CURRENT TOPICS.

A MEETING was held in Rome on a recent Sunday in honor of Darwin, at which the distinguished Prof. Moleschott, reviewing the career of the great naturalist, said that Italian history was a grand illustration of the Darwinian view of the struggle for existence.

THE Malley boys have been acquitted, and one of them goes to Saratoga for the summer, and the prosecution of "the Star route thieves" is already referred to as "the Star route break-down"; but a poor woman who stole a few cents from a neighbor to buy bread for her children has been convicted and sentenced to a year's imprisonment. "Thank God, justice has not quite departed from the world!"

A STATUE of Savonarola, the patriot priest and revolutionist of Italy, whose character is so finely portrayed by George Eliot in *Romola*, and whose portrait George Eliot's face so strongly resembled, was unveiled before a large concourse of people with appropriate speeches and ceremonies on Sunday, June 25, at Florence. Thus, again, in the world's history, is tardy justice done the memory of a brave, patient, and conscientious martyr.

A DESPATCH says that Arabi Pasha has commenced operations against the Suez Canal, and that General Stone, it is greatly feared, is throwing in his lot with Arabi, and endeavoring to hamper English action. The despatch adds: "His conduct is inscrutable. Americans long resident agree that America's interests and England's ought to work together. General Stone's personal friends who greatly admire him, are sorry to see him risking his reputation in such a cause." General Stone's conduct has generally been "inscrutable." It appeared especially so the last time we saw him, a safe distance from the field on the opposite side of the Potomac, during the battle of Balls Bluff, a few days after which he was arrested and confined in Fort Warren. We were not aware that he had any reputation to lose, in this country at least.

THE critics, who fancy they see weakness in the policy of Gladstone in regard to Egypt, more likely expose their own superficiality of thought. The antagonism which would be aroused by the expulsion of Arabi Pasha from Egypt, without consulting the Great Powers of Europe, armed as they are to the teeth and watchful of one another's movements, would involve England in complications of the gravest character, and of which no one could predict the result. Mr. Gladstone is a far-seeing statesman; and the world may rest assured that he is as little likely to go into a quarrel without calculating the cost as he is to resort to any of the unscrupulous methods by which such men as Lord Beaconsfield were willing to extend and strengthen British power. The solution of the Egyptian question will finally, without doubt, be through the conference of the Powers.

THERE ought to be a Nemesis of the grimmest sort awaiting not only the officers and crew of the Dutch steamer "Nemesis," but also the Royal Netherlands Steamship Company, which owns it, and whose culpable neglect, to say the least, caused the death of sixteen little children from insufficient and unwholesome food and water, lack of medical care, and cruel treatment. The same causes brought to the parents and other grown-up passengers disease and suffering untold. Unfortunately, before the story of the poor immigrants—a story to the truth of which their physical condition plainly testified—was made public, the "Nemesis" was well on its way back for another load of victims. But, as an exchange remarks, even if the captain and crew "are at present out of reach of the United States, we ought to be ready for them with a stringent law when they turn up again."

ONE of the ludicrous phases of both religious and anti-religious zeal was recently illustrated in France. A Madame Paul Minck, once famous as a leading Communist, wished to name her new baby by the rather unmelodious and inharmonious name of Lucifer Blanqui Vercingetorix, a desire in which she was seconded by her husband, the child's father. But the mayor of the district in which the parents resided, having apparently the fear of Lucifer before his eyes, decidedly objected to any such name being borne by any baby under his jurisdiction, and, after careful search, dragged forth from its obscurity a forgotten law of 1805, which forbids the employment of names not found in the Gregorian Calendar. Probably, the child, however rabid an iconoclast he may grow up to be, will yet have a little kindly feeling for this instance of religious intolerance which saved him from the infliction of such a name.

"THE Supreme Secular Benevolent Association," recently formed at Port Jervis, N.Y., has filed articles of association with the Secretary of State; and they have been approved by Judge Barnard of the Supreme Court. The object of this association is to improve the condition of the members morally, socially, and materially; to establish a relief fund on an equitable basis, from which shall be paid, on the death of a member who has complied with the requirements, for the benefit of his family, a sum not exceeding $3,000. A further object of this association is to promote the complete separation of Church and State, and the administration of our political system on a purely secular basis, substantially in accordance with the Nine Demands of Liberalism. The president is E. G. Fowler, the secretary W. T. Doty, and the treasurer W. M. Vail, all well known and worthy citizens of Port Jervis.

WHATEVER may be James Gordon Bennett's faults, lack of broad-minded and warm-hearted impulse is not one of them. Though some have narrow-mindedly censured him for fitting out that unfortunate arctic expedition, yet those same carpers would have lauded him to the skies as the generous friend of science and humanity, had that expedition proved the success he hoped it to be, and such as his Stanley exploration venture undoubtedly was. Although he was in no wise to blame for accepting the services of the scientific enthusiasts who so eagerly offered themselves to accompany the "Jeannette," he has taken upon himself to inquire personally into the needs of the survivors' families, and to provide for all those who are in need. To Mrs. De Long, he has given a large sum, sufficient for her maintenance in comfort for years; and, quite incidentally, we learn that he pays the family of the seaman, Jack Cole, who was rendered insane by his sufferings, a monthly stipend of $75, and employs the eldest son at a good salary.

THE New York *Herald* says that Mr. Worthington, the Collector of the Port of Boston, was "commended to President Arthur for the appointment upon the ground that he is held in the highest esteem in Evangelical circles of the Puritan capital. The number of orthodox church members among the subscribers to his stalwart Republican newspaper was asserted to be greater in proportion to its circulation than is the case with any other secular journal of any stripe of politics in that city." The *Herald* declares that these considerations, together with ex-Governor Boutwell's recommendation, doubtless influenced the President's choice, and adds, "And they also influenced us in giving particular heed to the following public revelation by Collector Worthington of startling discoveries concerning the management of the custom-house by his predecessor, who is a civil service reformer of the variety exemplified by Senators Dawes and Hoar." The "revelation" is that Mr. Beard, Worthington's predecessor, had "an examining board of his own for the selection of employés. The usual question first asked was: 'Did you vote for such a man at the last election?' 'Well, if you did, you are not the sort of man to come here.'" Mr. Beard declares this statement "utterly and entirely false"; and, now, the *Herald* says that his letter of denial "impresses us favorably with Mr. Beard's business capacity, even if he is not so orthodox as Collector Worthington." And having been induced to give heed to the charge against Mr. Beard, partly because of the Orthodoxy of his accuser, the *Herald* says to the present Collector, who is an opponent of civil service reform, "We think it is incumbent that you shall produce your proofs." The Orthodoxy of Boston will not thank the *Herald* for a compliment supplemented with such a confession of disappointment and chagrin·

FURTHER PARTICULARS OF THE "WILD PREACHER."

In a recent communication, I promised to give further information concerning a "Wild Preacher" whom you kindly took off our hands. I allude to Joseph Barker, who, being once a Christian, became a sceptic and finally a disbeliever. He never attained the dignity of a heretic. It is a poor thing to be a sceptic except upon two questions, upon which evidence for belief is denied us. Mere disbelief is not satisfactory, and may denote laziness of mind, where positive truth is to be had in place of the error discarded. Mr. Barker from being a disbeliever became what he called an atheist, and we became glad when he was converted again to Methodism. At the same time, we had among us Mr. Thomas Cooper, a man of great probity, who is both a poet and an orator. During imprisonment which came upon him through advocating Chartism, he wrote a remarkable poem, entitled the "Purgatory of Suicides." Mr. Cooper has no proclivity to self-death, for he is happily living among us still. His poem contained much impulsive atheism. He was a sentimental atheist, pretty much as Shelley was. He also returned to Wesleyanism, in which he was reared or, as you would say, "raised." We were not glad of that; for, being a man of character and parts, his defection was a real loss to us. It was Mr. Cooper who was the occasion of its becoming known that Joseph Barker was, upon his own admission, an atheist.

Joseph Barker, during his unbelieving period, wrote a pamphlet containing broad and coarse atheism, expressed with his usual extravagance and repulsiveness. Thomas Cooper engaged to discuss with him certain propositions contained in the aforesaid pamphlet. After accepting discussion, Mr. Barker evaded holding it during a year or more. To bring the matter to an issue, it was left to me to decide whether or not the debate should be held. Having to address a hill-top meeting near Huddersfield, at which Mr. Barker was present, I took occasion to speak to him upon the subject. My words were: "Your answer to a single question will end this matter. Mr. Cooper calls upon you to defend certain atheistic propositions. Are you an atheist or are you not? If you are not, you cannot be rightly called upon to defend atheism, although you have asserted it in your pamphlet. What say you: are you an Atheist?" He answered "I am." My reply was, "Then, I decide that you meet Mr. Cooper." And accordingly he did. His adversary had extracted the questions to be discussed from Mr. Barker's own statements. Their naked offensiveness, when put in concrete form, inspired Mr. Barker with reluctance to answer for them. He, some time after, denied that he ever was an atheist, though he assured me he was, and in consequence of such assurance he accepted the obligation of defending atheism. That atheism never had any real hold upon him, that he never had any clear or deliberate intellectual conviction of its truth, is possible. That he had written in favor of it, and had avowed himself of that opinion, did not prevent him denying that he ever was of that persuasion.

The debate was held in Bradford. It was desired by both disputants that I should preside at it. But the office of judge between them was not welcome to me. Both were capable, indignant, and determined disputants, quite devoid of admiration for each other. Mr. Cooper was a recent convert from free thought, and Mr. Barker a recent convert from Christianity. Mr. Cooper had no great opinion of Mr. Barker's honesty, and Mr. Barker had not learned to respect Mr. Cooper's sincerity. Besides, I was the friend of both. For Mr. Cooper, I had regard and attachment. Mr. Barker stood ostensibly on the same side of free thought as myself. Both would be sure to lapse into invectives, which I should feel bound to forbid. I neither wanted to condemn a partisan nor yet to decide against a friend, nor did I wish to preside over a discussion which might degenerate into a bear garden. Mr. Barker had a Wesleyan faculty of imputation, which had been cultivated by exercise in every party to which he had belonged; and Mr. Cooper was a controversialist, who would have thought himself wanting in manliness and faithfulness, if he did not say what he thought and all he thought about his adversary and his views; and what he thought was not at all pleasant. On these grounds, I avoided taking the chair, which I have regretted since. Mr. John Watts was appointed to preside, who was too young to have authority, and, being small in stature, looked like a boy in the chair between the two full-grown and mature disputants. Each opponent felt there was want of respect in the arrangement, which each thought I ought to have prevented. The debate left no pleasant remembrance behind it, and Mr. Barker shortly after slunk away into the old jungles of Orthodoxy.

During the war of emancipation in America, he reappeared in England as a copperhead and advocate of slavery. He had at an earlier period sent me from America powerful letters against slavery, which I had published in the *Reasoner*. The Anti-slavery Society in Manchester reminded him of his former opinions. The authorship of these letters he denied. As I had preserved the originals (being struck by their peculiar random yet regular calligraphy), I sent them to Mr. E. O. Greening, the secretary of the society which had challenged him, who produced them on the platform, when his disowning them had to take some other form than that of denying them.

Mr. Barker was of the reckless order of free thinkers. Indeed, he was reckless in everything. He never thought of the effect of what he was saying or doing. To make a sensation was the same thing to him as making progress. He was as the Indian, to whom the yell is more than the battle. If he made a great noise, it was the same to him as though the enemy were slain. He never inquired whether they were merely infuriated or whether they were fallen. As a disbeliever, he was anti-theology mad, and the dogmas of the priests ran away with him. Supernatural revelations were disproved long ago. The kingdom of science is founded and established; and, where its new truths are vigorously expounded, superstition retreats before it as wild beasts before the march of civilization.

As examples of Mr. Barker's wild statements, a few passages will suffice: "The last remnants of my old religious faith are gone." "All the religions of the earth are fictions of the human imagination." "I am most heartily sorry I was a Christian so long. I mourn over the time and strength I devoted to religion as an infinite and irreparable loss." "All belief in God and immortality appears to me to be inconsistent with right views of human duty." "Unitarian Christianity is little less immoral than the coarse and revolting original for which it has been substituted." "It seems an impossibility that I should ever be capable of reconversion. INSANITY might reconvert me, I suppose; but, how anything short of it could do so, I cannot conceive." These passages are taken from "Confessions of Joseph Barker, a Convert from Christianity," which he sent to me to be published. His writings at the same time, which I have not now at hand, contained examples of greater fierceness; but, from what is quoted, it is plain he need have had few scruples in defending atheism.

GEORGE JACOB HOLYOAKE.

"CONFUSION WORSE CONFOUNDED."

Says the *Catholic Review*:—

The Free Religious Association, which has "Parker Memorial Hall" for its head-quarters, and our esteemed contemporary, *The Index*, for its organ, is not the last development of free thought. True, they claim the utmost liberty of thought and speech, the privilege of doubting and discussing everything, even the existence of God; yet, strange to say, they are theists. They believe in God and in religion as well as in morality. They have religious services every Sunday in Parker Memorial Hall, conducted by a gentleman who claims the clerical character, who prays and preaches; and the services are enlivened by excellent devotional music. They do not call themselves a church, not even Unitarians, though they are a split off from that body, and in spirit and method are close to the Theodore Parker wing of that society. Their high priest was the late Ralph Waldo Emerson, and their prophet, Mr. Felix Adler of this city,—both of whom have held office in the Association.

These remarkable statements are made the basis of some equally remarkable conclusions, to which we will allude further on. We desire first to indicate to our "esteemed contemporary," since it feels so deeply interested in the Free Religious Association, some of the errors regarding this body into which it has fallen. In saying that "they are theists," the *Review* evidently refers to the Free Religious Association and *The Index*. But it is not true that "they are theists." The Free Religious Association has among its members agnostics as well as theists; and to the former class belongs Mr. Adler, who was its president two years, and several of its present officers. *The Index* is as ready to open its columns to an agnostic as to a theist, and the writer of this article respectfully protests against being regarded as a theist.

It is not true that the "head-quarters" of the Free Religious Association are at Parker Memorial Hall, even though it has held some of its annual meetings there. The editors of the *Review* can find the "head-quarters" of the Association at 3 Tremont Place, Boston. It is not true that the Association or *The Index* "has religious services every Sunday in Parker Memorial Hall." The worthy gentleman referred to, who "prays and preaches" there, is not even a member of the Free Religious Association, and has never spoken at its meetings. The society which employs him existed years before the Free Religious Association was formed. Mr. Emerson has never been considered, nor has he served (or ruled) as a "high priest" of the Association, nor has Mr. Adler been regarded as its "prophet"; although both have been among its honored representatives and officers.

Is it not possible for our Catholic contemporary to understand that the Free Religious Association is an organization composed of men and women who represent various religious beliefs, and that it aims to promote truth by encouraging the study and discussion of religion from the different points of view rather than by a dogmatic statement of a particular theory, and a requirement of uniformity of belief regarding this theory as a condition of membership; and that therefore theists and non-theists can consistently belong to the organization, and, without any sacrifice of personal convictions or compromise of principle, can feel interested in its success and give it their support? Why should not Mr. Emerson, who was a pantheist, Mr. Abbot, who is a theist, Mr. Adler, who is an agnostic, and Mr. Savage and Mr. Chadwick, who call themselves Christians, join in sustaining an association catholic enough to give them all a hearing on its platform, tolerant enough to consider all their arguments and criticisms and to compare their views, and eclectic enough to profit by the thought of able thinkers and scholars who repre-

Digitized by Google

sent different schools and different phases of philosophic and religious belief?

But, from the extract we have given, the purpose of the *Review* will not be clear without another quotation. The aim is to show that the Free Religious Association and *The Index* find fitting illustration of their legitimate influence in exhibitions of coarseness, vulgarity, and ribaldry. For, says this organ of the papal hierarchy, those who really "represent the last development of free thought" are "the frequenters of Paine Hall"; and, in order that the calibre and character of the audiences which "represent the last development of free thought" may appear to be so discreditable as to leave no doubt regarding the pernicious tendency of a movement which among Free Religionists is, as alleged, yet respectable, the *Review* informs its readers "that the ordinary parochial duties of the Paine Hall 'church' are performed by a vile imitator and mere shadow of his great prototype, the bishop [Ingersoll], with more than his blasphemy, but without his wit, his vulgarity without his culture, his reckless audacity without his talent."

Why does the *Review* select an individual whom it represents as an ignorant and a vulgar fellow, unworthy the attention of intelligent and fair-minded men of any belief or disbelief, as the last development of free thought and as an illustration of the natural result of a movement inaugurated by scholarly and pure-minded men, founded on the broadest principles, animated by a reverent love of truth, and conducted in a manner that has commanded the respect of friends and foes? We do not concur in the statement we have quoted regarding the gentleman who performs "the parochial duties of the Paine Hall 'church,'" and we believe his audiences will compare favorably in point of intelligence and character with the audiences that assemble in this city Sundays, to join in the services of the Church which the *Review* represents. At the same time, we regard much of the thought of the speaker referred to as rather crude, while his manner of presenting his views and treating those who differ from him is not exactly to our taste. But it should be remembered, both in consideration of his method and manner, and in justice to the free thought movement of which he is but one exponent, representing only himself and those in the same intellectual condition and transitional stage with himself, that he is but a recent convert from theology, the spirit of which still clings to him, and that therefore he should be associated with the incipient and rudimentary period rather than with "the last development of free thought." It is certainly unfair and unjust to hold up such a person as the last development of a method and a movement of which Darwin and Haeckel, George Eliot and Emerson, Spencer and Fiske, Holyoake and Conway, Higginson and Abbot, Frothingham and Adler are distinguished and recognized representatives, and the influence of which is penetrating in every direction and modifying the thought of the world. B. F. UNDERWOOD.

CONCILIATION, BUT NOT CONCESSION.

Ever since the stately Memorial Hall of Harvard College was dedicated, and even from the first inception of the project, the question has been raised by a small fraction of the friends and graduates of the College (and this outside the circle of its Southern Alumni) whether an institution of learning, devoted to the arts of peace and appealing for patronage to the whole country, should erect and perpetuate a memorial to one of the parties in a civil strife on both sides of which its sons were engaged and fell. On this question there might be an honest difference of opinion. But the number of Harvard graduates in the North, who, at least in the early years after the war, when its scenes were still fresh in memory, were disposed to take the negative of this question, was so small that the difference of opinion had no perceptible influence in resisting the force of the patriotic pride and gratitude which conceived the project of the Hall and carried it forward to completion. Now, however, after several years of peace and of efforts more or less successful to bring the two sections again into harmony, the feeling in some quarters that such a monument is out of place in a college has evidently strengthened. But, when the question is raised, as it has been more than once in private circles, and here and there somewhat more timidly in public, whether Memorial Hall may not now be interpreted as a monument to those graduates of the College who died in the war, in the Confederate as well as in the Union army, it is hard to see how on this point there can be any honest difference of opinion. The hall was built and inscribed and dedicated, the funds for it were contributed, with no thought of perpetuating the memory of those who fought to divide the country and overthrow its government, but in honor solely of those who died to save the country and its liberties. Every act that concerned the erection of the Hall from beginning to end kept this purpose unequivocally and openly in view. The tablets in the memorial vestibule, inscribed only with the names of the loyal dead, make this purpose so plain that not even the lisping of a question of it should ever be heard.

Yet, at the Commencement Dinner last week, one of the speakers, Mr. Robert M. Morse, Jr., of the class of 1857, speaking of the memorial window which had been erected by his class in the Dining-hall, made the declaration that the window "overlooks all differences between North and South"; that it was erected "in memory of those who fell in the war." And then he named some of his classmates who had fallen in the Southern army with those who had fallen in the Northern as equally honored by this memorial. And this declaration was greeted with not a little applause. A Southern graduate, at the time Memorial Hall was dedicated, privately made the remark that he expected to live to see the day when tablets in honor of those graduates who died on the Southern side would be placed in the vestibule. We then little expected to see within so few years a Northern man ready, as Mr. Morse appears to be, to take a long step toward the fulfilment of that prediction. We know not with how much favor Mr. Morse's class will receive his interpretation of the meaning of their window, but it was reassuring to discover that the great body of the Alumni were not carried away by the sophistry of his argument. When, later, Col. Norwood P. Hallowell was called upon to speak in behalf of his fellow-soldiers in the war, and made a most manly speech of precisely opposite tenor, the large assembly responded with a great outburst of applause that was evidently meant to tell something to Mr. Morse's ear. Singling out Colonel Shaw, without intending any invidious comparison, but, the speaker added, "for the same reason, perhaps, that his portrait hangs on yonder wall without a companion," and drawing a vivid picture of the chivalrous young commander leading his colored regiment up the parapet of Fort Wagner, and falling among them in death, Mr. Hallowell forcibly put the question whether "by virtue of his inheritance, by the earnestness of his convictions, by the unselfishness of his character, by his championship of an enslaved race, and by the manner of his death, the conditions were not all given to make him the best historical exponent, not only from Harvard University, but from all the land, of the underlying cause, the real meaning of the war, and of all that was best worth fighting for."

And these two speeches by Mr. Morse and Mr. Hallowell illustrate the false and the genuine interpretation of the meaning of the Cambridge Memorial Hall and of all other monuments which have been built in the North to commemorate the Union dead of the war. Mr. Morse and a few others, intent upon the one end of conciliation, are caught in the sentimental sophistry that, since there were valor and heroism and courage and fidelity to conviction on both sides, we may commemorate these virtues of both armies as American, and so try to forget that there were ever two armies or two causes. Mr. Hallowell holds—and we trust that the great majority of the Northern people still hold with him—that the North was contending for principles which are never to be conceded nor forgotten, and that such monuments as Memorial Hall commemorate the valor and fidelity *that maintained those principles*. There are plenty of ways for bringing about practical conciliation and harmony without conceding the very objects that redeemed the war from being a mere fratricidal strife for the display of military prowess and strength. Valor and courage and heroism are good qualities, but they are not always allied to good causes. *Fidelity* to conviction is praiseworthy, but the *conviction* is sometimes very far from praiseworthy. The late lamented Jesse James was valorous and brave. The leaders of the Inquisition had convictions which they were ready enough to maintain by force. The only historical justification which the loyal States will ever have for resisting the Southern rebellion is that they had not merely heroic troops and strong convictions, but that they had better convictions than the South, that they had a cause worthy of such a contest. The South went to war to divide the country for the sake of protecting and maintaining slavery. The North accepted the challenge of war to save from dismemberment a country that meant justice, order, and liberty. Here is an irreconcilable distinction, which, in the interests of historical truth, must never be obliterated by any gush of sentiment. And it is to be hoped that no institutions of learning, least of all Harvard, will ever feel called upon to apologize for specially perpetuating the memory of those of their graduates who have deemed it nobler to give their lives for their country and liberty than to fight against their country for slavery. Colleges may well be suspected of being hostile to the interests of the American Republic, if they ever shrink from openly identifying their objects with the principles of patriotism, justice, freedom, and humanity. Let the monuments stand, to teach still to coming generations of students that not courage and sincerity of conviction alone are good, but courage and conviction contending for noble ends. WM. J. POTTER.

THE ATHEISM OF SCIENCE.

So runs the charge from the religious side, implying that the spirit and effect of the current science are hostile to the religious conceptions deemed essential to society. From the scientific side, the charge is assented to with the counter implications that the current Theism is delusive and bad. So the issue is made up, is definite, clear, and momentous enough to justify the vehemence history records of the quarrel. The controversy has latterly taken on proportions never reached before, for the conflict rages all along the line. In vain, the platitudinarian tells us that the antagonism is only superficial, that true science and true theism are in accord, and the quarrel is only of words. The opiate serves till the cheat is detected. Paint by hy-

Digitized by Google

pothesis a black horse and a white one both brown, and the argument about difference of color is closed. The trouble is the hypothesis will not verify. The mental habit is too inveterate. No great controversy was ever less one of words merely. The stand-points, assumptions, and methods are as wide as two mental processes can well be. Of course, all controversies carried on by words come of conceptual differences,—namely, different ways of thinking and viewing things; but the difference is none the less terribly real.

It seems to me disingenuous, as is the manner of some who, no longer able to hold to the old thought, are yet fain to keep the old phrases, and make belief in God mean belief in an indefinite, incomprehensible something,—say, like Spencer's Unknowable. True, the divine character and attributes have been the contention of great minds in all ages; but I much mistake if his personality and his relation to the universe as King and Ruler are not common, fundamental, and essential in the conceptions of them all. He is in the royal line alike in the philosophic thought, in the popular notion, and in the history of individual deities.

Every age and people invests its ideal ruler with qualities conformable to its own standard of kingly character. It is the inflexibleness of our traditional Deity; his unconformableness to republican government, that in my judgment is at the bottom of much of the modern atheistic tendency. The universal order is coming to be conceived of as a Commonwealth of interdependent and reciprocally related parts, whose moral laws are one with gravitation,—are, like it, inherent, necessary, and automatic,—are generalizations, after the fact of the necessary behavior of things, and not at all commands, as to vassals whose duty it is to illustrate and sustain the glory of the central person.

A teacher who, having gone through the Euclidian demonstration, should add that the hypothenuse was quantitatively related to the sides in that manner, because the divine will had so ordered it, would impeach his own competence as a mathematician, and would confuse and offend the intelligence of his pupil; for, the pupil having once fairly apprehended the truth, it becomes to him quite beyond the power of any will, human or divine, to change it. When ethics shall have become scientifically formulated, the suggestion of a divine will as a source of moral law will be felt to be equally impertinent.

A republican agitator, in the midst of aristocratic and monarchical institutions, with difficulty repels the charge of contemning all social order and all noble, royal qualities of character; for his movement draws to itself the dissolute, dissatisfied, and insubordinate elements of society. In vain, he protests that his governmental theory is compatible with all high qualities and a true social order; that the republican theory was that every one is born to sovereignty and nobility, and the way was open for each to enter on his inheritance; that "regal," "noble," etc., really meant individual worth and service, and not the trappings of station; that the enlarged meaning making those high qualities no longer the birthright of the few did not cheapen or degrade those high ideals, but in fact carried them above the sphere of vulgar sense and made them truly divine. Such a one would not escape the charge of falsifying and trifling, if he still professed himself a believer in the aristocracy and the sovereign.

Now, substantially, this is the attitude, as I take it, of the great Founder of our religion,—namely, that there was no such monarch in the skies as the Oriental fancy painted, exacting tithes, temple service, ritual and religious punctilio, as the popular notion and habit were; but that the paternal, fraternal, filial, and generally serviceable in mundane society exhausted the entire scale of proper human solicitude and duty, but so inveterate was the habit of apotheosis that he did not escape transformation first into the unhuman or superhuman, and then, by easy transition, into inhumanities surpassing in some respects all the other deities.

I have said that moral and administrative considerations were the chief cause of the modern revolt. It has always been so. When godless schools, godless constitutions, and godless literatures are seen to be sufficient for the great interest of society, God is thus impliedly made to be something insignificant, outside and apart from the world's great movements,—becomes a sort of ornamental attachment, an ecclesiastical annex to the great business of life, a superfluity hardly worth the trouble and cost to earnest people.

But, in addition to these practical and administrative considerations, the new psychology presents theistic difficulties peculiar to itself. Mind or spirit, as we know it in persons, is itself a product of the natural forces, commencing to be, growing by experience, maturing, declining, decaying, and passing away, all under our own observation; and, while it is confessedly first in the order of worth and dignity, it comes last in the order of time, and we are not satisfied that what seems only a late and transient phase of the impersonal, never ceasing flux of things should be conceived of as primordial, self-existent, and creative.

It is popularly supposed that belief in a personal deity gives a certain exaltation, serenity, fortitude, hope, and even joy in hours of darkness and calamity, and holds us to high aims: and that, under any other cosmic theory, society would sink into barbarism and bestiality. The claim, in my judgment, cannot be maintained. At all events, the sentiment of the legend of Abou Ben Adhem is truer. "The gracious motions of the soul" are purely social products, are born of communion with actual and idealized human beings, and not with superhuman; and they will flourish and decay, as respect for human rights increases and declines. As well fear that the denial of the old conception of light as a separate entity will involve the world in darkness, and the assertion that heat is only molecular motion will bring an arctic climate, or at least make the comforts of the fireside forever impossible to the denier of caloric and phlogiston!

E. D. STARK.

CLEVELAND, OHIO.

A LESSON OF GUITEAU'S LIFE AND DEATH.

To the disappointment of many who expected, and to the chagrin of not a few who hoped, Guiteau would weaken, and show the world that he had been playing the part of a hypocrite, the assassin faced death on the scaffold with remarkable nerve, and, sustained by his enormous egotism and strong religious faith, read a prayer full of fanaticism and the spirit of revenge, chanted some unrhymed doggerel commencing, "I am going to the Lordy," and, when the black cap was over his head, shouted in loud tones, "Glory, glory, glory," and dropped a piece of paper as a signal that he was ready. There seem to be no grounds for doubt that he believed what he claimed, that he was "God's man," and that he was inspired to commit the deed for which he has been executed. His whole life, consistent to the end, was an illustration of intense religious faith, together with an undeveloped moral nature, the former enlisted by his selfish feelings and brutal passions on the side of immorality and crime, even to the incitement to and justification of murder. He was insane only as all men who believe they are supernaturally inspired of God are insane; and but for his heartlessness and viper-like disposition, and a wrong principle in government which excited his greed for office, he would probably have lived and died as an ordinary religious crank. Society certainly has a right to protect itself against men like Guiteau; but in much of the comment on the execution, and especially in the burning and hanging of the poor wretch in effigy after his death, there has been, we fear, more of vengeance than of patriotism. The career of the assassin will help to remove the popular error that theological beliefs and strong religious feelings have a necessary connection with excellence in character and conduct. "Unusual piety is in the popular eyes," says Lange, "either genuine saintship or a wicked cloak of all that is vile. For the psychological subtlety of the mixture of genuine religious emotions with coarse selfishness and vicious habits, the ordinary mind has no appreciation." To such an appreciation, the general familiarity with the life of Guiteau cannot fail to help.

B. F. U.

NOTES ON THE RELIGIOUS PRESS.

W. J. P.

THE *Presbyterian* prints a sermon by the late Rev. Dr. Wadsworth, of the Clinton Street Presbyterian Church, Philadelphia, which is one of the noteworthy signs of the times. The title of the sermon, "The Chief Thing,—Moral Character," is itself very significant; and the following paragraph shows the central aim and spirit of the discourse to be in entire keeping with the title:—

> The most important of all things on earth or in heaven, in time or eternity, is our own moral character. I am, of course, speaking only of character, and not of reputation; for no two things are more distinct and oftentimes more antagonistic, for the one is what man thinks of us, and the other what God knows of us. One is the substance of which the other is only the shadow, and often the most distorted and unreal of all shadows. The one is simply meteoric. It may be a black cloud, it may be a bright rainbow, flitting for a brief hour round a mountain peak, and which the first breath of the storm of adversity may blow away or the first sunburst of prosperity dissolve. The other is the adamantine rock of the everlasting hills, which all the earthquakes of time, all the great fires of eternity, can neither melt away nor break. In a word, the one is only a man's semblance, it may be only his caricature: the other is the man's selfhood, his positive character. I repeat it, therefore, moral acts, because they result in or spring from this inner character, are our most important acts,—indeed, the only truly grand achievements of life. Those achievements which men applaud and human histories record are the acts of the hands, the feet, the brain. But moral achievements are those of the whole man, heart, spirit, soul, working out together results as immortal as himself; for, in the exercise or formation or development of moral character, we are, in fact, working with or upon the very essence of the soul itself,—*i.e.*, of our own selfhood. It is, therefore, upon such acts our eternal destiny depends.

It is true that the sermon contains some evangelical phraseology and some intimations of doctrines,—*intimations* rather than assertions,—which a strictly rationalistic thinker could not accept. But its essential teaching throughout is given in this paragraph. What a contrast between this doctrine and the old Orthodoxy, which taught that "moral character" and "moral acts" were but "filthy rags" and no evidence of salvation at all! Within twenty years, we have heard an orthodox Doctor of Divinity declare in his pulpit that the man of upright moral character, without a religious profession, did more harm in the world than the openly wicked man. But, here, moral character is made the very end and crown of religion. When this teaching of Dr. Wadsworth's sermon shall have become the staple doctrine of evangelical pulpits, the disputes that may remain between

Digitized by Google

them and Liberalism on points of theology will have little practical importance.

THE *Catholic Review* has a very good-natured and rather patronizing article on "The Unitarians and Free Thought." The *Review* has a keen sense of the difficulty of the Unitarian attempt to uphold liberty of thought and keep a little shibboleth of a creed at the same time, and at the close of its article gives some very good advice suggested by the embarrassment of the denomination over the generous offer of Mr. Wade, of Cleveland, to found a new school, entirely undogmatic, for the training of religious teachers. It says, referring to the late Unitarian Anniversary meeting in Boston:—

But what particularly attracted our attention and, in fact, gave occasion to this notice, was the discussion that arose in regard to the munificent offer of a Mr. Wade, of Cleveland, Ohio, to give $250,000 to build a new theological seminary, provided the present institution at Meadville should be removed to Cleveland, united with the new institution which should be put under the care of responsible trustees, and provided further that "no doctrinal tests should be imposed upon the young men." That struck us, at once, as a splendid scheme and right in the line of consistent free thought; and we supposed, of course, the proposition would be promptly and thankfully accepted. Alas for consistency! The trustees of the Meadville institution refused to amalgamate, unless satisfactory guarantees should be given "that the new institution would teach Unitarian doctrine always." And the trustees of the American Unitarian Association, of whom Mr. Henry P. Kidder, one of the most intelligent, high-toned, and successful business men of Boston, is President, in reporting on the subject, in view of the dead-lock, very naïvely remarked that "they are not prepared to suggest the next step." If we were allowed to give advice to such a very respectable body of *élite* and intelligent representatives of free thought, we would politely suggest the propriety of adopting a definite, positive creed of some kind, and sticking to it consistently and manfully, or else of abandoning the organization altogether and allowing every fellow to go it on his own hook.

CATHEDRALS.

Shells of a dwindling faith, they stand,
Slow-mouldering, o'er many a land.
The ritualist would fain restore
These *holtes* of the days of yore;
Their Gothic arches fondly prop;
Their slow dilapidation stop.
Gigantic symbols once they stood
Of a long-current human mood.
That mood is past, and reason now
Forbids to grovel man's broad brow
In blind and servile homage low.
The lightning flash of modern thought
The gods they shrined to grief has brought.
They, mistlike, gradual fade away,
Smit through and through by reason's ray.
As ruin levelled long ago
Olympia's and Delphi's shrine,
Which nobler genius did design,
So Peter's dome at last will strow
With splendors wrecked the earth below.

B. W. B.

EDITORIAL NOTES.

IN speaking last week of the organization of women ministers as "Unitarianized," we did not intend to convey the impression that it was composed exclusively of Unitarians, but only that it had —unfortunately, as we think—followed Unitarian precedents and example in its rule of membership. As a matter of fact, its members represent the Universalist, Orthodox, Methodist, and Swedenborgian faiths, as well as the Unitarian. All the more pity that it could not have made itself broad enough to include Mrs. Bisbee, with her Free Religious tendencies of thought. We may correct our former statement, too, by adding that Mrs. Bisbee began, on the same day that she opened her Sunday-school, her service for adults, with an attendance of seventy persons. W. J. P.

"THERE are some things to which," says the *Nation*, "an honorable man ought not to stoop to procure money for any object, however sacred or respectable, whether church or party; and extorting small sums of money from poor men by leading them to think their livelihood will be imperilled by their refusal is one of them."

LOOK at your tags, and see whether you are in arrears for *The Index*, and, if you are, consider that we need the money which is due us, and that you will confer a favor by remitting without delay. It is time now for many of those who availed themselves of our offer to send the paper six months to trial subscribers for one dollar to renew their subscriptions; and we hope to hear from them soon.

REV. T. B. HILTON, president of a Methodist Episcopal seminary at Salt Lake City, in a recent lecture in New York on the "Evils of Mormonism," said, "Mormonism teaches that God is a married man." He thought this blasphemous. But how much worse is it to teach God is "a married man" than to teach that he is a being who "made man in his own image, and that his "only-begotten Son" was born of a woman who was not his wife, but was the wife of another, the wife of one of his creatures.

THE October number of *Mind*, a leading London quarterly, probably the ablest philosophical journal published in Europe, will contain a contribution from the pen of Francis E. Abbot, on "Scientific Philosophy." We design obtaining copies of this number for those who, recognizing Mr. Abbot's ability as a thinker, wish to see his latest and probably his ablest essay; and all persons who wish copies are requested to notify us at once, in order that we may know in time how many to order. Price one dollar.

WE have received from R. Heber Newton, the distinguished rector of All-Souls Church (Episcopal) of New York, the manuscript of a discourse of rare excellence, which he recently gave in that city, on "Emerson's Gospel of the Religion of Nature." This will be printed in *The Index* next week. Mr. Newton is known as one of the ablest, broadest, and most liberal representatives of his denomination, and in this discourse by him our readers will find a rare intellectual treat. A reply to Mr. Potter by Felix Adler, an article on "The Scientific Evidences of Immortality," from the pen of Miss M. A. Hardaker, and one on "Evolution and Morality" by Wm. I. Gill, A.M., are among the contributions that will appear in our next number.

AFTER the execution of the assassin, John Wilson Guiteau, his brother, said:—

Though my brother was either insane or inspired, and in either case ought not to have been killed for an act which he could not help committing, still he never could have died a better or a happier death. If he was not a martyr, he died at least a martyr's death, and, so far as he knew, went to a martyr's reward. He died in a manly, noble way, without a tremor; and his face, as he lay in his coffin under the gallows, was as smooth and placid as a baby's. It was unjust, it was barbarous to kill him; but he could not have died better, had he lived to be one hundred years old. I shall always remember with proud sorrow his fortitude, the strange mixture of the man of the world and the child of God, his bravery and his pathos, as he stood on the trap door yesterday, face to face with death. The Huguenot and the Puritan in his blood were at the front. He died as heroically as John Brown, and was, from his point of view, as patriotic and as noble a martyr for God. A braver death was never seen. All this talk with which so many newspaper reports to-day are filled, about his fainting and his weeping because he was afraid to die, is rot. As Dr. Hicks said to you last night, there was not the slightest wavering on the part of my brother from the time he first saw him until he died. He was self-possessed to the last, and was in that mood of exaltation which forbade dread of anything.

THE American Institute of Instruction and the National Educational Association have this year combined their forces, and will hold a four days' convention at Saratoga, N.Y., July 11, 12, 13, and 14. The programme includes the names of many distinguished teachers and speakers, and the subjects to be discussed are of primary importance and interest to all concerned in educational matters. On Tuesday afternoon, July 11, Mrs. Anna Garlin Spencer will speak on "Moral Teaching in the Public Schools." Among the other interesting topics to be discussed during the sessions, we particularly note the following, as showing the drift of thought in our educators: "Some Aspects of the Higher Education of Women," by John Tetlow, A.M., headmaster of the Girls' Latin School of this city; "What Place, if any, is Religion entitled to in our System of Public Education?" by Rev. A. J. F. Behrends, of Providence, R.I.; "The School Systems of the South, as seen with Southern Eyes," by Hon. James Denton, Superintendent of Public Schools, Little Rock, Ark.; "Secularization of Education," by W. W. Folwell, President of the University of Minnesota, Minneapolis; "Self-Consciousness in Education," by Rev. E. T. Jeffers, President of Westminster College, Pa.; "The Education of the Will," by Prof. G. Stanley Hall, of Harvard College; and "The Foundation Principles of Education by the State," by Hon. Samuel Barnett of Washington, Ga.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

The Index.

BOSTON, JULY 6, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For The Index.

PROCEEDINGS

OF THE

Fifteenth Annual Meeting of the Free Religious Association, June 1 and 2, 1882.

(*Concluded from last week.*)

The PRESIDENT.—In listening to Mr. Salter's earnest and thoughtful paper, you will have detected the drift of the discussion this afternoon,—namely, to consider those practical interests which concern us as an Association; and the speakers who are to follow are to take up different points of the same general question. There are three of those speakers, and an hour and a quarter remains to us before the adjournment; and those three are expected to divide that time amicably between them.

Now, friends, you will have the pleasure of listening to Mrs. ANNA GARLIN SPENCER.

Address of Mrs. Anna Garlin Spencer.

Mr. President and Friends,—Before proceeding to the discussion of the topic assigned to me, I crave your indulgence for a word of personal explanation. In the consideration of my subject, "The Appeal of the Unchurched to Free Religion," it devolved upon me to make a statement of the views, aims, principles, and purposes of Free Religion. And if, in that statement, I seem to oppose in any way the criticism in the morning from lips to which I, with others, yield in reverent admiration, you will remember that it is not a spontaneous answer,—for that would be presumptuous on my part,—but a previously prepared statement of my view of Free Religion, which I learned in humble reverence at the feet of the fathers and mothers of our movement.

THE APPEAL OF THE UNCHURCHED TO FREE RELIGION.

Who are the unchurched? They are those who have outgrown one form of church life and as yet *ingrown* to no other. They are those, also, who have never known the inner fellowship of a religious body. They are the conscious exiles whom the death of parent faiths has sent out, orphaned and anxious, to seek new dwelling-places in stranger lands of lore and thought. And are they the unconscious travellers, the "solitary" never "set in families" of united devotion, who know not that their restlessness contains any longing for a religious home. And they are the unhoused rangers of the wilderness, who count their roofless freedom a wholly joyous emancipation from dwarfing bonds. And what is the appeal which these various classes of the unchurched are making to-day, either by open confession of a felt want, or by unconscious betrayal of an intellectual or moral need?

To answer this question, one must consider briefly at least the present conditions of philosophic thought, of moral activity, and of emotional life. It needs no argument to prove before this body that over this trinity of intellect, conscience, and feeling, which constitutes humanity, the most profound and vital changes have passed during the last half-century. The scientific spirit of fearless investigation of all ideas and things, and acceptance only of verified facts of experience and nature as bases of absolute knowledge,—this spirit has possession of the age. No one resists it successfully; and no one tries to resist it, who can properly be called a leader of thought. The "intuitionalist" of high degree of intellectual power now differs from his brother agnostic or materialist not so much in *method of investigation* as in *tabulation* and *emphasis* of collected data,—a difference resulting more from temperamental bias of vision than from chosen system of study. And scientific explorations in the fields of physical, physiological, and psychological inquiry, conducted, as they have been in these later days, by master teachers, ranging in specialty of insight from the poet to the mathematician, have resulted in a deep-seated and wide-spreading uneasiness and doubt in the common mind. This uneasiness and doubt strike down to fundamental questions of belief, conduct, and feeling. Wherever the facts of physical nature and mental life have been found to disagree with accepted traditions of theory and practice, the traditions have given way, point by point. And this is as true of those who disclaim any change as of those who advocate an entire making over of the philosophy of belief and the conduct of life. The "Andover controversy" is but one of a thousand *proofs* that the Christian system of religion is riddled through and through with unbelief of its ancient dogmas. And, in Judaism and other special religions, the tendency toward giving up the exclusive beliefs and accepting as fixed only what common experience proves true is no less marked. Even the Brahmin caste of India yields to the democracy of facts that rules the intellectual world of to-day. And, although in the Christian, as doubtless in other special, organized religions, the temples are crowded with worshippers, the god they bow before is less often their highest ideal than conventional custom, social enjoyment, or unthinking consolation. Hence, we may say that the unchurched include hundreds and thousands of those whose names still remain on the church books, and whose constant presence at the church meeting gladdens the heart of the faithful believers, but whose highest thought and deepest devotion of religion are not phrased in the liturgy they repeat.

The threefold function of the Church is to teach the results of philosophic thought in its relation to the individual life; to outline the ideal standard and practical details of morality; and to purify the emotional nature of man, and direct it upwards to devotion, to the best in belief and action. That is to say, the office of the Church is to take the most of truth known, the best of right discovered, the fullest of love felt, and apply them to the building up of the individual character of each man, woman, and child. Its beginning of duty is the study and acceptance of all knowledge in reverence: its end is the establishment of harmonious relations between the universal law and the personal will in human life. This function and office cannot be fulfilled by any religious body which is too tardy in its intellectual advance or too uncertain in its moral direction to be a vitally controlling force in society. It will not sound presumptuous to you, if I say that the average church influence of to-day is not that of a masterful leadership, but rather of a confused and confusing following of other and controlling powers.

The time was when the Christian Church taught its beliefs with bold assurance as the "truth." The time was when the Christian Church held up its supreme model of right living, without criticism or addition, as the standard of a complete morality. The time was when, in consequence of this assurance of faith in its doctrines and absolute dependence upon its personal example of conduct, the Christian Church was the uplifting and all-controlling emotional influence in our civilization. And, *then*, the course of the humble and devout follower was plain. The whole force of thought and action could be spent in the living out of accepted and unquestioned beliefs. But *now* that the Christian Church, in no one particular, leads the advance of thought and action, the position of the simple and faithful ones, who make the rank and file of her army, is a difficult one indeed.

Consider in what straits the sincere and ardent religious disciple finds himself or herself, when the discrepancy between the ideal and the real position of the popular Church is first revealed! The creed-belief, once the honest if mistaken expression of the profoundest principles of intellectual judgment, is now proved utterly misleading not only by the logical attacks of its opponents, but still more by the apologetic and devitalizing "explanations" of its defenders. And the disciple learns to distrust more and more, the more he studies and reflects, not only the results of the old creed-makers' thought, but their method of inquiry as well.

The ideal of virtue embodied in the Christ, once supposed adequate to every emergency of moral growth, in the individual and in society, is now proved defective as a standard of ethics, not only by the arguments of the rational non-Christian, but still more by the vast enginery of moral reform born *outside* the Church in response to the imperative demands of social progress. And the disciple, observing how the modern additions to the Christian ideal of virtue are accepted,—often with tardy reluctance, but yet with final necessity,—accepted and adopted by the Church into its moral code, grows to distrust that code more and more, not only in its details of conduct, but in its system of ethical judgment as well.

And, finally, the emotional influence of the Church, once a heavenward-leading trellis on which the heart's pure passion, warmed by human relations, but soaring upward above all human relations, could climb securely to its divinest height,—this, also, is proved to deepest experience a broken and decayed support. That shy, sensitive, fragile flower we call devotional feeling can never bloom its best save where the intellect rests in calm assurance upon undisturbed foundation beliefs, and where the standard of moral judgment is clear to direct the conscience in paths of undoubted virtue. And that the devotional feeling of the popular Church is a withered blossom of a long-past harvest is proved not only by the rustling of dead leaves at the frosty touch of scornful unbelief, but still more by the uses to which the symbols of a once glowing life are now applied by professed believers. The cross of agony, on which the tears of countless devotees have dropped, now sparkles in diamond mimicry upon careless fashion leaders in ball-room revels. The pictured saints, whose faces devout painters toiled over in a solemn consecration of life, torn from their cathedral nooks, now exhibit themselves as if in a strange surprise, at the call of self-satisfied art collectors, in gay drawing-rooms. Even the church music, born in great travail-pains of passion, which must find voice finer and more subtle than word of poem or sculpture or painting,—even the church music is carried from the temple to the public hall. And, instead of listening on penitential knees to the moving tragedy and triumph of the God-man of his professed worship, the Christian, no less than the outside barbarian, attends the "Passion-Music" or "The Messiah," opera-glass and score in hand, every critical faculty alert, and intent only on æsthetic enjoyment.

Seeing all this, the sincere and ardent disciple may well cry out bitterly, as at sight of an empty tomb which had once been declared the beginning of a perpetual home, "They have taken away my Lord, and I know not where they have laid him." Ah, friends, there are no bereaved like those who close the dying eyes of old religious faiths, on which depended trust in eternal and all-conquering goodness and clear direction for every day's moral living, and sit alone in the still horror of desolation, not knowing surely that any new religious faith will ever be theirs. These bereaved are all about us. Their appeal is the transcendent call of the hour. On the intellectual side of religion, it is an appeal for a statement of belief regarding man's nature and the forces which control it, which cannot be overthrown by the most searching modern criticism. On the moral side of religion, it is the appeal for a standard of right and wrong more permanent and conclusive than the life of any one teacher of ethics.

On the emotional side of religion, it is an appeal for stimulation of a reasonable devotion of life, and a well-grounded trust that "whatsoever forces draw the ages on" work for good, and not ill, and hold the needs of the individual heart sacred, no less than the sweep of worlds and march of empires. This is the cry of the unchurched, "Give us an unassailable belief, a clear and definite moral guidance, a fire of purpose, and a cheer of consolation which are not cheating delusions."

This appeal in *the individual* has been met in num-

Digitized by Google

berless instances by a response, often completely satisfactory, from the various special schools of scientific research and moral reform. Just in proportion as the popular Church fails in general intellectual and ethical leadership, other social forces take up the work in detail. And the increasing accumulation of knowledge and growing complexity of social life necessitate specialties of labor in the church business of character-building, as in all other industries. And, hence, it is more than likely that this division of the forces of the old unity of church life, into separate bands of belief-makers and moral-workers will increase rather than diminish. Education—once, in all its branches, a function of the Church—is now not only a separate interest, but subdivided into many parts, each worthy of life-long study and devotion. Moral control and intellectual advance tend more and more to analytical and administrative specialties of reform, training, legislative and legal activities. And, in these various departments of social science, great numbers of the unchurched have found a new and complete gospel of life devotion. To a Charles Darwin, searching with eager interest for the desired footprints of truth, and tracing them out with noble fidelity to a duller world, there could have seemed no personal lack in life that he should make "appeal" to any other priesthood than that of scientific study! To a William Lloyd Garrison or a Lucy Stone, wholly absorbed in teaching a blundering and indifferent people one letter in the alphabet of morality, there could seem no vital, apparent need for any other statement of the object and aim of life. To an Octavia Hill or a "Sister Dora," nourishing with their sublimated motherhood a world of neglected ones, there could be no cold and desolate hours in which to sigh for a new liturgy of hope and love. Such souls as these, and their lesser followers, make a special chapel of their own, when they outgrow the popular form of the universal temple. In such chapels, many of the nobler religious services of our age and time are performed,—services which deepen the word "worship" from its common superficiality of form to its ancient meaning of "worthship," a life of worthiness. But the danger of the special chapel is that the builder rules its service, and misses the widening influence of kindred but differing emphases of doctrine, and often loses the sense of universal relation which comes from the cathedral worship of common humanity, where choir answers to choir from distant and unseen heights. If one is fully satisfied with but a single phase of religious devotion to an ideal good, he runs the risk of narrowness of vision and bigotry of judgment. If, on the other hand, one is *not* satisfied with such a single phrase, and yet bound hand and foot to its expression, knowing no broader gospel, he feels the hunger which many of our specialized reformers and philanthropists might confess to,—the hunger for some strength-giving draught of faith in a righteous whole, of which they are only the struggling part.

For his soul's health, the reformer and philanthropist, if of devout nature, needs, most of all good men, to escape often from his tabulated statistics of sin, his shocked sense of nature's dualism of evil and good, his sickened sympathy with the unfortunate, his outraged indignation against the selfish, into a quiet place apart, where he may listen to the voices which unite the scattered dicta of conduct in some hymn of the moral ideal. And the moralist or philanthropist needs not only a synthesis of ethics to keep him sane and calm in the whirl of battling reforms, but a standard of moral judgment, a clearly accepted basis of morals, to equip him for the fight. More or less consciously, he has given up supernatural and superficial standards. More or less consciously, he is testing his social experiments by the fundamental question, Does a given condition make men better and happier? yet he has attained no principle by which he may always judge proposed measures, and consistently withhold or give his help.

And, further, although a great many of the unchurched have sufficient moral power and earnestness to make or accept for themselves these various channels of study and labor for the good of society which to-day constitute, both outside and inside the Church, the leading ethical influence, a great many more have not such moral power and earnestness. To thousands, the loosening of church bonds is the result not of intellectual or moral growth, but of the churches' weakness of control over the weakest elements of society. Below those capable of making a law and gospel for themselves from scattered elements of intellectual and moral direction, there is a mass of unthinking and unheroic humanity, needing constant supervision and persistent training from some acknowledged and prominent source, to enable it to fill any useful place in life. To this class, the theoretical questioning of the validity of an inherited code of morals means not a call to deeper and more careful analysis of character and condition for the finding of a more complete law of life, but a bonfire celebration of the death of all restrictions upon personal desire. Is marriage found to be not a symbol of the mystical union of Christ and his bride, the Church, to be defined by theologians, but a social compact, subject to the best judgment of the present law-makers, these people at once prepare for greater self-indulgence in the loosened bond. Is the order of society, political and industrial, found to be not a fixed decree of God, but a movable adjustment of relations by man, these people proceed to demonstrate how great a strain of anarchy the most advanced system of social order will bear before giving way to a retrogression toward earlier and more tyrannical forms. In short, is any searching question applied to traditions of ethics, with the result of finding those traditions unsuited to modern needs, large masses of people rejoice that they are now at liberty to do as they like, without feeling any sense of responsibility respecting the discovery of the real right which should come in place of the conventional idea of right. "Hurrah! hell is played out: we can do as we're a mind ter" was, it was said, the verdict of a newsboy on a popular orator's lecture. And no one can watch the current of our lower life without seeing what dangers inhere in the period after the old moral control of supernaturalism is gone and the new moral control of a self-disciplined rationalism is not yet grown to take its place. The appeal, therefore, from the unchurched for a definite guidance of thought and conduct is not only or chiefly from those earnest and noble natures who pass through conscious crises of suffering, and have the moral stamina to work out their own salvation even through struggle and pain. It is especially a call from those who know not their poverty, a call voiced only by a danger signal. And why is the appeal of the unchurched especially to Free Religion?

The appeal of the unchurched is especially to Free Religion, because Free Religion provides, in the first place, an atmosphere of thought; in the second place, a standard of moral judgment; and, in the third place, a stimulus of the idealizing sentiment,—which are in perfect accord with to-day's outcome of human development. This can be said without reservation of no other religious or social influence. Other forces of education, inside and outside the Church, provide more specially one or the other of these elements of character building, or provide for all these partially and indirectly, working together for ends they have not intelligently aimed at. But Free Religion, by its varied teachers in their different interpretations, has boldly affirmed, not grudgingly or unwittingly accepted, the latest results of human growth in application to the religious life of man.

For an intellectual bond, it proposes, not a creedal statement of details of truth already attained by some leading mind, *not even the latest philosophic dogma of the limitations of human understanding*, but a pledge of *reverent devotion to the study of truth*, leaving each mind free to express its own results. From science it has learned the lesson, so peremptorily taught in these later days, that absolute and universal freedom of inquiry and expression can alone collect the material of thought upon which the consensus of common experience passes the verdict of true or false in selecting the permanent from the transient for the divine purposes of growth. And, from religious history, it has accepted the lesson that the attempt to make speculative opinion, in *any slightest degree*, the basis of union, leads to bigotry and intolerance no less than to mental stagnation. Hence, in sympathy with all other forms of mental activity, the intellectual side of Free Religion represents the growing demand for a bond of united belief, which can be broken by no fresh accumulations of knowledge, but will, on the contrary, grow stronger, the more we learn. This *permanent bond of belief* Free Religion declares to be the conviction that facts are greater than any theories, that truth requires no props of assumption, no protection of tradition, no concealment of cowardice. This permanent bond of belief Free Religion declares to be a *method of study*, not a *record of achievements*,—an unfettered and tolerant devotion to the ideal truth, not a partisan statement of one of its aspects. And this Free Religious bond of belief, and this alone, matches the intellectual appeal of the unchurched.

For an ethical system, a standard of moral guidance and control, Free Religion proposes not the deification of some moral examplar as the perfect ideal, not the arbitrary enactment of a code of details of conduct to be unquestioningly accepted as the law of right,—not these, but a clear acceptance of the principles of equality of rights in human relations, and the subordination of the lower to the higher nature in the individual life. Welcoming to its platform differing theories of the genesis of morality, gaining light upon the philosophic problems involved, from idealist and materialist alike, it has no shibboleth test of agreement of opinion respecting the origin, the history, or the present details of ethics, to apply to any earnest worker for the right, as he sees it. Welcoming to its platform partisan pleaders for all special reforms, it stands pledged to no one of them. Its office in the moral development of the race conflicts with no detail of ethical activity: it stands simply for the great principles which underlie them all. The educational reformer is seeking for a science of human development which shall match the modern needs. The industrial reformer is seeking for a science of labor which shall consider all classes equally. The social reformer is seeking a science of sexual relation and general affectional adjustment, and of personal and public control of vice, which shall be weakened and warped by no false theories. The political reformer is seeking for a science of government which shall relieve and finally prevent the results of ignorance and selfishness in democratic as in aristocratic forms. These various reformers are recognized by Free Religion as purveyors to the developing theory and practice of morality. To all, Free Religion applies the question, Is your offered specialty of conduct a contribution toward the equitable adjustment of all human relations on the basis of fraternal love? To all, it applies the question, Is your proposed method of work consistent with the highest interests of the personal life? To all, it gives the good speed of reverent study, earnest consideration, hearty coöperation, as the individual case justifies. To none does it resign its place of critic and harmonizer of all the varied moral forces. And this Free Religious standard of ethical judgment and control, and this alone, matches the moral appeal of the unchurched. And, finally, Free Religion proposes, as a stimulant of devotion to the ideal Best, not an arbitrary *form of expression*, but a mount of vision from which climbing souls may gain each his own revelation of beauty and strength. Recognizing with deepest reverence the supreme fact that man is a "religious animal," born to worship and aspire, it recognizes also the secondary fact that love, whether it be the elect choice of friendship in human relations or the winged, upsoaring yearning of the human heart for union with the divine, of which imagination tells,—love must be unfettered in its incarnations. Throughout the ages of special religious systems, the religious sentiment has been torn in tatters during theological frenzies of tyrannical definitions of the object of worship. Free Religion attempts no definitions, no limitations, no suggestions even, of the personal expression of the universal idealism of man. Does one repudiate all the old names, disclaim faith in any God, outside the God-conception in man, he is welcome with his hopeful proof that the moral nature is recognized as sovereign in all forms of belief. Does one keep all the dear names which are our common inheritance and surcharge them with modern meaning, he, too, is welcome with his mingling of tenacious affection for the old form and brave acceptance of the new life. Does one on bended knee voice forth his yearning toward the Perfect in prayer to a distinct reality outside his consciousness, he is welcome as believer in powers "not ourselves, which make for righteousness." Does one in simple, honest silence toward the Unknown think and work upward to his own better nature, in a pure faith in its saving power, he, too, is welcome, as believer in the powers within ourselves that impel us toward the best. Does one speak confidently of "personal continuance" after death, he is welcome as confirming that grandly audacious hope of the human heart which has survived the unbroken silence of a world of graves. Does one declare his feeling that the individual life, like the dropping leaf of autumn, is lost save as its decay nourishes the root of humanity's tree, he, too, is wel-

Digitized by Google

come, if he makes the moral influence of the special a continued gift to the general life; for he, too, in *impersonal* forms, confirms the ancient belief,—

"Whatsoe'er is excellent,
That is truly permanent."

Free Religion, on its emotional side, emancipates the *heart* of ideal devotion from the thraldom of intellectual dogma respecting its origin, object, and function,—just as a great social movement is freeing the distinctively feminine elements of human influence from the domination of the distinctively masculine powers. And, in both cases, the subtler forces, which have evaded classification and shrunk away from analysis under the tyranny of the special *form*, are beginning to blossom freely in the open air of the universal *spirit* of worship and association.

Free Religion has no united voice of authority respecting the spiritual nature and emotional desires of man. It bases its fraternal bond on no detailed answer, to which each tried and perplexed questioner must shape his problems of hope and fear or feel himself alone in the universe. It calls upon the tempest-tossed, the desolate, the faithless, the sin-beset equally with the prophets and saviours "which have been since the world was," to tell the tale of heart experience which life has told to them. And from the mingled voices of terror and of love, of despair and hopeful yearning, and of ecstatic joy, it weaves that symphony of aspiration toward an unexperienced, an imagined, and a trusted Good, whose music is the worship of the world. And this great, inclusive faith of Free Religion, this faith that the facts of universal life and law are to be trusted entirely, so entirely that we need no longer fret ourselves in fruitless efforts to unite upon a common liturgy of expression, but may forever content ourselves with its unfettered and variously voiced spirit,—this faith alone meets fully the emotional need of the unchurched.

A Pentecostal day hath dawned; and every one speaks in the language whereunto he was born, to testify of the spiritual force within. To many, the voices are confused; but to Free Religion, as I apprehend it, they are concurrent testimony to a movement in humanity constant and untiring, a movement from lower to higher, from higher toward the highest in thought and conduct and feeling,—a movement which proves the *righteous tendency of universal law*. On this, it rests with faith, whose "steps fall on the seeming void to find the rock beneath." Glad as Free Religion is of all the star-eyed poets who have hymned the special gospels of the separate religions, have added to this faith of faiths, far gladder is it for the testimony of common and uncomprehending experience.

This common humanity, its feet heavy with the clods of bestiality, its garments draggled with the bloody dew of selfish battle, its eyelids drooping with the tears of bitter sorrows, yet forever lifting its haggard face, forever stretching out its trembling arms in yearning toward something better than it has known, forever struggling upward, though blind and weak, to higher and yet higher aspiration,—this gives faith in the sovereignty of Good which cannot be gainsaid. This, the transcendent fact about the human, is Free Religion's altar-picture of the Divine.

The bond of sentiment it creates, the religious service it commands, is to "widen the skirts of light" by clearer knowledge of truth, by deeper devotion to the discovered right, by tenderer affection for the universal brotherhood of man, that the picture may shine with more resplendent glory, and inspire to a sweeter peace.

With such bread of life to break to a hungry world, bread of life already broken for the nourishment of elect souls, shall Free Religion answer the appeal of the unchurched with a stone of indifference. Oh, for a prophet's tongue of fire to tell the need, a poet's word of insight to teach the transcendent opportunity, a painter's skill to image forth the glorious promise of this *our* day of work!

THE PRESIDENT.—We have been glad, friends, to welcome new faces and new voices on our platform to-day. We are also glad to see the old faces and hear the old voices; and we have a friend with us to-day who was among the original founders of the Free Religious Association, who has been absent from the country for a number of years, but who has now returned and will speak to us on this occasion. I have the pleasure of introducing to you Mr. Edward C. Towne.

Address of Mr. Edward C. Towne.

In the record of Thomas Carlyle's religion there is a double story. When he talked with his friend Edward Irving, he said that he did not believe in Christianity. Edward Irving, he said, at the end of that man's life, was the best man, upon the whole, he had ever known; yet a man who, perhaps, in this modern time, went most wrong in the intellectual construction of religion. It was perhaps very natural indeed for Mr. Carlyle to say to that man that he did not believe in Christianity. But there was another thing about Mr. Carlyle's life. If you have not read the two volumes which Mr. Froude has recently published, you should read them, and you should gather out of them a holy and beautiful gospel of the relation of Thomas Carlyle to his mother. Mr. Froude tells us that between himself and his mother there was a passionate attachment; and he pictures to us how they sat together in the gloaming by their Scotch fireside, smoking their Scotch pipes, while the mother, with her tender anxiety, was striving to save Thomas from the temptations of the intellect, and Thomas, with the great heart of him which he had got from that mother, was trying to make her understand that, although his conceptions were different and his words were different and he seemed to be travelling in a path different from hers, yet nevertheless, as he assured her, their characters were the same, and, fundamentally, their faiths were the same, and he did believe, after all, in that very religion which he had thought it necessary to deny when he talked with his friend Irving. I have no doubt that, but for that mother of Mr. Carlyle, he would have been the most desperate leader of agnosticism and the fiercest apostle of despair. But she held him,—held him by his heart.

The reason that I speak to you of this is that I want you to see the two methods by which we may judge a religion, any man's religion. One of them is the small and narrow and strict method, and according to that method Mr. Irving believed; and, finding a man who so believed, Mr. Carlyle denied. But in the heart of a good mother there is always another method,—a method which is large, which is broad, which is free. I have sometimes thought that religion would long since have gone out of the world, if it had been left to men. I believe it would. I believe we should have agnosticism and despair altogether triumphant, if religion had been left to men. You turn the page of contemporary English history, you ask for the representatives of religion, and you will find that one of the most conspicuous illustrations of genuine religion on that page is that very plain, common, I think I may say inferior, yet nevertheless good woman, who is on the throne of England. And when you see the daughters she has sent into the world, especially those two elder daughters she sent to Germany, the Crown Princess of Germany and the Princess Alice of Hesse Darmstadt, who died, you find, with their mother, three as good disciples, I suppose, of Theodore Parker as there are in the world, and made such simply by the instincts of their good English womanhood. I do not say "English" because I mean on the other side of the Atlantic. What I have learned by five years' and a half residence in England is that England, as Mr. Carlyle said and as John Bright has said, lies on both sides the Atlantic, and especially when you come to the finest of all facts in English traditions, the tradition of its womanhood.

Now, that large and broad and free method is the method of the future in regard to religion. I think there is a great deal of Orthodoxy left on this platform. I think we have heard the method of it in those brief essays which followed one another through the hour and a quarter during which Mr. Salter entertained and instructed us. The method, I say, of Orthodoxy is the method of small and narrow and strict construction.

Now, if there is one thing the history of religion enables us clearly to understand, it is this: that every one of the great founders of religion has had knowledge of that religion which is behind and below all the religions. You may take the worst of them,—Mahomet,—and the world, the orthodox scholarship of the world, is already recognizing that, if you will look at Mahomet from his own point of view, from his own words, if you will read his life during the twenty-five years that he was faithful to that noble woman who was his wife, and who, if she could have lived to the end of his life, would probably have exercised more influence for good upon the destiny of mankind than any other human being would have exercised, you will find that even in Mahomet himself there is a large and noble reality, taking hold of the divine, of divine revelation. And need I speak of the morality of Confucius or of Laou-tszee? Need I speak of the divine compassion of Buddha? Need I speak of the sweet voice of nature which sung itself out of the Vedic hymns? Need I point to the different Bibles of the East,—the Bibles of Egypt, of Chaldea, and of Greece, to Greek poetry,—to convince you that everywhere there is one divine strain, if you are only willing to look at it in a large enough and broad enough and free enough spirit?

There is another fact which the history of religions teaches. It is that no set of disciples ever failed to corrupt the teaching which they had heard. And I think I do not exaggerate when I say that between master and disciples there has never been such a gulf fixed as between Christ and his disciples. I listened eagerly for something about the ethics of Christ in Mr. Salter's essay. I heard a great deal about modern problems, very nobly said, to which my heart responded, and I heard a number of assertions in regard to the ethics of Jesus; but I could not detect, from my own judgment as a scholar, that Mr. Salter had made the acquaintance of the ethics of Christ; I mean, that he had taken the pains to extract them from the memoranda which we have from the disciples of Christ; and I am confident that, as the years roll over his clear head, and as Providence, or circumstances, if he wishes to call it so, shall guide his earnest search, he will more and more find that he is walking in the identical footsteps which left a line of light in those paths of Galilee and up that hill of crucifixion.

I cannot, of course, in the brief moments that are allotted to me, say what I should like to say of the method of Christ which makes me recognize it as the ideal method in religion, yet not because it was Christ's. The only person I have ever nearly worshipped in religion was my mother. When I was a Trinitarian, I did not worship Christ: in the historical sense, I recognized him; but when I came to the questions of humanity in the streets of the city of New York, where I began my study of divinity, I said to myself instantly, "The spirit that has been breathed on me in all my life, and by which I have learned to trust God as a father,—that spirit is in utter contradiction of this religion which I am setting myself to learn, and am expected to preach." And I got out of it It dropped off from me. Now, I am confident, I say, that those who will look closely enough into this matter will find that, without any worship of Christ, without any other recognition of him than as a teacher and as an example,—a teacher and an example who sought after and found the ideal, and who has been providentially made an historical symbol,—they will find, I say, that Christ does represent to them this truth, which is the natural truth of the human heart. Mr. Emerson said so. Mr. Carlyle said so. I think you will find that the greatest thinkers have all said so in one way or another, whatever their criticisms. They offer their criticisms upon what is told us of Christ. But when it comes to Christ himself, when they come to stand with him, to walk with *him*, to live with him, and to die with him—then they know that his life was sublime and immortal. I yield to no man in giving honor to conscience; but I say that, when you add sympathy or love to conscience, you have quadrupled your resources. And I say again that there is a stage higher still, which, if you add it, you quadruple all that you have got before; and that is the stage of trust,—the instinct which looks out and forward and upward for good and for light, recognizing one purpose that is good—good enough to be divine—in all the course of the ages. Now, I say, this trust is four-fifths of natural religion; and sympathy is four-fifths of the other fifth. And if you go to work upon the basis simply of conscience, supremely important as that is, you are going to work with about four per cent. of the natural resources of religion.

Now, there is a lamentable tendency, I think, in our time to go to work upon a basis of four per cent. I will tell you why I think so; and if any of you have lived in England, as I have done, you will understand how lamentable the thing can be. If you take freedom, or the resistance to superstition, in a sense so extravagant as to make it possible to throw men back upon bondage and upon superstition, you may be

Digitized by Google

doing more for bondage and superstition than you are doing for freedom and for religion; and I sometimes ask myself whether, as a movement, we have not done more to injure the cause that is sacred to us than we have done to help it. All over England, you find the very class who have been immersed in free religion caught up by the very worst form of ritualistic superstition, and in the bondage of clergymen who call themselves priests, and call for subjugation to them as to a priesthood. The very people, I say, who were naturally Free Religionists, are turned in many of the Anglican churches into the bond-slaves of superstition; and it is because that is true which Wordsworth so finely said of Nature, which I will alter a little to make it applicable to my thought:—

"Great God! I'd rather be
A Pagan, suckled in a creed outworn;
So might I, standing by this shoreless sea,
Have glimpses that would make me less forlorn."

You cannot get away from these realities of the infinite and of eternity. They belong to the human heart. They are not merely in the Bible, they are not merely in the teaching of Christ. We do not find Christ much of a religionist: we find him more of a humanist. We do not find him much of a theologian: we find him more an ethical master; but, then, his ethical sagacity was sustained by the instinct of divine love and of eternal hope. He took God and took immortality for granted. And unhappy would the day be when such a master as we heard this morning, and such a disciple as we heard this afternoon, or a school of them, should fill our religious world with the very worst gnosticism that has ever been invented, though intended to be non-gnostic; for I think the very worst gnosticism that has ever been invented is that we know the limits of the horizon about us, and so well know them that we cannot trust, cannot hope, and cannot believe in God and in immortality.

Now, I have one more thought, and it is this. You may do what you like in any class or school of teaching, there is one thing that settles all these questions; and that is, the human mind, the course of history. I do not speak of the superficial appearances of the age: I speak of that which is eternal. I speak of the adamant which is beneath all our feet. I say that, whether you care for Christ or the teaching of Christ or not, the world does and will; and, if you do not give it to the world rationally and free, the priesthood will give it as a bondage and a superstition. And, if that be true, let me tell you that it is certainly the fact that this adamant which is under us all lifts the figure of Christ into a sunlight which will never be absent from him as long as suns shall rise and suns shall set. He, simply by the human truth of his faith, by the human truth of his conscience, his love and his trust, of his faith in God and faith in man, his divine faith in eternal life, by his large and free reading of religions, of church, and of worship, gave to us the perfect measure of religion, free as the air, free as the sunlight of God.

The PRESIDENT.—There has always to be a last speaker at every meeting, and generally the last speaker has a hard time of it. His time is scant, in the first place, and his audience is apt to be thin, and to become thinner; and therefore I bespeak for the last friend who is to address you at this time your special attention, for I know he will hold you, if you will let him have a chance. I have the pleasure of introducing Mr. B. F. Underwood, who will now address you.

Address of Mr. B. F. Underwood.

Mr. President, Ladies and Gentlemen,—I have no prepared address, and, if I had one, at this hour and under these circumstances should be very much disinclined to deliver it. Indeed, the meeting would close without any remarks from me, did there not seem to be needed a few words, in order to give formal completeness to the proceedings. We have heard much about religion, and a few words should now be said in regard to the value and importance of science. We have had different definitions of religion. Mr. Potter, in his able and eloquent address, defined it as the expression of man's relation to the universe. Prof. Adler, in his forcible and eloquent statement of his position, defined religion as something related to and derived from the moral sense, expressing itself in the idea of moral purpose in the universe. Mr. Salter has given another and perhaps a more transcendental definition. And, in the last address, we had yet another attempt to define religion. Whatever be the amount of truth in any of these definitions, I claim that it rightfully belongs to the domain of science. There is nothing in religion that is realizable or valuable that transcends science; and, when I say science, I do not include theology, which, being the "science" of the unknown and the unknowable, is, properly speaking, no science at all.

If religion refers to man and his relations to the universe, it represents what must be classified as a part of the sum total of human experience and knowledge. Once, in reply to a similar remark, Col. Higginson said in substance that religion is an emotion, and is not observable and cannot be dealt with by the methods of science. But it is the privilege of science to take cognizance of our thoughts and feelings, to compare and arrange them, to observe their objective effects, and to bring them within the province of classified knowledge, just as we take cognizance of material objects, and compare and classify them and reduce them to order and system. To speak of any religion as beyond or outside the scientific domain is to speak of what is beyond the power of the human mind to conceive or to consider in relation to the life and character of man.

Whether you regard religion as doctrines formulated into a creed—Christianity or Mohammedanism—or regard it as an intuition or a tendency inwrought in human nature, the result of ancestral experience, extending back through ages to the time man began to feel emotion in contemplating nature and his relations, it is the work of science to explain it, to illuminate the mind in regard to this subject, which is of such general and profound interest to man, and finds expression in so many ways.

It may be safely said, too, that the more science we have, the more morality will we have. True, much immorality is seen in communities that are in possession of considerable knowledge; and we hear it said, sometimes, that in some savage tribes is found a morality that would shame civilized nations. But such statements predicated upon superficial comparison of simple and complex communities are of little value. If you wish to form an idea of the difference in the moral character of the savage and the civilized man, imagine the Digger Indians suddenly organized into a community, with institutions and agencies as numerous and relations as complex as those of the city of Boston. Of course, such a change, were it possible, would at once involve not only great intellectual development, but the education of the moral sense and the differentiation of moral conduct to adjust the members of the community to the requirements of the new life. Such intellectual and moral changes cannot be effected without science, and then only by slow changes extending through centuries.

Morality—real morality, and not merely an ascetic or theological morality—depends upon scientific progress; and, if a people that have made considerable advancement in science, and are still more or less under the dominion of laws and habits which belong to an unadvanced condition, it shows how largely the present may be in slavery to the past, how men may outgrow beliefs and still be under the influence of those beliefs, just the same as many fancy they have emancipated themselves from the thraldom of creeds, when they have all the dogmatism, bigotry, and bitterness which those creeds engendered in their ancestors, and which they received partly by education and partly by inheritance. What I attempt here to indicate in regard to the influence of the past in determining our moral character, when it is utterly inconsistent with our best knowledge, is as unquestionable as the influence of superstition over Madame de Staël, when she said, in reply to a question, that she did not believe in ghosts, but was nevertheless afraid of them.

It is science, if I mistake not, that has chiefly promoted the *practical* morality we have to-day in the most enlightened communities, because it is science that has taught us what is involved in all the old precepts, and enables us to realize them in life. "Be just." These words express the whole duty of man under all circumstances, in all climes. They were uttered by ancient teachers, they are accepted by the savage mind. But intellectual development, including scientific knowledge, has enabled man to learn what *is* just. The abolition of slavery and the growth of international law were made possible by science, not by the repetition of precepts known to the ancients as well as to ourselves. The fact that much needs to be done to make men understand morality in the application of its principles to practice is illustrated by the unwillingness of the orthodox clergy to consent to the taxation of church property, when they know that such taxation compels people who do not believe in the churches to support them. It is secular knowledge and scientific progress that will finally effect this change, and not simply repeating the words of Jesus and exhorting men to obey them. The brotherhood of man was taught not only by Jesus, but by poets and sages in India and Greece; but what the brotherhood of man really means in actual life was not understood until science brought men and nations into communication, and is not fully understood yet. The invention of the telegraph, in my opinion, has done more to promote the brotherhood of man than all the preaching to which men have listened since that invention commenced its work of uniting men in the bonds of a common humanity. And it is now enabling men to put in practice what was before to a large extent mere theory, because it is making men more cosmopolitan in their views and broader in their sympathies. And so the invention of printing, which has spread knowledge broadcast, has been an important factor in social advancement, which means also moral progress. Further illustrations need not be given.

I may add that science, by giving good surroundings, teaching men how to live, making them acquainted with their numerous relations, giving them good laws and correct ideas of nature and of duty, strengthens and develops that fine and noble sentiment which has been defined here to-day as religion. Science is promotive of the highest sentiments and of the noblest traits of character. Left without these scientific aids, without this knowledge that comes to help man in controlling the forces of nature, left simply to the worship of an unseen Being or to a dreamy, nebulous contemplation of the universe, man never could have advanced from the conditions of savage life. Indeed, the emotion which is excited in the presence of the eternal mystery of being, the awe arising from the contemplation of man, of man's nature, and the inexplicable universe to which he is related, are the result of the enlargement of the human mind and the growth of the moral sentiment. With the number and complexity of man's observations and experiences, upon which this enlargement and this growth have depended, science has extended her empire, while the domain of theology has become smaller.

I insist then on the importance of science, not only in its application to what are called physical facts, but in its application to the human mind, the expressions of the human mind, and to the products of the human mind, including the religious sentiment and the moral sentiment as well as religious systems and the moral code.

I think, with Prof. Adler, that the chief value of this Free Religious Association consists in the liberty it has afforded and the encouragement it has given for the study and presentation of thought from every point of view. A society so broad and catholic can of course have no creed to hamper its members; and, for this very reason, it is adapted to do the work for which it was formed,—to encourage the independent and courageous expression of thought, and to elicit truth on the subject of religion. But it does not follow,—I wish to add this before I sit down,—because men and women agree to unite in the study and friendly discussion of this subject, that they must resolve themselves into a charitable organization. It is right and proper that charitable organizations be formed and supported as they are by many who are members of this Association; but it does not follow that an association established for the study and expression of thought from different points of view is remiss in its duty or has failed to accomplish anything, simply because it has not taken up a work for which it was *not* formed and which it has not the machinery to carry out.

The PRESIDENT.—I cannot let you go, friends, until you have finished the little matter of business of which I spoke at the opening of the afternoon session. The committee then selected to name a committee to nominate officers next year have reported as follows: Mr. Charles H. Codman, Mr. Harlan P. Hyde, and Mrs. Sara A. Underwood.

On motion, the Association ratified the nominations of the committee.

The PRESIDENT.—And now, friends, this Conven-

Digitized by Google

tion comes to its natural close. The festival this evening will be more informal and social. Whatever may be the issue of the Free Religious movement in the future, it has certainly, I think, had a good meeting to-day. We have had the wide range of thought that it has been usual to have represented upon this platform, and the various elements and phases that are here harmoniously associated together have been voiced. If any inspiriting idea has come into any of our minds, any more generous impulse been stirred within us, any higher hope, any better aspiration, then the meeting has been a success. But it will not have been a success in its results, unless we shall all go to our several posts of duty to put this new inspiration, this higher hope, this larger thought, into our lives. With the expression of the hope that this may be the case with us, I now announce that this Convention is adjourned.

Social Festival.

In the evening, the Hall was well filled again with those who came for the social entertainment. A portion of the time was given to speaking and music. The addresses were informal and mostly impromptu, and no notes were taken of them. The speakers were F. A. Hinckley, S. J. Stewart, Miss M. F. Eastman, Mrs. Kate Gannett Wells, Capt. Robert C. Adams, and A. B. Alcott. The music, generously volunteered by the Euterpe Quartette of young lady singers, was a very pleasant feature of the occasion. Two hymns, one by Samuel Johnson and one by Mr. Emerson, were also sung by the whole assembly. The rest of the evening was spent in social conversation and at the tables for refreshments. The donation table of the Finance Committee was also patronized; and the whole financial receipts of the Convention are given below.

For *The Index*.

ILLUSTRATIONS OF THEISTIC RETRIBUTION.

V. B. DENSLOW, LL.D.

If I were disposed to believe that the social world is governed by a Divine Person, instead of being left, like the material elements, to the unstable equilibrium resulting from the equal warfare of antagonistic forces, I should find, in the three foremost events of the present year—namely, the "No Rent" abolition of landlords' rights in Ireland, the assassination of President Garfield, and the Christian persecution of the Mormons—the manifestation of a desire on the part of this Person to teach mankind that ethical questions are not infallibly determined by popular majorities, and that policies may be very unanimous on the part of vast masses of people, and yet may be so unwise as to be pregnant with the seeds of their own punishment.

The six millions of Irishmen who, since 1846, have been driven to this country by the perverse incapacity and misgovernment of the Irish and English landlord class, have built railroads and performed agricultural and other labor here, which of themselves alone may fairly be credited with having developed a capacity for the cheap production of breadstuffs, meats, and provisions, which has rendered the payment of rent by English, Irish, and Scotch farmers impossible at the low prices to which American farmers have reduced the products on which British farmers depend. If, on the other hand, the English government had done as much to develop and preserve Irish manufactures as English, Ireland could have retained the seven millions of people who have been driven to America, Canada, Australia, and the Cape, and could have maintained the whole twelve millions in far greater comfort than she now maintains four millions. The lesson of this is that, though the English people were very unanimous in the measures by which, from 1781 to 1846, Irish industries were destroyed, yet, in spite of their unanimity, the British nation were asinine and suicidal, and their blunder was pregnant with the seed of retribution. All the official prayers of the Church of England cannot stop the destructive bombardment which is tumbling the English aristocracy and Church to the ground, though the only guns that are fired are the jocund laugh and merry jibe of the Irish laborer in America, as he drives his team afield, or picks up his spade every morning for his eight hours' work and his white wheat bread.

In the case of President Garfield, I wish there were more charity in what I have to say; but I am describing retribution, and I have never been able to see any element of charity in retribution. President Garfield sincerely desired to cover within the comprehensive mantle of a single, generous, and richly endowed mind a perfect and consistent sympathy with the most advanced metaphysical speculations and scientific conclusions of Newton, Humboldt, Tyndall, Darwin, Huxley, Spencer, and Haeckel, and at the same time to give hospitable shelter, under the same intellectual tent, to superstitions which for a thousand years held the world bound under chains and darkness, which during eighteen hundred years have probably destroyed the lives of fifty millions of people, and which have opposed, tooth and nail, inch by inch, every onward step in the revival of civilization in modern times. Knowing that Christianity had made this monstrous record,—for the vast and accurate reading of the late President had carried him intimately over the entire ground,—he still strove to see in its crude superstitions an element better than the human mind in its generous progress had placed there,—an element exterior to, above, and better than the aggregate march of human progress, indeed a sufficient cause and an inspiring motive to all this progress. He loved applause universally, but was voracious of the applause of Christians. He appeared at their conventions at Chatauqua and elsewhere; and, though deeply imbued with the spirit of an enlarged philosophy which abhors superstition, he encouraged the gross, materialistic Christians, who believe in a salvation through blood and the like, to claim him as their own. It was out of this dark cloud of Christian superstition which has been glowering over the world for centuries that the bolt fell. Behind him crept the meagre-witted, skulking, ill made-up and mentally deformed creature, in whose darkened pate the superstition, of which the brilliant Garfield was determined to see only the silver lining, had bred the dark and dangerous lunacy which led him to believe that the world is governed by a Moral Deformity, and that he selects moral deformities as his fittest agents and ministers. Had Guiteau's moral sense been sufficiently educated to perceive that Abraham, if the story of his offering of Isaac is to be taken as history and not myth, was a lunatic, he would not have fallen into the meshes of his own religious vanity. Without saying that, if the magnificent intellect of Garfield had never stooped to compliment and identify itself with Moodyism at Chatauqua, it would never have been struck down by Moodyism at Washington, I am of the opinion that the very Moodyism toward which Garfield bowed so low at Chatauqua that he forgot for the time the close intellectual relations he bore to an anti-superstitious philosophy,—a fact which he would not have forgotten, if the votes of philosophers had been as numerous and as clannish as those of Christians,—was the atmosphere in which Guiteau's intellect became addled. I am of the opinion that all effective religious revivalism is a mode of social and epidemic trance or lunacy; that Guiteau, according to his own testimony, was first struck with it during the Moody meetings in Chicago, in listening to a sermon by Dr. Kittredge, in which that worthy confessed himself unable to form a settled theory of Christ's second coming. Guiteau's phrases—"God always employs men of brains to do his work." "God has no use for fools,"—were the tickling phrases which Moody used during those meetings. Guiteau went out of the Moody meetings with the general notion that all frenzy is divine inspiration; and in fact he was as near right as this,—that there has never been any other divine inspiration than that which grew out of human frenzy or disease. He was possessed with the vast religious vanity of being as great a man as Moody. The first step to becoming such was to be as blindly superstitious. Along this track he moved into religious vagabondism, petty deadbeatism, diseased overestimates of his own personality, chagrin, shame, dark clouds settling constantly over his moral sense, until at last from motives partly insane and superstitious, partly sane and devilish, he struck out in the dark for fame or infamy, his mind was too clouded to tell which.

At Chatauqua, Garfield, from the full quiver of superstition, plucked the graceful feathered arrow of religious compliment, and drew the bow to show how deftly he could aim it at the heart of atheism. Millions of Christians made the welkin ring with their acclaim, and asked: "Who now will say that we are superstitious? Who now will claim that our effort to 'come up to the help of the Lord' in his arduous efforts to run the universe is a mode of lunacy?" Alas! before the shouts of acclaim had died away there was a sudden cry of horror and dismay. The whole world stood aghast. It had desired to assume that Christianity bred none but Garfields. But the terrible arrow had returned. Christianity breeds also Guiteaus. Atheism may perhaps be truly charged with assassinating deity,—so far as deity is a mere hypothesis of the undeveloped reason,—but superstition, and the lunacy it begets, assassinate man in the flesh. I find it impossible to conceive that the lamented President Garfield, during his long months of agony, could have failed to feel that the superstition to which he had tried to be kindly and complimentary had shot back the arrow which he had aimed at atheism.

> "So the struck eagle, stretched upon the plain,
> No more through rolling clouds to soar again,
> Viewed his own feather on the fatal dart,
> And winged the shaft that quivered in his heart.
> Keen were his pangs, but keener far to feel
> He nursed the pinion which impelled the steel;
> While the same plumage that had warmed his nest
> Drank the last life-drop of his bleeding breast."

Nothing short of a New Revelation could break on many minds the conception that the doubts and discussions among philosophic minds as to the existence or nature of deity are as harmless, because as high above the frenziable class as the stars. They can neither scorch nor wither, and they may instruct and guide. But the class of superstitions that first frighten and then enfeeble or enthuse the giddy vanity of the vast materialistic throngs of ox-brained, beefy mediocrity that crowd in thousands upon the teachings of a Moody, Talmage, Kittredge, or Harrison, who easily catch the notion that human frenzy is divine inspiration,—these, like low, ground fires that burn among the stubble, are dangerous.

(Concluded next week.)

CORRESPONDENCE.

THE CODE OF ETHICS.

Editors of The Index:—

I regret to find in *The Index* some ungenerous remarks on the action of the American Medical Association for condensing the new code of ethics adopted by the New York Medical Society, which permits to hold consultations with any legally qualified practitioner. This latter clause is altogether misleading. In some of the States, any one is legally qualified to practise medicine, if he takes it up as a business, regardless of his want of education and experience. In other States, a board of examiners, consisting mostly of non-professional persons, may, at their option, grant licenses to practice. Under these circumstances, no other resort is left for the educated physician, in order to maintain the honor and dignity of his profession, than to hold no professional intercourse with the "irregulars"; and this resolve has found expression in the code of ethics established by the representatives of the medical profession. Such a course is demanded by candor and honesty, if by nothing else. But the question arises, Who are the "regulars" and who are the pretenders? If medicine is a science at all, then there can be only one science of medicine, as there can be only one science of mathematics or chemistry or biology. Although Comte places medicine low in the ranks of sciences, on account of its dearth of large generalizations and of established principles, yet he admits it into the hierarchy of sciences; for he discerns in the cultivation of allied sciences, which form the foundation and auxiliaries of medicine, the true scientific method.

The theory and practice of medicine can claim a scientific basis only when built upon observation and experiment when it commences with the inductive process and then utilizes the results of the latter for deductive purposes. So-called special systems, in which the history of medicine abounds, abandon this slow, tentative work, and seek in the domain of hazardous speculations for a shorter and quicker route to the desired goal. In this effort, the founders of "pathies" are urged on by the consideration that to cure disease is a practical necessity that cannot wait for the fruition of scientific research. Unfortunately, that branch of medicine which concerns itself with the selection and application of certain substances and agencies for the relief and cure of diseases is the most backward of all the different departments of medical study. The enlightened and conscientious physician, who frequently knows perfectly well what is wrong with his patient,

Digitized by Google

but too often has to deplore the inadequacy of his therapeutical means to fulfil the indications of treatment, besides the inquiry into the powers and value of a reputed remedy, is beset with almost insurmountable difficulties; for the error of *post hoc ergo propter hoc* can hardly be eliminated from it. Suppose a patient recovers from a disease, who had been submitted to a certain plan of treatment, how are we to tell whether the recovery was effected by the remedy or happened in a natural way? The acute diseases are self-limited, and have a tendency to spontaneous recovery. A vast number of other morbid conditions are only exceptionally fatal. It is evident that, at least in these classes of cases, nothing can be absolutely determined concerning the curative powers of any remedy; but what a wide field does this open to the pretender, the impostor, and cheat, and what false inferences will be drawn by the advocates of some pet "pathy," who see in the recovery a confirmation of their faith! And, in truth, how great is the temptation to credit drugs with virtues for no other reason than that persons got well after they had taken them!

Many of those special systems of medicines have been reared upon just such fallacious reasoning, and homœopathy is the latest of them. Criticism is silenced amid the shouts of happy convalescents, who fancy they escaped death under the auspices of globulism. It appears as if sickness levels all understandings. Pericles, the Greek of the Greek, who could command the best medical talent of Athens, gave himself up to the charms and potions of his old slave woman, when he was taken sick. The Æsculapian priest could triumphantly point to the thousands of votive offerings hung up in the temple by invalids in gratitude to the healing God, whatever the sceptical Hippocrates may say to the contrary. The Father of Medicine would undoubtedly have smiled, had he been assured that the ten millionth of a grain of pulsatilla cures diphtheria. Perhaps some forward Athenian journal would have accused him of Bourbonism, and teased him because he could not put himself "in harmony with the spirit of the age." But it is said that "a good proportion of intelligent people employ physicians of the homœopathic school." When Dr. Forbes visited Paris, in 1842, he was told of the astounding medical virtues of a nostrum which was all the rage with the *élite* of the city. The irrepressible Englishman, by means of a handful of francs, got hold of the formula of this wonderful nostrum, and what was it? O ye shades of Galen and Sydenham! A decoction of flint stones!

But the unkindest cut of all is to put the science and art of medicine on a level with theology, with the implication that both of them rest upon such a precarious basis that "sectarianism or close communionism" becomes neither of them. I shall not stop to discuss this point, as my communication has already exceeded the limits I had designed for it. A few words may, however, be added in explanation of the cause that induced the members of the New York Medical Society to modify their code of ethics in the manner indicated. They even went further than this, when they said that "emergencies may occur in which all restrictions should, in the judgment of the practitioner, yield to the demands of humanity." How the demands of humanity could possibly be answered in a case of sickness by the combined efforts of men who have not a single medical opinion and mode of treatment in common, it would be hard to determine. The truth of the whole matter is this: homœopathy has become fashionable and lucrative in New York city. Many wealthy and influential people employ globulists, and it frequently happens that the professional services of eminent consulting physicians of the regular kind are desired by these rich patients. In order to avoid the scandal which a compliance on the part of the regulars would cause in medical circles, it was found convenient to modify the ethical code. The "humanity" is all in favor of the "big guns."

A. B. ARNOLD, M.D.

BALTIMORE, June 27, 1882.

MISCELLANEOUS.

THOMAS PETTIGREW, of Streator, Ill., in renewing his subscription, writes, "I think *The Index* the best paper of its kind in this country, and I cannot afford to dispense with it."

CAPT. R. C. ADAMS, in a business letter, writes: "Your proof-reader deserves great credit. Few papers present such good 'English,' in printer's phrase, as *The Index*. This reminds me that, in *On Board the 'Rocket,'* I wrote, 'Sailors talk in their watch below from 8 to half-past 8, one bell.' The printers made it, 'Sailors talk in their watch below, 8 to half-past 8, *on hell*,'—not what I meant to say."

DEMOCRACY (like Christianity) is not served best by its own most brawling advocates, but often far, far better, finally, by those who are outside its ranks. I should say that such men as Carlyle and Emerson and Tennyson, to say nothing of Shakspere and Walter Scott, have done more for popular political and social progress and liberalization, and for individuality and freedom, than all the pronounced democrats one could name.—*Walt Whitman.*

MISS SALLIE HOLLY, in charge of a colored charity school at Lottsburg, Va., in a letter acknowledging a donation from Rev. Photius Fiske, and mentioning the fact that he has contributed to this institution during the fourteen years it has been open, writes: "The school goes on day after day all the year round. But the ignorance, indolence, and indifference of both white people and colored people toward all that is included in modern civilization is wholly unknown to a Northerner. Virginia is a hundred years behind Massachusetts."

THE flag for which the heroes fought, for which they died, is the symbol of all we are, of all we hope to be. It is the emblem of equal rights. It means free hands, free lips, self-government, and the sovereignty of the individual. It means that this continent has been dedicated to freedom. It means universal education, light for every mind and knowledge for every child. It means that the school-house is the fortress of liberty. It means that "governments derive their just powers from the consent of the governed"; that each man is accountable to and for the government; that responsibility goes hand in hand with liberty. It means that it is the duty of every citizen to bear his share of the public burden,—to take part in the affairs of his town, his county, his State, and his country. It means that the ballot-box is the ark of the covenant; that the source of authority must not be poisoned. It means the perpetual right of peaceful revolution. It means that every citizen of the republic, native or naturalized, must be protected at home in every State, abroad in every land, on every sea. It means that all distinctions based on birth or blood have perished from our laws; that our government shall stand between labor and capital, between the weak and strong, between the individual and the corporation, between want and wealth, and give and guarantee simple justice to each and all. It means that there shall be a legal remedy for every wrong. It means national hospitality,—that we must welcome to our shores the exiles of the world, and that we may not drive them back. Some may be deformed by labor, dwarfed by hunger, broken in spirit, victims of tyranny and caste, in whose faces may be read the touching record of a weary life; and yet their children, born of liberty and love, will be symmetrical and fair, intelligent and free.—*R. G. Ingersoll.*

BOOK NOTICES.

THE *Art Amateur* for June contains a finely illustrated notice of the Paris Salon, with special reference to the pictures by American artists and to those coming to this country. Other exhibitions in Paris, New York, and Philadelphia are also vivaciously criticised. There are capital practical articles on modelling in clay and amateur photography; and some timely hints on the decoration of country "boxes" are given, together with the first of a series of articles on illuminated manuscripts, supplemented by valuable hints for amateur illuminators. The departments of Ceramics, Bric-a-brac, Needlework, and Art in Dress are well filled; and the usual liberal array of designs for china painting, embroidery, and general decoration completes a fine number of this deservedly popular art magazine. Price $4 a year; single number, 35 cents. Montague Marks, Publisher, 23 Union Square, New York.

THE *Sanitarian* for July is at hand, and contains the following valuable papers: "The City needs a Change of Air," by Prof. Richard McSherry; "Protection against Disease," by Dr. J. J. Speed, Secretary of the Kentucky Board of Health; "Protective Power of Vaccination," by Dr. Edwin M. Snow, Superintendent of Health of Providence, R.I.; "Evidences of Insanity, discoverable in the Brains of Criminals and Others whose Mental State has been questioned," by Prof. Edward C. Spitzka, one of the experts testifying in Guiteau's case; "Lead-pipe Dangers to Potable Water," by Dr. E. R. Maxson; "The Perils of Emigrants," apropos of the recent affair of the "Nemesis." These, with a portrait and sketch of the late Dr. Stephen Rogers and miscellaneous matter, make this an excellent number of the magazine.

THE *Unitarian Review* for July has the following table of contents: "Scholastic Theology," by Rev. J. H. Allen; "Personal Influence a Preventive," by Kate Gannett Wells; "Sense of Proportion in Religious Inquiry," by Rev. Thomas R. Slicer; and a delightful defence of "Sentiment," by Dr. H. W. Bellows. The "Editors' Note-Book" treats of Lessons for Sunday-schools and "The Use of Tobacco by Boys." In "Things at Home and Abroad," by Mrs. Martha P. Lowe, we are treated to a very interesting, gossipy, and pleasant talk on Emerson, Parker, Miss Peabody, Margaret Fuller, F. D. Maurice, Theodore Parker, and others. Rev. John P. Hopps contributes "Notes from England"; and there is review of Rev. Mr. Ware's Sermons and other current literature.

THE *Herald of Health* for July, among other evidences of a progressive spirit, devotes a special department to "Studies of Hygiene for Women." It also deals quite fully with some of the hygienic phases of the Chinese question.

PERSONAL ITEMS.

A COLLECTION of letters by the late Lydia Maria Child, in press by Houghton, Mifflin & Co., will have a preface by Mr. Whittier.

CHARLES BRIGHT'S lecture at Paine Hall last Sunday gave excellent satisfaction, and he was engaged to speak there again Sunday, July 16.

DR. BELLOWS, while living, was thought to be in good circumstances; but an examination into his affairs after his death proved that such was not the case. His former parishioners, on learning this fact, raised for his widow a purse of fifty thousand dollars.

MR. WALTER L. SAWYER, who has been connected with several of the Portland papers for some time, and also was correspondent of the Washington *Post*, has accepted a position on the staff of the *Post*. He has the best wishes of the editors of *The Index*, to which our readers will remember he has been an occasional contributor the past year.

CONCERNING Bret Harte, an exchange says: "One of the most intense and unspeakable Englishmen I have seen since I struck London is Mr. Bret Harte. . . . His hair is white, and his face is red enough to enrage the tamest bull in the world. He wears a section of a window-pane in one eye, and talks with a la-de-da accent that would infinitely amuse the friends of the Harte we used to know. This one trains with my lord this and the earl of that, and talks big things of magazines he is going to start."

THE *Christian Union* says: "The Rev. Samuel Longfellow, of Germantown, Penn., has resigned his pastorate of the Unitarian Society there, and will remove to Cambridge, Mass., to take up his residence in the Craigie House with the daughters of the poet, his brother, for the purpose of writing his authorized life. This arrangement is in accordance with the desire of the family, and should give content to all interested in the best performance of the work. Mr. Samuel Longfellow is a gentleman of fine literary taste, and himself a poet of no mean order. Some of his religious poems are almost as sweet as any in the language."

A STORY is told in Berlin of a rather embarrassing position in which the distinguished Professor Mommsen found himself during his recent visit in Rome. He was attending a lecture by the well-known archæologist, Dr. Rossi, when the latter paused to express his satisfaction at seeing before him "a man who might be called the father of Christian epigraphy." Before the lecturer had time to pronounce the name of the scholar referred to, Professor Mommsen rose and modestly bowed his thanks for the compliment; but he was thrown into confusion when the lecturer, recovering from the interruption, went on to quote the name of the Jesuit Father Carucci as the person intended.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lectures on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

CURRENT TOPICS.

MRS. LIVERMORE thinks "the cream of the East has gone west, that our finest young men and women are there, and that is the reason the West is in advance of the East."

IN the observatory at Princeton there has been recently put up a new telescope, said to be one of the largest and finest in the world, which cost $25,000. In the same observatory is a spectroscope costing $1,000.

THE success of the Mormon missionaries is remarkable. A shipload of converts has come to this country every month this year. July 1, a steamer brought to New York nine hundred and twenty-seven Mormon immigrants, most of whom were Swedes and Norwegians.

THE *Christian Statesman* says regretfully: "Last Sabbath week — the first hot Sabbath of the season — there were, it is said, more excursionists from New York to a single seaside resort than there were worshippers in all the churches in that city. Short trips on the Sabbath — stimulated by numerous trains and cheap fares — have become an alarmingly general form of Sabbath desecration."

THE people of Iowa have ratified the following amendment to the Constitution by a majority of about forty thousand: "No person shall manufacture for sale, or sell or keep for sale as a beverage, any intoxicating liquors whatever, including ale, wine, and beer. The General Assembly shall by law prescribe regulations for the enforcement of the prohibition herein contained, and shall hereby provide suitable penalties for the violation of the provisions thereof."

IN his attempt to soften the rigor of the Repression Bill, by modifying its provisions in regard to the right of search, Mr. Gladstone last week experienced a personal defeat; but his course was as just as it was courageous, and it ought to convince the Irish leaders that the English premier with the reactionary conservatives, as well as some of the short-sighted Liberals against him, is doing all that any man could do, under the circumstances, to give relief to the Irish people.

A NEW cure for small-pox is thought to be discovered in California, through the accidental upsetting of a boat containing sixteen small-pox patients on their way to the pest-house, in the bay at San Francisco. Having to wait in their water-soaked garments for an hour thereafter, it was confidently prophesied that they would all die, but instead they all recovered from the disease in a remarkably short time. Pest-houses will hereafter need to be turned into seaside bathing-houses.

IT is the opinion of military men who are familiar with the army and defensive strength of Egypt that the national party organized by Arabi Pasha will be speedily and decisively overthrown by the military and naval power of Great Britain. It is not forgotten that the Egyptian soldiers disgraced themselves in the Balkan peninsula when they quailed before the Russians, and, worse still, that they retreated in Abyssinia before the rude levies of King John; but they may prove braver now.

THE people of France will celebrate the fête day of the Republic on the 14th inst., going back very properly, to find their great day of celebration, to the date of the fall of the Bastile,—July 14, 1798. The vigorous growth of the French Republic, its progress toward stability, its development of resources, and its success in eliminating clericalism and ecclesiasticism from the administration of the government, will make the celebration of its fête day this month a subject of congratulation from lovers of liberty throughout the world.

COLLECTOR WORTHINGTON'S paper, the *Traveller*, which is as much noted for its piety as for its opposition to civil service reform, declares that "those crack-brained creatures, the civil service reformers, who are mad after office, are beginning to assume the attitude of 'bolters,'" and adds, "They will be found to be the corruptest lot of counterfeiters of patriotism that ever figured in America"; that "the sordid, selfish creatures are so anxious for mischief that they may not be able to restrain themselves at the approach of a chance for doing something. They will become as ridiculous as were the 'Patriots' of Walpole's time, and they will have to be seized to man the mad-houses." Another office-holding editor, one who lives in Peoria, Ill., says that George William Curtis is "exaltedly asinine," and is troubled by his "in famous and chimerical stupidity."

THE present time has been called, and doubtless is, the "scientific era." But all eras open with the strenuous effort and self-sacrifice of the few that the many may be enlightened. This era is no exception to the rule; but it is nevertheless with a sense of personal shame that we read that an important part of the life-work of a thinker like Herbert Spencer is to be abandoned from lack of means to carry it on to its completion. With part eighth, which is devoted to French sociology, of his *Descriptive Sociology*, Spencer states that the losses he has incurred during the fourteen years since he began the work compel him to discontinue it. While the expenses of publication, etc., have amounted to $22,000, the receipts so far have been but $5,000,—a money loss of $17,000, in addition to the time and labor which it is not strange that he begins to think thrown away. Although not yet destitute of means, he rightly thinks that he cannot longer afford so great a sacrifice of time and means for the benefit of an inappreciative public. "Should the day ever come," he says, "when the love for the personalities of history is less and the desire for its instructive facts greater, those who occupy themselves with picking out the gold from the dross will perhaps be able to publish their results without inflicting on themselves losses too grievous to be borne,—nay, may possibly receive some thanks for their pains."

THE most vivid and dramatic imagination of the wildest romancist could not invent a more thrilling or tragic story than is revealed by the discovery, amid the arctic ice-fields, of the dead bodies of Lieut. De Long and his party, and the pathetic, matter-of-fact terseness of the terrible entries in De Long's recovered log-book, in which occur such sentences as these: "Eat deer-skin scraps." "Nothing for supper but a spoonful of glycerine." "All hands weak, but cheerful." "Sent back for Lee: he had laid down, and was waiting to die. All united in saying the Lord's Prayer and Creed." One day, they had "tallow tea and two old boots" for breakfast. "Alexia dying." Then, the entries grow fewer: only a record of the days of the month, and deaths of the starved and frozen explorers. "Mr. Collins dying" is the last entry made by De Long, then himself nearly dead. There were then only two others alive. The bodies of these were found close by his remains. The following is from a New York *Herald* correspondent, who sent his despatch from the Lena Delta: "Melville went along the bank, and saw a camp kettle and the remains of a fire, about one thousand yards from the tent, and nearly stumbled over De Long's hand, sticking out of the snow. Here, in about a foot of snow, they found De Long, Ambler, and Ah Sam, all partially covered by pieces of tent and a blanket. All the others, except Alexia, they found at the place where the tent was pitched. Two boxes of records, a medicine chest, and a flag on a staff were beside the tent. None of the dead had boots. Their feet were covered with rags, tied on. In the pockets of all were pieces of burnt skin and clothing, which they had been eating. The hands of all were burned, and looked as if when dying they had crawled into the fire. Boyd was lying over the fire, his clothing being burned to the skin. Collins' face was covered with cloth. The bodies were carried to a hill, three hundred feet high, and forty versts to the south-west from where found, and interred in a mausoleum constructed of wood from the scow, surmounted by a cross. The mausoleum was covered with stones, and will be sodded in the spring. The cross is inscribed with a record, and names of the dead."

PROF. ADLER'S REPLY TO MR. POTTER.

Owing to my absence from the city, *The Index* of June 22 reached me a few days later than usual. I regretted this, because I should have liked my answer to Mr. Potter's article to reach you without delay. Not indeed that I am eager for controversy, especially not with one for whom I entertain the sincerest respect and esteem; but, to-day, controversy for once shall be welcome, if it will give me an opportunity to make more clear certain leading convictions which underlie my work as a religious teacher, which have lately prompted me to retire from the presidency of the Association, and which, it is very evident from Mr. Potter's article, are still misconceived to a remarkable degree even by near colleagues and companions in the common cause.

Let me take up Mr. Potter's different points of criticism, and reply to each in turn. First, I am told, "the Free Religious Association, though having its head-quarters and holding its annual meeting in Boston, is a national society, and always has been. It has a membership scattered through the country. . . . Its officers represent nine different States." My answer to this is that there may be two meanings to the word "national" as applied to an association, the one referring to the scope of its work, the other to the representative character of its governing body. The Free Religious Association is not national in the latter sense. The names of its honorary Vice-Presidents, many of whom live at a distance and some of whom have not been in direct contact with the Association for years, do not suffice to make it so, its list of members is not large enough to make it so, and the real government of the society's affairs is in the hands of a few directors, who represent a limited constituency in the Eastern States. The Free Religious Association is national only in the former sense. It aims to work for the entire nation, to include the entire nation within the scope of its influence. But even that is at present a mere aim, and one which its most sanguine friends might wish a great deal nearer fulfilment than it actually is.

Secondly, it is said, the Association exists for the propagation of principles, not for carrying them into practice. "It disseminates the ideas, urging that they should and must result in increased moral and philanthropic activities. . . . It cannot be expected to establish in Boston such special beneficent institutions as Workingmen's Institutes, etc."

To this, I answer that it never entered my mind that the Free Religious Association should attempt anything of the kind. I, too, believed its mission to be the disseminating of ideas, but of ideas "that should and must result in increased moral and philanthropic activity"; and precisely because they did not seem to me to result in *increased* moral and philanthropic activity did I question the sufficient value of the methods which the Association is employing. And I spoke of Boston and of the lack of increased moral and philanthropic activity in the Free Religious circles of that good city, simply because Boston is, after all, the seat of the Association, the place where the influence of its ideas should be most forcibly felt; and the question arose in my mind, If the Association cannot even inspire increased moral and philanthropic activity in its immediate vicinity, how much influence of this kind can we expect it to exert anywhere else? But here I come to the third point of criticism, of which I confess it puzzles me not a little and grieves me not a little that it should even have been made. Mr. Potter counts up a number of philanthropic enterprises in which persons holding Free Religious opinions have engaged; and, after saying that "other beneficent societies and institutions might be named, to say nothing of individual charity, in which the Free Religious people of Boston are specially prominent," he charges me with going "beyond the limits of rhetorical license, and committing an injustice against men and women who were growing gray in the service of humanity before he was old enough even to think of his work in New York," in overlooking these evidences of the benevolence of the Liberals of Boston. As if it had ever occurred to me to refer to the benevolence of individuals at all, or to deny that persons holding Free Religious opinions in Boston are taking their share in fostering existing philanthropies and in privately relieving the necessities of their fellow-men! This was decidedly not the point in question; and Mr. Potter himself seems to have felt that it was not, for he continues, "If he should reply that these beneficent activities do not come distinctly inpthe name of Free Religion, it must be said," etc. Now this is precisely what I do reply. I cannot imagine a more indelicate position than that of one who should rise in the community to vaunt the charities of his friends and himself, and to throw discredit upon the charities of others. I repeat, the question was not at all as to who is the better man or who are the better set of men. Before our own consciences let us all confess that none of us are in the full sense worthy, and a discussion of the point as to who might be the worthier did not enter even into my dreams.

The real point at issue related to the question whether, under the influence of the Free Religious Association, any form of moral effort had been initiated, which might be *directly traceable to the Free Religious idea*, and which would not have been undertaken, had Free Religion not existed. To this, it is not sufficient to reply that Free Religion directs us to work for humanity "with others." We may work with others and we may invite others to work with us; but, unless it inspires us to *higher forms* of moral endeavor than those current about us, until its ideas shall result in *increased* moral and philanthropic activity, I maintain that it is not in the true sense religion.

Moreover, by increased philanthropic activity or higher moral endeavor, we are not here to understand merely the more assiduous practice of the standard ethical convictions of the day, but especially the advancement of ethical theory itself, the working out of higher formulas of duty than have yet prevailed, and, as a consequence, the lifting up of the life of humanity to a higher level of manhood and womanhood than would be possible without such an advance of theory.

And here, indeed, it seems to me that we have touched the point upon which the future progress of Free Religion (I use the word not in a limited, but in its general sense) will wholly depend. "Unless your righteousness exceed that of the Pharisees," etc., is a word of warning addressed to us, as it was addressed to the disciples of Jesus. Unless our new views of Man and the Universe lead us to a better understanding of the fundamental principles of morality and at least their attempted realization in life, unless Free Religion is capable of guiding us onward in the path of ethical discovery, we shall have signally failed to fulfil what is expected of us.

Let me then attempt to point out the characteristic difference, as I understand it, that distinguishes such forms of moral effort as are undertaken under the direct inspiration of Free Religion from the ordinary efforts at improving society and the individual. In the limited space which I am entitled to claim from your courtesy, I can of course do this only with epigrammatic brevity. Religion, in all its possible forms, has to do with the idea of perfection. That form of practical charity to which we may ascribe religious significance, therefore, must express and enliven in us the idea of moral perfection. Now, it is true that in a certain sense every effort we may make to ameliorate the condition of society or to improve ourselves is a step nearer to the ultimate ideal, and in this way is subservient to the final purpose of perfection. But, as a rule, our efforts at improvement are so partial and fragmentary, the amount of visible good accomplished so inconsiderable, the connection between our endeavors and the final aim so remote, that the transcendent conception of the moral ideal is apt to fade from our consciousness in the interval. We are immersed in a series of tentative philanthropies, we are engaged in fighting off a crowd of ugly evils, we are compelled to combat innumerable lesser and larger vices, whose immediate effect occupies our attention, and, lost in these details, the conception of the Whole Man and of the Whole Humanity becomes necessarily feebler and more dim. We need therefore, if we regard the deed not only as the test but as the source of our faith, to search for some form of moral endeavor, of which the peculiarity must be that it shall serve to keep the ideal of the perfect fresh before our consciousness, even while we prosecute our labors. And the question will be asked, What form of moral effort can there be which shall answer these seemingly unattainable requirements? Be it said, by way of parenthesis, that all moral endeavors may be divided into two classes,—those which are undertaken for the improvement of others, and those undertaken to the end of self-improvement. In regard to the first class, let me briefly answer the above question by saying that I believe a scheme for the complete and generous education of young children deserves to be considered as a charity having religious significance. In such a scheme, if it be really comprehensive enough, we do aim at building up the *whole manhood, the whole womanhood*, of the pupils. And, as children are well known to be most open to lasting impressions, the chance of exerting a regenerative influence upon the entire life of others is nowhere so favorable as in their case. Let it be remembered that such a scheme of instruction and education for young children does not as yet exist anywhere, that our best public schools are notoriously deficient in supplying this want; nay, that even the idea of a *complete* education for young children has not yet secured full recognition, and that the problem which it implies has only been solved to a very limited extent, even by our most eminent reformers in education, such as Pestalozzi, Froebel, Diesterweg, and the others. To lead on the work of reform, therefore, in this direction, to spread the convictions, and to secure the means necessary for new and fruitful experiments in the education of the very young, has seemed to me a suitable task for a society founded on the principle of Free Religion,—a task following directly from the Ideal of a complete humanity, which it is the business of Free Religion to teach and to further,—a task, moreover, which we cannot undertake and successfully prosecute without having the idea of moral perfection ever present in consciousness.

In regard to the second class of moral efforts, those which aim at individual improvement, the idea of completeness is again necessary to lend them the distinction of religious significance,—the idea of completeness, however, be it well understood as a conscious aim, not as an accomplished reality; for that, we are all aware, is

Digitized by Google

nowhere and never reached amid terrestrial conditions.

There are a great many societies, whose object is the cultivation of some one particular virtue or the crusade against some one particular vice. We have societies for dress reform, societies for temperance, societies for the cultivation of studious habits, of chastity, and others of similar kind. It has seemed to me that a religious society must be distinguished from every one of these by including in one complete whole all the good they aim at and more, that the purpose of leading a *completely* human life must be the inspiring principle of such a society. And, since the desire for a perfect humanity will animate its members, they can never rest content with simply accepting the often crude moral canons that obtain in the community around them, but their whole life must be one prolonged effort to enter more deeply into the mystery of the moral nature of man, to search out and formulate ever finer rules for the guidance of conduct, and to round out their moral existence in accordance with the fuller insight which they have thus gained. And, because it is especially among the young that we find the motive and the willingness to enter upon the paths of radical self-reform, therefore I suggested a Young Men's Reform Society,—and I might have added a Young Woman's Reform Society, in the same breath,—as a proper beginning, looking toward the practical realization of the Free Religious idea, in so far as it applies to the task of self-reform.

I have now endeavored to explain why it is that not every form of charity indiscriminately can meet the demands of Free Religion, as I understand it.

As citizens of the State, as members of certain neighborhoods, as merchants, as professional men, we may still and ought still to engage in very many secular charities, which deserve the most devoted support and whose importance I am the last man to underrate. But, over and above all we may do in this direction, we have still another and higher duty to perform, we have other efforts at moral improvement to undertake,—those, namely, which we undertake at the command and in the name of our religion. And the name, here, is not a mere label dictated by vanity and presumption, but implies an intrinsic connection as between cause and effect. If, then, I have mentioned before the Convention various institutions that are now beginning to grow up in the midst of the Society for Ethical Culture, it was merely to give examples of the kind of moral endeavor which, in my humble belief, may prove adequate to meet the demands of the Free Religious principle, not thereby, assuredly, to throw into the shade what others have done.

Of course, I am well aware that the institutions to which I referred may not ultimately prove to be what I expect of them; but this is of minor importance. The main point is that we recognize in our religion a new principle of action, and make the attempt, at least, to derive from it a really new upward impulse for the ethical life of the world, such as the Hebrew prophets gave in their day, and such as the earliest teachers of Christianity gave eighteen hundred years ago.

As for the conventions of the Free Religious Association, I do not deny that they may be productive of good; but the serious question is whether they do enough good, considering the work that now needs to be done, and whether other methods, if they were tried, would not do the same good, and far, far more?

FELIX ADLER.

A REJOINDER.

We welcome to the columns of *The Index* Prof. Adler's more complete and explanatory statement. It was with great reluctance that we wrote the article of June 22d, and we much regret that anything in it should have caused him grief. Yet he must remember that his address at the Convention had grieved many of his friends. In that part of our comments in respect to which he specially and warmly disclaims the interpretation put upon his criticism, we were only echoing the sense of injustice which was being expressed to us on every side; and we saw that it was necessary to put the point forcibly, in order that Mr. Adler should see the full force of his words. And we think that, to any one who should turn back and read those parts of his address, this interpretation which he disclaims would seem the most obvious one.

Mr. Adler now states the point at issue to be "whether, under the influence of the Free Religious Association, any form of moral effort had been initiated, which might be *directly traceable to the Free Religious* idea, and which would not have been undertaken, had Free Religion not existed"; and he explains that his uncomplimentary reference to the Free Religious circles of Boston meant not that the Free Religious Association should itself initiate philanthropic institutions there, but that Boston, "being the seat of the Association," should first feel the influence of its ideas, and that there should first appear that increased moral and philanthropic activity which we have a right to expect as a result of the Association. By this latter remark, Mr. Adler shows that he still too much regards the Association as a Boston institution. As a matter of fact, not only its honorary Vice-Presidents, but a very considerable and influential part of its governing Executive Committee have been outside of Boston, and outside of Massachusetts. Its two chief executive officers, active in its management, have never been residents of Boston. It has held one public meeting in Boston each year. Evidently there has been no such *special* activity of the Association in Boston as to lead necessarily to the expectation of a special demonstration there of practical results. But this, under Mr. Adler's present statement, is a subordinate point, and need not detain us. Let us come directly to the main "point at issue," as stated by himself above. And the answer here must be sought not in the Free Religious circles of Boston alone, but wherever persons are at work who may be presumed to have been at all under the influence of the Free Religious Association, or the character of whose work is "directly traceable to the Free Religious idea." The question is, Have such persons been helped at all to "*higher forms* of moral endeavor" than those commonly current, or to that "*increased* moral and philanthropic activity" which tends to "the lifting up of the life of humanity to a higher level of manhood and womanhood"?

Now, such a question as this, of course, is very difficult to settle. It involves the ideas, influences, motives that go to the determination of character and action; and nothing is harder to ascertain than just these things. Nor are the practical benefits of any great religious reform to be measured by immediate, tangible results. The moral good resulting to Christendom from the Protestant Reformation was not immediately apparent. And we apprehend that if "the Hebrew prophets" or the "earliest teachers of Christianity," to whom Mr. Adler refers for a parallel, had been asked to show what practical good they had accomplished, they might have found it difficult to convince the standard Judaism around them of their usefulness. There is very much in the tone of the Hebrew prophets that indicates that they were not able to point to very much of achievement. And the earliest Christian apostles occupied a very small place in the world's progress for the first fifteen years after the death of Jesus. Yet it is now evident that in both cases they had found "a new principle of action," and that therein was "a really new upward impulse for the ethical life of the world." So it may be that, even though the Free Religious Association could as yet point to no *special* work accomplished for the moral benefit of man, the history of the movement it represents, when completed, will show that the new principle of action had arrived and was working in many hearts and minds, and bringing forth fruit for humanity's good.

But leaving this large and therefore vague ground, on which the value of ideas has to wait for historical justification, and even accepting Mr. Adler's demand for some immediate practical test, Free Religion, we believe, would not be found wanting. He explains that "by increased philanthropic activity or higher moral endeavor" he does not mean merely "the more assiduous practice of the standard ethical convictions of the day, but especially the advancement of ethical theory itself, the working out of higher formulas of duty," and "at least their attempted realization in life." Now, we believe that every prominent worker in the cause of Free Religion, every one who is working from the "Free Religious idea," is working, or is at least trying to work, precisely on these lines. Such persons are fully alive to the idea that ethical theories have heretofore in the prevailing teaching been made to depend on certain theological beliefs, and that, as these beliefs are seen to be no longer tenable, a new foundation and new principles must be found for ethics. And we think it may be safely asserted that the teachers of Free Religion generally are making it one of their chief endeavors to learn for themselves and to point out to others what are the new moral and social duties which grow out of their "new views of man and the universe," and how people may be led to the realization of these higher principles in their lives. Persons and societies might be named, if necessary, to exemplify this statement.

Prof. Adler, it is true, goes on to point out certain practical methods which, in his view, meet these ethical demands on Free Religion better than other methods,—namely, the methods that have been adopted in his own society. But, however excellent are these methods,—that of beginning with the education of children certainly goes down to the root of things,—we do not understand him to assert that they exhaust the scope of Free Religion, or that every Free Religious society must have exactly these in order to be entitled to its name. If he were to say this, we should certainly take issue with him, following his own argument. The aim of Free Religion, as he justly says, is the perfection, individually and collectively, of humanity. His statement, on this point, is nothing new; and this, in a general way, the churches will claim to be their aim. But the churches have found their motive for moral appeal and work toward a perfected humanity on the side of theology. The new moral impulse that is involved in the Free Religious idea is to be found in humanity itself. And this new impulse will work on its new lines of organization, as Mr. Adler also justly says, not merely for this or that special and fragmentary reform, but for the amelioration of the "Whole Man and the Whole Humanity." But, because of this very largeness of the aim and scope, the expression of it must be large and many-sided. No methods, probably Mr.

Digitized by Google

Adler would agree, as yet attempted can be regarded as covering the whole. They are all tentative. The conditions will not admit of precisely the same methods in every place. But the conditions everywhere call for the higher moral aim and endeavor and for the juster social order. Not even has the new basis of ethics that is to take the place of the obsolescent theological basis of morality yet been clearly defined and established; much less has the practical solution of the pressing ethical and social problems of the present day been fully discovered. Individual workers, here and there, have their views on these questions, more or less positive. Individual societies are trying one and another method, more or less promising and successful. And hence, again, as it seems to us, the occasion and the usefulness of a general association in which the individual workers shall compare views and methods, and stimulate one another to increased activity, and enlarge the general light. WM. J. POTTER.

AN IMPLICATION OF EVOLUTION.

Mr. W. L. Distant, replying in *Nature* to the statement that it is highly improbable that young birds have an hereditary instinct enabling them to distinguish uneatable butterflies antecedent to experience, observes:—

It is unnecessary to refer to the results obtained by Mr. Spalding in proving the inherited acquisition of ideas and experience in young chickens: it will at least suffice to repeat the observations made by him on the actions of a young turkey which he had adopted,—"When chirping within the uncracked shell." Now this young turkey, not only on the tenth day of its life, exhibited the most intense terror at the sound of a hawk's voice which was confined in a cupboard, but also proved its *inherited* knowledge of uneatable insects.

"When a week old, my turkey came on a bee right in its path,—the first, I believe, it had ever seen. It gave the danger chirp, stood for a few seconds with outstretched neck and marked expression of fear, then turned off in another direction. On this hint, I made a vast number of experiments with chickens and bees. In the great majority of instances, the chickens gave evidence of instinctive fear of these sting-bearing insects; but the results were not uniform, and perhaps the most accurate general statement I can give is that they were uncertain, shy, and suspicious."

If domesticated fowls and turkeys exhibit such inherited "instinct," may we not postulate a much greater excess of the same in purely insectivorous birds in a state of nature? And, if this is so, it will be unnecessary to explain away what appears to be one of the most philosophical considerations in the doctrine of "mimicry."

There are numerous facts of the class mentioned above, which clearly show the experiential nature of instinct, and prove it to be inherited habit; or, as Lewes aptly terms it, "lapsed intelligence" in which natural selection of variations of habit has probably played an important part.

And, if evolution be admitted, these facts render logically irresistible the conclusion that the intellectual intuitions, the moral sense, and the religious nature of man have had a natural growth, and are the results of the experiences of centuries organized in the race. True, some there are who affirm that they believe in evolution, but cannot accept this "extreme conclusion." It is equally true that—when Darwin's *Origin of Species* was first published, and, indeed, until the past dozen years—the majority who conceded the Darwinian theory as probably true failed to see, what none dispute now, that, if the facts of homology, embryology, natural selection, etc., sustain the view that the higher forms below man are derived from the lower ones, then it is irresistible that the *human* structure is the result of the modifications of pre-existing forms of life. Of course, Darwin saw this, and many affirmed it long before *The Descent of Man* was written. The evolution of man from lower animal forms carries with it inevitably the conclusion that the mind of man, including every faculty and tendency, is just as much the result of the modification, by natural cause, of lower minds as that the bodily structure is the result of the modification of lower structures. If we come into the world with an organism, every part of which is the result of changes that reach back through immense periods of time; if the body is an evolution, in which organs and parts, formed through ages, have been inherited through ancestors,—what we call mind must equally be an evolution, in which the inherited results of experience have become ingrained in and a part of our mental nature. In short, if man has come up through countless ages, and bears in his structure the results of innumerable changes of *form*, it is obviously a corollary that the powers of thought, the aptitudes and predispositions, all mental and moral characteristics, have been developed from the lowest organic activities; and thus the "laws of thought" or "regulative principle" of the mind, instead of being prior to all experience and above all mental processes, like Fate above the Olympian gods, are as much the result of experience as any individual acquirement can be. The writers who, while declaring they accept evolution, still attempt to hold that there are elements of the mind which are underived from experience, individual or ancestral, generally ignore the facts and reasoning here submitted, when everything else in the consideration of this subject is, in comparison with them, of but secondary importance.

If the logical implications of the theory of evolution were generally seen, its number of adherents would be fewer than they now are. But it is being accepted as other theories have been accepted, and in the only way possible, by emphasizing its points of contact with existing beliefs, ignoring whatever in it plainly contradicts the doctrines and theories of the age which are the least outgrown, and "reconciling" it as far as possible with the old thought, and accommodating it to the condition of minds that are progressive, yet profoundly influenced by traditionary beliefs. It is in this way that connection between the thought of an age and the thought of all past and future ages is maintained and mental evolution is made possible.

B. F. UNDERWOOD.

SCIENTIFIC EVIDENCE OF IMMORTALITY.

It is impossible for any earnest person to approach this subject without a feeling of reluctance; for, if he have thoroughly canvassed it, he cannot avoid the conviction that the scientific evidence of immortality is, in the present state of human knowledge, absolutely *nil*. But the announcement of such a conviction jars roughly, and perhaps needlessly, upon the common imagination. It is not always safe to assume an intellectual balance in one's audience, which will save it from the mental suffering that always comes from forced acceptance of a premature conclusion. Still, the topic is one which is so freely agitated by the many who now attempt to defend it by scientific reasoning that lovers of scientific thoroughness feel tempted to insist that every emotional factor shall be as carefully eliminated from this question as from any other. What proof have we that personal consciousness continues beyond death? To the writer's mind, the answer repeats itself with the authority of an intuition, *Absolutely none*. Nevertheless, ten years ago, the opposite conclusion seemed equally imperative. The inference is that the conviction of ten years ago was based on certain hereditary inclinations, supplemented by training and environment. It is quite certain that ten years ago no rigid reasoning upon the facts of nature which would determine such a question had ever been done by me. Even now, a conclusion reached after much thinking, and already held for several years, has a merely speculative interest for my mind. The very earliest effect of this negation was to convince me of its slight practical bearing upon life. Instead of losing interest in the present, the result was rather a gain, since the thought once projected forward into a dream of *post mortem* development was all concentrated into the effort for immediate improvement. Nor has the effect of this change been a diminution of interest in the advancement of others, but rather the heightening of a feeling before somewhat lukewarm. Indeed, the normal result of continued association with one's fellow-men seems the generation of a stronger sympathy, quite independent of all theories and theologies.

One of the noticeable philosophic changes of the few years just past is the lessened importance of speculative opinions in the minds of all instructed persons. Mr. Bradlaugh's atheism, for instance, has been magnified by himself and his disciples entirely beyond its intrinsic interest. The world at large cares nothing whatever for Mr. Bradlaugh's atheism in itself, but is only interested in the drama of parliamentary toleration. Contrast the interest felt in atheism with that in the Irish question or the free trade laws, and we at once see how theological opinion dwindles before questions of material welfare. So this question of personal immortality almost refuses treatment, although once a subject for glowing oratory. The amount of imagination once applied to a conception of the glories of heaven or the tortures of hell was very large, as shown in the great poems of Dante and Milton. Now, we are surprised to see how loosely the mere question itself lies in the hand, how easily it is displaced by some more vital interest. The development of American art, the wise solution of the labor problem, the purification of politics, the abolition of poverty and intemperance,—all seem more pressing than the settlement of this matter of continued existence. The actual ideals of our present civilization are the largest degree of personal development and the highest state of social perfection. These ideals are pursued with an almost complete independence of the speculative peculiarities of those whose welfare is sought. The State, for instance, favors all her children equally, whether they be Catholics or free thinkers. If this question of immortality had the actual imperativeness which it once had, the defenders of the doctrine would not rest until its truth was satisfactorily demonstrated. As matters now stand, there is an almost universal feeling among the more thoughtful that the problem is insoluble, and that we can very comfortably wait for death to settle it without making ourselves unhappy by present controversy.

Still, if it is to be agitated at all, as it often is by theologians, it should be handled in the light of all the facts which influence it. The proof of a *post-mortem* consciousness is identical with the proof of human thought, independent of brain action. If it be admitted that there is absolutely no evidence of thought except as a product of the living human brain, it follows that there is absolutely no evidence of a personal immortality. So far as human research and reasoning can go, life is but a brief name for the transforming processes which matter undergoes in the human body. In its physiological aspect, the human organism is but a vehicle for the expression of energy, the physical basis of that energy being food and air. The

Digitized by Google

brain processes which we call thought are, so far as we know, motions of cerebral matter. If thought is anything else than this, as it may be, science has not yet found it out. That thought and brain action are identical has the same sort of proof as that speech and certain laryngeal and labial movements are so. The thought motion in the brain is transformed into the more massive speech motion, one action of matter into a coarser and slower mode of motion. We have no more proof of a thought-spirit than of a speech-spirit. Where investigation is complete, as in the phenomena of speech, we realize that the process is entirely mechanical. The investigations into brain action demonstrate the exact synchronism of movement and blood supply with emotion and intellection. There is no more need of positing spirit for thought than for digestion. It may be done, but it brings a superfluous factor into the problem. There is nothing for this thought-spirit to do, when once it has been invoked. It is true that in the first endeavor at self-adjustment to this new point of view, there is a difficulty in conceiving the identity of brain action with thought. But at what point can the material pass into the immaterial? Every process of the human organism is physiological. Thought, then, must be a physiological process, or it is nothing. But all physiological processes cease at death. Hence, the thought process, being purely physiological, must cease also; and with its cessation comes the cessation of personal consciousness. If any evidence exists in disproof of the identity of brain-motion and personality, such evidence would overthrow the conclusion just stated.

A large number of the leading physiologists of the world, as well as many others, physicians and general scientific workers, have ceased to be dualists, and have dropped the belief in a continuance of personal consciousness without thinking it worth while to advertise such a change of opinion. Indeed a mind earnestly active in new acquisition and in pleasurable employment quickly learns to feel that this matter is an unimportant one,—that it alters no law of life by the veriest trifle whether that life be continued for fifty or for fifty thousand years. Modern physics has demonstrated the constancy of the amount of matter and motion in the universe. A developed human organism exhibits the phenomena of heat, of mechanical, molar, and molecular motions, of chemic processes, nervous vibration, and finally that complex neural action called cerebration. Other more occult modes of action are detectible by their effects,—that is, they become apparent to the senses when converted into more massive forms; and these have a special nomenclature; as electro-neural force, animal magnetism, clairvoyance, odic or psychic force, etc. All the phenomena of mesmerism and spiritualism, when sufficiently studied, will doubtless be ranged under these forces, and will become measurable and manageable.

But, as matters now stand, the only possible undeveloped proof of immortality lies among the crude and unclassified phenomena of spiritualism. We have abundant and reliable evidence from careful observers in Germany and England, where these phenomena have been approximately investigated, that a force emanates from the human body which counteracts gravitation, and which under proper conditions materializes sufficiently to reflect light, and to present to the optic nerve and to the sense of touch the phenomena of luminous hands and of walking or gliding and speaking forms. This materialization has been such that the pulse and heart-beats of these phantoms have been accurately counted and recorded, and tolerable photographs of them have been secured by means of the electric light. If it can be scientifically demonstrated that these shadowy beings are visitors from another world, of course the argument against immortality will have to be reconstructed. The real stronghold of those who would put this doctrine beyond a doubt lies in the study of these spiritualistic phenomena. It is quite possible that some absolutely new and irrefutable proof can be derived from them. But, for the most part, thus far these things have been left in the hands of those who have reasoned so poorly upon them that we see a justification of Faraday's comment that "many dogs have the power of coming to more logical conclusions." So far as the German and English investigations have gone, they indicate a general identification of the phenomena of hypnotism and psychic force of all kinds with abnormal nervous conditions in the subject or medium. But the important thing in the present argument is that all nerve processes, normal and abnormal, are suspended at death. Every fraction of a grain in the living body remains, and suffers slow volatilization or reabsorption. The dead body soon represents so much oxygen, carbon, phosphorus, and salts. It is diffused through nature's laboratory of inorganic matter. The very heat which it possessed is radiated, and could be measured to show that none was lost. The subtle magnetisms disappear. Mediumship and spirit materialization are not possible in a dead body. Spirits do not walk forth from dead bodies, but from living ones. And yet it would seem both more natural and more polite that impatient spirits should seize the opportunity to manifest themselves through the passive forms of those just departed. That they never do this shows a strange disregard of available methods of proof. Indeed, the neglect seems culpable, when we reflect upon the universal nervous exhaustion which the functions of mediumship impose. Whatever this electro-biological process is, it is certain that the food and life-force of the medium are consumed in its production, and that the spirit-forms can be traced back to their final terms in the bread and butter which the medium consumes. The whole proceeding demonstrates a dependence of spirit on matter which is equivalent to identity.

It would seem that the considerations just enumerated had touched every important phase of the question in discussion; but a final point suggests itself. The quality of human thought is often made to support the argument for immortality. We may call this view *the argument from superior quality*. But, if complexity, fineness, or quality be the criterion, it may be applied to include or exclude any term in the whole series of conscious life. All living forms are besouled. An animal thinks, an infant thinks, a man also. Shall degree determine permanence? A horse thinks and loves more than a snail, a rabbit or a bird more than a crawling worm, and a civilized Englishman more than an Esquimaux. A noble horse may have more self-respect, more affection and morality than a savage or criminal. It is not safe to draw a moral or an intellectual, but only a physiological line.

M. A. HARDAKER.

THE GOD ABOVE.

One strong reason why we think that God is above us may be found in Bell's *Anatomy and Philosophy of Expression*, Essay IV., pp. 95, 96, where we are told by what muscles the eyes revolve. "There are two sets of muscles which govern the motions of the eyeball. Four straight muscles, attached at cardinal points, by combining their action, move it in every direction required for vision, and these muscles are subject to the will. When the straight muscles, from weariness or exhaustion, cease to guide the eye, two other muscles operate to roll it upward under the eyelid: these are the oblique muscles." "In sleep, languor, and depression, or when affected with strong emotions, the eyes, naturally and insensibly, roll upward. The action is not a voluntary one: it is irresistible. Hence, in reverence, in devotion, in agony of mind, in all sentiments of pity, in bodily pain, with fear of death, the eyes assume that position." "This direction of the eye would appear to be the source of the universal belief that the Supreme Being has his throne above."

F. M. H.

ANTI-STATE THEORISTS.

Proudhon has disciples on this side of the Atlantic even, where "the State" sits lightly on the citizen, not crushing him beneath intolerable burdens, but allowing him the largest liberty. Manifestly, as long as ignorance, barbarism, selfishness, and animalism continue to be the traits of the majority of the human race, some system of repressive and protective authority, answering to what is called "the State," will continue to be a necessity. It is true that, in every enlightened community at least, there is a growing percentage of people who, by reason of their intelligence, instinctive recognition of each other's rights, and high degree of rationality, kindliness, tolerance, and good sense, are a sufficient law unto themselves. In every thoroughly modern community there are groups of what Matthew Arnold calls *children of light*,—of people perfectly free from a narrow, bigoted, religious Philistinism on the one hand and of a rowdy Philistinism on the other; of people who (to continue to use the phrases of the gospel according to Matthew Arnold) are full of sweetness and light and a sweet reasonableness. Such people of course could immediately dispense with "the State," as they are ready to comply with the dictates of the moral law without compulsion, and to obey its behests as naturally as atoms and planets obey the law of gravitation. Such people could live in peace with each other, even now, under "green orchard boughs," in that Atlantic seat which Emerson speaks of, "where the statesman ploughs furrow for the wheat." Fifty years ago, New England, with its intelligent, homogeneous population, had very nearly reached such a mental and moral condition as a community that it required very little repression. But manufactures were introduced, the British system of industrialism was naturalized here, and ignorant, European *proletaires* were constantly imported for purposes of labor in ever larger numbers, and wealth, more and more tending to and increasing in the hands of the few, began to divide society here into castes and classes of employer and employed, of capitalist and workingman; and, now, New England everywhere abounds in crime, poverty, and ignorance, and contains a populace who regard even our kindly republican "State" as their enemy. As a consequence, police repression is more and more needed, because the absence of it would be simply interpreted by the populace aforesaid as a license to commit crime and outrages of all sorts. Hosts of people resident here, not to the manner born, have scarcely a qualification for self-government. Such, if they constituted the larger moiety of our population, would soon become the subjects of an arbitrary personal rule in civil matters, as they are now in spiritual matters. No intelligent observer of men and things here can doubt that such would be the case, were it not for the American element of population. A populace destitute of moral character, self-respect, intelligence, and the progressive impulse and aspiration, naturally become the subjects of an arbitrary personal sway and dictation both on civil and ecclesiastical matters. For hierarchy and royalty are

Digitized by Google

correlated. Even now, the presence of priests as well as policemen in all the industrial and commercial centres of our once staid, law-abiding, self-governing New England bears witness to the change which has come over the spirit of our dream. Meantime there are people here who are beginning to denounce even our lenient, popular "State" and government as a usurpation and an infraction of the natural rights of man. Would that the State could be dispensed with! But, even with our large force of constables and policemen, and with our criminal courts, jails, houses of correction and State prisons in full blast, crime is more and more rampant, and outrages of all sorts on person and property form a staple of the daily news. Hence it is that no-State Antinomian doctrines are premature. Ignorant people are not in the full sense of the word *human* beings. The animal predominates in them. They cannot be left to their own guidance and control. They require repression and the presence of the constable and policeman to keep them in order. And not only that: they are liable occasionally to swarm in the shape of brutal and destructive mobs. And such wholesale manifestations of rowdyism on the part of a low-grade populace cannot always be quelled without resort to military force. Meantime let us be just to American institutions. They do not produce mobs. They, by means of popular education and a general diffusion and distribution of political rights, social equality, and property, make men orderly and autonomous. In the common-school States there is no native mob. It is always an importation from Europe. It is a curse inflicted on us by the abominable social, political, and ecclesiastical systems of the Old World. Though blameless in this matter, we Americans have to suffer in consequence of the persistence of such systems, in spite of the liberal tendencies of the time in the Old World. For, through rapid transit, Europe is close to our door-sills. Only where the people are highly enlightened and where a genuine social and political equality prevail is it true that that government is best which governs least. Governments of force, such as prevail on the other hemisphere, are both the badges and causes of human degradation. All civil governments are essentially the same, and have the same final cause. And this is the case in spite of difference of names. With an illiterate population on its hands, a republican government has to be occasionally as repressive as a royalty or imperialism. Those who wield the authority of civil government, whether by election or inheritance, are placed in a position of social superiority to their fellows; and, if they are corrupt and selfish, they can enrich themselves under our system as well as under hereditary systems. In an emergency of peril, such as popular insurrection or war, an American governor or president exercises all the power of a king, kaiser, or czar. It must needs be so. Let us hope that, in consequence of the migratory deluge which is breaking on our shores at Castle Garden, like the great, moon-drawn Atlantic tidal wave, government here may not have to become more and more stringent, and to divest itself of some of its immemorial popular attributes. Meantime let us remember that those who attack our American system of State education and common schools are our deadliest foes. Of the ultimate triumph of a popular civilization in the Old World, no liberal at least will hint a doubt. But, the Old World must not be permitted to overwhelm popular civilization here.

TRUTH is as impossible to be soiled by an outward touch as the sunbeam.—*Milton.*

EDITORIAL NOTES.

OUR readers will echo our thanks to Rev. R. Heber Newton for his generosity in enabling us to give them his fine lecture on Emerson, printed in this issue of *The Index*. We have nowhere seen, since Mr. Emerson's death, a more thorough and accurate analysis of his philosophical and religious views. Rev. Mr. Newton and Bishop Huntington are both preachers in the Episcopal Church, but it is evident that Mr. Newton does not share Bishop Huntington's anxieties as to the present locality of Emerson's soul. The lecture is written with a sympathetic pen, which discloses, perhaps, the source of some of the Broad Church doctrine for which Dr. Newton is distinguished.

W. J. P.

WE shall publish next week, among other contributions, one from Francis E. Abbot on "Bowne's 'Metaphysics,'" one from Ivan Panin on "The Condition of Russia," and the article by W. I. Gill, on "Evolution and Morality," to which reference was made in our last number.

IN Sanborn's *Thoreau*, just published (reviewed in another column), we find the following reference to one of our most able and versatile contributors by Emerson in a letter to Thoreau, written in 1843: "Young Ball (B. W.) has been to see me, and is a prodigious reader and a youth of great promise,—born, too, in the good town."

A WRITER in the *Occident* has an article on "Christ's Pocket Bible." We did not know before that Christ had a pocket Bible, but our orthodox friends seem to enjoy special revelations which are not granted to others. We imagine that few Christians to-day would be content to carry such a pocket Bible as Jesus did, which contained no word of the New Testament.—*Christian Register.*

IN an able discourse delivered at Streator, Ill., on "Charles Bradlaugh and the Test-oath," Rev. Mr. Shay said:—

Back of Bradlaugh stand his constituents, who have suffered one of the blackest of wrongs. His exclusion was in violation of the common custom of England and in direct contravention of her law. Whether is it best for the commons to break the law in the name of deism or for Bradlaugh to observe it with the name of atheist? Assuredly, the latter. Christ said, "Swear not at all." The oath in court is the same as common swearing out of court. It has no more sanctity. It grows out of a low condition of morality, and had its origin away back in a corresponding low condition of society. It is a relic of despotism, of superstition, and is a part of the old inquisitorial process. It appeals to outside powers as the incentive to higher conduct instead of the inner, nobler self; and it is conducive to human degradation.

A JAPAN correspondent of the *Sunday School Times* writes:—

The students in our theological school at Kioto came to a stand-still against that solemn old boulder, —the doctrine of the atonement. The class, to a man, refused to accept it as presented. The fact would not satisfy. They must theorize about it, and have a theory that to their own minds appeared just, righteous, God-like. "If God is good," say they, "he can forgive without reparation or punishment. It is like our cruel emperors to exact the last farthing." Again and again did the professor go over the well-taught ground, wrestle in prayer, spend sleepless nights, grow pale and sick, send to Europe for books rich in weighty utterances on the subject; for was he not like to lose this entire class for Christ?"

We are told that the theological professor finally found an illustration which satisfied the class. This may reasonably be doubted, even though the position and authority of the professor at last *silenced* the class. But what a spectacle,—a teacher employing all his ability and learning to obfuscate the reason of his pupils, by attempting to make them believe in a dogma against which the unperverted mind revolts!

BISHOP SHARP, of the Mormon Church, has come East from Salt Lake City with a delegation appointed to present a memorial to Congress, asking for the admission of Utah as a State. To a reporter of the New York *Herald*, he said: "'That polygamy is a right we believe as a matter of conscience, but we cannot contend against the laws of the United States. Most of our people are monogamists in practice, and doubtless the government can wipe out polygamy altogether; but, while the practice of it may be abandoned, we will continue to maintain its rightfulness. A peculiarly harsh feature of the law is that it proscribes existing polygamous relations. Now, I married all my wives before the law of 1862 against polygamy, and I don't think Congress has a right to attack those marriages. I joined the church in Scotland, and I had a wife and a family at the time. I went to Salt Lake City in 1850. I had married my first wife in 1840. I married again in 1854, and again in 1861. Now, I have grown-up children by my marriage in 1854. Congress now says I must turn their mother out of doors. Do you think it would be right for me to do so? I don't, and I won't do it?'"

MRS. JOSEPH COOK, having completed with her husband a journey around the world, has returned to this country, and is at the residence of her father, at Fair Haven, Conn., where she has been interviewed by a correspondent of the Boston *Herald*. She said:—

The same lecture subjects that were popular in England were popular in India. Idolatry is discarded by the natives; but they have accepted the scepticism of Western Europe and this country, and are familiar with the writings of Herbert Spencer, Mill, Tyndall, and Huxley. The lecturer combated this tide of unbelief and agnosticism; and, strangely enough, the Brahmins heard his denunciation of caste without demonstrations of disapproval. The English railways have done much to break down the barriers of caste in India; and the high-born Brahmin who travels by car is forced to sit side by side with, and touch the elbow, perhaps of one of low caste. The democracy of trade, commerce, and traffic is helping ministers, missionaries, and books to revolutionize that proud and splendid country.

"The English railways" and "the democracy of trade, commerce, and traffic" are no doubt doing much for India; and, through these same enlightening and liberalizing agencies, the advancement in thought and tolerance will continue, we trust, notwithstanding Mr. Cook's frantic efforts to stop "the tide of unbelief and agnosticism."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

RIGHTEOUSNESS.

Forgotten departed deeds
Live on to the after days,
Live on to the lives that lead
Abroad to the wide-world ways.

The truth life never lost
Had birth in the burdened need,
Had life by the long pain cost
Of use in the wide-world deed.

Oh, gather a world of grace
And truth in a life-tide song,
And faith toward a fairer race,
Atoning the wide-world wrong.

WILLARD PENNINGTON.

The Index.

BOSTON, JULY 13, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

EMERSON'S GOSPEL

OF

THE RELIGION OF NATURE.

A Discourse delivered in All-Souls Church, Memorial of the Rev. Henry Anthon, D.D., New York, Sunday, May 28, 1882.

BY R. HEBER NEWTON.

The first of preachers our generation has known was Ralph Waldo Emerson. He left the pulpit behind him, but carried his sermons with him. He simply exchanged the church for the lecture hall and the publisher's house, where he found a wider range of topics and a freer method of handling them. He answered an urgent solicitation to settle over a church where he temporarily supplied after giving up his own pastorate, "My pulpit is the lyceum platform." It was a portable pulpit to him. He did not lecture to amuse or please or even instruct his hearers. He never sought merely to mint his brilliant phrases into golden coin. On every theme, to every audience, he has preached by tongue or pen, seeking to rouse, inspire, and ennoble men. He could say, with Wesley, "My parish is the world."

Poet, philosopher, and saint, such a preacher certainly had a message for his age, some glad tidings of great joy. That gospel, like all other real gospels, is not to be read off-hand. The exhilarating tones of the clarion-call we hear full well, the articulate utterance we must study carefully. I am sure that the dear old soul in East Lexington did not speak without a meaning when she explained her church's reluctance to call a minister, after having had *him* as "stated supply": "We are a very simple people, and can understand no one but Mr. Emerson." That she habitually understood him, I somewhat question. But that deep and blessed thoughts were wakened and high and holy emotions were stirred in her, that she felt out of this man influences streaming, full of cleansing and comforting power, I am perfectly sure; and so she thought she understood him. Well when poorer preachers are thus understood!

It seems a forlorn hope to extricate any definite beliefs from the brilliant phantasmagoria of Emerson's pages. His vagueness, his love of paradox, his lack of logic, his self-contradictoriness, are proverbial. We should not wonder much if the Egyptian Sphinx *had* verily opened her lips after forty centuries of silence to say to the strange man standing before her, "You're another." But the attempt is not so hopeless as it seems. Most of his dark sayings have the key hanging by the door. He spake in parables, as Browning and other great poets have done up to the divine poet of Galilee, to turn away the unready and pique the hungry souls to keener relish, saying, "He that hath ears to hear let him hear." His contradictoriness grows out of his inveterate habit of climbing round a truth and looking at it from every side. The moods of nature passed into his mind, and a spiritual truth was no more the same to him on different days or in different hours of one day than the face of Monadnock was the same from sunrise to sunset through the changeful play of the light.

"Yonder ragged cliff
Has thousand faces in a thousand hours."

Yet have rock and man alike a persistent identity. Illogical he certainly was, according to the cut and dried patterns of our Art of Logic, with its quaint forms and conventional methods. Mr. Alcott once said that his essay read as if he had written separately the detached sentences of which it was composed, and thrown them into a hat, and then pulled them out haphazard, stringing them together as they came. Which was very much the actual fact of his literary method, if method it could be called. My honored friend, Miss Peabody, told me that he once read a printed essay to her, referring to his commonplace-book for the sources of the sentences, which it has been his habit to write therein as they came to him; and thus one sentence bore date of 1847, in England, and the next of 1860, in Concord. Yet these kaleidoscopic paragraphs arrange themselves by law in fixed figures. A few commanding ideas group these brilliant combinations. There is a logic of thought, though not of form. If then, undeterred by the difficulties of our quest, we search these hieroglyphs, we need not wholly miss a real message of good cheer.

Emerson's gospel is *the religion of nature,*—a limited gospel, but a veritable glad tidings for our age of nature study, with its blind fear that there is therein no place left for worship and for awe, for peace of faith and joy of hope.

It seems to me most natural that Emerson should pass away close after Darwin. They were really linked together as typical men of our age; the one representing the researches of the Understanding into nature, the other the visions of the Reason through nature. Darwin creates an epoch in knowledge, and reconstructs the globe. Emerson leads up the new knowledge into a new faith, and spheres the larger earth within vaster heavens. Darwin is the *accoucheur* of a new order of thought, which in Emerson finds its voice:—

"An infant crying in the night,
An infant crying for the light."

The great Englishman, dying just as he had examined an interesting beetle, was not more truly a student of nature than was his fellow *voyageur* into the mysteries of the beyond.

Emerson's first notable essay was entitled "Nature." That title might stand over all his writings. Each tune was a variation of one theme. Every topic was a phase of one subject. How he loved nature and lived in it, we have already seen. Thence, he drew his inspirations. His poems are songs, not of the salon, but of the field; and not of the "asphodel meadows" about which he read, but of the daisy fields of Concord where the rhodora blooms "its own excuse for being," where "the burly, dozing humble-bee drones," and the winds sough through the "sacred pines." Nature holds a fundamental position in his thought. All knowledge must rear itself upon its basic facts. Laws, beliefs, institutions, must root themselves in nature, and suck up their forces from it. Nature holds the truths it behooves us to know. Therefore, he studied her with such patient, reverent care that he interpreted her as another Wordsworth. He is nature become self-conscious and thinking aloud. Whether he had acquainted himself with the forefeelings of the earlier *savans* in our modern world, as he certainly knew some of the students of nature in the ancient world, or whether it was an illustration of Tyndall's "use of the imagination in science," the fact remains that twenty years before the appearance of the *Origin of Species* he announced the theory of evolution, which that epoch-making book brought fairly to the birth. The seer was beforehand with the *savan*. The motto to "Nature" was:—

"A subtle chain of countless rings
The next unto the farthest brings.
The eye reads omens where it goes,
And speaks all languages the rose.
And, striving to be man, the worm
Mounts through all the spires of form."

This was no lucky guess of a moment. It was his habitual vision. In the "Ode to Bacchus," he asks for "wine which music is," that "drinking this" he

"Shall hear far Chaos talk with me,
Kings unborn shall walk with me;
And *the poor grass shall plot and plan*
What it will do when it is man."

"The Sphinx," "Wood Notes," "Monadnock," "May Day," "Song of Nature," are hymns for the psalter of evolution. Tyndall could not apostrophize heat, wherein lie "the promise and potency" of all things, with more accurate eloquence than Emerson in the "May Day":—

"Like a sea which me infolds;
Heat with viewless fingers moulds,
Swells and mellows and matures,
Paints and flavors and allures;
Bird and brier inly warms,
Still enriches and transforms;
Gives the reed and lily length,
Adds to oak and oxen strength.
* * * * * * * * *
Enveloping heat, enchanted robe,
Wraps the daisy and the globe;
Transforming what it doth infold,
Life out of death, new out of old.
* * * * * * * * *
The *dead log touched bursts into leaf,*
The wheat-blade whispers of the sheaf."

That these are not the hyperboles of the poet is assured by the soberer prose of the essayist. Of the progressive life of nature, he writes: "It publishes itself in creatures, reaching from particles to spicula, through transformation on transformation, to the highest symmetries, arriving at consummate results without a shock or a leap. A little heat—that is, a little motion—is all that differences the bald, dazzling white and deadly cold poles of the earth from the prolific tropical climates. All changes pass without violence by reason of the two cardinal conditions of boundless space and boundless time. How far off is the trilobite, how far the quadruped! How inconceivably remote is man! All duly arrive, and then race after race of men. It is a long way from granite to oyster; farther yet to Plato and the preaching of the immortality of the soul. Yet all must come as surely as the first atom has two sides."

With this clear vision of the process of evolution, Emerson, the seer, has the vision which the *savan* does not always have. The *savan* deals analytically with the various parts; while, in the synthesis of the imagination, the seer tells us

"I yielded myself to the *perfect whole.*"

In this sight of the "one stupendous whole," of which all sciences are but parts, nature became to him a revelation full of awe. Where the ancient poet of evolution, Lucretius, saw only the blind play of atoms, Emerson saw—that which I leave him to describe.

"What god is this imperial Heat,
Earth's prime secret, sculpture's seat?
Doth it bear hidden in its heart
Water-line patterns of all art,
All figures, organs, hues, and graces?
Is it Dædalus? is it Love?
Or walks in mask almighty Jove?"

A question to which his answer is clear and positive in the sublime conclusion to the "Wood Notes":—

"Ever fresh the broad creation,
A divine improvisation;
From the heart of God proceeds
A single will, a million deeds.
Once slept the world an egg of stone;
And pulse and sound and light was none;
And God said, "Throb!" and there was motion,
And the vast mass became vast ocean.
Onward and on, the Eternal Pan,
Who layeth the world's incessant plan,
Halteth never in one shape,
But forever doth escape,
Like wave or flame, into new forms
Of gem and air, of plants and worms.
He is free and libertine,
Pouring of his power the wine
To every age, to every race;
Unto each and unto all,
Maker and original.
The world is the ring of his spells,
And the play of his miracles.
* * * * * * *
Thou seek'st in globe and galaxy,
He hides in pure transparency;
Thou askest in fountains and in fires,
He is the essence that inquires.
He is the axis of the star,
He is the sparkle of the spar;
He is the heart of every creature,
He is the meaning of each feature;
And his mind is the sky,
Than all it holds more deep, more high."

