"The Temple of Art," by Ernest Newlandsmith, can only be
described as a beautiful and highly instructive volume. If all artists,
in every medium, were to work upon Mr. Newlandsmith's lofty
conception of their responsibility, the effect would be a revolution

"Mr. Ernest Newlandsmith makes an eloquent plea for the higher
realisation of the artistic vocation. . . . Although there is more than
a touch of the Transcendental in his criticisms, his observations
upon the subject of musical education, a matter to which he devotes
particular consideration, are the plain common sense of the matter;
good, sensible ideas, soberly expressed. He distinguishes neatly
between the art and the craft of the musician."—Reference, Oct. 9th, 1904.

"The work before us is a plea for the higher realisation of the artistic
vocation, and very ably does the author urge it. His dedication,
'To all those who have been there' is to those who 'have been on the
edge of the infinite and looked ever,' who have caught some glimpse
of the eternal or of the divine light. The world is full of beauty; beauty
seen in the most ordinary things, but many pass their lives within it
without perceiving that beauty—hence the necessity for the careful
training of the coming generation. Many well-known artists, musicians,
fail to express anything, for the reason that, though their fingers have
been trained, their souls remain untouched; it is the same with some
painters and sculptors. They are outside the Temple and will so
remain."

A CHARMING AND INSTRUCTIVE BOOK
Suitable for both Old and Young.

THE UNIVERSAL KINSHIP
By J. HOWARD MOORE
(Instructor in Zoology, Crane Manual Training High School, Chicago.)

This Volume is full of genuine, common-sense, up-to-date teaching
concerning Man's place in Nature and his Relationship to other
Creatures; of racy and brilliant literary matter, and of pathetic
anecdotes. It is the most important Text-Book for Humane Education
yet printed, and is especially appropriate for use in Colleges and for
presentation to Institutions. It demonstrates our Physical, Psychical
and Ethical Kinship with the Animal World, and constitutes a most
powerful plea for the recognition of the rights of the sub-human races.

THE ORDER OF THE GOLDEN AGE, PAIGNTON, ENGLAND.

THE TEMPLE OF LOVE.
By ERNEST NEWLANDSMITH, A.R.A.M.
A Book which speaks of the Sanctities of Life, the
Supremacy of Love, and the true principles of the Coming
Kingdom of God.

Contents.
The Wicket Gate. The True Love. A Mother's Love. The
Love of God. The Right Within. The Child Spirit. Things which
Hinder The Kingdom of God.

A MOST HELPFUL AND INSTRUCTIVE VOLUME.
Printed and Bound in an artistic manner. Post 8vo.
Price One Shilling Net (1s. 6d. post free).

A Beautiful and Instructive Gift-Book.

THE TEMPLE OF ART.
A PLEA FOR THE HIGHER REALISATION
OF THE ARTISTIC VOCATION,
By ERNEST NEWLANDSMITH
(Associate of the Royal Academy of Music; and Director of the
British Musical Society.)

Contents:
I. The Artist's Calling.
II. The Spirit of True Art.
III. The Source of True Art.
IV. The Soul of Art.
V. The Failure to Attain the Ideal.
VI. The Esteem of the World.
VII. The True Minstrel.
VIII. On Art in Daily Life.
A Few Press Opinions.
"'The Temple of Art,' by Ernest Newlandsmith, can only be
described as a beautiful and highly instructive volume. If all artists,
in every medium, were to work upon Mr. Newlandsmith's lofty
conception of their responsibility, the effect would be a revolution

A COMPREHENSIVE GUIDE BOOK to Natural, Hygienic, and Humane Diet.
By SIDNEY H. BEARD . . . .

(American and Colonial Edition 50 Cents, post free.)

A book for those who desire to live a Hundred Years, which shows
how to avoid Mistakes in Diet and the suffering which results from them.
It is being freely purchased by doctors, teachers of physical culture,
and leaders of thought in religious and food-reform circles in all parts
of the world.

Most persons who buy this book send for additional copies for their
friends.

Its artistic appearance commends it as a gift book, apart from its being
a useful rude morsum to all housewives.

Contents.

The True Ideal in Diet. A Plea for the Simple Life.
A Plea for Moderation. Artistic Cookery.
What to do when Travelling. Substitutes for Animal Food.
Substitutes for Fish. Simple Savoury Dishes.
Graves and Sauces. puddings and Sweets.
Bread and Cakes.

Winter and Summer Drinks.
How to Feed Invalids.
What to do at Christmas.
Useful Domestic Information.
How to Cook Vegetables.
Labour-saving Appliances.
Medical and Dietetic Qualities of Foods.
How to Regulate our Diet.
Table of Food Values.
Hygienic Information.
How to Acquire Physical Vitality.

A FEW PRESS OPINIONS.
"A valuable practical manual of recipes and general directions for
readers who wish to try living upon the simple foods and to give up
being carnivorous."—Scotsman.

"The author is Editor of the "Herald of the Golden Age," and is perfect
master of his subject, and his aim is purely philanthropic, as the profits
are devoted solely to the furtherance of the work of the Order of
the Golden Age, and the gratuitous supply of its humane and educational
literature to public institutions and reading-rooms throughout the English-
speaking world. The book abounds in useful, and even essential,
information. It tells how to avoid dyspepsia, gives valuable dietetic
advice to travellers, and ample advice about both feeding and cooking."—
Christian Commonwealth.

"Every humanitarian ought to be acquainted with this most excellent
cookery-book—the best work of its kind in our opinion, that has yet been
published. The book is much more than a compilation of useful vege-
tarian recipes; it is, as its name implies, a real guide to the humanities
of diet, and it is written with such sympathy and experience as to be—
what few such works are—thoroughly readable and interesting. We beg
all our readers who do not know the book to get a copy without delay."—
The Waverleyan.

"A Guide-Book that we heartily recommend to all who desire cleaner,
more wholesome and simpler food. Many of our friends would fain
abandon flesh meats but know not the value of fruits, nuts and vegetables.
The author comes to the assistance of the food reformer and renders good
service thereby. It is the best, most attractive, and most suitable work
on the subject we have seen."—New Age.

"The introductory Clauses of this Guide-Book are quite enlightening.
The bulk of the book, however, consists of practical recipes for a simple
style of living which is not only rational but pleasant and appetising—
besides being humane. The whole deserves the attention of all who wish
to make life worth living."—Hereford Times.

"There is not a dull chapter in the whole book."—Stirling Journal.

"It is well written and as it is admitted on all hands that too much
flesh is generally used it deserves a wide circulation."—Christian Advertiser.

"The whole work is a valuable help in the correct understanding of
the dieting of the human body. It is written with a freedom from
'faddism'-an evil that so often enters into and checks, in parasitical
fashion, the growth of a new movement. There is shrewd common sense,
a practical grasp of the subject and a choice of only those arguments
endorsed by scientific research."—Fortnight Times.

"Food Reformers and those thinking of adopting a more humane diet
would do well to obtain this book. It is full of useful information."—
Montreal Daily Herald.
HOW TO PREVENT CANCER.
By ROBERT BELL, M.D., F.F.P.S.,
Late Senior Physician to the Glasgow Hospital for Women.
Fellow of the Obstetrical Societies of London and Edinburgh.
Price Threepence net.
All who are threatened with this dread disease, or who have relatives suffering from the premonitory symptoms, are invited to purchase this booklet.

THE BIBLE IN RELATION TO FLESH-EATING.
By BERTRAM McCRIE.
A Booklet which shows that the Bible is no City of Refuge for the flesh-eater; that its spirit is discordant with Carnivorism; and that the Prophets and the Christian Apostles and Fathers were advocates of a bloodless dietary.

FIFTH THOUSAND.
ERRORS IN EATING
And Physical Degeneration.
By SIR WILLIAM E. COOPER, C.I.E.
An up-to-date book which reveals in a piquant and interesting manner the many Dietetic mistakes and transgressions that are being made by the British public, and the cost in suffering which they have to pay in consequence. Much useful information is contained in this book, in addition to tables of food values, etc.

It is a valuable Gift-Book for Dyspeptics, Sufferers from Gout, and Invalids of all kinds.
In Art Linen. Price SIXPENCE. Post Free.

IS MEAT-EATING SANCTIONED BY DIVINE AUTHORITY?
By Sir W. E. Cooper, C.I.E.
Price Threepence net (post free).

An artistic Booklet that is specially helpful in removing the prejudices and misconceptions of those who have been accustomed to think that the Bible justifies flesh-eating. Much light upon the subject, and information concerning correct interpretation of the Scriptures, is given by the Author, and yet in such a reverent and scholarly way as not to offend the most orthodox.

THIRD EDITION. Twenty-fifth Thousand. 1906.
THE TESTIMONY OF SCIENCE
IN FAVOUR OF NATURAL AND HUMANE DIET.
By SIDNEY H. BEAR.
A handy up-to-date booklet, full of EVIDENCE by eminent Authorities in the Medical and Scientific world, with references for the quotations. It contains also ATHLETIC EVIDENCE and PERSONAL TESTIMONY of a convincing character.
Every Food-Reformer and Lecturer will need this booklet. You are invited to stock it, and to induce your friends to purchase copies.
Price One Penny (net); One Shilling per dozen (post free); Six Shillings per hundred (post free).

A Dainty Book for Sufferers and Invalids.

BROTHER PAIN AND HIS CROWN.
By Dr. JOShIAH OLDFIELD
(Senior Physician of the Lady Margaret Hospital.)
In Art Linen. Price 6d net, post free.

Many have been helped to understand the mystery of pain, and have derived comfort by reading the pages of this book.

THE ORDER OF THE GOLDEN AGE,
PAIGNTON, ENGLAND

A VALUABLE WORK ON HYGIENE AND DIET.
Giving a clear presentation of the principles relating to simple, wholesome living and the rational treatment of the sick which have proved so successful at the Battle Creek Sanitarium.

THE LIVING TEMPLE
By Dr. J. H. KELLOGG.
This book must be seen to be appreciated, but the following brief, partial outlines of the most important chapters will afford some idea of the helpful nature of the contents.

THE MIRACLE OF DIGESTION.
The Organs of Digestion—Five Food Elements, Five Digestive Organs—What the Saliva Does—The Work of the Gastric Juice—Other Uses of the Digestive Fluids.

Dietetic Sins.
Eating for Disease—The Selection of Food—Cereal Foods and Legumes, etc.—Errors in Notions About Fruits—Predigested Food Elements in Fruits—Fruit Juices Destroy Germs—The Medicinal Use of Fruits—Fruit Sugar—Fruit Cure for Constipation—The Fruit Diet—Fruit a Cleansing Food—Diseases Due to Milk—Milk and Cream from Nuts—Eggs.

The Natural Way in Diet.
Why Fats Render Food Indigestible—Objectionable Vegetable Fats—Chemical Bread Raisers—Condiments the Cause of Gin Liver—Dextrinised Cereals—The Daily Ration—Balanced Bills of Fare—Too Frequent Eating—The Purest Water, etc.

The Heart and the Blood
How the Blood is circulated—The Mystery of the Heart Beat—How the Blood Cells Combat Germs—How to Strengthen the Heart.

What to Do in Case of Sudden Illness or Accident.
Painting—Hemorrhage of the Lungs—Hemorrhage from the Stomach—A Bruise—The Deformities of the Abdomen—Sprain, etc.

Dangers in the Air, and How to Avoid Them.
Draughts Not Necessarily Dangerous—Sleeping in Cold Air—Diseases Due to Germs—Germs Kill—Germs not a Direct Cause of Disease—How to Combat Germs—Disinfection, etc.

The Clothing of the Temple.
The Properties of Different Clothing Materials—The Best Material for Underclothing—Common Evils in the Customary Dress of Women—Waist Constriction—The Deformities of Coated Women; Effect of Waist Constriction upon the Kidneys; Displacement of Vital Organs due to Waist Constriction—Why Woman is “The Weaker Vessel.”

The Brain and the Nerves.

What is Disease?

These brief outlines give a very inadequate idea of a book of some 568 pages, written in a fascinating style, and dealing with matters of vital interest.

PARTIAL LIST OF ILLUSTRATIONS.
The book is FULLY ILLUSTRATED, including a number of fine coloured plates. Following are a very few only of the subjects illustrated:
—Cell Division, Salivary Glands, Structure of Liver and Kidneys, Blood Cells, Malarial Parasites, Different Forms of Starch, Structure of a Grain of Wheat, Madly Pork, Beet Tape-worm, Blood Cells Destroying Germs, How to stop Hemorrhage, Bandaging, A Fashion of Deformed Woman, Effects of Tight Bands and Heavy Skirts, Diagram showing Abnormal Position of Internal Organs, Normal Nerve Cells, Abdominal Compress, Wet-Sheet Bath, A Healthy Stomach, Fatty Heart, etc.

