident in whom they trust, they need not fear. Let them faithfully obey and patiently await results. In their steadfast faith lies the substance of the things they hope for from the little hearts entrusted to them.

To such fathers and mothers children turn in time of trouble as in time of joy, for they have made the precious discovery that their parents are not only ready but competent to help. Precepts thus made practical, children learn to prize. Their fears grow less and vanish in the safe assurance of parental love. Pain and illness melt before it, and in the dark hour of temptation the same sweet monitor of the home is ready, instant in compassion, though fearless to rebuke. Integrity and gentleness hold sway in unison, and a hallowed peace makes home a sanctuary.

Bowing in humble recognition, meanwhile, before that Love which they behold working its quiet wonders through their lowly trust, the parents guard the precious secret and are still. They realize that all the life-sustaining qualities of the Father-Mother God are theirs by spiritual birthright to reflect; and that through these qualities alone the accomplishment of all good things is possible. Thus is divine Love reflected in love, and the coincidence of God and man made effectually manifest.

The wisdom which flows into the consciousness of father and of mother is their exceeding great reward. Spiritual intuitions, messengers of the Most High, admonish to a rightful course of action when doubt makes dark, and rejoicing, they press on, mindful of the spiritual light which glows bright ahead.

"The spiritualization of our sense of man opens the gates of paradise" (Miscellaneous Writings, p. 185), and it is through their efforts to spiritualize their sense of themselves and their sense of their children, that parents will see aright, and bring out the results they desire. To the old in years, as to the young, it must be borne in mind that there lies but one way open, and this leads upward through the pathway of obedience.

## A Perfect Man.

A SCIENTIST'S ANSWER TO A FRIENDLY LETTER.

*Dear Friend:*—You say: "Christ came and died for the sins of the world; now when we accept him we are quickened, made alive spiritually, yet our physical bodies are just as much subject to sickness and death as before we accepted him," and I would answer that as man was made in the likeness of Spirit (God) he must be, and is, spiritual, and not material. To be like the perfect, immutable, and immortal "I am," man must be perfect, changeless and immortal. His "life is hid with Christ in God," and, strictly speaking, he cannot be made alive spiritually, since he can no more cease to live or to be alive than can his immortal Principle, Father, or Creator. If a diamond were covered with mud we could see it no longer because of the opacity of the mud. But would the diamond cease to be, or to possess its inherent qualities? Wash away the mud, and the diamond will appear as pure, as brilliant, as beautiful as ever; thus we see that mud has no power to deprive it of its qualities. So it is with the likeness of God. Materiality, error, sin, and evil are the mud which, for a season, may seem to hide the manifestation of man, but when, by "the washing of regeneration," this mud has been removed, God's precious jewel (His likeness, or man) is brought forth in all its divine perfection, purity, and beauty. When by this washing the muddy or sinful mentality of the "chief of sinners," called Saul of Tarsus, had been removed, the new man, the man of God, "the second man" "the Lord from heaven," "the hidden man," was revealed and was known as the immortal Paul, "an apostle of Jesus Christ by the will of God." By this baptism or washing, this new birth, this resurrection, this putting on of the new man, the chief of sinners was cast into the lake of fire, a type of eternal destruction, and the new man, Paul, could say: "The law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Knowing his immortality he could challenge the last enemy in these words: "O death, where is thy sting? O grave, where is thy victory?" As a ray of light issuing forth from the Sun of Righteousness, man cannot be deprived of his celestial resplendency. The clouds of sin and of evil may hide or obscure for a time, but they cannot destroy the likeness of God. Like all temporal things, these clouds must, some day, pass away.

Though unseen, "the hidden man" exists nevertheless; he cannot be deprived of life, for God Himself is the source of his life. The Christ said, "I came forth from the Father." Christ represented the perfect type of Sonship, and His Father is also the Father of man. As the son of God, man does not come out of matter, nor does he come forth from the flesh. He is "born, not of blood,

Digitized by Google

nor of the will of the flesh, nor of the will of man, but of God." Jesus plainly taught the spirituality of man when he said, "Call no [mortal or material] man your father upon the earth: for one is your Father, which is in heaven."

Too long have we believed that man lives in a material and mortal body, and is forever subject to sickness and death. Too long have we believed that Christ is only a half saviour. If he can save us from sin only, and not from the effects of sin (sickness and death), we are greatly in need of a more powerful Saviour, for the children of men, with all their drugs and potions, cannot save us from these enemies. But let me assure you, dear friend, that Christ always was and always will be a complete, full, perfect, and almighty Saviour. He can keep our bodies perfectly whole and sound. His "hand is not shortened," and he can yet remove sickness and death as easily as he can destroy sin. He is still the Great Physician "who healeth all thy diseases."

For centuries old Jewish fables, human traditions, and mythological accounts have been taken for heavenly truths, but we do not have to believe them. In their imperfect knowledge of God, of man, and of the universe, men mistook the false and the unreal for the true and the real, and thought an imperfect, sinning, sick, and dying man the man of God's creating. God's work was perfect, my brother, and the perfect work of infinite Mind cannot deteriorate and fall into dust. The wicked man is not the man of God. Satan is his father, and like all else unreal, this false man, this counterfeit, is doomed to everlasting destruction that the real, the true, may appear, and God be the All-in-all. Error must disappear to make room for Truth; evil must be destroyed, that good may appear; disease must be removed that health may be expressed; death must be cast in the lake of fire, it must be swallowed up in victory, that Life may bring immortality to light. No matter how thickly the diamond is covered, there is water enough in the "River of Life" to wash away all the mud of the false and unreal, and free the beautiful gems of God. "Though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool."

You advise me "to read carefully the fifteenth chapter of the first epistle to the Corinthians, in which Paul describes so beautifully life and death, mortality, resurrection, and immortality." This is one of my favorite chapters, and the more I read it the more I am satisfied that heretofore we have not interpreted its verses aright. In our text-book (Science and Health by Mrs. Eddy) I have found what I consider to be the only true, correct, satisfying, and convincing interpretation of the teachings of this chapter. You tell me that "We do not need any text-book but the Bible, and if we are not saved by it, we shall never be saved." For centuries men have studied the Bible; for centuries the greatest intellects, the most learned teachers, the most erudite theologians have tried to interpret its pages, and what have they given us? This: the garment of Truth grievously divided; the Church of Christ separated into very many and widely differing sects, each confident of its right apprehension of the Master's teaching. In this mass of conflicting interpretations my unassisted, unilluminated reason has sought in earnest, and for many years, but in vain, to find out who was right; and as to interpreting and understanding the "hard sayings" and the mysteries taught in the Bible, this was for me a task far beyond the reach and ken of my apprehension. But believing that the truth is known by its fruit, that the true faith is discernible by its works; that certain signs must follow the true believers, and that these believers are enabled to do the works that the Master did (John, 14 : 12), I at last found the fruits, the works, and the signs in that much misunderstood body of teaching known as Christian Science, and I gladly accepted its text-book, for this book furnished me a key to unlock the treasures of the Bible. It has enabled me to prove, to my own satisfaction, that the "signs" do really "follow" to-day, as well as they did nineteen hundred years ago, "them that believe," and I am more than convinced that with a perfect understanding, the true disciple can to-day do the works that the Master did.

We all have the Bible; we all can read it, and we all can pray; but I believe that in spiritual understanding and knowledge, many are yet like the eunuch, needing some spiritually gifted disciple to instruct them and interpret the word of Truth aright. When we read the book, if a Philip should ask us: "Understandest thou what thou readest?" could we answer Yes? Could we prove our understanding by the fruits, the signs and works which must follow? If we cannot give such a proof, were it not better humbly to admit our inability to understand, as did the eunuch when he answered Philip, "How can I [understand], except some man should guide me?"

You further advise me to read carefully the third and fourth verses of sixth chapter of Romans: "Know ye not, that so many of us as were baptized into Jesus Christ were baptized into his death? Therefore we are buried with him by baptism into death: that like as Christ was raised up from the dead by the glory of the Father, even so we also should walk in newness of life." I know that your church sees in these verses "water baptism," and I am sorry that in this we cannot agree. When Paul wrote these words he had in mind Christians who were "dead to sin" and who could no longer live in it (verse 2). The sins that did hide the true children of God had been removed by "the washing of regeneration" or "the renewing of the mind," and these changes took place when the Roman converts were "baptized [or washed] into Jesus Christ." St. Paul explains that this baptism or washing meant also a baptism "into his death." In verse ten the apostle explains what this death was: "For in that he died, he died unto sin once." Herein we see that it is only as we die unto sin that we can be said to be buried with him by that baptism or washing into death unto sin. In this washing away of sin, "our old man is crucified with him, that the body of sin might be destroyed, that henceforth we should not serve sin." To be buried with him, to be planted together in the likeness of his death in order to be in the likeness of his resurrection so that we should walk in newness of life, requires a "baptism into death" "unto sin," and not a baptism into material water. The teaching of Paul indicates a purely mental process.

You further state: "We have no promise within the lids of the Bible that we can receive life without baptism, for 'He that believeth and is baptized shall be saved; but he that believeth not shall be damned.'" I quite agree with you that to remove the mud that covers the precious diamond, a washing is necessary. But to remove the mud of sin, evil, sickness, and death, requires a spiritual, not a material, washing. The waters of Jordan cannot remove that mud. The "one baptism" of Ephesians, 4 : 5 is the only washing that can "put off the old man" and bring forth "the new man." In the words of your quotation: "He that believeth and is baptized," etc., I cannot see the least indication of material water.

You next cite: "Then Peter said unto them, Repent, and be baptized every one of you in the name of Jesus Christ for the remission of sins, and ye shall receive the gift of the Holy Ghost." To be baptized "in the name" of Jesus Christ, to be washed, to be cleansed in the life and character of the Holy One of Israel, can hardly be made to read: to be baptized in material water.

You next mention, "Baptizing them in the name of the Father, and of the Son, and of the Holy Ghost," but here again, I cannot read, Baptizing them in material water.

You next refer to the baptism of Jesus in Jordan, by John; John, knowing that Jesus needed no such baptism,

Digitized by Google

would oppose him, but Jesus said, "Suffer it to be so now: for thus it becometh us to fulfil all righteousness." Christ's herald must soon decrease, for the Saviour of the world is about to enter his ministry and do the work that the Father had given him to do. He assumes and approves all that John had said and done in preparing the way before him, and he must receive the seal of John's mission; namely, water baptism, as he had already received the seal of the old covenant, *i.e.*, circumcision. Jesus needed not these two seals, but in receiving them it thus became him to fulfil all righteousness. He certainly did not need water baptism "to receive Life," for he himself said: "I am . . . the life," and his receiving that baptism is no more a proof that we also must receive that baptism, than his circumcision is a proof that we also must be circumcised.

No one but John was ever sent to baptize with water, and we know that this baptism was for the sole purpose of manifesting the Lamb of God to Israel. After this had been done, John and his baptism must decrease and disappear, while the Christ and his "One Baptism" must forever stand as the only source and means of salvation, for "Neither is there salvation in any other: for there is none other name under heaven given among men, whereby we must be saved." One may be immersed or sprinkled in Jordan every day in the year, and for all that be a sinner still. The baptism of the Holy Spirit, or the "One Baptism," is the only washing that can remove the mud of sin and so free us and make us appear in our white garments as the children of God, perfect and holy, even as our heavenly Father is perfect and holy.

I thank you for the Christian spirit you express in your last paragraph, and I hope you will accept my answer as coming from that same spirit of Christian love and friendship.

E. E. CHARPIOT.

## Fruits of the White Mountain Chapel.

EMMA C. SHIPMAN.

"THOUGH neither dome nor turret tells the tale of your little church, its song and sermon will touch the heart, point the path above the valley, up the mountain, and on to the celestial hills, echoing the Word welling up from the Infinite, and swelling the loud anthem of one Father-Mother, God—o'er all victorious!" (Mrs. Eddy in the dedication message to First Church of Christ, Scientist, Fabyan, N. H. *Christian Science Journal*, September, 1898).

This loving prophecy of our beloved Leader began its fulfilment on the day it was given to the world. As the phrase "Adorable One," from the spiritual interpretation of the Lord's Prayer (Science and Health, p. 16), was read at the dedication service, the sense of God's oneness so filled the consciousness of a listener who was suffering from headache that he was instantly healed.

A Christian Scientist on the Pacific coast gave a copy of the September *Journal* for 1898 containing the dedication lesson, to a friend from New Hampshire. This lady read the Bible references and became so interested in them that she bought a copy of Science and Health in order to read the whole lesson. This induced further study and led to her healing, as well as the healing of her husband and that of a friend. From this work a Christian Science service has resulted with a growing congregation.

A lady of the Baptist faith who had become a Christian Scientist went to her pastor with some trepidation to tell him of her desire to unite with the Christian Science church. She was met cordially and given a beautiful letter, because, as he said, he had met the Christian Scientists at the White Mountain church and had never known people who studied their Bibles more.

A Congregational clergyman, who was spending the summer at a hotel near the chapel, listened to the service for several Sundays and became interested enough to have a member of his family receive Christian Science treatment.

The church is situated in the heart of the White Mountains within five miles of seven hotels and within walking distance of four. The average Sunday attendance during the summer of 1902, was 33. Two-thirds of this number were non-scientists.

It is not quite five years since the dedication of this mountain church, yet from north, south, east, and west have come grateful testimonies of healing and loving thanks for its refreshing and uplifting ministrations, showing an answer to Mrs. Eddy's prayer as expressed in these words from her message:—

"May God's little ones cluster around this rock-ribbed church, like tender nestlings in the crannies of the rocks, and preen their thoughts for upward flight."

---

## "One of our Greatest Blessings."

WILLIAM R. KNOX.

"WORK is one of our greatest blessings; every one should have an honest occupation." This is the motto at the entrance of a school not far from Boston, and it has been the subject of my attention a great many times; but not until I had gained some understanding of the teachings and practice of Christian Science did I appreciate its full import.

Work is the song of the Christian Scientist. And as he awakens to the realization and appreciation of the truth of the teachings of this Science, he catches the rhythm of that song and strives to achieve the fulfilment of the promises which those teachings unfold.

Scientific work is not the babbling of words either audibly or mentally; neither is it the mere recitation of the Christian Science text-book or the Scriptures. It is not the effort to establish some human opinion or to bring about a result which to our limited judgment seems right, thus attempting to take from the hands of divine Mind that very guidance which we would seek. It is not the spasmodic effort, the striking out right and left in worldly fashion expecting results that must be gone over, one by one, in patient obedience. Work is not the aggressive effort of the man whose motto is to *do something*, no matter what it is, just *do something* and get some one else to *do something*. Such objectless effort is inharmonious and unscientific. Aggression is seldom progression, and is very often retrogression.

The mistaken judgment that would seek to manage another's affairs is not work, much less is it "an honest occupation" even though it may be prompted by experience and its counsel offered in the *name* of Love. For us to point out the error in another's path is well and good, even a duty; but to attempt to pilot that one on his course instead of pointing him to God, our only guide and counselor, is to deprive him of the great privilege of working out his own salvation, to say nothing of the sad neglect of our own duty.

Work in Christian Science gives the constant and satisfying proof of man's unity with God in every detail of occupation to which duty may call him.

It is a calm, quiet trust, alertness, devout self-abnegation, and love, in short, the minding of one's own business and giving others the privilege of minding theirs. It is the ever-increasing expression in thought, word, and deed of the ever-operative divine Principle, God, who is Life, Truth, and Love.

Therefore work under whatever condition, be it an honest occupation, is in some degree the exemplification of Life, of Truth, and of Love. To work is to live; and to live, we must work.

## Some Helpful Lessons from our Annual Meeting.

ESTELLA M. SCHUREMAN.

To be systematic in all our work, to the least detail.

"Study to show thyself approved unto God, a workman that needeth not to be ashamed, rightly dividing the word of truth."

To be prompt and diligent.

"In the figurative transmission from the divine thought to the human, diligence, promptness, and perseverance are likened to 'the cattle upon a thousand hills.' They carry the baggage of stern resolve, and keep pace with highest purpose" (Science and Health, p. 514).

To be watchful and alert.

"Never absent from your post, never off guard, never ill-humored, never unready to work for God,—is obedience; being 'faithful over a few things'" (Miscellaneous Writings, p. 117).

To be exact and concise in our every statement, whether written or verbal.

"But let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil."

To work together in unity.

"Our watchwords are Truth and Love; and if we abide in these, they will abound in us, and we shall be one in heart,—one in motive, purpose, pursuit" (Miscellaneous Writings, p. 135).

To be unselfed.

"Sacrifice self to bless one another, even as God has blessed you. Forget self in laboring for mankind; then will you woo the weary wanderer to your door, win the pilgrim and stranger to your church, and find access to the heart of humanity" (Miscellaneous Writings, p. 155).

To be gentle, patient, sweet, and loving.

"But the fruit of the Spirit is love, joy, peace, long-suffering, gentleness, goodness, faith, meekness, temperance: against such there is no law."

These are some of the lessons taught us by the local workers during communion week. Shall we not, as individual workers in our several fields of labor, make them a part of our daily lives? Then when we are again recipients at this feast of Love, we shall go better prepared to be "givers" as well as "receivers."

## Angels.

A. F. BLUNDELL.

ONE of the most beautiful and helpful truths that has dawned on my consciousness as I have gradually come under the influence of Christian Science teaching, has been the new and clear definition of the word "Angels:" "They are pure thoughts from God, winged with Truth and Love, no matter what their individualism may be" (Science and Health, p. 298); "These angels of His presence . . . abound in the spiritual atmosphere of Mind, and consequently reproduce their own characteristics" (p. 512); and they are also beautifully described in "Miscellaneous Writings," p. 306.

These willing messengers are unlimited in number, legions of them are at our command at all times, and as we try to put in practice the instructions given in Mrs. Eddy's letter of March, 1899, we not only understand that we are entertaining angels (in some cases perhaps) unawares, but we also understand that we are able to help others. In the divinely natural order of things, we may send out thoughts of love, messengers of truth, with healing in their wings, in every direction and to every one who enters into the daily environment or experience of our lives. The more we send out on missions of love and helpfulness, the more there are that come to us, willing, prompt, strong, and faithful messengers, to "Increase our faith, confirm our hope, and strengthen us in Love."

Should we not make a mighty effort, then, to surround ourselves with these invulnerable legions, "The impervious armor," realizing that not a single one of them fails to do effective work and to diminish, to some extent, the sense of error and discord in the world at large.

## An Expression of Thanks.

C. L. E.

I SHOULD like to express deep gratitude to God, the giver of all good, for the heavenly food with which He has so oft fed me through the Christian Science *Journals, Sentinels,* and *Quarterlies.* I wish to record my true appreciation of those who are bringing all their tithes into the storehouse by contributing, to the *Journal* and *Sentinel.* The *Sentinel* for May 23, 1903, seemed to me particularly replete with true thoughts and pointed lessons; a personal need was met through the study of the article, "Take up the Cross" and the illustration therein of our Saviour's "uncongenial" surroundings.

Let us indeed realize that the Principle governing circumstances is always wise, and can never cease to be so; then we shall understand that as the manifestation of good in each individual must be individual and distinct, so the seeming beliefs, whose negation we know, must be distinct. This understanding leads us to find the Principle actuating all good manifestations rather than to look at the manifestations themselves. If we do this, then our progress will be more rapid and sure. Only as we understand that good is already manifested in infinite space, can we securely walk the journey back to our home, even to primal good and primitive Principle. Then Mind's ideas will constantly occupy consciousness. A word of heartwhole thanks to His servant, Mary Baker G. Eddy, for the message which she obediently delivers to the world.

We, in London, England, know that in reality Mind's ideas are expressed just as much here; space is nought, since God is everywhere present. Christian Science does grow "in favor with God and man."

## Man Victorious.

GEORGE AMBROSE DENNISON.

TEMPESTUOUS wind was bleak and cold
As he sped with icy breath,
And sought frail man to pierce and hold
Against the gate of death—
With rheum, and ache, and shivering sigh,
To whelm his troubled breath.

But man was stayed and fortified
By worthy guests that day;
For Love was there, and, side by side,
In ceaseless interplay
Of lofty thought, sat Faith and Hope,
That tread the narrow way.

Wind roars, and howls, and whirls along,
And now he claims his prey!
But lo! a burst of heavenly song,
A light of higher day,
And man hath drawn the sting of death,
For Soul knows not decay.

The cause of every fact is an essential part of that fact, and determines its ruling characteristics. What is a fact, but the effort of a cause seeking to create or influence the future?"—MAZZINI.

CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.

### The Revised Church Manual.

FUNDAMENTALLY, all government must be based upon the desire of the governed for the common good, and with this in view, there is prompt and cheerful acquiescence in the laws and rules which have been found necessary to insure the orderly and dignified progress of nations.

In theory, voluntary organizations, whether religious, political, or social, are not in such great need of stringent laws as are nations, but in practice there is precisely the same necessity, and in this regard the Christian Science denomination is no exception. Fortunately, however, our people are law-abiding, through desire to be such, and wilful violations of the By-laws of the Mother Church are rare. That there are violations of these By-laws cannot be denied, but they usually occur through ignorance of any law on the subject, or by reason of an imperfect understanding of the law. The result, so far as confusion is concerned, is, however, the same in either case. The saying, "Ignorance of the law excuses no man," has become a maxim, and while courts are inclined to temper justice with mercy, it has become proverbial that "the law must take its course."

Such rules as have become necessary for the guidance of the members of the Mother Church have been prepared from time to time by our Leader, and have been adopted by the proper authorities as the By-laws of the Mother Church. Mrs. Eddy has written the following in explanation of the origin and growth of these By-laws.

"The Rules and By-laws in the Manual of The First Church of Christ, Scientist, Boston, originated not in solemn conclave as in ancient Sanhedrim. They were not arbitrary opinions nor dictatorial demands, such as one person might impose on another. They were impelled by a power not one's own, were written at different dates, and as the occasion required. They sprang from necessity, the logic of events,—from the immediate demand for them as a help that must be supplied to maintain the dignity and defence of our Cause; hence their simple, scientific basis, and detail so requisite to demonstrate genuine Christian Science, which will do for the race what absolute doctrines destined for future generations might not accomplish" (Miscellaneous Writings, p. 148).

Recently the By-laws have been thoroughly revised by their author and as revised they are now published in the twenty-ninth edition of the Church Manual, which is the authorized code of the Christian Science denomination. This edition presents many changes in the By-laws, and it is therefore important that every member of the Mother Church, especially the Readers and officers of the branch churches, should familiarize themselves with these changes, and with the By-laws as a whole.

This revision of the Manual has engaged the attention of our Leader for some considerable time, and but few may know of the great care and labor she has bestowed upon this important work in order that our Church may be safely guided in its increasing prosperity. In this work she has again shown her wisdom and loving foresight as the Leader of a Cause which is blessing all mankind, and she will receive the thanks of Christian Scientists, who appreciate her labors in their behalf. M.

### Specific Faith.

THE manifestations of Truth, taken as a whole, beget a concept of law, the unfoldment of which measures our advance in spirituality, for the full meaning of Spirit's supremacy is revealed to us only as we demonstrate the control of right thought,—the Christ within,—over every detail of daily life. The divine government is, and ever has been, all-inclusive and complete, and it can in no wise be extended; but in human consciousness the progressive apprehension of its domain is attended by many of the happy surprises and enthusiasms of discovery. Our personal applications of a law which is without beginning or end of days, brings to us a sense of acquirement and progress which both satisfies and exhilarates. It gives us that "joy of the Lord" which is indeed our strength.

The immeasurable vastness of Truth, awaiting the adventure of the spiritually aspiring, presents all the allurements of exploration. Looking out over its boundless reach and profundity, Paul exclaimed, "O the depth of the riches both of the wisdom and knowledge of God! how unsearchable are his judgments, and his ways past finding out!" The utmost flight of the imagination fails to find any bound to those green pastures into which inspired thought is led, and neither limit of privilege nor exhaustion of interest is known in that spiritual venture by which we are all to come "unto a perfect man, unto the measure of the stature of the fulness of Christ."

In the presence of this inspiring prospect we may not forget, however, that our immediate and continuous task is to prove, each for himself, Truth's effective presence as ever-operative law, in all the circumstances and conditions of human need. This is the goal of our religious education, it is the overcoming which fits us to be "pillars in the temple" of our God.

Through an inspired teacher, or through exalted intuition, spiritual truths usually appeal to us first under the form of general propositions which we have accepted and endorsed a long time before we have had any considerable apprehension of their practical significance. We have fully believed in that divine care and protection which was evidenced in the gathering of all the various animals into the Ark, where they lived together in peace and harmony, without having thought, perchance, that God is ready to protect and heal these animals to-day.

All Christian believers readily grant that God is the great Physician, and that Jesus and his disciples, in harmony with that divine law which knows no change, once healed the sick by spiritual means alone; but many Christian believers are not willing to concede that Jesus' followers can possibly heal the sick now by the same law and method. It is thus made evident that faith in God's government in the abstract or the far removed, precedes faith in God's government in the concrete and present, and it is only as we come to understand in divine Science the relation of Principle and idea,—the meaning of the terms image and reflection,—that this specific faith is intelligently asserted, and its promises fulfilled. Truth is thus transferred, through understanding, from the realm of theoretic and historic belief, to the realm of demonstrated utility.

The wonderful inventions and discoveries of modern times but register the utilization of forces and laws which have always existed, always been at hand and available; the lack of human understanding, first of their presence, and for a long time thereafter of their applicability to a definite end,—this alone has delayed the benefits which we now enjoy, and it is the province of that Christian Science which includes all science, to lead humanity by the way of discovery and adjustment of supply to need, into the possession of its largest liberty and richest inheritance. Christian Science comes to make no additions to the spiritual truths taught by Jesus, but to emphasize anew the present and unlimited serviceability of these truths. It declares that present demonstration over

Digitized by Google

sickness and sin is a revelation of the scientific workings of the "law of the spirit of life in Christ Jesus," which can be reached in no other way, and which is of the highest value. Holding firmly and steadily to the fundamental postulates of Christianity, it rediscloses the Christ-method of applying universal truth to personal, every-day need, so that right now men may escape the fetters and burdens of that ignorance and indifference to privilege which led Jesus to say so regretfully, "O Jerusalem, Jerusalem, . . . how often would I have gathered thy children together, as a hen doth gather her brood under her wings, and ye would not!"

To hold steadily to ever-present Love, and to know that it expresses itself in a law of harmony which is adequate to every want,—this is to respond to the appeal of Christian Science and bring the infinite resources of God into saving touch with all the needs of men. W.

## What Seek Ye?

THIS question, which was asked by Jesus when two of John's disciples came to him, might be repeated to-day when so many are leaving their homes and occupations, duty and pleasure alike, in quest of the change supposed to be desirable at this season of the year.

The answers which might be given to such a question would depend somewhat upon the personality of the one replying, but most persons would be likely to say that in getting closer to the heart of nature they were seeking change and rest.

That multitudes find both profit and pleasure in leaving the beaten paths for a season is undeniable, the question is how to secure the best results in so doing.

From the gospels we learn that Jesus often sought the hillsides and the seashore; but we are never told that he did so to escape from sickness. He would have resisted all error by spiritual means. He did not need to regain a fuller sense of vital energy, for he declared that, "As the Father hath life in himself; so hath he given to the Son to have life in himself," and wherever he went he carried with him that full and overflowing sense of the divine Life which healed the sick, comforted the sorrowing, and revealed to those who had eyes to see and ears to hear, the harmony which proves one God, one Mind, reflected in both nature and man.

A letter received recently from a Christian Science friend is suggestive, and as quoted in part may be helpful to many. The writer, who is spending the summer in the country, says, "The first two or three weeks I was here, I kept thinking how the pure air, as well as the food and the sunshine, would benefit me. Influenced by this thought, the study of Christian Science was neglected; I deemed that it would be more beneficial to keep out in the open air."

The writer adds, however, that a higher sense brought conviction of the error hiding behind these suggestions. She says, "Now I realize that my home is in Mind, that I derive all my benefits from Mind, and that all these summer beauties are, when rightly understood, manifestations of Mind. If my thought is not in a right condition I am not prepared to see and enjoy my blessings, so first and foremost is Mind."