No wonder that Mr. Tyndall, in his fragments of science, declares: "In him, we have a poet and a pro-

Digitized by Google

foundly religious man, who is really and entirely undaunted by the discoveries of science, past, present, and prospective. In his case, Poetry, with the joy of a bacchanal, takes her graver brother, Science, by the hand, and cheers him with immortal laughter."

The *savan* thus hails the seer the prophet of the new order, the psalmist of the Bible writ in stone, to whom there is the vision of the living creatures round the throne of the Lord and Giver of Life, singing, "Holy, holy, holy, Lord God almighty, which was and is and is to come."

How did Emerson reach this sublime apocalypse, and see the new heavens over the new earth? He did not leap to his conclusion, else he were no poet laureate of science. Imagination may have projected the lines of his pathway with swift, unerring sight; but reason opened the roadway thus surveyed, and builded slow and sure this causeway to the skies. Let us try to follow the steps by which he climbed to this mount of vision.

Emerson lays the foundation of his religion in the two cardinal affirmations of Science.

I. The first string in his constructive thought is *the Unity of Nature*. We can quite understand the surprise of John Stuart Mill's father that no one revived the ancient theory of dualism. It is the off-hand explanation of the contradictory forces and laws which earth presents. It offers an easy solution to the hard problems of life. But, whatever its plausibilities may be, it is forever impossible henceforth. Evolution establishes the oneness of nature. The materials of all organisms upon the earth, from the bacteria up to man, are the same. The elements of the worlds around us in space are the elements which compose our world. Sulphur and iron, oxygen and hydrogen, build up Neptune as the earth. The laws which govern the crystallization of the rocks reappear in higher forms in human society. Civilization arranges itself after the pattern of the life within the domed halls of the bees and the galleried chambers of the ants. The planets sweep through space under the law which drops the apple from the tree. Forces slip into each other, while we are watching them, and show themselves but forms of one Protean force. One type of organization discloses itself through the endless varieties of vegetable and animal life. The trunk of the tree and its branching boughs become the body, or, as we still say, the trunk of the animal and its legs, which only need to be set up on end to become the human form divine. We may learn about our organs in the oyster. The minuter the scrutiny, the more astonishing the analogies between all living things. It is because of this oneness of materials, laws, forces, and type, that each fleck of bioplasm carries within its filmy thread the possibilities of anything that is. It no longer admits of question that whether or not we are to say, "I believe in one God," we must say, "I believe in one nature, one order, one table of elements, one system of laws, one pattern and type of structure, one subtle, mystic force, of which all forces are but masks."

By no thinker has this unity been more vividly realized or more profoundly estimated than by Emerson. He is full of this thought. It fascinates him. It even moulds his style. Any sentence will do to follow any other sentence; for whether it be about ethics or physics, art or chemistry, it is about one and the same substance, a different setting of one thought. A truth of music turns to a truth of painting, just as motion passes through different stages into sound and light. A principle in botany is a principle in government and trade, and all are principles of morals. Everything can become every other thing.

Nature's unity is a basic truth with him, the first article of the new creed. "This unity of design in creation, this unity of thought, is the key to all science." In his poem on "Xenophanes," whose early discernment of this truth interested him, he writes: -

> "To know one element, explore another,
> And in the second reappears the first.
> The specious panorama of a year
> But multiplies the image of a day,
> A belt of mirrors round a taper's flame.
> And universal Nature through her vast
> And crowded whole, an infinite paroquet,
> Repeats one note."

This is the secret of the Sphinx.

> "Uprose the merry Sphinx,
> And crouched no more in stone;
> She melted into purple cloud,
> She silvered in the moon;
> She spired into a yellow flame;
> She flowered in blossoms red;
> She flowed into a foaming wave;
> She stood Monadnock's head.
>
> "Thorough a thousand voices
> Spoke the universal dame:
> 'Who telleth one of my meanings
> Is master of all that I am.'"

II. The second article of the creed of evolution, which Emerson also voices, is *the Progressiveness of Nature*. Evolution is a synonyme for progress. Things are not standing still. Creation is advancing. From chaos, order has emerged. Out of molten masses of star-dust, out of stormful, seething seas and hills hissing with the fires that twisted their granite-like clay and knotted their veins in writhing coils, issued the earth in the calm beauty of the summer opening again upon us. From wriggling, shapeless films of transparent matter, grasses and flowers and trees, fishes and birds and beasts have arisen, until, at the last, man has turned his mirroring face upon the long ascent of life, and in reading its processes recognized himself its issue, "the man-child glorious" with whom it has been in travail.

True, this progress has been no uniform, undeviating movement on and up, but a strangely wandering movement, now in this lateral direction and again in that, a series of tentative efforts, a feeling forth and round in all curious and baffling tracks; missing its way again and again, drawn aside into *culs-de-sacs* where was no exit, lapsing in recedent eddies, halting in stagnant back-waters, yet ever recovering itself from every wrong guess, retracing every mistake, finding its path again into the main stream of "the organic ascent of life," and pushing on into ever finer, higher, nobler forms, till in man it rests not still, but is already casting beforehand the shadows of the Coming Man in our dreams and aspirations. This truth, too, has been clearly grasped and graphically drawn by Emerson. It recurs ever in essays and in poems. "We can point nowhere to anything final, but tendency appears on all hands, planet, system, constellation, total nature, is growing like a field of maize in July, is becoming somewhat else, is in rapid metamorphosis. The embryo does not more strive to be man than yonder blur of light we call a nebula tends to be a ring, a comet, a globe, and a parent of new suns."

"'Tis in the stomach of plants that development begins, and ends in the circles of the universe. 'Tis a long scale from the gorilla to the gentleman, from the gorilla to Plato, Newton, Shakspeare,—to the sanctities of religion, the refinements of legislation, the summits of science, art, and poetry. The beginnings are slow and infirm, but 'tis an always accelerated march. The progress higher shows itself in society as in the lower spheres.

"The civil history of men might be traced by the successive meliorations, as marked in higher moral generalizations, virtue meaning physical courage, then chastity and temperance, then justice and love."

III. Thus far, the *savan* leads us. As he leaves us, it should be on our knees. Given an order whose vast complexity reveals an inner unity of elements, laws, forces,—an order whose unity is that of one advancing type, of one idea finding ever fuller and nobler embodiment, and already blossoming into such a creature as man,—and we have a fact before which none but the thoughtless can fail in awe, as before an infinite power in which we live and move and have our being. Here, we have already the materials for a creed, waiting only the seer's touch to tremble into worship. The seer's touch, not the *savan's*; for beyond this point he, as such, does not lead us. The next step is into the mystery beyond the ken of the physicist, the source of the enfoldments whose unfoldings he pursues. He postulates a potentializing of bioplasm before he begins to write his genesis, but he cannot find these potencies in the matter with which he deals. The only rational indication of this source is found in following the uplifted finger of the seer, as he points to *mind*. Philosophy can account for matter by mind, it cannot account for mind by matter. When pushed to the wall, it affirms—and can prove, if need be—that all things cognized by the senses are but states of consciousness in mind. Common sense, the quick, concurring instinct of the multitude, authenticates this witness of philosophy, and unhesitatingly and universally declares that such an order is stamped with the seal of an infinite intelligence. Science itself leaves us before a mystery of form within every organism, upon which the fluent matter streaming through it steadily is moulded into persistent identity. From every region of thought, we are driven back, as Huxley confesses, upon the ideal or spiritual interpretation, if we have to choose between this and materialism; though, under the influence of Spinoza's illusive and unethical ethics, he persists in expecting a higher unity, of which we need only say it is not yet within the field of thought. The alone substance or reality standing under the changing phenomena of nature we can postulate is *mind*.

This Emerson saw and taught.

"Mind is the only reality of which men and all other natures are better or worse reflectors." Every law of nature was first a law of mind. "Nature is the incarnation of a thought. . . . The world is mind precipitated." He tracks law through its circles till he finds its throne, where

> "Conscious law is King of kings."

Cities, and all the seemingly substantial facts of civilization,

> "Are but sailing foam-bells
> Along Thought's causing stream,
> And take their shape and sun-color
> From him that sends the dream."

Monadnock spake to him:—

> "If thou trowest
> How the chemic eddies play,
> Pole to pole, and what they say;
> And that these gray crags
> Not on crags are hung,
> But beads are of a rosary
> On prayer and music strung;
> And, credulous, through the *granite seeming*
> Seest the smile of Reason beaming;
> Can thy style-discerning eye
> The hidden-working Builder spy,
> Who builds, yet makes no chips, no din,
> With hammer soft as snow-flake's flight;
> Knowest thou this?"

Yes, he knew it well; and for him and those who know it with him, were there nothing more to add, it can be said,—

> "Enough for thee the primal Mind,
> That flows in streams, that breathes in wind."

But, though enough, it is not all.

IV. Another step the seer takes. Nature is not only, in its one substance, Mind: it is Character. Law is to him a series of concentric coils, wheel within wheel, as in the symbol of Ezekiel; and the innermost coil, the main-spring of the whole mysterious movement, is Moral Law.

A purpose of good is at the core of creation. An energy working toward goodness is stored in the filmy threads of bioplasm. All growths string on this crystallizing form. When we climb up through the slow progress of life, the Moral Law is the law which issues as the crowning and commanding principle of action; the Power recognized in the highest life of the highest product of nature,—man,—as throned above him for his unquestioning loyalty; the Force evolved in the organic ascent of life, which at once upon its appearance on the field ranks all other forces, and every most imperious power feels its master come. This law, this force, is ruling, working through every stage of nature's development, so that we can reduce its terms from ethics down through chemics and physics, and find the adumbrations of social ideals in the crystallization of the rocks, the fertilization of the flowers, and the associations of the insects, and know that we have really gotten a scientific statement of the Power in nature as capable of verification as any other proposition in our imperfect knowledge, when, in Matthew Arnold's famous phrases, we speak of this "stream of tendency" flowing up through life as "a Power not ourselves, making for righteousness." This is the truth Emerson saw and voiced. He is not blind to the anomalies of nature, viewed as a moral order; its severities and savageries, its free fecundities and libertine longings, its indifferences to character,—the sun shining on the evil and on the good, the rain falling on the just and on the unjust. He knows full well that in these facts men, themselves unlifted into spirituality, have ever found hints and excuses of evil, and that the lower forms of nature worship have been rituals of riotousness, sacraments of sensuality, propitiations of powers wrathful and withering, apotheoses of desire and dread. He sees, however, back of all this that is *un*moral in nature awakening the *im*moral in man, the traces harnessing these blind powers and brute im-

Digitized by Google

pulses to an ethical purpose, a spiritual will driving resistlessly on toward the education of man, and already drawing after it into the paths of virtue the truly human men. He finds in actual life that Nature is a spring and source of virtue, that her influences are inspirations. This careful picker of adjectives declares that

"Spring is strong and virtuous."

He finds that

"None can tell how sweet,
How virtuous, the morning air."

Intent on the building of a man, he chose accordingly his home among the "sacred pines," where he might be ever nigh to nature. Wordsworth before him had found that

"One impulse from a vernal wood
May teach you more of man,
Of moral evil and of good,
Than all the sages can."

And he, too, had gone to school among the Westmoreland lakes.

Thus, the noblest spirits have ever found. "Pure, vigorous nature," sighed the dying Froebel, drawn up in his arm-chair to the open window, that he thence be strengthened for the last ordeal. The perfect man grew amid the Galilean hills. This influence of nature upon man is the forthflowing from a heart that beats to the rhythm of a moral force.

"The Moral Law lies at the centre of nature, and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal preach to us. ... Every animal function, from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments.

"This ethical character so penetrates the bone and marrow of nature as to seem the end for which it is made." No supernatural revelation is needed to introduce man to virtue. Nature is a revelation of virtue, a teacher of conduct, a trainer of character. If true to nature, man will be virtuous. "Virtue is the adopting of this dictate of the Universal Mind by the individual will. Character is the habit of this obedience." The Moral Law is thus throned by nature over life, and the true man owns "the sovereignty of ethics." Conscience is the vice-regal faculty, ruling the individual in the name and by the authority of the Most High. Its counsels are commands, its suggestions are laws. At whatever cost, it is to be obeyed. Only in absolute loyalty to Duty is there real and abiding happiness for man. The final argument is, "I ought."

"Though love repine and reason chafe,
There came a voice without reply,—
'Tis man's perdition to be safe
When for the truth he ought to die."

In this insistent push of Force through nature and through man toward character, he feels the presence of a Spirit rightly to be called the Holy Ghost: the recognition of unity and progress leading on to the perception of Mind, and this Mind revealing itself as Goodness, he bows and dares to say "God."

"The next age will behold God in the ethical laws, as mankind begins to see them in this age, self-equal, self-executing, instantaneous, and self-affirmed, needing no voucher, no prophet, and no miracle besides their own irresistibility, and will regard natural history, private fortunes, and politics, not for themselves, as we have done, but as illustrations of those laws, of that beatitude and love. Nature is too thin a screen, the glory of the One breaks in everywhere."

It is thus by steps in the granitic order of nature that Emerson climbs to the mount of vision whereon he sees God.

V. Emerson, therefore, has no fears about the future of religion. While oxygen and hydrogen continue and meet in the currents of electricity, there will be water. While nature and the soul continue and confront each other in the common thrill of the Power working in them both, there will be religion. It is the instant result of this relation, where no untoward circumstances hinder. Religion is not in lodgings on earth. It came with the first human man (Mr. Chadband's "human boy" is no longer tautological), opened his eyes in wonder, and it came to stay.

"Let others wrangle, I will wonder," was a saying of Augustine, of which he was fond. Himself a

"Wonderer at all he meets,
Wonderer chiefly at himself."

Wonder always leads her sister Faith after her. Nay, faith is simply wonder become conscious. One who has learned much of Emerson tells us that

"Faith and wonder and the primal earth
Are born into the world with every child."

While wonder lasts and leads on to these high cognitions, faith will not fail. Wonder's other name is Worship. Linnæus on his knees before the Scotch heather in bloom, Kepler concluding the researches which led to his third great law with a sublime prayer, sign the natural posture of the soul before the Infinite Mystery forth from which such light gleams, and symbolize the secret Emerson had seen. The last thing to fear for is religion.

"The whole state of man is a state of culture, and its flowering and completion may be described as religion or worship." He was not unaware of the great change going on in religion, of the decay and death of old forms of faith going on all round him. His finer sensitiveness detected this fact, and measured its force before the mass of his contemporaries had become conscious of any change, and before any save a few had appreciated its full significance. But he saw that which a generation later we are all coming to perceive: that the present "ooze and thaw" of belief, in which most find symptoms of a coming catastrophe, is the washing away of an effete order to lay the foundations of a new and higher order; that the drying up of dogmas is only the extension of envelopes, which have served their end, by the swelling bud within the ancient formularies; that the change is in the line of growth toward simpler, freer, nobler forms of religion.

"You say there is no religion now. 'Tis like saying in rainy weather there is no sun, when at that moment we are witnessing one of his superlative effects." He sees a new church arising, whose walls the toiling host of students of nature are rearing, whose gospel knowledge will preach by the altars where Imagination lifts her worship:—

"There will be a new church founded on moral science, at first cold and naked, a babe in the manger again, the algebra and mathematics of ethical law, the church of men to come without shawms or psaltery or sackbut; but it will have heaven and earth for its beams and rafters, science for symbol and illustration: it will fast enough gather beauty, music, picture, poetry."

The creed of this coming church we are not yet ripe to write.

"I am too young yet by some ages," he says, "to compile a code." Yet he does not hesitate to offer a tentative expression of the faith that is in him:—

"I am ready to give the first simple foundations of my belief: that the Author of Nature has not left himself without a witness in any sane mind; that the moral sentiment speaks to every man the law after which the universe was made: that we find parity, identity, of design through nature, and benefit to be the uniform aim; that there is a force always at work to make the best better and the worst good."

Bald as this confession of faith may seem, it is the baldness of the root, needing only time and right conditions to put forth leaf and bud, and blossom, and flower, and fruit. It is what Catholics would call implicit faith. It holds in latencies more than it has developed, just as the similar faith of the old Hebrews held Christianity, wanting only a Jesus. It is what Catholics would call implicit faith. It is a potential theology. When this simple ethical religion begins fairly to work upon the problems of our earthly existence, it will find, as Emerson foresaw, that the old Schoolmen had not conjured up the mysteries that exercised their ingenuities. However antiquated their interpretation of those mysteries, there were facts at the core of their fine-spun metaphysics. Those facts exist to-day as of old. They will insistently solicit man's attention, demanding explanation. The new statements may differ from the old as widely as the reality differs from the federal headship of Adam, as Mr. Spencer's law of organic retrogression differs from original sin, as natural selection differs from election, as natural consequences in character differ from the doctrine of hell. In some form, however, the old problems will reappear in thought. "Natural Religion," writes Emerson, "supplies still all the facts which are disguised under the dogmas of popular creeds."

VI. Without curiously conning the pages of the future's thought, which are not fully open yet, let us note that which touches us more,—how, in Emerson's religion of nature, hope blossoms on this simple faith.

However dark the problems of existence may look to him who studies them in detail down in the valleys where the *savan* works,—to the seer, who from the sunlit summits sweeps the horizon's circuit, all looms light. This was Emerson's view. As I look up to French's fine bust, and note the characteristic smile, I think of that subtile touch in Spenser's personification of Hope,—"She always smyld." That smile seems to say, "I see more than I can tell." This was the secret of his optimism,—the persuasion that an infinite will had the job of earth in hand. "A sublime confidence is fed at the bottom of the heart, that in spite of appearances, in spite of malignity and blind self-interest, an eternal, beneficent necessity is always bringing things right; and though we should fold our arms, which we cannot do,—for our duty requires us to be the very hands of this guiding sentiment and work in the present moment,—the evils we suffer will at last end themselves, through the incessant opposition of nature to everything hurtful." Thus, unwronging any human sorrow, he could breathe the desire of the *Dial*,—"We wish it may resemble that instrument in its celebrated happiness, that of measuring no hours but those of sunshine." He was sure he caught truly the secret of evolution. Evolution is the grandest of prophets, its voice a lofty strain of expectation like the second Isaiah's,—"Comfort ye, comfort ye my people."

"Under gentle types, my Spring
Masks the might of Nature's king,
An energy that searches thorough
From Chaos to the dawning morrow;
Into all our human plight,
The soul's pilgrimage and flight;
In city or in solitude,
Step by step, lifts bad to good,
Without halting, without rest,
Lifting Better up to Best."

The organic ascent of man is not completed. Man is but the embryo of the man that is to be, if this majestic movement of nature goes on in the upward lines along which our vision already flies. "The whole creation groaneth and travaileth in pain together until now, waiting for the manifestation of the sons of God." This is the song of nature Emerson overhears: —

"I sit by the shining Fount of Life,
And pour the deluge still;

"And ever by delicate powers
Gathering along the centuries
From race on race the rarest flowers,
My wreath shall nothing miss.

"But he, the man-child glorious,—
Where tarries he the while?
The rainbow shines his harbinger,
The sunset gleams his smile.

"My boreal lights leap upward,
Forthright my planets roll,
And still the man-child is not born,
The summit of the whole.

"I tire of globes and races,
Too long the game is played;
What without him is summer's pomp,
Or winter's frozen shade?

"I travail in pain for him,
My creatures travail and wait;
His couriers come by squadrons,
He comes not to the gate."

This coming man is "the semi-god whom we await." It is none less than the World-Soul, who

"Forbids to despair;
His cheeks mantle with mirth;
And the unimagined good of men
Is yeaning at the birth."

Nor does this prophecy of nature merely mean to him the continued development of the race on earth. He is sure it means also the continued growth of individuals in other spheres. He is, as he says all right-minded men should be, incurious about this future, content with hope as the substance and not the form of things to come. But his own secret trust creeps out through all his aversion to the speculation which he saw had grown flamboyant in the Churches. "After science begins, belief of permanence will follow in a healthy mind. ... In nature, the implanting of a desire indicates that the gratification of that desire is in the constitution of that creature that feels it. ... I have heard that, when we pronounce the name of man, we pronounce the belief of immortality. All great natures delight in stability; all great men find

Digitized by Google

eternity affirmed in the promise of their faculties. . . . As soon as virtue glows, the belief confirms itself. It is a kind of summary or completion of man. . . . Our dissatisfaction with any other solution is the blazing evidence of immortality. . . . Everything is prospective, and man is to live hereafter. That the world is for his education is the only sane solution of the enigma. . . . I am a better believer, and all serious souls are better believers in immortality than we can give grounds for." In his last volume of essays, the old man, nearing the great mystery, dropped his reserve and spake out his matured conviction, in strong though restrained language. But this conviction was no late ripening of his thought. In early life, he lost a darling boy, "a genius of so fine a strain" as the world seemed "not ripe yet to sustain." When the morrow of his great loss had "dawned with needless glow," and other morrows after it, tiding him at length beyond "the blasphemy of grief," he wrote that thrilling Threnody, wherein he whispers to his soul the comfort he had learned in the darkness:—

"Wilt thou not ope thy heart to know
What rainbows teach and sunsets show?
Verdict which accumulates
From lengthening scroll of human fates,
Voice of earth to earth returned,
Prayers of saints that inly burned,—
Saying, *What is excellent,*
As God lives, is permanent;
Hearts are dust, hearts' loves remain,
Heart's love will meet thee again."

VII. Faith and Hope hold the hand of their divine sister, Charity; and the greatest of these three sits shrined serene within the temple Emerson rears for worship. It is needless to illustrate at any length the spirit which shines from each page he has written, which breathed in all his life, making every word and deed fragrant with gracious, gentle love. There was one thing he could not be drawn to do,—controvert. He voiced the truth he heard within him, and left others to voice the truths revealed to them, trusting "the vast Soul that o'er *all* planned" to harmonize the strains. In all that he has written there lives no word to hint the long years of suspicion, distrust, and misrepresentation through which he walked unsoured. Not even when popular prejudice railed round him most unkindly did his ink curdle in the least. He swept all classes within his sympathies. His intercourse with Carlyle dropped when the savage howl against "the nigger" came across the sea. No most abhorred creed could part a good man from his soul. The churchman shut not from him the man.

"Why should the vest on him allure
Which I could not on me endure?"

No differences of race prevented him from feeling with another people's faiths and hopes. He was one of the first to introduce to our people the sacred books of the East, and to welcome the "accent of the Holy Ghost" in foreign idioms,—

"What are Moslems? What Giaours?
All are Love's, and all are ours."

To him, the Power working in nature and in man is Love. Back of the Infinite Mind is an Infinite Heart. The pine-tree whispers that

"Perfect nature's every part
Is rooted in the mighty Heart."

The Sphinx hints that in nature

"Love works at the centre,
Heart-heaving alway;
Forth speed the strong pulses
To the borders of day."

Monadnock finds a voice to tell him of the Building Intellect,

"Whose throbs are love, whose thrills are song."

The "Threnody" sums the impossible when it asks,—

"Wilt thou freeze love's tidal flow,
Whose streams through nature circling go?"

VIII. The nature where faith and hope and love find altars reared is thus to him a temple of the living God, wherein "all wisdom and all good abide," and whereof "man is the façade," a temple whose rhythmic strains this seer articulates in worship.

IX. I am not unaware of the limitations of Emerson's religious thought as a theology. He was probably conscious of its limitations himself. His theism verges dangerously upon what, in spite of Carlyle's savage ridicule, is no light confusion,—pantheism. With this follows a tendency to regard evil as only negative, a defect of immaturity in nature, and thus to blur the ethical distinctions, as in some noted passages. The real dangers of pantheism have been lately pointed out by so dispassionate a critic as Le Page Renouf, in the conclusion of his Hibbert lectures on the religion of Egypt. They haunt the religion of nature. Emerson's attitude toward Jesus Christ seems to me largely part of his surroundings, as he came into life amid the revolt from the unnatural Christ of the Churches. His profound reverence for Jesus, his recognition of him as the supreme teacher sent from God, "our best, our dearest saint," it is needless to recall. Of his divineness, he would have said,—

"Draw if thou canst the mystic line,
Severing rightly his from thine,
Which is human, which divine."

The doctrine of the incarnation held for him a profound truth, which in other times he might have been more anxious to affirm than to deny. But this immanency of God in man, of which Jesus is the sacred symbol, had been in his view materialized in the usual way of sacraments. Men's reverence for the symbol and sacrament had made it no longer a transparent spiritual truth, but an opaque metaphysical truth. Instead of holding Jesus up to the light and looking through him to God, studying the divine nature as caught upon this prism, and thus entering into the consciousness of oneness with God which was at its full in him, the churches he found to be busied in looking *at* Jesus, disputing over him, intent on magnifying him, and thus missing the secret of his life. "The idioms of his language and the figures of his rhetoric have usurped the place of his truth; and the churches are not built on his principles, but on his tropes." Alas! that this was and still remains so near the fact. Pity that Christianity has adjourned its Master's work of regenerating human society for the disciples' work of determining his personality, that it has substituted truth about Jesus for the truth *of* Jesus. Thus, it came to pass that so reverent a soul should have to say, "The way to preach Christ to our age is to be silent about him." As, with the really growing spiritual and ethical life of the Churches and their mental emancipation, his charge shall cease to be true, his attitude will cease to be necessary; and the way will open for a rational *and* reverent recognition of the supreme authority of Jesus Christ as nature's most authoritative utterance, "the highest, holiest manhood," and thus the crowning consciousness of life.

His negative attitude did not reveal his truest thought. He was a living embodiment of his constant counsel, to affirm and let the affirmation carry its own denials. The man reveals the positive, constructive character of his thought,—nobly, beautifully good; profoundly, simply religious; never withdrawing his name from the register of the church in Concord; showing where he had been and of whom he had learned by the confession he drew from hosts besides old Father Taylor,—"He is more like Jesus than any one I have ever known"; a man of whom we can best say, he "walked with God and was not, for God took him."

The light in which we are to regard Emerson as a religious teacher is that of the attempt forced upon our age to get back within the florid overgrowths of institutional and dogmatic Christianity to that severely simple substratum of all religion which lies below controversies and questionings, grounded in the facts of nature, whereon Science lays deep and strong the foundation-stones of faith, while Imagination waits impatient to lift the walls which shall blossom into the beauties of faith and hope and grow vocal with the harmonies of worship.

A grand mission, grandly fulfilled. Already, we can see the advancing lines of that cathedral of humanity which the Religion of the Future is to open for men's worship, into whose chapels shall be welcomed the devotees of all true knowledge and all lofty life, whose walls all arts shall beautify, and whose rituals poetry shall write; while over its central altar shall shine the face of God breaking through upon the flesh of Jesus Christ. And when in gratitude and wonder our children shall ask, Who first taught your age to build thus nobly, when the old structures seemed tumbling into ruins? we will answer, Emerson.

"SPEAK thou the truth. Let others fence
And trim their words for pay:
In pleasant sunshine of pretence
Let others bask the day." —*Dean Alford.*

For *The Index*.

ILLUSTRATIONS OF THEISTIC RETRIBUTION.

BY V. B. DENSLOW, LL.D.

(*Concluded.*)

Again, if I were disposed to be theistic, I should think that God not the Jehovah of the Old Testament, but such a God as the consensus of educated men could devise if they set about it—had become so disgusted with the mode in which the Christian world walks backward with eyes shut, and throws the veil of reverent concealment over the iniquities of the Sacred Book, that he had determined to send upon them this murrain of Mormons, on purpose to show them in real life exactly what Bible-living is. Every Christian knows that from Genesis to Revelations there is not a single precept that forbids polygamy to anybody not a bishop, and that the prohibition in the New Testament upon a bishop, that he should be the husband of only one wife, implies that whether any man not a bishop should be the husband of more than one is left to his own choice. Every Christian knows that polygamy was practised throughout the Old Testament period without divine or human or prophetic or priestly rebuke of any kind; and every scholar knows that in casual instances, though greatly discouraged by the antagonistic heathen influence of the Greeks and Romans, the practice obtained in Judea until after the opening of the Christian era. Jacob has four wives, Leah, Rachel, Bilhah, and Zilpah; and the abundance of his wives as well as of his children and cattle is spoken of as proof of the divine favor, just as it would be to-day in Utah. The element in the crime of David which Nathan rebukes is not the polygamy, but the meanness, in robbing Uriah of his wife, when Uriah, instead of an opulent flock of women, had only "one little ewe lamb." But it is the "Lord God of Israel" who says to David, "I delivered thee out of the hand of Saul, and I gave thee thy master's house and thy master's wives into thy bosom." It is needless to cite a single further text to prove that the God of the Old Testament directly sanctioned polygamy.

On the other hand, in the very dawning of Greek civilization, as pictured in Homer's *Iliad*, that heathen type of life was nobly monogamic; and woman was there the intellectual adviser and counsellor of her husband, his equal, his co-thinker, his companion poet, and his fellow-artist. Hector is not ruffled nor his pride offended, when Andromache, at their parting, gives him sound advice as to the point at which he should await the onset of the Greeks, instead of sallying out against their odds. He, like a fool, rejects her advice, and falls a victim to his folly, which consists wholly, as pictured by Homer, in the fact that he trusts more in the assumed protection of certain fictitious gods, who had no existence except in the brain of poets, than he did in the level sense and shrewd judgment of his intelligent wife; and he dies as the penalty of his religious bigotry and of the stupefaction of his brain by a false theology. Throughout the whole Bible, no woman ever appears as a wise adviser. If she advises at all, it is as the mother of Jacob advised him into a fraud. Throughout the Bible, woman appears in the subordinate and slavish rôle which polygamy assigns to her as an article of property, to be bought, sold, given, fetched, moved, and owned. But, in the *Iliad*, at a date as early as that of Solomon, the Trojans and the Greeks divide and war over a theme the real gist of which is not Achilles' wrath nor Hector's valor, but the question whether Helen had or had not the right to leave the home of her lawfully wedded husband for the home of Paris, whom she loved more and better. This is the very highest social question now extant, and upon it civilization has not advanced an inch beyond the point at which it is left in the Greek epic. All the Aryan races in Europe were monogamic,—the Romans, Celts, and Germans as truly as the Greeks, and as faithfully while they were heathen as they are to-day. It is these heathen races, therefore, that converted Christianity into a monogamic religion, or rather, as Christianity crossed into Greece, Rome, and Germany, it took on monogamy from heathen sources, and became a composite religion, not a religion founded on Judean influences only. Indeed, as there is no idea in Judaic Christianity that was not previously heathen, so the best ideas in modern Christianity have been absorbed from heathen sources since the religion began its progress; and, doubtless, monogamy is one of these best features. The doctrine

Digitized by Google

which Judaic Christianity attempted to introduce into Europe was that celibacy is better than either monogamy or polygamy, but that between the two latter there is no difference worth speaking of. In this effort, Judaic Christianity signally failed, except as concerns the Roman and part of the Greek priesthood. The passions of mankind, the harmonious balance of which constitutes a truer virtue than can be found in the religious passion alone, rescued Europe and civilization from this contemptible silliness.

If I were a theist, I should see a profound special providence in the fact that a great nation whose further progress in self-knowledge and social reform is seriously impeded by their fetich worship for a book, many of whose teachings they have outgrown, should have thrust under their noses a type of Bible morals so liberal, so perfect, that it makes them sick. I sincerely hope there is such a Being in the direction of all human affairs. But if there be such a Being, and if he directed the events to which I have called attention for the purposes referred to, I still regard them as most bungling examples of divine justice. In the case of Ireland, a shorter route to justice could have been found by adding a little to the wisdom of the English people; in the case of Garfield, the cheaper route to justice would have been to lessen the volume and impetus of American superstition; and, in the Mormon question, a larger gift of common sense to both classes of saints would fill the bill.

CORRESPONDENCE.

FREE SOCIETY, LYCEUM HALL, DORCHESTER.

Editors of The Index:—

The Anniversary of this Society, celebrated Sunday before last, was of marked significance, as illustrative of the power of sympathy which may exist between churches of different denominations. A large variety of churches was represented in the audience. After the devotional exercises, in which a passage from T. W. Higginson, on the "Sympathy of Religions," was read, the pastor, Rev. Clara M. Bisbee, made a brief review of her purpose and plan of work, stating that such was an attempt to answer the wants of the "unchurched" through the establishment of a *broader platform* in *religion* and *simpler modes* of *worship*. Mrs. Bisbee then read communications from Unitarian, Methodist, Universalist, Episcopal, and Free Religious teachers of the age. This was followed by most interesting addresses on the "Good Life," by Revs. C. R. Eliot of the Unitarian Church, Dorchester, Frederick A. Hinckley of the Free Religious Society, Providence, R.I., and Wm. G. Babcock of the Warren Street Chapel, Boston. Three lay members of the Free Society, Mrs. Sarah C. Bird, Mrs. Frances E. Billings, and Mr. Wm. G. Babcock, Jr., made fine contributions in testimony to the growth and harmony of spirit which marked this first anniversary of the new society. The services were concluded by illustration of a practical method of Sunday-school teaching, employed by Mrs. Bisbee, wherein flowers of the garden are made to correspond, *through color*, with so many "flowers of the heart."

A.

BOOK NOTICES.

"AMERICAN MEN OF LETTERS." HENRY D. THOREAU. By F. B. Sanborn. Boston: Houghton, Mifflin & Co.

Mr. Sanborn has given us a charming and characteristic sketch of one of the most remarkable and strongly individual men of that group of moral and intellectual heroes who have made the little village of Concord so famous in the annals of our literature.

He has drawn the portrait of Thoreau, not in sharp relief against a blank sky, but in his natural setting of ancestry, kindred, and friends, and has helped us thus to know him as he really was, in all the delicate beauty of his home life and affections, far better than if he had made him an isolated figure.

Thoreau and Concord are inseparable in our thoughts; and Mr. Sanborn has sketched for us the grand old town, with its historic memories, its simple citizen life, its farmers, men of sturdy virtue and keen intelligence, and its poets and philosophers, like the fair blossom or the mellow fruit of the apple born upon the rugged, knurly tree. Nor has he failed to give the broad meadows and sluggish streams, the fair orchards, green hillsides and glowing sunsets which made the familiar scenery of this beautiful, idyllic life. Few men could have brought such qualifications to the task of depicting this town and its inhabitants. Poetic feeling, literary culture, wide knowledge of society, are united with a thorough spirit of reform and a love of genealogical detail and a quaint perception of humor. So he can sympathize with all the many-sided traits of his hero, can understand his longings for solitude, and reverence the heroic courage which made him the champion of John Brown and every unpopular defender of the right.

The life thus presented to us is full of meaning and beauty, and shows us how simple, sincere, and ideal a life may become in seemingly prosaic and unfavorable surroundings. Yet Thoreau is emphatically the child of his ancestors, and one can see how all the influences before and around him helped "to make him the being that he was, when he was most himself."

The incidental sketches of Thoreau's friends are equally true to life: the strength and nobility of Margaret Fuller's nature appear in her relation to him as his early critic, all Horace Greeley's good sense and generous kindness influenced his efforts to help the young writer, while Alcott, Emerson, and Channing seem like a host of angelic friends encompassing him on every side.

Like Margaret Fuller, Thoreau is not to be judged so much by his actual performance as by the influence he shed around him. What he was affects us far more than what he wrote, for it is only slowly that he is revealed to us in his works; but his character is reflected back from the faces of those who knew and loved him so dearly, and he seems more living and nearer to us now than when he walked with us in the flesh.

E. D. C.

THE June number of the *Revue de Belgique* opens with a powerful article on Ireland by Mme. Lagrange, who thinks the temper of the people such as must ultimately bring about their independence. There are also a poem, some rambling accounts of Sweden, the conclusion of a highly wrought story of reform through the power of love, a brief notice of Darwin, and some brief reviews of recent books. The longest and most original article is by Tiberghien, an author of forty years standing, who compares Schopenhauer, Comte, and Herbert Spencer with his own master, Krause, a successor of Kant, who has attracted little notice, owing largely to obscurity of style, but has the great merit of inspiring Froebel, as well as of pleading earnestly for the collective interests of humanity. Tiberghien, like Harris, argues that the agnostics ought not to say they know nothing about the Infinite; for their use of this term shows they give it some meaning. The agnostics' answer is: "We take the word from our opponents, and use it under protest. Our meaning is, that we know what is within reach of observation and experience, and nothing more. Those who claim they know something outside of our field of knowledge talk about the Absolute and Infinite, and bring forward various statements and definitions, all of which we reject, partly because they are irréconcilably contradictory and partly because they are found, when used as premises, to lead to absurd conclusions." This last statement is especially true of Hegelianism, which Tiberghien says is no longer talked about in Germany.

THE *Art Amateur* for July has an unusual amount of practical suggestions in regard to pigments and methods of applying color in various styles, which must be very valuable to amateur artists. The criticisms of pictures are generally lively and discriminating; and the writers do not seem to be bigoted adherents of a school, but really capable of appreciating merit in any style. We wish, however, that this art journal would also serve the cause of literary culture by holding up a higher standard of literary style for its contributors. There are many expressions in its pages which remind one of the current slang of the day. A genius may occasionally use a slang phrase with such aptness and felicity as to make it poetic; but, in ordinary hands, it becomes a mannerism, wearisome enough in the chat of Freshmen and school girls, but intolerable when printed in a serious essay or a criticism on artistic themes.

PERSONAL ITEMS.

MR. CHARLES BRIGHT will give a second lecture at Paine Hall next Sunday afternoon, entitled "The Elephant and the Partridges, or Priests and Progress."

PRESIDENT ALICE A. FREEMAN, of Wellesley, has been awarded its highest degree, Ph.D., by Michigan University, one of the soundest of the co-educational colleges.

MR. HERBERT SPENCER is expected to arrive in New York about July 21, as he has engaged passage on the Cunard steamer "Servia," which will leave Liverpool on July 12.

CONSTANCE FENIMORE WOOLSON, the novelist, was born in Claremont, N.H. Much of her life has been spent in Cleveland, Ohio, where she makes her home at present. Miss Woolson's mother was a niece of James Fenimore Cooper, for whom she was named.

THE Springfield *Republican* thinks Bayard's Dartmouth College oration on Webster "rather a portraiture of Bayard than of Webster,—unconscious, but such as men of sincerity draw of themselves when they seek to point out a moral from the life of another."

CAPT. PAUL BOYTON has swum more than twenty-five thousand miles, saved hundreds of lives, and is officially reported by the Life-Saving Service as having rescued seventy-two persons from drowning upon the coasts of the United States. For his services, he has received forty-two medals from the European governments, but not one from this country, of which he is a native.

MISS ZOE LUCY BETSY ROTHSCHILD, recently married at Paris, has a dowry of three thousand million of francs. It is interesting to know that this rich young lady is prepared for any future loss of wealth, since she is also the owner of a diploma which certifies her fitness to teach,—a diploma won by actual, earnest study, and of which she is doubtless as proud as of her inherited wealth.

THE poet Whittier is represented by Mrs. Ellen E. Dickinson, in the *Churchman*, as saying of Longfellow's view of the influence and nearness of dead friends: "I have felt but very slightly that closeness of the unseen of which you speak. Life is a mystery, death is a mystery. I am like the Chinese philosopher, Confucius, who, when he was asked, 'What is death?' answered, 'Life is such a mystery that I do not seek to penetrate what is beyond it.' I believe in the progress of the soul after death. Surely, we are not to be placed in niches to remain forever. We shall doubtless there have what we lack here, harmony; and that is my idea of heaven."

THE will of Mr. Darwin leaves to his son William Erasmus the family portraits and papers, all medals, the silver candlesticks presented to him by the Royal Society, his manuscript of the Voyage of the "Beagle," and his manuscript autobiography; to his son Francis, his scientific library; to his wife, Mrs. Emma Darwin, £700, all his furniture, plate, books, effects, horses, and carriages, and his residence at Down for life; and to his friends, Sir Joseph Dalton Hooker and Thomas Henry Huxley, £1,000 each, free of legacy duty. The residue of his real and personal estate is to be held upon trust for his wife for life, and at her death as to twelve seventy-fourth parts for each of his five sons, and as to seven seventy-fourth parts for each of his two daughters.

OF George William Curtis, the Boston *Herald* says: "It would delight the hearts of the 'practical' politicians, if they could parry the blows of this reformer by sneering at him as a 'sore-head,' who is simply venting his spleen because the party has not rewarded him according to his own estimate of his deserts. But Mr. Curtis is so far from being an office-seeker that he has declined the unsolicited offer of various honorable positions in the public service, and it is known that he could not be tempted from his present post of honor and of duty by the tender of any office within the gift of a President. The words of such men have weight, because the people believe them to be honest and fearless, with no selfish ends to serve, and no motive to mislead those who look to them for guidance. Office-holding and journalism are both honorable occupations, if honorably followed; but they don't go well together."

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

CURRENT TOPICS.

THE party of the old *régime* in China has already, it is said, made the anti-Chinese legislation of the United States an occasion for renewing the clamor for a policy of non-intercourse. But the progressive party, which is in the majority, although admitting that the anti-Chinese bill is unfriendly and has invited retaliatory measures, proposes to await further developments before taking any step affecting the commercial relations of the two countries.

A STRONG argument in favor of the cremation of the dead, especially of those who die from infectious diseases, is found in the discovery by the great French scientist, M. Pasteur, that the earth worms which prey upon such buried bodies become infested with the minute organisms which are the causes of such diseases, and coming to the surface are the means of spreading anew the germs of disease and death among the healthy and the living. Cremation would effectually destroy these germs, and in a great measure secure immunity from the often sudden and hitherto mysterious outbreaks of such diseases in communities where other sanitary precautions have been faithfully observed.

COL. T. W. HIGGINSON, in the *Woman's Journal*, writes: "One of the quotations whose source even the laborious Mr. Bartlett has failed to identify is the phrase, 'Consistency is a jewel.' The fact, however, is certain; and the jewel is rare. When we find so able a literary journal as the New York *Critic*, for instance, denouncing in one number those who would stop the circulation of the more indecent passages in Whitman's poems, and in another issue calling for legal interposition against the milder improprieties of *Zola*, or when the acute literary critic of the Springfield *Republican* lauds Whitman on the one side and condemns Wilde on the other, it is clear that consistency is hard to find."

THE following, signed by twenty physicians, appeared last week in the Dover (N.H.) *Republican*: "We, the undersigned, assuming that entire liberty of thought and freedom of opinion are absolutely essential to real progress in the science and art of medicine, *resolved*, first, that we will in no way approve, sanction, or hold allegiance to any organization, society, or name, as 'homœopathy,' 'allopathy,' 'eclecticism,' and any other o-pathy or -ism which, by giving exceptional prominence and authority to any exclusive medical dogma or mode of practice, tends to limit such freedom of thought or opinion; second, that we will recognize, professionally, only such honorable and well-accredited physicians as in their medical associations and conduct conform to the spirit of the foregoing resolution."

THE Concord School of Philosophy opened its four weeks' session on Monday of this week, when F. B. Sanborn read an original poem on Emerson and Longfellow. Among the new lecturers for this season are Dr. McCosh, of Princeton, who will give an address on "Scottish Philosophy" July 21; Charles E. Garman, of Amherst College, who will speak on "Dr. Hickok's Philosophy" July 27; Prof. G. H. Howison, who will give two lectures; and George Parsons Lathrop. On Saturday, the 22d, in the town hall in Concord will be held services commemorative of Emerson, commencing at 9 A.M., Dr. Bartol will give the opening address, to be followed by a poem by Mr. Alcott. Mr. Albee, Henry James, Prof. Harris, and others, will also make addresses or give readings. Most of the speakers were the personal friends of the dead poet; and the occasion is expected to be an unusually interesting one, which will call together a large and an appreciative audience of the admirers of Emerson's genius.

IN an address on "The Higher Education of Women," delivered before the American Institute of Instruction at Saratoga, N.Y., last week, John Tetlow, head master of the Girls' Latin School of this city, took the position that the entire practicability of identical brain work for girls and boys had been demonstrated, giving his own personal experience as a teacher for the last seven years in proof of the capability of girls to compete with boys in any study, even the higher mathematics. The reporter says that in the discussion that followed the address, "not one dissenting voice was heard in the large audience, but, instead, white-headed men jumped to their feet to give the evidence of their personal observation to these truths. It was almost magical to compare this gauge of national opinion with the corresponding one of twenty years ago, and showed, as nothing else can show during this convention, how rapidly we pass to the mile-stones of progressive opinions in our double-quick educational march."

PROF. H. W. PARKER, of Grinnell, Iowa, in a letter to the *Congregationalist*, describing the tornado which recently destroyed life and property in that town, writes: "The tornado levelled all between two houses owned by one man, strangely avoiding them; and he alone had a 'tornado insurance policy' to pay for incidental repairs. Perhaps he had daily and earnestly put his worldly affairs in the hands of God." Prof. Parker does not attempt to account for the destruction of the college at Grinnell, although it was a Christian college, "in competition with the free tuition of State institutions, which, however excellent and now in good hands, are, in the nature of the case, no more religious as institutions than others of the State courts, prisons, or post-offices." "Now," continues the Professor, "the first college planted in Iowa, founded and kept alive by home missionary prayer, every year owned by God in revivals, known to be like Oberlin in its spirit and in the community where it exists, has been outwardly annihilated."

WE have the statement, on the authority of the *Methodist*, that a clergyman from the West recently visited New York, and went to the office of the *Popular Science Monthly*, where he "announced himself as a minister who was engaged in refuting Darwinism and other atheism, and in demolishing geological time." He had, he said, given years of study to the subject, and had exposed the fallacies of modern science to the satisfaction of the crowds he had addressed. But, during the conversation, it turned out that he had read none of Darwin's works, and had no acquaintance whatever with current scientific thought. In the *Independent* appeared last week the following in regard to this same clergyman: "We see in the *Churchman* an enthusiastic account of a lecture in this city on 'Revelation and Science,' by the clergyman whom the *Methodist* told about as confessing that he had never read Darwin's books. He is reported as showing, with frequent applause, how 'science had proved a blind guide, or the Mosaic account demonstrably correct'; and six clergymen thanked him and wished he might be more widely heard, and they passed him a vote of thanks. Of course. Such offences must come."

EGYPT, involved in debt by the extravagance of her rulers, borrowed money and failed to fulfil her pledges. In 1879, the Khedive issued a decree, delivering into the hands of England and France, for the benefit of their bond-holders, the resources of the country. Arabi Pasha, representing what is called the "National party," usurped authority, and endangered not only the dividends of the bond holders, but, as it was feared, the Suez Canal, England's way to her Indian possessions; and this fact, together with the recent massacre of European subjects, and the determination of Arabi to strengthen the fortifications of Alexandria, has provoked England to display to the Egyptians the power of her iron-clads; and to-day the city that has existed through all the vicissitudes of twenty-two centuries is in ruins, while the independence of Egypt seems as remote as ever. How far England is justified by the circumstances in resorting to such summary action we will not undertake to discuss. John Bright, regarding the bombardment of Alexandria as a violation of international law and a blot upon England's escutcheon, has withdrawn from the cabinet. What will be the outcome of this trouble it is impossible to foresee.

BOWNE'S "METAPHYSICS."

Prof. Borden P. Bowne, of Boston University, has recently published a volume of over five hundred pages, entitled "Metaphysics: A Study in First Principles," which has received considerable praise from the press. Without undertaking to make an elaborate review of it, which would only be suitable to a journal specially devoted to speculative philosophy, it may yet not be wholly inappropriate to *The Index* to use it as a fresh indication of the necessity of that profound revolution in so-called "modern philosophy" from which alone can proceed a truly modernized conception of the universe as a whole.

Prof. Bowne writes with a great deal of ability. His style is strong, terse, and clear, although his mode of presentation is lacking in order and consecutiveness; he evinces originality in detail, while yet occupying a point of view which is essentially traditional. In short, his chief merits are his own, and his chief defects are inherited. What is meant by this statement will appear below.

"The thinking subject being the starting-point of speculation," he says [p. 7], "and things being only hypotheses to explain the thinker's experience, it is plain that there can never be any reason for positing realities unrelated to thought. Such realities are simply *xs*, which explain nothing and which cannot be brought into any articulate relation to our thought-system. As such they are purely gratuitous. A rational experience can never be any ground for affirming an irrational reality. Hence we object to the thing in itself in this sense of something which eludes all thought-determinations, not that it is unknowable, but that it is rationally unaffirmable. Reason will always repudiate the irrational reality, and take refuge in idealism as the more rational doctrine."

This is a reiteration of Descartes' well-known *Cogito ergo sum*—the traditional beginning-point of philosophical speculation since his day. But, logically considered, it is an improvement upon Kant's historical development of this position into the affirmation of noumenal *Dinge an sich*. There can be no question among sequent thinkers that, beginning with the individual *ego* alone, the passage is impossible to any "things in themselves" which are not ultimately analyzable into mere "states of consciousness" of that individual *ego*. If agreement has been reached on any one point by speculative thinkers since the modern period began, it is on this fundamental principle of cognition: that *the individual mind knows only its own states of consciousness*. The only wonder is that not a single speculative thinker can be found in all that period who has dared to adhere boldly to the only logical outcome of that principle,—Solipsism, or the sole existence of the individual mind itself. Innumerable attempts have been made to vindicate the existence of an external world by adopting some form of Inferential Realism. But the crushing answer to Inferential Realism in all its forms is that the inference on which it rests is a logically vicious inference. Once grant that an external world cannot be known, but only inferred as the hypothetical cause of the individual's states of consciousness, and Occam's impregnable maxim, *Entia non sunt multiplicanda praeter necessitatem* (which Sir William Hamilton re-affirms in his "Law of Parcimony") forbids the inference. If the individual mind knows only its own states of consciousness, the sole logical inference as to the cause of those states is that the mind originates all its own states by some principle working beneath consciousness,—in a word, absolutely creates its own objects, as in dreams it undeniably does. This inference was substantially made by Fichte, in his system of subjective idealism; but even he shrank from carrying it fearlessly out into a rigorously self-consistent Solipsism. Nothing is so remarkable in so-called "modern philosophy" as the unanimity with which, at the same time, philosophers adopt the principle that the individual mind knows only its own states, yet repudiate the only result logically inferable from that principle, Solipsism. This extraordinary phenomenon simply reveals the utterly untenable foundation of "modern philosophy," as compared with modern science, which adopts practically, though not as yet theoretically, a wholly different foundation.

It is in entire accordance with this traditional beginning-point that Prof. Bowne declares it to be the essential aim of his treatise "to criticise our notions of reality and thus determine the true nature and connection of things" [p. 5]. The "drawing of all knowledge from conceptions," however, by means of their subjective analysis and definition, was, as Tennemann explains, the distinctive peculiarity of the Scholastic method—the very soul of Scholasticism itself; and the adoption of this method by Prof. Bowne only shows afresh how essentially scholastic still is the philosophy which considers itself modern. The truth is that philosophy, unlike the physical sciences, has never yet thoroughly modernized itself, but has still to undergo that process of modernization which alone can render it a genuine power in the evolution of modern thought, especially religious thought. The purely critical method, divorced from that method of verification which is the soul of science, can lead to no stable results, as it has led to none; and philosophy can exercise little, if any, influence in the formation of the religious convictions of the future, until it has (1) recognized the necessity of adding verification to mere criticism, and (2) accurately determined wherein verification for philosophy must differ from verification for physical science.

The thoroughly one-sided subjectivism of "modern philosophy," which adopts the individual *ego* as its starting-point, and limits itself to the criticism of the individual's notions or conceptions as its method, is thus traditionally accepted by Prof. Bowne. Naturally enough, therefore, he accepts also the result of such a starting-point and method, when he explicitly teaches the doctrine of the mere subjectivity of relations. The very existence of science, however, is staked on the doctrine of the objectivity of relations. The starting-point of science is, not the conscious states of any individual *ego*, but the universal experience of the human race; for science was not possible until this experience had become already vast through the accumulation of innumerable individual experiences, and had recorded itself in human language. The first task of every scientific student, before he can pass onward to make fresh discoveries or even presume to have a valuable independent opinion of his own, is to master the knowledge already established beyond reasonable doubt. He might as well imagine himself to have originated the language by which he expresses himself as cherish the conceit of having originated the knowledge he simply acquires. This common stock of knowledge has, for its necessary postulate and foundation, the experience of innumerable individuals through innumerable generations; the very words that are its register require, as a presupposition, the coöperation of countless minds and tongues in order to account for the system of signs by which one communicates with another, and by which all individual thought that is clear must express itself. Futile indeed was the Cartesian dream of starting *de novo* with the individual subject! Science starts with the human race, as immersed in an illimitable cosmos of realities; its essential method is to determine the real relations among these realities, not by sending each individual into a corner to criticise his own notions, but by enlisting as many individuals as possible in a common coöperation of investigating activity. A cosmos of real things in real relations, objectively existent and objectively cognizable—that is the presupposition of science; and scientific philosophy can have no other. The only difference between the special sciences and a truly modernized philosophy must be that the former aim to explore the cosmos in its parts and details, while the latter aims to explore it in its unity and universality. But both must rest on the doctrine of the objectivity of relations, as part and parcel of their common and original starting-point.

Here, again, it is interesting to note how completely Prof. Bowne occupies the traditional ground of "modern philosophy." He teaches with wonderful clearness the doctrine of the subjectivity of relations, and is utterly unaware that in this very point lies the great battle-field between modern science and the Scholastic philosophy which calls itself modern. In entire consistency with his subjective starting-point and subjective method, he thus unambiguously states the traditional opinion of speculative thinkers on this subject since the triumph of Nominalism over Realism in the middle ages:—

"Relations as such are incapable of objective existence" [p. 191].

"Objectively there is nothing but things and their unpicturable interactions. All that is more than this is contributed by the mind. When these things are conceived as a manifold, then the mind relates its objects as conceived. But the relating act and the instituted relation are purely subjective, and the relation has no existence except in the relating mind. It represents no ontological predicate of things, but the aspect of things in thought. It is with the relations of things as with those of number. Apart from the mind there is and can be no number. The simple and unrelated unit is the only thing which can exist in itself" [p. 192].

So far as the mere subjectivity of relations is concerned, all this is consistent enough with the premises of subjectivism in general, which, as has been shown, Prof. Bowne fully accepts. But, so far as he concedes the objectivity of things, it is totally inconsistent with them. By what logical warrant does he violate the undisputed principle that relations are inseparable from their terms? Here he maintains at the same time the objectivity of things and the subjectivity of their relations,—as if the things and their relations could be by any possibility separated!

Logic requires that the things and their relations should exist inseparably, either both in the mind subjectively or both in the cosmos objectively. It is impossible for Prof. Bowne, or any other subjectivist, successfully to defend the position he has taken against this criticism. He goes directly against his own principles, as quoted previously, and concedes the objective existence of those things in themselves which he has above declared to be "rationally unaffirmable." Nothing but pure and unadulterated idealism, carried out to its extreme solipsistic conclusion, consists with the subjectivism which he here maintains. Granting that relations can exist only in the relating mind, then the related objects also can only exist in the relating mind; for the relations depend, absolutely and inseparably, on the terms between which they subsist. Any other statement would be totally meaningless. Yet this fundamental criticism reduces all such inconsequent subjectivism as Prof. Bowne's to hopeless contradiction. He is not, however, alone in this respect; all modern subjectivists are

Digitized by Google

in precisely the same dilemma. And the criticism is brought here against him only to show the necessity of effecting a great revolution in "modern philosophy" before it can be in harmony with modern science, or even with itself.

F. E. ABBOT.

JUSTICE AND MERCY IN THE MORAL EDUCATION OF MANKIND.

The moral integrity of human society is preserved in great measure by the balancing action of the two sentiments of justice and mercy. No individual, perhaps, can ever really forgive himself for any lapse in his own conduct from the strict line of rectitude. But, with regard to one another's conduct, we are not only made judges, but we have also the power of pardon. More than this, we are forbidden to judge, unless our judgment be tempered with mercy. Every one of the world's great religions declares the law of compassionate kindness as well as that of justice. So long as men are endowed with a moral sense, it is impossible that they should make absolutely no judgment of one another's moral conduct. It is, indeed, by the interaction of conscience upon conscience that the moral education of society proceeds. But intertwined in the same human nature with the power that judges and condemns is the sentiment that forgives. As we are so constituted that every man's conscience is to exact entire justice in the conduct of every other man, so every man's heart is to be ready with pitying help for another's frailty. Judgment is necessary, even severe judgment; but mercy is to "rejoice against judgment."

In human experience, we may see continually how these two forces—justice and mercy, exaction and forgiveness, accusation and excusation—are made to balance and regulate each other. That action would be absolutely right which should be vitalized from both of these sources; which should combine justice and mercy in such perfect proportions that they should flow into one sentiment and be indistinguishable from each other; which should be kind because just, and just because kind. In the last analysis of moral issues, the conduct that is conformed to the strictest equity is the highest benignity. With a being conceived as absolutely perfect, there could be no conflict between justice and love. Justice would be only the impartial distribution of beneficence. But, in man, these two sentiments are as yet very far from having been brought to this perfect oneness. Both are present, and both are necessary to the well-being of society; but the moral balance between them has to be preserved by their action and reaction upon each other. The exactions of justice sometimes become severe, bringing a suffering that is indeed pitiable. Then, mercy pleads for some relenting of the penalty. Yet often it pleads with mistaken tenderness, by blind excess of sympathy doing another wrong which only a severer equity can set right again. The recent disturbance in the Massachusetts State Prison at Concord is an illustration of the natural, but not as yet very successful, attempt to find the proper balance between these two principles in the treatment of criminals.

Society in all its relations is most healthy when these two forces are most nearly balanced; or, better, when, instead of acting against each other and producing irregularity of movement and conflict, the spirit of kindness goes along with the spirit of accusation. The Scribes and Pharisees would have left the woman whom they accused of sin, fallen and hopeless. Jesus lifted her up, and said unto her, "Go, but henceforth sin no more." Not looking with weak indulgence on her past, he yet opened to her a hope for the future. Society has not yet found this golden mean that reconciles in one act the moral judgment which condemns the wrong done and the moral compassion which reclaims the wrong-doer. The spirit of accusation is very busy against the characters of people without waiting for proofs; and the spirit of forgiveness is equally busy in other cases where the proofs of wrong-doing may be strong enough, but the conditions of amendment are not very evident. A prominent political or social leader, in the midst of an exciting partisan struggle, seldom gets justice done to his motives. Perhaps he is pitilessly accused and abused, as if he were the most corrupt of men. He dies, and friends and foes alike hasten to cover his grave with the tears of esteem and affection. Thus, people are continually vibrating between the two extremes of unjust severity and mistaken indulgence; in the one case showing judgment without mercy, in the other showing mercy without judgment.

On the one hand, judgment is exercised without mercy. Deep, almost irreparable, is the wrong that is done by the condemnation of the vicious classes of society without appeal. With the doors of their houses, the so-called virtuous classes shut against them in many cases the doors of repentance and reformation. Excluded from the paths of honest industry till they have established an honest character, they are often forced again into courses of dishonor, and given no chance to win a good name. In the severity of the judgment upon their past lives, they are condemned to sin as a punishment and to a whole future of misery and moral despair. What worse fate can we conceive for any man or woman who has travelled the ways of wickedness and learned their barrenness, and now desires sincerely to regain virtue and reputation, than to find all the avenues to virtuous associations closely barred? Suppose that the prodigal in the New Testament parable, when, on coming to himself, he resolved to return to the old home and the old ways of virtue, had found, instead of the hearty welcome, the door closed and the father's heart hardened against him,—what would have been his chances for amendment? Yet this is what society that professes to take the New Testament for its ethical guide, and calls itself Christian, is doing every day toward its repentant prodigals. Thousands of human beings are doubtless kept this moment in the degradation of vicious courses, because no human ear will listen to their penitence and no hand is stretched out to welcome and aid their returning footsteps. Even their own fathers and mothers sometimes suffer their hearts to close against their erring children. Among the vicious and abandoned in every great city, there are without doubt hundreds who would gladly go back to the pure homes of their childhood, if they could be sure of still finding there the fatherly and motherly love which once they grieved and spurned. But they feel that the house would be shut against them, that every honest mode of livelihood shrinks from them, that even the so-called house of God is not open for such as they. Heaven pity them, for they have few friends on earth! And somewhere there is pity for them, and help. A mother, unquenchable almost as is her love, yet may forget her child,—forget, because disloyal to her motherhood. But the moral purpose that is at the heart of the universe neither forgets nor loses any of its offspring, that turn from whatsoever wanderings back to its ways. Let them but come, and it will surely grasp them with intent to heal and save.

But, though moral judgment without mercy is so hard and incomplete, even more ruinous, on the other hand, is mercy, or the spirit of forgiveness, without moral judgment. The unfoldment, however, of this point must be left till next week.

WM. J. POTTER.

"ANTI-THEOLOGY-MAD" LIBERALISM.

In Mr. Holyoake's description of Joseph Barker, the "wild preacher," in a recent number of *The Index*, occurs the following: "To make a sensation was the same thing to him as making progress. He was as the Indian, to whom the yell is more than the battle. If he made a great noise, it was the same to him as though the enemy were slain. He never inquired whether they were merely infuriated or whether they were fallen. As a disbeliever, he was anti-theology mad, and the dogmas of the priests ran away with him."

Some acquaintance with Joseph Barker while he was prominent as an unbeliever, and some correspondence with him both before and after his return to his early faith, enable the writer to appreciate the correctness of the above description,—a description, it may be added, which applies about equally well to some individuals who "make a great noise" in the name of free thought to-day.

Joseph Barker was extremely emotional, rather sentimental, and full of inherited religious tendencies. He lacked stability of character, was fond of applause, and was always trying to make a sensation. He possessed many of the elements of a demagogue, and indulged readily in extravagant statements, coarse ridicule, and bitter invective. He possessed considerable ability as a speaker, but was superficial, given to special pleading, and was unfair in the treatment of systems and persons he assailed. He was never held in high regard among educated or fair-minded free thinkers. How extremely vacillating he was may be inferred from the fact that he was successively a Methodist, an Independent, a Unitarian, a disciple of Theodore Parker, a deist of the Paine type, a pantheist, a dogmatic atheist, an unsuccessful applicant for orders in the Episcopal Church, and a Methodist again. When he came to this country from England, he was an abolitionist, and wrote for Garrison's *Liberator*. But he changed his politics as often as he changed his religion; and, having belonged to all the parties during the Rebellion, he became a secessionist (and at the same time a Methodist) and lectured in England in behalf of the South. In a work before us entitled *The Teachings of Experience*, published in London in 1869, Mr. Barker maligns the free thinkers of this country as in earlier works he had, as he admits, maligned the Christians of his native land. In this work, he cautions Christians as follows: "Do not read infidel books.... Do not attend infidel lectures.... I add, do not keep infidel company. Do not dispute with infidels." On his return to this country a few years ago, he proposed a debate with the writer of this article, with the condition that the report of his speeches should be published separately, so that Christian readers would have an opportunity to read the Christian side of the debate without being "contaminated with infidelity."

In looking through the writings and reviewing the career of this "wild preacher," it is difficult to determine whether his conduct was more discreditable during the time he was a Christian preacher or while he was a free thinker; but it is reasonably certain that he did far more as an advocate of Christianity than was possible for him as its opponent to disgust people with theology. And men of his type generally do more to injure than to advance any movement with which they become identified, whatever amount of applause they receive from undiscriminating, superficial people for manifesting the bigotry and unfairness which they bring with them in assailing doctrines they were but recently preaching and persons with whom they were but recently in cordial fellowship.

Mr. Barker was a product of theology, of the

Digitized by Google

Methodist theology; and, although several years a professed "infidel," he was in some respects through his entire life a Methodist, and not only a Methodist, but a Methodist priest. It is not strange that such an impulsive, vacillating, egotistic, unreasoning fanatic, ill treated as he fancied he was by his brethren, should become an "anti-theology-mad" disbeliever, or that his hearing some children sing "Jesus, lover of my soul" (which he affirms was among the causes that led him back to Christ) should revive his old faith, and that avarice, which was a conspicuous trait in his character, should make him long for a priestly office in the English Church.

There are, unfortunately, individuals, now professing to represent Liberalism, who have personal characteristics and theological tendencies very much like those of Joseph Barker; and some of these individuals, although unable to make the slightest contribution to the thought of the age, or to command the attention of thinkers of any school or class, imagine that they are carrying the whole liberal movement on their shoulders. They would do well to pause a moment, consider the evanescent nature of the influence exerted by mere declaimers, acquaint themselves with current, scientific, and philosophic thought, and endeavor to comprehend the scope and spirit of the great liberal movement of the age, thereby putting themselves in the line of progress and sparing the liberal public much needless talk. But it is hardly to be expected that such men will act with much more reasonableness or sobriety of judgment in opposing what they once held than they did in preaching it. They represent actual stages of thought and conditions of mind that exist in every community, and the removal of which is possible only by years of education and growth. But it is well occasionally to remind the public that such characters are not the exponents of matured liberal thought, and that papers or preachers who try to belittle a great movement by referring to the vacillation or incoherencies or illiberality of such men, as the best result of free thought, are as unreasonable and as ungenerous to say the least as those they criticise. B. F. UNDERWOOD.

EVOLUTION AND MORALITY.

False arguments will rebound on their advocates, and not a few such have been launched against evolution. Of these, I wish to notice a few, chiefly as uttered by the eloquent James Martineau; and I wish to make these corrections by way of prelude to a paper in which I shall criticise one of the moral implications of evolution.

I affirm then, against Martineau, that it is incorrect to say that nature is opposed to self-denying benevolence. Indeed, the assertion is an assumption of the point in debate, since evolution affirms that all known benevolence is a mode of nature. Nature no more opposes benevolence than she opposes herself. Through all her domains, part opposes part, and thus effects interaction and community; and the same acknowledged force, operating according to the same law, produces opposite results on different objects. The force of gravitation raises smoke and vapors high in air by pressing down denser substances, and by the pressure of the atmosphere downward it forces water up the sunken pipe, and gives us all the advantages of our suction-pump. By a similar method, all the lower forms of natural agency subserve the higher, while they seem to oppose them. Gravitation opposes the uplifting of the animal's leg in walking; but that opposition is conducive to the process of walking, and absolutely necessary to it. Gravitation opposes the ascension of the sap in plants, and yet promotes it, and furnishes many of the essential conditions of the process, since it helps to bind the plant together and holds it in the soil. The more tightly the charge is rammed, short of bursting the gun, the greater the force of its expulsion and the more effective the shot. So nature's alleged opposition to benevolent feeling furnishes the necessary conditions and occasions of its exercise. If nature's forces brought in no case any evil in their train, compassion would have no function or object. Nature's painful operations have very often an effect which is coincident with the operation of benevolent feeling, and she pities and heals the wounds she inflicts.

It is also a partial and misleading statement that in *nature* the only rule is self-assertion and relentless competition for superior advantage. Is all compassion supernatural? Is not the instinct of motherhood, which dies for the salvation of its young, natural? Are there no natural affections of kindness, friendship, and love, which find their gratification in making sacrifices for the happiness of their objects? Surely, we have here only a caricature of *nature*, not a picture.

If we speak of material nature exclusively, we may describe it as relentless and inexorable. But we may not say it is "selfish" and in antagonism with unselfishness and morality. The application of such terms to matter as an unconscious force is irrelevant and absurd. Only the conscious and intelligent can be selfish or unselfish, moral or immoral, opposed or favorable to moral principle. In the discussion of this subject, therefore, it is only conscious nature which concerns us; and it is very clear that this is not wholly selfish and unmoral and devoid of compassion and self-denying benevolence or love. As in material nature there are phenomena of transcendent beauty, as well as repulsive forms and storms and tempests, so, in the world of self-conscious action, while there is a prevailing selfishness which is often fearfully grinding and remorseless, there are many charming exhibitions of kindness and unselfish devotion, which are the spontaneous operation of nature.

Nothing is gained by dividing nature into inner and outer, and setting one against the other. If both are manifestations of the same power, such a method is false. That they are both manifestations of the same power is the doctrine alike of evolution and theism. On either theory, there is a unity of ultimate force and method and final cause, so far as concerns this life. On either theory, it is equally unphilosophical and inconsistent to array the external and the internal works against each other, and to represent the one as opposing and the other as favoring all goodness. What is true of either is true of both. Evolution makes both to be the undeviating on-working and outworking of the same unchanging and eternal power, and in the same method, which varies only with varying connections and issues. Theism conceives God as working on one all-embracing plan, which binds all the phenomena of the universe into a unity of method and final purpose. On this theory, the material universe is instinct and pregnant with all high and moral issues, as its purposed ultimate end. On the theory of evolution, the material universe, whether by design or not, inevitably to the same extent works toward the same end, as seen in the actual operation of all exalted moral power, which is supposed to be the unfolding of the same power as that which shines in the sun, flashes and thunders in the lightning, howls in the tempest, and desolates in the earthquake or the pestilence.

As an argument against naturalism, the distinction and comparison of the inner and outer worlds is, further, impertinent, because both inner and outer are alike natural. If it were claimed that the inner and nobler world is all supernatural, there would be some logical significance in such a course. Such a claim, however, has never been advanced, and is not likely to be.

Nor are we prepared to accept without qualification the assertion that the sense of duty, according to naturalism, has lost its foothold on reality only to lean on a phantom of divine support. The sense of duty does not necessarily lean for support on the divine existence, whether this be a reality or a phantom. Here, we touch the fatal error of that notion of moral agency with which naturalism is here opposed. It assumes that there can be no morality, unless there is a supramundane personal deity as its source, support, and end; that it is only intelligible, if it be identified with the Universal Mind. This is a view which is intrinsically erroneous. The proponents of this argument, in any other connection, would be ashamed of such a description of the moral conception. Right and duty are not of God's manufacture. They do not ask his leave to be; and it is not his power or prerogative to change their essential nature aud form. They rule him, instead of being ruled by him. The judge of all the earth must do right, if there is such a judge. If there is not, still right is not annihilated. It remains as the dictator of all who can conceive the notion of obligation,—that is, of all intelligences.

All sentient being has a degree of worth or excellence of some kind. The very power of feeling and acting is something good, and the wise and benevolent regulation and employment of these powers are a further good. Simply because I am, and am a being of certain kinds and degrees of power, I owe a degree of respect and consideration to myself; and, for the same reason, I owe the same to all other beings. And, in proportion to the relative dignity and excellence of these powers, and the benefaction of their operation, are they worthy of this respect, and entitled to command and enforce it. This is the foundation and essence of all moral obligation, whether there is a God above me or not. If there is, I owe to him an absolute and unreserved homage and service for the same reason that I owe a qualified and various homage and service to myself and all other finite beings. If there is no God, my obligation to myself and other finite beings remains the same. Nothing is changed but our common relation to God. Every man is a law to himself; and he is primarily the executor of that law, and his dignity is measured by the clearness and emphasis with which he exemplifies this. God himself, as law-giver and judge, does no more, and can do no more, than secure this in its perfect operation and result in all intelligences. He who does right does not do right simply, as Paley says, to obtain the favor of God and everlasting happiness. He reverences himself and everything that exists, in proportion to his estimate of its worth. For this reason, he conforms to the will of God, so far as known, and may reasonably hope for his eternal favor and benefaction. He adores and obeys God, not ultimately because God wills it, but because it is right, and in so doing he acquires moral rights relative to God. The moral faculty in the breast of each man is monarch of all it surveys, and the fountain of all moral reward and punishment. It can allow no power to contradict it or set aside its decisions, or in any wise to override its authority, or to bestow or inflict any moral reward or punishment without its approval, because, without this, the bestowment or infliction would be devoid of all moral force. Just because of his powers, irrespective of aught above him, man is a moral

Digitized by Google

agent who approves and executes the moral law, which has its source and supreme force in man's nature; and, in all perfect moral action, he scorns all authority as mere will, whether of God or man, and respects only the right as such.

We agree that right has no local essence, and assumes an absolute universality as the law of all free agency. In consequence of this law, it applies to all such agents, whether they are many or few, or whether they be all finite or one of them infinite. Neither numbers nor the dignity of any of the agents affect the operation of the law. For the same reason, its existence or non-existence prior to man does not affect its character. It is, in this respect, of no consequence whether it is the root or the blossom and fruit of our existence. Mr. Martineau has well said: "However the present may have come about, I find myself in it. In whatever way my faculties have been determined, faculties they are; and they give me insight into my duty and outlook on my position." The moral faculty, as we find it, we have described and expounded on the broadest and loftiest principles; and yet we find that this may consist with naturalistic evolution.

We are well aware that this is not the method in which evolutionists have expounded and defended the moral element in man in relation to their system, and we feel obliged to concede that their method has laid them open to assaults like those we have refuted. But their failure and misfortune here should not be allowed to inure to the perversion and misinterpretation of the moral conception, and any advantage gained against mere naturalism by so doing consciously must be temporary in its duration and always odious to a just and philosophical mind. WM. I. GILL.

THE CONDITION OF RUSSIA.

Ignatyef, who has succeeded in earning for himself the name of "The Father of Lies," is at last gone from the helm of the Russian craft. He has acknowledged himself unable to cope with hydra-headed Nihilism; and, no longer able to warrant the Emperor's safety, he has resigned. And yet be it remembered that it was during his rule that Suchanof, Trigonia, and Kolotkevich, members of the terrible Executive Committee of the Nihilists, had been made harmless, not to mention the others of the twenty-three, with whose trial the government thought ended its struggle with the Nihilists. Stephanovitch, Deutch, and Chalturin, the most daring and persistent leaders of the revolutionary movement in Russia, are also in the hands of the government. Chalturin, it will be remembered, was the one who alone, without anybody's aid in the palace, blew up the Winter Palace. Even Kobazef, the "cheese"-seller, who had undermined Garden Street, and who coolly informed the authorities that he had nothing but cheese in the barrels of earth which the suspicious authorities came to examine,—even he is arrested; and yet Ignatyef cannot warrant the Emperor's safety any longer. In his place is appointed Count Tolstoy, who has done more to bring about revolutionary sentiment in Russia than any other man. After the assassination of Mesentzef, Krapotkin, Heyking, and several others, by order of the Executive Committee in 1879, the ministers of Russia began to appear in public only under escorts of safety, Tolstoy, who was then Minister of Public Instruction, among them. It was then that the Executive Committee addressed Count Tolstoy in a proclamation as follows: "Your Sereneness has nothing to fear from us. We are well aware of the service you have rendered our course, and we promise you that your life shall be dear unto us." And this is the man now called upon to deliver Russia from Nihilism.

The news comes of a new "death-blow" to Nihilism. Some twenty-five "leaders" have been arrested, the names of the members of the Executive Committee have been found out, their sources of financial support have been discovered, and the like. But no one knows so well as the Russian government of how little import these arrests are. When the famous trial of the sixteen was made possible through the revelations of the traitor, Goldenberg, the government thought that in Kviatkofsky, Shiryaef, Priesnyakof, and their accomplices, it caught the soul of the revolution. But, although most of the sixteen did belong to the Executive Committee, the government still found itself obliged to capture Zheliabof, Perofskaya, Kibaltchitch, who were also members of that committee. From what came out at the trial of these regicides, it did seem that now indeed was Nihilism dead; for, undoubtedly, as Zheliabof was the most talented and most high-minded of the men of the revolution, so was Sophie Perofskaya among the women. Kibaltchitch was acknowledged to be the great scientific light of the party. He was known by the name of the "Technic." All these were captured and hung, still the movement went on. Melikof assured Alexander II. that with the trial of the sixteen the end of Nihilism had come. Baranof assured Alexander III. that, with the capture of Zheliabof and Perofskaya, he had naught further to fear. Ignatyef triumphantly asserted that the trial of the twenty-two was a death-blow to Nihilism. And now, with the arrival of a new minister, a new batch of "leaders" are captured; but it is all in vain. Every new minister, to show the Emperor his superiority over his predecessor, will indeed capture the presumably most dangerous heads of the conspiracy, but never has the keen insight of the Executive Committee been so successfully vindicated as in the last eighteen months; for in the middle of March, 1881, soon after the assassination of Alexander II., the Committee issued a proclamation to the new Emperor, in which they stated the terms on which they would suspend the struggle. After a few preliminary remarks, the Committee goes on to say:—

The bloody tragedy enacted on the Yekaterininsky Canal* was not an accident, and took no oneby surprise. After all that has passed during the last ten years, it appeared inevitable; and herein consists its deep significance, which should be properly recognized by the man whom fate has placed at the head of the State. Only men incapable of analyzing the life of nations can characterize similar facts as crimes committed by individuals or by a "gang." Notwithstanding the most severe persecution; notwithstanding that the government of the late Emperor sacrificed everything, the liberty and interests of all classes, of trade, and even the interests of its own dignity, in order to stamp out the spirit of revolution,—notwithstanding all this, we have witnessed in Russia, during the last ten years, that movement spreading, attracting to itself the best elements of society, the most energetic and self-sacrificing men of the country; and we see it engaged for the last three years in desperate partisan warfare with the government. Your Majesty knows that the government of the late Emperor cannot be accused of want of energy. Both innocent and guilty were hanged. Our prisons and distant provinces teemed with exiles. Scores of so-called ringleaders were caught and hanged. They perished with the stoicism and resignation of martyrs, but the movement did not cease. Without intermission, it grew and throve. Yes, your Majesty, the revolutionary movement is not such as to depend on the exertion of any individual. It is a process of the national organism, and the gibbet erected for the most energetic exponents of this process is as powerless to save the old order of things as the crucifixion of our Saviour was powerless to save a correct world of the ancients from the triumph of reforming Christianity.

*The place where Alexander II. fell.

The government may, of course, yet seize and hang many a single individual. It may break up a large number of separate revolutionary groups. We grant even that it may break up the most powerful of the present revolutionary organizations. All this, however, does not change in the least the true state of affairs. Revolutionists are created by the circumstances of Russia, by the universal discontent of the people, by the longing of our country for new forms of public life. The whole nation you cannot uproot any more than its discontent can be uprooted by repressive measures. On the contrary, through repression, discontent only grows. Hence, it comes that the gaps left by those made harmless are constantly filled up by new workers, coming forth from the midst of the people in ever greater numbers, ever more embittered, ever more energetic. These new workers for the interest of the cause will of course organize, richer now, however, by the experience of their predecessors. Hence, the revolutionary organization must in time gain strength, not only of members, but also of character,—a supposition verified, alas! but too strikingly by the experience of the last ten years. What has the government gained by the execution of the followers of Dolgashin and Tshaikof, the leading spirits of the movement of 1874? They were replaced by popular champions of a still more determined type. The terrible reprisals of the government called forth the terrorists of 1878–79. In vain the government executed Kovalsky, Dubrovin, Ossinsky, Lizogub. Fruitless also was the extirpation of scores of revolutionary societies. Out of these imperfect organizations sprang into existence more vigorous political bodies, by the process of natural selection. At last, the Executive Committee made its appearance,—a body with which the government has not yet to this day been able to cope with any success.

The prophecy contained in the passage underlined has been fulfilled almost to the letter. Almost every member of the Committee as it was composed at that time is now either executed, in Siberia, or in the hands of the government. Still, the *movement* is not checked, and will not be, until the Emperor grants reforms, and reforms in fact, not in paper. For so long as tyranny and wantonness exist, so long will there be resistance; and the greater the severity, the more terrible the retaliation.

IVAN PANIN.

HEBREW SPECTACLES.

That men should any longer attempt to nourish their spirits by feeding on the dry husks of the past is becoming more and more astonishing. "If we had any vivacity of soul and could get the old Hebrew spectacles off our nose, should we run to Judea to look at the doings of the Supreme?" asks Carlyle. Is not the Supreme at work here and now, as manifestly as he was in ancient Israel? All people of a high degree of intelligence, all modern live people, have in fact ceased to look through ancient Hebrew spectacles at the universe, have ceased to use the theological and mythological phrases of a dead and gone world and of dead and gone civilizations. Only in the churches and meeting-houses do we find the names and notions of the past still current. There, husks are furnished instead of fresh, succulent spiritual pabulum. All human history is sacred, and not the history of any particular period or people. That is a truth which now goes without saying. Every phenomenon of nature, even the most common, is a miracle, an insoluble mystery. What grander miracle could there be than the change from daylight to the star-sown gloom and silence of night? What apocalypse is there, or was there ever, equal to that of sunrise? It is a phenomenon due to the actual turning over in space of this vast mass of matter called the "earth," with all its seas, isles, continents, and mountain ranges.

Why, then, should we go to Bibles and *acta sanctorum* for foolish, fictitious theological miracles, when every moment is fraught with the miracles of cosmic movements and revolutions? The Teu-

Digitized by Google

tonic race which, with its great, world-overshadowing branches in both hemispheres, is the foremost, the regulative race of the modern world, which is a stronger, wiser, more deeply seeing, subtly contriving, and moral race than any of the foremost historic races of the past, cannot afford much longer to so forget its intellectual, material, moral, and political supremacy any longer as to condescend to go back to dead Hebrews, Greeks, or Romans, for guidance of any kind. And yet, in continuing to believe in doctrinal Christianity, one is paying a perpetual deference to an ignorant, superstitious past, and turning his back on the light and truth of to-day.

Mr. Froude, in his Life of Carlyle, says: "Experienced fact was to him revelation, and the only true revelation. In revelation, technically so called,—revelation confirmed by historical miracles,—he was unable to believe: he felt himself forbidden to believe by the light that was in him. In other ages, men had seen miracles where there were none, and had related them in perfect good faith, in their eagerness to realize the divine presence in the world. They did not know enough of nature to be on their guard against alleged suspensions of its unvarying order. To Carlyle, the universe was itself a miracle, and all its phenomena were equally in themselves incomprehensible."

But the special miraculous occurrences of sacred history, so-called, were not credible to him. "It is as certain as mathematics," he said, "that no such thing ever has been or ever can be." And yet the churches and meeting-houses are still resonant with the old, outworn, threadbare theological names and formulas,—that is, the teachers in them feel obliged to feed their hearers on spiritual husks and million times threshed straw, in which there is no possible succulence or nourishment; because the churches are bound by iron usage and creeds formulated ages ago,—are bound to ignore the truth, knowledge, and light of to-day. How much longer will this defiance of the present go on in ecclesiastical quarters?

In all secular matters, people are taking advantage of the new light and the new truths. But inside of the churches, in the crepuscular shadow of the sanctuaries, men revert to the mental and moral status of two and three thousand years ago, and recite the words of ancient Hebrews, words and formulas which voiced the spiritual wants and feelings of semi-barbarous nomads and shepherds of thirty and forty centuries ago. We no longer treat with the least deference the astronomical or scientific theories of the ancient Babylonians, Egyptians, or Greeks. Why should we continue to go to the ancient Hebrews for our ethical culture and ideas of the good? Living men and women have moral natures and the moral sense far more fully developed than was the moral sense of the ancient Hebrews. Herbert Spencer and John Stuart Mill and Emerson teach a morality compared with which the morality of Moses and David and Paul was a barbarism, Modern international commerce implies such a high degree of morality as the ancient world could not have dreamed of. At last, one grows impatient at the spectacle of institutions surviving when their life is really gone, at hearing the old theological bagpipe still droning, as if nothing had happened, as if there was no science, as if there had been no advance in knowledge, as if, again to borrow the language of Carlyle, the Hebrew clothes had not become "old clothes," no longer adapted to human needs, but "gaping at all their seams."

B. W. BALL.

IF we could read the secret history of our enemies, we should find in each man's life sorrow and suffering enough to disarm all hostility.—*Longfellow.*

EDITORIAL NOTES.

IN the forthcoming article to appear in the London *Mind* of October, to which reference has already been made in these columns, Mr. Abbot will discuss more fully the subject which he treats with his usual vigor of thought in *The Index* this week.

THE total number of books licensed to be printed in Japan during the past year was 4,910 against 3,792 in 1880. Of these, school books take the lead. Among the translations are J. S. Mill's *Three Essays on Religion* and Buckle's *History of Civilization.*

THE article in *The Index* this week from the pen of W. I. Gill, A.M., is a noteworthy production to come from a Methodist minister, although it will surprise nobody who has read the remarkable work by the same writer on *Evolution and Progress*, — a work which was the cause of no little excitement in his own denomination a few years ago.

A FRIEND writes from Beverly, Mass., June 30: "At the exhibition of the high school here to-day, in twenty-seven essays, there was not one allusion to God, heaven, or a future life; and yet high purpose and good principle pervaded all. Probably, nobody missed the 'piety.' It is significant, as showing the great progress of secularism."

AT Greenwood Lake, the other day, was organized a "National Association for Promoting Healthy and Rational Modes of Living." Such an association ought to find a large following; but, before joining it, we would like to inquire by what method the association is to arrive at any unanimous agreement as to what are the most "healthy and rational modes of living"? "Who can decide when doctors disagree?"

WE quite agree with a correspondent who writes: "An editor who from policy or cowardice publicly mentions as a friend and praises as a hero a man whom he privately calls an enemy, and speaks of as a vile fellow, forfeits the respect of all honest men." The above statement is very general in its character, but any one who sees in it a condemnation of his own dishonesty is at liberty to make a personal application of the remark to himself.

GEORGE JACOB HOLYOAKE writes: "The term 'infidel' is simply a disastrous name. It is the worst in the vocabulary of Christian theology. I can honor even the apostles who bore the cross imposed upon them by their faith; but to choose the cross which your enemies make for you, and bear that, is the nearest approach to idiocy in advocacy that I can conceive. An infidel means an apostate from the truth. It means one who deserts it, knowing it to be the truth."

THE *Congregationalist* says, referring to Henry Ward Beecher's last sermon before the closing of his church for the season, that "it is to us inexpressibly sad to find the son of Lyman Beecher thus going out of his way to stigmatize as 'puerile, if not idiotic,' what he described as the faith of those 'who believe in the fall of Adam'; and winding up with a denunciation of the doctrine of the future eternal punishment of the impenitent. Mr. Beecher's name may still stand upon the official list of Congregational ministers, and his church be numbered among our churches; but, in the name of common honesty, we once more protest that such are not the doctrines of Congregationalism."

"THE assassin did not know," says the *Independent*, "that he needed any minister, he said, 'for I feel that I am a Christian; but, if I have any minister at all, I prefer a Congregationalist.' And so they gave him Mr. Hicks for chaplain. We do not judge that the Congregationalists are proud of their convert. Mr. Hicks was not an inappropriate chaplain, for he is so pronounced a Stalwart that he was one of the immortal medaled three hundred and six who voted at the Republican Convention at Chicago for Gen. Grant, to the very end. Like that other Stalwart Congregationalist, Dr. Newman, he was a Methodist; but being out of a job, and there being a split in a Washington Methodist Church, one portion went off and became Congregational, and called him for their minister, and so he gets his unpleasant notoriety."

THE general business of degree-giving has been so overdone by the colleges that their titles have little value nowadays. Prof. White of Harvard, in his address before the American Association, told of a college president who once remarked to him, "with a face shining with pride, that his college gave seventeen different degrees. One of these, I remember, was M.P., which, on interpretation, meant not member of Parliament, but master of penmanship." The professor added, "We all know, ladies and gentlemen, the bad odor into which the degree of D.D. has fallen among us, and that other degree, which means the same thing, of S.T.D., which, if the favor into which it has recently been growing in this country could be investigated, would perhaps prove to be an attempt on the part of the clergymen to escape the odium attaching to the D.D."— *Transcript.*

HENRY WARD BEECHER, in a recent discourse, said: "I do not know why public sentiment should gloss over great selfishness and wrong, because they are on a large scale. There have been some transactions in New York in the elevated roads that have been very instructive in this matter. There has been not only an elevated railroad system, but an elevated system of finance. There has been a system of ingenuity on the part of so-called Christians in that matter. When these things are known, the very name of corporation is 'tainted.' The outside multitude know their faults and their ways, and they feel oppressed. Therefore, when those combinations that have by deception and fraud filched vast sums from the public deny the men the poor pittance of $12 or $14 a week for the most laborious services, the men compare notes and say, 'What gigantic tyrant is this that over our head defies the legislature, cheats on the right and on the left, and now takes the bread out of our mouths and the mouths of our wives and children?' It is a dangerous thing for the great corporations to put themselves in that attitude toward the great mass of the people."

WE have received a circular which says:—

A society has been formed in New York, with a view to the amelioration of the social condition of mankind. Its name is the Sociologic Society. Its object is the propagation of the knowledge of the law of mutual helpfulness, and its application to all the interests of life. Its aim is to send tracts to all parts of the country, and to organize sentiment in regard to rapidly growing evils in our midst, which, if not arrested by a high moral sentiment, will prove destructive to republican institutions. We desire to form branches or auxiliary societies in every part of the country, which will elect their officers and have their own existence; accepting, however, our Constitution and By-Laws, and publishing tracts similar to those which the central organization sends out. We would be very glad of the hearty coöperation of all good men and women in this work of social reformation, either as members of the New York society or as independent workers to form sister societies. Correspondence is solicited; and those interested in the movement will please address Miss Clara White, Corresponding Secretary, No. 124 Amity Street, or the President of the Association, Mrs. Imogene C. Fales, 52 Seventh Avenue, Brooklyn, N.Y.

SAYS the San Francisco *Alta*: "Wherever a Chinaman gains a foothold, there he stays. . . . In every employment they have entered, the Chinese have mastered their work. They are the best imitators in the world. The man who belittles or minimizes a Chinaman is a fool. The Chinese are dangerous, because they are adepts. In all the arts and sciences, we find them rapidly catching up with modern progress. They are reaching out everywhere. . . . If the Chinese were intellectually inferior to Caucasians, the danger would be less. But they are not. In commerce especially, they are the keenest, wisest, and most forehanded people in the world. Besides, they live cheaper, and can afford to undersell us. Merchants of San Francisco, take this point into your consideration and digest it. You cannot, if you would, evade it. It is a foregone conclusion that every trade the Chinese are admitted into they will finally control. And, when Chinese laborers or operatives have displaced Americans, it is simply a little while until Chinese capitalists give their American compeers 'the grand bounce.' They get money cheaper: they live cheaper. How can you compete with them? It can't be done. Our only resource lies in exclusion. We do not sow our fields with thistles, neither should we permit noxious weeds to overspread our commercial garden. Merchants of San Francisco, you have a great and pressing duty to perform. Your self-preservation demands Chinese exclusion. See to it that you exclude them in time. Else you shall ultimately find your investments unprofitable, your business withering, and your occupation gone. With a full knowledge of the probable effects, we sound this note of warning to American capitalists. They cannot compete with the cheaper capital of China."

BISHOP HUNTINGTON, while eulogizing Emerson for his rare genius and unsurpassed purity of life, has, with commendable frankness and intellectual honesty, declared that, judged by any reasonable standard, he could not regard him as a *Christian*. For this, the bishop has been severely and, we think unjustly, criticised by some writers and preachers who have themselves discarded all that constitutes Christianity a distinctive system of religion, but who wish to retain the word "Christian," and expand it so as to make it include all truth and virtue. To one of his critics, Bishop Huntington thus replies:—

According to my recollection, I have never attempted to speak publicly one word touching the whereabouts or condition of Mr. Emerson's soul after death, or any other man's soul. In two articles on Mr. Emerson's genius and character, both highly eulogistic and both of which I am ready to send you in proof of what I say, I have discussed the question whether or not his religious and philosophical opinions were of the distinctively Christian type, inclining to the conclusion that they were not, and that in none of his published writings did he claim or imply that they were, although in many of their moral elements and spiritual aspects they coincided with Christianity. I had the same right and the same reason to make that criticism that you have for what you say of public men and their measures every day. . . . Mr. Emerson was a personal friend, a guest in my house, revered and loved by me as he was by hundreds whose esteem I value. For his family, I have the deepest respect. It never occurred to me to think of him as in disreputable company in any "world," and I should no more presume to assign his spirit to the "nether world" than yours to that one or the other.

It is pleasant to learn that Bishop Huntington does not think of Emerson "as in disreputable company," a fact evidently due to the influence of the rational thought and liberal spirit of the age which Emerson did so much to promote rather than to that theology which Bishop Huntington represents.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

BROTHERHOOD.

Through my every scar and sin,
Thou hast seen the man within;
Back of every failure, higher
Traced the lines of pure desire.

Weaker is the heart I show
Than the heart that throbs below,
And my dream scarce seems to die
In the act I prove it by.

Thou hast sought the deed at home
Ere the wanton child could roam,
And lifted into sight the aim
That dulls the glamour of the fame.

HORACE L. TRAUBEL.

For *The Index*.

INGERSOLL'S THOUGHTS ON DEATH.

Full well we know how vain it is
To gild a grief with words;
And yet we wish to take from death,
From every grave, its fear.

Here in this world, where life and death
Contend as equal kings,
Let each one meet with dauntless heart
What all the dead have met.

From off the wondrous tree of life,
Blossoms fall with ripened fruit;
And 'neath its boughs, in dreamless sleep,
Age and Youth lie side by side.

And, though such scenes bring voiceless grief,
Hope sees a glimmering star;
And listening Love, in death's dark night,
Can hear a rustling wing.

Let not the priest with solemn mien,
Nor creed of barbarous dead,
The future stain with thoughts of fear,
Nor fill the grave with gloom.

Why should we fear the change called death?
It may be life to die;
Since here the sun that sets in clouds
May rise in glorious morn.

The bird that withers, droops, and dies
By some untimely blast,
May serve a purpose, though unseen,
As grand as fairest flower.

So in the hours of deepest thought,
When Death has claimed his own,
We can but trust in Nature's laws,
Though mysteries hover round.

To live and love but for a time,
Where all must yield to death,
Is grander than eternal life,
Where love is never known.

Another life is naught to us,
Unless we meet again,
And know, as in this twilight world,
The ones that love us here.

Perhaps 'tis true, were there no death,
If none were born to die,
That love that gives to life its joy
Would wither from our hearts.

The nobler and the grander faith
In Nature, Law, and Love,
Assures us death, even at its worst,
Is only perfect rest.

Of this, all hearts may rest assured:
If all the myriads dead
Still live in realms beyond the grave,
Each finds his just reward.

Nor can they be less loved and blest,
On that mysterious shore,
Than when they journeyed by our side,
And shared with us life's toil.

So we, like others, have our faith,
Though not from book or creed:
'Tis this,—for all the living help,
And hope for all the dead.

MONT E. COLLINS.

MONONA, IOWA, June 14, 1882.

The Index.

BOSTON, JULY 20, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

WILLIAM HOGARTH.

BY MARIE L. MACOMBER.

In 1697, the year in which the Peace of Ryswick gave to the arbitrary and impolitic James II. his quietus, retrenched the unjust claims of Louis XIV., and recognized William III. as the lawful sovereign of England, there was born in London that great and original genius, William Hogarth. He was descended from a Westmoreland family; and his ancestry were a race of solid and sturdy yeomen, whose coat-of-arms was the plough and the harrow. Hogarth's father was a man of considerable learning, but his limited means precluded giving his son a liberal education; and, at fifteen years of age, William was apprenticed to a silversmith, to learn the single branch of engraving arms and ciphers on metal. It was here, while still a boy, that he felt the "fire of genius" burn within him, and believed himself destined to become a great painter. His hours of leisure were devoted to caricaturing people with whom he came in contact, and woe to those hapless individuals who gave him offence! They were sure to be "shown up" in his inimitable manner, in so grotesque a light and with such incongruous surroundings as to make them the butt for ridicule and the laughing-stock of the neighborhood.

Hogarth was as finished a satirist with his pencil as was Butler with his pen. The brush of the one, with each "particular hair" pointed to the very tip with telling sarcasm on the follies of his time, seems an appropriate accompaniment to a form so replete in wit, humor, knowledge of the world, and yet so harmonious in exquisite rhythm, as was the *Hudibras* of the other.

When nineteen years old, Hogarth commenced business on his own account, first as an engraver, and later as a designer of plates for booksellers; but, with the exception of those for a duodecimo edition of *Hudibras*, none of these early productions merit especial note. On the success of these last-named plates, however, he was enabled to turn his attention to portrait-painting,—rather an ill-suited occupation for one so little prone to flattery, and "whose talents were not adapted to look on vanity without a sneer." His peculiar method of painting families in small, then a novelty, and his aptness in catching likenesses, made his success for a time quite marked; but the ultimate result was what might naturally have been expected. He was too much of a satirist, and portrayed defects with too vivid a coloring to suit the votaries of self-love; and his patrons gradually deserted him, to give their ducats to a less formidable confessor of natural blemishes.

In 1730, Hogarth married the daughter of quite a noted artist, Sir James Thornhill. The union was a stolen one; and considering the youth of his child,

Digitized by Google

then scarcely eighteen, and the limited income of her husband, Sir James was not easily reconciled to the match. But through the diplomacy of Lady Thornhill, who, like a mother, was in sympathy with her daughter, some of the plates of the "Harlot's Progress," upon which Hogarth was engaged at that time, were secretly conveyed to Sir James' house, and placed in a conspicuous position where they would soonest attract his attention. On entering the room some hours later, his eyes fell upon the plates, and he eagerly inquired from whence they came. On being informed that they were the productions of his son-in-law, he exclaimed, "Very well, a man who can furnish representations like those can also maintain a wife without a portion"; and all enmity was forgotten.

"The Harlot's Progress" was followed by the "Rake's Progress," and still later by other paintings of a similar character, and from this time forth a firm foundation was laid for the artist's future fame.

Many laughable anecdotes are told of Hogarth, some of which serve to give an insight to his peculiarities and personal characteristics. On one occasion, a nobleman, not remarkable for generosity, sent for Hogarth, and desired that he should represent on one of the compartments of a staircase Pharaoh and his host drowned in the Red Sea, and at the same time he intimated that no great price would be paid for the painting. Hogarth agreed to do the work, and soon afterward applied to his employer for payment. The nobleman, seeing that the space allotted for the picture had only been daubed with red, declared that he had no idea of paying a painter who had proceeded no farther than to lay the ground.

"*Ground!*" exclaimed Hogarth: "there is no *ground* in the case, my lord! The red you see is the Red Sea. Pharaoh and his host are drowned as you desired, and cannot be seen, for the water covers them."

Another no less amusing incident shows his absent-mindedness. Soon after he set up his carriage, he had occasion to pay a visit to the lord mayor. While he was detained with his lordship, a violent shower came up; and, when he left the mansion-house, the rain was still coming down with business-like persistency. Hogarth called lustily for a hackney coach; but not one could he procure from any of the neighboring stands, and finally he decided to brave the storm, and actually reached his house in Leicester Fields without bestowing a thought on his carriage, until Mrs. Hogarth, astonished to see him so drenched, asked him where he had left it.

Hogarth was an intimate friend of Henry Fielding, and the likeness of this great writer (which was placed at the head of his works, and acknowledged by all who had ever seen the original to present a corresponding image of the man) was drawn from memory by Hogarth after Fielding's death.

That men, even of superlative genius, cannot step beyond the bounds in which nature designed them to move without betraying the weakness of their understanding, seems apparent in what Mr. Walpole says of Hogarth:—

"From a contempt of the ignorant *virtuosi* of the age," says Walpole, "and from indignation at the impudent tricks of picture-dealers whom he continually saw recommending and vending vile copies to bubble collectors, and from never having studied, indeed having seen, but few good pictures of the Italian masters, Hogarth persuaded himself that the praises bestowed on those glorious works were nothing but the effects of prejudice. He talked this language till he believed it; and having heard it often asserted, as is true, that time gives a mellowness to colors and improves them, he not only denied the proposition, but maintained that pictures only grew black and worse by age, not distinguishing between the degrees by which the proposition may be true or false. He went further. He determined to rival the ancients, and unfortunately chose one of the finest pictures in England as the object of his composition. This was the celebrated 'Sigismunda' of Sir Luke Schaub, said to be painted by Correggio, probably by Furino,—but no matter by whom. It is impossible to see the picture or read Dryden's inimitable tale, and not feel that the same soul animated both. After many essays, Hogarth at last produced his 'Sigismunda,' but no more like 'Sigismunda' than I to Hercules." Everything about the painting, according to Mr. Walpole's showing, was defective. The conception of the character was gross and repulsive. None of the sober grief, no dignity of suppressed anguish, no settled meditation on the fate she meant to meet, no amorous warmth turned holy by despair, the coloring wretched,—in short, all was wanting that should have been there to express a woe so sternly yet so tenderly felt. "Hogarth's performance in attempting this picture," continues Mr. Walpole, "was more ridiculous than anything he had ever ridiculed."

No weak sentimentality is shown in any of Hogarth's pictures. They all give evidence of a healthy tone and a vigorous touch, and they depict vice and corruption in its true colors. The moral of his satire is unmistakable, and bespeaks an independence of thought and action quite refreshing, when we consider the tendency of the times in which he painted.

In 1753, he appeared before the world in the character of an author, and published *The Analysis of Beauty*, a book, as some writer remarks, "containing many sensible hints and observations, but which did not carry the conviction nor meet with the universal acceptance which the author expected." Hogarth's life was a busy one; and even in the last year of it, when broken in health and quite feeble, he employed his time, with the assistance of several engravers, in retouching his plates. In 1764, a few months before his death, he remarked to some friends while the convivial glass was circulating around his own table, "My next undertaking shall be the end of all things."

"If that is the case," replied one of the company, "your business will be finished; for there will be an end of the painter."

"There will so," answered Hogarth, with a sigh; "and therefore, the sooner my task is done, the better." Accordingly, the next day he commenced painting his "Tail-Piece," as he termed it; and the diligence with which he worked seemed to indicate that he thought the time for its completion was limited. Every object that, to his vivid imagination, could symbolize the end of all things, was utilized in this picture,—an old broom, worn to the stump; a broken bottle; a cracked bell; a crown tumbled to pieces; the moon in her wane; the butt-end of an old musket; towers in ruins; the sign-post of a tavern called the "World's End," tumbling down; Phœbus and his horses dead in the clouds; a wrecked vessel; Time, with his glass and scythe broken; an open play-book with "*Exeunt omnes*" stamped in one corner; an empty purse; and the statue of Bankruptcy taken out against Nature.

"So far, so good!" exclaimed Hogarth. "Nothing remains now but this,"—taking his pencil in a sort of pathetic fury, and dashing off the similitude of a painter's pallet broken in pieces.

"The deed is done! All is over! Finis!" cried he.

Hogarth never afterward took a pencil, but expired on the 25th of October, 1764, less than a month after his feeble hand penned the "Finis."

CORRESPONDENCE.

BERLIN CORRESPONDENCE.

BERLIN, June 14, 1882.

Editors of The Index :—

It was recently stated in one of our American papers that the religious interests in Germany are declining. The statement was supported by giving the religious statistics of several cities, each of which showed for the number of its population comparatively few churches and a very small church attendance. As a further evidence of religious decline, it was said that a large number of marriages and burials take place without the performance of any Christian ceremonies.

That such a report is essentially correct, that Christianity is here growing powerless, could hardly be questioned by any one who has taken pains to inquire into the religious condition of Germany. It is a well-known fact that a great many of the people do not go to church at all, and that many others do not go oftener than once a year. Students and young business men will frankly say that they have not been to a church-service in years. It is not simply the young men, however, who neglect the churches, but the people generally. The Germans no doubt look upon the Christian Church as a much stronger institution among them than it in reality is. Christianity has here an outward appearance of life and power from the fact that it is a State religion, but its inner weakness is sufficiently manifest to one who visits the Sunday services. If it were not bolstered up by the State, its real weakness would be more clearly seen. The more important festivals of the Church are legal holidays, when the schools and universities are closed and business suspended or carried on behind half-screened windows. The universities had an Easter vacation of six weeks, between the winter and summer semesters; yet they have been closed at three different times during the first month and a half of this summer semester on account of church festivals: on the 3d of May for Prayer and Repentance Day, on the 18th because it was "Ascension Day," and from the 27th to the 5th of June because the Holy Ghost was supposed to have descended upon a few men gathered in an upper chamber at Jerusalem somewhat more than eighteen centuries ago.

Church services are held at these times, but are as poorly attended as upon Sundays. The people make use of these occasions for excursions, picnics, and other amusements.

The rate of church attendance in some of the other cities and in the smaller towns is undoubtedly higher than in Berlin, yet the religious statistics of this capital city are very instructive as to the religious condition of Germany, and indeed of our time.

According to a recent report, Boston has about two hundred and fifty churches and religious societies; and the total church attendance is 124,909, or about one-third, I believe, of the whole population. The population of Berlin, according to the latest census, is 1,169,122, about three times that of Boston; yet, if the reported religious census of Boston is correct, Berlin has only about one-fourth as many religious societies. From the last *Statistisches Jahrbuch der Stadt Berlin*, we learn that there are 35 State Lutheran churches in this city; 11 Lutheran societies connected with hospitals, prisons, work-houses, etc.; 8 independent evangelical churches; and 4 Roman Catholic,—in all, 58 Christian churches and societies. In addition to these, there are 3 Jewish Synagogues and 2 Free Religious societies. Several of the churches themselves are small; and it is therefore quite safe to say that, if every seat in all of them were filled, more than a million people would still be left outside. But the fact is that the seats in the Protestant churches are, as a rule, not more than half-filled. It is not infrequent to find a congregation numbering between two and three hundred people, and even less. A special preacher or a special occasion will now and then draw a full house; but it is not difficult to believe the report that not more than one per cent. of the people of Berlin attend church. When the royal family are in the city, the *Dom* in which they worship is not only crowded, but hundreds of people stand in the street outside during the hour of service. It is needless to say, however, that these do not come together to worship Him who refused worldly riches and a temporal crown. The four Catholic churches are always crowded, as might be expected after learning from the statistics that considerably more than a third of the church communicants of Berlin are Roman Catholics. According to the reported census of Boston also, more than a third of the church attendants are Catholics. On the other hand, it is to be remembered that only about a third of the people, even in that city of churches, are said to attend church. Two very important conclusions are to be drawn from these facts: first, that the unchurched classes greatly outnumber those who attend religious service; and, secondly, that the real power inside of Christianity itself, even in so-called Protestant countries, is Roman Catholicism. Protestantism, as everyone knows, is divided against itself. It lacks unity, and so lacks strength. A professor in an American theological school has said that the religious forces of Christendom are being gradually gathered into the ranks of either Catholicism or Rationalism. Between the two,—one representing absolute authority and faith; the other, freedom and reason in religion,—there is in fact no theological stopping-place. The Protestant principle of private judgment inevitably leads to rationalism, or rather to that stage of rationalism which maintains that reason and conscience are higher guides to individual conduct than the authority of any priest or church or book,—in a word, to individualism. If modern Liberalism went no farther than this, it would then, to my mind, be infinitely preferable to Roman Catholicism; but it must and will go farther. Its splendid negations and its wholesome recognition of the dignity and worth of man are of priceless worth to human progress. But the world demands more than this. It demands splendid affirmations. It demands organization and the build-

Digitized by Google

ing up of societies for the promotion of moral and social welfare. These demands will be fulfilled in time; but, meanwhile, what is the condition of things? Roman Catholicism, the old and avowed enemy of science and freedom, is still impressing her mediæval faith and doctrines upon hundreds of thousands who have not yet learned—and who do not dare to learn even that, the first principle of Liberalism—the right of private judgment. Catholicism, too, is earnestly pushing forward and strengthening her already magnificent organization. On the other hand, modern Liberalism is almost wholly unorganized, and is doing very little constructive work. To be sure, the scientists, who may be counted among Liberals, are doing an all-important work in their special fields of inquiry. But the work of science is not the special work of ethical religion. And, besides, what is done by a few or by many scientists will no more save the rest of us from the consequences of our ignorance and sins than faith in the blood of Christ. The new gospel is that we must work out our own salvation, and work it out in union.

It may be said, I think, that Liberals generally are either still in the negative stage or between this and a positive attitude; that is, in a state of religious indifferentism. But the fact that the great unchurched masses have given up their faith in Christian supernaturalism, the fact that Christianity is losing the power which it has held for centuries over the hearts and minds of the people, and the further fact that the axe of scientific thought has been laid to the very root of revealed religion, makes necessary the birth of a new religion and a new organization to take the place of the Christian Church.

The mission of religious liberalism, instead of ending with the disappearance of supernaturalism, has but just then begun. The liberation of mankind from superstitions and the old theology is a very minor part of our work, although some Liberals, it is sad to see, appear to regard it as the whole. It may be that Liberalism generally is in a more positive attitude than I have indicated. At all events, there are already signs of a more wholesome state of affairs. Here, as in America, there are many whose whole attitude is positive. They recognize the fact that the old faith is disappearing; but they think they see the dawning of a larger and deeper faith,—of a faith which implies the most reverent and absolute reliance upon truth, and which is yet ever open to new aspects of life and truth and duty,—of a faith, above all, which means an effort to fulfil the demands of the moral law. S. B. WESTON.

"THE WOMAN QUESTION."

Editors of The Index:—

This is an age of scale and crucible and microscope. But the intelligence of this age is an evolution, not an inspiration Between the crucible of scientific verity and that of the Great Consolidated Alchemies there is a "difference."

It is easy enough to measure ditch water by the gallon, and cerebral variations by the pound. But very instructive is the *naïveté* of the alchemies in the saying that "of qualitative differences we know but little."

Well, we will assume that "men are superior." Superiority in particular springs from enlightenment in general. Men have always perforated each other with spears and bayonets; but women have only had pins and needles. There is undoubtedly a "quantitative difference" between a pin and a bayonet. But the informed classes are beginning to regard the spear and the bayonet with disfavor. An excess of heroical enlightenment is contrary to the rules and regulations made and provided in the great Society for the Prevention of Discomfort. The effort of the Consolidated Alchemies to evolve a shell-proof, smoke-tinted eyeglass is possibly a valuable suggestion toward a remedy.

But, in the mean time, the large and respectable majority of men are very generally engaged in the millennial occupation of forging their spears and their bayonets into pins and needles. It is an interesting employment to forge needles from big horrid bayonets, but to forge the dear little needles back into bayonets,—God forbid!—it never can be done. That women never can arrive at the old-time standard is equally certain with the fact that men never can go back to it.

One of the alchemists declares that, "unless woman can devise some means of reducing the size of man, she must be content to revolve about him in the future as in the past." But the present writer has seen some talented men of "size" "revolve" very satisfactorily, though very self-reluctantly, upon the pen points of feminine exponents of the reform philosophy.

But that has only happened within recent years, since the world began to comprehend that there are other prophets than St. Paul, and other principles than those of pithless prudery. With sword and pen and statute, and by authority of iniquities, in all ages and in all departments of effort, have exalted fools declared for the conservation of the Great Incompetent. It is recorded over and over, in ever-varying modes of significance, in the history of every new idea which ever conflicted with the charters of falsehood.

We are wiser than we were: the fools shall not prevail at the last. We begin to know, for one thing, that there must be such entire freedom, for man, woman, and child, as is limited solely by an exact renunciation of fraud and violence and their concomitants. We begin to know that gain never can be measured by the brazen gauge of the traders. We begin to know that need never can find redemption at the hands of the changers of money. We begin to know that helpful righteousness is more than restless exploitation.

The reform tendency is not a thing of passing fancies. It is not a thing of a day or of a generation: it is a part of the long, old, inexorable evolution of the utility. From inspirations of regret, perpetuated in the race conscience, spring the sanctities of life. The failure and the pain of the past are factors in the possibility of to-day.

But be not deceived. Persons and words and plans and principles and institutions which conserve the conditions of failure and pain are, now and always, as they that would crucify their Christ. The iron institutions and the cultured follies of to-day are elements in the progress of the race. But woe unto the fools that crucify the sentiment which cries out for a fairer humanity, for purer men and braver women. Woe unto the fools who would build yet greater the stupendous fabric of the existing sophistication! WILLARD PENNINGTON.

REASON AND IMAGINATION.

Editors of The Index:—

Reason is the ability to see the truth. Truth is a conception of things—their qualities, conditions, and relations—as obtained through the senses. Our senses being unable to follow all the varied and intricate operations that make up life, we are apt to take appearances for realities. In case of a meteor, for instance, we may see a tail, frequently of considerable length, attached to the main body. But whether this caudal appendage is due simply to appearance, owing to speed or to friction by contact with the atmosphere, is not always ascertainable, because of the inability of the eye to follow the phenomenon in its great rapidity. Since conception of life, with all its varied scenes and objects around us, is clearly a matter of individuality, truth, likewise, is most correctly treated as such.

Truth may be divided into two great categories, one including such truths as we can demonstrate to others, and the other comprising truths not transferable, but restricted to individual consciousness. To illustrate: By adding to three apples two specimens of the same fruit, I may convince others that I have five apples as the result of the addition. But I could not so easily convince any one of the possible truth that such apples tasted agreeable to me or otherwise, because of the difference of individual tastes. So beauty is said to be in the eye of the beholder. "A truth to you is not necessarily a truth to me," implies the second class of truths, according to the classification just made. All that I may know of the result of any attempt of demonstrating truths in a practical way to other minds is simply an affirmative or a negative statement, or that of non-committal.

Truth is very often used as a term signifying that a certain conception has met with general coincidence, or with tacit acceptance without such. Truth is a conception of life and its facts, which we must earn for ourselves, not simply an effort of the imagination to picture what others have presented to our minds.

Imagination is the power of depicting within our consciousness what has been impressed upon it through the senses. The pictures thus evoked are generally not distinct or faithful, but rather vague,—true in part, but not unfrequently very poor caricatures of life, as a whole. Unless this noble faculty, this artist within the artist, be bridled and governed by reason, we will not wholly avoid the danger of misrepresenting nature in her manifold aspects, moods, and changes. No matter what means we may employ, whether pen or brush, chisel or musical sound, the portrait will be deficient.

Imagination, in absence of reason, has harassed the race with superstitions alike terrific and ludicrous. Reason, the emancipator, to many minds still the threatening iconoclast, come to dethrone the "ideal," must yet thoroughly purify and invigorate the imaginative faculty, so that the outer world may find itself faithfully reflected in the world within, and the latter may enjoy a grander expression through the material without. Imagination gave us the arts, reason the sciences; and like the Siamese twins inseparably should they perform their allotted work. If by the "ideal" we mean what our imagination may hold up before our mental vision, as superior to the reality without, then let us test the phantom within by a still closer comparison with the actualities of life, let us vent the mind upon more thorough observation of life around us, before we relinquish the substance for the shadow. Let us imagine reasonably rather than reason imaginatively. The imagination may, under the dominion of the lower propensities, lead us through indefinite stretches of misery, until reason must come to the rescue, and appealing to our higher manhood and womanhood lead us to moral altitudes refreshing and full of hope.

According to history, reason was formally enthroned, under the reign of terror, during the great French Revolution. Superstition, the offspring of ignorance and imagination, was holding the reason of mankind in abject bondage, by fagot and sword, until like a volcano awaking from apparent slumber, or like a young giant bursting his fetters, reason, then drunken with indignation and revenge, beclouded by hatred and despair, begotten by centuries of oppression, leaped to her legitimate throne. May she sway us all evermore!

SOME REMINISCENCES.

Editors of The Index:—

It is undoubtedly one of the marks of real statesmanship to be prepared for all contingencies, never to be caught in the meshes of unforeseen circumstances,—one of the traits which distinguish the statesman from the mere politician. But this mental attitude is incompatible with that confidence in the intrinsic excellence of human nature which many affect and which some really seem to feel. It is not, moreover, what is called an amiable frame of mind; and yet we very frequently discover, when any genuine test of the matter occurs, not only that the censured caution was the result of superior wisdom, but that the man who has observed a safe and reasonable distrust is really more amiable than the acrimonious censor of censoriousness.

There are many who will remember the indifference encountered by Mr. Elizur Wright when he warned the nation of the impending calamity of the slaveholder's rebellion; and how Mr. Wendell Phillips, a very few weeks before the rebels opened fire on Fort Sumpter, assured us, in a public speech, that the people were suspicious without cause, that "the day of the sword and bullet had passed by, that this was the age of the pen and of ideas"; and how, even after that revolt had broken out, Mr. Seward declared to our ministers at the English and French courts, that it was merely a little family quarrel which would soon be settled without any serious consequences. A reasonable confidence in one's fellow-beings is, no doubt, a very good thing; but then it must be modified by that intellectual quality which, for some inconceivable reason, has been denominated "common-sense." We meet with much in our intercourse with men which inspires us with confidence in the excellence of their motives and the nobility of their characters; but neither here, any more than elsewhere, do we find everything rose-colored, as the French say. There is such a thing as a reasonable incredulity, which is, unfortunately, a consequence of our experiences.

I entirely agree, Mr. Editor, with a recent article of your own on the dangers to be apprehended from the designs of the Romish hierarchy in this country, feeling as thoroughly assured as yourself and one or two of your correspondents who have written upon the subject, that there is no ground for serious apprehension, provided that the people are thoroughly informed as to the machinations, plans, and modes of

Digitized by Google

action of that most astute and subtle body of men. But, notwithstanding the repeated assurances that the people are thus intelligent, a large intercourse with them must convince any one that this is not the case; and I coincide perfectly with Prof. Huxley, when he declares his conviction, that the Romish Church is the greatest menace to human liberty in existence. The ablest European leaders are of one mind in this matter, among them Mr. Gladstone, who, a few years ago, demonstrated that no genuine Roman Catholic could be loyal to any but a popish civil government; Michiels, the historian; M. Paul Bert, the republican statesman; and Prince Bismarck, the stern Prussian councillor, who has been forced to take into serious consideration a trip to Canossa. No tolerably well-informed person will attempt to controvert this position, but those who adopt the very common cause of explaining away all evil design at the expense of all logical consistency. Unfortunately, however, we cannot, in the light of notorious facts, allow this plea in favor of the ecclesiastics who control the Romish Church; and in that Church, even more than elsewhere, the body of the people constitute a herd who follow their leaders without question. The illustrious founder of Pennsylvania, who had had a large experience in the matter, solemnly warned all liberal governments against the designs of the popish hierarchy, on the ground that it bred up its subjects in the doctrine of "blind obedience."

It is the fashion just now to assert that Catholicism has nothing whatever to do with the present difficulties in Ireland; but Garibaldi, whose sagacity cannot be doubted, long ago predicted that England would yet find to her sorrow that her great struggle would be with popery in Ireland.

No one who has given even a superficial attention to this subject doubts for a moment that great injustice has been inflicted by many tyrannical landlords upon the miserable peasantry of that unhappy island, —injustice which, like all other injustice, should be remedied as speedily as possible; but who is there, on the other hand, who believes for a moment that if the priestly body, with the Pope at their head, had uttered a stern and honest rebuke of the murders and other outrages against not only the despotic landlords, but also against the tenants who were able and willing to pay their rents, as well as against even the brute beasts which constituted a considerable part of their property,—who is there, I say, who believes that those outrages would have assumed those proportions which have appalled the civilized world, and which have culminated in a stupendous crime that has at last compelled Parnell and his accomplices to utter a tardy disclaimer, and the American Land Leagues to bow to the revolted moral sense of this nation?

The heinousness of these outrages has been increased by the fact that the statesman who is now at the head of the English government has been straining every nerve, and that in the face of the most powerful and persistent opposition, to remedy the evils which all admit have been inherited and accumulated in Ireland from generation to generation. The New York *Tribune* truly says, in speaking of the murder of Lord Frederick Cavendish and Mr. Burke, that "the very men who most strongly denounce the assassination as an infamous act it is safe to say would utterly refuse to expose and deliver up the assassins to British justice." The same journal no less truly declares the Irish to be "the most unruly and lawless race on earth." And these are not the utterances of one who is unfriendly to the Irish people or who is blind to their undoubted good qualities.

Judge Black, the person who so superciliously attacked Col. Ingersoll in the *North American Review*, has lately been denouncing, before a Fenian meeting in Baltimore, the tyranny of the Irish landholders. This is quite in accordance with his ordinary cheap declamation. Like all the Northern allies of the Southern slaveholders, he affects great gentility,—though himself possessing very slender pretentions to blue blood,—and speaks in lofty style of the lack of "respectability" of the American abolitionists. When one comes to remember that among these were Mrs. Child, Mrs. Mott, Judge Jay, Mr. Edmund Quincy, and Mr. Foster, the dictum becomes doubly amusing.

Judge Black was thoroughly identified with the democratical party through all its infamous career, and never protested against a single one of its most scandalous acts, neither against Judge Torrey's atrocious decision that "a black man has no rights which a white man is bound to respect," nor yet against the fugitive slave law which provided for the dragging back of runaways, subject to all the outrages attendant upon the public sales of "slaves, horses, and other cattle," to enforced and unpaid labor, and to prostitution. I think, Mr. Editor, you will agree with me that this is a most remarkable defender of "respectability," and that his sympathy with the oppressed Irish is, to speak mildly, a moral phenomenon. He, Mr. Bayard of Delaware, and a dozen or two others less conspicuous than themselves (though some of them are possessed of greater ability), are the wretched dregs which the combination of Southern slaveholders and Northern democrats has bequeathed to the nation. The key to the mystery of this curious philanthropy is the fact that the Irish vote has been uniformly given to the democratical party, and, consequently, in support of Southern slavery. And this conspiracy of Irish Catholicism and the Southern oligarchy, with its subordinate element of political democracy, has always seemed to me perfectly natural and fitting. How, if it had not been so, it could ever have been formed, I leave for another to explain.

HOWARD WORCESTER GILBERT.

MR. SAVAGE IN REPLY TO MR. MITCHELL.

Editors of The Index:—

By his persistent misunderstanding,—it *may* be my fault,—Mr. Mitchell compels me once more to do what I do not like: ask a little more of your space and use up a little more of my time.

In spite of my flat assertion to the contrary, he seems determined to have it that in my sermon ("What are Brains for?") I was discussing the scientific relations of mind and brain. As matter of fact, I was using the word *brains* in the popular sense, as synonymous with intellect. So that—as I told him before—the question of materialism, as a philosophy of the universe, was not what I was dealing with at all. But, as he is so anxious that this question *should* be dealt with, I have no objection to saying a word or two on the subject.

I have neither time nor inclination to go over the whole ground of his last article. The *nub* of the whole matter lies in his challenge of my assertion that "*modern science has found it utterly impossible to explain mind either as a part or product of matter.*" That assertion I still hold to, and my present purpose is only to offer a few considerations in support of it. As proof of the contrary proposition,—that is, that matter does *explain* mind,—Mr. Mitchell offers first his own assertion. I shall not attempt to disprove that, but only place alongside of it my own assertion the other way. And, now that I have done that, I will express my private opinion that neither *his* assertion nor *mine* is worth any more than the value of the raw material of breath it takes to utter it.

Let us now turn to the opinions of some men who know more about it than either of us.

1. He quotes Huxley as saying, "Operations of mind are functions of brain, and the materials of consciousness are products of cerebral activity." If Mr. Mitchell will only put in *italics* the two words "functions" and "materials," in the above sentence, he will see that Huxley's meaning is by no means necessarily the one that he gets out of the statement. Pretty soon, I, too, will quote Huxley.

2. He quotes Dr. Ferrier as saying, "The brain is the organ of mind, and mental operations are possible only in and through it." As I do not know of any sensible man who doubts that statement, I have no comments to make upon it.

3. He quotes Virchow as saying, "Man has a mind and rational will *only* in as much and in so far as he has a brain." As I have never seen a man with "a mind" and "a rational will" and who at the same time was without a brain, I have no disposition to contradict that statement.

4. Next, Mr. Mitchell quotes Haeckel as saying, "The spirit and mind of man *are but forces* which are inseparably connected with the material structure of our bodies," etc. See his article for the rest of the quotation. But Haeckel himself, as reported by Du Bois-Reymond (*Popular Science Monthly*, February, 1882), holds to a doctrine of "*atom-souls*" as his explanation of chemistry. He gets rid of the spiritual element, therefore, with a vengeance!

5. Once more, he quotes Claude Bernard, who says, "From a physiological point of view, . . . consciousness, intelligence, etc., . . . *are but ordinary vital phenomena*," etc. All right. I have no objection to that. "*From a physiological point of view*," it is doubtless true. But what of it?

All this array of proof (?) proves only one thing: *that the phenomena of mind are connected with the brain.* And, not knowing anybody who disputes that proposition, I cannot waste my time nor insult the intelligence of your readers by arguing about it.

Let us now turn to the question as to whether modern science establishes materialism as a philosophy of the universe, or whether the foremost scientific men of the age defend it.

I will begin by borrowing a definition from Mr. John Fiske, in the *North American Review* for March last. On p. 263, he says, "Philosophical materialism holds that matter and the motions of matter make up the sum total of existence, and that what we know as psychical phenomena in man and other animals are to be interpreted, in an ultimate analysis, as simply the peculiar aspect which is assumed by certain enormously complicated motions of matter." This, says Mr. Fiske, "is a strictly correct description of materialism, as it was held in the eighteenth century by La Mettrie and as it is held by Büchner to-day."

Now, the question is, Do the best scientific thinkers of the modern world hold such a view? Let me arrange them in order.

1. Mr. Fiske himself declares that "materialism is hopelessly behind the age," and that it argues "a superficial mind" and an "imperfect education" to hold it. He further shows that it is utterly inconsistent with the established scientific law of the "correlation of forces." Not only does he treat the matter in this *North American* article, but also, and at length, in his *Cosmic Philosophy*. In the latter work, he ridicules it as absurd.

2. In the *North American*, above referred to, Mr. Fiske quotes Huxley as having said to him personally that "the latest and ripest philosophic speculation leaves the gulf between mind and matter quite as wide and impassable as it appeared in the time of Descartes."

3. In the *Popular Science Monthly* for March, p. 616, Mr. W. D. Le Sueur speaks of materialism as the refuge of immature minds that have been prematurely freed from the old spiritualism.

4. In the same monthly for February, Prof. Du Bois-Reymond, in his article on "The Seven World-Problems," holds that the relation of brain and consciousness is utterly inexplicable on any mechanical or materialistic theory.

5. In his *Lay Sermons*, p. 340, Huxley ridicules the kind of materialism that Mr. Mitchell defends. In his *Critiques and Addresses*, p. 314, he says, "If I were obliged to choose between absolute materialism and absolute idealism, I should feel compelled to accept the latter alternative."

6. In his *Fragments of Science*, p. 120, Mr. Tyndall affirms, "The problem of the connection of body and soul is as insoluble in its modern form as it was in the pre-scientific ages."

7. Mr. Darwin was not a materialist, as I know through a personal friend who was acquainted with him.

8. Herbert Spencer is not a materialist, as I know both from his writings, from the representations of Mr. Fiske who is a personal friend of his, and also from personal conversation.

These are a few of my "facts" as to the testimony of the *best scientific thinkers of the age*. His alleged facts from Huxley, Bernard, Ferrier, etc., have no bearing on the question; and they are quite as strongly on my side of this little controversy as on his own. Until, therefore, he can make his own facts a little stronger, or can dispose of mine, perhaps he will dispense with any further cheap sneers at "pulpit thunder." It might be well for him to remember that a *free pulpit* has the same opportunity for acquiring a knowledge of the best results of scientific thought as is open to any other modern institution.

M. J. SAVAGE.

June 11, 1882.

MISCELLANEOUS.

IT comes out more and more distinctly that the theological institution at Andover is practically dead. The *Independent* and the *Christian Union* substantially admit that there is no escape from this conclusion. According to the present status, it is held as by a death grapple to the provisional creed of 1808, which nobody believes in to-day; and its faculty and

Digitized by Google

trustees have notably failed to extricate themselves from its iron-like grasp. They had but five students in the Junior year last September, when only the Abbott chair was vacant. There are now three empty chairs, with no likelihood that they can be satisfactorily filled; and the Seminary itself is hopelessly stranded, like Noah's Ark on Mount Ararat, upon the hills of Andover. The only chance for the institution, in the opinion of the journals already mentioned, is to fashion it into a theological hall at Cambridge, as the Episcopal Theological School is already established there: and for this purpose there will be needed a fresh and large endowment, which at present is not forthcoming. Thus, it looks as if the Andover school of the prophets were dying, if not already dead. It was founded in the spirit of protest, and its dissolution comes when the children of its founders have quite generally given up the protest.—*Boston Herald.*

REFERRING to the fact that Charles Darwin's mortal remains are to repose in Westminster Abbey, the *Campo Sancto* of Britain's worthy dead, the *Presbyterian* comments thus: "Why not? Dr. Darwin was no greater destructive in his way than was the late Dean of Westminster in his. Moreover, if greatness is to be gauged by eminence, Darwin was great. No man of his generation is more widely known; no man's ability and attainments are more generally acknowledged, no man's personal and literary integrity more fully respected. He has given his name 'Darwinism' to a philosophical theory of the origin of life-forms. He has set in play human thought, and stimulated human inquiry in a measure equalled by few individuals of the human race. If intellectual sluggishness be one of the chief foes of humanity, he has thus far, at least, been a benefactor. As an original investigator, he takes high rank among students of nature; but in this respect he is not only equalled, but excelled, by many naturalists of his own times.... The time has not yet come to prophesy concerning the future position of evolution in the faiths and theories of men. Indeed, the theory has already assumed so many variations that it seems likely to most strikingly illustrate itself by fairly evolving itself into irreconcilable and unrecognizable forms, and so passing by the law of disintegration into dissolution. But it may be affirmed with some confidence that 'Darwinism' proper, or evolution by natural selection, has met so many serious obstacles that its survival is, to say the least, very doubtful. Many of the warmest advocates of the hypothesis have abandoned it; and it is evident that Darwin himself, in his later works, appreciated fully the objections of his opponents. We cannot here, of course, enter upon this point; and we leave it with the remark that the idea to which this great man devoted his life is still an unproved and, we confidently believe, an absolutely unprovable hypothesis."

OF Daniel Webster, Hon. John Wentworth, in a recent lecture, said that "to have seen him once was to have seen him always. There were his ever blue coat, white cravat, and buff vest, his massive and overhanging brow, his raven hair, dark and deep-set eye, portly form, and erect gait. During the session of the Senate and Supreme Court, he walked to and fro much of the time, in the area or lobby, with his hands behind him and under his coat, occasionally bowing to people, but very seldom stopping to converse. People would wonder if he was listening or studying out some great legal or constitutional problem. He had no taste for the details of legislation, and seldom participated in them. One speech, one great and exhaustive speech, upon the general merits of this measure was all that could be expected of Daniel Webster. He could not be called a social man, and especially in the sense that Clay was. Yet he was far from being unsocial. Every one looked upon him with a sort of reverential awe, and had a hesitancy as to any degree of familiarity. He walked to and from the Capitol with the promiscuous crowd made up of Congressmen, Supreme Court lawyers, and visitors. He had a passing acquaintance with the most of them. He never conversed upon personal and local politics. He had no hobby, no specialty, no ism upon which you could excite him, as you could Clay, Benton, or Calhoun. All his conversation was marked with cool deliberation. He would ask concerning eminent lawyers resident where persons were living, or judges in their State whose opinions had commanded his attention. Oftentimes, he would originate a conversation by quoting some abstract principle, generally of law. Occasionally, he would quote from the old Latin authors, and try to bring out discussion. If a great man should do this at the present time, we should think he was trying to dodge the interviewer. But, in Webster's case, it was but showing the natural drift of his mind. He was thinking aloud. I never heard him say one word at which any person could take the least personal offence. He could at all times converse in the most friendly manner with all his colleagues, and was about the only prominent Senator who could do so. He ever spoke to the greatest intelligence of mankind."

BOOK NOTICES.

CLAIR: A Story of Mormon Life and Perfidy. By Hudson Tuttle. Chicago: Donnelley, Lloyd & Co.

Mr. Tuttle, whom we have hitherto known as the author of such works as the *Arcana of Nature*, *Physical Man*, and *Ethics of Spiritualism*, in this work appears in a new rôle, that of a novelist, in which, however, he still bears in mind the instructive principle which permeates all his writings; and the lesson of this story is the fraud and imposture of Mormonism, which he depicts in a lively and an interesting manner. We must confess that some of the incidents draw rather too strongly upon the imagination. Still, the general tone of the book is sensible and true to nature. We give a specimen of its thought from the lips of one of its heroes: "I believe in religion, was brought up to it. I believe in religious freedom. But I don't believe it correct to call acts that, in any civilized land, would send a man to the penitentiary or gallows religion, and then claim freedom to do them at one's sweet will."

MEMORIAL ADDRESS ON THE LIFE AND CHARACTER OF JOHN JUDSON BAGLEY. Delivered before the Michigan State Pioneer Society in Representative Hall, Lansing, Mich., by George H. Hopkins, June 7, 1882.

This address gives a very vivid sketch of the life of one who may be considered a typical Western American. Of good New England descent, he inherited strong traits of body and mind, which gave him a good outfit for a brave life of work and enterprise. His mother's influence was very strong, and he might well say: "She is a Roman Cornelia. It is not an easy thing to be a son of such a woman." When her husband thought in regard to slavery, "It will all come out right at last," she answered, "Not unless we shape it." She was a well-educated woman; and she cultivated studious habits and intellectual tastes in her son, as well as high moral principles. She would ask, "My son, what permanent acquisition to your memory have you made to-day?" These "permanent acquisitions" formed the stock of apt quotations with which Gov. Bagley enriched his private conversation and public speeches in after years. In many things, John Bagley might be held up as a model and an encouragement to American youth. In one respect only, perhaps, should his life be a warning to them. In the perfection of his powers, when his ripened judgment and experience would have still better served the family he so loved and the State he so honored, he died before he was fifty years old from a neglect of simple physiologic laws,—not from gross vices, but from careless overwork and neglect of out-door life and exercise. He says of himself, "I have not lived long, but I have lived a great deal too much.... I sprang from childhood into the cares and work of middle age, and have never taken a holiday. Now, I find myself spent before I am fifty, although I started with a capital of vitality that should have lasted me till eighty." We hope that Mr. Hopkins will continue his biographical labors, and give us a full memoir of his distinguished friend, whose life is so identified with the political and reform progress of his own State. E. D. C.

IN the *North American Review* for August, Henry Ward Beecher writes of "Progress in Religious Thought," pointing out the many influences, social, educational, and scientific, which are by degrees transforming the whole structure of dogmatic belief and teaching. T. V. Powderly, the official head of the Knights of Labor, contributes a temperate article on "The Organization of Labor." Archibald Forbes writes of "The United States Army," dwelling more particularly on those features of our army management which appear to him to be most worthy of imitation by the military governments of Europe. "Woman's Work and Woman's Wages," by Charles W. Elliott, is a forcible statement of one of the most urgent problems of our time. The author sees no advantage to be derived from the employment of woman in man's work, whether of brain or of hand. Such employment, he insists, only reduces man's wages, and does not really add to the total resources of the whole class of workers. In an interesting essay on "The Ethics of Gambling," O. B. Frothingham analyzes the passion for play with rare ingenuity. "The Remuneration of Public Servants," by Frank D. Y. Carpenter, gives matter for serious consideration both to the civil service reformers and their opponents. Finally, there is a paper on "Artesian Wells upon the Great Plains," by Dr. C. A. White, of the Smithsonian Institution. The *Review* is sold by booksellers generally.

PERSONAL ITEMS.

CHARLES BRIGHT gave his second lecture at Paine Hall last Sunday afternoon. It was able and eloquent, and was listened to by an audience that was not large, but appreciative, with much interest.

REV. HENRY GILES, a Unitarian clergyman and once widely known as a brilliant lecturer on religious and literary topics, died at his home in Hyde Park, July 10, aged about seventy-five. He was of Irish birth and a Catholic by education, but became a Unitarian early in life.

THE first college in Canada to grant the degree of B.A. to a woman was that of Mount Allison in New Brunswick, at its recent convocation. Miss Harriet Starr Stewart was the fortunate young lady. She wore the usual college cap and gown as she came in with her fellow-graduates, and her well-prepared oration was received with applause.

MR. CHARLES WATTS, editor of the London *Secular Review*, and well known in England as a representative of Secularism, writes us that he has arranged to visit this country, and will arrive in New York in September, and visit Boston in October. He will be pleased to receive applications for lectures from associations or individuals that will make arrangements. Letters may be addressed to him at this office.

GEN. MICHAEL SKOBELEFF, the eminent Russian soldier and statesman, suddenly closed a short but honorable life at Moscow, on the 7th inst., in the thirty-seventh year of his age. The central hope of the Panslavic faction, the representative of "Young Russia," possessed of intelligence, a reckless heroism, a restless activity, and great personal magnetism, his untimely death cuts short a career which promised to be a singularly brilliant one. Gen. Skobeleff's disease was apoplexy.

MRS. LINCOLN, widow of President Lincoln, died at Springfield, Ill., on the 16th, from paralysis. From the shock of her husband's violent death she never wholly recovered, and from that time her conduct has never been that of a perfectly sane woman. At one time, she sought consolation in spiritualism, and imagined that she had communications with her husband and her dead sons, Willie and Thaddeus; but her trouble was evidently that of a "mind diseased," and nothing gave her permanent relief. Her conduct was often the occasion of uncomplimentary criticism by those who did not make allowance for her mental condition. Robert Lincoln, the present Secretary of War, is the only child who survives her; and his filial solicitude and tenderness did not fail in the last years of her life.

A CORRESPONDENT of the Boston *Herald* writes from Saratoga regarding Anna Garlin Spencer's address before the American Institute of Instruction as follows: "Next followed a paper by Mrs. Anna Garlin Spencer, of Florence, Mass., which was a complete illustration of the theories just advanced as to the possibilities of woman's culture. Mrs. Spencer made an exhaustive analyzation of the causes of the increase of crime among juveniles, throwing much of the responsibility upon the State, that does not get control of the children at an earlier age even than than the primary school, advocating the kindergarten as one of the necessary means. She also advised that handwork should go with head-work from the very beginning, giving as proof the statistics that so few of our criminals know trades. This was a most able production, and full of such condensed thought that no true idea of its scope can be given here."

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

CURRENT TOPICS.

OUR esteemed contemporary, the *Catholic Review*, shows its judicial spirit and capacity for an impartial estimate of one who opposed its faith, by declaring that Garibaldi "was a dime-novel hero, nothing more."

THE Connecticut Supreme Court of Errors decided at Hartford lately that women are eligible to admission as attorneys. The decision was given on the application of Mary Hall of Hartford, who recently passed a satisfactory examination as to her legal qualifications. Decisions like these will help cancel the "blue laws" slander.

THE Cincinnati *Commercial* is credited with the statement that Hubbell's Committee have sent Mrs. Garfield a letter assessing her two per cent. on the late President's salary. This is thought to be very shocking; but in meanness it bears no comparison with sending letters virtually demanding political blood-money from letter-carriers, armorers, and laborers in the employ of the government. Mrs. Garfield with her $350,000 is able to stand an assessment of two per cent. without curtailing her expenses; but the poor employés of the government, who work hard for small pay, and have to economize every way possible to "make two ends meet," cannot pay money for party purposes without taking so much from what is needed to insure the comfort of their families and the education of their children.

WHO says this is a faithless generation, when, in addition to "God's man" Guiteau, we have also John E. Randolph, a religious crank living near Pittsburgh, Penn., who has persuaded himself that the Lord is soon to visit the earth with another flood, and is now busy building an ark after the fashion of Noah's? It is two hundred and twenty-eight feet in length, and forty-eight in width, and will have a capacity of one hundred tons. He expects the flood about the middle of October. He is arranging for the reception of animals, and sending out invitations to those persons he thinks worthy of being saved. If he could secure Barnum's menagerie of animals, it would save him some trouble in collecting the different species. At any rate, Barnum ought to secure him,—that is, if the flood fails to occur.

A STRANGE baptismal scene was that lately witnessed at Frankfort, Ky., where a squad of thirty enthusiastic converts, inmates of the penitentiary, who had "experienced religion" through the labors of an evangelist, were permitted by the sympathetic authorities to undergo the rite of baptism by immersion in an adjacent river. The converts rode in wagons to the river; but each wagon was accompanied by a squad of armed guards, who had orders instantly to fire upon any prisoner or prisoners who should attempt to escape during the ceremony. Such precautions showed a great lack of faith in religion by the prison authorities. But this lack of faith doubtless ensured, better than anything else, the quietness and decorum which accompanied the ceremony. The prisoners were baptized, and then rode quietly back in care of their guards to the penitentiary.

IT is a striking commentary on the intellectual condition of large numbers of religious people in England that a sensational clap-trap organization like the "Salvation Army" should command the support even of many educated persons of devotional feelings. Even the Queen has sent the "Army" a letter of encouragement. And yet the general of this "Army" issues proclamations of which the following is a specimen: Under the heading of "War! War!" everybody is invited to "join in the fight against Old Nick!" Then follows this programme: "Monday, June 5, Salvation Charge; Tuesday, Great Exhibition of Salvation Lasses; Wednesday, Fire and Brimstone; Thursday, Roll-call, Soldiers to deliver up their Cartridges; Friday, Baptism of Fire; Saturday, Rejoicing over Victories won, All-over-the-shop-Meeting; Sunday, June 11, 7 A.M., Knee-drill, ammunition supplied by Quarter-master General; 11 A.M., Descent of the Holy Ghost; 2.30 P.M., Tremendous Free and Easy; 6.30 P.M., Great Charge on the Devil; 9 P.M., Hallelujah Galop."

SLADE, the medium, who has puzzled many people, even men like the late Prof. Zöllner, with his slate-writing feats, was recently exposed at Belleville, Ont.; and the exposure was so complete and undeniable that he confessed his trickery. When reports of the exposure first appeared, our esteemed contemporary, the *Banner of Light*, stated that the individual exposed was not Slade, the well-known medium, who was declared to be in Michigan, but another Slade, and that it was glad to hear justice had overtaken the trickster. "The New York *Sun*," observed the *Banner*, "paragraphs this 'Belleville' business as applying to the genuine Dr. Slade; but its attempt to injure a worthy medium is beneath contempt, and is too absurd to need an answer." But it turns out that the *Sun* was right and the *Banner* was mistaken. Full accounts of the exposure were given in Belleville papers. The *Religio-Philosophical* journal, one of whose representatives had an interview with Slade after his exposure, bearing in mind, evidently, his experience in England, says: "There seems to be something in the atmosphere pervading Queen Victoria's dominions which breeds a cyclone for Henry Slade whenever he inhales it." Why is this so?

WE have had quite a long respite from any Adventist's "scare." Even the notable "yellow Tuesday" of last year did not arouse that emotional sect to more than temporary interest and excitement. But it seems that England's war with Egypt is more full of portents to their minds than any other recent event. The editor of the *World's Crisis* has been studying up the subject, and has come to the conclusion that the European Conference is "another united effort of the Revelator's four angels to hold the four winds." As the *Crisis* people have come to the decision that the "four winds are certainly becoming unmanageable," we, the "worldly people," may as well resign ourselves to an outbreak of startling readings and new constructions of the Books of Daniel and of Revelation, with all that they imply, *i.e.*, "the end of time," insane-looking maps, highly colored explanatory pictures which hopelessly muddle one's brain, "ascension robes," "Gabriel's trumpet," and all the rest of it, with additions suggested by the newer converts to an old delusion. The battle of Armageddon will be fought over, the image of many metals will be repaired and put together, the dragons, etc., of Revelation will be resuscitated, and the camp-meetings of the Adventists will take on a new activity.

THERE seems to be a concurrent opinion, among those competent to judge, that Walt Whitman's *Leaves of Grass* is a unique work of a poetical genius; that, while it contains some passages which violate in a very marked manner accepted canons of taste,—passages that Emerson, while expressing admiration of the "wit and wisdom" of the book, did his best to persuade the author to omit,—the work, taken as a whole, cannot by any rule of literary criticism or by any principle of commonsense be pronounced an obscene publication; and any attempt, therefore, to suppress it by law on account of the objectionable lines is as unreasonable and foolish as would be the attempt for the same reason to suppress any book of the Bible, any play of Shakspere, or any poem of Pope or Byron. Left, as such books usually are, to gain attention by its general merits, the call for the work as heretofore would be chiefly by a class of readers little likely to be injured by the author's offences against good taste; but, advertised by "prurient prudes," like District-Attorney Stevens of this State, who calls attention to its blemishes and creates a demand from a class that, indifferent to its poetic merits, desire to read it only because they hear it contains obscenity,—a demand certain to be supplied by persons who are ready to pander to this class by giving all possible prominence to the worst passages,—*Leaves of Grass* can hardly fail to become a widely read book; and large numbers who read it will purchase it on account of what Emerson severely condemned rather than because of what he praised in the work.

MORAL JUDGMENT AGAINST WRONG-DOERS.

Last week, we considered the relation of the sentiments of justice and mercy to each other in the moral education of mankind, and dwelt particularly on the wrong done to the erring classes of society by their condemnation without adequate effort to save them. But at this particular period of the world, perhaps, quite as much harm is done by the sentiment of sympathy and forgiveness for wrong-doers, when not adequately balanced by the moral judgment which exacts a just retribution for every wrong. And, on this point, we wish to add some remarks in this article.

The safeguards of society would be at once thrown down, and the whole fabric exposed to destruction, if the vicious were to be allowed, without question, to stand on the same footing and receive the same honors with the virtuous. And, so far as there is any tendency to this laxity of moral judgment, the moral safety of society is imperilled. No greater harm can be done than when, through a fiction of words, immoral persons are counted as moral by relaxing the severity of the public opinion that should condemn them. Without elevating them in the least, the moral standard of the whole community is debased, and they are excused from the effort to elevate themselves. If men are robbers, let us call them so, as much in the United States as in Egypt, no matter how high they may have stood in social or political position: only we are to be sure that they are robbers before we call them so. If men are drunkards and libertines, let us give them those names, though they be members of cabinets or churches and are influential workers in our own party: only let the accusation be established as true before it is repeated. Nothing is so strong an indication of, as well as aid to, the corruption of public morals as the prevalent disposition to cover up flagrant vices and crimes, of a certain nature, under an evasive phraseology. The hard word *theft*, which is as destructive of a man's pretences to morality, if it hit him fairly, as a well-aimed cannon ball is fatal to his body, is too often softened into "defalcation," "irregularity of accounts," "watering of stocks,"—weak paper bullets which do little damage to one's social reputation. If a hungry boy of the street takes a loaf of bread from a baker's window, he is sent to jail as a thief. If a financial magnate of the stock-exchange steals a railroad, he may go at large, and a considerable portion of society will look up to him with admiration for his business ability. If a young man be addicted to intemperance and lust and gambling, he is called "fast"; and younger men and boys are left with the impression that these ways of living are a part of the natural enterprise of a young man.

Now, all such concealment of vice and crime under fine names is weakly to excuse them; and weakly to excuse vice and crime is to put a premium upon them. Let not the sting of a just accusation be deadened by words of velvet. Let us use the plain Anglo-Saxon terms: they are the words that, true and sharp as steel, carry home to a man the real meaning of his deeds. The courtly, diplomatic Latin has been used to tell lies and cover up crime from the beginning of the English language. People should be made to know that sin is *sin*, and not merely a transmission by heredity of attainted blood; that vice is *vice*, and not merely a misfortune of circumstances; that guilt is *guilt*,—something to be got rid of, not by finely worded confessions of penitence, by theories of substituted punishment, nor by putting the responsibility on one's environment, but by real pain and struggle and hearty honest work at reform. It is but a sickly sentimentality which would weaken the force of the old law that "the way of the transgressor is hard." There are times when the greatest unkindness that could be done to a man would be to show him that his errors may be easily condoned. Many a mother smooths the road to moral ruin for her sons, because she overlooks too readily their childish faults. The mistake is not that she has too much love, too much heart, but that her love does not look through the far-seeing eye of moral judgment; her heart is not what is called, in Solomon's prayer, "a wise and understanding heart." The result can but be morally disastrous, whenever any excess of tenderness, public or private, blinds the moral sense to the enormity of wickedness. For very self-preservation, society must wear the ermine and sit in the seat of judgment. No man should be left to feel that the eye of the community is not upon him,—that he can sin and escape the court of public opinion. There may be forgiveness for him, but no wrong-doer should be led to feel that he can be forgiven before he has been brought to trial. The accusation and the sentence and the beginning of an amended life must come before the pardon. If any will waste their substance in riotous living, they should distinctly understand that husks must be their food and swine their company. And this is a law of moral retribution that society should enforce impartially against unreformed sinners of whichever sex or of whatever social position. Poor Jennie Cramer, had she lived, would have found few hearts or homes open to her. Will the Malley young men, who wrought her ruin, if not her death, find the moral judgment of society as inflexible against them?

To sum up our remarks in last week's paper and in this, we may say, in conclusion, that the moral tenderness which overlooks and pardons guilt, and the moral judgment which condemns and punishes guilt, are equally injurious when they are separated from each other. Many are the victims whom society has crushed, apparently, to moral death by the severity of a moral condemnation, just perhaps at first, but upon which no pardoning mercy followed. Equally many are the victims who have been surfeited to moral death by excess of mercy, who have been lured to their graves by over-friendly excuses for their vices. The problem is to combine mercy and severity in healthful proportions, to be at the same time both kind and just. Only thus is the moral health of society safe. In the natural laws of morality, justice and mercy are at concord. Very pitilessly do these laws accuse us, if we violate them; for a yielding pity would be our ruin. Very pitilessly do they condemn and punish us, if we continue to disobey them; for the severity of our punishment is our salvation. Yet these same laws are intent on our benefit. When we turn to obedience, or if we continue in goodness, they are our consolers and healers. While we are scourged, we are blessed; while we are condemned, we are redeemed.

WM. J. POTTER.

A REPLY TO MR. ABBOT.

Last week, Mr. F. E. Abbot favored the readers of this journal with a review of Prof. Bowne's "Metaphysics," in which he pointed out what he regards as some of the fundamental errors of the "so-called 'modern philosophy,'" and indicated what, in his opinion, must be accepted before there can be a "truly modernized conception of the universe as a whole." The article is written in Mr. Abbot's usually clear and vigorous style, in a philosophic spirit, with a large acquaintance with the views of speculative thinkers, with evident disregard of them all as authorities, and with the fullest confidence apparently in the impregnable nature of the positions he has taken.

Having carefully read Mr. Abbot's article, we find it impossible not to dissent from some of the views he has advanced, which he deems of the greatest importance in the construction of a philosophic system. As he is a thinker who invites the closest scrutiny of his principles and reasonings, we feel no hesitation—except, indeed, from lack of ability—in presenting our views in opposition to some of his main positions.

Mr. Abbot maintains that the only logical outcome of the fundamental proposition on which speculative thinkers are agreed—namely, *that the individual mind knows only its own state of consciousness*—is "solipsism or the sole existence of the individual mind,"—an hypothesis which of course involves the notion that the mind "absolutely creates its own objects" or "originates all its own states" of consciousness independently of any objective existence.

Subjective idealism, like that of Fichte, logically carried out, does seem to demand that the individual limit existence to himself, in order to do which he must of course regard all other individuals, in common with the general external world, simply as his own mind, with its modifications due to its internal constitution. But that this palpable and ridiculous absurdity is the logical outcome of the principle that the individual mind knows only its own states of consciousness—in regard to which Mr. Abbot correctly observes, "If agreement has been reached on any one point by speculative thinkers since the modern period began, it is on this fundamental principle of cognition"—is not shown in the article here criticised, and cannot in our opinion be proved by the ingenuity of any man. We know other individuals than ourselves, just as we know all other external objects, by the effect they produce upon us, by the states of consciousness they arouse in us.

But if an individual knows only his own states of consciousness, what reason has he for believing in an external world? Evidently, the same reason that he has for believing that he exists, because primarily he cannot help believing, cannot divest himself of the conviction; because the proposition is one the negation of which is inconceivable, because the conception is one that cannot be expunged from consciousness. Further, states of consciousness come and go independently of volition, involving changes which imply something that produces them as certainly as they imply something in which they occur, something that acts upon as certainly as something acted upon. What we know are states of consciousness. Our conception of the *ego* and the *non-ego* are doubtless the result of the application of the law of causation to the facts of conscious states; but the conditions and aptitudes that predispose to it have become so inwoven in our nature that the conviction of an individual self and of an external not-self has become an intuition, a fact of consciousness, an ineradicable part of our mental nature.

And still further, in order to show that the mind can know only its states of consciousness, we are obliged to postulate objective existence. The principle of the relativity of knowledge cannot be maintained for a moment without the admission of an externality; and the very premise of idealism which is incontestable, is based upon relativity. The phenomenal existence called a rose implies, it can be shown psychologically, sight, touch, smell, etc.; but the conviction is irresistible that, even in the absence of these capacities for sensation, something persists, and that, upon the restoration

Digitized by Google

of the subjective factor, the rose as a beautiful, tender, fragrant object will reappear. The reasoning that shows that what we call matter is a congeries of qualities,—resistance, weight, extension, etc.,—and that these are names for ways in which our consciousness is affected by some unknown agency, is based upon the postulate that an objective reality exists, which, whatever be its nature, will, when the subjective factor, mind, is present, give rise to the states of consciousness above named.

"Not a step," says Herbert Spencer, "can be taken toward the truth that our states of consciousness are the only things we can know, without tacitly or avowedly postulating an unknown something beyond consciousness. . . . After finding that the same tepid water may feel warm to one hand and cold to the other, it is inferred that warmth is relative to our nature and our own state. The inference is valid only supposing the activity to which these different sensations are referred is an activity out of ourselves, which has not been modified by our own activities. . . . Hence, our firm belief in objective reality,—a belief which metaphysical criticism cannot for a moment shake. When we are taught that a piece of matter, regarded by us as existing externally, cannot really be known, but that we can know only certain impressions produced on us, we are yet, by the relativity of thought, compelled to think of these in relation to a positive cause. The notion of a real existence which generated these impressions becomes nascent. The momentum of thought inevitably carries us beyond conditioned existence to unconditioned existence; and this ever persists in us, as the body of a thought to which we can give no shape. . . . At the same time that, by the laws of thought, we are rigorously prevented from forming a conception of absolute existence, we are by the laws of thought equally prevented from ridding ourselves of the consciousness of absolute existence, this consciousness being, as we have seen, the obverse of our self-consciousness. And, since the only possible measure of relative validity among our beliefs is the degree of their persistence, in opposition to the efforts made to change them, it follows that this which persists at all times, under all circumstances, and cannot cease until consciousness ceases, has the highest validity of any."