The PENNY GUIDE TO FRUITARIAN DIET AND COOKERY.
By Dr. Josiah Oldfield, L.R.C.P., M.R.C.S.
It is a concise book of advice to all who want to begin the delicious and humane diet, and to their friends for the use of the sick. It contains a large number of well tried recipes, and it arranges in a simple manner. It warns against the dangers that may be incurred by the careless, and shows how improved health and happiness may come to those who are willing to adopt the Fruitarian Diet scientifically. It is a little book which may be carried in the pocket, and may be placed in the hands of the most fastidious flesh-eater without fear of offending him.
Copies have been presented by Mr. George Cadbury and Mr. W. H. Lever to every Inhabitant of Brownville and Post, and to all their employees.

1/3 per dozen, post free; 7/6 per hundred, carriage paid.

THE ORDER OF THE GOLDEN AGE,
PAIGNTON, ENGLAND.
endeavouring to promote universal benevolence, by protesting against all obedience to the Laws of God—

''To proclaim and hasten the advent of a Golden Age when Humaneness and for the misery and disease which afflict Mankind.

errors in eating and physical degeneration, by sir w. e. cooper, c.i.e. price sixpence, post free.

The Members of the Order are pledged to seek the attainment of these objects by daily example and personal influence. They are divided into two classes—companions and associates—the former being abstainers from flesh, fowl and fish, as food: the latter from flesh and fowl only.

The Minimum Annual Subscription is Two Shillings and Sixpence, which entitles each Member to receive a Copy of the Official Journal and of all Pamphlets and Leaflets which are published.

A Copy of the Prospectus and Rules, and a Form of Application for Membership will be forwarded, if requested, together with any information that may be desired.

The Annual Report of Income and Expenditure (only audited) will also be supplied gratis upon application.
The Power behind the Throne.

Those who realize the actual state of things upon our planet at the present time, the recrudescence of evil in its worst forms, and the slowness of our evolutionary progress toward the humane and spiritual era which so many of us anticipate with strong desire and quenchless faith, may well feel constrained to wonder whether the revelation of some hitherto undiscovered Force may not be necessary to overcome the adverse conditions of our psychic environment.

When we hear that the richest man on earth, and others of his class, are endowing the vivisecting clique with the millions that have been extorted from mankind—thus making the systematic torture of animals one of the most lucrative of professions:

When we read that the prisons in Holy Russia are overcrowded with political martyrs, and that many are being secretly subjected to the knout, the thumbscrew, and the red hot pincer, before being hurried to unjust execution:

When we know that vast multitudes of human beings are perishing of famine in Eastern Europe and Asia, because tyrannical oppression and hopeless misgovernment are almost as possible today as a thousand years ago:

When our newspapers are filled with records of racial jealousy and animosity, political antagonism, commercial and domestic strife, crimes of violence, and cruelties and sins of every sort:

We need not wonder that men who have never personally known or felt the Power which lies behind the Throne of God should turn pessimists or atheists, and advocate policies of despair.

But notwithstanding all these discouraging evidences of the persistence and potency of evil, and of the malign influence of the lower invisible spheres, there is a Force that can deliver this world of ours from its sin, suffering and sorrow, that can sweep away from our midst the ills which now afflict us, and establish Peace and Happiness in every land. It is the spirit which emanates from the Christ-sphere, and which both constitutes the condition and ensures the supremacy of the celestial world.

Magical, omnipotent and seemingly miraculous in its effects, its dynamic influence is immeasurable—though the fact is but inadequately realized by Man as yet. For while its existence is indeed known, its remedial and beneficent efficacy is not yet fully apprehended, and it needs to be applied.

In order to exercise its spell over all other forces and conditions, it must be made manifest in and through living souls; and the difficulty lies in finding such instruments or media. And even when found they are seldom capable of transmitting a large amount of this rare form of energy. But wherever such have existed as vehicles, and just according to the extent of their capacity for such manifestation, the wondrous influence of this spiritual force has been demonstrated.

Almost all human beings (and other animals as well) recognize it when they see it, and respond to its vibrations. Though it be revealed to them by a man whose race is alien and whose language is unknown, yet they understand and own its sway.

The most hardened scoffer at conventional piety or sanctimonious cant will mentally doff his cap when he finds himself in its presence, for he knows the real worth and majesty of Love, and inwardly does homage to any soul who can make it manifest in the flesh.

Children learn to estimate its priceless quality through the maternal ministry that blesses them in their early days; husbands are often redeemed by it when they see it exemplified in patient womanhood; nations are uplifted by it when they are able to recognize it in their uncrested heroes and martyrs; and all the world renders homage to it when the record of the
great manifestation made by the Christ of Galilee is fully apprehended, and its true significance understood.

Love is the counterpart, on the spiritual plane, of Life on the physical plane. Where Life and Love are manifest, physical and spiritual death disappears. Both are indefinable and, in the deepest sense, they are One. But Love is transcendent. Love can save and transform the most hopeless human soul, and restore it to harmony and Heaven. It can make the weakest strong and heroic, the most despairing faithful and courageous, and the most sinful good and true.

Love can soften the hardest and most resentful heart, and win the confidence of the most confirmed sceptic. It can even cause the most self-righteous bigot to become kind, tolerant and charitable.

Where punishment and condemnation have failed, where harshness and Pharisaism have increased moral obliquity, and where righteous reprobation has accentuated obduracy, alienation and despair, Love, the ministering Angel, steps in, and by the gentle touch of the sympathetic hand, the beneficent look of still trustful and hopeful eyes, and the manifestation of the heart that understands, melts the most stubborn will, and gives new life and aspiration to the most prodigal and hardened of God’s erring children. For Love suffereth long and is kind, hopeth all things, believeth all things, and never grows weary of beneficent and healing ministration.

Though Faith can remove mountains, and Hope turn apparent defeat into victory, Love alone is omnipotent, and the greatest Force in existence. And those who are fortunate enough to become conspicuous as exhibitors of this supreme quality will enshrine themselves in human memory and in the records of history.

Love, ultimately, will redeem the souls of all mankind and change them into the true image of God, and bring them into that heavenly sphere where blessedness and joy reign supreme.

We may, perhaps, find it hard to conceive this optimistic vision of a future Restoration to be true, because our eyes are not yet opened to see the multitude of invisible workers who are even now engaged in the great work of transmitting this redeeming power to our world and its inhabitants—workers whose ranks are ever being augmented, as new instruments become perfected through suffering, and join their sacred ministry—yet this Ideal will be realized, and the conditions and blessedness of Heaven will be universally established.

For Love is omnipotent, and will prevail over all the powers of darkness. The gates of the Love-sphere stand widely open to all, and this “River of the Water of Life” flows freely and without reservation. All human souls will ultimately thirst for it, and drink at its perennial stream of gracious and healing influence—and thus obtain the requisite strength for victory over the adverse conditions that constitute the battle ground through which we have to win our way in our slow pilgrimage to the skies.

Though Enmity, War, and Cruelty may still persist and abound, even in this twentieth century of the Christian Era; though the noisome fumes of Hell may envelop our world for a time; yet the sacred stream of Influence and Power that rises from the Throne of God, and that is ever augmenting in volume as it finds new channels for its outpouring, will at last overcome and extinguish them utterly, and make our dream of Paradise and Heaven come true.
The Diet for Cultured People.

By Dr. Josiah Oldfield.

It is one of the privileges as well as one of the sadnesses of the medical profession, that the pains and penalties of misused opportunities are brought so prominently before them.

To the ordinary man or woman in the heyday of youth there is no internal voice which speaks of warning in food, and the words of caution of the old are looked on as so many crookings of the impotent whose day is gone.

I well remember a young father of the Church, who had inherited more muscle than wisdom from his ancestors, telling me that he no more consulted his stomach than his portmanteau as to what he should put into it!

He said that he was master of his stomach, and therefore commanded it to perform whatever work he chose to give it to do!

To such a man I have no message.

There are, however, to-day a rapidly growing number of men and women, of artistic temperament and aesthetic tastes, to whom the joys of clean feeding and dainty living are appealing more and more strongly, and who are demanding that their food shall harmonise with their aspirations after beauty and not disgust them with revelations as to its unsavoury origin.

This is the class to which my message is meant, and for whom I have a word of helpful teaching.

For nearly a quarter of a century I have eaten no flesh food, and so I have tested fully and for myself in practice both sides of the question. And as a Fruitarian I am more and more conscious that the progress of the higher classes is from Carnivorism towards Fruitarianism—from meat-eating towards fruit-eating.

Where there is a butcher's shop and a fruiterer's shop side by side the contrast is within the capacity of even the most inartistic mind to appreciate.

But it is when I leave the mere outward world of things of form and colour and begin to take a personal interest in these foods as something that I shall put to my lips and touch with my tongue and smell with my nostrils and swallow and make actually a part of my living self, that the great realm of fruits has such an attraction and the wide range of dead animals' organs such a repulsion.

The "Chicago sensation" and the Dangers of a Meat Diet.

Animals in domesticity suffer very largely from diseases of a more or less loathsome character. A diseased animal is not healthy food for decent men and women. Whether the disease from which the animal may be suffering is actually communicable to man by ingestion or not, is unimportant compared with the broad fact that a diseased animal is not decent food—even for a hyena, much less for a dainty woman or an artistic man.

Diseased animals are actually killed and sold and used in large numbers for human food.

Disease is such a subtle thing that it is often quite impossible to detect it in a dead body without the most careful post-mortem examination of every bit of the internal organs. It is often quite impossible to determine whether an animal is diseased by inspecting it before slaughter. It is exceedingly easy to remove the diseased portions of the internal organs after death before inspection. When the internal organs have once been removed it is quite impossible to say whether or not the animal was or was not diseased.

To make even an approximate approach to the elimination of diseased meat it would be necessary to inspect every animal before being slaughtered, and to put into quarantine every one that was noticeably unhealthy, and either to keep it under observation until quite well or to kill it and destroy the carcass. It would then be necessary to inspect every animal as it is killed in order to prevent the fraudulent removal of the internal organs. It would then be necessary to examine these organs in detail and to destroy (so far as human food is concerned) the bodies of animals whose organs were found unhealthy.

And then, when you have done all this and have destroyed thousands of dead bodies which would otherwise have been eaten, you will have no assurance that the animal was not suffering from an early form of one of the most loathsome and malignant diseases the whole time.

Let me illustrate. A woman of wealth and position develops a lump in her breast. She submits herself to the most skilled physicians and surgeons. Money is no object. Time and talent are unstinted. Every attempt is made to determine exactly what is the nature of the tumour.

"Health, strength, and longevity, depend upon immutable laws—not upon chance!"
In spite of all the consultations, it is not always possible to be sure whether the lump is the result of local inflammatory processes of very little importance, or whether it is the local manifestation of the gravest disease which affects the animal. It is decided to remove it for assurance. But even the tumour lying on the table, closely scrutinised and cut open by the most competent experts, does not always tell its tale, and it is necessary to take a section and mount it and examine it under a microscope before a definite decision can be arrived at.

When there are cases of such difficulty, with every facility for observation and every faculty on the stretch to determine whether the verdict for the woman shall be life or death, how is it possible to suppose that a single Inspector, having to quickly examine carcase after carcase, could be sure of noticing, much less deciding upon, the character of a tumour in an animal? When it was alive the animal could not even complain; and now that it is dead, the difficulties of discovery are tenfold.

If people think that it is easy to tell whether an animal is diseased by examining it before it is killed, they are very forgetful of the insidious character of disease. How many of us who have to deal with disease in men and women who can talk and detail their symptoms and complain of their pain, have been deceived! Again and again it happens that a patient goes to a doctor for what is apparently a trivial thing, to learn that an insidious disease has made such rapid internal progress that life is only a thing of months, or a year or so.

How often, too, has a patient been to one doctor who has found nothing serious, and has gone to another one a month or two later and is found to be far gone in a dangerous disease! The first doctor would have an infinitely better chance of determining the presence of the disease than any market inspector of animals could do, and yet it is often quite impossible in the former case to discover the disease. We all know how the tuberculosis test showed that herds of the finest cattle, that were presumably in the most perfect health, were tainted with the great white plague.