"What seek ye" in nature's fair realm, far from the noise of the city? If it is health and happiness, you may wait for them as long as did the helpless man at the pool of Bethesda, for both observation and experience witness to the continual disappointment suffered by those who seek help from a material source. To-day many disheartened ones, however, are hearing the voice of Truth, as of old, saying, "Wilt thou be made whole?" Many have responded to that call of Love and been healed, made heart-whole and free, and to other sufferers their lives are speaking even more eloquently than their words, the gratitude they feel.

When these leave their homes for a holiday, be it long or short, they carry with them that which really gives rest, for they surely know that else they will fail to find it. "Come unto me, all ye that labor and are heavy-laden, and I will give you rest." In responding to this loving call we leave behind us all sense of weariness, for in Christian Science there are no opposites; negation, weariness, has given place to reality, strength.

When Christ, Truth, goes with us, our eyes are not closed to the beauties of nature; on the contrary, we begin to reach the heart of things, and their spiritual ministry is enlarged with our understanding. The lesson of the lilies is new each day, "how they grow!" free from toil and anxiety, nourished and arrayed in beauty by our heavenly Father. The queenly rose reflects the smile of God (Science and Health, p. 175), and in the woods we may recall the old Prophet's words, "As the days of a tree are the days of my people, and mine elect shall long enjoy the work of their hands."

Mrs. Eddy says, "nature's haunts were the Messiah's University" (Retrospection and Introspection, p. 115), and they will become the same to us, though "the youths faint and be weary," if we but remember the promise, "they that wait upon the Lord shall renew their strength;" they "shall mount up with wings as eagles;" they "shall run, and not be weary;" and they "shall walk, and not faint." K.

## Letters to our Leader.

St. Joseph, Mo., July 23, 1903.

Rev. Mary Baker G. Eddy, Concord, N. H.

*Dear Leader:*—The benefit derived from attending the meetings in Boston, our visit to Concord, and meditation over it all since our return home, have been a great unfoldment to us. A new era has been begun and we cannot be thankful enough for such a beautiful demonstration; for it has not only overthrown much opposition, but much careless and indifferent thought has been corrected, and many that were doubtful have been enabled to see that Christian Science is indeed the Christ-truth.

The value of your address of welcome at Concord, preceded by "Significant Questions," and your address at the laying of the corner-stone there, cannot be over-estimated.

I cannot be thankful enough for the new Concordance. Its price is above rubies.

Your saying that "Most men and women talk well and a few practise what they say," is a timely and loving rebuke.

Your loving student,

CHARLES M. HOWE.

Chicago, July 27, 1903.

Rev. Mary Baker G. Eddy.

*My Dear Teacher and Leader:*—It was not my privilege to attend the Communion services this year in Boston, but it has been a great privilege, as manager of the Central Christian Science Reading Room of Chicago, to welcome many of the dear people on their way home from that blessed occasion.

We know it would have been a joy to you to have taken each by the hand as we did and to have heard their words of gratitude for all they had experienced during Communion week. They seem to have been enriched with a spiritual blessing, an exalted sense of holiness which could not be put into words. This reflected blessing has touched us, and we, too, are grateful.

Most lovingly your student,

MARY A. PACKARD.

Boston, Mass., July 30, 1903.

*Beloved Mother:*—For so my heart calls you, in the secret place of enduring love. I am here in Boston awaiting the arrival to-morrow of daughter from Scotland, I hope. With her little party is Mr. Wilson, who at one time went to Edinburgh to consult a great specialist. While there he called on Mrs. Cochrane to inquire a little of Christian Science. What he heard so convinced him of the Truth that he never returned to his doctor and is now a member of the Mother Church. He is one of many cultured and intelligent people in Great Britain who not only feel the convincing force of the words, but who realize that a consistent, practical Christian life is an object-lesson which proves the truth of the word.

We have learned to love you enough to try to take our own steps, finding even our experiences to be angels entertained unawares, and we are strengthened and go on with sweeter, better results than ever.

We are to remain in Boston over Sunday, and expect then to go to our summer home in Saratoga Springs. They would gladly go to Concord, but I know you do not always encourage too much thought of this. Our thoughts of love are with you,—of love, yes; and more. Reverence is mingled with love at the thought of how you have stood firm against every known assault of evil.

Your example in this is our model.

Your ever loving Student,

EFFIE ANDREWS.

## Selected Article.

### As to Matter.

THERE is no proposition, I suppose, upon which philosophers of all ages are more agreed, than the separation of every created object into its reality and its apparent reality. This essential reality of a thing—say, a tree, a flower, an animal, a man—is called its noumenon to distinguish it from the thing's appearance of reality, which is called its phenomenon. It is evident, that the phenomenon or apparent reality of a thing is to us nothing more or less than our human concept of what the reality of the thing is, it is but a representation in consciousness of what we conceive the thing to be.

Suppose some master artist should exhibit one of his grand paintings to the view of the general public. No two of all the beholders would see the picture alike; that is, no two would see the same picture. To the apprehension of many the picture would mean no more than an agreeable exhibition of deft mechanism, or an ingenious combination and contrasting of colors, while others would catch, with more or less clearness, glimpses of the spiritual meaning, beauty, or reality, back of and beyond the mere question of mechanical execution, and yet, most likely, not one of all the beholders would rise to anything like a full appreciation of the picture's real spiritual beauty, or true reality, even as presented by the canvas, while to the artist alone is reserved the privilege of beholding in his own mind a picture of such transcendent spiritual beauty and reality of perfection as to elude his every effort to give it concrete expression. This picture in the artist's mind which transcends all expression in material form, may be said to be the picture's true reality, or noumenon; the picture suggested by the canvas representations is its phenomenon,—in so far, at least, as the suggested picture is a true likeness of the picture in the artist's mind; while the picture actually present in the consciousness of each beholder may be a very inadequate, inferior, or even grossly distorted percept of the picture really suggested or presented by the canvas. In any event, the canvas representation does not contain or embody the picture, it is but the occasion, the suggestion, sign, or symbol, for the appearance of a picture in consciousness; but the picture, both in its noumenon and phenomenon, both in reality and appearance, dwells, and must ever continue to dwell, in mind only.

So, with the vast and exquisitely wrought panorama which Creation presents to our view, and since we cannot form an adequate conception of the works of a human artist, shall we not realize that, in proportion, our poor human and material concept of God's works must be scarcely more than a wretched travesty of those works which, nevertheless, continue to exist, in all their changeless and eternal reality of spiritual beauty and perfection, in the One Mind which so conceived them "in the beginning"? And is it any wonder that Professor Ladd of Yale, should endorse the conclusion of the great Christian philosopher of Germany, as he does on page 349 in his "Physiological Psychology," in the following terms:—

"The remark of Lotze is not unjustifiable when he affirms, 'The whole of our apprehension of the world by the senses is one great and prolonged deception.'"

Now this is just what Christian Science maintains; viz., that our apprehension of things through the five senses of hearing, seeing, touching, smelling, tasting, "is one great and prolonged deception;" that while things so perceived appear to be physical or material, they are in reality spiritual. For the only evidence we have of the existence of matter in any form is afforded by these senses, and if the only universe to which they testify is a deception, it is clear that we are without evidence of the existence of any material universe, and to affirm the existence of one is, therefore, absurd.

"After all," says Mr. Huxley, "what do we know of this terrible matter except as the name for the unknown, hypothetical cause of states of our own consciousness?" "Matter, then," says Mr. Spencer, "in its ultimate nature, is as absolutely incomprehensible as space and time. Frame what suppositions we may, we find on tracing out their implications that they leave us nothing but a choice between opposite absurdities." Grant Allen, in an article on the late Professor Tyndal, writes, "The charge of materialism could only be brought against such a man by those abject materialists who have never had a glimpse of the profounder fact that the universe as known to us consists wholly of Mind, and that matter is a doubtful and uncertain inference of the human intelligence." And yet, how common it is to hear otherwise well-informed people, we should think, ridiculing Christian Science for its position, there is no matter; "All is infinite Mind and its infinite manifestation" (Science and Health, p. 468).

L. H. JONES.

In *Winchester* (Ky.) *Herald.*

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

I see in all directions the light breaking. Trade and government will not alone be the favored aims of mankind, but every useful, every elegant art, every exercise of imagination, the height of reason, the noblest affection, the purest religion, will find their home in our institutions, and write our laws for the benefit of men.—EMERSON.

## The Mother Church Building Fund.

The following reports of contributions have been made impersonal as in the past.—Ed.

At a regular meeting of the teachers of our Sunday School, a suggestion was made to devise some plan by which the children could give systematically to the Building Fund of the Mother Church. All the children were delighted and thought it a privilege.

It was suggested to the scholars that they look up the meaning of the word Church in Science and Health (page 583), and build in their own thought first, then they would be sure of true building.

It is Love that builds, and in "Miscellaneous Writings" we read (page 117), "Love is the Principle of unity," and again on page 264, "Unity is the essential nature of Christian Science. Its principle is One, and to demonstrate the divine One, demands oneness of thought and action."

This has aroused such unity of earnest desire and action on the part of the children in this field that we send this to the *Sentinel*, thinking that perhaps it may help others to make a similar demonstration.

---

He who "spake as never man spake" said, "Whosoever shall not receive the kingdom of God as a little child shall in no wise enter therein."

It would often seem that the simple, trusting faith and earnestness of the little child might well be a guide to us.

The first contribution to be sent from our church to the Building Fund of the Mother Church, as well as the first to be pledged, is from our Sunday School.

The children voted to raise the sum of fifty dollars for that purpose, and it is with pleasure that we to-day send that amount. Our Sunday School gives evidence of a very prosperous condition, both in interest and attendance. The children, as well as the older ones, are learning that only through obedience and unselfishness can they prove that God, good, is able and will take care of His little ones.

---

It was just about the time of the dedication of the Mother Church in Boston, that I began to realize what Christian Science meant to the world. As the wonder and grandeur of it, and the great possibility and achievement for man, dawned upon me more and more, I felt a keen sense of regret that I had not awakened sooner, at least soon enough to be among the chosen ones who had helped build the Mother Church.

When the word came that all could now join in erecting a new building for the Mother Church, I felt humbly grateful for the privilege, and the lines from one of the Psalms passed through my thought: "No good thing will He withhold from them that walk uprightly."

---

At the last business meeting of our Society (numbering sixteen members), we voted to contribute the first collection of each month from June 1 to January 1, 1904, to the Mother Church Building Fund. We are much gratified to find the first collection so devoted to be one of the largest we have ever taken up.

---

We have called a meeting and decided to send the remainder of the one hundred dollars we subscribed by September 1st. We subscribed one hundred dollars or over, and feel sure we shall give more, but it was decided to pay the one hundred dollars by the first of September.

---

### Correction.

We learn that an error for which we are responsible was expressed in the testimony signed C. S. in our issue of June 13. The writer's trouble which was removed by Christian Science treatment was not "inflammation and paralysis," but a nervous disorder which had resulted from these afflictions.

## Testimonies of Healing.

It is five years now since I turned to Christian Science for help, for I was a sufferer. I had stomach trouble, insomnia, inflamed and weak eyes, yet I was completely healed in two treatments. I had never been satisfied in my church, but the something I felt to be lacking I found in Science and Health by Mrs. Eddy. How thankful I am to God for the light she has thrown on the Scriptures. I have had many beautiful demonstrations of God's loving care in the last five years, and cannot praise Him enough. When I let divine Love govern, all is well.

Mrs. E. Wagner, Hammond, Wis.

---

I can no longer withhold my testimony to the benefits received through Christian Science.

When I took up the study of Science I knew it was that for which I had been longing for many years. I have had many demonstrations of the power of Truth over error in cases of disease, accident, fear, etc., and words fail to express the joy and peace which a study of Science and Health has brought to me. It is indeed a "Key to the Scriptures."

My earnest prayer is that I may live the truth which our dear Leader has been so faithful in proclaiming to a sinful and suffering world.—Mrs. Ella H. Smith, Jamaica, Ia.

---

In the fall of 1898 my sister handed me Science and Health to read. I was at the time afflicted with rheumatism, and was otherwise broken down, having served three years in the Civil War, and I had just lost a son eighteen years old when I commenced reading Science and Health. I had studied the Bible very faithfully for two or three years, but it never satisfied my longings, for I seemed to hunger and thirst for a better understanding of the truth.

Christian Science satisfies me, for it has healed me, and I am just as happy as I could wish to be. I have attended a good many churches, but find more help in Christian Science than in anything else, for it heals the sick and harmonizes thought as nothing else can.

I am very grateful for this discovery which has come through Mrs. Eddy, and hope she realizes how much we appreciate her faithful work.—A. D. K., Mohall, N. D.

---

It would be unworthy for me to longer withhold my expression of gratitude for what Christian Science has done for me.

When I first turned to Christian Science, one year ago last April, I was in the depths of mental darkness, and I do not like to think what might have happened if God had not rescued me in my extremity.

I am thankful that I have at last learned through the teachings of Christian Science that He is not a God "afar off" and full of anger, but that He is omnipotent, omniscient, and omnipresent Love.

Formerly, I read the Bible occasionally as a duty, but without much profit or pleasure, as it all seemed a mass of contradictions; but now the Bible and Science and Health are read and studied every day with the help of the *Quarterly*, which is invaluable. I would like to thank all who contribute to the *Sentinel* for the great help I have received from this source.

That Christian Science is a religion of Love has been often proved to me; but in no way more strongly than in the loving patience and self-sacrifice of the kind practitioner through whom I have learned of this glorious truth. I feel that the only true gratitude I can show to God, to our Leader, Mrs. Eddy, and to all those who have helped me in the truth, is to strive to live the life that Christian Science demands.—Mrs. J. C. Munn, Milwaukee, Wis.

Digitized by Google

I came alone to Denver two years ago, having my own way to make in the world. My health was poor, and I had no business qualifications whatever. Gradually my health quite gave out, owing to a periodical trouble from which I suffered intense pain with convulsions.

Many times I wished I might pass away. I spent nearly all my earnings on medicine. Finally the physician said I would soon be in the insane asylum if relief did not come to me. I was told that there was imperfect development of some organs, and injury caused by a severe fall or heavy lifting.

I went to a Christian Science practitioner and she gave me treatments. The pain has lessened and I have improved until now I can work and be on my feet all day without feeling any bad effects. Now I am happy and cheerful and I have pleasant and steady employment, whereas I used to worry, cry, and have the blues all the time.

I have lately received class instruction in Christian Science which has been a great help to me, and now I demonstrate for myself and others very successfully. I feel greatly indebted to Mrs. Eddy and to the one who helped me. Christian Science is a beautiful work.

DOLLY NEWELL, Denver, Col.

---

I feel that I would be very ungrateful if I hesitated longer to acknowledge what Christian Science has done for me and mine.

It was in January, 1901, that I accepted this wonderful truth. Not through any physical healing, but through the healing of one of the liquor habit of over fifteen years' standing.

All hope was gone that it would ever be different, as it seemed, no matter how much he tried to give it up, the devil had control. But, thanks be to God, Christian Science was brought to our relief and the trouble was overcome in one treatment. What appealed to me most was this, that the treatment was given while the patient was under the influence of liquor, and four hours after the practitioner had left, he said, "I have taken my last drink," and it has been the last.

I did not ask for more proof, but at once accepted what had been done, with a great desire to know more, and have been earnestly working to understand how to pray aright. I had often prayed and asked for help, but my prayers were not answered, when here was one who offered up but one prayer and the answer came at once.

I wanted to know the difference between her prayers and mine. I felt that the only way to know was to investigate, which I have done, and must say I now understand somewhat the difference. We got our dear Leader's book, "Science and Health with Key to the Scriptures," and after reading it in connection with the Bible for one week, I destroyed the stock of medicine I had on hand, also two medical books that cost me three times what Science and Health did. From that day to this we have not taken a drop of medicine.

I am also most thankful for the spiritual uplifting I have had, and am trying each day to understand more of God and His love. No words can express the love and gratitude that goes out from our hearts, first to God for revealing this wonderful truth to our dear Leader, then to her for her unselfish labor of love in giving it to this sin-sick world, and also to the dear one who first brought the light to our home. May this light grow stronger and stronger until its rays destroy every cloud of error, and heaven is found on earth, is my most earnest prayer.

MRS. IDA M. FLEINER, Salt Lake City, Utah.

---

Many years ago in my brother's home I endeavored to help with the care of the children, and to control myself and them through human love and firmness. I persevered long after making repeated failures, because I knew no better way. The love and firmness with which I was successful at first (as it seemed), and for which I gave God little or no glory, I at last discovered to be wrong. Becoming more honest and truly seeking the reason for my failures, I at last looked my boasted love and firmness squarely in the face and saw that it was pride, self-love, self-will, even selfishness, for the so-called love did not extend beyond my immediate relatives.

At length, seeing the best I knew to be all wrong, and not knowing of anything higher, I decided I had no right to attempt the care of children until I could control myself better. I gave it up entirely and became discouraged and morbid over it. This caused ills unnumbered, physical and mental, until Christian Science gradually freed me more or less and gave me some understanding of love and firmness based on Principle and as attributes of God. In contrast with these failures in the past, I am grateful to be able to give an experience of a later date.

A mother whose child of four years had made a slave of her, and who had asked help for herself and child, feared the child would not be willing to be away from her even a few hours with one she had not seen before. When told that her mother was going to another part of the house leaving her with me, she did as was her habit, threw herself upon the floor and screamed, but when she saw that I calmly sat still and read a little book she stopped short and looked at me in wonder that I did not try to pacify her with toys. Then she began again, louder than ever, to compel me to do so, and not moving me after three attempts she at length quietly arose and coming to my side gently asked if I would read to her. The above was repeated three different times in as many days, but was of shorter duration each time.

A day or two later her mother was taken ill and confined to her room for several days, and I explained to the child how she could help every one in the house by playing happily in her nursery and waiting for her mamma to ask to see her. This she did so beautifully that I can never express in words the joy that the child was to me that week, so happy and free, because obedient and helpful.

At the end of that time a relative who had been away for three weeks said to me, "What a beautiful change in the child's thought! She asked you so sweetly if she could go home with me, when it has always been, I want to go and I *am* going!" That same day she said to me with beaming face, "Not unrest, but only jes' rest,—that is what you told me." Then I remembered an audible statement of truth that had been put into my mouth many days before when restlessness was torturing her: "But tell me the *rest* of it," I said. She looked steadily into my eyes for a few seconds, and I have the recollection of the sweetest sense of the brotherhood of man and man's oneness as God's reflection, as she said, "Not unrest, but only rest God gives all His little children. And He gives it to you, too?" "Yes," I said, "we big children are learning about it also."

The child's mother said to me, "You take the care of children so quietly and easily; I feel the good influence of your thought. When I leave them with you they are more restful when I return."

This record of the difference between the past without Christian Science and the present with some understanding of it speaks for itself and is my expression of gratitude to God and to Mrs. Eddy.

We are taught in Science and Health that "Desire is prayer." I desired to be conscious of the truth of the child's being, striving to keep my nets "cast on the right side," and did not look for signs other than this consciousness, and when the outward manifestation of the inward change of thought was noticed and spoken of, all of similar experience in this work know the benediction and joy that followed.

It causes one to wonder that there can ever seem to be a cross in this endeavor to keep motives and life growing nearer reality.—MARY M. DUNN, Boston, Mass.

I came to Christian Science about three years ago and have since received so many blessings through it that words cannot express my gratitude to all who have been instrumental in bringing me to a point where I could understand this truth, and especially to Mrs. Eddy for making it possible for us to have all these blessings.

When I came to Christian Science for help I came reluctantly; and having spent a large amount of money for drugs and for doctors' bills, I was beginning to think that all methods of cure were nothing else than schemes to make money. I was a physical and mental wreck. A prominent doctor in my city finally told me that nothing but a change of climate would do me good, and that I must go to the mountains at once. I at first decided to go, but when thinking of leaving my friends, father, mother, brother, and sister, and also my position, which was a good one, I listened to the advice of a friend, and, thanks to her, I gave Christian Science a trial. Suffice it to say I was healed of consumption and many other ailments, but not in a day or a week. It took time, and I am still working. Great peace came almost with the first treatment and I have learned some great lessons by trying to get close to God and see Him as He is.

I can truly see what a difference there is between present conditions in our home, and what would have been without Christian Science, for the little troubles that arise are now speedily overcome. In business Christian Science is a great help. My work now is much easier than it was before, and I am indeed grateful.

GEORGE KUEMMERLEIN, JR., Milwaukee, Wis.

---

Christian Science was brought to my notice about six years ago by the evidence of immediate relief it gave to my sister, whose condition neither medicine nor climate had relieved.

After her experience of the healing power of Christian Science I immediately discarded all material remedies, whose efficacy I had long doubted though I was a constant slave to them, hoping some time to find the right remedy.

Having always seemed delicate, and growing worse with years, I was greatly discouraged. I was especially troubled with almost constant headache, stomach trouble, and extreme nervousness, manifesting itself especially in fainting spells and hysteria. I also had other troubles and my relief from all was immediate.

With great joy I took off my glasses, which a prominent oculist had said I would always need to wear. Then I began to feel free indeed.

Being satisfied with my orthodox religion, my entrance into the Christian Science church was only at the last Communion. Then, with kindest of thoughts and gratitude toward my former church for its help, I gladly entered into the latter, feeling that in this way only could I realize the full benefit of my advancing knowledge of Truth.

I have found Christian Science an ever-present help and an effectual remedy, especially with my little girl, whose three years have been made happier by the atmosphere of love into which she was born.

Recently an added blessing has come to me in class instruction. I am hourly grateful for Christian Science and to those who have lovingly and patiently helped me to understand and prove its truth.

BERTHA KELLER WATERMAN, Chicago, Ill.

---

It is with thankfulness for this great truth, as set forth by Mrs. Eddy in Science and Health, that I write of my healing.

Early in April, 1902, while walking on the street, I was suddenly taken with a severe pain in my left side. I walked home with difficulty, the pain clinging to me night and day.

I did not call a doctor at once, thinking it would pass away, as I called myself a well woman.

As time passed and I seemed no better, I of course saw a doctor, and he said I must have an operation, as I had a growth. I made up my mind then and there that no operation should be performed on me.

One day as I was sitting in my misery a lady came in who had read Science and Health, and understood something of the healing. She encouraged my trying Christian Science, and I was ready to do anything rather than undergo an operation, and told her so.

The lady then said, "I will help you as best I know; I am not a practitioner, but if you will read Science and Health, I will give you good thoughts, as I know them; and remember, if you falter once I give you up immediately." She has been faithful, and when I tell you that I am a well woman to-day you may know I have not faltered or turned back once.

I say this to encourage all who are in physical trouble to go at once to this scientific method of healing, and by clinging to it, regardless of the seeming, you certainly will conquer as so many others have.

MRS. IDA MILLER, Brattleboro, Vt.

---

It was not as a last resort, or because I had been a great sufferer that I turned to Christian Science.

Something over three years ago, while suffering from a very severe cold, one of the kind that held me in its grasp most of the time, I was spending the day with a friend who had been wonderfully healed through Christian Science. She urged me to try it, but I was very indifferent, and although I drew each breath with greater difficulty and had never been able to get any relief from *materia medica,* it was with reluctance that I finally consented to go to the nearest practitioner the next day if I were no better.

The next day, Sunday, I went in search of the practitioner, but she was just starting for church and made an appointment with me for the day following. Some years before a similar cold had resulted in a very severe case of erysipelas and many weeks of suffering and anxiety. The members of my family had been in great fear of another attack ever since.

On Monday afternoon at the time appointed for the first treatment, erysipelas had begun to manifest itself, with all the old, ugly conditions. For about two days I seemed to be getting very much worse, and as my life had been almost despaired of on the previous occasion every one was impatient because I would cling to Christian Science, when I knew absolutely nothing about it, and it was doing me more harm than good, as they thought.

Divine Love surely was guiding me, for I did not waver, though everything certainly did indicate that I was receiving no help. However, in two more days, although it was January and very cold, I was out and *well.*

I had long been drifting about, unsatisfied with what the churches had to offer, although I had taken an active part in their work.

Christian Science, as I read and thought about it, answered the questions and brought the peace for which I had been searching.

Every day brings fresh assurance of the power of Truth, and it is my privilege to see the various members of the family turning toward it.

I am very grateful to Mrs. Eddy for all that has been made possible to me through her untiring efforts. I am especially grateful to her and to my teacher for my understanding of Christian Science, which, as I work up step by step, has enabled me to help others to a better realization of harmony.—Life, Truth, and Love.

GRACE DIETRICH GROESBECK, Chicago, Ill.

Digitized by Google

For thirteen years I never knew what it was to have a well day. I would be laid up for three or four months at a time, and then get about in a feeble way, always fearing I should break down again. In October, 1900, I had a complete collapse, which the physicians called nervous prostration. They did everything they could, but I grew so much worse that I was finally sent to a sanitarium in Boston to try the rest cure. I was there five months and returned home a very little better, just able to dress myself and go to the table to meals, but quite unfit for any occupation or amusement, and always having a feeling of great weakness and fear.

Three months later I became very ill again, and was sent back to the sanitarium, but was so much worse that the doctors had a consultation, and the decision was that an operation was imperative. It was performed by a very skilful surgeon, but my previous illness seemed nothing to what I endured afterward.

Everything that love and care could do was done, but of no avail. I had known of Christian Science for quite a long while, and finally asked my husband if he would be willing for me to try it. His answer was, "Try anything." That same day a practitioner was sent for. She came to me on Thursday, the twenty-eighth of August. The following Sunday I took my dinner with the family and walked about two hundred yards. The following Friday I took a car and went to the office of the lady who was treating me (the distance was about fourteen miles there and back), and from that time my improvement was rapid, so that by Christmas I was well.

I have gained thirty-eight pounds in weight since last September and my friends never cease commenting on my improved appearance. I have had some hard places to get over, but have always been lovingly sustained by my dear helper and friend, so that now I am getting able to help myself.

I am so grateful to God and so thankful to dear Mrs. Eddy for this wonderful physical healing and spiritual uplift that I long to say to all the sick and sorrowful, O, taste and see how gracious the Lord is! and to tell them of the "little book" and its wonderful message.

KATE M. DRURY, Cleveland, O.

### Notice.

Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

OUR LEADER'S MESSAGE.—The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

COMMUNION MESSAGE, JUNE, 1902.—The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid.

CHURCH MANUAL.—Containing all the By-Laws of the Mother Church to date, August 1, 1903. Also list of members, including those admitted June, 1903. Price, single copy, prepaid, $1.50; six copies to one address, $7.00; twelve copies to one address, $12.00. Address all orders to

Joseph Armstrong, 95 Falmouth Street, Boston, Mass.

DER CHRISTIAN SCIENCE HEROLD.—A monthly magazine printed in the German language, containing about thirty-eight pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

REMITTANCES.—Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to William B. Johnson, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to Stephen A. Chase, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

We are all seeking something that shall make Church life more potent and the Christian religion more effective in the world. In behalf of this we hold conventions, initiate forward movements, and plan fresh campaigns. But in many minds the conviction is growing that what we need is not an expedient but a dynamic, and observant men on the watch-towers of Zion are beginning to point out this need in language that must compel attention.

The progress of Christianity in the apostolic days, its advance among non-Christian nations, can be understood only as we realize how much their faith meant to the apostles and missionaries personally. Because it made them pure and happy and hopeful they were able to spread the contagion of that kind of living wherever they went.

So it will always be. If we have little power to attract men into the Christian life, it is because we do not convince our friends and our neighbors that we have richer resources, firmer hopes, and more enduring comfort than they possess. Once let the world about us see that our belief in Jesus Christ makes us strong to do and patient to suffer the will of God, and into that part of the world which we touch daily will come little by little a desire and an asking for the sources of our peace and our strength. To win our associates to Christ, then, we shall not have to join any special society or adopt any particular methods, but the life that is in us will bring to birth in them its prototype.

We have been passing through a period of severe criticism and reconstruction. We have not emerged from it yet and shall not for many a year, perhaps. But Christian preachers ought never to put the emphasis on the modifications of faith but on its substance. We are not to spend our entire life in verifying our beliefs, not even in clarifying and broadening them.