Another position of Mr. Abbot from which we dissent is stated in the following extracts:—

The very existence of science, however, is staked on the doctrine of the objectivity of relations. The starting-point of science is, not the conscious states of any individual *ego*, but the universal experience of the human race; for science was not possible until this experience had become already vast through the accumulation of innumerable individual experiences, and had recorded itself in human language. . . . Logic requires that the things and their relations should exist inseparably, either both in the mind subjectively or both in the cosmos objectively. It is impossible for Prof. Bowne, or any other subjectivist, successfully to defend the position he has taken. . . . Granting that relations can exist only in the relating mind, then the related objects also can only exist in the relating mind; for the relations depend, absolutely and inseparably, on the terms between which they subsist. Any other statement would be totally meaningless. Yet this fundamental criticism reduces all such inconsequent subjectivism as Prof. Bowne's to hopeless contradiction.

If we do not misapprehend the central and, above all others, the significant truth of psychological science, the human mind can know nothing whatever about relations *per se*, relations as they exist independently of intelligence, and can therefore know nothing as to whether the objective order agrees with the subjective order or not. We know objective existence only as it affects us: of it apart from its relation to the conscious mind, we have no experience, and, consequently, no knowledge. But of phenomena, of the objective reality as it appears to us, as it presents itself to and is colored and conditioned by intelligence, as known to us in the only way possible, by the *states of consciousness* it produces, we have experience, and therefore we have knowledge. Beyond the region of the relative,—*i.e.*, existence as it is related to intelligence, existence as it presents itself to consciousness,—we cannot go; for the obvious reason that we cannot know anything of the universe without intelligence and consciousness. The region of the relative is the phenomenal world, and this is the domain of science. Here, we may look for "verification" in the correspondence of the subjective order of our conceptions with the objective order of phenomena, because the former is the expression of our experience of the latter.

"If," says Fiske,—to whom Darwin referred as the most "lucid expositor" he had ever read,—"the subjective order of my conceptions is such that the concept of a solid lump of iron and the concept of a body floating in water will destroy each other rather than be joined together, and I therefore say that a solid lump of iron will not float in water, what do I mean by it? Do I intend any statement concerning the unknown external thing or things, which, when acting upon my consciousness, causes in me the perceptions of iron and water and floating or sinking? By no means: I do not even imply that such modes of existence as iron or water, or such modes of activity as floating or sinking, pertain to the unknown external reality at all. . . . By my statement, I only imply that whenever that same unknown thing or things, acts upon consciousness, or upon the consciousness of any being of whom intelligence can be properly predicated, there will always ensue the perception of iron floating in water; and, in stating this, I only reveal my incapacity for conceiving that, under identical conditions, the unknowable can ever act upon human intelligence otherwise than as it has always acted upon it. In other words, I am showing that I cannot transcend experience [states of consciousness], and I am reaffirming, in the most emphatic manner, the relativity of all knowledge."

It is only when the mind ceases its chimerical search for the "thing in itself," and recognizes the principle of the relativity of human knowledge, and makes the order of the phenomenal world the object of its study, that either science or a "scientific philosophy" becomes possible. The general foundation of science is the experience of the human race; the experience of the race is made up of the experiences of individuals; and the experience of every individual is his own states of consciousness. The changes of consciousness constitute the materials of knowledge, which, classified, we call science.

We entirely agree with Mr. Abbot when he observes, "The only difference between the special sciences and a truly modernized philosophy must be that the former aims to explore the cosmos in its parts and details, while the latter aims to explore it in its unity and universality." In this sentence, he states the view of those who accept what we regard as the "truly modernized philosophy,"—a philosophy which he criticises and would have replaced with a philosophy which is but little advanced, so far as one can judge from his article, beyond the so-called "Common Sense Philosophy" of Reid. John Fiske, in stating Spencer's as well as his own position, says: "While science studies the parts, philosophy studies the whole; while science, in its highest development, is an aggregate of general doctrines, philosophy, in its highest development, must be a synthesis of all general doctrines into a universal doctrine. . . . But, from what has been brought forward, it at once appears that philosophy differs from science in the greater generality, abstractness, and remoteness of the relations which it formulates, and also in its larger and more complex organization of general truths into a coherent system."

It is with this view of its aim and scope that men like Darwin and Huxley, Spencer and Lewes, have been able to redeem philosophy from the reproach brought upon it by those who believing they could find out "the absolute" or "the thing in itself" or could know the objective world as it exists, apart from the percipient mind or the condition imposed upon it in the act of knowing, diverted attention through many centuries from useful studies, and confused themselves and the world with their barren speculations and unintelligible controversies. Practically, Mr. Abbot is in harmony with the men who have enriched philosophy by their brilliant discoveries; but, in our opinion, the doctrine which he defends, that we can obtain knowledge of the objective world, and its relations, whatever they be, as they absolutely exist, or as they exist unrelated to consciousness, *one of the factors of phenomena*, involves a fundamental philosophical error, a step backward, demanding as it does that we disregard the principle of the relativity of knowledge, and opens the door for speculations and controversies such as have, without solving any problem whatever, bewildered the minds of men through more than thirty centuries.

B. F. UNDERWOOD.

CARDINAL NEWMAN AS VIEWED BY A LIBERAL.

The sketch of Cardinal Newman in the June *Century Magazine* is an admirable instance of the generous and ever-tender treatment which one person may give another, standing at a pole of thought the very reverse of his own. There is so much unseemly haste in these days in judging of those who differ from us, so much of wanton depreciation of ideas and interests that no longer engage ourselves, that it is a positive pleasure to turn over the pages of Mr. Paul's article, which is not without a quiet charm of style as well as spirit. He is himself, as he tells us, "a Liberal of the liberals, one of those, therefore, falling under Dr. Newman's stern disapproval"; and the subject of his sketch has been in his life one of the most subtle and profound and persuasive foes of Liberalism which this century has seen. Yet he writes with "the affectionate sympathy of a pupil for a master whom he cannot follow" (to quote his own language), and accords Newman the praise of being the one English writer of transcendent intellectual and literary merit left by the deaths of Carlyle and George Eliot.

What is it that has so won Mr. Paul, as indeed not a few who have never known Newman personally and have no sympathy with either his earlier or his later faith, but are somehow charmed with his writings, so that they feel almost a personal affection for him, as they read? Doubtless, it is partly his rare moral purity and earnestness and elevation, but probably also to some extent the singular simplicity and openness of his mind, the feeling evidenced so long as he was running his intellectual career (for he frankly tells us it ended, when he entered the Catholic Church) that there was more to learn, new positions to take, and that there was to be some great goal as the end of all his questions and struggles. In a word, we see in him a man growing: in reading a sermon of his, we seem admitted to the interior processes by which notable intellectual history is made. And of how many men at the present day, or indeed at any time, can we say that they have an ordered and hence a significant mental history? This is not saying that Newman began, as the genuine philosopher must, with a questioning of the most fundamental theological premises: he did not. He seems to have accepted the ordinary Christian doctrines, which Protestant and Catholic have in common, without question. But his keen mind revealed to him soon the various inconsistencies of Anglican Protestantism; and, as he was not to be moved in his fundamental Christian faith, progress and the truth

Digitized by Google

could lie to him only in one direction. Protestantism is a compromise between two orders of thought; and honor must be given to the man who reveals this clearly to us, and is clear and consistent in his advocacy of one of those orders, though it be not the one in which our own thoughts move. The story of his change and growth of opinion, as told in his *Apologia pro Vita Sua*, which, says Mr. Paul, has become classical and is, or ought to be, known to all students of religious life, of psychology, or of pure and vigorous English. Starting, as already said, with certain presuppositions, he seems to be constantly learning, moving, getting fresh insights; and he does not stop till he is at the feet of an Italian monk, asking reception into the Catholic Church. His mental changes laid him open to many suspicions. J. A. Froude, whose elder brother was one of Newman's dearest friends, and who was himself, as Mr. Paul informs us, in a measure and for a time his disciple, says of Newman: "He is supposed to have been insidious, to have led his disciples on to conclusions to which he designed to bring them, while his purpose was carefully veiled. He was, on the contrary, the most transparent of men. He told us what he believed to be true. He did not know where it would carry him. No one who has ever risen to any great height in the world refuses to move till he knows where he is going."* This last sentence reminds one almost in words of Cromwell's saying, "A man never rises so high as when he knows not whither he is going."

This fine openness of Newman's mind and readiness to follow whither truth should lead are touchingly reflected in his lines beginning

"Lead, kindly Light! amid the encircling gloom,"

written, according to Mr. Paul, at sea, in an orange boat, between Palermo and Marseilles, while seeking a rest from the agitations of life at Oxford. The hymn, for as such the lines have come to be used, is remarkable as containing not a single dogmatic word or phrase, and scarcely a conception to which the freest of thinkers—who have not lost all cause for reverence or aspiration—can take exception. It is so simple and unaffected that we are sure it came straight from the heart of the suppliant, and before we know it we find that we are breathing its aspiration ourselves. It is true that other problems engage us now, that our "encircling gloom" is no longer as to whether the Anglican or the Catholic is the true church of God. It is not even so much as to the nature of deity or the issue of our individual lives as to the more pressing and serious problems of human want and injustice and wrong. Where is the light that shall guide us in *their* solution? By what means shall we cause this thick darkness that must oppress every just and generous human heart to dissipate? We would fain believe that none of human ills are really necessary or irremediable, that a light exists which can guide us in lessening and finally abolishing them, that there is a haven into which human society and every human life can enter, if but the light be sought, wooed, and followed. It is the light to which conscience bears witness, the light of no dogma or speculation or theory, but of a command which imposes upon us the reshaping of each one of our individual lives and the reformation of human society. The command is, respect for the humanity of every man, dare not to use him as a means merely for your own ends, and own as a law for your own life only one that lifts others with you. The ideal must be, as Matthew Arnold somewhere says,

"A *common* joy lifting mankind again."

And, though the special theological opinions of the great Cardinal have little interest for us, the spirit of eager looking which he manifested, his readiness to obey, his willingness to renounce all attachments inconsistent with open loyalty to the light as he saw it, are for our imitation and re-creation, and, in connection with fundamental moral premises,—namely, as to the wrong that is and the right that ought to be,—may make another religious movement, which, instead of fearing and disowning the modern view of life, will supplement and complete it.

W. M. SALTER.

Good Words, copied in Boston *Pilot*, Aug. 6, 1882.

M. RENAN ON AMERICAN POPULAR INSTRUCTION.

In Matthew Arnold's famous article in the *Nineteenth Century* of last month, M. Renan is quoted as saying that "the United States have created a considerable popular instruction, without any serious higher instruction, and will long have to expiate this fault by their intellectual mediocrity, their vulgarity of manners, their superficial spirit, their lack of general intelligence." The trouble both with M. Renan and Matthew Arnold is that they have never seen America nor had any personal experience of things American. To the man who had never smelt a pink nor rose nor violet, no amount of description would convey to him a correct idea or any idea at all of the effect produced on the olfactory nerve by either of the above flowers. So in regard to locomotion by steam, whether by land or sea, it is so great an innovation on the old-fashioned, natural modes of travel that, to one having no experience of it, no mere oral description would convey any but an inadequate idea of it.

In like manner, a great, self-governing people, dwelling on a soil with no traditions of personal government or despotism, civil or ecclesiastical, must be seen and studied to be understood. Even M. Renan, with all his contempt for American popular instruction, must agree that it was a great feat to do away with "the peasant," or barbarian, of civilized society altogether, and to lift entire populations, *en masse*, to such a high average social and political plane as to remove them entirely from the condition of "the lower orders," as they exist in every European country.

We have no lower orders, no peasants, in the European sense of the word,—of native growth at least,—in our common-school States. And their elimination has been due largely, of course, to our system of popular instruction. It is true that average American popular intelligence, from the stand-point of the scholar, idealist, and thinker by profession, is superficial and unsatisfactory. To a man of the cloister or "student's bower," like M. Renan, it is not intelligence at all, but the negation of it,—mere unintelligence. But what is the intelligence of the average European of the higher classes, when put in comparison with that of the professional philosopher, investigator, scientist, and historic student? It is of as low an order and as vulgar as that of the average common-schooled American citizen of respectable character.

The average American citizen is not a scholar, technically so called; but he is sure to be sufficiently literate to cope with all the ordinary exigencies of a life in which he may be called upon to act even as a legislator. His intelligence is not philosophic, scientific, literary, or artistic, any more than is that of the average gentleman of the better classes in European countries; but it is a practical, matter-of-fact kind of intelligence, which renders its subject perfectly competent to deal successfully with the problems of every-day life, to govern himself and his household, and to coöperate in the government of his immediate locality and of his entire country.

The average American citizen of the common-school States, who is of good habits, where he has his way to make in the world,—and most Americans have their way to make in life,—generally succeeds in placing himself and his family in admirable worldly circumstances by his enterprise, initiative, and "smartness," as to residence, dress, food, opportunities of education, and all the apparatus which make life enjoyable, agreeable, and even elegant. Average American citizens, by means of their enterprise and the intelligence imparted to them by our system of popular instruction, have covered New England, New York, Michigan, Ohio, and the great States of the North-west, with innumerable elegant abodes, environed by beautiful, cultivated areas, such as were never in any other country occupied by an average population. They have transformed the vast wildernesses within the memory of living generations into "gardens of a finer race."

In such splendid average homes as they have reared, "the power of intellect and knowledge, the power of beauty, the power of social life and manners" will not fail in due time to exhibit themselves. What communities of his beloved Roman Empire, even under his philosophic and wise Emperor, Marcus Aurelius Antoninus, can M. Renan point out, which exhibited a moiety of the prosperity, intelligence, and ind vidual and popular well-being exhibited by the above recently settled American States? The fact is M. Renan is both by race and habit a dreamer of the past. He is therefore incapable of understanding or sympathizing with Americans or American institutions. For the American is essentially the man of the present. He dwells on a continent with no civilized human past, to speak of, to distract his attention from the things, interests, and ideas of the current hour. He is therefore not a sentimentalist. For a nation without a history and dwelling on a vast area of this planet which only became annexed to the domain of civilization and history in the last years of the fifteenth century of the vulgar era, M. Renan can feel nothing but a scarcely concealed contempt. Such a community is to him infinitely prosaic and commonplace. It is in the lands of the past, especially in that land of Adonis with which he has forever linked his own name and that of his sister,—it is in the lands of the past, I say, where M. Renan finds himself most at home, reconstructing in imagination long-vanished social and political systems, and fondly recalling long-perished priesthoods and imperialisms. In such lands, and not in a purely modern country like the United States, where all is in the sap and green leaf and where decay's effacing fingers have left no mark, the genius of the author of the *Vie de Jésus* lives and works *con amore*. M. Renan is of Celtic race, his ancestry migrating from St. Renan in Cornwall long centuries ago. He is of course a liberal Celt, so far as thought and religious belief are concerned; that is, he places the truth above all other considerations.

But M. Renan is not a political or social liberal. He hates the multitude, and he hates an elective government. He is at bottom a genuine Celt, governed by sentiment rather than reason; for the Celt remains forever in love with a far past. His ideal commonwealth is not a free, progressive republic of to-day, full of popular intelligence, prosperity, and liberty of thought, speech, and action; but it is some "isle of saints" of long ago, to which he looks back with an unquenchable longing and desire to reproduce it in the busy, rational, practical, scientific world of to-day. The Celt demands priesthood and royalty rather than liberty, for which he knows himself radically unfitted by his passionate, turbulent, unpractical nature. But his ideals cannot be gratified in the world of to-day.

Digitized by Google

"The mechanism of modern progress" is too strong for him; and, therefore, the sooner he gets into line with the strong, practical, freedom-loving Anglo-Saxon race, with which his lot is cast in both hemispheres, the better it will be for him.

B. W. BALL.

RELIGIOUS RESULTS OF DISESTABLISHMENT.

In my last article, I spoke of the influence of disestablishment of the English Church on the political life of the country. What will be its probable influence on the religious life in England? This is not so easy a question to answer as the former, and dogmatism here would obviously be quite out of place. A few detached thoughts alone can be said to be in order. Disestablishment will certainly produce far greater tolerance and charity than exist at present. It is of course too much to expect that the clergy of the Episcopal Church will recognize the ministers of other religious denominations as on a footing of perfect equality with themselves. The Episcopal theory as understood and held in the Anglican Church will forbid that, whether the Church be connected with the State or not. But the Anglican clergyman will have lost by disestablishment that position of social preëminence which at present enables him to look down upon the inferior person who ministers to a non-established sect. From this will result a different and far juster estimate of men than at present prevails,—an estimate, namely, based on ability instead of on social prestige. Of course, any change is to be heartily welcomed, which leads to a more just classification of men; and hence it is that a republic, like the United States, is so greatly superior to a hierarchical country like England, where artificial differences obliterate the true lines of distinction founded on internal qualities and intellectual powers. Then, again, heresy and liberal teaching will have, as it seems to me, a better chance in England, under a system of religious equality, than at present.

There is in the Church of England a very considerable amount of religious liberalism, not only as represented by such eminent teachers as Jowett, Abbott, Haweis, and others, but also among obscure parsons of whom the world is never likely to hear. If one is to credit all that he is told, the leaven of disbelief would seem to have been working widely among the clergy. Now, every clergyman who has inwardly renounced Orthodoxy is in a more or less false position. Some have discovered this; and the finest spirit of the Anglican Church—Stopford A. Brooke—has boldly and manfully withdrawn from a Church which imposed upon him the fetters of intellectual bondage. The liberal clergy in the Church are there mainly because of the laxity of state rule; for our Sadducee Parliament is of course favorable to any condition of things which preserves peace between Liberals and Orthodox. But, when state supervision has given place to spiritual self-government, the earnest religious people of the Anglican Church will probably not care to purchase liberal support at the expense of intellectual insincerity; and they will therefore insist on the creeds being upheld by all the clergy.

Those clergy, therefore, who have really ceased to believe in the creeds in any intelligible sense, may be expected to withdraw from the Church, and to found independent congregations, as Mr. Stopford Brooke has done. It will certainly be well-nigh impossible to maintain union between Evangelicals, Ritualists, and Broad Churchmen; and some secession will, it would seem, become inevitable. The extreme men of each school may therefore be expected to depart from the fold; and the residuum is likely to be, what Anglicanism has always been, practical, moderate, respectable, and somewhat cold. Evangelical dissent will, therefore, probably be strengthened by the accession of some of the Evangelical clergy, while the Church of Rome is almost certain to gain some of the extreme Ritualists. It is of course the knowledge that such things are likely to happen which intensified the feeling against disestablishment of such eminent Broad Churchmen as the late Dean Stanley. They wished to preserve union and historic continuity, but at a price which earnest sincerity cannot tolerate.

But, further, disestablishment, it seems to me, is likely to promote a deeper religious life in England. Religion in England is at present so much an affair of machinery and officialism and public respectability: this is largely, though of course not wholly, caused by state patronage. There is a story told by Henry Crabb Robinson, in his interesting Diary, about Lord Chancellor Thurlow, which well illustrates this official side of Anglicanism. A deputation of dissenters waited upon that not very pious personage, to urge upon him the repeal of the Test and Corporation Acts. His lordship answered them in these words: "Gentlemen, I'm against you, by G—. I'm for the Established Church, d—n me; but I'm only for the Established Church, because it is established, and, if you'll get your d—d religion established, I'll be for that too."

Happily, England is in a better condition than in the days of Lord Thurlow; and yet this remark of his expresses the real sentiment of the majority of our politicians who support the Established Church, and their spirit necessarily affects the whole body. Now, disestablishment will bring men down from the atmosphere of social fiction to the solid ground of fact and truth: it will compel them to "clear their minds of cant," and so will be productive of real moral benefit. Spiritual union will be discovered to be determined by spiritual affinities, and not by the accident of parish boundaries. Religion will be perceived to be the groundwork of human equality, and the most powerful instrument of social regeneration, — not an affair of Queen, Lords, and Commons, an agent of police, and an appendix to the British Constitution. Religion in England will cease to be political, and will become human. Disestablishment will not immediately produce this, but it will lead up to it; and therefore is it to be welcomed as a priceless benefit to the English people.

WILLIAM CLARKE.

CAMBRIDGE, ENGLAND.

EDITORIAL NOTES.

THE address of Wm. J. Potter, until September, is Bass Rock House, Gloucester, Mass.

WE shall print next week an article entitled "A Danger in the Republic," by Miss M. A. Hardaker; one on "The Creed of Science," by John W. Chadwick; and an article on "Prayer," by Capt. Robert C. Adams.

A LONDON clergyman makes a charge of one pound a year to women who want spiritual advice. When such religious consolation takes the form of a simple commercial transaction, it will lose much of its sacredness, as well as some of its romantic allurements for weak, sentimental, and clergy-worshipping women.

SINCE we receive every week advertisements which by the principles of this paper are rigorously excluded from its columns, it may be well to state that no advertisements of quack medicine or of spurious articles of any kind, and no advertisements which there is reason to believe are fraudulent or false in their representations, will be inserted in *The Index* at any price or under any circumstances whatever.

A CONCORD friend makes the following suggestion: "Dr. Bartol has this morning made the common charge, 'Unbelief is not true, because unbelievers are not happy.' Would it not be well for you to invite correspondence from come-outers willing to say whether they and their friends are happy or unhappy, and by and by give the results in a pamphlet, after printing what you can of the letters in your columns as they come in? I can give clear testimony myself, as I know you can."

THE Concord School of Philosophy appropriately devoted last Saturday to a commemoration of Emerson. The exercises were held in the town hall, instead of the small chapel; and the hall, which was tastefully decorated for the occasion, was well filled at both the forenoon and afternoon sessions. Many excellent things were said,—by Dr. Bartol, who read the chief essay of the day; by Mr. Alcott, who read a poem; and by Mrs. Howe, Dr. Harris, Mrs. Cheney, Mr. Albee, and others, who spoke to some point, either of Emerson's books or character. But, after all that has been said and done, nothing as yet seems adequate to commemorate Emerson.

ONE of the journals in this city, the *Investigator* observes, "contains no less than *twenty-eight* advertisements of clairvoyants who profess to reveal secrets; and thousands of people really think that they do. But, if they could, we would not see a statement like the following going the rounds of the press: 'Christian Ross says he has spent $60,000 to find Charley, and has examined over three hundred lost children, but has never heard a lisp of the boy since. Soon after the abduction, the thieves promised to return him for $20,000.' Now, what a chance is here for clairvoyants to convince Mr. Ross that his son is alive or dead; and not only this, but to establish the 'science' beyond a doubt, and obtain a handsome reward besides! But, no: it cannot be done, or at least it is not done. Yet our esteemed spiritual brethren keep saying that clairvoyance is a fixed fact. There must be a mental screw loose somewhere."

THE special Concord correspondent of the Springfield *Republican* writes that "the followers of Hegel" did not disagree with Dr. McCosh when, last Saturday, he "declared that America ought to have a philosophy of her own"; and that "Mr. Alcott spoke in extension of the views of the Doctor on the subject of a distinct American philosophy, which he said the Concord School, in its modest way, was aiming at." Think of that,—America to have "a philosophy *of her own*"! A philosophy manufactured under the stars and stripes and the outstretched wings of the American eagle—speculative native Americanism, or metaphysical Know-nothingism—can alone satisfy the philosophic demands of this country. Now that it is proposed that America have "a philosophy of her own," will somebody move that she have also a *science* of her own? We might begin with constructing an American science of mathematics.

"THE talk provoked by Zola's latest book," says the *Transcript*, "has inspired a delegate to the French Legislature to introduce a bill probibiting the publication of foul literature as a *feuilleton* in a newspaper. The motive of the delegate is unquestionably good, but the difficulty will be to make a clear definition of foulness. As, however, the French are able to check the tendencies of dramatists in any direction considered dangerous to the public welfare, they will doubtless find a way to keep the literature which finds its first public among newspaper readers reasonably clean.

Digitized by Google

It is becoming evident to the French themselves that the spot of moral corruption touched on in this proposed legislation is one which must be treated for cure under the republic. The monarchy or the empire in France might co-exist with it, but not institutions absolutely depending on widespread common virtue and self-respect among the units of the State."

EXAMINATIONS of the records of crime show that great obtuseness of the moral sentiment in criminals is often accompanied by strong religious faith. Recently, in France, a woman's paramour was murdered for purposes of gain by the woman, her husband, and a brother-in-law, the woman acting as a decoy for the victim of this base scheme. In her confession of the crime, the woman said that, having an hour to spare before the arrival of the victim at the place of assignation, she "passed the time in prayer in a church near by." Another case is furnished by the Protestant minister who, having killed his wife in order that he might marry another woman, declared, just before he was executed, that he had made his peace with God; and his only regret was that, having killed his wife suddenly, she had no opportunity for repentance, and he would not be able to meet her in heaven, whither he was going. In Guiteau, we had a striking illustration of religious belief and devotional feeling, unaccompanied by moral sensibility.

WE are permitted to state, upon the authority of Prof. Youmans, the editor of the *Popular Science Monthly*, that Mr. Spencer will not sail from England till August 12. It is understood that he will first go to Newport, and remain there till the arrival of cool weather. Then, he will proceed upon his tour throughout the country. Great efforts are being made to have him accept invitations to public and private receptions, but his health is so poor that he is obliged to avoid all social excitement. He is a victim of insomnia, and, unless he is quiet, he loses his sleep to the great detriment of his strength. This is of course extremely unfortunate. Mr. Spencer has hosts of admirers in this country, perhaps more than in England, and they are anxious to show, in the usual way, their appreciation of his great genius. Did his health permit, and were he not averse to all display, we feel sure that few English writers, if any, who have visited this country would receive heartier receptions and ovations than the author of one of the most important works of the age.—*Rochester Democrat.*

"WE observe," says the Springfield *Republican*, "that the stricter orthodox apologists always assume or imply that the rejection of their doctrines argues 'an evil heart of unbelief,' an unwillingness to submit to the authority of God and the strict requirements of his law; and they often attribute the embezzlements and defalcations of the time to the abounding scepticism of the age. If they were right in this, might we not expect to find the vast majority of defaulters and betrayers of public trusts outside the Church, and among the sceptics and liberals? But the fact is certainly far otherwise. Indeed, we hazard nothing in saying that the standard of morals among the rejecters of Orthodoxy is at least as high as it is in the Church itself. But it is none too high among either class, and neither has occasion on this score to cast stones at the other. That there has been an improvement in this respect in the attitude of the churches and pulpits within the last few years must be gladly acknowledged, and we believe still greater changes will come in the near future."

THE Land League is not exempt, it seems, from difficulties that have impaired the efficacy of many organizations: —

We have, says the New York *Tablet*, tried to fathom the reasons that keep valuable men aloof from organizations in the success of which their hearts are enlisted. At the risk of giving offence, we must frankly state that the fault is not so much theirs as that of the men themselves who denounce them for not actively coöperating with them. It is to be regretted that Irish organizations are too often controlled by arrogant, vulgar men, who will not brook opposition, and whose rudeness drives away decent men in disgust. Such men are too ignorant to listen to reason, or to tolerate the opinions of intelligent, thinking persons. . . . The Parnell Land League of this city had among its members wealthy men who gave freely both their time and their money to the cause of Ireland; but, we regret to say, they are dropping from its ranks in disgust at the conduct of a few cranks who want to rule or ruin. To such an extent has this low, vulgar annoyance been carried that at a recent meeting persons whose views did not accord with those of the "gentleman" alluded to were denounced as "swallow-tail gentlemen," "kid-gloved aristocrats," and the like, and were actually threatened with violence.

"NATURE," of July 6, contains an article on "Education in the United States," from which we quote the following:—

The schools requisite to supply education to so widely spread a population as that of America are far more numerous than in our crowded country. Naturally, therefore, it is a great difficulty to find sufficient teachers properly educated and qualified for this important work. It might seem at first that, in a country where, on an average, each individual is better educated than in England, there would be no lack of able teachers: but teaching is an art requiring a technical education as much as any other art; and the work of those who have not had this technical training is as clumsy as most amateur work is, and is found to have the fault of superficiality. The Bureau of Education is simply an office of information and reference. It has no central control over the various States; and one result of this is that no uniform standard of capacity is required of those who present themselves as teachers, and two standards are to be found, not only in the same State, but in the same city. A more unsatisfactory difficulty still is the favoritism and even corruption not unfrequent in appointing and dismissing teachers, who in many cases seem to go in and out of office like the nominees of a government.

AT the opening of the Concord School of Philosophy this month, Mr. F. B. Sanborn read an ode in which we find the following lines:—

"Now, Avon glides through Severn to the sea,
And murmurs that her Shakspere sings no more;
Thames bears the freight of many a tribute shore;
But on those banks her poet bold and free,
That stooped in blindness at his lowly door,
Yet never bowed to priest or prince the knee,
Wanders no m re by those sad sisters led.
Herbert and Spenser dead
Have left their names alone to him whose scheme
Stiffly endeavors to supplant the dream
Of seer and poet, with mechanic rule
Learned from the chemist's closet, from the surgeon's tool.
With us, Philosophy still spreads her wing,
And soars to seek heaven's King,
Nor creeps through charnels, prying with the glass
That makes the little, big,—while gods unseen may pass."

If Mr. Sanborn, with all his devotion to antiquated thought, had given a little time to the study of Herbert Spencer's philosophy, he would at least have been able to avoid downright misrepresentation and gross injustice to one of the world's bravest and best thinkers. Poetic license may cover a multitude of literary sins, but it cannot excuse a man in going out of his way to sneer at a philosophy which he does not comprehend and therefore cannot fairly state. Such allusions to Spencer's philosophy as the above, common enough in orthodox sermons, were hardly to be expected in a production from a Concord philosopher.

IT is an old saw that there is no absurdity of thought or belief which has not been formulated into some philosophic system or theology. Nevertheless, there are philosophies and theories the study of which afford a good discipline to the mind, and brighten it with gleams of truth. There are now admirable digests of the history of reflective thought, which put one compendiously and summarily in possession of a knowledge of it, so that we can learn readily how each historic generation has looked at men and things, and what their theories and beliefs have been. For a long time they were sufficiently absurd,—necessarily so. Master-minds have not been wanting, from time to time, who have shed light on the problem of man and nature. These have been the beacons which are seen flaming here and there in "the dark backward and abysm of time." It was a groping hither and thither in the dark for ages. At last we have emerged from the twilight of the past, and stand on a mount of clear vision. Really, modern live people are remarkable for their reasonableness, openness to truth, tolerance and fairness. It is an excellent mood, and indicative of better and better times ahead. Men have concluded to go to work and "save themselves" right here and now, by the aid of their own intelligence and reason. Knowing exactly what the dead past amounted to, we respectfully but firmly decline to be any longer guided by its farthing candles, with the electric light of truth available to guide us. Some people profess to feel very sad that mankind are fast leaving *en masse* the old glimmering, dimly-lighted theories of the past and stepping out into the daylight; but it is not a questionable or lamentable procedure at all.

THE *Christian Register* remarks that "even the most fervent preachers of the most ardent Orthodoxy cool off about this time, and the revival dwindles into inanition"; but that "the doctrine can still be found by those who hunger and thirst for it," and quotes in proof of the statement the following from the *Treasury of David*, by Rev. Charles H. Spurgeon: "The moral who are not devout, the honest who are not prayerful, the benevolent who are not believing, the amiable who are not converted,—these must all have their portion with the openly wicked in the hell which is prepared for the devil and his angels." There are whole nations of such. The forgetters of God are far more numerous than the profane or profligate; and, according to the very forceful expression of the Hebrew, the nethermost hell will be the place into which all of them shall be hurled headlong." The *Register* adds, "With the moral, the honest, the benevolent, and the amiable in the nethermost hell, the state of society will not be bad, whatever be the state of the atmosphere." The belief in a savage God and eternal torment exists as a sort of theological survival in the most enlightened communities. We heard it preached at an out-door meeting at a popular seaside resort last Sunday; and, from one of the tracts handed us by a weak-faced young man, we give the following sentences: "Who knows whether you may not go from reading this tract to meet your death, and after that an angry God, our God, who is a consuming fire, a terrible, righteous judge? Reader, will that be your lot? Will you be among the number of those who shall want even a drop of water throughout eternity? . . . You are out of hell *to-day;* to-morrow, you may be there *forever.* Settle it now. Not by trying to make *yourself* any better, for that you can never do, but by coming to, oh, *such* a Saviour! that gave *his life a ransom for yours.* . . . Only BELIEVE this word of God, and you are SAVED now, and saved forever." The thought of the preacher was about on a level with that of this tract, and his utterances were received half derisively by many, and seriously by few, if any. At the close of the benediction, some rough fellows shouted, "The circus is over!" and the crowd dispersed.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

The Index.

BOSTON, JULY 27, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

POETRY.

For *The Index.*

MANSIONS AND MAN.

'Tis but the "crumbling ruins of the past"!
Yes, friend; but sacred ruin-stones to me
This fallen heap of moss-grown masonry,
Whose legends golden of its life of use
Enriched my childhood's treasure-house of lore.
For this was part of an ancestral pile
Rearing its walls to meet the smiling heaven,—
Supporting yielding vines and ivies green,
That could not stand without its welcome aid;
Nourishing all the fair domestic life
It held within its bosom, shelt'ring aught
With fear and pain distressed If shades of night
O'ertook the wand'rer on the lonely wold,
Or helpless innocence or maid forlorn
Invoked its genial warmth or grateful shade,
How gladly was bestowed the happy boon!

Rebuild the "crumbling ruins of the past"?
Yes, friend: the waiting blocks are sound and fair,
'Tis but the mortar that hath fallen prone,
Eat by the tooth of Time, that never stays
Its ravages through nature's broad domain.
I'll find me out a death-defying link
To bind again these square, substantial stones
Into their place, and build a mansion brave
That Time cannot destroy nor cause to yield,—
Which shall endure unto eternity!
O marvellous old pile, so noble, grand
In thy belongings,—palace of great worth,
Fair promise of a tower of strength,—and such
Thou wast for ages till the spoiler came,
How art thou prostrate in thy stalwart prime,
Losing, with thy consistency, thy strength!

Rebuild the "crumbling ruins of the past"?
Yes: that were wiser than to pass them by
And freshly quarry-marked material choose.
Scorn not the Wisdom of the ages: grasp
Its fertile aid to help thy future on!
Many foundation-stones are solid there:
Loose not a block, save when a certain flaw
Presents itself, which may impair the strength
Of the eternal Temple we will rear.
When they of old took counsel each with each
And planned, as we, to their most perfect thought,
The Higher Law was not revealed as since.
Now know we Truth and Justice only can
Be bases sure for building: lay them broad and deep
With strong cement of Charity to man,
And wreathe our high fraternal walls in love,
Faith, grace, and sweetness of a grateful heart.

LITA BARNEY SAYLES.

SHELDON SPRINGS, VT., June, 1882.

I FEAR that what is called religion, but is perhaps pew-holding, not obeys, but conceals the moral sentiment. I put it to this simple test: Is a rich rogue made to feel his roguery among divines or literary men? No? Then, 'tis rogue again under the cassock. What sort of respect can these preachers or newspapers inspire by their weekly praises of texts and saints, when we know that they would say just the same things, if Beelzebub had written the chapter, provided it stood where it does in the public opinion?—*Ralph Waldo Emerson.*

For *The Index.*

How Virtue and Vice are Transmitted.

BY F. M. HOLLAND.

Different philosophies lead their adherents to solve this problem in various ways, but with similar results. Those who believe the moral sentiment a divine gift, given fresh and pure to every new-born child, will be slow to admit that it can be inherited. Those who consider moral ideas as innate cannot consistently suppose them to be derived from former generations. Those who consider conscience the voice of God must repudiate the idea that it is merely an echo of the past. But even those who hold such views will probably admit that the growth of conscience and the moral sentiments may be helped or hindered by tastes and habits which can be inherited. And writers of the opposite school, while laboring to specify what is inherited, have explicitly maintained that the moral feelings are not. Alexander Bain declares that, owing to its comparative rarity of manifestation, to its great complexity, usually underrated, and to its compulsory nature, "Of all important mental products, the moral sentiment is about the least favorably situated for transmission by inheritance." Again, he states that "There are no moral instincts, properly so called." (*The Emotions and the Will*, third American edition, D. Appleton & Co., 1876, pp. 55 and 56.) But after using the phrases quoted, Prof. Bain goes on thus: "In declaring against the intuitive character of the sentiment, I freely avow that certain powers belonging to us at birth are indispensable to the growth of our moral feelings, which powers, one or all, may have been developed through the cumulative experience of past generations. Into the moral sentiment there enter first and most conspicuously, the ordinary action of will, prompting us to avoid pain and court pleasure; secondly, the power of sympathy or disinterested impulses; and, lastly, the operation of our leading emotions, as fear, love, anger, and others. All these are primitive or inborn powers of the mind, and as such are open to be accounted for by the hypothesis of development. The finishing stroke, in my view, is due to education under authority; which constitutes the moral sentiment a distinctive and peculiar phenomenon, different from all the other exercises of will, sympathy, or emotion, or any compounds of these. Moreover, the growth and working of the moral sentiment largely depend upon intellectual processes unnecessary to specify." (*The Emotions and the Will*, p. 57.)

In other words, we may inherit capacity for developing moral feeling, but not the feeling itself. Similar statements are made by Mr. James Sully and Dr. Maudsley. The latter's opinion is presented with such precision and emphasis that it deserves particular attention. He states it in one of his most recent works, as follows: "As it is with the faculties of the spinal and sensory centres, so it is with the faculties of the ideational centres: they are not innate, but are developed by education. The notion of *innate* idea, in the exact meaning of the word, as connatural or contemporary with birth, is not less untenable and absurd than an innate pregnancy. But if by innate is only meant that, by the necessity of his nature, an individual whose brain is well constituted will, when placed in certain circumstances, acquire certain ideas, then all the phenomena of a man's life, bodily and mental, are just as innate or natural. A civilized person certainly inherits, by virtue of being born of civilized parents in a civilized country, a predisposition to certain modes of conception and feeling, just as he inherits a predisposition to certain modes of perception or walking. In other words, he inherits certain cerebral substrata, which are ready to come into functional activity on occasions of their suitable stimuli at the proper periods of life." (*The Physiology of Mind*, New York, D. Appleton & Co., 1877, p. 278.)

Bain's classification of these predispositions to moral feeling which are likely to be inherited in the form of cerebral substrata has been already given, but may, I think, be somewhat expanded as follows: First, he places "The ordinary action of the will, prompting us to avoid pain and court pleasure." But this seems to me to have little moral value until it assumes an intellectual character and becomes prudence. We know that the most prudent people are the least likely to commit atrocious crimes. Solomon thought his readers might be sufficiently restrained from vice and encouraged to virtue by being told that the choice between the former and the latter was also a choice between wealth and poverty, health and sickness, length of days and premature death. Criminals in all ages have thought, as a rule, more of immediate gratification than of ultimate consequences. Simple self-interest, well understood, restrains many people from yielding to gross temptation, and prompts them to do the plain duties upon which their neighbors insist. Such people are not saints, but they may be the parents of saints; and they are very likely to be their friends, patrons, and followers. That prudence and foresight are inherited, especially in certain races and families, will be admitted readily. And, second, I would place sympathy, as Bain does. He and Herbert Spencer have shown conclusively that it powerfully assists the development of moral feeling, and that it is peculiarly likely to be inherited. (Bain's *Emotions and Will*, third edition, pp. 57–67; Spencer's *Principles of Psychology*, vol. II. New York, D. Appleton & Co., 1873, pp. 558–608.) In the third place, Bain speaks of "Our leading emotions, fear, love, anger, and others"; and I should suppose that such feelings as distort the countenance are peculiarly likely to be inherited, since Maudsley states that "Any particular passion is rendered stronger and more distinct by the existence of those bodily states which it produces, and which, in turn, when otherwise produced, tend to engender it." (*Physiology of Mind*, New York, D. Appleton & Co., 1877, p. 387.) Then, fourth, Bain thinks that "The finishing stroke is due to education under authority." So Mr. James Sully says that "It appears highly probable, after a wide psychological induction, based on the observation of many races of mankind, that the first rudimentary sense of duty presents itself in that peculiar variety of fear which accompanies a recognition of superior will and power in another." (*Sensation and Intuition*, p. 18.) The more virtuous the parents, the more docile must be the mind of the child, just as the colts born on our farms can be broken much more easily than the foals of wild horses. When partridge eggs are hatched under domestic fowls, the young flee away to the woods as soon as they break the shell; and so the children of ferocious savages or habitual criminals are likely to inherit aversion to moral discipline. On the other hand, the aptitude for receiving and following good instruction will usually be inherited so strongly from pious and virtuous parents as greatly to assist the development of conscience.

And, fifth, our willingness to admit the justice of the censures on us of our neighbors is largely owing to a fact on which great stress is laid by Darwin in his *Descent of Man* (Volume I., Chapter III.); namely, that the social instincts are persistent, while the selfish impulses are momentary; so that, after following the latter in preference to the former, we soon come to regret having done so, and to blame the choice. For instance, a savage runs away from the battle where his tribe are fighting. As soon as his fear passes away, his desire to defend his tribe revives in such strength that he regrets not having followed it. His past conduct is so at variance with his present feelings as to cause him to admit that the reproaches of the other members of the tribe are just. His memory of the exhortations to courage previously made by his parents, priests, and chiefs, also leads him to think of his cowardice not only with sorrow but with shame. If in the next battle he conquers his fears, he will join with his comrades in praising himself for doing so. Thus, the enduring character of our social feelings helps to form the habit of praising or blaming ourselves according as we treat our neighbors. And readiness to criticise our past conduct may reasonably be imagined to be inherited, especially as an excessive proneness to do so is one of the signs of morbidness. We may therefore reckon this habit of praising and blaming our past acts as a hereditable predisposition toward the formation of conscience. And, sixth, I need say little about the advantage of self-control. This seems to depend so much on state of nerves and temperament, and to be so apt to take characteristic forms, running through all the members of different races and families, that there is good reason to believe that it can be inherited. Indeed, one of the firmest guarantees of our moral progress is that this power is being handed down from generation to generation, in ever-increasing fulness and force. Already, it has become one of the distinguishing marks

Digitized by Google

of really civilized and cultivated people as contrasted with boors and savages. And so the faculty of discriminating abstractions is peculiarly characteristic of members of the highest races and families, while it depends so obviously on the size and condition of the brain that it must be readily transmissible. Evidence that it is so will be found fully given in Mr. Galton's *Hereditary Genius*; and the possession of this faculty must do much to determine the ability to distinguish right from wrong, since these are among the most difficult of abstractions. Philosophers are still disputing about their nature; and this nature must be more readily realized by the children born in our most respectable families than by the offspring of savages, who have no numerals or words for time, space, existence, virtue, justice, or liberty, and who cannot make themselves understood in the dark, because they make less use of words than of gestures. Ability to distinguish right from wrong may therefore be placed among the transmissible predispositions toward the development of conscience. Whether in this mental power, joined with that of controlling ourselves,—that is, of subjecting our passions to the dictates of our principles,—and of the authority of the other members of society, with which forces are to be considered that of the habit of praising and blaming ourselves and also of sympathy and other strong emotions, we have a sufficiently full account of the nature of the conscience to be able to account fully for its well-known sovereignty, is a question which I leave to the consideration of my readers. It is certain at all events that these predispositions do much to give it its power and activity, and also that they are so freely transmissible, and in such different degrees, that the good and bad qualities of the parents thus readily reappear in the child. It seems to me further probable that the high and low degrees are transmitted with substantially equal facility; and thus virtue must be supposed to be just as likely to be inherited as vice, so far as it is thus determined.

There are, however, two passions which are known to be very dangerous and also to be very liable to be inherited; namely, that for intoxication and that for sexual indulgence. Where they are active in the parents, the children are likely to be vicious; but the offspring of people who lack them may not be particularly virtuous, but either weak or commonplace. Considering the force of these passions, it seems to me highly probable that virtue is less easily inherited than vice. This difference would seem much greater, if the superiority of vice in transmissibility were not in great part offset by the constant labor of society to put vice down. Children of drunkards, libertines, and other criminals, are often helped to struggle against their inherited propensities to vice by the sight of the sufferings of their parents. In these and other ways, the tendency to inherit vice is so strictly controlled that I suspect it to be in reality much stronger than would be indicated by statistics.

Before concluding, I must insist on the fact that we have a right to expect that people will act very much as their parents have done in similar circumstances. Indeed, to judge the child by the parents is not only our right, but our duty. It is simply just that the child who inherits a good character should inherit a good reputation also; and this can scarcely be, unless bad parents are allowed to hand their bad reputation down. Not to remember who have had vicious parents wrongs those who have had virtuous ones. Men and women must be judged mainly by their own acts, but children largely by those of their parents, since good education and nurture often merely delay the appearance of evil traits which have been inherited with a force that, after long suppression, finally brings them to the light. Adopting children of bad parentage often results after temporary success in final failure. Such children may indeed be greatly helped by good nurture, but this will be most beneficially given them by those who do not expect brilliant results, nor trust any appearance of sudden change. I would not check philanthropy, but simply observe that it must be prudent, careful, and laborious, in order really to succeed; and that true philanthropy will pay special attention to poor children whose parents are virtuous. Where there can be a choice between adopting, employing, or in any way helping children of virtuous or vicious parentage, it is not only business-like, but also philanthropic, to prefer the former, though the latter should not be utterly neglected. And, in dealing with vagrants, paupers, drunkards, libertines, and other criminals, we should bear in mind the strong probability of their children being like them. To help such people to propagate their kind is to wrong future generations wantonly and dangerously. There can be no real charity to such classes of people, which is not directed toward their extinction. Giving money, clothing, or even food to tramps and other beggars is, in most cases, supporting our enemies in waging war against us. Temperate, industrious, and honest people should be assisted liberally to support themselves; but the lazy, shiftless, and self-indulgent, who are willing to live upon their neighbors, should not be suffered to do so, except in poor-houses, prisons, and other places where they are not likely to perpetuate their evil race. Horrible as is capital punishment, it certainly has the advantage of preventing those who are known to be our worst enemies from increasing and multiplying themselves against us. This prevention may, however, be secured adequately, and with much less shock to our social sympathies, by sufficiently long imprisonment. It is to the workhouse and the penitentiary rather than to the gallows that we must look for the check of hereditary crime and pauperism. And, if any one shrinks from severity in hindering the increase of the bad, he should remember that this is the best way to promote the multiplication of the good.

CORRESPONDENCE.

SPIRIT OR MATTER,—WHICH?

Editors of The Index:—

Modes of thought unconsciously persist long after men have detected their unreliability, and believe themselves free from their influence. Years of mental drilling are required to enable us to reason symmetrically from the developed truths of modern philosophy. These truths come to us in flitting gleams, for habit has not yet secured the consistency of a steady blaze. Habits of language, systems of education, and modes of thought arise in rebellion within us against the latest philosophic intruders, and only in the most serene moments can these be heard without mental distortion.

I am led to reflect thus from the frequency with which I detect men of large attainments, hospitable to the psychological truth that our knowledge of external existence is limited to a knowledge of the sensations wrought within us, revert to the fixed habit of treating these sensations as the outer actuality, and confounding the symbol with the thing. Last week's *Index* furnishes numerous illustrations. A very able lecturer, after conceding that our knowledge is purely a knowledge of conscious states, goes on to talk of the intrinsic "properties of matter," as if he had not recognized the moment before that these are effects wrought within, and not causes without the man. So intensely materialistic are his thoughts and terminology that he does violence to the truth first assumed. To clamor for spirit or to clamor for matter is largely an affair of bias. What can we predicate of either, save being? That which is capable of producing a conscious effect within us is something, called by whatever name. The consistent philosopher realizes that the cause without is neither hard nor soft, heavy nor light, round nor square, sweet nor sour, black nor white. Only by a mental aberration does the educated man fall into the error of attaching these properties to the unknowable. The eternal "something" without may and does exist in such condition as to be absolutely effectless on our system, and not distinguishable from pure space. Only under conditions does the rhythm of being offer, each to each, resistance. So ingrained is our mode of thought respecting matter as an extended, resisting something that we picture this property of resistance as the thing *per se*. Resistance is more of an accident than a necessity of being. The world of non-resistance is infinitely greater than the world of resistance. To define what spirit is is no more difficult than to define what matter is. Stripped of those "properties" which inhere essentially in our own consciousness, both words would stand for the materialist's conception of nothing.

The problem before us is to determine if there is any logical necessity for this dualism,—spirit and matter. The materialist's objection springs from a misapprehension of the elements of his knowledge. We have certain axiomatic truths that the mind spontaneously assents to. One of these instructs us that, from nothing, nothing comes; another, that a thing can neither select nor create itself; another, that nothing can be evolved not previously involved. These axioms necessitate the conclusion that conscious power antedates organism, and is the architect thereof; that the brain exists because of mind, and not mind because of brain. The brain is the instrument selected by a conscious power to aid it in the furtherance of its desires. The alternative, that mind is a function of brain, outrages every one of the above axioms, and presupposes an unconscious thing as selecting itself for a conscious end,—an utter absurdity. As an instrument, the mind is dependent on the brain for the exercise of its powers; but the instrument cannot create these powers. This should be axiomatic. Whether, then, we shall accept dualism or monism depends on how far each of these possibilities is consistent with what we know. All things may be mind, or mind may be associated with matter in complex union; but matter without mind is a barren ideality, utterly worthless as an explanation of things. If mind and matter are phenomenal features of one identity, then physical laws and mental laws must be at bottom one. So long as, in conception, we have two sets of laws, mental and physical, which antagonize each other, so long are we constrained to accept dualism. The only possible way to escape the spiritualistic doctrine of matter and spirit is to fuse these into a common something, whose every phenomena can be reduced to a common law. Can this be done? The task is exceedingly difficult. At one time, I conceived it impossible. Our whole science is empiric and unsatisfactory because of the forced dualism which facts seem to necessitate. If monism is true, the iron necessity of our present mechanics must be abandoned, and the inherency of volition discovered in all motion. Unable to follow motions in their rapid speed through sound and color, men denied their identity, although they fused together at their margins. Once perceiving the identity, they aid each other in the interpretation of phenomena. So must it yet be with idealism, spiritualism, and materialism, if monism is true.

To aid in the reduction of mental and physical phenomena to a common law, I submit the following thoughts: Matter, motion, and mind are our final symbols of being. To matter, we attach extension, form, and gravity; to motion, tendency (reaction), action, and mode; to mind, feeling, will, and memory. Form in matter, mode in motion, and memory in mind are common links to the past. Gravity, action, and will reach for the future. Extension, tendency, and feeling are in the ever-present now. The relations to time here shown are permanent. The evolution of form is the evolution of mode. The evolution of mode is the evolution of memory. They progress side by side. Gravity is a source of material change. Action is a source of material change. Will is a source of material change. They act alike as causes. Extension aggregates with increase of gravity. Tendency aggregates with increase of action. Feeling aggregates with increase of will. They behave alike to forces. The quality or kind of tendency is determined by mode. The quality or kind of feeling is determined by memory. The quality or kind of matter is determined by structure (form). Their properties come in the same manner. Extension makes known its presence by gravity. Tendency makes known its presence by action. Feeling makes known its presence by will. They reveal themselves in similar manners. Feelings of the same kind are from memories of the same kind. Tendencies of the same kind are from modes of the same kind. Extensions of the same kind are from forms of the same kind. Their variations follow a common law. Like substances gravitate to a centre. Like tendencies act to a centre. Like feelings will to a centre. Their principle of action is identical. Form causes mode, mode causes memory; or, conversely, memory causes mode, and mode causes form. Are they not parts of one thing whose relations in time, in progress, in properties, in presentation, in products, in variations, in action, etc., all run perfectly parallel? Such far-reaching uniformities seem to imply this.

That there is an answering mode of motion to every mode of feeling is extremely probable. That certain modes of motion produce certain modes of feeling is seen constantly in the five senses. That certain modes of feeling produce modes of motion is demonstrated by the emotions and the will. Matter acts by motion on mind. Mind acts by motion on matter. That motion should act to produce mind is unthink-

Digitized by Google

able, unless the subjective side of motion is will. The crude conception of their relation as cause and effect cannot be entertained by a monist. Neither, from our point of view, can be thought of as the cause of the other, both arising simultaneously, as diverging phenomena of the unknowable. Motion subjectively is mind, and mind objectively is mass in motion. Matter seems to be atomic, and mind we know as individualized. Force inheres in atomic centres, and is not transferable. Nature's changes are exchanges of mode only. Mind must likewise inhere in these centres, or spiritual dualism is true.

Let us not make words stumbling-blocks. Before matter swallows spirit, it must be able to assume the functions of spirit. Our preference for or prejudice against the word "spirit" or the word "matter" must not be permitted to becloud or confound our logic. If we find ourselves able to dispense with one of these terms, we must incorporate in the meaning of the other all that the vanished symbol conveyed. It is a compromise, not a capitulation, between spiritualist and materialist; and the arrogant flaunting of either term, with its former beggarly raiment, bespeaks a small development in the perpetrator. Narrowed down to the respective abandoned "properties" of spirit and matter, it seems to me the materialistic camp have suffered a more radical change of base than the spiritualistic; for, as Spencer says, "it is easier to translate so-called matter into so-called spirit than to translate so-called spirit into so-called matter." DAVID ECCLES.

KANSAS CITY, June, 1882.

BERLIN CORRESPONDENCE.

BERLIN, June, 1882.

Editors of The Index :—

The friends of Free Religion in America will be glad to know that there is a very similar movement under the same name in Germany. For a complete history of the German Free Religious movement, we must go back as far as 1844, and to the Catholic Church. In the autumn of 1844, the Catholic world was invited to Trier to see the so-called "holy coat" which, it was claimed, was once worn by Jesus. This famous coat had been exhibited from time to time; but the repetition of this gross deception in 1844 was met by the earnest protest of a young Catholic priest, named Johannes Rouge, who appealed to the Bishop of Trier to exhibit the spirit of Jesus rather than his coat. Rouge was excommunicated; but his noble protest was heartily responded to by many others, and the result was a "German-Catholic" movement entirely separated from Rome. Immediately afterward, in the years from 1844–46, there was a radical movement inside of Protestantism which resulted in a separation from Lutheranism and the formation of the "Frei Gemeinden." One of the leaders of this movement is now one of the Vice-Presidents of the Free Religious Association, Frederick Schuenemann-Pott. These two movements continued separately, and grew more radical, until 1859, when they were united in an "Association of the Free Religious Societies of Germany." Since 1872 there has been published a "Free Religious Calendar," giving the statistics of the Free Religious societies, the report of the annual meeting of the national organization, and also many interesting facts connected with the history of free thought. The Calendar for 1882 contains ninety-six pages; and from it we learn that there are one hundred and thirty-six Free Religious societies and clubs belonging to the national organization, besides a number which have not yet been enrolled.

There are two such societies in Berlin. One of them maintains a settled speaker: the other has public speaking but one Sunday in the month. In both societies, all the forms of Christianity are discarded, as well as the Christian name. The older and larger society was formed in 1845, as a result of the "German-Catholic" movement. The history of its first years is one of continual struggle against political obstacles. From time to time, the police broke up its meetings, and often ordered its speakers to leave the city on account of some radical political utterance. For some years, the government would not allow either women or children to attend its meetings. From 1859 until the socialistic laws of 1878, the government adopted a more liberal policy, and the society was left to pursue its own course. Since 1878, however, two members of the police have been present at every meeting to prevent the discussion of political questions. The society is supposed to contain some social-democratic elements. Many of its members are workingmen, yet its annual income is 6,000 marks, or about $1,500. The society is now in a quite flourishing condition. It possesses a library which is opened every Sunday. A good supply of free-thought books, papers, and pamphlets is offered for sale in an ante-room before and after the Sunday morning speaking. Herr Schäfer, who has been the speaker of the society for fifteen years, was the delegate of the Free Religious Societies of Germany at the meeting of the German-American "Frei Gemeinden," held at Philadelphia in 1876. His discourses, delivered without notes, are generally upon ethical, social, or educational questions, and are well attended. Herr Schäfer also conducts two classes for the religious instruction of the children every Wednesday and Saturday afternoon. The text-book used by the children is a *Hand-book of Free Religion*, prepared by Herr Uhlich, a former Free Religious speaker at Magdeburg. The book has passed through six editions. It contains nine chapters, entitled respectively "The World," "Humanity," "The Individual," "The Law of Truth," "The Law of Right," "The Law of Beauty," "The Chief Human Relations," "The Future," "Free (Religious) Societies." Most of the chapters are divided into sections, each of which is an exposition of some important truth. Upon visiting one of the classes a short time ago, I found them considering the section in the chapter on "The Law of Right," which treats of our duties to plants and animals; and it was a pleasure to see the marked interest shown by the children in the subject.

Some weeks ago there was a very interesting Sunday service, at which twenty-four boys and girls, from fourteen to sixteen years old, each received a card signifying that they had passed through the *Religionsschule*, and were henceforth members of the society. Several pieces were spoken, and the right hand of fellowship was given to each one by Herr Schäfer. The hall was crowded; and many who came had to go away, being unable to get even a standing-place. It is interesting to know that the first kindergarten in Berlin was founded by this society in 1859. The school was kept up until several similar ones had been established with more means to carry on the work.

The ladies of Herr Schäfer's society have an organization, the purpose of which is "works of practical humanity." Frau Schäfer is one of the active members.

The second Free Religious society of which I spoke is an "Association for the Culture of the Free Religious Life." Social and literary gatherings are held one evening each week, and a public discourse is given the last Sunday in the month by Herr Sachse, the Free Religious speaker at Magdeburg. The society is small, but apparently very earnest.

The Free Religious movement in Germany stands upon the same broad basis of fellowship as the Free Religious Association, but it manifests a greater readiness for organization and propagandism; and this, it seems to me, is not a fault. I am glad to see that the subject of organization is now being agitated by the Free Religious Association. Unless the work of practical religion is to be abandoned, new organizations are necessary. The prejudice of some Liberals against organization arises from a belief that organization implies narrowness and exclusiveness, an unwholesome sectarianism. This, it seems to me, is not a necessary consequence. The societies of Florence and Providence prove that a *unity of purpose* can unite people, when that purpose is ethical and social culture and work, even without unity of thought. There is no doubt that a unity of philosophy would in many ways be a great advantage; but this we cannot hope for, at least, until a genuine scientific philosophy is established. In the only address I ever heard from Emerson's own lips, he said the world was still many centuries too young for a creed. But Emerson always taught that we are already in the possession of moral laws and of all that is necessary for the moulding of character and conduct. Have we not, then, a sufficient basis for organization? And have we not also a sufficient motive? The Free Religious movement, both in Germany and in the United States, as I understand it, is essentially an ethical movement. The best type of what this movement aims at is presented by Prof. Adler's society in New York. Some may deny that such a movement as this is religious; but, call it what one will, there are signs that it will be the successor of Christianity, and that it will work in a far better way for both human salvation and human progress. Whatever new ideas and new sentiments are represented in this new movement, its chief and ceaseless task must be to fulfil better than has ever yet been done the old law of practical righteousness. S. B. WESTON.

THE UNITARIAN SCAPEGOAT.

Editors of The Index :—

The old story was that the sins of the people were put upon the head of the goat, and that he carried them into the wilderness It seems to be essential to all systems of religion to have scapegoats. It has been made very plain by late events who or what is the Unitarian sin-bearer. Upon the withdrawal of Mr. Miln from the Unitarian ministry, the editor of the *Christian Register* said, "See how those men act who come out of the evangelical churches!" Also, when Mr. Wilson, of Bridgewater, made an injudicious statement about Paul, the cry was again raised against ministers coming out of the evangelical churches. Now, we imagine it is something new to the world to learn that the characteristic of evangelical ministers is a want of judgment, tact. Indeed, it is not uncommon to accuse them of having so much tact that they descend to cunning policy. It turns out in the case of Mr. Wilson that he has been a Unitarian for twenty years. Surely, he has been long enough under the influence of Unitarianism to have learned its ways.

To remedy this evil of injudicious conduct on the part of come-overs from the evangelical churches, two remedies are suggested. The one is by the editor of the *Christian Register*, and has been given by the editor several times. It is this: that the minister coming out should go to either Meadville or Harvard Divinity School. Without any controversy on the subject, we take Meadville out of the discussion as not of importance enough to merit notice. But, as to Harvard Divinity School, two objections may be raised. First, the men who come out are past the age of divinity school training. Some coming out are not unequal in scholarship to the learned editor of the *Register*. And it is difficult for us to imagine him taking his place alongside the youths in Princeton or Andover, should he change his views. Not less difficult is it to imagine a graduate of Princeton taking his place with the young men of Harvard who have just begun their divinity studies. Especially is this so when we remember that these ministers have been in charge for years of not unimportant churches.

A second objection is that, if one goes to Harvard, he does not find it suited to his needs. At least, it was not so. It may be, and no doubt is, admirably adapted to the fitting of students for the Unitarian ministry; but it can hardly be said to be the place for a man who was graduated in Princeton and has been in charge of a society to clear up his mind on difficult points. He goes over New Testament textual criticism, church history, Hebrew, etc., as in his own theological seminary. It may be different now: we trust it is. But we question the possibility of making an institution capable of meeting the wants of both young students and the older seekers. We are in great need of just such an institution as the editor of the *Register* imagines Harvard to be,—an institution for the study of theology, taken up where our divinity schools leave off. The writer has pleasant memories of Harvard, for he was kindly treated while there.

It is possible the editor of the *Christian Register* does not keep so distinctly in mind as he should the fact that no unimportant part of our Unitarian ministry is composed of men from the evangelical churches. The sons of Unitarian parents do not take kindly to the ministry, so that we believe few of those in our ministry have a long Unitarian lineage behind them. These ministers from the evangelical churches are doing a great work, and it has a tinge of jealousy in it for the *Register* to make them the scapegoat for ministerial blunders. We doubt whether a more severe and perhaps injudicious sentence was ever uttered by any one than that in Channing's sermon at the dedication of the church in New York, 1826, where he spoke of the cross as the gallows. Injudicious for his time it was, and we understand that in the late editions of his *Works* his words have been modified. Let us not make of any class a scapegoat.

The second remedy is that our parishes do not cull

Digitized by Google

men fresh from the evangelical churches. This is not bad advice. But how carry it out? The person who recommended this as a cure for the evil forgets that there lies back of this remedy another; namely, that our parishes first dismiss all members who have come out of evangelical churches, then refuse to admit any more of that sort. Thus, we would have parishes which laid great stress on Unitarian lineage. But, as our parishes now are, they will choose living men and put up with some of their faults. We must not be understood as saying that born Unitarian ministers are not living men; but we do say the evangelical churches have supplied us with a goodly number of active, educated, and earnest workers. The parishes know this, and act upon it; and thus they now make it, and will continue to make it, impossible for those in the fold to keep others out. We are thankful this is so, for it is the tendency of us all to keep our good things to ourselves. We need all the help that will come to us, and we are ready to welcome it; for the fields are white unto the harvest. A. W.

EMERSON AND WALT WHITMAN.

Rev. John W. Chadwick replies to Mr. W. D. O'Connor.

To the Editor of the Tribune:—

Sir,—I have read with interest and with approval in the main, Mr. O'Connor's eloquent defence of Mr. Whitman's poetry. I do not wish to enter here into any discussion of the morality or taste of those sections of his poetry which have excited the holy wrath of Mr. Oliver Stevens. I do not believe that Mr. Whitman has written a line which is not pure and high in its *intention*. At the same time, true art appears to me to be more carefully selective of its themes and phrases than Mr. Whitman has shown himself to be. I yield to few, if any, in my admiration of the major part of all his poems; but, in some particulars, I find him simply nasty and disgusting. But my opinion has not been asked upon this head, and I presume to give it only by way of introduction to the real purpose of my letter.

This is Emerson's birthday, and if on any day in the year we ought to do him simple justice we ought to on this. And it seems to me that Mr. O'Connor's letter does him a great deal less than justice. It is, I am obliged to think, disingenuous to an astonishing degree. I cannot suppose that Mr. O'Connor is not perfectly informed; and, therefore, I cannot escape the feeling he has consciously and wilfully perverted and suppressed the truth, and Mr. Whitman's cause is, I think, too good to need any such doubtful measures of support.

The principal object of Mr. O'Connor's letter is to bring forward Mr. Emerson as the unqualified sanctioner of Mr. Whitman's poetry in general, and especially those parts that have made it liable to legal interference. He quotes Mr. Emerson's letter of 1855, and says that "never, to his undying hour, did he retract or qualify it in any way whatsoever." Surely, Mr. O'Connor has read the later productions of his "good gray poet" much less carefully than some of the rest of us, if he can make such a statement honestly. Whitman himself is much more honest. In a number of the *Critic* published a few months ago, Mr. Whitman reports an interview he had with Emerson. I am sorry that I have not the paper at my hand to quote his exact words, which would be more to my purpose than any paraphrase. They walked together on Boston Common; and Emerson's talk was an arraignment, in no dubious fashion, of all that part of Whitman's book entitled "Children of Adam," which contains the greater part of all that with which Mr. Oliver Stevens is offended. His argument, says Whitman, was most thoroughgoing and convincing, and after he had finished I was more than ever determined to go my own way.

This statement of Mr. Whitman's is absolutely final, and it is directly contradictory to Mr. O'Connor's that he "did not qualify in any way whatsoever" his letter of 1855. He qualified it so far—Mr. Whitman himself our witness—as entirely to destroy the force of Mr. O'Connor's letter, and to make it hereafter impossible for any one who knows the facts to speak of Emerson's "absolute indorsement" of Mr. Whitman's poetry. His admiration of its average quality was great, and justly so; but his disapproval of those things which have got Mr. Whitman into trouble was severe and unmistakable. So much, on Emerson's seventy-ninth birthday, it is only fair and decent for all just men to allow.

Yours truly, JOHN W. CHADWICK.

BROOKLYN, May 25, 1882.

P. S.—I have hunted up the *Critic* of Dec. 3, 1881, containing Mr. Whitman's statement, and it is herewith appended:—

Up and down this breadth by Beacon Street, between these same old elms, I walked for two hours, of a bright, sharp, February mid-day twenty-one years ago, with Emerson, then in his prime, keen, physically and morally magnetic, armed at every point, and, when he chose, wielding the emotional just as well as the intellectual. During those two hours, he was the talker and I the listener. It was an argument, statement, reconnoitring, review, attack, and press-in hose (like an army corps in order, artillery, cavalry, infantry) of all that could be said against that part (and a main part) in the construction of my poems, "Children of Adam." More precious than gold to me that dissertation,—I only wish I had it now, *ve batim*. It afforded me, ever after, this strange and paradoxical lesson: each point of E.'s statement was unanswerable, no judge's charge ever more complete or convincing, I could never hear the points better put,—and then I felt down in my soul the clear and unmistakable conviction to disobey all, and pursue my own way. "What have you to say then to such things?" said E., pausing in conclusion. "Only that, while I can't answer them at all, I feel more settled than ever to adhere to my own theory, and exemplify it," was my candid response. Whereupon, we went and had a good dinner at the American House.

J. W. C.

BROOKLYN, May 27.

—*New York Tribune.*

MISCELLANEOUS.

IN a published discourse by a prominent Spiritualist (Mr. J. M. Peebles) on "The Eclipse and Decline of Darwinism" occurs the following:

The fact that Darwinism is posited upon a miracle is enough of itself to throw suspicion upon the whole hypothesis. . . . These are Mr. Darwin's words *verbatim*: "Life was originally breathed by the Creator into a few forms, or into one; and whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning, endless forms most beautiful and most wonderful have been and are being evolved."

Now, it is not true that "Darwinism is posited upon a miracle." It is not true that Darwin affirms belief in a miracle as the origin of life on this globe. The quotation given by Mr. Peebles (from some unfair opponent of Darwinism, second-hand, probably, *is a garbled quotation*. Darwin does *not* say, "Life was originally breathed by the Creator into a few forms or into one." He does not affirm *any* theory as to how life originated. But in his *Origin of Species*, written more than twenty years ago, he attempts to allay religious prejudice by saying in substance what is quite true that the origin of life is a mystery which his theory leaves unexplained; that this fact is not a valid objection to his theory; that the development of species from a few forms or from one is in no way derogatory to the character of Deity; that, on the theory of direct, divine action, the idea of God breathing life into a few forms or into one and evolving therefrom, according to law, all the organic forms now on the earth, is quite as grand as the idea that all species were created by miracle. But it is best to give, on this point, Darwin's own words, including the sentence which is garbled in Mr. Peebles' lecture:—

It is no valid objection that science as yet throws no light on the far higher problem of the essence or origin of life. Who can explain what is the essence of the attraction of gravity? No one now objects to following out the results consequent on this unknown element of attraction, notwithstanding that Leibnitz formerly accused Newton of introducing "occult qualities and miracles into philosophy." I see no good reason why the views given in this volume should shock the religious *feelings* of any one. It is satisfactory, as showing how transient such impressions are, to remember that the greatest discovery ever made by man—namely, the law of the attraction of gravity—was also attacked by Leibnitz as "subversive of natural and inferentially of revealed religion." A celebrated author and divine has written to me that "he has gradually learned to see that it is just as noble a conception of the Deity to believe that he created a few original forms capable of self-development into other and needful forms, as to believe that it required a fresh act of creation to supply the void caused by the action of his laws." (*Origin of Species*, p. 429, fifth edition. 1870. D. Appleton & Co.)

After mentioning the laws of growth, reproduction, inheritance, variability, struggle for life, and natural selection, Mr. Darwin adds:—

Thus, from the war of nature, from famine and death, the most exalted object which we are capable of conceiving, namely, the production of the highest animal, directly follows. *Thus there is a grandeur in this view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and that, while this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being, evolved.* (Ibid., p. 437.)

BOOK NOTICES.

BIRD-BOLTS: SHOTS ON THE WING. By Francis Tiffany. Boston: Geo. H. Ellis. 1882. Price 75 cents.

Mr. Tiffany has done well to put into more permanent form in this little volume the pieces which he has from time to time contributed to the Boston *Sunday Herald*, *Christian Register*, and possibly other journals. There is a good deal of more pretentious writing that gets into books that is not half so worthy of it. Mr. Tiffany is one whose eye is always open and mind alert to catch the significance of the humblest and homeliest as well as sublimest events in human experience, and the articles here reprinted are the result of this habit. They are full of wisdom and wit. They will make the reader laugh and set him thinking at the same time. The drollest illustrations and most comical conceits mingle with the sharpest critical analysis of prevalent social customs and of dangerous tendencies in modern life. It is an excellent book to put into the pocket or satchel for vacation-time. Here is one of its suggestive sentences, taken from one of the more serious chapters. "If there be anything in the wide universe man has a divine right to abhor and surge against, it is mere units,—units in the landscape, units in the family, units in the State and Church; unblent, unfused individualities, angular, sharp-cornered, fitting as parts into nothing larger, richer, grander than themselves."

PAUL DREIFUSS. His Holiday Abroad. By John W. Allen, Jr. Boston: Geo. H. Ellis, publisher.

This tastefully bound and nicely printed volume seems to be the literal record of a holiday passed in England and France by a genial, thoughtful, kindly-natured elderly gentleman, who in a leisurely way took notice of many things unknown to, or overlooked by, the ordinary tourist. He seems to have made an especial study of the politics of the two countries visited, and his remarks thereon are replete with good judgment and common-sense. The work is written in a readable and entertaining style, though it is not at all sensational; but is a liberal-minded, restful, and apparently truthful record of travel.

AMONG the most interesting articles in the *Catholic World* for August we count "St. Monica among the Philosophers," by Rev. F. C. Kolbe, and a sketch of "Denis Florence MacCarthy," whom the writer, T. F. Crane, declares "Ireland's greatest poet since Moore." Rev. J. F. Callaghan, D.D., discusses "The Cincinnati Pastoral and its Critics," defending the former. The tone of this essay can be inferred from such statements as these: "Liberty never did exist except under the shadow of the cross. Equality has no home except at the altar on which the shadow of that cross falls. . . . Take the Catholic Church out of the world, and liberty would sink into an eternal grave. If Protestant nations are free, it is because they once were Catholic. If a republic was built in this New World, Catholic principles were the architect." The other articles are "A French Country Family in the Seventeenth Century," by Elizabeth R. Barker; "The Irish in Chili," by C. M. O'Keefe; "St. Peter's Chair in the First Two Centuries," by Rev. A. F. Hewitt; "Was St. Paul in Britain?" by Rev. S. M. Brandi; "The Revival of Italian Literature in the Eighteenth Century," by Hugh P. McElrone; "The Word *Missa*, Mass," by Rev. J. E. Keller. There are also two continued stories. In the review of new publications there is a very fair notice of the late Henry Giles' book, *Human Life in Shakspere*, in which, however, occurs this statement: "Years ago, Cardinal Wiseman made it tolerably clear that Shakspere was a Catholic. There is one argument, however, that ought to be sufficient. It is this: Shakspere lived and wrote in Elizabeth's time, and, to a certain extent, for Elizabeth's court. Yet, though he distorted history in favor of the Tudors, and though it was the fashionable thing at court to rail against Catholicity, there is

Digitized by Google

not, from one end of his works to the other, anything that, if rightly understood, is in opposition to Catholic dogma. Shakspere's religion, which is everywhere present in his serious works, is undoubtedly Christian and Catholic. The cultivated Catholic, in fact, finds meanings in Shakspere that are continually missed or ludicrously misunderstood by the most learned of Shakspere's non-Catholic commentators. One great defect, indeed, of a certain German school of Shaksperian commentators has been that it has striven to measure the morality of Shakspere by an atheistic fatalism."

THE *Atlantic Monthly* for August has the following table of contents: "Two on a Tower," by Thomas Hardy; "At the Summit," one of O. W. Holmes' sweetest poems; "Across Africa," by Charles Dudley Warner; "Some Account of Thomas Tucker," a strong character story, by Rose Terry Cooke; "The Weather-vane," a poem, by Edith M. Thomas; "Studies in the South"; "New Faiths," short poem, by S. W. Weitzel; "Dr. Zay," by Elizabeth Stuart Phelps; "A Study in Sociology," a discussion of the *pros* and *cons* of capital and labor, by Miss M. A. Hardaker; "The Gods said, Love is Blind," a poem, by H. H.; "The House of a Merchant Prince," by W. H. Bishop; "Ralph Waldo Emerson," a careful study of his character, philosophy, and genius, by his friend, Prof. W. T. Harris. There are, in addition, several short articles on literary topics unsigned, and a supplement containing a detailed account of the garden party recently given Harriet Beecher Stowe, by Houghton, Mifflin & Co.

"WIDE-AWAKE" for August is at hand. Mrs. Louisa T. Craigin contributes a true and charmingly told story of a Fourth of July "Floral Procession," which will be read with deep interest by Boston children. Mrs. Lizzie W. Champney takes us through a delightful picture gallery in telling us how "John Angelo visits the Water-Color Exhibition," in which she gives thirty-one *fac-simile* illustrations of a recent exhibition in New York. Over fourteen pages are devoted to the words and music of an operetta, "The Rebellion of the Daisies," by Louis C. Elson; "A Youthful Martyr" is a very taking poem, by M. E. B. The illustrations, as usual, are very fine, and all the reading matter inviting. Boston: D. Lothrop & Co.

"OUR LITTLE ONES" for August has a list of eighteen articles, seven of them in verse, including a song with music, and all accompanied by one or more beautiful and appropriate illustrations. Boston: Russell Publishing House, 36 Bromfield Street.

PERSONAL ITEMS.

IN a volume of Emerson's works greatly treasured by Prof. Tyndall, he has written the words, "Purchased by inspiration."

IT will surprise many to learn that Eliza Cook, the poetess, is still living. She has been for the past eighteen years blind and infirm.

GEORGE H. ELLIS has just issued in neat form Mr. Frederic A. Hinckley's timely address, entitled "Thoughts suggested by the Death of Jennie Cramer."

IT is reported that John Bright will visit America during the recess of Parliament, and it is not unlikely that he will deliver addresses in many of the principal cities.

ANOTHER of Carlyle's diaries has come to light,—that of his journey to Paris after the revolution of 1848. It is said to contain many sketches of notable Frenchmen.

SOME one writing of Emerson says finely of him that he "did not help his hearers by coming down to their level: he raised them by always standing higher and *lifting them up*."

MISS EDITH SIMCOX, author of the philosophical work *Natural Law*, has just published in London a volume of short stories, entitled *Episodes in the Lives of Men, Women, and Lovers*.

QUEEN VICTORIA has just completed the forty-fifth year of her reign. Only three other English sovereigns have exceeded this: Henry III. reigned fifty-six years, Edward III. reigned fifty, and George III. sixty years.

HABLOT KNIGHT BROWNE, better known as "Phiz," the illustrator of Dickens's later works, is reported dead, by a cable despatch from London, at the age of sixty-seven. He was a successful caricaturist, well known in English literary circles.

EX-GOVERNOR WASHBURN'S will was filed at La Crosse, Wis., last week. It bequeaths $375,000 for the establishment and maintenance of the Washburn Memorial Orphan Asylum at Minneapolis, and $50,000 for a public library at La Crosse.

THOMAS JEFFERSON is at last to have a monument erected over his grave at Monticello, Va., Congress having appropriated $10,000 for that purpose, and the Secretary of State having last week approved the design submitted by Col. T. L. Casey. It is to be of granite, eighteen feet in height. The following inscription will be cut upon the obelisk, "Here was buried Thomas Jefferson, author of the Declaration of American Independence, of the statute of Virginia for religious freedom, and father of the University of Virginia." On the die will be inscribed, "Born April 2, 1643, O.S.; died July 4, 1826." These inscriptions were selected by Jefferson himself.

THE Newport correspondent of the Boston *Traveller* —presumably, from the initials, Miss Lilian Whiting —writes thus of the new pastor of the Channing Memorial Church in that city: "Mr. Wendte has grown up from boyhood in and around Newport, and his return now to scenes endeared from early association is mutually pleasant to himself and the friends who greet him. A man of profound learning, of fine classical attainments and a literary taste that goes far beyond the appreciative into the creative force, of swift sympathies, of broad directive power, and an unfailing intuition, Mr. Wendte is indeed peculiarly calculated for the pastorate of the Channing Memorial."

MISS FANNY PARNELL, sister of the Irish agitator, Charles Stewart Parnell, died very suddenly of paralysis of the heart, at Bordentown, N.J., on Thursday, P.M., July 20, aged twenty-nine years. Miss Parnell has been one of the most active leaders of the Ladies' Land League in this country, her sister Anna being as active in Ireland. Both were in thorough sympathy with their brother. Miss Fanny possessed fine poetic talent of a high order. Last week's *Independent* contained a beautiful poem from her pen, entitled "Shalōm Lâchem"; and her poems in the *Pilot* and other organs of Irish sympathizers have done much to inspire Irish patriotism and awaken enthusiasm for the cause to which her brother has devoted his services. Her death will be greatly deplored and regretted, even by those who had no interest in her enthusiastic sympathy for Ireland's wrongs.

STEPHEN PEARL ANDREWS, of New York, has been in this city a week, stopping at Hotel Union, where he informs us he has held two or three parlor meetings which were attended by thinkers and radicals of different schools. Mr. Andrews, who is generally regarded as mystical, or at least difficult of comprehension, as a writer, is never otherwise than clear before the public or in private conversation. The difference, he says, is due to the fact that in the great body of his voluminous writings he is engaged in expounding universology as a rigorous science, requiring its own technicality as much as chemistry, while in his conversations he deals generally with more common subjects. During a visit to *The Index* office a few days ago, Mr. Andrews gave us as the basis of his philosophy, which he terms Integralism, the following terse sentence, which he calls the platform motto: "In things proven, unity; in whatsoever can be doubted, free diversity; in all things not trenching upon others' rights, liberty; in all things, charity."

A PROMINENT member of the Melbourne Society of Spiritualists writes to the *Religio-Philosophical Journal* that "Thomas Walker has settled down into a materialist lecturer, denying his own mediumship." On which, the *Journal* remarks: "This was to have been expected, inasmuch as the Toronto (Canada) Spiritualists proved him several years since to be a fraud, cheat, and trickster. His accomplice, as well as himself, got badly burned with phosphorus while trying to show lights and materialized forms in a dark séance. Materialists and Secularists are welcome to their convert." It is fair to inquire whether this Mr. Walker was known to be a "fraud" by the editors of Spiritualistic journals before he renounced Spiritualism, and, if so, whether they made known his character and repudiated him as a representative. The reports of Mr. Walker that we have seen in these journals have been invariably favorable to him; but, if all this time he was known to be "a fraud, cheat, and trickster," the public should have been acquainted with the fact.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,

CURRENT TOPICS.

THE latest we have seen from Dr. Jones of the Jacksonville, Ill., Plato Club and Concord School of Philosophy, is the following: "Instead of man's being developed from lower creatures, the best and most ancient history proves exactly the reverse, and that savages are the 'fag-end,' not the beginning, of civilization."

"IT is a little strange," remarks the *Independent*, "that the leaders of the Irish cause, from Curran to Parnell, have so many of them been Protestants. Miss Fanny Parnell, the poet of the cause, who died last week, was a most devout writer; but yet her religious faith, we suppose, was too liberal to be even 'evangelical.'"

PUBLIC schools have been established in Belgium. Until recently, the Catholic Church has had entire control of the schools in the kingdom, and the priests are now bitter in their opposition to public schools. Fortunately, the liberal party has a majority in Parliament. A movement has been started, the object of which is to disendow the clerical schools.

THE Concord correspondent of the *Transcript* writes: "Mr. Alcott thought that, when we are asleep, the mind leaves the brain and goes back into the various memories of the past, and that this accounts for the vagaries of sleep. Mr. Sanborn said that last night he dreamed he was the guardian of Queen Elizabeth, and that he would like an explanation of it, to which Mr. Alcott observed that the dreamer had only made a mistake in time."

THE widow of a Methodist minister, who died lately in England, wished to be buried beside her husband. This the vicar would not permit, but consented to the burial of the body in an unconsecrated part of the cemetery, on condition that the procession should not go in at the ordinary entrance, "because," says an exchange, "the passing of the non-conformists over consecrated ground would hurt the feelings of churchmen." What tender feelings churchmen must have!

THE prohibitory liquor law of Iowa, strictly enforced, would, it is stated, prevent the purchase of wine for sacramental purposes; and the churches are now in doubt as to their duty in the matter. Some of them use unfermented grape-juice; but the Presbyterians of Vinton, determined to have something, in commemorating the Lord's Supper, a little more pleasant to the taste and warming to the stomach than "unfermented grape-juice," have voted to defy the law and to indemnify the druggist who sells to them.

EVERY day adds to the complications of the Egyptian question. The Sultan is evidently displeased with the action of England, hesitates to denounce Arabi Pacha as a rebel, or to make known the course he will pursue. The situation has led to a crisis in France, where President Grévy is trying to form a new cabinet. Meanwhile, Arabi's forces are said to be increasing in numbers; and at a meeting held at Cairo last Saturday, composed of prominent Egyptian leaders, the course of Arabi was sustained, and the judgment of the conference is to be submitted to the Porte. What will be the outcome of this trouble nobody can tell.

"THERE is much to be learned," observes the London *Inquirer*, "from the 'Salvation Army' and its success. It calls strong attention to wants and needs that will be met somehow; and, though an orgy of degraded theology is better than a drunken revel. the two things should not be regarded as necessary alternatives. It would be absurd to expect the cultured and the uncultured, refined natures and coarse ones, to think and feel alike upon religion or upon any other matter; but we cannot conceive it to be other than a grave error when religion is lowered to suit the meanest capacity, instead of being held aloft as the highest to which man aspires."

AT a meeting of the Jersey City branch of the Freight Handlers' Union, the following from Prof. Felix Adler was read by the president of the central body of the strikers: "Permit me to express the earnest sympathy which I feel for your cause. I am convinced that justice and policy alike demand that labor in this country shall not be subjected to the degrading condition to which it has been reduced elsewhere. I admire with my whole heart the moderation which the freight handlers have displayed in the assertion of their just claims, and believe that, whatever the result of the present movement may be, the example you have set will long be remembered to your credit, and will serve to conciliate public opinion in your favor. Enclosed, please find contribution of $100 to your fund."

A CONVENTION of free thinkers is to be held at Watkins Glen, N.Y., August 23, 24, 25, 26, and 27, under the auspices of the New York Free Thinkers' Association. Everybody is invited to attend; and any speaker who desires to present his views, on any subject we presume, will be afforded an opportunity. Last year, the Secretary of the Association wrote us that "the free lovers were conspicuous by their absence, to the satisfaction of many of us,"—a representation which proved untrue, but to which we replied in *The Index* thus: "We will only remark on this point that the platform of a convention called for no specific purpose, designed only to afford an arena for the discussion of matters in general, should be as free to free lovers as to any other class of agitators." It is certain that class will not go unrepresented this year, the person who wrote us as above having taken pains to engage several well-known apostles of free-love doctrines.

W. C. GANNETT laments in *Unity* a lost opportunity to Western Unitarianism. The opportunity was to put the words "freedom, fellowship, and character in religion" into the articles of incorporation of the Western Unitarian Conference, which might then have decidedly witnessed that *Western* Unitarianism, at least, stands "for a method and a spirit and a moral purpose rather than for any intellectual beliefs whatever." The words were adopted, however, as a motto for the seal of the Conference. For the articles, they were thought too "sentimental" and "unbusiness-like." Mr. Gannett asks what then is the Unitarian "business," if not the accomplishment of the ends expressed in those words. His comfort is in holding the Unitarian "communion" to be broader than the Unitarian "denomination"; and he persists, with a persistence more creditable to his heart than his understanding, in hoping that the day may come when the two things will be one. An historic movement that has gone decidedly in one direction is not likely to reverse its steps. The bearers of the idea for which Mr. Gannett contends are few and scattered. Would that *they* might come together, and perhaps another movement would come!

THE New York Association for Improving the Condition of the Poor is, according to a report printed in the *Tribune*, accomplishing a much needed work in behalf of those living in tenement houses, who, says Howard Potter, president of the association, are in many instances "the victims of a white slavery more oppressive and more degrading than was that of the negroes in the South," being afraid to make complaints against their landlords, however bad be the condition of the houses in which they live. Many of these old dwellings are in a condition that imperils the health and lives of tenants. Cellars, containing wet, offensive mud caused by leakage from backyards, waste-pipes not ventilated, leaky roofs, halls dirty and not whitewashed for years, chimneys at the top leaning and dangerous, vaults full and closets foul, are among the defects found in buildings owned by wealthy individuals or corporations and occupied by tenants. Many of these dwellings are owned by the Trinity Church Corporation. Their attention has been called to the disgracefully bad condition of some of their tenement houses, and they have taken steps to remedy the evils. The Association proposes to advertise in the New York daily papers a list of such houses as have been inspected and reported to the Board of Health three or more times without being remedied.

ENLIGHTENED REVERENCE.

In the sentiment of reverence, whether in religion or elsewhere, fear has hitherto been a dominant element. In religion, the Being himself who has been presented as the supreme object of worship has been generally invested with such terrific, fear-inspiring attributes that the fear has naturally been transferred to the places, books, institutions, customs associated with him. The prevailing Hebrew and Christian delineations of Deity have given to the universe a ruler against whom all the better sentiments of human nature, when capable of acting freely, would instinctively rise in revolt. It is very intelligible why some modern sceptics should bitterly hate, as they appear to do, the very sight of a church, a clergyman, and a Bible. It is because these are all associated in their minds with memories of hours when, on Sunday, in their childhood, they were compelled to listen to doctrines about God which sent such a terror into their young hearts that, though they no longer believe the doctrines, they have never been able wholly to escape from it.

Reverence may well spare this element of fear, which has been so powerful an ingredient in it. And, sometimes, reverence itself may seem to be vanishing because of the decrease of the fear in which it has so largely consisted. But the constituent parts of a much higher and finer kind of reverence remain. With fear as a predominating element of it, reverence is a semi-physical emotion,—an instinctive shrinking of the nerves from the demonstrations of an apparently hostile, vindictive, and destructive power. But, as fear goes out of it, reverence rises into an intellectual and moral emotion. Then it is not so much the power itself as the inner significance of the power that is felt,—the vastness of the time through which it has worked, the grandeur of the results, in great and in little, which it achieves, the far-reaching and noble purposes it holds in aim. And the fear de parts before enlightenment. Fear is the natural ally of ignorance and superstition. It is born of mental darkness. It belongs to the night-time of the human intellect, when things are seen dimly and out of their true proportions, and the imagination conjures up baneful mysteries. The daylight of knowledge comes, the reality is seen, and the fear vanishes. But reverence may consist with reality. This is the lesson which nineteenth century knowledge is teaching us. The objects of reverential emotion may be changed, the sentiment may be elevated and widened in its grasp, and its practical operation be much transformed; and yet the sentiment itself may abide. The real object of reverence is the veritable *truth* of things. Nothing, certainly, that the finite human mind can by its power of imagination conceive of the universe should be so fitted to excite wonder and awe and the grace of modest humility as the stupendous grandeur of the real universe itself. It is *truth* that properly excites the emotion of reverence,—truth in all its vast and wonderful actuality as it comes within the domain of man's existing knowledge, and truth in all the infinite immensity of its possibilities as enfolded within the universe yet beyond man's knowledge.

Science, certainly, is not irreverent. The genuine man of science often, indeed, loses himself in wonder and becomes a rapt worshipper, as he traces the workings of the mighty power in nature through the pathways and byways by which he, in thought, travels after it in the phenomena he is investigating. If man could stand with reverence before nature when he believed that genii and spirits dwelt immediately within all natural phenomena as their vital impulse, shall he have less of reverence when his own investigating intellect has discovered that all nature's energies and laws and operations are but modes in the activity of one supreme force which, beginningless and endless, is ceaselessly shaping the universe, from its minutest atoms of dust to its most splendid galaxies of planets and suns? Science guides reverence away from the debased shrines of an ignorant and grovelling worship, but thereby saves instead of destroying it. It was the philosopher Kant who said that two things filled him with reverence,—the starry heavens and the moral nature of man.

And the latter part of this remark points to another most important constituent of an enlightened reverence, namely, the moral element. And it is reverence for *man* that represents this moral element; not man as he always is, but man in all the magnitude and glory of his capabilities. In material nature, in its laws, forces, majestic forms, and gigantic operations, we have, so to speak, the intellectual side of the universe presented. But, until the universe brought forth man, there appeared in it, so far as concerns human cognizance, no moral consciousness. It is man who completes and reveals the fulness of nature's aim by translating her truth into virtue. Reading her law and purpose, man consciously and voluntarily confesses his allegiance to that law and purpose, and brings the new force of his personality to pushing them into larger activity. Nowhere, therefore, in all the universe which man's eye gazes upon, with all its magnificent wonders, all its mysteries of power and beauty, from the "starry heavens" above him to the tiny flower of perfect harmony of form and color that blooms at his feet, is there anything more entitled to call forth his reverence than what he finds in the possibilities of his own nature. In all the scene gazed upon there is nothing more wondrous than the power wrapped in the gazer himself. There is no mystery more profound than that man's sentient frame, itself a marvel of nature's art, made of the dust-atoms of the earth, should be consciously thinking and working out the world's thought. Nowhere else does man seem to get so near to the mysteries of the secret creative power that is the life-force of the universe.

The things, then, that are most worthy to receive and that will receive the homage of enlightened reverence are the things which man himself represents in the universe and inherently reveres when he stands at his highest level of mental and moral attainment: not so much power as the wisdom and goodness that control power; not so much office as the character in the office; not so much even gray hairs and old age as that "wisdom which is the gray hairs unto men, and that unspotted life which is old age"; not so much achievement and skill as achievement and skill put to beneficent ends; not so much mystery in itself as a mystery that is ever unfolding into a finer order, a more harmonious beauty, a nobler virtue, a more abounding completeness and felicity of life. The objects of enlightened reverence in religion are not the imperfect conceptions, the creeds, the institutions, the Bibles, the shrines, which at any time have been associated with man's strivings to express his homage, but they are the realities themselves behind these transient faiths and forms, which these have only dimly shadowed. They are truth, right, goodness, or the things that forever and evermore make up *righteousness of character*. No being, of however ancient and holy religious name, that does not have this entire righteousness of character can have man's enlightened reverence; and every being that has this righteousness of character is to that extent worthy of man's best homage. And if this enlightened reverence does not attach itself so closely as once it did to creeds and so-called sacred books and forms, it is because it is seeking the deeper word of truth that is ever above and back of them. If it does not always enter the old churches, it is because it finds them too confined for all the fulness of the truth to which it gives its devotion. If it is leaving the venerable shrines of ancient familiar saints, it is because it is looking for the actual sainthood that may be revealed in the familiar lives of men and women to-day.

WM. J. POTTER.

ICONOCLASM AND ART.

I cannot agree with my friend Prof. Adler that an organization like the Free Religious Association ought to incorporate itself in institutions, however practical and benevolent they may be; but do think with him that means should be provided, when and where possible, to train men and women for the work of diffusing Free Religious ideas and principles. It should not be forgotten, however, that this can only be done by resolutely adhering to and cultivating the ideas themselves. If practical embodiments of the ideas be made before the ideas themselves have been matured, and before they have won the sympathy and confidence of those who represent the old institutions, there is danger that the new forms will be crude, unattractive, and injurious. Let any one read Emerson's Divinity College address of 1838, and then ask himself what near prospect there is of seeing that gospel embodied in any visible institutions. It contemplates an organization coextensive with the New World. All the poetry and sentiment, the hearts and homes, the art and devoutness, have got first to be won over to that new colony before the fair City of Man can be built. But for this we certainly do require that young minds should be trained in the art of persuasion, that they should be cultivated in taste, eloquence, and in knowledge, so that the symbols of the past shall be seen by their worshippers as mere scoriæ of the treasure they are really seeking.

The English secularists are just now going through experiences which bear on this point. I had occasion recently to defend them in your columns from a rather wholesale charge that they are "an ignorant and prejudiced body of men, who give Sunday concerts and cheap lectures." I mentioned several who are educated and able lecturers, and said that, as a body, they examine their lecturers with care. Nevertheless, it must now be admitted, on the other hand, that this precaution has come as the result of dearly-bought experience, and that it has come too late to save them from being compromised by the crude elements in their organization. When they were organized, many years ago, they were a good deal less discriminating in the people they put forward and the books they published than they would be now if they had the same thing to do over again. A result appears as I write. On Tuesday, July 11, the proprietor, editor, and printer of the *Freethinker* were hailed before the Lord Mayor of London for having published a blasphemous libel in that paper. I have not read the "blasphemy" complained of, but the paper in question, though edited by a man of ability (G. W. Foote), has a reputation for admitting coarse and violent articles which repel those who ought to be enlightened. The real object of the prosecution, however, is not to suppress blasphemy, nor even to punish the men who are arraigned,—it is to get at Mr. Bradlaugh. Under the 9th and 10th William III., cap. xii., two convictions would render him "forever" incapable of sitting in Parliament. At present, Mr. Bradlaugh is kept out of Parliament illegally, by sheer brute force. It was hoped, by a prosecution for having sat and voted in Parliament without taking the

Digitized by Google

oath,—which he was not allowed to take,—that he might be made bankrupt, which would have legally disqualified him from taking his seat. But his adherents paid the money. Now, his bitterest enemy, Sir H. W. Tyler, M.P., has instituted these proceedings against the *Freethinker*, because it is printed in the same office as the *National Reformer*, hoping to draw Bradlaugh into it. He has a fair prospect of success. Already, a summons has been issued against Mr. Bradlaugh, although Tyler has found nothing to assail in his own paper or writings. The National Secular Society has resolved to support the defence in every way they can, and can hardly help it, though it brings their educated and careful writers into a position beside the illiterate and reckless, which misrepresents them. Such a prosecution is of course a two-edged sword. One edge lays bare Christian meanness and hostility to free speech; but the other edge wounds the cause of free thought by advertising all the crude and coarse elements that adhere to it. And corresponding to these two edges are the two morals: 1. The danger of too much practical organization in an immature movement, especially of the kind that invests it with pecuniary interests; and, 2. The need of sufficient organization to secure a refined and artistic expression and development of the ideas represented in the movement.

While these managers of the *Freethinker* are on trial, and not unlikely to be sent to prison,—for, haply, no free thinkers ever succeed in equalling their opponents in stupidity,—a much more radical and sweeping work than any they ever conceived is enjoying an unopposed circulation, and this simply because it is a work of art. The title of it is: *The Trinity. A Nineteenth Century Passion-Play. The Son; or, Victory of Love.* It is preceded by a quotation from Locke, "God, when he makes the prophet, does not unmake the man." It is the first work of a young man named Pearson, a graduate with honors of both Cambridge and Bonn. He is a Fellow of Trinity at Cambridge, where his dramatic poem is printed. He is also a law student at the Temple. The work lacks some of that "external perfection which can neither be commanded nor described," but every line of it is freighted with force and feeling. There is a "Prologue in Chaos," where the Spirit of Negation summons his Demons of Doubt, Ambition and Lust—who each defend their function in the world,—and sends them forth to tempt the new-born prophet who will endanger the growth of the human mind. Jesus passes every ordeal to the last. Here Mary Magdalene appears on the scene, a beautiful genius, with every charm of person and mind, representing the ideas of Goethe and Schopenhauer blended. Trampled by a world to which she is superior, appealing for sympathy, exalted by her recognition of the prophet as the one man worthy of desire and admiration, she at last finds him at a moment of depression, of hopelessness for his cause, and kindles in him a glowing vision of love and happiness on earth. With delicate art, the poet secures the quick flash of feeling between these two from even a suggestion of vulgar passion. The burning words pass at the instant of parting. They look to the joy of a human heart rising from the ashes of a vain world-dream. Mary, triumphant, at the same time loving, dreams of a coming joy which shall turn all her horrible past to purity and beauty. Jesus presses out into the wilderness and there confronts his forsaken ideal as a Satan, armed with all terrors. The struggle between the prophet and the man is told in a masterly manner. When next Mary meets him, she has drawn near to a crowd he is addressing. Then he speaks of the right hand that must be cut off if it cause one to stumble; and, looking toward the Magdalene, says, "They that have ears to hear, let them hear!" Mary sees that her victory has ended with its first pæan. There is another scene between them, and she parts from Jesus with bitterness. After other scenes, once more they are together, when he protects her from death. Thenceforth, she lives for him alone. The touching scenes related in the New Testament are finely intertwined, and gain pathos from the romance; and there is one scene that is remarkably beautiful: Jesus is asleep at eventide beside Jacob's Well. The Magdalene enters, and noiselessly places a flask of wine and food near him. She gazes sorrowfully upon him for a moment, and then steals away. She knows that the end is near. Jesus awakes and soliloquizes; his tone gets more despairing, and he cries:—

"All, all is false!
Nothing accomplished, not one jot achieved!"

Then he perceives the bread and wine. He drinks of the wine, and says:—

"Nay, nay, not all is false! At least one soul
Is saved, one purer joy at least is won.
Such deed alone is worth a life of woe."

When Jesus is fainting under his cross, the Magdalene wipes the sweat from his face. Jesus says to her, "Mary, remember me." Mary answers, "I cannot live without thee, Lord!"

The poem fills two hundred pages. I can merely give part even of the scheme of it. You will see that it is an able work; but it is more interesting as a promise than as a performance, and still more as a promise of our time than as that of its author. I doubt not he will have an eminent career; but it is a happier hope that, as the young intellect of our time is educated out of the old superstitions, it will turn them into poetry, transmute them to truth, break up the chain into charms. It is about time for the leathern-girt iconoclast to make way for the artist.

MONCURE D. CONWAY.

A DANGER IN THE REPUBLIC.

Those who have noted the very optimistic political philosophy of Gov. Long's Fourth of July oration at the Boston Theatre, especially readers of hopeful, impressible, and sympathetic mind, will have found it hard not to fall in with its pleasant prophecies. The general tenor of Gov. Long's review of the unfortunate tendencies in our nation is that such have always existed, and that prophecies of danger have always been rife; but that we have nevertheless overridden the storms and have still a prosperous present and a promising future. This optimism, which we would so gladly indorse, is the historic continuation of that which has controlled us in the past. Starting with a fairly sound national constitution, we have acquired the germs of disease by bad diet. The civil war was a thing by itself due to our political inconsistency. Two other evils have hung over us,—one the possibility of a religious war due to the overgrowth of Catholicism, a possibility which all good observers now admit to be past; the other, social and political disintegration due to low ideals, love of show, and greed of gain. To the latter evil, we are now so thoroughly awake, and have become so completely ashamed of it as viewed both in the sight of other nations and of ourselves, that there is a likelihood of our gradually outgrowing it.

Our greatest present danger is from another cause. Warnings of it are plentiful in the strikes that have been occuring in all the more densely populated States for ten years past. Unless a greater wisdom than has yet been available be applied to the evil, a tremendous organized conflict of labor against capital or of poverty against wealth will arise in the United States within the next decade. It needs no deep student of our national characteristics to foretell the shape which this new movement will take. It will undoubtedly be a political movement. We shall see the flags and mottoes of the "labor party," and its creed will be substantially that of European socialism. The socialistic scheme of government has a special fascination for immature and superficial minds. Such minds, we shall be obliged to confess, in keeping with Matthew Arnold's criticism, make a large proportion of our people. The more pliant of the so-called religious liberals manifest peculiar susceptibilities to new political and social theories. It has been often noted that social heresies follow upon the heels of religious heresies with astonishing celerity. Yet it is perfectly possible that religious rationalism might be intolerant of political rationalism, and that the largest free thinker in religion might be narrow in politics. Hence, a theory should be put upon the stand, should be thoroughly inquired of and made to undergo the severest cross-examination. Experiments tried upon human society are costly things, and if tried upon a grand scale, as almost always happens in American experiments, are likely to involve needless loss of time. If, out of already existing experience, we can reason to probable results, we are bound to avail ourselves of such help.

The socialistic theory of society has no unknown elements. All the materials for a conclusion are at hand. In the first place, more than forty communistic experiments have been tried in America, and nearly all have been utter failures. The main hindrance was that they could not keep out of debt. The good things constantly divided among so many grew discouragingly less. The consumers outstripped the contributors, and no will and intelligence were made authoritative enough to organize the rest into a successful bread-winning body. These small experiments ought to show convincingly that a reconstruction of society upon the co-operative basis is hopeless in the present development of human nature. In a manufacturing community, it is the planning of a few good heads that enables the less able members of society to attain reliable means of support. But the good organizers can do this only by having control of funds and methods. The socialistic idea is the legitimate offspring of our axiom of political equality. If every man have a voice in the general administrative policy of the country, why should not every man help determine the economic and industrial interests of the people? and why should not those interests be lumped together and the functions of government be extended to include them? If governments could only be induced to assume the obligation of assuring prosperity to all their citizens, then indeed would this bugbear of poverty disappear and our social millennium would begin. The proposition is a very tempting one; and the serious danger is that in this country, at least, enough of the Christian philosophy of the obligation of the strong toward the weak is lingering to win for the plan many disciples among the refined and sympathetic who have not made careful studies of social causes and sequences. Modern socialism as developed by Rousseau is an undeniable sympathetic excrescence. Suffering himself and seeing suffering about him, and being of gentle and earnest nature, without a powerful will or reason, he worked out this remedy. Civilization was to call a retreat, and the horrible words "mine" and "thine" were to be abolished. Rousseau is responsible for French communism and German socialism, although his ideas have been variously supplemented and modified by later reformers. These schemes for improving the condition of the impoverished and fettered masses have arisen out of a cheap and faulty

Digitized by Google

reasoning upon the causes of poverty. Is there any reason for expecting exemption from these schemes in this country? Our greater prosperity alone has thus far saved us. As soon as population overtakes subsistence, or wherever a false distribution of population occurs, the cheap European remedy will appear here. It has already appeared in individual advocacy. Ours is the country, above all others, wherein ideas may be rapidly disseminated. The average reasoning power is not above that of Europe; and the majority of workingmen have but the faulty intellectual equipment derived from centuries of Old World degradation. Such a new political movement would perhaps be led by Americans of more ambition and vanity than patriotism or common sense, and its rank and file would be the undisciplined and hungry millions of foreign extraction who regard this country as a good place to live in while wages are high, but who become clamorous, unreasonable, and defiant, as soon as the "hard times" appear.

The socialist imagines that some governmental device can save him from the consequences of his own incapacity. The plain cause of honestly acquired wealth or power is *personal development.* Let men be exacting toward themselves instead of toward governments or toward other individuals. With the hundreds of thousands of examples of fortune and power attained in this country by individual effort, the secret of success is surely an open one. European problems are being repeated here. As the country grows older, the inevitable division into rich and poor grows more marked, and the inevitable discontents arise. The political education of the American citizen has nurtured an aggressive, self-asserting individuality, and his common school has given him a command of methods which he is certain to use in his own favor. In other words, the moral discipline of the American commoner is deficient, while his low reasoning power makes him the ready victim of crude political theories. Even the supposed "better-class" American is so morally distorted that he is more ashamed of failing to make a good appearance than of failing to pay his debts. All classes of Americans are in sorest need of a lesson from stern old Carlyle, who lived for years upon oatmeal and potatoes in the solitude of Craigenputtock rather than become any man's debtor for a pound. The spirit which impels to self-development is the only spirit which makes a country worth living in. As soon as the people, not content with simple freedom, turn upon a government and demand that it shall create for them conditions of success, social prosperity is checked. The radical vice of the matter is in putting the coöperative in place of the competitive philosophy of development. The incompetent are always too ready to make demands upon the capable; and the whole socialistic scheme simply converts governments into grand organizations for the propagation of pauperism. The present loud cry of socialism is for the nationalization of land. A secondary demand is the abolition of the right of testamentary bequest. The earth and all that is upon it, it is said, is the proper possession of the men now living upon it, and no dead man's hand should be stretched out to control what he has left behind. It is expected that enthusiasm for the common good will incite everybody to industry and accumulation as completely as under present arrangements. A wrong premise vitiates the whole plan; namely, that the competent are bound to assure the comfort of the incompetent. Let teachers arise who will impress upon the common classes the imperativeness of that self-denial and self-discipline which thousands of refined and self-exacting Americans impose upon themselves. Instead of cherishing any high ideals, he lapses into a theory of animal comfort, erects his family establishment, and rebels against society when his income falls below his selfish requirements. As a comment on human nature, the spectacle is disheartening. Ignorant and uninstructed, the man of low powers cannot see his way out of his difficulty except by calling on society to save him from consequences. But society will always have the same problem to deal with until it makes a radical study of causes.

M. A. HARDAKER.

THE CREED OF SCIENCE.

I desire to call the attention of those who love good reading to a book written by William Graham, and published by C. Kegan Paul & Co., London. Its title is *The Creed of Science.* I have not read so sincere and earnest a book for many a day. It has strengthened in my mind a conviction which has for some time been considerably operative there; namely, that for all the wonderful achievements of our modern science,—achievements which it would be quite impossible to overrate,—its result, conscious or unconscious, with reference to many of the higher problems of existence, is exceedingly meagre, and not only meagre, but depressing, if certain theories which have the authority of distinguished men of science on their side are capable of confirmation. There are those among us who never speak of the scientific revelation, save in the most cheerful and exuberant, not to say hilarious, manner. I have often wondered whether a strict construction of the established truth of science, to say nothing of those theories to which I have already alluded, would justify all this exuberance and hilarity. I have questioned whether something of individual temperament or something of philosophy or poetry is not added to the purely scientific result, whereby its attractions are not a little enhanced. Mr. Graham's book has a distinct and luminous bearing on this class of questions. The writer is no partisan. His emancipation is complete from every form of supernatural religion; but he is able to appreciate the good which Christianity has done in spite of its tremendous limitations. He holds a brief for neither science nor metaphysic. His book is an honest effort to discover exactly what the bearing of science is on those religious, moral, and social problems which overtop all others.

Mr. Graham's book is made up of three parts: I. The Creed of Science, Religious and Moral; II. The Gospel and the Social Creed of Science; III. The future of Religion and Morals. In the first part there are five chapters, the first of these on "The Creation and God." We have here an admirable discussion of the nebular hypothesis. The theories of Kant and Laplace are distinguished from those of Thomson and Helmholtz; and it is shown how far from certainty we are in these fields of inquiry, where even the most rational hypotheses still labor under many difficulties. Spontaneous generation is discussed, but left an open question, though with a manifest inclination to the affirmative side. Coming next to the Darwinian hypothesis, Mr. Graham is less inclined to be entirely satisfied with it than the majority of those, even the more orthodox, who since Mr. Darwin's death have set forth his relation to religion. It is not enough for him that Mr. Darwin in set terms acknowledged an original Creator. Was he justified in doing so by his own principles? Mr. Graham thinks not, and considers those his most consistent disciples who have refused to follow him in this particular. A Creator in his system seems introduced rather for ornament than for any serious work he has to do. He is "a monarch that reigns, but does not govern." What governs is "natural selection," which is but another name for chance. Given some slightest accidental alteration of conditions at a critical moment, and the course of things upon the earth might have been entirely different. Man might never have appeared. Some "mute, inglorious" elephant or hippopotamus might have been the crowning work of time. Herein, he finds the radical defect of Darwinism and of evolutionism in general, as scientifically expounded: it denies expressly or by implication all or any Final Cause or Purpose in the Universe. Mr. Graham is quite certain that we shall not rest in this conclusion. We may give up every anthropomorphic and personal idea of God, but we shall still believe there is a Purpose in the trend of things. "The origin of species *by means* of natural selection": yes, if these "means" are means employed by a Supreme Intelligence with reference to some end; no, if natural selection is itself to be regarded as the First Great Cause.

Mr. Graham's second chapter recalls a recent controversy of Mr. John Fiske and Mr. William James; and he is heartily with Mr. James in his belief that the creed of science is not sufficient to account for human progress, that natural selection must be supplemented by the action of great men upon society. A chapter on "Human Nature and its Capacities for Virtue" is much more harmonious with the creed of science than the chapters which precede it. The want of scientific knowledge has been the principal cause of failure heretofore with the makers of ethical systems. Man's natural sociability is set down as the happiest discovery of evolution. Mr. Graham's hero-worship—it is of a very sensible and quiet sort—here once again appears. The great and good have made humanity beautiful for us, and the love of humanity possible. Best of all is his arraignment of the ethical system of Kant, never more needful than at the present time, when indiscriminate "retreat upon Kant" is almost as fashionable as "Boston blue."

A chapter on "Free Will and Man's Automatism" is one of the most interesting in the book. Here, as elsewhere, Mr. Graham distinguishes between the orthodox creed of science and the unorthodox; *i.e.*, the well established and the rashly hypothetical. The theory of man's automatism he discredits as only a fresh and an exaggerated instance of the strong tendency in men and philosophers in all ages to try to explain all phenomena by the particular class of phenomena with which they are habitually conversant. It is to psychology, not to physics or biology, that we are to look for the true creed of science as regards the problem of the human will This creed is necessarian. Mr. Graham frankly accepts it as such. His statement of the necessarian position is one of the most lucid I have seen. His arguments against any freedom of the will—that is, autonomy—are clear and strong. At the same time, he contends for a certain directive power in the Man which is not in the Will. We have an undoubted and a great capacity for working toward certain distant ends. We thus possess a practical freedom, the freedom of working toward a desired end. And this practical freedom is increased by every fresh discovery of natural laws. The New Testament saying, "The truth shall make you free," finds here a noble illustration.

A couple of chapters on Immortality will probably be read with more avidity than any others in the book, if not with greater satisfaction. I read them first myself; and many others will, no doubt, be as impatient to discover what they impart. In the first chapter, the negative argument is stated with remorseless brilliancy and force. The counter-thesis of the succeeding chapter will afford but

Digitized by Google

little satisfaction to the average man who craves belief in immortality. The result at which the author arrives is hardly more attractive than the doctrine of complete annihilation. He concedes to science that memory is an affair of physical organization, and that therefore we can have no memory of our former selves in a future life, no consciousness of personal identity. We may have no consciousness at all. Evidently, Mr. Graham wears his immortality with a difference so great that it would smell as sweet by any other name. The creed of science will be hardly less acceptable to hearts that ache with sorrow for their dead.

Mr. Graham's Second Book, on "The Gospel and the Social Creed of Science," begins with a chapter on pessimism and positive science, for the former of which he has no word of commendation, but to the latter he accords a generous meed of praise. A succeeding chapter on the message and promises of science to mankind is the most eloquent and comprehensive statement of this message and these promises that I have ever seen. Especially those sections which treat of knowledge as the emancipator and deliverer are exceedingly noble and impressive. Wonderful is the showing of the multitudinous ills of body and of mind that have succumbed to science,—ills over which the theologian and the metaphysician had no power. This chapter conducts us naturally and easily to the next, which treats of science and socialism. The positions of the socialist and sociologist are clearly stated, and, if compelled to choose between the two, Mr. Graham would certainly choose the sociologist. But, while the creed of socialism is as little made for human nature as the ethics of Immanuel Kant, the sociologist requires of us an impossible patience. We must and can accelerate the processes of natural social evolution, and he endeavors to point out the way of victory.

In Book III., we have first a chapter on the "Materialism of Atoms and Forces." It is well done; but poor Materialism has come in of late for so many salutary lessons that our natural sympathy with the under dog begins to show some signs of self-assertion. A second chapter continues this discussion. A third treats of "The Developed Conception of God." To a considerable extent, this conception, as interpreted by Mr. Graham, coincides with the Absolute Being of Herbert Spencer. But the Unknowable of Spencer is considerably known. We can know its existence, infinity, eternity, universal agency, and efficacy, and its final utter incomprehensibility. Moreover, we can know the sides of his nature that he has turned to us, the manifestations of this transcendent Power both in ourselves and in the external world. This is the creed of science, and it is not a godless creed. It is only not sufficient because it does not predicate purpose of the ultimate reality. This we must predicate, says Mr. Graham, if for no other reason than because the alternative is too grotesque and horrible to be believed.

A couple of concluding chapters treat of the Evolution Ethics. It does not seem to me that Mr. Graham brings to these so keen a penetration as is elsewhere characteristic of his mind. The sense of duty is not at the mercy of our speculative opinions. It is a spontaneous expression of hereditary convictions in regard to the qualities of certain actions. But, were it otherwise, I do not see that the moral law of evolution is any more a man-made thing than the moral law of the Christian supernaturalist. It is the inevitable outcome of a moral universe.

Thus, all too briefly, I have indicated the character and teachings of a book that I have found remarkably suggestive and impressive. Such a meagre account does it the scantiest justice. I can only hope that some of those who read my article will be led to get the book and read it carefully. So doing, I am sure they will be grateful for my word of commendation.

JOHN W. CHADWICK.

PRAYER.

If all events are the effects of preceding causes, and God, the supreme power in the universe, acts only through natural laws, prayer in the form of petition is irrational and useless, unless it can be proved that prayer is a natural force.

Upon the orthodox ideas of God, petition to him to vary the successions of cause and effect is unreasonable and wrong. It is asking for blessing which involves suffering to others. The sailor who prays for a fair wind really asks that other sailors, equally deserving of prosperity, may have a head wind; and, supposing that sailors pray, God is daily besought that the wind may blow from every point of the compass. How can he grant any of these petitions without injustice, even if the direction of the wind was not determined by natural laws which God has never interrupted? The flour merchant, praying for a rising market, asks God to do that which will make the laborer pay more for his bread. The laborer prays for cheap flour. How can God answer both prayers? The prosperity of one often means the adversity of another, the success of one the disappointment of his perhaps equally deserving fellow. How can a just God discriminate in the bestowal of answers? We narrate deliverance from shipwreck and accident in answer to prayer; but an honest consistency would oblige us to tell of shipwrecks in answer to prayer, and of misfortunes traceable to the following of "indications of Providence" succeeding prayer. Jesus had a wise conception of the limitations of prayer. The Lord's Prayer deals largely with desires for God's glory and man's moral improvement, its only material request being for daily bread, which every one would seem to have a natural right to possess. But it is more rational to work for it than to pray for it; and that this is the more effective course is proved by the popular proverb, "God helps those who help themselves."

Prayer is not only usually futile, but it is oftener injurious. It concentrates the mind upon itself and promotes selfishness. The calm of the evening subdues the throbbing brain of the business man; but, as he kneels by his bedside to pray, all the desires connected with his unfinished schemes are aroused, he often changes prayer into a renewal of his schemings, and, in utter forgetfulness of his purpose, calls back the trials and difficulties of the day, and his excited brain defers the approach of sleep. To some temperaments, the prayerless pillow brings the sweetest sleep. Prayer leads to trusting to God what should be sought by our own efforts. A landlady was overheard to pray imploringly that God would fill her house with boarders and bless her dog "Gypsy"; but she left her room and scolded so much at her servants that her boarders left her; and she stuffed her dog into an apoplectic condition. Prayer has been the resort of laziness, and has often paralyzed efforts and lost the attainment of desires, while the devout person was "waiting on the Lord" instead of using his best efforts for himself.

Prayer has an even chance of being answered or of failing, except that we usually pray for what is unlikely to happen. Most of the reputed answers to prayer are just this chance of having desire correspond to natural results. But there are some cases where prayer has really produced effects by its reflex influence: the will and faith of the devotee have affected the nervous organism and produced the desired result. The effect follows prayer to demons in Asia, to the Virgin and saints in Europe, and to Christ in America, and is therefore purely the action of physical laws. The shaking of the Joss-sticks in China, the whirling of the prayer-wheel in Burmah, the seven daily prostrations of the Mussulman, the counting of beads in Rome, and the prayer-meetings of Protestants, are alike in their measure of success or failure. Dr. Hammond, in the *International Review* for March, 1881, in a valuable article upon this subject, describes a cure effected by Croton water, labelled "Lourdes Water," after genuine Lourdes water labelled Croton had failed to produce effect, proving that the power lay in the imagination.

Perhaps, it may be found that prayer is sometimes effectual in another way. One or more persons sometimes "will" that another shall do certain things, and the acts are performed. This is believed to be a "psychological" influence; which only means that it is produced by a natural force that as yet we know but little of. In the *Nineteenth Century* for June, an article entitled "Thought Reading" gives most interesting facts of this character, with suggestions of explanation; and the editor adds a note containing a theory that "brain-waves" are produced by mental efforts, and sometimes affect others at a distance with a consciousness of the thought that caused them. Many visions, apparitions, and impressions would be explained by this theory, if it could be established. A man in a prayer-meeting felt an intense impulse to give a stranger five dollars. He did so with great diffidence, and learned that the stranger had been praying throughout the meeting for that sum, in order to bestow it upon a distressed person. This was narrated as an answer to prayer, and so it was. But, instead of its being the direct action of the Being invoked, is it not as well or better explained by the supposition that an intense desire may sometimes influence the mind of another person, or even affect natural forces in other ways, and thus produce the answer? If so, it is the feeling, and not the petition to God, which has brought about the result. Principal Dawson, in his latest work, *Facts and Fancies in Modern Science*, says, "The bleat of the lamb will not only meet with response from the mother ewe, but will even exercise a physiological effect in promoting the secretion of milk in her udder. . . . In the case of animals there must be a certain relation between the one that prays and the one that answers." He argues for prayer to God, but such facts better illustrate the effects of desire upon natural resources.

When men become good and wise enough to "will" with benefit to themselves and others, we may find that the power of nature to produce results has also enlarged, and it may be found that the instinct of prayer was a dawning conception of a grand force to become available for man's use in a more developed state. As people meet now in a circle to "will" that a table shall move, the prayer-meeting will perhaps be succeeded by a gathering of intelligent persons who shall effectually "will" for results more useful to man, in certain directions where the possibility of success has been scientifically determined.

Meantime, the area of prayer will gradually be narrowed, as men learn to trace results to natural causes. They cease to ask God for things as fast as they learn nature's laws. No one prays that the sun may rise or that the seasons may change; and men are ceasing to pray for rain and wind and all other events, in proportion as they see that they are as inevitable as the sunrise, or else can be directed by their own knowledge.

But many rationalists, either from early habit or

Digitized by Google

inherited impulse, while abandoning direct petition to God for specific material needs, delight in prayer as communion with the Power and Goodness which they perceive in nature, which they in a measure personify as God, and toward which or whom their spirit of thankfulness and wonder is outpoured. This it is not intended to criticise. The remarks made apply only to petitional prayer. Worship of God can do good only as it elevates the mental faculties to aspire toward a superior conception. Reverence for the powers of nature and an enthusiasm for the progress of humanity may produce as good effects upon the mind, and may lead to better results for the world.

ROBERT C. ADAMS.

EDITORIAL NOTES.

THE paper by Mr. Frey, which we present to our readers this week, can hardly fail to attract the attention of earnest thinkers.

WE print this week the last of Mr. Hinckley's contributions on the "Religious Culture of the Young." The series can be had complete in the form of printed slips at this office. Price 28 cts.

REV. WASHINGTON GLADDEN, who has an extensive acquaintance with orthodox ministers, makes the following statement: "I wish to record my own conviction, drawn from a pretty extensive knowledge of journalists and of clergymen, that the average editor is a little more fair and Christian in his dealings with truth and in his treatment of those who differ from him than the average parish minister." And yet the "average parish minister," although he has less knowledge of the world, is commonly believed, and not without reason, to have more faith in Christ and more reliance on prayer than the "average editor." Why is he less fair and truthful in dealing with opponents?

IT was at Concord on Emerson Day. After a morning with Bartol and Alcott and Mrs. Howe, the spiritual gave way to the mortal, and the sustenance of life became infinitely more important than the sublimity of death. "I was thinking," said a venerable college president, "as I looked among your audience, that there were no young men there, and with none but old men your school would soon die with them. By the way," he continued, addressing a distinguished authoress, "will you tell me what is your definition of a philosopher?" "My idea of a philosopher," was the instant reply, "is of a man up in a balloon, his family and friends holding the ropes which confine him to earth, and trying to haul him down." —*The Transcript.*

LAST Sunday, Rev. J. S. Breckenridge, in a sermon preached in the Sands Street Methodist Church, Brooklyn, said: "Sects are in many respects like insects. Let a lot of insects hover around an elephant, and each one sees it in a different way. One crawls up its leg, and reports to the others that an elephant is a tall, cylindrical, black body. Another has alighted on the elephant's tusk, and declares that the monster is a hard, white mass of ivory. A third sits down under the elephant, looks up, and vows that an elephant is a black cloud which overshadows the heavens. While a fourth perches on its back, and cannot be convinced that an elephant is not a vast level plain. No one religious sect can comprehend or represent the whole Jumbo of truth in itself."

SO GREAT is the dislike of the Boston literary correspondent of the Springfield *Republican* (Mr. F. B. Sanborn) to Herbert Spencer that he can find nothing but "elaborate triviality" in *Political Institutions* (Part Fifth of the *Principles of Sociology*) just published, although even the orthodox *Congregationalist* feels forced to admit that "it is a full and careful treatise, rich in facts and suggestions, and candid in temper. "We have been specially interested," adds this journal, "in the last chapter, in which Mr. Spencer indicates what he thinks are to be the outlines of future political institutions; and we are glad to see that he anticipates the spread of republican ideas. We also have read with special attention the note on pp. 640–642, which is a stingingly sarcastic criticism of British social, political, and religious shortcomings. It is an utterance which every honest man must approve, but which he also should lay to heart as regards his own nation, whatever that may be."

PRINCE LEOPOLD, in an admirable speech at the English Press Fund Dinner, said:—

The direct social and political power of the press is a fact which we are none of us likely to forget for a day. And yet it is the indirect, the educative power of the press, which is, I think, the greatest of all. The most pervading effect on mankind is produced not by the arguments of the press on points on which the various journals differ, but by the instruction given and the tone assumed by the press on points on which all journals concur. For, after all, the main function of the press is to be the contemporary and authentic record of the progress of the world; and the world's progress is not marked so much by the changing triumphs of one or other party, by the shifting predominance of this or that school of opinion, as by the steady increase in the mass of knowledge and experience on which all civilized men are agreed, and which each generation inherits, almost unconsciously, from its predecessor. And what it gives me most pleasure to observe in the press is the increasing completeness with which this world-wide record is kept,—the increasing accuracy and fulness of the picture which the press presents to us of all the complex life and thought and action which are going on upon the surface of the globe.

A CORRESPONDENT of the Springfield *Republican*, referring to Harriet Martineau's avowal of sympathy with the abolitionists in 1835, writes:—

When Miss Martineau, the gifted author, the friend and peer of English statesmen, before whom members of Parliament laid their schemes of political reform for her approval, she whom America had fêted and honored, whom even slave-holders had royally entertained, took this decisive step, she knew that henceforth every door in America, except that of abolitionists, would be closed against her, that her further travels must be circumscribed, that she would be in constant danger from lynching; yet in her nobleness of soul she writes: "I am held up in the good company of Mrs. Stowe and Mrs. Chapman to the abhorrence of the South. If I am proud of my company in one sense, I am ashamed of it in another. Mrs. Chapman and Mrs. Stowe have really sacrificed and suffered, and thrown their whole future into the cause, whereas mine is so cheap a charity that I blush to have it associated with theirs. By their side, I am but as one who gives a half-penny to a beggar in comparison with those who have sold all their goods to feed the poor." The newspapers of Boston and the press of the whole country anathematized the fearless woman; but to-day an earnest reformer in another field, Mrs. Livermore, through the Boston press, pays homage to the woman of genius; and, with tardy justice, Fame at last recognizes Harriet Martineau, the large-souled, rarely gifted, and philanthropic woman.

AMONG those who are to speak at Watkins Glen this month, somebody, we hope, will have the courage to denounce the deception and trickery by which the New York Free Thinkers' Association was made auxiliary to the National Liberal League. The obstacle to this affiliation was the policy of the National Liberal League in regard to the repeal of all postal laws against obscene literature. The difficulty was removed by a *compromise*, and *such* a compromise! The leaders of the League "gave assurance that they would do all in their power to make the League acceptable to all"; and "there appeared to be a desire manifested by all parties for concession by each, so far as it could be made consistently with honor." The impression was produced designedly that the League would so modify its policy regarding postal laws as to enable all in favor of State secularization to join it without sacrifice of principle. At the next convention of the National Liberal League, held in Chicago, the fraud was consummated by the adoption of resolutions inviting to membership all who believe in State secularization, but reaffirming the resolutions of the previous year, which pledged the organization to the total repeal of all postal laws against the transmission of indecent literature through the mails.

OUR esteemed contemporary, the *Catholic Review*, in a lengthy reply to the article in which, under the caption "Confusion worse Confounded," we pointed out some of the errors into which that journal had fallen respecting the Free Religious Association, informs us that it obtained its information from a reporter it sent to "the 'head-quarters, No. 3 Tremont Place, Boston,' to make the necessary inquiries; and it was there that the information, so new and interesting to us and to our readers, was obtained, and some of the valuable and extremely amusing, not to say edifying, documents of the Association secured for our future use; so that, if there be any error in our report, it is certain not to be laid at our door." We are quite ready to credit the *Review* with sincerity, when it declares that it "has not the slightest disposition to misrepresent them [the writer and his *confrères*] in the least particular"; but it is none the less true that the errors we exposed admit of no dispute or doubt among those acquainted with the Free Religious Association, and could not have been conveyed to a reporter by any person connected with it or competent to give information concerning it. And no such "information" was given at the "head-quarters, No. 3 Tremont Place, Boston." What our able contemporary says in regard to "the fault of the movement" we have marked for future comment.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index.*

PHÆDRA.

[Free Translation from Euripides.]

Forth to the air my languid form convey:
Where roams the blithe bee I would fain be straying,
Or on the breezy mountains far away,
Where round my love his deep-mouthed hounds are straying.

There speeds the dappled fawn, the pine tree there
Its keen aroma ever is exhaling.
Let loose the tresses of my auburn hair,—
Here pent and caged, I feel my life-pulse failing.

Lay my parched lips where under alders flowing
The dewy fountain pours its taintless stream;
Where o'er the meadow fresh young grass is growing,
And thousand blossoms woo the summer beam.

But chiefly for the mountains yearns my heart:
Therefore, my form uplifting, thither bear;
My beauteous prince his keen, unerring dart
In woody gorges wild is plying there.

Minion of Dian, he from men afar
A vestal youth in forest shades is leading;
Upon his leafy couch gaze moon and star;
His ears are deaf to love-sick passion's pleading.

Would I an Oread were in Dian's train,
Huntress of deer, in arrows keen rejoicing!
Then glimpses of the loved one I might gain,
Where nymphs and hounds the chase's joy are voicing.

The Index.

BOSTON, AUGUST 3, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

What Form of Agnosticism may become the Religion of the Future?

BY WILLIAM FREY.

Can Agnosticism be a Form of Religion?

The first half of this article explains why the pure agnosticism, as advocated by Herbert Spencer, cannot be a form of religion. The second half will represent how agnosticism, being supplemented by some unavoidable conclusions, may harmonize all the controversies about the future form of religion, and become the Religion of the Future.

Let us take for our starting-point the statement made by the editor of *The Index* (see his article in *The Index* of Feb. 16, 1882) that the source of religious feelings lies in man's dependence on the universe and its vital forces. The history of religion and the researches of our best thinkers prove that all religions have sprung from the same source,—that the feeling of our insignificance in comparison with the grand and mighty cosmos, and the sense of our dependence on the vital forces of the universe must forever remain as a basis for the future religion.

The display of stern and inflexible forces operating on primitive men during untold ages has made the religious sentiment intensely predominant over all other feelings. The undisputed superiority of the mighty Power excites in men the feelings of submission, awe, and terror, and have a tendency to establish the relation which exists between slaves and their master. But they could never build the relation which exists between children and their loving father; they could never stir the feelings of gratitude, hope, love, and reverence, which constitute the greatest bulk in religious sentiment, which warm our hearts and control our actions. The sympathetic feelings can be stirred and developed only by human forms and activities: and religion could affect them only by personification of nature and its forces.

Conceding that our dependence upon nature was the chief and primary impulse in our conceptions of Deity, it is none the less clear that man felt always the necessity of shaping this conception into tangible, concrete, human forms and activities. And the religious sentiment was built up in its completeness by the simultaneous influence of the two essential elements in every religion, of which the human element was at least as important as the element of the Infinite.

The personification of nature and its forces, as depicted by poets and the loftiest minds, is but a mirror of the highest human ideals at the time when religion starts into existence, and cannot fail to produce a beneficial influence on the masses. And we know that, long after the religion is firmly established and accepted, the character and conduct of men are moulded by the character and conduct of their Deity.

Herbert Spencer fully admits the great influence of the human element in past religions; but he thinks this element loses gradually its importance, because the deities of each successive religion recede more and more into the abysses of space and time, and become less concrete. He concludes that now, when our intellect outgrows all the fables and personifications attached to the forces of nature, we must recognize the existence of the Inscrutable Power, and submit ourselves to the stern necessity of obeying its laws. But, at the same time, we must bear in mind that, as finite and relative beings, we cannot comprehend the Absolute and Infinite, and that the laws of nature cannot be obtained through the direct communication with the Unknown.

"In Science," says Herbert Spencer, "we have the only veritable revelation. It is the duty of every one to verify this disclosure so far as in him lies, and, having verified, to receive it with all humility."

Men are put now face to face with the impenetrable mystery. They must reject any attempt at personification. The agnosticism of Herbert Spencer is but a last stage of the gradual process of purification of Deity from the gross human conceptions, and, as such, can stand the severest verification by science, and fully conforms with the spirit of the time. But is this a sufficient claim to become a religion? Can religion be based on the element of the Infinite, with the utter disregard of the human element?

Oh, yes! confidently answer the agnostics. If the nebulosity of personal gods in the latter religion did not diminish the strength of religious sentiment, then, certainly, the complete purification of Deity from all foreign attributes will only intensify the grandeur and sublimity of the Infinite, and may form a solid basis of religion for at least those who are grown up to accept the inevitable.

Now, in the name of truth, I protest against such answer, and I will briefly show

1. That, although the evolution of the idea of the Infinite is a constant and unavoidable process of purification from human elements, yet the human element of religion, instead of decreasing, grew up stronger with the increase of nebulosity of the personal God.

2. That agnosticism, as advocated by Herbert Spencer, disregards this fact; and, being devoid of one of the essential elements of religion, can never become as such.

To prove the first point, it is sufficient to see the evolution of monotheism in Judaism, Christianity, and Mohammedanism.

The Jehovah of the Hebrews is almost devoid of high and mysterious attributes which are implied in monotheism. He easily takes the shape of men, and mingles with them; he sometimes gets tired and weary with his work; he communicates to men his complaints and griefs; he even wrestles with men; he is constantly on hand in any emergency, and attracts the attention of men to himself rather than to his mediators and prophets.

The God of the New Testament becomes more invisible. He ceases to enjoy the trivialities of human life; he acts only through the mediator.

But, in proportion as the mysterious element of Deity predominates over the human, the religious fervor of men is excited less by nebulous conception of God and more by the human excellences of the mediator. And the strength of the Christian religion of to-day is not in the idea of one God and Creator, but in the man Jesus dying on the cross. In Christianity, we see the beginning of the separation of mysterious and human elements; and, while God is preëminently the representative of mystery, the Christ is preëminently the representative of the human elements of religion. Of course, this separation is not complete. The human mind cannot be changed abruptly. The imagination of men continues to envelop in the clouds of mystery the great teachers who claim to be the mediators between God and man. Crishna among the Hindus, and Jesus among the Christians are still regarded as Sons of God, as parts of Divinity. But, even in such a case, the hearts of men are kindled not so much by the divine origin of these great teachers as by their human excellences.

In the last monotheistic religion of the world, the separation of mysterious and human elements is more complete and more instructive for us.

Mohammed never claimed to be a son of God. So high was his regard of Deity that, even in the fits of hallucination, he never pretended to be in direct communication with God, but said that his Koran had been received from the archangel Gabriel.

God of Mussulmans is enclouded in deep mystery, while Mohammed, with his novel idea of monotheism, with his ability to organize the scattered tribes into a powerful nation, with his Koran full of wise and noble utterances, becomes the most prominent figure in the religion of Islam, and excites the most fervent enthusiasm among the Arabians.

The affection for Mohammed was so great that, even during his simple and unassuming life, he was regarded as an immortal being. We know what an indescribable grief spread over Medina when Mohammed died. Nobody was willing to believe in it. Only the influence and moderation of Abubeker appeased the tumult. "Mohammed is dead," said he to the multitude; "but *the God of Mohammed*, whom you must worship, liveth forever." Since that moment, and up to the present time, the God of Islam takes a secondary place, becomes a derivative from Mohammed, and the chief motive power of the religion rests on the personality of the prophet and mediator. Medina has been sanctioned by the death and burial of Mohammed. His name is inseparable from that of God. "There is but one God, and Mohammed is his prophet," is on the lips and in the thoughts of every true believer in the Koran several times a day. And all these adorations are paid to a man! Even the most fervent admirers of Mohammed, and inventors of miracles, dared not to ascribe to him a divine origin. We see that in this last monotheistic religion the idea of Deity or God became more nebulous, while the human elements of religion acquired more intensity and clearness by being grouped around the great teacher and benefactor of the race. God becomes a perfect mystery. Mohammed becomes a perfect man, an embodiment of all human excellences, a source of religious enthusiasm for his followers.

And this complete separation of the mysterious from the human element only strengthens the religion. Islamism now is a proselyting power, while Christianity must soon yield to the advance of modern civilization at home, and loses its charms abroad. Whenever the missionaries of the two religions have competed with each other, Bible and cross have been obliged to give way to Koran and crescent. The plain separation of the mysterious and human elements is more acceptable to the minds of the masses than the mysticism of Christianity, with its borrowed notions of the trinity and divine origin of Christ from the Virgin Mary.

This fact of the gradual separation of the mysterious and the human elements in religion is entirely overlooked by agnostics. They see that the human element loses its strength and concreteness in connection with Deity, but they fail to see that this very element is gradually gaining strength and intensity in connection with the great teachers of religion, the mediators between God and men.

The religious enthusiasm of the latest religions retains its vigor, not because the idea of God becomes more nebulous, but because the human element becomes stronger and clearer than ever before. True, the human element is transmitted from the Infinite to the human beings; but, in its new and proper place, it continues the same function as before, *i.e.*, excites the sympathetic feelings of man.

The agnostics look only at one side of the evolution of religion, and come to the erroneous conclusion that the human element is coming to the end, that a mere recognition of Inscrutable Power and the implicit obedience to its laws are sufficient for the Religion of the Future. They overlook the other side of the same evolution, which shows that the human element becomes stronger and clearer in each successive step, and that no religion of the future can exist without the fullest and most imposing display of this element.

Now, let us see to what result we may bring this one-sided conclusion.

First of all, Herbert Spencer himself says that the necessity of representing the Infinite in a concrete form is deeply rooted in the human nature, and cannot be neglected. "Very likely," says he, "there will ever remain a need to give shape to that indefinite sense of an Ultimate Existence which forms the basis of our intelligence. We shall always be under the necessity of contemplating it as some mode of being; that is, of representing it to ourselves in some form

Digitized by Google

of thought, however vague. And we shall not err in doing this as long as we treat every notion we thus frame as merely a symbol, utterly without resemblance to that for which it stands." (*First Principles*, p. 113.) This symbol must necessarily reflect back on our conscience and influence our conduct. Now, with the full stretch of our imagination, we fail to build up a symbol which could stir our sympathetic feelings.

This Inscrutable Power, stern, inflexible in its mysterious way, requiring a complete submission to its will, punishing every transgression of its laws, may be compared with an autocrat who shows no partiality, puts everybody on the same footing, and inflicts the same punishment on his best subject as on the meanest. Such a power may enforce humility, terror, and awe,—the very same feelings which were so prominent among primitive men,—but never excite the sympathetic feeling. Children may love the parent only when conscious of being loved and protected by him during their helplessness and in time of trouble. The cold, stony-hearted, immovable Power of agnostics cannot excite in man the feelings of love, self-sacrifice, and devotion. Men cannot bestow their love and life on "cold and careless nature which acts with such fearful uniformity: stern as a fate, absolute as tyranny, merciless as death, too vast to praise, too inexplicable to worship, too inexorable to propitiate; having no ears for prayer, no heart for sympathy, no arms to save." Is there any wonder if slaves become as cold and heartless toward each other as their master is?

Science is our revelation and our guide in life, say agnostics; but such assertion sounds like a mockery, as long as men have no stimulus to follow the dictates of science, no guide when science leaves them helpless. We know how incomplete and contradictory is science in its highest branches,—psychology, sociology, and ethics. We know that there is no absurdity which is not covered by the authoritative name of one or another famous scientist. To go to science without having a guiding ideal is the same as to pick up everything which may suit one's fancy or propensities. The most selfish man may unhesitatingly accept all the deductions of Herbert Spencer, recognize the supremacy of science, and remain as wicked as ever. The struggle for existence, the survival of the fittest, being the discoveries of modern science, can approve his most outrageous acts.

The Unknowable of Herbert Spencer cannot excite the sympathetic feelings which form the greatest bulk in the complex religious sentiment. Having lost the common fatherhood, men cannot be united in one brotherhood. True, it may be said that man has emerged from mystery, and is its child; but so has emerged a drop of water or a grain of sand. Such conception, grand as it is, will not improve our morality, our relations toward our fellow-men. It has rather a degenerating influence, because it equalizes men to other unanimated things, and the struggle for existence, according to it, may be applied alike to everything which exists. Such conception may create only fratricide and moral chaos. The motto, "Each for himself, and let the devil take the hindmost," may not be recognized openly by agnostics, but is the necessary result of their theory. The agnosticism as established by Herbert Spencer cannot bind men together: it will promote only enmity, competition, and divergences. It becomes preëminently the religion of individualism. It may stand for a while as a shield and exponent of our age of decomposition; but, if destined to become a religion of the future, it can only tend to the degeneration of men.

Happily for mankind, the religions are not made: they grow from the preceding ones. Each containing the same elements, only presenting them in a shape more acceptable to the moral and mental development of man.

Herbert Spencer has shown us the evolution of man's conception of Deity. With marvellous erudition and great force, he worked up the intellectual part of religion; but he entirely neglected its other part which warms the heart, gives strength to follow the dictates of science, supports and consoles our lives. We know that the beneficial influence of every religion is based mostly on its human element. We have seen in the evolution of religion that the human element is not in a decay, but grows stronger, and becomes a necessity for the development of our sympathetic feelings, for uniting us into one spiritual body. Hence, we may safely con clude that every form of agnosticism which excludes the human element can never become a religion of the future.

The Religion of the Future.

To correct the one-sided conclusion of agnostics, let us draw attention to the greatest discovery of the nineteenth century, made by a man equal to Herbert Spencer both as scientist and as philosopher.

"Between the man and the world, we find humanity," said Auguste Comte, about forty years ago; and in the existence of humanity, he foresaw the possibility of reconciling religion and science.

Both orthodox and liberals united to oppose this great idea of his. The former wanted to insult the man who had killed outright the supernatural and revealed religions; the latter felt that with the new religion comes the end of their selfish looseness or their metaphysical vagaries. They both ridiculed the great discovery of Auguste Comte. They called it the product of an insane mind. They are trying even now to sneer and laugh at it, but with what result? The stigma of insanity may rest on the great thinker; but his ideas are taking such a strong hold on the minds of men that even his avowed opponent, Herbert Spencer, unconsciously contributes the most weighty and conclusive proofs that humanity is a living and growing organism. To gather all these arguments, to demonstrate the existence of humanity, to give to the reader the full and clear conception of this imposing Being, is the object of another long discourse, whose appearance in the columns of *The Index* may be justified only by the degree of interest aroused by this article.

Suffice to state here that the proofs of the existence of humanity are within the reach of science; that men of science can no longer ignore a being, supreme to all known to us, who is subject to the same laws of evolution and growth as any other organism, and of which we individuals are but molecules.

Of course, before men of science shall have been compelled to recognize the existence of humanity, thousands of common people will accept this grand idea. Like many other great discoveries which revolutionized the world, the discovery of humanity is first hailed not by the sceptical *savans*, but by the open-hearted, unpretentious men who instinctively respond to the truth before they begin to analyze it. They are the first to perceive the sublime image of the Supreme Being, endowed with the same characteristics and continuity which are seen in every living organism. They see that humanity carries within herself and accumulates all the knowledge and aspirations of mankind, for the benefit of living men, exactly in the same way as an individual preserves and develops his own individuality, and, notwithstanding the constant change of molecules, carries within himself the experiences of the past for the benefit of his body in the present. Such an image teaches us that we, as molecules, are compelled to live for the good of the whole organism, whether we wish it or not; and that misery and sufferings result from our ignorance or neglect of this imperative law of organic life. On the other hand, this image represents humanity as an organism endowed with high spiritual characteristics. We see in humanity a source of all our blessings, because from her we obtain our knowledge and aspirations; only by and with her can we live and perfect ourselves. And as our material bodies, which are fed upon the earth, do not perish, but return to the earth and live forever with it, so our achievements, activities, and influences which are obtained from humanity do not perish, but return back to humanity and live forever with her, having their share in her future development.

Viewed in such a light, humanity ceases to be our master only; it becomes our protector and comforter also. And the sense of gratitude, combined with the sense of duty, compels us to pledge our life to its improvement and perfection.

The conception of humanity as a living organism gives a key for the solution of the most difficult problems of ethics. It explains rationally why personal happiness (which consists in obedience to the laws of nature) is not attainable unless man fulfils his duty toward humanity, and lives for others. It tells us that morality has a much deeper foundation than was ever supposed by metaphysicians, because it is based not on free will or the fatalist's theory but on the instinct of self-preservation with which humanity like any other living organism is endowed. With a clear conception of humanity, we may introduce order in place of confusion or sentimentalism; we may harmonize the conflicting opinions in regard to almost every question of vital importance; we are able to systematize our knowledge of history, sociology, and ethics. But, great as is the effect of this discovery on the progress of science, still greater is its effect on the development of a religious sentiment.

Humanity ceases to be a sentimental abstraction: it is a reality, a supreme being, an embodiment of all human perfections which may be conceivable at present. To this superior being, we must cling in expectation of all benefits. Its corporated knowledge, embodied in science, is constantly revealing to us the laws of nature, and is ever increasing the source of the moral and material welfare. Its corporated sense of beauty, expressed in works of art and poetry, gives us the ideal of the Perfect, and stirs our emotions with the desire to approach to it. Its past life, as recorded in history, presents us the beautiful examples of great and noble lives which exalt in us the desire to imitate them. It gives us also the assurance of progress in the future. Its vast magnitude and superiority over the individual overwhelm our intellect and arouse our highest emotions.

Truly says John Stuart Mill that this highest organized being, who ascends into the unknown recesses of the past, embraces the manifold present, and descends into the infinite and unknown future, appeals to that feeling of the Infinite which is necessarily associated with our religious sentiment.

Humanity affects our sense of sublimity, charms our imagination, warms our hearts with gratitude, hope, devotion, gives us strength to fulfil our duties and to withstand temptations. Humanity supports us in days of great affliction, prompts us to self-denial, unites us into one spiritual body which is animated by the same principles and is working for the same end. In short, the effect of humanity on our religious sentiment is exactly the same in kind, although stronger in degree, as the effect of human elements attached to the past religion. And, if more than a third of the human race prostrates itself before Buddha, if millions of Christians worship a good man hanged as a criminal, if a still greater number of Mussulmans get their inspiration from Mohammed, well may we bow in admiration and love before humanity as a galaxy of all great men and all noble thoughts and actions which ever stirred the human soul. We can worship humanity without the slightest conflict between the intellect and emotions, because we have no need of the artificial adornments and mythical stories which were grouped around the individuals worshipped in other religions. Humanity, unadorned, includes all the attributes which were ever ascribed to any individual.

Some of the ardent followers of Comte are so dazzled with this new conception that they are trying to put humanity in the place of God. In their zeal, they forget that the extremes of adoration may ridicule the object adored, that humanity as substitute for the Infinite and Inscrutable Power becomes a ridiculous thing. Herbert Spencer says, "No such thing as humanity can ever do more than temporarily shut out the thought of a Power of which humanity is but a small and fugitive product, a Power which was in course of ever-changing manifestations long before humanity was, and will continue through other manifestations when humanity has ceased to be." (*Study of Sociology*, p. 312.)

And he is right. However sublime and grand may be humanity in comparison with an individual, it is almost nothing in comparison with the mysterious Power existing in the universe. A true function of humanity is to be a mediator between man and mystery.

We must acknowledge the existence of the Inscrutable Power, and our complete dependence upon it. We know now that in the strict obedience of its laws lies our salvation from miseries and suffering. We, as agnostics, need not to degrade the Infinite by ascribing to it human elements; we cannot deceive ourselves any longer with the belief in the direct communication with the Mystery. We differ from the pure agnostics of Herbert Spencer's stamp only when we come to the solution of a burning question which always was preëminent in every religion.

Who will reveal to us the laws of nature? Who will be our saviour? is asked by every earnest soul. Agnostics refer to the abstract science, and thus work up only the mysterious element of religion. We refer to the concrete, living, superior being who is the

Digitized by Google

purest and highest representative of the human element of religion. The blank left in our souls by the omission of a personal God is filled now with the image of humanity as our protecting and guiding father, who not only reveals to us the secrets of nature, but warms our sympathetic feelings and kindles in us a desire to follow the dictates of science. We worship humanity as the mediator between man and the Infinite for all the ages to come; and in serving humanity we have all that is needed to unite persons of the most diversified tastes, temperaments, and dispositions, into one religious brotherhood.

Thus, by the simple addition of humanity, agnosticism loses its repulsive traits and becomes a noble and inspiring religion.

In giving a particular name to this religion, we must obey the same impulse which is silently working through all times and between all nations, and which compels men to name every monotheistic religion not after the ideals of Deity which it involves, but after the name of its recognized teacher and mediator. If the followers of Buddha are called Buddhists, if the worshippers of Christ are known as Christians, if the admirers of Mohammed style themselves Mohammedans, then, certainly, the religion which can satisfy the spiritual thirst of men of the nineteenth century must be called the Religion of Humanity.

The religion whose outlines are shortly represented in this article is not a fabrication. Containing all the elements which ever constituted the past religions, it brings them only to the present standard of our moral and mental development. It is an inevitable result of the evolution of religion and science, which were diverging for a while, but now come into the most complete and harmonious union with each other.

The religion of humanity is preëminently the Religion of the Future. The pure agnostics may safely cling to it, because humanity is not a product of sickly imagination, but a fact, subject to a scientific verification. True, the religion of humanity restricts selfishness and prompts altruism; it kills wandering in the clouds of metaphysics, and draws our attention to earthly affairs. This religion may be disgusting to all loose individuals who regard themselves as the lords of creation, and draw the rules of conduct from their tinged intuition; but men of common-sense and of altruistic disposition will cheerfully submit themselves to the inevitable corrections and changes which are introduced into the pure agnosticism of Herbert Spencer by the addition of humanity.

On the other hand, there is nothing objectionable in such religion to those positivists who exalt humanity to the utter disregard of the mysterious element of religion. In fact, they cannot deny that all men are under the control and management of the Inscrutable Power; that humanity itself is one of the manifestations of the vital forces of nature. They cling to humanity because they have lost faith in theological and metaphysical speculation, and see in humanity the only source of all the rules of conduct and of all the blessings of life. But they must not be afraid of the coming change. Humanity will forever remain as the only source of our inspiration and knowledge; and the intense feeling of gratitude and adoration which they feel toward humanity will become only deeper and stronger, if humanity be regarded as mediator between men and the Infinite, because then will come into play the strongest chord of religious sentiment,—*i.e.*, man's yearning for the Infinite. In humanity, then, we will see not only a being imposing in itself, but, for us, the only conceivable image of the Infinite; and the laws of morality which we derive from our relation to humanity become a reflection of the supreme laws of the universe, which all must obey who wish to escape punishment.

Right here lies the bridge over the chasm which now separates the followers of Herbert Spencer and Auguste Comte from the third group of liberal-minded and generous-hearted men who are also in search of religion, but try to find it in the depths of their individual souls. Men belonging to this group reduce religion to a working out of one's moral ideals. They do not trouble themselves with the dogmatic part of religion: they act, they put the main stress on self-improvement, and leave behind them the traces of lasting goodness. They may be the most sympathetic of all who try to solve "this," as Tyndall says, "question of questions of the present hour," and yet they are the most erring group of the three just mentioned. They are invulnerable when they confine themselves to ethical culture; but when they appear as teachers of religion, and claim to find a new philosophy of life, they fail miserably. That which these moralists regard as philosophy is but the promptings of their noble souls. They mistake in the supposition that every man can obey the dictates of inner nature just as easily as they do, or that he will follow the same direction of activity which they choose. They forget that the moral nature of every man is tinged by one or another of evil propensities, which he inherits together with the good ones; and, when he attempts to arrive at some definite conclusions by the dictates of his soul, he unconsciously becomes a victim of his inclination. Moreover, the moralists overlook the fact that there are many whose inner nature is in a state of lethargy. It is not enough to awake such a man from a spiritual slumber,—it is necessary to keep before him a certain standard of morality, so as to enable him to educate his conscience before he will consult it.

Evidently, such a standard of morality must be clothed not in abstract ideas, but in tangible, concrete forms. It must be embodied in something which is beyond the individual man, free from his propensities, and strong enough to conquer the heart of the most forlorn man and to kindle in him a desire for perfection. The greatest mission of religion has always been in working out and holding before men such a standard of morality. Revealed religions have nobly performed this mission in the past, and only the religion of humanity can perform it in the future.

Every true teacher of morality shall bear in mind

(1) That morality has always been and will always be based on religion as on our strongest inheritance from the past, our most powerful sentiment.

(2) That religion is a clinging of helpless individuals to the concrete, but not to the abstract; that it necessarily includes the recognition of authority in something higher and superior to individual man.

Starting from these premises, the teachers of morality will cease the equilibristical performances on the rope of metaphysics. They will find that the only standard of morality which may be safely put before all men is that which is found in our subserviency to humanity as a great living organism. They will easily see that, in submitting to this standard of morality, each man will find also a harmonious verification of his own moral nature; because all is one, and everything is subject to the same laws of the universe. The moral laws of humanity are the same as the moral laws of individuals, being only clearer from individual corruptions and therefore easier to be found and understood.

The teachers of ethics must become the teachers of the religion of humanity; and this change of basis is less difficult for them than for the other two groups, because they are already the most faithful servants of humanity. Unconsciously to themselves, they realize the most urgent need of this Supreme Being; they *do* good instead of preaching it. The acceptance of the religion of humanity will not change their activities, only add a new and strong stimulus to their actions, and above all will give them a tremendous power over the others, as nobody can resist the combination of natural goodness with the solid, intelligible, and ennobling philosophy.

In conclusion, let me say that the religion of humanity is the only form of agnosticism which can stand the severest tests of sceptics, and is able to continue the mission performed by the past religions. Let us not be afraid to indorse it. It will forever remain an embodiment of progress, because, being based on science, it has no stationary dogmas which may be outgrown in the future. The religion of humanity is the only safe anchorage for those who are tired both of metaphysical rambles of idealists and of sophistical arguments of the selfish. Under its banner will come all who are in search of true religion, all who are craving for spiritual food in our age of dollars and cents, all who find in their experiences how futile are the best planned reforms if not illuminated and sanctified by the religious sentiment.

CORRESPONDENCE.

A CORRECTION.

Editors of The Index:—

In an article in *The Index* of April 13, I spoke of one of the old Greek philosophers, Theodorus by name, as having been expressly called "atheos," or the man without a God. But it was really another contemporary philosopher, namely, Diagoras, the Melian, who was thus called. Theodorus was a Cyrenaic philosopher. Cicero, in his essay *De Natura Deorum*, the best theological treatise, by the way, extant, couples Theodorus with Diagoras, and says that they were the only two Greek speculative thinkers who dogmatically affirmed that there were no gods.

Other Greek philosophers would neither affirm nor deny the existence of gods. Protagoras, of Abdera, the subtlest thinker of his time, at the beginning of one of his works wrote, "As for the gods, I have nothing to affirm as to their existence *pro* or *con*." But the pious Athenians would not allow Protagoras to remain in such a state of philosophic suspense, but burned his book and banished him from their city and territory. Doubtless, the philosopher considered himself lucky in escaping combustion himself. In fact, Athens was, in that day, a nest of bigotry and intolerance, with all its wit, art, and wisdom. The Areopagus was as vindictive toward rationalists as was the Spanish Inquisition later along. The theological spirit was as intolerant in the ancient Athenian polytheist as it ever has been in the Christian monotheist or tritheist since. The brilliant and popular Alcibiades, for farcifying the Eleusinian Mysteries and mutilating the statues of the god Hermes during a revel with a lot of youthful comrades, would have been put to death, had he not escaped in a galley from the siege of Syracuse to Sparta. So that Gibbon's assertion that ancient polytheism was tolerant is false. All the little Greek city-states were bigoted and exclusive to the last degree.