We all know that continuous milking is a considerable strain upon an animal. When, however, the animal is turned into a machine, and the only object is to get the greatest amount of milk in the shortest possible time, the strain is so great that a large percentage begin to break down. What becomes of these anaemic and debilitated cows? Are they turned out to rest, or pensioned as a reward for their services? The curse of Mammon is too powerful for this. The plea of mercy may come in for the worn-out horse, but no one dreams of giving a quiet old age of rest to the mother cow. She is worth so many pounds as meat, and by the process of stuffing with grains or oilcake, she can be made to put on flesh and fat, and then—the butcher's knife and the dinner-table!

I have visited the abattoirs at Deptford. I have inspected the killing of animals at many of the slaughterhouses of London and the country. I have watched the Jewish killers at work at Aldgate, and by village slaughtermen I have seen the last sad scenes enacted. It has been my lot in my medical work to have to pass through the Smithfield meat market at all hours of the day and night, and to see the carcases in all their stages of anatomising, and I have come to the conclusion that not one man in a thousand—who partakes with relish of his breakfast of bacon and Worcester sauce, or his light lunch off a chop, or a couple of sausages, or his dinner from a round of beef or a fowl—has any idea of the preliminary stages which have been gone through before the cow grazing in the meadow, or the pig grunting in the sty, or the cock crowing in the early morning, has become the "piece of meat" on his plate!

I do not care to enumerate the charges that have been made against the administration of the abattoirs and food-canning industries of Chicago. Some of them are too nauseous to repeat; some are quite harmless in spite of their gruesome sound; but the substratum of them all is as applicable to England as it is to Chicago.

When animals are bred and fed in confinement and domesticity the aim is not to get an animal with a hardy constitution, but one with a great weight of body and a frame which will carry the maximum of fat in the minimum of time. The market does not ask for hardy cattle, it demands "fat beasts"—and fat beasts are provided for it. Now abnormal fat is in itself an unhealthy condition, and an animal so fattened is not a healthy animal in the best sense of the word. But this abnormality is as nothing compared to the actually diseased animals that are knowingly foisted on the food market.

We all know that continuous milking is a considerable strain upon a cow. A farmer has a wasting cow. He is not a rich man. He cannot afford to lose five or ten pounds, so he does not kill the cow and bury the carcase, but he sets to work to temporarily fatten her and then promptly sends her to market. The butcher who buys her knows nothing of this history, which is so suggestive of consumption, and so he buys her in all good faith. When she is killed the lungs and pleura show extensive tubercular disease. The butcher cannot afford to lose ten or fifteen pounds, so he strips out the pulmonary organs, cuts up the carcase, and sells it as "prime English meat."

The consumer buys in all good faith, and takes it home and congratulates himself that he does not buy cheap American rubbish but only the best English killed meat! And as he carves the joint from the tuberculosis cow he sings the song of the Pharisee and thanks God that he does not live in Chicago, but that Old England is his home and the roast beef of Old England is his food. And he wonders why consumption is such a dreadfully prevalent disease in the land.

I do not blame the butcher, because he has been taught that there is no harm in tuberculous meat, and he believes it and is willing to eat the carcase himself. I well remember when I read a paper on "Flesh-eating a Cause of Consumption" before the Sanitary Congress at Portsmouth, that two of our London medical officers of health—who are still medical officers of health for important London districts—opposed me on the ground that the flesh of tuberculous animals was excellent food, and that they would advocate the use of all tuberculous and cancerous meat for the poor after submitting it in a public institution to a sufficiently high temperature! Even then it appears to me that it

"Nature's price for health is regular and intelligent care."
should be labelled “carcass of a cancerous cow” or “a potted measly pig” or “canned consumptive calf,” or some title to enable poor people to know the sort of stuff which medical officers of health considered good food for them.

For myself, I consider that the dangers connected with diseased animals are so great that under no circumstances should their bodies be used for food.

A More Excellent Way.

What, then, do I offer? To destroy is easy, to create is difficult.

That it is practicable and feasible I need only point to the Lady Margaret Fruitarian Hospital, Bromley, Kent, where neither patients, nurses, nor medical staff partake of any form of flesh food within the Hospital. And the result of nearly four years’ working is excellent in the extreme.

A fruitarian diet consists of the fruits of trees (like apples, oranges, bananas and olives), the fruits of bushes (like currants and raspberries), the fruits of plants (like strawberries and melons, lentils and beans and cucumbers), the fruits of grasses (like wheat and barley and maize and oats), the fruits of nut trees (from filbert to cocoa-nut), together with some earth fruits (like potatoes) and a meducium of vegetables and salads. To these may be added butter, milk, honey and cheese, although their production is not so free from risk of contamination and animal infection as is the case with the products of the vegetable kingdom and the world of fruits.

Grown under healthy conditions, with diseased specimens easy to detect and remove, it is far more possible to live healthily and well upon a fruitarian dietary than upon the products of the slaughter-house. And if we want the next generation to be sturdy and strong, and fit to carry on the great traditions of England’s past and to rise to greater glories in the future, we must feed them on healthy food and eliminate the elements of disease from the dietary. With a fruitarian dietary in its widest sense, I believe this to be possible; with a diet consisting largely of flesh foods I believe it to be impossible.

What shall we Eat?

In the realm of fruits there is life and sustenance, as well as art and beauty.

From a dietary wisely selected from the vegetable world there is hope for the confirmed dyspeptic, colour to be regained by the waxen anemic, strength to be won anew by the devitalised and debilitated, complexion to be touched afresh with the bloom of health, and life to be lengthened and pain overcome.

It is from our food that every cell of our body is built up again and again, so that if we use beautiful and healthy food we may rightly hope in time to possess more completely beautiful and healthy bodies.

Now, what shall we eat? It is never possible to lay down any hard-and-fast rule as to particular foods, because of personal idiosyncrasies, so that the study of the adaptation of particular foods to particular needs is a complete science in itself.

It is generally well, however, for all beginners to obtain a Guide Book containing instruction and recipes, and then to spend a little time and thought in personal experimentation.

I have found it wise for people of every age to quietly drop this meat at once and to replace it by omelettes or egg dishes, or cheese dishes, or mushrooms, or some of those delightful new malted nut foods, which are becoming popular everywhere. They are so meaty in appearance and flavour that people who were not told would be quite satisfied that they were dining quite orthodoxly when they had one of them as a course at dinner.

I advise, too, the eating of less rather than more, because a fruitarian dietary is more nutritious and more completely digested than a meat diet.

I am a great advocate of the daily use of soaked raisings as being one of the most perfect of foods. A rice pudding with the yoke of an egg, and a handful of raisins or sultanas, is an ideal dish for one meal every day.

Pat is an article of great importance in a complete dietary, and a very fine coconut butter called “Darlene,” is used by the hundredweight at the Lady Margaret Fruitarian Hospital.

The fruits of the grasses (e.g., rice, maize, wheat, oats and barley) have given theirm and muscles to countless armies.

The fruits of the leguminous (e.g., peas and beans and the great dahil tribe) provide nitrogenous material in a very concentrated form, and should be used most sparingly.

The sweet fruits (e.g., raisins and currants, dates and figs and prunes) may always be used freely, and with excellent results.

Fresh fruits, ripe and in season, are most cleansing and refreshing, while in the form of marmalade and pure jams may be used by a certain section of the community with much benefit.

Nuts are only just beginning to be understood in England, although our ancestors had to resort to acorns and retained strength upon them, while walnuts and chestnuts have been the fare of the brawny peasants of other lands for centuries. Nuts are most valuable foods, and if they are passed through a nut mill they are transformed into a snowy meal, fragrant and digestible.

For very delicate people they may be used in their malted form, or cooked in soups or cakes or puddings.

A pleasant little illustration of a fruit and nut sandwich is obtained by taking Tafilat dates and removing the stones and filling up the cavity with walnut meal. A plateful of these piled up, cross and cross, like cheese straws are done, is an attractive addition to an “At Home” tea-table.

Exploration and invention in the land of artistic dietetic is so fascinating and so fruitful in happy results, that I commend the study of this subject to all who want to add new joys to life, and to perpetuate to old age some of the purest of bodily pleasures, remembering that a fruitarian dietary contains the completest nutrition in the most natural form for the higher classes of the human race.

PRACTICAL RELIGION.

It is through the God in man, in the throbbing heart of humanity, in the warm, loving, sympathetic soul that realizes its kinship to the lowly and suffering, that relief and solace must come, if at all. It is only when prayers are crystallized into deeds that they become true prayers.

R. T. Watson.
The Art of Letting Go.

The person who wants to be healthy—morally, mentally, physically—must learn to let go. Let go of the little irritations and the petty vexations that cross your path every day. Don't take them up and pet them, and nurse and brood over them. They are not worth while. Let them go.

That little difference that exists between yourself and your neighbour, that you argue and bicker over every time you meet, drop it. Let it go. You can't afford to lose a good neighbour, or a friend, by simply hanging on to some difference of opinion, and spending your time quarrelling over it.

Don't argue with anyone anyhow. It will do no good. And remember, please remember, that arguing means certain death to love and friendship. You may think not, you may hope to accomplish something by arguing, but you will accomplish nothing but a loss of respect for each other, and the total destruction of those kindly feelings that once existed. Respect each other's opinions, and let go the arguing.

That little hurt that you got from a friend, perhaps it wasn't intended, perhaps it was; but no matter, let it go. Refuse to think about it.

Let go of that feeling of hatred you have for another, the jealousy, the envy, the malice; let go such thoughts. Sweep them out of your mind, and you will be surprised what a clearing up and rejuvenating effect it will have on you, both physically and mentally. It will be like ridding the system of poison, for such thoughts do act as poison, diminishing the secretions of the body, clogging up the organs and vitiating the whole system. Let them go, let them go; you house and shelter them at a deadly risk.

But the big troubles, the bitter disappointments, the deep wrongs, the heart-breaking sorrows, the tragedies of life, what about them? Why—just let them go, too. Drop them, softly, may be, but surely. Put away all regret and bitterness, and let sorrow be only a softening memory. Yes, let them go—let them go.

Then that petty pet ailment that you have been hanging on to and talking about for these many years—let it go. It will be a good riddance. You have given it so much attention, and flattered it by talking so much about it, that it will be hard to get rid of. But turn it out, let it go. Don't pay any attention to it, quit talking about it, and it will go away of itself. Perhaps when you once let go of it you will find that after all it was only a figment of your mind, and had no real existence. Talk health instead of disease, and health will come. Quit nursing that pet ailment, and let it go.

It is not so hard after you once get in the habit of doing it—letting go of these things. You will find it such an easy way to get rid of the things that mar and embitter life that you will enjoy letting them go.

And then, when you no longer give any time to vexations and worries and irritations, to hatred or envy or bitterness, and waste no more time talking about this, that, or the other ailment, then you can give the whole time to useful thoughts, healthful thoughts. You will find the world such a beautiful place. You will love it simply for the warm sunshine, for the blue skies and for the stars that shine at night. It will be beautiful to you because you will be free to enjoy it, free in mind and body. You will no longer be depressed with unwholesome thoughts, and your mind will become buoyant and clear and strong, and your body will respond with a vigour and vitality and vivacity that will make mere existence a pleasure.

Medical Talk.

The following suggestions will prove helpful to those who are desirous of giving up the use of flesh-food and adopting a more natural dietary:

1. Give up flesh-meats at once and entirely—replacing them at first by fish, eggs, soft cheeses, macaroni, peas, lentils, nut foods, and good brown bread. You will, later on, be able to do without fish also, but it is best to proceed slowly and surely, a step at a time.

2. Eat less rather than more. Fruitarian food is much more nourishing than butcher's meat.

3. Try to like simple foods, and do not hanker after elaborate dishes that require much preparation. Avoid 'frying-panitis.'

4. Eat dry foods rather than sloppy ones; they are more easily digested. Take toast or Granose biscuits with porridge to assist proper salivation.

5. Do not mix juicy fruits with vegetables, but take the former either alone or with nut foods and cereals.

6. Green vegetables should be taken very sparingly, and with savoury dishes alone. If eaten with sweets they are apt to disagree.

7. Persons of sedentary habits should let at least two meals a day consist of fruit only—or of fruit with bread and butter.

8. Dried fruits, such as figs, dates, prunes, sultanas, etc., are very easily digested; and if blended with nuts they make a perfect meal.

9. Nuts should be flaked in a nut mill to aid digestion. Many nut products are now obtainable which are malted and partially digested already.

10. Give a few hours' thought and study to the important subject of your diet. Get a Guide-Book or two, so as to learn what to do, and what newly-invented foods are obtainable as substitutes for animal flesh, animal fat and animal broths.