After all, is there in these advanced days such a tremendous overturning of cherished beliefs? Are the being of God, the fact of Christ, the reality of the moral struggle, the peace and the victory which come to those who persevere in discipleship and service any less certain to our thought and vision than they were to our fathers? We do not believe it. All the preacher needs to do is to grasp and set forth the things that have not been and cannot be shaken. All the humble, every-day Christian needs to do is to renew and strengthen his faith in the Lord Jesus Christ, in his message and his mission. To such a believer all things are as possible in the twentieth as in the first century. He can himself go in the strength and joy of his Lord day by day. He can communicate, perhaps through his lips, certainly through his life, to his neighbor the secret of gladsome and triumphant living. That is how the revival may come.

*The Congregationalist and Christian World.*

The Rev. Charles T. Billings writes in *The Christian Register*:—

"In the Church of Christ there can be no such separation between a man's worship and his daily life. There is no room for double standards, no room for hypocrisy. The world is waiting for the revealing of the sons of God; and, if the spirit of God is in the Church, the sons of God must be there, too. . . . We know that love and sympathy do exist, and that the spirit of brotherhood is slowly seeking larger and truer expressions; and yet the spirit of God is not so common but what we have learned to prize it. We love all that reminds us of God,—the honor, the courage, the kindliness of our day and generation.

"It is ours to make religion within and without the Church more of a reality; and, unless it has reality for us, how can it have reality for others? Unless we are led by the spirit of God, how can we reveal ourselves as sons of God? The same demand Paul made of the church of Rome he seems to make of us. What was to give the law a deeper reality and a permanent power? The spirit of God that was behind it. What was to make the Gentiles appreciate the true scope of their liberty in their freedom from the law? It is the spirit of God, unseen, but eternal. And what is to give reality to our religion and power to our Church? It is the spirit of God manifested in our lives. When men find that we are led by the spirit of God, then they will see we are children of God. Religion will be real to them, because in their deep need, they see it is real to us.

"To make religion real to men, that is our highest privilege. That is what Christ did. He is a son of God because he was led by the spirit of God. . . . The world to-day is waiting for the revealing of the sons of God,—waiting as it waited in Paul's time. It feels often beneath strange misconception, the beauty and power of the Bible, Christ, and the noble men and women of the past; but it asks that we confirm its own belief by being ourselves led by the spirit of God, by being sons of God and joint heirs with the Christ himself. The earnest expectation of the creation waiteth for the revealing of the sons of God.' May the world find the sons of God revealed in us."

Rev. Granger W. Smith says in *The Standard*:—

"Some one has strikingly and truthfully said: 'If there were more religion in the pews, more pews would be needed to accommodate those who now stay away from church.' Too often the preacher proclaims the truth from the pulpit, and the people in the pews give the lie to his words. Your preaching for six week-days may utterly counteract all the good of what the pastor can say on Sunday. Take heed as to thine example.

"Take heed as to thy secret life. This is all important. This determines all the rest. Remember that for every inch of an iceberg above the sea there is a foot beneath the surface. For every part of thy life which others behold there is a measureless portion known only to thyself and to thy God. Take heed as to this hidden portion of thy life. Little things may start influences for weal or woe of infinite duration and extent. Take heed as to the little springs from which goes forth the stream whose sweet waters shall refresh and bless the world, or whose bitter waters will disappoint the hopes of the weary and perishing, and curse the world with its death-dealing poison."

It would doubtless be thought irreverent to speak of Jesus as a common man. If we change the article from indefinite to definite and recall Christ's favorite appellation for himself, "The Son of Man," we may reverently and gratefully speak of him as the COMMON MAN, that is, the universal man, the man who combines in himself all the essential qualities and characteristics of all the sons of men that ever have been or ever shall be on the earth: for that is just what his favorite appellation means. As Dr. Boardman, in his wonderful little book, "The Problem of Jesus," finely says: "The Son of Man illustrates in himself all essential human capacities,—reason, imagination, conscience, courage, patience, faith, hope, love; blending in his own pure whiteness all colors of all manly virtues, all hues of all womanly graces; as though he himself were eternal,—God's own infinite, ever-blessed sunlight. Jesus is the universal man, combining in himself all races, ages, capacities, temperaments, types. Towering above all mankind, yet penetrating all mankind, Jesus is mankind's one mighty archetypal, antitypal, consummate Man; the symbol of perfected human nature; the Alpha and Omega of unfolded, full-filled humanity." Sanctified eloquence can hardly surpass that loving eulogy.—*The Examiner.*

"Christian influence moves along the channels of ordinary human relationships and contacts. Exhortation and preaching are like the sword edge, but a sword must be something more than a sharp wire: it must have a solid blade to give it backing. A Christian man is effective largely in proportion to the extent that his religious convictions are backed up by his qualities as a man. The more man the more Christian.

The first name ever given to the religion of Jesus was "the Way." There is a large significance in that title. Christianity is primarily a mode of life. It is always an adjective qualification of life. It is not an end in itself, but the power to produce a certain type of human life."—*The Watchman.*

What you say may not have as much influence upon your friend as what you are. The personal interest and desire you manifest by your conversation may have more to do with leading that person to Christ than the words you speak or the skill with which you explain away difficulties.

ORRIN B. BOOTH.

*The Universalist Leader* quotes one of its ministers as asking: "Are we not working at the wrong end? Are we not trying to exhort and persuade our people to do and to give and to be 'loyal' and all that when we should be trying to convert them thoroughly and soundly to the Gospel?"

We must keep our eyes on the stars, but we must also remember that our feet are on the ground.—THEODORE ROOSEVELT.

The end of life is to be like unto God; and the soul following God will be like unto Him.

SOCRATES.

Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

**Joseph Armstrong, 95 Falmouth Street, Boston, Mass.**

# Published by The Christian Science Publishing Society,

**95 Falmouth Street, Boston, Mass.**

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

## Items of Interest.

**National.**

Upon the occasion of his late retirement, Lieut.-Gen. Miles issued an address to the army which is most dignified and pertinent. It includes the following paragraph: "Since its organization the army has been charged with a great variety of responsibilities, all subordinate to defending the country and maintaining the rights of its citizens. . . . It is now brought into daily communication with millions of people to whom its individual members are the exponents of American civilization. A serious duty and a great honor are now presented to every officer and soldier; namely, to exemplify to those with whom he comes in contact our country's principles of equal and exact justice, immunity from violence, equality before the law, and the peaceful use and possession of his own."

The pacification of the natives in the Philippines goes on with an occasional reverse and not a little evidence that only the patient and long-continued effort to educate them and better their condition is likely to eliminate the bitterness which war and its harsh measures have engendered. Captain Pershing, who has had to do especially with the Moros, reports that "There will be no more uprisings among them. Their general condition is far better than the people of this country realize. I think that within ten years they will be our most enthusiastic supporters. There has been an improvement in the industrial and sanitary conditions of the island in keeping with the improvement in the civil government."

The hundredth anniversary of the birth of John Ericsson was recently celebrated in New York by the unveiling of a statue. The statue is the work of John Scott Hartley. A national salute of twenty-one guns was fired by the United States gunboat Dolphin, and a folk-song from the birthplace of Ericsson was played by a Swedish band. Mayor Low of New York, in his address of acceptance, paid a high tribute to the genius of the great engineer, whose statue stands in Battery Park, overlooking the waters of the harbor. Forty-two Swedish-American societies celebrated the unveiling of the statue.

In the thirty-two years, 1870—1901, the exports of the United States increased 288 per cent. In 1871 she was fourth in the list of exporting countries, being surpassed by France, England, and Germany in the order named. The United States now leads all other countries in the amount of exports. In 1901 Great Britain, France, and Germany bought more than they sold to the amount of $1,153,000. We sold more than we bought to the amount of $637,000,000. Of all the great commercial nations, we alone had a "balance of trade" in our favor.

The Department of Education is pushing the work of lifting Porto Rico from illiteracy with great vigor. Nearly twelve hundred schools have been opened in the island, with 1,225 teachers, of whom one hundred and fifty are Americans. In the normal school for the training of teachers over one hundred Porto Rican young women and men are pursuing the regular course of study. Nearly every school now open in the island has a long waiting list of pupils who are ready to crowd in when a vacancy occurs or when a new school is opened in the district.

Second Assistant Secretary Pierce of the State Department has started on a tour of the Continent, visiting the principal consular offices in our service abroad. It is understood that Mr. Pierce will make a thorough study of the conditions at the different consulates, with a view to preparing an exhaustive report to the secretary of state upon his return to this country in the fall.

Having achieved great favor as a sculptor, Mr. Frederick MacMonnies, who designed the celebrated fountain at the Chicago World's Fair, has transferred his allegiance to the sister art and is devoting himself to painting, in which he is already commanding attention.

President Roosevelt's earnest and vigorous letter to Governor Durbin on the cause and cure of lynching, has awakened very general comment, and its frank suggestions seem to have received no less general approval.

A United States gunboat having on board a party of Cuban engineers has gone to Bahia Honda, where the work of delimiting the site for the United States coaling station at that point will begin.

**Foreign.**

A very remarkable movement is now on foot in connection with the Osaka exposition in Japan. More than a year ago it was decided that the different denominations represented in Japan, should unite in a series of continuous evangelistic meetings during the exposition held in Osaka, as multitudes would naturally visit the exposition from all over the country.

A hall capable of seating two hundred people was provided, each denomination taking charge of the services for two consecutive weeks. The meetings have been attended with great success, both as regards numbers and the interest shown.

The Canadian government is investigating the currents in that part of the Atlantic Ocean washing the south shore of Newfoundland between Cape Race and the French islands to ascertain the character and extent of the indraft which is reported to set into the larger bays in that vicinity. In recent years millions of dollars and many lives have been sacrificed in shipwrecks occasioned by lack of information regarding the trend of these treacherous currents.

The religious census of London, which is now completed, shows that the number recorded as having attended a place of worship on a given Sabbath was 1,002,940, giving a ratio of one in 4.45 population. It was estimated that 35 per cent went to church twice on Sunday, reducing the grand total attendance to 850,205, and the ratio of one in 4.45, to one in 5.25. The Christian Scientists attending public services on that day numbered 553.

King Edward's reception in Ireland has been even more enthusiastic than expected. The king and queen have expressed their gratification at the warmth of their welcome. "Their Majesties have been keenly delighted," Secretary Wyndham has reported to London.

A despatch from Rome, dated August 12, says Mount Vesuvius continues in active eruption. A new crater seems to have been opened, but it is impossible to ascertain the fact definitely, owing to smoke which surrounds the top of the mountain.

The island of Jamaica was visited by a hurricane Tuesday, August 12, causing great loss of life and property.

Consul-General Hughes at Coburg reports a new invention in the form of a new substance called "galalith," made from skimmed milk. It will be useful in the manufacture of buttons, combs, knife-handles, balls, rings, etc.

W. E. Corey, formerly assistant to Charles M. Schwab, has been elected president of the United States Steel Corporation.

**General.**

Professor Heilprin, who has recently returned to Philadelphia, after a two months' visit to Mount Pelee, on the island of Martinique, tells of a most wonderful phenomenon which shows results arising from present volcanic disturbances. He says that the scene surpasses all that he has ever witnessed in other volcanic mountains. The old summit of Mount Pelee, which was about four thousand feet high, is now surmounted by a new dome, over one thousand feet high. It is of solidified lava, which is steadily rising from the crater with irresistible force and it is rising higher all the time on account of the flowing lava which is hardening from the apex down to the base. Its entire aspect is one that is unique in the history of volcanoes.

The speed of electricity, as determined by Tizeau's experiment, is about 111,600 miles a second in copper wire, and 62,000 in iron wire. In trans-atlantic cables it is very much slower. The circuit of the globe was made by an experimental message sent by President Roosevelt in about ten minutes, but this of course does not represent the commercial speed, as official arrangements had been made by which this message had the right of way, and at every point of repetition the most expert operators were in waiting to pass it on. The journal *Le Temps* recently sent a despatch consisting of two words, without previous notice, which completed the circuit of the globe in about six hours. The charges altogether were $1.60 a word.

The use of the peanut as an article of food is becoming more and more general. A few years ago the Czar had his armies fed on a preparation made from the pindar, or ground pea, at once wholesome and palatable, with economy as an additional point of merit, and to-day the Kaiser's army is served regularly with bread and porridge made largely from the peanut.

President Barnard of Yerkes Observatory has discovered a large white spot on the body of the planet Saturn, which gives promise of aiding materially the determination of its time of rotation. Calculations based on the measured movement of the spot gives the period as 10h. and 30m., which is twenty-five minutes longer than the period reached by previous calculations.

Boston automobile tourists intending to go through Norway were obliged to abandon that route to the Arctic circle, owing to the opposition of local authorities, who fear injury to horse-raising interests principally.

"What I say unto you, I say unto all, *WATCH.*" *Jesus.*

## From our Contributors.

### "Where is he that is born King of the Jews?"

WILLARD S. MATTOX.

It was a memorable night for the world, when three men presented themselves before the door of an inn at Bethlehem, asking the strange question, "Where is he that is born King of the Jews?" A strange question, indeed, and a strange place wherein to find a King. The amazement of the servant who answered the summons was not greater than the surprise of those other guests who, till then, were ignorant of the regal presence in their midst. "Where is he that is born King of the Jews?" Who could answer? Which of that motley throng crowding the courtyard and filling the small house, answered that description? Here were Jews from all parts of the world come to their native city to be taxed, by decree from Rome. Merchants, artisans, and tillers of the soil; obscure for the most part, unheralded, seeking accommodation in a modest public inn. The most imposing dignitary of the assembly could hardly claim royal birth or descent, and yet what meant that insistent query, "Where is he that is born King of the Jews?" The eager bustling of the crowd, the startled glances and tense faces, gave some token of the inward thrill that question awakened. Was this, then, the consummation of prophecy? Were the prayers and longings of years to be realized at last, and was quiet Bethlehem of Judæa to give to the expectant Jews their Saviour and King? The import of the question was too vast for that little company. The thoughts it awakened and the vista of freedom and conquest it opened were too big for instant comprehension. For generations, the devout worshipers of one God had prayed for deliverance, their prophets had foretold the advent of the Messiah, every earnest supplication, every secret longing and whispered prayer had centered on the coming of a king, and now, as if from heaven itself, came the question which implied the cherished hope fulfilled, "Where is he that is born King of the Jews?"

And what of the men who thus proclaimed Israel's deliverer? As they dismounted and made their way across the courtyard, curious eyes noted the peculiarities of dress and visage which marked them strangers to Judæa. Dignity sat upon the calm brow, majesty glanced from eyes made serene with patient waiting. Their age and bearing, as well as their rich apparel and the costly trapping of their camels, commanded deference. The stains of travel and the dust of the desert could not quite dim the splendor of this little cavalcade. Here were messengers worthy to herald a king. They have been called Wise Men, and so they were, but their wisdom must have been of God, for their traditional meeting in the desert, and their journey, now ended, was not effected by human means. No lengthy correspondence preceded that solitary and solemn junction. No occult power, no mystic force inaugurated a journey that was to have its glorious finish at the manger in Bethlehem.

What paths they traversed, what perils they overcame, none may know. The great fact remains,—they found the King they sought! Each, in his far-off country, with peculiarities of race, temperament, education, and religion, "beheld a great light," and, obedient to the revealed truth, pliant to the guidance of infinite intelligence, they pursued their several ways, until they met, and together continued their journey to seek him who was alike unknown to them all. It must have been a sublime faith which instituted such a search, ay, an unshaken and perfect confidence that he whom they sought could be found. The record says, "And, lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was. When they saw the star, they rejoiced with exceeding great joy. And when they were come into the house, they saw the young child with Mary his mother, and fell down, and worshiped him." Thus was the King found, and the good news announced to a listening world. Holy aspiration and earnest seeking had revealed the Saviour. To the idly curious, to the ignorant, the gross, or the material, there was nought of kingly majesty, nought of puissance or glory in the infant form lying in the manger, but Wisdom had disclosed to eyes that could see and had whispered to ears that could hear, the triumphant truth that Christ was born to earth.

Since that far-off night, many wise men have asked the same question. "Where is he that is born King of the Jews?" And who is a Jew? Paul breaks down all race and creed limitations when he says, "For he is not a Jew, which is one outwardly; neither is that circumcision, which is outward in the flesh: but he is a Jew, which is one inwardly; and circumcision is that of the heart, in the spirit, and not in the letter; whose praise is not of men, but of God." Years before that, Moses caught a glimpse of the same universal truth, for he said to the Israelities, "And the Lord thy God will circumcise thine heart, and the heart of thy seed, to love the Lord thy God with all thine heart, and with all thy soul, that thou mayest live." The King of the Jews is born to a spiritual kingdom, to rule all hearts, whether Jew or Gentile, bond or free, which are prepared to do him homage. No country claims this King, no race of people monopolize him, no human sect limits his reign, no boundaries of time confine his beneficent rule. He dominates all, throughout eternity; he is for all, and over all, for he is the Son of God, the only begotten of the Father, the Christ, the Saviour of mankind.

To-day, as ever, the wise man is advised to make the journey that shall end in the revelation of Truth, Christ, "The divine manifestation of God, which comes to the flesh, to destroy incarnate error" (Science and Health, p. 583). The initial suggestion to seek and find comes now, as then, from God. It is individual and universal. One hears, understands, obeys, and finds. Another misses the meaning and delays the search. To the pure and the good, to the waiting heart, in every country, in every phase of material belief, the star appears, and leads to where the young child is. The individual undertakes the journey, and on his way he meets other seekers, led by the same inspiration, and together they pursue their way.

Christian Science is a revelation of the ever-present Christ, the healer and redeemer of the world. From out the gloom of human misery, from the far-off countries of despair and sickness, sorrow and sin, come weary mortals,

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

moved by nothing less than divine impulsion, and on the way they ask many times, "Where is he that is born King of the Jews?" From the ends of the earth they are coming, each treading alone his own way. Others they meet, asking the same question, tired of self, weary of pain and sin, and together they go on. At the threshold of Christian Science, they find the new-born Christ-idea which is to redeem them. When the Christ-child is discovered, when at last the star of hope leads us to our Bethlehem, then, indeed, we "rejoice with exceeding great joy," for unto us "is born this day in the city of David a Saviour, which is Christ the Lord."

## Order in our Church.

BARBARA C. ROE.

In Science and Health we learn that the Church is "The structure of Truth and Love; whatever rests upon and proceeds from divine Principle" (p. 583). This definition reveals to us, that our Church is not a material structure, a tabernacle built with hands; but, like the kingdom of heaven, is within man. All that proceeds from Principle is divine; hence the highest form of order or perfection of our Church, must necessarily depend upon our most exalted spiritual conception of Truth, the practice of good, and the demonstration of love. As these three essentials are requisite to Life eternal, so are they necessary in the disposition of all matters pertaining to our Church through which this Life should find expression. Truth includes all that is good because it is good, and can actuate nothing but good. There is but one way to understand Truth; that is, to practise the good it suggests. Scientifically understood, we find that Truth is the rock of our salvation, a mighty power which destroys all error, the wisdom and intelligence of the universe including man, that which altogether controls and governs divinely.

A church built on such a foundation ought to produce the best and highest results. The meek and lowly Jesus practised all the truths he taught, he loved those who persecuted him, and prayed for those who despitefully used him; he recognized at all times and under all circumstances the incorporeal child of God and no other. To have order in our Church we must build on the same foundation that he built upon; we must accomplish our work under the same guiding, controlling Mind that he was ever obedient to; we must worship the living and true God, not because such is the law, but because we love Truth beyond all else. This prevailing consciousness of Truth lifts us beyond all sense of personality, it destroys the love or worship of good and evil, and opens up avenues of thought that we have seemingly lost sight of. New ideas then begin to grow and blossom in greater beauty and perfection, and as these ideas multiply and replenish the earth, the greater becomes our capacity for receiving all that proceedeth from the Father; and we experience heaven with all its inexpressible joys and blessings, harmony and order, here and now.

As we continue in His love, and use it in every particular of our daily duty and conversation, varied forms of thought develop and increase; this variety adds charm and beauty and is needful to show forth perfection. Unity of thought controlled and governed by divine Principle will unite the various churches.

When mortal sense is subordinate to Truth, love will flow into every particular of our work, the image and likeness of God will be expressed. When love to God and to our neighbor is our reigning consciousness, and we put it before all else, the quality of love emanating from such an understanding of Truth will be spiritual and heavenly, and God will be seen and acknowledged as All-in-all. As the different parts of the body act as one, so will the varied ideas of spiritual thought act as one, reflecting in all the one divine Principle, God. Such societies or churches will appear in their grandest form and will reflect perfect order, filling the atmosphere with manifestations of Life and Love, and breathing forth an aroma of regeneration throughout the world; giving sight to the blind, hearing to the deaf, and healing all manner of sickness and disease among the people. All who have named the name of Christ in Christian Science are responsible for what their church is or appears to them to be. When our sense of obligation becomes clearer, truth will become clearer, and God will be nearer, and all as the result of active and orderly effort to bring men, from the least unto the greatest, into the real and true consciousness of Life eternal.

## "Infinite Love is reflected in love."*

SILAS COBB.

"Love is the liberator." If we love our neighbor as we do ourselves, we shall overcome hate in others and in ourselves, and banish sickness as the sun dispels the cloud. But unless we have love we cannot detect the presence of evil or put it to silence. If we have not love we are "as sounding brass, or a tinkling cymbal."

Could we make love practical and bring it into our business, our homes, into every walk of life, how much happier would be the world! Could mankind know that God is a God for our business, a God for our homes, a God for every walk of life; that He is a practical God, always at hand to guide us through every trouble, every danger in every path, what a joyful world we would live in! And I believe we are now, through the teachings of Mrs. Eddy, approaching this condition.

But too often in business, greed steps in and that is not love. Do we oppress the servant or the laborer by giving him less than his labor is worth? Do we practise idolatry by cherishing false pleasures, or the pleasures of this world, —which are gods, either little or great? Are we idolaters in worshiping any other god than the one God? We do not have to live among barbarians, or in the age of the heathen to be guilty of this. If we worship or think too much of self we are guilty. Do we hate our brother? Do we become angry when evil tempts us or when things do not go our way? Do we envy our neighbor who is reaching a higher success in life than we? Do we commit murder by trying to crush thoughts and deeds that are true and good? Do we practise revellings or drunkenness, are we possessed by evil thoughts of any kind? If we are guilty of any of these things, we are not proving that "infinite Love is reflected in love." That is, we are not loving, but hating. We are manifesting either hate or love. Which is it? It cannot be both at the same time.

On the other hand, the human love which expresses itself in long-suffering and gentleness, which we see linked with faith, which goes hand in hand with generosity, with mercy, justice, or goodness of any kind is a reflection of divine Love which comes from God, or good, as the light comes from the sun. There should be nothing mysterious about the love that goes to make up good citizenship. It is an attribute of God, and is not the sensuous element that is sometimes misnamed love. The test of good citizenship is whether we help or hinder our neighbor. If we are helping him we are showing forth the love which is an attribute of God, which is true, genuine, human love, and is the love that is the reflection of infinite Love.

The more of this good citizenship, or helpfulness, or loveliness we can show forth, the more like Jesus are we, the nearer to a model citizen we approach, and then we possess more of the true love which is of God.

The evil which mortal man thinks and does reacts against

* Science and Health, p. 17.

Digitized by Google

him, until he has suffered in proportion to the amount of evil he has thought or acted. It does not follow that all our suffering is brought upon us as the direct result of our own evil ways, but much of it is.

How important, then, to get our thinking right and keep it right, to think nothing but pure thoughts, thoughts of love! When anger, hatred, and malice come to us, and we know that we must suffer if we let them in and entertain them, it would seem that we would quickly bid them depart. We ought to know that these things will make us suffer, and if nursed enough they may bring us down to a fit of severe sickness.

Christian Science casts out anger, malice, hatred, diseased thought of every kind, and substitutes thoughts of love, rest, and peace; then the body is well.

## The Soft Answer.

WALDO P. WARREN.

As the lawyers tempted Jesus, asking his views on material affairs, so does mortal mind to-day tempt the student of Christian Science. The student, ever ready to give a reason for the hope that is in him, should distinguish between questions put by seekers for Truth and those asked out of craftiness.

If it is asked what we think of doctors or ministers; what of this or that denomination; what of marriage and parentage; what of the ultimate possibilities of Science; what of political questions or personages; or what of this or that prevalent custom, it is well to remember that it is not personal conclusions but the truth of Christian Science which should be given to the world.

To answer such questions in open approval of popular customs may bring condemnation from those who know some of them to be error, and may give a wrong impression of the teachings of Science; while to answer in unqualified disapproval may be to condemn those who are not worthy of condemnation, and this needlessly arouses antagonism. In either case your real meaning is lost, those whom you seek to help by your answer are really harmed, and the cause of Christian Science is misunderstood.

Our own conclusions may be perfectly correct as to our own problem, but very unfitting in regard to another's problem, the solution of which is at a different stage. The expedient step in solving our problem consists in proving all things, that we may be finally able to discern and "hold fast that which is good." It is not merely the manifestation of error which is wrong, but the thought back of it; and while the wrong thought is perhaps being bravely handled in Science, its manifestation may for the moment seem to be unchanged. While another is thus resisting the claims of error, and so working out a knowledge of its nothingness, our condemnation of his acts may be unjust and unscientific.

Let us consider well the example of Jesus in meeting crafty questions with counter questions, rather than cast the pearls of our own demonstrated conclusions upon the ground before mortal thought. For those who are honestly seeking Truth it is better to point out only the next step leading to the conclusion applicable to their problem, rather than to omit this step and place before them a far-off conclusion which does not fit their present need, which they are therefore not ready to accept, and cannot understand.

## Echo of the Communion.

SUE H. MIMS.

THE flags of many nations lent their bright hues to the walls of Mechanics Hall, where the Christian Scientists from the East and the West, the North and the South, met as one brotherhood to worship in sacred silence the God of Israel,—the omnipresent Love who forgiveth all our iniquities and healeth all our diseases.

A mighty wave of holy thought and realization of Truth must have gone forth to lift the burdens and lighten the sorrows of the world, for we are one body, and "whatever blesses one blesses all" (Science and Health, p. 206). The sweet invitation from Mrs. Eddy was joyously received, and all reached in unbroken and peaceful harmony, the lovely capital of the old Granite State.

It seemed a miracle of order and arrangements to see this great crowd, so free, so happy, so childlike, sitting under the trees, or strolling under the sylvan arches of green, waiting for the hospitable gates of Pleasant View to open to that vast throng which entered without confusion or impatience. It was pleasant to mark the tender eagerness of all to see our beloved Leader, but all human elements seemed quieted under the influence of that sweet home of purity and peace.

"What went ye out . . . for to see? A reed shaken with the wind?" No. The gathering of this vast concourse marks an epoch, as with hearts overflowing, and eyes dim with unshed tears, the people came to pay tribute, not to human pride and distinction but to spirituality, to goodness; not to earth's diadems but to exalted aspiration, to true womanhood. Is mere gratitude for hearts that have been healed, for sin destroyed, for health restored, for lives uplifted and spiritualized, for saddened homes redeemed and blessed,—I say, is this expression of gratitude worship of personality? not at all. As men and women we would hide our heads in shame if we did not feel this depth of grateful love. "But what went ye out for to see? A prophet? Yea, I say unto you and much more than a prophet,"—a woman whose self-effacement has been so complete, whose humility and love have been so unselfish, and whose personality has so faded from her own vision, that her consciousness has become a channel for a revelation of Truth which is bringing to humanity health, holiness, purer ideals, and heavenly aspirations. As that great company of reverent ones listened to her words of welcome and admonition to "Trust in Truth, and have no other trusts," and when her dear presence withdrew, their voices were united as one and they sang her beautiful hymns, and repeated the Lord's Prayer in glad yet solemn unison,—then we knew the blessed import of our visit, the personality was lost in the spiritual ideal and her sweet words remained like a benediction in our peaceful hearts.