Their citizens personified and deified their cities, and worshipped them. The Greek citizen had no rights as against his own city or State, which could offer him as a human sacrifice to propitiate the angry gods or send him forth to be slain in battle. The Roman Republic, and later the Roman Empire, after having subdued the civilized world of that day, treated the gods and religions of the conquered nations all alike, with an impartial tolerance and magnificent indifference. It was the Roman Empire in its grandeur and the magnanimity of its rulers which first allowed perfect freedom of opinion and religious belief, so long as their own political supremacy was not questioned. If the early Christians were persecuted by the Roman authorities, it was because they were regarded as the common enemies of the human race, as Nihilists and Communists are now regarded by all conservative people at least, and as entertaining notions and a belief utterly subversive of the political and social order of the pagan world. B. W. BALL.

MISCELLANEOUS.

ST. JAMES' CHAPEL at Elberon, N.J., can boast of having the wealthiest sexton in the world, as the benevolent G. W. Childs, of the Philadelphia *Ledger*, officiates there in that capacity. He is said to be also one of the most accommodating and good-natured sextons, as well.

THE Concord school of philosophers, now meeting under Mr. Alcott's apple-trees, are falling into too morbid a mood this summer. Not satisfied with bemoaning the generally decrepit and halting condition of the modern mind as compared with that of Concord seekers after truth, they now deplore the decadence of the world from "some prehistoric race, who probably were as gods compared with us." The thing is not certain, say they, but it may be so. Civilization, Mr. Alcott laments, may be retrograding instead of advancing, as we suppose. Miss Peabody, too, is inclined to complain because the present race of men are so contemptible compared with even the works of past ages, as in European cathedrals. What would the chubby babies of good Miss Peabody's kindergartens say to her heresy? One such school is a proof of a sounder humanity and higher civilization alive and at work than all the cathedrals built in Europe by the ignorant, half-starved paupers of the Middle Ages. As for Mr. Alcott's search for a mythical race of godlike men before history, we wish him success. The cave-man, however, we fear, will not help him out very far in his theory. At least, it is certain, from the shape of his skull and other indications of his raw-meat-eating propensities, that his civilization would not have qualified him eminently to enjoy the metaphysical speculations of the Concord school.—*New York Tribune.*

WHAT changes are going on in the old strongholds of the Christian faith! An American priest writes

Digitized by Google

from Rome to the *Catholic Review* that "the number of Catholic papers as compared with those of their enemies is very small; and the few that are published are so feeble in their defence of the Church that their influence is hardly felt. Here in Rome, the very heart of the Church, are numberless papers sold at one cent apiece that are continually vilifying the Church; while, on the other hand, you find two or three weak-voiced sheets that are the only weapons of truth, and all these but one are sold at two cents. This difference of a cent in price goes very far with an Italian; and hence you will see men who call themselves great defenders of the Pope buying the bad paper, because the one that is the friend of religion costs too much. . . . Not to mention France, I saw in Madrid, the very capital of most Catholic Spain, papers that appeared every day with the most shocking caricatures of even the Pope himself. And, strange to say, the demand for such papers could hardly be supplied. There was no voice raised against it. . . . No people may read such papers for a long time without imminent danger to their faith. The men who are doing this deadly work in Spain are a mere handful. They have done their work well in France. In olden times it was said, with a great deal of truth, *gesta Dei per Francos;* but nowadays we find another name substituted for that of God. . . . You cannot conceive the apathy of the Italians in this respect. They allow the revolutionists to say and to do what they like, in the vain hope that some miracle or other may set all things right. I cannot describe to you what pain it gives a priest to witness such a condition of things, and what contempt he must entertain for those who can so easily defend themselves, but who have not the moral courage to do it. Up to the present, the revolutionists in Italy do not represent more than one-fourth of the population, and hardly as much; but there is, literally speaking, no one to oppose them, and they are gaining ground every day."

BOOK NOTICES.

NATURAL RELIGION. By the author of *Ecce Homo.* Boston: Roberts Brothers. 1882. pp. 251. Price $1.25.

A new book by the author of *Ecce Homo*, who is now known to be Prof. John Robert Seeley, must attract wide attention from all who are interested in independent religious discussion. This work, or much of it, appeared four or five years ago as essays in *Macmillan's Magazine;* but it has been entirely recast, new matter added, enlarging the scope without changing the general tenor of the articles as they were first published. The author holds that there are important truths in religion outside the region of ordinary discussion, and some of these truths it is the object of the work to present. Every chapter contributes some fresh thought, or presents some old thought so luminously revealing unfamiliar aspects of truth that it has the appearance of newness. The author dwells on the fundamental resemblances between systems that are popularly supposed to be diametrically opposite in their essential teachings. For instance, science and theology are in harmony in recognizing universal self-existent Power upon which all phenomena depend. "I say," remarks the author, "that man believes in a God who feels himself in the presence of a Power in the contemplation of which he is absorbed, in the knowledge of which he finds safety and happiness." He is by no means disposed to regard men as atheists, if they fail to see proof of benevolence or personality in the all-embracing Power; and he denies that "supernaturalism is necessary either to the idea, or the practical vigor, or to the popular diffusion of religion." "It may no doubt," he observes, "produce perplexity, when the name of religion is given to that which wants some of the leading characteristics, which, not at some times or in some places only, but all over Christendom and from the primitive times of the Church, have been supposed to belong to religion. As described here, religion does not brood over a future life, but is intensely occupied with the present. It does not surmise something behind nature, but contemplates nature itself. It does not worship a Power which suspends natural laws, but the power which is exhibited in those laws. It does not shrink from political organization, but is itself the soul of all healthy political organization. It does not damp enjoyment, but is itself the principle of all rich enjoyment. It is not self-conscious or self-absorbed, and does not make us anxious about our own fate, but *is* the principle which destroys self, and gives us strength to rise above personal anxieties." If a supernatural can be proven, let it come in, the author says, as a supplement to a natural one; but it can never properly be the "mainspring."

In this work, the author is bolder than in *Ecce Homo.* His style is vigorous and clear, and his spirit is that of a broad thinker and a candid man.

CHRISTIAN THOUGHT. Four Sermons by Albert Walkley, Unitarian Church, Keene, N.H. 1882.

This is a tiny pamphlet of thirty-one pages, yet it contains four sermons on such topics as "The Death of Socrates and the Death of Jesus," "Paul on Mars Hill," "Greek Philosophy and the Gospel of John," "Roman Thought and Christian Theology." There is one evident thread of intent running through the series,—to show how Greek and Roman ideas and habits of thought mingled with the Hebrew stream to produce Christendom. This is a large theme; and, though these sermons do not treat it profoundly or exhaustively, the preacher shows himself quite well at home in the subject, and treats it in the best way, probably, for a popular congregation,—a way that is instructive, at the same time that it is sketchy, vivid, and sometimes tending to the dramatic. Mr. Walkley considers Christianity from an entirely rationalistic stand-point. The parallel—which is also in part a contrast—drawn in the first sermon between Socrates and Jesus is suggestive of the change that is going on in Unitarian theology. To couple the name of Jesus with that of any other human being used to be regarded twenty-five years ago as blasphemous. To do this now may not be common, but congregations are not shocked by it as they once were. Mr. Walkley not only brings the two names and characters side by side as two equally human beings, but, while on the whole awarding the superiority to Jesus, he clearly indicates that on some points of a complete manhood the advantage was with Socrates. The author of these sermons, we understand, came into the Unitarian ministry from the Episcopal Church. He is certainly a "Broad Churchman" now.

CHRISTIANITY OUTSIDE OF CHRISTENDOM. Lecture Sermon. By Rev. E. L. Rexford, D.D., pastor of the Universalist Church, Detroit.

This discourse shows the spread of broad Free Religious principles among the organized Christian churches. If such is the tone of the Universalist pulpit, it will deserve its grand name better than ever before. The discourse gives an account of the Brahmo Somaj movement in India under the leadership of Keshub Chunder Sen, well known to the readers of *The Index.* Dr. Rexford takes strong ground against the exclusive claims of Christianity, saying, "I submit that the time is come in the history of religious inquiry to assume that the problem of religion is the problem of humanity, and not a mere side issue in which only a small sect or party is directly concerned." When we see the part which religious prejudice still plays in the world, causing bitter race hostilities, intensifying the war spirit, and shutting us out from the benefits we might gain from equal intercourse with men of other faiths, the spread of these views is of direct practical importance to humanity; and we hail with welcome this new fellow-laborer in the good cause.

THE *Century Magazine* for August is the midsummer holiday number, and a large share of its contents is of the breezy, out-of-door character appropriate to the season. Alice Fenn has a delightful descriptive paper on "The Border Lands of Surry" (with charming illustrations by Harry Fenn), a delicious bit of English country, "whose rural quiet and beauty have attracted many people who are prominent in the literary and artistic world. George Eliot, Tennyson, White (Gilbert) of Selbourne, and Thomas Hardy, Alma Tadema, Boughton, and Birket Forster have sojourned or lived on these border lands." In "The New Northwest," E. B. Smalley describes the Dakota Wheat Regions, the Bad Lands, and the Yellowstone country. Good reading for the seaside is found in "Steam Yachting in America," by S. G. W. Benjamin; "An Aboriginal Pilgrimage," by Sylvester Baxter; and "The Phantom Sailor," a story by Noah Brooks; while John Burroughs' fine description of "A Snow Storm" is very refreshing reading these hot days. "The Lambs" is a unique serio-comic Wall Street "tragedy" by the author of *The Little Tin Gods on Wheels.* A striking portrait of Richard Wagner adorns the first page, and John R. G. Hassard tells "How Wagner makes Operas." "The Personal History of Garibaldi," by E. D. R. Bianciardi, is a timely and interesting article. L. B. Bulkly, in "Dinah Morris and Elizabeth Evans," shows pretty conclusively that Mrs. Elizabeth Evans, an aunt of George Eliot, was the original of the sweet, sincere character of the woman preacher, Dinah Morris, as portrayed by George Eliot in "Adam Bede." There are dramatic instalments of both the continued stories, "A Modern Instance," by Howells, and "Through One Administration," by Mrs. Burnett. In the "Aboriginal Pilgrimage," which describes in detail the visit of the band of Zuñis under Frank Cushing's charge to the "Ocean of Sunrise," it is related that the Zuñi chiefs, being told while in Salem of the hanging of the witches there, expressed their hearty approval of such vigorous action against witchcraft, in which they have a firm belief. The magazine contains various other articles of interest, and the illustrations are as usual numerous and in the highest style of the art.

THOSE subscribers to *St. Nicholas* who have no opportunity to spend their vacation away from home are not to be very much commiserated, so long as they have the August number of this lively magazine for young folks to read; for they can thus have many of the pleasures with considerable of the knowledge gained by travel, without any of the hardships or inconveniences consequent thereon. Among the "bits of travel" which make this essentially a vacation number, we instance the following: "Mrs. Peterkin in Egypt," by Lucretia P. Hale; "A Visit to the Home of Sir Walter Scott," by Mrs. P. I. Collins, with eight fine illustrations; "The Mysterious Barrel," a story of several foreign curiosities, by Paul Fort; "How a Hoosier Boy saw the Tower of Pisa," by A. H. Fretageot; "Summer Days at Lake George," by Lucy A. Millington; "How Joe Bentley won a Bouquet from the Queen of Portugal," a story founded on fact of a Yankee boy's daring adventure at a bull fight. Besides these, most of the other stories and poems have a strong foreign flavor. "How Bart went Whale-hunting," by H. H. Boyesen, is a story of a Norwegian fisherman's adventurous son; "Hassan's Watermelon" is a characteristic Turkish story, by David Ker; "The Cloister of the Seven Gates" is a tale of life in Servia; and, in "Stories from the Northern Myths," James Baldwin tells anew the story contained in the "Nibelungen Lied"; "The Punjaubs of Siam" is a story in verse, of which Jumbo ought to have been the hero; Celia Thaxter's beautiful poem, "The Nightingale," is charmingly illustrated, as are most of the articles; "Sea Baby Houses" is an instructive and interesting lesson in seaside natural history, by Mrs. H. M. Miller. *St. Nicholas* is published by the Century Co., 33 East 17th Street, New York, at $3.00 per year.

THE sunflower has made its æsthetic way even into the baby's magazine; for the lovely picture of "Kitty and her Parasol," which adorns the front page of *Baby-Land* for August, represents a sweet little girl who, in walking out, has taken a sunflower for her parasol. The verses and pictures entitled "In a Swing," as well as those which tell of the adventures of "A Greedy Cat," will be highly appreciated by all the little ones for whom the magazine is intended. D. Lothrop & Co., Boston.

PERSONAL ITEMS.

GEORGE P. MARSH, our Minister to Italy the past twenty-one years, died suddenly at Vallambrosa, July 24. He was eighty-one years old. His contributions to literature were voluminous and varied.

MRS. EMERSON, of Concord, widow of Ralph Waldo Emerson, is eighty-three years old, and retains her powers to a remarkable degree. She was Miss Lidian Jackson, and lived in Plymouth, Mass., before her marriage.

WENDELL PHILLIPS'S new home in this city is on Common Street, an old, unfashionable locality; and, in hot weather, he goes for a month or two to Waverly, an inland village, rural, dull, and unfrequented by city visitors.

FRANCES POWER COBBE, in a recent letter to the London *Spectator* regarding the uses of rest and physical exercise for literary workers, says: "Not having overtasked myself too early, I was able from the age of five-and-twenty to five-and-fifty to write at any

Digitized by Google

time under pressure nine or ten hours a day without any ill consequences."

MR. R. C. SPENCER, of Milwaukee, well known to the liberal public in connection with the movement for State secularization, missed his little son Earnest one day last month; and after a week of terrible suspense and anxiety, during which it was feared the little boy had been kidnapped, the body was found in Lake Michigan. Such an occurrence excites the sorrow and sympathy of every heart.

LILIAN WHITING, writing of the Newport Unity Club, says: "Among the speakers who have addressed the immense audiences of the Unity Club lectures have been Prof. Richard Proctor of England, Prof. Morse of Salem, Mrs. Livermore, Rev. Mr. Savage, Mrs. Julia Ward Howe, Miss Mary F. Eastman, George Jacob Holyoake of England, and other notable men and women. These courses of lectures contributed in a greater degree than will ever be known, perhaps, to the intellectual growth of the community."

DR. PUSEY, the celebrated English divine, will attain his eighty-second year in August. In spite of his advanced age, he is very well, and is still giving his three lectures a week at Oxford, where he has been professor for many years. Dr. Pusey is the second son of the late Philip Bouverie, half-brother of the first Lord Radnor, his mother having been Lucy, daughter of Robert, fourth Earl of Harcourt, and widow of Sir Thomas Cane, Bart. She assumed the name of Pusey by royal decree in 1800, the year of Dr. Pusey's birth.

AN American writing from London refers to Moncure D. Conway and his chapel thus: "Around the ceiling in illuminated letters are the names of the different men whom the congregation admire. Over the reading-desk is the name that has no divinity to them,—the name of Jesus. On either side of this are Socrates and Shakspere, and beyond these are Voltaire and Moses. Mr. Conway reads passages from Confucius or Herschel or anybody he admires: his people sing poetry from Shelley, Wordsworth, Shakspere, or Adelaide Procter; and Mr. Conway never prays. He worships only truth."

AN American committee, of which Prof. Asa Gray is chairman and Prof. Alexander Agassiz is treasurer, has been appointed to join with the English executive committee in the work of the Darwin memorial, which will probably include an endowment for a scholarship to carry on biological research, though its exact form has not yet been decided upon. The membership of the American committee takes in some of our most eminent scientists and educated men, such as ex-President Woolsey, Prof. O. C. Marsh, President Gilman, President Eliot, Prof. James D. Dana, and Prof. Charles Eliot Norton; and, if the Longfellow memorial is worthy to be pushed as an interest of international importance, much more should the Darwin memorial receive attention on both sides of the Atlantic. American subscriptions may be sent to Prof. Agassiz, of Cambridge.

RELIGIOUS CULTURE OF THE YOUNG.

THE WORLD WE LIVE IN.

THE MINERAL KINGDOM.
THE VEGETABLE KINGDOM.
THE ANIMAL KINGDOM. (Except man.)
MAN.

Study 27.—The Animal Kingdom. (*Except Man.*)

Mammals. (*Except Man.*)

Text-books, Wood's New Illustrated Natural History and Hooker's Illustrated Natural History.

We have now studied about what three orders of the Vertebrates?
What is the next higher order called?
Why?
Is this the highest order known?
What is the highest animal in this order?
Do we include him in this study?
Why not?
So, when in this study we talk of Mammals, we mean what?
Into what four great divisions are these Mammals divided?
What animals are included in the Quadrumana or four-handed class?
Which is the largest of the Quadrumana?
Which is the smallest?
What is a Bat?
To which of our great divisions does he belong?
Why so called?
Is this division a large one?
How are Quadrupeds divided with respect to their feet?
What examples can you give?
Can any Quadrupeds live in the water?
Why do we call *them* Quadrupeds?
Do the Seals and the Whales belong to the same order?
What differences can you mention between the two?
How many kinds of Whales are there?
How large are Whales as compared with other animals?
What is a Dolphin?
How do the Mammals differ with respect to teeth?
The reason for these differences in the teeth then is what?
How do Mammals differ with respect to the covering of their bodies?
How do Mammals move?
Do all the walkers walk in the same way?
Notwithstanding these differences, what points can you mention in which all Mammals are alike?
How in these respects do they compare with other Vertebrates?

SELECTIONS.

The fidelity of the dog should shame men who are forgetful of benefits.—*Chinese.*

The coat of the buffalo never pinches under the arm, never puckers at the shoulder: it is always the same, yet never old-fashioned nor out of date.—*Parker.*

The shoes of the reindeer and the ox wax not old upon their feet.—*Parker.*

Ask now the beasts, and they will teach thee; and the fowls of the air, and they shall tell thee; and the fishes of the sea, and they shall declare unto thee.—*Job.*

O man! there is no kind of beast on the earth, nor any fowl which flieth with its wings, but the same is a people, like unto yourselves.—*Mohammed.*

Suggestions to Leader.—Of course, it is impossible to show actual specimens of the mammals. The illustrations in Wood are remarkably good; and a visit to a good menagerie, should opportunity offer, may be made instructive.

Study 28.—Conclusion.

We have now studied about what portion of the world we live in?
For convenience, we have divided our study how?
What are these called?
Which is the oldest of the three kingdoms?
How do we know?
Which comes next?
How do we know that?
The mineral kingdom treats of what?
What do we mean by the crust of the earth?
Of what is this crust composed?
All the rocks of the earth may be divided into what three classes?
Why are these classes so named?
Give examples of each class.
What changes has the earth's surface undergone?
The next kingdom to the mineral is what?
Of what does this consist?
What two kinds of organs have plants?
What are the organs of growth?
By means of these, the plant does what?
What are the organs of reproduction?
By means of these, the plant does what?
Describe the growth of a plant from the seed?
How many kinds of plants are there?
How are the herbs divided?
Mention some of the flowerless plants.
The next higher kingdom is what?
What is the first natural division of this kingdom?
What are they?
How have the invertebrates been subdivided?
Describe each of these classes.
Give examples of each.
How have the vertebrates been subdivided?
Describe each of these classes.
Give examples of each.
In what respects do the invertebrates differ?
In what respects do they agree?
In what respects do the vertebrates differ?
In what respects do they agree?
Are the mineral, vegetable, and animal kingdoms independent of each other?
What relations do they hold to each other?
What relation do they hold to man?
Which is the more beautiful and useful, the whole of a thing or a part of it?
Which is the more beautiful, a whole orange and a whole apple or half an orange and half an apple stuck together?
Why?
Which is more beautiful, the whole world or a part of it?
A world with things in their places or out of their places?
The world we live in then looks most beautiful to us when?
Mention some respects in which we can see that this is so.
What, then, may we say of everything in the world?
What did Pope say about this?
[All are but parts of one stupendous whole.]
What did Emerson say about it?
[Have the group read Emerson's poem "Each and All."]

The World we Live in.

THE MINERAL KINGDOM.		THE VEGETABLE KINGDOM.		THE ANIMAL KINGDOM (*except Man*).	
		Organs of Growth.		*Invertebrates.*	
Sedimentary Rocks.	Conglomerate. Sandstone. Shale.	Roots—Tap-roots, Rootlets. Stems—Cellular Tissue, Woody Fibre. Leaves—Blade, Footstalk, Stipules.		Protozoa.	A simple cell or aggregation of cells.
				Radiates.	Parts radiating from a common centre.
		Organs of Reproduction.		Articulates.	Jointed, but without a backbone.
Organic Rocks.	Coal. Limestone. Chalk.	Flower.	Calyx. Corolla. Stamens. Pistils.	Molluscs.	Bodies covered with a soft envelope, most of them having shells.
		Fruit.	Skin or Outside Covering. Pulp.		
		Seed.	Seed Coats. Kernel (Embryo, Albumen).		
		Kinds of Plants.		*Vertebrates.*	
Igneous Rocks.	Granite. Lava. Tuff.	Herbs.	Annuals. Biennials. Perennials.	Fishes.	Live in the water, and breathe by means of gills.
		Shrubs.		Reptiles.	Creeping animals and inhabitants of rather warm climates.
		Trees.		Birds.	Covered with feathers, warm-blooded, and possessed of wings and beaks.
The Crust of the Earth.	Raised Beaches. Submerged Forests. Coal-Pits. Crumpled Strata. Origin of Mountains.	Flowerless Plants.	Ferns. Lichens. Sea Mosses.	Mammals.	Animals which nurse their young.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of personality. The argument probably will not convince persons with a strong tendency to disbelieve immortality, but probably maintains that science has not any persons apprehend and some claim a negative decision on the old question of immortal life. The old faith still and people may hold it with Mr. Weiss, yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

THE *Christian Register* exclaims: "Poor Darwin! What a mercy he died before learning of Mr. Alcott's crushing refutation of his theory at the Concord School of Philosophy: 'Mr. Alcott, referring to the decay of all the ancient nations famed in history, said that man did not work up to his present state from a beginning in barbarism. He had his beginning in the sky, and through vice and degradation had slipped to the lowest plane, from which he was now struggling back again.'"

THE Arrears Bill has been so saddled with amendments in the House of Lords that its provisions the most relied upon to improve the condition of Irish tenants are virtually destroyed. Mr. Gladstone refuses to compromise; and, unless the Lords consent to drop these amendments, their action will probably force the resignation of the ministry and the dissolution of Parliament. But the Egyptian war may have the effect of harmonizing the discordant elements on the Irish question.

A BOY crossing a field near Toronto, on Sunday, was shot by a rural constable, and died from the wound. The officer says he drew his pistol merely to frighten the boy, and that the discharge was accidental. A coroner's jury was not satisfied with the explanation. Meantime, a clergyman writes to the *Globe* of that city that, as the boy was violating the Sabbath, the shooting was justifiable. This is what Ingersoll would call a "hellish kind of justice." The clergyman is generally and severely condemned for his defence of the Mosaic law.

IN order to render inoperative disfranchisement and other penalties against polygamy, the Mormon leaders have adopted measures to secure apparent conformity to law; and polygamists in office have resigned, and Mormons who are monogamists in form, if not in fact, have succeeded them. It is declared that, when the commission arrives, it will find nothing to do. But polygamy under the ban, and merely as a clandestine relation, can hardly fail to lose its respectability and consequently its religious associations among the higher class of Mormons.

A MINISTER, who preached at a Staten Island camp meeting recently, said: "In a few weeks, Tug Wilson and Sullivan will meet each other with gloves, and the one that endures the trial will get the money. So it is in the Christian religion: the man who contends manfully with his foe, the devil, and conquers him, will receive the reward." An exchange asks if it is wholly just "to liken the beaten man to the devil, especially if the preacher has no money on him." Perhaps not; but a speaker's allusions to current topics in illustrating his thought are something of an index to his intellectual and moral character.

THE *Christian Statesman*, after referring to "the injurious secularism of our public schools," quotes approvingly the following "vigorous sentences" from *The Workman:* "At the present day, the educators of India, Japan, and China in the public schools teach their youth and young men the doctrines and precepts of their several religious systems. We, however, the aggressive Christian nation of the world, while spending immense sums to instill Christianity into the minds of the children of these dark lands, look with strange unconcern at the colossal machinery of our common schools yearly producing, if not educated heathen, at least what is worse, a nation of callous materialists."

"THE Roman *Index*," says the Boston *Herald*, "has rendered a service to M. Renan in condemning his recent treatise on Ecclesiastes, for which the brilliant Frenchman and his publisher cannot be too thankful. Very often, in these days, a timid author will send copies of his book around to the literary notables for a liberal estimate of its merits, but who among the tribe of French, English, or American writers would venture to disturb his Holiness in this way? Happily for M. Renan, the Pope has been interested enough in his latest book to turn literary critic of his own accord, and give such a free-handed criticism of the work as to increase the interest in it a thousand-fold. Everybody will wish to read the book to see whether his Holiness, who is infallible in matters of faith and morals, is really infallible in condemning M. Renan as an immoral writer.... The Roman *Index* has immensely increased the circulation of the books it has condemned, from the Reformation down to the present time, and has for centuries been the guide of the private studies of modern heretics."

AT one of the "faith meetings" held at Old Orchard Beach, Me., last week, three hundred invalids were brought forward, anointed with oil, prayed over, and, the despatch adds, "Those that had faith were cured." The Boston *Herald* thinks that "such incidents tend to diminish men's respect for Christianity." "The hasty inference drawn is that this is a part of the teachings of the Bible; and, as all human experience shows the immutability of law, and that suffering is common to both the good and the wicked, the conclusion arrived at is that the Bible is not to be trusted." Such fanaticism the *Herald* thinks more disastrous in its effects on Christianity than the lectures of Col. Ingersoll. It is certain that the "inference" that the belief and practice of the "faith" people are a part of the teachings of the Bible is an inference that is entirely correct, and it is equally certain that in the reports of these meetings there is a strange mixture of truth, which belongs to the province of psychological science, and misrepresentation due to credulity, superstition, and fraud.

THE *Christian Intelligencer* laments the increase of Sabbath desecration as exemplified by Sunday excursions, and Sunday trains in summer, and visitors to summer resorts, who, "away from home, drive, ride, stroll, saunter, gossip, and flirt through the sacred hours, apparently restrained only by a dim and fading traditional reverence from boldly playing lawn tennis or base ball on Sunday as they would on Saturday." In addition to this shocking depravity on the part of summer tourists, the *Intelligencer* also deplores the growing indifference to Sabbath-keeping in many professedly religious homes, and declares that "the taking of a Sunday newspaper is the entering wedge which, with nine out of ten, secularizes the reading and lowers the spirituality of the day." As a remedy for all this, it recommends that we "get back to the purer, more excellent, and, we confess, Puritanical and Calvinistic ideal of the Sabbath." It is perhaps fortunate that the *Christian Intelligencer* does not represent the intelligence of the majority. Sunday papers have become a necessity, and we are pleased to see that Sunday excursions are becoming more popular every year.

SAYS the London *Spectator:* "The Salvation Army is developing a somewhat unspiritually belligerent spirit in some of its officers. Its "captain" at Salisbury appears to have declared that, "but for the grace of God," he would "pull the noses" of "the bobbies, magistrates, or mayor of that city," toward whose authority he had expressed the utmost indifference. The "grace of God" had evidently not worked very powerfully in its restraining effect upon him, when he uttered this bellicose threat; and, of course, the consequence is that in Salisbury the Salvation Army is regarded as a sect hostile to the established authorities. But this is, we think, the tendency—hitherto manfully held down—of the whole military organization. The physical excitement which is the basis of the whole business must stimulate the physical passions of soldiers of the Army; and, whenever they get such a captain as they seem to have got at Salisbury,—one who goes as far as physical threats, even though he does not venture to go so far as physical violence,—they will be strongly tempted to outbreaks of violence against their foes. It is impossible to regard their hitherto very effective discipline as in the best sense either moral or spiritual."

MR. BEECHER'S LATEST THEOLOGICAL MANIFESTO.

Henry Ward Beecher does not write anything which, for criticalness of scholarship or for logical clearness and profundity of thought, is worthy of much attention. But by his native vigor of intellect, his broad human sympathies, his close acquaintance with the common facts and experiences of human life, and his brilliant gifts as an orator and rhetorician, he has won a large popular following in the Evangelical Church, and, though an erratic leader, is certainly one of the representative powers of modern Orthodoxy. As such, his utterances have a value apart from themselves. Moreover, though Mr. Beecher is not technically a scholar, he instinctively imbibes the results which modern thinkers and scholars and scientists are working out, and keeps himself *en rapport* with the intellectual movements of the age. His own thought and beliefs, which he still presents to the public from a nominally orthodox pulpit, have been very largely shaped by these movements. He is a modern man, though still training in a Church that counts Calvin among its chief apostles. From this point of view, his article in the August number of the *North American Review*, on "Progress of Thought in the Church," will receive deserved attention. As a sign of the times, it is deeply significant. It is a manifesto of the most advanced Orthodoxy.

Indeed, it is not too much to say that this article totally repudiates the Calvinistic theology, both in form and in substance. Mr. Beecher, as he has shown by previous utterances, accepts the doctrine of evolution. But not before has he affirmed with such candor and boldness the logical consequences of the doctrine in the domain of religious belief. He calls it "the most revolutionary tenet ever advanced." He says: "To admit the truth of evolution is to yield up the reigning theology. It is to change the whole notion of man's origin, his nature, the problem of human life, the philosophy of morality, the theory of sin, the structure of moral government as taught in the dominant theologies of the Christian world; the fall of man in Adam, the doctrine of original sin, the nature of sin, and the method of atoning for it." If the belief of Christendom on all these points is to be revolutionized, it is certainly hard to see what shred of the Calvinistic system of theology will be left. Further, speaking of the doctrine of the Bible as the guide to right belief and practice, Mr. Beecher says that, though "in an important sense the sacred Scriptures are of God, . . . they have authority only concurrently with educated human reason and rational moral sense," which is plainly to put Bible teaching to the test of man's reason and moral intelligence. Of the change going on in creeds, he says, "Men no longer preach doctrines to which they swore in their ordination vows, or they give to them new meanings *at variance with historic fact*." The italics are ours. His arraignment of the Calvinistic conception of Deity as a monster of injustice and inhumanity is very much in the vein of Ingersoll, and might almost be quoted from the pages of that trenchant iconoclast.

In this statement of views, Mr. Beecher departs farther from the old standard of Orthodoxy than did Channing and the old Unitarians: indeed, he goes farther, probably, than even some modern Unitarians would follow him. Yet such a proclamation of views will now make no split in the Orthodox church, for the reason that evolution has now taken the place of revolution in the progress of religious thought. Naturally, however, such views will not be received by Orthodoxy everywhere with equal favor. The *Congregationalist* combats them in a long and elaborate article, in which it takes advantage of Mr. Beecher's weakness in logic and in theological learning. The *Christian Union* welcomes them as the utterances of one who is "by nature a prophet," and flatteringly urges him to follow up this "interpretative" article with another, which shall "tell us what the rising revelation is," and sketch at least "a prophetic outline of his conception of the probable theology of to-morrow."

But it is doubtful if Mr. Beecher is adequate to the task to which the *Christian Union* summons him. He certainly is not, if he still adheres as tenaciously as he has heretofore done to the doctrine of the special Deity of Christ; and on this point the article in the *North American* does not give us much light. The theology that is coming, he says, is "a theology consistent with the life and teachings of Jesus Christ," which is a vague generality that may mean much or little. Radical as his manifesto is, apparently he has yet to see that the doctrine of evolution cuts under the Christology of Orthodoxy as destructively as it affects every other part of its theology. Yet, while Mr. Beecher's views have a certain representative value, personally his authority is not what it once was; for unfortunately, whether justly so or not, his name, in the estimation of a vast multitude of people, is still under the shadow of a darkened reputation.

WM. J. POTTER.

NEW TESTAMENT TEACHINGS REGARDING WOMAN.

In referring to a tendency to "depreciate extremely the character and position of women" in the early ages of Christianity, Mr. Lecky says that we "may detect in part the influence of the earlier Jewish writings, in which it is probable that most impartial observers will detect evident traces of the common Oriental depreciation of woman." This is no doubt true; and Christianity perpetuated and extended that influence by maintaining the divine authority of these Jewish writings, and making errors they contain fundamental parts of its creed. Who can compute the evil consequences to woman that have resulted from the fable that, through her influence, man fell from a state of innocence and incurred the wrath of God? Yet it is as essential a part of Christianity as that man is restored to God's favor and saved from sin through the sufferings and merits of Jesus Christ. The New Testament plainly teaches the inferiority of woman, and enjoins her to be in subjection to man. Man is spoken of as the head of woman, even as God is the head of Christ. A woman that prayeth or prophesieth is required to have her head covered, as a sign of her subjection to man: the man is required to have his head uncovered, as a sign of his God-like authority over the woman. And this authority of the man over the woman is grounded on the statements that the woman was made out of the man and not man out of the woman, and that woman was the first to sin. Wives are required to be obedient to their husbands in all things, to act toward them accordingly, and to yield them the same obedience which the Church is required to yield to Jesus Christ. The teachings of the New Testament in regard to woman do not raise her above the common sentiments of the times in which its various books were written. Her inferiority is plainly taught. No wonder, then, that the estimate of woman was low in the Christian empire. "Woman was represented as the door of hell, as the mother of all human ills. She should be ashamed of the very thought she is a woman. She should live in continual penance on account of the curses she had brought upon the world. She should be ashamed of her dress, for it is the memorial of her fall. She should especially be ashamed of her beauty, for it is the most potent instrument of the demon. . . . Women were even forbidden by a provincial council in the sixth century, on account of their impurity, to receive the eucharist in their naked hands. Their essentially subordinate position was continually maintained." So says the author of the *History of European Morals*. We are not surprised, therefore, to read in Lecky: "Wherever the canon law has been the basis of legislation, we find the laws of succession sacrificing the interests of daughters and of wives, and a state of public opinion which has been formed and regulated by these laws; nor was any serious attempt made to abolish them till the close of the last century. The French Revolutionists, though rejecting the proposal of Sieyès and Condorcet to accord political emancipation to women, established, at least, equality of sons and daughters, and thus initiated a great reformation of both law and opinion, which sooner or later must traverse the world."

It is a popular belief produced by the teachings of the clergy that all advancement in the condition of woman, during the past eighteen hundred years, is due to Christianity; that before this religion was preached there was in the Pagan world nothing worthy to be regarded as chastity, or monogamic marriage, and no recognition of any rights of woman that man was bound to respect. Yet the conceptions of chastity were essentially the same among the ancient Pagans as in Christendom; and Lecky says that it "may be questioned whether the inequality of the censure which is bestowed upon the two sexes is not as great as in the days of Paganism, and that inequality is the cause of the most shameful and the most pitiable injustice." "The character of the seducer, and especially of the passionless seducer," this writer continues, "who pursues his career simply as a kind of sport, and under the influence of no stronger motive than vanity or a spirit of adventure, and who designates his successes in destroying the honor of women his conquests, has been glorified and idealized in the popular literature of Christendom in a manner to which we can find no parallel in antiquity."

Antoninus Pius, in issuing a condemnation for adultery against a guilty wife, by the request of the husband, added, "provided always it is established by your life that you gave her an example of fidelity. It would be unjust that a husband should exact a fidelity he does not himself keep."

Monogamy prevailed in Rome from the earliest times, and historians are agreed that Roman influence was one of the chief causes that made this type of marriage dominant in Europe. Divorces, which in the earlier age were rare, none having occurred, it was said, for five hundred and twenty years, were in the empire undoubtedly frequent; but the right to separate belonged to the wife as well as to the husband. The word "concubine" among the Romans represented one of the forms of marriage. This union, which the clergy have frequently stated was little, if any, better than prostitution, was strictly legal and honorable. It was contracted between men of patrician rank and freed women who were not permitted to intermarry according to the other forms,—the "*confarreatio*" and the "*coemptio*." But cohabitation under this form made it impossible for the man to contract a union with another woman without being legally guilty of adultery. Under this form of marriage, woman's position in the Pagan empire was one of social dignity and legal independence. Woman could hold property in her own right. Inheriting a portion of her father's wealth, she retained it independently of her husband, and at one time a

Digitized by Google

large amount of the wealth of Rome was in the possession of women. Despite the evils that grew out of this form of marriage, it recognized rights of women for which men like Higginson and women like Mrs. Stanton are pleading to-day. "No society," says Maine, in *Ancient Law*, "which preserves any tincture of Christian institution, is likely to restore to married women the personal liberty conferred on them by the middle Roman law."

Tacitus has given us an account of social life among the ancient Germans, in which he represents that the German women were remarkable for their chastity, that adultery was very rare, and that women were treated with great respect. "The old Teutonic tribe," says Mrs. Child, "had always been remarkable for the high consideration in which they held their women, and the respect with which they treated them. Teutonic tribes married but one wife, and fully acknowledged the equality of men and women, both in matters religious and matters political."

"Only," says F. W. Newman, "in countries where Germanic sentiment has taken root, do we see any marks of any elevation of the female sex superior to that of Pagan antiquity. And, as the elevation of the German woman in her deepest Paganism was already striking to Tacitus and his contemporaries, it is highly unreasonable to claim it as an achievement of Christianity."

It is not denied that Christianity gave to certain moral truths and requirements an emphasis which was greatly needed when it appeared; nor is it denied that, as defined and interpreted in later times, Christianity has in a few respects been favorable to woman. But this fact does not change the real character of the teachings of the New Testament regarding woman, nor justify the claims commonly made by theological writers that the present elevation of woman is due to them.

B. F. UNDERWOOD.

FAITH MIRACLES.

Dr. Cullis, a Boston physician, has long been known as a man of faith, a believer in direct answers to prayer. For the past six or eight years, he has been healing the sick by a literal following of the method prescribed by James, and his practice has grown recently to huge proportions. According to newspaper reports, in the presence of hundreds of people at Old Orchard Beach, a popular summer resort in Maine, he and some helpers have made addresses upon the power of faith, songs of faith have been sung, and then the sick have been invited to come forward. They have been anointed with oil, a separate prayer has been offered for each one, and many have been cured. Those not cured or not relieved are supposed to be wanting in faith.

I have no hesitation in expressing my belief in the reality of the cures reported to be made by Dr. Cullis, and by his predecessors and imitators, who are somewhat numerous just now in this country and in Europe. I do not doubt for a moment that many persons have been temporarily relieved and some permanently helped by these men and women of faith. To any rationalist who may object that this admission may logically require me to admit also the miracles of Lourdes and the healing power of dead saints' bones, I reply that the logic seems to me to be perfectly correct. I believe, as thoroughly as Dr. Cullis, or any pious Catholic, or even Dr. Tyng of New York, that faith in the water of Lourdes and faith in dead saints' bones have wrought in the past many wonderful cures, and will probably work in the future many others equally wonderful.

Furthermore, I have talked with intelligent men and women who were familiar with Mormonism in its early days, before the introduction of polygamy, and they assure me that miracles of like character were of common occurrence among the primitive Latter Day Saints; and I believe them. Dr. Cullis may lift up his hands in holy horror at my credulity, which thus seems to surpass his own. Can the despised Mormon work miracles? Yes, as truly as Dr. Cullis.

But the full extent of my belief has not yet been indicated.

Recently, in a Western city, I was an interested observer of the actual performance of analogous miracles. In a public hall, I saw crowds of men and women operated upon by one who had even less piety than Dr. Cullis or a Mormon elder. Pains of many years' duration were instantly relieved, the lame walked, the bowed-down rose upright, and the deaf heard. And these last miracles of faith were wrought not by an elder or a deacon, but by the stroking of the hand and the punching of the fist and the shouting of the voice of a long-haired and vulgar-mannered "quack," — a self-styled doctor without an M.D., an adventurer whose miracles were abruptly terminated only when one wife too many appeared upon the scene of action and claimed him for a husband. He ran away, but is probably working his profitable miracles somewhere else. His cures were without question as genuine and as complete as those of Cullis, although Cullis prays and my long-haired hero did not pray.

I believe still more. I believe the statement of Dr. Hammond that, in the New York hospitals, pious Catholic patients, who have begged to be stroked with a saint's bone, have been stroked and cured,—positively cured,—although, no saint's bone being at hand, a piece of the broken handle of an old tooth-brush was used instead; and that similar cures were brought about by the use of the supposed water of Lourdes, which was really Croton water drawn from the plumber's faucet. Do I believe too much? But the evidence in all the above instances is equally good. I must believe all or none, and I believe all.

What is the common factor in all these cures? Faith. Faith in God and in a divine answer to prayer, according to Dr. Cullis; faith in the new dispensation, according to the Mormon elders; faith in the Virgin and the saints, according to the Catholic; faith in some mysterious power possessed by the quack, according to those whose cure I witnessed while out West. All other factors may be eliminated because they contradict or cancel one another. The old tooth-brush cancels the old saint's bone, Croton water cancels the water of Lourdes, the unrighteous quack cancels prayer. Faith alone remains, and the particular object of faith becomes wholly unconsequential.

This faith is translated by Dr. Hammond as "expectant attention," and it may be described also as an intense nervous excitement which brings all the powers of the system to bear upon the atrophied or diseased organ, and there initiates a normal in place of a long-continued abnormal action; and the relief is temporary or the cure becomes permanent according to the amount or energy of the reserve force so applied, and the peculiar condition of the diseased part. The stimulating atmosphere of Old Orchard Beach, the additional nervous excitement consequent upon being placed on a platform before a crowd of people, the novel consciousness of being the centre of attraction of hundreds of eyes, and other attending circumstances, are secondary, although sometimes important factors, in these cures.

That "expectant attention" (in which phrase all the above elements are included) is the real secret of these cures might be inferred from the fact that the diseases alleviated are always such as can be immediately affected by nervous action. Spinal affections, hip-disease, paralysis, neuralgia, heart-disease (supposed), and other more or less obscure nervous ailments, or local ailments, directly referable to abnormal nervous action, are the only diseases cured. Persons not cured are said to be lacking in faith. Not so, however; but their disease has reached a stage, or is of a kind, which puts it beyond the possibility of alleviation or cure by direct nervous stimulus. Very many ailments, therefore, and some of a very simple sort, cannot possibly be reached by faith. Dr. Cullis is said to have made recently as many as two hundred and fifty prayers for as many different persons in one day; but not ten times two hundred and fifty prayers concentrated upon a single person can ever relieve an ingrowing toe-nail, or remove a mole or a freckle or even the tan of the summer's sun, or set a fractured bone, or stop the progress of any kind of zymotic disease. Malarial affections, diphtheria, typhoid fever, small-pox, and measles are beyond the reach of prayers or old bones or mesmeric passes, whatever the amount of accompanying faith.

One important fact must not escape recognition. Those who are cured by faith are always ignorant persons. I care not how gentle or pious or lovable they may be, they are always ignorant when tested by the knowledge essential even to a comprehension of the causes of our best civilization. No intelligent person was ever the subject of a faith miracle. But, if the ignorant may be cured of some wretched diseases by possessing the requisite amount of faith, may we not then argue that ignorance is to that extent a blessing? By no means; and for the simple reason, as I believe, that no intelligent person ever needs to be thus cured. All that can be done by faith in prayers or bones or holy oil or fantastic manipulations he has already done for himself. The curative power in these cases is internal, not external; and the intelligent man can summon all his forces to the rescue of a diseased organ (or, more often, prevent the first coming of the disease) without awaiting the bidding of a medical quack or the repeating of a pious or mystical shibboleth.

The faith-fancy is efficacious in direct proportion to the decay or non-development of more important faculties. Its intensity is measured by the energy of superstition. It annuls self-reliance, and disheartens investigation. The effort of man to perfect himself is what we need, not a blind repose in mystery. These faith miracles therefore, whatever little temporary benefit they may confer upon a few, are, in the long run, exceedingly mischievous. They help to perpetuate the errors against which our whole civilization wrestles,—errors which, given up to, would drag us back to the Dark Ages, errors which must be wholly overcome before we can hope for that Golden Age of humanity, to the bringing in of which our noblest efforts are consciously directed.

ROWLAND CONNOR.

A WORD ABOUT PROF. LOTZE.

The late Prof. Lotze began some years since the publication of his philosophical ideas in systematic form. First came the *Logik*, and then the *Metaphysik*. The third volume, as we learn from Prof. Baumann, Lotze's colleague at Göttingen (*Philosophische Monatshefte*, xvii. Band, ix. and x. Heft), treating of practical and religious philosophy and æsthetics, will probably have to be gathered from the lecture notes of students. That it should not come from his own hand is the more to be regretted, since certain leading ideas, to which frequent reference is made in the earlier volumes, would here receive for the first time a detailed

Digitized by Google

treatment; *e.g.*, his teleological view of the world, and the doctrine that the ultimate reality is a personal spirit. Though, from a literary point of view, the *Mikrokosmus* (three volumes) is his leading work, philosophical readers will be compelled to resort to his later volumes for a close and thorough treatment of principles; which in it are, as it were, taken for granted. Lotze did not regard it possible, however, to form a closed system after the old fashion, and so founded no school, though inciting many an investigator. He advised young men, who wished to become philosophers, to cultivate some special line of research (*Fachstudium*), and held philosophizing to be fruitless without the preparation of a mathematical and scientific training. For those interested in practical philosophy, he approved the study of the Roman law, political economy, statistics, and *Culturgeschichte*. Prof. Baumann tells us he admired independence in his students, and looked with a kind of astonishment on those who professed entire agreement with him. And, when he recognized real talent in any one, he was anxious for nothing more than that the person should preserve his own mental individuality, even if the tendencies shown were those he could not wholly approve. Prof. Baumann shows by quotations the unity of Lotze's thought from the beginning of his intellectual career. His earliest subjects were physiology and pathology, and his latest metaphysical ideas are revealed here and there in his treatises upon them. That there are ends which ought to be realized, that there are individual existences capable of realizing them, and that there are general laws according to which such existences do or may realize them,—these are some of Lotze's fundamental propositions. Even metaphysics and logic wear to him a teleological aspect, and the only ultimate thing is the idea of the good. Dr. G. Stanley Hall, in *Aspects of German Culture*, announced a change in Lotze's later thought in the direction of assumption and dogmatism. Prof. Baumann does not seem to be aware of any change; and the writer of these lines knows not where a better instance can be found of the modest, tentative way of treating philosophical questions than is exhibited in the pages of his last volume, *Metaphysik*. It is to be wished that a translation of some of Lotze's works might appear; but the rage for dogmatic systems, like Hegel's on the one hand and Spencer's on the other, would have to abate somewhat before there could be much appetite for them. W. M. SALTER.

A SINGULAR REMARK OF GOETHE.

Apropos of the Second Adventists, as certain religionists of the popular sort are styled who are expectant of the end of the world in connection with the reappearance of Christ, the student of human history and the reflective observer of current events, who has traced the tragi-comedy of man from the earliest periods downward, is sometimes inclined to ask, in moments of despondency, How much longer is it going to last? *Cui bono?* Sometimes, to the middle-aged man, the annual round of the seasons, with its reiterated bloom of spring, ripeness of summer, sereness of autumn, and suppression of all vegetable growth of winter, becomes wearisome with its repetition of precisely the same seasonal phenomena year after year. We are told that the famous German philosopher, Lessing, actually became morbidly weary of the recurrence of the beautiful green of spring. It seems as if a certain number of reproductions of exactly the same results would suffice. The nature of things, from the stand-point of a single life, seems bent on sameness and monotony rather than progress. As soon as a man has the experience which makes him wary and capable of success, he either finds his physical powers declining or he is withdrawn from activity by death.

The profound sage who, with a longer lease of life, could scale the very heights of knowledge, finds his life and his investigations abruptly terminated, while people who are of no account are permitted to vegetate for an indefinite term of existence. Generations full of experience and knowledge and wisdom are continually removed to give place to raw recruits, so to speak, who in their thoughtlessness, intensity of passion, and inexperience, are mere marplots, and constantly committing all sorts of follies and indiscretions. The question is, Toward what kind of a goal is the world moving? Is there to be any adequate outcome from all these endless repetitions of birth, growth, maturity, decay, and death in the vegetable, animal, and human kingdoms? Goethe said to his disciple, Eckermann, in 1828: "Mark this: the world will not attain its goal so speedily as we expect and desire. There are always retarding demons, who start up in opposition at every point, so that, although the whole progresses, it is but slowly." "The development of mankind," said Eckermann, "appears to be laid out as a work of thousands of years." "Perhaps millions," said Goethe: "who knows? But, let mankind last as long as it may, it will never lack obstacles to give it trouble, and never lack the pressure of necessity to develop its powers. Men will become more clever and more acute, but not better, happier, and stronger in action, or, at least, only at epochs. I foresee the time when God will have no more joy in them, but will break up everything for a renewed creation. I am certain that everything is planned to this end, and that the hour and time are already fixed in the distant future for the occurrence of this renovating epoch. But a long time will elapse first, and we may still for thousands and thousands of years amuse ourselves on this dear old surface."

Thus was Goethe an eschatologist, or a man with a doctrine of the end of the present *natura rerum*, or of its transformation and renovation. It is evident enough that the present world is not yet finished, and that its possibilities and capabilities are not yet exhausted. For instance, civilization has got to raise all the various races of mankind and every individual of those races to the plane of humanity, of properly developed human beings with cultivated minds and shapely bodies and uplifted foreheads. This task will require several centuries for its accomplishment. Then, the air is to become the region of locomotion.

Meantime there will never be a joy more intense than that of the love of the sexes; and the blight of death will always continue, in spite of human progress, *to seem* to mar the life of each individual, and make it at last appear a farce, a useless endeavor, and a futility. B. W. BALL.

A NEW PROOF OF THE IMMORTALITY OF THE SOUL.

I think, if we adhere to the popular notion of the non-egoistic nature of the sensible world external to our bodily organism, we have less support for the doctrine of personal immortality than other ages have enjoyed, because arguments once reasonably relied on are now in a good measure nullified. When dualism (of mind and matter) could make a respectable showing in its favor, the survival of the personal mind after organic dissolution was quite probable. But this argument is utterly destroyed by the very thorough proof of monism furnished by the advancing science and thought of the present age. If the external world is non-ego, and if all individual forms of life are evolved from the world, one with it, only so many various modes of the one force, then, individually, we exist only as such modes, and, with our organic dissolution, our individuality and personality are necessarily ended. They began with our organization and end with its extinction, because in this organic form and action consists their essential nature or essence,—a peculiar complex mode of the world force.

But there is another side to monism,—the subjective, the egoistic; and this, we are beginning to see, swallows up the other. Directly and immediately, we never know aught but self. Whatever is immediately known is self only. This has been so often asserted without contradiction, and is so generally recognized, that we shall take no special pains to prove it. It is never questioned that all the known secondary qualities of body are subjective states only; and that includes all the visible world, whether of earth or heaven; all the world of odors; all the world of sounds, whether of nature, music, or speech, and the cries of animals; all the world of tastes of every variety and degree. Whatever is seen, heard, smelled, or tasted is ourselves only and always. Thus, nearly all the known universe at once disappears in the ego, or rather appears only in the ego and as the ego. The sense of touch and pressure, which yet remains, is then surrendered by the best minds as nothing else than a *sensation* of touch and pressure, and the object and subject of such sensation are one, a mode of the ego. We can never find aught but self within the range of experience. If there is aught beyond, called matter, it is unknown and unknowable; and therefore, as true agnostics, we should say nothing about it. At all events, we have nothing to do with it here, because we are speaking only of the known world, which without dispute is wholly and only ego. This we shall now assume.

How, then, do we know the existence of aught but ourselves? We do not know it in the same way as we know the phenomena of self,—and all phenomena are self. This knowledge is experiential. All other knowledge, so called, is inferential, either deductive or inductive. It is only thus we know that there are other men, and the principle on which the inference is made is a sematic induction. Since the publication of Berkeley's *Theory of Vision*, we have all known that the visible phenomena which we designate as other men are only modes of self; but we have taken them, without dispute or question, as signs of the existence of other men in certain relations to ourselves. Into the philosophy of this, I cannot now enter, though I am prepared to do so in the proper connection. Enough, at the present, that I indicate the ground and procedure of all men who have any scientific knowledge. I am simply appealing to acknowledged facts and truths, that I may plant myself firmly upon them, and thence draw what appears to me a reasonable inference in favor of personal immortality.

In the light of these facts, we see that our personal individuality cannot be evolved from any known external, non-egoistic, impersonal world; for there is no such world, and therefore it cannot lapse into any such world; and what we call death, a modal change of our personal forces, must find some other explanation.

Personality, it is hence seen, is not the product or exclusive constituent of our bodily organization. That organization is simply one of an innumerable number of the complex modes of the ego, which includes all phenomena and all possible phenomena, each and all being just as really a constituent of the ego as is the organism or any of our interior experiences.

Digitized by Google

Hence, again, the ego is not limited or confined to the organism. It cannot be less than commensurate with all its many modes, and these are commensurate with the knowable universe and constitute that universe.

We thus see that the ego, every person or self-conscious individual, is an almost infinitely grander and sublimer thing than it has ever heretofore been thought to be, since it includes all the phenomena and all the forces (which are one) of the known and knowable universe, and therefore of all time, so called, as well as all space.

The extinction of so vast a reality is no trifle. It is not the fall of a leaf, as it has been often called. It is the fall of the universe and the annihilation of its distinctive individualistic being or force (which are one); for every person or individual is himself a universe, the only universe known or knowable to him, all of which is but a grand cosmic series of subjective phenomena, our individual transvolitional force thus and thus acting and self-manifested. The extinction of such a being has never been conceived by man, for such a conception of man has never been definitely attained, still less entertained; and no one has ever believed in the annihilation of the essential material or force of the known universe. Such a thing, if believed, must forever remain without proof or a grain of probability. (Unless God, the Infallible, declared it, if there is such a Being.) No sound mind, therefore, ever will entertain such a belief: so that whoever once clearly grasps and accepts the notion of human individuality which our exposition has indicated will never believe in its extinction. To such a one, belief in our personal immortality will be a psychological imperative.

Of course, this involves many other things, great and extraordinary, on which we cannot here dwell. If we enter into details as to what are the probable personal changes experienced in the event we call death, we may seem to belittle the subject. Yet the human mind necessitates such an inquiry, and we will risk one or two suggestions.

The death of others, so far as it is immediately known to us, is only a change in our own modes and experiences. But it is an index of some event that has transpired beyond my universe, an event of no small importance to a member of my race,—that is, a fellow-being, constituted like myself, who undergoes a constitutional change, so that he no longer belongs to my race or sustains his former relations with it and its universes. Let us look at the indicators of the nature and extent of this change, which are to be found in the changes we experience. These changes are all confined to that class of phenomena which we call the body or animated organism. The indication, therefore, is that the person whom we describe as dead has undergone the change of losing that organism, and nothing more. He has simply ceased to be the subject of certain sensations which he had before; for the body is only a complexus of sensations, lexically associated with other sensations and with super-sensual operations, which associated powers and operations are presumably left intact. On the old and popular theory that the ego is confined to the organism, we know nothing of the former apart from the latter, and we could have no scientific proof that the two could exist apart, or that they are not one and the same exclusively and throughout. According to our analysis, we *know* better. We know that the animated organism is but an infinitesimal fraction of our being, because the ego is identical with the entire knowable universe. To remove the body is therefore to remove only a very minute portion of our being, and perhaps to our advantage indefinitely. Though our analysis has already refuted the supposition, yet it is probable that many will think that the dissolution of the body will destroy all other sensible phenomena, because these all come to us, it is said, through the organism. This is erroneous. It is not, as we have seen, the body properly that sees or feels or tastes or smells: it is the man, the soul or spirit, call the conscious ego what you will, that is conscious of the body under the form or sensation of touch and sight, and equally of all objects beyond, which are called visible and tangible. It is not the organic eye which sees external objects: it is the soul itself only that sees, in lexical relations with certain other sensations, which for the sake of distinction are classed as organic. The soul may therefore know the universe with which it is now familiar, even though the organic phenomena of the animated organism disappear; and, for aught that appears to the contrary, the knowledge may be fuller, clearer, and more easily acquired and retained. Everything favors this view. The body has always been regarded as a clog and as an element of weakness and the source of low temptations. It is the link of connection and the badge of alliance with the brute animal world; and, so far, it makes us animals, with animal propensities and passions and grovelling appetites and tendencies. In losing the body, therefore, we lose much that is base and evil and belittling, and I see not that we lose anything else. All known wear and tear and actual waste of life are of the body. Hence come the necessity of food and sleep and rest and warmth, clothing and shelter against the elements. Here is the seat of disease, and to this also the operation of death, the consummation of all physical evils, is confined. Thus, nearly all known infirmities and all painful burdens and necessities are confined to the body, and with the dissolution of the body they pass away. And as these obscure the intellect, and often dwarf the intellect by the animal passions asserting so much sway, and by the necessity of devoting so much time and attention to the body, it appears that death must be an immense intellectual advantage. And it must also be equally a moral advantage to those in whom the spirit is willing, but the flesh weak; that is, to all the pious in purpose and wish and prayer. To them, "death" is "the crown of life."

The phenomena of somnambulism and hypnotism show us the human mind, in the exercise of powers of perception independent of the usual known laws and recognized senses, in clear, indisputable, and multifarious forms. It is certain that persons in such states see with their eyes shut and in perfect darkness, and discern distances, forms, elevations, and depressions, and even concealed objects, with a directness and accuracy and assurance far surpassing what is possible to them in their so-called normal condition. They have been known thus to write with perfect regularity along the lines of the paper, and to dot the *i*'s and *j*'s on a whole page with perfect accuracy, and to fill pages with figures in mathematical calculations, marshalling them with a precision and compactness to which the waking vision would scarce be competent. They have been known to walk in very dangerous places, as on precipices, and the ridges and counterscarps and parapets of lofty buildings, with perfect ease and assurance, though they would not be safe there an instant in the usual condition, with the full exercise of their senses. And I remember one instance where a sister had followed her somnambulistic brother quietly to watch him, but who, on seeing him get in such an apparently perilous situation, uttered a loud cry of terror, which awoke him and caused an instant and fatal fall. In one recorded case which we remember, the family, to prevent one of its members from going out in a somnambulistic state, concealed the key of the door in a vessel of water; and he, a young man, was *seen to go straight to where the key was deposited*, and proceed to take it out. Under the names of "mesmerism" and "clairvoyance" there have no doubt been much charlatanry and imposture; but, notwithstanding this, certain facts in this connection, of a very extraordinary character, have been indisputably established to the effect that, in accordance with some unknown law, certain persons have at times displayed a power of perceiving material phenomena which far transcends any known power of sense, and that, too, without the exercise of any of the recognized senses. We do not believe in any "odic force" or "mesmeric fluid." We pretend not to explain the mode; but the facts are patent that there is not only an exaltation of certain senses, but in some subjects an action which is above them. Such are some of the somnambulistic phenomena already mentioned, the clairvoyant reading of unopened letters in various positions relative to the body, and the discernment directly of the vital and pathological conditions of other persons, and also events at a distance both in place and time. All of which and many other things equally striking are certified unanimously by a committee of nine men of learning and science, appointed by the French Academy, which committee had the subject under advisement five years before they published their verdict in 1831, reversing a previous judgment of a committee of three, which had been more hastily pronounced, and when there was less evidence on the subject than at the latter date,—evidence which has never been rebutted successfully, though some of the theories connected with it have; while the simple facts have often since been certified and verified by numerous witnesses of the most competent and authoritative character. Such facts as the foregoing make it easy for us to conceive that bodily dissolution does not destroy, but exalt and augment, the powers of perception even of the material world. Indeed, all the facts taken together seem to indicate that death is truly an evolution into a higher order of existence. There has been an order of progress from the lowest forms of animal life, till man, while yet an animal, becomes also something immeasurably above all brute animals. Death strips him of his animal part, and, as we infer, lifts him immeasurably above his present condition and powers.

WILLIAM I. GILL.

EDITORIAL NOTES.

REFERRING to the Emerson Day at Concord, the *Christian Union* remarks: "It would have been better to have secured a more representative group of speakers rather than to select from Emerson's immediate followers and disciples; for it is coming to be recognized, as is invariably the case, that the noblest impulses received from Emerson are being wrought out not by those who have caught and keep repeating his accent and inflection, but by those who, having been started by him, are taking their own individual courses."

"WHAT," asks Emerson, "is the scholar, what is the man *for*, but for hospitality to every new thought of his time? Have you leisure, power, property, friends? You shall be the asylum of every new thought, every unproved opinion, every untried project which proceeds out of good will and honest seeking. All the newspapers, all the tongues of to-day, will, of course, at first defame what is noble; but you, who hold not of to-day, not of the times, but of the everlasting, are to stand for it, and the highest compliment man ever

Digitized by Google

receives from heaven is the sending to him its disguised and discredited angels."

"MEN of experience will tell you," said Carl Schurz before the Harvard Phi Beta Kappa, "that you will render the most venomous defamer harmless by letting him disdainfully alone. Or, if it gives you pleasure and you have time to spare, you may expose him for the public benefit and amusement. But necessary it is not. Public opinion is always just in its final judgments. Unscrupulous slander and unjust vituperation carry their antidote with them. An honorable character, well built up by honest conduct and patriotic service, can safely defy wanton attempts to destroy it. It will issue from the contest with greater brightness and also with just pride. For a man of genuine, well-founded self-respect will be rather proud of the fact that scoundrels are his enemies."

THE annual State camp meeting of the Kansas Liberal Union will be held this year at Bismark Grove, the finest grove in the State, beginning Sunday, August 27, and lasting nine days. The Committee of Arrangements announce that good speakers and good music have been engaged, and that those who attend will find ample accommodations on the ground and in the city, with "facilities for boat-riding on the broad, beautiful, and still waters of Kaw River." Ex-Governor Robinson, one of the officers of the Union, is endeavoring to secure reduced rates on all the railroads; and no efforts are being spared to make the meeting a large and successful one. All inquiries concerning the Bismark Grove Meeting will be cheerfully answered by Mrs. Anna L. Diggs, Lawrence, Kansas.

THE *Jewish Messenger*, which has vigorously promoted the fund to aid Russian Jews, uses plain language in regard to a certain class of immigrants:—

"People ready and willing to work," it says, "are always welcomed in America, and no questions need be asked as to nationality. But shiftless, lazy families, who evidently expect to be lodged and boarded at public expense, are not wanted here. Refugees from lands where persecution has been rampant deserve our sympathy; and they should be kindly received, and made to feel that they will have the country's warm help in their efforts to support themselves. But after the excitement of arriving in a new country has worn away, and investigation shows that some of these arrivals are evidently bent on being supported by the public and doing nothing for themselves, they should be told in distinct terms that the country will not harbor such people."

THE Concord correspondent of the Boston *Transcript* writes of Dr. Jones:—

The object of his course of lectures is to show that man has always existed the same as he exists now; that there is in history a permanent element; that man was made in the image of his Maker a full man, not coming up from lower forms of matter through different stages of development to his present eminence as lord of creation, but perpetually growing, and then decaying and dying, as does the individual man in the earthly life. If we examine any of the older civilizations, we shall find that these dead peoples had the same life and the same development as we have to-day. Only the experiences differ. The Hindu civilization of India has been found to have equalled any of those of modern times.

This sounds like a voice from the tombs. Yet it comes to us in the name of philosophy from Concord, where Emerson lived and where evolution found in him a defender a quarter of a century ago.

AN absurd claim has been made by a few faint-hearted preachers that he (Emerson) was a Christian. But, unless by a confused jargon of terms we call every man a Christian who does not lead an immoral life, and whose writings are not condemned by the authorities as publications unfit to be sent through the mails, then he was no more a Christian than is any Mongolian disciple of Confucius in this city or in China. It is a fact that more of gospel truth and a nearer approach to a system of Christian ethics can be found in the works of Confucius or Plato or Cicero than in those of the sage of Concord. Emerson was in no sense whatever a Christian, but was in all respects a pagan. As a pagan writer and teacher, his works will meet with the same treatment as that accorded to the productions of the illustrious pagans of the past: the truth will be sifted out of them and cherished, and the errors will be silently condemned and retired into obscurity.—*Occident.*

THE following paragraph is from the pen of a gentleman of considerable literary ability, who was acquainted with both Emerson and Thoreau:—

Never was man born who had better reason for exclaiming, "Save me from my friends!" than Thoreau. His was "a fugitive and cloistered virtue," and it is no kindness to him to drag him from his Walden cabin into the glare of public examination and criticism. As a poet and naturalist, he is vastly overestimated by his Concord admirers,—a conspicuous example of the exception to the text in Matthew xiii., 57. Of the three conditions which Milton declares to be essential to all true poetry,—namely, to be simple, sensuous, passionate,—Thoreau possessed but the first, and in no mean degree. His prose writings would be more delightful if we could eliminate from them his egotism, his struggles for originality, and his fondness for paradox. When he remarked to his sister "that there was as much comfort in perfect disease as in perfect health," . . . our faith in his good sense receives a shock; and when he went to prison rather than pay his tax, we cannot help thinking his love of notoriety surpassed his love of liberty. One name only immortalizes Concord,—the name of Emerson. The rest are ephemeral, including the whole faculty of its far-famed "School."

WHEN Joseph Cook said in one of his lectures, "My friend Mr. Fiske is a brilliant man and an agnostic," he probably had not learned Mr. Fiske's estimate of Joseph Cook, which was pretty plainly expressed in an article in the *North American Review* on "Theological Charlatanism," in which "my friend Mr. Fiske" says: "If we were to go through with Mr. Cook's volume in detail, we should find little else than misrepresentations of facts, misconceptions of principles, and floods of tawdry rhetoric, of which the specimens here quoted are quite sufficient to illustrate his 'fundamental method of procedure.' I have not treated him seriously or with courtesy, because there is nothing in his matter or manner that would justify or even excuse a serious method of treatment. The only aspect of his career which really affords matter for grave reflection is the ease with which he succeeded for the moment in imposing on the credulity and in appealing to the prejudices of his public." It is worthy of note that Mr. Fiske's opinion of Joseph Cook's manner of treating subjects that require careful thought and accuracy of language coincides with that of educated natives of India who have commented on his recent lectures in that country.

WE shall give in our next number an essay on "Emerson and Parker" and a contribution from Colonel Higginson on "Modern Asceticism."

POETRY.

For *The Index.*

ON THE HEIGHTS.

The misty veil that hides the dawn
Floats back, and, by an unseen hand,
From silvern sea and brightening land
The sombre robe of Night is drawn.

Looking adown this wooded height,
I mark the careless world below,
And sigh to think it may not know
When comes the joyous morning light.

Men share with me both sun and cloud,
Yet are not given their course to see.
All is of good comes first to me:
For me, the purpled heavens are bowed!

* * * * * * * *

So he who toils with voice or pen
'Gainst evil and for right and truth—
In ripened age or earnest youth—
Is lifted o'er his fellow-men.

They note effects: he knows the cause.
They see the end: he finds the way.
The sun shines for him night and day:
For him are changed e'en Nature's laws.

All things to him a lesson tell;
All love is his, by right of place;
All goodness goes before his face:
The gods come down with him to dwell!

WALTER L. SAWYER.

For *The Index.*

OPTIMIST.

A perfect God, he must have planned
A perfect scheme: his wisdom scanned
His embryo world; his forming thought
Outran the centuries as he wrought.
He gauged it all,—each seeming flaw,—
The dreadful fact of sin; the law
Of sad heredity, whereby
The innocent for the guilty die;
Truth's birth-throes; martyr stings and pains;
A dusky continent in chains.
He gauged it all: he saw that wrong
Would often win; he knew the strong
Would hurt the weak, and honest worth
Become sweet food for knaves; that dearth
Would blight the land, swift lightnings mar,
And great floods whelm it; schism and war
Keep bloody carnival above
His slaughtered laws of truth and love;
That sickness with its legion brood—
Rheums, fevers, palsies, taints of blood—
Would plague the race. Ah, wherefore, then,
Project a world of suffering men?
Why stayed he not his forming hand?
Why issued he that dread command,
That awful fiat, "Let there be"?
O graceless, vain philosophy,
That seeks with finite grasp to span
The boundaries of infinite plan!
Enough for our imperfect thought
That perfect Love and Wisdom wrought:
That not one atom of the whole
Stupendous scheme but has for goal
A gracious outcome, hidden, sealed
Perhaps, but sure to be revealed;
That sin and suffering have their place
In God's economy of grace.
Ay, sin! we know not why or how;
But, since his wisdom could allow
This alien offshoot on the tree
Of healthy being, who are we
To hurl thereat our puny doubt,
And murmur, "It were best left out"?
Nay, cavil ye who will or can,
"Let God be true and every man
A liar." Is there other creed
Can serve us at our direst need?

Thus far our quest, if that be quest
Which ends where it began. At best,
We travel in a circle when
We scan God's wondrous ways with men.
Still, still we find his boundless love
The pivot on which all things move.
Still, focus and circumference
Are radiating centres whence
All good evolves,—and evil still
But the blind agent of his will.

All glory, then, to him who knew
Whereof he wrought. All glory, too,
To that transmuting power which brings
Such sweetness from such bitter things,—
Good still from evil, bliss from bane;
From weakness, strength; from losses, gain.
All glory! Let the stars outpour
Their praiseful song as once before,
When, at the first, creation stood
Complete, and God pronounced it good.
All glory! Let the sons of God
Still shout for joy, and tell abroad
Their gladness from each heavenly hill,
"All, all is good!" proclaiming still.

The Index.

BOSTON, AUGUST 10, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors*
BENJAMIN F. UNDERWOOD, ... }

No WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

ANNIHILATION.

BY D. C.

Probably there is no word in our language that, when used in reference to a possible condition of the human race after death, is held in such abhorrence among English-speaking Christians as "annihilation." As the term signifies the utter extinction of individual consciousness, and complete obliviousness of the past, present, and future, it is not surprising that it should be so regarded. Yet, when the whole question of a possible future state is calmly reflected upon and considered from all points of view, there will be found, I think, many forcible reasons for a modification of this general aversion. It is however unquestionably true that the thought of an endless hell, with all the horrors that the term implies, does not convey to the evangelical Christian such an overpowering sense of wretchedness as annihilation. For from the former there is provided, according to his religion, a door of escape, to which each believer complacently flatters himself that he holds the key.

Judging from the tenacity with which these Christians cling to the dogma of rewards and punishments in another world, it is evident that, to many of them, the contemplation of a mode of existence wherein a small fraction of the race will be supremely happy, and the larger remainder extremely miserable, is a most agreeable one. Heaven is regarded as a sort of celestial clearing-house, established for the balancing of mundane accounts, and the settlement of old scores. Should it turn out at last, however, that with this life all ends, there certainly will be no opportunity afforded the righteous to exult over the wicked, however depressing the thought may be; nor will the Lazaruses, who fancy they have had a rather hard time of it in this life, experience the felicity of "getting even" with their more fortunate terrestrial neighbors. Considerations such as these undoubtedly have their weight in causing many to shrink with disgust from the thought of annihilation. But it would be disingenuous to attribute the general desire of immortality to such low motives.

The truth is, old conceptions of a future life have been modified immensely, and are in a fair way to become obsolete. It is being more generally admitted that, in all speculations concerning the hereafter, there must necessarily be an element of uncertainty, and that possibly the shrewdest dogmatizers and the most astute philosophers will find themselves as much mistaken in their opinions as were the medical experts who attended President Garfield, as to the location of Guiteau's bullet.

The only escape from the possibility of disappointment lies in the *bête noire* "annihilation,"—a term which, as it implies neither more nor less than *absolute repose*, need not inspire one with peculiar dread. But, unfortunately, this word, as a rule, is misinterpreted. Many persons, probably a large majority, absurdly conceive it to signify a mode of being in which we shall be forever *conscious of our unconsciousness.* Indeed, nothing is more common than to hear it spoken of as a state of despair. Such conceptions are not only erroneous, but unphilosophical. Although the thought of annihilation, or a state of unconsciousness, may not inspire much enthusiasm, it is both unscientific and unreasonable to regard it with special aversion.

Contrasted with the average Christian conception of a future state, it is infinitely more consonant with our benevolent instincts. If, also, we reflect a little upon the full, and, it might be added, fearful import of the term *eternity*, we shall, I think, be more reconciled to the thought of a condition in which we shall experience neither pleasure nor pain. With regard to another existence, however, we know absolutely nothing, and our conceptions of one can never be more than purely fanciful.

But of what annihilation signifies we have many important hints. Arguments drawn from analogy, and facts of individual experience, prove that a state of unconsciousness is by no means one from which we need recoil with horror. Certainly, we suffer nothing from the recognition of the fact that we are not conscious of having had an existence in any form before we were born into this world. This is significant, to say the least.

Again, persons who have remained unconscious for days and weeks together, by reason of skull fracture and consequent pressure on the brain, have not, after removal of the pressure and return to consciousness, reported having experienced sensations of any sort, agreeable or otherwise. In fainting fits also, and in cases of resuscitation after partial drowning, we have similar reports. We sometimes hear of delightful sensations felt at the moment immediately preceding unconsciousness, but never of pleasant nor unpleasant experiences during the period of suspended animation.

A few days before his death, Lord Macaulay had an attack of fainting which lasted for several hours. In writing to a friend, a day or two afterward, he alluded to it, and expressed regret that the state of unconsciousness into which he had fallen was not prolonged indefinitely. This is a noteworthy fact, considering that Lord Macaulay was a man who, as men are estimated, had a large stake in immortality. But hundreds of similar experiences are recorded. A still more conclusive answer to the argument that a state of unconsciousness is the condition after death most awful to contemplate is that our daily experiences contradict it. Healthy individuals, who are temperate in eating and drinking, whose digestion is good, and whose mental state is serene, spend a considerable fraction of their lives in a state of unconsciousness. This is not a condition forced upon them against their will, but one toward which, after the fatigues of the day, they look with pleasure. Especially is this obliviousness agreeable to invalids. Of course there is much force in the argument that it is the expectation of awaking to a state of consciousness with a renewed appetite for the pleasures of life that reconciles one to this temporary death. But all that this proves is that it is the *thought* that we shall not awake, and not the *fact* of unconsciousness, which disturbs us. So, when we are about to die, the expectation that we are to have another existence where we shall meet and recognize the dear ones who have preceded us is comforting, and one that may be indulged in without the least possible harm, even though it be a delusion.

The writer is not attempting to disprove the theory of the soul's immortality, nor does he deny it. He is only desirous to show that a state of unconsciousness, or, in other words, annihilation, is very far from being the bugbear that it is generally represented to be. At the worst, it cannot be other than a state of *perfect rest*, a state for which we instinctively pray when sickness and suffering have made us weary of life. It is certainly true that in many cases, probably a large majority, the dying view death as an event that will bring to their sick and weary bodies rest, rather than as the portal to Elysian fields. Chronic invalids more frequently think and speak of death as a release from pain than as the gate that conducts to paradise.

To such as these there is no word in their vocabulary so pregnant with joyous anticipations as *rest.* Yet this is only another name for annihilation. Now, since we know absolutely nothing concerning the future, and the unanswered invocation that

> "Some courteous ghost would blab it out,
> What 'tis they are and we must shortly be,"

is likely to remain unanswered, and since the reasons for non-belief in a future existence are as cogent, at least, as the arguments for immortality, does it not seem to be the dictate of sound philosophy that, in forecasting the *probabilities*, we should also give due consideration to the *possibilities?*

There is altogether too much dogmatizing relative to the soul's immortality, and the pulpit is forever ringing with audacious and groundless assumptions concerning it.

By what superior right do men, whom it is sheer irony to style "divines," prate so authoritatively respecting a matter of which they are as profoundly ignorant as nursing babes? The agnostic, with more modesty, and quite as reverently, confesses that the problem is "far beyond our utmost reach of thought." Recognizing, however, the probable fact of the indestructibility of all things, he concedes the possibility of another life, though refusing to accept as logical the arguments mainly used in support of the dogma. He finds it quite easy to account for the belief that is so general, though by no means universal, in the soul's immortality, without recourse to miraculous revelations or metaphysical subtleties. It is, as he conceives, the legitimate offspring of that hope which

> "Springs eternal in the human breast,"

and will not down, though

> "Man never is, but always to be blest."

Without this attribute of the mind, though in life's experiences so often and so painfully proven to be a mere will-o'-the-wisp, beckoning us onward from one disappointment to another, man would be a malorganized being, wholly unable to grapple with the conditions into which he was born. Therefore, the real value of *hope* as a factor in the solution of the problem of immortality may be easily estimated. However, since the pleasures of this life are so largely made up of delusions, and as the imagination plays so important a part in its prospective delights, it would seem to be unkind to attempt to dispel the one or to place obstacles in the way of the fullest play of the other. Certainly, the writer has no disposition to disturb beliefs in which others find comfort, well knowing that in all matters purely speculative every man must be a law unto himself, and that he who claims infallibility of judgment is but little else than a contemptible bigot.

Indulging in no fanciful dreams of a blissful hereafter, neither in gloomy forebodings of his destiny, he will endeavor to await the outcome of this life with philosophic decorum, not doubting that, whatever change death may bring, it will be in obedience to laws over which, fortunately, we can exercise no control. And, while not wishing to impose his own, quite possibly erroneous, theories upon others, he feels that he is not demanding anything unreasonable when he insists that, surrounded as we are by so many unmistakable manifestations of beneficence, all our conceptions of the future shall be cast in a benevolent mould, and that our views respecting the source of the

> "Light and life
> Of all this wondrous world we see"

shall be broader and higher and grander than any yet formulated in church creeds or that can find adequate expression in human language.

EXTRACTS FROM SOPHOCLES.

SELECTED BY F. M. HOLLAND.

"Then does man's life become one vast disease,
When once they seek their ills by ills to cure."
—*Fragment* 98; *Plumptre, II.*, 263.

"Oh that my fate were fixed
To live in holy purity of speech,
Pure in all deeds whose laws stand firm and high,
In heaven's clear æther born."
—*Œdipus the King*, 852; *Plumptre, I.*, 38.

"'Tis better not to be than vilely live."
—*Fragment* 436; *Plumptre, II.*, 270.

"We should not joy in pleasures that bring shame."
—*Fragment* 665; *Plumptre, II.*, 275.

"The man who yields to wine
Is void of understanding, slow to wrath,

Digitized by Google

And loves to babble many words and vain,
Full loath to hear what eagerly he spoke."
—*Fragment* 668; *Plumptre, II.*, 275.

"Full many a threat and many an idle word
Spoken in wrath have made men cower for dread;
But, when the soul is master of itself,
The threatenings vanish, and are seen no more."
—*Œdipus at Colonus*, 660; *Plumptre, I.*, 97.

"Evil mood
An evil issue finds forevermore."
—*Œdipus at Colonus; Plumptre, I.*, 121.

"Man's worst ill is stubbornness of heart."
—*Antigone*, 1242; *Plumptre, I.*, 203.

"But still the gods love those of ordered soul."
—*Aias*, 132; *Plumptre, II.*, 137.

"It brings some pain, I know; but one must try,
As best one may, to bear the ills of life.
Needs must we find some healing from these things."
—*Fragment* 236; *Plumptre, II.*, 266.

"Chance never helps the men who nothing do."
—*Fragment* 302; *Plumptre, II.*, 267.

"Be of good cheer. Speak thou the truth, and then
Thou shalt not fail."
—*Fragment* 513; *Plumptre, II.*, 513.

"To thrust out a friend of noble heart
Is like the parting with the life we love."
—*Œdipus the King*, 610; *Plumptre, I.*, 28.

"Still, the good man feels,
Or ought to feel, the memory of delight,
For gracious thanks beget more graciousness;
But, if a man forgets the good received,
His soul wears not the stamp of noble birth."
—*Aias*, 520; *Plumptre, II.*, 152.

"Be sure no lie can ever reach old age."
—*Fragment* 59; *Plumptre, II.*, 261.

"To hide the truth is evil, and beseems
But ill the soul of one of noble birth."
—*Fragment* 100; *Plumptre, II.*, 264.

Odysseus says,—
"Thou neither speakest wise things nor devisest."
Neoptolemus answers,—
"If they be just, then are they more than wise."
—*Philoctetes*, 1245; *Plumptre, II.*, 246.

Again, Neoptolemus says,—
"I wish,
O king, to miss my mark, as acting well,
Rather than conquer, acting evilly."
—*Philoctetes*, 94; *Plumptre, II.*, 197.

"All things are noisome, when a man deserts his own true self."
—*Neoptolemus in Philoctetes*, 903; *Plumptre, II.*, 231.

"I know
None pleading well all causes, and yet just."
—*Œdipus at Colonus*, 805; *Plumptre, I.*, 103.

"He is no longer reckless nor unblest,
Who, having fallen into evil, seeks
For healing, nor continues still unmoved."
—*Antigone*, 1025; *Plumptre, I.*, 194.

CORRESPONDENCE.

ONE PHASE OF FREE THOUGHT.

Editors of The Index:—

Many persons who have thought much about the origin and destiny of man have given up the problem as utterly insoluble. They feel that the subject is not only now beyond the comprehension of the highest human intellect, but that it will always be overshadowed by the mysteries of the unknowable. These persons do not longer talk about the whence and whither of the human race, not because they have no interest in the question, but because they feel too deeply for words that all attempts to part the veil which shrouds the eternal mystery are vain and childish. Who that has had his mind penetrated by the intricacy of this problem which the sphinx of life proposes has not felt a sense of helplessness too intense for utterance? To use an algebraic figure, we have one indefinite and unyielding x representing all the essential factors in the problem, and from this stubborn symbol of ignorance we can deduce no rational equation. Thus, baffled in every effort to bring the question within the province of rational thought, the investigator frequently retires from the unequal contest with the unknown, refusing to affirm or deny beyond the cradle or the grave.

This seems to me to be the attitude of mind which will more and more prevail, for a time at least, among a large class of thinkers. Absolute ignorance respecting the whole subject will prevent credulous spiritualism on the one side and pronounced materialism on the other. *I do not know* is all that many who face this mystery can say. This state of mind is called wilful unbelief by the Church and cowardly hesitation by some of the champions of decided materialism; but it is the only honest position many thinkers can occupy. They cannot affirm that life is eternal in its individual consciousness, nor that death is everlasting oblivion. They see in both the cradle and the grave a mystery which makes doubt quiet and reverent. Over neither of the gateways of life do they inscribe any dogmas affirming or denying the existence of what hope and fancy may sometimes discern in the shadows beyond. They mutely gaze on the outlying mystery, and wait for the light or darkness to which death leads the pilgrim of earth.

Religion has taught us to indulge too much a childish credulity. We have been fed on dreams and fancies, and, like children enchanted with fairy stories, have learned to prefer delusion to reality. It is hard for the child of faith to accept the limitations of knowledge, and live on what the mind can firmly grasp. To a nature long accustomed to the intoxication of religious fancy, the mental condition of the agnostic seems cold and dreary. Like the emotional child of the nursery that finds the facts of life in harsh contrast with the fairy-land of its youthful day-dreams, the religious enthusiast, when once impressed with the inevitable limitations of human knowledge, when reason refuses to credit as authority all that traditional credulity has gathered from the hopes and fancies of the past, then to live by sight and not by faith appears hard and unsatisfying. And unless an enthusiasm for some tangible good can be substituted for the faith thus surrendered, unless the heart finds itself entering with closer sympathy into the life-efforts of our common humanity, there will be no compensation for what the believer gives up. A true life must have its religion, whether it finds its object in heaven or on earth. It must have some lofty ideal for its inspiration, whether that ideal be found in the divinity of faith or in the highest aspirations of our own struggling race. Happy are they who, though denied the knowledge of man's whence and whither, find duty still speaking in tones of supreme authority, sympathy for all that is beautiful and good, tender, and strong, and faith in the continued elevation of earth's ideals earnest and constant.

CLAY NEVILLE.

OZARK, MO., July 22, 1882.

TRUTH AGAINST FAITH.

Editors of The Index:—

In a recent editorial printed in the *Journal* of this city, I found the following statement: "It is the people with a positive and searching faith who set themselves to the most unselfish labors for their fellows. The more intense the faith in God, in communion between God and man, and in a life beyond the present, the more intense and earnest the purpose to do something in the service of humanity, because such service is felt to be supremely worth while. . . . Just in proportion as you undermine the faith of man in God and the future, just in that proportion you diminish the estimate of the dignity of mankind and reduce the motives which prompt to noble living and sacrifice for the sake of others."

This may be good "Orthodoxy," but it manifests a supreme disregard of the truth. The fact is that just in proportion to a person's "faith in God and a future life" (I mean that conception of them which is held by the *Journal*) will be his desire, not to benefit his fellow-mortals in this life, but to save their souls for the future life in which he has faith. A man who possesses a genuine, old-fashioned faith in God and the future has no faith in this life worth mentioning. To him, this world is a vale of tears, an indiscriminate hodge-podge of total depravity, natural enmity against God, a lure of Satan, and a very dangerous existence on the brink of the bottomless pit where the worm is said to be immortal and the fire never to go out. The whole tendency of the influence of such a faith is to make those possessing it attempt to restrain and coerce those who have it not. The believer would compel the unbeliever to believe,—not to make him happier here, not to make him more intelligent, more truthful, more honest in this life, but simply to save his soul from the heated term in the life to come. The gentlemen who established the Inquisition had an abundance of this faith in God and the future, and it made them very inhuman. In fact, I am at a loss to see how the Inquisition, offspring of faith and engine of malevolence, can be regarded as anything other than an institution of human monsters. Certainly, they would be so regarded to-day who should attempt to revive that method of increasing the happiness, the "noble living," of humanity. Taking Guiteau as a sane man, he is a reversion to that old faith in God that made murder, in God's name and for the pretended good of mankind, a deed of glory. But the universal detestation of this wretch, despite all his protestations of inspiration and divine commission, shows how deep and wide is the change that has gradually opened between the faith of men in God two hundred years ago and the faith of to-day. If God had established that sanguinary faith as the condition of man's escape from eternal woe, it could not have changed. Sunshine and rain have never withheld their blessing, our planet has never ceased to bring us her changing seasons that we may have life and abundance here and now. Why, then, should God deceive us by allowing the faith which alone can bring us joy hereafter to fall into decay and weakness? If God were really the author and finisher of such faith, he would restore it to its strength of the days when it ruled the world. What has wrought the change? Civilization has taken from the faithful their power to coerce, to enslave, to burn, to starve, to kill men, women, and children in the name of God. Perhaps the *Journal* would argue that it was this very faith in God and the future that made civilization possible. Such, at least, is the argument used by advocates of the *Journal's* type of faith. But the argument is a sort of boomerang. It comes back to the thrower to apply itself. If faith in God and the future life is the source of civilization, and civilization is the death of the power of faith over men, then faith in God and the future life is killing itself. No lesson is more clearly conveyed by advancing civilization than that general knowledge—not of the future life, for we do not know any more, if indeed as much, about that now as people thought they did generations ago, but of the present—is steadily weakening the hold of faith in God and a future life, and proclaiming and establishing on demonstrated facts the faith of mankind in this life and this world and the material universe. There are larger charities to-day and more leniency toward opinion, because men and women possess larger minds, because want appeals to an increasing benevolence, which is not expressed as formerly by the cold and excluding influence of theological creeds. With men and women of generous impulses, the question is more and more becoming, not "What does this person believe?" but "What are his or her conditions and needs?"

"Organized charities" are by no manner of means the only charities in existence. Few people there are who do not in one way and another in these days answer demands upon their charity just as fully in private giving as organized charities do in public on the street corners. It is therefore no test of the wisdom or value of a principle that it does not organize for clothing and feeding beggars. The wisest and best service to humanity is that which educates it, and thereby decreases the birth of paupers. Hence, knowledge, wisdom, truth, are better than faith in God and a future life. The former will in time establish heaven here: the latter, despising this world and this life, is compelled to postpone all realization of happiness indefinitely. Emerson founded no school of charity, established no hospital for incurables: but the splendid legacy of his mind has enriched and elevated the whole world of man. Darwin, spending his long life in patient, persisting toil to learn the truth concerning the world of life of which he felt himself to be a part, did a work for the improvement and elevation of mankind, the worth of which it would be utterly impossible to represent in dollars and cents donated for relief of the poor. It is fact, not faith, that elevates and strengthens humanity to-day. If knowledge leads to uncertainty in regard to the existence of God and a future life, as conceived by theologians, or even if it leads to conviction of their non-existence, which is noblest, to accept the truth with a quiet assurance that the truth is best, or to deny it, and pretend a faith in what we cannot believe? Is the gift of heaven to be the reward of

Digitized by Google

hypocrisy? People can honestly believe only in accordance with the evidence they have, and lack of evidence is the secret of the incurable consumption of "faith." Just as surely as mind outgrew the mythology of ancient paganism and barbarism, just so surely is it outgrowing the mythology of Christianity; and just as surely as mind is growing in the world, just so surely is mankind becoming greater, better, nobler, than it was when "faith in God and a future life" made it a crime to doubt the apostles' creed or the inspiration of the Bible.

CHARLES ELLIS.

"THE INDEX" AND THE ENGLISH UNITARIAN PRESS.

Editors of The Index:—

All the English Unitarian journals have done me the honor to notice my criticism of the Liverpool Unitarian Conference, which appeared in your columns a few weeks ago; and considerable correspondence has taken place upon some of the points which it raised. This general notice is gratifying for two reasons. First, it is pleasant to know that *The Index* is read in English Unitarian circles; second, since English Unitarians have a great respect for American movements in liberal religion, there is a possibility that one may exert some slight influence when they discover the fact that

> "A chiel's amang ye, takin' notes,
> And, faith, he'll prent it."

But, on the other hand, these notices are disappointing, because they make no attempts to reply to a single statement of my letter, but denounce it as consisting of "sneers" and "scoffs," giving misrepresentations of its contents in order to justify these and similar expressions.

The English Unitarian journals are the *Inquirer*, the *Unitarian Herald*, and the *Christian Life;* and I think the three ways in which they have received your article may not unfairly represent to your readers their respective theological tempers. First, because least, comes the *Christian Life*. This was started by the Rev. Robert Spears at the time when he felt himself compelled to resign the secretaryship of the British and Foreign Unitarian Association. It holds a position which can hardly be distinguished from Orthodoxy, except by the fact that it indulges in the language of denunciation to an extent to which orthodox journals no longer frequently descend. In a somewhat different sense from the old proverb, "Beware of the man of one book," we may say, Beware of the newspaper in which one man forms the staff of editors and contributors,—a state of things understood to be characteristic of the *Christian Life*. It describes my letter as follows:—

> The Boston *Index*, the organ of the American Free Religious Association, has an article descriptive of our National Conference at Liverpool. The tone of the writer's criticisms may be judged from the fact that he sneers at the Conference having been opened by the celebration of the Lord's Supper, which he considers to be a circumstance of "sad significance," and that he scoffs at our own remark that our Unitarian Churches are "not going to give up Christ." The estimate which we place upon scoffs and sneers depends altogether on the quarter from which they come, and we need hardly say that we hold very cheap the criticisms of one who characterizes as "dreadful cant" our desire to honor the Son of God and to follow his guidance.

Although I am crushed by the consciousness of being held cheap by the staff of the *Christian Life*, I have a few words to say in reply to these three statements. In the first place, what I said of the Lord's Supper was that it was "a very false note"; and "I cannot help regarding the circumstance as having a sad significance." There is here no suggestion of a sneer: the word "sad" accurately describes my own feeling. Again, referring to the statement that "our churches are not going to give up Christ," I said, "This, with the communion service for a key-note, is an admirable summary of the results," and afterward quoted the well-known passage from Lessing's *Nathan*. There was no suggestion of a scoff. Third, I did not "characterize as 'dreadful cant' *the desire to honor the Son of God*." I should deeply regret if I had been guilty of so ill-judged a proceeding. I specified distinctly, using marks of quotation, that the expression "dreadful cant" was applied to the following passage of the Rev. W. H. Channing's speech: "The time had come. They were being revived. It would go on to glory. In the first place, their duty was *to rally round this blessed Son;* next, to teach the scientific men," etc.

In view of the above facts, I do not think it is too much to charge the *Christian Life* with deliberate misrepresentation of the spirit and statements of my letter.

The *Unitarian Herald* has a long editorial on "Three Voices on the Condition of Unitarianism," the voices being those of Dr. James Freeman Clarke, the Rev. Panton Ham, and your correspondent. In describing my letter, it begins with a little mild misrepresentation (*e.g.*, "He did not like the Lord's Supper, for it cannot, he says, be shown that Jesus commanded this rite," thus implying that the denial of the command of Jesus was my principal reason for disapproving of the communion service, whereas in fact I dismissed that reason in a parenthesis of two lines, and devoted half a column to other reasons), and then makes the following remarks, which I will take *seriatim:* "We fear H. N. has got his mind biassed or his temper soured, and that he looks at the meeting with opaque spectacles."

This needs little comment. It goes without saying that, if you differ with any one about matters of religion, it is because your mind is biassed. Theological dissent is, in the mind of the opposite party, the result of one of two causes, malice or ignorance. *Tertium non datur.* Dr. Clarke, agreeing with the views of the *Unitarian Herald*, is credited with a "noble sermon." The Rev. Panton Ham, differing with the same authority, is recommended to go somewhere to recruit his health. "If it approve itself to the reason of Unitarians, why should not they prefer the leadership of Christ to that of Herbert Spencer?"

It seems to me to be bad taste to make a bold comparison between Christ and Herbert Spencer, and none such is to be discovered in my letter. We should be only too glad to have the Unitarians follow any leadership that recommends itself to their reason: our chief ground of complaint is that they frequently do not use their reason at all, but are content to follow the leadership of unreasoning custom or authority. "Does not H. N. himself concede all that Unitarians would ask from him, when he speaks as he does of Jesus Christ as among the noblest of figures of men to guide and inspirit us?"

This question is delightfully *naive:* it would be much better answered by some other English Unitarian. Certainly not. Unitarians ask that we should speak of Jesus as *the* noblest of men, not as *among the* noblest; that we should avow ourselves exclusively his disciples; that we should rally round him; that we should take his commands for our rules of conduct, and a score more things too well known to need enumeration. Indeed, as if to furnish me with further arguments, the editor himself says in closing, "If any one is disposed for a moment to listen to either [Mr. Ham or your correspondent], we earnestly beseech them to stand fast in the liberty wherewith Christ hath made them free." If so slight a concession would make good Unitarians of us, how soon the ranks of Unitarianism would be swelled! "Why should he question their consistency in preferring the Christian name and Unitarian associations to joining a Free Religious Association with Frederic Harrison or Mr. Conway as its leader?"

I did not question their consistency at all. The only foundation for the above paragraph is my simple statement there is no such body in England as the Free Religious Association, and that Mr. Conway stands alone. To refrain from the charge of deliberate misrepresentation in this last instance is—to quote the old saying—only to spare the morality of the *Unitarian Herald* at the expense of its intelligence.

The London *Inquirer*, a much larger and more expensive paper than the others, as well as a much more liberal one, merely describes my letter as "somewhat caustic," and then reprints the latter half of it. Considerable correspondence has taken place with regard to my statement that Mr. Conway stands alone, and that his writings represent himself only, there being no organized body which he and they can claim to represent. A correspondent says:—

> In the article on the Liverpool Conference, copied from *The Index* into the *Inquirer* of the 17th inst., with which in the main I agree, there is one statement that seems to me to need some qualification. The writer, lamenting some supposed reactionary tendencies in English Unitarianism, says, "Mr. Conway stands alone, and, admirable as some of his writings are, they represent himself only." This is, I rejoice to know, far from being strictly correct. There are many of our ministers, and many more of our laity, who are in hearty sympathy with some of Mr. Conway's opinions, and are admirers of his writings, and of the free, reverent, and earnest spirit in which he carries on his isolated ministerial work. Many of these do not share his objection to the Christian name, and regret that this conscientious objection on his part prevents his being more closely identified with the Unitarian body; but, notwithstanding this nominal obstacle, Mr. Conway has on several occasions occupied our pulpits, and within the last few months has conducted the services in at least two Unitarian chapels, and would, as I happen to know, be warmly welcomed in others, did his engagements permit him more frequently to accept the invitations of our ministers and congregations.

It is, of course, pleasant to receive fresh proof of the fact that Mr. Conway has many friends and admirers wherever his work is known. The above argument, however, does not refute my statement in any way, but rather strengthens it by the writer's unconscious reference to Mr. Conway's "isolated ministerial work." Of course, this letter, too catholic in its tone to suit most Unitarians, has been promptly repudiated by several other correspondents, one of whom says that "the writer in *The Index* got unreasonably angry, but he at least accepted facts as such." So there is no occasion for me to reply.

As I said at first, it is good to have roused the Unitarians to reply, but disappointing to find that they make use of the wordy weapons from the old theological armory rather than bring forward plain arguments to show what I, for one, would so willingly see proved; namely, that my previous estimate of them was a mistaken one.

H. N.

ENGLAND, July 15, 1882.

PROF. ADLER AND THE F. R. A.

Editors of The Index:—

I have been deeply moved and interested in the position recently taken by Prof. Adler toward the Free Religious Association and in the criticisms made thereupon. It seems to strike the key-note of difference between thought and deed.

The friends of labor have often told me that I need never look for help from the Free Religious ranks, that they are men absorbed in other and foreign subjects, with no understanding or inclination for this cause. This I could not believe; for it seemed to me that, of all men, they with their broad culture and education, their deep faith in human nature, and hearts alive to the welfare of the race, were just the ones to furnish heads and hearts ready and able to battle with the situation. Therefore was I loath to accept the assertion as truth; but, after years of anxious watching and waiting, I have been obliged to admit that it was truth. And just as I point proudly and triumphantly to the President of the Association, feeling that his work justifies my old faith in the Free Religious friends, he steps out of their ranks, and, alas! for the reason that he fails to find there the help which he had a right to look for and expect; while many of the criticisms made upon the step which he has taken only go to show still more plainly how little is the situation understood or appreciated. The critics fail to see that his is the larger outlook, that he grasps not only their field of vision, but goes beyond it. The crying need of the day is this question of poverty. The Woman Question means poverty, the Temperance Question means poverty, War means poverty, and the Chinese Question most emphatically means poverty; and yet the culture, education, and influence of the day neglect this problem, instead of looking it squarely in the face and trying to find its solution. It is as culpable for men of brains and influence to ignore this question to-day as it was twenty-five years ago for such men to ignore the slavery question.

"It is the only question, as Carlyle thinks, for wise men, instead of art, and fine fancies, and poetry, and such things, to address themselves to the problem of society." "The real poem for a man at present," Carlyle said to Cooper, "is to make a bit of *Cosmos* out of the horrible practical chaos round us." It costs nothing in this day to be a Free Religionist, it is respectable, one is in good company, the battle is half won, the most bitter struggle is now going on in another part of the field, and the rebuffs are keenest felt in other lines.

I do not fail to appreciate the great and glorious work the Free Religionists have done and are still doing. To me personally, it has been as a haven of rest for many years; it has been as my bread and staff. Week by week, through the columns of *The Index* there was sure to come noble thoughts and words, which could not fail to lift one into a higher life.

Digitized by Google

Feeling this as I do most keenly, and also realizing that few of us are capable of doing more than one thing really well, I yet cannot but regret that, when one of their number does combine the ability to both *think* and *act*, instead of its being hailed with glad acclaim, and eager effort made to meet the new demand, there is no adequate response to a noble appeal.

Most peculiarly inappropriate do some of the criticisms appear, which are made by your Cambridge correspondent of June 13. As for instance, "A poverty of ideas seems not to concern him." How can such an assertion be made, when one thinks of the lectures given every Sunday, week after week, full of food for mind and heart, for those who are able to listen to him. Even though we set aside the Sunday work, which we have no right to do, still there is a most grand and noble thought at the basis of the week-day work.

It is a truth that, until you feed the hungry and clothe the naked, it is of no use to preach to them high ideas, which they can neither attain unto nor understand.

An empty stomach cannot grasp the thoughts which come from a life of culture and liberal sympathy. It needs a certain degree of education and refinement for such thoughts to find an answering echo in the mind of a listener.

Take the beautiful essays which are published in *The Index:* how many of the masses read them, or would be benefited by them, if they did? They would not understand them, they would not touch them, they do not even know of their existence.

That reform is upside down, which expects to accomplish anything with ideas, first, for the masses. The race must first be fed and clothed, be lifted out of the horrible poverty and oppressive toil which now degrade them, before there will be soil rich enough for you to expect your noble ideas to take root and grow; they must first be lifted up to the level of those ideas. Nothing more proves the brotherhood of man than the fact that, while the favored few are filled with enthusiasm over the beautiful life which opens before them, as high thoughts and new ideas inspire and elevate, they cannot make much headway therein, so long as the dead weight of suffering humanity is ignored.

Because man can live on six cents a day in China, we in America must suffer for it; and it is right that we should, so long as we simply think and say that man is our brother without making it verily so in act and deed.

M. M.

[Our correspondent does injustice we think to Free Religionists, who are generally "friends of labor," and many of them active workers in movements which aim to improve the condition of the working classes. A very large proportion of them are interested in the reforms of the day mentioned above, with which indeed not a few of them are identified as generous supporters and prominent representatives. If, as members of the Free Religious Association, they give prominence to questions directly related to the purpose of the organization without discussing matters that belong specially to the province of other societies, the fact is as little to their discredit as the fact that the Woman Suffrage Association do not include in their proceedings discussions, for instance, on the origin and growth of Judaism or Christianity is to the discredit of that body. Widely separated and members of different organizations, in connection with which they sustain reforms and charities in which they are interested, why should Free Religionists all resolve to convert the Free Religious Association into a general Reform Association or an association for the distribution of charity or for the education of the poor? The work of mankind cannot be done without a division of labor, and this is as true of the work of reform as of the general work the performance of which is necessary to supply the daily wants of the race. To "feed the hungry and clothe the naked" is a laudable work, but that is not the work for which the Free Religious Association was formed, and its failure to engage in this work is no reason why it should not continue to encourage the independent study and fearless discussion of subjects concerning which the majority even of educated men have yet narrow and one-sided views.

Our correspondent confessed to having been lifted "into a higher life" by "the noble thoughts and words" published in this journal. We have received many assurances of this kind; and they encourage us in our work, even though there are many in this country, as well as in Africa, who are not directly benefited by the essays we print, because "they would not understand them, they would not touch them, they do not even know of their existence." Although we do not agree with our correspondent that the "reform is upside down, which expects to accomplish anything with ideas, first, for the masses," yet we are in sympathy with the philanthropic spirit of the above article, and admire the noble work Prof. Adler is doing. At the same time, we recognize his method as but one of several, and his work as detracting in no way from the value of the work performed by Free Religionists individually or through various organizations, in intellectual culture or practical charity in different parts of the country, as well as through the work of the Free Religious Association.—ED.]

FAITH CURES, OR MODERN MIRACLES.

Editors of The Index:—

As it is far too well-known a fact to need demonstration anew that faith in remedies, or in individuals giving alleged remedies to the sick, often accomplishes results which, to the mind not accustomed to examine such cases, seem little less than miraculous, the writer only wishes to present a few instances to help direct attention away, if possible, from assigning to the recently widely published alleged cases of wonderful cures of really sick persons by "prayer and anointing" in the presence of admiring audiences.

And, to premise briefly, let it be remembered that the more ignorant of a subject persons are, the more readily are they deceived; and the more such ignorance pertains to the bodily comfort of persons, the more are they eager to obtain relief and hope against long odds for success.

A year or more ago, during the regular service at the Boston Dispensary, there applied to the writer an ignorant washerwoman for relief from a chronic trouble, which called for a laxative treatment simply. In order to demonstrate to some students (who were in a discussion as to the effect of the mind on the body) how far faith in a remedy given would go, a powerful *sedative* was given, with careful directions as to use and warnings as to evil results of exceeding the directions, lest too great an action, the reverse of the real effect, would be caused. The patient returned in about ten days to report, as ordered, and requested that she be given more of the above-named remedy, as the effect *which she desired* had been caused. Thus, the mind, having been directed, overcame the chronic trouble, and also overcame one of the most powerful drugs known, causing a veritable modern miracle, in short. Again, two strong laboring men, one a longshoresman, the other a bricklayer, applied in like manner. The one complained of utter loss of appetite and great weakness; while the other asserted that, for weeks past, he had had but little unbroken sleep. Neither of these men would for a moment be supposed to be of a very imaginative turn of mind, but the contrary. Both were given carefully written prescriptions for clean water, and minute directions were furnished them as to use. Both reported in due time as well, and were profuse in their thanks for the powerful remedy given them.

Such cases to a large number are recorded. Should a "believer in the efficacy of the prayer and faith cure" argue that these cases are indeed faith cures, the reply is evident—that faith in man and drugs is not identical with faith in an unseen, unknowable, mysterious power called God.

Given a clearly diagnosed case of phthisis in the third stage, which in short is consumption as generally known, or heart disease involving the mechanism of the valves, which has been or can be relieved or cured by prayer, then the writer will forget how little effect all the prayers said for President Garfield prior to his death had; and he will "believe" ardently. Till then, the "thousand natural ills that flesh is heir to" must not depend on prayers or other relics of the past, as much as on honest inquiring men, for relief.

JOHN DIXWELL, M.D.

BOSTON, Aug. 5, 1882.

MISCELLANEOUS.

IT is too common for individuals and committees arranging for public meetings to announce, among the speakers engaged to address the meetings, persons of reputation from whom have been received no intimation whatever that they will be present. So far has this dishonest practice been carried that a list of great names no longer attracts a crowd, unless back of the announcement there is *character* to vouch for its correctness. Circulars and letters have been sent out by the Secretary of the New York Free Thinkers' Association, designed to give the impression to the public that the meetings will be addressed by speakers who there is really no reason to believe will be present, who, in some instances to our knowledge, have expressed indignation at the unauthorized use of their names. In one of these circulars, dated July 28, is the statement that the committee "hope to procure the attendance of Herbert Spencer, who has just arrived in this country." It matters not to the author of the circular that Spencer is yet in England, and does not sail for this country for some days, and that the statement has been made, on the authority of Prof. Youmans and others, that, owing to impaired health, the distinguished philosopher will avoid all public meetings and social excitement, and spend his time, until cool weather arrives, at the seaside. It was thought his name would give strength to the circular; and it was used on the principle, probably, that the end sanctifies the means. How much better is this than the practice of the Christian Fathers, so justly condemned by Liberals, of using falsehood to promote the interests of their faith! "The cause" is not in need of any such tactics; and *The Index* will not allow circulars like this, issued in the professed interest of free thought, to pass unnoticed.

THE French Chamber has finally passed the judicial oaths bill after a long and bitter discussion. At the final debate, Bishop Freppel and the reactionaries advocated the maintenance of the oath, with the infliction of fines on those who refused to take it. The government recommended a dispensation for persons entertaining or affecting scruples; and the committee proposed a uniform secular oath or declaration. Jules Roche, in a trenchant speech in favor of this last course, inveighed against Roman Catholicism as having for centuries arrested human progress, established and maintained itself by violence, and deluged France with blood by the massacre of St. Bartholomew and the revocation of the edict of Nantes. There were murmurs on the right at some of the passages of his denunciation, but silence on his describing the persecution of the Huguenots as a great crime, from whose consequences France still suffered. M. Roche also drew a contrast between the morality of Roman Catholic casuistry and that of sceptics, like Montaigne and Voltaire. Bishop Freppel, in reply, repelled the charge that Roman Catholicism sanctioned mental reservations, and accused Pascal, that "pamphleteer of gamins," of garbled quotations on this point. He urged, moreover, that, even if individual casuists had gone astray, Innocent XI. had condemned mental reservations He twitted freemasonry with wishing to expunge the name of God from the code, "as it had done from its own constitution," and cited Robespierre's vindication of theism as an answer to this attempt to bring back the time of Hébert and Chaumette. A proposal designed to meet the objection to an oath by defining it as an attestation upon honor and conscience, implying no profession of religion or philosophic belief, was lost by 220 votes to 205. The formula, "On my honor, faith, and conscience, I swear," was then adopted by 338 votes to 108. The existing phrase, "before God and man," was expunged by 313 to 96 votes. A clause forbidding the erection of religious emblems, crucifixes, and pictures of the crucifixion in courts of justice, was carried against the government by 210 votes to 197, and the bill then passed by 263 to 137.—*Springfield Republican.*

A DAUGHTER of Victor Hugo has been for many years an inmate of a private insane asylum near Paris. She was a beautiful girl in her youth, but married against her parents' wishes a young naval officer, who soon after deserted her, leaving her penniless and without the power to prove the marriage legal. This blow unsettled her reason. She was twenty when this occurred, and she is now fifty.

M. LITTRE, the famous French dictionary-maker, was the son of parents who were both types of the republicans of ancient Rome; and he himself shared their views. He was fond of telling how, when his mother, a little woman, old and feeble, was walking with him in Paris, she was brutally pushed down by a working-man. When Littré, deeply indignant helped her up, she said with a smile, "My son, one must love the people very much to remain on their side."

BOOK NOTICES.

FOR GIRLS: A Special Physiology; being a Supplement to the Study of General Physiology. By Mrs. E. R. Shepherd. New York: Fowler & Wells. 1882.

This is a plain treatise on subjects connected with woman's physiology, which are treated in a sensible, straight-forward, and chaste manner. The book is more particularly fitted for the information of mothers of girls than for girls themselves, and gives to such excellent hints as to the best development of healthful conditions in their young daughters.

THE *Art Amateur* is devoted to the cultivation of art in the household. The number for August will be a welcome guest for the spiciness of its articles and for the amount of valuable practical information which it presents. The designs form a very important part of the work, and in general we can commend them highly. In this number, the birds and the apple blossoms are very natural and pretty. But "the design for a tile fireplace-facing" seems to us neither pleasing nor appropriate. The nude figure in it approaches too nearly "the brink of all we hate" in modern French art to be used in household adornment, and the same may be said of "The Sultan's Favorite." Montezuma, the English correspondent, makes the interesting statement that "the public here [in London] is ready to believe in everything American which is artistic. The admirable wood engravings in *Harper's* and the *Century* apparently are known to everybody in London and in Paris, too." We should give more weight to this praise, if it did not end in a puff of the *Art Amateur*, a journal which is making its way so fast that it can dispense with self-praise.

THE *Unitarian Review* for August opens with a thoughtful and well-written article on "The Religious Outlook" from the Unitarian stand-point, by Rev. F. B. Hornbrooke. Rev. David H. Montgomery interestingly describes, "The Book of Doom,"—the Domesday Book of England compiled by order of William the Conqueror eight hundred years ago. "Scholastic Theology," by Rev. J. H. Allen, is concluded in this number. Rev. James T. Bixby traces back many of the fables and pseudo-historic tales current in our own day to their source in "Buddhist Birthday Stories"; and Rev. Robert Collyer, in "Meditations on my Birthday," gives us one of those bright, off-hand, gossipy moralizations which are so characteristic of this writer. The editorial department and reviews are as usual interesting and readable.

THE *Herald of Health* for August contains a very entertaining description of "The Hygienic Habits of the Hindus" by one of that faith, Raj. Coomar Roy. "Some Facts concerning Rural Wells" should be carefuly read by all those who live or visit in the country. This number also treats briefly and sensibly many other hygienic and sanitary topics.

PERSONAL ITEMS.

A GRANDSON of Henry Clay is on the editorial staff of the *Youth's Companion*.

JAMES PARTON, the biographer, with Gen. Butler and party, has sailed for a cruise along the Dominion coast. The party go as far as Halifax.

MRS. FREDERICK DOUGLASS, the wife of the celebrated orator, died yesterday at her home in Washington, of paralysis. Mrs. Douglass was sixty-nine years of age, and was a resident of New Bedford when Mr. Douglass married her, in 1838 or 1839.

JOHN C. HAMILTON, the last surviving son of Alexander Hamilton, died at Long Branch, N.J., on Tuesday, at the age of ninety years. He was the author of the life of his father and the history of the United States. His funeral will be held at Trinity Church, New York city, to-morrow.

GEN. "ABE" BUFORD has become associate editor of a new and promising sporting paper, published at Louisville, Ky. It is understood that he will make use of its columns to advocate his theory of the relations of the turf to the Church, the first number containing an editorial article on that subject from his pen.

THE only humorous sentence we ever read in the *Presbyterian* is the following: "Mr. Joseph Cook proved himself to be a man of weight among the Japanese, in various ways. He impressed the intelligent men with the massiveness of his argumentation, and he broke the springs of nearly every Japanese carriage into which he entered."

CARLYLE'S opinion of Daniel Webster, expressed to an American: "The most remarkable man in appearance I ever saw,—great, shaggy, taciturn, having the gift of silence, yet knowing how to talk,—a great thing that, to know when to hold your tongue,—evidently of great reserved power. I shouldn't like to fall into his claws, when he is excited."

GEORGE FRANCIS TRAIN is still living in New York, where he is considered in the light of a harmless lunatic. For five years, he has sat daily in Madison Park, bareheaded, surrounded by children, whom he treats to candy and playthings. He has not spoken to a man for an entire year. His skin is very dark from exposure, and his hair is white as snow.

DR. SCHLIEMANN began this year at Hissarlik a new series of excavations, which until recently did not uncover anything of special importance. But it is just announced that he has been again successful. In the lower portion of the hill of Hissarlik, he has opened a series of holes, corridors, and vaults which, according to his confident belief, are ruins of the citadel of ancient Pergamos. Dr. Schliemann adds that the researches he has recently been prosecuting have convinced him that the views he has hitherto held respecting the site of Ilium, and of many of the relics he formerly discovered, will require very considerable modification.

OF John James Ingalls, the Senator from Kansas, the New York *Sun* says: "As a general debater, Mr. Ingalls approaches nearer in style, in manner, in logic, and in keen repartee to the late W. P. Fessenden than any other member of the Senate since the death of that eminent statesman. If Mr. Ingalls has a fault in controversy, it is the want of self-restraint in punishing a prostrate adversary. He pursues the object of his ire, even when resistance cannot be vigorously made. Could he temper resentment or forego opportunity for biting sarcasm, Mr. Ingalls would rank with the very foremost in debate; for, to natural gifts of a high order, he adds scholarship and a large store of valuable information."

PROF. ERNST HAECKEL of Jena, has lately returned to his university after a six months' journey in India and Ceylon, undertaken in the interests of science with the object of providing additional data in support of the theory of evolution, of which he is the most able and best-known exponent in Germany. The veneration which he constantly expresses for Mr. Darwin, of whom he may be said to have been the first and perhaps the chief disciple on the Continent, would of itself suffice to give his opinions and observations weight in this country. No one, however, who has read the series of letters now being contributed by Prof. Haeckel to the *Deutsche Rundschau*, can fail to find them on their own merits both delightful and instructive. They are written in a popular form, but contain traces of profound scientific knowledge, combined with great quickness and freshness of observation and an almost boyish exuberance of delight in the presence of nature's wonders.

PROF. STUCKENBERG says in the *Independent*: "Whatever Du Bois-Reymond writes is sure to attract the attention of scholars. He has attained an enviable place among the leading scientists of the day, and is the permanent secretary, as well as one of the most prominent members, of the Berlin Academy of Sciences. As a professor, he is so popular that there is not a lecture-room in the University of Berlin large enough to accommodate the students and others who crowd to hear his more popular lectures. He differs from many specialists in the universality of his knowledge. He has by no means limited his studies to the various departments of physics, but has also included metaphysics and ethics, and is well versed in general literature. In his popular lectures to the students, he speaks without notes, has a pleasing style, draws illustrations from all departments of literature, intersperses wit and anecdotes, and has the happy faculty of combining the popular and the scientific. . . . He is far from being a theist, still less is he a Christian. Only last winter, I heard him speak before five hundred students of "The Cruelty of the God of the Jews, whom the God of the Christians imitated."

TO MEMBERS AND FRIENDS OF THE F. R. A.

The Executive Committee of the Free Religious Association beg leave to call your attention to the following plan of work adopted at the late annual meeting:—

Resolved, That this Association herewith instructs its Secretary, acting with the advice and consent of the Executive Committee, to superintend the following work for the ensuing year:—

1. The preparation, as thorough and exact as possible from data furnished by the State correspondents and other sources, of the following memoranda of information, namely:—

(*a*) A complete list of the names and addresses of members of the Free Religious Association, classified according to States, towns, and cities, and a similar list of well-known persons in sympathy with the Free Religious Association, not members.

(*b*) A full list of organizations, State and local, whose constitution and methods are in substantial conformity with those of the Free Religious Association, with names of officers and description of form of union and of work appended to each.

(*c*) A brief statement of the needs and conditions of each State in relation to the Free Religious movement, compiled from the returns of the State correspondents, so far as reported.

2. Aided by these memoranda of information, the Secretary, with the advice and consent of the Executive Committee, shall choose not less than two (2) nor more than six (6) States which in their opinion present the most favorable conditions for the spread of our principles and their local organization, as the immediate field of work.

3. The Secretary, or some one selected by him with the advice and consent of the Executive Committee, shall visit the selected States, and call in each, by letter and personal interview, a private conference of our members and friends, for the purpose of stimulating their interest in our cause, and urging them to pledge pecuniary and moral support sufficient to secure either a successful convention or a course of lectures by the accredited speakers of the Free Religious Association in the most promising centre of liberal thought in said States, the choice between the two methods of work being left with the Association's representative on the ground and the local friends.

4. When the local friends are unable to raise all the money necessary for this work, the Executive Committee shall be empowered to aid, in cases promising good results, as hereinafter provided.

5. The Secretary, or person representing the Association, thus visiting a State for the purposes indicated above, shall, if possible, be present and speak at the convention if such be held, or, if the lecture course be given, shall, if possible so to arrange it, deliver the first or last lecture, and in either case shall present the principles and objects of the Free Religious Association, and the need, the possibility, and the most practicable methods of organization for State or local work.

6. In order to carry on this work for one year, it is desirable that $2,000 be raised; and the Executive Committee are hereby instructed to take immediate steps to secure that sum. And whatever amounts shall be received for that purpose or used from the funds in the treasury shall be appropriated under the direction of the Executive Committee.

7. That the office of State correspondents be continued, and effort be made to secure one in all States not now represented by such an officer, in order that the memoranda of information be kept as complete as possible.

In accordance with this action of the Association, it becomes our immediate duty to appeal for contributions to the fund of at least $2,000, which it is deemed wise to raise for putting this plan into effect.

Cash subscriptions or pledges, large or small, may be forwarded to the Secretary at the office of *The Index*, or to the Treasurer, John C. Haynes, 451 Washington Street, Boston. Upon the sum placed at our disposal will depend the character and amount of the work to be done.

There are earnest men and women throughout the land to whom life is sweeter, truer, diviner, because of the ideas for which Free Religion stands. Many such have large means, many more have a competence; and all feel, we are sure, a desire to help carry to other souls the glad tidings which have come to their own.

We not only solicit, therefore, but we look forward with confidence to an early and a favorable response to this appeal.

For the Committee,

WM. J. POTTER, *Pres.*

FREDERIC A. HINCKLEY, *Sec'y.*

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,

THE BIBLE'S FLAT EARTH

AND

SCIENCE HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

CURRENT TOPICS.

THE failure of the freight handlers' strike and other similar movements in various parts of the country ought to set workingmen to thinking of the extreme difficulty and almost impossibility, as we remarked when these strikes commenced, of getting wages raised on a falling market.

TEN car-loads of excursionists left Northampton on a recent Sunday to attend the Lake Pleasant Spiritualist camp-meeting. Some of the more rigid religious people of the town were "greatly exercised in mind" because of this; and a Methodist minister at Williamsburg, one of the railroad stations on the route, appeared on the depot platform, and prayed unavailingly that something might happen to prevent the sacrilege.

THE power of the press is seemingly appreciated in Turkey, where an American journalist, James Gordon Bennett, who happened to be cruising near Constantinople in his new steam yacht, was beseeched by the Sultan to visit Arabi Bey and persuade that gentleman to come to Constantinople and hold a consultation with him (the Sultan) on Egyptian affairs. This extraordinary mission it is said Mr. Bennett promptly accepted. We have not yet learned the result.

THE *Christian Union*, in reply to a correspondent who wishes to know where he can "attend a course of lectures designed to expose the evil tendencies of modern infidelity," states that "the American Institute of Christian Philosophy is arranging for such a course, to be delivered in New York city this winter." Such a course of lectures will be welcomed by all genuine free thinkers who know that the truth can never be worsted by investigation and discussion, which always awaken thought, and, in the long run, help the truth.

A CREMATION society has been formed in New York; and its members intend to erect a crematory upon some shady knoll overlooking the Hudson River, where they propose to cremate bodies at the rate of about fifteen dollars each. The *Sun* speaks rather favorably of the plan on sanitary and economic grounds, and says, "When the crematory overlooks the Hudson, from a knoll shaded by trees and embellished with flowers, it may prove the best missionary in the cause, and bring this method of disposing of the dead into greater favor."

TWO QUEBEC clergymen, pastors of St. John and Levis churches in that city, have publicly prohibited their parishioners patronizing a woman dentist who has lately gone into business there, after being duly qualified by a course of study. They base their objection to her on the ground that dentistry is not a proper calling for a woman. We don't know how the Canadians will act under such priestly pressure; but, in the States, we are sure such a prohibition would serve as the lady's best advertisement, and she would soon be overwhelmed with business.

WHEN in a State like Connecticut, celebrated throughout Christendom, because of its strict Sunday laws, as the most orthodox State of orthodox New England, we observe such palpable indecencies sanctioned as the recent hilarious reunion at Savin Rock of a jury of "twelve good men and true" at the scene of the death of the fair young victim of wealthy lust, whose misleaders were set free by the verdict of this jury of Connecticut men, it gives the truly pious, the merely moral man, and the doubter alike, a prejudice against mere Orthodoxy, which not even Connecticut persecutions of Sunday excursionists can overcome, and sets philosophical moralists to thinking seriously how far our present jury system is efficacious in furthering the ends of true justice.

COL. HIGGINSON, although well known as an advocate of woman suffrage, does not agree with those whose preference for candidates is based solely upon their favorable attitude toward this reform. He writes in the *Woman's Journal:* "But it must be remembered that there are always other questions at stake besides woman suffrage; and that, however important and desirable it may be that the governor elect should represent correct opinions about this, it is also essential that he should be an upright and high-minded man, who will not be scheming for himself or his friends, but will be steadily looking to the honor and prosperity of the Commonwealth. . . . We must remember, too, that there is no man to whom the pledges of reform come more easily than to the demagogue."

THE Boston *Sunday Herald* recently called attention in a couple of columns to the good work being done in the cause of public-school education in the South by Rev. A. D. Mayo, whose missionary efforts for the past year or two have been devoted to the object of awakening the Southern people to their needs and duties in this respect, and who has, we are pleased to learn, met with encouraging success, as "the Southern people have taken him to their hearts and given him unbounded and unprecedented confidence." In an editorial on the subject, the *Herald* very sensibly remarks: "It is to be hoped that his success in enlisting the different religious denominations at the South in the common education of the whole people, both white and black, may be carried to the point where the Southern religionists may see the way to the removal of the difficulty under which they have previously labored, and out of which they are now beginning to lift themselves. Before the war, all education at the South was parochial and under religious direction. It was not, perhaps could not be, common. Now, it is rapidly becoming common and free to all. The difficulty has been, and perhaps it still exists, that the different classes of religionists are not always able to see that all honest education is ethical in its tendency, and that it is better to educate the whole people ethically than a portion religiously, with the remainder left to grow up in ignorance."

OUR esteemed contemporary, the *Catholic Review*, has an article on "The Catholic Church and Human Aspirations," which begins with a quotation from a letter of Rev. James Freeman Clarke, from Paris, to the *Christian Register*, in which that gentleman goes into ecclesiastical raptures over the beauty and majesty of "the vast proportions and lovely details" of the Catholic churches of Paris. He also speaks of "the atmosphere of worship" pervading the churches in question, which "suits the mood and calms the excitement of great multitudes," and refers to Romanism as "a religion of sentiment, of feeling and aspiration." This testimony to the sublime influence of the religion and architecture of the Catholic Church — qualified, however, with the statement, "It does not help the progress of man"—by a distinguished Protestant divine, gives the *Review* great comfort. A certain degree of ecclesiastical dilettanteism is to be expected and excused in a New England Unitarian minister, of conservative tendencies, beyond the seas on a vacation tour; but, in our opinion, a little, wooden, New England meeting-house standing on a village green, and painted white with green blinds, and surrounded by the comfortable, elegant residences of the free, intelligent, orderly, well-to-do citizens who worship inside of it, is, from a moral, social, and political stand-point, a far sublimer edifice not only than the Madeleine and Notre Dame churches of Paris, but than St. Peter's at Rome, and the vast cathedrals of Milan, Cologne, and the famous old Spanish cities. The Yankee meeting-house marks a vast moral, social, and political popular advance. Around it, you find industry, thrift, order, and cleanliness; while, in the shadow of the great Roman Catholic monsters of Italy, Spain, and Portugal, you find beggary and ignorance, and a most unhealthy moral, social, and political atmosphere. Roman Catholic Church architecture was partly intended to awe ignorant mobs and to set off the tiaraed and crowned figures of kings and high priests to the best possible advantage, to make the ignorant masses get upon their knees and do obeisance to them. Thus was the sublime mediæval cathedral architecture, however great a triumph of art, a symbol of popular ignorance and servility and ecclesiastical despotism.

THE RESERVED FORCES OF VIRTUE.

In the conditions of modern society there is very much that is unsatisfactory, whether from a social or a moral point of view; and philosophy, in consequence, is in no little danger of passing from the extreme of optimism to that of pessimism. In view of the flagrant vices and crimes that infest civilization, the moralist is at times tempted to despair of the moral progress of the race. The philanthropist is almost overwhelmed with the ceaseless and importunate demands made upon his sympathy, and hopelessly perplexed with the social problems that are pressed upon him for solution. The preacher has no occasion to go to the far-off times and scenes of the Old Testament for examples of gross depravity and rebellious disobedience to divine commands. He finds the depravity and rebellion no mere theological theory of antiquity, but a very palpable fact all around him; and yet he is humiliated and disheartened by perceiving that his appeals for repentance seem to be as little heeded by the ears of living sinners as by the long-ago-dead Amalekites and Philistines of Hebrew times.

But, as an offset to this dark picture, there are not infrequent intimations of a reserved power for virtue in human nature, which promises in all great exigencies to be more than a match for all moral evil. There have been several times in the history of our own country when, so morally apathetic was public opinion in the presence of great dangers, and so selfishly absorbed in their own interests seemed even the best classes of society, it looked as if everything was going to destruction. But, before the last fatal moment has arrived, the sober thought and the latent moral sentiment of the great mass of quiet citizens have been aroused and the impending perils averted. The secret of this happy turn of fortune has been that in human society there is a reserved moral force beyond what is drawn upon in the ordinary experiences of life. The moral instincts of the great majority of people are sound, and will rightly respond when genuinely and deeply touched. The heart of humanity is often veiled and muffled, yet it beats in healthy sympathy with the right and true.

This principle of reserved power is taught in the operations of nature. It is the principle by which healing and restoration are effected after any damage to her aims and processes. Nature's vital resources are not all used just for sustaining the passing methods of life. A portion is held in reserve ready for any extraordinary demand that may be made upon the vital energies for repairing the waste made by some untoward accident or disease. Were it not for this accumulated vitality, the processes of life in the material world might at any moment be overwhelmed by some sudden catastrophe and extinguished. In respect to man's physical constitution, it is a misfortune which forebodes coming disease or premature old age, if persons habitually live so as to use up day by day all the stores of physical sustenance which they receive, and nothing is laid by to meet a future demand. And, again, the instinct of accumulating property is nature's provision against the caprice or calamity of circumstances. Neither an individual nor a nation needs to be plethoric in wealth in order to be strong. But pauperism is always weakness. There must be a goodly reserve of property beyond the daily necessities of existence to insure national or individual prosperity.

In intellectual capacity and service, a similar rule holds good. It is the comparatively small and poorly equipped intellects that work up to the full limit of their ability and resource in the strain of their habitual effort, and such cannot be depended upon when the calls come for extraordinary mental achievements. They have accumulated no materials for these exceptional exigencies. It is, indeed, one of the chief differences between the really great man and the man of mediocre talent that the former, behind all the necessities of his constant achievements, has reserve funds of knowledge, of thought, of mental facility and power, that are scarcely drawn upon in the ordinary routine of life's work, but are ready to be spent upon any unexpected great mental labor which may suddenly be thrust upon him; while the mediocre man is exhausting his meagre intellectual stores on the demands of each day's work, anxious and calculating at that, lest his resources shall fail him with even his ordinary tasks unaccomplished. The security of mental strength and progress is in the accumulated and reserved resources of intellect.

Now, this same principle is regnant in the domain of morals. People are morally weak, and the moral effect of their lives will be comparatively slight, if they have only just enough of conscience to go round the routine of an ordinary day's demands. When they have to calculate to learn whether they would be morally justified in doing this or that, they are already on dangerous ground. They may, possibly, have morality enough to last through the day, but hardly enough to last over night to meet the demands of another day. They have not enough to meet life's surprises. The great temptations, the hard trials, come to human beings by surprise; and the moral test of character lies in its ability to meet these surprises without being overcome. When the moral instincts of people have become so pure and true and firm that they no longer have to turn a moral question over in their thought and to deliberate and hesitate upon it when the hour for action arrives, but, when that hour calls, the right action comes, as it were, of itself, then people are morally safe; and they are not only safe themselves, but, from the reserved strength of their virtue, they are able to render important moral service to mankind around them.

And it is a most encouraging fact that, when these great trial hours come, more people are really prepared to meet them than we might beforehand suppose to be possible. Giddy girls have suddenly waked to noble womanhood when some severe disciplinary experience has touched the deeper places of moral sentiment within them. Wayward young men, tested by some new responsibility thrown upon them in an hour of bereavement which has stirred their better natures, have exhibited powers of wisdom and self-reliance that were a surprise to their fellows. Women who have appeared only as vines clinging to an oak, bereft of the strong props on which they have been wont to lean, have often found an unsuspected strength within themselves, which has carried them safely over obstacles which, looked at in advance, they had declared impassable. Men, suddenly overwhelmed by a calamity that has taken them for a moment off their feet, have succumbed only for the moment: the next, they are up, working on that reserve of mental or moral force that retrieves the day against all disaster.

So, in general, in communities as in individuals, there is a reserve of moral power, an accumulated strength of virtuous impulse, which, when once appealed to, is equal to the conquest of any threatening evil. And the fact that, in spite of the world's ills, humanity has morally progressed, proves that hitherto this moral power has not been appealed to in vain. May we not trust that the same power will be adequate to any future emergency?

WM. J. POTTER.

MODERN ASCETICISM.

No sentence of Thoreau's, perhaps, is oftener quoted than his very reasonable remark that he did not wish to practice self-denial, unless it was quite necessary. Needless self-denial is asceticism, and asceticism was for ages held one of the highest Christian duties. I do not see how any one can read the writings of modern agnostics or mingle much in their society without seeing that extremes meet, and that some of this estimable class only substitute a new form of sterner self-denial for the old. Not that they imitate the hair-cloth and the bloody whips; but those were only the trappings and the suits of ecclesiastic woe. It was in the crucifixion of the affections, the crushing down of the natural sympathies, that the true sting of the old self-discipline was found. And it seems to me that in many cases the modern rigorists equal, or surpass, the ancient. Let us take two sacrifices which many of them feel bound in consistency to make,—that of the belief in personal immortality and that of the theory of mutual benevolence. Did any sacrifice made by ancient asceticism surpass these?

Let us consider the first. The mediæval ascetic, consistent with his creed, perhaps shut his only daughter in a convent, and left her beneath the black veil for life. He lost her for all time, but retained her, as he believed, for all eternity, never doubting that death would restore her to him again. The modern ascetic keeps his daughter for this life, if he can, but resolutely puts away the hope of ever meeting her again, should she be taken from his arms to-morrow. It may be a confession of great weakness—though I do not think so—but, for me, the modern asceticism would be the hardest to bear. I do not wish to practise such self-denial, unless it is quite necessary.

Whether it is quite necessary is not a matter to be argued here. I only wish to point out the fact of the sacrifice. The modern ascetic, like the ancient, is governed by duty, and accepts what he thinks the legitimate consequences of his creed. I do not impeach, but rather admire, his courage and his faith. They are as admirable as those of the man who consistently flings himself before Juggernaut, or of the fakir who spins on his iron. And some such ascetics have the frankness to admit this sacrifice. Some of the ablest and most cultivated agnostics of my acquaintance have admitted to me that, after the loss of a mother or a child, the most ignorant believer in personal immortality might be envied by the wisest who disbelieved in it. But the renunciation of what might make us happy is asceticism. It may be our clear duty to practise it, if our creed compels; but I think we ought not, in fairness to others, to represent that creed as a glory and a joy for the human race. We ought rather to label it, as Winwood Reade honestly christened his gloomy book, "The Martyrdom of Man."

And so again with mutual benevolence. The Roman Catholic writer Digby says that the moderns have found out a new way to spell the word honour [honor], but not a new way to practise it. So the modern scientific school has found a new word for unselfishness,—altruism; but I do not see that their extreme representatives leave any place for anybody to practise it. To them, what they contemptuously call "the Christian philosophy of the obligation of the strong toward the weak" is the mere survival of a pitiable weakness, which interferes with the strict course of social competition. That the competent should strive to assure the comfort of the incompetent is honestly regarded by such writers as indicative of weakness, not of wisdom; or at any rate a practice to be de-

Digitized by Google

precated, not encouraged. The inevitable ideal under this theory is the successful accumulator,—the Stewart, the Vanderbilt, the Gould,—not the man who has lived frugally for himself that he might live generously for the weak. Grant this theory correct, yet look at it on the other side, consider the formidable asceticism of it. What constitutes the greatest enjoyment of life? One of these enjoyments certainly consists in helping those weaker than ourselves. Wordsworth finds no delight so great as

> "That largest portion of a good man's life,
> His little, nameless, unremembered acts
> Of kindness and of love."

Even modern philosophy baptizes it into a sort of respectability, as has been said, by giving it a name, and then prohibits from practising it,—like the proverbial Ensign Stebbins with the prohibitory law. Even the most conscientiously selfish men cannot wholly keep clear of its satisfactions. I suppose that Baron Lionel de Rothschild kept as far from any concession to the infirmities of the weak as anybody; and yet even he advised a friend sometimes to give a penny to a beggar, "it was so amusing."

Now, it may readily be admitted that neither society nor the individual can live upon the principle of unlimited "altruism" any more than on that of self-interest alone. The true philosophy must lie somewhere between. It is not, however, my object to expound that philosophy, were I competent, but simply to point out the profound asceticism, and indeed the crucifixion of our deepest emotions, in which the so-called utilitarian theory ends. Suppose two brothers, who have taken wholly different paths. The one finds himself early charged with a great weight in the shape of the "incompetent." He has to look after the comfort, let us suppose, of a brother who lost his health in the war, but was treated in such a thoroughly business like and common-sense way by the government that he never had a cent of pension; of another brother, affectionate and lovable, but born feeble-minded; of a sister who lost her health in nursing their mother through an illness; and of another sister whose husband was unfortunate, and died, leaving her a widow with numerous children. All these persons our friend has to support; and finds in toiling for them joy, peace, and a loving household. And one reason why he has to support them is that his brother, being thoroughly enlightened in the most recent views, has entirely outgrown the delusion of "the obligation of the strong toward the weak," and has never in his life given a dollar to one poorer or feebler than himself, though the recipient be brother or sister. That brother is now a pitiable millionnaire without a human tie or obligation. His vast wealth, which in other times he would have attributed, piously or impiously, to the peculiar blessing of God, he now attributes, with more insidious self-flattery, to his own rare powers alone. He calls it "personal development." "The way is open," he says: "the secret of success is plain. Do as I do."

But to live up to his theory implies a perpetual crucifixion of all generous impulse. If he was born with a human heart, his asceticism is more complete than that of any fanatic mediæval saint. No matter: he vindicates the competitive theory. Let us admire his self-devotion, if we must; but anything more calculated to make us all mediævalists through sheer pity, I cannot conceive. Saint Martin dividing his cloak with a beggar may excite our compassion for the saint, especially if the weather was cold and the cloak small. But Saint Gradgrind, occasionally feeling the impulse, he being strong, to care for the infirmities of the weak, but crushing down this impulse as unworthy a modern man,—this is a sample of scientific self-martyrdom which affects me more profoundly. Not that the Gradgrinds know the philosophy of their own existence, or what fine names have been devised to elevate their supposed selfishness into a vindication of great principles. But tried by the standard of sheer happiness, if they have bought their success by acting on the principle that the strong have no duties to the weak, they are men profoundly to be pitied. Instead of mortifying the flesh, they mortify the natural sympathies, which is worse. I should rather not make that sacrifice, "unless it is quite necessary." T. W. HIGGINSON.

SYMPATHIES AND ANTIPATHIES.

The earnest, humble student, who has already discovered the narrowness of the area of research, is often struck with amazement at the tone of arrogant assumption and self-satisfied dogmatism adopted by others in imparting to the world the modicum of positive knowledge or even of half-truths which they have been able to glean or guess at. In the face of the many unsolved problems of life and being which discouragingly mock the most patient and toilsome efforts of investigation, it seems strange to him that one can assume the air of a masterful teacher when he so well knows how comparatively unimportant the discovered truths of the universe are in comparison with the undiscovered truths, or those of which he has gained but the merest inkling.

Even to those of us who are but tyros in this search, the least successful of amateurs, the fact is already patent that there are many mysteries by which we are surrounded in our daily lives,—mysteries which, we are assured by those far in advance of us, are still unsolved, and some of which, it is asserted, will remain forever insoluble to human knowledge.

One of the most common of these mysteries, one whose manifestations occur daily and hourly in our lives, and one which, in varying forms, seems to permeate all nature, animate and inanimate alike, is that of those feelings which are always coëxistent, and which we call sympathies and antipathies, or attractions and repulsions. One of the strongest forces of nature, one of the most powerful determinants of whatever is, one of the chief sources of our happiness and our misery, we yet know comparatively nothing as to the how, the why, or the wherefore of it, although these questions are forever tantalizingly arising to demand solution, while at the same time mockingly defying our power to solve them.

If we confine ourselves to the manifestations of this feeling in humanity alone, what problems it presents, what mysteries of inconsistency surround it! It is the unconfessed source of our business relations, our friendships, and our loves; for no man, however obtuse, would or could enter into intimate business partnership with a person toward whom he felt an undeniable aversion, however ill-founded in reason that aversion might seem to be. No one could entertain a real friendship for another whose society was a positive pain to him. None can love where the secret sympathy which first induces love is absent. The sensitiveness to this feeling varies greatly in different individuals; and, good gift as it sometimes proves, unhappy is he or she who is unusually endowed with it, since the sympathy is so strong in some cases as to be unreasoning and dangerous because of the partiality felt for unworthy objects, while the antipathy may be so intense as to aid injustice and encourage wrong-doing. The strength or the weakness of this unexplained, unanalyzable feeling determines, in a greater or lesser degree, every act of our lives. The man least influenced in his judgments by it is, nevertheless, though unacknowledged to himself, in part governed by it in all his words and acts. The most unimpressionable of us are never in company with any human being for ten minutes at a time without measuring him or her by this unacknowledged standard. Those most sensitive to its influence take violent likes and dislikes on first sight,—likes and dislikes which often fatally color and shape their whole after life. The least sensitive are so far guided by this feeling as to allow it often to bias their judgment of men and things, though imperceptibly, perhaps, to themselves.

Among Maria Edgeworth's charming moral tales for children there is one on the subject of these unreasoning antipathies, in which her aim is to show that they are founded on partial knowledge and ill-natured guess-work. I knew a child with strong inherited moral principle, but born also with this unfortunate dower of unreasoning sympathy and antipathy, who, reading this story of Miss Edgeworth, pondered long and deeply upon the moral inculcated by the story of Rosamond and the old woman in the poke-bonnet, resolving to profit by it and overcome its unconquerable aversion for certain people, and foolish attraction toward others less worthy. The only known result of that childish effort was to make it hate more heartily and love more fiercely those whom it should not.

Long ago, somebody voiced this feeling in the well-known, often-repeated doggerel lines: —

> "I do not love thee, Doctor Fell,
> The reason why, I cannot tell:
> But this alone I know full well,
> I do not love thee, Doctor Fell."

It is not alone toward the strangers whom we meet or to whom we are introduced, some of whom we feel inclined to grasp by the hand and greet with the warmth of tried friendship, while we touch coldly and shrinkingly the extended hand of another, and feel a sense of pain in addressing with the cordiality demanded by social custom, that we have this feeling, but toward those also, bound to us by ties of blood or gratitude and acquaintances of years' standing. And, though reason frequently gives sanction to these sympathies and antipathies, it is by no means universally the case; for often those whose presence is a delight, and whose hand-clasp a pleasure, are those whom our moral sense condemns or whose untrustworthiness is well understood by us, while we hold aversion for others in whom morally and intellectually we can discover no important flaw.

Another of the contradictions of this mysterious sense is that it is not by any means always reciprocal. Those whose touch and tone make the dearest joy of our lives may be, and often are, utterly indifferent to us, or may show unmistakable signs of repulsion; and, among those who love us most faithfully and seek us most constantly, may be those from whose touch we shrink, and whose presence we would gladly avoid, if we could do so without giving pain.

So, while we talk glibly of our discoveries and drag language out of its proper sphere to torture it into giving meaning to the phantasms of our brain which we dub philosophies, we stand dumb and servile before a mystery of our daily lives, which we have not, so far in our research, been able to catch, verify, and label. Efforts to do so have not, however, been lacking, ranging in merit from the Baron von Reichenbach's theory of "odic force" to the "aura," or individual "atmosphere," of other theorists, and the unsystematized vagaries in regard to it of various mesmerists and spiritualists.

But the majority, finding these "explanations"

Digitized by Google

as hard to understand, at least, as the force which they undertake to unravel and explain, are obliged to acknowledge their evasive character; and we grow weary of the vaunted knowledge which assumes so much, but which fails to unravel for us this overwhelming, omnipresent mystery of our daily lives. SARA A. UNDERWOOD.

MENTAL IMPRESSIONS AS A MEANS OF CURE.

I am very glad to read the articles of both Mr. Connor and Dr. Dixwell in regard to the late alleged faith cures at Old Orchard beach. Whatever opinion we may hold of Dr. Cullis or any other person professing to perform cures in this manner, it is very important to recognize the value of mental impressions as means of cure; and that is the secret of the effect in all these cases. We need not suppose intentional hypocrisy or deception on the part of any one. The late Dr. Littré, in an excellent work,—*La Médecine et les Médecins*,—has an essay which treats this subject very carefully. He analyzes the reports of celebrated miraculous cures performed at a certain shrine in France (I write from memory), and shows that there is every reason to accept the accounts as sincere and trustworthy. He describes the class of diseases relieved and the amount and permanence of the good effect produced, and shows that both are precisely what might be expected from a sudden and strong mental impulse, whose effect is well known to science. In the New England Hospital for Women, there have been several cases of patients, who supposed themselves to be utterly unable to rise from bed, who have been cured only by the simplest hygienic care and a proper exercise of authority or influence in persuading them to use their own muscles. They seemed to be cases not of imposture or laziness, but of incapacity of self-control.

Now there are great evils in such a display of superstition as that which took place at Old Orchard, and great harm is done by reliance on miraculous help to the neglect of reasonable means of cure; but yet who would scruple to have recourse to them, when other means failed?

The practical question I would like to ask is, How can science produce the benefit without the evil? Dr. Dixwell reports the success of the administration of pure water. Can he tell when it would be safe to trust to that alone? Is there, in short, any test or measure of the influence of such mental impressions, and can they be produced in any rational way, so as to relieve the community from dependence on the accidental and perhaps intentionally false influences which may produce such benefits? Very great moral evils are often connected with such excitements.

We all know the story of the bed-ridden woman, who rose and walked when the house got on fire. Must we burn our houses down to cure our patients, or can science and reason show us how to exercise a control over ourselves and others which will cure our diseases?

This is especially a Free-Religious question, for we can discuss it without fear or favor. E. D. C.

SELF-DENIAL AND AGNOSTICISM.

According to an article printed in *The Index* this week from the pen of Col. Higginson,—a valued contributor, whose force and felicity of expression impart interest, and whose ability and reputation give weight to whatever he writes,—"needless self-denial is asceticism"; and, therefore, one who denies himself the pleasure of believing in personal immortality is an ascetic, and the asceticism of such a one seems to him harder to bear than that of the devotee who denies himself rational enjoyments in this life that he may thereby secure greater and more enduring enjoyments in a life beyond the grave. Does asceticism thus defined include the sacrifice of certain beliefs, even though it be demanded by intellectual honesty and be made from a sense of duty? Certainly; for Col. Higginson says, "The modern ascetic is governed by duty, and accepts what he thinks the legitimate consequences of his creed." The "needless denial" of the modern ascetic consists, then, in his giving up of beliefs which, if he could honestly retain them, would contribute to his happiness. But, if this be asceticism, all who are unable to accept rose-colored but unfounded theories, all who have abandoned faiths and fancies which once gave them pleasure,—in short, all who have come to distinguish between what they are compelled to believe and what they wish or have wished to believe,—are or have been ascetics, and the whole history of human progress is a history of asceticism. Theodore Parker must have felt this deeply when he wrote: "To oppose the institutions which your fathers loved in centuries gone by; to sweep off the altars, forms, and usages which ministered to your mother's piety, helped her bear the cross and bitter ills of life; to sunder your ties of social sympathy; to destroy the rites associated with the aspiring dream of childhood and its earliest prayer and the sunny days of youth; to disturb these because they weaved chains, invisible but despotic, which bind the arm and fetter the foot and confine the heart; to hew down the hoary tree under whose shade the nations played their game of life, and bound in death the clod of the valley sweet to their weary bosom,—to destroy all this because it poisons the air and stifles the breath of the world, it is a sad and bitter thing."

But the self-denial of the millions who in every age experience the pain of giving up long-cherished errors,—errors from which generations of men have derived consolation,—and of reluctantly accepting after stubbornly resisting unwelcome truths in conflict with inherited tendencies and acquired beliefs, and apparently with all that is most precious in their faith as well as the general weal, is not a "needless self-denial," but a self-denial which, in spite of the sorrow and suffering, "the crucifixion of the affections, the crushing down of the natural sympathies" involved, is imperatively demanded by the law of intellectual development, is an indispensable condition of progress, and is essential to the continued and increasing happiness of the race. Such self-denial cannot properly be called asceticism. Experience and philosophy prove that truth is the friend, not the enemy, of the race, because it is favorable to human happiness, whatever individual pain or temporary social disturbance results from its conflict with error long established and venerated as divine. "Philosophers unite," says Samuel Bailey, "in regarding truth as inseparable with human happiness, and error as essentially hostile to it." This is implied by the maxim, *Fiat justitia, ruat caelum*.

The abandonment of pleasant beliefs that are not susceptible of proof, from the conviction that they can never be realized, is not asceticism. He who deprives himself of rational enjoyments here to secure thereby happiness hereafter, sacrifices what is known to be good and attainable for that of which he knows nothing. He who does not believe in immortality loses whatever pleasure the belief might afford him. Yet, although in the absence of satisfactory proof, he is forced to reject it, at the same time he seeks enjoyment in this life, the only life known to him and the only one the enjoyments of which at present are possible to him. He may reasonably hold that, if death is but the entrance to another state of conscious existence, man will be adapted to his condition in the future as he is in the present, and that the best way to secure the possible enjoyments of the other world is to live in a natural and rational manner in this world.

Doubtless, "some of the ablest and most cultivated agnostics," in the bitter anguish of their bereavement, when death has deprived them of "a mother or a child," have "envied the most ignorant believer in personal immortality"; but how much more significance is there in this fact than in the fact that the philosopher, perplexed and distracted by the great problems of the universe, often envies the confidence and self-satisfaction and freedom from mental weariness of the most ignorant man who does not know enough ever to doubt in regard to what is beyond the range of his senses? "The most ignorant believer" is more to be envied in the presence of death than the most enlightened believer,—that is, from Col. Higginson's point of view; for the former is likely to be free from doubts which must disturb the latter.

The agnostic's position is not determined by choice or preference, and his views have not been adopted because of their pleasantness or their unpleasantness; yet, when put in contrast with the beliefs that have for centuries prevailed throughout Christendom regarding the future of the race, he might, influenced by *benevolence* and *affection*, regard the prospect of an everlasting rest for every human being as "a glory and a joy."

We have not here assumed that personal immortality is or is not a fact; but, whether it be or not, the spirit of the following quotations from Emerson regarding the question is admirable:—

> Here we drift like white sail across the wild ocean, now bright on the wave, now darkling in the trough of the sea! But from what port did we sail? Who knows? Or to what port are we bound? Who knows? I at least will shun the weakness of philosophizing beyond my depth. What is the use of pretending to powers we have not? What is the use of pretending to assurances we have not respecting the other life? If there is a wish for immortality and no evidence, why not say just that? If there are conflicting evidences, why not state them? If there is not ground for a candid thinker to make up his mind yea or nay, why not suspend the judgment? I weary of these dogmatizers. I neither affirm nor deny. I stand here to try the case. Who shall forbid a wise scepticism, seeing that there is no practical question on which anything more than an approximate solution can be had? Now shall we, because a good nature inclines us to virtue's side, say, There are no doubts,—and lie for the right?
>
> I think all sound minds rest on a certain preliminary conviction,—namely, that, if it be best that conscious personal life shall continue, it will continue; if not best, then it will not; and, if we saw the whole, should of course see that it was better so.... I was lately told of young children who feel a certain terror at the assurance of life without end. "What! will it never stop?" the child said. "What! never die? *Never*, never? It makes me feel so tired!"
>
> I confess that everything connected with our personality fails. Nature never spares the individual,—no prosperity is promised to *that*. We have our indemnity only in the success of that to which we belong. *That* is immortal, and we only through that.
>
> There is a drawback to the value of all statements of the doctrine; and I think that one abstains from writing or printing on the immortality of the soul, because, when he comes to the end of his statement, the hungry eyes that run through it will close disappointed.
>
> We cannot prove our faith by syllogisms. The argument refuses to form in the mind. A conclusion, an inference, a grand augury, is ever hovering; but attempt to ground it, and the reasons are all vanishing and inadequate.
>
> Future state is an illusion for the ever-present state.... It is strange that Jesus is esteemed by mankind the bringer of the doctrine of immortality. He

is never once weak or sentimental. He is very abstemious of explanation. He never preaches the personal immortality, whilst Plato and Cicero had both allowed themselves to overstep the stern limits of the spirit and gratify the people with that picture."

B. F. UNDERWOOD.

EDITORIAL NOTES.

SAYS the *Age* (formerly the Seymour *Times*), "When a great cause is persistently diverted from its legitimate purpose to the puffery and profit of individuals, and to the business of offensively pushing forward its self-appointed and unsavory advocates, it is in a bad way."

IN reply to Matthew Arnold's remark that "the Protestant idea of heaven is that of a glorified, unending tea-meeting," the *Christian at Work* suggests that Matthew Arnold's idea of heaven probably is that "of a place where a select coterie of literary gentlemen can criticise Almighty God to all eternity."

A CONTRIBUTOR to the *Independent* writes: —

A man has simply to do something outlandish or unusual, and he is famous at once. A man plods along the even tenor of his way, doing brave and faithful work, and nobody notes him. A Wilde writes a few verses, puts on knee-breeches, wears long hair over a velvet jacket, gazes fondly on the sunflower, and dines off of a lily, and the æsthetic craze is fully inaugurated.

SCIENTISTS tell us that pigeons and rabbits will live long after their cerebral hemispheres are removed, if food is placed in their mouths; but they will make no effort to supply their wants, and, if unfed, will die of starvation, though surrounded by plenty. Exact illustration of the condition in which the Church has often placed man: tell man that he must not reason, remove the mental dome, he will sit still and swallow what the priest offers: the spirit will starve in the midst of a universe full of truth and beauty.— *Unity.*

WE find the following paragraph in the *Popular Science Monthly:* "In reference to his conversion, Sir Charles Lyell says: 'The question of the origin of species gave me much to think of, and you may well believe that it cost me a struggle to renounce my old creed. One of Darwin's reviewers put the alternative strongly by asking "whether we are to believe that man is modified mud or modified monkey." The mud is a great come-down from the "archangel ruined." Even in ten years, I expect, if I live, to hear of great progress in regard to "fossil man."'"

IT is conceded that the attendance upon the Concord School this summer has been very small; but Mrs. Shattuck, who has written interesting reports of its essays and discussions for the *Transcript*, says: —

I am able to assert from knowledge that there is no truth in the rumor that the Concord School is going to migrate, the only foundation for it being that some friends have extended to the faculty a very urgent *invitation* to go to Chicago some time for a season of philosophy. An invitation to go somewhere is not the going there, and one does not accept all the invitations one receives.

THE orthodox *Congregationalist*, referring to Dr. Cullis' "faith cures," says that the "whole business" is not "merely a delusion and a sham, but a misfortune and reproach to the cause of rational religion in this Christian land in this nineteenth century.... The Scriptures warrant no such procedure." And yet, in James v., 15, we read: —

Is any among you sick? let him call for the elders of the church, and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save him that is sick, and the Lord shall raise him up: and, if he have committed sins, it shall be forgiven him.

FROM a report in the Chicago *Weekly Magazine* of an interesting Emerson memorial service held at Madison, Wis., we clip the following: —

The choir then sang,

"All before us lies the way."

It will interest our readers to know that Miss Ellen Emerson in a private letter to Miss Woodward (Auber Forestier) states that her father denied having written this hymn when it first appeared, some twenty-five years ago, over his name, and, whenever it was spoken of to him, always asserted that it was written by another Emerson. Not long before his death, it appeared somewhere in print with his full signature, R. W. Emerson, which annoyed him. It seems that Mr. Crooker expressed serious doubts regarding the authenticity of the poem, but they were overruled by those who had seen it printed with the full name. It is said, however, that at a memorial service of the Free Religious Association it was sung as a hymn by Emerson."

THE Constantinople correspondent of the New York *Tribune* writes: —

One hears a good deal in America about religion that has no trade-mark of good deeds. But the full capability of the race in this respect can only be seen under Eastern skies. Here, you can see a man who thinks no more before committing robbery than before picking a ripe plum from the tree,—a man who can kill a neighbor with as clear a conscience as he can wish him good-morning,—a man who can tell to a hair the number of blows with a club that will kill and the number that will merely stun, and who understands how to pad a club with sand so that it will kill without breaking the skin; and you will find the same man talking to you about love to God and about diligence in prayer, producing conscientious scruples about eating his mutton unless it has been butchered in a peculiar way, groaning in spirit when by accident he kills a flea, and calling a servant to remove a bedbug from his wrist, lest his own less skilled fingers might mangle the gentle insect.