11. Do not make the mistake of attempting to live on potatoes, white bread, cabbages, etc., or merely upon the ordinary unwholesome conventional dietary with the meat left out.

12. If you feel any symptoms of dyspepsia, reduce your food and take more exercise. Eat only when hungry.

13. If you are not getting on, obtain advice from a Doctor who is a fruitarian, or from an expert and experienced Food-reformer.

S. H. B.
The Cry of the Children.

A series of most alarming and significant articles, written by Mr. Geo. R. Sims, have recently appeared in the Tribune on the subject of infant mortality and racial degeneracy. His statements concerning the drinking habits of the mothers of slumdom in our large cities are appalling, for it appears that a large percentage of them give their babies beer, or alcohol, instead of milk; and that having wasted their money at the saloon they buy cheap meat and "scraps" at the butcher's with the small residue that is left. Thus the whole family suffers. Speaking of South London, he says:—"I entered thirty public-houses in this quarter last Monday morning, and up to noon I found women and babies and children in all but three of them. Some of the children were having their share of the morning dram."

"From home to the pawnshop and from the pawnshop to the public-house is the conventional Monday morning trip of a vast number of poor married women."

"The three great drinking periods of the week are Saturday night, when the wages are in hand, Sunday, when a good deal of drinking is crowded into a short space of time owing to closing hours, and Monday morning, when the money received from the pawnbroker is available."

The different condition of things prevailing amongst the Italian families is most remarkable, and shows the urgent need of social reform work if the English race is to be saved from further deterioration."

"Among the bonniest babies and the healthiest children to be found in London are the little ones of the Italian quarter. . . ."

"Among the Italian children you will find few pinched pale faces, sunken lack-lustre eyes, or attenuated frames. You will see rosy cheeks, bright laughing eyes, and plump little bodies and sturdy limbs."

"And these are the children of organ grinders, roast chestnut sellers, ice-cream vendors—of the aliens whom we have been accustomed to look upon as "dirty" folks."

"In 1903 Dr. Newman made an inquiry for the Royal Commission on alien immigration, into the mortality of the Italians in the Italian quarter. The result showed that the rates for 1901 and 1902 were respectively 259 and 242 per 1,000 for the English, and 136 and 129 for the Italian."

"These people lived under the same external conditions. What was the secret of the higher death-rate among the English infants? Many of the English mothers took their babies into the dram shop; the Italian mothers did not. The English babies were hand-fed, the Italian babies were breast-fed."

"Let us now compare the practice of motherhood among the Jewish population of the East End with that prevailing among the native population."

"There is one street in the East End to which I frequently take friends who are interested in the problems of child life in London. One end of this street is almost entirely inhabited by Russian and Polish Jews. The other end is principally occupied by native families."

"Among the aliens you will never see an unshod child and rarely a ragged or a dirty one. Among the natives many of the children are shoeless, and very few of them, even in the depth of winter, are warmly clad. The alien children are in the street till a late hour in the night. They form always a pretty picture, dancing merrily in their gay coloured frocks and ribbons and white pinafores to the organ."

"The native children, ragged and unkempt, wander dejectedly in the dark courtways or stand about outside the public houses in which their mothers are drinking. The scene on Saturday night in this street is an object lesson in sobriety and careful motherhood, as opposed to intemperance and neglectful motherhood."

"The Jewish mother feeds her infant naturally, caters skilfully for her children, and does not frequent the public house. The sobriety is racial, and so is the instinct of family life, that is the abiding virtue of the Jewish race."

"It is to their sobriety and their devotion to their children that the Jewish aliens largely owe the early success in a strange land which enables them to push on, and, gradually improving their condition and adding to their means, to displace and dispossess a less sober and less domesticated people."

"In the Jewish quarters the birth-rate is high. The mortality among Jewish infants in these quarters is low. Among the native population the birth-rate is decreasing and the rate of infant mortality is increasing. Slowly and surely the sober race is ousting the intemperate race."

"I have watched the process for years, not only in the East End but in certain crowded quarters of the West, and as an Englishman loving my own land and my own people, I cannot—while greatly honouring all that is splendid in the sobriety, the motherhood, and the family life of the alien people—recognize without a pang of shame that two of the great causes of the displacement of the native are to be found in the greater devotion to motherhood of the Jewish woman, and the greater sobriety of the Jewish toiler."

"The housing conditions, the external environment of the alien people in the congested areas of the East End are in no way superior to those of the native population. But the alien children thrive, whereas the native born perishes."

"There is no need to raise the cry for the Jewish children, "Out of the Dram Shop!" and "Back to the Breast!" The little ones are never taken into the former, or denied the latter."

"The lowest rate of infant mortality in Manchester is in the Jewish quarter."

"Good motherhood triumphs over all external conditions. Bad motherhood is the first great cause of our appalling infant mortality."

A strong Committee of well known public men and women has been formed to deal with this question. Every patriotic soul should help to bring about better conditions. And the fact should be emphasized that Dietetic Reform strikes at the root of the drink crave.

—Ed. H.G.A.
Editorial Notes.

The distinct challenge concerning the moral indefensibility of the carnivorous habit which was contained in the leading article of our last issue failed to bring forth any public defender of flesh-eating, although it was sent to His Holiness the Pope, and nearly all our Archbishops, Cardinals and Bishops, to the Presidents of the Non-conformist Churches, and also to a great number of the Clergy and Ministry. Letters of appreciation and sympathy were received, but the one solitary and very feeble attempt at a justification of the butchery which this prevalent habit entails, came from a Canon who "imagined that our Lord partook of flesh," and who apparently considered that there was no more to be said on the matter.

If there were any positive evidence to justify this belief on the part of the good Canon, I readily admit that there would be some excuse for our teachers of religion showing reluctance to let humane sentiment interfere with their dining upon various portions of the anatomy of their fellow creatures—but there is none. Not a jot or tittle of positive evidence can be found in the Bible or in Church History to the effect that He ever did so, and as we have no reason to believe that these three apostles were other than pious Jews, and as direct Jewish testimony has affirmed that in those days conscientious objectors to flesh-food (who were very numerous in Palestine) were allowed to observe the Paschal Feast at a table from which the lamb was excluded, this aforesaid assumption breaks down.

And with it the unsupported false idea (which is so prevalent in the churches) that the lamb was eaten upon the occasion of the 'Last Supper' is demolished.

I say with it, for in the light of this evidence concerning the three apostles, it is well-nigh impossible for any enlightened truth-seeker to believe that the flesh of the lamb would have been introduced on the night of the Supper. It was held, moreover, on the first day of the Feast, when unleavened bread would constitute the appropriate fare. John's testimony on this point is distinct and conclusive, for he shows in three separate places (ch. xviii, v. 28, ch. xix, v. 14 and 31), that the evening of the supper was on the day preceding that of the Passover.

Peter's Vision.

At meetings which are held for the advocacy of natural and humane diet the lecturer is nearly always confronted by the Peter's Vision difficulty. It is generally advanced by some pious lover of flesh-meat with a smile of triumph, for such persons are usually unable to apprehend the fact that great Principles can neither be established nor upset by the allegorical dreams of any man—even though he were an apostle.

It is well to read the account of the dream as it is given in the latest and, apparently, the most accurate translation of the Christian scriptures that is, as yet, obtainable. This is known as the "Twentieth Century English" direct from the purest original Greek text (that of Bishop Westcott and Dr. Hort).

Here we find it recorded (Ch. x, v. 9) that "Peter went up on the housetop to pray, about mid-day. There he became hungry and wanted something to eat; but while it was being prepared he fell into a trance, and saw that the sky was open, and that something like a great sail was descending, let down by its four corners towards the earth. In it were all kinds of quadrupeds, reptiles and birds. Then a voice came to him, 'Peter, get up, kill something and eat it.'"

"No, Sir, I cannot," Peter answered, "for I have never eaten anything 'defiled' and impure."

I would ask my readers to note two points of special importance: (1) that the creatures let down in the sail were those whose bodies always contain blood (no 'fish' being mentioned), and (2) that Peter, even in response
to what he may have regarded as an angelic voice. Emphatically declared that he could not eat such fleshfood, because he had never eaten anything defiled or impure.

In chapter xi, verse 7, when Peter is narrating the story of his vision to the Jews at Jerusalem in order to explain to them how he was, by means of it, taught to recognise that Jewish bigotry and exclusiveness were contrary to the Divine Will, he accentuates this point by declaring that he responded to the Voice, "No, Sir, I cannot, for nothing defiled or impure has ever passed my lips."

Thus we learn from Peter's own emphatic declaration that he was a life abstainer from the flesh of animals, and that, consequently, he, also, had not participated in the orthodox observances of the Jews on the occasion of the Passover Feast.

In the light of this distinct affirmation—corroborated as it is by the opinion of Clemens (2nd century) expressed in his Homilies: that Peter was "always a strict abstinent"—how can we avoid the conclusion that he must have been a life-abstainer from blood-stained food? I cannot do so, and it is my personal opinion that if the sources of information which are available to us concerning the other immediate followers of the Master were not so fragmentary, we should find that every one of them held the same convictions as Matthew, James and Peter did on this subject. And it is inconceivable that these disciples, and the many others amongst the early Christians who shared their humane sentiments, would have been in advance of their Master in ethical perception and practice.

The earliest and most authentic and important witness on this point is Tertullian, who lived and wrote in the second century, and who was described by Jerome and Latin theologians. "He declared his conviction that our Lord was a total abstainer from flesh-food (in his celebrated treatise De Iesuiness: Adversus Psychicos). And he pleaded most eloquently with the degenerate Christians of his day, who had departed from the apostolic example and precept in this matter, to reform their ways. Such evidence as this ought to be considered conclusive, especially as it is corroborated by the writings and practice of the most spiritual of the early theologians—such as Clemens of Alexandria, Jerome, Augustine, Chrysostom, and Origen.

The Early Christians.

The early Christians were noted for their humane and pure dietetic habits, and the before-mentioned early Fathers denounced carnal feeding far more vehemently than our modern food-reformers do. The martyr Biblias affirmed that he and his fellow Christians considered it unlawful to participate in the slaughter of animals (Eusebius), the girl-martyr Perpetua did likewise, and the hymn written by Prudentius (4th century) also declared this to be a fact.

In The Testament of Jesus (about 400 A.D.) it appears that a Bishop was then expected to eat no flesh at all. The same rule holds good still among both East and West Syrians.

Hegesippus describes James, the brother of Jesus, as practising such abstinence. Clement of Alexandria says of St. Matthew that his diet consisted of fruits, roots, and herbs. St. Basil (379 A.D.) said, "with sober living well-being increases in the household, animals are in safety, there is no shedding of blood, nor putting animals to death," and St. Jerome (440 A.D.) held up natural diet (non-flesh) as the Christian ideal, and St. John Chrysostom (407 A.D.) was of the same opinion.
Several new kinds of tinned nut-foods are now offered by Messrs. Winter, of The Arcade, Birmingham. Of these "Nutton No. 1" and "Nutton No. 8" are worthy of recommendation; they should be stewed in gravy, just like meat, and served with savoury vegetables. "Legumon," a similar preparation, made from legumes, is the best meat-substitute I have yet met with. This firm are also making a new food called "Prunus," which contains 23 per cent. of vegetable albumen, 50 per cent. of digested starch, 20 per cent. of nut fat, emulsified, and 3 per cent. of vegetable salts, total 96 per cent. One pound of this is equal to 3 lbs. of lean beef and is much more easily assimilated.

Two new kinds of Proteose are offered by the International Health Association, Birmingham. One is called "Pine-nut" and the other "Hazel-nut" Proteose, and they are certainly a great improvement on the older commodity that was made from pea-nuts.

Those who want to find a perfect and most palatable substitute for cow's butter have only to try Hugh Mapleton's Almond-Butter and they will at once realize that henceforth they are independent of the dairyman; and these nut butters, being emulsified, are less likely to cause gastric disturbances and are more nourishing.

A new unfermented grape wine has also been sent me by Messrs. Ingersoll and Melhuish, 6, Eastcheap, London. It is called "Chateau Peyron," and is bottled at Mas de la Ville, France. It tastes good and pure and should win favour with the public.

At the commencement of Lent I attended divine service at one of the most prominent and beautiful of the Catholic Churches in London (although I am not a Roman Catholic) and was somewhat depressed when an Episcopal Manifesto was read from the pulpit, granting a Dispensation to the faithful to ignore the time-honoured obligation to fast from flesh food during Lent because of the prevalence of Influenza. It was stipulated, however, that an increased amount of prayer should be offered, and that extra contributions should be made to the offertory box to make up for this delinquency.