Contributors to our publications are requested to write legibly, with ink, and on one side of the paper only.

## The Concordance.

The new Concordance is helpful and convenient. After using it, every student of Christian Science will want it as an aid to the study of our text-book. I have also found it most useful in finding instructive statements and helpful declarations of "the counter fact, relative to any disease" (Science and Health, p. 233), and in collecting lessons on particular subjects for the Wednesday evening meetings.

CLIFFORD P. SMITH.

Let me say a few words in appreciation of the new Concordance to Science and Health. A long-felt want has been fully met in this comprehensive and complete work, which will be appreciated by all students. The alertness of our dear Leader in apprehending and meeting this need, is indicative of that spiritual insight which has ever characterized her in the past, and proved her ability, under Divine guidance, to direct and maintain our sacred Cause.

G., Madison, Wis.

## Selected Articles.

### Mistaken Criticism of Christian Science.

THE Discoverer of Christian Science has met and mastered much ignorant fault-finding directed against her personality or against her teachings. She has done this with a patient love and forbearance that have won the admiration not only of her students, but also of the unprejudiced public at large. Christian Scientists have learned from her not to retaliate in kind nor to make personal attacks. The logic of events is justifying their faith daily and hourly by its beneficent results in reforming the sinner, healing the sick, and comforting the sorrowing. The respect for the rights of others which they are taught, is based upon a clear perception of the Brotherhood of Man as a spiritual reality. They can wait, watch, and work in peace, knowing that the good they do is immortal and that God shows them the way to atone for their mistakes and failures.

In this brief article, therefore, I have no desire to enter into any controversy with persons. The critic may be moved by a variety of motives and influences. He may be honest, but unacquainted with actual facts. He may have no deeper purpose than to give expression to the gossip he hears. I do not consider myself competent to pass judgment upon the critic himself, but experience has shown me the falsity, perversity, and futility of much which passes for criticism of Christian Science, and I believe that the readers of *The Independent* will be glad of a brief analysis of the subject.

Let me state at once that I have yet to read a criticism of Christian Science which contained a correct or comprehensive statement of its teachings. It is my firm conviction that no one can really understand these teachings without being favorably impressed by them and wishing to put them to immediate application in practical, every-day affairs. Thus a very large number of earnest and intelligent people have already come to the conclusion that Mrs. Eddy's teachings are the very truth of Christianity, uttered to this age, in regard to the nature of God and man and the universe. A still larger proportion of the public are persuaded that her teachings are instinct with glorious possibilities for mankind. Only a relatively small number of persons take antagonistic ground, and among this small number it will be found that few have ever even studied Mrs. Eddy's works, much less attempted to put her teachings into practice.

Christian Science offers that which every man is seeking: happiness, health, and a measure of holiness. It does not postpone the promise of the kingdom of heaven until after death. It opens the way, here and now, for the fulfilment of Christ's promises, in so far as the individual has sufficient spiritual understanding to rely upon these promises. Does any Christian desire more? Then why should the teaching and inculcation of a Science which shows man his real self and the real universe under omnipotent good arouse any opposition?

There is no denying the fact that since the appearance of "Science and Health with Key to the Scriptures" by Mary Baker G. Eddy, almost forty years ago, a gradual change in popular views on the subject of theology, medicine, and natural science has made itself felt.

Christian Science has roused the world from the lethargy of routine beliefs. It has been persistently emphasizing the Scriptural teaching that "God is Spirit" (John, 4 : 34, R. V.), and that the real man, made in His image and likeness, must, therefore, be spiritual and not material. Christian Science has been blotting out the awful spectacle of a revengeful god and bringing into relief St. John's grand statement that "God is love." These teachings are not based on sentimental grounds, but on logical, scientific deductions from the Scriptures, and are freeing receptive persons from the mental, moral, and physical diseases caused by the fear of an unnatural god as creator and controller of the universe. Christian Science practice in healing the sick has proved to the medical fraternity the necessity for paying greater attention to mental symptoms and for relying less upon drugs and manipulation. One of Mrs. Eddy's greatest services to mankind was to show the unscientific nature of mesmerism, or hypnotism as it is more commonly called to-day. Years ago she showed how this educated will power affected the sick, but warned the public against its use as detrimental in the long run alike to operator and subject. In establishing the true Christian system of metaphysical healing, it was necessary for her to expose the false human mode of suggestive therapeutics.

As in the realm of theology and medicine, so in that of natural science, Mrs. Eddy's teachings have pointed to a complete revolution of thought. Take, for instance, her very well-known teaching concerning the nature of matter. It is significant that within very recent times noted natural scientists like Lord Kelvin and Sir William Crookes have startled the public by their changed views on this very subject. As far as I can judge from the reports of their utterances published in the newspapers, their investigations have led them to resolve atoms into forces, thus bringing their conclusions ever closer to those of the psychologists who maintain that matter is merely a mental concept.

The bearing of these conclusions upon the subject of Christian Science is readily seen when we consider that they denote an approach, though still a timid one, to the position taken so many years ago by Mrs. Eddy. In Science and Health she writes:—

"Matter is nothing beyond an image in mortal mind" (p. 116).

"The world would collapse without Mind" (p. 209).

"The term Science, properly understood, refers only to the laws of God, and to His government of the universe, inclusive of man" (p. 128).

The theories which presuppose power in matter have been thus characterized by Mrs. Eddy:—

"They either presuppose the self-evolution and self-government of matter; or else they assume that matter is the product of Spirit. To seize the first horn of this dilemma, and consider matter as a power in and of itself, is to leave the Creator out of His own universe; while to grasp the other horn of the dilemma, and regard God as the Creator of matter, is not only to make Him responsible for all disasters, physical and moral, but to announce Him as their source, and so make Him guilty of maintaining perpetual misrule, in the form and under the name of natural law" (p. 119).

In view of the growing perception on the part of the psychologists and physiologists that thought alone is force, and that matter is a mere concept of the human mind, the writings of Mrs. Eddy become constantly more impressive to the general public. The trend of the more progressive thinkers lies clearly in the direction of Christian Science; nevertheless, the teachings of the latter are still so far in advance of general modern thought that for this reason they are more readily apprehended by those persons who are hungering and thirsting after righteousness, and are ready to make sacrifices in their search for the solution of the problem of being. Christian Science is also having a marked influence upon the position of woman. Without propaganda or pronunciamento, it has placed woman upon a footing of entire equality with man in the Christian Science denomination. The grand results it has accomplished in temperance reform alone would entitle it to a foremost position among the altruistic movements of to-day.

These are some of the services to mankind which Christian Science is performing. In spite of these services,

Digitized by Google

however, futile criticism has been leveled against Mrs. Eddy's education, against her literary style, even against the price of the text-book she has written. Much of this criticism has been uttered from pulpits devoted to the good news of peace on earth, good will to men.

Every means Mrs. Eddy has instituted for the protection of Christian Science from perversion has aroused criticism from quarters in which there seems to be no desire that Christian Science should succeed.

A reasonable remuneration for Christian Science practitioners has been stigmatized as a sign of greed and avarice. At the same time those who have been the recipients of Christian Science benefits declare with justice that no amount of money could adequately pay for the blessings received. Criticism has played up and down the gamut of possible objections, but has proved self-contradictory. It has sometimes objected that Christian Science tries to ignore sin, but on other occasions it has been obliged to concede that this very Science has made men and women better, which, after all, is the only real test of the destruction of sin. Criticism has found fault with Christian Scientists for considering it their Christian duty to heal the sick as well as reform the sinner, and yet no criticism has ventured to deny that Jesus, his disciples and apostles, and the early Christians took this same view. As Mrs. Eddy has well said (Science and Health, p. 142):—

"Anciently the followers of Christ, or Truth, measured Christianity by its power over sickness, sin, and death; but modern religions generally omit all but one of these powers, —the power over sin. We must seek the undivided garment, the whole Christ, as our first proof of Christianity, for Christ, Truth, alone can furnish us with absolute evidence."

Christian Scientists have promised, in their church tenets, "to be meek, merciful, just, and pure" (Science and Health, p. 497). They claim nothing for themselves which they are not glad to concede to others. It is by the elimination of sin and sickness that they are proving their right to teach and practise Christian Science.

W. D. McCRACKAN.

## An Unauthorized Criticism.

DR. WILLIAM CARTER is quoted as saying in his late address before the Ministers' Alliance, "Three things might be said to be responsible for the vigilant research, unrest, and dissatisfaction of the present age. They are fear of pain, desire to know the future, and the universal longing for immortality." The writer heartily agrees with Dr. Carter in his analysis—that the fear of pain, desire to know the future, and the universal longing for immortality cause the unrest, dissatisfaction, and research of the age—and wherefore? The world is reaching a period in its history where it is demanding something more than the theories and impracticable time-honored systems of the past, especially along the lines of religious beliefs and curative systems. Christian Science is not at war or even at variance with any religious or curative system, but is the "advanced thought"—the child born in due season as the natural and necessary outcome of the very circumstances mentioned; namely, desire to be delivered from pain, to know the future, and the universal longing for immortality (complete salvation).

Continuing, the speaker stated: "The Christian Scientist promises for implicit faith a relief from all pain." With this statement as a whole I am compelled to take issue. The teachings of Christian Science promise for implicit faith in God a relief from all pain, but this implicit faith must correspond to the faith referred to by James: "I will show thee my faith by my works"—faith based upon understanding—and to say, "The credulous and ignorant public, eager for freedom from bodily pain, accepts its teachings after a mere reading of its promises," is widely to miss the mark, and implies a gross lack of appreciation of the actual facts concerning Christian Science. It is true that both the ignorant and the learned, as well as the halt, the lame, the blind, the deaf, the sorrowful, and the sinner turn to Christian Science—"this advanced thought of the day" —for relief, not merely because it promises, but because it fulfils its promises by healing them of both sickness and sin, and establishing in them a higher moral and ethical standard for the community in which they live, and which may be seen by any one who will observe their daily lives.

It is an error to state that two years ago it was announced from the Mother Church in Boston that the members numbered a million or more. The writer was present at this meeting, but heard no such statement, nor does it appear in the printed reports of same on file. The statement no doubt has been made that the movement has a million or more adherents or followers, since there is a much larger following of Christian Science than it has in actual church membership, for the church is designed to have for its members only such as have some practical knowledge of its teachings, and who are ready to subscribe fully to its tenets. Christian Scientists ask no favors they do not concede. They do not proselyte nor invite people to become members of its church because they believe in Christian Science, but they explain to them the necessity of their having a practical understanding before they are fitted to assume the responsibilities of church membership, for Christian Scientists are not mere believers in Christianity, but are aware of the necessity of living and practising Christian lives, in accordance with the Mosaic decalogue, the Sermon on the Mount, and the teachings and practice of Jesus Christ.

Dr. Carter refers to Christian Science as a fallacy, but the evidence that he offers does not justify his statement. He says, "They depend more on silent instruction than public preaching. Their public reading rooms, found in every town and city, bear evidence of this fact." Christian Scientists not only have public reading rooms in almost every town and city in the United States, Canada, and Europe, but they also have public services in their churches every Sunday and Wednesday throughout the entire land.

JAMES A. LOGWOOD.
In *Kansas City* (Mo.) *Times.*

Paul tells us that this human or carnal mind is enmity against God: for it is not subject to "the law of God, neither indeed can be." Mental Science may be defined as the action and operation of the human mind, while Christian Science is the Science of Christ, or the law of God, which Jesus the Christ applied to humanity, healing the sick and the sinner. Christian Science may rightly be called mind-healing, if the Mind therein referred to is God, in obedience to the scriptural injunction, "Let this Mind be in you, which was also in Christ Jesus." JOHN H. WILLIAMS.
In *Jacksonville* (Fla.) *Metropolis.*

What a grand power is the power of thought! and what a grand being is man when he uses it aright; because, after all, it is the use made of it that is the important thing. Character comes out of thought; or rather thought comes out of character. The particular thoughts are like blossoms on the trees; they tell of what kind it is. "As he thinketh in his heart, so he is."—SIR WALTER RALEIGH.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### Concord's Semi-Centennial.

BECAUSE Christian Scientists the world over are greatly interested in the growth and development of Concord, N. H., they will be much pleased with the semi-centennial edition of the *New Hampshire Patriot*, dated August 19, 1903, and issued in commemoration of Concord's fifty years' existence as a chartered city.

So many of our people have visited Concord from time to time and have been so hospitably received by its citizens, that they feel a personal interest in the city and all that pertains to its welfare, but the chief reason for their interest is that Concord is the home of our Leader. Mrs. Eddy was born at Bow, N. H., within sight of her present home, and her earlier and later years have been spent in the immediate neighborhood.

This special edition of the *Patriot* contains a sketch of Mrs. Eddy's life and work written by Hon. Henry Robinson, Postmaster and ex-Mayor of Concord. Mr. Robinson is not a Christian Scientist, but, like most of the prominent citizens of Concord, he is well acquainted with Mrs. Eddy, is conversant with her work, and competent from personal knowledge to write of her life and of her position as a leading citizen. Mr. Robinson's article is particularly well written and we believe clearly reflects the sound judgment of the Concord people, to whom Mrs. Eddy's life is as an open book.

The following brief extracts are representative of Mr. Robinson's article, which covers over a page and a half of the paper.

In every age it is given to a few choice geniuses to lead the upward march.

Nobody in the present generation precedes Mary Baker Eddy in the ascent. She is in the forefront of the enlightened throng whose foreheads are bathed in the golden dawn of eternal day, whose eager hearts are flooding with infinite love, whose souls are swelling with the holy inspiration and limitless power of perfect faith.

. . . . . .

The fact that it is the home of Mary Baker Eddy has endeared the attractive city of Concord to a widespread million of cultured people, many of whom have never seen the capital of the Granite State.

So unostentatious, reserved, and gracious, is the unaffected Discoverer, Founder, and Teacher of Christian Science that half of her own townsfolk may not realize that history will recognize in her one of the brightest and most beneficent beacons of the last and present centuries,—a radiant spirit, a wonderful intellectuality, a tremendous factor for universal good, whom the whole community respects, appreciates, holds in evident deference and high esteem.

. . . . . .

Current biography has already given to her work and worth the prominent mention which their merits demand in the annals of advanced Christian civilization; and her niche of fame in the cloister of the world's best intellects will be enlarged and become more sacred as time rolls on.

. . . . . .

Her spiritual ideal is inseparable from her life, and reflects the true divinity, not in creeds or codes, but in facts and qualities inherent in her own noble character. Her life is one of noiseless charities, of gentleness and tenderness, of indefatigable toil and unparalleled self-immolation; yet she unsparingly rebukes sin in all its forms and phases.

. . . . . .

She remains unalterable and inflexible in the holy belief that "the physical healing of Christian Science results now, as in Jesus' time, from the operation of divine Principle, before which sin and disease lose their reality in human consciousness, and so disappear as naturally and as necessarily as darkness gives place to light." She maintains that "now as then, they are not supernatural, but supremely natural. They are those 'mighty works' which were the sign of the Immanuel, or 'God with us,' an influence ever present in human consciousness, and coming now again, as was promised aforetime:—

> **To preach deliverance to the captives [of sense],**
> **And recovering of sight to the blind,**
> **To set at liberty them that are bruised"**
> **(Science and Health, Preface, p. xi.).**

. . . . . .

That Mary Baker Eddy is an accomplished, beautiful woman, with a master mind, and an intellect and luminosity of spirit far beyond her opportunities of education and observation, broad as they may have been, cannot be doubted for a moment by anybody who has read her splendid works.

. . . . . .

Very recently she gave $120,000 toward a Christian Science Church edifice in her home city of Concord, wherein she is universally recognized as an estimable neighbor, a royal good friend, and an especially public-spirited and generous-hearted fellow-citizen. She helps the poor, clothes the naked, lifts the downfallen, enlightens ignorance. She has taken great interest in public institutions, enterprises, and measures, and contributed bountifully in many directions, being very fond of Concord, and closely concerned in all that pertains to the history, welfare, and progress of the community. On this occasion of the semi-centennial of the municipality, when the gems are counted, and the story of achievement and distinction told, we do well to pay homage to the life that "pervades the world."

As an extemporaneous speaker she is fascinatingly eloquent, her sermons affecting her hearers much, and frequently healing the sick. Her explanation of the Scriptures elucidates the divine Principle and science of health, holiness, and eternal life, awakening attention to the life of Jesus of Nazareth, his divine humanity, humility, and healing power, and calls the age to contemplate and imitate the Christ character. Her aim is, to put the axe of Science at the root of sin, sickness, disease, and death, and to cut them down. Her wonderful mission has increased so rapidly that almost every one of the prominent cities and towns in the United States, and even many places abroad, now have a Christian Science Society, and the Church edifices are numerous.

. . . . . .

Whatever else may be said of Christian Science, it is not now denied by candid reasonable persons that it has accomplished a vast deal of good; that its followers are among the most intelligent, educated, and cultured people; and that its Founder and Discoverer, in whatever light considered, belongs to "the sacred galaxy of the true stars; and the marvelous constellation, brighter from moment to moment, shines in the clear horizon, and, as it rises, blends with the boundless dawn of Jesus Christ."

Another writer in the same issue of the *Patriot*,—Frances M. Abbott,—pays the following tribute:—

It would be impossible to speak of Concord as a residence city without mentioning the home of Mrs. Eddy, the most

Digitized by Google

famous woman of our time. It is her residence here that is causing our town to become the Mecca of thousands of pilgrims from all parts of this country and across the seas. Her beautiful grounds are the most attractive feature of the drive to Millville. Her house is filled with costly tributes from admirers in all parts of the world, and the wide view across the valley from the upper balcony includes the spot amid the Bow hills where she was born. Mrs. Eddy, though necessarily living a life apart, has manifested a most generous interest in the people and institutions of Concord; and, directly and indirectly, her dwelling among us has materially benefited the town and spread its name and fame abroad to a degree that few people realize. M.

## The Value of Good Example.

ONE of the incidental effects of Christian Science is its marked influence upon Christian thought in other churches respecting spiritual healing. The undeniable demonstrations which are being seen and known of men can but prove gently suggestive to all the Master's earnest and sincere followers as they are thus reminded of his definite command to heal the sick, and see that its fulfilment is manifestly possible.

An interesting item in evidence has been brought to our attention by a friend who has sent us a Montreal paper giving a report of the meeting of an Anglican Synod in Quebec. Rev. Dr. F. G. Scott, a member, raised a question as to the propriety of anointing the sick in keeping with the habit of the early Christian church. In support of a motion to that effect, we are informed that, "he went on to cite at some length the injunction of the Apostle James to anoint the sick, which was among the special commands of the Lord in Holy Scriptures, that applied to the healing of both the body and the soul. . . . He also strongly pointed out that many members of the church were having in the present time to identify themselves with the sect of Christian Scientists and other new denominations, who practised the healing of the sick by the laying on of hands and prayer."

Dr. Scott's motion was approved by a considerable number, and the consideration given the subject indicates that, owing to the spread of Christian Science, a large body of the clergy and laity are looking for and seeking to revive the practice of healing as in the days of primitive Christianity. This movement points to the fulfilment of the prophecy of our Leader: "If the lives of Christian Scientists attest their fidelity to Truth, I predict that in the twentieth century, every Christian church in our land, and a few in far-off lands, will approximate the understanding of Christian Science sufficiently to heal the sick in His name" (Pulpit and Press, p. 31). W.

## Speaking with New Tongues.

"JUDGE a man by the company he keeps," is a familiar adage which would lose none of its meaning if it were made to include the language he employs. No effort of the imagination is needed to discover a man's nationality by his speech; indeed, it is comparatively easy to tell by this token whether he is cultured and refined, or the reverse.

No one ever recognized this more clearly than did Jesus when he said, "A good man out of the good treasure of the heart bringeth forth good things: and an evil man out of the evil treasure bringeth forth evil things. . . . For by thy words thou shalt be justified, and by thy words thou shalt be condemned."

Pursuing this line of thought we come naturally but irresistibly to the declaration that certain signs were to characterize those who believed in Christ. It is not necessary for our present purpose to consider all that was required as evidence of this belief, but it may be well to notice the distinction made between those who merely professed to believe the truth, and those who really understood it. This distinction was to be marked by certain signs, "They shall cast out devils; they shall speak with new tongues."

Thought finds expression in words, and our language is usually in keeping with our thought. This becomes very clear as we study Christian Science. The unenlightened mortal believes in the reality of sin, disease, and death, and his words continually express his belief.

The Christian Scientist has changed his views on this subject, having learned that in the kingdom of God no evil can be found, and he knows that this kingdom is universal in extent and endless in duration. He can no longer think of disease as a reality, for it is seen to be a manifestation of error, ignorance of God's all-presence and power. Recognizing it to be unreal, an illusion, he now calls it "a belief," sometimes to the amusement or confusion of those unfamiliar with this use of the word.

It should be clearly understood that certain terms employed by Christian Scientists are useful in the transitional stage from the old to the new, but they may be likened to bridges which we should not re-cross, except it be to help another over. It is true that we at one time believed that we were sick, but through the understanding of Truth we were delivered from this false sense, and we should therefore be very careful not to dignify the error by saying that we still have a belief in it.

Those who do not yet understand the truth of their own being will doubtless give expression to their belief in sin and sickness, but the consistent Christian Scientist should speak with the new tongue, and remember the prayer, "Set a watch, O Lord, before my mouth; keep the door of my lips."

Sometimes the beginner in Christian Science is puzzled as to the proper way of conveying his thought to another, when told that it will not do to let error slip through by attaching to it the words "claim," or "belief." In such cases it is well to ponder deeply the solemn warning, "Let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these cometh of evil."

As human thought is undergoing great changes at this time, and corresponding changes are taking place in the world around us, so the new ideas which are taking concrete form in art, commerce, and invention, require new words and phrases by which they may be represented.

Now let us try to grasp the idea of what human language would be with every word left out which expresses sin, disease, and death. Who dare say the world would be the worse for such a change? The Bible tells of a new heaven and a new earth in which are neither sorrow nor pain, sin nor death, "for the former things are passed away." If these things had vanished, there could be no reason for the use of language to express that which is no longer existent, and as thought tends to new manifestations, language will finally be like a stream ever broadening and deepening, ever becoming clearer as the mortal elements are left behind.

At present we are very conscious of the poverty of language, in the effort to express our sense of truth, but language is what we make it, and as we grasp the true sense of being, the words which fittingly express its purity, beauty, and sublimity will come to us as they came to the prophets of old.

Communion with God, with good, will, indeed, "convert the sage into a seer, the poet into a prophet."

The "new tongue," is in evidence in all our Leader's writings, and it should be in all our communications with each other and with the world, so that thought will pause on the threshold of expression, and

> Guard the lips as they were palace doors,
> The king within.

## Among the Churches.

### A Prospective Church in Plymouth, Mich.

The corner-stone of First Church of Christ, Scientist, Plymouth, Mich., was laid Wednesday morning, June 17, at six o'clock, with a short but impressive service. The stone, which came from Concord, N. H., was of gray granite and has the date 1903 engraved on one side. In the stone were placed the following articles: The Bible, "Science and Health with Key to the Scriptures," and other works by Mary Baker G. Eddy, Manual of Mother Church, copies of each of the Christian Science periodicals, By-laws and History of First Church of Christ, Scientist, of Plymouth, Mich.

The exercises closed with the reading of a poem, "Laus Deo!" written by Mrs. Eddy.

*The Plymouth* (Mich.) *Mail.*

### Progress in San Francisco, Cal.

At the semi-annual meeting of the members of First Church of Christ many applicants for membership were favorably acted upon. The increase noted was at the rate of forty per cent for this year.

During the past six months a generous sum was forwarded by the church here as a contribution toward the auditorium to be built at Boston. It was also stated at the meeting that the organization had completed the payment for the large lot purchased by it on Scott and Sacramento Streets. A resolution was adopted calling for the appointment of a committee of five to present preliminary plans and methods for the beginning of subscriptions toward erecting a church edifice on the property mentioned. It is estimated that the building and furnishings will cost about $100,000, and will take at least two years to complete.

Last Sunday forenoon communion services were held at Steinway Hall, which was crowded to the doors. The new communicants were cordially welcomed, and the tenets of the Mother Church were read and subscribed to by them. Free public reading rooms are established in the Adams Building, where Christian Scientist visitors may register their names and locations. They are called upon, and a welcome extended to them by visiting committees appointed by the local Board of Directors.

*San Francisco* (Cal.) *Post.*

### The Work in Franklin, Pa.

For several years before the organization of the church here, meetings had been held by a few who were interested in Christian Science, but it was not until April, 1899, that the church became a legal body. Six of those interested applied for a charter which was granted immediately, and as we look back over the four years of our organized work, we realize that divine Principle has guided us step by step, and we are grateful for every proof that has taught us that this Principle is Love. This spring we were enabled to purchase one of the most attractive corners in our city and have remodeled the old stone house that stood on it, so that we now have a pleasant and suitable church of our own. Besides the church there are three extra rooms, which we use for Reading Rooms and the church work. The attendance has been steadily increasing since we moved into our new church. The local newspapers have been most kind in their attitude towards us.

In reading the above it might seem that we had had nothing to do but "just grow." We have had to "walk by faith." In doing the work for Truth and Love we have pressed on, and the shadows ahead have been dispelled, showing whom we have trusted and that the work is God's, not ours. It is a glorious warfare that we are fighting against the seeming power of evil throughout the world to-day, and victory will rest "on the side of the immutable right" (Science and Health, p. 446); so we keep our eyes and hopes on the goal and strive for perfection knowing that there is joy in the presence of the angels of God over one sinner (one sinful thought or inclination) that repenteth.

As a church we wish to express our utmost loyalty to the brave woman whom we call our Leader, and who is so courageously and lovingly watching over her flock in the Field to-day, and to thank her for the helpful words that she has given us during the past year.

KATE D. GRANT, *Clerk.*

## For the Children.

### Some Simple Truths.

KATE SWOPE.

ERROR is not anybody; it is never you. It is not a person. Sometimes it seems to be persons, because it borrows so much. Error lives on what we lend it. It is like a person who cannot make a living, and has to live by borrowing all the time. That is just the way error lives on borrowed life and power.

The reason it seems to be persons—many persons—is because it borrows eyes, ears, tongues, and minds to live by. But persons are only the lenders, lending themselves to error, letting it borrow life and power from them.

Unless we watch, error will borrow our hands and feet, and if we lend them, they will get into mischief; they may slap and kick and destroy things. Hands and feet must be good helpers. We must lend them to good only.

Tongues and ears! These error loves also to borrow, because they are such workers. Error has to talk with something and so it borrows tongues. It likes to talk about itself. It knows nothing but itself,—its sins, its sickness, its feelings, its opinions, its loves and hates. Unless we watch, we shall lend it our tongues, and away it will talk. It talks sick, sicker, sickest,—talks to anybody who will lend it ears. Unless we watch, error will borrow our tongue for the "little white lies that won't hurt anybody." No; they may not hurt anybody else, but they hurt us, by forming a very bad mental habit. And sometimes people cannot get well until they stop it.

It is the habit of telling lies that is so much worse than the lie. The lie we tell is soon forgotten by others, but the bad habit stays and grows more fixed with every "little white lie" we tell. Sometimes children teli lies because their fine imaginations have gone astray. I do not mean in pleasant story-telling, but in expressing the little lies that cowardice tells. Courage and lies never live together. When courage comes, it will not let you lend your tongue to error. Little men and women must be full of courage in Christian Science. When lying seems to offer protection, we may know that it does not, for while it tries to save us from without, it is ruining us within by sowing the seeds of bad habit.

To lie is a coward's protection. Any coward can lie, but it takes courage to refuse to answer everybody's questions. We can know all we tell without telling all we know. Curiosity is error, and we cannot lend it all we know. Let us remember how Jesus stood before Pilate when he was asked questions that it was not wise to answer: He opened not his mouth.

Some children tell lies because they fear punishment. Let us overcome this fear that lies, and fear rather to be a liar. Our parents will not surely punish us as a reward for telling the truth. Good always wins in the end.