THE London *Standard*, in its review of *Democracy*, observes: "To laugh at the absurdities or eccentricities of one's countrymen is fair enough: it may even be useful. In a more serious mood, to lift up one's voice to testify against the vices which most easily beset our own people may be a religious duty not to be shirked. But these 'genteel' attacks on the social shortcomings of their countrymen, in which it is so much the fashion for American novelists nowadays to indulge for the amusement of foreigners, are consummately vulgar. They will give more pain to those persons who have had occasion to know and love Americans than to Americans themselves. Few right-thinking people of either nation will fail to say to themselves in thought, if not in words, when they have finished the perusal of *Democracy*, 'There is no doubt some amount of truth in the author's satire; but "A lie that is half the truth is ever the blackest of lies."'"

AN able editorial in the Boston *Transcript* on "Faith Cures" concludes as follows: —

All well-attested "faith cures" are either of purely nervous diseases or of organs closely dependent upon the nervous system. Of the four authentic cases of cure at Old Orchard, two were spinal affections, one sciatica and one heart disease. But most so-called heart disease is a mere nervous derangement; and, if this case were such, all four cases were nervous affections. All nerves centre in the brain, and may be acted upon through the brain. This is best shown in mesmerism, but the fact is indisputable. A very powerful brain stimulus, an idea or conviction, an expectation even, or disappointment, will communicate itself to the whole nervous apparatus. The idea that the Great Spirit of the universe is exerting itself in his or her behalf must create a powerful excitation in a credulous mind. Bones are not set by prayer nor by any nervous stimulation. No contagious disease is ever cured by miracle. Diphtheria, fevers, small-pox, and malaria are not influenced by faith. Freckles and sunburn, any disease of the hair or nails, in fact disease in any portion of the body not supplied with sensitive nerves, refuses to yield to the most devout faith.

REV. DR. WECHSLER, of St. Paul, Minn., a well-known rabbi of liberal views, when visiting Montreal recently, was invited by the Board of Trustees of the St. Constant Street synagogue to preach to that congregation. He delivered an able discourse, in which he said that the "present age is essentially the era of reform, and that all classes and religions must yield to the influence prompting the world in this direction." Whereupon, one member of the congregation arose and ordered the preacher to stop or refrain from any similar expressions during the remainder of his address. Several others rose to express dissatisfaction, and the excitement soon became such that a messenger was despatched for a policeman. It appears that the congregation has for some time been divided on the subject of a reform in the Jewish ritual,—one party desiring to make it more consistent with the liberal views of the age, while the other strenuously oppose any attempt to deviate in the slightest from ancient usages. And this latter, "the orthodox party, say that they firmly believe Dr. Wechsler, known to be a reformer, had been expressly sent for to preach reform to them." Therefore, they took occasion to openly resent the attempt.

FROM the report of the standing committee on the condition of education, read at a recent meeting of the New York State Teachers' Association, it appears that, while the population of the State is increasing, the daily attendance upon the public schools is decreasing. The *Scientific American* says that the lessening number of children in school is not peculiar to New York or to factory towns, that it is more or less visible throughout the country; but, instead of deploring this condition of things, it sees in it an indication of "the spread of juster views than formerly prevailed of what is proper for youthful culture." There is, especially among well-to-do people, a growing feeling in favor of putting off longer the beginning of school life, which is likely to continue while school work is planned and regulated as it is now. What the *Scientific American* says in regard to the cutting off of the other end of the school period is worthy of thought, and we quote it entire: "When the free school system was first developed, the belief was general that schooling was the one thing needful to enable young people to get on in the world; and it was a common thing for parents to make great sacrifices to keep their children year after year in school, only to find in the end that their sons were too old to do boys' work, and too proud to begin at the bottom of any trade or other industrial calling and work up. They must do something more genteel, and crowded into the towns and cities in pursuit of clerkships and *quasi*-professional engagements, in which a little present salary was accompanied with extravagant expectations seldom or never to be fulfilled. Others as unwisely pressed on in their school course, mortgaging their future to prepare themselves for learned professions, vainly seeking to win fame and fortune in places for which they had no real fitness. The condition of much schooled but ill educated girls was, if anything, still worse. A natural reaction against this misdirection of youth and natural result of the failure of the public schools to shape their work to meet the practical wants of the multitude is the disposition to cut short the school period early to begin in earnest what seems to be the real business of life. Though

Digitized by Google

ninety-nine in every hundred youth cannot hope to go to college, their educational needs are largely sacrificed to make the school a possible tributary to the college. Time which the majority of youth need for practical preparation for their life's work is thus very largely given to studies of value only in their relation to a subsequent college course which is never to be enjoyed. It is no evidence of popular unwisdom, as most teachers seem to think, that there is an increasing popular indisposition to surrender so much of youth's precious time to such unpractical work. There is nothing so valuable to youth as education, but unhappily schooling and education are yet far from being synonymous; and, if the schools are declining in favor, it is because the intelligent public see this fact more clearly than the mass of school officials do"

POETRY.

For *The Index*.

A TRIBUTE TO EMERSON.

"Like the towering mountain rising
Far above the clouds and storm,
Round its breast the tempest gathering,
On its brow eternal calm,"
Thus above us he had risen
To the realms where storms no more
Swept across his raptured vision,
Though beneath he heard their roar.

Circling systems burn and glitter
In the thoughts he gave to man;
Gems and pearls lie flashing round us,
Burnished by a master hand;
"Spirit Laws" and "Compensation,"
"Love" and "Friendship," ne'er can die.
He has found them, taught and lived them,
Set them in the vaulted sky,—
There like stars to burn forever,
Lighting nations yet to be;
There to guide the wand'rer homeward,
As he sails life's shoreless sea.

Deep from mines of rarest treasure,
He has brought us golden ore;
In one sentence couched the wisdom
Of the centuries gone before.
He has rent the veil of Isis,
He the siren's voice has stilled,
Swept at morn the harp of Memnon
That ten thousand hearts has thrilled.

He has voiced the thoughts of millions
Who their thoughts could never speak,
Since the yearnings of earth's children
All in his one soul did meet.
Strew his grave with fairest flowers,
Deck the sod that wraps his breast:
Holiest memories,—these are ours;
His,—Nirvana's dreamless rest.

MONT E. COLLINS.

For *The Index*.

THE SILENT-FLYING LAND.

In each tall flower of that land
There lurks a silent human eye,
Deadly-weird.
Subtle-drowsy heavy perfumes
Fill the air;
And, glassed in sluggish stream,
The poppy sleeps in dim reflection
Lurid-red.
Oh, masked and muttering somnambules,
Whither away?
Beware of the pitfalls of death,
Stay, oh, stay!

W. S. KENNEDY.

The Index.

BOSTON, AUGUST 17, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

EMERSON AND THEODORE PARKER.

An Address delivered in the Church of the Unity, Cleveland, June 4, 1882.

BY EDWIN D. MEAD.

In 1838, several things happened. The daguerreotype was invented. I wish that the first sensitive plate could have been uncovered, not in Westminster Abbey, where, on a midsummer day in that year 1838, Victoria was crowned queen,—the gew-gaws, consecrated by traditions of the Conqueror and Richard Lion-Heart and Harry Tudor and real kings, brushed up once more by the rather ghostly bishops who wore the robes of Stephen Langton and Joseph Butler, and a galvanized crown blessed once more by a galvanized Church,—not there, but in the little chapel of the Divinity School of Harvard University, where, on another midsummer day of that same year, a little crowd of men and women was gathered, and an earnest man was speaking simply some simple, earnest words. We should all like a picture of that scene, I think; for this man was the real king, and this scene was more impressive than the other to him who sees deep. Ideas alone have royalty and divine right in this noon-time of the world, and so we count this little gathering at Harvard the most important thing of that year 1838.

The speaker was Ralph Waldo Emerson. The name did not mean much on the morning of that day. The small world to which it was known at all knew it as the name of a young man who had left the pulpit of the Unitarian Church half a dozen years before, because he could not conscientiously join in the sacrament of the Supper, who had been to Europe since and hunted up Thomas Carlyle in the solitude of Craigenputtock, and had just now published in Boston Carlyle's *Sartor Resartus*. He had written a little book of his own, too,—*Nature*,—and had given lectures in Boston and the towns about, which had drawn to him the attention of the thoughtful people He had retired now from the rush and roar of Boston to the quiet of a Concord farm-house to spend his life.

"Good-by, proud world! I'm going home,"

he had said to the fawning flattery and upstart wealth of the town and the insincerities and old clothes of the Church.

"When I am stretched beneath the pines,
Where the evening star so holy shines,
I laugh at the lore and the pride of man,
At the sophist schools and the learned clan;
For what are they all, in their high conceit,
When man in the bush with God may meet?"

He had been meeting with God in the bush, standing on the holy ground with the shoes off his feet; and he was come now to tell the college and the Church what the voice had said. He spoke of the beauty of nature. He spoke of spiritual laws, of which all nature that we see is but the clothing and the symbol. He spoke of the more overpowering beauty of the sentiment of virtue, which teaches us that we are "born to the perfect." "The laws of the soul execute themselves," he said. "He who does a good deed is instantly ennobled: he who does a mean deed is by the action itself contracted. If a man is at heart just, then in so far is he God. If a man deceive, he deceives himself. Thus is man made the Providence to himself, dispensing good to his goodness and evil to his sin."

This sentiment, he said, lies at the foundation of society. Its absence is the presence of degradation. Let this primary faith depart, and the very words it spake become false and hurtful. The doctrine of inspiration lost or the oracle made second-hand, and the Church falls, and the State, art, letters, and life.

Such a time, said this new prophet, had come in the history of the American Church. Its prayers and dogmas were grown as fabulous as Dante's *Inferno*, wholly insulated from anything in the life and business of the people. None believeth in the soul of man. Tradition, said Emerson, characterizes the preaching of this country: it comes out of the memory, and not out of the soul. It is assumed that the age of inspiration is past and that the Bible is closed. But it is the office of a true teacher to show us that God is, not was; that he speaketh, not spake. The true Christianity, a faith like Christ's in the infinitude of man, is lost.

Jesus Christ, said Emerson, was true to what is in you and me. He saw that God incarnates himself in man, and evermore goes forth anew to take possession of his world. He said: "I am divine. Through me, God acts; through me, speaks. Would you see God, see me; or, see *thee* when thou also thinkest as I now think." But the understanding caught this high chant from the poet's lips, and said in the next age, "This was Jehovah come down out of heaven." The idioms of his language usurped the place of his truth; and churches are built, not on his principles, but on his tropes. The preachers do not see that they make Christ's gospel not glad, and degrade his life and dialogues by insulation and peculiarity. Let them lie, as they befell, alive and warm and part of human life. To aim to convert a man by miracles is a profanation of the soul. That which shows God in me is what fortifies me. Dare to go alone. Dare to love God without mediator or veil. Thank God for all good men, but say, "I also am a man." Yourself a newborn bard of the Holy Ghost, cast conformity behind you, and acquaint men at first hand with God.

This Harvard address of Emerson's marked an epoch. It was the first clear, uncompromising utterance of rational religion in America. It showed all men at once what the new faith was and what it meant to do. It fell into the camp of the stiff and proper Unitarianism of Boston like a thunderbolt. It was a touchstone. It compelled every man to define himself, and speak out somehow or other; and it divided the Church in two. "There are now two parties among the Unitarians," wrote Parker: "one is for progress; the other says, 'Our strength is to stand still.' Dr. Channing is the real head of the first party: the other has no head." Channing, who was less than almost anything else in the world a "Channing Unitarian," stood by Emerson, said, indeed, that he could discover no difference between Emerson's address and the sermon he himself had preached at the dedication of the school. He found that he himself "could not draw a long breath in Boston." Soon after, indeed, he died. Had he lived ten years longer, with his great prestige and power, he would have saved the Unitarian Church in America half a century.

But, in the general Unitarian camp, "one shouted," said Parker, "'The Philistines be upon us!' another, 'We are all dead men!' while the majority called out, 'Atheism!' The Dean of the Divinity School said, 'That part of it which was not folly was downright atheism.'" Mr. Norton, the high priest of the Church in those days, very much as Dr. Bellows has been in these latter days, opened his mouth and preached upon the "Latest Form of Infidelity." No miracles, he said, no religion: the miracles of Jesus are the only evidence of the truth of Christianity. Henry Ware told the young men that, if there appeared to them any contradiction between the reason of man and the letter of the Bible, they "must follow the written word." "Reason," said another, "must be put down, or she will soon ask terrible questions."

Digitized by Google

Harvard College, in the person of one who still teaches a sound philosophy there, had already pronounced Emerson's thoughts "fantastic and unreal"; and Prof. Felton himself soon found that they were "full of extravagance and overweening self-confidence, ancient errors disguised in misty rhetoric, and theories which would overturn society and resolve the world into chaos." Such being the voice of Harvard College and of the Unitarian Church, you can picture for yourselves the reception accorded the new prophet in other religious circles and by the world at large.

But amid all this uproar there was one young man, not thirty years old yet, who had sat quietly through the address in the Harvard Chapel, and, going home, had written, "It was the most inspiring strain I ever listened to, so beautiful, so just, so true, and terribly sublime! My soul is roused, and this week I shall write the long-meditated sermons on the state of the Church and the duties of these times." This young man had graduated from the Divinity School two years before, studying under Ware and Norton there, and was now settled over a little parish in West Roxbury. He was born in Lexington. His grandfather was the captain of the minute-men who gathered on Lexington Green on that morning of the 19th of April, 1775, and with his own hand had slain the first British soldier in the Revolution. The young man's name was Theodore Parker.

Theodore Parker was already a suspected man, known among his fellows as a man of ideas; and, during the next three years, he did much thinking. In May, 1841, at an ordination in South Boston, he sounded his full key-note in a sermon on "The Transient and Permanent in Christianity." He showed the evils of an appeal to any external, prescriptive authority in matters of religion. He showed that there is no reason why moral and religious truths should rest for their support on the personal authority of their revealer any more than the truths of science on the authority of him who makes them known first or most clearly. "If it could be proved," he said, "that the Gospels were a fabrication and that Jesus of Nazareth never lived, Christianity would still stand firm and fear no evil. In an age of corruption, Jesus stood and looked up to God. There was nothing between him and the Father of all. And we never are Christians as he was the Christ until we worship as Jesus did, with nothing between us and the Father of all."

You remember the result of this. The Church dropped him. "So far as the ministers are concerned," he was compelled to say, "I am alone." But the blood of his Lexington grandfather was in him, and he said, "I will go about and preach and lecture in the city and glen, by the roadside and field-side, and wherever men and women may be found. I will go eastward and westward, and northward and southward, and make the land *ring*. And if this New England theology, that cramps the intellect and palsies the soul of us, does not come to the ground, then it shall be because it has more truth in it than I have ever found. What I have seen to be false I will proclaim a lie on the housetop; and, fast as God reveals truth, I will declare his word." And then, while every pulpit and every newspaper in Boston was vilifying him, while some of his clerical friends would not speak to him in the street and refused to take him by the hand, in their public meetings left the sofas or benches where he sat down, and withdrew from him as Jews from contact with a leper,—then a little company of gentlemen met together, passed one resolution, and went home: "*Resolved*, That Theodore Parker shall have a hearing in Boston." To my mind, that was one of the most remarkable church councils ever held. The Council of Trent didn't accomplish as much as that in its whole six years.

I speak to you of Emerson and Parker to-day, while the flowers laid on the grave of Emerson are still fragrant, for several reasons. I wish to invoke the influence of this solemn hour and its eloquent suggestions to impress more deeply upon every soul of us the duties of openness to new ideas, of scorn of compromise, and of self-reliance. I wish that, in this hour, we may realize more gratefully how dense the darkness was into which these great souls let in the light by which we walk; and, in the end, I wish that, turning from our secularities and societies and strifes, our minds may be more seriously fixed upon the infinite God, the immortal life, and the eternal right, in the consciousness of which they reposed and made true religion to consist, and to consist alone.

I link the names of Emerson and Parker here, because in the things of religion they cannot be separated. They stand for the same thing. Emerson was Parker writing books. Parker was Emerson's truth in the pulpit. When there was almost no warm hand for Parker in Boston, it was his wont to visit Emerson often at Concord; and he always returned to his work quickened and inspired. It was Emerson who fed his lamp, he said. And Emerson said that, be the lamp fed as it might, it was Parker whom the time to come would have to thank for finding the lamp burning. "He is the soldier whom God gave strength and will to fight for him the battle of the day." "Emerson," said Parker, "has a more glorious history than any American of this generation. He has touched the deepest strings on the human harp, and, ten centuries after he is immortal, will wake music which he first waked." He dedicated to Emerson his *Ten Sermons of Religion*. And when, at last, all broken in the fight, he sailed away in search of the health which he should never find, his greatest comfort was in saying, as he sat on the deck on Sunday morning, "Emerson is preaching at Music Hall to-day." When he died there at Florence, no churchman's voice was heard at the funeral in Music Hall, but the words of Emerson and Phillips. "He has gone down in early glory to his grave," said Emerson, "to be a living and enlarging power wherever learning, wit, honest valor, and independence are honored."

"The vice charged against America," he continued, "is the want of sincerity in leading men. It does not lie at Parker's door. He never kept back the truth for fear to make an enemy. It was his merit, like Luther, Knox, Latimer, and John Baptist, to speak tart truth when that was peremptory and when there were few to say it. As a reformer, he insisted beyond all men in pulpits that the essence of Christianity is its practical morals: it is there for use, or it is nothing; and, if you combine it with sharp trading or private intemperance, or successful fraud or immoral politics, or unjust wars or the cheating of Indians, it is an hypocrisy, and the truth is not in you," and no love of religious music or praise of John Wesley or of Jeremy Taylor can save you from the Satan which you are.

"Ah, my brave brother!" cried Emerson, in closing, "it seems as if, in a frivolous age, our loss were immense, and your place cannot be supplied. But you will already be consoled in the transfer of your genius, knowing well that the nature of the world will affirm to all men, in all times, that which for twenty-five years you valiantly spoke; that the winds of Italy murmur the same truth over your grave, the winds of America over these bereaved streets; that the sea which bore your mourners home affirms it, the stars in their courses, and the inspirations of youth; whilst the polished and pleasant traitors to human rights, with perverted learning and disgraced graces, rot and are forgotten with their double tongue."

After Parker's death, his society desired Emerson, the next autumn, to give the first sermon for them in Music Hall. The treatment Parker had received had alienated Emerson more than ever from the Unitarians, and he had long before abandoned all thought of ever preaching again. But he said that he could stand where Parker had stood; and he not only preached on that first Sunday, but spoke in Parker's pulpit many times for several years. He was the only man large enough for that place, the one man who stood roundly for the truth which Parker preached. These two Americans seem to me the two greatest religious teachers and reformers of our century, incomparably beyond Döllinger and Hyacinthe and that class of reformers, whose work was really all done three hundred years ago; greater far than Beecher and Stanley, whose new wine already spills from the old bottles which it was foolish to use; greater than Carlyle, by so much as their faith in essential humanity was greater than his.

I have said that the first use which I wish to make of this subject, as we stand by the fresh grave of our great teacher, is to impress the duty of openness to new ideas. Very feeble here are any words of mine beside the emphasis of history itself and new events. I have thought that it must be impossible for any man who has lived in these last years, and learned two of their great lessons, ever again to be a bigot. I have lived only some thirty years in the world, but a much briefer time than that has seen the outcome of the careers of William Lloyd Garrison and Charles Darwin. I can remember a time when Garrison's life was not safe on Boston Common. Many here, not old men yet, can remember when great rewards were offered for his arrest, when he lay in jail in Baltimore, when he was dragged by a rope, half-naked, through the streets of Boston. We can remember, too, how, just as John Brown's musketry was rattling at Harper's Ferry, a book was laid on the library table, called the *Origin of Species;* and we can remember the noise that followed, much louder than John Brown's musketry, for almost twenty years. "Darwinism" was the butt of *Punch's* jokes, the target of all satire, the object of all the venom and vituperation of the pulpit. I suppose that half the sermons that many of us younger men have heard in all our sermon-hearing Sundays have been on "Christianity and Darwinism," and in most mouths the phrase meant about the same as "God and the Devil." If a preacher confessed Darwinism, he was a doomed man; if a professor confessed Darwinism, his college days were done; if the theological student were caught reading the *Origin of Species*, it were better for him that he had never been born.

Well, we saw Garrison borne to the tomb amidst the reverence and tears of a nation which, if it should build a monument to-morrow to commemorate its new life and salvation, would place his figure at the front, as the bearer of the redemptive idea. And yesterday, while the bells tolled and the white-robed boys sang anthems, England laid Darwin to rest in Westminster Abbey, beside Newton and Macaulay and Chatham and Chaucer and those whom she delighteth to honor. The mockers and satirists of ten years ago are the elegists and eulogists of to-day. There is no man of science who has not now placed Darwin's truth alongside the fundamental theories of Newton and Copernicus; and no pulpit has yet been heard from, which, if not manly enough to join in the hearty panegyric, has been base enough to echo its old follies or is not busy in the work of reconstruction and new accommodation. I cannot think that these two lessons will easily be forgotten by this generation. I cannot think that those of us who study politics and science, or venture to speak of them at all, will ever, after witnessing this abuse, and then this apotheosis of Garrison and Darwin, be hurried to condemn any man unheard; and I think that the Church will be cautious before it again compromises itself with serious men, swells the bad reputation of caring more for its creeds than for the truth, and damages the cause of religion itself, as it has done in the Darwin controversy.

As the crown of thorns and then the laurel wreath to Garrison and Darwin in the realms of politics and science, so in the realm of morals and religion the rejection of Emerson and Parker forty years ago, and the glory which is theirs to-day. I suppose there has been no so conspicuous case of persecution in the American religious world this century as that of Theodore Parker, and no man ever who was the object of bitterer malice and misrepresentation and execration in his lifetime than he. He was a man who had no delight in controversy. He was not by choice or first nature a fighter, though certainly a better fighter never lived. He was a scholar, with all the scholar's shyness and love of quiet and retirement. He was a man whose whole warm, affectionate nature craved love and sympathy and the good opinion of his fellows. Yet he was forced, by the rank abuses of the times and by the infidelity of those on whom he thought to trust, into lifelong conflict; though, in that conflict, he never once shot back a poisoned arrow, never once opened or engaged in a personal controversy, but fought and conquered simply by preaching straight on, regardless of criticism or abuse on the right hand or the left, the great positive principles of his irresistible gospel.

The treatment which Parker received from those who advertised themselves as "liberal" and from those who did not was much the same. The Unitarians of forty years ago, as Parker's biographer has said, were "about as complacent a set of Christians as ever took ship for the kingdom." Aside from Dr. Channing and half a dozen others who might be named, the clergy seem to have been an altogether petrified and asphyxied set of men, as destitute of all red blood as the pre-Raphaelite saints. If they had any positive maxim, it was, to use a phrase of Emerson's, "By taste are ye saved"; but for the most part, as Emerson himself said, their creed was only a "pale negation." Their principal theological occupation

Digitized by Google

was to deny the divinity of Christ, a very melancholy business; and they had not yet learned that Christ was human. Parker's persuasion, moreover, was that no body of men was ever more completely sold to the sense of expediency. They were, indeed, "the advance guard of the Church militant in America." They had been "the movement party in theology," and had done a praiseworthy work. Directly, or by the support they gave to Channing, they had repudiated creed subscription, and declared the right of each man to investigate for himself in matters of religion. But a reaction was now springing up. A Unitarian orthodoxy had been tacitly agreed upon, and the main endeavor of the bishops and elders seemed to be to prevent any sort of commotion, and to keep things decent and in order. When a man like Theodore Parker came into such a circle as that, an honest man and a rugged, a man who could not compromise, but who must and would speak out the truth that was in him, a man whose every word had been "fierily furnaced in the blast of a life that had struggled in earnest,"—when such a man, I say, came into such a circle, there could be but one result. The controlling men of the denomination said, "This young man must be silenced!" They closed their pulpits and their periodicals to him, they tried to alienate his little congregation, they wrote abusive letters, they refused to occupy the same platform, to trade at the same shop, to remain in the same room with him. They excommunicated him, put him out of the Church. Many of the brethren had said to him before, "You are right, you say the truth; but it won't do, don't preach it. He that spits in the wind spits in his own face: you will ruin yourself, and do nobody any good!" And, when the trial came, man after man on whom Parker had reckoned for countenance fell back upon the old guard, and was silent. "Alas," he wrote, "for that man who consents to think one thing in his closet, and preach another in his pulpit! God shall judge him in his mercy; but over his study and over his pulpit must be written, *Emptiness;* on his forehead and right hand, *Deceit, deceit!*"

If these things were done in the green tree, what was to be expected in the dry? Parker was the special object of the prayers and maledictions of the American churches for twenty years. Priestly malice, as Phillips said, scanned every inch of his garment; but it was seamless, it could find no stain. He saw men stare at him in the street, and point and say, "That is Theodore Parker," and look at him as if he were a *murderer*. Prayer-meetings were held on his particular account. During the great revival of 1858, it was recommended that men and women, wherever they might be in the shop or on the street, should pray for Parker daily when the clock struck one. "We know that we cannot argue him down," they said; "but, O Lord, put a hook in his jaws, so that he may not be able to speak! If he will still persist in speaking, induce the people to leave him; and come up and fill this house instead of that!" "Hell never vomited forth a more wicked and blasphemous monster than Theodore Parker," said one of the noted evangelists; "and it is only the mercies of Jesus Christ which have kept him from eternal damnation already." And then he prayed, "If this man is a subject of grace, O Lord, convert him, and bring him into the kingdom of thy Son; but, if he is beyond the reach of the saving influence of the gospel, remove him out of the way, and let his influence die with him."

And Parker himself, through all this? It did not surprise him, for he knew human nature. He knew that in no country and in no age would he have encountered so little persecution as he did encounter. He knew that this bitterness and falsehood were but the natural fruits of the hard and dark theology against which he rose to do battle. "I knew all this would come," he said. "It has come from my religion, and I would not forego that religion for all this world can give. I have borne sorrows that bow men together till they can in no wise lift up themselves. But my comfort has been the joy of religion: my delight is the infinite God, and that has sustained me." "If I fall and die," he said, as he sailed away, "let mine enemies rejoice as much as they will at the thought that there is one feeble voice the less, rebuking the vice of the Press, the State, the Market, and the Church, one voice the less to speak a word for truth, freedom, justice, and natural religion. Let them triumph in this, but let them expect no greater result to follow from my death. For, to the success of the great truths I have taught, it is now but of the smallest consequence whether I preach in Boston and all the Lyceums of the North, or my body crumbles in some quiet, nameless grave. They are not *my* truths. A great Truth of Humanity once set a-going, it is in the charge of humanity. Neither State nor Press, nor Market nor Church can ever put it down: it will drown the water men pour on it, and quench their hostile fire. Cannot the Bible teach its worshippers that a grave is no dungeon to shut up Truth in? It is one thing to rejoice at the sickness and death of a short-lived heretic; but it is another and a different to alter the constitution of the universe and put down a fact of spontaneous human consciousness, which also is a Truth of God."

When he lay dying there in Florence, he said earnestly, in one of the gleams of light that came at intervals across the weakness: "There are two Theodore Parkers now: one is dying here in Italy, the other I have planted in America. He will live there, and finish my work." And, as the sun looked down upon the half-dozen mourners and the friend who read the Beatitudes over his grave on the banks of the Arno, the same sun lighted up the arches of Music Hall as his dearer friend stepped into his own desk and opened one of his own sermons to the text, "Have Faith in God." I came to Florence from the Alps one gray November Saturday, despondent over many things, homesick and heavy-hearted, in some things, maybe, faithless. But, early on the Sunday morning, I remembered Parker's grave; and, while then even Giotto's Tower and San Giovanni's Gates were not beautiful to me, I hurried there, and in that still half-hour, the stern gray stone by the green grave made my heart stout again, and told me strongly to *have faith in God*. And as I turned back into the city, the streets, before so cold and unresponsive, were now all eloquent with history and beauty, and I walked with Dante and Michel Angelo. And here, this hour, as I have pictured thirty years ago, with the blindness and hard-heartedness that make us sick, I pause and remember how upon the table of every thoughtful minister of religion in the land, be he called "Liberal" or "Orthodox," the Prayers of Parker lie, to stimulate and voice devotion, and feel, through door and window, the air pulsating still with the universal benediction falling on the grave of Emerson. And I say to you, when hearts seem cold and the fight is long, and the false seem strong and the day is weary, *have faith in God*, and know that one is a majority with him.

"Oh, blest is he to whom is given
The instinct that can tell
That God is on the field, when he
Is most invisible.

"And blest is he who can divine
Where real right doth lie,
And dares to take the side that seems
Wrong to man's blindfold eye.

"Oh, learn to scorn the praise of men!
Oh, learn to love, with God!
For Jesus won the world through shame,
And beckons thee his road.

"And right is right, since God is God;
And right the day must win:
To doubt would be disloyalty,
To falter would be sin."

I know of nothing that can impress more deeply the duties of openness to new ideas, of scorn of compromise, and of self-reliance, than the story of these two lives. I know of nothing grander than Parker's pulpit, as it stood there for twenty years, amid the shuffling and truckling of those times, thundering of righteousness and judgment to come. I should like to have been of those earnest thousands who, Sunday after Sunday, went up to Music Hall to hear him preach. No trumped-up, twenty-minute speeches those, confectional and condimental, such as some of our weak-backed congregations sit through with difficulty even, but solid sermons of an hour, or two hours if need was, that sent the people home with their ears tingling for a week. No place that for a lazy head. Ministers told him that he was "preaching over the heads of the people"; but none ever had to tell him that he was doing that much commoner thing, preaching under their feet. Not a school for the more exquisite graces of etiquette, perhaps, Parker did not assume to be a rival of the dancing-master. Boston had exhibitions plenteous of *suaviter in modo:* his business was with *fortiter in re*. "You never made me your minister," he said, "to flatter or to please, but to instruct and serve." Those who wore soft raiment, in those days, dwelt in king's houses: he wore camel's hair and a leathern girdle, and the words fell from his lips sharp and rugged as from the Baptist's,—"Repent! Wrath to come!" He preached against the errors of the popular theology more than upon any other form of wrong, for he felt that they were most fatally mischievous of all. But, like all those New England transcendentalists, he had much to say upon all the burning questions of social reform. The Church was here in the world for nothing at all, if not to hold up a higher standard of life and create a better society. Intemperance, covetousness, ignorance, the wrongs of woman, war, political corruption, above all slavery, like grape-shot were the sermons rained upon them all. As it was Garrison who fought slavery with the newspaper, and Phillips on the bema, and Whittier with the poem, and Sumner in the Senate, and John Brown on the scaffold, and Lincoln with the sword of State, so it was Parker who fought it with the gospel in the pulpit, while the churchmen of good and regular standing, whose heads had felt the bishop's fingers, shivered before the bullying of the slave-holders, chattered about Onesimus, and whined, "Cursed be Canaan!"

(*Concluded next week.*)

For *The Index.*

THE MOODS OF MANKIND.

BY B. W. BALL.

The human race has its moods as an individual has his or her moods. We are at one time grave and serious, at another gay, and so on. The different moods of the race constitute periods or eras of history. The race was in its darkest, gloomiest, and most dejected mood in the Middle Ages, or ages of faith, as they have been called. In those ages there was an almost universal belief prevalent among Christian mankind that the world was in a state of decline, and near its end. Christianity, in its literalness, was believed and practised. The noblest life which could be led, according to the belief of the ages in question, was that of the squalid, idle, superstitious monk, who neglected all worldly duties and lived as a mendicant, and was constantly on his knees with crucifix in hand.

"The eternal life beyond the sky
Wealth cannot purchase, nor the high
And proud estate.

"But the good monk, in cloistered cell,
Shall gain it by his book and bell,
His prayers and tears."

Dirty, monkish lazzaroni were in fact the moral men of the ages of faith. Holy idleness, shiftlessness, and squalor, with prayers and tears, were the marks of their spiritual superiority and contempt for an evil and lost world and of their fitness for a better one. Finally, a belief that the *Dies Irae*, or Day of Wrath, and conflagration of all things was at hand, pervaded the minds of all classes throughout Christendom,—a wild and fanatical conviction, the result of ages of theological teaching and priestly sway, which completed the wretchedness, shiftlessness, and gloom of mediæval mankind. Everything went into the coffers of the Church, and theology and the priesthood were all in all. There was utter mental and moral stupefaction paralyzing the human mind throughout Europe. Ignorance, pestilence, and religious fanaticism had culminated. There was no lower deep to be sounded. Either the human race, or that portion of it which constituted Christendom, had got to recover its manhood, self-respect, pluck, and enterprise, or sink into general and hopeless idiocy and imbecility.

Well may the fifteenth and sixteenth centuries—the centuries in which the European man began to vindicate his nature and extricate himself from the strangling coils of theological superstition—be called the period of the Renaissance; that is, of the rebirth or re-creation of humanity. A dayspring of light and knowledge, of mechanical invention and terrestrial discovery, dawned. The printing-press was invented and set in motion; the New World was found beyond the Atlantic Ocean, which had been up to that time known as the *Sea of Shadows;* Luther set at defiance the supreme authority of the Church; and, above all, the old manly Greek poetry, philosophy, and history, with their stalwart ideals of a free and free-thinking

Digitized by Google

manhood, were recovered, and fascinated European scholars, causing them to despise monkish ideals of abject humility, holy indolence, self-abasement, and unquestioning submission, and to take for models of character, instead, the heroes of Greece and Rome, who were full of resolution, a noble pride, and a dauntless spirit of resistance to tyranny of all sorts. Men began to say that this life and the world are good things to be enjoyed to the utmost.

The Europe of the fifteenth and sixteenth centuries began to glow with the spirit and genius of the great ages of Greece. The fifteenth and sixteenth centuries, as it were, shook hands across the intervening gulf of time with the old Greek heroic age and with the ages of Themistocles, Pericles, Pheidias, Plato, Aristotle, Alexander the Great, and the Ptolemies. The higher classes in Italy, even the popes,—*e.g.*, Leo X.,—became paganized. Free, reflective thought after the manner of the old independent Greek thinkers and seekers after truth began to take the place of the futile subtleties of the Schoolmen, of Duns Scotus and Thomas Aquinas.

In the language of Taine, "After the terrible night of the Middle Age and the dolorous legends of spirits and the damned, it was a delight again to see Olympus shining from Greece: its heroic and beautiful divinities once more ravished the hearts of men," and made them turn away in disgust from "the mediæval images and paintings of the attenuated Christ,—a miserable, distorted, and bleeding earth-worm,—the pale and ugly Virgin,—a poor old peasant woman, fainting beside the cross of her son,—from ghastly martyrs, dried up with fasts, with entranced eyes, and from knotty-fingered saints with sunken chests." Art was revived in the Grecian spirit; and the theatre and drama were revived, resulting in England in that unparalleled Shaksperean drama, which still delights and instructs the world, and will do so forever. For Shakspere belongs to the Renaissance as well as Luther and Columbus.

Thus did European man in the fifteenth and sixteenth centuries arouse himself from the stupor of the Middle Ages, and begin to reassert his manhood and intellectual and moral rights of free thought and free inquiry.

After a lapse of nearly four hundred years, the world has reached another renaissance or period of rebirth and re-creation, when society is visibly undergoing a process of reconstruction on entirely new bases, moral, social, political, and intellectual. Now, not this or that form of speculative belief and opinion is discarded or modified or reformed; but men refuse to be guided by speculative beliefs altogether, and will conform to nothing but the light of positive knowledge. They neither affirm nor deny anything in regard to an alleged future state of existence, in regard to the controlling power of the universe and other theological subjects; but they say that they are here concerned with the present life solely, and that their aim is to make man and society what they ought to be, according to the dictates of the higher reason. This means intelligence, competence, and a free, intelligent activity for all men and women without distinction of race or hue.

As I have said, the advanced nations are now no longer interested in a merely speculative morality and religion. They demand realization and practical results in the shape of an actual moral, social, political, and intellectual elevation of all men of all races from the slough of ignorance and poverty and viciousness, in which the vast majority of the race still wallows and flounders. Could Bacon, the great scientific thinker of the first renaissance, revisit the world, he would find his grandest dreams of the possibilities of knowledge and invention more than realized in Europe and America to-day. He would exclaim: "I was indeed a truthful prophet of the future! Only, the reality has surpassed my wildest and most magnificent dreams. Behold, the ends of the earth whisper to each other in a moment, in the twinkling of an eye! The earth through knowledge and science and a rational morality can indeed become and is actually becoming such a 'New Atlantis' as I sketched prophetically. It is evident enough that the azure deeps of air are shortly to become the regions of travel and locomotion for man. He is nearly ripe for such a splendid consummation, as I clearly foresaw centuries ago that he sooner or later would be." Such would be the exclamations of Bacon, if he could revisit this sublunar sphere in the current year; and such is the altered and current mood of the human race, or the civilized portion of it, at the present time. Popular intelligence, popular renovation, and popular freedom, and competence as the fruit and reward of such a renovation, are now the goals of human endeavor; and they will be attained, despite all temporary discouragements and obstruction. For the Grand Collective Man is becoming at last self-conscious, and is moving intelligently, and no longer blindly groping toward his ends and aims.

CORRESPONDENCE.

SOCIALISM.

A Reply to Miss Hardaker.

Editors of The Index:—

Having been more than ordinarily interested in the paper by Miss Hardaker on Socialism, contained in your issue of August 3, may I be permitted, as one of the "undisciplined workingmen," of "faulty intellectual equipment," of "low powers," and "foreign extraction," with whom she seems somewhat disgusted, to offer thereon a few comments in self-defence.

Miss Hardaker's clear, vigorous style I admire, and envy her her scholarly knowledge of the subject of which she treats, and so feel diffident in calling in question any of her conclusions, my "equipment" being necessarily limited, to an unfortunate extent, to experience and reflection, and crippled by the curse of "centuries of Old World degradation." Yet, somehow, I cordially assent to the healthy sentiments expressed by your correspondent on the necessity of cultivating a self-reliant spirit, and have no faith in any theory or system that would lessen the use of such a virtue. Communism, pure and simple, is of course subversive of this faculty; but the system of communism now in vogue I look upon as even worse than the one Miss Hardaker defends. This is condemned by the experience we have had of it, while communism never has had a fair trial. Miss Hardaker and I will concede to each other the right to differ a little on this point. She says it has failed after forty trials. Would we be justified in pronouncing sheep-raising for profit an illusion on general principles, because we had failed to make it pay in a paddock? Is it fairly trying communism to attempt its development to successful results under governments organized on principles utterly inimical to its aims? Is it fairly judging it to deduce inferences from the inevitable failure of those agricultural, pastoral, or industrial experiments made by small communities, whose very existence almost has depended at the same time on exterior facilities and systems of communication, transportation, and finance, over which they had no control? Yet these same systems and facilities are necessary to civilized life, and to that part of the population manipulating these extensive interests lavishly fall the luxuries of wealth; so that, unless we can turn to a better stand-point from which to attack the communistic idea than actual attempts to give it a trial have yet afforded, until a more comprehensive experiment has been made, the siege must be raised. That stand-point, however, is found in human nature, in the love of approbation, of liberty, of action, hope, and less meritorious attributes pertaining thereto, which communism would suppress, if it were possible. Individualism, in giving these same human attributes too much liberty, makes a mistake less only in degree, not in kind. Our hope lies in a medium course.

What we mostly need in the present stage of our political development is a legislative limitation to excessive individual gain, so that the little fishes be not all gobbled up. Miss Hardaker says that "the socialist imagines that some governmental device can save him from the consequences of his own folly," and that "the present loud cry of socialism is for the nationalization of the land." Well, was it not a device of government that created the system of individual property in land? And shall not society cure itself on the homœopathic plan, if it wants to? My belief is that, if we have to thank literature for shedding any light on this question, Henry George deserves it, of all authors, for *proving* the harmfulness and unjustifiableness of the system of private property in land. "Rousseau," says Miss Hardaker, "is responsible for French communism and German socialism, although his ideas have been variously supplemented and modified by later reformers"; and she might have added *by the exigencies of the case*, with no loss of force to the statement. Rousseau, like Henry George, spoke of what he saw, giving utterance to truth; but the truth existed and exists independently of those who give it utterance. So I hope Miss Hardaker will let Rousseau off for part of the blame.

Miss Hardaker says of socialism that "a wrong premise vitiates the whole plan [to think of all the plans that have been spoiled that way!]; namely, that the competent are bound to assure the comfort of the incompetent." Yet, in the same breath does she not give an inferential but decided indorsement of the "governmental device" of testamentary bequests? I had long labored under the impression that the heirs of self-made millionnaires were, as a class, the *most* incompetent and *most* needing a homily on self-reliance of any,—more even than "the undisciplined and hungry millions of faulty intellectual equipment and low powers," familiar to your correspondent.

Sirs, the open discussion of this subject is of the utmost importance. Free discussion may preclude the necessity of more radical measures. Therefore, I trust that loyalty to the principles upheld by *The Index* will induce you to give my say a place in its columns. Miss Hardaker has done well to challenge a discussion, which I hope to see maintained to some purpose. For my part, the deep interest I feel in this subject is my excuse for venturing on ground generally held sacred to literary excellence that I admire, but cannot duplicate. F. HARMER.

MANISTEE, MICH., Aug. 6, 1882.

COMTEISM,—DOES IT SOLVE THE QUESTION?

Editors of The Index:—

Having read Mr. Frey's article (*Index*, August 3) with intense pleasure and interest, I am still anxious for more light. It is unquestionably true that, with the advance in civilization and knowledge, the mental conceptions of the race have undergone modification and are of a purer and higher type. It is undoubtedly true that there is a strong tide in the direction of the more practical, moral, philanthropic, humanitarian side of life; and this setting of the current seems destined to sweep away the theoretic and theologic philosophy on which the churches and sects have hitherto predicated their religion. I am vividly cognizant of the drift toward the worship of humanity. I feel its power. It has great fascination and plausibility. Science is too abstract and abstruse for the common people. They everywhere say: We can't see through it. Give us the old familiar, well-known ways, or some practical moral work. They care little for abstract theory, true or false. They have no patience with the substitution of an impersonal power or force for Deity. They want the personal attributes of human being, feeling, love, for their adoration and worship. They take readily to the concrete embodiment of the higher elements of life in any human shape, and they insist on a religion as the basis of morality and obligation.

Mr. Frey states these points concisely, clearly, and truly. One cannot help admiring his statement. But, nevertheless, we are bound to look beneath as well as upon the surface, at the abstract philosophy of truth no less than the concrete inheritance of old errors and predilections. We cannot help asking, Is it scientific, is it true, that we must stop short in our philosophy of the Infinite, suspend its purification from ancient anthropomorphic elements, and, for the sake of the popularity of the human, traditional habit, build on that which, it is admitted, is vanishing and changing from age to age? Undoubtedly, a popular working religion must take in the human, personal elements, for ordinary humanity will not worship the abstract; and, if the common notion of a creating, supervising, personal Deity be dropped, the term "religion" must be dropped also, or an entire new signification be given it. But must our science of what is objectively and at bottom true in nature, our philosophy of things, be made subjectively conformable to inherited human feelings?

Must science give way to sentiment? Is worship more important than knowledge? Are the leaders of sects and the founders of religions the chief and true benefactors of humanity? Mr. Frey's argument seems to imply this; for, while admitting the truth of much of Mr. Spencer's philosophy, his argument is that the strength of the religious sentiment has not decreased with the growth of knowledge, but has actually grown stronger, and will never be satisfied

Digitized by Google

with abstract truth. "We know," he says, "how incomplete and contradictory science is"; and "to go to science without a guiding ideal is the same as to pick up everything which may suit one's fancy or propensities."

What and whence is this "guiding ideal"? Is it a tradition or an inspiration? If one of the human elements, and not infallible, how is it more than the "symbolic image," or relative conception, which Mr. Spencer admits?

If, as Mr. Frey argues, religious enthusiasm, in the later religions, retains its vigor because "the human element becomes stronger and clearer," and "the beneficial influence of every religion is based mostly on its human element," what is to hinder equally beneficial enthusiasm for humanity proceeding from human knowledge of human relationships, irrespective of any element of religious mystery? If God is not, as most religions affirm he is, a personal manager of human affairs, who can be influenced by prayers, where is the necessity of the God element as a basis of morality? Religion, in any ordinary acceptation of the term, is by no manner of means necessary to a good and true life; and I cannot admit that science and our knowledge of things are subordinate to the passions and fickle sentiments of human nature. Without science, human nature would itself be sadly off. A. N. A.

FAIR HAVEN, VT., Aug. 6, 1882.

THE WESTERN UNITARIAN CONFERENCE.

Editors of The Index:—

Apropos of your editorial comment on W. C. G.'s article in *Unity*, in which he regrets that the last Western Conference should have refused to insert the words "freedom, fellowship, and character" into its articles of incorporation, will you permit me a word in justification of the action of the Conference? It did decline for various and sufficient reasons to insert this clause into an instrument framed for purely business purposes, and so to make this formula binding on the reason and conscience of all succeeding sessions of the Conference. But it did pass by a unanimous vote the following:—

Resolved, That this session of the Western Unitarian Conference, for 1882, wishes to place it on record that it interprets Unitarianism in no narrower sense than "intelligence, freedom, fellowship, character, helpfulness, and reverence in religion."

By request of W. C. G. however, who had originally offered the foregoing phrase as a part of the intended articles of incorporation, this vote was reconsidered and the resolution tabled. The whole proceeding was candid and kindly, and the vote showed that sides were taken without reference to theological opinions and on other grounds.

After this showing, I think the regrets of W. C. G. and your editorial comment are not justified. For myself, I read the Unitarian movement, especially at the West, very differently, and find its tendencies growing more and more radical and broad.

C. W. W.

NEWPORT, R.I., Aug. 4, 1882.

[C. W. W.'s justification is partly not new, and, so far as it is, passing strange. That "freedom, fellowship, and character" could possibly be thought to have the danger in it of *binding* the reason and conscience reveals a sensitiveness with regard to freedom which surpasses all that even the Free Religious Association has ever asked for. If such is the state of mind of the Western Unitarian Conference, we think it is in a bad way, and suggest to the next National Unitarian Conference, which we believe meets this fall, that it institute an investigation, and, if there are no gentler means, that it refuse fellowship with the Western Conference, as it once did with the Free Religious Association.

But we suspect there was a trifling bit of *Heuchelei* in this motive; and in any case, to speak seriously ourselves, we have no doubt there are "broad and radical tendencies" among Western Unitarians. But, if they are tendencies that really trust themselves, why is a name clung to, which we should think would have forever lost its prestige in the eye of "broad and radical" men, after the action of the National Conference at Syracuse in 1867? We mean, of course, the Unitarian name. It is this that gives an air of inconsequence to protestations such as the resolution which C. W. W. quotes contains; and possibly, though it is a mere conjecture on our part, it was the failure to do a great thing and the content at passing a resolution that induced Mr. Gannett to request its reconsideration. Let us not be understood as undervaluing the labors of the men who have given the distinctive character to Western Unitarianism in the last ten years. They are not thrown away either for the present or the future. But the end of their labors will be in the *complete* victory of the tendencies which they are now serving so well in part,—and, we regret to say, only in part. Meanwhile, the choice for others, who have not Unitarianism in their blood any more than in their reason, is to anticipate this victory, and, taking now as their foundation stone "a moral purpose in religion rather than any intellectual beliefs whatever" (to quote Mr. Gannett's words), to build up upon it, openly and avowedly as well as impliedly, and so in a measure help to fulfil the prophecy of old Unitarianism and the better purposes of Western Unitarians themselves.—ED.]

A LETTER FROM LILIAN WHITING.

Editors of The Index:—

Will you kindly permit me to correct an error occurring in the last number of your always vigorous and inspiring journal, regarding a statement made by me? *The Index* quotes a paragraph from a letter of mine, written from Newport to the *Daily Traveller*, regarding the "Newport Unity Club," when, instead, I referred to the Unity Club of Cincinnati, a society that existed in that city under the pastorate of the Rev. C. W. Wendte, who has so recently been installed pastor of the Channing Memorial Church at Newport. If *The Index* will permit me to present the paragraph referred to, the context will indicate the facts regarding this, the Cincinnati Unity Club:—

The Channing Memorial is singularly fortunate in the pastor it has installed, Rev. C. W. Wendte. Mr. Wendte is a Harvard man, of the class of '69. Soon after graduating, he accepted a call to Chicago, where he organized the Fourth Unitarian Society, and remained there some six years, when he was called to Cincinnati by what were then the "two wings" of a greatly divided Unitarian society. Among his notable predece-sors there were Moncure D. Conway, Rev. Wm. H. Channing, and, for a period of six months, Rev. Dr. Bartol, of Boston. Mr. Wendte accepted the double call to Cincinnati by uniting both divisions into one, and his long pastorate in the Queen City was one of almost unexampled prosperity. Old differences were healed by the vital power of a new and growing faith, while his intellectual rank and practical power made Mr. Wendte one of the most valuable of citizens. It was under his ministrations that the famous "Unity Club" of Cincinnati grew up,—an association of social and intellectual culture, that inaugurated the system of Sunday-afternoon lectures by noted men, for the merely nominal price of ten cents' admittance. The Opera House was engaged, and the people crowded it from orchestra to upper gallery. Among the speakers who have addressed the immense audiences of the Unity Club lectures have been Prof. Richard Proctor, of England; Prof. Morse, of Salem; Mrs. Livermore; Rev. Mr. Savage; Mrs. Julia Ward Howe; Miss Mary F. Eastman; John Jacob Holyoake, of England, and other notable men and women. These courses of lectures contributed in a greater degree than will ever be known, perhaps, to the intellectual growth of the community.

Since *The Index* has done me the honor to refer twice to this letter in its columns, may I beg to present from it a little matter of literary interest, for whose knowledge I am indebted to Mr. Wendte, of a forthcoming work from the Rev. Dr. Brooks? The reference made in the letter to the *Traveller* was as follows: -

The culmination, however, of his life-work is soon to appear in a translation of a long poem of Rückert's *Wisdom of the Brahmins*, a work conveying the philosophy of Hinduism as does the *Light of Asia* that of Buddhism. This work is to be published immediately by Messrs. Roberts Brothers. It will appear in six volumes, the poem written in hexameters. Last week, Rabbi Sonnesschein, of St. Louis, a man whose erudition is celebrated in two hemispheres, was here in Newport, and examined with Dr. Wendte the proofs of Dr. Brooks' forthcoming work. It is pronounced by these learned divines one of the most remarkable translations the world has ever witnessed. It has been an Herculean task. It will be remembered that the Brahmin literature is intricate with its interwoven apologues and parables, copious in many-sided metaphors, and containing that depth of significance and wealth of imagery peculiar to Oriental literature. The English language contains no correspondence to this intricate structure, which can only be given in it by an absolute mastery of its whole scope by the translator, whose reproduction is so great and so original a work that to call it a translation is really a misnomer. Dr. Brooks' work will be received with great attention now on account of the recent and widely absorbing interest awakened in Oriental literature. Max Müller's works have largely stimulated this trend of thought, as have the deep researches into the Chinese and Persian literature made by the late Samuel Johnson of Boston. This intellectual drift is revealing to us a new world of thought, of hidden significance, and of certain spiritual laws that have influenced the destiny and the direction of new civilizations.

The error in locating the Unity Club in Newport rather than in Cincinnati was a very natural one to a casual reader of the letter; and, fearing that I have encroached on your space at a rate altogether disproportionate to the slight importance of the matter, I am, Respectfully yours,

LILIAN WHITING.

A FRIEND, thinking Mr. Chadwick's letter on Emerson and Walt Whitman, lately copied from the New York *Tribune* into this journal, does injustice to Mr. O'Connor, to whom it was a reply, has sent us a rejoinder by Mr. O'Connor, which was also printed in the *Tribune*. Its extreme length prevents our giving it entire; but the following extract contains the gist of Mr. O'Connor's defence, which we give without comment. Mr. Chadwick's letter, with Walt Whitman's statement in the *Critic*, upon which the letter was based, can be found in *The Index* of July 27.

In retraction of his letter of 1855, he uttered not one word, nor—let Mr. Chadwick mark it well—did he utter one word on *moral* grounds concerning anything in the volume. How could he? Mr. Chadwick himself says: "I do not believe that Mr. Whitman has written a line which is not pure and high in its intention." How could Emerson urge on moral grounds anything against a poetry containing not "a line which is not pure and high in its intention"? Mr. Emerson's arguments simply consisted of a splendid and sincere unfolding of the technical, literary, and conventional points applicable, with a view to induce Walt Whitman to conform to them, and leave out some lines in his volume. Of the higher reasons for leaving those lines in, he said not a syllable; and, years ago, Walt Whitman, talking with several of us here in reference to this interview, said that, apart from Emerson's solicitude for him, it was the saddest conversation he ever had in his life, inasmuch as Emerson, in all his copious and splendid talk concerning the mooted passages, had, after all, nothing better to urge than that their withdrawal would make the book sell better.

In a recent letter to me, Walt Whitman says:—

"What made, and ever makes, the argument of Emerson in that walk on the Common dear and holy to me, was its personal affectionateness, as of an elder brother to a younger. It was a vehement, even passionate, well-wishing, which I felt then, and feel to this hour, the gratitude and reverence of my life could never repay. Although perfect from an intellectual and conventional point of view, it did not advance anything I had not already considered. And my *arrière* and citadel positions—such as I have indicated in my June *North American Review* memorandum—were not only not attacked, they were not even alluded to."

Mr. Chadwick may try to say that, if Walt Whitman had any case to state, that hour with Emerson in 1860 was the time. On the contrary, the question of the poet's eternal duty to his day and generation being laid in abeyance, and the question of deference to convention being alone brought forward, I think that Walt Whitman's silence was the sublimer answer. It is in times like these that speech is silver, but silence is gold. It is obvious that Emerson's arguments did not touch Walt Whitman's principle of treatment in sexual matters, which was a moral one, or rather one which involved the vertebra of all morals. He urged instead, though with trenchant power and grace, conventional and technical literary considerations. These considerations Walt Whitman had long dwelt upon in his own mind, and he was anxious to hear the utmost that could be said upon them. And now, when he had heard what the best critic of the age could say, and in his inmost soul and brain remained untouched, his final resolution was taken. What he sought to do in *Children of Adam* for human purity seemed, he once told some of us here, all the more necessary after that conversation with Emerson. From that time, however interest might point, his duty was plain.

BOOK NOTICES.

THE *Revue de Belgique* for July contains a spirited drama on Garibaldi, opening with his famous speech on leaving Rome in 1849. "Let us march! The glory of Rome and the liberty of Italy will follow us everywhere. Let him who offers them a worship unconquerable follow me. I ask only for hearts full of love to our country. I can offer you nothing but famine, thirst, the rocks for your pillows, forced marches, bayonet charges of one against a hundred for your

Digitized by Google

only pleasures, and for your sole rest the death of the brave. He who loves glory and liberty, and does not despair of Italy, will follow me." Other subjects are "Civilization in China," the "Derby Races at Epsom," "Agénor de Gasparin," and the "Difficulties of a National Literature in Belgium." In view of the large part of our own great authors who have passed away or ceased to write, it might be well for some magazine in this country to consider the difficulty of keeping up our literature in America.

SCHMEITZNER'S *Internationale Monatsschrift* for June.—Our readers will like the views of this new magazine on theology and politics, and welcome its use of large type and the English alphabet. Perhaps there are too many continued articles, but that beginning with this number on Bruno Bauer promises admirably. This recently expired champion of liberalism was not so scholarly as C. F. Baur, but more in sympathy with the popular struggle for freedom. He is fitly compared to a sexton who has locked the door of the old church and put away the key, and it is particularly interesting to read how he spent the money Greeley paid him for writing on European politics in having these articles republished in Germany. The short view of Bismarck's present position is also very valuable.

THE *Sanitarian* for August opens with a long though interesting abstract of a speech giving "The Status of Education in the United States," by Senator H. W. Blair, of New Hampshire. "Tree Preservation," "The Influence of Woman on Village Adornment," "The Duty of the President in the Case of Guiteau" from the doctor's point of view, "State Medicine," and the report of "The National Association for Sanitary and Rural Improvements" are the titles of some of the longer articles. Dr. A. N. Bell, editor, 113 Fulton Street, New York.

FROM the *Sunday Review*, a quarterly magazine published in London by Trübner & Co., and devoted to the secularization of Sunday, we learn that the late Dean Stanley was a strong friend of the Sunday movement. The *Review* for July contains reports of interesting speeches before the Sunday Society and the spicy debate on the subject in the House of Commons which took place in May last.

PERSONAL ITEMS.

PROF. VAN BUREN DENSLOW is the recently elected President of the Chicago Philosophical Society.

A STATUE to August Mariette, "Mariette Bey," the distinguished Egyptologist, was unveiled with imposing ceremonies on July 16, at his native city, Boulogne.

THE real name of "A. Wilford Hall," author of the *Problem of Human Life*, which is having so great a circulation among ignorant thinkers, is Alexander Hall.

QUEEN ELIZABETH of Roumania, who writes under the pseudonyme of "Carmen Sylva," has recently been elected a member of the Roumanian Academy of Sciences.

ADIRONDACK MURRAY has written a letter denying that he is living a sinful life in poverty in Texas. He says he is making money on a sheep ranche, and is "walking uprightly before God."

"ZION'S HERALD," mentioning Mr. Abbot's "very able critical notice of Prof. Bowne's *Metaphysics*" printed in *The Index* recently, remarks, "The Professor will respect the fairness of his critic, but will hardly yield his *pou sto*."

THE wife of Charles Dickens is described by one who knew her personally as a pretty little woman with beautiful, heavy-lidded, large blue eyes, a good forehead, nose slightly *retroussé*, small mouth, with red, smiling lips, and a rather retreating chin. She was in early life cheerful, good-natured, and witty, and apparently devoted to her husband.

OF Edwin Arnold, a London correspondent says: "He has an intense face, full of the fire of concentrated purpose. He has the poet's eye, which seems always to see things far away and invisible to other mortals. There is not an atom of pretence or "shop" in his manner: he is simple and unaffected, as the great mass of these honest English folk are sure to be found."

"I HAVE a new reason," wrote Emerson to Carlyle, "why I should not come to England,—a blessed babe, named Ellen, almost three weeks old, a little fair, soft lump of contented humanity, incessantly sleeping, and with an air of incurious security that says she has come to stay, has come to be loved,—which has nothing mean and quite piques me." This was the present Ellen, so great a help to him in his old age.

SIR GARNET WOLSELEY, who has just gone out to take command in Egypt, is very quick and brisk in his ways, with a trim military appearance, and great readiness of adaptation to change of circumstances. He possesses Napoleon's faculty of taking at a glance the measure of a man, and knowing how best to use his ability. He has succeeded in every position in which he has been placed. Like Sir Frederick Roberts, England's other great general, he is an Irishman from near Dublin.

THE Rev. Mr. Brand of Oberlin, Ohio, whose sermon about Druggist Bronson, a sly rumseller, has led to a suit for damages, wound up the discourse by addressing Bronson thus: "Good men shall breathe freer at thy death and utter thanksgiving when thou art gone. Men shall place thy gravestone as a monument and a testimony that a plague is stayed; and as, borne on the blast, thy guilty spirit whistles toward the gates of hell, the hideous shrieks of those whom thou hast destroyed shall pierce thee,—hell's first welcome."

GEN. G. K. WARREN, the head of the engineer department of the Newport district, died at Newport, R.I., on the 8th inst., aged fifty-two. His death is said to have been hastened by the delay in making known the result of the recent proceedings before the court of inquiry into his conduct at the battle of Five Forks, which he secured from President Garfield. The evidence before the court completely exonorated him, but the mortification of remaining under the charges until the results were published preyed upon his spirits with sad effect.

COMMENTING on the nomination by President Arthur of William Astor in place of George P. Marsh, the New York *Sun* says: "Mr. Marsh was a poor man and a very distinguished scholar. Mr. Astor is one of the richest men in the world, and as a scholar one of the most undistinguished." But to this is added a quotation from the Philadelphia *Press* that "the present appointment is irreproachable. Mr. Astor's table manners are excellent. And the chief purpose of our diplomatic establishment in the lesser European States is to demonstrate in an international way the existence of table manners in this country."

"HENRY SLADE," says the *Religio-Philosophical Journal*, "has had fine success in this city [Chicago] the past week, and the affable clerks at the Crawford House have been kept busy by those calling to see him. Mr. Slade is so well pleased with the intelligent spirit of investigation he finds here that he promises to return in September, and thinks strongly of remaining during the winter. On Sunday last, he gave a running sketch of his life to an audience which filled every seat in Martine's Hall. He spoke for over two hours, and we are informed by many who were present that the interest was very great." Mr. Slade's "fine success" at Chicago followed immediately after his exposure and confession of fraud at Belleville, Ont.

REV. JAMES FREEMAN CLARKE, who, as mentioned in another column, has been so stirred by the beauty and majesty of the Roman Catholic churches of Paris, would have felt himself even more sublimely stirred in the vast pagan temple of Diana of the Ephesians, or that of the celestial Venus at Carthage, or that of Jupiter Olympus at Elis. In those temples, he would have found vaster "proportions and lovelier details" of architecture and art, and mightier throngs of devout worshippers kneeling in their perfumed "atmosphere of worship," while a hundred altars exhaled the steam of frankincense, and gorgeous processions, in lovely vestments, of youths and maidens, deployed in their precincts. For, in truth, the pomp of Roman Catholic worship is but a poor and tawdry imitation of the old pagan cults, and Roman Catholic churches are but poor imitations of the old Ionian and Doric temples. For the genius that reared these latter edifices perished with the old Hellenic race, and will never be known again on earth. Meantime, Romanism is a lineal daughter of the old Hellenic and Roman paganism, and exhibits the pomp of the latter to the extent of its ability.

THE IMMORTAL LIFE.

By JOHN WEISS

12mo. 255 pp., with Heliotype Portrait of the Author. Price

Mr. Weiss' great argument for a future existence is the nature of man's personality. The argument proceeds with a convincing power before which the tendency to disbelieve immortality, but which maintains that science, as yet, assumes that persons apprehend the claim, gives a negative decision to the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

M. L. SANDERS,
DELAVAN, ILL.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

NOW READY:

The Gospel of Law.

Discourses on Fundamental Church Doctrines,

By S. J. STEWART.

These discourses, delivered in Bangor, Me., include discussions of the Bible, Miracles, God, Jesus, Prayer, the Devil, Sin and Atonement, Hell and Salvation, Predestination and Scientific Necessity, Morality, Immortality, etc.

12mo. 324 pages. Cloth. $1.25.

For sale at THE INDEX office.

AGNOSTICISM AND RELIGION.

By W. H. SPENCER. For sale at this office. Price 5 cents.

PRIVATE SCHOOL FOR TEN BOYS,

In Northboro, Mass., opens September 13.

TEN thousand people attended the Spiritualist camp-meeting at Lake Pleasant, Mass., last Sunday.

THE rapidity with which Darwin's views have found acceptance among scientific men is, said George Ripley, "without a parallel in the history of knowledge."

PROF. GOLDWIN SMITH, on seconding a vote of thanks to Lord Reay for his address to the Coöperative Congress in the Sheldonian Theatre, Oxford, May 29, 1882, said: "England has escaped, as Lord Reay said in his address, in some measure, from the severe friction, and worse than friction, of the industrial movement in other countries. She owes that exemption, no doubt, to very various causes,—to the good sense and sterling character of her workingmen, and to the generally liberal character of her institutions [hear! hear!]; but she owes it, among other causes, to this,—that the movement has had far better leaders here than it has had elsewhere. [Hear! hear!] It has been led by men like Mr. Holyoake [applause], who were not self-seekers, who were not demagogues, who had nothing at heart but the real interest of the working class, and who, when conflicts arose between employers and employés, were not for interminable war, to their own profit, but for peace, with justice."

THE *Scientific American* concludes an article on the display of auroral light on the night of August 4th as follows: "The cause of these auroral outbursts is a question of universal interest. The sun is now passing through the maximum period of sun spots, and a condition of great disturbance agitates his fiery mass. It is generally believed that sun spots and aurora bear to each other the relation of cause and effect. No human being has ever yet found out why a storm in the sun is followed by a display of auroral light in our atmosphere. Nothing in modern astronomy is more desired than a solution of the mysterious relation existing between the sun and his family of worlds. For, doubtless, when our skies are illumined with auroral light, every planet in the system responds to the same all-pervading power. No one knows how many centuries of observation must pass before the key is found to solve the mystery. But, in some unexpected hour, light will break forth from the darkness, and the secret of the sun's physical structure will be comprehended."

THE Boston *Sunday Budget* urges the following considerations in favor of cremation: "It is less repulsive than burial to any one with the smallest smattering of chemical or physiological knowledge, and absolutely harmless to the living, which the most ignorant person knows that burial is not. Furthermore, its general adoption would put an end to the disgusting quarrels which too often take place over plots of ground, sacred to the dead but coveted by the living on account of their value to trade; for each family may be the custodian of its own ancestor's remains if it choose, and, even if the ashes should be deposited in some public receptacle, their removal could cause no ill-feeling, since it would not be attended by any of those sickening incidents which cause the least sentimental of men to revolt against changing a body's place of sepulture. The prejudice of the vulgar against cremation is naturally stronger than that of the sentimental, and seems to rest on a vague impression that Omnipotence may not at the general resurrection be quite equal to reuniting atoms separated by rapid combustion, although slow combustion under ground offers no obstacles to miraculous power. This belief will outlast every other prejudice; but it will probably give way at last, and cremation will be the prevalent method of disposing of the dead among civilized nations."

REV. N. H. CHAMBERLIN, on the 13th, preached a sermon in St. John's Episcopal Church, East Boston, on "Christianity and Ralph Waldo Emerson," in which he said: "Mr. Emerson was not a Christian, and did not claim to be a Christian. He definitely rejected, for reasons which he set forth, historical Christianity as a solecism and an error. Some loose talkers have called him a Christian; but, if he is to be admitted to the Christian fold, Christianity might as well commit suicide. If Mr. Emerson can say there is no need of Jesus Christ and still be a Christian, Christianity is logically dead. Mr. Emerson exhibits a peculiar case of casuistry in character. His character was so pure and untainted that it seemed he must be a Christian; but Socrates, Epictetus, and Marcus Aurelius were pure men without being Christians. God has his altar in the heart of every man, which teaches the man to seek him even in the dark. But men are named from the leader they acknowledge and follow,—Kantians from Kant, Hegelians from Hegel, Christians from Christ. Mr. Emerson did not follow Christ more than he did other great and good men. He had Christianity in his blood, silently influencing and sustaining him, as all men have who live in a Christian country; but Christ was not acknowledged as his leader and God. Mr. Emerson was a pantheist; and pantheism takes the soul from Christianity, and takes personality from immortality."

THE question, "Are the poor growing poorer?" receives important light from some statistical references in an article by Hon. Carroll D. Wright in the July *Princeton Review*. The wage-receivers, he says, are now asking whether they are being paid the proper proportion of the results of production, the fact being that the cost of living has advanced and is advancing at a more rapid rate than the rate of wages. Strikes are symptomatic of this fact. For example, the average increase of wages from 1878 to 1881–82, in a large number of industries, was six and nine-tenths per cent., while the cost of the means of living has increased twenty-one and two-tenths per cent. From 1860 to 1878, wages, indeed, increased in a higher ratio than the cost of living; and the increase for the entire period 1860 to 1881–82 is found to be thirty-one and two-tenths per cent. in wages and forty-one and three-tenths in prices of necessaries of living. "That is, between 1860 and 1881, the workingman has suffered a reduction of ten per cent. in the purchasing power of his wages, and this between a dead-level year and one of general prosperity." Still, Mr. Wright regards this as a temporary state of things, and looks for truer conditions in the near future. Prof. J. E. Thorold Rogers, in his *History of Agriculture and Prices in England*, of which the third and fourth volumes have recently appeared, does not draw very cheering conclusions from the mass of data which he has so laboriously gathered. A passage quoted in a recent *Nation* is worth reproducing here: "They [*i. e.*, the conclusions] are stated in the briefest possible form, when I refer to the fact that, while the rise, during the last forty-two years of the period before me [1540–1582], in the price of provisions, was two and seventy-one hundredths, the prices of the previous one hundred and forty years being taken as unity, the rise in the price of labor and of objects whose main value depended upon labor was only one and sixty-four hundredths. These figures concentrate the results derivable from an analysis of facts. . . . They tell of the long cloud which was coming over the old sunshine of labor, and show how it was that the mass of the people was about to exchange a condition of comparative opulence and comfort for penury and misery, unhappily prolonged for centuries. From the Reformation [under Cromwell] till the Revolution [1688], the condition of the English laborer grew darker and darker. From the Revolution to the outbreak of the war of American Independence, his lot was a little lightened, but only by the plenty of the seasons and the warmth of the sun. From the war of American Independence to the repeal of the Corn Laws, it was at its very worst." Very pertinently does the *Nation* reviewer say: "It is one thing for an agitator to make such statements: it is quite another when they are given as the result of scholarly and temperate research. It shows us that there does exist a social question."

HUMAN SOCIETY AND ITS CLASSES.

In his Epistle to the Romans, the Apostle Paul said, "We are every one members one of another." About the same time, Paul's Roman contemporary, the philosopher Seneca, wrote: "We are members of one great body; nature has made us kindred, . . . and implanted in us mutual love." And in the same Rome, a number of years before, Cicero had said, "It is the duty of mankind to love the members of society as themselves." Sentences like these are found in all the great religions. Investigations in social science are disclosing the fact that the significance of them applies not only to the members of society individually, but to the relation between the different classes of society. The classes of society, to a certain extent, are necessary to each other; and, therefore, each of them is *vitally*, and hence should be *morally*, interested in the well-being of all the others. It is not necessary to the perfection of society, or to a just equilibrium of rights, that all people should be at the same level of material possessions or of mental capacity or of practical power. It would be a positive detriment, if all mankind were of one physical or mental type, if all were exactly fitted to the same kind of work, and all had desires to achieve the same things. Nature, in all her processes of evolution and growth, seeks differentiation, variety. This is the very essence of the creative and world-building tendency in her processes,—from one to many, from singleness of germ to manifoldness of product. And the future strength of the human race depends, very essentially, on the present varieties of type, of talent, of national stock and temperament of which the race consists, and each of which is to make its special contribution to the coming humanity. None is to be sacrificed, not even the poorest and lowest; while each is to be lifted up and benefited by the common progress of all.

Two very serious mistakes have been made on this point with regard to human progress. One has been specially the mistake of past times. It is the idea that the most enlightened and wealthy and capable classes of society can go on in their own way, follow their own desires and pursuits, achieve their own cultivated aims, and govern the human world by the force of their own superior talent and power, regardless of the great mass of mankind around them. The other is a mistake that is showing itself conspicuously in our own time. It is the notion that all classes of society should be reduced to the same level of material possessions and conditions, and, so far as material possessions are a source of power, to consequent equality of practical power. The first is the mistake of the extreme aristocratic orders of societies; the second, the mistake of the extreme democratic or communistic classes. Both mistakes are alike detrimental to the genuine interests of human progress. The one overlooks or wilfully puts out of sight the welfare of society as a whole: the other disregards the necessary individuality and variety of the parts.

With regard to the first, the principles of social science make it clear that humanity is not to be elevated and improved by an exclusive refining culture at the top. The culture, the educating and uplifting influence, must extend all through the social strata, down to the very base, where humanity still rests, like a heavy, inert mass, on the soil to which it still feels its kindred: else is there no security that the top of the social pyramid will stand to greet the skies. The whole race is so linked together by the necessary conditions of its existence, by the laws of physical and mental heredity, and by the mutual contact and interdependence of class with class, that no part of it can go on in genuine advancement and leave the rest helplessly and hopelessly behind. Social science even asserts that a too select intermarriage among a few families that might be considered at the very topmost point of cultivated intelligence enfeebles both mental and moral power, so strong is nature's intent to carry along the whole race toward perfection. Beyond a certain point, her subtile forces refuse to be employed for the exclusive aggrandizement of the few. They become barren.

On the other hand, the principles of social science make it equally clear that what is needed for the safe and fair structure of society is the very variety of type and ability and temperament and skill which different classes and individuals present. Society thus becomes a complex organism, each organ fitted for and achieving a distinct task; and, hence, the whole range of manifested power, mental, moral, physical, becomes immensely greater than would be the case if any one class, even the generally so-called highest, existed by itself. And society is most healthy and progressive when of these, its various members, each stands robustly and persistently for its own aim, and does at that point the best work possible. The advancement of mankind does not depend on the equalization of conditions, material or mental, or on the levelling of capacities and tasks to one standard; but it depends on the just recognition of equality of rights among all classes and on the faithful discharge of the duties that devolve upon each.

WM. J. POTTER.

THE CHINESE QUESTION.

I.

Having had the good fortune to be in California during the excitement attending the passage of the Chinese bill through Congress, I have availed myself of every opportunity to obtain what information I could on this subject. It is one of the greatest moral questions which has entered into practical politics since the settlement of the slavery question; and I am constantly reminded of the days before the war by the vehemence of discussion in regard to it, and by the influence which prejudice or interest exerts upon men's principles and theories. Like the defenders of slavery, the opponents of Chinese immigration are driven to acknowledge that the Golden Rule and the Declaration of Independence are against them; and they fall back upon the duty of caring first for ourselves, and they stigmatize the action of their opponents as sentimentality and regard for the rights of other races in preference to our own.

The sectional aspect of the question is lamentable. California newspapers publish violent articles upon Eastern views, endeavoring to show that it is not the broad principle of justice which animates the opponents of the bill, but merely the interest of the railroad contractor and manufacturer in opposition to that of the agricultural laborers and ranchmen of California.

All this is greatly to be deplored; but it should not blind our eyes to the real questions involved, for these are of the greatest importance. I shall not discuss the merits of the bill, which is already passed. Having become a law, its effect will be best seen in its workings; and a little time will show whether it is a blessing or a curse to California.

Almost every person who talks on the subject gives different reasons for objecting to the Chinese.

First, is the cooley arrangement. The six companies engage the Chinese to come over here as laborers, and pay their passages, which they are to be repaid by their labor. Until the debt due to the company is paid, the Chinaman is virtually its slave; and he is under the control of his company, and owes allegiance to it rather than to the government. Each company has so much *esprit de corps* that the members will go long distances to trade with others of their company, and all social matters are regulated with reference to it. I have not heard that the companies abuse this power by cruelty to the Chinese; but this custom certainly prevents them from becoming free agents, and does not fit them to take an intelligent part in American life. Railroad managers, factory superintendents, etc., engage their hands from the companies, and the wages are paid to them.

The United States law condemns such engagements, and the companies could not recover the money advanced for their passage; but, as the Chinaman expects to return home, he cares more for the law there than here, and does not dare to break his engagement.

But the most general complaint is that the Chinaman works cheaper than the white man wants to; and, hence, he keeps down the price of labor and prevents the immigration of the whites. The Chinaman "wants but little here below." He works steadily all day long, even far into the night. His dress is cheap, his luxuries are few. He lives mostly on rice and vegetables, with a little pork and shell-fish; and he requires the smallest place to sleep in of any human being. He rarely gets drunk. His only expensive vices are gambling, smoking cigarettes, and the opium carouse. The general verdict is that the Chinaman is a faithful, industrious workman. Even of those who oppose the continued immigration, almost all say, "We could not spare those who are here." They are engaged in nearly every occupation. The shoe trade is largely in their hands. They raise the vegetables, supplying families at so much a week, cheaper than a householder can produce them from his own land. They do the work in families and hotels, as cooks, chambermaids, and waiters. Of course, they differ in ability; but I have seen excellent work in all these departments, and heard of more. Every settlement has a Chinese laundry, which is their social exchange where they meet to discuss their own affairs. They can wash perfectly well, but they do not by any means always do so. Some employers say that a Chinaman cannot do so much hard work in the field as a white man: others say he can, with the same food, but that his diet is insufficient. I do not believe that, on an average, they equal white men in muscular power. I observe that it usually takes two to carry up a trunk which an Irish porter would throw over his shoulder while he carried another in his hand. Still, they are capable of very hard, persistent labor. It is a common thing for Chinamen to engage in the clearing of land. The owner of a wild tract of land, full of old oak and sycamore stumps, agrees to give the Chinaman the use of that land for two or three years, on condition that he returns it to him thoroughly cleared and fit for cultivation. A party of Chinamen set themselves to work upon it. They grub out every root as big as a hand, which they use for firewood; and, during the short time they hold the land, they get off of it enough to pay them for their labor, and return it to the owner ready for the setting out of a vineyard or orange-grove.

The anti-Chinese men reason that all the money which a Chinaman earns, with a very small deduction for living expenses, goes back to China to be expended there; that even his rice and dried meats are brought thence; and that, therefore, California is impoverished to the extent of all that he earns, and nobody but himself is benefited thereby.

It requires an education in political economy to

Digitized by Google

expose the fallacy of this view; to show that it is not the possession of gold and silver which makes a country rich, but the development of its resources and the increased productiveness of its soil. Every field reclaimed by the Chinaman, and devoted to the raising of barley or wheat or garden vegetables, is an addition to the wealth of the country: it makes the necessaries of life more abundant and more cheap, entirely apart from the question of what he does with the money which is paid him for it. The money paid to him is only a representative of the benefit he has produced: he may take the representative elsewhere, but the actual thing remains. The railroads which the Chinamen have built will make it possible for the German and the Irishman to come to California, and take their part in its development. As an actual fact, wages in California, if lower than they were in the days of gold excitement, are not so low as in other parts of the country; and, from all classes of employers, you hear the cry of the scarcity of labor and the difficulty of carrying on various industries for the want of it. That the laborer is not down-trodden and despised is evident by the independence of speech and manner characterizing him. The expression "if you please" is said to be quite as necessary in addressing a ploughman as Sir Joseph Porter, K.C.B., thought it should be to a British sailor; and the washerwoman is styled a lady, and the stage-driver a gentleman.

But what is the effect of the Chinaman's dollar or million dollars which he has earned by doing this work, which is imperatively demanded here, and which it is claimed that he sends home to China? If he spends it in China, it has the effect, as far as it goes, of stimulating business there. His wife and children demand more or better food, raiment, and education. Either prices are raised or production is increased: in either case, how does it hurt us? If the Chinaman is better off at home than before, because of this renewed activity, he will be less a rival to our laborer, since he will find more advantage in remaining in China. If he has acquired a knowledge of American manufactures and productions, and prefers them to those of China, he will become a purchaser. The only effect of his taking his money away with him would be to diminish the amount of coin in this country, and so raise its purchasing power. But, by his work in this country in actual mining, he has brought out of the earth gold and silver enough to keep the amount of bullion equal to the demand. I was told at the United States Mint that a very large proportion of all the ores brought there directly for assay and coinage was brought by Chinamen; and, moreover, that they had very large sums of money on deposit, which they did not take to China, probably considering them safer here.

Another class of persons tell you that the Chinaman is smarter and more intelligent than the white laborer; and, therefore, his competition is to be dreaded, as he will live, also, on a much smaller amount than the white laborer can. Where there are industry and economy on the one hand, and idleness and extravagance on the other, we can hardly prevent the former from gaining the day; but it is hard to admit that a Chinaman, with all the odds of language against him and with a heavy debt to pay for his passage, can get the advantage of a sober, industrious white man; and no others deserve success. Yet this idea of competition of labor is one that has great power over those who find it hard to win success in life; and it is said to be mainly the foreign population from Germany and Ireland, themselves engaged in the grand struggle for existence on a foreign soil, who oppose the Chinese laborer most bitterly. But all classes join in this cry. It is the same difficulty as that which occurs from improvements in labor-saving machinery, which does throw men out of employ for a time, but which increases production, and so cheapens the blessings of life to a poor man in the final result.

Others, again, say that the Chinaman is a curse to California by keeping out other immigration, such as that of the Irish, Germans, and Swedes.

But there is still an insufficient supply of labor in the States lying nearer to Europe; and it could therefore be only by paying an extra price for labor, covering the added cost of the journey to California, that European labor could be secured. An additional land passage of three thousand miles is a great item to be considered in transporting emigrants. The Chinaman keeps out the other laborer only in a fair competition by doing the work needed better or cheaper than others can and will.

There is much complaint of the employment of Chinese in household labor in California, and patriotic housekeepers are urged to supply their places with Irish or German servants. But every one knows the difficulty of procuring these, even in the great centres of population like Boston or New York. How, then, can the distant States of Oregon and California be supplied?*

But there are deeper questions than those of material advantages to be considered.

It is asserted that the Chinaman comes to this country without wife and children, and has no intention of becoming a citizen, not even leaving his dead body here, but fully determined to return to his old home. Hence, they are never citizens taking an interest in the welfare of the country, but merely pilgrims and sojourners. When we remember that the Chinese number fifty thousand in San Francisco, and perhaps a hundred and fifty thousand in the State, this would be no inconsiderable body, if they were banded together in hostility to our government or institutions.

But they are not, and nothing will make them so but violent and cruel persecution. A patient, industrious, law-abiding people whose religion is work, they are yet quite capable of organizing revolution, as their history abundantly shows; and they are apt at organizing societies for improvement and self-protection. Those who object to the Chinese because they do not remain permanently in this country still declare that they never shall be naturalized here, and that their ever being voters is quite out of the question.† What will they have? Shall this body of men remain outlaws from our free representative government, yet having the stake of wife and family and home in the country? No more dangerous position could be found for them and for us. While he considers himself only a visitor, he is not concerned in our affairs; and, if he is unsuccessful or even ill-treated, he may turn his face homeward again. But, if he has bought land and builded a home, and buried his dead, and brought forth children here, then he and his children will feel that they have rights here, and only a participation in the government can secure them. In a free government, a disfranchised class is always a dangerous class. How much more so, when it is a strong, compact body of one race, of able-bodied, middle-aged men, intelligent and educated, who have taken part in the government of their own country, perchance even in its revolutions! The Chinaman thinks himself fully the equal, if not the superior, of every other nation; and he will not tamely submit to injustice and wrong, when he knows his own strength.

There is no middle course for our country. We must have universal suffrage, and justice can make it safe. Treating every man of whatever race as an individual, he will stand in that relation to the government, and will be only individually dangerous; but if, by race prejudice and proscriptive laws, any class is obliged to protect itself by union, it has the power of union to endanger the common weal.

E. D. CHENEY.

*It is instructive to consider the proportion of immigrants of different nations. The Chinese immigration is only about one-twentieth of the whole arrivals in the United States. The Germans, Irish, English, and Canadians each come in greater number. Scattered over the whole country, therefore, their numbers would be insignificant. It is only the natural advantage of proximity which takes them to California instead of the German and Irishman.

†A Chinaman has lately been refused naturalization in our courts in Boston, the judge interpreting the new law as forbidding it.

ARE AGNOSTICS ASCETICS?

Mr. T. W. Higginson says they are, in his "Modern Asceticism," in *The Index* for August 17; but this seems to me, who am one of them, rather too complimentary. Mr. Higginson gives two definitions of asceticism: one is "needless self-denial," which, as Mr. Underwood shows in the same number, has no application to men and women for whom it is not needless, but strictly necessary and obligatory, to believe what they find to be true, and nothing more or less. There is no "needless asceticism" in agnosticism. Probably the definition Mr. Higginson really has in view is given when he says, "Renunciation of what might make us happy is asceticism." Mr. Higginson thinks that agnostics do actually make such a renunciation; and here he agrees with Mallock, Dr. Bartol, and most other opponents of agnosticism. May I venture to ask about the facts? Is it true that agnostics renounce views that would make them happy? This is a question which, it seems to me, is still to be answered. I should like myself to know whether agnostics have actually been less happy than other people. I want to hear what they say for themselves, and how they appear to their friends. Mr. Higginson has known agnostics to express envy of believers in immortality after the loss of a mother or child. But do any religious or philosophical views prove perfectly satisfactory at such a time? One of the most famous living writers, from Mr. Higginson's own standpoint,—J. R. Lowell,—says, in "After the Burial,"

> "But not all the preaching since Adam
> Has made death other than death."

Still, I am glad of Mr. Higginson's testimony; but I think there is need of still more before the question can be considered settled. Much can be learned from the lives and letters of noted agnostics and other unbelievers. Let me give some specimens of what I want to see in *The Index*. Just before Buckle's death, he said to Mr. Glennie, "I have spent fourteen years of uninterrupted happiness, which, I imagine, few people can boast of" (*Life and Writings of H. T. Buckle*, by Huth, p. 450, American edition). Harriet Martineau, whom we may call the first agnostic in England, spoke of her state of mind after becoming so: "It dissolved all false relations, and confirmed all true ones. At no time of her life was she more occupied, more prosperous, so cheered by sympathy, or so thoroughly happy" (*Autographic Memoir*, written by her for publication, after her death, in the *Daily News*, and printed in her *Autobiography*, etc., vol. ii., p. 572, American edition).

"My last days are cheered by the sense of how much better my later years have been than the earlier, or than in the earlier I ever could have anticipated. Some of the terrible faults of my character, which religion failed to ameliorate, and

Digitized by Google

others which superstition bred in me, have given way, more or less, since I attained a truer point of view; and the relief from old burdens, the uprising of new satisfactions, and the opening of new clearness,—the fresh air of nature, in short, after imprisonment in the ghost-peopled cavern of superstition,—have been as favorable to my moral nature as to intellectual progress and general enjoyment" (*Autobiography*, vol. ii., pp. 106, 107). "At past forty years of age, I began to relish life without drawbacks; and for ten years I have been vividly conscious of its delights" (*Autobiography*, vol. i., p. 483).

Thus, Miss Martineau declares that the great happiness of life came to her after she gave up all religion, and as a result. I may also refer to the praise given by Lucretius, who was thoroughly acquainted with the influence of Epicureanism, to the founder of this form of unbelief, as the greatest benefactor of man, as well as to the letter which Epicurus himself wrote as he was dying, to tell how he was consoled in his last illness by thinking of the truth he had taught.

It may seem presumptuous to add testimony from inferior sources; but I must say that the twenty or thirty agnostics and unbelievers whom I have known intimately are, on the whole, a more cheerful and happy set of people than my other friends. And the importance of the subject will, I hope, excuse my saying what is still more personal. In childhood, I was a Unitarian. I soon came to hold the form of philosophy of which Mr. Higginson is one of the best representatives among us, and about ten years ago I became an agnostic. I am sure that in taking this last step I made no renunciation of happiness. I believe that I should make one, if I were to go back to my former views or adopt any form of belief in immortality. Of course, I should resign myself to whatever view I might find true, and should find some pleasure in thinking I had made progress. Irrespective of such considerations, I should really be sorry to have to adopt any theory of existence after death. To me, it would be bartering realities for shadows. I know the reality of this life, as I could not with my former views; and, in this knowledge, I am very happy.

I hope it will not inconvenience Mr. Higginson to give some explanation of such statements of his about agnostics as: "Let us take two sacrifices which many of them feel bound in consistency to make,—that of the belief in personal immortality and that of the theory of mutual benevolence." "So the modern scientific school has found out a new word for unselfishness,—altruism; but I do not see that their extreme representatives leave any place for anybody to practise it. To them, what they contemptuously call 'the Christian philosophy of the obligation of the strong toward the weak' is the mere survival of a pitiable weakness," etc. I should be greatly obliged to Mr. Higginson for mentioning the agnostic author whom he quoted in the passage just given, and for stating who the others are who leave no place for benevolence. I ask for information. I thought I knew something about the great teachers of my own views. Here seems to be a whole company of authors I have never met with or heard of. I know that Comte, who, more than any one else, may be called the founder of agnosticism, made all morality consist in living for others, and that Harrison, Clifford, and Fiske take nearly the same view. I know that J. S. Mill is famous for his teaching of disinterestedness, and that Harriet Martineau certainly encouraged it. So, on the whole, does Herbert Spencer, who has made some limitations of this duty, but yet lays great stress on mutual benevolence. Perhaps some agnostics deny their obligation to help others, but I should like to know what there is in agnosticism to cause such a denial. I thought all agnostics believed in benevolence. Mr. Higginson has apparently met some who do not, but I cannot see why he should call them more consistent than the philanthropists among us. Let me add that, since becoming an agnostic, I have been able to see more clearly than I ever could before how firmly benevolence, like the other moral duties, rests on the essential facts of human nature and the necessary relations between man and man. Morality has its own foundation, independent of all theology or metaphysics. If there is any one who does not see this, he would do well to study the authors just mentioned. I have no wish for personal controversy. All I want is to bring out the facts. Mr. Higginson has contributed some, but there is room for more.

F. M. HOLLAND.

DR. JAMES' DEFENCE OF FAITH.

The article on "Rationality, Activity, and Faith," in the July *Princeton Review*, is a somewhat singular mixture of scepticism and faith. It is the sequel to one on "The Sentiment of Rationality" in *Mind*, which sought to exhibit the failure of the purely logical function in philosophizing, the present aim being to indicate another criterion of philosophical truth; namely, "the æsthetic constitution of our *practical* nature." Few philosophers have allowed that so little can be accomplished by the speculative action of the mind, and few have trusted to so great a return from our practical instincts and interests. To the writer of this notice, Dr. James has retired from a purely speculative attack upon the problems of existence after too little fighting, and seems to overlook or underrate the importance of his own earlier and convincing statements of idealistic doctrine. Surely, if idealism is a "reductive" for materialism, as he has asserted in purely critical discussion, spiritual and material views of things cannot be put on a par as to logical worth. In itself, however, and apart from too ambitious uses, his defence of the method of faith is sound, acutely and even brilliantly made, called for at the present time in the interests of discriminating philosophical as well as ethical thought. For I do not take Dr. James too seriously in his modest avowal that it is a purely psychological inquiry he is instituting. I do not presume in saying that he himself reveals more than a psychological interest in the problems he discusses. His paper is, indeed, one of the few original contributions to the philosophy as well as the psychology of ethics which American writers have made.

In form, however, the inquiry is matter of fact; that is, as to the practical needs which actually do more or less determine us (and, as Dr. James seems to think, wholly) in fixing upon an answer to our philosophical questionings. These needs are three in number: (1) *expectancy* must be determined, in which connection he puts the doctrine of substance in a new light to at least one reader; (2) *powers*, active and emotional, must be called forth, our dearest desires and most cherished powers must not be baffled nor our active propensities contradicted by being allowed no object against which to press; and (3) the faculty of faith or unconstrained belief must not be violated. A value lying on the surface of the paper is the warning it cannot help giving to those readers who are interested in the "Religion of the Future," that their concern embrace and provide for the whole of man's nature, and particularly that they do not leave out of account certain of its "unmapped" portions.

The main interest is in the discussion of faith. Faith, he says, is belief in something concerning which doubt is still theoretically possible. Its test is willingness to act, and so may again be defined as readiness to act in a cause, the prosperous issue of which is not certified to us in advance. "It is, in fact, the same moral quality which we call courage in practical affairs." Faith he shows to be necessary to science, since the uniformity of nature, including as it does the future as well as the past, in a measure anticipates experience, and so must contain an element not due to experience. Prof. Bain's language is worth requoting: "Our only error is in proposing to give any reason or justification of the postulate, or to treat it otherwise than as begged at the very outset." But, in other instances, science is not inclined to allow the legitimacy of faith; and Clifford, in his *Ethics of Belief*, calls it "guilt and sin" to believe even the truth without "scientific evidence." Dr. James, in turn, cleverly says, "But what is the use of being a genius, unless, with the same *scientific evidence* as other men, one can reach more truth than they?" He even claims that "every philosopher or man of science either, whose initiative counts for anything in the evolution of thought, has taken his stand on a sort of dumb conviction that the truth must lie in one direction rather than another, and a sort of preliminary assurance that *his* notion can be made to work, and has borne his best fruit in trying to make it work. These mental instincts in different men are the spontaneous variations upon which the intellectual struggle for existence is based. The fittest conceptions survive, and with them the names of their champions shining to all futurity." If these are facts, and the history of science and philosophy ought to tell us decisively, they make a strange commentary on Clifford's and other narrow schemes of intellectual ethics.

But Dr. James shows that, in certain spheres, faith is not only a confessor, but a factor; that it may create the very truths on the possibility of which it stakes its existence. The faith, for example, that one *can* make a dangerous leap, may be the very means, *ceteris paribus*, by which he does make it. And similarly with any victory of the good in one's life, or any conquest of justice in society; and why not with the final triumph of the good in the universe itself? The "scientific evidence" cannot come in till after these things are done, and he who will wait for the evidence before he believes and acts will merit a reproach similar to that which Crillon received at the hands of Henry IV.: "Hang yourself, brave Crillon! We fought at Arques, and you were not there." Very keenly does Dr. James deal in this connection with Spencer's supposed new and *objective* criterion for moral conduct, and with the German controversies as to optimism and pessimism.

The radical question of life is now taken up, which is whether this be at bottom a moral or an unmoral universe; and the question is raised, Has the method of faith an application here? The statement which Dr. James gives of absolute morality is remarkable for simplicity and, at the same time, thoroughness. Any single *should* can only be expained by a still deeper *should*, and at no time by a reference to what is matter of fact, since the question may always be raised as to the significance of the facts and their moral right to be. "Like the old woman in the story who described the world as resting on a rock, and then explained that rock to be supported by another rock, and finally, when pushed with questions, said it was 'rocks all the way down,' he who believes this to be a radically moral universe must hold the moral order to rest either on an absolute and ultimate *should* or on a series of '*shoulds*' 'all the way down.'" Such language is refreshing. And Dr.

Digitized by Google

James points out the practical difference between the opposing moral views. One who acknowledges no final sacredness in the *ought* may tone down the sensitiveness of his feelings, when facts are at war with them. The absolute moralist, however, has no such recourse; and his peace and quietness of mind must come, if they come at all, by other means. "Resistance then, poverty, martyrdom, if need be, tragedy, in a word,—such are the solemn feasts of his inward faith."

Can there be a verification of this view of the absoluteness of morality? In the ordinary sense of verification, plainly not, since the hypothesis is not here as to matters of fact, but as to *what ought to be*, and can only receive fresh statement or be greeted with new confidence or find confirmation in the conviction of others. More loosely, however, there may be said to be a verification,—if the course of our experience throws in our way nothing that leads us to doubt the hypothesis,—if we meet rather what the nature of the hypothesis leads us to look for, Dr. James explains that the experience of the individual is insufficient, "the experience of the entire human race must make the verification." Just what kind of experience the terms of the hypothesis would suggest he does not state, nor am I able to conceive of any other than that of the success of the good cause which we believe in. If it succeeds, the natural feeling is that the system of things is not opposed to us, but favors us; and, if it fails, that there is some secret indifference or hostility to us. But a difficulty arises. Suppose that even at the end of history the cause of justice should not triumph, that, as Christianity has sometimes taught, the good and evil go on warring till the very last, or that injustice should have decidedly the upper hand, would one's faith that *justice ought to be* have logically to succumb? I think not. It would still be possible to recognize the meaning and the sacredness of justice, though our own race had failed in the task of realizing it, and to think that it might summon other races and planets with whom the event might be more in consonance with the ideal demands. It might be that it was

"We and not the world that failed,"

that not one particle of support would be given to pessimism, the real cause being that our efforts were not strong enough or were made by too small a number and these not united, and not that there was any lack of sanctity in the cause or of sympathy in the nature of things. And, on the other hand, should the triumph be perfect, the pure phenomenalist might account for it altogether by phenomenal causes, refusing to allow any influence to the invisible nature of things, or any authority to abstract ideas save that which human will or convention gives them. I am unable to see how any experience whether of the individual or the race can settle in one way or another so ultimate a question as the authority of the just and the good. One person may say, "Though He slay me, yet will I trust Him," another may own no unseen ties, though every effort of his wins its end.

It is true that hope and faith belong to a generous nature, hope and faith for this world as well as any other. But, when we are not so fortunate as to have these by a grace of nature, and in the times of uncertainty and gloom which are liable to come now and then to well-nigh every good man, unspeakable is the importance of the recognition that justice is all independent of our belief in it or of the sanctions or successes it may win or fail to win in this realm of sensible things. Dr. James says, Let us choose the good. All in vain, I am tempted to add, unless it first chooses us, unless it is all above our desires or wishes or subjective interests of any sort, a command of the rational nature of things. Duty is not what I want or wish or crave, though happy am I, if this be the case,—but what *ought* to be. It is a necessity of reason, and not a fact of sensibility. Here is the significance of Kant's treatment of conscience as practical reason. Any other than a rational foundation is uncertain, or, better, what is certain, necessary, absolute, *is* an assertion of reason, whether it be in the form of speculative truth or of law for conduct. Our desires, our æsthetic nature, our choices, all must submit to this final test: if we put confidence in them, if we use them as evidence for one philosophical view rather than another, it must be because we have rationally estimated them, and have learned that they have a right to be considered.

In a word, we cannot escape the general theoretical questions by any *de facto* choice; and Dr. James seems at times, in a reaction against dogmatism, "scientific" and other, to advocate an intellectual license such as men themselves do not crave. We want to act, but not at random; we want, as he himself says in another connection, a rule for our will, and to feel that something beside our own wish is concerned in the making of it. We want to create, to feel our spontaneous power, but in the execution of tasks that are not altogether of our own designing. We want to know the truth; but most of all that truth which is beyond our power to make or unmake, which is of old, and seems to give us immortality in the thought of it. As we want to do what we ought to do, so we want to believe what we ought to believe. We want the sense of matching a truer and higher in all the serious action of our minds. Not that it is possible to wish for a reign of authority in the old sense, or that it is rational to require to be bound hand and foot with evidence, before forming a belief. But surely there is a mean between these extremes, and, on the other hand, believing without any objective reason whatever, simply because of a kind of superabundance of spirits which must find vent, and will take any rather than none. Something there must be which makes us choose one way rather than another before ever our practical energies can be deeply stirred. Only a chartered, a constrained freedom does great or heroic work in the world. The greatest reformers only feel that they are doing what they must.

But with such qualifications, to which perhaps Dr. James would express no dissent, I must express my entire sympathy with the general drift of his paper. In it, we meet with such subtlety in analyzing motives, such fertility of illustration, such picturesqueness and piquancy of statement, that we are instructed and entertained and charmed all at once, and more than all are nerved with something of the earnestness of his own moral convictions. I must, however, express a passing surprise that he should seem to countenance the popular confusion by classing God and Immortality along with Duty as questions in respect to which "the universe will have no neutrals," and by deprecating "a wise scepticism" as to them. The cause of a fundamentally moral and ideal view of things others, too, may have at heart, *sed non tali auxilio*.

W. M. SALTER.

HERBERT SPENCER is coming to America. It is hoped the clergy will not treat him as they did Profs. Tyndall and Huxley. They may endear religion to many now alienated, by proving by their conduct that religion is not another name for intolerance, that priestly ordination does not paralyze man's love of truth. Their enemy is not the influence of Mr. Spencer, but the moral unbelief of men like old Major Pendennis: "Sir, life, without money and the best society, isn't worth having."—*Unity*.

EDITORIAL NOTES.

THE *Alliance* says, "Society can be improved only by accepting right principles of conduct and life. To familiarize society with such principles has been, and is, the one great object of the Free Religious Association; and, if it does this work faithfully, it is somewhat unjust to charge it with being 'impracticable.'"

LOOK at your tags, and see whether you are in arrears for *The Index*, and, if you are, consider that we need the money which is due us, and that you will confer a favor by remitting without delay. It is time now for many of those who availed themselves of our offer to send the paper six months to trial subscribers for one dollar to renew their subscriptions; and we hope to hear from them soon.

JOHN GILMARY SHEA, LL.D., in an article on "Protestant Churches and Church-goers," in the American *Catholic Quarterly Review* for July, 1882, says: "An ex-Jewish rabbi, Adler, formed a Society for Ethical Culture. It had its Sunday services, but he has recently abandoned it as sterile; it had no good works to show. How could infidelity or negation be fruitful in good works?" This is a specimen of the misreprsentations and falsehoods which we read every week in sectarian papers and periodicals, some of whose writers have a religion apparently of which truthfulness forms no part.

THE following reference to Darwin in connection with this journal we take from the Dunedin (New Zealand) *Echo*:—

> It is said one can be judged by the companions he keeps. This may be said regarding the books one reads. Charles Darwin read *The Index*, perhaps the ablest free-thought paper published in America, and one of the most cultured newspapers published anywhere. He was a subscriber to *The Index* from its first issue; and, on renewing his last subscription, he sent a donation of £25 to the newspaper to help its maintenance. What will the orthodox, who look upon Darwin as not a heretic, say to this?

"ENGLAND IN ECLIPSE" is the title of a brilliant article from the pen of Moncure D. Conway, which we shall print in this journal next week. In the same number, Mary J. Safford, M.D., will present her views in regard to "Faith Cures," and Rowland Conner will have something very readable to say in regard to De Witt Talmage. Week after next, *The Index* will contain a contribution from George Jacob Holyoake, explaining what "Secularism" is and what it is not. Since Mr. Holyoake is the father of "English secularism," considered as a philosophy of life, an exposition of this subject by him will have peculiar interest and value for our readers.

MR. FREDERIC A. HINCKLEY left Boston Monday last to attend the meeting of Liberals to be held at Bismark Grove, Kansas, this month. He goes as a representative of the Free Religious Association. He will stop at Albany, Syracuse, and Chicago by the way, and probably lecture in various places in the West. His address during this month will be at Lawrence, Kansas, care of Mrs. Anna L. Diggs. Mr. Hinckley is an able and earnest representative of the Free Religious movement; and we are confident that he will be well received in Kansas, whose people, we have learned by several visits to the State, are not surpassed in intelligence and liberality by the people of any State of the Union.

"CURIOUS," says an exchange, "at a time when the saintly Darwin is being gushed over in so many pulpits as one who never—no, never—assailed the fundamental truths of Christianity, to stumble upon the following passage in one of his later works: 'No shadow of reason can be assigned for the belief that variations, alike in nature, and

Digitized by Google

the result of the same general laws which have been the groundwork, through natural selection, of the formation of the most perfectly adapted animals in the world, man included, were intentionally and specially guided.' If this is not a direct and unqualified denial of the existence of a personal God, what is?" It is certainly not "a direct and unqualified denial of the existence of a personal God," but it may be safely affirmed that the passage quoted is inconsistent with belief in such a being.

PROF. V. B. DENSLOW, in a letter to us enclosing what appears to be a "cooked" report in regard to the religious belief of convicts in the Joliet penitentiary, which conveys the impression that not a few of the convicts are "infidels," observes: "The questions put to the convicts to bring out such statistics as here cited must have been in effect, In what form of religious faith do you believe? (*i.e.*, as distinguished from other forms of the same Christian or Jewish faith.) To such a question, the answer would be, 'None.' But had the questions been: 1. Do you believe in a God? 2. Do you believe in a future life of rewards and punishments? 3. Do you hope for salvation from the punishment of your sins through a Divine Saviour? I do not believe there are five persons out of the fourteen hundred who would have answered 'no' to either question."

AMONG savages, we have the priest in his primitive state; namely, as Mumbo-Jumbo, issuing out of the desert or forest in fantastic garb to awe his simple flock. He is a rain prophet and a medicine man. He can ward off the all-dreaded thunderstroke. His curse blights the object of it, so that he dwindles and pines away until he perishes. The primitive priest declares this and that thing "taboo," or consecrated; and nobody dares to touch it. Later along, in the primitive civilizations,—such as arose in the great fertile river valleys of the East,—we have the priest full-fledged in gorgeous costume, a magus, magician, or agent of Deity, an anointer of monarchs, dwelling in imposing temples,—the scenes of splendid ritualisms, full of the fragrance of myrrhine incense. At last, science and the inventive faculty have made priestly magic and priestly magic rites, such as the mass, and priestly miraculisms and supernaturalisms ridiculous.

SAYS the Springfield *Republican:* "The Irish celebration of the centenary of their parliamentary independence (which lasted not quite twenty years) was a significant affair, inspired and filled, as it was, with a hope which is growing into confidence of a renewed and more complete independence. "Repeal" was heard in the speeches, the watchword of the great O'Connell, whose statue was unveiled during the day. This is a fitting honor for Dublin to pay, with all Ireland, to the greatest of Irishmen; and the Irish genius of Foley, and the faithful skill of his pupil Brock, have produced a worthy work, it is said. O'Connell was his own master,—something that is not characteristic of Irish leaders. Parnell may well emulate the fame of the great repealer, and build upon his foundation with the materials half a century has accumulated. The exibition of Irish industry (the first that has been exclusively Irish) is still more important than the honor to the dead; for it contains promise and prophecy for the living,—a recognition of the elements of Irish national success."

THE fifth annual conference of the British Secular Union was held recently in Nottingham, England. The Marquis of Queensberry was reëlected president. Ernest Renan and Prof. Pasteur, with their full approval, were elected vice-presidents; and Victor Hugo, by his special request, was made an honorary member. The president, in thanking those present for his reëlection, said that he had lost his seat in the House of Lords for openly expressing his sympathy with secular principles, through an act of great intolerance on the part of the Scotch peers, who had the power of election among themselves. Yet those who had silently acquiesced in his exclusion from the Upper House he declared equally to blame for the injustice done himself and those whose opinions he expressed. Mr. Gladstone could, he said, if he chose, make him an English peer, and thus enable him to take his seat. He had written to Mr. Gladstone and Lord Grenville on the subject, but, from the replies received, was led to understand that nothing could be done "until he went down at the head of processions, with yards of petitions, to get his coat torn off his back, like Mr. Bradlaugh; for Mr. Gladstone told him that the matter had not been pressed upon his notice." Five or six years ago, he had sent a pamphlet of his to one of the bishops,—he believed it was the Archbishop of Canterbury,—on which was written, "From one who hopes some day to be found foremost with the van, fighting to the death against all ignorance and superstition," and signed his name, "Queensberry." If, he said, that day, in accepting the position he had been elected to as president of the British Secular Union, he was placing himself in that van most humbly, even if it was as the leader of a forlorn hope against the still prevalent intolerance and superstition of the day, he would be well satisfied to do so. A paper entitled "Plain Words about Secularism," by George Jacob Holyoake, who, however, was not able to be present, was read by Mr. Robinson.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index.*

THE MYSTERY.

O foreground of impenetrable dark,
Impervious to knowledge or surmise,
Faith, hope, and fear, and aspiration all
Beleaguer evermore thy wall
And at thine ebon portals hark
For intimations, but thou bafflest ears and eyes.

What wonder that Imagination then
To shape and formulate thy mystic gloom
Forever tries?
Like knight of old in some enchanted glen
Or tangled wood, which scarcely mid-day beams illume,
Bent on the rescue of a damsel fair
In hideous thraldom held a captive there.
Amid the leafy maze, he wandered in despair:
His quest was not all hopeless, for a ray
Would glimmer here and there
To light his perilous way.

But us a lampless gloom doth foil;
Our fiercest sallies, baffled, vain recoil;
And so in helplessness we turn again
To revelations old,
The dreams of holy and primeval men
In their fantastic nescience bold.
The solving word had to their ears been told
In fragrant *adytum* of some great fane,
Where awe and silence held perpetual reign;
The Builder of the Universe
Had deigned the secret of creation to rehearse.
Henceforth *Thus saith the Lord* made mystery cease,
When credulous nations seers and sibyls swayed.
Such visions now are vapors of disease;
Madness no more is deemed divine,
That once responses gave from many a gorgeous shrine
With lips of foam, whose ravings states and kings obeyed.

B. W. BALL.

The Index.

BOSTON, AUGUST 24, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

EMERSON AND THEODORE PARKER.

An Address delivered in the Church of the Unity, Cleveland, June 4, 1882.

BY EDWIN D. MEAD.

(*Concluded from last week.*)

But the most precious of the great preacher's sermons were not those which attacked society nor those which attacked the Church, but those in which he lifted his hearers up into the comfort of the mighty faith and trust wherewith he himself was comforted of God, and sent them forth to the duties of life with the divine pledge of victory. "The first time I heard Theodore Parker preach," writes Miss Alcott,—who has passed the torch along in books so full of gospel to so many "little women" and to men as well,—"was a memorable day to me, as such occasions doubtless were to many others who 'came to wonder, and remained to pray.' The sermon was addressed to 'laborious young women," and was full of paternal advice, encouragement, and sympathy; but the prayer that followed went straight to the hearts of those for whom he prayed, not only comforting by its tenderness and strengthening by its brave and cheerful spirit, but showing them where to go for greater help, and how to ask it as simply and confidingly as he did. It was a quiet talk with God, as if long intercourse and much love had made it natural and easy for the son to seek the Father, confessing faults, asking help, and submitting all things to the All Wise and Tender as freely as children bring their little sorrows, hopes, and fears to their mother's knee.

"To one laborious young woman, just setting forth to seek her fortune, that Sunday was the beginning of a new life, that sermon like the scroll given to Christian, that prayer the Godspeed of one who was to her, as to so many, a valiant Great-heart leading pilgrims through Vanity Fair to the Celestial City."

It is this deep, positive religion in Emerson and Parker, this great faith in God and right and the soul, of which I would speak in closing, and with chief emphasis, rather than of any work of theirs against old superstions and in the service of free thought. I suppose there are not many in this congregation who need any more words on old superstitions and free thought, save to brace them to the work of keeping the light shining in the dark places. I suppose that most of us are already rationalized almost to death; and the everlasting onslaught on the creeds, necessary as it is no doubt, is pretty wearisome to some of us, like the crackling of thorns under the pot. We have quite as much light already as we can manage well, and what we pray for now is more sweetness and very much more disposition to do something. Not that I would minimize, of course, the great offices of Emerson and Parker in the work of theological enlightenment, nor our own duties in the same direction. How great those offices were is best attested

Digitized by Google

by the public sentiment which they created, able to recognize and love the truth they taught, and condemning, in every enlightened place, the treatment which the public sentiment of thirty years ago indorsed. It is attested by the greater liberality in every church in the land that stands on the line of railroad. It is attested by the decay everywhere of the belief in the old doctrines of infallible books, mechanical creation, and eternal damnation. It is attested by the inaugurals of theological professors, declaring that miracle cannot longer be appealed to as the test of truth, and by the clear perception of every thoughtful student in the schools that that is not the worthy conception of God's universe which finds best evidence of the divine in prophets riding in chariots of fire or in great fishes, in the stoppage of the sun and moon to facilitate slaughter, or in strange legerdemain with loaves and fishes, but that which knows that the highest freedom works by perfect law, and sees in the procession of the stars, in every dewdrop and in every flower, and most in every human soul, the working of the present God. Our duties in the matter appear wherever these old doctrines still have power, and men still endeavor to put covers on God's Bible, to limit God's action to certain sections of the map, and to consign any soul of man to hopeless hell. While I have been in your beautiful city, one of your leading preachers has been preaching much upon damnation, and I read his sermons in your newspapers; and I found one long sermon taken up with saying in many ways that men must go to everlasting punishment, because, forsooth, Jesus once used the Greek word *aionios*, and *aionios* has such and such shades of meaning.* It happens in this case, of course, as most of you know, and as the Doctor of Divinity certainly ought to have known, that Jesus never spoke a word of Greek, but some Aramaic dialect; that we have no original word of his, but only translations, made, as men remembered, fifty years after the utterance. But pass this. Wherever men are found engaged in the bad business, however conscientious, of defending bad doctrines by the bad method of an appeal to some external and prescriptive authority, there we must still lift up the battle-flag of Emerson and Parker, and cry, Turn on the lights!

It is not so much from over-belief, however, that the interests of religion are endangered to-day, as from under-belief and a withering of spiritual life in the atmosphere of a mechanical philosophy and ethics. The death-blow has been given to superstition. There are always men, of course, who never know that the sun has risen until it is noon; and superstition will yet stagger on for a miserable distance before its final fall. But it is already ghastly from loss of blood, and there is no loveliness in it more that men should desire it. But in the breaking up of the old religious sanctions, and the extension of the realm of law to regions where, before, men saw nothing but arbitrariness and impulse, God has seemed to many to be pushed so far away that he has been discounted altogether, and a mechanism running rapidly to a dread fatalism has seemed to leave no place for the idea of freedom, and to grind up the soul. Tired of the false, fantastic Jesus-worship of the churches, many manly men have come to listen more gladly to the words of almost any other of God's sons than to the words of Jesus, and to be found with almost any other name upon their lips rather than his, lest the merest honor to the name should confound them with the sickening idolatry. "Let me never hear that man's name again," said the weary old Voltaire to the priests, when they talked to him of Jesus after their manner; and no man of rugged, Puritan sincerity but who, turning from much of the mawkish language of the prayer-meeting and the tract society, can understand this feeling of the old iconoclast. So the loquacious and fulsome discipleship of a thin unintelligence makes us tire some days of the names of Bach and Wagner and Turner, of Washington even, of Carlyle and of Emerson himself. Tired of the superstitions, too, which have centred round the Bible, many have put their Bible on the upper shelf and thought they got more inspiration from Confucius and the Brahmins, from the new poem or new novel, or from the newspaper, than from the Psalms of David or Isaiah's prophecies, the gospel of Christ or the letters of Paul. Tired of the sluggish, unproductive dreaming of "a happy land far, far away," they have said: Enough of this! Here is work to be done, here are wrongs to be righted, here are men with no chance, here is the devil's work done in God's name. Don't sing to us of heaven: we have only time and strength to work for a new earth. And so the doctrine of the soul has suffered; and to deny immortality is thought to be heroic, and, indeed, almost becomes so. It is more unselfish, they say, to work nobly, knowing there is no hereafter to reward us and that we shall not see the fruition.

Great is the nobleness in this all. Greatly nobler, said Parker, is the doubt of the man than the creed of the fool, greatly nobler often the atheist's law than the churchman's God; sublime witness, too, to the fact that the soul will not be chained. Men hate a dictum and a *must*. Legislate that your people shall admire the sunset, and the afternoon shall find them flocking from the lake-side to the smoke of Newburgh; that they shall all learn the *Pilgrim's Progress* and find no fault in it, and next year each literary circle shall be a "Hudibras" society. We tire of the best, will not be content with the best, save with the better and the good,—not on terms of insulation. Only the All is sacred and infallible. We leave the philosopher of to-day for the ploughman, and to-morrow our enemy shall be more welcome than our friend. Shakspere himself has had times of going out of fashion, and Raphael and Michel Angelo are forgotten for Giotto and Angelico or the new Frenchman. Yet, all the while, the sunset is beautiful, and Bunyan is better than Butler, and best is best. It were better that we should read Shakspere always than that we should think Shelley and Schiller just as good, and the *dilettanti* who live only to glorify the pre-Raphaelites are not the men who do the most either for art or manhood. They do, indeed, do more for both than the devotees of a conventional Guido or a weak Carlo Dolce, just as the compilers of the "sacred anthologies" stand for a sturdier religion than the men who write the tracts. But all this Orientalism and comparative theology, which is the fashion now, invaluable as its office is, does you poor service, if it makes you think the Koran and the Vedas as good as the Bible, or Confucius and Zoroaster as great as Christ.

The transcendent merit of Emerson and Parker as religious teachers is that they never opposed halfness by halfness, and were never hurried by impatience of superstition to irreverence toward the object of the superstition. Jesus Christ, the Bible,—more than any others have Emerson and Parker helped us to see their transcendent preëminence among books and men, because recognizing this preëminence on the ground of freedom and pure reason. "People imagine," said Emerson, "that the place which the Bible holds in the world it owes to miracle. It owes it simply to the fact that it came out of a profounder depth of thought than any other book, and the effect must be precisely proportionate. Gibbon fancied that it was combinations of circumstances that gave Christianity its place in history. But, in nature, it takes an ounce to balance an ounce." "Jesus Christ," he said again, "alone, in all history, estimated the greatness of man: this one man was true to what is in you and me." And Parker sang:—

> "Thy truth is still the light
> Which guides the nations groping on their way,
> Stumbling and falling in disastrous night,
> Yet hoping ever for the perfect day.
> Yes, thou art still the life: thou art the way
> The holiest know,—light, life, and way of heaven;
> And they who dearest hope and deepest pray
> Toil by the truth, life, way that thou hast given."

This clear and cultured maintenance at the centre of what is true and best comes into the flimsy anti-christianism of a cheap *free thinking* like the healthy restoration of Shakspere after the things that satisfied the shallow taste of Queen Anne's London. The temple which we build of the prophets and apostles, who through the ages have mediated truth to men, will ever lack beauty, proportion, and solidity, unless Jesus Christ be the chief corner-stone. And there was never a time when it was so important to say this strongly as the present time, when the superstitions, which have made a rational grasp of Christ's idea so difficult, are fading; when society seems ripe for a more practical appropriation of the principles of neighborhood, equality, and brotherhood, and the unit value of the soul, which he instinctively divined; and when a people paralyzed and parched by mechanism, utility, and fate thirsteth for freedom and the living God. What our society most needs to-day is a baptism of the Holy Ghost. I see in the young men of this age, said Emerson, character, but scepticism. "They have insight and truthfulness, they will not mask their convictions, they hate cant, but more than this I do not readily find. The gracious motions of the soul—piety, adoration—I do not find. Scorn of hypocrisy, elegance, boundless ambition of the intellect, willingness to make sacrifices for integrity of character, but not that religious submission and abandonment which give man a new element and being, and make him sublime."

This is what we want. The other, without this, is not enough. Goodness itself, without this, lacks its final grace and beauty. The soul, without this, is in the end distorted, maimed, and dumb. "Unlovely," said Emerson, in his last religious utterance, speaking, as in 1838, to the Harvard students of religion,—"unlovely, nay, frightful, is the solitude of the soul which is without God in the world." It is so. The man who has looked into the pit knows that it is so. The man who has seen the sun shine without power to cheer and who has learned to look into the starry heavens with irreverent incuriousness, who hears no music in the rolling sea and sees no vision where it fades into the sky, to whom the brook in the forest sings not, and who finds naught but rock in the everlasting hills, to whom summer is only a waiting for winter, the earth a graveyard, men and their cities spectral, and his friend and the love that loves him incredible and unauthentic like himself,—he knows that it is frightful to know no Being behind the seeming, no living Will that shall endure, no Soul of Beauty, no everlasting answering Thought,—frightful to be without God in the world. My friend, if any single soul be here who, like Paul with beasts, has fought with death and to whose innermost experience I speak, I say to you that, if there be no God and no hereafter, we want to know it, and we will believe it must be well. It will still be better to love than to hate, to help than to sleep, to be brave and true than to be false and a coward. The man who tells you that, if this life be all, it matters not what you do, preaches swine's gospel and the devil's. Take note that he smells of brimstone. He is libertine at heart. When eternity is in a man, he will live according to the forms of eternity, though his prospect be but a day. If this life is all, then make it count. And a seventy years' lease of this universe, with all its opportunities and joys and disciplines, is much. Life may still be great and noble, I say; and, God or no God, we are bound to make it so. And if godlessness and the soul's death be a glad new evangel that shall bring new liberty and power, as Emerson's and Parker's gospel brought liberty and power in ridding us of other chains, then, indeed, let us give heed, lest, haply, we be found fighting against godlessness. If this gospel speaks to you most persuasively in the hour of your highest aspiration and most self-sacrificing endeavor, listen to it. Whenever it comes preached by the thinker and the lover, listen to it.

> "But if, when faith has fallen asleep,
> You hear a voice, 'Believe no more,'
> And hear an ever-breaking shore
> That tumbles in a godless deep,"

and the sound is not music to you but a dread sound, yet if, in your continuous round of business and society, you have dulled yourself into complacent listening, stop and ask yourself what your life means, and whither it is tending. And, if you are awake and shivering in the solitude of godlessness, yet know not where to turn for light and warmth and strength, then, I beseech you, use those generous "means of grace"—there are no better words than those—with which the Father of spirits has hedged us in, the companionship of those in whom, like the great teachers whom we honor to-day, faith was made perfect in knowledge, and, above all, in the simple doctrine and life of Jesus Christ, the author and finisher of a faith in the unseen and eternal which grows young and strong as it grows old, the teacher of the holiest and the greatest master of these masters whom we love.

Say to the man who tells you that faith in God is a hindrance to earth's regeneration and to devotion to mankind that, when the atheistic teacher comes who shall prompt to nobler endeavor than Emerson and Parker, the atheistic martyr who shall suffer for the suffering more gladly than John Brown, the atheistic pioneer of civilization more dauntless than

* Nice shades are important here, since many of the new-fangled theologians strain at *everlasting* punishment, but swallow *eternal* punishment.

Digitized by Google

the Puritans of Plymouth, the atheistic apostle of any truth more zealous and more bold than Paul, the atheistic Christ who shall inspire self-sacrifice more heroic and discipleship nobler and purer than Jesus,—then, but also not till then, will you believe that faith in God is falsehood to humanity.

Believe me, such poor notion, though it may pass to-day, cannot stand the test of life to-morrow and to-morrow and to-morrow. And when it is said that the doctrine of the soul's immortality is selfish and harmful to humanity, and that a new earth can be built only on the ruins of the faith in the hereafter, say that, when you find yourself tempted to baseness and idleness to-day by the thought that the sun will rise to-morrow, when you find honor to your father and your mother a stumbling-stone to care for your children, find your soul so microscopic that you can be faithful to a new friend only by treason to an old, find yourself a better citizen through insularity and protective laws, and find yourself inspired to help the sufferer round the corner more by slandering or slighting the men who send gospel and schoolmaster to the night of Africa and the isles of the sea,—then say you will believe it. When you find men agreeing to call it selfish to enjoy the sunshine and the breath of life, selfish to lift up the eyes unto the hills and to stand by the shore, because the ocean is sublime and beautiful, selfish to open Plato and Dante and to thirst for knowledge, insight, growth, and power, for any noble capacity or any great opportunity,—then, I say, but also not till then, concede the faith in the immortal nature of you to be a blight upon you and upon society and turn to the new evangel; and, until then, tell the preacher to go learn clearer notions of self-sacrifice, and that he is a selfish man, indeed, who, save by soberest thought prolonged and resistless conviction, impugns what the history of the deepest thought and the dearest hope and the constitution of the soul itself avouch, motives most pure and potent to justice, heroism, nobility, and toil.

No, no, my friends. This God's universe and the souls of us are not built upon any such parsimonious plan as that. There is no Wall Street in the soul; no exchange, where to barter hope for duty. Giving is getting there; and infinite responds to infinite, and satisfies. Draw confidently on eternity for all the Godlike in you needs, and I think it is the spirit of God that declares the drafts will all be honored. "What is excellent," says Emerson, "as God lives, is permanent." "When we pronounce the name of man, we pronounce the belief of immortality. All great men find eternity affirmed in the very promise of their faculties. The evidence from intellect is as valid as the evidence from love. The being that can share a thought and feeling so sublime as confidence in truth is no mushroom. Our dissatisfaction with any other solution is the blazing evidence of immortality." It is so: believe it. And, as incurious about the hereafter as about to-morrow, live your life faithfully and confidently, and do this day's duty well. For this day, too, is the hereafter, and all eternity is one:—

> "Heaven and hell, with their joy and pain,
> Are now and here.
> Of what is to be, and of what is done,
> Why queriest thou?
> The past and the time to be are one,
> And both are *now*."

Our debt to Emerson and Parker, I say, is greatest, not for their onslaughts on debasing superstitions and their service to free thought, but for a faith made perfect in knowledge in the soul's freedom and great affirmations, the eternal right, the immortal life, and the infinite God. O my brothers, let not the torch shine dimmer for having come to our hands in its progress! Infinite almost is the responsibility laid upon us. Our prophets are falling in the high places. It has been a year of death. And upon the heads also of Whittier and Martineau and Tennyson the hoar-frost lies. The tolling of the bells of Concord spoke not only of the passing of Emerson, but of the closing of an era, and told us that we are left to ourselves now. It is the signal for higher duties and the call to nobler manhood. Thank God for these good men and great, but say, as they have taught us, I also am a man, and vow to do your little task, if it be little, even as they did their great ones, "in the manner of a true man, not for a day, but for eternity; to live as they counselled and commanded, not commodiously in the reputable, the plausible, the half, but resolutely in the whole, the good, the true."

CORRESPONDENCE.

A NATIONAL FREE CONFERENCE.

Editors of The Index:—

There are not a few friends of what Mr. Gannett calls "freedom, fellowship, and character in religion," who have cherished the hope that, with Unitarianism as a centre, there would become organized and developed a thoroughly broad, open, entirely free communion, under the influences of which every form of religious, ethical, and humane progress would make new advance in the direction of ideal truth. The opportunity for a grand first step toward this is close at hand in the meeting, September 18-22, of the Unitarian National Conference; and I would like to raise the question whether there is not interest to improve it. Is not the time fully ripe for a change of the basis of union to one which would begin something like this?—

Whereas the decline of sectarianism and of strict creeds, and the advance of liberty, learning, and character in religion, are affording new opportunity for broad and free fellowship in practical work and religious study and communion,—

It is hereby resolved to substitute for the existing Preamble and Articles of Constitution the following:

ARTICLE 1. This Conference shall be entitled the National Conference of Free Churches.

Although I say "substitute for the existing Preamble and Articles," and do this in the belief that for the practical purposes of large liberal union the whole instrument can be greatly improved, I only give here, to save space, the key-note of the change which seems to me desirable. The principle of the change is that of simple honesty. I suppose there might be accessions of great value from liberal Orthodoxy on the one side, and others, on the other side, from representatives of extreme freedom, and such nominal non-Christians as the liberal Jews (who are a good deal recognized already). But my contention is for honesty, and let results be what they may; though I believe that conservatism of the true sort would gain more than it would lose, and that pure theistic and humanitarian Christianity, which I take to have been that of Christ himself, would find immense advantage in the change.

The reason which is at present the only serious one against a change is this: "We do not believe what the present basis says, but it is *not politic* to change." This to me is a very strong reason for urging the change. The Unitarian body, as a whole, does not believe in having anything dogmatic in its basis of union. President Josiah Quincy said in 1845, "I cannot find that the sect called Unitarian ever made to itself a pass-key." A pass-key was made twenty years later; and a valuable fraction of a hitherto free communion driven off to establish organization and journalism of its own, and to pursue an extreme course which otherwise it would not have taken. It was a mistake which ought to be honestly and fearlessly undone.

But this is not the whole, nor is it the worst. The Unitarian body, as to its present majority, does not hold the line of beliefs which is put forward in the dogmatic phrases of the present basis of union. To illustrate, I will briefly refer to the example of Dr. Martineau. He assisted, in 1862, in making a Unitarian "Common Prayer for Christian worship." Three years ago, he brought out a revision of this, with the title, *Ten Services of Public Prayer*, in which the scope of the alterations consisted in substituting purely Theistic for "Messianic" phrases, on the ground that the latter are not true to us, and do not in fact represent Christ's own Christianity, but some form of apostolic opinion. Dr. Martineau says, for instance:—

"No one who has once become familiar with the definite images and ideas of the Messianic Christianity in any of its forms can ever again give to its language the loose and large interpretation which alone renders it available for the voice of living piety. He knows that it really means what he cannot mean; and, if constrained to adopt it, he feels that his 'kingdom of heaven suffereth violence.'"

The dogmatic words which appear in the present basis of Unitarian communion are of this "Messianic" character: they do not represent the genuine truth of Christ himself, as our best free learning now reads this truth. As Dr. Martineau says, in the preface to *The Ten Services of Public Prayer*:—

"If it be true that the supreme and distinctive end of Christ's religion was to bring the human spirit face to face with the Divine, and to leave man alone with God, *i.e.*, not to establish, but to destroy all mediation, then is it contradicted, rather than expressed, by the traditional modes of piety."

The majority of Unitarians, accepting Christ as a Teacher of pure Theism and pure morals and humanity, do not make him, in any real sense, a mediator in their experience or a Messiah in history. They refer the kingdom of the spirit and the kingdom of history to the alone and supremely Divine, of which Christ was a prophet. Hence, the inconsistency of using the phrases, and even *imposing* the phrases, of a faith which they have ceased to hold. It was an unconscious inconsistency for a long time; but it is now a perfectly conscious one to a very large number, and thus involves serious want of honesty. If change to a broad, free, open basis of communion meant any grave wrong to anybody's sincere faith, the case would be less simple than it is. But it means nothing of the kind. It only means honesty first of all, and generous fairness and charity all round. The most conservative seniors might take the lead in doing for the basis of union what Dr. Martineau has done for the English Unitarian Prayer-Book.

EDWARD C. TOWNE.

29 COMMON STREET, BOSTON, MASS.

MR. MITCHELL'S REPLY TO MR. SAVAGE.

Editors of The Index:—

On receiving your journal of July 20, I found another article by Rev. Mr. Savage in reply to mine of June 8. And, I am sorry to say, it is so incoherent and diffusive that I am puzzled as to how to treat it in the limited space you can afford me. Mr. Savage excused himself from giving a proper answer to my last on the plea that he was short of time; and yet he introduces another subject, to which I had made no allusion and which I had shown not the slightest inclination to discuss. The subject was "The Relations of Mind and Brain"; and I had quoted passages from the physiologists, Huxley, Bernard, and others, showing their view of the relationship,—namely, *organ* and *function*. And, in the former part of Mr. Savage's review of these authorities, he says: "All right:... no sensible man doubts the statement. I have no disposition to contradict that statement," etc. Now, if Mr. Savage saw the statements were true and incontrovertible, why has he wasted both his own time and other people's, and occupied your space, in taking them one by one?

Mr. Savage has evaded another question. I *challenged* his statement about the "best thinkers being inclined to believe the only *real* things in existence were *mind* and *God*." This statement, which I hold to be entirely erroneous, he has made no attempt to sustain.

At first, I thought his "best thinkers" might be men of whom I had never heard; but, in *this* last communication, he falls back on Huxley, Tyndall, etc., as the gentlemen he had in mind; and, by so doing, he puts me in the position to say positively that he has misrepresented the beliefs of these gentlemen. I am certain he cannot find a single sentence in any of their writings where they say they believe in God as a *personality* or *mind* as an *entity*. I shall wait his justification of this statement.

Mr. Savage says that "modern science has found it utterly impossible to explain *mind* as a *product* of *matter*"; and his purpose is, he says, to "offer a few considerations in support of it."

This purpose, however, he failed to carry into effect: he never alludes to it again, so that the assertion stands simply on its own merits. And what are its merits? According to Mr. Savage's own estimate, "it is worth no more than the raw material of breath it takes to utter it." *Nil!* simply *nil!*

To show Mr. Savage that I am able to redeem my promise in regard to *proving* the "Relations of Mind and Brain," I propose to give one or two experimental cases showing the *dependence* of the one on the other. In *The Index* of May 4, page 526, I said, "Facts have been disclosed proving that, while the brain is a bodily organ, it is also the instrument for *producing mind*," etc.

"The rules of evidence in regard to *cause* and *effect*, or the dependence of one thing upon another, are shown [says Prof. Bain] by two classes of facts: first, the *presence* of the *cause*, *followed* by the *ap-*

Digitized by Google

pearance of the *effect*; as, for instance, when we prove that lighting a fire is the *cause* of smoke," etc.

Now, accepting this rule as correct, we can show, by quoting an experiment detailed by Dr. Carpenter, that the brain is the organ and the *cause* of mind. The brain, he says, is supplied with blood from four arterial trunks which enter the cranial cavity near each other, and then unite in what is called the "*Circle of Willis*," from which it is conveyed by various branches to every part where brain substance is situated.

Now, if two or three of these trunks are tied, the supply of blood is diminished; but, in virtue of the arrangement in the circle of Willis, no part is left entirely deprived of blood, and functional activity, though much lowered, still goes on. If, however, the *fourth* artery is compressed, then there is an immediate and complete suspension of activity, and unconsciousness supervenes until the blood is allowed to circulate again, upon which consciousness and functional activity reappear in proportion to the amount of blood supplied.

Thus, mental activity (says the Doctor) is shown to be dependent upon physical conditions, *and on them only!* This evidence is as complete, and the demonstration as easy, as to show that electricity and galvanism are the results of chemical changes in the metals and liquids by which they are produced. And, if we are to believe that chemical changes produce *one* set of phenomena, I see not how we can refuse to give them credit for the other.

Thought is as certainly the *result* in one case as electricity is in the other. And, if this be admitted in the case of *sensational consciousness*, it must be admitted in *emotional*, and, if in emotional, *why* not in *ideational*? Another case still more conclusive, if that is possible, may be found in an experiment performed by Claude Bernard. And this case will answer to a crucial test John Stuart Mill laid down; and of which he said, if it could be performed, we might determine the possibility or otherwise of *immortality*. Mr. Mill says: "To make good the *proof* that the *brain* is the *cause* of *mind*, it would be necessary to produce an organism and try whether it can *feel* and *think*." Though we have not yet arrived at the point where we can *produce* an *organism*, we have arrived at that stage of experimental manipulation where we can *abstract* an organ and, by patient watching, see a new one grow. Claude Bernard, in one of his experiments, abstracted the brain of a pigeon; and, as a consequence, it was reduced to a state of perfect helplessness, without either power, or desire even, to look after its own food.

It would, however, swallow, if food were put into its mouth. And *this* being performed for it, it was kept alive until its brain grew again; and, wonderful to relate, with the *reappearance of brain substance* there was a *reappearance of functional power and activity*. Here, as Prof. Bernard says: "We have had both analysis and synthesis of the vital function. We have seen the destruction of brain substance, and, along with it, the disappearance of all functional manifestations of mind. And, then, we have seen the reappearance of the brain, and, with it, the reappearance and manifestation of its functional powers." These facts, I submit, are pertinent to the subject, and adequate to verify my assertion that "the brain is the organ for producing mind, or, to invert the sentence, that the mind is a *function* or *product* of the Brain."

And, this fact being accepted, Mr. Savage's statement that "modern science has found it utterly impossible to explain *mind* as a *product* of *matter*" is proved to be incorrect. Mr. Savage has put the word *explain* in italics, and has also cast on me the *onus probandi* of furnishing proofs in terms of Matter. Ordinarily, I should decline any such task; but, having already accomplished more than half the task, I will assume the whole responsibility on one condition,—namely, that Mr. Savage will accept Huxley's dictum as to what an *explanation* is. Mr. Huxley says: "The explanation of a *physiological function* is the demonstration of the connection of that function with the molecular state of the organ which exerts the function. Thus, the function of sensation is explained when the molecular changes, which are the invariable antecedents of sensation, are discovered."

The fact that it is impossible to comprehend *how it is* that a physical state gives rise to a mental state no more lessens the value of the explanation than the mysterious fact of a ball in motion communicating its energy to a ball at rest. The *how* in both cases is perfectly incomprehensible, but the fact in both is indisputable.

We therefore say (according to this dictum) that mind, as a function of the brain, is *explained* when we have proved (as we certainly have), by strict experimental evidence, that the molecular changes in the brain are invariable antecedents of those phenomena we call feeling, thought, and will.

I repeat, therefore, that I have accomplished the task assigned me by Mr. Savage; namely, proved "that matter does explain mind."

And now Mr. Savage will perhaps be kind enough to tell me, if these phenomena are *not* the *product* of *matter*, what are they the *product* of? Where do they originate, and how exist?

If mind is a *state* or a *series* of *states* of *consciousness*, as Spencer and Huxley and Bain assert, how can we *possibly* become conscious except through our material organism? Take away our nervous system, and consciousness is impossible. Destroy the optic nerve, and sight is forever gone. Spencer says: "If I am asked to frame a notion of mind divested of all those *structural* [material] *traits*, under which *alone* I am conscious of mind in myself, I cannot do it. I know nothing of thought save as carried on in ideas traceable to the effects wrought by objects on me. A mental act is an unintelligible phrase, if I am not to regard it as an act in which states of consciousness are known as like other states in the series that has gone before, and in which the relations between them are severally like past relations in the series."

If mind is *something* more than a series of states of consciousness, what is that something more?

We call the brain an organ, and every organ is supposed to have a function of functions. What is the function of the brain, however, unless MIND be that function? What office has the brain, unless it does the feeling, the thinking, and the willing?

What an anomalous thing it would be to admit that an organ composed of the rarest and most powerful ingredients, constructed in the most elaborate and complex manner,—myriads upon myriads of fibres and cells, of a delicacy of texture and varieties of shape and size and color, all no doubt indicating varieties and degrees of functional power and capacity, and wherewithal as yet so wrapped in mystery that in our contemplations about it we are lost in wonder and amazement,—I say what an anomalous thing to think that this rarest, this most delicate and elaborate, this most complex piece of machinery with which humanity is acquainted or can conceive of,—to think that this wonderfully constructed organ should have *no office*, no special function! And yet, if *mind* is not its *function*, then it has none.

The ancient notion that the brain is *not* the *real* organ of thought, that it is merely a substratum for some ghost or metaphysical entity to play upon, is too absurd to be treated with sober arguments in the light of modern knowledge. And yet, doubtless, it is this ancient figment which Mr. Savage has in mind when he says, "From a *physiological* point of view, it is doubtless true." Now, can a thing be true as a *physiological fact* and untrue from some other standpoint?

Does not Mr. Savage know that every physiologist of any note has conceded that, whatever the psychology of the future may be, it must have its base and its origin in physiology? As Dr. Maudsley says: "The ultimate appeal must be to *him* who deals with the *bodily organization*. Through *his* territory only can the theologian and the jurist pass to their departments." So that, if it is "all right" in a physiological point of view, it is all right absolutely.

MIND A SUPERIOR FORCE.

Editors of The Index:—

Thanks to H. D. V. for his very able and interesting answer to query in *The Index*, May 11. But, as he did not seem to comprehend the full strength of the proposition that mind is force, I crave briefly to illustrate.

We cannot escape the fact that mind is an entity which commands physical force, therefore it must be a superior force. Though it may not act independent of matter, it does act independent of the physical organism, as in clairvoyance. From birth, we see the intellect gradually expand, which indicates that organic process is a means to its development. But, if the lowest order of animal life have consciousness without nerves, it must follow that the animating force which builds the organism does not depend on them for consciousness. Herbert Spencer admits that "there may be a single primordial element of consciousness, and the countless kinds of consciousness may be produced by the compounding of this element with itself and the compounding of its compounds with one another in higher and higher degrees, so producing increased multiplicity and complexity." Then, consciousness is a faculty of the soul or the individualized "vital spark" which is developed by evolution. As there can be no feeling without consciousness, so the emotional and mental faculties must belong to the vital energy of the organism. It is evident that evolution is not confined to physical development from the fact that the mental powers still progress after the organism has attained to full maturity. From the above facts, it must follow that the vital force, mind, or soul, is a distinct entity which does not depend on organic structure for existence. As mind commands and physical force obeys, there is a distinction between them, which I think may be properly made by the word "spirit"; but, as materialists object to the term as meaningless, I used the word "force," supposing its entity and conservation were settled, which H. D. V. seems disinclined to admit. If force can move from object to object and act remotely from matter, it must be a distinct entity, however closely connected the two may be in action and reaction as phenomenal cause. Attraction and repulsion are too opposite forces, yet one could not exist without the other. Granted that "force is never isolated from matter," it is not a local property confined to limited bodies, but leaps from place to place as with electricity; and, as the plenum of space is not denied, there is ample materiality, from the perceptible to the imperceptible, for the eternal action and reaction between force and matter. The conservation of force has not only been demonstrated, but, on the same principle that we affirm the certitude of mathematical axioms, we can affirm the eternity of all existence but condition, the mutability of which constitutes the law of evolution.

H. D. V. gives no reason for his inference that mind, as force, "can be transformed into any other force and cease to exist as mind." If force has become an individualized entity through evolution, what is to hinder its continued progress and individuality? Evolution implies unlimited progress and durability fo gain. Such are the views of a SUBSCRIBER.

CHINESE EQUITY.

Editors of The Index:—

Will you permit me to call attention to the following significant statement by President Angell of Michigan University, and ex-minister to China. I find the statement in the Ann Arbor *Register* and credited to the New York *Tribune*. It is in regard to some incidental diplomatic business effected by President Angell during his residence in China.

He says: "I succeeded in having a heavy tax removed from Protestant Christian Chinamen, which they had previously paid for the support of religious festivals. In all the Chinese villages, they have a great many celebrations that are partly religious and partly civil,—a sort of religious Fourth of July, in fact. The expenses of these festivals are paid by general tax; but, naturally, Christian Chinamen felt strong conscientious scruples against paying money for the support of heathen religious rites. Many years ago, the Roman Catholic Church succeeded in having its converts exempted from this tax; but it was still levied upon Protestant converts. My attention being called to this fact, I broached the subject, on the first fitting opportunity, to the foreign office; and Prince Kung, the viceroy, said that he had always supposed that all Christian converts were exempted, that he was willing to rectify the mistake, and to do so officially. I therefore prepared a diplomatic dispatch on the subject, and an official agreement was made, removing the tax from the Protestant converts. There are fifteen thousand of them in China."

From the above statement, it would seem that the Chinese possess a fine sense of justice that more pretentious nations would not be injured by cultivating. Chinese religion may have many faults, but it displays at all events the sterling quality of being able to stand alone, and does not require the forced contributions of those who do not receive its teachings. When a Chinaman changes his religious views, it is only necessary that the attention of his government

Digitized by Google

be called to the fact, and he is promptly relieved from paying money to the support of rites that he regards as useless and pernicious. This is certainly in marked contrast to the condition of things in this country. There are no doubt many more than fifteen thousand persons among us who do not believe that any good is to be derived from the rites and ceremonies of the Christian Church; yet these persons are compelled by law to conform to many of the rites they believe to be worse than useless. They are taxed directly for the support of Christian ministers and for the ministration of Christian rites; they are taxed indirectly for the support of all the church property of the country; and, though attention has been called repeatedly to this condition of things, no measures of relief have yet been established. It would seem that our country, while bidding fair to become the best government in the world, is not yet perfect, and that she might without injury receive from China this simple lesson in equity.

Respectfully, J. M. LATTA.

ANN ARBOR, MICH., July 20, 1882.

WHAT POVERTY MEANS.

Editors of The Index:—

I would like to make a word of reply to yours of August 10, as I see that I am not understood, in one important particular at least.

When I claim that war means poverty, intemperance means poverty, the Chinese question means poverty, I mean that all these evils are the results of poverty, and therefore hold that the largest endeavors, the greatest efforts, should be directed to the one end of exterminating poverty, the grand cause of all these lesser evils. When the cause is removed, the results will gradually disappear of themselves. Until it is removed, all efforts at their extermination is like picking the worms from the top branches of the apple-tree, while hundreds are crawling up from the trunk. To be sure, some worms are picked off; but not much headway is made, so long as the root of the evil is not understood and dealt with.

Our Peace Societies do not understand the fact that war means *cheap men*. "The second qualification for a soldier is poverty, a man to whom a shilling a day is an object."

Almost the cheapest thing on earth to-day is a man. If the world was not full of cheap men, England would find it impossible to recruit her armies for the invasion of savage and heathen lands. Make men dear enough, and wars would not pay: they would die out of themselves.

The thing to learn is how to make man the most costly thing on earth.

John Stuart Mills says, "No remedy for low wages has the smallest chance of being efficacious, which does not operate on and through the minds and habits of the people."

Nothing would so much affect the habits of the masses as less hours of daily toil, less hours of exhausting drudgery, and more leisure to learn the fact that they are men as well as working machines.

It is not, I think, that I do the Free Religionists injustice, but that I rank them so very high that I unshrinkingly make yet new demands upon them, feeling that they are able and willing to answer every legitimate appeal. M. M.

A FRANK LETTER FROM "THE PINEY WOODS OF MISSISSIPPI."

Editors of The Index:—

For years have I been an interested and instructed reader of B. F. Underwood's writings. He has been my model in regard to force and clearness of style. As to the meaning of the language he ordinarily uses, no one needs to be in doubt one moment. Just now, however, I feel limp and helpless, with brains addled and mind wandering in hopeless confusion,—all the result of a rash attempt on my part to read and comprehend his recent "Reply to Mr. Abbot." That gentleman's contribution in the preceding number of *The Index* I examined only partially; for, on seeing the extreme attenuation and tortuosity of thought pervading it, I quite willingly gave it "the grand American bounce," and passed on to easier reading.

The old Schoolmen, in their metaphysical disquisitions on the Homoousion and the Homoiousion, the *tertium quid*, etc., evinced a marvellous aptitude in subtilizing and mystifying language. And there is the modern German, too, who, with his brain beclouded with tobacco smoke, throws upon the world ponderous volumes of distracting vagaries, and, with many, passes for a deep, deep thinker. Nor is our own land altogether free from the presence of writers who habitually affect this mystic, transcendental style,—writers who, fancying themselves surpassingly acute and profound, are, in truth, merely erratic and obscure.

Very likely Mr. Underwood himself regards that species of abstruse, bewildering composition in exactly the same objectionable light in which the mass of plain, common-sense readers do; and that, in this particular instance, he concluded to depart from his usual simplicity, and demonstrate his own ability to juggle with words and muddle minds as adroitly as Mr. Abbot or any other incomprehensible philosopher. Literature, no less than knight-errantry, has long needed the corrective genius of another Cervantes, to burlesque the many misguided knights of the quill that have for ages been tilting against windmills. Clear conceptions are not apt to take the form of confusing expressions. The Scotch metaphysicians, in treating of the laws and powers of mind, have succeeded in tracing the meanderings of thought through every intricacy with masterly ease and perspicuity. The reader is rarely perplexed, and never finds his author in the arena playing the part of a verbal acrobat.

The foregoing criticism, it must be confessed, is anything but polished, or even excusable, coming as it does from the piney woods of Mississippi, whither the culture and æstheticism of Boston have yet to find their way. Then, too, perhaps

> You supply the subject, but can't afford the pains
> To furnish each dull reader with the needed brains.

Truly yours,

S. F. SMURR.

BROOKHAVEN, MISS., August, 1882.

ARE OUR MOBOCRATS ALWAYS FOREIGNERS?

Editors of The Index:—

In your issue of July 13th, Mr. B. W. Ball says in an article "Anti-State Theorists," among other illogical utterances: "Meantime let us be just to American institutions. They do not produce mobs. They, by means of popular education and a general diffusion and distribution of political rights, social equality, and property, make men orderly and autonomous. In the common school States there is no *native mob*. It is always an importation from Europe. It is a curse inflicted on us by the abominable social, political, and ecclesiastical systems of the Old World. Though blameless in this matter, we Americans have to suffer in consequence," etc.

It seems to me that Mr. Ball is not well read in history, nor has he seen with a critical eye all that has passed in this country during his lifetime. First of all, Mr. Ball might have read in history that the early New Englanders laid the foundation for mobs and mob-law in prosecuting and even killing Quakers and others who refused to follow the creed of the Puritans. Mr. Ball might recollect that the "Mississippi Pirates," the "Arkansas Regulators," the "Iowa Squatters," the "Missouri Border Ruffians," "Bill Pool," and his associates in New York city, the Rowdies of Baltimore, were all Americans. I would further remind Mr. Ball that even in Boston there were native mobs against abolitionists, that Americans murdered abolitionists in Illinois and elsewhere, that even the ladies seem to have learned from "their lords" how to form mobs (commonly called crusades) and destroy liquor-stores, as they have done in Ohio and some other States.

In conclusion, let me give my opinion of the effects of immigration. Without immigration, the United States would be nowhere, like Mexico. The only cause for the rise and the power of the United States is to be found in the close relationship with their mother country, England, and the rest of Europe. Mexico, and most of the South American Republics, in spite of liberal constitutions, have tumbled back to semi-barbarism for lack of immigration from Europe.

MONROE, MICH., Aug. 1, 1882. C. P.

WE must be as courteous to a man as we are to a picture, which we are willing to give the advantage of a good light.—*Emerson.*

MISCELLANEOUS.

THERE is a moral sublimity in his (Herbert Spencer's) self-sacrificing career which is not to be neglected in making up the estimate of his character. As remarked by M. Laugel: "If Mr. Spencer, with his talents, his fertility of genius, and the almost encyclopedic variety of knowledge, of which his writings furnish the proof, had chosen to follow the beaten path, nothing would have been more easy than for him to secure all these honors of which English society is so prodigal to those who serve her as she wishes to be served. He preferred however, with a noble and touching self-denial, to put up with poverty, and, what is still more difficult, with obscurity." In advance of his generation and working against the powerful current of its prejudices, with broken health, without pecuniary resources, and depending upon promises of support that were very partially redeemed, with an intrepidity that was not wanting in heroism, he entered upon the most formidable intellectual project that was ever undertaken by any single mind. One would think that it should have commanded the sympathy of the generous and the cordial approval, if not the kindly coöperation of all who appreciate courageous and noble endeavor; but, unhappily, a discriminating appreciation of genuine work is not over-abundant in these times. And, in the accomplishment of a task which I believe future generations will regard as the most memorable achievement of this fruitful age, Mr. Spencer has had but stinted encouragement and very shabby support.... Referring to the subject of evolution, in a lecture before the Royal Institution, Professor Huxley said, "The only complete and systematic statement of the doctrine with which I am acquainted is that contained in Mr. Herbert Spencer's *System of Philosophy*." Of this doctrine, I have given the proof that Mr. Spencer is the chief originator as well as the only expositor. The same ethical canons of research, I therefore maintain, which gave to Copernicus the glory of the heliocentric astronomy, to Newton that of the law of gravitation, to Harvey that of the circulation of the blood, to Priestley that of the discovery of oxygen, to Dr. Young that of the undulatory theory of light, and to Darwin that of natural selection, will also give to Herbert Spencer the honor of having first elucidated and established the law of Universal Evolution.—*Prof. E. L. Youmans.*

JOHN RUSKIN, being once solicited to contribute to a fund devoted to restoring Warwick Castle, replied in the following sensible manner: "I am at this hour endeavoring to find work and food for a boy of seventeen, one of eight people,—two married couples, a woman and her daughter, and this boy and his sister,—who all sleep together in one room, eighteen feet square, in the heart of London: and you call upon me for a subscription to help rebuild Warwick Castle! Sir, I am an old and thoroughbred Tory; and as such I say, If a noble family cannot rebuild their own castle, in God's name let them live in the nearest ditch till they can."

BOOK NOTICES.

IN the *Popular Science Monthly* for September, Mr. C. M. Lungren gives a statement of the relative cost of "Electric and Gas Illumination." Dr. Felix L. Oswald writes, in the clear, pungent, aggressive style that is characteristic of him, concerning "Longevity," to the effect that the length of life is to a considerable extent a matter of temperament and habit, and shows how it is affected by the occupation of the individual. In "Animal Self-defence," Mr. H. L. Fairchild describes the varieties of armor, the disguises, and the kinds of weapons with which animals are provided. "Brazilian Diamonds and their Origin," by M. H. Gorceix, is full of information concerning precious minerals. In "The Functions of an American Manual Training-school," Prof. C. M. Woodward presents some timely remarks on the importance of giving a more practical aspect to education. In "A Note on 'Thought reading,'" Mr. Horatio Donkin disputes the possibility of performing the feat so named, except where there is some kind of communication, however indirect or remote, between the parties to the transaction. Prof. George H. Perkins, of the Medical Department of the University of Vermont, discusses "The Physician of the Future." M. A. De Rochas gives a pleasant account of the "Trials by Fire." In

Digitized by Google

"Electromania," Mr. W. Mattieu Williams depreciates the advance which the world supposes itself to have made in the application of electricity to its work. "Anthropoid Mythology," by Dr. B. Placzek, is a curious repertory of lore concerning monkeys and their likeness to man from ancient Oriental and ancient Mexican literature. In "The Poisons of the Manufactory," Mr. Hector George presents a number of suggestions of practical value concerning the poisonous emanations which are the dangerous accompaniments of many manufacturing processes, and the means of counteracting them. In "Littré, Dumas, Pasteur, and Taine," are references to a recent discussion in the French Academy of Sciences. An entertaining paper follows on "The Chinese: their Manners and Customs." The editor in his table commends the example of Sir John Lubbock—a man of wealth, who gives his time to scientific investigation—to American young men of wealth, has something to say on the views recently expressed by Mr. Beecher on theology and evolution, and suggests as a proper American memorial to Mr. Darwin the institution of a fund for scientific research.

EVERYBODY will want to buy the September number of *Scribner's*, if for no other reason than to secure the excellent portrait of Mark Twain which graces its first page. It was engraved by T. Cole, "after the painting in black and white from life, by Abbott H. Thayer." There is also a sketch of the life of Mr. Clemens by W. D. Howells. "The Academic Career of ex-President Woolsey," of Yale, is interestingly sketched by George P. Fisher, and is accompanied by portraits. These, with an interesting article by Austin Dobson on "Thomas Bewick," one of the earliest artists in wood engraving, and a sketch of "Dante Gabriel Rossetti," the dead poet-artist, by his friend Edmund W. Gosse, make this quite a biographical number. Some of the other more prominent articles are "Ocean Steamships," by S. G. W. Benjamin; "Ningpo and the Buddhist Temples," by Constance F. Gordon Cumming; and "The War in Egypt," by Gen. George B. McClellan. Joaquin Miller contributes one of his characteristic stories, the title of which is "The Col. Bill Williams' Mine." In the "Topics for the Times," appreciative tributes are paid to Herbert Spencer and Darwin.

THE *Catholic World* for September offers to its readers the following list of subjects: "The Catholic Church and the Native Mexicans," by Bryan J. Clark; "How the Church of England finds its Pastors," by Wm. F. Dennehey; "Fernan Caballero," by Ella J. McMahon; "Into the Silent Land," by Mary E. Meline; "The Tornado and its Origin," by Rev. Martin S. Brennan; "Philosophy of Hero-Worship," by Arthur F. Marshall; "Pilgrim's Progress," by J. Huntington; "Last Pages in the Journal of Eve de la Tour d'Arrainie," by Agnes Repplier; "The Opening of the Schools," by Rev. Henry A. Braun. The two well-written continued stories, "The Lady of the Lake," by John McCarthy, and "Donna Quixote," by Henrietta M. K. Brownell, are concluded in this number, which is altogether a very readable one.

THE illustrations in the September *Wide Awake* seem to us unusually good in a magazine almost unrivalled in this respect, while in number they are unstinted. Mrs. Lizzie W. Champney tells an interesting Norse story in "The Cave of the Winds"; "The Little Texas Nurse Girl" is an exceedingly clever bit of negro dialect, by M. T. Cushing; "The Truant Fire-Flies," by Clara Doty Bates, is a charming fairy tale in jingling rhyme. The Chautauqua papers are interestingly instructive as usual, and the whole number is quite up to its own excellent standard.

PERSONAL ITEMS.

EX-REV. MILN is announced among those who are to speak at the Watkin's Glen Convention this week.