It is a pity that humane sentiment, the example of the Apostles, Fathers, and early Christians, and the wise teaching of the Church concerning the need for temporary abstinence, at least, from carnal food, in order to promote spiritual growth, should be thus ignored in deference to popular degenerate taste and ignorance concerning hygienic facts. And it suggests the thought that the Catholic Conscience, like the Nonconformist Conscience is in need of a tonic. But it is encouraging to know that while the ethical perception of the Churches waxes dim that of the secular world is being clarified. This is evidenced by the following extracts from a leading article on "the uses of fasting," published recently in the Society paper The Queen:

"The fasts of the Church, which were more generally observed by the nation as a whole in mediæval times, acted as a corrective to the undoubtedly greater feeding habits of the people in those days. The growth of education, the evolution of man's mind and morals, have tended to lessen the respect for fasting of previous epochs, until to-day, apart from certain sections of the Christian Church, the Persians and Mahomedans, fasting as a moral rite has ceased to be definitely practised by the community. Freedom of thought has led to freedom of action, so that no one would think of enforcing by penalty the Act of Queen Elizabeth—if it still existed—which enacted that none should eat meat on "fish days" (the Wednesdays, Fridays and Saturdays throughout the year) without a licence.

"Going further back, we read that in the eleventh century those who ate flesh during Lent were liable to have their teeth knocked out, while in the time of Charlemagne a law was passed for the newly conquered Saxony which attached the penalty of death for wanton disregard of the holy season. "The need is the same to-day, for most of us—nearly all, in fact, who can afford it—eat too much, both in bulk and of one particular kind of food. The form we refer to is butcher's meat. "It must not be forgotten that England was made and the British Empire founded by men who did not by any means depend upon butcher's meat as their main source of nutrition. To-day, both among rich and poor, there is a sort of blind worship of flesh meat as the sole or chief source of strength. That this is a "vulgar error" most scientists who have studied the subject to-day affirm.

"Whether a knowledge of the undoubtedly stimulative properties of flesh underlay the wisdom of the Church in ordaining abstinence from meat as the chief part of fasting we cannot say. On the other hand, we know, and the ancients knew, that absolute fasting induces a certain excitement of mind which leads to man's perception of the spiritual and supernatural. Dreamers of dreams for a purpose, of visions of visions, were accustomed to fast before trying to excite the spiritual, as opposed to the physical functions of the body."

At a meeting of the Royal Society of Edinburgh, Dr. Chalmers Watson showed an Excessive that in the offspring of rats fed on an Meat Diet—excessive meat diet the osseous system was defective. The bones were invariably too soft and vascular, and frequently showed structural changes like those of rickets in the human subject. He also demonstrated the occurrence of similar structural changes in the bones of an infant suffering from an obscure disease, whose mother had been fed for a prolonged period on a diet containing a great excess of meat. In a communication on the effects of a meat diet on fertility and lactation, Dr. B. P. Watson demonstrated that the reproductive power of rats fed on an excessive meat diet was much below that of rats fed on a meat-free diet; and also, when the meat-fed rats had litters, that the mothers were less able to nurse their young owing to the smaller development of mammary tissue. Drs. Malcolm Campbell and Chambers Watson showed that the use of an unphysiological diet, such as an excessive meat diet, induced structural changes in the lining membrane of the uterus, and these changes were most pronounced in animals in which the faulty feeding was begun when the animals were weaned. Such animals were invariably sterile.

The recently issued report of the Royal Commission on Tuberculosis is conclusive concerning the danger of eating con­
sumptive cattle or drinking their milk. Koch's proposition that tuberculosis in man is different to tuberculosis in other animals is now finally exploded.

The Commissioners sum up the results at which they have arrived as follows:

"There can be no doubt that in a certain number of cases the tuberculosis occurring in the human subject, especially in children, is the direct result of the bacillus of bovine tuberculosis having got into the human body of the bacillus of bovine tuberculosis; and there also can be no doubt that in the majority at least of these cases the bacillus is introduced through cows' milk. Cows' milk containing bovine tubercle bacilli is clearly a cause of tuberculosis, and of fatal tuberculosis in man."

"A very considerable amount of disease and loss of life, especially among the young, must be attributed to the con-

"Let us cultivate the art of saying things in as few words as possible."
The Herald of the Golden Age.

The danger of eating ducks. An instructive article appeared in the New York Herald last month, explaining how ptomaine poisoning results from eating the bodies of "ducks" when served in a particular manner which is common in our best restaurants and hotels. As it illustrates the process of putrefaction which takes place in "game" and certain other types of flesh-food, and thus accounts for the frequency of the cases of "death from ptomaine poisoning" that are reported in our newspapers, it may prove of interest to our readers.

"As is well known, it is not rare to observe, after eating 'Canard à la Rouennaise,' more or less serious manifestations of poisoning. In the Nantes district, where most of the ducks are raised, they are killed in two ways. Those which are destined to be sold as 'Canard Nantais' are bled by opening a vein in the neck. Ducks which are to be sold as 'Rouennais' are killed by having the brain pierced with a pin.

The flesh of these birds assumes quite a different aspect according to the manner of killing them. That of the 'Canard Nantais' is colourless, bloodless, with white skin; that of the 'Canard Rouennais,' on the other hand, has a reddish color due to the presence of blood in the tissues. With a view to further accentuating this aspect, it is customary to beat the duck's body immediately after the brain has been pierced to the extent of causing extended ecchymoses. In addition one finds large clots of blood in the neighbourhood of the lungs and the liver. For this reason, the symptoms of 'ptomaine poisoning' are more grave. The birds Rouennais,' killed by piercing the brain and not bled, putrefy more quickly than ducks killed by bleeding.

From the chemical point of view, a search for ptomaines in the organs of two ducks killed according to the two different methods brought to light notable quantities twenty-four hours after death in the case of 'Canard à la Rouennaise'; whereas, in the case of a duck which had been bled there were no ptomaines after twenty-four hours and they did not begin to appear till forty-eight hours after death.

The series of cases observed in Paris during the summer two years ago seemed to be attributable to the action of the microbes favored by the temperature, the length of time the ducks were kept, the method of killing and the preparation, all factors which enable the germs to attain a degree of activity capable of causing fermentation and dangerous decompositions in the digestive tube.

The Carrion Traffic. I travelled in the train the other day with three well-to-do dealers in cattle, and while they thought I was asleep in my cosy corner they let out some rather startling revelations. They talked freely of the hardship of having to bear the loss when an Inspector happened to detect a badly-diseased carcass. Their conversation clearly showed how perfectly familiar they were with tubercular deposits in every stage.

One of them bemoaned the fact that he had not a private slaughter-house of his own, saying: "You can do what you like when you have a place of your own, but there is always danger in having to send your animals to a public slaughter-house." And, incidentally, they commented on the impossibility of supplying "sound" meat in connection with Naval Contracts. "The price was too fine," and therefore "the only way was to square the Commissariat Officer—but it needed to be done in a diplomatic manner."

The absolutely callous way in which they talked about the animals they bought and sold for immediate execution showed that they regarded their merchandise as being so much "raw material" and nothing more. Their only consideration was, "how much dead weight of meat would they yield?" and they even debated whether they fattened up quicker if made to undergo a certain operation. I could not help inwardly thanking God that I had been emancipated from the sphere of the Carnivora.

The cost of Breakfast Bacon. Mr. George Allen (the long-distance walking champion) stated in a lecture at Hull, that when he visited the slaughter yards in Chicago, he saw one of the pigs trying to swim in the huge vat of scalding water into which it had been thrown after having its throat cut. As about 20,000 of these animals meet this fate every day, in this one packing house alone, it is impossible to imagine the sum total of cruelty that is inflicted to satisfy the demands of flesh-loving Christian Nations for ham and bacon. Thus humane sentiment, Biblical prohibitions, and hygienic considerations, are alike ignored at the bidding of a depraved and unnatural taste.

A Dog's Heroism. Surgeon Flood of the North-West Mounted Police, perished in a snow-storm in Canada, in February last. All his sledge dogs, except the leader, bit themselves free and reached Fort Churchill safely. But when the doctor's
body was discovered, the faithful animal who stayed with him was found frozen stiff over him, having sacrificed its life in a vain endeavour to save him by keeping him warm. And it is such creatures as these that Christian nations deliver up to the vivisector for prolonged torture, for selfish reasons.

** An Eminent Russian Vegetarian. **

One of the most notable men who has recently expressed his entire sympathy with the work of The Order of the Golden Age, and who is giving his support to its propaganda is Prince Paul Troubetzkoy, a scion of the Imperial House of the Czar, and a most distinguished sculptor.

This eminent Russian, who has been chosen to create the statue of the late Czar for the Nevsky, in St. Petersburg, was recently interviewed by a Morning Leader representative, to whom he delivered himself as follows:

"I will not have dead eyes in my sculptures," he declared, "any more than I will have dead meat on my dishes at dinner."

"As I cannot kill," he continued, "I cannot authorise others to kill. Do you see? If you are buying from a butcher you are authorising him to kill—kill helpless, dumb creatures, which neither I nor you could kill ourselves. So that I am for that reason a vegetarian, as most Russians are."

"For nine years I have been a vegetarian, and I shall be one—mind I am a man with strong convictions—to the end of my life."

Speaking to Mr. C. Borup, the Prince recently said:

"Physically I have benefited greatly by my reformed mode of living, and as an instance I can mention that I used to suffer much from toothache in my carnivorous days, which is now a thing of the past. But first and last, I hold that we must avoid bringing pain and suffering to any of our fellow-creatures, and the more helpless they are, the greater their claim upon our sympathy."

Prince Troubetzkoy, who stands 6 ft. 3 ins. in height, is a great friend of animals, which is evident in his work as a sculptor. At his home in St. Petersburg he keeps as pets several Siberian wolves, bears and dogs—all vegetarian and strongly attached to their master. The wolves used to promenade the streets with him, but the Police became alarmed, and they are now confined to the home circle.

** Religious Brutalities in India.**

My colleague, Mr. Labbhshankar Laxmidades, of Nagar Wado, Junagad, India, has constantly appealed to the Government of India for the suppression of certain religious brutalities perpetrated by some sections of the natives.

An appeal made to the Rt. Hon. the Earl of Minto, in November, 1906, contained the following statements:

"Pigs, lambs and fowl are impaled alive upon pointed stakes in a religious ceremony in many parts of the Telugu country; priests drink the blood of sacrificed animals and dogs—all vegetarian and strongly attached to their master. The wolves used to promenade the streets with him, but the Police became alarmed, and they are now confined to the home circle.

In an article in the Bombay Samachar of October 30th, it is stated that at Coimbatoor and other places long rows of tied-up live goats are crushed to death under the wheels of a heavy chariot that is driven on the bodies of the wretched victims on the Dasera holiday.

"In these and several other ways thousands of dumb, defenceless animals are mercilessly tortured to death in the sacred name of religion in this country, and most unfortunately the perpetration of such horrible deeds is sanctioned by the Government of India. (Vide section 11 of the Anti-cruelty Act of 1890):—'Nothing in this Act shall render it an offence to kill any animal in a manner required by the religion or religious rites and usages of any race, sect, tribe or class.'"

There is obviously a necessity for Legislative interference with such barbarities as these, and no scruples concerning the religious notions of the Hindoos or other tribes ought to be raised to the suppression of such preposterous and wanton cruelties. The educated sections of Native Society would, I feel sure, co-operate with the Government in removing such a scandal, and I earnestly hope that many of our Members and Friends in India will lend Mr. Labbhshankar Laxmidades their best support in connection with his praiseworthy efforts to promote reform.

Some of the sinister facts that have already come to light during the sitting of the Royal Commission on Vivisection—entirely packed as it is with pro-vivisectors—were summarised by Dr. Walter Hadwen, M.D., M.R.C.S., in a speech delivered at Woking on March 21st. Amongst other statements were the following:

"That whilst granting of licences and certificates to vivisectors is under the supreme control of the Home Secretary, he, nevertheless, consults in every case the Association for the Advancement of Medicine by Research, a body acknowledged by the principal clerk in the Home Office to include "a large number of gentlemen of great distinction in vivisection practice." In short, the power of the granting of licences for vivisection is practically placed in the hands of the vivisecting chiefs by the easy-going method of the Chief Secretary of State.

That during the last published three years' returns the Home Office Inspector and his assistant have together only witnessed an average of 31 experiments to every 2,500 performed in the licensed laboratories. This the Inspector thought "sufficient to keep us well acquainted with what goes on."