Unless we watch, error will borrow our ears, it will make us listen to things about people that will make them look ugly to us, so as to turn us away from helping them, it will

Digitized by Google

pour mental poison into our ears, and will rob us of our helpfulness.

There is one thing that error especially likes to borrow, and unless we watch we shall lend. It likes best of all to borrow our name. It has no name but what we lend it, and so it borrows our name, and calls itself "I." After we have lent it our name, it can then talk to us about ourselves. It can then say, "I am sick;" and if we lend our ears too, we shall believe we are sick, when all the while it is only error talking about itself; calling itself by our name.

It may borrow our name and say, "I can't." If we lend ears too, we shall believe it is we that are saying it, and we shall think we can do nothing, when all the while it is error saying that it can do nothing, and that is the nearest that error ever came to telling the truth.

Sometimes it borrows our name and says, "I am discouraged." Next time that it says that, let us talk back and say, "You may be discouraged; but I am not." We want to lend ourselves to courage only, to health only, to good—God—only. If we have let error take our name, it was "taken in vain." Let us get it back and say instead, "I am made in the image and likeness of God." Let us lend ourselves to God only.

I once knew a four-year-old boy who had a grandma that was not a Christian Scientist. She came into a cold room where he was, and told him to "take care;" for she was afraid he would take cold. After she was gone, he said to himself, "Old error; he thinks he is something like me; but he isn't." He would not lend himself to error, and so error had no boy, and no boy had error.

### A Little Heroine.

She is only fourteen years old, but she is a little heroine, and the parents of four hundred children will bear witness to the fact. Ethel B. dared smoke and menacing flame, and while the hundreds of her fellow pupils in the Lincoln School, marched in orderly manner from peril to safety, she stayed courageously at her post.

It was ten o'clock and recitations were being held throughout the building when the cry of "Fire!" startled teachers and pupils. The former were quick to prevent an impending panic. Soothing words quieted the little ones, and then the beating of a drum convinced all that the structure was afire. It was the signal to form in line for the drill, which all the pupils had rehearsed again and again, but never before when there was actual danger.

Hardly had the lines in the various rooms formed before the stirring notes of one of Sousa's marches penetrated to all quarters. Each tramping pupil knew his place, and little Ethel knew hers, too. While the pupils merged from all corners into one general column she played the march as rapidly and as evenly as she could, and in three minutes from the first alarm every soul save Ethel was out of the threatened structure.—*Exchange.*

THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

## Testimonies of Healing.

The following letter from a patient in England to his practitioner in America testifies to the healing realized in Christian Science. We are informed that this was a young man who ran a rapid course in the way of the world and was brought home from Australia as a paralytic, with a severe bronchial trouble.

He became a Christian through right reason and its consequent revelations, earned through demonstration of the first and second great commandments.—ED.

*My Dear Mr.* ——:—I sent you a cablegram two days ago asking you to stop the treatment. I want to see for a bit how I can get on alone. Thanks to your terse and able letters I have got a fairly good hold of the letter of Science, and I fancy that the fact that I have to stand on my own feet will induce me to put forth greater efforts for myself to win the realization of the power I possess through the divine Mind *now.*

On looking back to last November when I began treatment with you, the progress I have made in health and the understanding of the doctrine seems to me very considerable. Then I was carried or supported from one room into another; the other day I returned alone from London in one day, over twelve hours' traveling, without feeling at all tired. Colonel H., who first told me of Science, writes me, "If your friend could see the same change in you that I can see he would be much pleased."

When I understood the relation of God and Christ and man, as your second letter enabled me to do, the path was opened out, and then it was just a question of working along the proper lines, under your kindly and patient guidance.

If I feel that I need your help and direction again I shall not hesitate to apply to you. Thanking you for your great help in a time of great need.

Very truly yours,

A. R.

Two years and a half ago I was a complete invalid in every sense of the word, having a few months before undergone a severe operation. Instead of the operation effecting a cure, as had been hoped by myself and friends, I seemed, if anything, worse. I was quite lame and simply dragged the left limb about. I could not understand, after suffering such agony, why I did not get well and strong. I tried every material remedy that friends suggested and obeyed the doctors faithfully, all to no avail, however. Finally two physicians had decided that I had sustained a rupture and that I would never get well unless I had another operation. I had already had three operations in my life, and the thought of having another made me shudder. Some of my friends, seeing the weak condition I was in, thought I would never survive another operation. Just at this critical point I was filled with despair. Having given massage, electricity, medicines, and the knife a thorough trial, I knew not which way to turn.

Such was my condition when Christian Science was brought to my notice. I knew absolutely nothing about it, but had a dim notion that it savored of spiritualism, in which I did not believe, but this I very soon found was not a correct idea. After the first visit of the practitioner, my thoughts were in a whirl, and my head, which had ached incessantly for fifteen months, seemed worse than ever. I could not sleep and every wrong I had done in all my life seemed to come up and stare me in the face. This lasted for three days, after which time my recovery was rapid. In less than a week I was eating everything. After dieting for ten months on chopped steak, zwieback, and hot water, the food tasted delicious to me. It seemed as though I could not get enough to eat and all fear was destroyed.

In two weeks I walked down town, a distance of perhaps

Digitized by Google

half a mile. I felt as light and happy as a little child and I simply *could not* limp. An invisible something seemed to lift up my feet. After clinging to people so long for support I hardly knew what to do with my hands and arms. They seemed to dangle at my sides like pump-handles. This awkwardness, however, gradually disappeared. The dreadful pain from my head and neck went away, and I also laid aside my glasses, which I had worn constantly for eight years. I had been a great sufferer from childhood with my eyes, and had lain for days during my illness with a bandage of tea leaves on them. At times they would be badly swollen. The physician said I was a nervous wreck and would never be able to do stenographic work again, even if I did get better. My healing occurred during the month of December, and on the first day of April I accepted a heavy position, doing a man's work, after not having written a word of shorthand for fifteen months, and have continued at work ever since.

For several weeks after my healing I was on the Mount of Transfiguration, as it were, but after coming in contact with the world again I found that I had to descend to the valley and work my way up. I have had many struggles, and it seemed sometimes as if I could not see the light at all, when, most unexpectedly, the way would be made clear. Christian Science has brought so much into my life that I cannot find words to tell it. I always have this feeling of satisfaction, that, no matter how hard the problem seems to be, if I am patient and willing to trust in God, divine Love will readjust the scales sooner or later.

I have had the privilege of class instruction, and my one desire is that I may grow in grace each day. I am deeply grateful to God for His loving kindness, and to our beloved Leader, Mary Baker G. Eddy, who has toiled so incessantly for the good of mankind; also to my helper for her patience and sweetness.—FRANCES M. OSBORNE, Cleveland, O.

---

Undoubtedly we all desire to learn well the lesson of obedience, knowing that "Obedience to Truth gives man power and strength" (Science and Health, p. 183). We may frequently put self-will aside to follow the voice of Truth, but are there not times in each one's experience when we begin to make excuses?

To some of us, perhaps, such a time is when the call comes to make acknowledgment of the good that has come to us in so many ways, by testifying either in our meetings or periodicals, or both.

Error may suggest abundant excuses, but we are told that "If in one instance obedience be lacking, you lose the scientific rule and its reward: namely, to be made 'ruler over many things'" (Miscellaneous Writings, p. 117).

If we stop to realize that it is not hard to do whatever is right, and that we "can do all things through Christ which strengtheneth," we shall make no excuses.

Those who have been weighed down with the misery and despair that comes with the thought of having an incurable disease and the necessity of continual care-taking in order to be comfortable, and the giving up of all one's cherished plans, particularly at a time when life would otherwise seem so full of brightness, can appreciate something of how much it means to have hope renewed, with evidence given of reason for such hope, and of the great change from bondage to freedom that comes with the destruction of doubt, fear, and sickness.

Ever since my first apprehension of Christian Science I have been impressed with the thought that there was at this time a cry, a longing for this truth. I used to think—and I know from testimonials that I have read that this has been the experience of many,—Oh, if Christ were only here now, and I could touch the hem of his garment! Now that this longing has been gratified and we have learned that Christ is still with us to save from sickness as well as sin, should we not hasten to be obedient children in every instance? We know that each time we obey the next step becomes easier for us.

I am thankful to Mrs. Eddy who has given us such an example of obedience as to make it possible for us to receive the higher understanding of God through Christian Science.

A. G. W., Hartford, Conn.

---

By the advice of a friend, a gentleman called upon a practitioner saying he would like Christian Science treatment; he had had rheumatism for a long time in his arms. He bent his head forward and with great difficulty raised both hands to his head and removed his hat. He said if he could be relieved it would mean four dollars a day to him. A treatment was given to him after telling him something of Christian Science and of Mrs. Eddy, its Discoverer and Founder; also of her remarkable healing.

When he left the office, without thinking he took his hat up with one hand and placed it on his head, and walked out; when outside he thought of what he had done, came back, and asked if it had been observed. Then to show he was healed, he removed the hat from his head and replaced it with either hand with perfect ease, and said, "I couldn't do that when I came in here."

He soon had work at $4.50 per day. This was over a year ago.

In January, 1903, a gentleman living in a distant city was healed by Christian Science treatment of the claim of paralysis. He was unable to help himself in the least in any way, and could not talk. Two physicians treated him for two weeks, finally saying they could not raise him and would not call again unless sent for; said they never knew a case like that ever to get out again. A Christian Scientist was asked to treat the gentleman, and treatment was given; in a few days he was able to sit up; in a few days more he ate at the table with the family, and he was soon walking around the house and yard. Inside of two weeks he walked up town to his place of business. He also regained his speech.

This was all absent treatment. The practitioner never saw the patient until several weeks after, when he came to this city and obtained employment, and he is now working every day.—E. F., Cleveland, O.

---

I have experienced a wonderful protection through reliance upon Truth, divine Love. "God is Love; and he that dwelleth in love dwelleth in God, and God in him." When trials come to us we can abide in Him.

One afternoon, as I was alone at home, I began to clean the walls of a room. One side was almost cleaned; and as I was standing on the ladder, I heard something break behind me. I immediately thought of the rope that held the ladder. The thought came, "What shall I do?" But the answer came also immediately: "I am not afraid, I shall find refuge in God, who is our ever-present help in trouble." Like a child, I trusted in God. The next moment I saw nothing but received a terrible blow in the back. The senses warned me that I had suffered a serious injury, and I soon found that my arm was bleeding and very badly swollen; but I clung steadfastly to the promise, "They shall bear thee up in their hands, lest thou dash thy foot against a stone," and arising, I continued my work, holding steadily to the truth that in God there are no accidents.

I went on with my other work, prepared supper, and when my children came home, no discord could be noticed. The next day I cleaned the other walls; the third day, Saturday, I had considerable more work to do, but I did it all and was not afraid. The wrong thought would say, "You cannot do it, you are internally injured," but I would not believe in error. The next day was Sunday and I wanted to go to the dedication of our Third Church (we belong to the Second). The suggestion came, that I could not

Digitized by Google

do it, but I went, because I knew that nothing could prevent my doing that which was right.

The fifth day, I told my children of it; they said it seemed incredible, because they had noticed not the slightest change in me. Then I showed them my back—it was very black from the bruises, but I said to them, "Do not be frightened; God has saved me through His Word and through my trust in Him." Truth was victorious, as it always is: His promises are being fulfilled.

This trial and overcoming has made me stronger and firmer, and I feel very grateful to God and to our dear Leader, who leads us to Truth and Love.

MRS. CAROLINE WINHEIM, Chicago, Ill.

---

In 1890 I gave up business in the East and went to try the high, dry climate of Colorado. I had been told that this was the only thing that would do me any permanent good. During eight years prior to this time I had been taking medicine for several diseases with but temporary relief. In 1892, Christian Science was presented to me by a fellow-salesman who had been healed by reading Science and Health. For three years I refused to listen to any great extent to what was said to me by this friend as to what Christian Science could do for me. In 1895, however, having given the climate as well as new *materia medica* remedies almost five years' trial without any lasting benefit, I decided to give Christian Science a trial, and did so.

In the first treatment I was healed of one disease, although not the one I considered the worst. Before this help in Christian Science, I was unable to partake of much food, and of only certain kinds, without much suffering. Often I was compelled to drink wine and other liquors in order to feel like eating at all. Since the time of my first treatment I have eaten anything I wanted without any bad effects. For the other diseases I continued treatment for several weeks, and then came to Boston to investigate Christian Science. After being here some time, I again took treatment for several months. Christian Science has destroyed a great deal of fear in my case. Two brothers and two sisters have died of consumption, and I feared this disease until Christian Science destroyed my fear of it.

After coming to Boston, I began at once to attend the Mother Church services. At first I found much fault with the testimonies given at the weekly evening meetings, especially when Mrs. Eddy was referred to. My thought toward her had been poisoned by reading articles in the newspapers, magazines, etc., detrimental to her and to Christian Science. I was healed of this attitude of thought toward Mrs. Eddy, however, just as quickly and effectually as I was healed of dyspepsia, when one evening one of Mrs. Eddy's own students arose in the meeting and said in part, "You can no more separate Mrs. Eddy from Science and Health than you can Moses from the Commandments, or Jesus from the Sermon on the Mount."

These statements healed me of my wrong thought toward Mrs. Eddy. With this healing I began to grow in the understanding of the teachings of Christian Science.

I have received great help from the *study* of the Bible and Mrs. Eddy's writings. "God is no respecter of persons." The promise is: "Seek, and ye shall find."

I am continually seeing in Mrs. Eddy's life the exemplification of her writings. Her life is proof to me that "one with God is a majority."

I feel sure that I owe my present good health to the teachings of Christian Science.

CALVIN C. HILL, Boston, Mass.

---

Although I was raised in the Christian doctrine, I had many adversities to meet in later years, for unity of heart and mind, equality in kindness, and love were not found in our home. This condition induced me to investigate Christian Science, and shortly after, my twenty-months-old child suffered from indigestion. The physician gave me to understand that the child would not live more than three years, but Science effected the healing in three weeks and the child is now nine years of age. This elucidated for me the Scripture passage: "O death, where is thy sting? O grave, where is thy victory?" I thank God, who has given me the victory in Christ.

Through this teaching I came into the spiritual perception of our heavenly possessions on earth, and that the worldly and earthly have no place in God or in right consciousness.

A short time ago I went to the bedside of a sick one over whom the death sentence had been pronounced, but by knowing that through the reappearing of the Christ-idea, we have eternal life, relief was realized. The young man, who had been afflicted with a terrible disease, is entirely healed and well. "Blessed are they that hear the word of God and keep it."

MRS. FRIEDA SCHMIDT, Denver, Col.

---

In April, 1903, I had the nerve of one of my front teeth devitalized and taken out without pain, and the outer cavity filled with gold.

The filling seemed perfectly satisfactory until two days after it was completed, when the tooth suddenly began to ache. As it did not respond in the least to my treatment, I went to the dentist and asked him to examine it. He found that in hammering the gold in, the inner filling had been pushed too far up into the apex of the tooth and that the filling would need to be taken out.

The parts were considerably inflamed and the dentist said that it would be impossible to refill it for a week at least.

This was Thursday night; I was to leave town for the mountains at eight o'clock on the following Saturday morning and would not have another opportunity to have the work done for two months. I explained the situation to him and he said he was sorry but could do no better than put in some temporary substance on Saturday morning. To this I replied that I had planned to go away and felt that I must have the work done, and he finally said that he would fill it, provided I could stand it to have the tooth touched. That evening and the next morning I tried earnestly to make the demonstration, but the tooth seemed quite sensitive still when I set out to the dentist's office. On the way I asked a Scientist for help, but it was not until I was seated in the chair that the sense of pain was destroyed. The cavity was large and I was in the chair seven hours with a rubber dam and clamp on the tooth nearly all the time. When it was finished the dentist said, "You have been one of the best patients I ever had; Christian Science is very effective; I wish all my patients would have that kind of treatment."

Several times before this, I had had very trying experiences and so I feel very thankful for this demonstration. I wish to express my gratitude to Mrs. Eddy for her unselfish love toward all mankind.—J. E. C., Gresham, Col.

---

I am only a little girl eleven years old. I live in Monroe, Neb. About six years ago I was sick with the heart disease. I was in bed for six months. Four different doctors came to see me and they said that they could not do anything for me. They said that if I ever got well I could not run and play as other children did.

One day my aunt came to see me. She asked mother if she would let me be cured by Christian Science. Of course mother said yes. We did not believe in it at all. In about a week after that I was able to walk around, and I can run and play like other children. I am so thankful to Mrs. Eddy for teaching us the way.

FERN VAN ALLEN, Monroe, Neb.

I should like to tell of my healing which seems to be an uncommon case. I was for several years in the habit of taking morphine when suffering from severe attacks of pain that seemed chronic. The habit so grew upon me that for over a year I was almost constantly under its influence, but lacked the moral courage to ask for help, till through a mistake an overdose was taken and my life was saved only by Christian Science.

A short time afterward the sense of bondage seemed to grow so strong again that help was asked to overcome it. After two treatments, there followed a night of peace such as I had not known for years, and the desire never returned. Can we ever thank our Leader enough for the light she has given us that makes us free indeed.

A. E. D., Provo City, Utah.

---

I wish to express my gratitude for what Christian Science has done for me. It has been a spiritual uplift rather than a physical, although my health has greatly improved now that I am beginning to understand the Principle of being. The feeling of peace and harmony has manifested itself stronger in the past week than ever before. I have come to the realization that no human being or material belief can mar the perfect joy of Truth. The thought, "Life is eternal" (Science and Health, p. 246), has helped me greatly to demonstrate over the limitations of time.

MABELLE E. EVERETT, Orange, Cal.

---

I should like to express the gratitude I feel for what Christian Science has done for me. I have studied for more than three years, and one ailment after another has been healed until I feel like a new person. I have been a channel for the healing of others, but the spiritual uplifting and a clear understanding of the Scriptures is more than all else. Thanks to God and Christian Science.

J. H., Spencer, Wis.

---

My business is to get the light into my own soul, and then associate with those who can, generally speaking, march with me. I think as one grows older one grows more profoundly thankful that there are messages so absolutely different from one's own—different expressions of "the same spirit that worketh in every man severally as He will."—DR. RAINSFORD.

### Notice.

Members of the Mother Church who have changed their name by marriage will please notify the Clerk and send $1.00 for change of name in the published list of church members.

---

### A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

---

OUR LEADER'S MESSAGE.—The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

---

COMMUNION MESSAGE, JUNE, 1902.—The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy; $4.50 per dozen copies, prepaid.

---

CHURCH MANUAL.—Containing all the By-Laws of the Mother Church to date, August 1, 1903. Also list of members, including those admitted June, 1903. Price, single copy, prepaid, $1.50; six copies to one address, $7.00; twelve copies to one address, $12,00. Address all orders to

JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

---

DER CHRISTIAN SCIENCE HEROLD.—A monthly magazine printed in the German language, containing about thirty-eight pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

---

REMITTANCES.—Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchange on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

---

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

---

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

---

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

---

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Religious Items.

The Rev. F. M. Bennett, in an article in *The Christian Register*, says:—

"In the mind of John the Baptist the day of judgment was to be somewhat deferred. . . . With Jesus the punishment was not to be deferred. His moral and spiritual teaching was for the present rather than for the future. . . . True repentance brings the fruits of repentance at once. The kingdom of God was not to be here, or there, or then; the kingdom, such as it is, is now and within you. The 'wrath of God' has already fallen on you for your evil, and the rewards of righteousness are present in your character. The actual touch of the Holy Spirit is a cleansing fire for the soul. The divine judgment makes a clean sweep of the threshing-floor of human life. By its own motives and acts, character gathers the wheat into the garner, and burns the chaff in the fire of the spirit. The judgment, the sentence, and its execution are immediately performed. The judgment day is not deferred. It is now and here. The court of character is continuously in session, and has no adjournments. In human life the sheep and the goats separate themselves, and each soul inevitably goes to the place assigned by the quality of its life.

"People sometimes speak with a kind of reflective horror, a far-off, disdainful pity in their tones, of the pictures of physical and spiritual torture of the future hell which were drawn by such men as the great Jonathan Edwards and the noted revivalists of the past. People sometimes speak as if they were glad to be released from the old fear of these threats, never realizing that the present hells into which they plunge themselves by their sins and evils are, in fact, a thousand times more to be dreaded. That old-time future hell was not comparable to the punishment which is actually given to the evil life now and here. As we sow, so do we reap, evil fruit for evil seed; and the crop is not long in growing. This is the fact which modern science is continually proclaiming. The hell of science is more sure and fearful than the old hell of theology. The old theology said you *will* be damned for your sins. Modern science says, Your sins not only have damned you, but they kill you, body and soul, so that you may drag through this world little better than a corpse, with not even enough life to realize that you are practically dead.

"We can become appreciative of the true beauty and worth of the world and its life if we persistently cultivate the power to see it at its best, and guard against these impurities of our lives that are sure to blur our vision. We may find our heaven here and now if we will make ourselves strong and pure enough to enter into the rewards of righteousness,—the rewards which come only with right living, right thinking, right action, and the diligent search for that which is true and good and beautiful. But no way of *selfishness* can lead to such a heaven.

"We are our own judges, and we go *now* each to our own place, according to the quality of life which we can gain. We ourselves separate the chaff from the wheat, cleanse our own threshing-floor, and burn the refuse in the unquenchable fire of the divine spirit which burns within us. This is our judgment day, and every to-morrow in this world must be another."

Albert E. Waffle, D.D., says in *The Watchman:* "God wants all His creatures to be happy. To prove this proposition four arguments may be adduced, all of which taken together put the question beyond controversy. One is from the Fatherhood of God. No human parent worthy the name of father or mother wants his children to be miserable; Jesus taught us to believe that God is a father more loving, tender, and compassionate than any earthly parent. Another argument is from the fact that happiness is normal. We are constituted for it by the hand of Him who made us. When we are well and strong existence itself is a pleasure. Happiness promotes health of body and mind while misery is impervious to both. Most creatures spontaneously, like the singing birds, express their delight in life. A third argument may be derived from the ministry of Jesus. He expressed the mind of God towards us. A large part of his ministry was devoted to alleviating suffering, to making the miserable happy. My final argument is drawn from his teaching. Of course, his main purpose was to make us good; but he recognized the fact that we could not very well be good unless we are happy And so, much of his discourse is occupied with instructions about the conditions and means of obtaining happiness."

The Rev. W. H. P. Faunce, D.D., in his baccalaureate sermon at Brown University said: "If our young men and women too often think little of the powers of the world to come, is it not because the conventional heaven is a combination of orientalism and formalism, which to us is utterly unreal? Under the influence of popular hymnology, we have made heaven a mere state of marble fixity and passivity, of correct stagnation, from which generous, eager spirits revolt. 'Rest for the weary'—that heaven will do for the sick, the defeated, the aged; it has no charm for the strenuous occidental manhood which wants nothing so much as a great task with a great result. The heaven of Jesus was a place of responsibility, vicissitude, and enterprise. 'Have thou authority over cities;' 'I will make thee ruler over many things;' 'Enter into the joy of thy Lord'—such was the heaven of Jesus, throbbing with vital action and aglow with further conquest. To get behind all traditional conceptions and venerable formulas, and stand face to face with the eternal verities of the spiritual world—far more real than all the world that touches eye and ear—is the distinguishing desire of the truly religious man to-day."

The presence of our fellow-beings is a great blessing, but many are sorely tempted thereby. One feels envy, jealousy, pride, contempt, and bitterness when he looks upon his neighbors. Another is cold, indifferent and impatient. The inequality in condition has caused a world of discontent and envy. Sometimes those who prosper most are least worthy. The Psalmist was sorely tried when he saw the prosperity of the wicked. But when he went into the sanctuary his eyes were opened. He saw that worldly prosperity is hollow, that inequality in the condition of men is chiefly in the outward appearance, that the saints of God have something better than prosperity, better than success, better than the world. Worldly greatness is a ridiculous fiction. True greatness is in the heart.

*The Christian Advocate.*

Faith means the giving over of our lives to God for such a use as He shall choose to make of them. Energy finds its opportunity in obedience and service. It is the paradox of the Christian life that power comes with surrender. He that loseth his life shall save it. When we hold our lives for Christ we hold them at once more loosely and more powerfully than before. They may consist of only ordinary powers in humdrum circumstances, but Christ will use them. And we may not measure the value or the fruits of his chosen use, any more than Peter could have foreseen or foretold the fruits of his life consecration to the teacher who became his Saviour and his lord.

*The Congregationalist and Christian World.*

Our sins will not keep still: at the time we most wish them to hush they set up an incriminating hubbub of noises. It was written a long time ago but it is still true, "Be sure your sin will find you out." Our own characters will display it. Our sin may be done in the secret recesses of Amalek, but its consequences will appear at Gilgal.

*The Standard.*

*The Watchman* observes: "There is a great difference between taking things as they are, and acquiescing in things as they are. We have to do our work on the basis of recognizing the hard facts of the situation, but no man benefits the world who does not do something to make things more as they should be."

*The Watchman* says: "Some intellectual difficulties that men find to an acceptance of Christianity are undoubtedly real and genuine, but many others are the pretexts of those who speak to evade a mode of life approved by their moral natures."

There is but one sovereign will in the universe, and against it none other can contend. . . . The eternally right and the eternally good will prevail by the power of eternal God.—REV. R. J. CAMPBELL.

Before we can bring happiness to others, we must first be happy ourselves, nor will happiness abide within us unless we confer it on others.—MAETERLINCK.

What is it to be like Christ? It is to be able to take what is sweet and wholesome out of life everywhere and put it into other lives.—REV. P. F. MARSTON.

What is defeat? Nothing but education; nothing but the first step to something better.—WENDELL PHILLIPS.

Levant, divinity circuit, leather lined to edge, round corners, gilt edges, silk sewed, each, prepaid . . . . . 5 00
Twelve or more to one address, each, prepaid . . . 4 75
Orders for Miscellaneous Writings in lots of twelve or more to one address may include any or all of the different styles of binding.

No discount will be allowed on orders for twelve books which include both Science and Health and Miscellaneous Writings.

**CHRIST AND CHRISTMAS,** an Illustrated Poem.
Single book, prepaid . . . . . $3 00
Twelve or more books to one address, each, prepaid . 2 50

**RETROSPECTION AND INTROSPECTION.** A biographical sketch of the author. The way she was led to the discovery of Christian Science; its growth and fundamental idea; 120 pages, cloth covers, gilt edges. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**UNITY OF GOOD.** It lays the axe at the root of error, elucidating and enforcing practical Christian Science, thus affording invaluable directions for all true Scientists. The following are some of the topics treated: SEEDTIME AND HARVEST, DEEP THINGS OF GOD, THE EGO, DEATH, SAVIOUR'S MISSION, SUFFERING FROM OTHERS' THOUGHTS, CREDO, MATTER, SOUL. 80 pages, cloth covers. Prices, prepaid, 55 cents; $2.50 half dozen; $4.50 per dozen. Leather covers (pocket), $1.00 each; $5.00 half dozen; $9.00 per dozen.

**PULPIT AND PRESS.** A unique work of importance in the history and to the readers of Christian Science; containing Dedicatory Sermon delivered at the Mother Church, and scintillations from the press on that occasion; 132 pages. Prices, prepaid, $1.06; $5.00 half dozen; $9.00 per dozen.

**RUDIMENTAL DIVINE SCIENCE.** An interesting and valuable book, containing a brief and concise statement of Divine Science, *alias* Christian Science, in the form of questions and answers. It is a very succinct statement of Christian Science. 35 pages. Leatherette covers, gilt top. Prices, prepaid, 37 cents; $3.00 per dozen.

**NO AND YES.** A brief statement of very important points in Christian Science. 56 pages. Pebbled cloth covers. Prices, prepaid, 27 cents; per dozen, $2.50.

**CHRISTIAN SCIENCE *versus* PANTHEISM.** The Pastor Emeritus' Message delivered at the Communion Season in the Mother Church in Boston, June, 1898. A clear and strong refutation of the charge that Christian Scientists are Pantheists. Leatherette covers; 21 pages. Prices, prepaid, 26 cents; per dozen, $2.50.

**MESSAGE TO THE MOTHER CHURCH.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1900. Deckle-edged. Prices, prepaid, 26 cents; per dozen, $2.50.