COL. JOHN C. BUNDY, of the *Religio-Philosophical Journal*, is, with his wife, passing a few weeks East, attending camp-meeting and visiting seaside resorts.

HUDSON TUTTLE, Emma Tuttle, Rev. D. Cheyney, Mrs. M. P. Krekle, C. B. Hoffman, ex-Governor Charles Robinson, Mrs. H. M. Stearns, and David Eccles are announced to speak at the fourth annual camp-meeting to be held in Bismark Grove, Kansas, from August 31 to September 3.

THE free thinkers of Paris are not satisfied to allow the remains of Diderot to remain in the vaults of the Church of St. Roch. They appeal to all free thinkers in France to help them to get the philosopher out of his present "unworthy sepulchre," to erect a statue over his future tomb in some central part of Paris, and to celebrate his centenary in 1884.

CAPT. MAYNE REID, the well-known writer, who "fought for glory, grub, and Jackson's medal" in the Mexican War, and is obliged to wear crutches because of a wound received during that war, is a resident of Herefordshire, England. His father was a Presbyterian clergyman, and a native of County Downs, Ireland. Capt. Reid is described as an eccentric but "charming old gentleman, fond of a chat, fond of a glass, and especially fond of a good listener."

GEORGE JACOB HOLYOAKE, in a note accompanying an article for this journal, writes: "By the time it is printed, I shall have the pleasure to be in America. My address the first part of September will be Geo. S. McWalter, 221 East 18th Street, New York. The second week in September I shall be the guest of Col. Ingersoll at Long Branch, then I proceed to Canada. . . . At the end of September, my address will be James Charlton, Esq., Chicago & Alton Railroad, Chicago, Ill."

A VOLUMINOUS packet of manuscript, labelled simply "Notes," has been found among the papers left by Thiers. The notes extend to three hundred and forty-seven pages, and appear to be materials for the memoirs of M. Thiers. Some of the pages are mere fragments, but there are others ready for the press; namely, a pen portrait of Louis Philippe, a conversation with Talleyrand, the portrait of Jacques Lafitte, and a furious diatribe against Napoleon III. There is also a chapter on the abuse of fiction in modern literature.

SAYS the *Commonwealth*: "Friends of Col. Robert G. Ingersoll say (so it is reported) that, when he undertook the defence of the Star-Route men, he fully believed in their innocence. But the more recent testimony as to their guilt has convinced him that he is upholding a bad cause. Consequently, he has determined, as soon as he is done with the case, to quit the law business entirely and devote all his attention to lecturing. What a comment this is on the practice of the law! And now the bar, as well as the Church, will be down upon him."

SENATOR BENJAMIN HARVEY HILL, of Georgia, died of cancer, at his home in Atlanta, on the 16th. He was very popular in his State, where especially his death causes profound sorrow. He was a man of fine presence, a ready and powerful but not always discreet debater, and a brilliant although not a sagacious leader. His attachment to his own State was very strong. "Other men," said he in his sick-room, "might have served Georgia with more ability and success, but no man could have labored for her with purer purpose or a more earnest devotion." He was fifty-nine years old.

PROF. A. WUNDT, of Leipzig, as translated in the *New Englander* by Rev. J. B. Chase, denies to spiritualistic mediums like Mr. Slade, who held séances at Leipzig in the presence of noted scientists, any scientific trustworthiness. It would, he thinks, give an unfavorable impression, if one should ask a physicist to watch the movements of a magnet through a keyhole, or an astronomer to select a cellar vault for his observatory. Yet the observer of spiritic phenomena must be content with just such unfavorable conditions. Mr. Slade did nothing, in the judgment of Prof. Wundt, more than could reasonably be expected of a skilful juggler who makes favorable conditions of various kinds for himself.

FANNY PARNELL is said to have been one of the most learned women in the country, reading with ease the modern languages of Europe, as well as Latin, Greek, and Hebrew. That she had a deep heart is evident to any one who has read the verses which have made her the successor of Lady Wilde as the patriot poet of Ireland. Her blood connected her with the distinguished deeds of our American navy, as well as with the land from which her paternal ancestors came; and she proved herself worthy to belong to a family which her brother has also made distinguished. Peculiarly sad seems the premature death of so many whose genius had given promise of adding honor to our country's literature.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.

WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.

OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.

FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.

HANNAH E. STEVENSON, 32 Mt. Vernon St., Boston, Mass.

TREASURER.

JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.

Four Years.

B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Three Years.

EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

Two Years.

CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

One Year.

MINOT J. SAVAGE, Boston, Mass.
WILLIAM C. GANNETT, St. Paul, Minn.
CAROLINE M. SEVERANCE, Boston, Mass.

The office of the Association is at 3 TREMONT PLACE, BOSTON (directly in the rear of the Tremont House), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

LAKE PEPIN GAZETTE,

W. F. JAMIESON, Editor and Publisher.

To be issued weekly. 12 pages. Publication day Thursday. Pepin, Wisconsin. Price $1.00 a year.

LAKE PEPIN GAZETTE will be devoted: First.—To the advancement of the material interests of Pepin and vicinity. Every number will contain descriptions of the great North-west.

Second.—To the freest possible discussion of the live questions of the day.

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression. Sample copies sent free to everybody. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

M. L. SANDERS,
DELAVAN, ILL.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

PRIVATE SCHOOL FOR TEN BOYS,

In Northboro, Mass., opens September 13.
E. A. H. ALLEN, Principal.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. For sale at this office. Price 5 cents.

CURRENT TOPICS.

FORTY-FOUR years ago this month, Abner Kneeland, a learned, moral, and kind-hearted old man, was released from Leverett Street jail, in this city, where he had been imprisoned sixty days for the crime of "blasphemy."

EXPERIMENTS made at Havre to test a system of telephony between the roads and the city proved so successful that it is now proposed to form a pontoon structure at a distance from the land, on board of which public telephones will be placed to put the shipping in communication with the land.

REV. G. W. SAMS, a Methodist minister, writes from Little Rock, Ark., that "we as ministers have three common foes to deal with, the devil, the ministers of the African Methodist Church, and the members of the Baptist Church." Mr. Sams thinks that the last two of these foes are as dangerous as the first.

THE papers report that President Arthur, last Monday at Newport, after an elaborate breakfast at the residence of W. W. Astor, and an hour's reception at the Ocean House, "attended the fox hunt," riding out with Mrs. Astor, and being the recipient of "no little attention at the meet." The President's encouragement of this mean and cruel sport is not "greatly to his credit."

THE London *Positivist*, in a protest against the action of England in Egypt, says in substance: Our fleet should be withdrawn from Egyptian waters, the control should be given up, the bond holders should be left to shift for themselves, and the Egyptian government should be informed that, so long as the canal is not injured, we will not meddle with the country nor allow any other nation to meddle with it.

THREE scientific associations held their meetings in Montreal last week; namely, the American Association for the Advancement of Science, the Society for the Promotion of Agricultural Science, and the American Forestry Congress. A number of distinguished British scientists were present at these meetings. Our neighbors of the Dominion will be expected to make great progress in science during the coming year, in consequence of being so unusually favored.

ON the 28th, the thirteenth annual convention of the New England Galaudet Association of Deaf Mutes was held at Norwich, Conn., at which three hundred deaf mutes were present. The draft of a constitution, submitted by a member of the committee on constitution and by-laws, was the subject of a long discussion. It was taken up, spelled out section by section in the sign language, and finally adopted. A motion to allow the female members of the Association to vote was the subject of some merriment, but was not sustained.

AN illustration of the same conditions which make "faith cures" possible is found in a superstition which has a directly contrary effect. In the Sandwich Islands, it is said to be "a fact too perfectly established to admit of a question that it was once not an uncommon occurrence for a man's enemy to employ a priest to pray the man to death, and that the victim, hearing of this, would certainly die on the day the priest had appointed for that consummation of the bargain. . . . No amount of ridicule or argument could convince the natives that they might just as well continue to live as die for all the priests could do."

THIS year, for the first time in more than two hundred years, a Roman Catholic prelate has been presented at the English court in his official dress. Since the days of Queen Elizabeth, who strongly disliked the Roman purple, the court dress prescribed for ecclesiastics has been strictly black; but Archbishop Lynch, of Toronto, just returned from Rome, was permitted to appear at a levee in London, held by the Prince of Wales in behalf of the Queen, in his official garb, consisting of a *soutanelle*, purple stockings, and wearing on his crown a purple *zucchetta*, and around his neck a golden chain with cross pendant.

FRANCES POWER COBBE, in an article on the "Salvation Army" in a recent *Contemporary Review*, takes the view that revivals like these belong to the childhood of religion, and are unfitted for this age, when religion means something altogether different from a contrivance provided for the escape of souls from perdition. However, strangely indicative of the strength of this movement, and inferentially of the low intellectual grade of the average religion of to-day, is the fact that, in the same number of the magazine in which Miss Cobbe's article appears, space is given to two other articles on the same subject, one written by "Gen." Booth, the originator and leader of the movement.

THE Catholic bishop, Lafleche, of Three Rivers, Canada, says the female members of his flock must forego banged hair, frizzes, and fashionable dress, as they "are incompatible with true Catholicism." And another clergyman of the same place gives as his reason for defending the denunciations of the bishop against gay dresses for women the fact that "there is such extravagance nowadays that we cannot tell the difference between mistress and maid. I defy any one to do it." Such priestly domineering as this may do much to awaken the female Canadian mind to thought, and incite a spirit of inquiry as to the limitations of priestly power and of resistance to religious tyranny.

"HARDLY anything," says the *Herald*, "more fully indicates what is going on in the religious circles of English and American society, or in the conservative religious thought of the two countries, than the topics selected for the annual Church congresses." Among the topics selected for this year, which the *Herald* gives somewhat at length, we note the following: "The Church and Modern Thought"; "The Limit of Authority and Free Thought"; "The Harmony of Science and Faith"; "The Church and Democracy"; "The Inspiration of the Scriptures"; "Unity of Belief in Relation to Diversities of Thought"; and "The Controversy with Rome." All these subjects show plainly that the churches begin fully to realize their precarious hold on the minds and hearts of the people under the awakening influence of wide-spread scientific investigation.

THE death of Prof. W. Stanley Jevons, who was drowned while bathing on the 15th, is deeply regretted, especially by students of mental and social science in all parts of the world. Although he did not possess originality of the highest type, he was a good thinker, a hard worker, and admirably fitted for a teacher, especially in the fields of logic and political economy. His little work on "Logic" and that on "Money and the Mechanism of Exchange" have been widely read. His work on the "Theory of Political Economy" has not received the approval of economists generally. His works on the "Coal Question" in Great Britain and on the "Value of Gold" won him a high reputation. These, and other productions from his pen, attest the useful work he performed for the world at large, while he filled a place that cannot be easily supplied as Professor of Logic and Political Economy at Owen's College, Manchester. He was forty-seven years old.

A CONVENTION of free thinkers, held at Watkins Glen, N.Y., through five days, closed its sessions last Sunday evening. The reports published are somewhat meagre, and we defer comments until we shall be in possession of fuller information. The most prominent speakers announced as "engaged" or "expected," including Herbert Spencer, Felix Adler, and Col. Ingersoll, were not present. Mr. George C. Miln, however, spoke, and no doubt gave an able address.——Since the former part of this paragraph was written, Mr. Charles Bright, who was one of the speakers at Watkins, has informed us that the attendance on the speaking averaged about five hundred, and that the audiences were made up chiefly from the surrounding towns, although a number attended from a distance. The speaking represented many *isms* and many reforms, real or fancied,—Materialism, Spiritualism, Positivism, Agnosticism, Negativism, Woman's Rights, Temperance, "Social Freedom," etc.

ENGLAND IN ECLIPSE.

Madame de Staël's remark that she didn't believe in ghosts, but was afraid of them, has often been quoted. It might be placed on a label to indicate the large number of cases in which beliefs which have died out of the intellect linger in the nerves. Here is the Irish author, Miss Cobbe, the first editor of Theodore Parker in this country, one of the earliest to substitute "Theist" for "Christian" in her faith; yet she is terribly disturbed at the irreverence of the present day in general, and in particular at the rough familiarity of the Salvation Army folk with God. One of their preachers, for instance, says, "They accuse us of being always in a row; but isn't God always in a row?" This is one, though an extreme, example of the kind of talk which has shocked Miss Cobbe, or rather her nerves. If a scholarly writer on the gods of Greece had described Jupiter as being always in a row, Miss Cobbe would probably not have noticed it; but there is as great a distance between the god of Miss Cobbe and the god of the Salvation Army as there is between her god and Jupiter. What she has written against the god of orthodoxy must be regarded by the orthodox as quite blasphemous and shocking. Her present protest assumes that her deity of Infinite Love and the god of wrath feared by the Salvationist are the same being: whereas, in every respect they are different and opposed, as Theodore Parker said to the Calvinist who sought his conversion, "Your god is my devil." Why, then, should a Parkerite feel sensitive at any familiarities his worshippers may take with a deity in whose existence they disbelieve? Is she—or rather, her nerves—victim of a Name spelled with a big N? That such is the case is suggested by the fact that she goes on to complain of the "irreverence" of our time. She says that John Stuart Mill told her he thought this "irreverence" grew out of the modern advance in education. Children are now often educated so much better than their parents that they cease to revere them. Miss Cobbe seems naïvely to ignore the second edge of Mill's remark; namely, that what is usually called "reverence" is the child of ignorance. There is, indeed, such a thing as real irreverence; and among the worst examples of it are parents who do not hold in honor the new ideas and higher culture of their sons and daughters. The irreverence of children is often a reply to the unteachableness of parents.

Taking the facts in the aggregate, and especially in an old country like this, we may say that the characteristic faults of the younger generation are the other side of inveterate faults in the older generation. Thought and enthusiasm are always starting out only to come dead against the wall of prescription, custom, tradition. Liberated thoughts find themselves prisoners. Young thinkers foresee that, in the course of life, they will be compelled to adapt themselves to those limits, and ultimately turn into part of the dead wall. Their only compensation is to say what they think about it during their period of sanity; and it is not to be wondered if they do so cynically, or even blasphemously. It is a fault, it is unwise, it is coarse; but who makes the coarse blasphemer? They who exclude him from the influences of refined society, who spit on him, who trample him, who show by doing so that every holy phrase on their lips is a lie, and thereby make "reverence" for their traditions mean and hypocritical.

The degree to which the present is oppressed and fettered by the past is just now shown in many ways. In dogmatic superstition, it is shown in the resolute refusal of bigots to repeal an antiquated statute punishing blasphemy, which has resulted in the reckless attempt of a member of Parliament to tomahawk Bradlaugh politically with it. Blasphemy is a misdemeanor at common law, and is held to include "any denial of the truth of Christianity in general, or of the existence of God, whether the terms of such publication are decent or otherwise," or "any contemptuous reviling or ludicrous matter relating to God, Jesus Christ, or the Bible, or the formularies of the Church of England as by law established." Under the statute, it is blasphemy to "deny any one of the persons in the Holy Trinity to be God, or to deny the Christian religion to be true, or the Holy Scriptures of the Old and New Testament to be of divine authority." By this statute, were it equally applied, all the authors of heretical books and the publishers and printers of such, are liable to imprisonment,—Huxley, Tyndall, Colenso, Herbert Spencer, F. W. Newman, Miss Cobbe, Swinburne, Lecky, Froude, Leslie Stephen, Stopford Brooke, Charles Voysey, the Duke of Somerset, the Marquis of Queensberry, Martineau and all the Unitarians, and the Positivists; and equally the publishers of the works of Mill, Darwin, Clifford, Carlyle, Emerson, Sir George Cox, and a host of others. Justice Stephen, who had to commit Bradlaugh and the others for trial, has himself written things far from orthodox, and, if the persecuted free thinkers make reprisals—as they will be forced to do, if sentenced—may have to take his place in the dock instead of on the bench. The trial is to come off in the Court of Queen's Bench in November; and one result is certain,—the trial and condemnation of an absurd statute and of those silly Christians who have prevented its erasure from the code of a country claiming to be civilized. I have already expressed my dislike of the method of the men charged with blasphemy; but, if the bigots make it the test of liberty, all good men will begin to blaspheme.

So much for the way in which the living are swayed by the skeleton of a defunct past, under the sanction of superstition. In the political world, we are suffering still more by a corresponding anachronism. The majority of those who make up the present English ministry are in heart and history representatives of progress, of equality, and of new ideas. If you can fancy a cabinet at Washington made up of such men as George Curtis, Wentworth Higginson, Wendell Phillips, and James Russell Lowell, you would have one corresponding to this ministry, containing Fawcett, Dilke, Trevelyan, Chamberlain, and just now John Bright. Religious traditionalism embodied in Gladstone, political traditionalism embodied in the Marquis of Hartington, have bound these young thinkers and radicals to the worn-out "policy"—or rather impolicy—of the old Palmerstonian *régime*, which was a petrifaction of the accumulated unjust precedents of centuries.

The lionizing of Cetewayo in London, at a time when a petty war is waged against the Egyptians, is a striking fact that seems to strike no Englishman. The old plan of Judge Jeffreys, hanging the prisoner and trying him afterward, has been pursued toward the Zulus. After large numbers of whites and blacks have been slain, Cetewayo is now brought here, his case looked into, his evidence received; and it is pretty clearly made out that the whole Zulu war was a scheme of Bartle Frere and his missionaries for propagating Christianity, and that Cetewayo will have to be restored to his throne, and things put back about as they were before the miserable crusade occurred. If Cetewayo had only been invited to England before, instead of after, the struggle, much fruitless suffering might have been escaped. And precisely the same may be said about Arabi. For all that is really known in this country, Arabi may be as noble a man as Garibaldi was, while the Arabians were describing him as a demon with long tusks who breakfasted off a baby every morning. At any rate, a consultation between the English at home and Arabi might almost certainly have prevented this cruel and barbarous war of England against Egyptian nationality.

And why has it not occurred? Why did it not occur in the case of the Zulus? Simply because the traditional notions of British dignity, as codified by Palmerston, are: 1. Always stand by an official agent in a foreign land, whether he is right or wrong, and whatever he does; 2. Whenever there is a difference between English agents and natives in a foreign land, never receive any communication from the natives except through your own agents, or, in plain words, never hear but one side; 3. Every Englishman's interest is a British interest, where the nation can secure any interest by maintaining it; 4. However much you may have denounced the injustice of a government when you are out of power, when you get into power you must stand by what they have done as the national honor. To this, Gladstone has added: 5. Never shrink from bloodshed, if it's against an unbeliever.

This sort of thing has been going on for ages: the painful part of it now is that it is not done by Tories nor by fossilized Whigs, but by a government containing elements of scholarly radicalism and liberal thought more largely than any known in the history of England. The hands of these young thinkers are fettered, while their minds are free. And they seem to have no dream that any deliverance from these deep-worn ruts of ages is possible. Nor is it possible until this nation has a religion. At present, England has no religion. That which it calls its religion is merely a consecration of everything that happens to coincide with the wealth, pleasure, ambition, and political estates of England. English Christianity is the most perfectly evolved and gigantic example of systematized selfishness known in all history. Against this Christian war against Egypt,—which may now be called the Land of Bondholderage,—really meant to extort from the Moslems there usurious interest on the late Khedive's borrowings, spent in their oppression, imposed against their protest, the voices lifted (with few exceptions) have been those of unbelievers in Christianity, and particularly the Positivists. While English Christianity is loving its enemies with Gatling guns, the pleading of Christ for humanity and peace has been heard from men on their defence for blasphemy. So long as Christianity sits in the seat of religion, there is not the least chance that the moral character and influence of England will increase: on the contrary, they must decrease. This is a hard thing to say of a country which, within its feudal walls, contains so many sweet and noble people. But it is true. All the hard, selfish, and hypocritical elements of the country have become incarnate in one powerful man, without relation to the really great brains of his country, who rules England with a power all the more despotic because it is under the banner of Liberalism. There is no oppression of weak tribes, no petty persecution at home, which has not crept out of its hole under his reign. Gladstone regards himself as half saint, if not more: it is a species of atheism to say anything against him; even Bradlaugh's tone lowers when he speaks concerning the Premier. But, whatever Gladstone may have been in earlier days, he is now representative of the aggregate meanness of the country, of its vulgar superstitions, its heartless dogmatism, and of that soft-footed, cruel selfishness which loves to symbolize

Digitized by Google

itself as a lion. There is a British Lion, and when out of office it is a brave and noble creature; but, whenever it sits on the Treasury Bench, it turns into a cat.

MONCURE D. CONWAY.

T. DE WITT TALMAGE.

Mr. Talmage is just now a very prominent fact. His church membership in Brooklyn is only surpassed in numbers by that of Beecher, and his sermons are more widely published than those of any other living preacher. They are dictated by Talmage himself to an enterprising reporter in advance of their delivery, and, after being printed, are sent in great numbers to Western newspapers, which reproduce them for their hundreds of thousands of readers at the same time that they are given in the Brooklyn Church.

It was with no little expectation, therefore, that I took an excursion train on a recent Sunday to Highland Lake Grove, where this well-advertised minister was announced to preach. The day was a perfect summer day. The grove, belonging to the Railroad Company, centres about a pretty sheet of water, and has been admirably fitted up for excursionists and picnic parties; and I found here a well-behaved crowd of at least two thousand persons gathered within the open and spacious building in which the services were held.

There is nothing ministerial about the preacher. Anywhere else than behind the pulpit, he might be taken for a prosperous plumber in his good clothes; and there is nothing in voice or manner to destroy this impression. His voice is unusually harsh, and, in the delivery of his sermon, was used without any intelligent modulation, varying only from a conversational tone to an unpleasant and apparently exhausting shout. His manner is uncouth. He strides and stamps, and gesticulates wildly with arms and legs and head, but with little reference to any parallelism between gesture and sense. The impression given by his elocution, if this word may be used, is that of an undignified and very artificial striving after effect. There is an utter absence of earnestness; and his extravagant and sometimes vivid rhetoric was again and again completely disarranged by the introduction of that prolonged "Oh," which is used by the most ignorant Second Adventist and Methodist exhorters in order to gain time while they are groping about for the next word or phrase. His sentences, therefore, were often unfinished, and became mere empty ejaculations, reminding a hearer of that neat statement called out some years ago by the Beecher troubles, that the language of some men, like that of the lower animals, is used to express emotion, and not reflection; but, in the case of Talmage, the ejaculations seemed to work like pump handles, calling up emotion for the special moment.

His sermon, as a literary effort, was not in the least artistic. It had no real plan or logical development, no central point, and led up to no legitimate peroration. In fact, after he had ended his real subject, which was a defence of the Bible, he gave a long exhortation to "get" religion, which differed only in rhetorical extravagance from the commonplace exhortations of the most ordinary revivalist. His pronunciation throughout was characterized by giving to several vowels the same obscure sound,—the familiar method which marks the pronunciation of all uncultivated persons. In this, however, he was consistent, for he sneered at "cultchar," as he pronounced the word in a successful attempt to call forth a titter from the crowd; and he sneered also at all modern learning, as illustrated by those who go about with a copy of *Darwin* under one arm and a box of dried butterflies under the other, prating about the survival of the fittest.

His defence of the Bible was a perfect farce; and the infidel, who was roundly denounced, must have chuckled at the recklessness with which this theologaster played into his hands. "That Shakspere wrote 'Hamlet' or Scott wrote 'Marmion,'" says Talmage, "is not so sure as that the Lord God Almighty, by his prophets and apostles, wrote this book." And, again, "The Bible says that Sodom and Gomorrah were destroyed by fire and brimstone. 'Absurd!' says infidelity: 'no such natural phenomenon ever took place.' But Lieutenant Lynch drops his line into the Dead Sea, which occupies the site of those two cities, and brings up sulphur, pieces of the very brimstone which came down from heaven." Mark Twain, in his *Innocents Abroad*, never wrote anything more deliciously comical than some of Talmage's arguments. I observe that, in the newspaper reports of this sermon, the ejaculations and repetitions are omitted, the sentences are finished, and much of the rhetoric is either abbreviated or altogether thrown out, thus making the abstract more endurable than the original.

Perhaps I should add that the Scripture reading (in this instance, the parable of the Prodigal Son) was interpolated with remarks, which were sometimes misinterpretations of plain words, sometimes only synonymous phrases, and sometimes puerile additions. They always tortured or obscured the meaning, and spoiled the effect, of the simple story. The prayer also, which was nominally addressed to Christ, but really to the audience, was shouted out in disconnected sentences, and was without any reverence or emotion. Silence, in place of it, would have been a great boon.

A brass band, close at my side, fittingly caught up the harsh Amen! of the stereotyped benediction; and I hurried away to the other side of the lake that distance might soften the tones of the instruments, and soften also, if possible, the memory of the harsh tones of the speaker.

And this man is the admired preacher of a large congregation, the hero of several religious newspapers, and an acknowledged exponent of evangelical Christianity! Alas! have we fallen so low? I had expected of course to find a sensationalist, but supposed there must be something of genuine excellence about him to account for his popularity. I had not bargained for stage artifice and violent straining, for puerile and absurd illustrations instead of a little real thought and knowledge, for foot-stamping in place of effective language, for loud shouting instead of true declamation, for reckless assertion instead of attempted proof, for exaggeration in place of simple fact, for turgid imagery supplying the lack of elevation of feeling, or trashy bathos instead of pathetic plea. The only real power I could detect was the power of exaggerated illustration and tinselled rhetoric.

What is the best use to make of Sunday? was a question which came to me with redoubled emphasis after the above farce was played out. Better almost anything than to attend such a parody upon religious service. I looked about the grove, and saw that many persons were boating on the lake, others were swinging, others were revolving on wooden horses, and many were reclining on the grass, enjoying the beautiful scene, basking in the sunshine, and drinking in the fresh air; and I knew that those in this grove were only representatives of tens of thousands more who were similarly engaged all about the good city of Boston. I came away a more confirmed latitudinarian than ever with regard to Sunday observance. Let the bands play, open the bowling-alleys and gardens, let the trains run into the country, and the steamboats carry their crowds out upon the ocean,—let anything be done to rest the mind and body and lure people away from the churches in which such preaching is given them for spiritual food. If I were compelled to choose between Talmage and Barnum, I should say, without any hesitation, Give me the Sunday circus. I could listen even to the stale jokes of the clown on Sunday, and receive less shock to moral and reverential feeling than was given by these clerical jokes intended to ridicule the noblest triumphs of the century. Even the clown sings a sentimental ballad which awakens a real emotion in some of his listeners; and, in this respect at least, the clown's ballad is better than Talmage's prayer.

But I believe there is something infinitely better for a summer Sunday than either Talmage or Barnum, and I sincerely hope that the choice may never need to be made between these extremes. The two thousand who listened to Talmage were mostly young men and women, respectable clerks, shop-girls, and mechanics, with a sprinkling of others of all ages and pursuits. Why cannot arrangements be made to furnish these men and women with real preaching instead of its simulacrum? Why can they not listen to the voice of a prophet instead of a superficial actor? Most of them were willing to endure for three hours (including morning and afternoon services) this sprinkling over their heads of theological chaff. Why not enable them to spend at least one hour in the reception of real mental nourishment? Have we no speakers competent to tell the truth about the Bible, and give instruction to such an audience regarding its origin and its history, its real merits, and its equally real defects? Have we not scholarly men, with popular gifts, who could unfold the truths of geology, for instance, or of any of the natural or social sciences on a correct comprehension of which our civilization really rests? What benefit might not such a multitude receive, if they could go home from a lecture on the revelations of Darwin, at which the preacher sneered, or even a pleasant talk about the dried butterflies, at which he also sneered! Many persons will not, even if they should, remain in the close city upon their only holiday in the summer time. Could not the Sunday excursions be so used that these might return to their homes, after a day in the fresh air, carrying with them some positive fact or real criticism, or enkindled by some new aspiration, or softened by some pure emotion? However much this might fall short of furnishing an ideal Sunday observance, it would at least be vastly preferable to the present assumption of an attendance upon divine worship, from which can be carried away nothing more substantial than would be the memory of the noise of an empty barrel rolling down hill.

ROWLAND CONNOR.

THE CHINESE QUESTION.

II.

Is there any chance that the Chinese will become settled good citizens? It is answered that a generation has passed since they began to come among us, and there is yet no change in their habits. They still come and go, mere birds of passage. But what inducement have we held out to them to remain? All emigrants at first go abroad with the hope of returning home; and the Chinaman, among a people of different race, religion, and customs, who have given him no hospitality, but rather scorn and abuse, will hardly be swift to exchange his home. He is especially devoted to his family and his ancestors, and it is therefore harder for him to give up living where his fathers lived and being buried beside them than it is for other men. Still there are signs that some of them begin to con-

Digitized by Google

patriarchal idea produces an almost slavish veneration for woman as mother, but a contempt for her as wife. A Chinaman permits his mother to choose his wife for him, and accepts her commands as laws; but the wife must consult his pleasure and comfort in everything. But the actual relation of man and woman is almost always better than the nominal one. In the Chinese family lately so sadly broken up at Cambridge, we are assured there were domestic happiness and mutual respect and love; and, in the strong family love which is characteristic of the Chinese, we see that there must be good elements at work to counteract the unquestionable evils of their ideas of woman and of marriage.

Here, too, is work for the reformer. It is only by raising the whole standard of equality and purity in the relations of the sexes that we can destroy the last vestiges of polygamy and struggle with the still wider and greater evils of profligacy. As the Chinese come among us, we must teach them by legal enactment, by precept, by the force of public opinion, and still more by example, the superior blessing of a home founded on marriage, on the equality of man and woman, on obedience to the sanitary laws and the highest spiritual teachings. In their own religion and literature, we could find abundant helps to this instruction. They have seen a better way than they have been able to follow. Which do *we* ask to be judged by as a nation, the utterances of our Gospels and Declarations of Rights or the records of our police courts? I cannot admit that either is right, or in policy we ought to drive the Chinese back from our shores. We have no right to do so; for we have taken possession of the land by no valid title but the ability to use it, and they possess that title as fully as we. We have no right to expel them, because we have proclaimed the doctrine of a free country to all who would take part with us in developing the soil and establishing here free and orderly government, and they have shown no willingness to do so. And, especially, we have no right to expel them from our country, because we have forced them to admit us to theirs; and we have gone there in precisely the same spirit which we complain of in them, to make money by traffic, returning to our own land to enjoy it, with no desire or intention to become citizens of their state or subjects of their government, but rather holding ourselves aloof from them in proud scorn and fancied superiority.

It is bad policy to drive them away, because they are a useful, intelligent people, believing in education and work, two of the great pillars on which our social fabric rests. But, if we ought to and must retain them here, have we not a duty to ourselves and them to discharge, in order that we may harmonize our lives and our interests, so that we may mutually benefit each other? We must first lay aside our prejudices of race and of class, and cordially accept them as equally entitled to all the respect and all the privileges of humanity with ourselves. This lesson we have had to learn over and over again, with the Indian and the Negro, only at the cost of war and bloodshed. May we be wise enough to accept the milder teachings of wisdom and humanity in the case of the Asiatic! We must next learn to know the Chinaman thoroughly, studying him in his history, his religion, his literature, his government, his social traits: then, we shall find that we have much to learn as well as to teach, and mutual respect will bring mutual help.

The Chinaman must be freely admitted into our churches, our schools, into all our life, if we wish that our civilization should act upon him. Excluded by custom, if not by law, from the public schools in many places, the only direct influence for education that is open to him, so far as I know,

---

patriarchal idea produces an almost slavish veneration for woman as mother, but a contempt for her as wife. A Chinaman permits his mother to choose his wife for him, and accepts her commands as laws; but the wife must consult his pleasure and comfort in everything. is in the missions of the evangelical sects. These are doing good in various ways,—in saving children from abuse and misery, in instructing the Chinese in English, in encouraging marriage in our sense, and in giving them confidence in the kind feeling of Americans toward them. In many cases, the Chinese send to the missions for help when they are ill or in trouble. I am told that every church in San Francisco is doing something in this way. But it is done in the spirit of proselytism, and the instruction given is very largely formal and ritual. The Chinaman takes the doctrine for the sake of the lesson in English, or for the material aid, or, perhaps oftener, for the sympathy and kindness given with it. He is tempted to hypocrisy; and, at any rate, he does not receive the broad education which he needs. I do not know how fully she was justified in her opinion; but one lady told me that she would never employ a mission Chinaman, for he learned deceit and treachery from his training. This was, doubtless, a sweeping judgment; but, as Free Religionists, I think we ought to approach the Chinaman, not to convert him to a church, but to bring him into line with us in work for the general good. And are we not shamed by the Church, which is doing its work for him in its own way, while we are doing nothing in ours?

I could not see that theological feeling had much to do with the opposition to the Chinese. As a rule, I found members of evangelical churches rather inclined to favor them and to work for their conversion, instead of driving them out of the country, while many radicals in religion oppose them violently. Business interests influenced men's opinions more. Bankers and railroad men were apt to favor them, while those who dreaded their competition opposed them.

The solution of the Chinese problem is very simple: it is only to receive the Chinese as equally entitled with us to a life, a work, and a home on this continent, and to apply to them the same principles and laws which we have found to work for good among ourselves. E. D. CHENEY.

FAITH MIRACLES.

There is a Catholic church in the mountains, only a few hours' ride by rail from Vienna, Austria, that has a wooden image of a Madonna, believed by the faithful to be possessed of great power to heal the ills that flesh is heir to.

I spent a few weeks at the little mountain village that has this church with its all-healing Madonna. Pilgrims during the summer season come to this shrine by thousands, and from distant countries,—even from America, I was told.

My fair Lady Madonna is about four feet in height, with painted cheeks, rosy lips, blue eyes, and flowing blond hair that has evidently undergone the modern agony of crimps. She is gorgeously attired as a bride; and, not to be outdone by royalty, she is said to have a different gown for each public appearance. She wears a jewel-set tiara upon her head, and pendent from it is a long, white lace veil. Encircling her neck are many strings of costly pearls, and her wrists are set in gems of the first water. Thus bedecked, she is carried in state some miles to meet the invalid corps upon whom she is to confer the blessing of health.

It is often a strange procession that one looks upon: men, women, and children, it may be; lame, halt, and blind; dust-covered, ragged, laid on litters, in wagons, hobbling on crutches, or carried in arms, often pale, emaciated, and deformed. Some have been bed-ridden for years. In the church to which these pilgrims repair for religious services there is a large room literally filled with surgical appliances that have been left by those who were cured and who had no further use for them.

There is also a treasure-room that contains innumerable gifts that have been bestowed upon my Lady Madonna. These gifts have come from the hands of royalty, and from all the intermediate grades of humanity to the poorest beggar. The gifts are as varied as the social conditions of the givers. The value of the jewel-set articles alone is estimated at many thousands of dollars.

But who would venture an estimate of the worth to those who gave them of children's toys, of locks of hair, and of thread-bare-worn garments? What does all of this prove to the intelligent mind,—that a lifeless, fleshless, bloodless image has the power in itself to make the bed-ridden take up their bed and walk? No, it shows simply this: that the will power of some people, under certain nervous conditions, is so weak that they do not have the power to make the flesh obey it. Under such circumstances, it matters little what influence is brought to bear upon them, if it only enables them to concentrate and bring into action their nerve-force.

There are many cases on record of persons who have not stepped for years, and others helpless in other ways, suddenly becoming aroused to their normal activity by fear, from fire or some other pending danger. So long as people are superstitious, in any age or any land, we may be sure that so-called miracles will never cease. Science and common sense are the only safeguards against humbuggery in religion, as in everything else.

MARY J. SAFFORD.

EDITORIAL NOTES.

WE shall print next week, in addition to articles by George Jacob Holyoake and other writers, one from a new contributor to *The Index*, on "God or the Galilean" by Felix L. Oswald, who is well known as an able writer.

THE London *Inquirer* shows its appreciation of a fine discourse by reproducing in its columns, entire, that on Emerson, by R. Heber Newton; but it omits to credit it to *The Index*, which obtained the discourse from the author and printed it from his own manuscript.

THE hopes of publishers and authors on both sides of the Atlantic that the negotiations in regard to an international copyright law would result in the adoption of some wise and just legislation on the matter are, Minister Lowell announces, doomed for the present to be disappointed.

THERE will be a decided rise in the valuation of dukes, if, as a body, they begin to emulate the example of the young Duke of Orleans, only thirteen years of age, who, at the annual competition of the Paris Colleges, took the prize for Latin composition. His father, the Count of Paris, amid the plaudits of a large gathering, embraced him, and placed on his head the laurel wreath presented to prize winners.

"IT is claimed," observes the *Sunday School Times*, "that Prof. Darwin knew a great deal more about the human body than he knew about religion. He thought he knew where man came from, but he didn't know where man was going to. His prime idea of duty was that a man should do the best he could for himself here and now, whatever might be the consequences in the hereafter." Such a statement is not likely to prejudice children of this generation against the great naturalist.

IT would seem that the purely American system of philosophy advocated at Concord the past season is less radical in its tendencies than the Churches, for Dr. Prime, having spent two days at Concord listening to the philosophers, declares, in the *Observer*, during that time "I did not hear an expression that might not have been uttered in a convention of Christian ministers in New York, when the same subjects were up. In fact, I have heard more error, irreverence, and heresy in some Christian assemblies than in this school of philosophy."

WE judge from the following that our staid and conservative neighbor, the *Congregationalist*, believes in muscular Christianity: "A minister writes to the Providence *Press* for advice whether to learn to box for the sake of his health. That journal sensibly tells him to go ahead. Every minister, and every other man, would do well thoroughly to train himself physically, not merely because such wise training conduces to health and long life, but also because almost every man, even among ministers, once or twice in his life finds himself in unexpected circumstances in which he needs to know how to make the most of his muscles for his own safety or the rescue or welfare of others."

A SOCIETY for Psychical Research has been started in England under the presidency of Mr. Henry Sedgewick, to investigate in a scientific manner the phenomena exhibited in so-called spiritual manifestations, mind-reading, clairvoyance, mesmerism, and kindred subjects. Among its members are A. J. Balfour, M.P., Prof. Balfour Stewart, R. H. Hutton, Hon. Roden Noel, Dr. Lockhart, Dr. Robertson, and other names well known in scientific circles. We tender the Society our best wishes for its success in its investigations, and join with *Unity* in the hope that American scientists will help to throw light on these misunderstood and misinterpreted subjects.

THE *Independent*, in reply to the *Congregationalist*,—which says Felix Adler's Society of Ethical Culture "has come to nothing," and (quoting from the *Christian at Work*) adds, "There is no work to be done by an American Agnostic Society for the Elevation of Humanity which is not being done and better done by the thousand and one religious enterprises of the day,"—observes: "Both our New York and our Boston contemporary will learn with great pleasure, we trust, that there is no truth whatever in the above. Felix Adler's Society of Ethical Culture is in admirable condition, and is not only continuing, but enlarging its work, and making new plans for the education of poor children and the care of the sick. We wish all our churches in this city and Boston were as prosperous."

THE New York *Herald* thinks that there is no lack of free thought in Yale and Harvard, and does not see the need of "a free-thinkers' college or university." We quote a paragraph from its columns:

The alleged free thinkers now in convention at Watkins Glen propose to found a free thinkers' college or university. In the name of a college-ridden nation, we ask, "What do they want of it?" Have they not already Yale and Harvard, where nobody is anybody, unless he is a free thinker? Do they suppose that because these venerable institutions were erected on foundations of Bibles, and framed with iron supplied by John Calvin, that the students are any more orthodox than outsiders? If they do, they are behind the times. Any bright graduate of either of the old universities can voice more genuine free thought in half an hour than the combined free thinkers at Watkins Glen have done thus far, for he would not "pad" it with much noisy nonsense.

DR. A. D. MAYO, writing to the *Christian Register* in reference to the educational status of South Carolina, says: "Although the State has a university and a considerable number of academical and collegiate schools for both sexes, some of them of great merit, yet the neglect of elementary education for whites and blacks, five years ago, reached a melancholy point. The common schools were sup-

Digitized by Google

ported but two and a half months in the year, and even then, in the country, were scarcely worthy the name. The large negro population, and a considerable proportion of the whites, were in a deplorable state of ignorance. But, within the past two years, a marked awakening has been felt through all parts of the State. Everywhere, as if by a common impulse, the most thoughtful people have started up with a determination to lift this burden of disgrace, and give to the masses of the population better opportunities for schooling their children."

THE *Critic*, speaking of the action of the Society for the Prevention of Cruelty to Children in having arrested the manager of the Miniature "Patience" Company, remarks of the president: "Mr. Gerry would be wise to seek his quarry elsewhere. Our streets are full of starved and oppressed children,—children who black boots, children who sell newspapers, children who learn to lie and steal as soon as they can speak. Beside these, the children of the stage are happy. Doubtless, they pick up the histrionic vices too soon; doubtless, they are precociously vain. But, at least, they get some dramatic schooling, in a country where no provision is made for any other kind of dramatic schooling; they are brought up in a reputable profession, and they give a good deal of innocent amusement to the simple people who go to see the tattooed Greek nobleman, and await with anxiety the coming of Mr. Bunnell's new giantess."

A CORRESPONDENT of the San Francisco *Call*, writing from Hawaii of the church-going proclivities of the natives, which he declares are "tremendous," gives the following statement as to the causes that led to the conversion of this people to the Christian faith: "When Vancouver showed the first king of all Hawaiians the difference between a musket and a spear for purposes of warfare, and the difference between sharp steel carpenters' tools and stone axes for purposes of canoe building, and told him of the difference between a European cottage and a native grass hut, he impressed him that all the advantages resulted from Christianity. Being anxious to convert the old heathen, he said, Christianity, mind you, not civilization and science, brought the advantages he pointed out. Promptly, and upon that idea, Christianity was proclaimed and adopted, not with a change of heart, but from a conviction that a Christian musket would kill an enemy at a greater distance than a native spear, and that a sharp steel adze would hollow out a canoe quicker than a stone axe. Consequently, the idols were broken, the missionaries were welcomed, churches were built, and the strong, hearty nation of four hundred thousand happy people dwindled to forty-five thousand diseased servitors of the people who Christianized them."

OF Francis Maitland Balfour, the young scientist who, by some fatal slip on an Alpine glacier, was hurried to instantaneous death, M. Foster, his intimate friend, thus writes in *Nature*: "The world of science knew Francis Balfour as an investigator of the brightest promise, who, indeed, as a mere youth, had already solved morphological problems which had heretofore baffled the acutest minds, and of whom it seemed difficult to say how far he might not reach. A smaller circle in this country and in Europe knew him also as a man whose firm will and rapid but clear judgment were all the more effective, because his decisions and resolves were made known to others with a winning courtesy and with a kindly sensitive regard for the feelings of those from whom he might differ in opinion. But only those who had the privilege to be his friends knew his real worth, for they alone were aware how much the light of his personal character outshone even his scientific achievements and his administrative powers. It will need great knowledge and skill on the part of him who attempts to show exactly how much science owes to Francis Balfour as an inquirer, a teacher, and a counsellor; but that will be an easy task compared with the effort to tell to those who did not know him what he really was. Workers in biology all the world over will feel that a light has gone from the world when they hear the sad news that he is dead. Cambridge men, who have watched events at Cambridge during the last ten years, will know that a wholly irreparable loss has fallen upon their University; but their grief and their loss is a small thing put by the side of the emptiness which is left for them whose daily life was brightened by the light of his countenance. These mourn for Lycidas, and cannot be comforted."

THE *Westminster Review* correctly observes, "If Herbert Spencer had no other title to fame, he would still be the greatest of psychologists." His reconciliation of the experiential and intuitional psychology, by showing that ideas and feelings cannot be explained by the experience of the individual, but that they nevertheless have a basis in experience,—*the experience of the race*,—would alone give him enduring fame. "The doctrine that the intellectual and moral intuitions of one generation," says Dr. Carpenter, "are the embodiments, in its mental constitution, of the experiences of the race, was first explicitly put forth by Mr. Herbert Spencer, in whose philosophical treatise it will be found most ably developed." But Spencer's greatest work has been in developing and elucidating the doctrine of evolution as the basis of a general system under which all orders of phenomena—geological, biological, psychological, and sociological—can be generalized. Darwin's fame rests chiefly upon his discovery of the principle of natural selection, and the skill, industry, and honesty with which he showed its bearing on the "origin of species." But, before Darwin's great work was published, Spencer had made evolution, as a universal law, the basis of a philosophical system. Said Prof. Huxley before the Royal Institution, referring to evolution, "The only complete and systematic statement of the doctrine with which I am acquainted is that contained in Herbert Spencer's *System of Philosophy*." It is not affirming too much to say with Prof. Youmans: "The same ethical canons of research . . . which gave to Copernicus the glory of the heliocentric astronomy, to Newton that of the law of gravitation, to Harvey that of the circulation of the blood, to Priestley that of the discovery of oxygen, to Dr. Young that of the undulatory theory of light, and to Darwin that of natural selection, will also give to Herbert Spencer the honor of having first elucidated and established the law of universal evolution."

OUR esteemed contemporary, the *Catholic Review*, allows itself to speak as disparagingly of the "Yankee race" as the Southern slave-holders used to do in the good old times when the adherents of the Pope in this country voted to a man almost, on the side of the system that kept millions of dusky laborers in bondage. But our esteemed contemporary should bear in mind, in its hierarchic disdain of the "Yankee race" and of the old-fashioned pine-board Yankee meeting-houses, that in those meet-ing-houses and in the school-houses, plain and humble as they were, and as much superstition and intolerance as were connected with them, was nurtured American liberty, with the idea that the American was in the religious order his own priest, and in the political order his own sovereign, as expressed in these lines:—

> "Call the people together,
> The young men and the sires,
> The digger in the harvest field,
> Hireling and him that hires;
> And here, in a pine state-house,
> They shall choose men to rule
> In every needful faculty,
> In Church and State and school."

A well-housed, well-clad, intelligent, thriving, enterprising, self-governing average people is a far nobler spectacle than an ignorant, shiftless populace, living on mud floors beneath thatched roofs, with a magnificent hierarchy and monarchy lording it over them in gorgeous palaces and cathedrals, in the name of God, when the word, as used, means simply king and priest *writ large*. In the little pine-board meeting-house, the priest was and is a citizen, one of the people, a man with a family if he chooses, having the same social and political interests with his congregation, and not the member of a great, arrogant priestly order, claiming to be the authoritative mediators between the private conscience and Deity. Our esteemed contemporary will thus see that the free, popular American State was simply the correlate of the free, popular Congregational church, whose most common place of worship was a pine-board edifice. And therein lies the immense significance to which we alluded, making it a nobler edifice than the great cathedrals that are crumbling to decay on the soil of modern Europe. The cathedrals meant royalty and hierarchy, of which the people of Europe have had enough; while the little New England meeting-house meant and means an advance in popular liberty and popular prosperity, increase of free thought, the ultimate extinction of superstition, and the complete secularization of the State. The Yankee meeting-house neither was nor is a finality, but indicates a step forward in the right direction when compared with the mediæval cathedrals. It was a cheap edifice, and did not require enormous contributions to be squeezed by theological menaces, and promises of bliss or threats of punishment, out of thousands of poor day-laborers who ought to be devoting all their earnings to getting homes for themselves and families.

POETRY.

For *The Index*.

THE GROWTH OF WISDOM.

My wisdom was a wee-born thing
And suffered much from me:
I used him like an underling,
Who wished my guide to be.

For many years, he did not grow,
Curtailed by many a wrong:
He would not die (he loved me so),
And this inspires my song.

He yearned for me, by impulse led,
And I despised his care:
He counselled me with loving dread
My "wild oats" to forbear.

"By these, dear soul, you cannot live,
They bear a deadly yield.
Bestow the saving wheat I give
Upon your vital field."

The moment came: it touched my heart,
His patient suing so.
Against myself I took his part,
Whence he began to grow.

How changed his shape, that wee-born thing
That I had treated sore!
No more he seemed an underling,
A princely guise he bore.

My sovereign grown, thou bidd'st me Know
Myself, old sage's shield:
Convert, the saving wheat I'll sow
Upon my vital field.

H. L. HOWARD.

The Index.

BOSTON, AUGUST 31, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

The Scientific and Metaphysical Methods in Philosophy,

AS AFFECTING CERTAIN PROBLEMS OF RELIGION AND LIFE.

An Essay read before the Brooklyn Philosophical Society, April 28, 1882.*

BY LEWIS G. JANES.

"Though we only know in part,
Give us faith in what we know."

He who cannot get it into his head that *spirit* and *matter*, *soul* and *body*, *thought* and *extension*, . . . were, are, and ever will be the necessary double ingredients of the universe, which demand for themselves equal rights, and therefore both together may be looked upon as representatives of God,—that man should give up all attempts to be a thinker.—*Goethe.*

The Problem Stated.

The student of philosophy and psychology, at the outset of his investigations, is compelled to meet and decide for himself the questions, whether truth is unitary or dual; whether there is one method adapted to the study of physical phenomena and another for mental; whether the mind can be separated in thought from the organism, and treated as if unrelated to material conditions,—in a word, whether he shall adopt the metaphysical† or the scientific method in his investigations.

The remarkable and beneficent advance of science during the past century has given a strong impulse to the inductive, or scientific, method as applied to philosophical questions. "To ascertain those established conjunctions of events which constitute the order of the universe," says Dugald Stewart, "to record the phenomena which it exhibits to our observation, and to refer them to their general laws, is the great business of philosophy." In all this beneficent progress, metaphysics, however, claiming to be a finality and assuming a dogmatic attitude, has had no part. "Metaphysics alone," says Prof. Youmans, in his admirable introduction to Bain's *Mental Science*, "has refused to change, and, clinging to its old method, has stood as a landmark of the past, stationary in the midst of progress, vacant of benign influence, while all other knowledges were blossoming and fruiting in the useful service of society."

*Read also before the Association for the Promotion of Spiritual and Moral Education, in the Second Unitarian Church, Brooklyn, Sunday morning, March 19, 1882.

†The term "metaphysical" is here used in its technical significance, as identical with the *a priori* or "intuitional" method in philosophy. In a vaguer and more general sense, all investigation of mental phenomena might be termed "metaphysical."

Influence of the Evolution Hypothesis on Philosophy.

Within our generation, the comprehensive theory of EVOLUTION has resulted from the application of the inductive method to the study of both mental and material phenomena. Supported as it is by an immense multitude of facts in its scientific and practical relations, it has now attained well-nigh universal acceptance in scientific circles. Modifying our conceptions not only of the origin and growth of the physical universe, the inception and development of life—including man—upon this, and presumably upon other planets; but also, by necessity, our entire philosophy of history,—creating the science of sociology,—it has naturally become the basis of a new and remarkable philosophical system. This system is well termed by Herbert Spencer, its leading exponent, "THE SYNTHETIC PHILOSOPHY."* In its mental and psychological phases, it includes the physiological elements and conditions as an essential part of the phenomena to be studied, regarding human nature not in fragments, but as a vital whole. It is the purpose of this paper to discuss, as briefly as possible, the relations of the new to the older metaphysical systems, and to consider which is most consistent with an entirely free and rational theory of man's mental and spiritual nature, and his relations to the universe of which he is a part.

It should be said at the outset that the new philosophy does not desire to underrate or unnecessarily antagonize the older metaphysical conceptions of man's nature and mental capacities. It recognizes freely and gladly their beneficial influence upon the thought of the past, and its own indebtedness to the great metaphysical thinkers. Consistent with its evolutionary basis, it admits its natural growth out of the intellectual soil which they have broken up, enriched, and rendered fertile by their labors. Yet, if well founded in reason and the nature of things, it must, when accepted, greatly modify both the method and the conclusions of the various speculative and metaphysical systems.

The Logical Absurdities of the Metaphysical Method.

Grouping these older systems broadly according to their fundamental tendencies and logical deductions therefrom, they divide naturally into two classes,—the materialistic and the idealistic. Both agree practically, however, in conceiving mind and matter to be in some sort antithetical, and endeavor to harmonize the antithesis, either by explaining the existence and affections of matter in terms of mind,—the logical outcome of which attempt is a pure idealism,—or by explaining mind as a mere property of matter, resulting in materialism pure and simple. The efforts of some of these systems to avoid this apparently necessary dilemma, either land them in a hopeless dualism, in which any natural and consistent relation of matter and mind seems to be logically inconceivable, or involve the ordinary mind in a maze of metaphysical abstractions, from which it is impossible for it to extricate itself.

It has been said of the Swedenborgian doctrine of "correspondencies," that a system so intricate and requiring so much intellectual effort and profound and prolonged study for its comprehension—rendering, therefore, the truths of religion inaccessible to all save a very small portion of the human race—is the very *reductio ad absurdum* of the conception of a divine and infallible revelation of truth. This fact is practically admitted by one of the most profound students of Swedenborgian literature, who has defined revelation as "the obscuring or veiling over of divine truth." The same or a similar objection appears to inhere in the results of metaphysical speculation. The Deity, for example, whose existence and attributes can be assured certainties only to those who have sought and found "the eternal verities" through the subtleties of Hegelianism, is manifestly a Deity of but little use or consequence to the vast majority of mankind. Moreover, a Deity who can be fully known or comprehended, whose attributes can be determined and labelled with all the nicety and accuracy of a specimen in an anatomical museum, can hardly be considered a proper or possible object of reverence or worship. Having been solved or discovered in his essential nature and attributes by the human mind, he is, consequently, something less rather than greater than the mind. The mind that comprehends him can scarcely condescend to render him obeisance. "Personal, conscious intelligence," says Dr. Mansel, "limited though it be, . . . is grander than the grandest object man can know; for it is that which knows, not that which is known."

Hegelianism attempts to meet this difficulty by asserting that there are no such things as individual and distinct minds. There is MIND, but there are no minds. MIND is a unity. Man's individuality inheres in his *will*, which seizes and uses mind according to the measure of its individual activity. Mind serves as the common ground on which individuals meet, and thus the possibility of intellectual intercourse is accounted for. From this fundamental assumption of the unity of mind, the theory of innate ideas not derived from experience as essential to the being and nature of mind,—*e.g.*, the categories of Kant,—and the conclusion that truth—"the eternal verities"—can be attained with absolute certainty through the exercise of dialectics, or pure reason, independent of experience, naturally follow. Involved in this metaphysical theory are the notions that Universal Mind is identical with pure Being, or Deity; that matter is a *creation* of mind and dependent upon it for existence; and that all sensational knowledge partakes necessarily of the illusory and transient character pertaining to matter. To follow out the line of dialectical argument through which these conclusions are reached, and to investigate the various corollaries and deductions which logically flow from them, is impossible and undesirable within the limits of this paper. As a course of intellectual gymnastics, nothing could be more admirable or more enticing; but it is manifest that only the most robust mental natures, with abundant leisure for such researches, could ever succeed in mastering a system, the details and conclusions of which are still a battle-ground for the greatest intellects whose entire lives are devoted to the investigation of metaphysics. It follows that, if the truth of the existence of God, a correct understanding of man's moral nature and of the relations of man to the universe, are dependent upon metaphysics, there are few indeed who can ever attain to them. The acceptance of the metaphysical theory thus favors and almost necessitates the growth of an intellectual aristocracy or priesthood, to whom the masses of the people must look as the custodians and mediators of philosophical and religious truth.

The Rational Basis of the Scientific Method.

It remains to consider briefly wherein the scientific method differs from the metaphysical, and whether or not it presents a more rational and intelligible interpretation of the universe and man's relation thereto.

The young daughter of a distinguished advocate of the national policy of "protection" is said to have asked her parent one day, "Father, who is this *A Priori* about whom my Mental Philosophy talks so much?" "*A Priori*, my daughter?" was the reply: "*a priori* is dead. When he lived, he was an old fool!" Now, we would by no means be so disrespectful to the metaphysical or *a priori* method as to characterize it with the severity of our protectionist friend; yet his epithet somewhat too forcibly, but aptly, expresses the distrust of the *a priori* or intuitional method with which the modern scientific mind regards the various metaphysical systems of mental philosophy.

The synthetic philosophy claims no aid whatever from an assumption of "innate ideas," or "intuitions," as commonly understood, or any sort of infallible interior illumination or supernatural inspiration. It knows of no royal road to truth. It bases itself upon *facts*,—facts of our human nature and facts of experience, including all the relations immediately involved in the apprehension of facts. It starts with the fundamental and undeniable fact of the *finiteness of man*, and the consequent impossibility of his *comprehension* of the Infinite. It holds, therefore, that all the knowledge possible to man is *relative* and not *absolute* knowledge. Neither mind nor matter can be known *absolutely*, as "things in themselves." It does not deny the existence of a universal substance, in which all phenomenal manifestations of mind inhere; but the only mind open to its study and investiga-

*While it is believed that the positions herein taken are in no respect necessarily antagonistic to the philosophy of Mr. Herbert Spencer, the writer by no means assumes to give a complete or authoritative explanation of that philosophy, nor does he presume to hold Mr. Spencer responsible for all the inferences and conclusions herein set forth For these, no authority is claimed, other than that involved in their inherent reasonableness.

tion is that manifested phenomenally in man and the higher animals. Man, as a finite being, stands in certain definite relations to the external universe. He perceives the various phenomena of that universe as an orderly succession of like relations occurring under like conditions. In this perception, he apprehends the principle of *causation*, and traces also a like principle working in all sane exhibitions of mental activity. Herein is the first suggestion of a synthesis involving the phenomena of both mind and matter. How the apprehension of causation, or relation between phenomena, is possible to the mind according to this theory, will appear hereafter.

The Polytheism of Primitive Scientific and Religious Hypotheses.

All phenomena, both mental and material, are presented to him as manifestations of *force*. In the infancy of thought, these various manifestations of force were conceived to be disjointed and unrelated. Tracing in external nature the action of various forces, and conscious of like phenomena occurring in his own being; observing the same in all other sentient creatures,—he came naturally to regard the tree, the rock, the star, the sun, the volcano, and the storm-cloud as animated by like personal and conscious reservoirs of force with himself. Thus arose Animism, and the various systems of polytheistic worship which are characteristic of the earlier stages of human thought. It is only within the past century that the discovery of the wonderful law of the CONSERVATION AND CORRELATION OF FORCES has offered a logical escape from this polytheistic method of regarding natural phenomena, and opened the way toward a rational and scientific monotheism. It is by no means asserted that this law of itself is a sufficient foundation for the monotheistic idea: only that it is an essential element in the establishment of that belief upon a scientific basis.

Ideas of Unity, Totality, and Infinity not Innate, but Deductions from Experience.

The earliest development of the human intellect thus regarded phenomena as individual, unrelated, and often antagonistic. The conception of an infinite totality or unity is of comparatively late origin, and marks the close of a long and tedious struggle of successive generations of men with the questions suggested by their relation to the environing universe. This is the testimony of fact and of history, in opposition to the theory which would conceive this idea as innate in the human mind. The earliest races of mankind, and some existing races of savages, have no words to express the idea of *infinity* in any of its possible implications, and are totally unable to grasp the conception when it is presented to them. In numbers, some are unable to count more than three or five, and their conception of totality would be exhausted in enumerating the fingers upon their two hands. But, from the first, the perception of any finite object involves the apprehension also of a somewhat external to that object; and, as the mind developed in comprehensiveness and rationality, it was at last perceived that no object, no combination of objects, could be conceived so immense that something beyond would not still exist. Thus, in time, was apprehended the idea of the *spatial infinite*. Once risen to this height, the mind, which at first regarded the somewhat without the object of perception as a *finite* somewhat, now apprehends it as an *infinite* somewhat; and the implied conception of *infinity* accompanies naturally every act of perception. Transferring this conception to religion, the finite and anthropomorphic deities of the early animistic and polytheistic stage of human development have given place to the apprehension of INFINITE BEING.

The Synthesis of Mind and Matter under the Universal Law of Evolution.

It is noticeable that the history of this and all similar conceptions, as held by the human mind, involves a process of gradual development or growth. This process is also observable in the history of every individual organization, both in its mental and material relations and in the working of the causes which produced that organization. Moreover, it is traced in the formation of planetary systems, and in the development of social combinations among masses of people. Within the generation of those now living, this vast and similar series of facts have been united in another synthesis of profound import, under the general hypothesis or law of *evolution*,—a hypothesis the demonstration of which, says Prof. Huxley, "at the present time rests upon exactly as secure a foundation as the Copernican theory of the motions of the heavenly bodies." Prof. O. C. Marsh, of Yale College, declares: "It is now regarded among the active workers of science as a waste of time to discuss the truth of evolution. The battle on this point has been fought and won."

So far as is now known to man, the entire history of the universe is a *related unity*, a progressive and intelligible whole. At no point in the entire process of development is there any room for exceptional, miraculous or supernatural interference, any break in the web of causes and effects. The old conception of *creation*, either of the different genera or species of organic life upon the planet, of the world itself, or of matter, is relegated to the realm of discarded anthropomorphisms, which, one by one, have fallen from the religious and philosophical conceptions common to the early and immature period of human thought.

The Monism of the Scientific Method.

Matter is no longer conceived to be a "thing in itself," dead, inert, endowed with certain "properties" by an absent Creator. The alleged "properties" become different and related "modes of motion," and all we know of matter is reduced to *force*. "It is surely a great step," says Wallace, "to get rid of the notion that matter is a thing in itself, that force or forces are another thing given or added to matter, . . . and to be able to substitute . . . the far simpler and more consistent belief that matter as an entity distinct from force does not exist." Matter and mind, by this conception, are mutually and necessarily related manifestations of a common Substance or Being. The existence of one without the other is inconceivable. The creation of one by the other is equally inconceivable. The logical absurdities of the metaphysical method are thus avoided by another synthesis, and the duality of mind and matter are lost in UNITY. For, if it be assumed that mind and matter are separate entities, "things in themselves," and if the creation of matter by mind be affirmed, as it is in the old theological and metaphysical systems; if it be assumed that matter has certain essential "properties" which are not possessed by mind, among which is the property of extension, and *vice versa*,—it then follows that, if mind does not occupy space, has no extension,—that being, by the assumption, a property pertaining solely to matter,—mind could have existed *nowhere*, *i.e.*, could have had no existence prior to the existence of matter, which is the *reductio ad absurdum* of the proposition. If, on the contrary, the evolutionary hypothesis of the uncreatability and indestructibility of matter is admitted, and its necessary relation to mind, or their common relation to a single substance, be a logical concomitant thereof, we are saved from the absurdity of denying the omnipresence of Infinite Being, prior to the assumed *creation* of matter out of the raw material, *nothing*; or, in the phrase of the Boanerges of the Brooklyn Tabernacle, out of "God's omnipotence." Matter is seen to be the necessary relation which the Infinite Substance bears to sentient beings: mind is the process through which this relation becomes intelligible, the apprehension of which process appears in the phenomena of consciousness.

Man's Vital Relation to the Universe.

Let us now proceed to a brief consideration of the new interpretation which the synthetic or scientific method places upon some of the leading problems of philosophy, more particularly as these problems are related to the religious and ethical nature of man.

First, as to man's relation to the natural universe, it declares him, in both his mental and physical constitution, to be the natural and necessary product of the interaction between organism and environment, through all ancestral stages of his development, from the starting-point in inorganic being. Out of this interaction have come consciousness, reason, memory, the perception of cause and effect, and all the faculties and processes by means of which man apprehends his relations to the life and being without him, as well as the more purely material functions of his organism. Man's relation to the environing universe is, therefore, a vital and organic one. He is the noble coin of which the universe, out of which he has sprung, is the perfect die. The special senses, by means of which he apprehends his environment, have been developed by contact with it. Light, or the objective æther vibration, has produced the eye, aerial vibrations the ear, contact the sense of touch. Therefore, he is justified in assuming *an actual correspondence of the external reality with the internal state*,—that the evidence of his senses, in so far as they are sane and perfect, is sound and true. The relations of which they assure him are real relations. The knowledge which he obtains by observation and experience is as real as any knowledge which is possible to him. He thus avoids the misty and unsatisfactory conclusions of idealism, inherent in the metaphysical method.

How so-called "Innate Ideas" originate in Experience.

If it be queried how ideas conceived as innate by the metaphysicians, as, for example, the principle of causation, are possible to the mind; how, by experience, anything save unrelated phenomena can possibly be conceived,—the reply of the synthetic philosophy is that every perception of a truth concerning man's relation to the external universe involves two elements, an objective fact or relation and the subjective appreciation thereof. The objective relations, as bearing upon the development of organisms, have existed during their entire ancestral period,—long before the appearance of intellectual subjectivity or consciousness. The consciousness, when it appears, receives and reports the facts which have become already organized in the individual through past, though unconscious, experiences. It simply reports what it finds. It can do no otherwise. Unconscious organisms recognize and obey the laws of these relations by their actions, as when the plant stretches toward the light, sends its roots around stones and obstacles to seek its nourishment, as when the lowest forms of animal life seek their food and appropriate conditions of existence through an instinct which manifests an intelligence of which they are yet unconscious. In what manner consciousness itself is evolved, no philosophy can answer, any more than it can tell why a blade of grass grows. But the *fact*, the *process*, is patent and undeniable. Latent in the worm, advancing to higher and higher stages of perfection in the various species of animals, it reaches its highest manifestation in man. In man himself, it gropes blindly in the savage, and soars to loftiest heights in the mind of a Kant, a Darwin, or a Spencer. Throughout, the process is manifestly one of *gradual growth* or *evolution*, purely orderly and natural from first to last.

Substitution of the Vital for the Mechanical Theory of the Universe.

Secondly, this conclusion is saved from all merely mechanical and, as commonly understood, *materialistic* implications by the fact that nature, or the environing universe, reports itself to man, not as a mere mechanism or manifestation of lifeless and unrelated laws, but, as interpreted by the philosophy of evolution, *as a vital and living organism*, replete with *life* in every atom and part; and by the related fact that the rôle of the *organism* in the process of development *is equally important with that of the environment*. In the organism itself, however simple, in the matter of which it is composed, and in its environment, exists the potentiality of all which is developed from it. Matter is thus seen to be a living manifestation of the Eternal Substance,—not dead and inert,—"the Divinity is in the atoms"; and the so-called "laws of Nature" are not mechanical and superimposed conditions, but, rather, *man's subjective classifications of the observed facts of nature*, which appear as bearing an orderly and uniform relation to one another. Each fact appears as the immediate manifestation of an Inscrutable Power, whose method is constant and invariable.

The Synthesis of Philosophy and Science.

Thirdly, in its relation to science, the synthetic philosophy stands in an attitude of perfect and entire harmony. The facts of science are the basis of its own conclusions. By the method of science, it tests all its problems. The individual sciences find a common synthesis in its comprehensive treatment of the relations of man to nature. It thus fulfils the conditions of a genuine philosophical system by becoming, in fact and in truth, *scientia scientiarum*, the science comprehensive of all sciences.

The Relations of the Synthetic Philosophy to Theology and Religion.

Fourthly, *Theology*, or an assumed or attempted "Science of the Infinite," the synthetic philosophy relegates to the realm of pure and idle speculation.

Digitized by Google

The Infinite, as an object of comprehension and scientific investigation, it regards as *Unknowable*, and therefore deems all systems of theology to be alike impracticable and chimerical. Its position in this regard is that of the agnostic. It does not, however, deny the ultimate facts of *Religion*. In its conception of the universe as a vital unity, and not a mere mechanism, it lays the foundation for a truly scientific and rational idea of God. Recognizing that, to all highly developed and cultivated minds, the apprehension of the Infinite is an essential element in every perception, it avoids the errors and fallacies of crude materialism; while, in its recognition of the limitations of the human senses whereby the ultimate Substance or Reality is approached, it is withheld from dogmatic negation of the possibility of existence manifested in other ways than those which are known to us as sensible and material. "If we were destitute of sight, touch, taste, smell, and hearing," says an able agnostic writer, in an article on the philosophy of Herbert Spencer, "these [subjective] qualities would cease to exist, although *the external reality which causes these groups of sensations would still exist.* To beings differently organized from ourselves, so differently that their mode of being could not be conceived by us, the objective reality might give rise to states of which the word *matter* would convey no idea to our minds."

The counter-assertion of the idealist that light, sound, etc., are purely subjective sensations, that the eye produces light, and not the contrary, is, evidently, a mere truism. The æther vibrations, which are the objective fact recognized in the phenomenon of light, existed before any eye existed, and by their interaction with the organism developed the organ of vision. All that the idealist really asserts is that the objective fact would not appear in consciousness, unless there existed a conscious being with faculties capable of perceiving it, which is the merest truism. The two terms of the proposition are identical, and its statement adds nothing to our knowledge.

Philosophical Limitations of the Knowable.

The immense and fathomless region of the unknown and, to us, unknowable, offers the widest scope for wonder, awe, and reverence, and forever forbids that conceit of knowledge concerning the "eternal verities," which, while it is the life of theological and metaphysical assumptions, is the death of all true and genuine religiousness.

Yet, while this unknown Power is thus in its essential attributes shut out forever from human dissection and analysis, the new philosophy recognizes it as capable of being *well known* in all its practical and helpful relations to human kind. Through its manifestation in the visible universe, in the philosophy of history, and all the varied life of the human race, it is revealed to every inquiring intelligence according to the measure with which it seeks to learn the orderly method of its progressive relationship to these environing conditions, and to live in accordance with their manifest tendency and purpose.

That this Power is, in its essence and completeness, unknowable, appears therefore to be no real human loss or privation, since it is so, not to the confounding of any legitimate hunger for knowledge on our part, but simply and solely from the necessary finite limitations of our human nature. *All knowledge which can possibly come within the range of our faculties is open to us;* hence, every legitimate demand of our intellectual nature may be satisfied, if we follow the correct and scientific method in our researches.

The Personality of the Infinite.

Respecting the attribute of personality, as belonging to the INFINITE POWER, the synthetic philosophy does not dogmatize, recognizing that here everything depends upon definition, and that the Infinite and Absolute cannot be defined. "To define God," says Spinoza, "is to deny him." *Human, conscious* personality is, so far as we know, inseparable from organization in a brain and nervous system. "Mind, consciousness, feeling, whatever term may be selected to express sentient phenomena," says Lewes, "*is a function of the organism*, and this in both the mathematical and biological sense of the term." "At the present day," says Dr. Austin Flint, Jr., "we are in possession of a sufficient number of positive facts to render it certain that there is and can be no intelligence without brain substance." "Brain-cell is static thought, and thought is dynamic brain-cell," is the terse statement of Maudsley. We would rather admit, however, with Tyndall, that the relation is one of universal coincidence rather than of demonstrated consequence or identity, and that "the passage from the physics of the brain to the corresponding facts of consciousness is unthinkable."

Granting the necessary relation between personality as known to us in man and an objective organism, and agreeing therefore that "personality" cannot, in the human sense, properly be affirmed of the Infinite, the new philosophy does not therefore conceive that Deity is something *less*, but rather, on the contrary, something infinitely *more* than personal. The greater is never produced by the less; and, if the *appearance* is otherwise in the evolution of life upon this planet, it is because sufficient recognition has not been made of the intelligible forces in the environing universe, ctive in the working of every natural law, present at every stage of material and organic development. The conception of the Infinite involved in this philosophy is not that attained by the metaphysical process of abstraction,—that of a somewhat, *less* all the conceivable phenomena of manifestation. It is no mere negation of the finite. It is *more*, and not *less*, than all that we see and apprehend. This fact is admitted even by those who discard the terms of personality as inadequate, in reference to the Infinite Power. "Others may boldly go forward," says Mr. George C. Miln, "to limit the Infinite, to imprison in terms of personality that all-pervasive force which lies back of all phenomena, a denial of which is tantamount to a denial of sanity. But if one's thought has once stood in awe before the mystery of being, if he has once seen the folly of ascribing a finite name to an infinite essence, he will still reverently refuse, with the ancient Hebrew, to articulate a name for so incomprehensible and unknowable a force." Here is manifestly no atheism, but rather a recognition that "his thoughts are not our thoughts, nor his ways our ways; but, as the heavens are higher than the earth, so are his thoughts higher than our thoughts, and his ways than our ways."

Ethics the Supreme Aim of the Synthetic Philosophy.

Fifthly, not theology, but ETHICS; not knowledge and service of God, but knowledge and service of MAN,—of God only *through* man,—is the practical object and aim of the synthetic philosophy. And herein its profound and constant recognition of the law of cause and effect enables it to discover a rational basis of morals, wholly independent of metaphysical or theological implications. The *theological* assumption that right and wrong have no other basis than the will of God as given through revelation, involves the conception that there is no way of determining from actions what is right and what is wrong. The *legal* assumption that right and wrong are dependent upon the mandates of human law involves a similar conception. It is not otherwise with the assumption of the pure *intuitionists*, who believe that moral ideas are innate, that men have been divinely endowed with moral faculties. For, to affirm that we know right and wrong only by the action of an infallible or inspired conscience, is equally to deny any natural relation between acts.*

Utilitarianism, Rational and Empirical.

The synthetic philosophy likewise avoids the objectionable empiricism of the *utilitarian*, whose recognition of causation, though far superior to these other schools of thought, is yet unsatisfactory and incomplete. To make the distinction between empirical utilitarianism and the rational utilitarianism of the synthetic philosophy as complete as possible, I quote briefly from Spencer's *Data of Ethics*:—

"Conduct, according to the utilitarian theory, is to be estimated by observation of results. When, in sufficiently numerous cases, it has been found that behavior of this kind works evil, while behavior of that kind works good, these kinds of behavior are to be judged right and wrong respectively. Now, though it seems that the origin of moral rules in natural causes is thus asserted by implication, it is but partially asserted. The implication is simply that we are to ascertain by induction that such and such mischiefs and benefits *do* go along with such and such acts, and are then to infer that the like relations will hold in future. . . .

"The view for which I contend is," says Mr. Spencer, "that . . . the science of right conduct has for its object to determine *why* and *how* certain modes of conduct are detrimental, and certain other modes beneficial. These good and bad results cannot be accidental, but must be necessary consequences of the constitution of things; and I conceive it to be the business of moral science to deduce, from the laws of life and the conditions of existence, what kinds of action necessarily tend to produce happiness, and what kinds to produce unhappiness. Having done this, *its deductions are to be recognized as* LAWS OF CONDUCT, and are to be conformed to *irrespective of a direct estimation of happiness or misery.*" The synthetic philosophy of ethics thus avoids the empirical and selfish-egotistical implications of utilitarianism proper, and formulates certain universal laws for the government of conduct. The result of conduct so governed will produce the greatest *fulness of life* in the individual, his family, posterity, and the world in general; and this test becomes the ultimate standard of morality.

* *The Data of Ethics*, by Herbert Spencer.

The Universal Implication of Ethical Purpose.

Tracing the progress of mankind in civilization and moral development from the earliest ages, a profound philosophy of history reveals the Infinite Life in its human and social workings as a POWER THAT MAKES FOR RIGHTEOUSNESS. A clear and fine perception of the unity of man with nature, in this principle of order and uniformity which underlies and binds together all physical and social phenomena, can hardly fail to suggest the conception of *moral purpose involved in the whole from the beginning;* for, unless involved, it could not be evolved. The synthetic philosophy accepts, therefore, the thought of Jesus as in truth the testimony of the Infinite concerning duties toward God and man: "Inasmuch as ye have done righteous service unto the least of these little ones, ye have done it unto me." It finds its highest service of God, as did the Teacher of Nazareth, in the service of man; and, in this service, an instant and perpetual revelation of the ETERNAL POWER THAT MAKES FOR RIGHTEOUSNESS.

Fallacy of the Metaphysical Theory of the Freedom of the Will.

Respecting the theological and metaphysical doctrine of the freedom of the will, the synthetic philosophy has a short and effective method of treatment. It declares, in the first place, that there is no such thing as a *will*, apart from the respective acts of thought; that the notion of the will as a separate faculty, superior to the mind and having the power of independent causation, is a figment of the metaphysical imagination. "Will, or volition," says Bain, "comprises *all the actions* of human beings, in so far as guided by feelings." * All sane actions, whether voluntary or involuntary, come within the range of cause and effect, otherwise they would not be intelligible. Man always acts from the impulse of the strongest motive. All motives are determined by natural causation, and are not independent and unrelated creations of the intellect. The absolute "freedom of the will" asserted in theological dogma must therefore be a metaphysical fiction; or, as Sully terms it, a "philosophical illusion."

The Rational Synthesis of Law and Liberty.

But, since this is merely to affirm that human acts and human motives arise under and in accordance with natural laws, the freedom of the *person*, as distinguished from the fictitious *will*, is no more annulled than is that of the Deity, whose action is conceived to be always within the range of law, and without special or miraculous intervention. In the latter case, it is manifest that there is no determination from without, and hence no fatalistic implication of necessity; since the law and the act both inhere in the actor. The law is no imposed condition, but merely the orderly manifestation of power. Man's action differs only as it possesses finite limitations. The causes which determine motives are largely external; but the motives themselves, and the acts which flow from them, are both inherent in the human mind. To say, therefore, that "*man acts*," is to say that he acts *as he wills to act*, and hence possesses formal or relative freedom. The limitation is only such as inheres in all his capacities as a finite being. Action which flows in the direction of accord with natural and universal law is always recognized as the least constrained, and hence as the most free. That man is the strongest and most manly man who yields most implicit obedience to these laws. Action of a contrary nature is no mark of freedom or power, but rather of weakness,

* *Mental Science.*

Digitized by Google

ignorance, or insanity. In this finer synthesis of liberty and law, the old dispute between the advocates of freedom of the will, and fate, or fore-ordination, is also relegated to the limbo of worthless and impracticable metaphysical abstractions. Man stands related to the universe as natural offspring, bound to the great world-mother by indissoluble ties. With Goethe, he regards the rational world "as a great immortal individual who steadily works out the Necessary, and thereby raises himself to be master even over chance." His sense of freedom and his recognition of limitations are alike justified by the dictum of a true philosophy. Whether he apprehends his actions under the form of freedom or of necessity appears to have little influence upon his life or his moral nature, since he may conceive himself to be destined to the noble career of a Jesus or a Mohammed as easily as to less elevated and worthy ends. Whether he seeks his goal of perfect manliness as if determined only by personal will and aspiration, or as giving himself freely to be the medium of a divine constraint, his attitude is alike worthy and exalted. He lives as one who,

"To his native centre fast,
Shall into Future fuse the Past,
And the world's flowing fates in his own mould recast."

God and Duty as revealed by the Metaphysical and Scientific Methods.

The traveller on the Alps, in the misty twilight of the early morning, is startled to see across his pathway, and advancing to bar his progress, a dim, awful, and gigantic apparition. Credulous and superstitious, he trembles with apprehension, and bows before it as the veritable form of his Deity. Courageous and investigating, he approaches it by steady footsteps, treading firmly on solid ground; and, lo! the figure lessens at his approach, until it is discovered to be but the magnified image of his own person projected upon the clouds, which the rising sun soon dissipates and destroys. Such is the god of the dialectics,—a misty, metaphysical abstraction, created by man in his own image. The Deity of the new philosophy is seen not as the product of formal logic, proceeding from a basis of metaphysical assumption cut loose from the solid ground of experience and the understanding, but as an immanent, immediately apprehended, and all-pervading LIFE. He needs not to be sought afar or through subtle processes of intellection, for

"Closer is he than breathing,
Nearer than hands or feet."

Not in any attitude of body or platitude of language is his true worship, but in brotherly service of our fellow-men. Atheist, theist, pantheist, Christian,—the *name* is nothing. He who serves his fellows most wisely and devotedly knows most of God, though he call himself an atheist. The fact of royal and devoted service to mankind is all in all. Not they who say, "Lord! Lord!" but they who live in accord with the highest manifestations of the Infinite Life in their ethical relations, are the ones who are invited into the fellowship of the Rational Religion of the Future. Can we do nobler work or seek a greater salvation than will come to us through striving to be worthy of this invitation?

CORRESPONDENCE.

OUR LATE NATIONAL DANGER.

Editors of The Index:—

In discussing the question which, west of the Rocky Mountains, takes precedence of all others, it is well to begin by clearing away a few misconceptions. Many partisans of the sentimental view think they can score a point against the recent reform, by impeaching the motives of the body that adopted it. Mr. Beecher, in his usual chaste and modest diction, referred to those who had the presumption to differ from him as "this fool, Congress," and intimated that their action was due to fear rather than to principle. Very likely. We never staked our cause on the sincerity of parties. Granted that our charter of salvation was extorted from the fears of a reluctant Congress, that the prayers of an outraged people would have been treated with contempt had they not been backed by votes, that the President sacrificed his convictions to avert an era of Democratic postmasters and tide-waiters, what then? Simply the consequence that for once right and might went together,—that political selfishness accomplished some good. Another misconception, at once the most universal and the most absurd of all, is that which ascribes our feelings on this subject to "race prejudice." California is the most cosmopolitan State in the Union. Thousands of her citizens are fresh from the universal brotherhood of New England, and thousands more from those Arcadian realms of Europe, where, we are so often told, the color of a man's skin has no more effect on his social prospects than the color of his coat. Her voters, most of them mature when they came here, have been subject to our blighting race prejudice for all periods from a year upward. In 1879, they were given an opportunity at the polls to show their sentiments upon this abstract question, unbiassed by personal or partisan influences. The result showed between eight and nine hundred votes in favor of Chinese immigration and more than a hundred and fifty thousand against it. This unexampled unanimity disposes of still another misconception; namely, that the opposition to the slave trade is confined to ignorant foreigners of the Kearny stripe. For good or evil, the fact must be accepted that on the Pacific slope public opinion on this subject is simply a unit, that there is no pro-Chinese element worthy even to be called a minority. Those who attempt to explain such facts upon the theory of race prejudice should ponder the remarkable circumstance that, wherever Chinamen have settled in considerable numbers among an enlightened people, they have aroused the most bitter opposition. It has been so in Australia, in British Columbia, in the United States; and just in proportion to the increase of the invaders has the opposition become more universal. If Boston shall ever be cursed with such a "Chinatown" as that of San Francisco, it can be predicted, with the certainty of a transit of Venus, that the sentiment of Boston will be precisely that of San Francisco to-day, except that it will probably not be so law-abiding.

If our relief came from the irresistible unanimity of opinion in the infected regions, as it undoubtedly did, we have to thank the cause that produced this unanimity. That cause is to be found in the fact that Chinese immigration possessed a happy combination of undesirable qualities, which secured the special dislike of every class of the community.

To the poor, it was a matter of life and death. The standard of living, painfully formed and slowly elevated through six centuries of progress, could not be suddenly reduced to the Asiatic level without the extinction of the American laborers. And to that end it was bound to come, unless the stream could be stopped. Two currencies may circulate side by side, so long as the cheaper is not plentiful enough to supply the wants of trade; but, the moment that point is reached, the dearer must pack up and leave. So, while the Chinese are comparatively few, Americans may occupy the same country; but, in the absence of restriction, the day would be inevitable when those who are content to eat rice, and sleep on tiers of shelves, would crowd out those who insist on beef and beds. Thus, the evils already tasted and the prospect of greater evils to come armed one powerful and bitterly determined class against the invasion. This was the genesis of the Sand Lot; and, worthless as many of the popular leaders were, it can hardly be denied that they had a real grievance to back them.

The religious element, another large and influential class, could not view with equanimity the influx of a mass of pagans far outnumbering all other immigrants to the State, by land and sea. A few missionaries, whose zeal had long parted company with reason, saw a providential opportunity to illumine the heathen with the light of the gospel; but most Christians thought it better to save California than to throw it away for the extremely problematical chance of converting one Chinaman in a thousand.

Again, parents, of whatever class or creed, began to feel a personal interest in the subject, when their boys and girls were found stupefying themselves in Chinese opium dens. People of refinement were shocked, when they discovered the peculiar and characteristic uncleanliness with which their neat, daintily clad assistants diversified their washing and cooking. Timid people were alarmed at the frightful sanitary dangers that menaced every place afflicted with that supreme achievement of filth and squalor, a "Chinatown."

Thus, those whose hearts were bound up in the success of the American experiment,—who would rather have carried the flag to some solitary island of the Pacific than to have seen it floating over an intellectual province of Asia or a sinking chaos of wrangling races, instead of struggling in a hopeless minority against the apathy of their fellow-citizens, found themselves supported by all the elements of society, from the mob to the clergy. They welcomed every recruit, without particular inquiry as to his antecedents or his motives. They allowed each to justify his opinion by his own arguments; but for themselves, without disputing the importance of social and economic considerations, they ranked above all the safety of the Republic.

Already, our institutions have had to undergo a strain beyond anything their founders could have imagined. A community at first essentially English has become the receptacle of a heterogeneous mass, contributed by all the nations of Europe. That the process of absorption is still far from complete may be seen in the foreign churches, theatres, and newspapers of our cities, as well as in the cohesion displayed by each nationality on election day. As a rule, the Irish are Democrats, the Scandinavians are Republicans; and the Germans, with more independence, give their vote to the party that outbids the other in the direction of free beer and no Sunday. These foreigners bring their factional fights with them, and disturb the peace with squabbles about the Paris Commune and the Battle of the Boyne, while Americans live on sufferance in their own country. Such things are hard to bear; but we endure them, because they are only temporary. With seasons of depression, immigration will decline; and we can take breath to survive a fresh attack. The German may remain a German all his life; but his son will be three-fourths a Yankee, and his grandson will endeavor to trace his descent to the Mayflower.

To this cheering prospect there is one momentous exception. The sin of our forefathers fastened upon a great part of the country a race so totally different from our own that its management has been and always will be one of the gravest problems of statesmanship. That sin can never be undone; and, willingly or not, we must bear its consequences forever. But, in full view of the frightful legacy of war, anarchy, and political corruption entailed upon us by the importation of negroes, it is hardly the part of wisdom deliberately to make history repeat itself. The *ante bellum* question, "Do you want your daughter to marry a nigger?" was absurdly irrelevant as an argument against the abolition of slavery; but it is decidedly pertinent, when applied to the introduction of an alien race. For unless the Chinese intermarry with the whites, which, however desirable some might consider it, is hardly likely to happen to any great extent, they will always remain Chinese. And the question whether they will remain Chinese or become Americans is one of the very highest importance. It involves the essential difference in ultimate safety between the Chinese slave-trade and European immigration which so many Eastern critics seem unable to grasp.

Sentimental writers are fond of talking of the spirit of our institutions. The spirit of our institutions is opposed to the permanent disfranchisement of any large class. Imagine then, if you can, the effect on the politics of this State, already corrupt enough, of a hundred thousand Chinese voters, ignorant and careless of the first principles of citizenship, but anxious to get the highest price for their votes. The chances are ninety-nine to one that the Central Pacific Railroad would buy the whole hundred thousand, and swing them in a body. This, of course, is making an impossible supposition; for nothing is more certain than that Chinese will never vote in California, while Americans still live here. Still, if the influx had continued, the permanent residence of Americans near the Pacific might have been problematical. The friends of the importation say that it has all been drawn from a single province, containing not more than a tenth of the population of China. If one province could give such a shock to our civilization, the prospect after the slave-dealers had penetrated to the rest of the Empire would be gloomy enough. If our peaceful Americans did not care to fight, they would in all probability be forced across the Rocky Mountains, and that with no more discredit to themselves than gold suffered when it was driven to Europe by depreciated paper.

BOOK NOTICES.

MEMOIRS OF THE REBELLION ON THE BORDER, 1863. By Wiley Britton, late of Sixth Kansas Cavalry. 458 pp. Chicago: Cushing, Thomas & Co.

This work is a panoramic view of military operations and events on the borders of Missouri, Kansas, Arkansas, and the Indian Territory during the year 1863, written from materials collected eighteen years ago by one who was in the Union Army and connected with the movements, battles, and events which it describes. The writer says: "I felt such an interest in the anti-slavery cause before the war that Kansas, to me, always meant a principle; and I left home at an early age to join the Free State party. It was therefore a real pleasure to me to chronicle everything that I thought would be of interest in the future pertaining to Kansas soldiers in the war. At the same time, I endeavored to do full justice to the soldiers of other States serving with us in that section." These memoirs have historic value for students of American history, and especially for those interested in the events of the late Rebellion in Kansas, Missouri, and Arkansas. The style and arrangement of the work are good, and it is very readable and valuable for reference.

KING'S HAND-BOOK OF BOSTON HARBOR. By M. F. Sweetser. Illustrated by Charles Copeland and others. 268 pp. Cambridge, Mass.: Moses King, publisher, Harvard Square.

This neatly printed work, with its historic narratives of old-time events and incidents, and bright, sketchy drawings illustrative of scenes and occurrences on the shores of Boston Harbor, surpasses all previous works of the kind, and should be read not only by summer visitors to this city, but by Bostonians, who are often told, and not always without truth, by Westerners, that they know less about the harbor and places of interest bordering on it than those who come from a distance.

IN the *Atlantic Monthly* for September, generous instalments are given of two of the serials (Hardy's "Two on a Tower" and Bishop's "House of a Merchant Prince"), while Miss Phelps' promising "Doctor Zay" is apparently brought to a legitimate but somewhat unsatisfactory conclusion. Moncure D. Conway takes his readers on a very charming and delightful "Geologic Ramble on the Weald." Frank Cushing's recital of a daring trip to the little known "Nation of the Willows" is written in a very wide-awake and enticing style, which lends an added interest to the strange story he tells. R. Fellows writes of "American History on the Stage"; Alexander C. McClurg, on "The Last Chance of the Confederacy"; and Elizabeth Robins, on "Evil in Greek Mythology." The "Studies in the South" is continued. Among the books reviewed at some length are Freeman's "William Rufus," Mozley's "Reminiscences," Lecky's "England," Leland's "Gypsies," Lalor's "Political Science," and Mrs. Fanny Kemble's "Memoirs."

THE leading article in the *North American Review* for September is on "Political Assessments," by Dorman B. Eaton, who by an interesting path reaches the conclusion that the practice of levying assessments in this country is extortion. Judge E. A. Thomas, in an article on "Oaths in Legal Proceedings," shows that formal oaths do not add to the weight of testimony or promote the interests of morality or public justice. T. B. Maury contributes an article on "Tornadoes and their Causes," in which are suggested practical measures for averting disaster to life and property from wind-storms. The other articles are: "Architecture in America," by Clarence Cook; "Earth-burial and Cremation," by Augustus G. Cobb, who finds the idea of cremation fascinating; and "The Geneva Award and the Ship-owners," by J. F. Manning.

"ST. NICHOLAS" for September presents to its readers its usual complement of bright and beautiful pictures and pleasant and instructive reading. We note, as among the best of the reading matter it contains, the story, "Do you know such Boys?" by Eliot McCormick; the sketch of "Jiro, a Japanese Boy," by C. A. W.; the article on elephants, entitled "Our Largest Friends," by John Lewees, to which the recent exhibitions of Barnum's Jumbo will add interest; and "The Story of the Arbalist." There are over a dozen poems, short and long, so that every taste is sure to be suited in the matter of poetry as well as of prose.

THE *Unitarian Review* for September contains articles on "A Ministry of Education in the South," by Rev. A. D. Mayo; "Buddhist Birth Stories" (concluded), by Rev. James T. Bixby; "Modern Spiritualism," continued, by Thomas B. Hall; "The Buddha and Christ," by Rev. C. H. A. Dall; "Seekers after Truth in Primitive Scandinavia," by K. M. Haven; "Natural Religion," by Rev. F. H. Hedge, D.D.; with "Editors' Note-Book," "Things at Home and Abroad," by Mrs. Martha P. Lowe, and Review of Current Literature.

GEORGE H. ELLIS will issue September 1, by arrangement with the author, an American edition of Miss Frances Power Cobbe's new book, *The Peak in Darien*. The work is an octave of notable essays "touching concerns of the soul and body," as follows: "Magnanimous Atheism"; "Hygeiolatry," a timely protest against the growing fashion of making health the paramount consideration in ethics; "Pessimism, and One of its Professors," in which Schopenhauer is treated with an *argumentum ex homine;* "Zoöphily," a plea for kindness to animals; "Sacrificial Medicine," in which certain medical superstitions are discussed without any particular tenderness for the feelings of the medical profession; "The Fitness of Women for the Ministry of Religion," a remarkably candid and dispassionate presentation of both sides of the case; "The House on the Shore of Eternity," an allegory; and "The Peak in Darien: the Riddle of Death." This last essay, which gives a rather misleading title to the whole book, is an intensely interesting account of the testimony of dying persons who have seemed to look out from that isthmus between two worlds upon the sea of Eternity, even as Balboa from "the peak in Darien" looked out upon the great ocean of the Pacific.

PERSONAL ITEMS.

AN unfinished and hitherto unpublished work by Kant will appear in the September *Altpreussische Monatsschrift*.

REDPATH says that Henry George is a brilliant fool. It only remains for us to learn what Henry George thinks about Redpath.

OSGOOD will publish in December *The Correspondence of Thomas Carlyle and Ralph Waldo Emerson*, 1834 to 1872, edited by Charles Eliot Norton.

CHARLES BRIGHT, of Australia, will lecture at Paine Hall next Sunday afternoon at three o'clock. Subject: "Evolution, its Processes and Possibilities."

THE Rev. Thomas Mozley, having alluded to Herbert Spencer's system of philosophy as occupying "several yards of shelf in most public libraries," Mr. Spencer has been at pains to state that "less than two feet" is the space actually covered by his books.

MISS M. A. HARDAKER has recently received from her *Alma Mater*, St. Lawrence University, the degree of M.A. This is the second honor of this kind she has received from the same source, the degree of Ph.B. having been bestowed upon her by this college some time since.

"UNITY" says: "That earnest and talented friend of free religion and pure morality, Francis E. Abbot, is about to re-enter the field of philosophical thought with an article in *Mind* on 'The Scientific Basis of Philosophy.' Mr. Abbot is at present engaged in teaching and study in Cambridge, Mass."

THE annual meeting of the German Association of Scientific Men will be held at Eisenach, in Saxe-Weimar, from September 17 to 22. In the programme are lectures by Prof. Haeckel on "The Interpretation of Nature by Darwin, Goethe, and Lamarck," and by Prof. Rehmke on "Physiology and Kantism."

THE New York correspondent of the Rochester *Democrat* says: "Mrs. Elizabeth C. Stanton is spending the summer in Paris, accompanied by her daughter Harriet and her son Theodore. Her husband is the political writer on the *Sun*, and is now one of the veterans of journalism. He has never, however, equalled his wife in notoriety."

THE two British princes, Albert Victor and George of Wales, who have been making a tour of the world, have just been confirmed at Whippingham Church, Newport, Isle of Wight. It was very thoughtful of the young fellows' parents to allow them to make the tour of the world before asking them to renounce its "pomps and vanities."

E. DWYER GRAY, member of Parliament, ex-Lord Mayor of Dublin, High Sheriff of Dublin, and editor of the *Freeman's Journal*, has been sentenced by Judge Lawson to imprisonment for three months and a fine of £500 for contempt of court, in publishing a statement that the jury which lately convicted a man of murder were drunk on the night before giving in their sentence. The judge would not allow Mr. Gray time to get counsel, nor was he permitted to prove the truth of what he said. This was an outrage on justice which reminds us of the days of Judge Jeffreys.

A CORRESPONDENT of the *Commonwealth*, writing from Brooksville, Me., makes the following allusion to a well-known thinker and a valued contributor to *The Index*: "From the wharf, I walked, as directed, to the nearest house, to get a conveyance farther, where the first thing that met my gaze was a small cannon in the yard, pointing toward me. The lady was so kind I forgot to make any inquiries about the cannon, which I do not believe was loaded, especially when I learned that she was the sister of our old friend and your former pastor, Rev. D. A. Wasson, whose son, Mr. Wasson of Boston, the artist, passed last season in this vicinity, collecting sketches for pencil and brush."

WHEN Auguste Comte died, he bequeathed all his works, manuscripts, and the objects that had been his especial personal property to his little band of disciples. This disposition in his will did not please his widow, who disputed it in 1870, and lost her suit. But Pierre Laffitte, the chief of the Positivist school, was gallant enough to give up to Mme. Comte a portrait of her husband, which was the only one in existence, on the understanding that it should come back to the Positivist Society on her death. The lady forgot this agreement; for before her death, in 1877, she gave the portrait to Wyronboff. Then, Laffitte forbade the administrator of Mme. Comte's estate to give up the portrait. The picture remained in the administrator's hands until the death of that person; and a few days ago the two Positivists, Laffitte and Wyronboff, had a legal wrangle for the possession of the coveted object. The court has sustained the judgment of 1870, and the Positivist Society is authorized to receive and keep the portrait of the founder of its school of thought. During the trial, a constantly growing adherence to his principles in France was clearly shown.

HERBERT SPENCER arrived in New York on the 21st. He has come to this country to rest, and has declined all invitations to lecture or to be interviewed. He is the guest of Prof. Youmans. He does "not expect," he says, "to sojourn for three months in this country without meeting material for copious notes." The probability that we will see in the next division of his great work on Sociology the result of his observations among us, especially in the department of the industrial developments of society, helps to compensate for the fact that he will not come directly before the public while here. We have among us, without doubt, in Herbert Spencer, England's greatest thinker. Darwin called him "our great philosopher." Of him, George Henry Lewes wrote, "It is questionable whether any thinker of finer calibre has appeared in our country." And, in his review of Sir William Hamilton, John Stuart Mill speaks of him as "one of the most vigorous as well as boldest thinkers that English speculation has yet produced." The London *Saturday Review* says: "Since Newton, there has not in England been a philosopher of more remarkable speculative and systematizing talent than (in spite of some errors and some narrowness) Mr. Herbert Spencer." And our own George Ripley wrote: "Mr. Spencer combines to a degree certainly seldom found in any other living English writer the power of deep reflection, of equally acute insight and outsight, of practical adaptation, and of expression and illustration as felicitous as it is forcible. With the condensation and pointedness of Hobbes, the flowing facility of Locke, the philosophic simplicity and earnestness of Bishop Butler, and the profundity of Kant without his diffuseness and obscurity, he must be classed in the highest rank of British authors, not only as a thinker, in which line few will be disposed to question his preëminence, but as an artistic writer, in which capacity he has perhaps not been so universally recognized."

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

M. L. SANDERS,
DELAVAN, ILL.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

PRIVATE SCHOOL FOR TEN BOYS,

In Northboro, Mass., opens September 13.

CURRENT TOPICS.

A PICTURE gallery is at last open in London on Sunday afternoons. It is that of Miss North, which some time since was given by her to the Royal Gardens at Kew, and consists mainly of paintings of the flora of many countries painted from actual observation by Miss North herself.

AT a recent examination for clerkships in the London post-office, fifteen hundred women presented themselves. This would seem to indicate that women, as a class, are not so indifferent to the emoluments or so averse to the cares of public office as many opponents of the woman's movement would like to make appear.

THE *Congregationalist* cites the case of two little girls who have been secured to attend the camp-meetings at Chautauqua and Framingham for the purpose of "fiddling to a company of Christian people in the woods at night" as one worthy the attention of the Society for the Prevention of Cruelty to Children.

IT speaks well for the philanthropy of this much-decried age that the contributions to the "Fresh Air Fund," started and controlled by the New York *Tribune* for the purpose of securing to the children and invalids of the poorer classes a week or two of country life and air during the summer, have now reached the generous sum of $20,000.

OBSERVATIONS of the transit of Venus, to take place December 6, will be made under the auspices of the United States Government at Washington, D.C.; Cedar Keys, Fla.; San Antonio, Tex.; Fort Thorne, N.M., in the United States; and at the following foreign stations: Cape of Good Hope; Santa Cruz, Patagonia; Santiago, Chili; and one in New Zealand.

THE experiment of admitting a colored cadet at West Point is probably to be tried once more, Samuel W. Livingstone, of Florida, a jet black negro and an excellent scholar, having offered himself for examination with every prospect of passing successfully. If he succeeds in entering West Point, it is to be hoped for the honor of the United States Service that we shall not be treated to another Whittaker scandal.

A LADY missionary to India, in a letter describing her efforts in trying to convert the native women to Christianity, tells of the unexpected help rendered in her work by some dolls which had been sent her. The present of one of these to a poor blind woman, who took a fancy to it, was, she *naïvely* declares, "the means of bringing three new women to my Bible-class." Although some missionaries are, doubtless, too conscientious to care for converts made under such circumstances, yet her experience seems to be related as a hint to others.

"WE observe," says *Nature*, "that a correspondent of a daily paper proposes that men addicted to the pursuits of science should be called *scientiates*, after the Italian *scienziati;* and in like manner the studies of science, *sciential* studies (*studj scienziali*). The substitution of the American *scientist* for our unsatisfactory phrase *man of science* is of course much to be deprecated. Perhaps we shall come to accept Sir William Thomson's proposed use of *naturalist* for the designation in question, if its sense may be extended. *Scientific studies* is a phrase which cannot be commended for accuracy."

THE Directors of Paine Hall state that "the idea of turning Paine Hall into a Liberal Union, as it were, with all its social and ethical advantages," has long been entertained, but "that, while these ends are desirable, their adoption now would be premature and uncalled for under the circumstances in which Paine Hall is placed, and are only to be accomplished when the treasury can stand the expense; . . . that, as long as there is a heavy debt on the Paine Memorial, their responsibility to the stockholders demands that that debt should be removed with as little delay as possible," and they condemn as "unjust and unreasonable" attempts to create a contrary impression.

THE Boston *Journal* states that a curious law question has arisen in Morris, Conn. Mrs. Stevens, a pious widow of that town, in a recent conversation with Mr. Horace Benton, expressed confidence that she could bring rain by prayer. He offered her ten dollars to bring a good rain within three days. A light shower followed, when the pious widow called upon Mr. Benton and demanded the ten dollars, declaring that her prayer had been answered and her part of the contract performed. He objected, on the ground that the shower was too light to be of any value, and fell short of what the contract required. She has made three different demands on him, and threatens suit for the money.

THE Springfield *Republican* says: "The great small-pox epidemic in Chicago began in June, 1879, with the case of a hotel porter who took the disease from handling immigrants' baggage. The city had for a long time been free from the pest, vaccination had been neglected, and the poison readily spread from this beginning, and is not even yet stamped out. In the next January there were eighteen deaths from small-pox; and for the eighteen months ending with July 31, last, the number of deaths is thirteen hundred and fifty-eight. The greatest number in a single month was one hundred and seventy-two, in October last. In January last there were one hundred and thirty-four deaths, and since the number has constantly diminished to: sixteen in July. The city spent about $67,000 in vaccinating during the eighteen months."

COL. JOHN C. BUNDY, editor of the *Religio-Philosophical Journal*, in interesting "Camp Notes" to his paper from Martha's Vineyard, observes: "The managers of evangelical camp-meetings everywhere see the futility of working for converts, and are establishing at the Vineyard, Chautauqua, and elsewhere, summer schools for intellectual improvement, and endeavoring to make up, through social and intellectual advantages, for the loss of the spiritual repasts offered by their acknowledged Lord Jesus when he ministered to the people. Let Spiritualists learn from the experiences of these Christian people; and, while doing all that is possible, and much more than yet attempted, for intellectual improvement, hold firmly and faithfully to the spiritual side of man's nature as well." It is gratifying to see that measures for "intellectual improvement" are superseding the machinery heretofore employed for making converts, and it furnishes one of the illustrations that the evolution of thought is proceeding along the line of existing beliefs and systems, and that one of the greatest achievements of rationalism is seen in the changes it has forced upon the churches.

"THE *Catholic Review* asks the *Christian Advocate* this easy question: 'How does it explain the circumstance that the countries which hold a sad pre-eminence for immorality and drunkenness in the Old World—Scotland, Scandinavia—are the very countries that were stamped with their "religious and moral character" by the reformers of the sixteenth century?' We have heard this statement made a hundred times by Catholics, that Scotland and Scandinavia were notorious for the number of their illegitimate births, in contrast with the purity of Catholic countries. Though any one who knows Italy or France would laugh at the idea of their being pre-eminently virtuous countries, we take the trouble to turn to Von Oettingen's *Moralstatistik*, and we find that, in each of the Protestant countries of Scotland, Norway, and Sweden, the illegitimate births from 1865 to 1870 were less than ten per cent. of the whole, while in Catholic Austria they were 14.7 per cent., and in Catholic Bavaria they were 19.3 per cent. Let us hear no more of this nonsense." The above we find in the *Independent*. The "circumstance" is left unexplained, and the reply is by no means complete; but it is sufficient to remind our Catholic contemporary that, if Protestantism has not transformed its adherents into saints, something more than Catholicism is necessary to enable society to realize practically the highest moral ideal.

THE CONCORD SCHOOL OF PHILOSOPHY: ITS MERITS AND ITS DEFECTS.

The Concord School of Philosophy closed its fourth annual session three weeks ago. Yet it may not be too late to offer some comments upon it as one of the educational institutions which now appeal for a permanent patronage. Mr. Alcott, the venerable dean of its so-called Faculty,—who finds in this school at least a partial realization of his lifelong dream of an American Academe,—announced in his valedictory address that the report of the removal of the school to the West, though the question of a temporary removal had been entertained, might be denied; for Concord, its birthplace, would still continue to be its home. His address was also congratulatory on the general success of the school in the accomplishment of its purposes during the four years of its existence, notwithstanding the diminished number of students the present year.

That the school has had a good measure of usefulness may easily be admitted, even though it be questioned whether the "seven hundred or eight hundred different persons" who, according to Mr. Alcott, have been registered in its list of students, have thereby shown that they "really care to devote themselves to philosophy"; or even though the more serious question be put, whether the attempt to make a study of philosophy in four or five weeks of a summer vacation time does not tend to encourage superficiality in an intellectual pursuit that requires the most searching and persistent thought. The results of the school must be judged not by the standard of a university course, or the elaborate programme of study laid down for a scientific college, but rather by the aim of the lyceum platform, and such courses of lectures as are given by the Lowell Institute. That is, the school has served rather to gratify briefly a love of mental pursuits among those in attendance, and to incite thought among those already disposed to think, than to give any large amount of information or to accomplish any profound and systematic philosophical work, or even to direct young minds toward such work. But, measured by the standard of the lyceum platform,—the lyceum platform, it should be added, in its former and better days,—the Concord School may present a good showing. It has had able and learned lecturers, some of them being specially acute and brilliant. If profound originality of thought cannot be claimed for any of them, it can at least be said that they have for the most part been highly accomplished and enthusiastic students of the themes which they have chosen for their lectures. Through them as ardent disciples, some of the greatest and most original thinkers of the past have had their interpreters, and much of old and valuable wisdom has been thus resuscitated. There has also been considerable variety in the themes. Though philosophy has had a dominant share, literary and social topics have yet been to some extent admitted, and have, it is said, each year been among the most attractive features of the course.

Now, so many bright, intellectual men and women cannot come together to tell their thoughts or to give forth their learning without benefit to those who hear. Whether any profound questions of thought or life have been settled, or even systematically treated, or not, if the hearers have been led to *put* questions more wisely or have gained a better idea, even at second-hand, of the intellectual work of past thinkers, or have only redeemed a part of their vacation from mere physical pleasure or *ennui* to mental recreation, no little good has been effected. The tendency is becoming so strong to lengthen the summer vacation season that not a few persons must find it a real boon to have such a place as that which the Concord School offers, where they can combine with physical rest and refreshing a certain healthful and pleasurable amount of intellectual stimulus.

But, while it may be granted that the Concord Summer School is in its way a useful institution, yet, as a school of *philosophy*, which it professes to be, it has very grave defects. To say nothing now of the rather ambitious title, "School of Philosophy," as given to a month's course of miscellaneous lectures, the school in its aim and method entirely fails to meet the demands made upon philosophy at the present time. The institution may be good in its way, but its way is a fatally narrow one. As it has been conducted thus far, the school is the *Bourbonism* of metaphysical philosophy.

First, by the lecturers chosen on philosophical subjects, and by their treatment of their themes, it has been clearly manifested, if not openly professed, that the *aim* of the school is philosophically to vindicate Christianity as the absolute and universal religion. In the discussions concerning Christianity, the historical and critical lines of investigation, the only ones that have any real vitality at the present day, are abandoned; and the Hegelian feat, which even Hegel's disciples in Germany have mostly ceased to practise, of reconstructing ontologically a dogmatic theology whose historical foundation was admitted to be utterly destroyed, is dexterously reattempted, as if it promised a permanent structure of religious faith. It is not too much to say that, at this day, no philosophy which sets out with the premise that any one of the historical religions is absolute truth meets the demand of the times. To ignore those results of modern historical research which show that all religions are of one family and origin,—and have been subject alike to natural conditions of development, and that each and all of them, therefore, are limited and provincial in character,—is to manifest not only an incapacity to solve the religious problem of our age, but even a failure to see what the real religious problem of our age is. When Mr. Alcott said, in his closing address, that "it is safe for young people to go to the Concord School without imbibing any heresies," he unconsciously declared the fatal limitations of the school on the side of religious philosophy. The robust minds among the young men and young women of our age are not afraid of "heresies": they have already largely imbibed them, and they will justly be suspicious of the thoroughness of any school which promises to fence them in a "safe" place where heresies cannot come.

A second fatal defect of the Concord School is its ignoring of science. It has not only thus far kept rigidly to the *a priori* method of inquiry as distinguished from the scientific, but it has in a marked degree ignored the results of scientific discovery, and even treated with a kind of contempt the idea that science rightfully affects both philosophical and religious theories. Now, it is not necessary nor desirable that the school should be turned into a scientific institute. It need not set up a chemical laboratory nor a zoölogical museum. Let it keep to its province of pure philosophy. It is most excellent to have an institution with that object. Natural science is not philosophy. Philosophy is a systematic view of the whole truth of things, and as such it includes and crowns all the sciences, mental, moral, and physical. But because philosophy is thus all-inclusive, embracing the whole range of truth, any attempt at setting forth a philosophical system which ignores the magnificent work of science in disclosing the actual facts of the universe is fatally discredited at the outset. In the present stage of the debate between the so-called intuitional and scientific methods (a nomenclature that does not express the correct antithesis), the Concord School need not be required to take sides against the "intuitionalists." They stand for a truth that must be covered in the fulness of the philosophic view. But as little should the school take sides against science and its method, if it is bent on attaining truth. This it has hitherto done. It has pursued philosophy in the narrow spirit of sectarianism. But the sectarian spirit, whether in philosophy or religion, never arrives at truth: it only sees a very distorted section of truth.

WM. J. POTTER.

THE PLACE OF OPINION.

The proverb is generally accepted which says, "There is a place for everything, and everything should be in its place." This is equally true of opinion, but nobody seems to think so. The principles of conduct are as various as diet. You cannot make all people eat one kind of food, nor can you prevail upon all people to live on the same set of opinions. Just as all diet is good, so long as it is wholesome and suitable to the nature of the person consuming it, so all principles are profitable so long as they are honest and adapted to the minds which accept them. It is well to combat principles which are mixed up with error, just as it is desirable that food should be divested of impurity or adulteration. The intellectual natures of men are as different as their physical nature. Yet this seems never to be recognized in advocacy. There has lately appeared in *The Index* a series of admirable papers by Rev. Mr. Potter, Dr. Adler, and others, which seem to me to proceed on the assumption that any set of principles to be regarded as true or useful must be capable of being universally received. Were it not for this assumption, many varieties of opinion would be treated more fairly, and be better appreciated than they now are.

For myself, I have accepted the friendly invitation of the editors of *The Index* to communicate to its readers statements of forms of thought which appear to me to be useful in their place. But I have no idea that such opinions should be considered as suitable to every mind. Some of your contributors and editorial writers take quite a spiritual view of beliefs, and regard them as all essential. I believe they are natural and essential to many persons. I am content occasionally to place different views before your readers, just for the chance of their being acceptable to some who, by nature, are inclined to a secular view of life.

Some years ago, I proposed a new form of free thought, based upon agreements of opinions arrived at instead of upon differences of opinion which never get reconciled. Already, a considerable number of adherents of these principles have appeared. Some statesmen, some philosophers, and even some theologians, have either recognized that secular principles have their place in the world of thought, or have arrived at similar conclusions themselves, and may be regarded quite as much originators as adherents. But confusion on the part of the general public exists as to the separate nature of such principles; and even such persons as the editors of the *Secular Review*, published in this country, have converted that organ into a furious, scornful, anti-theological journal. They have slipped out of Secularism altogether, and seem to know it not. I have ceased to write in it, because the public would infer, if I did, that I also meant by Secularism mere anti-theology, and that I did not know which was which. There are a substantial number of persons in England who do know which is which; but, when the editors of a reputedly

Digitized by Google

secular paper fall headlong "from grace," no wonder if in another country, where Secularism has been little heard of in journalism except by the courtesy and liberality of the editors of *The Index*, who have permitted me to speak of it in their columns, misconceptions of it, agile and active, run about. Nevertheless, it is a distinct thing, having its distinct place.

Secularism is quite a new term which has come into use in recent years. It is natural that those who are strangers to it should have confused notions of it. It is natural that those who are enemies to it should misunderstand it. And, as is always the case with new ideas, many friendly to a new form of free thought, like Secularism, have an inadequate conception of it. This is no great wonder. The English people have been taxed for forty years for travelling about, under the name of "The Railway Passenger Tax"; and not one person in ten knows it. If this ignorance may subsist in an affair of the pocket, there is sure to be misconception as to a new principle of life and conduct. Every new idea in England takes a good deal of explaining.

Secularism means belief in this world and the uses of this world, and regards the duties of this world as consisting in seeking happiness through morality; and it measures morality by its conduciveness to promote the welfare of others as well as the welfare of the individual. Secularism seeks this welfare by the employment of material means,—because these means are most certain, and everybody can employ them. It does not believe in believing: it believes in working. The most ignorant and idle and unscrupulous can excel in believing, but only the intelligent and honest can or will vote for the welfare of themselves and for others. But the best-intentioned persons will not work with zeal, unless they are certain of results; and certainty of result can only be attained by wisely chosen material effort.

The distinction of a Secular Society is that it seeks the improvement of this world by material means, always understanding that the means employed shall be moral. It regards science as the available providence of man. What other providence there may be belongs to theology to determine. In this world, it is clear that the regulation of human affairs, human welfare and progress, is conducted by science. Condorcet has remarked that it took two thousand years for Archimedes and Apollonius to perfect the science of navigation by mathematics and astronomy so as to save the sailor from shipwreck. When navigation was thus perfected, it totally superseded the efforts of the human mind to induce, through prayers and sacrifices, the providence of the Churches to control the winds and the waves with a view to the safety of ships. The providence of science does that, and gives heaven no trouble. It appears to Secularism that this world is made to be self-acting, and that there are means of self-help and self-direction for those who use common sense. Secularism is the creed of self-help.

There is no doubt that morality ought to be the aim of every person. There is no doubt that material means are the most certain means of increasing human welfare. There is no doubt that reason and free speech (which means fair, considerate, and relevant speech) are the surest means by which truth can be discovered and advanced. These things, about which there is no doubt, are those which a Secular Society makes the bond of agreement within it. There are two things which have always been doubtful,—conclusive knowledge of the existence of God, and a future state. There are many people who believe they know all about these things, and have no doubt about them; while others, less wise or less confident or more modest, are less sure concerning these things. There always have been, and still is, great difference upon these subjects. The Secularists, therefore, leave these unprovable things to the private judgment of the members, and ask for no agreement thereupon, because the proof of the existence of Deity is beyond our faculties: the proof of a future state lies beyond the grave. The Secularist, therefore, says: "If God made this world, and I improve this world as far as my power goes, I shall be fulfilling the will of God, whether I have personal knowledge of Him or not. If I promote human welfare in this life as far as I have opportunity or discernment of it, I shall deserve another life, if there is one, and shall have fitted myself for it in the best way, and the only way open to me."

Thus, the members of a Secular Society unite upon matters of undoubted agreement, and leave out all matters of doubtfulness and difference.

There are persons who seem to have no faculty for anything but atheism. They pay but little attention to the improvement of the world, they are so interested in finding out its *origin*. Yet the origin of the world is a very small question compared with the *uses of the universe*. The wise use of this world depends in no way upon the knowledge of the *cause* of it. A man may judge of the house he desires to live in: he can tell whether it is well situated, has a wholesome neighborhood around it, whether it is well drained, well ventilated, has light and space, and will be a pleasant and healthy habitation, although he may never know who is the *architect* of it. The Secularist regards this world as a habitation whose builder is unknown, and seeks to put that habitation to the wisest uses, instead of devoting his whole time in trying to discover the Builder, who does not choose to be found, and whose address no one seems to have.

Other persons seem to have no faculty except for theological discussion. They profess to consider theology a waste of time, and yet they waste their time upon it. Instead of trying to improve men by advising the study of morality and science, these persons enable the priests to call them "Infidels," which sets people against the Secular truths they might teach and sometimes try to teach. The term "Infidel" means one who disbelieves or denies what he knows to be the truth. This term cannot be applied in science or morality, because such truth can be proved in this world, while the theological truth of the Bible can only be proved in another world. So much of the Bible as is moral and accords with the experience of this life the Secularist accepts. The Secularist, as such, is not under any obligation to prove the Bible is not true: his business is to prove his own principles true, which are independent of theology.

There was a time when the Bible was thought to be the source of all truth: now, Science is known to be the source of all truth. Therefore, Secularism advocates the study of science, and teaches that morality is the true piety. The first preaches the usefulness of piety: Secularism preaches the piety of usefulness. Theology preaches piety to God: Secularism preaches piety to man, which must include piety to God, and is the only way in which man can show it.

Secularism is not a new name for an old thing, but a new name for a new thing. Secularism is that which teaches self-help by the use of science and morality, founded not upon creeds, but experience, which shows that honesty, truth, and kindness are best for this world, and not bad things for another, if it comes to that. Therefore, the Secularist is under obligations to use fairness of speech, to avoid offensive imputations (which set people against new truth), to explain and not to denounce, to speak with reason and consideration, since dogmatism and outrage are traitors which betray new truth to its enemies. Some people think that they may "shock" people into the truth, but they make "shocking" converts by this method. If Secularism does not make fair-speaking, pleasant-minded men, it is no better than theology in its influence,—no better than theology, of which honest men have grown tired because of its disagreeable fruits of bigotry, imputation, and unpleasantness of speech.

For myself, I have no objection to anti-theological or even atheistic journals, providing they keep themselves distinct and do not bear a title which implies they are "Secular Reviews." Secularism, to be judged of intelligently, should be represented consistently in some organ or other. I am for keeping distinct things separate as simpler for the student and more intelligible to the public.

GEORGE JACOB HOLYOAKE.

GOD OR THE GALILEAN?

"Nur offen wie ein Mann, für oder wider,
Und die Parole: Slave oder frei!"
—*George Herwegh.*

The art of reading the signs of the times furnishes one sure prognostic for the prediction of impending events in the history of nations and creeds; the rule, namely, that a crisis is near at hand, when the interests of two allied causes have obviously ceased to harmonize. The increasing discrepancy of national and hierarchical interests provoked the German Reformation and the revolt of the Netherlands. In mediæval France, patriotism and king-worship went hand in hand. "*L'état c'est moi*," said Louis XIV. The growing dissent from that view led to the French Revolution.

The system of faith known as Trinitarian Christianity has reached the eve of a similar crisis. A creed, reduced to a basis of ignorance and hypocrisy, may still linger in the back-alleys of mental prostitution; but it has ceased to deserve the name of a *religion*, and demonstrable truth and the dogmas of the new testament can no longer be reconciled. God and nature have become synonymous terms. The God-idea, the highest conception of an omnipresent, omnipotent, and inexorably just though benevolent being, has been realized in the progressive revelations of that unknown power which ancient philosophers called the *Natura naturans*, and which modern scientists have called the Law of the Universe. Nature, the eternal, the all-pervading, the all-sustaining, the dispenser of sweetness and light, of abundant happiness, but also of pitiless justice, has fulfilled the promise of the ancient seers: the cycle of ages has led us back to the purest creed of our forefathers,—the worship of Nature that preceded the deification of her elemental powers. That worship is as compatible with deism as with pantheism and optimistic materialism; but it is the eternal antithesis of pessimism.

Some eighteen hundred years ago, the founder of a new sect attempted to blend the dogmas of Buddha with the monotheism of the old testament, and succeeded by radically perverting the God-idea of his countrymen. For the parental Jehovah, he substituted a joy-hating despot, a celestial grand-inquisitor, a torture-god, who made earth the antechamber of hell, and punished with eternal torments the gratification of nearly every natural instinct. The angelic messengers of the national God he supplemented with a host of malevolent demons, physic with thaumaturgy, the peace of the grave with a pit of brimstone and fire. The pantheism of the Mediterranean nations became a pandemonism. Everything natural was evil, life a disease, and death its only remedy. The pursuit, and even the love, of worldly happiness,

Digitized by Google

the western apostle of Buddhism represented as a crime; blind faith and the repudiation of all earthly sympathies, as the first conditions of salvation; science, as a snare; industry and the love of comfort and health, as unworthy of a true saint. His gospel was essentially a declaration of war against nature. In their controversies with sceptics, the converts of the new religion appealed to the supernatural talents of its founder. Miracles were then supposed to be the test of truth. The true test is time. False systems are refuted by their consequences. In that scale, the system of the nature-hating Galilean has been weighed and found wanting.

The dogma of salvation by faith made intolerance a duty, and the Middle Ages the unhappiest period in the history of the human race,—not excepting the Neronic century of the Roman Empire. The despotism of the Cæsars was a lightning that struck only the loftiest tree; the tyranny of the Christian inquisition was a smouldering fire that blasted the life-germs of a whole forest. Earth became a gehenna of fanaticism and cruelty. "They felt with St. Augustine," says Lecky, "that the end of religion is to become like the object of worship; and they represented the Deity as confining his affection to a small section of his creatures, and inflicting on all others the most horrible and eternal sufferings. . . . Persecution invariably accompanied the realization of these tenets, and their normal effect upon the character was to produce an absolute indifference to the sufferings of those who were external to the Church." There is, indeed, no doubt that the doctrines of that Church fostered a spirit of inhumanity which originally was as foreign to the genial Mediterranean as to the manful Teutons; for it is evident to every observer that the milder manners of the present age are merely the outcome of the coöperative stage of social development, and are far more characteristic of our joy-loving communities of free thinkers than of those who are still committed to the dogmas of pessimism. We can love only lovely things; and, in order to make men more amiable, we must make them happier. Is that a "Religion of Love" which has done so much to make men unlovely by making them wretched and superstitious? Its founder, indeed, commanded his followers to love their enemies, and might as well have instructed them to admire ugliness or still their hunger with stones; but, in favor of noble friendship and faithful, conjugal love, he never said a word. On the contrary, everything natural being a demerit in his eyes, he distinctly instructs his disciple to *hate* his father and mother, and wife and children, and brethren and sisters, yea, and his own life too. Could a war against nature fail to create mischief and rancor? The instigator of that war could himself not doubt that result. "I did not come to bring peace," says he, "but the sword." Love cannot be created by a mere command,—least of all, if that command be neutralized by more effective measures. Asking a man to watch and pray is in vain, if we feed him on opium. Would you call him a benevolent father who advised his children to love one another, but took comprehensive measures to stir up discord among them? The "New Testament" left us such a legacy of love that the victims of its dogmas would cover a continent with corpses. We are told that the author of those dogmas died for us. It is much more certain that twenty-three million of our fellow-men had to die for him. But the supposed supernatural effect of his death is, indeed, the only possible reason for worshipping the man of Golgotha. From a human point of view, we should try in vain to find such a reason. In which sense of the word has the progress of our race been promoted by a system which directly discouraged their physical and intellectual development, and used such ineffectual means to secure the improvement of their moral nature? We should not forget that the benefits of modern progress are confined to the nations who saved themselves by the aid of the Protestant Revolt before the poison of pessimism had sapped their life-strength. If we would know what that poison means, we should look at the countries that have been more effectually inoculated with its influence. Compare the deserts of Southern Europe with the description of the old Mediterranean paradise; compare the modern Romans and Greeks with the statues and the record of the old hero-races, if you would know if Christianity has benefited the world. Shall we believe that morality has gained by its alliance with a monstrous fiction? Has the gospel of pessimism brought us nearer to heaven? "My idea of heaven is harmony," were almost the last words of the poet Longfellow. Shall we find that blessing in a creed whose tenets are hopelessly at variance with the revelations of Nature and the promptings of our normal instincts? The popular definition of heaven is perfect happiness; and, on earth at least, the surest road to that goal is the harmonious development of all our physical, mental, and moral faculties. How much nearer to the gates of paradise were the disciples of a Grecian academy than the slaves of a Christian convent!

The doctrine of anti-naturalism has marked its progress by the spread of a hopeless desert. From Syria to Portugal, the substitution of prayer and miracle-worship for industry and the study of Nature has blighted the god-gardens of the *Orbis Romanus*, and realized the Nirvana-ideal of the East Indian pessimists.

The doctrine of demonism led to the witchcraft horrors, and cost the lives of untold thousands of innocent human beings during a period that has been justly called the age of insanity. During the twelve centuries, from the first Council of Nice to the dawn of western rationalism, a sane inhabitant of Christian Europe must have felt like a philosopher caged in a lunatic asylum, and subjected to the control of a brainless and heartless keeper.

Pessimism has turned whole nations of freemen into abject slaves. In logical accordance with the dogma of natural depravity, men were thought unfit for self-government, and their own welfare seemed to require the suppression of every revolt against the authority of their spiritual taskmasters. Passive obedience, too, and the renunciation of earthly happiness, are valuable qualities in a slave: hence, the universal alliance of Christian priestcraft and despotism.

The science of health and the science of happiness will, perhaps, never recover from the influence of a system that has shortened the average duration of human life by fifteen years, and peopled the earth with cachectic wretches who had been taught that the culture of the manly powers is sinful, and that diseases can be cured with prayers and ceremonies.

The defenders of the Trinitarian dogma have always been the worst enemies of natural religion. By associating the name of the Supreme Being with all sorts of absurdities and atrocities, they succeeded in making religion hateful, and reduced their intelligent disciples to the alternative of scepticism or hypocrisy. The chief error of many liberal Unitarians is the idea that the difference between Christianity and true religion is only one of degree,—that our best thought is an advance upon the stand-point of the new testament, but that, on the whole, its dogmas have led us in the right direction. The sad truth is that they have led us far in the wrong direction. The moral activity of the Middle Ages was wholly reactionary, the energy of fourteen centuries wasted in the effort of crushing out the remnants of culture and manhood that had survived the fall of the Roman Empire, and the ideals that had made Greece the happiest country on earth. The creed of modern science is a revival of those ideals.

Miracle-mongery, the depreciation of Nature, and the supposed duty of blind faith combined in suppressing free inquiry. The undisputed sway of the Christian dogma coincides with the darkest century of the Middle Ages. The most orthodox nations of the present age are the most ignorant; the most enlightened, the most sceptical. The progress of common sense has always been accompanied by a propaganda of unbelief. Christian dogmatism and true science exclude each other like the two poles of the magnetic compass. Our Christian sects—even the Catholics—expend large sums for educational purposes, because they realize the importance of biassing the minds of the young; but, whenever we examine the methods of their so-called academies, we shall find that they patronize a professor of science as burglars caress a watchdog,—in order to silence him. In all countries and all ages, the supremacy of the Christian creed has inaugurated a reign of obscurantism; and it is a profanation to associate the name of that system with the sacred watchword of human progress. Christian Civilization! We might as well speak of liberal despotism or wholesome poison. The delusions of pessimism are fatal to the development of our highest faculties, and the dogma of the New Testament is a dam that has obstructed the advance of mankind for eighteen hundred years. At the bursting of such dams, rivers generally make up for lost time; hence, the present flood-tide of industrial and scientific progress. The victories of civilization were won on the battle-fields that broke the power of Christian superstition; and the surviving bigots who condescend to enjoy the fruits of those victories are like rats that have been prevented from scuttling a ship, but continue to share the provisions of the crew and congratulate themselves on the prospect of a pleasant voyage. The history of the last sixteen centuries proves that Tacitus was not far wrong when he called the Christian fanatics the enemies of the human race. Their prophet of the millennium has persistently failed to keep his promise.

And now the negative evidence of experience has found its supplement in the positive evidence of natural science. The claims of the false theory have been exploded by the demonstrations of the right theory. The advance of civilization has strewn its path with the wreck of mediæval dogmas. Wherever the revival of common sense has encouraged a man to devote his life to the pursuit of earthly happiness, pessimism has lost a votary. Every new ray of natural light furnishes an additional argument against supernaturalism, every victory of science is a back-set to the Christian faith. The God of Nature bears witness against the god of Galilee. To all who have eyes to see and ears to hear, scepticism has become a religious duty. It was once blasphemy to deny the Trinitarian dogma. It is now blasphemy to defend it. The slanderer of Nature has ceased to be our God. The men who were killed for heresies against the Christian creed have become martyrs of a higher religion.

The mediæval Christian had merely to suppress the voice of his instincts. The modern Christian has to reject the revelations of science, confirmed by the voice of his instincts and the testimony

Digitized by Google

of experience. He has to save his faith by the habitual suppression of his intellectual conscience. He can practise his lessons only by disobeying the mandates of a higher law. He has to shut his eyes to the self-contradiction of a system in which the experience of every week-day refutes the theories of every Sunday,—a system which makes candor a crime, and obliges him to preserve his allegiance to the author of a dogma by defying the author of the Universe.

The time has come when every upright man has to choose between naturalism and anti-naturalism. We may openly renounce the faith of the Dark Ages or shut our eyes to the daylight of science, but we cannot afford to be hypocrites: paradoxes and anachronisms are less fatal to the authority of a creed than inconsistencies.

Christians may decide the alternative from their own point of view. If spiritual poverty is bliss, the rant of a revivalist is perhaps preferable to the logic of a scientific lecture. If wealth is an insuperable obstacle to salvation, the deserts of the Spanish Christians may be an improvement upon the god-gardens of the Spanish Moors. A person who believes that the body is the enemy of the soul is justified in preferring disease to health and whining impotence to manly strength. But he should be consistent. A virtuous man may use the railways, protect his house with the invention of the sceptic Franklin, enjoy his meals, appreciate the advantages of industry, and contest the prize of a boat-race, but he should not call himself a Christian. A consistent Christian has a perfect right to persist in denouncing all such things, in despising earth for the sake of heaven and his body for the sake of the soul; but he should not presume to call himself a Man. The days of the Holy Inquisition are past, and no citizen of a free country can find an excuse for making a secret of his conviction. Outspoken liberty of thought—once the privilege of the most powerful—has become the right and the duty of every true man. The conflict of reason and dogma is no longer confined to the secret debating-clubs of the French universities: the revelations of science have become the common property of all, and the practical instinct of the people begins to ask questions which can no longer be answered with sophisms.

We have to decide between nature, knowledge, health, manliness, happiness, and freedom on the one side, and anti-naturalism, blind faith, disease, impotence, misery, and social and spiritual slavery on the other: we have to choose between God and the Galilean. FELIX L. OSWALD.

FOREIGN ISSUES IN AMERICAN POLITICS.

A writer in the August *International* enumerates three of these,—Mormonism, the Chinese question, and, lastly, what he newly christens the "American-Irish" question. Almost the whole of his article is devoted to the latter, and there is a refreshing originality as well as a large amount of truth in his views. He affirms that the American Republic is being unconsciously towed along in the wake of the Irish agitation. This he deems a most unwise application of sympathy, and holds that, so far as the real American sentiment finds utterance, it should give moral support to Gladstone. "The American Republic," says this writer, Mr. Robert J. Creighton, "is tied to the Land League chariot; and it is incumbent upon Americans to ascertain exactly where the charioteer is driving, and when he is likely to draw rein. Instead of sympathizing with Irish Irreconcilables, they should sympathize with the great statesman who has undertaken the almost hopeless task of settling the Irish Land Tenure upon an equitable basis."

Mr. Creighton further condemns "the prevalent theory that the United States is the dumping-ground of the nations, and that the right of American citizenship is inherent in all races under heaven, without reference to their civilization, education, or moral status." Public opinion has certainly begun to veer about in the direction so boldly stated by this courageous writer. There has begun an intellectual reaction, not against our fundamental tenets of religious and political toleration, but against their mal-appropriation and abuse. The Chinese question made a little rift within our lute. It formed the accidental basis for divergence and the creation of a political philosophy based on the growing utilitarianism of today. The orthodox interpreters of our Constitution held on tenaciously to the idea of unrestricted hospitality toward China and every other semi-developed country. But the utilitarians triumphed upon this issue, and the probability is that the new interpretation will strengthen as the country grows older. Yet, with curious inconsistency, the very people who favor indiscriminate immigration condemn Mormonism, although both are equally palpable exaggerations of the spiritual tenor of our Constitution.

It may be, as Harriet Martineau suggested, that the "founders of the American Republic laid down a political programme too lofty for their descendants." But it lies with those descendants to show their worthiness of such a legacy by not distorting its intention. All that we say and do goes upon record,—our childishness and short-sightedness as well as our wisdom. The truth is that the signs of the times begin to call imperatively for a more thorough and serious domestic legislation, while we are spending our strength upon comparatively irrelevant outside matters. We are forced into agreement with the writer just quoted, that "social and economic questions, and most especially the labor problem," are *the* pressing questions of the time. Yet a comprehensive domestic legislation will not be possible until these foreign issues are eliminated, or at least subordinated.

M. A. HARDAKER.

THE CATHOLIC CHURCH AND INTELLECTUAL PROGRESS.

The *Catholic Review*, which is undoubtedly the ablest organ of the faith it represents in this country, is getting to be quite disputatious. "Only for the Catholic Church," it says, "there would have been no real progress of man, still less of woman. And if our friend, *The Index*, is anxious to take us up on this point, we are quite prepared to meet it."

While we are not *anxious* for controversy with our esteemed contemporary, we are ready to expose the fallacies which appear in its pages from week to week, as far as our space will permit. We would be pleased to see what it can advance in support of the proposition it so confidently affirms. Meanwhile, as the *Review* claims that the Catholic Church has been the great patron of science and learning, the promoter of popular education, and the cause of the intellectual advancement which has been made during the past eighteen hundred years, it may be well to consider here the attitude of that Church toward learning when it swayed Christendom, and to present some facts in the history of letters bearing on the influence of the Catholic system on intellectual progress.

It does not admit of question that, although a few of the Fathers, in becoming Christian, could not shut their eyes to the merits of the noble literature in which they had been educated, Christians, generally, of the early ages, felt only ignorant contempt for pagan learning, the only learning then in the world. Many were for abolishing all philosophy and erudition from the limits of the Church, and hence, as Mosheim says, "the beginning of that unhappy contest between faith and reason, religion and philosophy, piety and genius, which increased in succeeding ages, and is prolonged even to our times with a violence which renders it extremely difficult to be brought to a conclusion." Among the monks, when they were under the vow of silence, it was customary with them, in asking for any pagan work, to make a particular sign, which consisted in scratching the ear like a dog, to which, it was thought, the pagans should be compared. In this manner, they expressed an itching for those dogs, Virgil, Horace, and Ovid. The fourth council of Carthage forbade the reading of secular books by bishops. Jerome condemned the perusal of them except for pious purposes. The physical sciences were unqualifiedly condemned, since their cultivation was considered incompatible with the practice of religious duties. The Greek schools of medicine were closed. The Alexandrian Serapion, with its libraries and its museum, the accumulation of centuries, was destroyed under the archiepiscopate of Theophilus, A.D. 389, "and twenty years afterward the empty shelves excited the regret and indignation of every intelligent spectator." Many of the bishops in the councils of Ephesus and Chalcedon, it is declared, could not write their names. Ignorance was not considered a disqualification for ordination. No importance was attached to anything of an intellectual character except those childish and unintelligible theological controversies which were carried on for centuries. "These disputes," says Hallam, "diverted studious minds from profane literature, and narrowed down more and more the circle of that knowledge which they were desirous to obtain."

The monastic movement contributed to the decline of letters and decay of intellect. "I cannot conceive," says Hallam, "any state of society more adverse to the intellectual improvement of mankind than one which admitted no middle line between dissoluteness and fanatical mortifications."

The subversion of Rome was encouraged by the policy of the Catholic Church. That the condition of affairs would have been creditable to the ecclesiastical system, had Rome never been conquered by the barbarians, there is no reason to believe. Hallam thinks we may form some notion of how little probability there was of the Western Empire producing any excellent fruits, even if that revolution had never occurred, by considering what took place in Greece in the following ages, when "no original writer of any merit arose, and learning, though plunged for but a short period into mere darkness, may be said to have languished in a middle region of twilight for the greater part of a thousand years."

In the Western Empire, during a period of seven hundred years from the invasion of the barbarians, the Church exercised absolute and complete control; and then, after the dissolution of the whole framework of Roman society, "she was left," as Lecky observes, "with a virgin soil to realize her ideal of human excellence."

What was the intellectual condition of those over whom she swayed her sceptre? For many centuries, a layman could rarely be found capable of signing his name; charters were subscribed with the mark of the cross; what little learning existed was confined chiefly to the clergy. A "cloud of ignorance overspread the whole face of the Church, hardly broken by a few glimmering lights, who owe almost the whole of their distinction to the surrounding darkness." (Hallam's

Digitized by Google

Middle Ages, p. 460.) In the sixth century, the classics were scarcely read; and, from the middle of this century to the eleventh, but little difference was discernible. "In almost every council, the ignorance of the clergy forms a subject for reproach. It is asserted by one held in 992 that scarcely a single person was to be found in Rome itself who knew the first elements of letters. Not one priest of a thousand in Spain, about the age of Charlemagne, could address a common letter of salutation to another." (*Middle Ages*, 460.) The clergy could not translate a sentence of Latin. The homilies they preached were prepared from previous works of the same kind by some of the bishops.

Whoever wished to follow a life of study had to abandon secular pursuits and adopt the monastic life. "Mediæval Catholicism," says Lecky, "discouraged and suppressed in every way secular studies, while it conferred a monopoly of wealth and honor and power upon the distinguished theologian. Very naturally, therefore, it attracted into the path of theology the genius that would have existed without it, but would, under other circumstances, have been displayed in other forms." (*History of Morals*, vol. ii., p. 209.)

In the monasteries, it is true, were kept all the libraries of Europe; but, in these receptacles, they conferred no blessings on mankind. A large number of the manuscripts of the classic authors that have descended to us through the monasteries were defaced, the original writing scraped off, and monkish tales and patristic fables substituted for it. "Not till the education of Europe passed from the monasteries to the universities, not till Mohammedan science and classical free thought and industrial independence broke the sceptre of the Church, did the intellectual revival of Europe begin." (Ibid., p. 206.)

Such, however, was the general and deplorable ignorance which the Church helped to produce and to perpetuate, that, considering the general disuse of the Latin language, and the use of the jargon which represented it, the hope of literature, it is true, depended very largely, almost wholly, upon the perpetuation of that language; and, no doubt, keeping the Scriptures and liturgy in that language, after it ceased to be spoken, insured the transmission to us of the literature of antiquity, which those ecclesiastical ages were unable to appreciate, and the study of which, a little later, contributed to revive Europe from her intellectual torpor. It is not to the credit of the Catholic Church that she kept the Bible and her liturgy in a dead language, and for no other act has she been condemned more justly by the Protestant world. Yet this circumstance, condemned, as Hallam says, by "every rational principle of religion," prevented affairs, when they had, largely through the influence of the Church, become so lamentable, from becoming more hopeless still, and rendered it possible for later ages to make use of the books which the Church had stowed away in monasteries, and which she now claims credit for not destroying, when she ought to have disseminated the knowledge they contained,—in which case, neither monastic institutions nor a sacred language would have been of any use.

Will our esteemed contemporary attempt to maintain that the darkness of the Middle Ages was dispelled by the Catholic Church, when, as it must know, it was among the Mohammedan Arabs that appeared the first gleams of light which shot athwart the horizon of Christian Europe; when, while the greater portion of the Western world was plunged in ignorance, the Moors of Spain were cultivating the arts and sciences; when, at a time, as Draper says, Europe "was hardly more enlightened than Caffraria is now, the Saracen were cultivating and even creating science"; when, as Mosheim says, "the mathematics, astronomy, physics, and philosophy that were taught in Europe from the tenth century were, for the most part, drawn from the Arabian schools that were established in Spain and Italy or from the writings of the Arabian sages"; and when, as he adds, "the Saracens may, in one respect, be justly considered the restorers of learning in Europe," and "may be looked upon as the fathers of European philosophy"?

Our esteemed contemporary cannot be unaware of the fact that, during the long struggle between intellectual life and intellectual death, which continued for ages, Catholicism opposed most stubbornly every innovation, and punished with imprisonment, torture, and death the votaries of science, philosophy, and reform. Roger Bacon was imprisoned ten years for his scientific investigations; the work of Copernicus was condemned, his theory denounced as "a false Pythagorean doctrine," and the author, there is reason to believe, tortured and excommunicated; Bruno was burnt at the stake; Galileo was arrested and forced to renounce his scientific theories, and when released his steps were dogged until his death. And, in later times, the Catholic Church has kept behind the age, and been the enemy of scientific research as well as of political reform.

It is scepticism and free thought, science and secular studies and pursuits, not Catholicism, that have contributed to intellectual progress. The history of modern civilization, Lecky observes, discloses two "capital truths." "The first is that, the influence of theology having for centuries numbed and paralyzed the whole intellect of Christian Europe, the revival which forms the starting-point of our modern civilization was mainly due to the fact that two spheres of intellect still remained uncontrolled by the sceptre of Catholicism. The pagan literature of antiquity and the Mohammedan schools of science were the chief agencies in resuscitating the dormant energies of Christendom. The second fact . . . is that, during more than three centuries, the decadence of theological influence has been one of the most invariable signs and measures of our progress. In medicine, physical science, commercial interests, politics, and even ethics, the reformer has been confronted with theological affirmations which barred his way, which were all defended as of vital importance, and were all in turn compelled to yield before the secularizing influence of civilization." (*History of Morals*, vol. ii., p. 18.)

EDITORIAL NOTES.

THE able essay by Mr. Lewis G. Janes, which appeared in *The Index* last week, has been neatly printed in pamphlet form, and is for sale at this office at five cents a copy.

A "UNIVERSAL PEACE CONVENTION" was held, August 24, in the vicinity of New London, Conn., at which addresses were made by Mrs. Belva A. Lockwood, Mr. Love, and others.

PROF. EDWARD WILMOT BLYDEN, President of the Liberia College, Africa, who is now visiting this country, says that the Mohammedan religion has a more beneficial effect on the native Africans than the Christian religion."

WE regret that Mrs. Cheney's article on "The Chinese Question," as printed in *The Index* last week, was marred by two or three errors that escaped our almost infallible proof-reader, and by a most provoking division of sentences due to a transposition of lines in making up the paper.

MUCH indignation has been expressed, all over the country, at the extravagant expenditure of public money by Congress, but credit should be given it for some items of retrenchment and economy. For instance, it cut down the appropriation for the life-saving service $20,000. This action may cripple the service (always poorly enough paid), and may prevent some human lives being saved; but it shows that Congress *can* economize.

THE legitimate result of the influence of brutal shows on the temper and morals of those witnessing them was very forcibly illustrated recently at a bull-fight in Nîmes, France, where the audience, impatient at the fact that the beasts displayed a lack of ferocity, protested against the poorness of the exhibition by hurling their chairs down from the galleries. Finally, they set fire to the properties, and committed damages to the amount of $1,000.

THE *Anglo-Catholic* "believes most fully in the efficacy of prayer, and intends to make its defence a part of its editorial work." So it begins by citing the case of Dr. Flower of Freehold, N.J., whose wife was obliged to separate from him, and take with her their little son. However, the father began an action to recover the boy, the wife prayed for divine intervention in his behalf, and Dr. Flower lost his case by appearing drunk at court "in answer to prayer." Truly, the most pious people sometimes attribute very strange proceedings to the Lord.— *Springfield Republican.*

THE Boston *Sunday Herald*, commenting on an article in *True Religion*, touching on insincerity in the pulpit, expresses much truth in the extract which we here reproduce:—

> There is no truly independent preacher in America. In our voluntary system, the preacher is controlled by the people who listen to him; and the preachers who seem most free to speak what they think are really the most limited in their freedom, and most likely to be knocked off their pedestals by an unpopular breeze. If we had an Established Church or a religious system endowed by the State, the ministers could speak freely, as in England and Scotland, without losing their bread and butter; but, under our present voluntary system, a preacher's liberty of opinion is measured by the size or number of the pews in his place of worship, or, rather, by the opinions of those who occupy them. No preacher is without this check upon his opinions, and it is for this reason that the pusillanimity is exhibited at times which the editor of the *True Religion* alludes to with characteristic relish.

THE *Christian Register*, after referring to the fact that the minister has a sympathetic audience inviting to boldness, and is secure against challenge, says:—

> If his opinion is to be traversed, it will be in another place, and when further and deliberate opportunity will be given for reply. A political speaker or a lawyer must needs see the question at every angle, and cultivate fairness in debate; for he is liable to instant challenge. The minister suffers the disadvantage of freedom from such challenge, and from the sacredness with which his proclamation is invested, the triple sacredness of the day, place, and subject-matter. Since, therefore, circumstances do not guard the minister, how jealous he should be of his manhood, and how severely he should be his own guard and judge; how vigilant of his sincerity, his frankness, his fairness, and every attribute of manly public address! And, in our judgment, it is at this point that the manhood of ministers suffers the most. They do not so much need to be exhorted to the courage of their speech as to these other qualities.

These words are just, and they should be read and heeded not only by ministers, but by all who address audiences under circumstances that do not admit of reply at the same time and place,—circumstances that make misrepresentation mean and personal assaults cowardly.

IN one who knows how to select that which is really valuable from the cheap and common things in literature, nothing awakens such reverent feeling as the conscious contact with a great mind in

Digitized by Google

careful dealing with great themes. The student of Spencer gets this gratification in the fullest degree. A mere *reader* will not get it: he must be conned and dwelt with like a poet in order to be appreciated, and especially must he be supplemented by contemporaneous scientists, English, French, and German. Taking him in connection with Huxley, Darwin, Tyndall, Faraday, Lyell, Haeckel, Du Bois-Reymond, Ribot, Carpenter, and Humboldt, one who has the necessary power of assimilation can sit and feast as at a perpetual banquet. A mind like Spencer's, in which the philosophical tendency is uppermost, naturally wishes to carry its explanation and connection of phenomena into every realm of research. Having once espoused evolution, he has been as faithful to it as a lover to his ideal. No allurements of society or of affection have tempted him. He has remained unmarried, a severe student, completely consecrated to the increase and coördination of human knowledge. The list of his works is startling in its comprehensiveness. —*Boston Transcript.*

A PEACEABLE citizen of New York city, who was bullied on his own door-step by a ruffianly policeman, and arrested by him and locked up all night in a foul cell and the next morning discharged upon his own statement, writes to the *Sun:*—

I now propose to see what rights a citizen has under the law in this city as against police dictation and tyranny. I propose, as a matter of public duty, to spare no time or labor in bringing these uniformed law-breakers to justice. There is no remedy or form of procedure provided for such cases that I shall leave untried. Things have reached such a pass in this city that police outrages must be prosecuted resolutely and thoroughly for the defence of the public against the men whom they pay to guard and protect them. Russian police administration is thought to be arbitrary and despotic, but it cannot be worse than what is witnessed and endured in the city of New York. I regard it as fortunate that I was able throughout the time that I was in the hands of the police to preserve my self-control so completely and to refrain from resistance or any violent ebullition. Had that not been the case, I have no doubt that I would have been clubbed into unconsciousness, and then accused of violence and intoxication; and sergeant, patrolman, and keeper would have joined in swearing the charges through. This is the practice of these law-breakers, to swear to anything that may be needed to justify their outrages.

POETRY.

MY GARDEN IN THE WEST.

My skiey garden nightly blossoms fair
With star-flowers tremulous and bright:
It is a field of dewy sunset air,
Where riseth Hesperus to sight.

I from my western window duly gaze,
As sundown's splendor ebbs away,
And see its mystic parterres bloom and blaze
With night-flowers knowing not decay.

Into my silent, lonely, darkling room
From azure spaces far they gleam,
With their unwithering petals a perfume
Of heaven dispensing as they beam:

Thicker and thicker, on that field dark blue,
They into fulgent blossoms burst and shine,
In clusters sweet and mystical which woo
The vision with a charm divine.

O radiant Gulistan of sunset air,
My skiey garden in the west!
Each night I see thee blooming brightly there
Where evening's red doth heaven invest.

I, thitherward intently gazing, seem,
While softly whispers twilight's breeze,
To see the Grecian poets' myth and dream,
The garden of the Hesperides.

B. W. BALL.

The Index.

BOSTON, SEPT. 7, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER,
BENJAMIN F. UNDERWOOD, } *Editors.*

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

SCHOOLS OF POETRY.

BY B. W. BALL.

Poets, it has been remarked, go in schools, like whales. The latest schools of English poetry are called the æsthetic and agnostic,—two good old Greek words which have been made to assume a peculiar significance in these days. Groups of illustrious English poets, from their having flourished during the reigns of two English queens, are known as the Elizabethan and Queen Anne poets, and all the later English bards might in like manner be designated as Victorian poets.

There used to flourish what was called the Lake School of poets, the chief of them having been colonized in the vicinity of the English lakes. Contemporary with the latter school of poetry was the Satanic school, so called by its enemies. Æsthetic poetry of course means the poetry of a *dilettante* period. Tennyson, with all his genius and splendor of diction and imagination, must still be classified as a *dilettante* poet. As M. Taine says: "Away there in the Isle of Wight, he amuses himself by dressing up lost epics. How happy he is among his fine books, his friends, his honeysuckles, his roses!" He is the poet of elegant leisure. He ransacks all times and climes for subjects for his dainty muse, in the absence of any absorbing passion or special inspiration. He sings for the fastidious, the over-cultivated, the inordinately wealthy. His muse disports herself in paradisal domains of freshest English verdure, umbrageous with summer woods, which make a murmur in the land. His garments are not grimed with the dust of a grim life-struggle. He voices no fierce heart-lacerating indignation, no terrible personal experience. He is a leisurely, luxuriously-housed verse polisher, and fitly describes the gorgeous life of a great, decadent aristocracy, rotten-ripe. In fact, the Tennysonian poetry is a case of rotten-ripeness, of over-finish. While reading it, one hankers for a taste of the rude rhymes of Burns, or the careless, often slovenly, improvisations of the scold and rhapsodist of freedom, Byron. It is always a sign of a *dilettante* literary period when poets and imaginative writers attempt to resurrect the past and make its dry bones live again.

The Alexandrine poets were mere imitators and drivellers. The epic spirit of Greek poetry could not be revived. Tennyson summons, or attempts to summon, for the delectation of his fastidious readers, the heroic men and famous heroines of Grecian and mediæval myth. But the Tennysonian Œnones, Guineveres, Cleopatras, etc., are all simply beautiful, modern English women; and the Tennysonian Ulysses, Arthur, Sir Galahad, Sir Launcelot, are all Oxford graduates draped in the costumes of the past, modern English gentlemen of culture masquerading in antique armor. Tennyson's "Lotos Eaters" are not genuine old Homeric mariners of the Ægean Sea, mere creatures of sense, impulse, and appetite, lightly moved, hardly self-conscious, and utterly incapable of continuous reflection. The Tennysonian lotos-eaters, on the contrary, are gloomily reflective, highly æsthetic and agnostic moderns. They are pessimists, and propose to give up the struggle of life as hopeless, and lie down on their backs and indulge in pleasant day-dreams and mournfully sweet memories during the little remainder of their lives. How æsthetic and un-Homeric is their mood! The Homeric world was sicklied o'er with no pale cast of thought. Suffice it to say that no ancient Greek would have understood Tennyson's poems on Greek themes, and no mediæval knight, even if he could have read them, would have comprehended Tennyson's "Idyls of the King," or recognized the characters described in them as his contemporaries. Milton once entertained the idea of writing an Arthuran epic, but he felt that he lived in "an age too late" for such a performance.

Because a genuine epic poem is not a *dilettante* performance, but is alive with real life, fire, and action, *dilettante* poetry after a brief period is sure to show for what it is; namely, something ungenuine, hot-housy, and artificial. Its lusciousness cloys at last. It is felt to be void of any serious, grand significance. It is the mere luxurious display and wantonness of a gorgeous imagination seeking to smooth the transit of hours of cultivated, refined leisure, idleness, inaction, and dreaminess.

Now, the Satanic or Byronic school of English or European poetry—for Byron had for his followers such great continental poets as Leopardi, Heine, and Alfred de Musset was not at all *dilettante*. It had faults enough, but they were not faults of Dellacruscanism or dilettantism. Byronic poetry was the voice of the revolutionary spirit which is still remoulding society and civilization. It was no mere drivelling sentimentalism of unbelief and despair, but a vehement protest against cant, pretence, and insensate custom and usage. It was the forerunner of an age of truth and reality, and of a liberalized state of society.

Thus, the so-called Satanic school of poetry, from the fact that it was the poetry of revolt and protest, had an unmistakable virility and nobleness of aim and endeavor which covered the multitude of its sins and defects, and which left not to its authors the leisure or inclination to be fastidious phrase-mongers. They were too much in earnest for niceness of literary execution. But, when the spirit did seize them, they were capable of sublimities of thought and versification which no *dilettante* bard can ever hope to attain. Thus, while Byron and Shelley will always shine as fixed stars in the European literary firmament, the names of the *dilettante* poets, such as Tennyson, Browning, Morris, Swinburne, and Rossetti will be remembered, it is true, but remembered as Theocritus, Moschus, and Bion, and Lucan among the ancients, and Cowley and Donne of the metaphysical school of English poets, are remembered. Keats, the father of English æsthetic poetry, was prematurely born and preternaturally, deliriously sensitive.

Æsthetic poetry always abounds in "morbid fancies and super-subtilized phrases," so that it is largely unintelligible and frequently requires translation into the vernacular of its writers. But its significance, when carefully ascertained by study, is of no importance. Lord Beaconsfield once remarked that he should probably admire Browning's poetry, if it was only translated into English.

If Swinburne had never published anything but his *Songs before Sunrise*, he would not be a *dilettante* poet. But, as it is, he is a vicious mannerist, with all his lyric genius, and a cockney neo-pagan, who prefers the sensual style of paganism to a reproduction of its nobler thoughts and imaginations. The greatest poets have always been healthy-minded and joyous. Shakspere could depict a melancholy Jacques; but he himself is always cheerful, natural, and full of fire and vigor of thought and expression.

In his review of the æsthetic poet, Daniel Gabriel Rossetti, Principal Shairp says, addressing himself to the fashionable, æsthetic, and agnostic poets of England: "The world is weary of your moanings, and can well dispense with any more of them. It is really not worth your while to trouble it with your pipings, until you have something to tell it. . . . If future poets wish to win the ear of their countrymen and to merit

Digitized by Google

the honor according to the highest poetry, they would be wise to cultivate manlier thought and nobler sentiment, expressed in purer and fresher diction, and to make their appeal not to the perfumed tastes of over-educated coteries, but to the broad and healthy sympathies of universal man."