That the vivisectors who have so far come under examination, especially Professor Starling, claim absolute infallibility concerning everything connected with their cult. The supreme contempt of the typical vivisector for animal suffering is manifested by Professor Starling, who declared in cross-examination that if there were no such things as anaesthetics he would justify painful experiments on animals.

That the same penchant which vivisectors manifest in all their writings for the contradiction of one another's conclusions in all material points was equally noticeable in their evidence before the Commission.

That, according to Sir Thorneley Stoker, the Inspector for Ireland under the 1876 Act, "The amount of terror that a dog feels even in being put under chloroform is rather painful to witness" and that the monkey evidence was the most convincing when it is brought into the room where it is going to be operated upon, and shows a great degree of terror."

* * *

** The Iniquity. **

An eminent Russian, who has been chosen to create the statue of the late Czar for the Nevsky, in St. Petersburg, was recently interviewed by a Morning Leader representative, to whom he delivered himself as follows:

"Thy friend hath a friend, and that friend hath a friend; therefore be discreet."
and whether he too owed his selection to the choice of the mysterious Association for the advancement of Medicine by Research. And many thousands of humane persons are wondering how much longer this iniquitous legislation of criminal cruelty is going to be tolerated by the electors of Christian States.

* * *

During the year 1906, Miss Rosa Synms (the Champion Lady-Cyclist of the World), who has been a strict vegetarian for 12 years, cycled 12,047 miles, or an average of 33 miles per day for the whole year. One day she covered 200 miles in 24 hours, and in August she rode 1,860 miles in 14 days, or an average of 128 miles a day for 14 days—in all weathers and on the hilly roads from Land's End to John o' Groats and back. During the past three years she has cycled 34,411 miles, thus proving what wonderful stamina can be built up from a natural and fleshless diet.

Mr. H. H. Agnew won the Championship of the Vegetarian Cycling Club by riding on the road 50 miles in 2 hrs., 31 mins., 49 secs.; 100 miles in 5 hrs., 35 mins., 23 secs.; 196 miles in 12 hrs. He is also Champion of the North London C.C.

Mr. F. A. Knott, the vegetarian runner, competed in 30 first-class Athletic events during the past eighteen months, and with the result that he won 15 First Prizes, ran two dead-heats for Firsts, and secured 4 Seconds, and 3 Thirds. He won the Championship of the South London Harriers, the Croydon Cup for the Five Miles Race, and also the 100 Metres Match and 1,200 Metres Steeplechase at the International Races at Brussels.

“Love covers a multitude over a multitude of slights, blunders and fruits of ignorance.”
Vicarious Sacrifice.

In all the existing annals of the human race, dating from the mythic twilight of vanished peoples down to the blatant records of yesterday's half-penny press, there never seems to have been a time when the tenet of Vicarious Sacrifice has been without a strong body of enthusiastic upholders and exemplifiers. Strong, be it observed, in respect of numbers only; the moral strength of its partisans never being aught else than a negative quantity, and this because of the falseness and immorality of the principle posited, and the fact of its appealing solely to the baser instincts in man's nature.

For, translated into plain language from the nebulous and sophistical oratory in which its adherents love to enwrap it, the dogma of Vicarious Sacrifice reads thus:—Holding that justice, compassion, self-sacrifice and the fortitude of expiation are unnecessary attributes, and believing therefore in the legitimacy of the innocent suffering for the guilty, exploitation of the weak by the strong, and the invariable justification of the means by the end—we assert that man is entitled to borrow or extort pleasure, health and life from his fellows, human and animal, in despite of their welfare, claims or rights; such gain as he thus extracts being his reward for the exercise of those superior powers which enable him to survive and persist.

Briefly summarised this is an utterly detestable and pernicious doctrine, since it implies nothing short of the abasement of God, who is Love, and the exaltation of the negation of God, or the devil, who is hatred. Put into practice as the gospel of force and selfishness it means the distortion of man's mind and the suicide of his moral conscience.

Its general acceptance would threaten the very nature of existence, for life is only explicable in terms of progression from lower to higher modes and states of being, by the unfolding of the soul, individual and universal, to fuller and freer manifestations of its divine substance. No mere Darwinian evolution is herein signified, but that other interior and stupendous ascent from the dust of the ground to the bosom of the Absolute which lies before every child of God, and of which this infernal doctrine of retrogression would vainly seek to rob him.

Now it might readily be supposed that the practice of a system so nefarious in construction and so disastrous in results would be confined to savage races or remote periods of history, the gradual elevation of the common standards of morality and the diffusion of religious instruction making it obsolete among an avowedly Christian nation. But in point of fact, and as already indicated, this is not so.

Whether owing to indifference on the part of politician, ecclesiastic and scientist, with resultant ignorance for those who lean upon them for guidance; or because of the increasing absorption of all classes in the material and sensual merely, with the consequent repudiation of the Soul as the supreme judge of conduct and love as the light of life,—it would seem that never was this hydra-headed evil so firmly established as at the present day, and among nations laying special claim to liberty and culture.

True, in some few particulars the application and enforcement of Vicarious Sacrifice as a system has undergone modification, in that human bodies no longer write beneath the priest's knife, and there exists a Royal Society for the Prevention of Cruelty to Animals. But the change is one of practice only and not of principle. To substantiate this statement, to indicate the dry-rot permeating this proud and gilded fabric of modern life, it is only necessary to take moral stock of some current Western beliefs and customs.

Sacrifice in War.

If the altars of the Church do not now run with human blood, the altars of the State reek to heaven with it. To select an immense number of peaceful and useful men from one nation and clothe, feed, house and pay them at the expense of the rest of the nation; to train them up carefully as so many expert homicides and arm them with the most deadly instruments of extirpation contrivable; to teach them that Right is enforceable by Might and no man truly a brother who owns allegiance to a different flag; to bring them face to face with a similarly selected, trained and taught body of men from some other nation, with whom they have no quarrel, to whom they are mutually related by the ties and interests of common life; and then to set these two sections of mankind frenziedly annihilating one another—all this may be termed War, but it is rightly defined as organized murder and criminality.

To suppose that civilization may be advanced, justice administered, or honour upheld by such methods is a veritable apotheosis of evil. Only unscrupulous intellects lusting for temporal power and dominion could stoop to gain their ends by aggressive war; only natures corroded by greed, envy, or malice, could wilfully incite such passions in the breasts of others, and deluge in blood and tears the hearth-stones of a people.

The cry of 'patriotism' will not avail to drown the dreadful dissonance of War. For surely the highest form of love and service for one's country is to lay down one's life for it from day to day, in an honest endeavour to establish peace and prosperity within its borders, and not, in a paroxysm of devastation, at a moment's notice, to teach them that Right is enforceable by Might and no man truly a brother who owns allegiance to a different flag; to bring them face to face with a similarly selected, trained and taught body of men from some other nation, with whom they have no quarrel, to whom they are mutually related by the ties and interests of common life; and then to set these two sections of mankind frenziedly annihilating one another—all this may be termed War, but it is rightly defined as organized murder and criminality.

who are guiltless of such sentiments, and to execute
their foul schemes by proxy, this is Vicarious Sacrifice
in all its naked hideousness.

Sacrifice for Science.

Apart from War, and as illustrative of the
change in method rather than in motive
before alluded to, the practice of the system
under examination by the western world
to-day is almost wholly confined to the immolation
of animals, and this at the hands alike of the most renowned
and the most obscure members of the race. At one end
of the scale is the elderly and titled researcher of the
physiological laboratory, at the other the youthful and
amateur butcher in the private slaughter-house; while
between these extremes stands the general public, sub-
sidizing the experiments of the vivisector and subsisting
on the labours of the slaughterman.

Turning to that which, dubbing itself “scientific,” is
in reality at the antipodes of genuine science, namely
the practice of Vivisection, it is noteworthy that some
of its high priests openly proclaim their supreme motive
to be not the benefitting of mankind, but the acquisition
of what they call knowledge; an assertion only too well
borne out by the nature of their experiments and the
futile records of the movement. The vivisector, how-
ever, as a rule finds it convenient to encourage the
popular notion that he is toiling amid uncongenial sur-
roundings to mitigate the sufferings of his fellows, and
bestowing upon them occasionally beneficent liquids,
whereof a syringe-full beneath the skin will give ex-
emption from maladies brought about by a violation of
the laws of nature and the canons of common-sense.

As for the knowledge which the vivisector seeks,
its only parallel is the dire knowledge of the sorcerer,
who, in his search for selfish and material power,
trample down the instincts of his soul and thereby
engenders his own ultimate retribution. Sowing wholly
to the flesh, they of the flesh reap nothing but cor-
ruption. It almost passes comprehension how the art
of healing has become associated with science in this
its most debased and perverted aspect, or how men
could ever look for the blessings of health and life as
the outcome of a system founded on filth and nurtured
on slaughter.

Again, of suffering arising from self-engendered
disease two things may be predicated; first, that it is
primarily the result of ignorance and therefore a neces-
sary factor in the education of the individual concerned,
and second, that it is not undeserved. Vivisection,
therefore, by seeking to augment rather than decrease
the ignorance of the individual, tends to retard his

Deplorable as is the practice of Vicarious
Sacrifice in the above two aspects, the
third now touched upon is especially sad-
dening, inasmuch as it is Woman who is
arranged with the repression of those
faculties which it is her supreme function in life to exalt.
The skins of quadrupeds and the feathers of birds are,
to the refined eye, only truly beautiful when in their
proper places on the living animals, for to their intrinsic
beauty is then added the beauty of utility and apposi-
teness. But these same skins and feathers torn from
animals that have exchanged a healthy and happy life
for a violent death, in order that woman may trick
herself out in them, are hideous to the reflective eye, and
disfigure with the taint of blood-guiltiness all who
handle them.

The plea that furs are necessary to keep the body
warm in winter will not stand examination. It is
generally brought forward by those who have made the
smallest effort to find adequate substitutes, and who
overlook the fact that the male portion of the race get
along well enough without wrapping themselves in hides.
It is really quite a reflection upon the perspicacity of
the Creator to insinuate that one class of his creatures
cannot retain its vital heat save by pillaging another
class of life and skin. Moreover the heat derived from
wearing furs is not of a nature conducive to hardiness,
and for this and other reasons it is certain that they had
no place in the wardrobe of Hygeia.

Nor ought they to form part of the apparel of any
thoughtful and high-principled woman who desires to
preserve inviolate the sanctity of her sex. To such a
woman the purchase and parade of these pitiful relics
left to starve beside the flayed carcases of their parents
at their best; of seals skinned alive; of infant animals
embowelled for the sake of the specially delicate skins
of their fit place with the hallucinations of insanity.

As for the knowledge which the vivisector seeks,
its only parallel is the dire knowledge of the sorcerer,
who, in his search for selfish and material power,
trample down the instincts of his soul and thereby
engenders his own ultimate retribution. Sowing wholly
to the flesh, they of the flesh reap nothing but cor-
ruption. It almost passes comprehension how the art
of healing has become associated with science in this
its most debased and perverted aspect, or how men
could ever look for the blessings of health and life as
the outcome of a system founded on filth and nurtured
on slaughter.

Again, of suffering arising from self-engendered
disease two things may be predicated; first, that it is
primarily the result of ignorance and therefore a neces-
sary factor in the education of the individual concerned,
and second, that it is not undeserved. Vivisection,
therefore, by seeking to augment rather than decrease
the ignorance of the individual, tends to retard his

evolutionary progress, while it also, by implying his
sufferings to be unjust in promising him salvation
through the innocent blood of others, endeavours to
asperse the nature of Deity itself.

Lest by any it be imagined that this vampirism of
'Science' is of small extent, it is here re-stated that
during the year 1905 there were performed by the
vivisectors of Great Britain alone—fully licensed and
certificated for all emergencies by the Government—
thirty-seven thousand, nine hundred and thirty-five
experiments upon living animals, an increase of five thousand,
three hundred and seventy-three experiments over the
number performed in the previous year.

"Great Principles have achieved more victories than horsemen or chariots."
to gloat over the gladiator’s death throes? Then let
Woman realize that the measure of her value in life is
the extent to which she stands as a living symbol of
celestial virtues, for only by the realization of this will
she triumph over thoughtlessness and rehabilitate that
intuition of soul the suppression of which leads her
to patronise the very thing she should most execrate.