**OUR LEADER'S MESSAGE.** The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Prices, prepaid, 50 cents; per dozen, $4.50.

**COMMUNION MESSAGE, June, 1902.** The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Prices, prepaid, 50 cents per copy; $4.50 per doz. copies.

**CHURCH MANUAL.** Containing the By-Laws of the Mother Church, also list of members. Price, one copy, $1.50; six copies to one address, $7; twelve copies to one address, $12.

**CHRISTIAN HEALING.** A sermon delivered in Boston; 17 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**PEOPLE'S IDEA OF GOD.** A sermon delivered in Boston; 14 pages. Paper covers. Prices, prepaid, 21 cents; $2.00 per dozen.

**FEED MY SHEEP.** Words by Mary Baker G. Eddy. Music by Lyman F. Brackett. Prices, prepaid, 50 cents per copy; $5.00 per dozen.

Direct all orders for above works, and make remittances payable to

# Published by The Christian Science Publishing Society,

95 Falmouth Street, Boston, Mass.

## The Christian Science Journal.

**Founded April, 1883,**

By the author of "SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES," THE REV. MARY BAKER G. EDDY, Discoverer and Founder of CHRISTIAN SCIENCE.

Official Organ of The First Church of Christ, Scientist, in Boston, Mass.

The Journal is published on the first of each month, and contains interesting reports of cases of Spiritual and Physical healing as well as instructive discussions of the Principle and the Practice of Christian Science.

**Terms of Subscription:**

Payable in advance, postage free, to any part of the United States, Canada, or Mexico. Two Dollars per annum: One Dollar for six months; Single Copies, Twenty Cents; Foreign Subscriptions, $2.40 per annum; $1.20 for six months.

## The Christian Science Quarterly.

**Published January, April, July, and October.**

Contains the Lesson-Sermons, which are read at the Sunday Services throughout the year in all the Christian Science Churches.

**Terms of Subscription:**

One copy, one year, 50 cents; Fifty copies or more to one address, one year, each, 50 cents. Foreign Subscriptions, one copy, one year, 60 cents. Postage prepaid to any part of the United States, Canada, or Mexico.

No subscription received for less than twelve months.

**Terms of Sale:**

One or more copies, postage paid, each, 15 cents; Fifty copies or more to one address, each, 12½ cents, postage paid.

## Miscellaneous Publications.

**COMMUNION HYMN.** "Saw ye my Saviour?" Words by REV. MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. Price, 50 cents per copy; $5.00 per dozen. Words used by special permission of Mrs. Eddy.

**THE MOTHER'S EVENING PRAYER.** A Poem by MARY BAKER G. EDDY, music by WILLIAM LYMAN JOHNSON. For soprano or tenor, C sharp to A; for lower voices, B flat to F. Price, $1.00 per copy, $9.00 per dozen.

**THE CHRISTIAN SCIENCE HYMNAL.** Cloth, per copy, prepaid, $1.15 each; per dozen, $9; per half dozen, $5. Half Morocco, per copy, prepaid, $1.40 each; per dozen, $12; per half-dozen, $6.50. Full Morocco, $2.50 each. Levant, $3.50 each.

**THE MOTHER CHURCH.** By JOSEPH ARMSTRONG. A History of the Building of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass. 103 pages. Illustrated. One copy, $1.50; Six copies, $7.00; Twelve copies, $12.

**THE NEW WORLD. 1492, 1866, 1892.** A Poem by CAROL NORTON. Illustrated in photogravure. Bound in cloth, 75 cents.

**WOMAN'S CAUSE.** By CAROL NORTON. A review of the work of the women of history. Paper, 32 cents. Cloth binding, 45 cents.

**THE REVELATION OF CHRISTIANUS,** and twenty other poems, by the EARL OF DUNMORE. Dedicated by special permission to the Rev. Mary Baker Eddy.
Sixty-two pages. Bound in white ribbed cloth, gilt top, lettered in gold on back and sides. Pages red ruled and illuminated initials. One copy, $1.25; six copies to one address, $6.00; twelve copies to one address, $12.

**For list of Pamphlets, Supplements, Tracts, and Reprints, see preceding page.**

SUBSCRIPTION PRICE:

Single copy, one year, one dollar.

Ten copies or more to one address, one year, each copy, ninety-five cents.

Twenty-five copies or more to one address, one year, each copy, ninety cents.

Fifty copies or more to one address, one year, each copy, eighty cents.

For Foreign subscriptions add, for postage, fifty cents per copy to rates given.

Six months' subscriptions received at half the above rates.

No subscription received for less than six months.

Subscriptions to the *Sentinel* will be entered to begin with the first of the month

The date of expiration may be found on the address. No other notice will be given.

TERMS OF SALE:

Three cents a copy, postpaid, to any address; twenty-five copies, fifty cents; fifty copies, ninety cents; one hundred copies, $1.65.

Foreign: Four cents a copy, postpaid, to any address; twenty-five copies, seventy-five cents; fifty copies, $1.40; one hundred copies, $2.65.

*Entered at the Boston, Mass., post-office as second-class mail matter.*

## Items of Interest.

**National.**

Secretary Root has been in correspondence with Governor Taft regarding the construction of a system of railroads in the Philippine Islands, amounting to some six hundred miles. It is proposed to build a line from Manila north through Luzon to the harbor at the northernmost end of the island. Another projected line is a branch from this north and south line over the mountains to the eastern coast. Another proposed line is from Manila south to Batangas. It has been suggested also that a line be constructed along the west coast of Luzon from Dagupan, the present terminus of the Manila & Dagupan road, to the north end of the island.

Secretary Root believes that the construction of these roads would be of immense benefit and would settle for all time the question of possible insurrection in the Island of Luzon. For police and patrol of the roads, it is believed, would be far superior to regiments of soldiers, while the expense for troops would be nearly double the amount of interest the Government would pay on the cost of the railroad construction.

There have been purchased for the new Philippine coinage, 9,711,506 ounces of silver for which $5,145,762.53 was paid. The profit in the shape of seigniorage will go toward the redemption fund. Congress at the last session authorized the printing of silver certificates for the Philippine pesos. The Bureau of Printing and Engraving is now printing the first instalment of these bills amounting to five million pesos, equal to about $2,500,000. Under the law these certificates cannot represent less than two pesos, and may be in any amount up to ten pesos. They are receivable for taxes, revenues and all public dues, and when so received may be reissued. The present issue will be in denominations of two, three, and five pesos. The bills differ from ours in being an inch smaller on both length and width.

Full confirmation of the irregular conditions in the Indian Territory is contained in the official report just completed by Special Agent Brosius of the Indian Rights' Association. The report mentions members of the Dawes Commission of the Department of Justice and of several other branches of the Government service as members of companies involved. Special Agent Brosius declares that trust companies and land sharks have been operating for a long time in securing lands from Indians without giving them adequate return.

One of the results of the investigation of the postal service will be the abolition of the office of General Superintendent of the free delivery service, as the rural free delivery and the city delivery already have a superintendent, who attends to the details of the two branches.

It is understood that Secretary Root will place his resignation in the hands of the President before his departure, on the 22d inst., for London to attend the session of the Alaska Boundary Commission, of which he is a member.

After the passing of the Irish land bill by the House of Lords and the putting on the basis of law a new experiment in the solution of that ever-recurring question, Parliament was prorogued until November 2.

The thirty-seventh annual encampment of the G. A. R., occurred at San Francisco last week.

**Foreign.**

A German contemporary says that the expenditure for the German army and navy for the year 1902-'03 amounted to 985,100,000 marks, while that for other great Powers was as follows: Great Britain, 2,124,000,000 marks; United States, 1,482,600,000 marks; Russia, 1,080,200,000 marks; France, 927,200,000 marks; Austria-Hungary, 408,800,000 marks; Italy, 252,800,000 marks, and Japan, 218,500,000 marks.

The Colombian Senate has rejected the Panama Canal Treaty. By the terms of the Spooner act, failure to ratify this treaty was to be followed by reopening consideration of the Nicaraguan route. The treaty, however, after some slight changes have been made in its terms, may again be brought before the Colombian Congress by President Marroquin.

Minister Conger at Pekin has secured a written promise from Prince Ching to sign, on October 8, a treaty with the United States which will include a guaranty that Moukden and Tatungtao shall be open ports.

The Mexican Government has issued orders prohibiting Chinese from landing at the Western coast towns along the Gulf of California.

The Marquis of Salisbury, late Premier of Great Britain and one of her most distinguished statesmen, passed away Saturday, August 22.

**Industrial and Commercial.**

A new trade route to the Far East is said to be assured by an agreement between the Hamburg-American Steamship Company and the Orient and Wabash railroad. There will be a line of steamers on the Pacific from Port Stillwell to China via Hawaii and Japan, while the Orient and Wabash railroads will afford direct connections between the Atlantic and Pacific. As the Hamburg-American line has in addition to its trans-Atlantic routes steamers running to the Orient via the Suez Canal, this new agreement will result in a system completely encircling the globe.

A factory where all the employes are blind is in prosperous operation in Philadelphia. This factory does a business of over $100,000 a year. Its superintendent is blind, its book-keeper is blind, its 125 workmen are blind. Nevertheless, its various products have an enviable reputation for excellence.

Carpet-weaving and chair-caning are two of the most important industries carried on. The men work 10 hours a day, and they earn from $8 a week up to $10, and even $12. They are self-supporting; about two-thirds of them are married.

The North German Lloyd steamer, Kaiser Wilhelm II., arrived at New York on the 18th from Bremen, Southampton, and Cherbourg after a fast run of five days, fifteen hours, and ten minutes over the short course of 3,052 miles, at an average speed of 22.58 knots per hour. The best previous westward record of the Kaiser Wilhelm II. was made May last, and was five days, twenty-one hours, and forty-eight minutes.

Renewed activity and fresh discoveries of rich gold ores are reported in Mexico, which has yielded vast returns of the precious metal for the crude mining processes of the past. Now expert American and English miners, with the latest methods and machinery, are taking hold of so-called "worked-out" claims and opening new ones, and the industry is rapidly assuming large dimensions.

Vast irrigating enterprises are under way in various parts of the West, and two hundred thousand acres are to be reclaimed by utilizing the waters of the Snake River alone. The main canal is eighty feet wide at the bottom and carries a volume of water ten feet deep. The total length of the canal system will be about one thousand miles, and the farthest area watered will be about seventy miles from the fall.

The survey for the trolley line between San Juan and Ponce, which will be constructed at a cost of $3,000,000, has been completed. The survey was made from both ends of the line, and the surveyors met between Cayeya and Aibonito.

**General.**

By the initiative of Professor E. Doumergue, of the Theological Faculty of Montauban, France, and perhaps the greatest living exponent of Calvinism, the Société du Musée historique de la Reformation at Geneva has resolved to erect an expiatory monument on the spot where Michael Servetus was executed three hundred and fifty years ago. The monument is to be erected by the friends of the great reformer of Geneva, as an expression of sorrow for the one great mistake of his life. The inscription for the monument has not yet been fixed upon, but will probably include the following: "To Michael Servetus, burned for his convictions at Champel, 27 October, 1553, victim of the religious intolerance of his time." Professor Doumergue merits the gratitude of the age. No other such monument has ever been erected.

A Scientific expedition, financed and led by an American, Major W. C. Daniels, who served in the Cuban War, will leave Southampton September 1 for New Guinea. Major Daniels will be accompanied by Dr. C. G. Seligman, a member of the Cambridge anthropological expedition to Torres Strait and Sarawak, Borneo; Dr. William Strong of Trinity College, Cambridge, and A. P. Dunning. Major Daniels has equipped a schooner and the Royal Geographical Society has furnished the instruments. The Royal Society and the British Government are helping the expedition financially.

Mr. Joseph Pulitzer, proprietor of the *New York World*, has given $2,000,000 for the establishment of a School of Journalism in connection with Columbia University. The relation of the School to the University will be like that of the other professional schools, and a fine building at an expense of $500,000 is to be erected for it.

Edwin A. Abbey is at work on his large painting of the coronation of King Edward. It seem that the order for this work was not given by the Government, but by the Agnews. It is said that when the work is finished it will be sent to this country for exhibition. The king and queen have already given the artist sittings.

## From our Contributors.

### Meeting Difficulties in Metaphysics.

CLARENCE A. BUSKIRK.

SUCH is the nature of every metaphysical truth that when it is superficially studied it excites doubt, and may even seem to be self-contradictory and absurd; but when thoroughly weighed and tested it dispels doubt and converts the apparent self-contradictions and absurdities into additional proofs of its trustworthiness; and this for the reason that all true philosophy can never be found at fault in the slightest particular when the square and compass of pure logic are applied to it. The tests we are quite likely to apply to a philosophical or metaphysical proposition, when we approach it in a superficial way, are not the square and compass of pure logic, but, on the contrary, they are tests which are a compound of ideas and habits of thinking that have come to us largely through the deceptive avenue of our physical senses.

A straight line may seem crooked when viewed through a distorting medium, and such a medium is human prejudice which warps and perverts well-nigh every good and beautiful thing. It is the experience of every reader of the Christian Science text-book that many of its statements seem, at the first reading at least, to be enigmatical, and some of them perhaps self-contradictory. If the reader take up the text-book as a hostile critic this result is quite sure to follow, and he may be led to close his inquiry and possibly become yet more hostile.

The writer personally knows of the instance of a clergyman of fair repute who announced that he would preach a sermon on the next Sunday upon Christian Science. He then borrowed the text-book, so that he had only a few hours to study it, having never looked at a page of it before, and when the time came, actually presumed to denounce it as a tissue of foolishness and falsehood. This was a flagrant instance, of course; and it is plain that such amazing narrowness will always be found like Moses on Mount Nebo, with no power to enter into the land.

Intellectual narrowness is a common fault, and many readers of Christian Science literature, although free from all conscious bias at the outset, mistake the limitations of their own ignorance of this subject for critical acumen. They are too much like the New Zealander who, because he had never seen anything of the kind, believed the missionary's description of ice to be an attempt to deceive him with an absurd falsehood. It is difficult, and often it appears to be useless, to reason with these people. Their preconceived ideas hang down like a thick curtain before their intelligence, and it is a matter of common observation that the critic who is most ignorant is likely to be most egotistical and unconvertible.

The readers of the Christian Science text-book may be divided into four classes: those who are hostile critics at the outset, and who persist in reading its lines, and often between its lines, through colored glasses; those who are reasonably free from adverse prejudices at the outset, or whose prejudices may be even inclined favorably, but who seem to be so equipped as reasoners that they are wholly unable to weigh a metaphysical proposition in the scales of pure reason, and invariably are found weighing it in the scales of their own incomplete or erroneous sense of things; those who find many of the metaphysical propositions difficult to omprehend for a long time, but who are fortunately brought into observation of its practical "works," so that their incredulity never solidifies into the unteachable conceit of either Pharisee or Sadducee, and is at last slowly dissipated like a mist, as the gray dawn deepens into the radiant day; and lastly those, comparatively few in number, whose habits of thought and religious experiences, from the very beginning of their search, render it possible for the logic of Christian Science to come to them as the unveiled presentment of Truth.

Although there are many metaphysical propositions whose verity is as absolute and indubitable as the proposition that two parallel straight lines can never meet, they are, nevertheless, of such a nature that it is difficult either to prove or explain them in the language of common experience. This difficulty in putting an abstract idea into a concrete mould explains why metaphysics has so largely baffled even the most acute intellects; why the most profound metaphysicians are frequently found wholly to misunderstand each other, and this is why the Nazarene found it so difficult to teach even his immediate disciples by means of abstract propositions, and resorted, in consequence, so largely to parables, and placed his main dependence, after all, in the "works" which he did to persuade them of the genuineness of his mission and the veracity of his doctrines. This is why Christian Science must rely mainly upon its physical demonstrations, such as the healing of the sick, to persuade the world of the soundness of its metaphysics. Tell a young child, or even the adult of some living barbarian tribes, that twice three is six, and the listener may fail to grasp the idea clearly, and merely "believe that he believes;" but take physical objects and demonstrate the abstract rule before his eyes, and the way is found to make him understand, and so persuade him that the proposition is of some value.

There are some Christian Scientists whose understanding of the metaphysics of the new-old religion is so constant and cloudless that they never relapse into those darker periods when the mists seem to rise about them so that they, for the time only, "believe that they believe." But there are many others whose understanding has not attained to such excellence. Let these remember, when their periods of darkness come, that the shadows of night always rise from the earth and never descend from above. And, above all, let them not despond. The measure can be filled and emptied even many times, and yet be filled again. The lid may seem to grow tired, and may fall down over the eye, but if the light of the eye remain, it shall see again. "Nevertheless when it shall turn to the Lord, the vail shall be taken away." It is our duty never to suffer ourselves to let discouragement darken our vision, "while we look not at the things which are seen, but at the things which are not seen."

When the adherents of a theology which has no "works"

Copyright, 1903, by Mary Baker G. Eddy.

Digitized by Google

like that of Jesus, becomes entangled in the intricacies of its metaphysics, it is a Cretan labyrinth from which they may never find a safe deliverance. But our state as Christian Science adherents is happily different. Though the metaphysics may become to us a labyrinth at times, yet the thread by which we may find our way again from darkness into light remains in our hands. One instance of spiritual healing in accordance with the metaphysics of Christian Science brought to our knowledge after we have gained an intelligent insight, suffices to renew a faltering faith and to dispel the earth-born shadows of the night of doubt and restore the joyous radiance of the sunlight of an assured and trusting conviction. One assured instance proves the rule, for there could be no such instance if the rule did not exist; and failures are only negative evidence which can have no just weight whatever against the affirmative proof. No matter how many mistakes and failures may be met with on account of our failing to work our problems correctly, the working of even one problem successfully according to a scientific rule and because of the rule, unveils the rule as an eternal and unchangeable verity. We may puzzle and split hairs over the metaphysics involved in the rule, but assured "works" under the rule ought, in all sound reason, to fortify our consciousness of the rule as an ever-acting force against all disquieting doubts thenceforward.

## The Work in Germany.

O. G.

THANKS to our dear brethren in Truth, who bring us greetings from the branch churches when passing through this city on their travels. Thanks to them for their kindness, for the brotherly spirit they exhibit in proffering help and assistance in thought to the workers collecting around the Berlin Church. Thanks to them for telling us how the work in Germany is being observed. Thanks to the observers, who give us the assurance of the oneness of thought which governs all those working in Truth, and renders them a closely connected and formidable army of God's men.

Frequently have we been told here how much we require the active help from the branches in the home country, because the Germans, as a rule, are so conservative and, on that account, difficult to approach and slow to accept the truth.

My personal experience with Germans, among whom I have a large acquaintance, being myself one by birth, is, that the average business man is rather quick to see his advantage, quick to know a good thing when he sees it, and quick to take a good hold of it. Such methods have given to the German commerce the proud position of being second only to the English. I don't think I should call such men conservative.

There are in this country many doctors and professors working and striving for new discoveries and the gain of knowledge in all the known arts and sciences, in many of which they, as a class, easily take a leading position before their brethren and co-workers. Such men also I would not call conservative. Among the politicians here, there exists a large party of men called Social Democrats who, in their dissatisfaction with existing conditions, would like to turn things upside down and inside out. To call such men conservative would be mildly erroneous, I think. But of this fact I am sure, and I think my co-workers in this field will agree with me, that the above-enumerated progressive and avowedly non-conservative people are not a bit more ready to accept the truth than the so-called conservative Germans.

The belief in conservatism is apt to prove a stumbling-block to the timid, but is not able to keep anybody out of Science.

What, then, is that which seems to make it difficult for the Germans to embrace the new-old idea and so to swell the rank and file of those calling themselves Christian Scientists? Permit me here to refer to my own experience. I find that before I ever heard of Christian Science, the only reason why I had not then accepted and embraced the truth, as I have now, was because I never heard of it. Simple ignorance, and that not any more dense than in others, was the only cause why I did not become a Scientist earlier than I did.

That, dear brethren, is the reason why the Germans find it so difficult to see the truth,—their lack of acquaintance with the teachings of Christian Science. This is the mist which hovers over the stagnant waters, and which is being gently removed by the advancing light,—the illumination that is being brought by the *Herold* and all our other publications, the ever-increasing sale of which within the borders of this country I am able to report. Not help from outside, but truth and the declaration of it by the workers in this field, is needed to bring about more rapid growth.

The remarkable growth of Christian Science in this field has astonished all the many visitors who have noticed the few active workers, and they have commented on the earnestness of our congregation; surely a fact which speaks volumes for the honesty of the work of our little band of Scientists. They all know that it is their own individual thought and watchfulness which stirs the stagnant waters, and therefore they do not rely on help from others. That such help has been proffered and promised assures us of the kind and brotherly spirit which is entertained for us by the Field in the home country, and for that we are very grateful to all.

## Removing Limitations.

G. L. MC NEILL.

THROUGH the study and practice of Christian Science we are enabled to remove, little by little, the sense of limitation which has in so many ways prevented us from realizing that "the kingdom of heaven is at hand" and that "*now* are we the Sons of God." We learn that God is All-in-all, that there is no limitation to His goodness and power, that we are made in His image and likeness and have dominion over all. How this understanding frees us and helps us to help others!

Without this understanding one is liable to have a depressing sense of helplessness and limitation in the effort to relieve poverty, sickness, and distress. This sense of helplessness and limitation is due to belief in the reality of these seeming conditions,—the belief that they are God-imposed. When men learn, through the teachings and demonstrations of Christian Science, that God is the only Creator, and that His creation is harmonious and perfect, they know that poverty, sin, sickness, and death, being discordant and imperfect, have no abiding-place in His creation, hence do not exist. They know that with God all things are possible, and in proportion to their ability to remove all sense of limitation they are instrumental in casting out these illusions, which hold their brothers and sisters in bondage, and thus enable them to enter into the "glorious liberty of the children of God."

If we feel a sense of limitation as to means, let us remember the promise of our Master: "Seek ye first the kingdom of God, and His righteousness; and all these things shall be added unto you." How many of us seek the kingdom of God so that all these (material) things may be added. We may not acknowledge or recognize it, but the underlying thought is there and needs to be uprooted and cast out. This can only be done by persistent denial of material selfhood. We must be absorbed in seeking the kingdom, not in looking for results.

As we look to God as All-in-all and begin to realize that He is infinite, we begin to lose the sense of limitation in every direction. We can see that there is absolutely nothing that we need, because we have all, and we cease to have anxious thought.

## The Flesh-Pots of Egypt.

W. C.

IN searching for the "Promised Land" is it not a frequent experience to find ourselves reverting in memory to the "fleshpots of Egypt," as we encounter new and severer trials? Our first expectation was to reach the land flowing with milk and honey as soon as we made some special and convincing demonstration. With characteristic short-sightedness the ordinary mortal expects his escape from bondage to result in immediate and final happiness, and so the "Marah" and the "fiery serpents" come as startling surprises.

In our fight against more serious evils we sometimes forget our former servitude to the petty taskmasters,—fear, fretfulness, complaint, and selfishness. Then most of our time was spent in such service. But the fighting in the wilderness is against greater foes and requires much valor. At times our advance is so slow that we fail to realize that we are making any real gain.

One who has been emancipated from a continual belief in colds, for instance, and who has perhaps been entirely free for months or years, becomes greatly disturbed at finding himself momentarily overtaken by the old enemy. He forgets for the moment how glorious his sense of freedom has been since his captivity, and he is tempted to think with regret of the former days in which there was no demand upon him for a continuous warfare to maintain his position. The disheartened murmurer feels that it would be far easier to sit down by the "fleshpots" and submit to the taskmaster with a hopeless contentment. The Saviour emphasized the significance of this temptation when he said, "No man, having put his hand to the plough, and looking back, is fit for the kingdom of God."

We are apt to forget how very bitter the oppression was, as we proceed, and the smallest obstacles are magnified by closer proximity. It has been an occasional experience of the writer that the slightest approach of the symptoms of an old trouble which had apparently been vanquished, has occasioned intense momentary anxiety, whereas the ever-recurring attack in former days caused no disturbance whatever. Some of the distresses of the Israelites in the wilderness were as nothing compared with the burdens imposed by Pharaoh; but to suffer passively had required less exertion than persistent fighting for victory.

One of the first effects experienced by one who opens his heart to Christian Science thought, is an exhilarating sense of freedom and appreciative gratitude. But no sooner is this freedom fully realized than there are new paths to tread, new enemies to encounter, and disturbing elements and contentions to be brought into harmony. Then it is that we are tempted to recall the "fleshpots" of our former enthralled and sluggish thought which, without the whip of the oppressor, remained inactive. It was easier in a sense to be driven than to arouse ourselves to forceful activity.

The demand upon the Scientist to-day is to advance, to be continually overcoming, and this can be done by those only who are willing to forget the former enslavement, even though they did then "eat bread to the full." Doubtless many a student of Christian Science has remembered, in the midst of his search for the right, the former contentment of mind, when the knowledge of certain material remedies, ever at hand, kept the fear of sickness in abeyance. Alone in the wilderness with none but God to depend upon before the manna appears, our faith is tried again and again, but we have a great advantage over "our fathers," the children of Israel; we see that in spite of their murmuring and distrust, God graciously vouchsafed to them ample proof of His fulness and supply. More than this, we have the Master's assurance of a certain victory over even the worst of all enemies, death, in the promise of that life which is not dependent upon earthly bread.

Not in the memory of material relief offered by the taskmasters of error, but in dependence upon the manna of the present, can we find a sure entrance into the promised land.

---

## The Real Work of Christian Science.

J. F. MAYNARD.

THE popular idea of Christian Science is that it is primarily a system of healing of physical ailments. This has been indeed a prominent feature in the propaganda of Christian Science, but it is not the fundamental one.

That healing of physical ills does follow the study and realization of the truths of Christian Science is undoubtedly a fact, but this healing is itself a result. The prominence given to physical healing is natural. It attracts the attention of those outside the fold who might not be drawn to Christian Science by its promise of spiritual regeneration.

This was no doubt the reason why the Master answered the question of John, "Art thou he that should come, or do we look for another?" as he did, "Go and show John again those things which ye do hear and see: the blind receive their sight, and the lame walk, the lepers are cleansed, and the deaf hear, the dead are raised up, and the poor have the gospel preached to them. And blessed is he, whosoever shall not be offended in me."

Observe the arrangement of this answer. The spoken word is first in order of mention, but details of physical healing take up the greater amount of space, showing the reliance which Jesus placed on the evidences of physical healing to promote the entrance of the great truth of being into the popular mind; but he places at the end a promise of blessing, "Blessed is he, whosoever shall not be offended in me," which was addressed to those who receive the seed into "an honest and good heart."

Those who come to Christian Science solely for physical healing and, that obtained, seek no further, find their prototype in those who sought Christ for the loaves and fishes, and not for "the true bread from heaven."

"It is the spiritualization of thought and Christianization of daily life, in contrast with the results of the ghastly farce of material existence; it is chastity and purity, in contrast with the downward tendencies and earthward gravitation of sensualism and impurity,—wherein the real attestation of the divine origin and operation of Christian Science is to be found. Its triumphs are recorded in the destruction of error and evil, from which are propagated the dismal beliefs of sin, sickness, and death" (Science and Health, p. 272).

Our Leader points the way and it only remains for us to follow the path which she has blazed through the wilderness of materiality. The route will not always be easy. For centuries error has been flourishing and the undergrowth will clog our footsteps, but if we push on, guided by the directions she has given, we shall reach the goal we seek, and having reached that we shall have all.

"Seek ye first the kingdom of God, and his righteousness; and all these [material] things shall be added unto you."

---

## Legislation in North Dakota.

MARTHA SUTTON THOMPSON.

THE Christian Scientists of this state are pleased to chronicle the defeat of another legislative bill purposing to prohibit the practice of Christian Science.

Two years ago the attempt was made under the disguise of a measure to regulate the practice of medicine, but worded to exclude the practice of all other healing systems, but the bill introduced into the Senate at the legislative Assembly of the present year, came without disguise, as follows:—

Digitized by Google

"Be it enacted, by the legislative Assembly of North Dakota:—

"Section 1.—It shall be unlawful to practise Christian Science, faith cure, mind-healing, or other like agencies in the curing of disease.