And now a word on American poets and poetry. American poets, it has been remarked, show to best advantage in anthologies, not being voluminous enough, most of them, to exist independently. If we open one of our American anthologies,—that of Griswold, for example,—we find ourselves in a different poetic domain or atmosphere from that of English poetry. Bryant's poetry, for instance, could only have been written in an American environment, on the banks of the Hudson or some other American river. It could not have been written on the banks of the Thames at all. We speak of Bryant, because he is one of the best known of our American bards. But he is scarcely more racy of the soil, sky, and waters of this hemisphere than were a number of others, his contemporaries, who have been cast into total eclipse of late years by the superior renown of four or five bards, who somehow have made the fact forgotten by the mass of readers that anybody but themselves ever wrote verses in this country. But as there were brave men before Agamemnon, so there have been American poets other than Longfellow, Whittier, Lowell, and Holmes. Mr. Lowell, if we are not mistaken, somewhere speaks disparagingly of Percival; but Percival, in poetic genius, was greatly his superior, and, born in a German, English, or French environment,—that is, with historic Germany or England or France back of him,—would have taken rank with the foremost of the European poets who were his contemporaries. For the Muses are and will always remain the daughters of Memory. They require for background and inspiration a historied *human* past extending away into the shadows and twilight of fable and romance.

Epic and dramatic poetry, or the poetry of action and of the historical imagination, have been impossible here for want of a human past; and our bards have been thrown on descriptive, lyrical, and reflective poetry, which are inferior kinds of poetry to epic and dramatic. In Griswold's *Poets and Poetry of America*, we find the light and bloom and vastitude and loneliness of our unsurpassed New World nature most graphically delineated, with all the emotions to which the contemplation of such a nature gives rise. And Bryant is not the only faithful delineator of our unique New World nature, with its azure mountain distances, with its unfailing umbrageousness and sylvanness, with its reedy fens and water-fowl, with its lakes great and small, with its prairies and rivers, and vast-sounding coast line. Numbers of other forgotten American poets, such as Percival, Hoffman, Brainard, Wilcox, and Halleck, have been almost Bryant's equals as descriptive poets. Dana's "Buccaneer," or a psychological study of delirious remorse, is even more graphically appalling than Coleridge's "Ancient Mariner."

But to return to our poets descriptive of nature. The anthologies which contain their best things are among the best books of poetry extant, and thoroughly American in spirit. Their pages are redolent of the odors of our forest-waving, mountain-shadowed, river-furrowed, lake-gemmed landscapes, and luminous with the deep-skied splendor which irradiates them. So far, then, as our glorious and still largely unhumanized nature is concerned, our American bards have been admirable delineators of it. Even the affected and cockneyish N. P. Willis has some touches of New World nature which will keep his memory green as long as the delicate-footed May fills us with a longing to be away wasting in wood-paths the voluptuous hours. How Bryant's lines, "To the Evening Wind," murmur and ripple with the delicious breath of the breeze of twilight, at which in the dog-days languid forms rise up, and pulses bound livelier!

A great but cynical critic says: "Poetry is one of those mysterious things whose reign and development can never be what is called explained. Often, it seems to us like the wind blowing where it lists, coming and departing with little regard to any the most cunning theory that has yet been devised of it. Least of all does it depend on the form of government, or any modification of politics or political economies. It lives in snow-clad, sulphurous Iceland, and not in sunny, vine-growing France. . . . Why did poetry appear so brightly after the battles of Salamis and Thermopylæ, and quite turn away her face and wings from those of Bunker Hill and Lexington? We answer, because the Greeks were a poetical people, and the Americans are not; that is to say, it appeared because it did appear." Carlyle, in the above quotation, succeeded in making a malicious thrust at Americans; but, unfortunately for his historic accuracy and his anxiety to hit us Americans a hard rap, it was not *after* Salamis and Thermopylæ, but long *before* their occurrence, that Greek epic and lyric poetry and epic and lyric inspiration manifested themselves in their greatest resplendence and power.

After the battles of Salamis and Thermopylæ came the age of Greek historic prose; namely, that of Herodotus and Xenophon and Thucydides. The great Greek singers, Homer and Sappho and Alcæus and the rest at that time, belonged to a remote past. The dramas of Æschylus were in one case, that of his "Persians," inspired by the Xerxean invasion; but it is the stupidest of all the extant Greek dramas.

One wonders if Carlyle regarded his own countrymen as "a poetical people." They have produced Scott and Burns, it is true; but everybody knows that they, no more than Americans, are "a poetical people," in the sense that the ancient Greeks were. Neither are the English or Germans. But Greece perished, exhausted with her creation of poetry and art. It is the average races and nations who last the longest; for brilliant races, like brilliant men, quickly wear themselves out by a too prodigal expenditure of their peculiar genius. They enrich the world, but perish in the process.

EXTRACTS FROM SOPHOCLES.

SELECTED BY F. M. HOLLAND.

"Ne'er can a state in peace and safety dwell,
Where justice and the law of self-control
Are trampled under foot, and brawling know,
With crafty bond and cruel goad, drives on
The state to his own purpose."
—*Fragment* 606; *Plumptre, I.*, 63.

Antigone says to her sovereign:—

"Nor did I deem thy edicts strong enough,
Coming from mortal man, to set at nought
The unwritten laws of God that know not change.
They are not of to-day nor yesterday,
But live forever; nor can man assign
When first they sprang to being."
—*Antigone*, 450; *Plumptre, I.*, 168.

"I pray thee, then, wear not one mood alone,
That what thou say'st is right, and nought but that;
For he who thinks that he alone is wise,
His mind and speech above what others boast,
Such men when searched are mostly empty found.
But for a man to learn, though he be wise,
Yea, to learn much, and know the time to yield,
Brings no disgrace."
—*Antigone*, 705; *Plumptre, I.*, 180.

"What virtue gains, alone abides with us."
—*Fragment* 202; *Plumptre, II.*, 265.

"The wise can ne'er grow old, for with them dwells
A soul sustained by truth in Heaven's own time."
—*Fragment* 688; *Plumptre, II.*, 278.

"Now let us go, my children, to the schools,
Where wise men teach, and learn the Muses' art,
And ever, day by day, take one step on,
Till we gain power to study nobler things.
Evil a boy will learn without a guide
With little labor, learning from himself;
But good, not even with the teacher won,
Abides with him, but is full hardly gained."
—*Fragment* 779; *Plumptre, I.*, 36, *II.*, 283.

"Cease from your weeping, maidens. Over those
With whom there passes to the distant land
The blessing which the powers below can give,
We may not mourn. Such griefs the gods chastise."
—*Œdipus at Colonus*, 1730; *Plumptre, I.*, 145.

"Mighty in heaven he dwells,
Zeus, who beholdeth and directeth all;
Resign to him the wrath that vexeth sore."
—*Electra*, 175; *Plumptre, II.*, 10.

"The dice of Zeus have ever lucky throws."
—*Fragment* 763; *Plumptre, II.*, 282.

"O Zeus, thou Lord omnipotent of gods!"
—*Œdipus at Colonus*, 1085; *Plumptre, I.*, 116.

CORRESPONDENCE.

"VACCINATION."

Editors of The Index:—

In your issue of April 13, 1882, appeared a letter on "Vaccination," in which several questions are asked, and some statistics given and assertions made, which call for answer.

The first three questions are: "But are all the statistical facts for vaccination fictions, and can they be overruled by the thus far rather vague anti-vaccination publications? Are the honest, experienced, and well-educated physicians who vaccinate, themselves careless? Have the anti-vaccination writers better chances to ascertain whether vaccination is for the welfare of or injurious to humanity?"

In the first place, it will be noticed that statistics in favor of vaccination do not allow the possibility of there being other causes for the diminution of small-pox at any particular time or place, but give the whole of the credit to vaccination: hence, they do not rest upon a good foundation. For this reason, and the further reason that some of their statistics have been proven unreliable, they cannot be accepted as facts in the sense that the vaccinationist wishes them to be. As to the anti-vaccinationist publications being "rather vague,"—well, that is a matter of opinion.

There is no doubt that many physicians who believe in vaccination do so conscientiously, but it is only natural that their familiarity with disease should bring contempt for it. It is, besides, much "easier to accept facts which support existing theories than to accept those which contradict them." Dr. Martin illustrates this fact in the *North American Review* for April, when he states that it was not until an advocate of vaccination demonstrated the possibility of the transmission of syphilis that it commanded the "implicit belief of even *those most desirous not to be convinced.*"

P. A. Taylor, member of the British Parliament, says: "A few [doctors] wholly disbelieve in vaccination, and a still larger number do not feel very certain upon the question; but, naturally, neither of these classes cares to press upon the public an unpopular belief. But, undoubtedly, a great majority of the profession do seem to pin their faith upon the Jennerian doctrine. But, among all with whom I have conversed upon the subject, I have found, I think, but two who even professed to base their faith upon their own experience; and certainly, when I came to inquire even of those two into the amount and value of that experience, it seemed to me to be nearly worthless. I found, in fact, two excellent gentlemen, who had been early imbued with the traditions of vaccination, and that so strongly that the facts they had afterward encountered only seemed to make any impression on their minds just in proportion as they seemed to tell for or against their foregone conclusions. In fact, it is clear that the enormous proportion of the profession have neither time, opportunity, nor inclination for the real scientific examination of the results of vaccination."

Mr. Henry Bergh, in the *North American Review* for February, says, "For though, as one of their number admitted to the writer lately, many of them in their own consciences disapprove of the practice, they dare not give expression to their honest judgment for fear of being ostracized by their fellows and by the public."

Anti-vaccinationists who have risen superior to popular opinion and overcome their early prejudices, and who have considered the subject carefully, are better able to judge of the value of vaccination than those who are still swayed by public opinion and biassed by their early training.

The first statistical point which calls for criticism is the following: "Among the hospital records of England, it is found that the average deaths in that country were, for thirty years prior to vaccination, 3,000 for each million of inhabitants."

Joshua Jacob, a Quaker of Limerick, Ireland, in the course of an answer to a letter in favor of vaccination, written to him by Lord Emly, Chairman of the Limerick Board of Guardians, speaks as follows: "To thy statement that, 'thirty years before vaccination was introduced, the number of deaths in England from small-pox was 3,000 a year per million of the population,' I answer that this is an estimate merely, put forward by a medical officer of the Privy

Digitized by Google

Council, who reduced it to 2,500 when examined before the Commons Committee in 1871, and was derived from an estimate of Dr. Lettson, who lived last century, and who assumed that figure to represent the mortality all over England, from the circumstance that it represented the mortality in and around London at a certain period. Figures are indeed figurative, as I shall prove by reminding thee that in vaccinated Dublin, in 1872, the small-pox death-rate rose to 7,500 per million,—a complete and crushing answer to thy English estimate. By parity of reasoning, we might with equal propriety assume that 7,500 per million was the small-pox mortality for all Ireland."

It seems from this as though "for thirty years" was a misquotation; but, supposing it be allowed to be correct, it must still be remembered that, as inoculation was introduced into England in 1721, the "thirty years" would probably be the period when inoculation was at its height.

Dr. John Clark, writing in 1815, said: "It is scarcely to be doubted that more persons have died of the small-pox since the introduction of inoculation than before it was known in England. . . . Before inoculation was known, it was only occasionally endemic."

Dr. Farr, in McCulloch's *Statistics of British Empire*, says: "Small-pox attained its maximum after inoculation was introduced. This disease began to grow less fatal before vaccination was discovered, indicating, together with the diminution in fever, the general improvement in health then taking place."

As to Dr. Buchanan's statistics, it must be taken into consideration that vaccination has been very strictly enforced in London,—one of its advocates (Dr. Carpenter) placing the proportion of vaccinated to unvaccinated at 300 to 1,—consequently there would be but a small number from which to obtain the unvaccinated portion of the statistics. P. A. Taylor, M.P., speaking on this point in *Current Fallacies about Vaccination*, says: "The unvaccinated class, consisting, first, of those who, being in feeble health, the doctors dare not vaccinate, and, secondly, of that portion of the population living in the slums of London and unreachable by your vaccination officers,—and under each condition the 'unvaccinated residuum,'—is marked out to fall under any existing epidemic in larger proportions than the more favored vaccinated class." Further than this, there is good reason for believing that some who are vaccinated are reported as unvaccinated. The writer last quoted states, "As a matter of fact, numerous instances have been found, on critical inquiry, in which the same child has been registered as 'successfully vaccinated,' and, in the death register, as died of small-pox, unvaccinated," and gives authority for his assertion.

As to people being protected in proportion to the number of marks, a few statistics from Taylor's pamphlet will be sufficient. He says:—

I find in the Metropolitan District Asylum's Report the following table of deaths under five years old, from small-pox. The percentage of deaths is (of those reported as having any vaccination marks at all):—

One mark	22	per cent.
Two marks	28	"
Three "	18	"
Four "	0	"
Five "	16	"

Take, again, another table, age thirty to forty:—

One mark	16	per cent.
Two marks	20	"
Three "	21	"
Four "	23	"
Five "	8	"

Take, again, the number of cases admitted in various hospitals. The Deptford Hospital Report for 1879 gives the following:—

One mark	317
Two marks	384
Three "	447

Homerton Reports, 1871-77, give:—

One mark	1,042
Two marks	1,259
Three or more	1,261

Fulham Hospital Report, 1878, gives:—

One mark	149
Two marks	156
Three and more	202

Metropolitan Hospital Report, 1870-72, gives:—

One mark	1,124
Two marks	1,722
Three and more	1,677

The statistics of the observer, Marshal, were quoted by the editor of the *Medical Record*, about November or December of last year, in an article entitled "Does Vaccination Protect?" but in the same article he states that "there is a very small number of persons who will take small-pox, if exposed, whether they have been vaccinated or not." Thus, he virtually declares the statistics unreliable or exceptional.

The deaths from small-pox in England and Wales in the first ten years after the enforcement of vaccination (1854 to 1863) were 33,515; in the second ten years (1864 to 1873), they were 70,458. There have been three epidemics within these twenty years, and each one has been much severer than the preceding one.

The London Registrar-General gives the small-pox mortality of that city for thirty years as follows:—

Decades.	*Estimated Mean Population.*	*Small-pox Deaths.*
1851-60	2,570,489	7,150
1861-70	3,018,193	8,347
1871-80	3,466,486	15,551

In 1881, 2,371 persons died in London of small-pox, 615 of whom were under five years of age.

Dr. Marson, surgeon to the Highgate Small-pox Hospital, in his report for 1871, says, "Of the 950 cases of small-pox, 870, or 91.5 per cent. of the whole cases, had been vaccinated."

In regard to small-pox being made less severe in the vaccinated individual, read the following:—

In the hearing before the Massachusetts Committee on Public Health, March 9, 1882, for the repeal of the compulsory vaccination laws, Dr. Booth, of the Bellevue Medical College, "read from Marson,—the leading English authority on small-pox,—as admitting that the disorder was not modified in the vaccinated, and that cases among the latter presented as great variety in symptoms and in fatality as among the unvaccinated."

Dr. Charles Cameron, M.P., a vaccinationist, in a letter to the *Times*, May 24, 1881, says: "Since 1836, our statistics have been compiled so as to enable us to compare the mortality, not merely in small-pox occurring in all classes of vaccinated persons at different periods, but in each separate class of vaccinated persons,—in persons, that is, with one, two, three, or four good or indifferent marks. I have gone into these details, and found that not merely has the mortality in small-pox occurring after vaccination progressively increased in the aggregate, but it has increased in each class of cases, and increased enormously in the best vaccinated class of cases."

The *Lancet*, Jan. 21, 1871, says, "From the early part of the century, cases of small-pox after vaccination have been increasing, and now amount to four-fifths of cases."

Dr. Jules Guerin, of Paris, in an address before the French Academy of Medicine, 1881, says, "A large number of medical men consider a general vaccination and revaccination to be in itself one of the causes of small-pox, a crowd of the newly vaccinated to be itself a dangerous centre of infection, and the 150,000 revaccinations in Paris during the siege to be in some degree responsible for the great epidemics of 1870-71."

Next, as to disease caused by vaccination. Some vaccinationists attribute any evil results caused by vaccination to the condition of the patient. By the same mode of reasoning, we might say that, if a man who cannot swim be pushed into the water by another man, thus causing him to drown, the criminal must be held blameless, because his victim might have saved his own life, had he been able to swim.

Dr. Collins testified before a committee of the British House of Commons that he had "often seen children with syphilitic eruptions after vaccination whose parents were free from taint." He testified also that scrofula, convulsions, abscess, delirium, erysipelas, and phagedenic ulcers, pneumonia, diarrhœa, and death, are all by no means uncommon ensuing after vaccination.

Taylor says, "Dr. Depaul, the director of the French Vaccine Institute, lately declared that 'vaccinators made too light of the risk of transmitting serious maladies in the process of vaccination.'

"A ghastly confirmation to these various statements is given in a Parliamentary Return, moved for by Mr. Hopwood, in which is contrasted the deaths of infants under one year old, per million births, of nine diseases liable to be communicated through vaccination, with the deaths by all other diseases, in the years 1847 and 1878, with the following terrible result, namely: that while the total mortality (under one year old), as between 1847 and 1878, had diminished 12,000 per million births, the mortality from these nine diseases had increased from 55,213 to 81,280. In further corroboration of this view, I will quote the words of Dr. Farr (see Thirty-seventh Annual Report of Registrar-General): 'Syphilis . . . was, as far as it was recorded, twice as fatal in the five years, 1870-74, as it was twenty years ago. Its most fatal recorded forms occur in children under one year of age. Thus, of nearly 2,000 deaths ascribed to syphilis [in 1874], 1,484 were babies under one year of age.'"

But we are told that, "even granting the force of the objection, the method of using pure bovine virus invalidates it entirely."

The *Lancet*, which is strongly in favor of vaccination, says, in its issue of June 22, 1878, "The notion that animal lymph would be free from chances of syphilitic contamination is so fallacious that we are surprised to see Dr. Martin reproducing it."

Dr. J. Garth Wilkinson says, "If calf-lymph is resorted to in order to avoid the inoculation of human diseases, calf-lymph on that line of argument may implant cow diseases."

Dr. John Hunter, the celebrated physiologist and anatomist, who was acquainted with Jenner, says, "The introduction by inoculation of mineral or vegetable poisons into the blood is hazardous, and in certain quantities may be destructive; but the introduction of animal products from another living body, be it a man, a cow, or even an ass, is infinitely more pernicious, because allied to it in being vitalized."

The United States *Courier*, June, 1880, contains the following: "A son of a locksmith named Newman, living at 191 Second Street, has just died of erysipelas resulting from vaccination, on the 7th instant. This is the fourth death this week of which vaccination has been the primary cause. In every case, the vaccine had been furnished by the Sanitary Commission, and is affirmed to have been perfectly pure."

Prof. Germann, M.D., of the University of Leipzig, says: "Eighteen school-girls, averaging twelve years of age, were revaccinated, and thereby syphilized, and some of them died. . . . Yet the lymph, the syphilitic lymph, used in this case was obtained from the Official Royal Establishment for the new 'regenerated' or 'animalized' vaccine lymph."

Dr. R. Brudenell Carter (F.R.C.S., England) thinks "that syphilitic contamination by vaccine lymph is by no means an unusual occurrence."

Dr. Creighton, of Cambridge University, England, gives the history of twelve cases of bovine tuberculosis (consumption) in human beings.

There is one point in the article here under criticism, which is worthy of warm commendation; and that is the toleration evinced by the writer in declaring against "compulsory vaccination." There appears to be a greater amount of intolerance displayed upon the subject of vaccination than upon any other subject now before the public. Anti-vaccinationists only ask that vaccination be allowed to stand upon its merits.

ALEXANDER SPENCER.

CHICAGO, ILL.

FROM MILWAUKEE.

Editors of The Index:—

The agitation of the Sunday observance question has assumed unusual proportions in Milwaukee the present summer. It began by the circulation of a petition, addressed to the managers of the leading theatres, begging that the Sunday performances be discontinued. This petition was presented by Rev. Henry Rose, then pastor of Plymouth Church, to the leading business men of the city, and was signed by a number of the most prominent, influential, and wealthy citizens.

The immediate result of this was seen in published responses to the petition from two of our theatre managers. One of these acceded to the request: the other, who has established a very profitable series of Sunday afternoon and evening performances, refused to comply, and instituted a wordy warfare with Mr. Rose through the press, which has continued over the space of two months, and seems in a fair way to be continued indefinitely. The animus and arguments of the two gentlemen are affording indifferent readers some amusement, while those who are inclined to take up the fight have found ample field in this newspaper war.

Another result, possibly one not anticipated, was the ready and active interest manifested by the brewers and distillers of Milwaukee. The anxiety of this body had already been awakened by the action of the temperance and prohibition party, and they seemed to anticipate still further interference on the part of the Churches in affairs that would affect their business.

Some spirited members of the Brewers' Association resented the action of individuals who had signed Mr. Rose's petition, and a decided sensation was created in the community by the public announcement

Digitized by Google

that a system of business boycotting would be the result of such action. It proved, however, that there was more newspaper talk than the facts in the case warranted, but it is true that a great deal more feeling was manifest among parties engaged in the liquor traffic than among those persons who hold anti-Puritanic ideas of Sabbath desecration.

The German newspapers, however, expressed vigorous sentiments upon the personal rights of citizens and their infringement by Puritan proclivities. The English journals, meanwhile, were shilly-shallying over the matter, apparently afraid of both sides of the Sunday question, inasmuch as their patronage depends largely upon both elements.

The Sunday laws remaining upon our statutes are explicit enough to settle these disputes, were they not absolutely a dead letter, and totally disregarded save by such as sustain the Churches and maintain the Christian Sabbatarian ideas.

The subject of opening the forthcoming industrial exposition, in September, on Sunday, is again agitated. The managers of the exposition are divided in opinion on the matter. In the preliminary meetings held by the directors, the question has come up frequently for discussion; but no preponderance of favor for either side as yet indicates the result. It is argued on the one hand that the "laboring classes were virtually barred from attendance last year, for the simple reason that the doors of the building were closed on Sunday, the working-people's only holiday." On the other hand, it is urged that "a good deal of annoyance would be occasioned to exhibitors, all of whom would be compelled to employ help to attend to their exhibits during this day; that the laborers were not barred from attendance, for fully nine-tenths of them could spend at least one day out of the fifty at the exposition." One gentleman said, "The subject is a serious one, and I was dissatisfied that the directors last year were afraid to look the matter in the face." He believed that but two or three exhibitors would be opposed to it, and suggested that the executive committee might inquire of all exhibitors whether they would be in favor of opening or not, and let the majority decide the matter.

Newspaper interviewers buttonholed several influential citizens to obtain their sentiments on the subject. The pros and cons are of the usual order. T. A. Chapman, Milwaukee's merchant prince, made some very common-sense remarks, and decidedly favored the opening on Sunday for the benefit of employés and laboring people. As opposed to him, a prominent Methodist minister, who has been active in the Sunday war, claims that to institute such desecration of the Sabbath will vitiate the moral condition of Milwaukee. This latter gentleman has put himself on record by his unique definition of "personal liberty," and his peculiar illustration of its outcome. In a sermon last Sunday, he stated that "the gratification of the passions and lusts is what is meant by personal liberty." "The doctrine," he continues, "is a relic of the old paganism saved through the ages. It is a demoralizing doctrine; and, out of the demoralization it causes, comes one of three results. One is anarchy. Sometimes, anarchy has been avoided by the act of some strong, ambitious man who has grasped the reins of government over a people unable to rule themselves. Such instances are the second result of the personal liberty doctrine,—monarchy. A third result is national destruction, either by the direct visitation of God or by the incursion of another race."

Alas! what direful catastrophes we Free Religionists and free thinkers are calling down upon ourselves and our country, when we adopt the watchword "Liberty," that joins hands on either side with the sweetness of "Light" and the majesty of "Right"!

Alas that such ideas should be taught to mankind, inspiring it with no higher law of ethics than that unbridled lust is the legitimate outcome of independent individual thought and action; that humanity cannot yet be trusted to walk alone, but must still be kept under the leading strings of church-made rules for conduct, its development still too low for any course but obedience; that men are fit subjects only, after their repeated struggles for human freedom, of a man-made monarchy.

The missionaries of enlightened reason are surely and sorely needed when such ideas as these are promulgated in an intelligent community without let or hindrance.

The establishment of the "Sovereignty of Ethics" will be more certainly promoted by the advocacy of the ideas that *The Index* has so earnestly and bravely promulgated than by forcing political issues such as is reported to be attempted in a national organization known as the Personal Liberty League. This organization is said to be perfected, with branches formed in nearly all of the States of the Union. Already, it has thousands of members; and Milwaukee lays claim to the origination of the idea. Its projectors are the liquor manufacturers and dealers and the champions of liberty, so called.

The ideal society of Stuart Mill, Herbert Spencer, and other illustrious advocates of liberty, will scarcely be realized from pushing into political contests class or selfish interests, albeit they are labelled with the plausible and taking name of "personal liberty."

But, whatever disappointing results may be seen from unscrupulous political manipulation, they cannot be so evil in their tendencies as those resulting from the unscrupulous ecclesiastical manipulation of mankind.

Howsoever we may deplore the crudeness of the methods used, we can derive consolation and hope from the certainty that some fair blossom, some good fruit, will be sure to grow from seed planted in the name of human freedom. B.

MILWAUKEE, WIS., Aug. 23, 1882.

CARDINAL NEWMAN.

GALETTA, ONT., Aug. 1, 1882.

Editors of The Index:—

I am very much at a loss to know why Liberals waste so much eulogy on Cardinal Newman. In a late number of *The Index*, Mr. W. M. Salter reëchoes the laudatory sentiments in Mr. Paul's article in the *Century* magazine. Mr. Salter is no doubt a Liberal, and Mr. Paul describes himself as being a "Liberal of the Liberals." They ascribe the charm of Newman's writings to his "rare moral purity and earnestness and elevation, and probably also to the singular simplicity and openness of his mind." We are told also that "Protestantism is a compromise between two orders of thought; and honor must be given to the man who reveals this clearly to us, and is clear and consistent in his advocacy of one of these orders." Mr. Paul thinks that the *Apologia pro Vita Sua* (the most painful reading, I think, in the English language) "has become classical, and ought to be known to all students of religious life and to all students of psychology." Again, "starting, as already said, with certain presuppositions, he [Newman] seems to be constantly learning, moving, *getting fresh insights*; and he does not stop till he is at the feet of an Italian monk asking reception into the Catholic Church."

Now, it is scarcely credible that a Liberal should ask us to honor Newman because he denounced Protestantism for teaching the right of private judgment in opposition to the intolerable pretensions of the Romish Church; for that is the substance of one of the orders of thought referred to. It is still more incredible that we should be asked to honor Newman, because he was "clear and consistent" in his advocacy of spiritual and temporal despotism,—the other order of thought. A true Liberal will never be able sufficiently to honor Protestantism for recognizing the right of every human soul to form its own judgment on matters of religion, even though it may have been very imperfectly carried out in the Protestant Churches. It is the seed from which all the liberties of Europe and America, political as well as religious, have sprung. There is not much room to doubt that Newman is sincere enough in holding to the miserable ideas into which he has drifted. He, like all other men in searching for the truth, has had his intellect biassed by the predominance or deficiency of his moral feelings. Men of the clearest intellect have their judgments more or less swayed by their sympathies. I have no hesitation in saying that no man of "rare moral purity and elevation" or of conscientious regard for the rights of others or of sympathy with the sufferings of his race could ever be brought to look upon the Church of Rome as a divine institution. It is not necessary to refer to the atrocious cruelties it has visited on heretics and witches, or to its persecutions of science by the burning of Bruno and the torture of Galileo, or even to the fraudulent pretensions of its priests to extricate souls from Purgatory with a despatch proportionate to the amount of money paid. I shall only refer to its attitude on one single modern question, that of negro slavery. It is now nearly a century since England, by keeping an armament on the coast of Africa, tried to put a stop to the slave-trade. Since that time, slavery has been abolished in her colonies at a great cost. America has also got quit of slavery by a frightful sacrifice. The best minds in both of these countries labored and agitated incessantly for many years before emancipation took place But who ever heard of a bull or a syllabus or encyclical or other papal document on this subject? Among European countries, Spain was the worst offender in this matter. England tried long and ineffectually to bind her by treaties for the suppression of the slave-trade. One word from the infallible head of the Church would have succeeded where English diplomacy failed. But no such word was ever spoken. The fact is, Cardinal Newman has no claim whatever to the character of "rare moral purity and elevation." He is harsh, cold-blooded, and sympathyless, and deficient in that prime element of a noble nature,—the sense of justice. Proofs of this can be found on almost every page of his writings and in his treatment of his brother, F. W. Newman, a far more worthy man. His celebrated dictum—which he fathers on the Catholic Church, but which appears to be his own original sentiment—that "it is better for the sun to drop from heaven, for the earth to fall, and all the millions on it to die of starvation in extremest agony, than that one soul should tell an untruth or steal a farthing's worth of property," is enough of the man, if he can be called a man, who could give utterance to such a horrible sentiment. Surely, such a one has no claim to eulogy at the hands of those who call themselves Liberals.

J. G. WHITE.

THE CREED OF SCIENCE.

Editors of The Index:—

In reading William Graham's *Creed of Science*, which, as Mr. Chadwick says, contains much excellent matter, I fail to see any good ground for a distinction he makes, as follows:—

He distinctly and repeatedly recognizes "purpose" in God, yet denies to him "consciousness" (p. 364) and "personality" (pp. 51, 345, 354, 364), saying (pp. 50, 364) that these latter "clearly imply the notion of limits and conditions." I do not see how the second and third *necessarily* imply limits and conditions more than the first, though all three are associated with limits and conditions in *human* beings.

In the chapter treating on "Man and his Development," he says (p. 72), "The development of the human spirit has come from an inner revelation to certain privileged individuals,—a revelation of truth, of insight, of inventive power, of duty, of beauty, visiting the soul unsolicited, coming, none can say whence, not even the possessors, further than it is from the Unknown, from the Purpose of the universe that thus means and wishes to declare and develop itself,—from God, and not from chance."

Having spoken as above, it seems self-contradiction for him to say afterward of science (p. 227) that it is "the only revelation that men have ever received or can receive."

Of the silence of Science in regard to God, he says, very justly (p. 63) that, "a First Cause is not within the scope of her inquiries."

I am glad to see that he admits (p. 53) the reality and importance of faith, and also (pp. 54, 347) the necessity of a coöperation of reason and faith.

His rule of life for us is (pp. 138, 139) trying to press good motives into our service, incorporating them into our character and trying to work under them, endeavoring to make a good conscience our strongest motive force. C. K. W.

GLEANINGS FROM CORRESPONDENTS.

From every quarter, the editors of *The Index* are receiving letters containing words of praise, like the following, all of recent date:—

The Index used to be one of my most valued weekly visitors. The hurried glance I have been able to give some of the later numbers convinces me that it has lost none of its former thoroughness and purity of thought and expression, and gained considerably in variety of subject and treatment. I like its breadth and charity and courage. Healthy, restful conviction comes only from the faith which has the courage to face problems on every side. *The Index* possesses

Digitized by Google

that faith, and invites to friendly counsel on its unfenced platform those of every opinion and feeling. Unpledged to the creed of any corporation, *The Index* supplies a distinct need,—a need which the organizations even of those most advanced theologically, while existing to extend certain methods and ideas, cannot supply. The diversity of sentiment in *The Index* is at once the strength and weakness. Yet clearer and steadier than the clash of its friendly conflict and the occasional discord of its several-voiced editorial, I seem to hear the blessed symphonies of the Spirit. As a Free Religionist, who in the exercise of his freedom rejoices to be known as "Unitarian," I wish *The Index* that large amount of prosperity which it works to deserve. ALEXANDER FARQUHUSON,
Unitarian Minister, Chesterfield, England.

I value *The Index* more highly and get more help from it than from any other paper which comes to my address. The paper is doing just the work that needs to be done for hundreds who have broken with the old theology. Allow me to say that I value very highly your own and Prof. Adler's statement of faith in the issues of June 15 and 22. But the Professor has made a mistake in withdrawing from the Free Religious Association, and his reasoning is inconclusive. Let *The Index* and the Free Religious Association continue till we all see with no uncertain eye the green-skirted sides of a new continent of religious truth advancing in the bosom of the sea. We shall then be happy as the Scottish Chief in *Ossian*, when he saw "the green-skirted sides of Erin advancing on the bosom of the sea." A. N. ALCOTT.
KALAMAZOO, MICH.

I hope you will continue to meet with good support. We need just such a solid philosophical periodical as yours. I was pleased with the needed expression, "No countenance to humbug or pretence of any sort, whether it passes under the name of religion or liberalism." I wish you abundant success in your splendidly managed paper. It must be accomplishing much in behalf of liberal and scientific thought. W. F. JAMIESON,
Editor Pepin (Wis.) Gazette.

It seems to me that *The Index* is growing better month by month; but I think it will tax your resources to keep up the rattling pace you have been going of late. W. S. CUNNINGHAM.
LEMOORE, CAL.

We thank you most sincerely for your entire labor; and our constant prayer is for your perfect victory, which is the same as wishing for the triumph of humanity. ANDREW JACKSON DAVIS.

The Index is full of meat,—one of the best of all the liberal papers,—in fact, the very best.
MADISON, WIS. GEN. G. P. DELEPLANE.

I consider *The Index* the best of all radical journals. WALTER L. SAWYER,
of the Washington (D.C.) Daily Post.

The Index seems to me to increase steadily in interest. W. M. SALTER.
BURLINGTON, IA.

Permit me to say that *The Index*, always the best, grows better and better. R. C. SPENCER.
MILWAUKEE.

My interest in the paper has of late increased.
FELIX ADLER.

MR. F. HARMER writes to correct a sentence in his reply to Miss Hardaker, by which he was made to say, "The system of communism now in vogue I look upon as even worse than the one Miss Hardaker defends." What he wished to say was that he regarded communism as worse even than the present system of society-individualism, of which he regards Miss Hardaker as a defender. The error was in his manuscript.

BOOK NOTICES.

DRAMAS AND MISCELLANEOUS POEMS. By Dr. J. R. Monroe. J. R. Monroe: Seymour, Ind.

This is a unique production. The volume comprises, with many poems of more recent date, the author's early efforts. The dramatic pieces evince considerable power and skill. The author possesses not simply the faculty of rhyming, but much of the true spirit of poetry, with the constructive ability, versatility, and sense of harmony to enable him to embody his thought in a great variety of forms. The volume has many passages replete with philosophic thought, expressed in strong and elegant verse. Some of the earlier pieces celebrate the charms of women, and often in language almost Byronic in its passionate ardor, but with such grace of expression and profound respect for true womanhood that even the coldest natures can hardly object to them. The author's wit is often sharp, but never ill-natured.

WAS JESUS DIVINE? A Critical Examination of Biblical Theology. By M. B. Craven. Philadelphia: Barclay & Co., publishers.

This is a pamphlet of thirty-two pages devoted to showing some of the discrepancies and absurdities of the New Testament narratives, the inconsistencies of the orthodox theology, and some of the objections to the idea that Jesus was more than a man, who "became an innocent martyr to his aspiration for good in the cause of humanity, through the jealousy of a bigoted priesthood and national suspicion of intended regal usurpation, by an agonizing death on the cross."

THE *Revue de Belgique* for August opens with an article urging that the troubles in Egypt are largely due to the national and natural dislike of oppressive foreigners, and that they may be best appeased by making the Khedive, who has had little more than nominal power, the real ruler, as is desired by Gladstone, and not by setting up a British protectorate, as is threatened by the Tories. We see also a translation from the Italian humorist, Farinata; a statement of the benefits of abolishing the local duties on agricultural products; an account of the discovery and exhibition of bones supposed to belong to the giant-king, Teutobochus, defeated by Marius 150 B.C., but now known to be the remains of a mammoth, and still to be seen in Paris; a narrative of a journey to Mount Etna; and notices of some new essays on the philosophy of evolution.

"BABY-LAND" for September gives as its frontispiece a delightful picture of "A Grave Consultation" between two little misses. The verses entitled "Lazy Daisy" will take the fancy of all the little "kitty-cat" lovers, while baby's adventure with "The Watering-pot" will be recognized as a very natural story by the mammas as well as the little ones.

PERSONAL ITEMS.

W. J. POTTER returned this week from Gloucester to his home and congregation in New Bedford.

PROFESSOR BLACKIE has resigned the Greek chair in Edinburgh University, after holding it for thirty years.

B. F. UNDERWOOD will go West in a few weeks to meet lecture engagements. Societies that wish his services should address him at once.

THE death is announced of Prof. Leith Adams, who held the chair of Natural History in the Queen's College, Cork. He was the author of several popular scientific works, as *Wanderings of a Naturalist in India*, *Notes of a Naturalist in the Nile Valley and Malta*, and *Field and Forest Rambles, with Notes and Observations on the Natural History of Eastern Canada*, which latter work is best known in this country.

WHEN Long John Wentworth was in Congress, many years ago, he once told a Methodist chaplain of the House: "I'm not going to vote for you again. You give us too much hell fire in your sermons. Now there's a man at Cincinnati who promises to save the whole of us. He's the man for me." "Ah! Mr. Wentworth, but he doesn't know you all as I do, or he wouldn't undertake to save the half of you."

MR. CHARLES BRIGHT'S farewell lecture in this city, at Paine Hall, last Sunday afternoon, was delivered before quite a large audience, and was very well received. The subject was evolution; and, although Mr. Bright is a Spiritualist, and claimed that the facts of development point to the possibility at least of continued and progressive life beyond the grave, the main part of the discourse was devoted to a somewhat general statement of the known processes of evolution. Mr. Bright will give a few more lectures in this country before returning to Australia.

THEODORE PARKER, as is generally known, by will gave his library to the city, the gift to take effect on the decease of Mrs. Parker. She relinquished her life interest in the larger part of her collection; and now, since her decease, the books retained, together with her own library, amounting in all to fifteen hundred and ninety-two volumes and two thousand one hundred and seventeen pamphlets, have gone to the library. With these also went the marble bust of Mr. Parker, by W. W. Story; his library desk; and crayon portraits of Mr. and Mrs. Parker, by the late Seth Cheney.

SIR GARNET WOLSELEY, now in his fiftieth year, has been thirty years in the service. In 1852, in the Burmese war, he lost a portion of his left thigh. In 1854, he acted as assistant engineer in the trenches in the Crimea with honor. Among other engagements in the Indian mutiny, he was at the relief of Lucknow, and acted as Quartermaster-General in Oude. He was at the taking of the Taku forts in China. His campaign with the Ashantee tribes in 1872 brought his generalship into notice, and secured, among other high honors, the thanks of both Houses of Parliament. He is also known as a writer of a novel and essays, especially on military subjects.

ONE of the literary attractions of Leipzig is the course of public lectures on female education by Frau Dr. Goldschmidt. Dr. Goldschmidt is the rabbi of the city. His wife's lectures draw crowded audiences, composed of Jews and Christians alike. The kindergarten school and the lyceum for young ladies which she has founded and directs with care, zeal, and energy, and in the most disinterested way, are well attended by young women of both persuasions; and she has just published one of her courses of lectures on the occasion of Fröbel's centenary, under the title of "Ideas on Female Education in connection with Frederick Fröbel's System" (Leipzig: Reissner, 1882). She shows a masterly grasp of the subject, which she treats with great eloquence and in elegant diction. The volume well deserves translation into English.

LITTRE, the eminent French philosopher and lexicographer, owned a country retreat at Mesnel. It was a peasant's cottage, without the smallest pretension to gentility. The garden was stocked with fruit-trees, and old-fashioned, hardy flowers decked the borders. What used to be a kitchen was converted into a parlor. Littré slept upstairs, or rather up a ladder. His room was under the roof, but was fairly high and well lighted. The walls were lined with books. When he was a deputy, as a single vote at that time might have changed the form of government, he attended with unfailing regularity to his parliamentary duties, riding to Versailles from Mesnel by rail and diligence. He was as gentle as Carlyle was irascible. In fine weather, he studied under an old oak in the forest, near the road to St. Germain. It is now called the Tree of M. Littré. A sloping meadow, bounded by the Seine, is in front of it; and beyond are the plain of Argenteuil and the hills of Cormeilles and Sannois.

GEORGE JACOB HOLYOAKE arrived in New York last week, accompanied by his daughter, Miss Emily Holyoake, and by Mrs. Ethel Leach, a member of the Great Yarmouth School Board, and a prominent advocate of the extension of the civil rights of women. He expects to be in this country until the middle of November, when he will return to England. He has been engaged for many years in the endeavor to secure the publication, by authority of the Government, of a guide-book for emigrants, which shall contain information regarding the character of different parts of the country and the comparative inducements which various regions offer to settlers. Twelve years ago, he submitted to Lord Clarendon, who was then in the Foreign Office, a plan for a book of this kind, containing information about the industrial classes abroad; and he afterward promised to furnish the plan of this book to the American Government. The first object of his present visit is the fulfilment of this promise. After spending a week in New York and vicinity, he will go to Canada to examine the ways of the Colonial Government. He carries letters from Lord Kimberley to the Marquis of Lorne. After visiting Canada, he expects to travel through the United States, delivering lectures in Boston, Philadelphia, Chicago, St. Louis, and other cities. He will confer with the leaders of the coöperative movement in the various places where he goes, with a view to the promotion of information about coöperative and industrial enterprises in England. Among the subjects upon which he proposes to deliver lectures are "The Peculiarities of Parliamentary Orators in England" and "Eccentricities of the Public Men of England." All letters addressed to him at *The Index* office will be forwarded to him without delay.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

W. F. JAMIESON, Editor and Publisher.

To be issued weekly. 12 pages. Publication day Thursday. Pepin, Wisconsin. Price $1.00 a year.

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression.

Every number will contain descriptions of the great Northwest.

First number of LAKE PEPIN GAZETTE—5,000 copies — exhausted, except for new subscribers. Sample copies 5 cts.

Send 50 cts. for six months; or, to try it, 25 cts. for three months. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

FRANCE is ahead of us in the public employment of women. The great French railway companies in many cases employ women as ticket and audit clerks; in several banks and public companies, they are largely employed in the clerical work; and the Corporation of the City of Paris offer three hundred situations for women as clerks.

OF the sixteen chaplains accompanying the army of Sir Garnet Wolseley, five are Roman Catholics; while it is said that there is only one Catholic chaplain in the United States service, though a great proportion of our soldiers are of that faith. Is this an indication that the British Government is more inclined to religious liberty than our own?

WESTERN business men understand the importance of religious tendencies as a means of inducing the confidence of the public in their probity and character. This is why, we presume, that a real-estate dealer in Dakota advertises in his local paper that he "can be found either at the Gold Mine playing 'freeze out,' at Mitchell's Exchange betting on the age of 'old hosses' with Brown, or at my residence on Oak Street, perusing the Scriptures."

ANOTHER of the beautiful developments of the Mormon religion has been brought to light by the efforts of an English gentleman from New South Wales, who is visiting this country for the purpose of investigating our system and methods in the care of the insane. This gentleman writes to the Salt Lake *Tribune*, stating that in visiting the Utah Insane Asylum, which is under the charge of a nephew of Brigham Young, he found the grossest abuses existing, its twenty-one patients being kept in the most filthy condition. Several were kept confined in iron cages outside the main building; some were in iron, bound hand and foot; and two he found to be perfectly sane.

REV. JUSTIN D. FULTON, of Brooklyn, N.Y., according to his own story, was the means of restoring to her parents a little girl taken away by an insane woman, and for whom the police were searching for several days; for, when he was told of her rescue, he said he felt quite assured that she would be restored that day, as he "had sat up all night, and prayed" that she might be. It is a pity he did not think of this method of finding her at first, and so have saved her friends a great deal of useless heartache, and the Brooklyn authorities much unnecessary trouble. We hope Mr. Christian K. Ross will apply to the reverend gentleman at once to restore the lost Charlie by the same means.

ONE of the greatest impediments to the success of any progressive and reformatory movement is the accession to its ranks of crowds of the ignorant and depraved, who, incapable of understanding the true meaning of such movements, take it for granted that increased liberty means increased license, loose morality, and indecent behavior, and so eagerly join, much to their dismay, the thoughtful few to whom the progressive movement means only help for humanity and increased knowledge. The steps recently taken by the French Government to secure religious freedom by insisting on a purely secular public education has attracted a class of adherents of this sort, who bring disgrace on the cause they advocate by a savage warfare of the most brutal kind on unoffensive priests, who are, it is said, now openly insulted all over France, in some cases the brutal crowd setting dogs upon them, and dragging to the rivers respected and honored men simply because they were priests.

THE New York *Sun*, in its comments on a communication from a writer who calculates from various public statistics that there is such a continuous and accelerated diminution in the number of professing Christians in this country that, if the process continues, there will be before the year 1900 no Christians at all in the United States, says: "That the proportionate number of Christians is declining, and that the percentage of those who are not Christians is continually increasing in this country, may be taken for proved; but this does not dispose of the vast number of persons who sincerely and piously adhere to the Christian religion, and who adhere to it as earnestly now as they ever did. What is to become of these persons? Are they all to be killed off in the course of the next fifteen years? And what is to become of those of their children who are regularly educated in the Christian doctrine, and who attach themselves to Christian churches as soon as they have reached the requisite age? Does our correspondent suppose that there are to be no more such young Christians, and that the whole generation that is to come will grow up pagan?"

AN indication of the increasing liberality of the orthodox clergy, as well as evidence that evolution in religious thought is along the line of existing religious organizations, has just been furnished by the Evangelical Ministers' Association of Boston and vicinity, commonly known as the Evangelical Alliance. Last Monday morning, the junior editor of *The Index*, in response to an invitation he had received some weeks before from the body, read at a meeting of the association in Wesleyan Hall a paper on "Evolution in its Relation to Biblical Creation and Evangelical Religion." The aim of the paper was to show the irreconcilableness of evangelical religion with the principles of evolution and the facts of science. Several hundred ministers were present, and the hall was crowded. Prof. P. A. Chadbourne of Amherst and Prof. Asa Gray of Harvard, who were present to speak by special invitation, made interesting remarks on the subject of the paper, the former defending the Biblical account of creation, the latter declaring that, while he thought evolution would not materially affect religion as taught in the four Gospels, what the Old Testament taught in regard to the order of creation, etc., and whether it accorded with science, were to him matters of indifference, as Christianity was no more responsible for the errors of the Old Testament than he was for the misdoings of his ancestors.

REV. C. W. WENDTE, pastor of the Channing Memorial Church, Newport, R.I., delivered a discourse last Sunday, which has attracted much attention and made a marked impression. His text was, "The Sabbath was made for man, and not man for the Sabbath." It seems that all the ministers of the city, except Mr. Wendte, had signed a petition requesting the "governors" of the Casino to discontinue Sunday evening concerts. In this discourse, Mr. Wendte presented his reasons for *approving* the Sunday evening concerts given at that place, of which he thought the citizens of Newport might justly feel proud. In reply to the statement that the concerts charge an admission fee at the door, he said he could not understand why, as the Casino was open to all comers on Sunday, it should not be supported on that day as on others. He reminded his clerical friends that pew-rents were continued and collections taken up on Sunday in their own churches. To the cry of alarm, "You would introduce among us the European Sunday," he replied that he knew from personal observation that the observance of Sunday in Europe was more favorable to the happiness and welfare of the people than the Puritan Sunday. Mr. Wendte thought there were evils in our daily life, beside which the supposed offences of the Casino pale into insignificance. He would co-operate with all to fight intemperance in a rational way, and to protest against the unenlightened and parsimonious conduct of certain elements in our civic life in refusing to listen to the lessons of experience and solemn warning to make Newport as clean and sweet and healthy as nature intended it to be. He alluded to the false timidity that restrained one and all from denouncing in fitting terms the demoralizing sport in which an inoffensive little animal is hounded to death, noble horses are maimed and killed, private property invaded, human lives endangered, and all to furnish a new excitement to minds ennuied and jaded with fashionable pleasures, and to enable men and women to decorate themselves with the bleeding trophies of an inglorious victory. We congratulate Newport on having one sensible and courageous minister.

THE RADICAL UNITARIANS AND THE NATIONAL UNITARIAN CONFERENCE.

The National Conference of the Unitarian denomination is to be held at Saratoga next week. We do not hear of any attempt likely to be made to broaden the basis of the Conference by excision of the objectionable theology of its Constitution. For a number of years, the radical wing of the denomination has ceased even to protest publicly against those portions of the Constitution over which in the earlier history of the Conference there was such a famous fight. They say, some of them, that they are biding their time,—that, in the natural course of things, within a brief period, after a few more deaths and a little further progress in the denomination in liberal doctrine, even at the present rate of advance, the Conference and its Constitution will be in their hands, without any conflict, to do with as they please. And so, for the sake of peace and social good-will and with a view to keeping their position and influence in the denomination, they acquiesce for the present in the conservative constitutional creed of the Conference.

But, meantime, the old issue is in danger of being dropped out of sight as if it were of little importance, while there is a question of intellectual sincerity involved, which is not receiving due consideration. From our own observation, we judge that the younger men who are now coming into the Unitarian ministry, even though they incline to radical views, do not have the same appreciation of the merits of the old contest over the Preamble to the Constitution of the Conference which the radical men had who went into that contest. They see some of these very men now going to the Conference year after year and taking part in its proceedings without any change of views, and yet without the slightest effort to make any change in the Constitution under which they thus act. Even some of those who for a time made their silent protest against the theological status of the Conference by staying away from it have in latter years, we notice, yielded to the social or denominational attraction or to some other force (perhaps only to the drawing power of a famous summer resort), and go as announced delegates to the Saratoga meetings. It would be, therefore, but natural that the younger men in the Unitarian pulpits and the young people in the pews should have come to the conclusion that the old issue is no longer a vital one,—that it has somehow been settled or put out of the way. Indeed, as they think of it, perhaps a vague reminiscence comes to them that it *was* settled by the adoption of a compromise amendment to the Constitution, which made it all right for the radicals to keep in the Conference. An impression, too, appears to be gaining ground that one may take part in the Conference without being responsible for its Constitution, just as one may go to the Music Hall meeting of the Unitarian Association in Boston, and speak there without committing himself to all the votes or to the constitution of the Unitarian Association.

Now, in this view of the case, there are, as it seems to us, fallacies and illusions which are most hurtful to the highest sincerity, but which grow directly out of the policy on the part of the Radicals of temporary silent acceptance of the Preamble-creed. It has long been a puzzle to us how certain radical preachers—who, judging from their printed discourses, no more agree with the theology of the Preamble than, for instance, do the editors of *The Index*—can act as members of the Conference. We must assume that they do in some way justify their course to their own consciences, and we do not impute to them any conscious insincerity. But we must be permitted to believe that their habit in this respect has been detrimental to clear thinking among younger men, and made it easier for them to waive questions of conscience which interfere with denominational fellowship. For the purpose of showing the theological position of the Conference and the relation of individual members thereto, let us take a look at the Constitution under which the members meet, and briefly recall the history of the conflict over the theological phrases that are found in it. A review of the facts may serve to simplify for some persons the moral question of their right to take part in the Conference.

The Conference was organized in New York City in April, 1865. The Preamble to the Constitution then adopted read and still reads as follows:

> WHEREAS the great opportunities and demands for Christian labor and consecration, at this time, increase our sense of the obligations of all disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God, and the building up of the Kingdom of his Son.

All shades of belief, from the extreme right wing to the extreme left wing of Unitarianism, were represented at that first meeting, for the call had been a broad one. Strenuous resistance was therefore made by Messrs. O. B. Frothingham, D. A. Wasson, C. C. Burleigh, and others, to the doctrinal statements inserted in this Preamble; and a goodly minority voted against the Preamble in the form proposed. It was nevertheless pressed by the majority to adoption. The issue was not simply that which has since been made in the American Unitarian Association,—namely, whether the organization should define itself by the "Christian" name and fellowship,—but it was whether on the corner-stone of the organization the Messianic authority of Jesus should be inscribed and declared, and he should be styled in a special and exclusive sense the Son of God. Here were distinct dogmas to which the rationalistic thinkers of the denomination could not subscribe, however they might interpret and use the title "Christian."

At the next meeting of the Conference, in October, 1866, at Syracuse, another strenuous effort, led by Mr. Francis E. Abbot, was made on the part of the Radicals to eliminate from the Preamble these phrases of dogmatic theology, and to put the Conference on the basis of organization for what even Mr. Abbot was then willing to call practical "Christian" work. But this effort was opposed as determinedly and successfully as that of the previous year. The Preamble remained as it was. After this defeat, a number of the more radical men withdrew from the Conference, and have not since attended it. And, in the spring of the next year (and doubtless as one of the results of the defeat), the Free Religious Association was formed, with a platform whose liberty and fellowship were not limited even by the Christian name.

Since the meeting at Syracuse, the National Unitarian Conference has met biennially. At its third meeting, held in New York October, 1868, the Radicals who had remained in it made another appeal for the relief of their consciences. As the result, a compromise was agreed upon, which, though it did not suit the extremes on either side, was accepted by an adequate majority. The Preamble remained as originally adopted, but those who could not subscribe to it were relieved from that necessity by the addition to the Constitution of an article of absolution, which ran as follows:—

> To secure the largest unity of the spirit and the widest practical co-operation, it is hereby understood that all declarations of this Conference, including the Preamble and Constitution, are expressions only of its majority, committing in no degree those who object to them, and dependent wholly for their effect upon the consent they command, on their own merits, from the churches here represented or belonging within the circle of our fellowship.

But even this concession was not allowed to stand longer than two years. At the very next meeting, under the leadership, if we remember aright, of Rev. George H. Hepworth (not long before his secession to Orthodoxy), the new article was rescinded, and the following adopted in its stead:—

> Reaffirming our allegiance to the gospel of Jesus Christ, and desiring to secure the largest unity of the spirit and the widest practical co-operation, we invite to our fellowship all who wish to be followers of Christ.

From the time of this last change, 1870, the Constitution has remained unaltered, and without further attempt to alter it. Not only does the Preamble stand as first written, and have binding force upon the entire membership of the Conference, but the last article adopted, in a sense, reaffirms and strengthens it,—"rubs it in," as it were. And the organization of the Conference is such that it is difficult to see how any of its members can escape their share of responsibility for all the statements of both Constitution and Preamble just as they stand. The Conference is not a mass meeting of individuals acting under no well-defined rule of membership, but according to its organic law, as expressed in the first article of its Constitution, it is an association of churches; and, according to the second article, these churches are to be represented each by three regularly chosen and accredited delegates. It is these delegates that make at each session the Conference. They are the Conference; and, in our opinion, they just as much, each and all, subscribe to the Constitution with its Preamble, under which as a body they exist and act, as if they wrote their signatures beneath it.

Now, there are many radical preachers who still act more or less with the Unitarian denomination, but whose views, if we at all understand what they have published and preached, are as far from the theology of the Preamble printed above as are the present Andover professors from the Andover creed to which they are expected to give their assent. Messrs. Savage, Chadwick, Tiffany, Learned, Clifford, Vila Blake, Crooker, Forbush, F. L. Hosmer, to name no others, could hardly, we judge, consistently put their names to the Preamble-statements concerning Jesus. We should certainly be surprised to see them framing any such statement of their own faith. They are, therefore, either excluded from the Conference, or, if they attend as members, it must be with some mental reservation as to the doctrinal parts of its Constitution. But is the habit of mental reservation or of getting round a hard creed by some process of private interpretation any better at Saratoga than at Andover? Is it not just as much opposed to good faith and good thinking and good morals in the one place as in the other? Yet we note that most of the men just named are announced to go as delegates to the meeting at Saratoga next week. And since they are honest men, and some of them among our cherished friends, we should like to understand by what argument they convince themselves into doing it. To us, it seems like a denial, for the time, of their real opinions; and though, as an outsider, it may not be our province to give advice, we may be allowed perhaps to put the question, whether, after twelve years of silent acquiescence, it is not quite time that the Radicals who still adhere to the Conference should make another active protest against the offending Preamble, if not to clear their own consciences, at least to clear up their position to the public. WM. J. POTTER.

THEOLOGICAL ATAVISM.

According to modern science there is a law in connection with that of heredity, in accordance with which there is a recurrence sometimes to some ancient form or type. Men do not always inherit the nature and tendencies of immediate ancestors; but, according to what scientists call Atavism, there may be, in certain cases, a reappearance of some peculiarity which existed many generations back.

While, however, scientists teach that there is sometimes such a tendency, they also show the power of environment and the law of modification, and therefore that, in every concrete case, every principle or function which now exists may not have existed in the past. They also teach that, while men do sometimes return in part to ancient types, yet the hope of improvement rests on other facts and laws, and that the effort in general should be to prevent such a recurrence.

Many theologians, however, make atavism the principal law in the moral realm, and seem to think that the great effort should be to return to some primitive form or belief or code. Even many professed Liberals, who do not technically proclaim a belief in special past relations, still tacitly or indirectly assume that, after all, moral progress consists only in a return to ancient codes or beliefs or saviors. The tendency to revive old theories and beliefs under new names is also manifest among all but the most rational of moralists. Men will technically accept the results of modern scholarship,—results which are logically destructive of old religious theories,—and yet, with seeming unconsciousness that the old foundations are gone, will still attempt to draw their inspiration and moral guidance from that which they have just destroyed. We may be tolerated in accepting the most critical conclusions of science, but we will still be expected to proclaim the old faith as if nothing had happened. We may prove incontestably that the Old Testament, for example, is largely a collection of legends, and that the Gospels are not authentic; but men will still demand that, nevertheless, we must go to the first for our theory of creation, and to the other for our scheme of salvation and our moral guidance. A favorite teaching of some indefinite writers and speakers is that, if we could only get back to the original type of religion, men would be delivered from error and superstition and the world saved from evil. Overlooking the fact that society has improved as it has moved away from original types of religion and morality and forms of government, there is a demand for a return.

If there ever were an example of hopeless inconsistency, it is on the part of those who are too scholarly not to accept the results of modern Biblical criticism, and yet call one man a special savior or mediator, and one book the source of religion and the basis of morals.

Not long since, a correspondent of a liberal religious newspaper wished to know the precise reasons for the continued use of the Bible "as a pulpit reading book in Unitarian churches, to the exclusion of all other writings whatsoever." Many replies came to his question, some of them almost bitter toward the questioner for even raising a doubt, and none of them any too courteous; and in nearly all there was a tacit assumption, if not open declaration, that the Bible is the Word of God preeminently, and that it would be a kind of sacrilege to use other books in such pulpits. Perhaps all of these writers would have felt insulted if any one had suggested that they did not know the results of Biblical scholarship: many of them would talk, at least, about the inspiration of an Emerson or a Longfellow and the *truth* of science; and yet, true to tradition, they assume that truth and inspiration are specially in one book.

Denominationalism, even of a diluted liberal type, always assumes that the only safety is in a return to some theory or teaching. The best prepared public teacher to-day is the one with the natural fitness for teaching and with the most knowledge of the facts and principles now accepted by the wisest men. But men are advised, even now, that it would be well for them to be trained in the special schools of a liberal denomination, and it is suggested that there can be little dignity and scholarship found outside of the regular denominational channels. The dignity and learning as well as success of many liberal teachers who have arrived in their own way by special study of the best thinkers ought to be a sufficient reply to this egotism. A training under certain theological teachers might be advantageous, because some of those teachers are familiar with modern science and philosophy and criticism, and because, in one instance at least, the intellectual environments are such that a faithful student could hardly help receiving benefit. But the real object, after all, is to become familiar with the most facts and principles. Such being the case, it seems like irony to suggest that any thoughtful student should go back and place himself under the teaching of the writer of the misleading and superficial article on "Transmutational Ethics." Herbert Spencer is at least the most prominent modern writer upon ethics. By what principle except that of theological atavism should any man go back for instruction to those who do not even understand him?

There is a fundamental error underlying this popular theory. That I may not be charged with drawing on my imagination for a text, I shall advert to a practical illustration. A writer who is evidently fair, scholarly, and appreciative, recently had occasion to review a book written from the scientific stand-point. The reviewer was even generous in his criticism, and confessed that the positions taken by the author were in consistency with the best scholarship, while "no mere compilation of many heterogeneous facts, but well-compacted, and flowing together as the energetic action of the [author's] mind." Of one chapter, he says, "It frankly reveals what all scholars, who allow themselves to think, freely admit." Yet, in the summing up, this critic shows the popular tendency to which reference has been made. The critic seemed to think that, notwithstanding all these facts, the author should somehow find his "Gospel" in the very theories he had proved to be false. There was no attempt to show that the author was irreverent or unfair to past beliefs. That would have been unscholarly. But the tendency of a nondescript Liberalism had its culminating expression in these words of the critic, "*The old must have contained the new, else the new had never come.*" This sentence came, too, in a connection in which the critic assumed that he was defining the doctrine of evolution. Could there have been a better illustration of a belief in theological atavism? Here is expressed a vital error, which is not in accordance with the law of evolution, as many suppose, and yet is the basis of much antiquity worship. Any writer is of course superficial who is only an iconoclast, and does not properly recognize everything good in the past. But it is not true that "the old must have contained the new." In an abstract or general sense, of course everything present was in the past in an undeveloped form,—the war in Egypt and the cholera, as well as our civilization. But, in a strict sense, everything concrete did not exist in the past. Everything was potentially in the universe as a whole, but not every phenomenon, either man or religion. There must be no subterfuge under that word "old." The "old" means some principle or organization of past ages. Now, our modern conception of God and law, our morality, even our manhood, was not contained in anything in any past, except as the universe contained it potentially. The acorn did not even contain the oak of to-day. It was one condition of it, but the oak has been formed by the soil and sunshine more than by the acorn. The primitive form of animal life did not even contain all of the organs and functions. Some of them have been caused by outward environment. No government by a tribal chief contained our democratic form of government, although it was the beginning of government in society. No ancient Christianity contained what is carelessly called our modern Christianity, not even in essence. The error is in continually assuming that it did. The unfolding or development even of the teachings of Jesus would never have resulted in that complex sum of sentiments and benefits and moral conclusions which go to make up our civilization and even religion. This complex sum is as much caused by what was not contained in the old as by what was contained. It is largely caused by the elimination of what was contained in the old. At least, our active business life and our patriotism exist in spite of the old in Christianity. Commercial intercourse, art, science, literature, and democratic institutions have put into, or added to, or taken from the ancient Christianity. The old was one condition of reaching the new, but it did not contain it. Scientific evolution does not mean simply the unfolding of some concrete thing. It sometimes includes that; but, among other things, it means the condensation of what before existed in a diffused state, and a change from the homogeneous to the heterogeneous. The climate was never contained in the acorn; and, in fact, the climate and soil have themselves caused new varieties of oak. Neither was our modern scientific religion ever contained in the Christianity whose inception dates from Paul, and not even in the Sermon on the Mount. Scientifically, the environment is making all things new, and, in a concrete sense, is making new things. Men have new ideas of religion and morality, which could not have existed in the days of Jesus, because they have been caused by an experience which was itself caused by an environment which did not exist in the days of Jesus. It is only necessary to state that a part of that environment is our new scientific atmosphere.

For the most fundamental reason, our modern gospel of religion and morality cannot be evolved out of any past theology. All of the ancient theology was founded on a certain theory of the universe and grew out of it. Our philosophy of religion and morality cannot grow out of such a theory, but starts from an essentially new universe. Believing as we do now in a universe of regular law and the theory of evolution, we must build our morality and religion accordingly. We cannot go back to any old theory, because the old Christian theory of life, of fiats and anthropomorphism, does not contain our new conceptions. If we were to go back at all, it would be of logical necessity to the Roman and Greek philosophers, who, of all men of the past, came the nearest to our modern faith in the essential goodness of a universe of law.

We shall be very superficial and unwise, if we fail to seek all the inspiration possible from the past. We can learn much from Jesus and the prophets of the Hebrews, and may find rare gems in the Hebrew literature. But so, too, may we learn much from the Stoics, and from those Eastern Bibles whose gems have been gathered for popular use by a Conway and a Lydia Maria Child. But it is time men should cease committing intellectual suicide by proving that a Jesus is but a man and the

Digitized by Google

Bible but one of many Bibles, and yet continue to talk of a Lord Jesus and Mediator, and a culmination of revelation in a collection of Hebrew and Christian writings. Henry Ward Beecher, in his old age, accepts the doctrine of evolution; but even he still centres everything in Jesus. Can he not see that, when he accepts evolution, he makes Jesus a product of evolution, and therefore has no logical right to go back to his idols? But how much more inconsistent are they who, after long accepting liberal thought, still seek the finality in some primitive form or savior! The truth is, so far as the Christian theology is concerned, our modern progress is entirely away from the principle of atavism. From Buddhism and the Stoics, we receive the most of our modern calmness in the face of death; from a consciousness of the present universal power and mystery rather than from a past revelation, we are moved to real aspiration and wonder, and we base our morals upon human experience rather than upon any ancient man or book.

S. J. STEWART.

THE DECREASE OF SUFFERING.

"And ever by delicate powers
Gathering along the centuries
From race on race the rarest flowers,
My wreath shall nothing miss."

—*Emerson.*

The test of the right of a thing to live is its power to give joy.

There are people who believe that the great spiral of nature moves upward and not downward, that there is a predisposition to good in nature, that there are continually more delicate meliorations and adjustments, but who still think that pain is inherently and necessarily the concomitant of happiness. The whole sum of things, they say, is one great system of dualities. The stars move in the most exquisite harmonies, wheel within wheel, system within system, cluster within cluster. In rhythmic spires and gyres, the glittering star-mist whirls, and from the many-colored suns the light moves forth in softest rhythmic undulations. On the earth, winter's cold succeeds to summer's heat; and this fact is itself the result of the duality of the centrifugal and centripetal forces. Then, we have the ebb and flow of the tides, heat and cold, sleep and waking, square and oblong, odd and even, right and left, one and many, the male and the female, the quiescent and the moving, the right line and the curve, light and darkness, the finite and the infinite;—

"For Nature beats in perfect tune,
And rounds with rhyme her every rune."

"In fine," say the pessimists, "the whole system of things is one of dualities. Why, then, are not sorrow and joy one of these perpetual rhythmic runes?" It is sufficient to reply that they *mistake the duality of suffering and joy for the duality of contrasts.* Contrasts, antitheses, are eternal in the nature of things; but it can be proved that anguish is only a temporary and non-essential accompaniment of life, and not an inherent property of things. It is an intruder, a marplot. Evil is

"The wild and deep
And unregenerated wastes of life;
Dark with transmitted tendencies of race
And blind mischance; all crude mistakes of will
And tendency unbalanced by due weight
Of favoring circumstance; all passion blown
By wandering winds; all surplusage of force
Piled up for use, but slipping from its base
Of law and order."

In other words, evil and pain are only the result of mal-adjustment. It is true that, in the present state of society, pain is needed as a reforming and chastening agent. It is a severe remedy employed upon diseased persons. But, when we cease to be diseased, when (as evolution demands and proves) all mal-adjustment shall have disappeared from society, then the sick man's medicine will not be needed. We shall no longer need the old crutch. Our natures will be enriched and chastened by more beautiful means than suffering, and pain will only linger in the background and inner nature of things in order to serve as a scarcely needed warning against the breaking of law.

"All life-sustaining acts are pleasure-giving acts," says Spencer. "Every pleasure raises the tide of life: every pain lowers the tide of life."

"Lust und Liebe sind die
Fittige zu grossen Thaten,"

says Goethe,—"Pleasure and love are the wings by which we rise to great deeds." All the processes of Nature tend to happiness. What enormous volumes of purifying and restorative materials Nature has at her command! No sooner has the spirit of life forsaken a shattered chrysalis or mask than the process begins of separating it into its elements, redistributing the checkers for a new game, the type for a new article. Then there is something very sane and cheering in the unconscious happiness of the lower animals.

"They do not sweat and whine about their condition,
They do not lie awake in the dark and weep for their sins,
They do not make me sick discussing their duty to God.
No one is dissatisfied,—not one is demented with the mania of owning things,
Not one kneels to another nor to his kind that lived thousands of years ago,
Not one is respectable or industrious over the whole earth."

—*Whitman.*

It is a fact which I have established by considerable study and original investigation that herbivorous animals preponderate enormously in number over carnivorous. I can *conceive* a time when all animals in the world shall be non-carnivorous. Considering the geological records and the certainty of progress, who shall say that half a million years hence there will be such things as fishes, *e.g.*?

Pass to the human world, and see how the shadows are shortening. Remember that great calamities seem more numerous as we look back over the past, because these calamities were always chronicled, while the common blessings of life were unrecorded.

There can be no doubt that there has been among men a steady gain in physical comfort. Our English ancestors at one time slept in straw on the floor, like dogs. Their houses had no windows and no chimneys. They had no good roads, few books, and, indeed, few comforts of any kind. Speaking of Shakspere's Old John of Gaunt, time-honored Lancaster, Mr. Verplanck says: "The mode of life of those steel-clad warriors" (in the twelfth century), "mixed of alternate hardships and wild excess, with little attention to cleanliness either in their persons or their dwellings, with the total absence of all surgical or medical skill to relieve the most ordinary malady, or what would now be considered as a slight wound, broke them down at a comparatively early age." John of Gaunt at the age of fifty-eight is called an old man.

As to the alleged increase of pain owing to the increased sensitiveness of organization, in the first place, I believe that the number of people with morbidly sensitive nerves is not nearly so great as is often supposed. Look at the faces of the people you meet in the streets,—what blooming health! what a proud carriage of the body! what a consciousness of power in every movement! Then consider the countless happy homes of what are called the middle classes. The life of the inmates of these households flows on like a peaceful river. With music and light and warmth, with art and books, the pretty prattle of children, and with tender love,—with all this, how can there be much room for misery?

Again, it is evident that the careful discrimination between evil and sin, which the study of heredity has brought about, has very largely helped to lessen mental suffering. Not only the study of heredity, but all the study and thought of the time look in this direction. Much that to an enlightened mind is now known to be only imperfection or evil was formerly regarded as sin against an angry deity. We are making the gratifying discovery that we are much more moral than we had supposed.

A few practical words, now, as to ways and means for the avoidance of pain. It is uttering but a truism to say that the foundations of a happy life are laid in physical health; and, in general, the man who preserves a perfectly healthy body in this American climate is the man who keeps the most vigilant and unceasing watch over changes in the weather. Turgot said that the greatest misfortunes in life take their rise in circumstances which were considered too small to deserve attention.

It is in the open air that we rise to the full dignity of manhood and womanhood. In the open air, I feel like a god; in the house, like a prisoner. "All great deeds are conceived in the open air," says Whitman. Sunlight stimulates the retina and the medulla oblongata; the nerves running thence to the respiratory organs quicken the breathing and the circulation of the blood, and thus repair the waste of the tissues. Hence, to color the blanched lilies in the cheek with crimson and tan means to increase the health of brain and muscle. American women should organize walking clubs, botanical clubs, gardening clubs, rowing clubs, and riding clubs, and make these things fashionable.

Out-door exercise is the basis of cheerfulness. A perpetually sunny-tempered man ought to be salaried by the community: he is the best preacher in it. His sunniness begets sunniness in other hearts, as often in the dark windows of a landscape the setting sun kindles a thousand answering signal-fires. It is the easiest thing in the world for people in a great city to get into a state of chronic irritability. There is a poisonous and enervating sweetness in melancholy, a luxury in sorrow, a luxury in grumbling and growling, and in nursing and petting up one's little grievances. Cultivate tranquillity of mind, cultivate stoicism. Read the cheerful, medicinal authors,—the classics. Think of compensations, of how much worse off you might be. It is best to keep busy, and try to find comfort in little joys. "Man," says Jean Paul, "must become a little tailor-bird, which, not amid the crashing boughs of the storm-tost, roaring, immeasurable Tree of Life, but on one of its leaves, sews itself a nest together, and there lies snug." New scenes and new experiences form good antidotes to melancholy. As for myself, my mind can be shrouded in no gloom so profound that the happy twitterings of the little birds in a bird-fancier's shop will not dispel it in ten minutes. Nature is full of sanatives and restoratives.

The following words of Marcus Antoninus are like precious gems. He says: "To-day, I have got out of all trouble, or rather I have cast out all trouble: *for it was not outside, but within, and in my opinions.* Take away thy opinion, and then there is taken away the complaint, 'I have been harmed.' Take away the complaint, 'I have been harmed,' and the harm is taken away. Begin the morning by saying to thyself, 'I shall meet with the busybody, the ungrateful, arrogant, deceitful, envious, unsocial,—all these things happen to them by reason of their ignorance of what is good.'" Again, he says: "Do the things external which fall upon thee distract thee? Give thyself time to learn something new and good, and cease to be whirled

Digitized by Google

around. How much trouble he avoids who does not look to see what his neighbor says or does or thinks, but only to what he himself does, that it may be just and pure!"

W. SLOANE KENNEDY.

DR. HEDGE ON THE CHURCH.

In a sermon preached to the First Parish congregation at Cambridge, at the installation of Rev. E. H. Hall as pastor, and now published in the September *Unitarian Review*, Dr. Hedge sets forth his view of Unitarian public worship. He speaks of "a large class of such as have not entirely broken with religion, who have not cast God quite out of their thoughts, who do not oppugn Christianity as a private persuasion and theory of life; mostly persons of blameless lives, of good conversation, of large culture and refined tastes,—a power in society,—who [yet] feel no need of a church and no obligation to assist at the Sunday service." In regard to this class, Dr. Hedge says: "It is often pleaded in excuse of their neglect, by those who absent themselves from the public services of religion, that they are not benefited thereby, that the Church gives them nothing which they need or cannot get elsewhere." To this plea, Dr. Hedge says:—

"That you are not profited by these Sunday exercises in the way of devout feeling, I can easily understand. I suppose that very few are. There is very little to inspire devout feeling in our churches, and I fully sympathize with those who profess that they are more profited in that kind by the contemplation of nature than by anything they see or hear in the 'meeting-house.' . . . But all this is nothing to the purpose. It is not a question of devout excitation that we are considering, but a formal recognition. You get nothing, you say, from the Sunday service. The question is not what you may get, but what you should bring.... Your personal presence is an offering, . . a silent confession of respect for holy uses, to offer which is a contribution to social well-being, to withhold which involves a loss to society. Abolish the Church to-day, and to-morrow barbarism will have taken its place."

Dr. Hedge goes on to state the claims of the Church under these three heads: 1. "The Church is society's confession of God"; 2. "The Church is a social bond"; 3. "The Church is an educator,—the pulpit the official expounder of the wisdom of life."

Public worship, says Dr. Hedge, is in reality dead: it will not profit you in the way of devout feeling. For any real good that it will do you, you had better go abroad for the contemplation of nature rather than go to meeting. Whether this is true or false, we do not inquire now. We only note the amazing fact that Dr. Hedge, an educator of Unitarian ministers, and the foremost senior among Unitarian ministers, says that it is true; that, for any real result to the religion of the individual, Unitarian ministry is an empty formality. He says this coldly, without shame apparently, and without anxiety or grief.

More extraordinary still is what Dr. Hedge proposes to do about it. Confessing that the thing is in reality so dead that, for your own good, you had better take a walk than go to meeting, Dr. Hedge advises to keep it going as a useful formality, a great and good bugbear against barbarism. "It is not a question of devout excitation," says Dr. Hedge, "but of formal recognition," "to withhold which involves a loss to society." It will not stir real religion in you: that is not the question of public worship, says Dr. Hedge. But it will keep up a useful appearance, calculated to do society good. Dr. Hedge seems to think that religion as fact for the soul is played out, so far as meeting and public ministry are concerned; but that, as an impressive hypocrisy, it should be kept together and contributed to by all of us, for the sake of the effect on the vulgar, who would bring in barbarism with a rush, if they found religion as absent as it is empty.

"The Church," says Dr. Hedge, "is society's confession of God." This is the only point he makes which connects the Church with religion. That as to the social bond, and that as to the educating influence, do not connect it with religion. Now, let us read out plainly what Dr. Hedge says of public worship as a confession of God. He says that you are not to expect this confession of God to be of any account to you, or to mean anything worth while to you, or to do you any real good: so far from that, you had *better* take a walk or a ride. But you are to keep it up as a form, destitute of reality indeed, but useful to impress the dangerous classes, and our only safeguard against barbarism coming in like a flood.

This is exactly what philosophic atheism said under the Roman Empire, and we are at a loss to understand how Dr. Hedge can say anything of the kind. Mr. Emerson said of Free Religion, "What I expected to find here was some practical suggestions by which we were to *reanimate* and reorganize for ourselves the true Church, the pure worship." Who that really has anything to confess and to reverence, be it an idea only, or an ideal, or an Infinite Being, can possibly make his confession and offer his reverence, either alone or in the company of fellow-confessors and fellow-worshippers, without a quickening, an elevation, a strengthening of the soul? It is *not* true for any soul or for any religion that anything can equal or take the place of the genuine Church. Carlyle said justly: "Religion is a social thing. Without a church there can be little or no religion. The action of mind on mind is mystical, infinite: religion, worship, can hardly (perhaps not at all) support itself without this aid. . . . I have strange glimpses of the power of spiritual union, of association among men of like object. Therein lies the true element of religion. It is a truly supernatural climate. All wondrous things, as the foundation of Christianity, take their rise here. Men work godlike miracles thereby." Such leaders of religious advance as Emerson and Carlyle went out of the Church only that a better should gather wherever two or three should meet in any form of holy communion with pure truth. Mr. Emerson, especially, though he saw it not, looked for piety as the ideal, for adoration as the best life of the soul. What we should strive for he recognized in this complaint of a lack in the advance going on: "I see character, but scepticism; in sight and truthfulness, but not piety and adoration, not that religious submission and abandonment which give man a new element and being, and make him sublime. I see movement, I hear aspirations; but I see not how the great God prepares to satisfy the heart in the new order of things. The understanding is active, the sentiments sleep." To complain with Mr. Emerson was to prophesy, and the Emerson of another generation would have been a churchman of the spirit of truth. It is a spectacle as sad as it is singular to see such a man as Dr. Hedge taking for granted that the Church is dead as to all spiritual reality, and only proposing to maintain t as a bugbear to the vulgar.

THE CATHOLIC CHURCH AND SLAVERY.

"It was," says the *Catholic Review*, "the Catholic Church that won the emancipation of slaves, and taught kings and property holders that in God's sight slaves were free and immortal as themselves, and this ages before Catholic influence and enterprise opened up a New World to man. It was Protestantism that in this New World built up the strongest of the powers on slavery and bigotry, so as almost to destroy this Republic and union of free States." The fact is, as our esteemed contemporary ought to know, both primitive Christianity and the Roman Catholic Church, which grew up on the ruins of paganism, distinctly recognized slavery, and encouraged docility and passive obedience on the part of the slaves. None of the Fathers condemned it as the Essenes had in the first century. It is true that the Church, by creating a new relation for the slave by allowing him to participate in the religious service and by giving prominence to the servile virtues which were encouraged by monastic life, did something to mitigate the hardships of slave life, yet the system continued under Christianity eight hundred years from the time of Constantine; and the number subject to it, historians have declared, was greater in the empire under Christianity than under paganism. Shall we be told that a religion under which slavery flourished for nearly a thousand years led to the abolition of the institution? If the Church once became the friend of the serfs against the nobles of Europe, it was because a proud and powerful nobility, not always submissive to ecclesiastical discipline, having almost unlimited control over the people, weakened the authority of the Church. The people once more under her power, she oppressed the nobles and serfs alike. The Archbishop of Canterbury joined with the barons in extorting Magna Charta from King John. For this act he incurred the wrath of Pope Innocent III., who removed him from office, denounced the charter, declared it null and void, and threatened the king with excommunication and the curses of the Church if he did not disregard it. It was, we may add, Spanish monks, with the famous Las Casas at their head, who introduced into America that "sum of all villanies," negro slavery.

Coming down to our times, we cannot forget the attitude of the Catholic Church toward slavery in this Republic. In New England and New York and the other Northern States, Roman Catholic naturalized citizens voted *en masse* on the side of Southern slave-holders. Years before our Civil War, ignorant Roman Catholic laborers by their votes helped to keep the chains on the limbs of millions of their dusky fellow-laborers in the rice, sugar, and cotton fields of the Gulf States. And their priests never taught them better. Indeed, the Catholic hierarchy was notoriously pro-Southern. In Cuba, the last dependence in this hemisphere of Roman Catholic Spain, slavery still lingers, but at last is, we believe, in the process of abolition, though the process, like all Spanish movements, is provokingly slow.

B. F. U.

EDITORIAL NOTES.

WE desire to congratulate our readers on the treat we offer them this week not only in the essays, but in the particularly brilliant and spicy letter from Colorado by Prof. W. D. Gunning, entitled "A Study of Man in a Mining-Camp."

REV. HEBER NEWTON, in his eulogy on Emerson, published in *The Index*, seems to attribute the phrase, "*stream of tendency*," to Matthew Arnold, who makes so much use of it. But, like so many phrases common enough now, it comes from Emerson.—*Unity*.

CETEWAYO, the Zulu ex-King now visiting in London, is not a believer in woman's rights. He mistook the occupants of the ladies' gallery,

Digitized by Google

come to St. Stephen's to hear the debates, for a select contingent of the Speaker's wives; and, when he was assured that the honorable Speaker has only one wife, he was puzzled, and declared that it is making an invidious distinction to pick out one woman and place her in a position where she would be supposed to enjoy special privileges denied to the rest of her sex.

THE New York correspondent of the *Congregationalist* pertinently remarks: "There is something almost comical in the zeal which some of the police are suddenly showing for breaking up the 'opium dens' that are becoming far too common. . . . For years, 'the finest police force in the world' have paced day and night silently by policy shops, mock auctions, gambling rooms, lottery offices, whiskey saloons, and every foulest resort of crime, until, in self-defence, private detectives had to be employed to do their work. But the case of the poor, friendless, voteless, bossless Chinaman is altogether another matter. He pays his fine, and goes back to imitate his whiskey-selling or cock-fighting neighbor in repeating the offence, but only to be snapped up again and again, and taught that the law and its executors are great respecters of persons."

SAYS the Indianapolis *Age:* "A man worth $100,000 the other day, an old subscriber, a Liberal, ordered two copies of the *Age* that he was paying for stopped, because some telegraphic reports that he didn't relish were copied into the paper. Intolerance is frequently the rule, and Liberalism the exception, with 'Liberals' as well as with church people." We had some such thought, when a few days ago we received a letter from a subscriber who censured us for printing Mr. Conway's stricture on Gladstone's policy, and another letter from one who wrote angrily because of certain articles in *The Index* on the Chinese Question, —a subject on which we have published contributions from different points of view. One Liberal wrote that he "must stop the paper"; but the paper will continue to be published weekly as heretofore, and its broad and liberal policy will be inflexibly maintained while under its present editorial management.

PROF. HENRY KIDDLE, formerly superintendent of public schools in New York, and now known as a zealous Spiritualist, in an article in the *Progressive Age*, writes: "Spirits will always be found who will sanction any iniquity upon which they are consulted. Inquiries of that nature always repel the higher spirits, for they cannot interfere with the development of man's individuality, to be accomplished by the exercise of his free will; but the lower ones, by the law of attraction, 'flow in,' and rejoice to aid in the consummation of a wrong, already committed, in the mortal's mind, while he seeks only the means to perpetrate it, or to escape detection. It is the *intention*, not the act, that, spiritually considered, constitutes the crime. For example, Mr. A. goes to a medium to know whether his wife is his true 'spirit affinity,' and the answer is (by raps, or otherwise), *No*. The next question is, 'Is not —— —— my true "spirit affinity"?' and the response comes just as emphatically, *Yes*. Of course, these answers only serve to corroborate the inquirer's own *spiritual* intuition; and the man, confirmed by a spirit's advice, acts accordingly. Hence, in part at least, that odious and damnable monster, 'Free Love,' or 'Free Lust,' occurring as a *phase of Spiritualism*."

A CORRESPONDENT of the *Christian Intelligencer*, writing from Holland, says: "We may talk among ourselves about a return to evangelical doctrine in Europe; but certainly, here in Holland, the prospect is far from flattering. The great masses in city and town, in hamlets and country, do not cry for the pure, unadulterated gospel, as it is reported. The teachings of these rationalists are permeating the masses, and beget among them indifference, materialism, and infidelity. Go any Sunday to Bonn, a foremost city in lower Prussia, stand on the wharf along the Rhine, watch the steamers crowded with pleasure-seekers, and visit the churches in the morning, and I am very much mistaken if you do not conclude with me that the Continent of Europe is drifting farther and farther away from evangelical religion and morality. Yes, even the most orthodox universities, as Leipzig for instance, are manned by professors who incline very much nearer rationalism than orthodoxy. I know that distance lends enchantment to our view; but competent men here in Holland and Germany, who are well informed as to the religious outlook in Europe, paint it anything but encouraging and rose-colored. Undoubtedly, many good and great men are lifting up their voices in the orthodox camp, manfully and successfully. I know that Lange, Dorner, Christlieb, Delitzsch, Kuyper, Van Oosterzee, and others, are battling nobly for the faith once delivered to the saints. But what are these among so many? And what if their number is lessening?"

MR. HOLYOAKE'S present visit to the United States seems to all well-instructed free thinkers like the return of a prized member of the family. It is well to have such men among us, to honor ourselves and them by genuine and appreciative hospitality. American Liberalism would be improved by an infusion of English seriousness. Mr. Holyoake, however, is not oppressively serious, but has always brightened and lightened his work by a perennial humor. His history is well known to most free thinkers; but he is himself more than a free thinker, if that were conceivable. He is, at any rate, too broad for strict identification with any philosophical clan. The study of his life has been to erase party lines, and to fix upon the points of agreement among men as a working basis in his reconstructive sociology. He appears to have long ago scented the necessary existence of species in philosophy and theology. Aware of the folly of spending energy in obliterating species, he has chosen the task of coördinating the unmodifiable sorts of men, while still giving his quota of influence in effecting modification. But he has not stubbornly insisted on the adoption of the creed of science as a primary need. To effect some practical work for the amelioration of human suffering has been his self-selected and continual endeavor. He may be said to have illustrated the objective method in popular philosophy. His books betray the quality of the man in every paragraph. No one can regret acquaintance with a man through his books, for his best is always there. Mr. Holyoake's books make a solid and valuable record of the development of free thought in England during his lifetime. Few controversial works are so delightfully readable. Their author has a thinker's vigor and a reformer's earnestness. Besides these, a temperamental geniality interfuses all that he has written. He shows a judicial toleration for and forms a scientific estimate of those who differ from him. These traits are so rare, yet so invaluable in social reform, that it is worth while to attend to them. Some deem Mr. Holyoake's coöperative logic unsound; but, certainly, his "Rochdale Pioneers," and the hundreds of coöperative associations which followed them, demonstrate some latent fitness for distributive coöperative work among Englishmen. Mr. Holyoake's special mission in this visit is the collection of data for an *Emigrants' Guide-Book* for the use of citizens of Great Britain intending to settle in the United States.

LIVE THOUGHTS.

ONE misfortune of extraordinary geniuses is that their very friends are more apt to admire than love them.—*Pope.*

IF you are conscious of certain infirmities of character, select companions in whose society you would be ashamed to give way to them.—*Anonymous.*

IF the secret history of books could be written, and the author's private thoughts and meanings noted down alongside of his story, how many insipid volumes would become interesting, and dull tales excite the reader!—*Thackeray.*

BEAUTIFUL is the appearance of a noble man, when he is making known to the world the fine qualities of others. The rays of the moon, when he is opening the calyx of the night-lotuses, have a double brightness. —*Hindu* (*Vasavadatta*).

CONSIDERING all the heresies, the enormous crimes, the wickedness, the astounding follies which the Bible has been made to justify, and which its indiscriminate reading has suggested; considering that it has been, indeed, the sword which our Lord said he was sending, and that not the devil himself could have invented an implement more potent to fill the hated world with lies and blood and fury,—I think certainly that to send hawkers over the world loaded with copies of this book, scattering it in all places, among all persons, . . . is the most culpable folly of which it is possible for man to be guilty.—*James Anthony Froude.*

TO SHAKSPERE.*

WRITTEN IN WESTMINSTER ABBEY, JUNE, 1880.

How beautiful, an undisputed king,
Among unnumbered princes standest thou,
Immortal thought upon that perfect brow,
Whereof those lips of marble seem to sing.
Likewise, the matchless hand seems wandering
Over a lyre so many-voiced, that now,
As ever, wins the willing soul to bow,
While golden string mingles with golden string.
Even this solemn temple fades away
From the tranced senses, and the dying toll
Of bells that tell the flight of time, and say
How brief our life, and the great organ's roll
Through these dim aisles, now, at the passing day,
Before the words upon thy magic scroll!

HOWARD WORCESTER GILBERT.

For *The Index.*

ONWARD.

The seasons hard that slay
The sensuous life that flows
In the red blood of day
From night whose shadow grows,

Bear fruits rich for desire,
And wisdom hardly won;
And deeds cursed in the sire
Grown blessèd in the son.

Yet ne'er was worship lost
That was deserved, no tears
Of sweet regret a cost
Unpaid in gladder years.

Love to all souls that hold
Truth o'er all greed, that find
Through the soul-mists of old
The constant sun behind!

Hail to the mystic call
At which the martyrs start
To the grand deeds that fall
Like balm on Time's thrilled heart!

Now hath the prophet-tongue
Anew set hearts afire:
Who list the song that's sung?
Who seize the pure desire?

Up! for again 'tis day,
And duties once more cry:
Time's freshest youth doth stay,
Though Time itself must die.

HORACE L. TRAUBEL.

*The exquisitely beautiful statue of Shakspere, by Kent, in the Poet's Corner of Westminster Abbey, holds in one hand a marble scroll bearing the famous words from "The Tempest" alluded to in the sonnet.

The Index.

BOSTON SEPT. 14, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

On Some Features of the Ethics of Jesus.*

BY W. M. SALTER.

I. The charge is sometimes made that the moral teaching of Jesus *is mercenary*, that he does not ask men to do right because it is right, but because we shall be rewarded in a future state if we do, or punished if we do not. There are certainly passages which lend themselves to this interpretation. Jesus unquestionably believed in future rewards and punishments; and it is a mistake to imagine him a mild, modern humanitarian, without a sense of law or of the just deserts of men. But this is not saying that he appealed to the self-regarding motives, *when urging upon men moral conduct*. It is one thing to recognize that wickedness will call down vengeance from heaven, it is another to seek to dissuade from wickedness solely or chiefly for fear of that vengeance.

I cannot consider the sayings of Jesus in detail, but a general key to their understanding seems to me to lie in the distinction between the prophet and the mere exhorter or preacher. Many Christian preachers have used the ideas of heaven and hell as motives to determine men in their conduct; and Christian morality, as commonly taught in the past, has been deeply tainted with mercenariness. But Jesus was not primarily a preacher or exhorter. He makes few appeals to men. His attitude is the one all uncommon, if not well-nigh unintelligible, to us of the Western world: he stands for the Highest, and as a prophet declares the law of the Highest to men. Who does not at times crave a justification of the ways of the Eternal to men? Who has not at times had his soul stirred within him as he has seen the cause of things favoring, if not in league with, the unjust man and the oppressor, and coldly indifferent, if not hostile, to the good? Who has not cried out for judgment, and asked: "Why standest thou afar off, O Lord? . . . Break thou the arm of the wicked and the evil man." A Hebrew psalmist once pictured the righteous man as a lamb, graciously tended and protected by the shepherd, Jehovah. No one can fail to see the beauty and the pathos of the picture; but how often is it true? Yet we believe it ought to be true,—that the deep nature of things must somehow prefer the just to the unjust man, and that this preference must be made manifest. The prophet addresses himself to this problem, or rather brings an answer to it; and the answer which Jesus gave has written itself into the heart of myriads of men, and has been the mainstay and consolation not only of actual sufferers, but of those harassed with doubt, who, but for it, would lose all intellectual satisfaction with life. There is, he declares, a moral providence in the world, so that to the pure, the humble, to those who love peace and seek righteousness, there can be no loss, whatever may be the sensible appearance. Rather is there for them mercy, blessedness, the vision of God and the kingdom of heaven; while, for wickedness, there will be, as there ought to be, humiliation, shame, gnashing of teeth, and the fire that is not quenched.

The kingdom of heaven was Jesus' answer to the world-problem. In the light of that coming event, the ways of God to men were justified: it would be the end, and the solution of the riddle of humanity's history. As to what there is of truth and error in all this, I am not now concerned. I am simply endeavoring to put an historical interpretation on language. There is nothing so easy as to judge of an historical character from our own stand-point; there is nothing that requires such large fairness of mind as to enter into and judge from the circle of ideas in which he himself had his mental being. Hence, when Jesus says, "There is no man that hath left house or brethren or sisters . . . for my sake and the gospel's sake, but he shall receive an hundred-fold now in this time, . . . and, in the world to come, life everlasting," I do not conceive that he is making an appeal to or even consoling men, so much as declaring a law, uttering what to his mind in the moral nature of things *must* be, and what the apparent contradictions of experience put upon him a passionate necessity of declaring. When Jesus violently drove the money-changers out of the temple, we are told that his disciples called to mind a saying out of the Psalms,—"The zeal of thine house shall eat me up." If we, in these secular days, could realize the meaning of such a passion; if we could enter into that "zeal for God" and for the vindication of a Divine order in the world, which made, along with a kind of tender pity for the wronged and baffled, one of the leading motives of Jesus' life,—we should not find it so easy to call his morality mercenary, and should reserve our impatience and indignation for those who conceive no other uses for his words than as allurements or as threats to keep men in the way of righteousness.

An objection to another part of Jesus' moral teaching is that it *is extravagant and impracticable*. How can we, it is said, resist not evil, turn the other cheek, give away our cloak to one who takes our coat, and freely lend to every one? Are not law and economy equally opposed to such precepts? How long would orderly society endure, if they were obeyed? Is it not the teaching of the new charity that we are *not* to give and not to lend save on some kind of business principle? I think a measure of confusion is betrayed in questions of this sort. Jesus does not, if I understand aright, condemn resistance for self-defence, but has in mind the old precepts of "an eye for an eye, and a tooth for a tooth," and the spirit of retaliation which was at their basis. For self-defence, we may use violence to protect our person or our property or our rights. For self-defence, one nation may rise against another or one class against another. If Jesus would have condemned such self-defence, it was in connection with a view of Providence, which we no longer share. Retaliation, however, is an entirely different matter. I know of no rule of equity according to which we may return blow for blow or oppression for oppression. This would not be righting a wrong, but making a double wrong. Better than this would be actually turning the other cheek and going the second mile.

Nor do the new rules of charity, now happily making their way in our midst, contradict the precepts of Jesus. A business charity, in one sense of the word, would not be charity at all. To give help to no one who asks for it, because of a rudely conceived principle that every one ought to help himself, would not be to make an advance upon Christian practice, but to go back to the hardness of heathenism. It must not be because we love less or are ready to do less that we give up the old habit of almsgiving, but because we love more, because we wish to institute more radical means of relief, and thereby not merely temporarily relieve distress, but do something toward checking it at its sources. If there is merely the economical, the business spirit in the new charity; if the aim is chiefly to rid us of annoyances and banish unsightly objects from the public gaze, depend upon it, no great results will come from it,—no such results as came from that mighty movement of pity and tenderness which streamed from the heart of Jesus, ever taking, as it has, the weak and unprotected into its care, covering our Western world with beneficent institutions, and making the relief of want or suffering one of the primary virtues. No: only a new birth of love, a new enthusiasm for humanity, will effect any radical revolution in human conditions; only a new wave of such tender feeling as was in Jesus himself, though it be in connection with our view of the world and not with his, and guided in its manner of expression by all the light that past experience and scientific observation and experiment can give us. The best machinery will after a time lie idle, if there is not the force of human love to propel it. Nothing, not all knowledge or skill, will take its place.

Jesus told the rich young man to go and sell all that he had and give to the poor. Let us very carefully discriminate, if we object to that saying. I might almost say it is at our peril, if we do so. For the very breath of it is the utterness of consecration it enjoins. According to it, there is nothing which is to be cherished as privately our own: what we have and all of it is for blessing. And I have a deeper faith in man than those economists and sophisters (and there are some "ministers of religion" among them) who think it necessary in explaining this precept to strip its exactions of their grandeur, and trim and adjust them to the levels of conventional benevolence. I believe man at his deepest does not want to be left where he is, but to be lifted higher. I believe that he *can* give unselfishly, can give all he has,—his possessions,—yes, not even hesitating at his life, when some cause makes transcendent claims upon him. Prudence is indeed called for; but there are two kinds of prudence, the one springing from selfishness, the other born of religion itself. The same outward act may have meanings at a heaven-wide distance from one another. Suppose, for example, that I refuse alms to a beggar on the street. I may do so, because, having hardened myself into the idea that every man is himself entirely responsible for his condition, I feel no promptings of pity in my breast. On the other hand, I may refuse for very pity and very bewilderment, knowing how little such help would be, how much greater are his needs than those I could thus cover, and with the thought either to go with him to his home and learn well of his misfortunes, or to send some one wiser and better qualified than I to do this for me. This would be a totally different prudence, and would be nowise contradictory to the command of Jesus himself: "Give to him that asketh thee, and from him that would borrow of thee turn not thou away." The indiscriminate and unthinking giving of alms which has been too characteristic of the Christian Church, we may indeed censure; doubtless, it has done and still is doing much harm. But it must be because anew the spirit of humanity is rising within us, and a deeper and more serious spirit of humanity than the Church has ordinarily exhibited in the past.

Another objection to the moral teaching of Jesus I shall pass over lightly. It is astonishing to me that an earnest radical thinker should ever make it. It is that Jesus *slights the family relations*. For that he held sacred the *idea* of the family and of the marriage bond, which is at its basis, is shown by words so severe and exalted that few of his followers nowadays are able to bear them. I mean those which declare marriage indissoluble save for the single cause of adultery. Only the Catholic Church, which along with whatever additions and *Aberglaube* seems yet most faithfully to have preserved the primitive Christian traditions, insists upon obedience to them. But it is a practical slighting of the ties of family that the objection has in mind. And it is true that Jesus called upon men to leave brothers and sisters and parents, and follow him. He would not even suffer a disciple to go and bury his father, rather rudely, as it may seem, saying, "Let the dead bury their dead." He said, Not peace, but a sword, was he introducing into the world: he was come to set a man at variance against his father, and the daughter against her mother, and to cause a man's foes to be those of his own household. And, when his own mother and brothers wished to see him, we are told that with no very decided show of affection he pointed to his disciples, and said, These are my mother and brethren.

Now, if morality means nothing more than that kind of action which keeps human society in existence in families, Jesus does in all this slight its primary requirements. But can we allow that there are no causes reaching beyond the interests of family-life as at any time particularly constituted? Is all possible good already realized and incorporated in social institutions? Is there no justice, and no call for its exe-

cution, as wide as the human race, and immeasurably in advance of that which our present laws and social habits reflect? In truth, those who object to the divisions in family-life, which necessarily followed in the wake of Christianity, deny the logic by which all great forward movements in history are made: they go over into the ranks of the conservatives. Any principle thrown into the ferment of human thoughts and aspirations is a principle of division. Those who assent to it are parted from those who do not; and, if it be indeed a sovereign principle, like that of justice, then no lower allegiances have a right to interfere with the supreme allegiance due to it. Man must choose the highest: he has no peace or honor in his own eyes, save as he does; and, consistently with this choice, all his other relations in life must be ordered. They dare never assert that it shall be modified and accommodated so as to harmonize with them.

Jesus did set a man at variance against his father,—he was stern and exacting in his demand of absolute allegiance to the cause he represented,—he did feel a closer tie of kinship to those who heard his call and obeyed it than to any earthly mother or brothers; and no cause has ever thrived in the world that has not in a measure repeated these facts. No religion of the future will be a worthy successor of the religion of the past that does not introduce a similar division, that does not have a similar attitude of exaction to all wavering and double-minded persons, and does not introduce a bond of union, over and above, if not sometimes in contradiction to, the traditional bonds that now hold men together. The pathway of that future religion, of which we know so little and yet believe so much, is strewed with flowers to many a prophetic young heart of the present. I have no idea that it will be so. I have no idea that there will be any less call for self-denial, for stern faithfulness, for courage, —yes, for daring for the right,—than there has been in the past. Humanity has not gone one-tenth or one-hundredth part of its journey. We compare ourselves with the past, with pre-Christian or with mediæval times: it is for us rather to compare ourselves with the idea of the perfect, to feel how great, how well-nigh measureless is the distance yet to be travelled over. The goal is still far aloft, and the way to it is no easy one, but steep and winding, and perchance has many a danger lurking by its side. Are we ready for new toil, for more heroic aims, for severer duty, or will we take our ease on the spot we have already reached,— this is the question, answers to which will reveal whether or not we are children of the coming time.

II. I turn now to some features of the ethics of Jesus having such clear and positive merit that little objection is likely to be made to them. I essay no comparison of him with Socrates or Sakya-mouni or Confucius. This is a difficult and delicate task, which should not be undertaken without an equipment of historical knowledge and sympathy and imagination, which few of those who so often and so lightly make the attempt seem to me to have. I do not deny, indeed, that there may be no one idea in Jesus' teaching that is not found in the teaching of others as well. But I have rather in mind the prophet of Nazareth in connection with the times in which he lived, and the actual influence he has had upon men living in our Western world. It cannot be claimed that we stand in any such relation to Socrates, or the Hindu prince or Confucius, as to Jesus. Socrates has not been without influence upon us, but it cannot be soberly called a tithe of that which Jesus has had. Would that men read the *Apology* oftener. They would find meat and drink in it, a tonic and an inspiration for their lives! But there is need for no such wish in relation to the Gospels. Jesus is an ideal of goodness, all too indistinct often, but hovering in the breast of well-nigh every one that most of us ever come in contact with. It is true that there is much uncertainty relating not only to his life, but to his teaching. But, as there need be no doubt as to the main tenor and events of his life, so there need be none as to the commanding features of his teaching. They make too largely consistent a whole, and bespeak a mind of too much freshness and originality and power to allow us to think of them as coming in an indefinite way from an age otherwise so traditional, so barren and prosaic.

And, first, we notice that he opposes the traditional morality of his time. And, in this relation, what other function, we may ask, is there for the prophet than to purify and enlarge the moral ideal of men, to strip righteousness of conventional expressions and reveal its absolute and all-encompassing nature? To acquiesce in the moral requirements ordinarily allowed, to merely proclaim the old Mosaic law, so called, and insist upon all the particularities of its observance,—what need for the prophet to do that? All this was being done by the existing teachers of the nation, and especially the Pharisees. The Pharisees were eminent patriots, no doubt, conservers of the national religious life and its ancient traditions, and stood, as some one has remarked, to orthodox Judaism much as the modern Jesuits to the Catholic Church in its conflict with liberal ideas. They had on their side, too, the majority of the lawyers of the nation, a class naturally inclined to conservatism, and whose function is somewhat obscured to us by the title Scribes, which is usually given them in the New Testament. As the Pharisees with this legal following had a cause and an enthusiasm for it, they were more influential and held in higher honor by the mass of the people than the party of the Sadducees, who, with their inclination to liberalism, and varnish of foreign ideas and manners, had lost a measure of both religious and patriotic zeal. But it was the mistake of the Pharisees to esteem the moral code contained in their Scriptures final. Christians affect to find this very strange in view of the added legislation of Jesus, but that it is not strange is shown by the very fact that they regard Christian morality as final and incapable of being superseded. It is, in fact, the part of a conservative temper the world over to believe that things materially better than the old cannot come: it is just as true now as at any time. I find liberals, even, who look with a kind of disapproval, if not disbelief, upon any departure from and advance upon their present religious attitude. That which we know and are accustomed to, the old wine, we all naturally think is best. But Jesus did add to the old legislation: he was, in fact, a second "Moses" to those who accepted him. We will not attempt to say how far his legislation was new, and to what extent there were anticipations of it in the old law and prophets. It is interesting to note that almost always, when changes are made in the world, either intellectual or moral advances, we are all ready to accredit them to the authorities whom we revere, after they are accomplished, though, when they were making, the authorities spoke to us with no such clear voice, and our uncertainty may have practically amounted to hostility. So, in the future, it is possible that no reforms will ever be accomplished for the human race that clever Christians will not claim, after they are done, to have been the natural expression of their own principles; yet now it can hardly be said that their Master speaks to them in such a way that they feel that they must themselves accomplish the reforms.

One reformer always honors another, one prophet always feels that he belongs to a succession. They know well that it is not this or that particular cause, as such, they are serving, but these as forms of one cause, demands of one principle, which is itself absolute though they all be relative, limitless though they all be finite. Ever is it the triumph of the ideal good, the victory of the just in the world. Only he *is* a genuine reformer or prophet who serves his cause solely because of its rightness, and gives to his special task the form of this absolute consecration. It by no means follows, however, that each prophet honors the *disciples* of another prophet, who, perhaps, cherish his words without being aware of the animus and reach of thought that lay behind them. Circumstances and conditions change, and the eternal motive must prompt to new words and new actions. As he would be no prophet to us to-day who should merely repeat with skilful commentary the message of eighteen hundred years ago, so Jesus, had he but strikingly recast the words of Moses or Isaiah, would have been a Scribe along with the rest. One with them in fundamental thought he was, but he spoke from his own consciousness and not from theirs; he vindicated the ideal to a generation in which idealism had become chiefly a tradition, and convinced the most scrupulous followers of the old law of sin, of righteousness, and of a judgment that, to his rapt vision, hung over their nation.

Speaking more particularly, he gave the moral law a more distinct inward application, saying that our thoughts and merely spoken words have a moral significance like that of our actions. That we are not to act from wrong motives is indeed a commonplace of morals, but Jesus virtually teaches that we are not to have the wrong motives. Repression has been the maxim ordinarily laid down. Jesus implies an exalted state of mind, in which there shall be no call for repression. Is it said that this is impossible, that our inward feelings are beyond our control, and that in any case we cannot be held responsible for them, but only for the harm they may lead us to do others? Jesus will allow none of these things. Nothing in the line of what is good is impossible: if our inward feelings are wrong, we are responsible for allowing them to exist and can change them; and there is such a thing as harming our own selves in a more serious sense than we can ever harm others. Life is to become serious, to be held to a purpose, to involve discipline, and the ideal on which we set our hearts is not to be abandoned for numberless failures to win it. And what a profound—yes, I may say awful—moral seriousness does Jesus reveal in his commands: "If thy right eye causeth thee to stumble, pluck it out, and cast it from thee.... If thy right hand causeth thee to stumble, cut it off, and cast it from thee." And yet the truth may be all with him, and none whatever on the side of the easy conscientiousness that makes the moral outfit of most of us. It may be there is no injury in life to really fear but a moral injury, that there is no comfort nor pleasure, nor grace of body or mind, that can make up for the stains upon the moral nature that come from any species of actual or imagined sensuality. It may be that it would be actually better to lose the eye or the hand than to allow them to become instruments of degradation to the spiritual nature. Is this asceticism? No, but verily better, nobler, would be asceticism of the severest type than the torpor of conscience which allows us to feel only passing reproaches, and no stings and smarts when unworthy acts or unworthy thoughts are indulged in. There is no relaxing, to my mind, of the command of absolute purity. Are we thereby straining the possibilities of human nature? Lecky tells us that, when the Roman consul "Marius had vanquished an army of the Teutons, their wives besought the conqueror to permit them to become the servants of the vestal virgins, in order that their honor, at least, might be secure in slavery. Their request was refused, and that night they all perished by their own hands."* No, if honor be a dream to many, in others the fine, impalpable thing is their very life.

Further, Jesus removes all barriers to the love we owe our fellow-men. Brotherly and neighborly kindness had indeed been granted before, and doubtless the prophetic mind now and then caught glimpses of a time of universal love and brotherhood. With Jesus, however, this love was to become the present and abiding rule of life. Even our enemies are to be loved, no kind of malice or wish to injure is to be tolerated. We are to forgive, not merely seven times, but seventy times seven; *i.e.*, forgiveness is an unlimited obligation. These are, it is true, commonplaces to-day, though it be commonplaces of thought or speech rather than of actual sentiment. But, when Jesus uttered them, they were not even commonplaces of thought. Plato had commended the Athenians, speaking of their treatment of the Persians, "for their pure and heartfelt hatred of the foreign nature,"† and Aristotle taught that barbarians were no more worthy of humane treatment than wild beasts.‡ The humanity of the ancient world was in general at best a tribal or a national rather than a universal humanity. It may seem strange, and yet it is strictly true, that the natural condition of mankind is one of mutual enmity rather than affection, save in limited circles of relationship. Nay, with all our professions, and with all our real advances in feeling, it is probably to a great extent still so to-day. It is so frequently of nations, so of classes, so of corporations, so of private individuals who are seeking the same prizes in life. And the reason is obvious. It is the instinct of self-preservation, the desire to maintain ourselves and to get the best places in life. Those, it is often said, can love most who have least to do in the actual struggle of life. They who are in the battle must assert themselves: they can have no fine scruples, but must take advantage where they can, and may even injure where they must. The battle, it is said, that science has recently revealed to us as going on in the lower world, is going on equally in human society. Love and brotherhood are hence for the idealist to talk of, possibly for the kingdom of heaven to realize somewhere; but, in this world, victory is for the strong, and perhaps it is childish and

History of Morals, II., 361. †*Ecce Homo*, p. 172.

sentimental, even if it is Christian, to care for so many weak and unprofitable members of our species. Why not follow Nature, or rather simply let Nature have her own way; and then only the strong and the fit would survive.

But, in sober truth, I believe that all this is but the assertion of the brute instincts in us, seeking indeed to give a specious justification to themselves, taking on the airs of science and human reasoning, but nowise the utterance of what is strictly human in us. The human is developed in us according as we act from other motives than those of self-assertion, as we remember the ties that bind us the one to the other, and seek only that good for ourselves which is consistent with the good of all. It is the thought of humanity that makes us human: it is the bond linking us to and making us a part of humanity—a bond which is no natural force compelling us, but a fact in the ideal nature of things constraining us only with an ideal constraint—that makes our very dignity and glory. And human brotherhood, as Jesus taught it, is an idea which, if it took possession of human hearts, would not allow some of the features of our present political and social institutions to last a day. We act for the most part from the lower motives, with slight modifications and a slight tempering of the conduct owing to the influence of ideas from above. Religion demands that the ideas have an absolute, an all-controlling supremacy. In the kingdom of heaven, of which Jesus spoke, this demand was to be realized. None should be members of it save those in whom love was the absolute principle; and this should be proved by their having owned the claims of the lowest of their brothers,—those who, in the bitterness of fate or in return for their own sin, had come to nakedness or famishing or the disgrace of prison walls. And there is this element of truth in Jesus' view, that the kingdom is to come from above, and not in the natural course of things; namely, that it is not to come, and cannot, from the onworking of man's natural self-regarding impulses. It is the dogma of a certain school of liberal philosophers that, if men "are left free to act in accordance with their obvious interests and their natural dispositions, their conduct will tend to the benefit of the whole of mankind."* There is, to my mind, a grain of truth and a mass of error in such a dogma. The Middle Age was a time when the natural differences between men had free play, when law and government meant little but what those strong enough chose to make them. Did the differences happily supplement one another, and the conduct of the strong and capable "tend to the benefit of the whole of mankind"? Instead of this, history discloses to us the strong,—few in numbers, yet almost wanton in pride and power,—princes, ecclesiastical as well as secular, "benefiting" men by making them their vassals and slaves. And a part of the significance of the rise of the absolute monarchy in the fifteenth century consisted in putting checks upon the unrestricted freedom of the strong, in preventing them in many a circumstance from following their "obvious interests and natural dispositions,"—in a word, in diminishing the inequalities which, in a pure state of nature and freedom, are always bound to show themselves. And ill will it fare with any republic, when its boasted freedom comes to mean simply the freedom of one class of its citizens to appropriate to itself the services of the remainder. The future will join with the past, in my opinion, in showing it to be but a pleasing dream that the selfishness of one man shall so neatly adjust itself to the selfishness of another that they will perforce live together as brothers. And brotherhood means no such contrivance: it is a thing of the heart, and must come from the heart. It must crown our selfish impulses, it can never spring from them. It will descend, if ever it does descend upon the earth, out of an ideal region, and rule us, if it does rule us, by the spell and might of its ideal beauty and its ideal right.

Hence, the significance of that primary aim which Jesus would set to human life,—namely, to seek the kingdom of God. How little of reality have those words to us now! I mean, not merely to us Liberals, but, comparatively speaking, to the whole modern Christian world. How we seek to turn the kingdom into a metaphor, or to substitute for it all manner of abstractions! Or, if we still hold to its concrete substance, how we put off the divine city and fellowship afar in the clouds and at the end of time, inwardly saying that it is well enough there, but cannot be seriously thought of as giving the ideal and the rule for this present life! Accordingly, the present enthusiasms of men, so far as they have any, seem so measured and finite, they do not lift us to any height, nor do they touch our depths. Ah! to have lived—who does not at times wish it?—when the measureless good of the kingdom of God seemed waiting for men to enter into it, when human life was lit up with the transcendent hope, when heaven seemed about to descend and touch and sanctify the earth! There is no wonder that the multitude of those early believers were of one heart and soul, that not one of them said that aught of the things he possessed was his own, but they had all things common. As they were not playing with words, but *believed* in the "kingdom of God," how could they forbear to live in some measure then in their earthly lives as they knew they should live thereafter?

The phrase, "kingdom of God," is perhaps outworn for those who would not, under a cloak and venerable remnant of piety, hide the light that is in them; but the thought which lies at its basis is of perennial interest and worth. Of what is untrue and harmful in the Christian conception of it, I may speak at another time. The essential truth of it may be stated in a few words: It is that man belongs vitally to another order of things than that of which he has experience. He can see what is, and at the same time form a conception of what ought to be; and, in that conception, he finds the goal of what is and the end to which his thoughts and energies rightfully turn. And, as he forms this conception in virtue of the rationality that is in him, all rational beings can form it, and, as matter of fact, with varying clearness do form it; and the goal is thence a goal for all rational beings. And the goal is of nothing that is absolutely apart from those who contemplate it, far beyond and above them as it is: it is a goal *for* rational beings, and is nothing more nor less than that of a perfect society or community of them. Anciently designated a kingdom, we now may more naturally call it a republic, if we are not thereby made to forget that the laws of it, while in one sense of our making, are not altogether so, but are in some sense set for us in the ideal nature of things as unalterably as the goal itself. For us is really only the creation of *ourselves* after the ideal pattern. But, perhaps better still, we may call it a brotherhood, since thereby the idea of association, of a common interest, a common life, a common joy, are most effectually and most touchingly suggested to us. There is a yearning in us for brotherhood. We are no more satisfied with the modern aim of self-culture than with the older one of the salvation of our individual souls. We want, in our deeper moments, to get out of, to rise above, the self and feel that we are parts of some grander whole, and that we have in it a more than private mission and work. The very good and happiness we crave we do not wish to win for ourselves, but to have come in consequence of our world connections, to be a kind of bounty and answering benediction from the whole. And this only is religion, when the law for me is the law for all, when the good for me is the good of all, when the tides and the gladness of universal being sweep through me, and I know it is no longer this poor finite self that lives, but the world-self that lives in me and the world-purpose that leads me on.

And so truly do I believe the "kingdom of God" in its essential meaning to be the central theme of religion that I regard some fresh apprehension of it, some feeling of its truth so real and deep that all uncertain and merely traditional language shall be avoided in publishing it, some clear, simple, unambiguous statements of its practical meaning in connection with to-day's habits of thought and life, to be the indispensable preparation for a Religion for the Future. And in this sense we are still on the foundation of prophets, Jesus himself being the corner-stone.

WE are exhorted to throw aside these doubts, and believe those necessary truths of which no two philosophers have ever succeeded in giving the same version. But, until your divine revelations have something more to reveal, we shall be content to admit openly, what you whisper under your breath or hide in technical jargon, that the ancient secret is a secret still; that man knows nothing of the Infinite and Absolute; and that, knowing nothing, he had better not be dogmatic about his ignorance.—*Leslie Stephen.*

The Nation, Feb. 9, 1882, p. 125.

CORRESPONDENCE.

A STUDY OF MAN IN A MINING-CAMP.

Editors of The Index:—

From a horizon of snow-crowned domes, I greet *The Index*. From the spirituous "shebang" of "Busted Joe," I greet you. From my window, I look out on a little mound, over which rises a stove-pipe made of two barrels placed end to end. In that mound lives a man. Beyond, I see another mound. Under it lies the body of a man. A pine slab is the head-stone. It bears an epitaph the most simple, artless, pathetic I have ever read:—

"He had sand in his craw,
But was slow on the draw,
And we planted him here in the dew.
Caliber 45."

Do you "catch on"?
Do you "get the bulge on it"?
Do you "tumble to the racket"?

No: "your feet are sore." But you will stop a moment and philosophize. You are finding man under conditions which you have not known. From new modes of life come new modes of thought and expression. Victor Hugo makes the wretched and the vicious speak a language evolved through vice and misery. Now, these mountain men, like all men of the mountain or the desert, speak in tropes and symbols. "Where have you been?" I said to a man. "Counting ties." He meant that he had been walking on the railroad. "My little man," I said to a boy, "why don't you go to school?" "Because," he answered, "I ha'n't got no sand." What did he mean? A bird which has gravel in the gizzard is brave to attack the hardest seed.

"He had sand in his craw."

That is, he had gravel in his gizzard; that is, he was *brave*. The boy abridged the trope. He had no "*sand*."

"But was slow on the draw."

That is, he didn't draw his pistol as quick as the other man.

"And we planted him here in the dew."

The consequence.

"Caliber 45."

The pistol which "took him in the place where he lived."

Now, you "catch on"; that is, you seize the rope as it comes up through the shaft. Now, you "get the bulge on it"; that is, you stand in the widest part of the ore-body. Now, you "tumble to the racket"; that is, you understand the noise, the game, and "fall to." Now, your feet are well; that is, you have been so long in the mountains that your feet have recovered from their tramp over the plains. You are ready for another lesson.

Over the way is a sign in verse:—

"Miners' supplies,
Bread and pies.
Two bits a pie,
Take it or [and?] die."

I asked a miner what kind of pies they kept over there. "Well," he said, "I'll tell you. The foot wall has a good deal of selvage. The hanger wall's a good deal decomposed. The gangue's all gouge. The pay streak's pinched out." Do you "get the bulge" on that? Turn to Von Cotta, and learn the meaning of these terms in mining.

"BILLY, THE KID."

This is the inscription I read on a slab in Gunnison. Kid, in the mining camps, is the word for boy. Its use here, with this meaning, is suggestive. It is the old English for *child*. We have it in "kidnap." A word becomes extinct in old communities, and springs to life again in these isolated mining towns.

"Will you have peas or tomatoes or corn?" said the waiter to a man at my side. "Bring on the whole outfit," was the answer. Do you "catch on"? Remember that, in early times, emigrants to these mountains stopped in some town on the Missouri and laid in their supplies, an entire "outfit." The word is good. Huxley speaks of a man's "mental outfit." The miner uses the word in recollection of the old days of the emigrant trail. "Will you go to church with me to-night?" I said to a man in Leadville. "What church?" "The Episcopal." "I don't like that outfit." A place-miner said to me: "I've mined all the creeds to the bed-rock. I've sluiced them. I've panned them out. I never got a color." You "get the bulge" on that, I know.

All the world is here in a large mining-camp. You

Digitized by Google

can study nature and man too, but the real man is often masked. The only pleasure-drive I have found time to take was in the company of a clergyman and a physician. We met a man dressed in a dog-skin coat and carrying a gun, a white-tailed ptarmigan, a sage-hen, and a porcupine. "Hello, old fellow!" said the preacher: "what have you got there?" "Can't you see?" said the hunter. Preacher and doctor expressed a wish to see the game. We dismounted, and I was a silent witness to the following conversation:—

Preacher to the doctor.—"Well, now, I suppose Darwin would say that these quills developed out of hairs."

Doctor.—"Yes, with about as much sense as anything else he has said."

Man in leather coat.—"Darwin has made no special study of the porcupine; but, if you have eyes, you can see for yourself. Can't you see fine hair on the nose? And can't you see that this hair passes, on the neck, into quill-like hair, and this on the back into *quills?*"

Doctor to preacher.—"Well, I've studied anatomy for a good many years, and I never saw anything in favor of Darwinism."

Leather-coat.—"What have you studied?"

Doctor.—"Men, animals, birds."

Leather-coat.—"Birds? Here is the sage-hen, do you understand that?"

Doctor.—"Very well."

Leather-coat.—"Then, you understand that this bird belongs to an order of grain-eaters, and consequently to an order distinguished for a large development of the gizzard. You understand that this sage-hen has left off the ways of its kindred, that it never touches a grain or seed, and eats only the soft leaves of the artemisia. You understand that, in consequence of this diet, the gizzard, not being called into use, has completely aborted. It is represented in a few shreds of muscle."

Doctor.—"How do you know?"

Leather-coat.—"From my own dissections."

Doctor.—"Where did *you* learn anatomy?"

Leather-coat.—"Well, sir, I learned a little anatomy under Jeffries Wyman, and more in these mountains under my own dissecting-knife."

Doctor to preacher.—"He's got a white ptarmigan."

Leather-coat.—"That is not the name of it."

Doctor.—"That's what Baird and Coues call it."

Leather-coat.—"Neither Baird nor Coues calls it by any such name. I happen to have in my pocket a letter from Prof. Baird, thanking me for my monograph on this very bird." He handed the letter to me.

I will not report this conversation any further. It turned now to human anatomy as bearing on the question of evolution, and my friend in the leather coat so entrapped the pretentious doctor that he left the field in deep humiliation. I asked the hunter where I could find him. I lost no time in searching him out, and for two weeks he was my daily companion. He is one of the most accomplished men I have seen in the State, a scholar, a naturalist, a geologist. He was associated with me in the examination of one of the most important mines of Leadville.

But this is not the type of man evolved in a mining-camp.

"Hello, Pat! How is business?" This was spoken by Brown to O'Brady. O'Brady had "struck it rich." He had secured an office, and was sitting before a desk, barbarously ornamented with silver and gold. Each ear held a pencil.

"Biznis!" replied the millionnaire. "Sivin pincils a day wouldn't do me biznis."

"How are you, Pat?" said another caller.

"Call me Mishter O. Brady, if you plaze."

"Hello, Pat!" said another.

"Call me *Col.* O. Brady, and it sha'n't cost you a cint ez long ez y'r in Lidville."

This is one type of the Bonanza man. Here is another:—

Smith keeps a corner grocery. His neighbors say that his whiskey is make by dissolving old rubber boots in aquafortis. He gives Jones an "outfit" to prospect. Jones makes a discovery. Smith sinks a shaft. The "expert," Ashburrer, examines and reports. "Millions are in sight." The mine sells. Smith has a million, and Jones a million. One cold morning, within a month, Jones is found dead under a stove in one of the lowest dens of Leadville. He had struck a "blind lead." He had "drifted on a barren contact."

How is it faring with Smith? A few months ago, he could not have commanded the support of a party for road-master. Now, he is the candidate of a great party for lieutenant-governor. A year has passed. He is shot down like a dog in his own fraudulent mine. *Finis.*

Here is another type:—

Bass is an ignorant loafer. His wife does something to win bread for the family by washing. One day, he strolls off with a gun. He is tired, and perhaps lazy. He is on a conical hill, and sits down on a block of trachyte. He does not know it; but he is sitting over what, perchance a million years ago, was the throat of a great geyser. Fragments of trachyte were falling from the walls into the throat; and the ascending vapors, from the laboratory deep below, were encrusting these fragments with telluride of silver and gold. Bass picks up a fragment, and the incrustation arrests his attention. He must have an assay, but he has no money and no credit. He strikes a bargain. The assayer makes the assay, and Bass chops for him a cord of wood. The throat of the old geyser is a great mine, and Bass is a millionnaire. Business at the washtub is suspended. Bass goes to Denver, and in one night loses in a gambling den eighty thousand dollars. Still, he is very rich. He goes to Connecticut, and flaunts a blazing diamond over unwashed linen and an unwashed person. But he is rich, and Bridgeport does him honor!

The Church should amend its ritual: not from sudden death, but "from sudden wealth, good Lord, deliver us."

These are types of the few called *fortunate.*

There is another picture. A mining-camp develops the very worst which is in human nature. The many are poor, despondent, desperate. The moral nature is dead or aborted. The most painful thing which confronts you in Leadville is the travesty of what all right-thinking men hold sacred. On the corner of a leading street, you will read a sign, "THE LITTLE CHURCH ROUND THE CORNER." It is a low gambling-whiskey saloon. Over another door in the same square, you read another sign, "SAINT ANNIE'S REST." It is a den of infamy.

The very fountains of life are polluted. The press is Satanic. I read in the Sunday morning *Democrat* a fulsome eulogy of "Pap Wyman's" gambling den. In the daily *Herald*, I saw a notice of Emerson's death, six lines. In the same paper was a column devoted to a street broil between the pimps of a State Street "dive."

Some of the most depraved men I have seen are from New England. The lowest men I have seen in the State are from Pike County, Missouri. "Now, seriously," said a clergyman to me, "where *do* you think man came from?" "Seriously then," I answered, "I think he came from Pike County, Missouri."

Enough. If you visit Colorado and go to Bonanza, call on my friend, "Busted Joe." If you go to Tornichi, drop in on Broncho Dave. If your journey extends to "O be Joyful," dine with mine host, Cayote Bill: his dinner will temper your joy with dyspepsia. If your studies lead you to Leadville and State Street, you can drop your plummet down into the slime of human depravity, and then philosophize, but do not tarry. "I hope," said a man to me, "that you are enjoying Leadville society." "Well, sir," I answered, "when I visit hell, it will not be for society, but to study the laws of combustion." If you ride through Ten Mile Canyon, hold on firmly to your immortal soul. Mine was jolted out. If this communication in thought or moral tone falls below my former contributions to *The Index*, you will remember this incident, and not ascribe the retrogression to a mining-camp.

W. D. GUNNING.

GUNNISON, COL., Sept. 1, 1882.

WILL-POWER IN DISEASE.

Editors of The Index:—

Two classes of patients are met with in daily practice, in either of which relief can be predicted at the hands of a careful attendant without consideration of the question of the form of treatment provided. The one class contains the more ignorant, and hence more superstitious persons, who, from the very outset of any illness, expect to obtain something miraculous from the attendant. The other class contains the better educated, and hence somewhat more reasonable persons, who know better as to the powers of drugs or attendants than to expect too much from either source. In the former class, the patients, having been impressed with the experience and ready sympathy of the attendant and their own utter ignorance of the case, readily throw the responsibility of the case on him, and begin to recover as soon as they are assured of the care and treatment called proper for their case. In the latter class, generally, some sort of theory of what is needed for their treatment is formed by the patients, which must either be accepted as true or demonstrated to be false and another substituted before any sympathy and mental coöperation can be expected, and no ready recovery.

In all cases, whether surgical, medical, or hysteric, wherein a full coöperation of the attendant's and patient's wills and minds can be secured, it is safe to say that recovery is quite possible, if, indeed, it is not assured; while, in a reverse mental condition, recovery is very unlikely to take place or relief be afforded even.

The will power in a patient must be stimulated when flagging, roused to life if dormant, or, if it is temporarily wholly wanting, another's strong will must be lent to aid the patient toward health again. Thus, the objective point of all treatment must primarily be to get the confidence and whole coöperation of the patient's will: then is half the cure accomplished, or the relief is even given already. Secondarily, wholly, is the treating of symptoms, which may seem to call for aid to hasten recovery at times. A moribund patient often can live by the rousing of the desire, the will, so to do; while, on the other hand, a desponding well person may die from no other real cause than the lack of this same will power to try to live.

This much can surely be asserted by any one even having a dozen or so years of experience in contact with sickness in varied form; and this, too, is enough to show that no danger to the welfare of the poor patients exists in aiming to establish this coöperation of will power *first*, and later, if active treatment is positively indicated, in *administering what can do as little harm as possible.* As no two patients are alike, or even the same patient is not alike in two attacks of the same disease or disorder, no test of the amount of good which can be accomplished in a given time by the stimulation of a sick person's will alone can be given, nor is one likely to be found. No test is needed other than the appearance of the patient to prove his condition, of course, whether better, worse, or stationary.

JOHN DIXWELL, M.D.

AN EXPLANATORY NOTE.

Editors of The Index:—

. If you think that your readers have not forgotten all about my article on the Liverpool Unitarian Conference, I should like to say a word in reply to two letters in your issue of June 22, which, by a strange oversight, I did not notice at the time.

Both writers, Mr. M. D. Conway and Mr. W. Mawer, find fault with my statement that in England "the Secularists, with a few individual exceptions, are an ignorant and prejudiced body of men, who give Sunday concerts and cheap lectures," and ask, in the first place, if lectures are any the worse for being cheap. In reply to this, I can only say, with much regret, that I used the word "cheap" in its incorrect sense, meaning by it commonplace, trivial, of slight importance. I think this incorrect use of the word is common in America. I did not refer to a low admission fee; for it is my experience that most of the Secularist lectures are given—from necessity, I fear—gratuitously.

I am very sorry that Mr. Conway found in my article anything like "a slap in the face" for his congregation at South Place. I must assure him that nothing was farther from my thought. Does it not seem to you that the statement, "We hardly know of a single satisfactory congregation representing reverent and cultivated free thought" expressly admits—as it was intended to do—of *one* exception? and Mr. Conway's congregation is the only exception that I know. I am glad if Mr. Conway knows of many more, but I cannot help thinking that his criticism confirms my original statement. He mentions Dr. Aveling, G. W. Foote, and Mrs. Besant: now, even if we admit that each of these persons is unobjectionable, what are they but "a few individual exceptions," precisely what I said? And I am sure that I need not point out to your readers the differences between Mr. Conway's work and Dr. Adler's. It is, too, quite unnecessary

Digitized by Google

for Mr. Conway to recommend his own work to me. I spoke of it in my article as "admirable."

In reply to Mr. Mawer, three things: first, he incorrectly represents me as speaking of the Secularists of London instead of the Secularists of England,—a vast difference; secondly, I know that they *do* give Sunday concerts, and poor ones, too, for an advertisement to that effect appears almost every week in the local paper of the town where I am staying at present; thirdly, Mr. Mawer's own letter is additional testimony that the Secularists—I presume that he is one of them—are an ignorant body of men, for he calls my statement "a falsehood and a slander." Now, to impute without evidence deliberate untruth to a literary statement of fact or opinion is, to say the least, bad manners; and bad manners are nearly always the result of ignorance. H. N.

THE SUNDAY QUESTION IN NEWPORT.

Editors of The Index:—

An interesting discussion of the Sunday Question has taken place in Newport this summer. It was caused by the action of the Newport Casino in opening its doors to the public on Sunday evenings at reduced rates, so that all classes of the people could enjoy the fine music performed by Lander's orchestra on these occasions. An audience of from three to five hundred as respectable and well-behaved persons as those constituting the congregation of any church in the city assembled every Sunday evening during July and August.

Early in July, an attack on these concerts was begun by the Puritan element of the population in the columns of the local papers. The concerts were said to be an "outrage on the feelings of the moral and respectable portion of the community," and it was prophesied that they would lead to further and worse "desecration of the Sabbath." Sermons were preached by Rev. Mr. Van Dyke of the Congregational Church, and also by Rev. Mr. Magill of Trinity Episcopal Church, directed specially against these concerts; and three petitions were prepared to be presented to the Governor of the Casino, asking that the concerts be discontinued. The petition prepared for the clergy of the city was signed by every active clergyman in the city with one exception, that of Rev. C. W. Wendte of the Channing Memorial Church. The *personnel* of the signers to these petitions, however, show the weakness of the opposition rather than its strength, since they consist of twenty-one out of the three hundred heads of families resident in Newport in summer, and one hundred and nine out of nearly three thousand adult males of the city. An able sermon was preached by Rev. C. W. Wendte at the Channing Memorial Church on "A Rational View of the Sunday Question," in which he gave an historical account of the origin, progress, and decline of the Puritanical observance of Sunday, and advocated a freer use of it for the elevation of mankind in every way. H. E. A.

NEWPORT, Sept. 10, 1882.

MISCELLANEOUS.

THE Rochdale plan of coöperative stores, which divides the profits among the purchasers instead of shareholders, is successful in England. In the aggregate, these establishments divided last year nearly 10 per cent. on the gross amount of their sales. This is equal to 60 per cent. on the share capital,—a much larger ratio than the private dealer realizes, the greater profit arising from the fact that the coöperative stores are not required to go to any expense to get or retain custom, and that their business is so regular that they need suffer very little from dead stock. In 1861 there were 150 English societies, with 48,184 members, doing an annual trade amounting to about seven and a half million dollars. In ten years, the number of members and sales increased fivefold, and the capital was nearly doubled. In the next decade, the membership doubled, the capital increased threefold, and the sales to more than half a million members amounted in 1880 to $100,000,000. These are the figures given in returns to the government of actual business. Scotland has a large number of societies in proportion to its population, but they do not seem to flourish in Ireland. Indeed, it is only in certain parts of England that they reach their highest development in communities where the members are well known to each other. The parliamentary return shows that counties where coöperation prevails have the smallest percentage of pauperism. Experiments in this country have not met with much encouragement except in Philadelphia.

AMONG the addresses delivered at the Watkins Glen Convention was one by the Secretary of the National Liberal League, in the interests of which the Convention was managed; and from this speech, which was a "prepared" one, read from the manuscript, we quote a few sentences, without comment:—

> There is Francis E. Abbot, who led off within the liberal household itself. Francis was the founder and the president of the National Liberal League; and he might have continued so to this day, had he been fit to survive. Abbot snapped and snarled at Mr. —— for two years; but see—the man recovered from the bite, the dog it was that died. I suppose there never was a really learned and capable writer so well advanced toward a firm, well-won, impregnable place in letters, as well as in Liberalism, who so suddenly fell out of line, and almost out of the memory of men, as Mr. Abbot has done; and it came about just from the little mistake of choosing the wrong road at the parting ways. Then, there was Mr. Underwood, second fiddle to Mr. Abbot while he was leader of the orchestra, but now sawing the same old *Index* catgut pretty much alone. He makes no better success of it; and the same abyss of Coventry and oblivion, for his treason to Liberalism, awaits him.... From being the popular lecturer he once was, he no longer "draws," as the actors say; and he has fallen down, down, until he has landed now in the seat on *The Index* rom which Mr. Abbot was bounced. He fills it perfectly, and, on the same line, will come to the same bad end. Then, there is Mr. R. C. Spencer, of Milwaukee; but I made my point on him in a letter which has been published, so I won't dwell. Next comes Tom Titcomb, of *Scribner's Monthly*. He characterized Mr. —— as a very bad man, and our reception of him in Chickering Hall as the "Apotheosis of Dirt." Well, within a year, Tom went into the presence of that God of his, who inspired the great, infallible Book; and he knows now, if he is as immortal as he used to think himself, which has got the most "Apotheosis of Dirt" in it, the Bible or the reception at Chickering Hall. It is the luckiest thing in the world for us infidels that the Bible is so magnificently obscene,—we can retort on them, "You're another," with such a crushing effect.

PERSONAL ITEMS.

ROSA BONHEUR is sixty-two years old.

MRS. E. D. E. N. SOUTHWORTH has written sixty-seven novels.

MR. O. B. FROTHINGHAM'S *Life of George Ripley* will be ready this fall.

MARK TWAIN is supporting a colored student at Lincoln University.

MR. W. S. KENNEDY has a brief paper on John Burroughs in the August *Californian*.

REV. MINOT J. SAVAGE is said to be preparing for the press a small volume of choice hymns for liberal congregations.

IT is sixty years since George Bancroft first began to collect materials for his still unfinished history of the United States.

MISS LENA GALL, A.M., Professor of Greek in the University of Des Moines, Iowa, has just been elected to fill the same position in the Central University of Iowa.

A PETITION for the loan of a white elephant, on his Majesty's own terms, has been sent to the king of Siam by Mr. Barnum, it is said, through the agency of the United States consul at Bangkok.

EVA BRIGGS, the Lawrence girl who was claimed to have been relieved of hip disease recently by the faith cure at Old Orchard, was taken to Danvers Insane Asylum soon afterward, crazed by her religious excitement.

J. B. LIPPINCOTT & Co. have just issued Dr. Felix L. Oswald's *Zoölogical Sketches*, a series of papers which originally ran through *Lippincott's Magazine*, and the first one-volume edition ever made of T. Buchanan Read's poems, in large octavo form, and illustrated.

MR. CHARLES WATTS, editor of the London *Secular Review*, writes us that his departure for this country has been unavoidably delayed, but that he will arrive early in October, and will give lectures throughout the country. He can be addressed at the office of *The Index*.

JOHANN HALBIG, the celebrated German sculptor, is dead, aged sixty-eight. He executed many commissions for Germany, Austria, Russia, and America. The marble piece called "The Bathers" and the allegorical statue, "North America," at New York, are fine specimens of his work.

THE Elmira *Gazette* says that William Peak, formerly manager of the Peak family of bell-ringers, was recently arrested at Goshen, N.Y., as a vagrant, and sent to jail for ten days. Ten years ago, he was worth $100,000, but now he is a pauper. Benevolence is said to be the cause of his poverty, as he was always liberal to a fault.

FREDERICK DOUGLASS' wife, who lately died, was a remarkable woman. She was a free woman in Baltimore when he escaped from slavery, and met him in the North, joined his dangerous fortunes, and was his great support in all his days of trial. No wonder Mr. Douglass writes, after forty-four years with her, that "life cannot hold much for me, now that she has gone."

THE family of the late George Henry Lewes have presented the philosophical and scientific portions (over two thousand volumes) of his library to Dr. Williams' trustees, in order that the books may be available to special students at the library in Grafton Street, London. The only condition attaching to the generous gift is that the books be arranged on distinct shelves, and that each volume bear some record that it formed a part of the "George Henry Lewes Library."

SEVERAL sons of famous fathers are living on their parentage in London. *All the Year Round* is still "conducted by Charles Dickens." This magazine was the dead Dickens's personal property, and was left to the present Charles Dickens, with the proviso that the name should be placed at the head of its pages. Douglas Jerrold was the editor of *Lloyd's Weekly News;* and, when he died, the proprietors continued the family name by putting in the line, "Edited by Blanchard Jerrold." The editing is said to consist in the drawing of a salary. *Fun* is nominally edited by Tom Hood, a son of Thomas Hood, the famous humorist.

AMONG the American publications to be counted upon this fall, one of the first in costliness and literary importance is *The Historical, Political, and Diplomatic Writings of Nicholas Machiavelli*, translated from the Italian by Mr. Charles E. Detmold. This will be the first complete English translation of the diplomatic correspondence of Machiavelli; and, as he was engaged upon over twenty distinct and separate missions, it is needless to say that his official communications with his government on those occasions cannot fail to possess great historical interest and value. The work will make four goodly octavo volumes. The completion of Prof. Villari's admirable Life of Machiavelli this year makes this publication most opportune. We understand that Osgood & Co., of Boston, are to be the publishers.

DR. SCHLIEMANN is carrying on new excavations a Hissarlik, with the assistance of two eminent German architects. One hundred and fifty workmen are daily employed in laying bare the foundations of ancient cities. Two perfectly distinct cities have lately been discovered in the burnt stratum, the lower one resting on the large walls which have hitherto by mistake been attributed to the second city. Hissarlik now turns out to have been the acropolis of this lower burnt city, this being proved by the walls and the pottery, as well as by two vast brick buildings, one of them forty-three feet broad by one hundred feet long, the other twenty-three feet broad by less than one hundred feet long. These buildings seem to have been temples, a separate gateway, flanked by enormous towers, leading up to them. There are, besides, three or four large buildings, apparently dwelling-houses, but no smaller buildings. The city walls now stand out very imposing. They rest on a substructure of large blocks, thirty-three feet high, afterward superseded by great brick walls. All the treasures formerly found by Dr. Schliemann are now ascribed to the first burnt city. Dr. Schliemann has found in the temples copper nails of a very peculiar shape, weighing from a thousand to eleven hundred and ninety grammes. The second burnt city, being the third city from the rock, and hitherto identified with the Homeric Troy, turns out to have had but very small houses, and no lower town at all. Dr. Schliemann will continue his excavations till the beginning of August.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Embracing "The Influence of Christianity on Civilization"; "Christianity and Materialism"; "What Liberalism Has Done"; "The Place of Christianity"; "Scientific Spiritualism: its Meaning and Tendency"; "Woman: her Past and Present, her Rights and Wrongs"; "Paine, the Political and Religious Reformer"; "Materialism and Crime;" "Will the Coming Man worship God?" 300 pp. Cloth. $1.00.

The Letters of Junius. An essay on the authorship of these remarkable compositions, with letters to Mr. Underwood, never before published, from jurists, statesmen, and scholars, showing a concurrent conviction that Junius was Sir Philip Francis. 10 cts.

Religious Revivals, their Causes and Consequences. 10 cts.

Burgess-Underwood Debate. A four days' debate between Prof. Burgess, President of the North-western Christian University, Indianapolis, and B. F. Underwood. 188 pp. Paper, 50 cts.; cloth, 80 cts.

Underwood-Marples Debate. A four nights' debate in Canada between B. F. Underwood and Rev. John Marples, Presbyterian, of Toronto. Paper, 35 cts.; cloth, 60 cts.

Jefferson, *the free-thinking philosopher and statesman.* His religious views presented from his own writings, with his own testimony and the statements of John Adams, William Wirt, Daniel Webster, Edward Everett, Caleb Cushing, and Robert C. Winthrop, in regard to the authorship of the Declaration of Independence. 10 cts.

Radicalism and Conservatism. 5 cts.

Address THE INDEX, 3 Tremont Place, Boston, Mass.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00.

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

LAKE PEPIN GAZETTE,

W. F. JAMIESON, Editor and Publisher.

To be issued weekly. 12 pages. Publication day Thursday. Pepin, Wisconsin. Price $1.00 a year.

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression.

Every number will contain descriptions of the great Northwest.

First number of LAKE PEPIN GAZETTE—5,000 copies—exhausted, except for new subscribers. Sample copies 5 cts.

Send 50 cts. for six months; or, to try it, 25 cts. for three months. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

M. L. SANDERS,
DELAVAN, ILL.

Thoughts on the Death of Jennie Cramer

is the title of an address by FREDERIC A. HINCKLEY, neatly printed by Geo. H. Ellis, and for sale by the author and at this office. Price 5 cts., or $4.00 per hundred.

PRIVATE SCHOOL FOR TEN BOYS,

In Northboro, Mass., opens September 13.
E. A. H. ALLEN, Principal.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. For sale at this office. Price 5 cents.

THE *Debater* is the name of a new "Weekly Liberal Penny Newspaper," published at Sydney, New South Wales. The numbers that have reached us contain articles well worth reading. We notice that the *Debater* has reprinted in its columns the lecture by Mr. F. E. Abbot, entitled "A Study of Religion,—the Name and the Thing," delivered in Horticultural Hall, Boston, in 1873.

OUR esteemed contemporary, the *Catholic Review*, abuses the great European liberals who in sentiment and purpose belong to the same class of men with the founders of the American Republic. By so doing, it renders more and more clear the animus of the Church which it so ably champions on American soil. But, whatever be the animus of the *Review's* Church in this Republic, its fate is being settled in the countries of Latin Europe, where it belongs.

MR. TALMAGE stated, in a recent sermon, that, "of the twenty most celebrated infidels in Great Britain in our day, sixteen have come back to Christ, trying to undo the blatant mischief of their lives,—sixteen out of the twenty." We do not suppose that Mr. Talmage does us the honor to peruse our columns, but we should highly value his list of the "twenty most celebrated infidels in Great Britain," both for its important statistical use, and for the clear definition of "infidelity" and "coming back to Christ," from the Orthodox standpoint, which it would doubtless afford, and which is a real desideratum.

MAYOR LOW, of Brooklyn, evidently believes in practical civil service reform. "I am admonished," he writes in a letter he has sent to each of the commissioners and heads of departments of that city, "by many signs that the fall political campaign is about to begin. Be so good as to assure the employés of your department that their salaries are intended to compensate them for faithful service to the city; that, failing in that respect, no amount of contributions for party purposes will avail them; on the other hand, that a refusal to contribute will not imperil their situations. In other words, they are in the same condition in this particular as the employés of a commercial firm. I look to you to protect them in this respect."

A CORRESPONDENT of the Boston *Herald*, writing from the United States Hotel, Saratoga, says Herbert Spencer "is rarely seen about the hotel, but he takes drives with Prof. Youmans, who resided here for many years and is thoroughly at home. Mr. Spencer is not handsome, but he impresses one at a glance as being a man of unusual force. His eyes are very keen and searching, and the small glasses do not hide their fire. His forehead is broad and massive, and his features are as clear cut as a cameo. He wears the regulation side-whiskers, somewhat after the fashion of George William Curtis. He is animated in conversation; but, even upon the trivial commonplace topics which always creep into informal talk, he gives you the idea that he is, above all, a man of thought, with a keen insight and power for broad generalization."

MR. CHARLES WATTS, editor of the London *Secular Review*, whose name is identified with the free-thought movement in England, and who has the reputation of being an able and eloquent lecturer, in some farewell words to the readers of his journal says: "Having received many private invitations to visit America, I have at last decided to do so. I go upon my own responsibility, unassisted by any bureau; depending upon the goodness of my cause and my own energy and self-reliance. What I have achieved in this country I intend to try to achieve throughout the States. Various friends in New York, Boston, and other American cities, have kindly promised me their hearty co-operation. I shall therefore leave this country with every hope of success and determination to represent English secularism in America as I have hitherto expounded it here."

DR. MONROE of the Indianapolis *Age*, who was a surgeon in the Union Army during the Rebellion, says he is constantly receiving letters asking for certificates that will assist the writers in obtaining pensions. He publishes a letter from one who writes him, "I hain't forgot the time that you tride to pull some teeth for me. . . . I am trying for a penchen," prefacing the letter with the remark that the "writer of the following will rank in that large class where cases need a poweful sight of crooked swearing to get through." The genial doctor adds: "The laws made by political demagogues to help them into office encourage everybody who was in the service to apply for a pension, and the result is that every frivolous ailment is set up as a plea. The idea of granting a pension for physical inability, ache, or ailment occurring twenty years after the war is over, is absurd enough, though an occasional trouble may have its primary cause considerably behind its development. The writer of the following deserves a pension for his candor. He is much mistaken about the tooth-pulling, we never having been at the place (only to pass through it) where he says it occurred. But he doesn't say the pulling was a success."

THE *Commonwealth* says that the Bishop meeting in this city "had a conspicuous element of Congregationalism in it," and that "subsequently not a few of the caucuses hereabouts looked as though orthodox prayer-meetings had been adjourned from the church vestries to the town halls." To corroborate these tactics, the following statement is quoted from the Worcester *Spy*: "An emissary of the Bishop committee, who is a member of the present Legislature from Worcester, has, as we learn from more than one source, been laboring in the county towns for his candidate, seeking to influence the pastors and members of the Orthodox Congregational churches by the assurance that Mr. Bishop is active and zealous in that denomination of Christians. A Clinton correspondent says the success of the Bishop cause in that town is due to a visit which a Worcester deacon paid to the orthodox minister. As a result, the church members turned out and secured a Bishop delegation." "We have," adds the *Commonwealth*, "the profoundest respect for a man's religious convictions when honestly held and faithfully lived up to, but only the supremest contempt at any attempt, under our institutions, to bring differences in religious belief into the arena of politics. The men who will do it have but a poor conception of the beneficence of our government."

SAYS our Unitarian neighbor, the *Christian Register*, "The Evangelical Ministers' Association of Boston showed an unexpected and commendable liberality in inviting B. F. Underwood, Esq., of *The Index*, and the Hon. Paul A. Chadbourne to discuss the question 'Evolution: Is what is proved about it antagonistic to Biblical Christianity and Evangelical Religion?' Both sides were ably presented. Mr. Underwood aimed to show that the account in Genesis is hopelessly irreconcilable with the doctrine of astronomic and geological evolution. Prof. Chadbourne defended the inspiration of Genesis, and fell back upon the theory of six creative epochs. Additional interest was given by the presence of Prof. Asa Gray, who said that 'settled scientific belief must control religious belief,' and thought that the really important question is: 'Is science in its results antagonistic to Christianity? I do not believe that, when all has been done that can be done, faith in the gospel of our Lord and Saviour Jesus Christ will have been materially shaken, although some cherished beliefs will have been given up.' Among these will undoubtedly be the scientific authority of the Mosaic cosmogony. As a piece of literature, it will always be interesting; but no device like that of Prof. Chadbourne, which stretches the word 'day' into an indefinite period, can restore the infallibility of the Mosaic account. The position of Prof. Gray is safe, because, while equally religious, it is much more rational."

EMERSON AND THE CHURCH.

A month ago, the *Catholic Review* had an article entitled "The Errancy of Emerson," founded on a remark made by Dr. Bartol in his address on Emerson before the Concord School of Philosophy. As reported in the Boston *Herald* and thence quoted by the *Review*, the remark was: "Emerson feared the excesses of radicalism, and went to meeting regularly in his last days. I count it a spiritual assent in him, not an intellectual assent." With, perhaps, some condensation, this is substantially what Dr. Bartol said, as we remember his words. When we heard him make the statement about Mr. Emerson's attending meeting, we foresaw that it would be one of those things which the conservative religious press would seize with avidity for propping up the groundless notion that the author of "The Over-Soul" and "Self-reliance" and the "Divinity School Address" had recanted in his old age the opinions which he had advocated through his long public career. If Dr. Bartol had known all the circumstances concerning Mr. Emerson's attendance of church in the last year or two of his life, he would hardly have mentioned the fact; for then it would not have served the purpose for which he used it, and the editors of the *Catholic Review* and other journals would have been saved from writing articles and constructing theories on insufficient premises. The remark as made by Dr. Bartol was one of those partial statements of truth which are as misleading and mischievous in their results as error.

It is true that Mr. Emerson went to meeting quite regularly in his last days. But it is also true that he did not resume this habit until his memory had become so much weakened with regard to places, times, and occasions that he evidently had little realization of where he was going or what he was doing. From some facts that have come to light since his death, it is clear that his mental powers were more impaired than was generally understood by the public. We are told, for instance, that he would sit for a long time amusing himself with looking at children's picture-books, and that members of the family took him with them when going out as they might have taken a child,—partly because they were anxious lest he might wander off alone, and partly because, though he made no complaint and was always sweet and patient, they feared that time hung heavily upon him, and they saw that it entertained him to be with them. So he went to church with them as he went elsewhere. But a session of the Summer School of Philosophy or a lecture or a church service were manifestly all one to him. On going with them to meeting, he once remarked that he had always been in the habit of going there, showing that he did not discriminate. Certainly, the going to church under such circumstances can hardly be regarded as giving a spiritual more than an intellectual assent to the service.

It may be sad to contemplate the obscuration of such a fine intellect; and yet it is not wholly so, since the beautiful serenity and simplicity with which he bore the infirmity are in perfect harmony with the philosophical lesson of his whole life. But, certainly, it is vastly better that all the facts of mental deterioration should be known than that upon the acts and sayings of his last days should be constructed an argument to prove that he had essentially changed his beliefs.

Yet it should be added that Mr. Emerson has never opposed the Church *as such*. He believed in religion most profoundly, and appears to have continued to believe that it might yet create for itself some fitting representative embodiment in society. He had gone out of all existing churches because they seemed to him to keep the form rather than the spirit and substance of religion; nay, to *suppress* the spirit and substance for the sake of preserving the form intact. But with him spirit and substance were so supreme and all-dominant that he could not question their right and power both to break and to make any forms that the exigencies of human progress might demand. He left the old churches that he might help to build a new one on a broader basis, with sincerer speech and action. The relation of humanity to the creative power and purpose of all being was the central idea of his teaching; and this is an idea on which an institution corresponding to the Church, but free, progressive, and rational in its methods, may find ample support.

As to any change in Mr. Emerson's religious views in his latter years toward a more orthodox position, this is a matter that ought to have been set at rest by the explicit assertion of his son, Dr. Emerson, in the letter that was widely printed two years and a half ago, and the writing of which was authorized by Mr. Emerson himself. The letter denied that there had been any change. It is related also that, when this matter was once brought to Mr. Emerson's attention, he pointed to a set of his books on the library shelves, with the simple remark, "There are my views." And there the world will look, and not to any of his interpreters, to find his thoughts and beliefs on the great themes he has treated. He was the prophet of a new era in religion. And though in his last days, when age had enfeebled his intellect, he went again to the church of his fathers, his books, the reading of which there as Scripture lesson would probably still be regarded as sacrilege, will be read among the Bibles of that Church of the Future which he has helped to found.

WM. J. POTTER.

SCOPE OF PHILOSOPHY.

As a sphere or method of intellectual inquiry, science is limited and imperfect. It does not profess to be absolutely ultimate in its explanation of phenomena. Even those who affirm that the orderly connection of phenomena is the utmost possible goal of knowledge admit that this does not satisfy the human mind, and that our mental interrogations always transcend this scientific boundary. They say we ought to be content to stop here, but we are not; and positivism affords no restraint and no argument to detain us here except its assertion that all attempts to advance beyond will be futile. But, as there is an inextinguishable desire to advance, the wish will here as everywhere be father to the thought. Men will hope and endeavor, as they always have done. Nor is this blind or futile. Intelligence will ask every intelligible question, and the question is itself a benefit because it is the action of intelligence; and no proof can ever be furnished that the answer will never come, for such a proof would be the answer, since it would be an explanation of the question, so as to give to the mind an ultimate intellectual satisfaction.

While science seeks only the lexical connections of phenomena, the intellect always asks further into the nature, origin, and cause of these phenomena and of the order which they observe. This is the ultimate inquiry; and it is philosophical or metaphysical, in contradistinction from the merely and properly scientific. Philosophy or metaphysics thus constitutes the rationale of all science, pursuing its investigations beyond phenomena as such, and furnishes an answer to all ulterior questions till no further self-consistent question remains possible. While this pursuit is taken by some as unfruitful and inadmissible because beyond the powers of the human mind, it is by others confounded with science, and under that name it is deviously and haltingly prosecuted.