Sacrifice for Food. If Vivisection and Fashion have slain their
thousands of victims the fetish of Flesh-eating has slain its millions. In
many respects the modern practice of Vicarious Sacrifice here
both takes its rise and finds its climax. For a vast number of otherwise intelligent people cheerfully cherish the impression that life can only be sustained by the frequent ingestion of animal remains, and it is not difficult to see that a belief of this sort tends to make its holders indifferent at the outset to the Rights of animals in all other directions.

The pious-minded say that since it has pleased God to send, in His mercy, these dumb creatures for the dinner-table, it would be ungracious not to enjoy such gifts to the full; while their frankly materialistic confères assert that life being largely an internecine warfare, it is unimportant whether we add to its sanguinariness or not. The morbid bias of this latter view is self-evident, and as for the former it is sufficient to remark that it libels Deity by the ascription thereto of qualities the reverse of deific.

Whatever purpose animals may fill in the scheme of creation it is certain that they were never meant to fill the human interior. For science affirms and history supports, what morality instinctively apprehends, that there is no necessity whatever for man to eat the flesh and drink the blood of beasts, the best of everything requisite for his bodily sustenance being readily obtainable from the vegetable kingdom.

The extent to which this natural truth is recognised and practised in the West may be gauged by the fact that during the year 1905, through one market alone (Smithfield Market, London), there passed for human consumption four hundred and fifteen thousand, two hundred and ninety six tons of meat and poultry, the increase for 1906 being estimated at over seven thousand tons. No mind can comprehend the sum total of agony and degradation represented by these ghastly figures, or compute their equivalent in unmerited suffering. And when to them is added the yearly slaughter going on in every village, town and city in lands where this brutal habit has gained a footing, the accumulated horror smites the soul as with a pestilence.

It might be doubted if such a transference of Vicarious Sacrifice from the human to the animal realm does not well-nigh constitute a decline in morality, since it means that instead of offering up those who are to some extent his equals and capable of self-defence, man makes a holocaust of those who are in many respects his inferiors and defenceless, and whose claims upon his sympathy are all the greater because of their relatively lower position in the scale of life.

There are indeed some who talk glibly of animals having no souls—and soul-less must they be who can so affirm—and others who say that man’s chief duties are towards his own species, but these are quite irrelevant matters. For all warm-blooded, sentient, highly organised creatures pain is pain and death is death. Therefore if it is an offence to deliberately inflict unnecessary pain or death upon a two-legged creature called a man, it is also an offence to inflict unnecessary pain or death upon a four-legged creature called an animal.

Mark well that word ‘unnecessary,’ first because the humanitarian has been accused by the brutalist of deprecating all taking of life, and second, because it stultifies every plea that the flesh-eater can muster for the continuance of his habit. This is to say, that as the flesh of animals is quite unessential to man’s diet all his slaughter of animals for food is useless and indefensible. Nor is it any complete extenuation to say that he slays because he has not been informed as to what is his proper food. He should need no scientist to tell him that he is not of the order of the carnivora, for he has that within him which can enlighten him, namely his soul, and this, did he only acknowledge and cultivate it, would cause his whole being to revolt from a diet of blood.

What does his lack of perception mean but that this miserable doctrine of Vicarious Sacrifice has become so ingrained in his system that he can view with equanimity and consume with gusto the produce of the slaughter-house. It is because this doctrine is here not only openly encouraged but actually assumed to be a fundamental law of life, that on Carnivorism, as the chief idol in the worship of Beelzebub, is centered the attack of all who truly feel and strive to abolish the sins and sufferings of slayer and slain.

Think on these Things. The denunciatory attitude which is inevitable in treating of this subject must not be misinterpreted. Imbued in slaughter though man may be, he has still within himself the method and means of atonement and salvation; recognising his guilt he will recognise also his only way of redemption from it. Wherefore all that is denounced is want of thought, for this same interposes between man, the shedder of innocent blood, and man, the expression of the love of God.

The condemnation is not of the West as being incurably wicked, but of the West as becoming increasingly thoughtless concerning the ethical significance of the principles underlying its actions. It is by the according of serious consideration to matters of personal profit and pleasure only, by accepting without question the stereotyped judgments of others, and by assuming what is customary to be what is right, that we impede the faculty of clear thinking, and allow wrongs to be openly perpetrated which a little honest reflection would make impossible of commission. Nor does the exercise of thought in the conduct of life presuppose any superiority of gifts or conditions; for it is the inalienable birthright of every normal individual. The peasant is as well fitted as the philosopher to think out his position with regard to this matter of Vicarious Sacrifice and determine whether it shall have his support or dissent.

For the whole question is ultimately resolvable into deciding between Right and Wrong, and that is a

“Let us remember that God never hurryes, and is never late.”
decision which every man can and must make for himself alone. Hitherto the issues have been obscured by the supposition that sacrifice of any sort is always an excellent and acceptable thing, and therefore it has been deemed unnecessary to criticise its extent or nature as a factor in daily life. Whereas the fact is that the entire value of sacrifice depends upon the motive which prompts it and the form it assumes. If the motive be pure, high and unselfish, then the form will be such as may best express that motive, and sacrifice will become one of the sublimest acts of the soul, whereby it may be made perfect in love. But if the motive be sensual, low and selfish, then the form will be such as will least conceal that motive, and sacrifice will become the yielding up of the soul to the lusts of the body.

Now in Vicarious Sacrifice the motive is always either self-gratification or the evasion of the consequences of actions, and the form which this motive takes is seen in the attempt to purchase pleasure or pardon by the oppression of the weak and the shedding of the innocent blood of others. The extent to which, for want of proper thought, this perverted form of sacrifice may prevail in lands styling themselves Christian, has been indicated by a consideration of the above four examples of War, Vivisection, Fashion and Food.

But the survey were incomplete without some description of the converse of Vicarious Sacrifice, that true and beautiful Renunciation which prophets have extolled, poets sung, and illuminated souls enacted in all ages, the truth of which is slowly dawning upon the consciousness of mankind as they recognise in it a ladder set up from earth to heaven. Herein is effected the conjunction of sacrifice and sacrificer; on this altar no victims are bound; the blood of beasts, the cries of the oppressed, these have no place in the offering up of the lower to the higher self, that transformation of bodily desire into aspiration of soul, with which Renunciation deals.

Within the solitude of his own heart the neophyte must erect his altar and thereon lay the passions that would weaken him, the evil will that would master him,—all that would enchain him to an existence wherein sense and self are the ruling powers. Striving thus to sublimate his earthly nature he takes delight in the surrender of his own material welfare for the benefit of others, and refuses to accept from them aught save the voluntary offerings of sympathy. Cultivating charity in its widest sense he sees behind the form to the essence, and learns to co-operate with that universal law of Justice and Love which aforesaid he ignored or repudiated. Thus mounting by self-sacrifice, making purification of body and mind his unchanging purpose, death will at length for him be swallowed up in immortality.

This ascent is no special prerogative of mystic or hierarch, nor is the process secret except in the sense of being interior to him who will follow it. Already as he resolves to live up to the best he has in him to be, and sets his heel upon one cherished failing, he has begun the great Renunciation, and entered upon that path which leads from shadow and illusion to substance and reality, from dust to divinity.

Bertram McCrie.

Interesting Facts.

Captain Diamond, of San Francisco, who has abstained from flesh food for over 80 years, is now 110 years old, and expects to live for some considerable time yet. He was teaching physical culture to a class quite recently and is reported by an American Journal to be still "as active as many men of 40 years of age."

Dr. Walter Hadwen, who has had 25 years' experience as a Fruitarian, has opened a Sanatorium at Gloucester. Hygienic treatment, of an up-to-date sort, combined with non-carnivorous diet, is provided. A prospectus will be sent to any applicant.

The Principals of three Additional Schools have announced that they are now making Food-Reform a prominent feature, and are providing a well selected non-flesh dietary for their pupils. The establishments are Claremont School, Pittville, Cheltenham (Miss Manley, L.R.A.M.); St. Michael's School, Kidlington Road, Bedford (Miss Tushy); and The College Snettisham Grange, Norfolk (Mr. W. H. Prosser, B.A.)

Another Hydropathic Establishment, in which a good Vegetarian Menu is provided, was opened on March 23rd. It is situated on the well known eminence called Boar's Hill, near Oxford, and has great advantages as a Hygienic Resort. Mr. James F. Shone is the Managing Director, and baths of all sorts are provided (including sun-baths).

A similar Institution is opened at Henley Grove, Henleaze Road, Bristol (Principal, Miss Bland), and a 'House-Party' is being arranged from March 25th to April 11th, for which Lectures, Excursions, c., will be provided.

The Dutch Vegetarian Society has received a gift of £3,500 from Mr. Dumas—a gentleman who was cured of a disease by adopting a non-carnivorous diet. Let us hope that this good example will be followed in all countries by other beneficiaries. "Were not ten cleansed—where are the nine?"

A new quarterly Magazine, entitled The Laresol Review has been issued by Mr. Ernest Newlandsmit, A.R.A.M. Its aim is to emphasize true Spiritual Ideals in Art and to declare the true mission of Art in its relation to social life. The publishers are Ballantyne & Co., Tavistock Street, London, and the price is sevenpence.

A new edition of the Mystic Book, entitled "Clothed with the Sun," has been issued by the Ruskin Press, Stafford St., Birmingham. This work contains many of the illuminations given to Anna Kingsford, M.D., the gifted Seeress who was joint recipient with Edward Maitland of the more philosophical work on esoteric Christianity entitled "The Perfect Way, or the Finding of Christ." Both these books contain profound and suggestive thoughts for advanced students of the higher aspects of truth and revelation.

"Let us remember that we make and mould our own destinies."
There is no adequate substitute. The bottle, however, can never be proclaimed too emphatically. And there-and during the nursing period. Here our rule will be, and strict moderation, especially before the birth, is of those who eat the most, who assimilate the most. Wines, beer and tea, and all unnatural seasonings such as pickles, mustard, pepper and relishes. Eggs should be the staple food of nursing mothers is now mainly moderation and simplicity. It is not always absolutely discarded, such as butcher's meat, soups, made of stone-rolled wheat is often very valuable, being returned when weaning is over and the patent food discarded. Or the teeth will come through fairly easy and quickly, but will as quickly decay.

The second point is, that good cow's milk is by far the best substitute for the mother's milk. And here is where our greatest difficulty confronts us. Stall-fed cows are very seldom really healthy, and so in actual practice hardly any infants can digest cow's milk, however much diluted with water. It must then be mixed with something; though it must never on any consideration be boiled or sterilized, but only heated to the proper temperature. The milk must be mixed with some preparation of stone-rolled wheat or oats or barley.

I have seen barley tried over and over again and fail, simply because it was improperly prepared. For a very young infant take one heaped tablespoonful of barley to one and a half pints of water; bring it to a boil and then boil gently for ten minutes, strain through muslin into a jug, and keep until wanted. Use three tablespoonsfuls of milk to six of barley water, and then as time goes on give the food a little stronger.

Or oatmeal may be used as follows, especially after the first three or four months:—Mix one tablespoonful of fine oatmeal to a thin paste with cold water; boil the first three or four months:—Mix one tablespoonful of oatmeal, wheat, rice, barley, macaroni, vegetables and fruit to any extent. Pulse may be used in moderation, being very nutritious and cheap.

Wholemeal bread is invaluable. If unheavened, it can often be assimilated in cases where other food will be found to disagree with the digestion. Porridge made of stone-rolled wheat is often very valuable, being less heating and more easily digested than oatmeal porridge. Raw fruit, and figs and prunes, stewed or raw, and nuts for those who have good teeth, are splendid food. And a diet of this kind will be found to be not only beneficial to the child, but will tend to considerably lessen the pains of child-birth.

Our first consideration then must be the diet of the mother. And if only our object can be effected, and the mother can have the unspeakable happiness of nursing her own little one, we need have few misgivings. But alas, how few women there are now-a-days, who can nurse their own children even though a fairly healthy life and wholesome diet have been adhered to for some time. And so the bottle must be resorted to. And in almost every case anxiety and worry begin to make their appearance.

The question then is, what is the best substitute for the mother's milk? I speak as a layman, and in all humility, as one who has been advised to do this and that, by doctors, nurses, and parents, and generally only to find the food prescribed a miserable failure. But I speak from experience, and two points seem to me quite clear. One is that all patent foods are bad and to be avoided. They often do seem to bring the children on quickly, but I believe they always leave some bad after effects. Either they remove the constipation which had existed before, but which will return when weaning is over and the patent food discarded. Or the teeth will come through fairly easily and quickly, but will as quickly decay.
Does Man overestimate Himself?