"Section 2.—Any person convicted of the practices mentioned in Section 1 of this act, shall, for the first offence, be fined not less than twenty-five dollars nor more than fifty dollars; for the second offence, not less than fifty dollars nor more than one hundred dollars, and for each subsequent offence shall suffer imprisonment in the county jail not less than thirty days, nor more than sixty days.

"Section 3.—In case any child under the age of eighteen years, who is treated by any so-called Christian Scientist, faith-curer, or mind-healer, should die, and it is proved that said death resulted, or was hastened, by failure to call a regular physician, said Scientist, faith-curer, or mind-healer shall be deemed guilty of manslaughter in the second degree, and punished as provided by statute."

The bill was referred to Committee on Public Health, by whom it was returned to the Senate commended "favorable to pass."

Through the efforts of Senator Bacon, a staunch believer in Christian Science, it was recommitted, this time to the Judiciary Committee. Here it was that Mr. Bacon made his strong fight. The members of this committee seemed ignorant of the doctrines of Christian Science, and were, for the most part, inclined to favor the passage of the bill. Mr. Bacon's package of literature, which he had carried to the senate chamber daily, he now used to good advantage, reading from the pamphets "Legal Aspects of Christian Science" and "Hearings on Proposed Medical Bill," also extracts from Science and Health, and articles and testimonials from the Christian Science periodicals. This presentation of the nature and scope of Christian Science, and more especially the quoted opinions of educational men and decisions of eminent judges, led the committee to halt in their intent, and they sent the bill back to the Senate recommending that it be indefinitely postponed." This recommendation was almost unanimously concurred in by the Senate. Thus ended the most widespread, determined, and secretly manipulated attempt to legislate against Christian Science that has been made in this young state.

After the session the Christian Scientists presented Senator Bacon with a pocket edition of "Science and Health with Key to the Scriptures" in token of their gratitude, and appreciation of his arduous, fearless, and successful work.

## Love Reigns.

H. FRANCES R. NORWOOD.

Love reigns! Dear friend,
Be not discouraged nor repine;
But lifting thought and word and deed aloft,
Give thanks with grateful heart
For Love divine.

Our heritage
It is, to know the tenderness
Of ever-present Love beneath, around;
Sustaining with its power
Our helplessness.

O perfect Love!
Enrich us with Thy life;
Teach us to know Thee better, love Thee more;
Thus shall we find sweet peace
Beyond all strife.

## Selected Article.

### A Progressive Minister.

The Rev. E. D. Daniels, pastor of the Swedenborgian Church in this city, preached a sermon last Sunday morning in which he spoke of Christian Science in the following fair manner:—

Of late years a movement has started up which has grown to wonderful proportions. It has for one of its objects the healing of disease, not by hypnotism, spiritualism, animal magnetism, or anything of the kind, but by the power of God,—the healing of disease by coming near to, and forming a union with, the divine One who is the source of health. . . . It goes without saying that a movement which has already gained tens of thousands of adherents of whom a large proportion are intelligent and educated people; a movement which meets the want of thousands of longing souls; a movement which in certain quarters is thoroughly organized and has built grand churches; a movement which evidently has in it something of perpetuity,—it goes without saying that such a movement must have in it some elements of truth. And it is the part of candor and rationality not to attempt to frown it down, but to ascertain what truth and good there are in it.

It is certain that the Bible promises physical health as a result of religious faith or trust. In Exodus the Lord promises to take sickness away from His people. He healed Hezekiah of his sickness in direct answer to prayer, which we learn in Isaiah was an exhibition of divine love and mercy. In the Psalms we read of the Lord as one "who forgiveth all thine iniquities; who healeth all thy diseases." Says the Psalmist, "O Lord my God, I cried unto thee, and thou hast healed me." And again, "Fools because of their transgression, and because of their iniquities, are afflicted. Their soul abhorreth all manner of meat; and they draw near unto the gates of death. Then they cry unto the Lord in their trouble, and he saveth them out of their distresses. He sent his word, and healed them." But we need not multiply passages; the whole Bible, both Old and New Testaments, is full of them.

But lest it be thought that all these promises refer to spiritual sickness alone and not to physical,—to the sickness of the soul and not to that of the body,—let us see how the apostles understood the matter, for they were not only taught by the Lord in person, but were afterwards illuminated to understand his teaching. We read in the Acts that the father of Publius lay sick of dysenteric fever, and Paul prayed and laid hands on him and healed him. We find Paul rejoicing because, for the sake of his gospel work, the Lord had had mercy on Epaphroditus and healed him. We find James saying that "the prayer of faith shall save the sick, and the Lord shall raise him up." There were failures even among the apostles. Paul wrote to Timothy, "Trophimus have I left at Miletum sick." And in his own case Paul prayed that his thorn in the flesh, whatever it was, might be removed, but without avail. The reason was that Paul did not pray from the divine nature within him, but from his own selfish nature. Indeed, he saw afterwards that his thorn in the flesh was necessary for him lest he be exalted above measure. Paul needed something to keep him down. But had he emptied himself of his own will, and become truly humble, listening only to the Divine voice within him, his thorn in the flesh would have been removed; for there would no longer have been any use for it. It would have vanished as Paul's selfish state vanished. The Lord says, "If ye abide in me, and my words abide in you, ye shall ask what ye will, and it shall be done unto you," which means that if we abide in our higher nature, which is the Lord within us, and if we think, pray and live from that, then whatever we ask will be granted; nay, is

Digitized by Google

already granted, and will soon be realized to us. If we once grasp and cling to the Divine will, which will is to give us only that which is good, then evil, even including sickness, will disappear for us.

And what more reasonable? Our coming into and abiding in the proper state does not change God of course, but it changes the whole receptive condition of things. . . . Make the center of a person's being right, and all unhealthful and evil things will be put away from his circumferences. Let a person live from the Lord and not from self, and he comes into a state of order, and order will in good time follow in all the affairs of his life.

Extend this principle to include all temporal affairs, and you have the new gospel, or rather a new form of the old gospel. Formerly the great question was, "What must I do to be saved from hell?" To-day men care little for the doctrine of hell or heaven or anything else. This decadence of doctrine is no doubt temporary, but it is a fact. To-day men are interested only in the present. They want to be freed from sickness of the body, the cares of the world, and the struggle for existence. Once men feared the hereafter, now they fear the present. The gospel was powerful to save from the past fear, will it not save from the present? Once when men asked, "What must I do to be saved?" the reply was, "You are saved now if you would only believe it," and multitudes found it so; though their statement of it may have been faulty. So to-day when men ask, "What must I do to be saved from present sickness and troubles?" the same old reply holds good, "You are saved now if you would only believe it," and multitudes are finding it so; though they may not always state it quite correctly. It is the same blessed old gospel, only extended to meet the wants of the present age. The Lord has commissioned his ministers to preach a full salvation, and they are not faithful to their high calling unless they do so. Jesus himself said, "What things soever ye desire, when ye pray, believe that ye receive them, and ye shall have them." The Lord intends only good for us. He who is only goodness itself cannot intend anything else. And he who, in self-emptiness, and with an abiding trust, believes that the good intended for him is already his, will soon come into the actual realization of it.

## Among the Churches.

### Improvements in Richmond, Va.

The Christian Scientists of Richmond, known as First Church of Christ, Scientist, have removed their service to No. 709 East Main Street, which has been leased for two years. A part of the building has been fitted up appropriately for religious services and the other part furnished and equipped for a reading room.

The church has about thirty members, and an average attendance of about sixty. The society was organized about two years ago, and has grown steadily.

*Richmond* (Va.) *Times Despatch.*

### Progress in Alpena, Mich.

We have been organized three years, and the following are some of our demonstrations: A lecture, distribution of literature, a church building fund, and all expenses of the church promptly met.

For some time we have felt the need of a reading room, and after some difficulty a room was secured last fall in a very fine location. On Easter morning we held our first service in our new room. Our offering met all expenses of moving and furnishing, for which we are truly grateful. We feel that we are slowly but surely growing.

*Correspondence.*

### Laying of Corner-stone in Des Moines, Ia.

Members and friends of First Church of Christ, Scientist, assembled at the site of their new church on Eighth Street to participate in the exercises of the laying of the corner-stone, it being an eventful occasion for the local Scientists, who are erecting the first church of this sect in our city.

The corner-stone is of Concord granite, out of compliment to the founder of the church, Mrs. Mary Baker Eddy, who lives in Concord, N. H.

The services were conducted by the First Reader, and were composed of selections from the Bible and the Christian Science text-book.—*Exchange.*

To those who speak to you of heaven, and seek to separate it from earth, you will say that heaven and earth are one, even as the way and goal are one. Tell us not that the earth is of clay. The earth is of God. God created it as the medium through which we may ascend to Him. The earth is not a mere sojourn of temptation or of expiation; it is the appointed dwelling-place wherein we are bound to work out our own improvement and development, and advance towards a higher stage of existence. God created us not to contemplate, but to act. He created us in His image, and He is thought and action, or rather, in Him there is no thought which is not simultaneous action.—MAZZINI.

### THE NEW CONCORDANCE.

A COMPLETE CONCORDANCE TO SCIENCE AND HEALTH WITH KEY TO THE SCRIPTURES is now ready for delivery. This work has been compiled from the late revised edition of SCIENCE AND HEALTH, and contains about eighty thousand references (more than ten thousand words being indexed). It also contains an index to the Marginal Headings, and a list of the Scriptural Quotations in SCIENCE AND HEALTH. 595 pages, 10x7, bound in cloth, marbled edges. Price, prepaid, single copy, $5.00. Twelve or more to one address, $4.50 each.

Address all orders to JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

### THE CHURCH MANUAL.

The Church Manual, containing all the By-Laws of the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., will hereafter be sold separate from the list of members.

Price, single copy, prepaid, $1.00; six copies to one address, $5.00; twelve copies to one address, $9.00.

Address orders for above to

JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

### LIST OF MEMBERS.

Hereafter the "List of Members of the Mother Church" will be sold apart from the Manual. Price, single copy, 50 cents; six copies to one address, $2.50; twelve copies to one address, $4.50.

Address orders for above to The Christian Science Publishing Society, 95 Falmouth Street, Boston, Mass.

# CHRISTIAN SCIENCE SENTINEL

## Editorial.

### MRS. EDDY TAKES NO PATIENTS.

**The author of the Christian Science text-book takes no patients, does not consult on disease, nor read letters referring to these subjects.**

### The Manual.

THROUGH mistake, the salary of those who are called to the assistance of the Pastor Emeritus, by Section 10 of Article XXXII. of the By-Laws, was misstated in some copies of the 29th edition of the Church Manual. Those who have received copies of this edition will please return them to the publisher, to be exchanged for perfect copies, *providing the last paragraph of Section 10 does not read as follows:—*

"These assistants of the Pastor Emeritus shall be paid semi-annually at the rate of twelve hundred dollars yearly, in addition to rent, board, and traveling fare for the round trip."

### The Evidence Required.

JESUS said, "Let your light so shine before men, that they may see your good works, and glorify your Father which is in Heaven." These words should be engraved upon the heart of every Christian Scientist, for Christian Science is a religion of good works, and its standing before the world must depend upon these works. That Christian Science is glorious with the saving grace of Christ must be made known to humanity, if humanity is to be saved, but this does not mean that we shall be heard of men in the market-place or from the housetops, but rather that we shall be about our Father's business at all times and under all circumstances, and that we shall depend more largely upon what we do than upon what we say, to prove that Christian Science is the religion of Jesus; that it is accomplishing the mighty works that he said should be done by them that believe. If we have truly partaken of Christ's cup we shall not fail to manifest the Spirit in all good words and works.

The cry of the world is for healing,—healing of its diseases, its sins, its sorrows, its unbelief; and the grateful "Whereas I was blind, now I see," is the only convincing testimony to the world that will reach mankind and awaken the hope of salvation, here and now.

The profound gratitude for the ministry of Mrs. Eddy which every beneficiary of her labors must feel, can best be manifested by walking in the footsteps of our Master, in healing the sick and reforming the sinner. No matter what our other interests may be, or what calls there may be upon our time, we should see that this is made paramount; for the one true test of our understanding of Christian Science lies in this practical application of Jesus' teachings in healing the sick. "By their fruits ye shall know them," was his test, and that he was consistent is shown by the fact that a large part of the four gospels is devoted to the story of his healing work.

The healing accomplished through Christian Science has appealed to those who have had other religious affiliations as well as to those who were agnostics and infidels. To the former it comes as the fruition of their hopes; to the latter it is proof that there is a God, and that the record of the so-called miracles of Jesus' time is consistent and trustworthy. Every case of Christian Science healing stands forth as an answer to criticism and unbelief, and by this work we preach the gospel most effectively.

M.

### Temptation and its Overcoming.

"LEAD us not into temptation." How many lips daily repeat this prayer, and by how many it has been uttered since Jesus' disciples said to him, "Lord, teach us to pray."

Temptation as commonly understood would pre-suppose two conflicting interests forever warring against each other on the world's great battlefield—the human mind. The belief in more than one power has given rise to many strange theories, one of which appears in the story that temptation was first known in heaven and that it brought some of the angels to their downfall. This theory has, however, no support from the Bible, which teaches emphatically that God neither tempts nor can be tempted; hence His presence would exclude even the supposition of another influence or attraction; they could have neither place nor power.

This whole subject is embraced in the question, Is man a spiritual being, or not? If the answer be in the affirmative, then the theory of temptation may be readily disposed of, for as God, Spirit, is not subject to temptation, neither is the spiritual man.

To illustrate, good does not tempt, good inspires, purifies, exalts, and makes free. We never say that a man is tempted to be good, for true goodness is seen to be normal and it is ever free. On the other hand, the belief in temptation implies the existence of a foreign and unnatural element,—something which deceives and deludes till the false is taken for the true, the true to be false. This condition constitutes "the belief and dream of material living" referred to in our text-book. (Science and Health, p. 14.)

The all-important consideration for humanity is the way of escape from whatever is evil and untrue, and there are none who do not make an effort, though it may be feeble, to rise above the low and degrading tendencies that in some form assail all mortals. The result of these efforts is proportionate to the clearness with which "the beauty of holiness" is recognized and its value appreciated. However much may be said as to the need of separating evil from good, the fact remains that when Truth is understood and loved, evil has no longer any power to tempt.

As we win our way in Christian Science we see more and more clearly the need of this understanding, for material sense would deceive continually even after the grosser forms of temptation no longer appeal to us.

The Bible says that Jesus was "in all points tempted like as we are, yet without sin." This statement makes it very clear that, whatever guise temptation may assume, the problem for every man is the same, and that our only safety lies in taking refuge in God, in realizing that our true being is spiritual and perfect, then sin has no power over us.

One very subtle form of temptation is the whispered suggestion that it is most wearisome to keep constantly alert in order to rise above the fear and the possibility of sickness and sin. The fallacy of this will be quickly perceived by every clear thinker, and Christian Science compels us all to think clearly in order to progress. Would we admit that it is necessary to struggle constantly against the desire to commit murder or some other terrible crime? Most people would indignantly repudiate such an intimation, and why? Because they hold themselves to be superior to such error, and with some justice they would deny its power over them. The time has come when Christian Scientists should live up to their high standard, and meet without a moment's delay every suggestion of error which would hinder their knowing with perfect certainty that the triumph of the cause of Truth is already assured, and that the complete deliverance of every one who is loyal to divine Principle is equally certain.

"God is not separate from the wisdom He bestows" (Science and Health, p. 6), and good is ever on the winning

Digitized by Google

side, whether apparent or no, and no accumulation of false evidence should ever tempt the Christian Scientist to doubt or to waver.

We need at this time to be boldly aggressive in meeting error, not indolent nor half-hearted, and though we know the utter inefficiency of "carnal weapons," we have learned the effectiveness of the spiritual armament which has become available through the understanding given us in Christian Science. Although Jesus was tempted by evil suggestions from without, error never found him asleep. At every assault he turned upon the foe with an invincible weapon, the sword of the spirit which is the word of God, and by its use gained fresh victories at every attack.

It is important for each of us to make due preparation for the overcoming of material sense, including all sin, sickness, and death. It would be useless to put into the hands of an untrained soldier a keen sword, for unless he had the requisite training, he could ill defend himself in the hour of need; but with this preparation he would reach, unwounded, the decisive close of every combat.

What we need first of all is the understanding of God as the only Mind, then constant watchfulness and prayer which should constitute our daily mental drill, and though temptations may seem to come thick and fast we shall parry every attack with increasing skill and ease, leaving behind us the fallen foes that never possessed either life or mind.

As victories take the place of defeats, we shall ascribe to Truth all praise, and realize the spiritual sense of the Lord's Prayer as given in our Leader's words, "And Love leadeth us not into temptation, but delivereth us from sin, disease, and death" (Science and Health, p. 17). K.

## Keeping Awake.

ALERTNESS is the open eye and the listening ear of spiritual capacity. It unites with experience to raise ability to the righer level of availability, and thus opens the door to success.

In the seeming struggle with a false material sense, error's aim is to manacle, but it asks simply if it may hypnotize; needing no other concession it covets no other privilege, and this marks the seductive nature of those temptations to lethargy which are wont to appeal to us under some guise of comfort. They promise relaxation, relief, or increase of strength, and falsely estimating their value we are led into the very penumbra of death.

These temptations of mortal sense declare that escape from suffering is to be found in torpor, that break-downs are to be repaired while mortals are in a state of stupefaction, and some of these means of benumbing sense have been named providential. But Truth ever cries, "Awake, thou that sleepest, and arise from the dead, and Christ shall give thee light."

This awakening call came to Peter on one occasion, when he was bound, imprisoned, and asleep, and it is manifest that his marvelous escape would not have been effected had he not been responsive to Love's mandate "Arise up quickly."

Jesus, when tempted to find exemption from pain in the asserted power of a deadening drug, refused the proffered opiate, and turned for relief to the consciousness of good alone. For us as for him the divinely appointed avenue to freedom is not a mesmeric coma, but spiritual alertness, right thought. This may be gained and expressed upon the human plane not only in an ever-wakeful looking to good, but in that continuous guarding against the approach and entertainment of evil which is inculcated by the words of the Master, "What I say unto you, I say unto all, watch."

While the wakeful shepherds were faithfully protecting themselves and their flocks from every prowling danger, they were greeted by angelic visitants, and Love's frequent footstep has ever marked the threshold of that heart from which hatred, with its noisome brood, is prayerfully and persistently excluded.

This gives special significance to "the habitual struggle to be always good" to which our Leader commends us both by precept and example (Science and Health, p. 4); and when we have acquired the habit of making every suggestion of error, every expression of hatred or variance, a cue to loving and corrective spiritual thought, we shall have reached that stage of experience in which all things do "work together for good."

Alert and patient endeavor will surely and speedily bring us all to this place, and the schooling on the way will prove of a value that is above rubies. W.

## The More Just Estimate.

THERE are few asperities or prejudices of human nature which time does not soften. With the gentleness of light, truth makes its way into the consciousness of the well-meaning, and ere they are aware, they are impelled to its recognition.

This fact renders all thoughtful friends of Christian Science very patient with its critics. They know that if with God's gracious help they may but attain unto a wholesome and consistent manifestation of the truth for which they stand, in due time the antagonism thereto will pass and their faith will attain to its legitimate place and just rating.

The vicar of St. Mary's, London, England, has preached several sermons recently on "The Spiritual Healing Movement," in which he has unhesitatingly recognized that the doctrine distinctly belongs to Catholic Christianity. While not free from misapprehensions, his statements as a whole are characterized by that breadth and Christian kindliness which in due time will be shown by all Christian believers, but which hitherto has been so sadly lacking in much of the ministerial reference to our Cause.

The *Boston Transcript* comments editorially upon the vicar's position as follows:—

"Broadly speaking, his treatment of the matter shows insight and sympathy. He admits the bottom truth of the movement as valid for all time; claims that it was once recognized by the Christian Church in its office of unction for the sick; that it is time for the Church to set its own house in order in the matter, repent of its want of faith in God, and restore in its midst a form of spiritual healing—a 'lost sacrament' he calls it. If this is not done soon he predicts that the Church stands to lose even more adherents than it has lost, for he is sure that the movement is to grow rather than diminish; and h points out, as does Professor William James in his last book, 'The Varieties of Religious Experience'—to which the vicar refers—that the movement is only one aspect of a reaction of the world from materialism to idealism, from the mundane to the transcendental, from the carnal to the spiritual.

"As for the peace of mind and trust in God which he concedes go along with the doctrine of the domination of spirit over matter, of God's will over the human will and the appetites and functionings of the body, he remarks: 'It is an old truth as well as a new one, but a forgotten truth, a truth very little practised among us. It is a true thing, a most beautiful thing, with far-reaching spiritual, moral, social, and civil gains, this peaceful, trusting spirit, this complete living co-operation with God, and leaving it all in His hands.'

"It should be noted that this sympathetic interpretation of the meaning of a movement which has taken root in this country and is spreading in Great Britain and on the continent, comes from a High Churchman."

## Letters to our Leader.

Rev. Mary Baker G. Eddy, Concord, N. H.

*Dear Leader:*—Out of hearts overflowing with gratitude we wish to thank you for the Paschal meal that you prepared for us at this Communion tide. A meal which, though eaten in haste, has fed us, and of which enough remains to feed us and the world forevermore. May each crumb of it be eaten, and thus, as your words have ever done,—

Feed the hungry, heal the heart,
Till the morning's beam.

We thank you, dear Leader, for giving us the privilege of testifying, by our presence in your home city, to the love and duty that we bear you. We thank you for your words of comfort and of cheer to light us on our way. Have not you walked it? Have not we seen you, a unlit, heaven-kissed peak, upon the journey? Have not we heard you,—though pierced how many times,—discourse the celestial harmony of love for all? And shall we doubt or falter on *our* way? We thank you for the words, "my book is not all you know of me," and the "secret" you imparted to us at Communion. As students of your book, it has healed us, and in healing us it has taught us to know you,—to know who you are and whom you serve, to know that your life has been devoted to the service of Love which is Life. May we, and all, ever follow you, and may our lives and the lives of all who follow you in name, follow you in deed, and thus be the living testimony that shall consummate your life work,—establish the kingdom of God on earth.

Gratefully and lovingly,
CHARLES I. OHRENSTEIN.
LILY A. OHRENSTEIN.

Syracuse, N. Y., July 9, 1903.

---

City of Mexico, June, 22, 1903.

Rev. Mary B. G. Eddy, Concord, N. H.

*Dear Mrs. Eddy:*—When our dear little Sunday School thought of sending a donation to the Concord Church, they did not then know there was to be (as in the Mother Church) a room therein for your dear self. When the article, "A Sweet Love-Offering," in the June 13 *Sentinel,* was read to them last Sunday, with one accord, and most lovingly, they decided to send their contribution to you for your room in the Concord Church. This, their gift of five dollars United States currency, represents $12.10 Mexican money, and is the joint "love-offering" of our Mexican and American classes. They range from little ones of three years of age to children of fifteen and sixteen, and the classes are increasing right along.

With tender affection is the enclosed check sent to you by the children.

Yours in Truth and Love,
MRS. MARY BLUMENTHAL.
*Sunday School Superintendent.*

---

Providence, R. I., July 8, 1903.

Rev. Mary Baker Eddy.

*Beloved Leader, Teacher, and Friend:*—We, the members of First Church of Christ, Scientist, in Providence, R. I., in annual meeting convened, desire to send to you the following message of love, loyalty, and appreciation.

We are learning through the example of the Master Metaphysician, whose demonstrations of divine Science have been universally and practically made manifest to this age through your revelation, "Science and Health with Key to the Scriptures," that "Spirit and matter cannot co-exist or co-operate" (Science and Health, p. 279), and we are fervently praying to know *how* to pray, and willingly obeying that we may learn *how* to obey. Our hearts are full of gratitude for the many expressions of love and the privileges that have recently been ours at the feast and jubilee of Spirit, a foretaste indeed of the New Jerusalem. We try to appreciate scientifically the object of your lifework, that it may become the spring and motive power of our own. We also try to understand your unselfed love for us and for all mankind, that it may enable us to help you to expand the leaven of Truth, insomuch that the morning dawn of spiritual consciousness shall have enveloped the universe, and all traces of the midnight hour of false trusts and false beliefs be shaken, and the omnipotence, omnipresence, and omniscience of God be no longer a mystery, but natural and real to all mankind.

Lovingly, hence, obediently, your children,
GILBERT C. CARPENTER,
MARY E. HEYWORTH,
KITTIE B. WALSH,
*Committee.*

---

## Testimonies of Healing.

Not finding the harmony in married life that I expected I was very unhappy. I read the Bible, but no response came. One day some years ago I visited a friend where I met with Christian Science. After this my child became a wreck from indigestion, and the doctor said he would not live to be three years old, but in three weeks' time he was cured by Christian Science, and is now nine years old. This made me determined to find the truth, and the Bible is now the book of life to me, through Science.

When I found Science and Health, I had to clear the chaff from the wheat in my own thought in order to reach harmony. There was nothing left me to mortal sense, for my husband passed on four years ago. Before this occurred he had gained a sufficient understanding to open his eyes to the truth of Christian Science, and this gave me much comfort. I put my children in the Sunday School, and although I had many difficulties to meet, they have all been overcome by the understanding that God is All-in-all, and matter nothingness.

I would like to mention one demonstration. It was a condition of gangrene resulting from a case of small-pox. The ailment was overcome in two nights. In the morning the patient sat up, walked a few steps, which he had not done before for three months, and is now a well man. We know this power of scientific healing is of God, who is Truth, Life, and Love.

MRS. FRIEDA SCHMIDT, Denver, Col.

---

This summer in particular has been so full of blessings, that I can no longer refrain from expressing, in a simple way, my deep and loving gratitude for all that Christian Science has brought to me.

As a religion it has more than answered my greatest longings; for although an earnest member of one of the older churches for more than twenty years, and though I still hold that church in tender esteem, yet I failed to find that practical help for daily living which is so constantly realized in Christian Science.

Having been of a melancholy nature, given to worrying and to borrowing trouble, I now rejoice in the fact that I have at last found what true happiness is, where it may be found, and, best of all, how it may be enjoyed each and every day. Would that I might be the means of leading others to this wonderful new peace which to me is such an indescribable blessing.

Christian Science has also helped me in many ways, physically and financially. Even now a disease of seventeen years' standing, pronounced by the world incurable, has been almost entirely overcome, and I feel that I cannot be thankful enough to God and to our loving and tender Leader, Mrs. Eddy, for this great light and love that has come into my life through Christian Science.

C. C., Hiram, Me.

Digitized by Google

Unlike the great majority of Christian Scientists, I have not been healed of any serious physical troubles, but as all Christian Scientists know, there is a greater healing than the physical.

I was prompted to investigate Christian Science by a desire to lead a better life, and if I were asked why I accepted it after investigation, the reply would be because I found it to be a practical, every-day, common-sense religion, a religion of doing, instead of empty promises.

Early in my experience I learned that even a little understanding of Christian Science, when practised, brought quick returns, and that divine Love was a most generous paymaster.

The early part of the year 1897, was the dark period in my life that just preceded the dawn. Like the prodigal of old, I had wandered into a far country, so far away from God, that I was almost as one without hope, and I know what it is literally to feed on the husks.

At the time referred to, I was walking along the streets of a western city, so absorbed in the great life problem that I stopped still to ponder it, and a wail of anguish went out from my heart when I asked, Is there no God? Is there no peace for me? Then with a resolution born of desperation, I decided to try to find a way out of the darkness that enveloped me. I felt that there was a way, and was led to investigate Christian Science, without the influence or advice of any human being.

I had never talked with any one on the subject, except to ridicule my concept of what it was, and about all that I had ever heard of Christian Science was in the nature of adverse criticism; but from the moment of my new-born decision, I felt the guiding hand of God leading me up out of the depths. I will give some of the reasons for the faith that is in me.

I had not attended church for twenty years, and during that period had not read as much as one chapter in the Bible. It is now six years since I turned to Christian Science, and in that period not a day has passed in which I have not devoted more or less time to reading and studying the Bible and the Christian Science text-book, and have attended church with great regularity.

For twenty-five years I had been a slave to tobacco, chewing and smoking the weed to excess. In late years I used every known means to get rid of the tobacco habit without success until I came to Christian Science. In the past six years I have not used tobacco in any form, and have had absolutely no desire for it.

I was not a drunkard, for the reason that I foresaw what over-indulgence would lead to, and by sheer will-power I refrained from the excessive use of alcohol, but there was an ever-present desire for it, a constant struggle, and more or less indulgence. Since the day I began to read Science and Health, six years ago, I have not, to my knowledge, used any article of food or drink containing one drop of alcoholic liquor, and the appetite for it was wholly destroyed at once by Christian Science.

I was possessed of at least an average amount of selfishness, temper, impatience, and intolerance, all of which have been in a large measure overcome by my modest understanding of Christian Science.

One of my besetting sins was hatred, and I found delight in hating those whom I looked upon as enemies; and for the destruction of this sin also I am most grateful.

When this great light came to me I was a constant traveler, and having exhausted every source of so-called worldly pleasure, I was weary of it all, and was fast developing into a cynic. I was not able to find a God whom I could love and worship until the Christian Science God was revealed to me as "universal, eternal, divine Love, which changeth not and sendeth no evil and no sin upon man" (Science and Health, p. 140). Then I understood how it was possible for God to be omnipotent and "a very present help." I have been able to prove in a measure that He is God ever at hand, and know that I am to-day the beneficiary of His rich promises, which I once thought were not intended for this age.

While I enjoyed fairly good health in the old life, I was subject to attacks of illness and carried constantly a supply of medicine. Since the day I began to read Science and Health I have not used any material remedy, and every claim of sickness has been destroyed by Truth.

In my business Christian Science has solved many problems and enabled me to perform duties which I was not equal to in the old life. It has purified thought, lifted me out of the depths of despair, and given me a higher purpose in life, for all of which my heart goes out in gratitude to God and to our revered Leader, who has pointed us the Way.

It was my pleasure to accept her loving invitation to visit Pleasant View June 29 of this year. I realized at that time as never before the meaning of her self-sacrifice and love for humanity, and her consecration to God, and that it is the duty and privilege of every Christian Scientist to consecrate thought and energy to the end that this gospel may reach every human being.

R. M. STROTHER, New York, N. Y.

---

Eight years previous to my acquaintance with Christian Science, I was almost a constant sufferer with weak lungs, liver complaint, ulceration of the stomach, and rheumatism. I also wore glasses during this period and was in bondage to granulation and paralysis of the eyelids. All material remedies ceased to give relief, and, discouraged and disheartened, life had become a burden to me. But even through the dark hours divine Love guides.

Upon meeting a friend, she advised me to try Christian Science, and told me where to find a Christian Science Church. My first attendance was at a Wednesday evening meeting, and, as the Scripture says, "they shall speak with new tongues," it appeared to be all Greek and I doubted the truth of the accounts of demonstrations given. However, I was led to attend service occasionally, and after three months truth had dawned upon my consciousness to such a degree that I had no need of my glasses.

Having experienced the healing, I secured Science and Health and continued the search. The study of the book was a hard task, but by this time I knew that God is the healer of all diseases, and He is not a respecter of persons; others had been healed and He would deliver me from my yoke of bondage. With this thought I continued to read, and in a few months Truth had gained the victory over the evidence of the physical senses. "For the law of the Spirit of life in Christ Jesus hath made me free from the law of sin and death." Indeed I was free.

Two years ago, I devoted more time to spreading the Truth in this vicinity and the following are some of the results from the seed sown: A man whose arm was disabled by rheumatism was healed through Christian Science treatment. Another man who was prejudiced against Christian Science, was suffering from his lungs. Continually growing worse, his wife became alarmed. She spoke to the Christian Scientist and remarked that he was unwilling to listen to any explanation whatever. No explanation was necessary, but Science and Health was given him to read. He accepted it, and after reading a few days declared that he was healed and ready to go to work.

A boy was taken ill with scarlet fever. A Christian Scientist was called, and upon her arrival she found the boy in bed, crying with pain. He received treatment and was relieved, and the third day all the manifestation of the disease had disappeared, trust in the omnipresence and omnipotence of divine Love rendered null and void the law of contagion.

A few months ago a lady seemingly near death was rescued by realizing the truth. Relatives and friends having passed away from the same condition, fear tried to mag-

Digitized by Google

nify itself and find new avenues to work through each day, but holding firmly to her apprehension of Truth, the battle was won. "Who is so great a God as our God?" Being clad with the armor of righteousness (right thought) we constantly radiate good.

I cannot close without expressing my gratitude to our beloved Leader who has given this wonderful truth to the world.—P. E. L., Kiel, Wis.

---

A lesson teaching the reward of childlike trust may be learned from the following incident. Some time ago the call came to go to see a young boy who seemed seriously ill. The practitioner found him in bed, groaning with every breath from pains in his chest. The remark was made in sitting down by the bed, "Don't you know that God is Love,—tender Love,—which is ever-present? Then can anything hurt you in this ever-presence?" A wondering look come into his tear-filled eyes, which showed that he had heard and believed those words of Truth. The work was finished, the groaning ceased. He asked for something to eat, and was told he could be dressed and go down to dinner, which he did, perfectly relieved from all symptoms of pneumonia. The child's faith in the spoken Word was the open door for the quick healing.

M. A. P., Oak Park, Ill.

---

Three years ago the call came for students who would volunteer to work in our city prisons. I could scarcely wait for the opportunity to rise to my feet and offer my services. To be one to carry the Christ-truth to those who "sit in darkness," was indeed a great privilege.

But it meant very great self-sacrifice, as the hour set apart for work in the prison was the morning hour, and it demanded the giving up of our own church service, which is very dear to us all.

The work required many hours of hard study on the Lesson-Sermon, so as to be able to give out this precious truth, for while we met the poor, ignorant, and darkened condition of human thought, we also met bright, intelligent, and well educated men, who were ready with all sorts of questions which Truth alone could answer.

Our first year's work was done in what is known as the criminal ward of the County Jail, and it proved to be the most wonderful year in my experience as a Christian Scientist.

When we began our work, the men came unshaven and unkempt. A little thought was given to this condition, and in a short time every man came down as neatly and as carefully dressed as circumstances would permit.

I will give one incident which occurred while we were in this ward. One Saturday night we had about the worst storm I ever knew. Cars could run on only two lines in the whole city. I telephoned the turnkey to tell our boys that I should not be down. My co-worker had been suddenly called out of the city, and as the morning advanced I asked myself, What stands between me and my work? Snow—nothing else. I immediately dressed myself for the trip, and by doing a great deal of walking, I managed to reach the jail. Never shall I forget the cry of joy that greeted me as I stood waiting for the great key to unlock the big iron door for me to enter the ward, "Here she is! here is our Christian Scientist!" Seats were soon placed in position and in a few minutes I had fourteen eager listeners. My helper and myself had worked upon the Lesson thought for several months, talking and reading extracts from the lesson subject, and at this time we had demonstrated the service in full.

To see those men, there because of sin and crime, bow their heads in silent prayer, and recite audibly the Lord's Prayer, was indeed uplifting, and brought an overwhelming sense of thankfulness that the seed of divine Love was indeed being planted. God would bring forth the increase.

At one session of the court a young man who had received a five years' sentence in the State Prison, came and inquired the price of Science and Health; said he had but one dollar in the world, and was saving it towards a pair of shoes, but would give it to me if I would get him a Science and Health to take to prison with him. This was a lesson for me. How much was I willing to sacrifice for the spreading of Christian Science? Would I give my little all for Truth? Our boys look forward to our coming from week to week, and where darkness, despair, and sorrow reign, we are able for a little time at least to bring joy and peace by showing them that a kind, loving Father is their God, who will care for them when they open the door of thought and bid Him enter.

Our hearts go out to God and to our beloved Leader in great gratitude for the benefits we have received during the past three years of prison work.—M. G., Detroit, Mich.

---

I have intended for some time to send in my testimony relative to my eyes, and I now submit it for the encouragement of those suffering from similar troubles.

At about the age of ten years I was severely injured about the head while playing around an old shipyard capstan on the coast of Maine, causing hemorrhages from the nose, eyes, ears, and mouth. This resulted in crossed eyes for a year or more, but they were afterwards straightened. Suffused and weak eyes followed, terminating some years after in such loss of sight, that I could not discern the mortar between the bricks of the building across the street, nor would I have been able to recognize my own brother at a short distance.

This finally led to severe headaches with very frequent darting pains almost beyond endurance. Finally the oculist, who was a professor, said, upon examination, "Eyes! I should say it was eyes!" and called his assistant to see their condition.

I wore glasses continually for nine years; but shortly after coming to Christian Science, I laid them off for two weeks, and then used them two weeks longer, when the thought came to me that sight was spiritual; so I persisted in realizing the truth, and the glasses are a thing of the past. For two years now my sight has been perfect.

For this and numerous other blessings in a family of seven, we are humbly thankful, and give credit to Christian Science through Mrs. Eddy, who has so clearly voiced God's will for all generations to come.

C. E. MEYNELL, Philadelphia, Pa.

---

I became interested in Christian Science about five years ago. It was through the effects which were produced upon friends and acquaintances that my attention was first drawn to this new teaching. That which produced such results seemed to me worthy of investigation. Having rejected other religions, I accepted this one cautiously, not to say reluctantly, and only in so far as it was proven to my entire satisfaction to be the truth. During the past five years I have had overwhelming proof of the power of this Science to heal and to correct all manifestations of error. It has also been my very great privilege to receive class instruction.

In my business, which is that of newspaper correspondent, Christian Science has done more for me than I can possibly tell. All that makes for success,—courage, judgment, sanity, strength,—is to be had in increasing measure by the daily application of this truth. Christian Science is as practical and as useful in every-day affairs as a knowledge of arithmetic; and as certain in the results of its application. It is the expression of a power which is always available, not a something for Sunday and for church, of which it is rather embarrassing to speak and for which apologies must be made. I cannot better express what

Digitized by Google

Science has done for me in business than to say that I have found this to be true which is claimed for it in a reference to business men. Mrs. Eddy says, "Christian Science enhances their endurance and mental powers, enlarges their perception of character, gives them acuteness and comprehensiveness and an ability to exceed their ordinary business capacity. The human mind, imbued with this spiritual understanding, becomes more elastic, is capable of greater endurance, escapes somewhat from itself, and requires less repose. A knowledge of the Science of being develops the latent abilities and possibilities of man. It extends the atmosphere of thought, giving mortals access to broader and higher realms. It raises the thinker into his native air of insight and perspicacity" (Science and Health, p. 128). Christian Science does all these things.

H. GILSON GARDNER, Washington, D. C.

---

I have had many proofs of the one intelligence governing all.

When my mother was seventy she could not read English. I had made it a practice to read the *Journals* and Science and Health to her, which she enjoyed very much, and one day it dawned on my thought that she must learn to read. I said nothing but ordered a copy of Science and Health, and when it came I gave the book to her, saying, "This is yours, and you must learn to read it."

Often when we are bidden to the feast the excuses come, and she made the remark, "How can this be, when from childhood it has been so hard for me to learn?" In reply I said, "Science and Health teaches there is but one Mind, and this being true, you have access to just as much as I have, and we will begin right now, we will not stop to spell, but read." The book opened at page 115, "Scientific Translation of Immortal Mind."

We began with the words, "God," "Principle," "Life," "Truth," "Love." I told her that these words often appear in Science and Health, and by taking a good look at them, and always calling them by their right name she would recognize them quickly. We took up the study every day, not limiting ourselves in any way, and my faith was so strong that there was not a doubt in my mind.

In less than six months she could read readily. This was in 1895, and since then she has become a member of the Christian Science Church, and drives a distance of ten miles, sometimes all by herself, to attend the services.

My thought goes out daily in loving gratitude to Mrs. Eddy for the wonderful good we derive from all her writings.—KATHARINE RETTERER, Marion, O.

---

I did not come to Christian Science for physical healing, I wanted more spiritual light. I have been in Christian Science about five years. I had been studying Science and Health about six months when I went through a class. A year ago I went to Concord to look into our dear Leader's face, and when I had that privilege I determined I had a work to do.

I returned home the third of August, began a service in Allegheny City, and two weeks before the last Communion we organized with seventeen members.

We have many demonstrations in our services. One woman who came to me said, "Do you know your insistence upon my attending this service was the means of saving my life, for I fully intended to commit suicide." We now receive most beautiful letters from her; she is restored to her children, her husband has returned to her, and they are most happy in living this truth.

I have had many beautiful demonstrations. A lady had become unconscious from the fumes of gas, and for over two hours I declared the truth and she recovered when all present insisted again and again that she could not be restored.

Another case was that of a young man who had appendicitis, and had an operation performed which was unsuccessful and required another, so that the doctors said he could not live. Then his mother sent for Christian Science, and the case was treated about six weeks. He has fully recovered and is at his business. The complications in this case were very serious, but when we realize that we are only the channel through which the work is done, all we need do is to be still and know that God does all.

My heartfelt gratitude for "Science and Health with Key to the Scriptures" has given me a constant desire to spread this gospel of truth, for it has brought me a "peace which passeth all understanding."

MRS. ROBERTA HOSMER, Pittsburg, Pa.

---

To show that faith in Christian Science is not indispensable to healing, I will tell of a recent demonstration. A week ago my husband fell, spraining his ankle. It did not give him any immediate trouble but towards evening it developed rapidly into a very serious case. The suffering was so intense as to cause faintness and chills, with other ills. We were advised by kind friends to apply bandages, but did not use any material remedies.

I asked him if he were willing for me to telephone to a practitioner for help. He replied that he was willing, but that he knew they couldn't help him as he was too sick. In a short time he gave evidence of being relieved, and in two hours was sleeping quietly. In the morning he was able to leave his room without help. He improved rapidly through the day, and by evening walked home from his place of business, which is about a quarter of a mile distant, without trouble. "Oh that men would praise the Lord for his goodness, and for his wonderful works to the children of men!"

I am very thankful for having seen this beautiful demonstration of truth. It has given me fresh inspiration to "Rise, in the strength of Spirit, to resist all that is unlike God" (Science and Health, p. 393). I believe that if we are earnest in our seeking we shall see the salvation of our God.—C. A. C., Scituate, R. I.

---

Since childhood I had asked questions that never seemed to get satisfactory answers, and I was constantly looking for something that would satisfy. After marriage my thoughts seemed to be diverted into other channels for a time. When about the age of thirty the old longing came back with greater force than ever. I wanted to know what I was living for, and what I was bringing my children up to be. To live, merely to die in the end after passing through troubles and trials, did not seem right, and I could find no help or satisfactory explanation from the varied doctrines of the churches.

This went on for about five years, the darkness and mental suffering increasing all the time. Looking from the mortal standpoint I had every reason to be satisfied and thankful. I had a good husband, home, children, and health. My constant searching brought Christian Science to my notice. I learned where services were held and soon found it to be that for which I had so long been seeking.

I began the study of Science and Health and other writings of our dear Leader, Mrs. Eddy, in earnest, and now, after about three years' work, I can truthfully say I am happy and contented far beyond my expectations. I have also proven for myself that Christian Science is as good for physical as for mental suffering.

One day the teacher sent word to me that one of my children paid no attention to her when spoken to. Knowing there was a sense of deafness, I began to treat the case and knew that if my work was done correctly I had a right to expect instantaneous healing. Although the deafness was inherited it was completely destroyed in one treatment.

Digitized by Google

I am thankful to God for Christian Science and to our dear Leader, Mrs. Eddy, to my teacher, and to all who have in any way helped me to understand the truth.

MRS. EMILY GIESSNER, Davenport, Ia.

The government of ever-present Intelligence, or "God with us," is demonstrated almost daily by the children of our family, they being fully alive to the fact that Christian Science is their best guide. Although they are the most active children in the neighborhood, the knowledge of harmony, present and perfect, protects them from many of the troubles usual in childhood. Should they fall temporarily into trouble, the rapidity with which they get out is wonderful.

Three years ago when they first knew of Christian Science, our four-year-old boy was attacked by inflammatory rheumatism which was so painful that he lay on pillows and would scream if even touched. This lasted about twenty-four hours, during which time Christian Science treatment was given. His recovery was quick, complete, and permanent. The whole trouble went all at once, the healing being heralded by his jumping off the bed and asking some one to "play horse" and drive him around the rooms, during which time he ran and capered with no sign of pain. As before stated, the healing was permanent.

Our other boy, seven years old, had his hand and arm badly burned last Fourth of July, by a Roman candle shooting out of the wrong end. Through the immediate realization of Truth the fear and pain were allayed, and the boy continued setting off his fireworks. The mark of the burn rapidly disappeared with no further pain whatever. Thus by daily demonstrations we learn that the right and perfect way is always at hand, if we but turn, see it, and walk therein. The constant work of a true Christian Scientist is to bring all into that perfect way.

V., Kansas City, Mo.

As I have received much benefit from the *Christian Science Sentinel* and *Journal*, I would like to tell the Field, that I was healed from poor eyesight through the understanding gained in reading these periodicals. This was four years ago, and from that time on, the Bible and Science and Health have been my daily companions.

This spring I took class instruction, and have found, that in living the truth as taught in Science and Health we can fulfil our Master's commands. I cannot close without expressing my thanks to Mrs. Eddy for this beautiful religion, and to my kind teacher who has shown me how to make the "path less wearisome" (Science and Health, p. 426).—MRS. VILIMINA K. SHAFFER, Hooper, Neb.

## A Word from Mr. Chase.

Per capita taxes, contributions to the Mother Church, or contributions to the Building Fund, should be sent by check, post-office money order, or express money order.

Do not send currency. If currency is sent it will be at the sender's risk.

All persons who have sent remittances to the Treasurer of the Mother Church since June 1, 1902, either to pay their per capita taxes, for contributions to the Mother Church, or to the Building Fund, and who have not received a receipt therefor, are requested to notify the Treasurer of the date and amount of the remittance, and the form in which it was sent, whether in currency, check, or money order.

Receipts will be sent promptly as remittances are received. If you fail to receive a receipt within a reasonable time, notify the Treasurer.

Please write your name plainly. Always give street and number or number of post-office box.

STEPHEN A. CHASE, *Treasurer.*
Box 56, Fall River, Mass.

THE CHRISTIAN SCIENCE TEXT-BOOK.—Science and Health with Key to the Scriptures with latest revisions and additions, and numbered lines. 700 pages.

For description, price, and other information, see last page of cover.

OUR LEADER'S MESSAGE.—The Annual Message of the Rev. Mary Baker G. Eddy to the Mother Church on Communion Sunday, June, 1901. Deckled edges; 50 pages. Price, 50 cents; per dozen, $4.50, prepaid.

COMMUNION MESSAGE, JUNE, 1902.—The Annual Message to the Mother Church on Communion Sunday, June 15, 1902, by the Pastor Emeritus, Rev. Mary Baker G. Eddy. Deckled edges. Price, 50 cents per copy, $4.50 per dozen copies, prepaid.

Address all orders to

JOSEPH ARMSTRONG, 95 Falmouth Street, Boston, Mass.

DER CHRISTIAN SCIENCE HEROLD.—A monthly magazine printed in the German language, containing about thirty-eight pages of reading matter. Subscription price for the United States, Canada, and Mexico, one dollar in advance; all other countries, one dollar and twenty-five cents.

REMITTANCES.—Remittances should be made by post-office money order, express money order, or exchange on Boston or New York. Do not send exchang on Chicago or other western cities. We shall esteem it a great favor if our co-workers throughout the Field will comply with this request.

*We ask that no money remittances whatever be made to the Editor or Editorial Department.*

CHURCH TENETS.—The tenets of The First Church of Christ, Scientist,—the Mother Church,—printed on folded sheet for the use of branch churches of Christ, Scientist, with space for the names of churches and their by-laws, can be had at one dollar per hundred.

Not less than one hundred are sold. Postage stamps are not taken for payment.

All orders should be sent to WILLIAM B. JOHNSON, C.S.B., 30 Norway Street, Boston, Mass.

BUILDING FUND OF THE MOTHER CHURCH.—Contributions to the Building Fund of the Mother Church should be collected by Branch Churches and Societies and forwarded by them to the Treasurer, who will receipt to the churches and societies for amounts sent. Each Branch Church and Society should keep a list of its own contributors. When not convenient or desirable to send as above, individual contributions may be sent direct to the Treasurer.

STEPHEN A. CHASE, Treasurer of the Building Fund.
Box 56, Fall River, Mass.

CLERK OF THE MOTHER CHURCH.—Correspondence relating to membership with the Mother Church and requests for blank applications for membership, should be addressed to WILLIAM B. JOHNSON, C.S.B., Clerk, 30 Norway Street, Boston, Mass.

CHURCH TREASURER.—Per capita taxes and contributions to the Mother Church, The First Church of Christ, Scientist, in Boston, Mass., should be sent to STEPHEN A. CHASE, Treasurer, Box 56, Fall River, Mass. Please do not send currency.

## Love.

It is not the deed we do,
Though the deed be never so fair,
But the love that the dear Lord looketh for
Hidden with holy care
In the heart of the deed so fair.

HARRIET MCEWEN KIMBALL.

Digitized by Google

## Religious Items.

The signs are many that a great and radical change of opinion on religious and social questions is going forward. No one believes now as men believed fifty years ago, and social ideals are widely different at the present time. What is most interesting about this transformation of opinion is that there is now a widespread expectation of change. Persons of all beliefs and parties, except the most conservative and stubbornly retrogressive, are anticipative that we are entering upon a new period of intellectual and spiritual life, which will bring about large changes in the social ideals and relations of men.

However imperfect may be this diagnosis of the mental attitude that anticipates change, there can be no doubt about the fact that such anticipation is widespread and radical. It shows itself in many directions, in many forms of expression, and in the shape of a great number of theories as to what should be done. That many persons are anticipating change may be taken as proof that we are on the eve of a new epoch, but such conclusion must be accepted with caution. Every age is one of transition, and changes are always taking place with greater or less rapidity. In many directions the present time is in no sense remarkable in its transitional character.

Although there is always at work a powerful motive against change, yet it is to be anticipated that changes will come. The anticipation is always in considerable measure a prophecy, and it is even an assurance that the change has already begun. The desire for a new kind of life is in itself the realization of that life, else the demand for it would not find utterance. When it is declared that love is the greatest thing in the world, it is at once not only accepted as the truth, but it is discovered that many persons are living in harmony with that ideal, or else it would not find expression.

What we ought to desire is a simpler form of living, a deeper ethical conviction and practice, a clearer spiritual insight into realities, and a universal sharing in the rewards and the joys of life. We are to look for a larger manifestation of justice, a wider recognition of the ethically right, and a genuine fidelity to the spirit of brotherhood. We need more of the spirit and the reality of co-operation, that we may come into closer sympathy with each other, and that we may share with each other in a more kindly affection. We are no longer content with these beliefs and ideals as such, but we wish to put them into practice. In that consists the change that is coming rapidly, and with promise of large benefit to our social and moral life. The expectation of beneficent changes is preparing the way for them, and will help bring them to pass.

*The Christian Register.*

The essence of this lesson is in the different estimates put upon arms and methods of fighting by Saul, Goliath, and David. Saul, who would clothe David with armor, represents those Christians who would use the world's means to conquer the world. Goliath, who saw only David's staff and overlooked the sling which was the means of his defeat and death, represents the world which ridicules the Church for its apparent weakness, and knows nothing of the mighty power of the Holy Spirit which the Church has at its command. David, who was not afraid of Goliath's great weapons and show of strength, and who did not even depend on his own weapons, but on the Lord, represents the good soldier of Jesus Christ who relies not on his own strength but on the mighty power of God, and goes bravely forth to the apparently unequal conflict with the world and the evil of the world, confident of victory through the ever-present help of the Lord whom he serves.

*The Watchman.*

The dark shadows of evil consciousness and of foreboding are thick across men's paths. And in their deepest hearts their longings are for some message that will show that they are not alone, that God holds a relation of helpfulness to them, that there is an escape from sin, and a possibility of realizing in themselves the best ideals. There is no occasion for wonder that certain styles of preaching fail to interest and hold men. They become utterly weary of fine-spun philosophies, of analytical accounts of mental and spiritual phenomena. They ask, not always audibly, but actually, for something outside themselves that will be a real help to them in their trials and struggles and overthrows. And one of the questions that should be put to every candidate for the ministry of the evangelical churches is: What is the Gospel? Is it so conceived as to make it an evangel, a message of actual objective helpfulness to weary and sinful men?

*The Watchman.*

Rev. Joseph F. Newton, in an article on "The Quest of Faith" in *The Universalist Leader*, says: "In the years that lie before us this quest of faith will continue, and it will be more joyous and more satisfying. To us is given the high task of translating the language of the Book of Truth into the dialect of every-day life. It is not enough if truth hovers about us exercising a sweet, harmonious influence on our minds, like the grave and yet kindly tones of a church bell; it must become incarnate in character and incandescent in life. To our work, then, we must go, and use truth in the service of man. Out of our faithfulness will come a conquering faith; out of our practical righteousness, a conviction of the Eternal Righteousness; out of our devotion to eternal things, intimations of immortality."

The weakness of Christianity to-day is in the multitude of Christians who get their knowledge of Christ not through personal communion with him, but through intermediaries, through pastors and teachers, through books and current opinions. The mighty apostle whose ministry was in the midst of constant controversy over religious questions in a time when the Church was passing through a revolution which transformed it from Judaism to Christianity, had always one answer to every challenge to his faith, "I know whom I have believed." This intercourse of soul with Soul, the only with the Only, is the greatest need of the church to-day, the greatest service which the individual can give to his fellow-men.

*The Congregationalist and Christian World.*

If we live as did our spiritual progenitors in the Christian faith, that will come to pass that occurred in their day,—the Lord will add to the church daily those who are being saved. It is the daily living, not the Sunday formalities, of Christ's professed followers that will impress the world. "The lives of Christians," said the saintly Dr. Christlieb, "are the world's Bible." If, every day, we live Christ's life after him, walking humbly and gratefully in his blessed footsteps, our lives will be a constant sermon on the precious text, "Come to Jesus." And that is "religion between Sundays."

*The Examiner.*

Dr. Charles J. Little, president of Garrett Biblical Institute, reported in the Chicago *Inter-Ocean*, says:—

"Men seek knowledge for various reasons. Some seek it because it makes them better moral men. Others because it gives them power. The first seek it for good and unselfish motives; the others from selfish motives. They do not seek knowledge through Christ.

"But, great as it is, knowledge without love is nothing. I would put love above knowledge, for it is greater and broader than knowledge. Without love we are nothing."

The religion of Jesus tells us that cheerful piety is the best piety. There is something finer than to do right against inclination, and that is to have an inclination to do right. There is something nobler than reluctant obedience, and that is joyful obedience. The rank of virtue is not measured by its disagreeableness, but by its sweetness to the heart that loves it. The real test of character is joy. For what you rejoice in, that you love. And what you love, that you are like.

REV. HENRY VAN DYKE, D.D., LL.D.

Denis Wortman, D.D., in *The Homiletic Review*, says: "We ought to expect health from God. God wants us to be happy, and health helps toward that. He wants us to be useful, and health aids us toward that. He wants us to be in natural, normal condition, and health accords with that. Therefore pray God with faith that you may be well—if He will; and believe that so He does will."

Wayland Hoyt, D.D., LL.D., says in *The Homiletic Review:* "Exactly what things Jesus taught, these things precisely Jesus did. And this separates our Lord from all other teachers. Other teachers taught more loftily than they did. Jesus did as loftily as he taught. Though Jesus had been subjected to the cruelty and shame of crucifixion yet he did as loftily as he taught."

The faith that counts is a fruitful faith. It does something, bringing forth results in character, in deed and influence. And the best test of the genuineness of our faith is what it does. "By their fruits ye shall know them." The kind of fruit tells the kind of tree, but the absence of all fruit of any sort also tells the kind of tree.—*The Watchman.*