There are lessons that may be learned from the uncorrupted children of Nature—lessons in simplicity of life, straightforwardness, humility, art, economy, brotherly love, and cheerfulness—more beautiful, perhaps, and more true than may sometimes be learned from the stilted and Machiavellian ways of men.

Would you learn forgiveness? Go to the dog. The dog can stand more abuse and forgive greater accumulations of wrong than any other animal, not even excepting a wife.

Would you learn chastity? Go to the bower-bird, or to the subterranean hollow where the wild-wolf rears her litter.

The horse, who suffers, and serves and starves in silence, who endures daily wrongs of scanty and irregular meals, excessive burdens and mangled flanks, who forgets cruelty and ingratitude, and does good to them that spitefully use him, and submits to crime without resistance, misunderstanding without a murmur, and insult without resentment, is a better exemplar of the sermon on the Mount, than many church-goers, in spite of the fact that it is cunning and vainglorious, and towers about on its hinders.

Man is not the surpassingly pre-eminent individual he so actively advertises himself to be. Indeed, in many particulars he is excelled, and excelled seriously, by those whom he calls "lower."

The locomotion of the bird is far superior in ease and expedition to the shuffling locomotion of man. The horse has a sense which guides it through darkness, in which human eyes are blind; and the manner in which a cat, who has been carried in a bag and put down miles away, will turn up at the back door of the old home next morning dumbsounds science. The eye of the vulture is a telescope. The hound will track his master along a frequented street an hour behind his footsteps, by the imponderable odour of his soles. The cat-bird, without atlas or geographic manuals, will find her way back over hundreds of trackless leagues, season after season, to the same old nesting place in the thicket.

Instead of the highest, man is, in some respects, the lowest, of the animal kingdom. Man is the most unchaste, the most drunken, the most selfish and conceited, the most miserly, the most hypocritical, and the most bloodthirsty of terrestrial creatures.

Almost no animals, except man, kill for the mere sake of killing. For one being to take the life of another for purposes of selfish utility is bad enough. But the indiscriminate massacre of defenceless innocents by armed and organized packs just for pastime, is beyond characterisation. The human species is the only species of animals that plunges to such depths of atrocity. Even vipers and hyenas do not exterminate for recreation.

No animal, except man, habitually seeks wealth purely out of an insane impulse to accumulate.

No animal, except man, gloats over accumulations that are of no possible use to him, that are an injury and abomination, and in whose acquisition he may have committed irreparable crimes upon others. There are no millionaires—no professional, legalised, lifelong kleptomaniacs—among the birds and quadrupeds.

No animal, except man, spends so large a part of his energies striving for superiority—not superiority of usefulness, but that superiority which consists in simply getting on the heads of one's fellows. And no animal practises common, ordinary morality to the other beings of the world in which he lives, so little, compared with the amount he preaches it, as a man.

The Higher Law.

"Do what thy manhood bids thee do
From none but Self expect applause:
He noblest lives and noblest dies
Who makes and keeps his Self-made laws.
All other Life is living Death,
A world where none but phantoms dwell,
A breath, a wind, a sound, a voice,
A tinkling of the camel-bell."

"Kasidah."
**Beauty Culture.**

A most practical and helpful ‘Guide to Health’ in the home has just been published by Alfred B. Olsen, M.D., and M. Ellsworth Olsen, M.A. It contains, amongst a large amount of instructive matter concerning the exigencies of life, the functions and diseases of the human body, and hygienic treatment, the following excellent suggestions relating to Beauty Culture. The book itself, entitled “A School of Health,” and consisting of 400 pages, profusely illustrated, can be obtained from our Book Department. (See list of Publications received, page 123).—E H.G.A.

“There can be no true beauty without health. The clear sparkling eyes, the rosy cheeks, the transparent skin—are not all these so many signals that Nature hangs out to show that all is well within? A soft transparent skin is one of the things every woman longs to have. Fortunately it is susceptible of cultivation; but no amount of mere external treatment will effect the desired end. A coated tongue, a bad taste in the mouth, slow digestion, a sluggish liver—these are the usual accompaniments of a sallow muddy complexion, and they also show where the real trouble lies. ... A cleansing process is called for.

Plenty of pure, soft water, drunk freely between meals immediately on rising in the morning, and just before retiring, will do much to rid the body of accumulations of waste, just as real in their way as the garbage heaps that encumber a back-yard. Vapour and electric light baths will greatly assist the elimination through the skin, and thoughtful regulation of the diet will remove any tendency to constipation. The cold morning-bath will improve the circulation. Daily exercise out of doors is a wonderful beautifier, brisk walking with chest well expanded, shoulders back, and arms hanging naturally at the sides is the best all-round exercise. Working in the garden is also excellent.

Good digestion is essential to good looks. Take jealous care of your stomach and liver. Feed on pure wholesome viands, to the exclusion of rich, indigestible, highly spiced and clogging foods. A diet composed largely of fruit is conducive to a smooth healthy skin. Cultivate a taste for simple, natural foods; avoid rich, complicated dishes as you would the plague. They are invariably beauty destroyers.

Good hard bread, well baked, may be taken at every meal, and will be found distinctly superior to cakes and pastries. The manner of eating is almost as important as the nature of the food. Eat slowly, chewing every morsel thoroughly.

Rise early if you would keep fresh and young. Late hours and fashionable dissipation make ‘pasty’ complexions, weaken the nerves, and bring on premature age.

Deep breathing, practised night and morning, will do wonders in the way of broadening and deepening the chest, and filling up the unsightly hollows of the neck and chest.

Don’t drug yourself with patent medicines. ... Don’t wear stays; they are unnatural, unphysiological, and unhealthful. Don’t patronize so-called beauty-doctors. Don’t indulge in late suppers. Be sparing in the use of sugar and sweetmeats.

Don’t forget that beauty-culture is, at the bottom, character-building. As the athlete must exercise self-denial in order to develop his muscles to the highest pitch, so must the aspirer after true physical beauty deny perverted appetite, and maintain strict control over passion, in order that all the bodily organs may work together harmoniously, and the whole system respond as a perfectly tuned instrument to the movements of the soul within.

There can be no true beauty culture without happiness; and happiness, while sought in vain for selfish purposes, comes of its own free will to those who set about most heartily the work of making others happy.

The most powerful moral aid to beauty is a truly unselfish life, devoted to the highest ends, and the disposition, which can easily be cultivated, of looking to the needs and welfare of others.

Selfishness mars a countenance of the most elegant proportions, while loving care for others brightens, softens, and transforms the plain face, and makes it shine with heavenly light.”

---

**JUST FOR TO-DAY.**

What a change would come over our lives if we could be made to feel the truth that Life is only the gift of a day, that each eventide we might lay aside all that had fretted us so and open the book on a clean page for the record of the uncertain to-morrow. If every day that comes to us from out the treasury of time were looked after carefully, its needs met faithfully, its opportunities given full play, so that we could feel we had lived it our best, it would be all we could do successfully.

It was well that “God broke our years to hours and days,” for we were not given power of mind or body to grasp greater portions of time and make out of them the steps that lead to a well-rounded and successful life.

God knew that there was enough of labour, enough of care, bound like a faggot on the back of each day, and it may be enough of joy many times to keep the heart from failing. So He closed the door on the morrow with the words, “The morrow shall take care of the things of itself.”

It is this fruitless endeavour to look over into the Forbidden Future, because we cannot see it clearly, but magnify its sorrows and minimize its happiness, that makes life become a wearisome, hopeless beating of soul-wings against the bars that God has wisely put between the present and the time to come.

Remember this. Yesterday is dead. To-morrow is yet unborn. To-day only is ours.
New Publications Received.

A text book on up-to-date medical treatment. It includes Chapters on Psycho Therapeutics, Magnetic Treatment, Music and Colour Treatment, Dietetics, Light and Electricity Cures, etc., etc.

"Ancient Mystic Oriental Masonry," by Dr. R. Swinburne Clymer. (The Philosophical Publishing Co., Allentown, Pa., U.S.A.)

A book for advanced students of Mystic Masonry.

Mr. R. PETSKY,
Formerly the Residential Specialist (7 years) in the Peebles Hydropathic Establishment (the largest in Great Britain and on the Continent) until its destruction by fire in 1905.

Has resumed his Practice, temporarily in Edinburgh and previous to the opening of a model Health Resort in the North of England, and treats all chronic diseases individually by True individual Diet treatment, as analytically and microscopically ascertained in each case, by new clinical methods; and aided by Electro-Hydrotherapy in its manifold applications, the efficacy of which has been amply proved in thousands of serious cases.

Electricity: Faradic and constant currents; High-frequency; Static; Rontgen-rays; Electric Light Baths; Chrom-Light; Electric Vibrating Massage, etc. (see special pamphlet).

Home treatment by trained attendants. Consultations by appointment only.

10, Rutland Square,
EDINBURGH.

Gathered Sunshine.

Not the mild and fitful sunshine of England, but the rich flooding sunshine of semi-tropical countries, is stored up by Nature's Alchemy in the rich kernels of Nuts.

Nuts are so much "gathered sunshine." The same is true of Dates, Raisins, Figs, and all kinds of Dried Fruits; also of unpolished Rice.

You have only to send your name and address on a postcard, and we will send you a beautifully printed Booklet. This little book has received highly commendatory notices from the leading Food Reform Journals. Its contents include the origin and food-value of each kind of Nut, and 24 Simple and Original Nut Recipes.

With the Booklet we will send you a free sample of our delicious and nourishing food "Cream-o-Nuts"...the concentrated goodness of the choicest nuts.

We supply only the best and freshest goods, and we pay marriage to any address in the United Kingdom on orders value £1 and upwards.

Geo. Savage & Sons,
Nut Experts, Fruit and Rice Merchants,
Dept. D, 53, Aldersgate St.,
London, E.C.

"WALLACEITE" (Regd.)
"P.R." STAMINA FOOD

For INFANTS (over 9 Months), INVALIDS AND ATHLETES.

This is a perfectly balanced food, and it is the outcome of the most recent discoveries in dietetics. It is prepared in five minutes, and is very economical, particularly in the large tins.

THE MOST PERFECT FOOD SCIENCE AND EXPERIENCE CAN PRODUCE.

THOROUGHLY COOKED FOR USE.
HIGHLY PALATABLE AND NUTRITIOUS.

In Tins, 1, 3, 6, 12, 24 & upwards. Malted, 1, 2, 3, 4, 6, 12, 24 & upwards. (About 5 lbs.)
Carri. paid. The latter is specially recommended for delicate infants and invalids.

Send id. Stamp for Sample.

THE ANSTEY PHYSICAL TRAINING COLLEGE
FOR WOMEN TEACHERS.

Provides a Practical and Theoretical Course of Instruction in Swedish Educational Gymnastics, Medical Gymnastics, and Massage, the aim being to send out Trained Teachers with increased health and bodily vigour, mental strength, and moral power; to spread a knowledge of Physiology and the Laws of Health; to teach Gymnastics, Outdoor Games, Dancing, etc.

A non-flesh diet is the rule of the College.

Shorter courses are arranged for those who desire to get the advantages of Physical Training, Outdoor Games, and Country Life, without taking up the work professionally; also for girls with Spinal Curvature, Anæmia, &c., who are treated daily with Medical Gymnastics and Massage.

NEW LIGHT UPON THE SCRIPTURES.

A book rapidly coming into use in the Roman, Greek and Anglican communions as a text-book which represents the prophesied restoration of the Ancient Esoteric Doctrine which, by interpreting the mysteries of religion, should reconcile faith and reason, religion and science. Its standpoint is that Christian Doctrines, when rigidly understood, are necessary and self-evident truths, recognisable as founded in and representing the actual nature of existence, incapable of being conceived of as otherwise, and constituting a system of thought at once scientific, philosophical and religious, absolutely inexpugnable, and satisfactory to man's highest aspirations, intellectual, moral and spiritual.

Send all orders for the above Works either to THE RUSKIN PRESS, STAFFORD STREET, BIRMINGHAM, ENGLAND, or to Mr. WATKINS, 21, Cecil Court, St. Martin's Lane, LONDON, England.

THE CHOICEST HOT-HOUSE TOMATOES

Are those grown by MAURICE & CO., GUERNSEY,

Because they are produced under clean and pure conditions, being

GROWN ENTIRELY WITHOUT

THE AID OF ANIMAL MANURES.

Is it logical to avoid eating the flesh of animals — often diseased—probably more often than not—and to go on eating Fruit and Vegetables, of which Tomatoes are the most indispensable, grown by the aid of animal manures?