In defence of the thesis that science supports theism, writers often argue that we know as much concerning God and the human soul as we do concerning matter and gravitation, because we know none of these things in themselves, and that science judges of each in the same way and with equal authority, from its phenomenal manifestations. Now, science proper forms no judgment at all on this question. It simply traces out the ganglia of lexical connections of phenomena, whether they be considered as subjective or objective; and what they are in themselves is a question which science proper never raises. At the very utmost, it is satisfied to determine qualities and their phenomenal relations to each other; and that is but another way of saying that its quest is lexical phenomena only.

Now, this question is no mere logomachy. For, in the first place, it involves a point of such vast importance as the differentiation of science and philosophy or metaphysics,—a differentiation which is very necessary, and toward which all modern thought is tending. Some who are really working in this direction have for their designed object the rejection of metaphysics as the old clothes of science; while others seek thence to give to metaphysics the solitary supreme place which belongs to it, as *the science of the sciences*.

In the second place, this confusion of science and metaphysics confuses argument and discussion and all the different parties to the discussion, as there are some who will pay no respect to any argument, whether in the name of science or metaphysics, which affects to transcend the lexical connections of phenomena, whether as to matter or spirit, if any distinction is to be made.

In the third place, that doctrine that we can never know a thing in itself involves a questionable system of metaphysics, not to be assumed against opponents. It is a contradiction in terms to say that the thing in itself is aught else than quality (which is known). Beyond quality, nothing can be known or conceived, and so all affirmation is void; and, if quality is not the very essence and substance of things, we are landed ultimately in empty phenomenalism and all sorts of inevitable inconsistencies. If it is quality, it is knowable in its action and effects. To assume the contrary of this, therefore, as scientific dicta, is very extraordinary. Science cannot be thus overloaded, obscured, and disguised. It must be left in its simplicity, and justly exhibited as free from all metaphysical elements.

On the other hand, if there is a metaphysics or ultimate philosophy of things, or an attempt thereat, it must be discriminated from science. We must therefore insist on the distinction we have indicated. Philosophy seeks an ultimate exposition of substance and cause, which is ulterior, and the only question which is ulterior, to the tracing of phenomenal forms and connections. This ulterior inquiry is conceivable and intelligible, and we cannot go beyond it. This is the extreme limit of thought, and the beginning as well as the end of metaphysics or philosophy. We can never go beyond phenomena to the unqualitative, for there is no such thing; but we can show the ultimate logical implications of known phenomena till all conceivable logical inquiries are answered. Whether this attempt will only bring us into a region of inexplicable contradiction, as Kant, Hamilton, Mansel, and Spencer affirm, is not for us here to determine; though I will add dogmatically that I do not think it will, if we take the right track or pursue a proper method.

Digitized by Google

Definite and simple as is the object or scope of metaphysics, as I have described it, it is broader than is generally conceived, so that it covers many questions which are discussed and dogmatized on by those who make it a practice to decry metaphysics. Discussions in connection with material science are, very frequently, transcending material science. All discussions on the nature and ultimate constitution of matter do this. On this point there are two very distinct questions raised: first, whether matter in its intrinsic nature is a force; second, whether its ultimate form is atomic. Both these questions, especially the first, are purely metaphysical, though constantly discussed by scientists. They are supra-scientific, seeking not phenomenal co-ordination, but phenomenal preordination, ultimate nature and cause.

The doctrines of the unity (universal) of natural force, its absolute conservation, persistence, and indestructibility, are metaphysical conclusions. They are not known by the senses or by any experience; and, as they are not the expression of possible phenomena, they are not generalizations of phenomena. In phenomena, we have no absolute beginning and ending. These are all related to each other in a series. To go beyond this is to rise from science into metaphysics. Even the physical experiments of Mayer, Grove, and Joule, so far as they sought anything more than the *law* of associated phenomena, were in spirit and object metaphysical, not merely scientific. Indeed, they sought force and the unity of force as well as law, and concerning these they made asseverations as the result of their observations. All our profounder physicists are, in fact, to a degree metaphysicians, because they generally endeavor to transcend mere law as such, and penetrate to force and substance as such, and *as the source and explanation of the law.*

Distinctively, the question of causation as aught other than lexical antecedence is metaphysical. None of the senses and no faculty of experience tells of such a cause or of aught but phenomena and their local and temporal connection, not whether they operate on each other. The senses cannot even raise or entertain the question, because they are only imaging faculties. Here, on this basis, Hume was right. If sense is the source of all our knowledge and also the supreme or ultimate criterion of truth, we know nothing of force or cause other than as lexical coëxistence and succession.

Much of the operation of what has been called the "scientific imagination" is only another name for a metaphysical process of mind. So we are told plainly that the human intellect "wishes to get behind the phenomena of the external world and learn their causes and connections." Yet long discussions in the spirit of this sentence are published as "Fragments of *Science*." Philosophy is evolved out of science, and, where the latter terminates, the former begins its sublimer and profounder career; and it is a great injury to have the two spheres confounded, especially if that leads to a systematic depreciation of the nobler course and agency, as it has done so generally in these days.

WILLIAM I. GILL.

THE FUTURE.

Biblical scholars are generally agreed that there is no indisputable evidence in the entire books of the Old Testament that the doctrine of the immortality of the soul and a future life was known to the Jews of those days. It is an idea which gradually gained currency among philosophers, and was emphasized by Jesus and the apostles. It was not revealed by them, for it was believed before their day. If, when it was made known, it was received by way of direct revelation from God, it may rightly be asked why God, who talked with men, kept such needful knowledge carefully concealed for so many ages, and let his friends, the men after his own heart, live and die in ignorance of so important a truth, virtually deceiving them as to the facts of their existence. But the late attainment of the idea is explained, if we accept the theory that it is a higher intellectual conception than the earlier races of men were capable of exercising, and has been developed from the advancing mind of man. As to the proof of its truth, we must say that there is none beyond the fact of its belief: there is no evidence of a future life that will bear the test of examination; but there are strong analogies in nature and an intense yearning in man which stimulate the *hope* that death does not end all. Hamlet's soliloquy expresses this argument. The pictures of heaven given in the New Testament are the fond imaginations of the writers of that age, and are not acceptable to the present generation, who have no more delight in the prospect of white robes and harps and the song of Moses and the Lamb than in the land of Watts' conception, "where congregations ne'er break up and Sabbaths have no end." Each age and clime makes heaven for itself. The modern authoress changes the harp into a piano; the tropical negro looks to a cool, shady grove; and the Esquimaux believes in a land of sunshine. These imaginations may do no harm, and may even be beneficial and comforting, if kept in the right place; but when they exalt the world to come over this world, as the rightful object of our concern, they are hurtful. The Bible teaches that this world is condemned of God on account of the sin of the man he made; and his long-suffering patience is gathering out a few favored elect ones to dwell in a new heaven and new earth, when he has destroyed the present abode of man and the vast majority of its inhabitants. As in the days of Noah, so it is to be at the coming of the Lord. Consistent Christians, therefore, "love not the world, neither the things that are in the world," and ignore all attempts to improve what God has cursed, which cannot be regenerated by any efforts of man. They teach that Christians should not engage in politics nor hold office nor seek wealth nor crave pleasure, but, with loins girded and lamps trimmed and burning, should wait for their Lord. The majority of Christians, however, are not of this mind, and believe in making the best of both worlds, though any candid reader of the New Testament must see that they are a different order of Christians from the original sect, and have virtually evolved a new religion to suit the times.

The apostles and early Christians were looking for the speedy return of Christ, and therefore taught contempt of the world. Their hope being false, as is that of those who now wait for his appearance, their conclusions are therefore wrong. A good old man, who spent his days in prayer and tract distribution, was admiring the noble ship in which I was about to embark on a voyage around the world. "Yes," I said, "we hope to have some good times in her."

"Ah, my dear brother," said he, "we can't take any pleasure in this world that has crucified our Lord."

His view of life was similar to that of the "dear brother" who shut his eyes in the cars, lest the beauties of this world should distract his thoughts from Christ and the age to come. They considered inventions and arts as man's effort to improve what God had condemned. Though Christians generally may now disavow these pietistic views, they cannot deny their Scripturalness; and consistency should lead them to follow them, or else admit that the New Testament is not their infallible guide. These views of the future life, as being so immeasurably the object of our concern, discourage efforts for the increase of knowledge and invention or the improvement of the material condition of man, the saving of his soul being all that is worth attention, since the world and all in it is to be burned up. Some writers maintain that any hope of immortality is injurious, as necessarily distracting thought and effort from the present life; but it is not clear that this must be so, if it is recognized as only a hope, the realization of which is not so definite as to warrant the engrossment of the faculties in its contemplation. If we make the best of this world, when another comes we shall find we have made the best possible preparation for it. Spinoza says, "The proper study of a wise man is not how to die, but how to live."

If we never awake from our dreamless sleep, we shall never know our loss. Life is a burden to most people. Their happiest moment is when they are just falling into sleep; and they usually awake with a sigh, as the consciousness of another day's care comes to the mind. Some writer has said man's happiest hours are those which he passes in childhood and in sleep. Why, then, should eternal sleep be so dreaded? The rational mind must reject the idea of a perfect future state, for there must ever be progress upward. Life must therefore always be in some sense a struggle; and, though ambition prompts the desire to engage in it, yet the weary laborer need not shudder at the thought of eternal unconscious rest, and may "sink to sleep" more peacefully than though agitated with thoughts of angels and uncounted glories.

But, if this hope has grown in man as his intelligence has increased, it has been founded upon fact or has been useful. If it is not true, when it ceases to be useful, it will be discarded; and, if it is true, the demand which man's mind now makes for evidence, without which no belief can much longer exist, will be met by proof, which his advancing powers will elicit from nature. If there is any light to be gained on this subject from the phenomena of "Spiritualism," it will in time be made plain. Immortality is one of the mysteries which we may not deny, but which as yet we do not know. If it cannot be positively denied and there is therefore a possibility of its truth, it is not irrational to hope for it.

The aim of life should therefore be to assist in the subjection of the laws of nature to man's use, and to improve the moral, intellectual, and social condition of man. Instead of endeavoring to convert men to a belief in theories which will make them happy in a hereafter, of which we know nothing and which men through the ages have conceived of differently, according to their own temperaments, we should aid the progress, which history shows has slowly but surely been going on, of making man the master of this world. The application of steam, gas, electricity, and some only suspected forces to the comfort and power of man, offers an unbounded field to the man of science or the practical mechanic; while the philosopher and theologian can turn their devotion and credulity from the myths of darker ages to the discovery of psychological laws, which hinted to us in the phenomena of "Spiritualism," suggest a vast enlargement in the range of man's intellectual powers. They can study the problem of moral restraint without the supposition of divine edicts, the methods of raising the profits of labor to a more just proportion to those of capital, the abolition of the selfish, demoralizing, and partial laws of so-called "protection of industry," which makes each nation the commercial enemy of every other, and robs

Digitized by Google

its many citizens for the benefit of the few, and by the promotion of free trade and the intercourse of reciprocal commerce all over the world develop the bonds of peace which will forever chain the demon of war and bind all men into a universal brotherhood. The Christian, instead of being "a man of one book," and that a compilation of the traditions of a credulous age, will become a student of the volumes of nature, and learning its facts will discover its laws. Winwood Reade in *The Martyrdom of Man* says: "There is a great enterprise in which men have always unconsciously been engaged, but which they will pursue with method as an avocation and an art, which they will devoutly adopt as a religious faith, as soon as they realize its glory. It is the conquest of the planet on which we dwell, the destruction or domestication of the savage forces by which we are tormented and enslaved." He says, when men made fire serve them, the first victory was won. "But we can conquer Nature only by obeying her laws, and we must first learn what they are."

If the Bible predictions as to the world's future are to be classed with the innumerable myths and legends that pervade the literature of all people, what does Science teach us? She knows nothing of the future save what is taught by the analogy of the facts of the past. What has been will be: that is all that she can say. She finds in the past a slow, painful process of improvement going on in all animate Nature; and she assumes that it will go on, and things that improve forever must in time approach perfection. But she finds evidences of a limit to the existence of worlds, and sees a possibility of such changes in condition as to lead to the extinction of all life on this globe, though vast ages must elapse before this result could ensue from the orderly progression of causes which have worked in the past.

The pre-millennial scheme of the speedy advent of Christ to miraculously perfect the earth, after destroying the evil men in it, and then in a thousand years burning the world itself up, and the post-millennial theory of the gradual but not far distant conversion of the world to Christianity, and a thousand years of blessedness followed by the appearance of Christ to destroy the world, find no support from the records of what has been. No one can say it may not be so, but there are the best of reasons for believing it will not be so. God has never told us it would be thus; and the story which many believe came from God is so differently interpreted under "the infallible guidance of the Holy Ghost," by those to whom the revelation is supposed to have been given, that no two men can agree as to the details of fulfilment, and as to the event of greatest concern, the appearance of Christ. Believers in his coming are at least a thousand years apart in their reckonings. When God gives us a revelation, he will be likely to tell us something; but a tale of war-horses, and trumpets, and vials of wrath, and beasts, which most learned men tell us mean great events of past history, but disagree as to what they are, the beast being Antiochus Epiphanes or Nero or the Pope or the Church of Rome or Louis Napoleon,—and which other equally wise men declare refer to events that have not yet happened, the beast being a wicked ruler yet to appear,—this tale seems to a rational mind to be more probably the poetic imagining of the religious prophets of a less enlightened age than the present, than the instruction from God as to what man is to expect. It is impossible that the God which the nineteenth century can alone conceive of should *reveal* what is unintelligible. A noted orthodox theologian has said, "The study of the Book of Revelation either finds or leaves a man crazy"; and yet at its beginning the Holy Ghost says, "Blessed is he that readeth and they that hear the words of the prophecy."

If things are to go on, what then may we expect? We are warranted in believing that the forces of nature will become the servants of man. Time and space will be almost annihilated by aerial flight, talking on beams of light, electric and pneumatic despatches, and other modes of movement and communication. New motive powers and machinery will abolish the *curse* of labor. Chemistry will create cheap food. Social science will distribute wealth more equally, banish land monopolies, let producers get a greater benefit than they now do in comparison with the gains of the capitalist. Muscle, and brains, and money will share results in more equitable proportions. But what of sin? Of what use is all this, while it may yet be said, "Only man is vile"? History certainly shows that man is less vile than he was once; and, if he has improved, we are warranted in hoping he will "go on unto perfection." The telegraph, the newspaper, and the high moral sentiment which is the standard of society now, bring to notice a multitude of crimes that in old times would not have gained publicity, both from the lack of facilities for publication and the prevailing lax morality which would have ignored them. These increased exhibits of sin cause some to mourn over the degeneracy of the times, and to sigh for a return of the good old days. If they will read the histories of those days, they will find cause for gratitude that they do not date their births any earlier. Governments, all will admit, have improved; and, as laws are the expressions of the wills of the governed, it follows that men collectively, and therefore individually, have improved. If society is better, man is better. The social conditions of the Middle Ages or the Roman Empire or the days of Abraham were morally inferior to those of to-day; and though, individually, man's morality does not seem to have kept pace with the material improvement of his circumstances, it must be admitted that it has advanced, and therefore probably will advance.

Lewes in *Problems of Life and Mind* says: "Among the many strange servilities mistaken for pieties, one of the least lovely is that which hopes to flatter God by despising the world and vilifying human nature. The author of creation is the only author who is supposed to be flattered by the lavish assurance that his works are imbecile." While men insist on styling themselves vile worms of the dust, they not only insult the God who they believe made them, but they retard the progress of man.

Man's conception of Deity is the evidence of the aspiration of his nature and of the goal toward which his energies and desires are directed. The qualities and powers which men have most desired to attain to, they have attributed to God; and the progress of humanity in each age is toward the character and ability of its God. Man's thought of God, therefore, becomes a prophecy of his own destiny, and in ages to come man may rise to the possession of the attributes of his present God. What intimations we already have of this,—travel by steam, aerial voyages, talking by telegraph, telephone, and photophone, listening with the microphone! Time and space are being annihilated by these inventions, which convey a suggestion of the omnipresence of man.

The phenomena of mind-reading, clairvoyance, and second-sight, may be the germs of a rising ability which may increase to a capacity for what seems to us infinite knowledge, and man will become omniscient.

The application of chemistry to the arts, of mechanical invention to manufactures, of electricity, animal magnetism, will-power, and other physical and psychic forces to the general necessities of men, give us a foreshadowing of a future omnipotence.

When man thus becomes relatively omnipresent, omniscient, and omnipotent, and a corresponding moral advance and "love to man" are gained, his present ideal of God will be in a great measure realized; and the true "coming of the Lord" to earth, for which all ages have hoped and waited, will become a fact.

R. C. ADAMS.

A REMARKABLE PASSAGE IN EMERSON'S POETRY.

"I see the wreath, I hear the songs
Lauding the Eternal Rights,
Victors over daily wrongs:
Awful victors, they misguide
Whom they will destroy,
And their coming triumph hide
In our downfall or our joy:
They reach no term, they never sleep,
In equal strength through space abide;
Though, feigning dwarfs, they crouch and creep,
The strong they slay, the swift outstride:
Fate's grass grows rank in valley clods,
And rankly on the castled steep,—
Speak it firmly, these are gods,
All are ghosts beside." —*Voluntaries.*

No words ever written are better worth binding, like a talisman, on the heart of the moral hero than these. They are as remarkable for their powerful condensation of diction as they are for the grand idea embodied in them. The essence of all morality is in them, and they form the keystone in the arch of scientific philosophy. You have there Herbert Spencer in a nutshell. How like a beacon their stern and steady light flames out over the moral and political rottenness of this land! One seems to hear throughout the lines the thunder of invisible but resistless wheels. Fools never hear this sound; or, if they do, they stop their ears against it. I know young men who have recently gone into the ministry: they are acting lies every day; they have sold themselves; they are lost. Apparently, they are the successful ones. They would never tremble at the sound of the approaching wheels of the "awful victors," even if they heard them. Ninety-nine men out of a hundred would choose to rot in eternal oblivion rather than suffer deeply for the truth. The progress of thought is so rapid now that, even in one man's lifetime, he, if he is false to his soul, will find his hypocrisy unmasked and himself the laughing-stock and scorn of the generation next below his.

The imagery of Emerson's poem is strikingly beautiful. Somewhere afar in the invisible order of things, he sees a company of shining ones with garlands and songs for the Eternal Rights,—the sleepless ones whose sway reaches through all space, the swift-striding Eumenides, the crouching dwarfs, the all-powerful. These Eternal Rights are nothing less than Fate, or God, whose grass of oblivion grows over all the past, waving in rank luxuriance over crumbled cities and castles with all their pomp and woe.

Right, Fate, or God, hides its triumph

"In our downfall or our joy."

That is, when we are depressed with the thought that our sacrifice for truth has been in vain, when time-servers laugh us to scorn, when "the nerves prick and tingle and all the wheels of being are low," it is then that we may be assured that the eternal victors are on their way. And they will triumph, whether we live to see it or not.

They also hide their triumph in our joy. That is, when we are rejoicing over an apparent gain obtained at the expense of right, when the world applauds, when all seems calm and safe, then, too, the Eternal Rights are moving irresistibly toward us to "redress the eternal scales."

W. S. KENNEDY.

EDITORIAL NOTES.

MR. J. H. CLIFFORD, of North Andover, to whom with others reference was made in our article last week on the "Relation of Radical Unitarians to the National Unitarian Conference," writes promptly to say that, though he has several times attended the Conference at Saratoga, and his name has been publicly announced as a delegate thereto, he has never attended as a member nor taken any part in the proceedings except as a listener. Not being able to subscribe conscientiously to the Constitution, he has never felt that he had any moral right to membership. And he "quite agrees with the tenor of our article." The society, however, of which he is the minister, chooses to be represented in the Conference; and, under that provision of the Constitution by which the ministers of societies are *ex officio* delegates, the clerk of his society has included and published his name as one of its delegates. To his society, Mr. Clifford has, doubtless, made his position perfectly plain; for he is not one who says one thing and acts another. His sincerity and candor are above suspicion. But, since he now sees that misapprehension as to his position may have naturally resulted elsewhere, he adds, "The one thing which I should now confess I ought to have done was to prevent the printing of my name in a list of delegates to a Conference in which I never acted or was willing to act as a delegate, and of which I never regarded myself as in any sense a member or willing to be a member." This is frank and manly. W. J. P.

ALL associations or individuals desirous of arranging for lectures by B. F. Underwood should address him at this office immediately, in order that he may make up his route to advantage. He will go as far West as Kansas, starting late in the fall, and lecturing in cities and towns in which his services are wanted.

"MORRIS HEMINGWAY and N. H. Frisbie, of New Haven," says the Meriden, Conn., *Evening Press*, "charged with violating the Sunday law in running the steamer 'Ivemia,' have been discharged. Judge Studley decided that, since the poor people needed these cheap excursions, the 'Ivemia' had done a work of necessity and mercy."

THE friends of Mr. Francis E. Abbot — Dr. Abbot, we should have said — who admire his rare ability for philosophical speculation on the one hand, and his power of clear statement on the other, will be glad to know that copies of his article on "Scientific Philosophy," to be published in the London *Mind* for October, will be for sale at *The Index* office, No. 3 Tremont Place, next month. —*Christian Register.*

WE would call the attention of our readers to the article by Mr. T. W. Curtis, in the present number of *The Index*, on the Mormon question. As Mr. Curtis was born and bred in the Mormon Church, and thus writes from an inside acquaintance with its system, his views have a special interest. And though he has now come out of it, and no longer believes in its principles or methods, he wants to see justice done to what he still regards as its merits.

NEXT week will be printed in *The Index* the address of B. F. Underwood, on "The Relation of Evolution to Biblical Creation and Evangelical Religion," given in this city September 11, by request, before the Evangelical Ministers' Association of Boston and vicinity, together with revised and authorized reports of the addresses delivered on the same occasion by President P. A. Chadbourne and Prof. Asa Gray. The same number of *The Index* will contain contributions from Moncure D. Conway, Miss M. A. Hardaker, Edwin D. Mead, and other able writers.

MR. JAMES KAY APPLEBEE will give a course of six lectures under the auspices of the Free Society, Dorchester, Mass., in Lyceum Hall, commencing Friday evening, October 6. The following are the subjects: October 6, Longfellow: The Poetical Man; October 13, John Wesley: The Man and his Work; November 10, Emerson: The Man, the Thinker, and the Poet; November 24, John Bunyan, Thinker and Teacher, Preacher and Pilgrim; December 8, Romeo and Juliet: A Dream of Love; December 22, Types of Womanhood from the writings of Charles Dickens. The proceeds will be contributed toward supporting the Free Society which is under the charge of Clara M. Bisbee, and deserves the encouragement of all who are interested in the Free Religious movement. Tickets for sale at *The Index* office and at the music store of Oliver Ditson & Co.

"IT is very difficult," writes S. J. Stewart in the *Iconoclast*, "to make some men understand that Liberalism does not mean animalism, and that true Liberals are seeking, among other things, a better morality. Nothing has injured the liberal cause so much as the undesired following of the bummers who have left the old churches, not because they loved truth, but in the interests of vice. They are not, however, true Liberals. . . . The reason the genuine Liberal has rejected the old church faith is not because he desires to reject truth and to become immoral, but it is because he finds the Church standing to-day directly in the way of the progress of truth and a better manhood. Believing that the best morality must come from accepting the facts of science and of all known truth, he cannot uphold a system of theology which is built upon tradition and exploded theories of life and the universe."

"DISTINGUISHED poets," the *Catholic Review* remarks, "have written on 'the pleasures of hope,' 'the pleasures of imagination,' and 'the pleasures of memory.' Now let some 'inspired' poet of free thought give us a glowing rhapsody on the pleasures of doubt." We can assure our esteemed contemporary that "the pleasures of doubt," when the mind trained to believe that the majority of the race will be consigned to eternal torment, begins to see the falsity and absurdity of such a belief, are no imaginary pleasures. The feeling of relief and satisfaction is usually great in proportion to the generous and philanthropic spirit of the individual who experiences it; and this doubt, as it has deepened into conviction, and led to the adoption of humane and rational views in the place of antiquarian dogmas, has often filled the heart with serenity and peace, even with hopefulness and joy, and has inspired the noblest literature of the age.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

POETRY.

For *The Index*.

A MID-DAY DREAMER.

What, dreaming still?
Having reached the crowning height of the hill
Of life! When already the thoughtful eye,
Grown sadly discerning, sees fearfully nigh
The downward trend from youth's high aims?
In the face of losses, defeats, and shames?
Of rebukes and rebuffs in the struggle for life,
And that fiercer struggle, that bitterer strife,
'Gainst the desperate foes that ambushed lie
In the depths of our own personality;
The warfare bequeathed from ancestral blood
With the Hates, the Loves, the untamed brood
Of wild desires, which, unleashed, betray
Their ancient source in their savage play?
Yes, dreaming still,
In the face of all this. No power of will
Can hold quite in check the soul's high dreams
Of some nobler future,—the last gold gleams
Of Hope's bright sunlight, whose rays so cheered
Youth's trusting heart. With vision cleared
From the glamour which once in rose tints draped
The dreariest tasks, and into beauty shaped
E'en the harshest lines of Life's "ought" and "must,"—
Yes, standing too high for the glamour and dust
Of Life's road to bewilder,—still visions most fair
Come to comfort, to strengthen, to silence despair,
Of an Age in which only the Wrong need rue;
And I dream that some of my dreams come true.

SARA A. UNDERWOOD.

For *The Index*.

DELUSION: WHO SHALL DECLARE IT?

Well, maybe it is delusion
That the soul lives after death;
But, if so, it is far the dearest
Which the tongue of mortal saith.
And, since so much of life's pleasure
Is wrought of unreal things,
I shall always hold to the riches
Which the "dear delusion" brings.

Delusions of earth are mocking
Wherever we mortals go,
And finding so much unreal
Has cost me a deal of woe.
But the dream of life immortal
Will never bring me pain;
For, when it is proven error,
I shall count not loss nor gain.

I shall never live to know it,
If my darlings are only dust;
And all which the weakest and wisest
Can do is to hope and trust.
I may reason and doubt, but ever
They seem to speak from the sky:
Then, it seems but a cold delusion
To dream that a soul can die!

You may shower me with dust and ashes,
You may give me a wreath of rue,
You may dream you have truth and wisdom,
And I am less brave than you;
But, still, I shall never yield it
For a thing you say or do:
You cannot make it an error,
And I cannot make it true.

We all must wait and wonder
What the change of death will bring:
Your sketches are skulls and cross-bones,
Which I to the winds would fling,
And sketch you immortal faces
Brow-girt with asphodels,
And hands which are reaching earthward
Bunches of immortelles.

But neither your wise conclusions,
Nor mine with their rainbow wings,
Can alter one jot or tittle
The eternal law of things!
Yet, ah! in the world that this is
It were all too sad to stay,
If we could not have our fancies
Of "The Ever-so-far-away."

EMMA TUTTLE.

GOETHE ON AMERICA.

[Free Translation.]

Than our old ruin-stricken hemisphere,
America, a happier lot thou hast:
No ruined castles strew thy soil as here,
Encumbers thee no rubbish of the past.

No legacy of senseless feuds is thine,
No useless memories disturb thy heart:
For thee, the day that is alone doth shine,
With undivided thought thou play'st thy part.

The Index.

BOSTON SEPT. 21, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index*.

MORMONISM AND ITS CRITICS.

BY T. W. CURTIS.

Believing that there is more to this Mormon question than many surmise, and that Liberalism, being a pioneer force in thought and action, has a duty to discharge in relation to it (in discerning the true issues and upholding the right), I am prompted to review an article, bearing the title of "A Study of Mormonism," that appeared in *The Index* of recent date, by a writer of scientific training. By the use of quotation-marks and tables of statistics, his eloquence is made to appear a miracle of fairness and logic. But his theme suffers disparagement in every instance, his utterances being denunciatory in the extreme; and his silence on the legislation proposed for Utah is a practical indorsement of the same. My aim shall be to mark the threefold aspect of this Mormon problem,—the religious, social, and political,—which, as a rule, is but faintly apprehended or altogether lost sight of.

Prof. Gunning makes a bold dash with his pen in the very start, as if to strike in ahead of a writer of great eminence. "A French *savant* esteemed Mormonism phenomenal in this, that it is a new religion born right under our eyes. . . . Could he not see in Mormonism an eruption of Judaism which had slumbered under Christianity?" But Remy himself says, "There is not an absolute break with tradition: on the contrary, every effort has been made to solder and renew the connection with the old. But it is none the less on this account a novelty, a creation, if not original, at all events, diverse,—in one word, a new religion." This remark accords with my own view.

A portion of the Mormon catechism is given as teaching the grossest anthropomorphism on the authority of the Old Testament. But here is a part of that catechism which is *not* quoted. I will give the answers only:—

> The person of God is infinitely glorious.
> He is everywhere present.
> Nothing can be hid from his gaze.
> His wisdom is past the comprehension of man.
> God is more powerful than we can conceive.
> God is a being of truth, justice, and mercy.
> He is an unchangeable being.
> All men are the children of God; begotten first as spirits, are then sent to take bodies upon the earth, *to become educated, developed, and perfected, and through faithfulness to become Gods, even the sons of God.*

Joseph Smith ("old Joe Smith," that is, whose career was finished at the age of thirty-eight years) said: "Of a fanciful, flowery, and heated imagination beware, because the things of God are of deep import; and time and experience, and careful and ponderous and solemn thoughts, can only find them out. Thy mind, O man! if thou wouldst lead a soul unto salvation, must stretch as high as the utmost heavens, and reach into and contemplate the lowest considerations of the darkest abyss, and expand upon the breadth of eternity's expanse,—it must commune with God. How much more dignified and noble are the thoughts of God than the vain imaginings of the human heart! None but fools will trifle with the souls of men. How vain and trifling have been our spirits, our conferences, our councils, our private as well as public conversations,—too low, too mean, too vulgar, for the dignified character of the called and chosen of God, who hold the keys of the mysteries of those things that have been kept hid from the foundation of the world until now, of which some have tasted a little, and which are to be poured down on the heads of babes, yea, the weak, obscure, and despised ones of the earth!"

John Taylor, the present head of the Mormon Church, and who was with the prophet at the time of his massacre in Carthage gaol, wrote in this fashion in 1850: "If men and nations, instead of being governed by their unruly passions, covetous desires, and ambitious motives, were governed by the pure principles of philanthropy, virtue, piety, justice, and honor, and were under the guidance of a fatherly and intelligent head, and directed by that wisdom which governs the universe, regulates the motions of the planets, there would be no need of so many armies and navies, police regulations," etc.

True, Mormonism reverses the apothegm of Coleridge, and says, "A God *not* understood is no God at all"; but, as will be seen, it enters its strong protest against the idea that God can be comprehended by man. It is not on the authority of the *Old* Testament only, but of the *New, and of the revelations of to-day and of reason*, that the Mormon rests his faith. Here is a thought in one of their hymns, composed by a wife of the seer:—

> "I had learned to call thee Father
> Through thy spirit from on high,
> But, until the key of knowledge
> Was restored, I knew not why.
> In the heavens are parents single?
> No: the thought makes reason stare.
> Truth is reason: truth eternal
> Tells me I've a mother there."

"Do Christians who define God without body, parts, or passions, know him?" "They do not." Rare sport is made of this bit of catechism, in total unconsciousness, it would seem, of the fact that the God of the creeds is one with the Unknowable of that philosophy decried by the churches as atheistical. How far does Mansell differ from Spencer? Orson Pratt, when he penned his dissertation, does not appear to have been familiar with these writers; but it was known to him how the extremes of mysticism and scepticism may meet. Mormonism teaches that spirit is a substance, and, with the elements, is eternal, and that God is *not* the negation of everything human or understandable. To be "crowned with eternal life" means nothing more nor less than the capacity for eternal progression, the most godlike of attributes. It knows nothing of the God who exists "beyond the bounds of time and space," the monopolizer, at the same time, of all honors, powers, and prerogatives. The Christian has much to say of the marks of design in nature. The Mormon says, "Yes, God is a designer and a worker, and we his children are at school learning from him." To organize worlds and people them with intelligences, is not that the work of a God? This is in the line of man's development. The Mormon priesthood is a hierarchy of wisdom and virtue, extending beyond the veil. The Mormons would doubtless be inclined to regard as genuine the following communication from Lord Bacon, through Judge Edmunds, the spirit-medium: "It may not be amiss to inform you that, among many spirits of high estate, there are those who believe God himself the product of developed intelligence. How this may be I cannot say, but it is the opinion of many here." Smith's revelations, however, preceded the birth of modern Spiritualism. The Mormons vary, though but little, in their ideas of God, that of the prophet himself being probably what the world would call the most spiritual. It is easy to criticise. Will the Professor give a definition of the God whose name he uses?

"The fall of Satan and of man in Mormon theology is a travesty of Revelation and of *Paradise Lost*." But that depends upon how you look at it. *I* should say *the reverse*, rather, is true. This basic principle of Mormon belief the Professor represents in this way: Lucifer (who was made Satan) *rebelled* in heaven, *because* his offer to save all men in opposition to Christ, who thought there were some who could not be saved, was rejected. The Professor then goes on to speak of rebellion being ever after the greatest sin in the sight of God and of the Church, etc. But the true doctrine is this: "When it came Lucifer's turn to speak, he gave it as his opinion that man should be saved *in* his sins. But Christ replied, I will save him *from* his sins. The Father thought this last method the best, and accepted it." Christ died, not so much to save the world as to enable it to save itself. The Mormon catechism says, "We ought to consider the fall of our first parents as one of the great steps to eternal exaltation and happiness; for we cannot know the excellency and beauty of that which is good, unless we experience the wretchedness and deformity of that which is evil."

"What has become of all those who died before God spake to Joseph Smith? Except the Hebrew polygamists, they are all consigned to hell. Of this there can be no doubt, as salvation is impossible outside of Mormonism. Paul speaks of baptism for the dead: the engine by this touch from Paul becomes reversible. Any dead man can be made a Mormon and saved, if some living Mormon will stand proxy and be baptized for him."

In answer to this, Mormons would say, in the first place, that Hebrew polygamists are not all saved, nor are all others consigned to hell. David went to hell for his sins, probably a deeper one than the Professor himself will be consigned to. But there is hope for both of them, as David is to regain his place after having paid the penalty of his transgressions. All are to be dealt with alike. To be damned is to be handed over to the buffetings of Satan for a season. None are lost save the sons of perdition, who are they who have received the light, and then rejected it. Salvation is possible outside of Mormonism, but not the highest. There are degrees of exaltation, as typified by sun, moon, and stars. All are rewarded according to their works. "Glory, honor, and peace to the man that worketh good," says the Book of Mormon. Of the God who damns and saves according to his own arbitrary will and pleasure, Mormonism knows nothing. Those dying before arriving at years of accountability are saved. "For awful is the wickedness to suppose that God saveth one child because of baptism, and the other must perish because he hath no baptism. Woe be unto him that shall pervert the ways of God after this manner; for he hath neither faith, hope, nor charity. Behold, I speak with boldness, having authority from God" (Book of Mormon). Those dying in ignorance of the gospel have the truth presented to them in the other world. The *rite of baptism* is performed for them in this world. For Christ commanded them to be baptized. Thus are the justice and universality of God's law vindicated. In this sense, "Mormonism, as finally evolved, is a sort of reversible engine." *The few are lost, the many are saved. Merit, worth, not worthlessness*, saves. *God speaks to-day no less than in times past. This earth is to be our heaven.*

The Professor would show up polygamy in its true colors. Among many terrible things, he says: "Woman *must* be married." "The outcome is salvation to woman by marriage." Why is not that wholesome doctrine? Do not nature's laws emphasize the "*must*"? Look at the women who are damned because not married. Yes, and at those who are damned because they are married, notwithstanding the beautiful monogamic system! Marriage is daily becoming less fashionable, and the world is trying to make a virtue of necessity; but that condition of things which necessitates celibacy will be found fruitful of anything but virtue. It is not only not good for man or woman to be alone: it is an injury, a loss. Marriage does not save all who enter it, but without marriage neither man nor woman can in full sense be saved. Woman's affinity is the soul of a righteous man. Better to be the plural wife of a noble man than the only wife of an indifferent man, or than to live single. To usher immortal souls into existence, under a due sense of responsibility, is the aim of the polygamic theory. Marriage for eternity is designed to root out passion and whim, and to perpetuate the family tie and relationship in the worlds to come. The sealing process implies fidelity in each to the principles of their religion; and there is no court, not

Digitized by Google

even that of death, that can dissolve the relation. Though the highest exaltation comes through the law of celestial marriage, its reckless observance brings the deepest damnation. A woman may be divorced (for this life) at her own request; a man cannot without her consent. Adultery is punishable by death. "Woe unto them who commit whoredom, for they shall be thrust down to hell." At present, one in fourteen of the males, probably, are practical polygamists. And one in fifty of these may have more than two wives. But Mormonism was established before Smith received the revelation on polygamy.

"The Deseret University is suggestive of Mormon culture," says Prof. Gunning. "What the state of education has been we may infer from this handbill, which I take from one of the rural settlements. 'I, schoolmaster to all brethren greeting, Monday, the 19th day of November, the anniversary of the massacre of one hundred and eighty-five thousand Assyrians by the angel of the Lord, having been fixed upon for the reopening of my school for the divine sciences and spelling and reading,' etc., 'for, whereas those who cannot pay in grain may be able to do so in some other way, bear's flesh or squirrels or dried pumpkins will be received,'" etc. That this is a most "suggestive" handbill I firmly believe. Mark that from a handbill "taken from one of the rural districts," at some time in the past (though we are led to suppose quite recently), we are to infer what the state of education has been, and also even what it is to-day. And this handbill "suggests," too, the Professor thinks, "the bondage of this people to the Old Testament." But this is not the whole story. This "handbill" is twenty-eight years of age. Prof. Gunning never saw that document He "took" it from Remy's history, who states that he saw it on the door of a village school in Utah, in 1854. How it came there he does not state. I venture to say that, had he gone through Utah in search of its fellow, he would not have found it. But he, writing in 1860 (twenty years ago), added the following as a note to his chapter on education in Utah: "It is but just to say that, since these remarks were written, a great change seems to have come over the spirit of the heads of the Church; and, according to the last advices from Utah, they are zealously devoting themselves to the task of improving and advancing the elementary instruction of the people." So this official handbill, which is used as a gauge of Mormon faith and intelligence, turns out to be an ancient, anonymous, solitary placard. Most of the evidence used to convict Mormons is of this nature. I am quite willing this "handbill," with its history as an addenda, should go to the jury, along with the story of the Spaulding manuscripts.

Why was not the procedure of the Deseret University given, which is said to be so "suggestive of Mormon culture?" I will take upon myself to state why. That university in the quality and grade of its instruction is not a whit behind similar institutions in a community of equal size, and it is compromised in even a less degree by the intrusion of religious dogma. Why is not the present state of education in Utah dwelt upon? I will answer. The school attendance in Utah, and the number of school days in the year, are of a higher ratio than in the majority of the States. Utah has appropriated larger sums for school purposes, and been the recipient of less aid from government, than the bulk of the States themselves. The value of these estimates is enhanced greatly by the fact that the people of Utah, by their unaided efforts (except from the God whom they worship), have performed the Herculean task of transforming a wilderness into a habitable abode.

Here is the critic's exclamatory outburst! And it is indeed a faithful echo of the cry heard all over the country. "What will be the outcome of such a system on character? It is not in human nature to revere a cruel, unjust man-God. Man will neither revere God nor love woman. Young was often profane in the pulpit. Kimball called his wives his 'cows,'" etc. I claim that the Mormon man-God is of a higher, nobler species than the God adored throughout Christendom to-day. On the social condition in Utah, I will bring forward another witness, to whose writings the Professor appears to be much indebted: "While reserving to ourselves the right to relate without reserve the evils we were eye-witnesses to, we feel pleasure and yield to a sense of justice in declaring that the Mormons are not wicked and immoral, as they have often been represented to our too credulous minds. It is even our duty to avow that they are industrious, honest, sober, pious, and it is just to say, since we believe it to be the case, even chaste in their polygamous relations." . . . "For our own part, we affirm that after travelling for ten years over almost every part of the globe, it is still a question with us if there be a country in which the women are more virtuous and more moral than amongst the Mormons." Why, the same method of argument employed in assailing Mormonism will apply, I might say, with many-fold more force to the social and religious institutions surrounding us. Monogamy would certainly stand condemned. Is it too much to say that prostitution in and out of marriage and solitary vice characterizes society as it is to-day? I believe this statement is more true than false, and is more capable of proof than nine-tenths of the charges brought against the Mormons.

Then, in conclusion, the Professor produces a table of statistics, which is affixed to his critique like one of the great seals of the apocalypse, to endure to the judgment day; and doubtless it will, as "figures never lie." From the tables of 1860, it appears that New York had furnished ten thousand and New England twenty thousand converts to Mormonism. And, of the balance, he asks, "Why do England and Scotland furnish thirty-two thousand, and Ireland only one thousand and Italy fifty? Is there not more ignorance in Ireland than in England, and in Italy than in either? It is evident that soil for the growth of Mormonism must have some other ingredients than ignorance and superstition, and that Protestantism is that ingredient,—acceptance of the *Old* and New Testament as the rule of faith and life. To the Catholic, the Church is supreme: to the Protestant, the Bible is supreme." Now, whatever originality there is in this view does not belong to Prof. Gunning (as it is copied), and whatever there is in it of fallacy or disingenuousness he must share for having adopted. It is easily seen what would have been said, had the Catholic countries furnished the greater number of converts. Of course, the Bible is responsible for Mormonism to a certain extent; but the Bible is the strength of Catholicism as it is the weakness of Protestantism. It *stops the ears* of the former, and *perverts the reason* of the latter. But, as freedom and mental activity are to be found in Protestant countries, is it not possible that they may form part of the ingredients of the soil for the growth of Mormonism? Do not the facts testify to the truth of these words of the Mormon prophet, "It is the love of liberty that inspires my soul"? Mormonism and its founder must be judged by the ideal rationalistic stand, it is true, but their merits cannot be determined without reference to the Christian standard, and the actual state of the world at the time of its advent. Its doctrine, I affirm, is in advance of orthodox Christianity; and, with the New Testament even as a standard, it is more consistent than Liberal Christianity. Is it to the discredit of Mormonism that it works among the lower strata of society? By the heavens, no, if with pure motive it raises its converts to a better mental and physical condition. To the poor, the gospel is preached. The temporal and the spiritual Mormonism labors to make one. And it is but little known that among the saints is the largest and most perfect system of co-operation on the continent. Little credit is due a system that finds its material already fashioned and polished, as in the case of the cultured ecclesiasticism of the times; or to a system which attracts the cruder elements and fails to work any change in them, as in the case of the Roman Catholic Church. The more successful we are in proving that Mormonism receives its recruits from the most degraded class, the more we strengthen its claims to divinity; for we find its subjects have undergone a great transformation. For the Mormon people are more sincere than the average Christian, and fully as enlightened. I can see in Mormonism an "eruption of Judaism," it is true; but I see in it an eruption of common sense and humanitarianism, also.

It is asked: "To cure Mormonism, have we nothing to cure in ourselves? By what right does Talmage denounce the Mormons?" This sounds well. *But there is something besides the Bible that is responsible in this matter.* What is responsible for this Bibliolatry? Theological systems find their support in those frailties of the human mind which make passion and prejudice the main premise of every argument. Our social system, as it is, which fosters selfishness, pride, and hypocrisy, veiling oppression under fair promises and sounding names, makes inevitable the upspringing of such a faith as Mormonism, which is a sort of evangelical socialism, a revival of that true spirit of brotherhood which distinguished primitive Christianity. The intellectual formlessness of the times makes Mormonism possible. The special sciences have attained a wonderful development; but the average acquirements are superficial in the extreme, and the new philosophy has not yet sphered itself in thought.

I have claimed, it is true, that the attacks on Mormonism are themselves a travesty of the principles of reason, candor, and honesty. And this same spirit I see reflected in the debates of Congress on Utah affairs. I do not think polygamy defensible on any but the weakest ground. It is a transitional, not the ultimate form of marriage. Mormonism, being a theocracy, is at war with republicanism, and in many of its dogmas and teachings traverses known truths of science. But truth and virtue should confront error and iniquity. And the actions of a great government like this should be characterized by the highest form of justice and magnanimity. The present anti-polygamy bill is an outrage, and will accomplish nothing, save it be to increase irritation and misunderstanding, and make the saints more a unit than ever before. Congress has undoubtedly a right to act in the matter: its condemnation lies in its failure to combine courage and sagacity in its action. Its legislation on the "twin relic" has been mere make-believe. It had a haunting sense of the right course to be pursued, but cowered under the haughty stare of the mob of priests and gentry. Look at it. A prosperous community of two hundred thousand souls, outstripping its neighbors in the developments of agriculture, trade, and industry, self-made and independent, denied admission into the Union, because of the practice of polygamy, in which it believes as a unit, *both male and female*, while any State, by the vote of a majority of its citizens, *the male citizens only*, has the right to regulate its own domestic institutions, including that of marriage! If monogamy *is* the universally accepted principle of the relations of the sexes, why not embody it in a national statute or leave it to custom? Either of these methods would be better than our State laws, so conflicting with one another in their form and in, apparently, their origin also; for whether they receive their sanction from nature or the Bible, the State or the Church, nobody seems to know. Our government needs secularizing. We must pass on from this Christocentric or traditional stage of thought and life to the natural and the human. Let Congress make the religious amendment to the Constitution more clear and definite, or strike it out entirely. Give to woman the right of suffrage, and pass a uniform marriage law for the whole nation, *based solely on the will of the people*, and then say to Utah, You can be admitted into the Union by conforming to the law of the land. As matters stand, there is not the shadow of an excuse for keeping Utah in a state of territorial vassalage. The best method of battling with Mormon theocracy (and that is real evil) is in bringing Utah into the closest possible relation with our republican system of government, whose spirit, aided by general enlightenment, will prove itself more potent than any acts of special legislation; and its mandates will soon become to them superior to those of the "Holy Ghost" even. But what are we doing but legislating for Utah as a mere property, and treating her citizens as chattels, under that claim of the right of Congress to make "any needful rules and regulations for the government of the Territories"? We appoint over her a governor with an absolute veto power, and fill in the same way all the other highest and most important offices; and now we dissolve the Legislature and order a new election, under the supervision of a committee of strangers, five in number, who are before trial to determine who shall vote. The anti-polygamy bill disfranchises polygamists, and covers the whole of a man's past life; and, while a *believer* in polygamy is disqualified for a juror, the man who does not believe in it—having but one wife, but any number of mistresses—is qualified to sit in judgment on the accused. And, again, *polygamy* is confounded with *bigamy*: the latter implying *deception* and *abandonment*, whereas the former does not. And as great a fallacy is contained in the "twin relic" idea, though nobody would seem to be conscious of it. But who, with the least reflective power, will dare to place Mormon polygamy and African slavery in the same category? Was it not causes similar

Digitized by Google

to these that provoked the colonies to rebellion against Great Britain? And, as if to make the parallel complete, Utah's delegate, Hon. George Q. Cannon, was expelled from the House of Representatives, on the flimsiest pretence, on the very eve of the debate on the Mormon question.

The Mormons will not give up polygamy: when it stops, Mormonism stops. The revelation is well authenticated to them. The *Christian Union*, Henry Ward Beecher's paper, suggests that the United States has at least the right to choose its own company, and Utah may therefore stay out of the Union. Kind, indeed, considering the source of the suggestion! The Mormons might not feel greatly hurt, if left severely alone. Said Joseph Smith: "I want to be resurrected with this people, whether we ascend to heaven or descend to hell. If we go to hell, we will turn the devil out and make a heaven of it. Where this people are, there is good society. Who cares where we are, so that the society is good?"

But will government leave them alone? The Rev. Joseph Cook thinks this cancer will have to be cut from the body politic, as was slavery, by a deep, prolonged plunge of the sabre. Talmage thinks the only cure is cannon and musketry. Surely, their words have meaning, when we consider how that bill was fairly heaved through Congress by the strong pressure from evangelical quarters. And, then, the gentlemen having the bill in charge on the floor of the Senate and of the House frankly observed that they meant to try the mildest of measures first! Be assured the Mormons will remain a "Territory" forever, or leave the United States, or even die, before forsaking their religion. No Christian sect will ever make converts among them. Their next step is into the domain of free rational thought. Let every liberal-minded man and woman be on the side of justice.

A member of the Church, resident in Utah, said to me in New York city recently, in answer to a question of mine: "No: though I myself have but one wife, I never once think of the Mormons giving up polygamy. We have gone too far; nay, it is a fundamental doctrine of our religion." But another question I failed to ask, I fear might not have evoked so ready a response. It is this, Would you feel justified in exercising rights denied to your brother who is practising polygamy? To me, it seems as if the Mormon people ought to accept or reject the rights of citizenship *as a community*. The man with but one wife should say, "The rights that are too good for my polygamist brother are too good for me: the right you deny to him you deny to me." No matter how the law dictionary defines polygamy, your God or your conscience will not approve of your swearing "I am not a polygamist," for any franchise under the sun. Plant your cause upon the highest ground. It is time the issue were drawn sharp and clear. Be faithful to your convictions, whatever they be; and you will have friends, and the world too will be profited by it. Compromise, and you are lost.

For *The Index*.

REFLECTIONS BY THE WAY.

BY MONT E. COLLINS.

Dreams are the pictures that present to us the possibilities of the soul.

Time is the point where the eternity of the past touches the eternity that is to be.

Life's holiest, sweetest thoughts are those that come to us as we contemplate the mystery that folds us in its unseen arms.

Education is the overgarment of genius; and, though it can pass very well even in good society without this finery, it generally wears it merely to keep up with the fashion, being conscious it adds very little, save to improve its external appearance.

The sage cannot fully express the reasons for the faith of the soul, but the reasons for the belief of the understanding even a child can tell.

The hours of sadness often bring to the heart the thoughts that heal our greatest grief, while the hours of sinful pleasure always crowd upon the soul those recollections that give to life its deepest gloom.

To him whose heart is at one with nature's Infinite Soul, all seasons are alike the inspiration of joy, —winter has no chilling blast, summer has no stifling heat, spring reminds him of life's bright morn, and autumn winds whisper that all is well.

The wise ever believe that no evil is eternal, that no sin can go unpunished, that no virtue can be unrewarded, and that loving deeds, borne on eternity's spreading wings, will yet return to bless the soul of him who gave them birth.

In the presence of those mysterious visitations of nature that sweep the earth with disease and death, we have small thoughts of God and great thoughts of ourselves; but, in the presence of those that give to life its light and joy, we have small thoughts of ourselves and great thoughts of God.

CORRESPONDENCE.

FAITH IN GOD AGAINST FAITH IN A MATERIAL UNIVERSE.

Editors of The Index:—

A correspondent, in your issue of August 10, criticising the assertion of the *Journal* that the more intense the faith in God the more earnest will be the purpose to do something in the service of humanity, declares, *per contra*, that the fact is that, just in proportion to a person's faith in God and a future life will be his desire not to benefit his fellow-mortals in this life, - to make them happier here, more intelligent, more truthful, more honest,—but simply to save their souls from the "heated term in the life to come." The Inquisition and Guiteau are cited as fair representatives of "faith in God" as conceived by the *Journal*, and the universal detestation in which both are held is viewed as an index to the change between the faith of men in God two hundred years ago and the faith of to-day. The reason why we have escaped from the old savageries which were perpetrated in the name of God is declared to be the fact that advancing civilization is steadily weakening the faith in God and a future life and establishing the faith in this life and in the material universe.

Now, whether the *Journal* be demonstrably right or not,—and we do not propose to discuss the point,—we believe your correspondent to be demonstrably wrong, and his position to be mischievous. We believe, moreover, that the serious interests of rational religion suffer from every such recourse to the redoubtable pre-Lessingite style of criticism, and that it is the duty of somebody within the camp, in each instance, to disclaim and neutralize it. This indeed is our only reason for recurring to the matter.

It is considerably too late in the day to ring the old changes on the Inquisition. That might do in the time of Reimarus, though we doubt whether it amounted to much, even then. But the serious appeal to the Inquisition now, as the natural or representative embodiment of "faith in God," simply makes the critical laugh, and is abortive with everybody. It is very much like holding the new faith responsible for the nondescript men in the dirty shirts whom I heard wrangling the other day in the convention of free-lances at Podunk. I suppose that most of those Spanish inquisitors really did believe in immortality and God; and so, it is said, do the devils, and tremble. And the Podunk men of the dirty shirts, if they are to be trusted, certainly believed very emphatically in "this life and a material universe," and made short work with eternity and the unseen spiritual. Yet I could not help feeling that, even with this high recommendation (?), I should hate to have them taken as representatives of the ideals or the capacities of the new faith. "Always put the best interpretation on a tenet," Emerson used to say. And when shall we learn that there is nothing so ridiculous and nothing so ineffectual as to argue against a thing by appeal to some bad caricature of it or some obstreperous, hybrid outcome? Every new faith has so big a menagerie of hybrids of its own to take care of that it can afford to be pretty magnanimous about the barnacles of the old faiths, even when they are as bad as Guiteau,—who, by the by, couldn't have been made the best kind of a saint we imagine, even by baptism into the stoutest kind of faith in "this life and a material universe." In this connection, would not your correspondent himself have let Guiteau off, if he could have established that his "faith in God and a future life" was really at the bottom of the murder? We have a notion that a genuine belief in the consistency of murder and godliness would be quite sufficient proof of insanity, at this stage of the world. Certainly, the Washington jury would not have asked for anything more. It should be said, too, in passing, that your correspondent is probably very much mistaken in thinking that the present universal detestation of Guiteau is the measure of the advance, in two hundred years, from the faith in God to faith in "this life and a material universe." Our own opinion is that Harry Vane and Milton and their benighted generation would have wasted very few words over Guiteau's "inspiration," but have provided him with a headsman on Tower Hill with an alacrity that would have quite eclipsed the "universal detestation" of our own highly "civilized" commonwealth.

We criticise the wickedness that is done in the world in the name of the Lord; and it is a very easy thing to do, so easy that it is really not often worth the effort. We laugh at the serious barbarities of the religious old Jews. But why do we laugh? Simply at the *inconsistency* of the savagery with "faith in God," as we conceive it. Does anybody imagine that they would have been a whit less barbarous without their religion, and with a stalwart faith instead in "this life and a material universe"? The Moabites and Amorites probably devoted much less time and thought to things unseen and spiritual, yet we doubt exceedingly whether they did any more on that account to make each other "more intelligent, more truthful, and more honest in this life." Joshua was savage enough, heaven knows, with the kings along Jordan; but we think the chronicles of Og, King of Bashan, if we had them, would reveal a much looser and rougher ethical code,—if we may for a moment make a question of ethics of what was really simply a question of education and civilization. Samuel hewed Agag in pieces before the Lord in Gilgal. The Gibeonites would not be content with anything short of seven men of the sons of Saul, to be hung up unto the Lord in Gibeah of Saul. These Gibeonites we say very little about, but Samuel is brought to the bar by every Reimarus for his summary proceeding. Why? Simply by reason of our instinctive demand that Israel's higher religious conceptions subject her to measurement by a higher moral and social code. Faith in God has always seemed to most people to have a natural partnership with better actions toward mankind; and we have thought that we had a better right to be hard on the man who claimed to be religious and yet proved to be a scamp than on the detected sinner who had never said anything about God and immortality. Claim to faith in God, in the midst of selfish and vicious living, has been felt to be hypocrisy, because men have felt that genuine faith in God must naturally express itself in moral excellence. "He that loveth not his brother, how can he love God?" is the question of an altogether primary assurance that true love of God and of man must go together.

Religion is only one element in civilization, and religious conceptions themselves are of slow maturing and purification. Faith in God does not suffice to make a perfect man; but certainly it cannot be shown that, if men were without faith in God, they would be more perfect or more philanthropic. The antithesis which it is often sought to fix between faith in immortality and God, and devotion to the present interests of society, is an altogether false and mischievous antithesis. It is true enough that the man who believes in eternity will not be satisfied with any scheme for the welfare of men as final which concerns itself alone with the needs of the life that now is: it must also "save their souls," if we please to use the language of the men who cut eternity in two. But it is also true that no men are doing so much to clothe the naked and feed the hungry, to make men "more intelligent, more truthful, and more honest in this life," as those who believe in God and the immortal life. The assertion that men are neglectful of social duties just in proportion to their faith in God and immortality is so absurdly untrue that it should be vouchsafed only a flat denial. The recognition in man of the divinity of immortality must needs, more than aught else, inspire endeavor for his emancipation and development.

With positive denial, too, is the assumption to be met that the movement of science is away from faith in God to faith in a material universe. Not only is this untrue of the general trend of science and philosophy, but it is conspicuously untrue of contemporary thought. It would seem that the statement were impossible from any one familiar with the scientific movements either of our own country or of England, Germany, and France. Philosophical materialism, whatever prevalence and strength it had twenty years ago, has been steadily waning since. Dr. Stan-

Digitized by Google

ley Hall, probably the ablest physiological psychologist in America, and certainly the one whose acquaintance with European science is most intimate, has told us that almost no man of standing in his own province now professes materialism or can find in a materialistic hypothesis any adequate principle to subsume his facts. It is so with the physicists generally. We believe, in spite of the outcries of scared superstition, that the general tone of our physical science has never been really irreligious,—we are identifying religion here, for convenience, with faith in the spiritual and eternal,—but its tone is notably far more religious to-day than fifteen years ago. In general speculation, too, no movement is so general and strong in the philosophical world of Germany as the return to Kant with his belief in immortality and God as necessary practical postulates; no movement is more remarkable in England and America than the rapid spread of an Hegelianism that affirms immortality and God explicitly as constitutive principles; while, in France, the "positive" philosophy is entirely without eminent disciples. We would call attention in this connection to the remarkably suggestive article upon Littré and Pasteur in a recent number of the *Edinburgh Review*, republished in the current number of our *Popular Science Monthly*. We believe that this article simply affords illustration of the general fact that materialism and philosophical scepticism are confined to-day chiefly to literary critics who sport with the outside of things, and scarcely exist at all among the serious and profound scientific *workers*, who must needs have a synthetic principle.

We cannot forbear, in closing, to point out the irony of your correspondent's appeal to Emerson and Darwin to help him establish his thesis that "it is fact, not faith, that elevates humanity,"—meaning devotion to the things of the material universe *vs.* faith in the spiritual (we think that Darwin would have shaken his head very gravely at his "material universe"); and he seems quite to forget, for the moment, that Emerson was the great prophet to our age, which is so devoted to the *facts* of "this life and the material universe," of the unseen and eternal. His philosophy, above that of all other great Americans, was idealistic and religious. "Frightful," he said, "is the solitude of the soul which is without God"; and his whole strength lay in his unswerving recognition of spiritual laws and his abiding communion with the Over-soul.

The confiding tone of your correspondent's appeal to this great prophet of the ideal and eternal makes us half suspect that he is only half in earnest with his material universe, or rather that he did not say just what he meant. We hope that what he chiefly meant to do was to felicitate himself that the world is outgrowing the "mythology of Christianity" and the "faith" which "made it a crime to doubt the apostles' creed or the inspiration of the Bible"; and in this, of course, we should have no quarrel with him.

HUTTEN.

FAITH CURES.

Editors of The Index:—

What are we to understand as the purpose of Dr. Dixwell's and Mr. Connor's recent communications on faith cures, if it be not to discredit them altogether? Both admit such cures are made, but say they are limited to a certain class of ailments, and that the subjects thereof are limited to the ignorant and superstitious; while Mr. Connor leads to the conclusion that they can be as effectively performed by the ignorant and base as by persons of intelligence and high moral and religious character. I think the foregoing is a fair statement of the spirit of those communications.

Having admitted that cures are thus effected, why object to faith as the instrumentality? Why is not faith, imagination, or "expectant attention" as legitimate an agency in the curing of disease—so far as it can be successfully used—as jalap, senna, tartar emetic, and the lancet, or as chamomilla, nux vomica, and bryonia, in their ten-thousandth dilutions?

After Dr. Dixwell's statement of the experiments which he has himself made in faith cures, is he not in fairness estopped from an *a priori* declaration that consumption and valvular diseases of the heart, even, cannot be cured by the same potent force? When he tells us that he has himself produced a degree of mental action in a patient, which has not only cured a chronic trouble, but has also at the same time arrested the natural action of "one of the most powerful drugs known," and caused it to produce effects directly opposite to those of its normal action; and when he further relates how, through faith created in the mind of his patients, he has caused so neutral an element as water to act as a powerful remedy upon the most vigorous constitutions, do not his statements go a long way to convince us not only of the reality, but also the beneficence of faith cures? Does he mean to have us think that in his experiments he has exhausted the capacity of the faith element in the cure of diseases? If not, why are we not at liberty to conjecture, at least, that there may be a degree of faith possibly exercised sufficient to cure the very diseases named by him as incurable?

As to the assertion that only persons of the ignorant and superstitious class are subjects of the faith cure, I would respectfully say that facts are against the assertion. The whole body of Spiritualists throughout the world believe to a greater or less extent in what Dr. Cullis calls the prayer or faith cure, and in one form or another practise it. As a class, they are neither ignorant nor superstitious, but, in fact, stand immensely above the great majority in intelligence and freedom from superstition. Indeed, it is their teachings which have to a considerable extent dispelled from the popular mind the belief in miracles at all, and substituted therefor the rational idea that no event transpires except in harmony with law.

It is not necessary here to mention the name of conspicuous persons who are Spiritualists, and who are among the most intelligent men and women in the country. Indeed, the ranks of Free Religion would show a meagre following, if all those were left out who to a greater or less extent believe in faith cures.

It seems to me quite as difficult to accept the statement that character on the part of the one who performs these cures has nothing to do with their success as to accept the other, that only the ignorant and superstitious are their subjects.

I believe it is fast becoming the conviction among thinking people that the success of physicians, who treat their patients only in the usual way of administering remedies, has very much to do not only with intelligence in their art, but also with the whole character of the man. Finely organized, intelligent people are fast coming to believe that character in the man himself, aside from his knowledge of his art, his moral, religious, and spiritual life and sympathies, have greatly to do with a physician's success.

Since the researches of Riechenbach into what he terms the "odic force," and the experiments of Dr. Buchanan upon mental susceptibility, if not before, there has been a growing conviction that there is such a thing as a *personal sphere* or atmosphere, and that others coming within it are agreeably or disagreeably, healthfully or otherwise, affected by it. If such is the fact, how shall it be thought that character has nothing to do with the success of the ordinary physician in the treatment of his patients? And, if important in the case of the regular physician, how much more important where the physician uses that sphere or force, and is himself the imparter or vehicle of its impartation. I do not doubt that, in hundreds of instances, physicians carry to their patients influences a hundred-fold more injurious to their health, both of body and mind, than the diseases they are called to treat.

Why not let the faith cures stand or fall on their own merits, like any other cures? What the world is interested in knowing about them is whether or not they are genuine; and it is of no consequence whether every sort of disease can be thus cured. It is no objection to faith cures that only fools and quacks perform them, any more than it is an objection to any other forms of cure, because quacks and fools employ them. They will of course use them, unless forestalled by the wise and good. I wish not to have it inferred that I include Dr. Cullis in the category of quacks and fools. I do not know him, and therefore have no right or inclination to speak of him in any but respectful terms. I somehow have got the impression that he has been for years a successful homœopathic physician. The allopaths have always pretended to believe that the patients of homœopaths have no real disease, or, if they have and are cured, that the cure results from no efficacy in the remedies, but is owing to the patients' imagination or to constitutional vigor. Is it not possible that they have succeeded in convincing Dr. Cullis, and that he is now showing them how very right they are, and how subtle an agency the imagination is or may become in making the sick whole?

JOHN ORVIS.

OUR LIKES AND DISLIKES.

Editors of The Index:—

Are they "inscrutable and past finding out"? or, as a vigorous writer in *The Index* of August 17 put it, there are mysteries and miseries of our social system, "some of which will remain forever insoluble to human knowledge." But here permit me to avow my entire concurrence with the array of *facts* Mrs. Underwood so admirably brought to the very portals of those places where men and women congregate to traffic in the courtesies, amenities, and blandishments of life. My trouble does not arise on account of the facts contained in the essay, but rather with the statement that our "sympathies and antipathies" are enigmas, and will remain so forever. More than a hundred years before the essayist was born, Alexander Pope persuaded his thinking countrymen to believe that the springs or motives of men's actions are not only discoverable, but positively made "clear":—

"Search the ruling passion: there alone
The wild are consistent and the cunning known,
The fool consistent and the false sincere,
Priests, princes, women,—no dissemblers here.
This clew, once found, unravels all the rest:
The prospect *clears*, and Talmadge stands confessed."

The difficulty to account for our likes and dislikes, our frowns and favors, is not because they are enveloped in mystery. *It is* because those possessing this capriciousness of conduct generally prefer giving every other reason than the true one for what they do and what they leave undone. They are not ashamed to act; but they would tremble like an aspen leaf, if obliged to tell the reason of their acts.

The fact is our whole routine of social life, customs, habits, and manners, preside over the social and sensitive parts of our common nature; and the charges and delinquencies of those who give tone to social tyranny were justly rebuked by your correspondent. But the point in dispute is our likes and dislikes. Can they be reasonably accounted for?

Let me, if you please, introduce my first witness, Dr. Fell. The doctor was fortunate: he missed the love of the "damsel" who could give no reason for her dislike. Since the world began there never was a woman who could not give with painful accuracy the reason of her love or hatred. And why not? Are our likes and dislikes articles of our own manufacture? Find the man or woman who can love or hate without cause, real or imaginary, and you'll find a being who has no affinity with our common nature. As it seems to the writer, if there is but one phase in mental or moral philosophy that stands forth undeniably certain, it is that our volitions, whether overflowing with gratitude or disfigured with black revenge, result from antecedent causes. There is presumptive evidence in Dr. Fell's case of reaction in the mind of the spinster who discarded him: were it not so, she would not have invented the "*bouncer*,"—"The reason *why* I *cannot* tell." She could tell, but fear and shame deterred her, because the doctor's uniform kindness, his affectionate regard, had been overcome by the dazzling qualities of another (Dr. Bell), who "sighed and vowed, and she believed him. She was false, and Fell undone."

We have another set of social sinners whom your correspondent has omitted,—sinners they are who snarl at the hands that feed them and are stone-blind to heaven's bright light that shines around them. Men they are who are not "to the manner born," having eyes, but "see not" that the Yankee common school was the fountain from whence flowed light, liberty, and law; and, though it might have been "just a wee bit bigoted," it gave to the world what it never had before,—a Church without a bishop and a State without a king. But, withal, the Catholic press of the country snaps, growls, and would bite out of existence every vestige of New England's educational system, if it could; and Mr. Potter, Mr. Underwood, and *The Index* would receive the tender mercy of "our holy religion." The *ostensible* reason given is that the Bible is in the "pine-board Yankee schoolhouse"; but the true reason is, histories are there, which inform the young, with an index to the kindly persuasive eloquence that fell on the heads of Savonarola, Arnold of Brescia, and John Huss, and in modern times St. Bartholomew, Gunpowder Plot, and Mary of England, wife of "Spanish Philip," whose love of Protestants impelled him to say that

Digitized by Google

he would rather reign over a wilderness than a populous city filled with heretics. The Bible is a pretext: they care as much about it as they do about *Poor Richard's Almanac*. But they do care about Prescott and Motley, Hume and Macaulay, whose pens opened the doors of the holy Inquisition and aided in sending the "Eternal City" tottering to her fall. It is only with tongue and pen Catholics deny the superiority of Yankee life: socially, they imitate, and, when exterior and speech don't betray them, "stick to it" they are Yankees. RODERIC RANDOM.

GLEANINGS FROM CORRESPONDENTS.

HUDSON TUTTLE writes from Berlin Heights: "We have just returned from Kansas. We met your Mr. F. Hinckley at the Bismark camp-meeting for the first time, and must say that he completely won us, as he did every one else, by his unassuming manners, profound thought, and honesty of expression. We feel assured that every one of his hearers went away with more exalted purposes and broader horizons of thought. It is a pleasure to think that such men as he are in the vanguard of liberal thought."

IN a pleasant letter to the junior editor of *The Index*, Mrs. Mary F. Davis writes from Orange, N.J.: "We are both greatly interested in your work as one of the editors of *The Index* and an advocate of free religion. I heartily indorse a sentiment recently received in a friend's letter. She says: 'If the Free Religionists do nothing more than to tax church property and keep God out of the Constitution, or Church and State distinct, they are doing a service to humanity, and will serve as a standing protest against religious fanaticism, which has cursed the world and done more harm than all the "infidelity" of the ages.' We were greatly pleased with Mr. Potter's reply to Prof. Adler's criticism, made at the time of his withdrawal from the Association. Never have I seen the principles of Free Religionists more clearly and nobly expressed, and surely Mr. Potter redeemed them as a body from the charge of lukewarmness in reform. Yours for the Free Religious platform."

A CORRECTION.

Editors of The Index :—

The work done by your printers and proof-readers is generally of so superior a kind that I shall not attribute to them a mistake in the article printed this week in *The Index*, and entitled "Theological Atavism." Without attempting to explain the cause, I wish simply to state that in the third paragraph of that article and in the sentence beginning "Even among professed Liberals," the expression "special past *relations*" should read "special past *revelations*."

Very sincerely, S. J. STEWART.

BANGOR, ME., Sept. 15, 1882.

HERBERT SPENCER.

Mr. Herbert Spencer, the eminent English philosophical writer, arrived in this country August 21. He has long desired to visit America, but has been deterred from the undertaking by his very imperfect health, and his apprehensions of the effect of the Atlantic voyage. He landed in a very exhausted condition, and, declining all social engagements and excitement, went quietly away to the mountains to rest and recruit.

Mr. Spencer was born in Derby, England, in 1820. His father was a teacher, a man of culture, of independent views, which he carried out in the education of his son. His fundamental principle in teaching was that only what the pupil does for himself is really valuable to him, and hence he labored to establish inquiring and self-reliant habits in the minds of his pupils rather than to help them to passive acquisitions. Young Spencer was educated on this principle in his boyhood by his father, and afterward by his uncle, an English clergyman. He early took to mathematics and science rather than to classical studies; and instead of going to Cambridge, as his uncle, a university man, desired, he went into railroading, as a civil engineer, at the age of seventeen. The great railroad reaction of 1845 threw him out of business, and he then took to a literary career.

Mr. Spencer is perhaps most widely known by the little work on Education, which was contributed first to the reviews, and issued as a book in 1860. It is written largely from the point of view of his own experience in methods of study, and is so strenuously favorable to the study of science, and so practically valuable as a guide to self-education, that it fell in with the tendencies of the age, and has exerted a very wide influence upon individual minds and upon practical school instruction, as shown by the fact that it has passed through many editions, and has been translated into a great number of languages in all quarters of the world.

Mr. Spencer's life has been outwardly uneventful, and the world is interested in him solely as a thinker and a representative of great modern ideas. In this respect there has been a remarkable unity in his intellectual career. No more striking example can be found of a man working on from his youth through life in a broad but continuous line of research, although, from the number and diversity of the fields he has had to traverse, there has arisen the notion that he has a great propensity to write upon everything. The simple fact is that he early got possession of a new all-comprehensive principle, and has spent his life in working it out in all directions.

In 1842, at the age of twenty-two, young Spencer published a pamphlet on *The Proper Sphere of Government*, an ethical discussion of individual rights and public duties. This germinal exposition was developed into a volume, and published in 1850 under the title of *Social Statics*. This book was an attempt to establish a scientific basis for private and public morals. Finding that the subject demanded far more extensive treatment, he projected a series of works, scientific in method, to bring out this view; and the last of them is a treatise on the *Principles of Morality*, of which the *Data of Ethics* has been recently published. He is thus upon the same track of thought that he entered forty years ago, and all his intermediate labor has been pursued with distinct reference to the final result.

But this alone will not account for Spencer's hold upon the thought of the age. He is widely known as the philosopher of evolution, but he was led into the investigation of this great doctrine by the necessities of his studies in ethical science. His first pamphlet is full of the idea of progress and adaptability in man and his social relations. In *Social Statics*, the idea of evolution, though vaguely presented, has become the key to the discussion; and, from 1850 on, Mr. Spencer made the working out of this doctrine his great object. This he did at first in a fragmentary way. Having to get his living by writing, he made numerous contributions of articles to leading reviews from 1850 to 1860, all implying, illustrating, or expounding the evolutionary principle in a large number of its aspects and applications. He then projected the *Synthetic Philosophy*, in ten volumes, as a twenty years' work to develop the doctrine of evolution, and has been at it ever since. To show how far in advance he was of all other thinkers in this field, it may be stated that he had written more than thirty elaborate articles in the chief English reviews, all bearing upon evolution (although by the rule of those reviews unfortunately anonymous), and had drawn up a detailed scheme of the evolution philosophy in the exact logical order which he has since followed, and all this before Mr. Darwin had published a word upon the subject.

Mr. Spencer's health gave way in the year 1855, after the appearance of his *Principles of Psychology*, perhaps his profoundest work, and which was written in eleven months. After this, he could do nothing for a year and a half; and he has been troubled with sleeplessness and much nervous irritation ever since. His main business for twenty-five years has been to economize his vital forces for the continuance of his work. All his books and letters are dictated, and at the best he has been able to give but about three hours a day to his amanuensis. He seeks relief from the strain of thought by recreations, such as billiards, concerts, and country excursions, and has found social excitements so disturbing that he has been compelled very much to restrict them.

In social intercourse, Mr. Spencer is easy and agreeable. He is a ready and interesting talker, though his capacity for society small-talk is slender. If conversation engages him, and he is in a vigorous condition, his talk is impressive and often brilliant; but, as such excitement generally costs him sleep, he is apt to decline and avoid serious subjects on social occasions. Indeed, he is more and more compelled in these latter days to avoid all argument and exciting discussion; and, if he is very much compelled to do so while in this country, his friends must credit it to his low physical condition, and remember that he regrets it more than anybody else.—*E. L. Youmans, in Harper's Weekly.*

BOOK NOTICES.

REMINISCENCES: chiefly of Oriel College and the Oxford Movement. By the Rev. T. Mozley, M.A. In two volumes. Boston: Houghton, Mifflin & Co. 1882. $4.00.

The Oxford movement in English religious history, beginning fifty years ago and making a great noise for ten years or more, with effects which spread out widely and have lasted to the present time, ought to be better known than it is to all who are interested in the modern destiny of religion. It began, and was chiefly made, at Oxford University, by persons connected with Oriel College. Hence, the title of Mr. Mozley's extremely interesting and valuable *Reminiscences*. In the Oxford of that day there were two brothers Newman and two brothers Froude; and one of each pair went into the Oxford movement, while the other went as far to the other extreme, into advanced free thought. The most radical book against Christ and Christianity which has ever been made by a thoughtful scholar is Prof. F. W. Newman's *Phases of Faith*. James Anthony Froude, the historian, began his career with a little work on *The Nemesis of Faith*, in which he threw away the average Biblical and Apostolic Christianity, but with the intimation that, if we could get behind the mass of errors introduced by the apostles, evangelists, and other early disciples, and could recover the original pure teaching of Christ himself,—if we could have "*not the Christian religion, but the religion of Christ*,"—he would gladly be a disciple of that. The Froude who went the other way died early; but the Newman who set his face to the dead past, and was the chief of the Oxford movement, became a Roman Catholic, and at a great age is still living, at Birmingham, England, as the head of a little college of papists, which does some preaching and some school-keeping and some monkery, at a level of ignorance, superstition, and hypocrisy possible only in the Catholic Church. This Catholic Newman has been made a Cardinal by the Pope, one of those preposterous dignities for a disciple of Christ which seems inconsistent with honesty in an Englishman of Dr. Newman's opportunities to know better. The Rev. T. Mozley, who has given us two capital volumes of *Reminiscences*, married a sister of the Newmans, went into the movement, and was its main wheel horse behind John Henry (now Cardinal and Doctor) Newman as leader, and finally proposed to go into the Roman Catholic Church, when Newman himself, who had not yet gone, advised him to "think over it two years"; and the result was that thirty-nine years have passed, and he is still in the Church of England, and able to look back upon the characters and incidents of the movement with just the sympathy, as well as the knowledge, necessary to tell the whole story well and faithfully. The great number of vivid sketches of character, and the nakedly honest delineations of spiritual experience and free thought within orthodox limits, which appear in these crowded pages, make the work most entertaining and most instructive. It is a book which can be read a chapter at a time, and it has one hundred and twenty-nine chapters. Its author is more simply a man than any orthodox writer whom we can name. He goes to human nature for his foundation, likes a good deal of paganism because it is natural and human, and for the same reason likes a good deal of Catholicism, which he honestly confesses was borrowed from paganism. He seems to have remained in the Church of England, because his roots as a man, a husband, and a minister are in it. But he dislikes it, and speaks very plainly of the badness of its method, the poorness of its belauded services, and the meanness of the results at which it arrives. The points of doctrine which make up Orthodoxy are stripped naked, down to all their human uncertainty and natural weakness; and those who believe them are shown that they do so as much without reason as with. The book will help any man to think, and to be charitable, if not to believe; and it will be read with unfailing interest.

THE CHOICE OF BOOKS. By Charles F. Richardson. New York: American Book Exchange, 764 Broadway. 1881.

We find in the diary of a very noble youth the following entry: "This book with which I spent a whole morn, full of wisdom as it is, and not only useful reading, but exceeding pleasant, I met by accident. My landlady was taken sick only once during the many weeks I spent in X.; and this was the only time they were bold enough to ask me, a stranger

Digitized by Google

boarding in their house, to go an errand for her to the doctor. The doctor himself being ill abed, I was asked into the parlor to wait. Upon the table, I found this little book, read into it for a dozen pages or so, became exceedingly interested, and inquired where the book could be bought. The lady of the house kindly offered to lend it to me. I took it, and I have ever since been feeding on the feast that is spread there not only for one meal, but for many. Thus doth nature throw in our way her gifts lavishly, just as we most need them; for I was just then groping in the dark about that enthusiasm of mine about books, not knowing into what channel to let it flow. And yet we call this accident, and dismiss the subject."

A book that has thus affected a struggling soul may be of use to some others. Mr. Richardson wisely chose to let the sages of the world speak on the topic so dear to him rather than to speak himself. Under appropriate headings, such as "When to Read," "What to Read," "Reading of Periodicals," "The Use of Note Books," etc., he connects with his own thread the words of the best in whose company it is ever a pleasure to dwell. In fact, if the thought to be carried away from this book were nothing more than this, that healthy spiritual growth is best attained by intercourse with superiors rather than inferiors, and that books are, on the whole, the best of each man, and that in the best of books we have the choicest possible society for our growth,—were the lesson of this book no more than this, verily, it were worth the perusal time and again. For do we not see much noble material misspent for mere lack of stimulus got from contact with pure minds? The company of the best among the living it is not ever possible to have. Nay, rather the contrary: too often does intercourse with men have the depressing effect on aspiration, because of the pettiness and littleness that ever stalks abroad. And, doubtless, the reason that so many noble youths have their fire quenched within them is just because in their attempts to fight pettiness they become poisoned by it themselves. We almost fear to mention Thoreau as a marked example, though few will not find some living example under their very eyes. But how soon is all this dispelled after spending a half-hour in the atmosphere of the dead yet ever living books! A play of Schiller, a passage from Franklin, a chapter of Tyndall, and—need we mention it?—a line from Emerson, Marcus Aurelius, or even Lacon, does leave us with a kindred sensation as being in the woods or in the sea-breeze, or as watching a sunset over the hills. A bracing, cheering sense it is. It is wonderful, too, not only how much pleasure books do give, but also how much pain they prevent.

THE October number of the *Popular Science Monthly* is one of great excellence. "Massage: its Mode of Application and Effects," by Douglas Graham, M.D., is an account of a combined operation of rubbing and kneading the body, systematically performed, as an aid to the curing of disease. Matthew Arnold's lecture on "Literature and Science" is the next article. A review of the paper in the editor's table exposes the utter insufficiency of Mr. Arnold's valuation of science. Dr. Andrew Wilson's "The Past and Present of the Cuttle-Fishes" is full of information about these most curious and varied inhabitants of the deep. "Mozley on Evolution," a reply of Mr. Herbert Spencer to some statements in the Rev. T. Mozley's recently published "Reminiscences," contains a clear and succinct outline, at first hands, of the whole scheme of the theory of evolution. "The Utility of Drunkenness" is found, by Mr. W. Mattieu Williams, to consist in the fact that it promotes "the survival of the fittest." In "Delusions of Doubt," M. B. Bill describes a curious mental disease which is sometimes manifested in most remarkable ways. The "Annual Address" of Prof. G. J. Brush, retiring President of the American Association, is next given; and the subject is "The Progress of American Mineralogy." In "Industrial Education in the Public Schools," Prof. Straight projects a scheme under which pupils should be turned out prepared to do honest, thorough work as a matter of course. Dr. Felix Oswald lends the unique charm of his keen humor to the discussion of "Physiognomic Curiosities." "The Formation of Saline Mineral Waters," by M. Dieulafait, is a suggestive study in chemical geology. "A Partnership of Animal and Plant Life," by K. Brandt, offers a solution to a biological problem that has caused much perplexity. The Portrait and Sketch are of Prof. Rudolf Virchow, physiologist, anthropologist, and advocate of popular rights. New York: D. Appleton & Co.

THE *Art Amateur* for September, in addition to its usual lively gossip about artists and their works, has some very excellent articles both on photography and decorative art. The directions for book-binding are excellent, showing how simplicity and consideration of real use produce far better effects than imitation of inappropriate subjects. The sketch of the Irish painter, William Magrath, is very interesting; and the woodcuts justify the praise given to his work in his own special line. Irish life is full of picturesqueness, humor, and feeling; and Mr. Magrath will have full scope for his talent in depicting phases of Irish life, many of which are rapidly passing away.

PERSONAL ITEMS.

B. F. UNDERWOOD will lecture at Stoneham, in "the Christian Union Church," next Sunday evening.

GEORGE JACOB HOLYOAKE, in his work *Among Americans*, written after his return from his first visit to this country, says: "Rev. Francis Ellingwood Abbot, the editor of *The Index*, interested me greatly. He displayed great capacity, and a Puritan force and pride in the integrity of the principles he represented. I know no one in England who has his fine enthusiasm for liberal and religious progress."

DR. PUSEY, the founder of Puseyism, who died Saturday, was born in 1800. His father, Philip Bouverie, was a brother of the Earl of Rednor, and assumed the name of Pusey. He graduated at Oxford in 1822, became a Fellow of Oriel College, Canon of Christ Church Cathedral, and Regius Professor of Hebrew in 1828. In conjunction with John Henry Newman, he wrote *Tracts for the Times* (1833), which produced great excitement. He was suspended from his pastoral functions on account of a sermon on the Eucharist, which he preached in 1843. He favored auricular confession and several doctrines and practices similar to those of the Roman Catholic Church.

DURING the reign of Lord Beaconsfield, when the hatred of London society for Mr. Gladstone was at its height, there was a smart dinner party, at which Mr. Bright was present; the other guests including a princess, two or three duchesses, and others high in that social range where Mr. Gladstone's name was odious. The talk turned on Mr. Gladstone, and the abuse of him was general. Said Mr. Bright to the Duchess of ——, next where he sat, "May I ask of you if you have any children?" She admitted she had. "Then let me beg of you to take them some day where they may see Mr. Gladstone, and, when they see him, tell them they are in the presence of almost the greatest Englishman who ever lived, to whom God has permitted to do almost the greatest service ever done by an Englishman to his country." A dead silence fell upon the company. Mr. Gladstone had not one other friend among them.

ONE of the pioneer Abolitionists of West Andover, Ohio, passed away on the 5th instant. The death of Mrs. Horace Lindsley was one of more than ordinary sorrow. She was one of the two remaining nieces of Hon. J. R. Giddings, and, like him, at an early date enlisted in the anti-slavery cause. During those stormy times, many a slave *en route* for Canada found shelter and comfort under her protecting roof. Capt. John Brown and his sons were her intimate friends and guests. Just prior to the Harper's Ferry raid, Andrew D. Stephens, who sacrificed his life in that unfortunate event, made his home at her house. At her funeral on the 7th, the procession was three-quarters of a mile in length, fully testifying to the love and esteem in which she was held. The Grange, of which body she was a member, conducted the service, and no minister took any part in the exercises; nor was there any prayer offered, only such as composed a part of the ritual of the Grange. The deceased had reached her sixty-fourth year, and was a woman of more than ordinary intelligence. She had been a subscriber to *The Index* almost from its initial number. Her creed was to do right, that every one is responsible for his own acts, and that there is no salvation except such as each individual works out for himself. Her own life was one of spotless morality, and her constant endeavor was to teach those around her to live pure lives. She leaves a husband and six grown-up children, all holding honorable places in society, to mourn her loss.

TO MEMBERS AND FRIENDS OF THE F. R. A.

The Executive Committee of the Free Religious Association beg leave to call your attention to the following plan of work adopted at the late annual meeting:—

Resolved, That this Association herewith instructs its Secretary, acting with the advice and consent of the Executive Committee, to superintend the following work for the ensuing year:—

1. The preparation, as thorough and exact as possible from data furnished by the State correspondents and other sources, of the following memoranda of information, namely:—

(*a*) A complete list of the names and addresses of members of the Free Religious Association, classified according to States, towns, and cities, and a similar list of well-known persons in sympathy with the Free Religious Association, not members.

(*b*) A full list of organizations, State and local, whose constitution and methods are in substantial conformity with those of the Free Religious Association, with names of officers and description of form of union and of work appended to each.

(*c*) A brief statement of the needs and conditions of each State in relation to the Free Religious movement, compiled from the returns of the State correspondents, so far as reported.

2. Aided by these memoranda of information, the Secretary, with the advice and consent of the Executive Committee, shall choose not less than two (2) nor more than six (6) States which in their opinion present the most favorable conditions for the spread of our principles and their local organization, as the immediate field of work.

3. The Secretary, or some one selected by him with the advice and consent of the Executive Committee, shall visit the selected States, and call in each, by letter and personal interview, a private conference of our members and friends, for the purpose of stimulating their interest in our cause, and urging them to pledge pecuniary and moral support sufficient to secure either a successful convention or a course of lectures by the accredited speakers of the Free Religious Association in the most promising centre of liberal thought in said States, the choice between the two methods of work being left with the Association's representative on the ground and the local friends.

4. When the local friends are unable to raise all the money necessary for this work, the Executive Committee shall be empowered to aid, in cases promising good results, as hereinafter provided.

5. The Secretary, or person representing the Association, thus visiting a State for the purposes indicated above, shall, if possible, be present and speak at the convention if such be held, or, if the lecture course be given, shall, if possible so to arrange it, deliver the first or last lecture, and in either case shall present the principles and objects of the Free Religious Association, and the need, the possibility, and the most practicable methods of organization for State or local work.

6. In order to carry on this work for one year, it is desirable that $2,000 be raised; and the Executive Committee are hereby instructed to take immediate steps to secure that sum. And whatever amounts shall be received for that purpose or used from the funds in the treasury shall be appropriated under the direction of the Executive Committee.

7. That the office of State correspondents be continued, and effort be made to secure one in all States not now represented by such an officer, in order that the memoranda of information be kept as complete as possible.

In accordance with this action of the Association, it becomes our immediate duty to appeal for contributions to the fund of at least $2,000, which it is deemed wise to raise for putting this plan into effect.

Cash subscriptions or pledges, large or small, may be forwarded to the Secretary at the office of *The Index*, or to the Treasurer, John C. Haynes, 451 Washington Street, Boston. Upon the sum placed at our disposal will depend the character and amount of the work to be done.

There are earnest men and women throughout the land to whom life is sweeter, truer, diviner, because of the ideas for which Free Religion stands. Many such have large means, many more have a competence; and all feel, we are sure, a desire to help carry to other souls the glad tidings which have come to their own.

We not only solicit, therefore, but we look forward with confidence to an early and a favorable response to this appeal.

For the Committee,

WM. J. POTTER, *Pres.*
FREDERIC A. HINCKLEY, *Sec'y.*

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

LAKE PEPIN GAZETTE,

W. F. JAMIESON, Editor and Publisher.

To be issued weekly. 12 pages. Publication day Thursday. Pepin, Wisconsin. Price $1.00 a year.

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression.

Every number will contain descriptions of the great Northwest.

First number of LAKE PEPIN GAZETTE—5,000 copies — exhausted, except for new subscribers. Sample copies 5 cts.

Send 50 cts. for six months; or, to try it, 25 cts. for three months. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

PROF. HENRY KIDDLE, who is well known as a Spiritualist, thinks that at "séances" there is "need of music, of singing especially, and not mechanical droning or dismal humdrum, but soul-stirring songs that cheer, exalt, and inspire, and thus focalize all the thought-force present. There is a kind of noise called singing which we sometimes hear at séances, that is calculated to appall both angels and devils, and thus produce a general stampede of all the spirits."

REV. DR. GOSS, an old-time Baptist minister, in the recent Illinois Democratic Convention at Chicago, prayed as follows: "O Lord, we beseech thee to save us from the devil. O Lord God, we beseech thee to save us from Star-Route and other thieves upon the public treasury. O Lord God Almighty, we pray thee to save us from Republicanism. For Christ's sake, Amen." It is stated that, following the "Amen," there was a storm of applause, and that many hats were thrown toward the ceiling.

JUDGE EDWARD A. THOMAS, in the *North American Review*, says, in substance, that in his judgment the oath should be entirely dispensed with, since it does more harm than good. He declares that the conscientious man will tell the truth, when legally called upon to do so, as thoroughly without the oath as with it, and that dishonest persons are seldom restrained by the utmost solemnity of the form. In short, he believes that the oath has lost its force as a restraint, and is merely the formula of an exploded superstition.

SAYS the Boston *Herald:* "It is related that, when Joseph Cook was a boy, he took a pile of books out into the fields, and became so absorbed that he forgot to come home to dinner. Joseph is now on his way back to Boston. Won't somebody send him some books? Perhaps, if the pile is big enough, he may forget to come back." We hope no one will act on the suggestion of the *Herald*. Joseph Cook is needed in Boston. His presence here will give inspiration to the wit of the Boston press. *The Index*, which has looked forward with interest to his return, would be greatly disappointed should he fail to appear and repeat his "incontrovertible facts."

A REVIVAL of religion may be confidently looked for among fashionable ladies this season, as "prayer rugs" are among the latest of fashion's freaks. They are imported from the East, and are such as Mohammedans use. An exchange describes them thus: "They are usually about three by four feet in size, and can be distinguished by the design, which always represents some large figure at one end, and pointed at the other. Places are indicated for the hands and knees. Devout women procure the real things from an importer, and, without facing Mecca, bumping their heads on the floor, or removing their shoes and stockings, like the sons of the Prophet, still actually do use them to kneel on while praying. They are said to be a great comfort."

THE Association for the Advancement of Women will hold their Tenth Congress at Portland, Me., October 11, 12, 13. The following are the topics for discussion and the names of the speakers who will address the Association, as given in a circular we have received: "The Chinese Question from a Woman's Point of View," Mrs. Caroline M. Severance, California; "Right of Women to Free Competition as Workers," Miss Laura Clay, Kentucky; "Regulations discriminating in Favor of Single Women against Married Women as Teachers, Guardians, Administrators," Mrs. Mary E. Foster, Ann Arbor, Mich.; "Vacations and Vacation Schools," Miss Eunice Sewall, Portland, Me.; "History and Results of Preceding Congresses," Mrs. Lita Barney Sayles, Connecticut; "Comparative Effects on Health of Professional, Fashionable, and Industrial Life," Dr. Anna D. French, New York; "The Condition of Women in Utah," Mrs. J. A. Froiseth, Utah; "Rights of Children," Mrs. Emma C. Bascom, Wisconsin; "Possibilities of Success for Women in the Industrial Arts," Miss Ella C. Lapham, Buffalo, N.Y.; "Needs of the Religious Nature," Mrs. Louise V. Boyd, Iowa; "Political Economy," Miss Emily J. Leonard, Connecticut; "A Study of Saturn," Prof. Maria Mitchell, New York.

JENNIE COLLINS, the warm-hearted and energetic manager of "Boffin's Bower" in this city, has issued her twelfth annual report of the workings of that beneficent institution. She reports the number of applicants for employment as 1,545; and the number of employers applying for help, 1,154. Three thousand and sixteen meals were furnished to those out of employment. The receipts, including the proceeds of the annual fair, and $200 from the State, amounted to $2,168; expenditures, $2,088. There is a lesson for all at present well-to-do women contained in a statement made in this report, that the hardest class to deal with among those who seek the help of the "Bower" are those who have seen better days. Miss Collins says of these: "The applications are stereotyped: 'I have never been obliged to do anything for myself, and can give the best of references as to character and respectability; could be a companion to a lady, keep house where there are servants, or read to an invalid.' And my answer has to be as completely stereotyped as the application, that 'no rational, self-possessed lady has time to waste upon a companion.'" Useful work it appears is the only sort of labor which is always in demand, and every one should be ready at need to do that kind of labor in a skilful manner.

THE National Liberal League, which was formed in 1876 for the work of agitating and educating in favor of State secularization, but which, the past four years, has been diverted from this work and identified in the public mind with the clamor for the repeal of postal laws against the transmission of obscene literature through the mails, will hold its next annual convention at St. Louis, September 29 and 30 and October 1. We say now, as we did last year when the repeal resolutions, which the year previously had driven Col. Ingersoll and others from the organization, were reaffirmed, that the foolish policy adopted and the course pursued by the League have repelled from it the great mass of Liberals who are in favor of State secularization, and thrown it into the hands of those with whom the repeal of postal laws against indecent literature is an object to which every other object seems to be secondary. That the members of the League, generally, design or desire to encourage the circulation of such literature, we have never stated nor believed; but that the policy to which it is committed tends in that direction we are confident. Since the League has persisted in this policy, is under the leadership of persons who are devoted to it, since it publishes a paper in which prominence is given to repeal, and those lecturers and papers only are encouraged that advocate repeal, since it uses money obtained from auxiliaries and individuals, and employs every available means to strengthen the sentiment in favor of repeal, it follows, of course, that those who sustain the organization with their money or their influence are committed to the policy and share in the responsibility for the work which they thus help to perform. The determination to persist in the repeal policy, and at the same time to secure the support of those who have no sympathy with that policy, by such a contemptible resolution as was passed at the Chicago convention last year, has deceived no intelligent person, and was simply a piece of trickery, so regarded even by some of the members who were present. We make these statements because they are true, and because they are needed, influenced in no wise by the wilful and persistent misrepresentation and vile abuse which this journal and its editors have received the past year from the leading representatives of the League, through its own organ and other unscrupulous sheets they have been able to command.

PROTESTANT JESUITISM IN GIRARD COLLEGE.

Protestants have been accustomed to complain bitterly of the cunning and deception practised by the Jesuit orders of the Catholic Church. The claim that fraud and falsehood might be allowed when the object was to advance Christ's kingdom has been decried by zealous anti-Catholics as most abhorrent to the very soul of Christian morality and as a veritable instigation of Satan himself. Yet the *Sunday School Times* of Philadelphia, a paper of immense circulation, devoted to building up the interests of Sunday-schools in all Protestant evangelical sects, has recently confessed and defended a piece of unblushing "Jesuitism" in the management of Girard College, as genuine, we venture to say, as any which can be found in the domain of the Church of Rome within the present century.

As is well known, Girard College, in which orphan boys are gratuitously educated, was founded by a wealthy merchant of Philadelphia, Stephen Girard, who was a native of France, and, though not himself a man of much education, was a disciple of the doctrines of Voltaire and Rousseau,—a freethinker. In accordance with his views, Mr. Girard provided in his will that, while the scholars should be trained in the "purest morality," the school should give no instruction whatever in the tenets of any particular sect or church or religious faith; and, to carry out this provision, he enjoined that "no ecclesiastic, missionary, or minister of any sect whatever, shall ever hold or exercise any station or duty whatever in the said college," and, to make his purpose doubly sure, he forbade that any such person should ever be admitted, even as a visitor, within the college premises.

Now, it may be admitted that this last clause was a needless restriction and showed the illiberality of a professing Liberal; that it was one of Mr. Girard's eccentricities, by which he intended to cast public reproach on a large class of persons in whose work he had little confidence; and that there was even, as has been suggested, a spice of personal spite in it, having origin in some unhappy circumstance connected with his own experience. In our own view the fine moral and benevolent purpose of the will is marred by this clause. Yet a better interpretation of its motive is possible; namely, that the sagacious old merchant meant to guard against any surreptitious teaching of theological doctrines which might creep in through a missionary "visitor." But, however this may be, the intent of the will was as plain as words could make it. While the pupils were to be trained in morals, in knowledge, and in manual labor, their minds were to be kept clear from all theological indoctrination, so that, as expressly stated, on entrance into active life they should be free to adopt "such religious tenets as their matured reason may enable them to prefer." And the will, though contested in the courts, and with all the force of Daniel Webster's great intellect, and contested particularly on the point that there can be no charity nor morality in an institution divorced from the Christian religion, was declared to be valid. The magnificent edifice was built according to Mr. Girard's plans, and the school was inaugurated to carry out his humane purpose. The letter of the will has been strictly observed, even to the clause most declaimed against. No clergyman has ever held office in the college; nor has any clergyman of any sect ever entered within its gates, unless it has been done in a disguise that has deceived the managers. But how about the *spirit* and *intent* of the will? Let the *Sunday School Times* give answer in the following paragraph from its columns concerning the recent death of President Allen at the college:—

> In the funeral services of Dr. Allen, President of Girard College, a good illustration was given, on the one hand, of the narrow bigotry of the founder of that institution, in forbidding the admission of any clergyman within its walls, and, on the other hand, of the folly of all attempts to shut out positive Christian influences or pronounced religious teachings from such a place by legal provisions and human guards. During the illness of President Allen, neither his pastor nor any other Christian minister could visit him; nor could his own son, if that son were a clergyman of any denomination whatsoever, have passed within those walls to receive the farewell of his dying father. If a Buddhist priest were excluded, under such circumstances, from entering the precincts of a Christian college or hospital in America, what brutal bigotry it would be called! and rightly. Nor, again, could any Christian minister come within Girard College walls to have a part in the funeral services at the chapel there. So much for the bigotry side. But President Allen had himself done the work of a clergyman in that college while living; and, at his funeral, Christian services were there led by Christian laymen. After this, his remains were taken into a neighboring church, where Christian liberality gave freer air; and there a score or more of prominent Christian clergymen united with a large assembly in paying another tribute of respect to the life and work of this distinguished Christian layman. As Joseph said to his brethren who had sold him into slavery, so it may be said to Stephen Girard as to his attempted stigma on the influence of Christian ministers in the founding of that college, "Ye thought evil; but God meant it unto good to bring to pass, as it is this day, to save much people." You can shut out air and sunlight from a dungeon, but you cannot shut out Christian influences by a ten-foot wall in any part of God's creation. The heathen rage, and the people imagine a vain thing in taking counsel together against the Lord and his servants, after this fashion. "He that sitteth in the heavens shall laugh: the Lord shall have them in derision."

As to the "bigotry side" illustrated "in the funeral services" here described, enough has already been said above. We repeat, let the bigotry be admitted, though we see no occasion for applying to it so strong an epithet as "brutal." Dr. Allen knew the terms of the will, and it is to be assumed that he was ready to accept them. He understood, when he became President of the college, that, if he were to be sick and die there, he could not have his pastor to visit him nor any Christian ministers to conduct there his funeral services, nor, if he had a clergyman for son, receive that son there to give him his dying blessing. If he thought there was intolerable hardship in these conditions, he was under no obligation to subject himself to them by accepting the Presidency. Indeed, if President Allen was not a man entirely ready to forego "Christian" consolations on his death-bed and "Christian" services at his funeral, it may be said that he had no business to be dying there at all. If he was one who felt that "Christian" teaching was a necessity of existence, he should not have been an officer of the college.

But what shall we call the other "side" of the illustrative story told by the *Times*? There is no attempt to explain away the intention and motive of Mr. Girard in making his will. In a longer article in a subsequent number, the *Times* says frankly that Mr. Girard wished to have the pupils leave the college unbiassed in favor of any of the special religions of the world, and that he gave, as the reason for his course, his desire "to keep the tender minds of the orphans free from the excitement which clashing doctrines and sectarian controversy are so apt to produce"; and it even adds that "his proscription of clergymen was obviously because of their possible instructions and influence." That is, it is admitted that Mr. Girard did not proscribe clergymen simply because they are clergymen, but that it was his wish and purpose to shut out the theological and sectarian teaching which clergymen are accustomed to give. Yet, in the face of this clear statement that it was not so much the clergyman as his work that the founder of the college meant to exclude, the *Times* declares (and makes the declaration with an air of boastfulness) that President Allen, in the guise of a layman, "had himself done the work of a clergyman in the college." In other words, while conforming to the letter of the will in not being an ordained clergyman, President Allen, with the consent of the trustees, had been doing all that an ordained Christian clergyman could do to turn the college into an institution for Christian propagandism, contrary to the explicit directions of its founder.

And over this act of cunning strategy, by which Girard's munificence has been turned aside from the channel into which he directed it and been perverted to uses which he expressly proscribed, the *Times* exults and glories. It even pictures God as looking down upon the act with blessing, and conniving at the sharp practice by which the free thinker was outwitted and the Christian Church got hold of his funds. And this is the kind of morality which the *Sunday School Times* commends to the Sunday-school teachers of the land. To us, the act looks very much like a fraud and a swindle, and none the less so because done under cover of a decision of the Supreme Court of Pennsylvania that Christianity is a part of the common law of the State, and that the inculcation of the "purest morality" in the college would necessitate the use of the Bible and the teaching of the Christian religion there. The *Times* exults over an open betrayal of a trust. It evidently thinks that an "infidel," however rich he may be in this world's goods, has no proprietary rights which "Christian" honor and honesty are bound to respect. If the property which he leaves for a benevolent purpose, according to his own views, can yet be turned by any trick of interpretation to the building up of the Christian Church, the *Times* thinks the end sanctifies the means, and declares it all right. If the same act had appeared in the Catholic Church, we think the *Times* would have found the true names for it,—perfidy, fraud, theft.

WM. J. POTTER.

A SEA-CHANGE.

In early life, Nathaniel Hawthorne wrote a curious tale which does not appear in any of his volumes. It is entitled "Mother Rigby's Pipe." A witch has the humor to turn her scarecrow into a fine gentleman. After a glittering career in high society, this fine gentleman becomes betrothed to a fine lady. But one day she catches sight of him in a mirror, and rushes from his embrace with a shriek. The fine gentleman also caught sight of himself in the mirror, and, according to my recollection, went back to the witch, and begged her to make him appear what he really was. Then, he was stuck up in a potato-patch,—a thing of straw, old hat, jacket, and pipe,—and there lived and died an honest scarecrow. Scarecrows have not always that grace after they have once become fine gentlemen.

This tale occurred to my memory this morning as I sat beside the bathing-beach, where a thousand people or more went into the looking-glass. They appeared, in a sense, as they really are; and, in many cases, the transformation was greatly to their advantage. But there is another sense in which the "silver streak" which separates England from the Continent is a revealing mirror. The English man or woman who crosses it is very apt to suffer a sea-change into something rich and

Digitized by Google

strange. Perhaps I may include the Americans. There are over a thousand English-speaking people here, and on Sunday they would have gone to church, and perhaps rolled up their eyes if any one had suggested frolicking in the water all the morning and going to the theatre or the grand ball in the evening. There is an English church here, but few there be that find it. The zest with which the English and Americans take to Sunday amusements on the Continent is notorious. On Sunday evening, I went to see "La Fille de Madame Angot"; and I believe that, if the secret heart of each Englishman present had been revealed, he would have pronounced the English Sabbath a scarecrow, he would have agreed that the one thing most needful for London would be a Sunday theatre.

The Sabbath is only one bit of the scarecrow careering as an English gentleman. From ancient Syrian corn-fields has come that effigy of outworn superstitions, which has lived this long because of its cleverness in avoiding mirrors; that is, being looked at by reflection. Originally raised to scare thought and freedom away from sacerdotal enclosures, this figure of a deity, jealous about his Sabbath, exacting about ceremonies, and always menacing damnation, has been conjured into the form of an Englishman. But no sooner is this thing of shreds and patches carried out of England, and he whom it invests becomes temporarily free from the witchery of conventionalism, than it is seen for what it really is; and the man rushes from it. It does not, however, imitate Hawthorne's fine gentleman, and return to be the antiquarian scarecrow, useful in its place, but by no means a real thing. No: it goes over to Dover, and remains there till the Englishman comes back from his vacation, when it gets into him again, and he remains sanctimonious for eleven months more. Yet even at home, if one holds a mirror before the Englishman, by getting him alone within four walls, he will confide his opinion that what goes by the name of "religion" is largely humbug.

Sunday theatres are recognized by thinking men on the Continent as a great agent of refinement. It is almost hopeless to think of mitigating the brutality and sottishness of the masses without them. Even Milton's Puritanism did not blind him to this; and he suggested that it would be wise for the government to subsidize several theatres where on Sunday evening the masses might witness the best dramas. But how bitterly would Almighty God feel if he saw these millions happy on Sunday!

The extent to which English culture is sacrificed to a pietism largely conventional, if not hypocritical, has just had a fresh illustration. Competent persons who attended the first performance of Wagner's new opera "Parsifal" at Bayreuth declare that it is one of the most grand and impressive works of art which this century has produced. Yet the chief London papers have warned us that we are not to see it: it can never be given in England. And wherefore? Because, to quote the *Times*, "'Parsifal' is a 'Sacred Festival Drama,' a revival of the mediæval 'Mystery,' and like its prototype full of references to the spirit and even the outward forms of Christian worship. Those who undertake the pilgrimage to Bayreuth will, no doubt, fully enter into the deeply reverent spirit in which the master has done his work. Perhaps the same persons would be justly shocked if they saw the same work in an every-day frame of mind, or as one of a series of ordinary theatrical shows. 'Parsifal' is an exceptional work, requiring exceptional surrounding. In London, it would be out of place as much as the Passion-Play of Oberammergau." Exceptional surrounding! That is, at home the Englishman feels himself under the necessity of being a long-faced, self-sanctified, Pecksniffian pedant and Philistine. Such is the theory of these journals. The English crowd Oberammergau, have made its fortune, write eulogies on it, snivel over it, and then wage war against every manager who proposes to introduce the like of it into London. The subject of "Parsifal" is from the English Scriptures. It is part of the one only great British myth, that of the Round Table and the search for the Sangreal. Nothing in the mythology of Greece, unless it be the myth of Prometheus, is more beautiful. The Sangreal is the cup made of single ruby, with which Jesus was said to have administered the Last Supper, and which afterward held his blood. The search of the Knights for it was in the belief that it held that which each desired most on earth. This is the story in the "Morte d'Arthur." Wagner seems to have combined all the variations of the myth with exquisite art, and to have produced not only a noble opera, but a valuable poem also,—a poem which, if discovered in ancient manuscript, in an old library, would be worth its weight in diamonds. But, in the opera, Parsifal silently prays. We can't allow that in London. Also the knights gather around the Sangreal and taste it. Worse and worse! That suggests the eucharist. Admirable at Bayreuth, it won't do in England. With what scorn will the England of a hundred years hence look back upon a generation which allows itself to be defrauded of the great daybeams of art by such nonsense as this!

However, Philistinism and Puritanism may hug heir delusions. Wagner has added to his already magnificent achievements one which marks an epoch. He has begun the work most needed, that of transforming the symbols of mediæval Christianity into artistic beauty. This further development of his grand epical purpose was anticipated in "Lohengrin." (By the way, it must have been an oversight, which once made had to be adhered to, that the white dove, symbol of the Holy Ghost, is allowed to appear at Covent Garden.) The symbols of a discredited faith can only be made to serve a real purpose by being rescued and reproduced by Art. It was so that the gods survived the decay of belief, in the dramas and sculptures of Greece. When there is no Art that can do that, the symbols are trampled on and rot. That is likely to be their end in England, and I fear in America too; for, somehow, there does not appear to be in either country any promise of a great Art.

MONCURE D. CONWAY.

ORTHODOX AND LIBERALS IN CONFERENCE.

We have just witnessed a new phenomenon, as striking as it is novel. An association of evangelical ministers of Boston and vicinity invited the junior editor of the liberal paper, *The Index*, Mr. B. F. Underwood, to read them a paper on the adverse bearing of evolution on Christianity. Mr. Underwood complied with the invitation, and Prof. Chadbourne of Amherst College and Prof. Gray of Harvard University answered him in the same meeting. Tell it in Gath, and publish it in the streets of Jerusalem. Think of Bishop Butler, who would not have a private solicited interview with David Hume, having a public discussion with the Tyndall of his time. But the Butlers of our day are coming to that or something like it.

On the part of the orthodox, this fact is worthy of being commemorated and imitated. It is a proof of their growing faith, courage, and critical scientific research. The weak in faith are always lacking in courage. They are naturally afraid to meet alleged or supposed foes, and are easily deterred alike from discussion and investigation. Hence, all sign of reluctance to engage in fair debate on disputed subjects is interpreted by Liberals as a confession of conscious weakness or, at least, of inadequate confidence. All manly Christians will therefore hail with joy such a fact as that we have recorded. To them, it is hopeful and inspiring; and on the opposing camp is forced an augmented respect for the orthodox spirit, if not its talent.

The effects of such discussions, so far as they reach, are entirely healthful on both sides. The parties see each other face to face, and all the amenities of a true human brotherhood have some scope for exercise. Each party is under the necessity of hearing the other at equal length, and each states his own position with all the clearness and force which it can receive from special study and conviction and personal magnetism. The opposing forces are now engaged in a fair struggle for existence, and we may rest assured the fittest will survive. Therefore, if the orthodox are thoroughly assured of being the fittest, they should be expected to covet such struggles everywhere, until no foe remains to struggle against, and the happy universal equilibrium prophesied by Spencer, or rather a better one than his, is attained.

I think that, in this case, the action of the orthodox is partly due to the excellent style and gentlemanly spirit in which Mr. Underwood always speaks and writes. He is a man of convictions, who respects the intelligent convictions of others; and he always treats his themes in a philosophic spirit and in the light of science, presenting in these respects a great contrast to the popular declaimer against all sacred things.

But he who thinks he can maintain, before the force of modern science and criticism, all the old interpretations of the Bible and the metaphysical heirlooms of old theologies, is doomed to disappointment. An unacknowledged conviction of this makes all modern mediævalists averse to all such discussions and suspicions of all who favor them. Every age should think for itself, and each should think better than its predecessor in some things at least. Theology was not done up for all time by the councils and synods, nor the Bible by Henry, Gill, Scott, and Clarke. If the Bible be of God, it must be, like nature, equally good for the early pre-scientific mind, and for man's ripest attainments; and theories and interpretations will succeed each other, till we attain the broadest and deepest, the true.

While we rejoice in the fact which we here commemorate, this fact is only better than nothing in that line. A portion of a single morning for distinguished advocates and opponents to contest it concerning the verity of Christianity, — how utterly inadequate! As Prof. Chadbourne said, in his speech, it is impossible to do such a subject adequate justice in a discussion of less than a week or ten days. But, if such a time were given to it, I think it would be made clear that his own chief assertions in that same speech against Mr. Underwood are untenable, and that he must seek some better method of defending theism. How slipshod, for instance, is his inference of divine Providence, because the great trend of the evolving forces is in the main in a good direction. In a fuller discussion, he would be taught to see that, for explanation of this fact, we need only say that the all-great and ever-acting force, unconscious below man and animals, works, as we find it working, by an intrinsic necessity of its nature, not by design and volition.

THE SPENCERIAN METAPHYSICS.

Lovers of thorough thinking cannot help the conviction that the direction and degree of indebtedness to Herbert Spencer is at present seriously inverted; nor can they suppress the prophecy and the hope that this inversion may some time be corrected. The popular consciousness has imbibed more of his metaphysics than of his invaluable studies in biology, sociology, and ethics. This is natural; but it is also regrettable. It was probably inevitable in the sequences of psychologic growth that the part of Spencer's work which offered a substitute for the disappearing theologies should become most quickly popularized. The first hundred and twenty pages of *First Principles* (about a fourth of the whole book) are busied with a refined metaphysical problem, nothing less than what the late Prof. Clifford called an attempt "to solve the universe." The modesty of science takes things in parts, but nothing less than the universe contents the ambition of philosophy. Had Mr. Spencer been content with the glory of a *scientific* philosopher,—*i.e.*, if he had drawn his splendid generalizations solely from experience,—there would have been no loose stone in his beautiful temple. As it is, his metaphysics hangs by the loosest possible attachment to his physics. A slight pull will detach it: a breath will almost dislodge it. Let us see if we can make clear this instability.

The general criticism is not a new one, but is in range with that applied by John Stuart Mill to those English and French systems which diverged from his own. It is inconvenient that Mr. Spencer gave no distinctive *name* to his metaphysics. He calls the entire body of his work *A New System of Philosophy*, and nine tenths of it actually consists in the elaboration and application of the law of evolution. Thus, his real inductive philosophy is the majestic system of evolution. But on the narrow area of his metaphysics has been reared a popular and easily intelligible set of ideas, which its creators have named agnosticism. This statement must be taken with some local limitation however, since in England a modified Comteism has helped to create agnosticism. But agnosticism in the United States is generally traceable to Spencer's metaphysics. Then, in addition to this popular absorption and reproduction, helped by lecturers like Mr. Ingersoll, who have broken the Spencerian bread in a hurried way to the multitude, there have been scholarly and careful men like Mr. John Fiske, who, approaching their master in a reverent and philosophical spirit, have tried to interpret him to the intelligence of the critical. Thus, the thinking, if not the name, of Herbert Spencer, has been widely influential. It is to those who have taken his metaphysics into more thoughtful acceptance that this criticism appeals.

Mr. Spencer himself, and his disciples still more earnestly, would object to the application of the word "metaphysics" to anything which he has written. But what are all the minute arguments to prove an "Absolute," an "Unconditioned," or an "Unknowable," except reasonings toward a pure metaphysical entity? Sometimes, Mr. Spencer calls this *something* "Being," "Ultimate Reality," "Inscrutable Power," or the "Infinite"; but he always capitalizes it, and he reiteratedly and unqualifiedly affirms its existence. He makes science yield this "Absolute Being" as its final term: he makes religion yield it likewise. He makes it the substratum of matter: he also makes it the substratum of mind. In the chapter on the "Persistence of Force," he identifies the Unknowable with that abstraction: saying, "Thus by the persistence of Force we really mean the persistence of some Power which transcends our knowledge and conception. The manifestations, as occurring either in ourselves or outside of us, do not persist; but that which persists is the Unknown Cause of these manifestations. In other words, asserting the persistence of Force is but another mode of asserting an Unconditioned Reality, without beginning or end; . . . and this persistence of the universe (in consciousness) is the persistence of that Unknown Cause, Power, or Force, which is manifested to us through all phenomena." Here, and in other paragraphs, the great thinker endeavors to vitalize the Absolute so far that we shall accept it as an irrefutable, overawing fact or presence, while at the same moment that he thus breathes into it the breath of life, he tries to strike it dead by proving that it can never come into experience, that we can know absolutely nothing of it, that we may not even predicate unity of it, or liken it to anything else in thought, but simply admit its existence because of the impossibility of conceiving its non-existence. The chief part of the argument is given to the demonstration of the *existence* of the Absolute; and, at the end, the impression left on the mind which accepts the reasoning is that of a vague but intense *somewhat* penetrating or underlying the universe, hiding behind the personality of human minds, and making experience possible only by its self-revelations. The *reality* of this Absolute out of which phenomena emerge is as distinct to the reader as Plato's Over-soul. Invest Mr. Spencer's Absolute with personality, and it can at once be classified with the gods of Greece. Under its present statement, it approaches more nearly to the impersonal Brahm of the Hindu metaphysics than to anv other religious conception. It has no more title to existence than the "Absolute" of Hegel, a postulate which he arrived at quite in defiance of experience. It is philosophically identical with the entities and quiddities of the scholastics; *i.e.*, it is arrived at by an equally illegitimate process of thinking. It is difficult to see why Mr. Spencer, who promised us the deanthropomorphization of the universe, should have created and placed within it this huge ontological spectre.

It is not easy to indicate in brief space the faulty bases of the Spencerian metaphysics. The primary cause is doubtless inherited intellectual tendencies. Mr. Spencer is the heir of ages of unscientific thinking. He desires to take his stand upon experience, induction, and pure scientific ratiocination; but he has not done so. He also hopes to be the peacemaker in the old conflict of science and religion. A mind which holds strictly to experience, and to reasoning founded on experience, cannot evolve an "Absolute" beyond phenomena. The word "phenomena" is itself misleading, and should never have crept into modern speech. It has entered our speech because we are the inheritors of the unscientific thought which it expresses. The "phenomenon" is the correlative of the "noumenon"; and no "noumenon" can be found in experience, neither can any be inferred by right reasoning. The prop which upholds all these fallacies is the widely accepted doctrine of the relativity of knowledge. To deny the legitimacy of this doctrine is to be guilty of a philosophical heresy; yet it is a doctrine which is undoubtedly destined to fall with increasing knowledge. This doctrine teaches that we cannot know things *per se*, but only as related to our faculties. The capacity of consciousness is the limit of our knowledge of the external world. This idea is regarded by most scholars as so overwhelmingly self-evident as to need no argument. Granting the relativity of knowledge is in effect to grant the existence of the "Absolute," for the latter is identical with the "noumenon" and with the *thing in itself*. Now, science is continually advancing in the direction of making life or mind an intelligible thing. The mysteries of consciousness are one by one being gathered into the fold of verifiable scientific data. The subtle connection of subject and object is being drawn into the light. We get impressions of the world outside us by taking up motion from it through a system of nerves. These nerve vibrations can be measured, and the rate of progress of motion from afferent to efferent nerve recorded. Sound, mass-motion, light-motion, or electrical motion, occurring in matter not in contact with our bodies, may be brought into contact with them by normal physical processes; and these motions may be taken up by the nervous matter of our bodies through the correlation of force (or *motion*, for all forces are resolvable into motion), and these motions will produce in us their exact equivalents of consciousness or nerve action, precisely as mechanical action produces its equivalent of heat when transferred or translated to adjacent bodies, or as heat produces its equivalent of mass-motion in moving a train, or as electricity produces its equivalent of light when arrested by the carbons of the electric lamp. The human body with its specially responsive nerve system is correlated with all other matter in the universe, and takes up motion from it continually, this motion reappearing in the brain as thought, in the muscles as mass-motion, etc. The latest physiological researches are proving the human body to be but a medium for the transformation of energy, a wondrously sensitive and complex medium, but still only one in a series of material masses through which motion, or energy, passes in its ceaseless round. Physiology will be the destroyer of the doctrine of the relativity of knowledge by putting, in place of its mystic phraseology, proved and intelligible organic processes which can be distinctly stated, because understood. There is no more difficulty in conceiving the transformation of molecular or molar motion into sensation and thought than in conceiving them as transformed into electricity or heat. Improbable or not, the fact that they are so transformed is irresistible. We cannot see ourselves think, because thinking is not a motion which acts upon the optic nerve; but, if we had instruments sufficiently nice, we could doubtless see the physiological nerve motion which constitutes thought in the person or animal in whom it occurs. As knowledge advances, the "Absolute" must fade away out of mind and out of matter, like all its metaphysical kith and kin that have gone before.

M. A. HARDAKER.

PHILOPROGENITIVENESS.

Weeds are always a thriving kind of vegetation; and low-grade humanity is always philoprogenitive, always increases and multiplies in the face and eyes of its inability to maintain its progeny, which are cast upon society as waifs, to take their chances in the struggle of existence. Darwin tells us, in his *Descent of Man*, that the reckless, degraded, and often vicious members of society tend to increase at a quicker rate than the provident and generally virtuous members. Meantime, the mortality among the children born of such a parentage is always great.

This improvident, rapidly multiplying kind of population is known as *proletgires;* that is, as people who have many children and not much else. Out of its ranks, current industrialism draws its cheap laborers. In the English manufacturing districts, this description of population increases and multiplies wonderfully when labor is in great demand and well paid, and wanes and dwindles in hard times. Everybody remembers the Æsopic

Digitized by Google

fable, in which some philoprogenitive animal, the rabbit, perhaps, is represented as taunting the lion with the smallness of his family. "It is true that I have but a single offspring," replied the king of beasts; "but that is *a lion*." Meantime, Dr. Allen, of Lowell, continues to indulge in jeremiads in regard to the decline of the family in New England. It is undoubtedly true that the matrimonial bond is not so strong as it used to be, and also that the stirring, locomotive populations of the present day are not likely to have, and do not have, such large families as the less enterprising, stationary populations of the past had. But we are living in a transition period.

Humanity everywhere is pervaded by new hopes and prospects. All its powers are taxed and called into intense activity by the exigencies of current civilization. Men will no longer consent to vegetate merely. But let not Dr. Allen be disturbed. There will be no failure of humanity either here or elsewhere; for the nature of things has so ordered it, has given the sexual passion in such excess, that there can be no such failure. As long as there are youth and beauty, there will be love and desire, and, as an inevitable corollary, progeny. Indeed, the tendency has always been, other things being equal, for populations to increase too rapidly for their own good or the good of the communities to which they belonged. Such an increase subjects the mass of the people in overcrowded countries to the extremes of poverty. Misery and epidemic diseases are liable to decimate, and do periodically decimate, such overcrowded countries, thus restoring the social equilibrium. Such overcrowding makes human beings too cheap, in fact the cheapest of all commodities. As ignorant, improvident, low-grade populations are apt to multiply the fastest, so they are apt to become turbulent and social nuisances by their mere numerousness. Since the mass of the rural population of France became small real-estate owners, the census of that country has remained almost or quite stationary.

The philoprogenitiveness of the French peasant is now restrained by prudential considerations. He has in fact, though unconsciously, become a Malthusian. Napoleon I. told Madame de Staël, who had inquired of him whom he regarded as the noblest woman, that the woman with the largest family was entitled to the foremost rank in her sex, in his opinion. But he wanted recruits for his armies and as food for powder in his perpetual wars. That was why he was in favor of a reckless and indefinite increase and multiplication of population. But the thrifty French peasant of to-day has no disposition to burden himself with a numerous family for the sake of furnishing cheap laborers or cheap soldiers to selfish capitalists or selfishly ambitious usurpers.

It is needless to say that overcrowded populations are necessarily at the mercy of wealth and ambition. Such political institutions as ours do not thrive in dense, poverty-stricken populations. Indeed, they were never intended for improvident, ignorant, proletarian communities, but for an intelligent, foresighted, well-to-do average people, with plenty of room and means to live in a state of self-respect, and material, moral, and political independence. It is among low-grade, dense populations that despotisms of all descriptions, both civil and ecclesiastical, thrive and have the best prospects of an indefinite continuance. Dense populations crowded into narrow territorial limits are kept down by their very numbers. Their only hope is in emigration. No change of government will better their condition.

The philoprogenitiveness of the German people, while it keeps them in straitened circumstances at home, is good for the world at large, because their straitened circumstances and compulsory military service drive them to emigration; and German immigrants are invaluable to all new, sparsely settled countries. Such considerations as the above are calculated to mitigate the melancholy of Dr. Allen over the decline of philoprogenitiveness here and elsewhere, albeit there is really no lack of children in our *live*, thriving towns and cities. On the contrary, the racket in the streets of many places indicates that there is a surplusage of them.

B. W. BALL.

UNITARIANS IN CONFERENCE.

I

Having attended at Saratoga the meetings held September 19, 20, 21, and 22, I propose to give in three papers a critical sketch of the present aspects of Unitarianism as represented in its National Conference.

It is instructive to note the indications given by Unitarian prayers, and in fact by many orthodox prayers. They consist largely of confused thoughts hastily meditated and uttered in view of the human audience, not the divine hearer. An avowed agnostic meditation could not be less real prayer, and might easily be more serious and suitable, than these thoughts spoken to men under the guise of an address to God. Dr. J. F. Clarke opened the first conference meeting with a prayer largely spoken to the audience.* In what he spoke to God, he said, "We come together as those who love thy Dear Child and our Dear Brother, Jesus." This exactly represents the survival of Orthodoxy which still does duty in the religion of many Unitarians. Instead of grand adoration of the Infinite, the Eternal, the Almighty God and Father, which is alone genuine Unitarianism and real religion, there is a feeble and dying worship of Jesus. If Unitarianism should prove unequal to its natural future, it will be from its failure to wholly and absolutely pass from the utterly wrong worship of the old faiths to an utterly genuine and pure worship. Does any one suppose that if the plainest and deepest teaching of Jesus himself had been heeded, to worship and serve only the Lord thy God and to take the only God and Father as the example of perfection, that any Teacher, Prophet, Master of truth and example, would be referred to as Christ is referred to by very many Unitarians? The theism of this worship of Jesus is so faint as to have almost no effect; and it seems to me that, on the conservative side of Unitarianism, a good deal more than on the radical, the truth and power of a genuine faith, able to meet agnosticism and to maintain a barrier against atheism, are wanting. To say that Christ was genuine and true as a man, pure and profound as a teacher, admirable as a human example, and grandly providential as a radical reformer, is intelligible, and is to me true. But this is not to say that he is a religious object. And probably the least suitable substitute for an infinite God ever acknowledged is the man whom Unitarians make Jesus to have been, while yet there survives with them a worship of him, the weakest and least useful possible. There is already taking shape a Free Religion of Orthodoxy, the root of which is pure adoration of the Infinite Father; and within no long time it will go to the front, and leave Unitarianism hopelessly in the rear, unless Unitarians can beat their music out to a grand pure theism, as the conservatives among them have not yet adequately begun to do.

Gov. Long, as President of the Conference, opened the conduct of business with a few fresh and inspiring words. As chairman throughout the meetings held, he was from first to last both able in his duties and broad and genial in his sympathies. He commended the Conference to the clearer light and the larger progress of the future, and his whole spirit and action were in harmony with this.

The Rev. G. Reynolds, President of the Council, made the report of that body. Mr. Reynolds is the ablest and broadest denominational agent ever employed by the Unitarian body. With solid good sense, sagacity, and tact, catholic sympathies, and sledge-hammer strength, he is the right man to get the most done with the least means, which is the problem given him to solve. He tells his constituents, plainly and justly, that on a not too certain expectation of thirty-five cents, they ask him to spend fifty cents. I refer to his office as Secretary of the American Unitarian Association, which gets $35,000 a year where its lowest limit for work to be done ought to be $50,000, and never gets that in good business season. But Mr. Reynolds is not sour in even his complaints, and in his hopes and resolution he is grandly cheerful. He conceives that the Conference exists to quicken and inspire, to advise and appeal, to make inquiry and to give instruction; and he desires that thereby the Unitarian body shall keep abreast of advance, shall know the subjects which are in the air, shall cause the movement of faith and life to be no monopoly of the clergy, and shall make union real and piety intelligent, and get work out of old ruts into new and broader fields. He considers, and wisely it seems to me, that the Conference is not so much a practical working body as it is a practical source of inspiration and influence, amply exercising practical power without taking in hand practical details. This ideal is not, however, very closely followed. There is too much of details, reports, and routine business, interfering with large discussion, broad attention to general plans, and close pursuit of inspiring inquiry. The Western men have an heroic Conference which does everything at once, not having learned that the Mary of fervent ideals and the Martha of denominational housework were best given each a place; and they are crazy to "amalgamate" the American Unitarian Association and the National Conference, and wildly prophesy the coming of the millennium if they can see Mr. Reynolds and Mr. Thayer, the two secretaries, in one jacket, which is to be the jacket, in this case, of the smaller man. They would only damage immensely the Conference as an organ of inquiry, of thought, of inspiration, by making it take in hand the multifarious work of the Association. What is wanted rather is to make the Conference, more purely than it is now, a school of broad plans, of large principles, of ample free discussion, and of grand inspiration; a school of liberty and learning, of fellowship and communion, from which ministers and delegates will go back to their homes nobly quickened and greatly instructed. The spasm of "work" which has had a beneficent side has had also a side of ill effect, in denying ideas and ideals, thought and enthusiasm, study and discussion, their due place. Unitarianism has so largely dealt thus far with negation and criticism, and so little with reconstruction and new positive development, that it peculiarly needs to use to the utmost the opportunities of free conference, which some of the more conservative are unworthily afraid of, and many of the more radical are not enough awake to the need of.

Mr. J. Page Hopps, an English Unitarian minister, opened the work of the Conference by an essay on "Jesus Christ's Unfulfilled Ideal of Religious Unity." To Mr. Hopps, Jesus Christ is a man simply, not an object of worship; and, had he done himself justice, his theme would have been fruitful of radical suggestions. He might have outlined

* Dr. Clarke began a passage of his prayer with these words: "And when we remember that dear brother by whom at first was done so much to form this union."

Digitized by Google

the demands of the present time upon Christianity, and asserted that to meet them would only require a recovery of the original ideal of Christ. But Mr. Hopps proved an exhorter rather than a thinker and scholar. I asked as instructed and acute a critic as I could consult to tell me what his critical opinion of Mr. Hopps' essay was; and his reply was, "A pleasant and interesting statement of the thought of fifty years ago, with a touch of nineteenth century interest at the end of the paper." About all that Mr. Hopps had to say was that the ideal suggested in the Beatitudes and the command to love one another remain unfulfilled. He was commonplace; and he contrived to about half-spoil the delivery of his exhortation by lying down on the pulpit most of the time, and reading as if to a few persons under his nose instead of to the very large audience before him. It is a not uncommon English habit. Some points of Mr. Hopps' essay were very well put; and, though never very high, he rose steadily to the end. To talk of Christian unity, he said, was like telling an idle dream. The creeds are clearest in the clauses that damn. But, in the great hereafter, men will have to make the best of the fact that the great God proves to be no partisan. Half the bliss of heaven will consist in reconciling the enmities of earth. If a broad ideal carries us beyond Christendom altogether, and embraces the pagan, so much the better. There are other names given under heaven than that of Christ, whereby men may be saved. In fact, the highest intimations of divine unity will be found in the secular life of the nineteenth century, its spirit of universal brotherhood which grows out of the idea of the fatherhood of God. The ideal is not yet achieved, not yet approached even. There shall be not only a united church, but a united humanity. We may be sure that the ideals of man are the promises of God.

A good example of the inspiring instruction wanted on the conference platform was given in Dr. W. B. Carpenter's address, "Upon the Influence of Science on the Progress of Religious Thought." Dr. Carpenter is an F.R.S., Fellow of the Royal Society. The *Christian Register* gave to these letters of high dignity the meaning "Free Religious Society." Dr. Carpenter had nothing new to say; and he was conservative in his application of the truths of science, but what he said was interesting and quickening. He pointed out how creation had been found to be a continuous act from all time. The object of science is the discovery of laws expressing the uniformities of nature,—*not* governing, regulating, ordering phenomena, as is too often said, but expressing observed uniformities. We get from science a conception of energy, force, power,—not motion merely, but a cause of motion. All modern science grasps the idea of the unity of all the forces of nature, and we are by this left where we must see a constant sustaining action of creative power. Push evolution speculations to their utmost limit, and we only get to one force of which all forces are the expression. Science itself has obtained an immense emancipation from trammels of authority, such as the dogmas of Aristotle. Prejudice, stronger in Protestant lands than anywhere else, and strongest of all in Great Britain, has slowly given way; and with freedom of science has come the progressive enfranchisement of thought, and the love of truth for its own sake. Mistakes have indeed been made. Liebig said, "Show me a man who has made no mistakes, and I will show you a man who has never worked." Darwin was an incarnation of the love of truth, and there gathered at his burial an unexampled company of the men and women of intellect in England. The Darwin family are of long association with Unitarianism in England, a body that has never been afraid of any truth whatever.

The Conference was never so large in numbers as it has been now, nor more attentive to the serious business which brought so great a company together. E. C. TOWNE.

ELECTRICITY AND LIFE.

The Rev. Edward C. Towne, who has lately returned from several years' residence and study abroad, has in preparation three lectures on the Natural History of Creation and Development in the World of Life, the purpose of which is to announce and establish the following conclusions:

1. That all life in both animals and plants is due to atom charges of electricity carried into the living system by the oxygen of respiration; life being not at all the result of the properties of protoplasm, but of oxygenic electrisation of the protoplasm.

2. That the natural course of electrical action in protoplasm establishes functions and creates structure to corespond to function.

3. That variations arise from the influence of the environment upon electrically conditioned reproductive germs or embryonic forms, and give the true origin of species,—not by means of natural selection, as Darwinism teaches, but by a vastly easier and more rapid and efficient method of natural creation.

The views advanced in these lectures get rid of the protaplasm theory of the basis of life, and of the minor theories of Darwinism; but they confirm and greatly strengthen, Mr. Towne thinks, the main doctrine of evolution. If accepted as true, they must form an addition to human knowledge of the greatest significance and interest, discoveries in fact almost without a parallel, whether as contributions to science or in their relation to medical knowledge and practice. The special titles of the three lectures are: The Electrical Origin of Life; Creation and Development through Electrical Agency; and The True Origin of Species by Natural Creation.

It will be remembered that Prof. Helmholtz, in his Faraday Lecture last year before the Chemical Society in London, lent the highest authority to the view which, as Prof. Helmholtz stated, was first brought into notice by "the elaborate electro-chemical theory of the renowned Swedish chemist, Berzelius,"—the view that atoms are in a state of electrical charge, and that, in Prof. Helmholtz's words, "the quantities of electricity with which the atoms appear to be charged are exceedingly high." It is from this fact that Mr. Towne proceeds to show that in all protoplasmic forms in which liveliness or life appears, whether animal or plant, the vital state and vital motions are due to the charge and currents of electricity brought in from without by the oxygen atoms on which all life is found to depend. This is the "working hypothesis" upon which it is proposed to reconstruct the foundations of biological science and of medicine, and to give to evolution a basis much surer than the Darwinian.

EDITORIAL NOTES.

AT the National Unitarian Conference last week, Rev. M. J. Savage proposed that the following Article should be added to the Constitution:—

ART. 10. While we believe that the preamble and the articles of our Constitution fairly represent the opinions of the majority of our churches, yet we wish distinctly to put on record our declaration that they are no authoritative test of Unitarianism, and are not intended to exclude from our fellowship any who, while differing from us in belief, are in general sympathy with our purposes and practical aims.

The Article, being referred in regular order to the Business Committee, was reported back favorably, and, after the briefest remarks commending it by Messrs. J. F. Clarke and E. E. Hale, was adopted almost unanimously, without debate, and perhaps before a large portion of the meeting waked up to the fact of what was being done. Even Mr. Savage had no opportunity to make a speech upon it. Discussion evidently was not wanted by the majority. We understand, however, that Mr. Savage (who considers the points well taken in our recent article on the "Relation of Radicals to the Conference") is satisfied with the result for the present, as giving him a position in the Conference which otherwise he could not have had, and from which he can work for a more effective amendment hereafter. To us, the new Article seems inadequate, even more so than the compromise Article passed in 1868 and rescinded in 1870. But Mr. Savage is alert and vigorous, and he may be able to use his new vantage-ground to good purpose. We advise him, however, to keep his eyes open and be on hand early at the next Conference, or somebody on the other side, by the same quick process and without the unnecessary formality of a discussion, may get this year's Article rescinded by the like unanimity, and another adopted in its place, clinching the Conference anew to allegiance to the dogmatic Preamble. W. J. P.

THE following is from the *Presbyterian*: "It is stated in the *Advance* that, not long before Theodore Parker went abroad and died, Emerson said to him at Concord: 'We must get rid of that Christ, we must get rid of that Christ!' If the story is true, it agrees with everything known about Emerson, and with much written by him. He was an eminent and quite attractive Pagan, living in the nineteenth century, but living a life wholly apart from Christ, and ready, as the above remark indicates, to say, 'Away with him!'"

IT is strange that a scholar of Mr. Chadwick's critical ability should have imagined the very able work, *A Candid Examination of Theism*, was written by a weakling like Mallock. We quote the following from a communication in the *Christian Register*, by Thomas R. Slicer: "The most authoritative information came to hand only to-day from London, where the book was first published, saying that the author of *A Candid Examination of Theism* is G. J. Romanes, whose 'chief writings are on physiological subjects.' I am assured there can be 'no mistake' in the statement of the authorship. You will recall a book of Mr. Romanes just announced, *Evidences of Organic Evolution*."

THE *Christian Union*, last week, contained a very fair editorial on "An Important Discussion on Evolution," in which it gave the leading ideas of those who spoke at the meeting of the Evangelical Ministers of Boston and vicinity, held in Boston, September 11. We quote the concluding paragraph only: "It is worthy of mention that the views of Prof. Gray, as well as of Prof. Chadbourne, were received with great cordiality. Although the majority of clergymen may not be prepared to go as far as the Cambridge botanist,—the acceptance of evolution,—they are not only willing, but even eager, to know the evidence for the theory. The time when ministers scoffed and derided Darwin and his disciples has forever passed." The *Congregationalist* concludes its notice of the meeting thus: "Great interest was maintained throughout the meeting, many being unable to gain admittance. There was some criticism of the committee for having invited one holding such views as Mr. Underwood to address the meeting."

MR. W. C. GANNETT explains in a recent number of *Unity* his motive for moving the reconsideration of the resolution concerning "Freedom, Fellowship, Character, etc.," adopted, as Rev. C. W. Wendte had declared, by a unanimous vote at the late Western Conference. It was, he says, because the vote was *not* unanimous, and our own conjecture as to his motive was mistaken. The following spirited words of his are worth quoting: "The very policy that we need to-day is a policy of daring faith,—a faith in rational and moral principles, not merely as necessary to religion, but *as necessitating religion.* Unitarianism has long stood for the first: it is the last which we hesitated to declare at Cleveland. And this last thing is the faith that will yet be formally declared,—if not by Unitarians, *then by others for lack of Unitarians.* And, if this faith be not Christianity, then on this faith, *for lack of Christianity, a new religion will arise.*" (The last italics are ours.) He retains his impression, however, that "Unitarians will yet be glad suitors for the apostleship of the high faith."

WE clip the following from the New York *Sun*:—

The death of President Allen of Girard College, Philadelphia, has called public attention to the provisions made in the will of Stephen Girard against Christianity being taught in the institution which he munificently founded. During Mr. Allen's illness, neither his pastor nor any other Christian minister could visit him, and none could go within the college walls to take part in the funeral services. But the exclusion of ministers does not seem to have accomlished what Girard intended. . . . The Girard heirs and the trustees of the fund are said to be a unit as to the propriety of teaching Christianity in the college, while technically obeying the will by excluding clergymen.

That part of Girard's will excluding Christian ministers from the college he founded, although its object was to protect the institution from ecclesiastical influence was neither liberal nor wise; but "teaching Christianity in the college" is as palpable a violation of a public trust under the forms of law as ever occurred, involves dishonesty and perfidy on the part of all who are responsible for it, is a disgrace to the State of Pennsylvania, and serves to illustrate what is now evident to all honest observers,—that zeal for evangelical Christianity is compatible with the absence of those common sentiments of justice and fidelity which are acknowledged by all honorable men. We make this statement deliberately, and hope to live long enough to see the decision by which this injustice was perpetrated reversed, and the will of Stephen Girard faithfully executed.

THE *Churchman*, like the other religious newspapers, has its say about Col. Ingersoll's reference to the picture of Mary at the cross in his speech in the Star-Route trial, and his comparison of her faithfulness with that of the wife of his client. Why, asks the *Churchman*, in the whirlwind of its passion, should Col. Ingersoll venture to take such a subject on his lips at all? "For one who has been for years deriding the Gospel and the Gospel story, whose mean ambition is to be known as a disbeliever in Christianity, and who but a few minutes before had insolently announced his doubts of the very existence of God, to dishonor the name of the Redeemer, by taking it upon his lips and dragging it into his address for dramatic effect, arouses the indignation and disgust, not of Christians alone, but of all lovers of decency." Concerning which brave language it should be remarked that, whatever is to be said of Col. Ingersoll's taste in his reference to the woman at the cross in connection with Mrs. Dorsey, the matter has nothing on earth to do with religion or the "existence of God"; and, in all good nature, we advise the religious newspapers to make capital out of something other than this, else the people will think them very hard up indeed. Col. Ingersoll has the same simple right to the illustration as the Bishop of Connecticut or the Pope of Rome or anybody else. The religious newspapers are indeed often very dull, but certainly none of them ought to be so dull as to imagine that Col. Ingersoll's "derisions" of some archaisms and absurdities in the "Gospel story" must needs affect his reverence for the character and teachings of Jesus himself or his appreciation of the faithfulness of the woman at the cross. The ecclesiastical mind seems to find it difficult to conceive of any reverential or even honorable attitude of mind toward Christ in one who does not view him as "the second person of the blessed Trinity"; and the *Churchman* evidently believes that all enthusiastic or even respectful words concerning Christ from such a one are mere sentimental buncombe or hypocrisy. The *Churchman* has much to learn, and, among other things, this,—that no "insolence" of Col. Ingersoll ever equalled the insolence of assumptions like these.

SUNRISE.

With sudden flash behold the sun
New-risen intensely burning,
To glorious Cosmos once again
Night's formless chaos turning!
His blinding splendor flows abroad
In mighty inundation:
What wonder that the primal man
Bent low in adoration,
As if he heard ring in his ear
The fiat of creation?

Apocalypse more grand, august,
To prophet ne'er was given,
When, into awful vistas oped,
He saw the future riven,
The misty mountain-tops and vales
With Memnon-strains seem sounding
To hymn day's luminary vast,
Once more old night confounding.

THE VOICE OF THE MORNING.

I sit on our "blessed veranda"
In the sweet early cool of the dawn,
Inhaling a life-giving fragrance—
The breath from its purity born.
Farewell to the night-wings of slumber!
Refreshed, at the coming of light,
I wait for the voice of the morning,
As we listened the hush of the night!

To the west, down our beautiful valley
The vaporous mist rolls afar:
It has followed the gates of the sunset—
Departing with vanishing star.
And clouds have the orient shadowed,
The day-god to hedge on his way,
But crimson and purple above them
Are promising tokens of day.

The birds sing their songs in the tree-tops,—
My heart is a-tilt with their song:
Above the dark cloud there is spreading
An exquisite glory along!
And HOPE is the voice of the morning
That carols its joy to my soul;
For sadness hath fled with the shadows,
And Love crowns the infinite whole!

The Index.

BOSTON SEPT. 28, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

EVOLUTION

In its Relations to Evangelical Religion.*

Addresses of B. F. Underwood, Prof. P. A. Chadbourne, and Prof. Asa Gray at a Meeting of the Evangelical Alliance held in Boston, Sept. 10, 1882.

Address of B. F. Underwood.

Mr. President and members of the Association:—

I wish first to express my appreciation of the liberality evinced in your inviting an avowed free thinker to present before you for consideration and discussion objections to your faith, based upon science. In the letter in which your Secretary requested me to speak on this occasion, I was informed that the subject would be "Evolution in its Relations to Evangelical Religion"; and accordingly, in the time permitted me by your courtesy, I shall endeavor to state some of the principles of Evolution, with a reference to such facts as will serve to illustrate the theory, and to show some of the points of conflict between Evolution and Evangelical Religion, as I understand these two systems of thought.

Evolution implies a continuous process of change in which every event has an antecedent; in which the condition of any given age is the outgrowth and product of all pre-existing ages; in which a fundamental law is the integration of matter, and the concomitant dissipation of motion, exhibited alike in the crystallization of carbon into a diamond and the growth of an animal from a germ; in which, in the field of biology, where Evolution becomes a double process, there goes on, with the integration of matter, increasing multiformity, together with increasing coherence, definiteness, and mutual dependence of parts, and a

*Although the subject was announced at the meeting, "Evolution: Is what is proved about it antagonistic to Biblical Creation and Evangelical Religion?" it is given above as stated in the following letter, asking Mr. Underwood to give the address:—

SCITUATE, MASS., Aug. 16, 1882.

B. F. UNDERWOOD, ESQ.:

Dear Sir,—I have been shown in *The Index* some articles of yours on Darwin and Evolution, etc., and you have thus been indicated as one likely to do a desired service.

The Evangelical Ministers' Association of Boston and vicinity, commonly known as the "Evangelical Alliance," has a regular meeting at Wesleyan Hall, Monday, 10 A.M., September 11. It is designed to have presented the subjects of "Evolution in its Relations to Evangelical Religion." It is presumed that you would take the ground that this evolution would damage the Bible and its account of creation, and disparage evangelical religion. If that is your position, will you do us the favor to present your views in a paper of twenty minutes or more, or an oral address? At that time, Rev. Dr. Townsend will follow on the other side.

There will be a large audience, mostly of evangelical ministers, usually some four hundred, who, I have no doubt, will give a respectful hearing to any views you may think best to present on that occasion.

Will you do me the favor to give me an early and I hope a favorable reply? Very truly yours,

WILL C. WOOD,
Secretary Evangelical Ministers' Association.

Digitized by Google

subordination of the various parts and manifold functions to the movements of the whole structure.

Evolution teaches that in this process there is an orderly succession of phenomena in which the thread of continuity is preserved unbroken, and in which every manifestation of force is part of a rhythm of motion, and in the co-operant conditions of which are represented the forces adequate to produce all the phenomena that occur. A manifestation *without* antecedents would be a product without factors. If any one of the great generalizations of this age has been established upon an impregnable foundation, it is that of the conservation and correlation of forces. If the amount of force in the universe is constant, no event can occur without an antecedent in the natural order; for the persistence of force means that, whenever energy appears in one form or place, it has changed from some other form, or disappeared from some other place.

If a cannon-ball, while in a state of rest and operated upon by no external agent, should manifest force in the form of heat equal to the mass motion when shot from a cannon, we would have what I presume might be called a "miracle"; for it would involve a manifestation of force without a natural antecedent, an effect without a cause, a link forming no part of any known chain, the destruction of a link in a known chain, a breach in the ongoings of nature, and a violation of the principle of the conservation and correlation of forces.

But evangelical religion has recourse, for the explanation of certain alleged phenomena, to what are called "miracles," manifestations of force in the natural world without natural antecedents, thus interrupting the continuity of the order, prefacing or supplementing events with something which has no basis in the known laws of matter and mind, and forms no part of the natural order. For instance, when it is affirmed that God once stopped the sun and moon (or we will suppose was meant the earth in its diurnal revolution) in order to favor his chosen people, in battle with the Amorites, we have presented to us an alleged manifestation of power that had no antecedent and no consequent in astronomic phenomena or the cosmic order. And when it is alleged that a being having the form and faculties of man appeared on the earth, born of a natural mother but without a natural father, the statement can be accepted only by believing that the generation and birth of a human being in this world occurred without those co-operant conditions which are absolutely necessary to the continuity of the natural order, to the invariable sequence of phenomena, to the principle of the persistence of force, and to the unbroken reign of natural law in a universe in which, so far as science can discern, there is no deviation from the natural course.

Such a notion is utterly inconsistent with Evolution. If the numerous miracles of the Bible really occurred, then it is certain that numerous manifestations of force have appeared without natural antecedents to connect them with all the myriad interlacing phenomena of ages past; and if such miracles occurred in Judea, a few thousand years ago, they may have occurred in every land and in all prehistoric ages, in which case any reasonings in regard to the formation of worlds or the evolution of species, in accordance with law, by successive modifications and the operation of natural forces, would have no validity whatever. Rev. George B. Cheever, a well-known evangelical minister, evidently takes this view of the subject; for he says, "By their scheme [evolution] there never was, and never could have been, a deity interposing to instruct Adam, to educate Abraham, to inspire Joseph, to put down oppressing Pharaoh, to change the rod of Moses into a serpent, to create an additional frog, louse, or mosquito in Egypt, to call forth waters of a deluge, to spread abroad a rainbow, to speak to the rain to fall on one piece of ground and not on another, to commission a famine or a pestilence or a flash of lightning; every drop of rain and every shower and every ray of light and every blade of grass having been so unalterably woven out of the original supply of force in the web of order, continuous and unbroken forever, as not to admit of a possibility of interference or alteration." But this part of the subject, on which I have but indicated an argument which would require a long discourse to elaborate, I must leave, to consider the relation of evolution to "the Bible and its account of Creation," to which it is expected I will give prominence in this address.

Genesis is, it seems to me, hopelessly irreconcilable with the facts of astronomic and geological evolution, "There were and are," said Dean Stanley at the funeral of Sir Charles Lyell, in Westminster Abbey, "two modes of reconciliation, which have each totally and deservedly failed. The one attempts to wrest the words of the Bible from their real meaning and force them to speak the language of science, and the other attempts to falsify science to meet the supposed requirements of the Bible." The Humboldts, the Darwins, the Huxleys of science, without the aid of inspiration, amid opposition from its defenders, make their discoveries in regard to the order of nature; and when, in spite of the clamor raised against them by those who make the Bible their special study, their discoveries become established, it is declared that the supposed discrepancy is only imaginary, that the newly discovered truths are in perfect harmony with, and in fact a part of, revelation.

"When," says John Weiss, "Galileo pried a flat and inert earth out of the page of Scripture where it lay embedded, rounded it, and set it spinning in a fair orbit to the tune of law, men looked at their Bible with dismay; an empty pit where the earth had rested on its pillars, and all around its edge were texts left as ragged as a crater: the eccentric orb must be flattened into place again to restore the integrity of Scripture. And there stood Galileo, in the fatal nick of time, in the very spot where this readjusting process caught him, and neither God nor man could afford remorse at the spectacle. And all this happened because somebody in Joshua, exulting over a battle, said that the sun stood still until the people had avenged themselves upon their enemies. It must, therefore, previously have been in the habit of moving round a stationary earth. Nowadays, the credit of this miracle is saved at no expense except that of the common sense of the divine who said lately in its behalf that, although there seems to be a slight astronomical difficulty in the case, there must have been an apparent stoppage of the sun, produced, no doubt, by refraction; at all events, produced in some way, because the statement is unqualified."

That we have in Genesis two distinct narratives of the creation, which differ in almost every particular, is admitted even by some evangelical scholars, and never would have been doubted, if found in any other work, ancient or modern. In the first account man is the last, in the second the first, object of creation. In the first account, the earth is represented as producing herbs bearing seed and trees bearing fruit, before man appeared; while, in the second account, the herb does not grow till man has tilled the ground. In the first account, man is made in the image of God; in the second, he is punished for becoming like God in knowing good and evil. In the first account, man is created male and female; in the second, man is made, then beast and fowl, after which woman is made from one of the ribs of Adam. These are but a few of the discrepancies in the first and second chapters of Genesis, which some theologians still think can be made to harmonize with the facts of science.

According to Genesis, the first condition of the earth was a watery one; for "darkness was upon the face of the deep, and the spirit of Elohim hovered upon the face of the waters." This does not correspond with the theory now commonly held, that the earth was once in a nebulous, and afterward in a fiery, condition. A firmament is made to divide "the waters which were under the firmament from the waters which were above the firmament." That "the sense of solidity is combined with the idea of expansion and tenuity in the term" can be shown by the use of the word *rakia* in other passages, and is admitted by the best Hebrew scholars.

On the third day appear plants, including those having fruits and seeds, before any other forms of life were created, when geologists tell us that fruit-trees did not appear till millions of years after the appearance of animal life, and when science knows nothing of a vegetation that preceded by a whole period the appearance of animals. On the fourth day were made the sun and moon. "It is," says Colenso, "a mere evasion of the plain meaning of the words to say that Elohim made the sun and moon to *appear* first on the fourth day,—though they had been long before created,—that is, to the earth, when, however, according to the story, there were as yet no living creatures on its face to see them. The writer manifestly intends to teach that Elohim actually *made* the sun and moon at this time; and, in fact, he uses here the very same word that he had used before in verse seven, 'Elohim made the firmament,' and as he uses it again in verse twenty-five, 'Elohim made the animals of the earth after their kind.'"

Not only is there no warrant for the assumption that the writer meant to say the sun simply *appeared*, but such a notion involves an absurdity; for there was nobody for the sun to appear *to*, and there is no light (no luminousness) where there is no eye. The writer of the account had no idea that the earth was the child of the sun, but thought it was created for the benefit of the earth; nor did he see the absurdity of representing as existing before the sun plants bearing seed and fruit "after their kind," when from the sun alone they derive their vigor. The discrepancies between the order in which animals appeared on the earth and the account in Genesis have been pointed out by numerous writers, and the subject requires more time than can be given it in this short address. I will content myself with reading the following, from Prof. A. R. Grote: "Again, the distinction between 'the beast of the earth after his kind, and cattle after their kind,' shows a belief that domestic animals were created in a state of domestication. The Hebrew word *b'hema* means cattle; *i.e.*, domesticated animals, in contradistinction to wild animals. The other term, *chayah*, means wild beasts, in contradistinction to tame animals. The use of both terms show that both kinds were believed to have been created 'after their kind,' and as distinct species. There is nothing contradictory in the conclusion that the statement was at one time believed in, because savage man still believes in parallel assertions; and this particular belief was generally current in Europe before naturalists had shown its contrary to be true, and that all domestic animals were originally wild, and by man's selection have been changed from their original physical condition. A vegetable diet is also assigned at first to beasts and man; but the physiologist knows that carnivorous animals have always existed, and that the instincts of animals are true to their teeth."

The account in Genesis evidently means to represent that the heavens and the earth were made in six literal days. "When," wrote Moses Stuart, a good Hebrew scholar and author of a Hebrew grammar, "the sacred writer in Genesis i. says 'the first day,' 'the second day,' etc., there can be no possible doubt—none, I mean, for a philologist, let a geologist think as he may—that a definite day of the week is meant, which definite day is designated by the numbers, first, second, third, etc. What puts this beyond all question in philology is that the writer says specifically, The evening and the morning were the first day, the second day, etc. Now, is an evening and a morning a period of some thousands of years? Is it in any sense, when so employed, an indefinite period? The answer is so plain and certain that I need not repeat it. If Moses has given us an erroneous account of the creation, so be it. Let it come out; and let us leave the whole. But do not let us turn aside his language to get rid of difficulties that we may have in our speculations." Since these words were written by Prof. Stuart, the great antiquity of the earth has become an established and accepted fact even among theologians, but the meaning of Genesis has not changed. And as Arch-deacon Pratt says, "It is extremely difficult to believe that the seventh day is a long period, and the Sabbath day an ordinary day; that is, that the same word 'day' should be used in totally different senses in the same short sentence and without any explanation." Says Prof. Grote, who is a good Hebrew scholar as well as an accomplished scientist: "To take these days as indefinite periods is a proof of a want of exact thought: it is an exploded statement with the new facts, rather than cut loose at once from demonstrated error. The Hebrew word *yōm* not only means a day of twenty-four hours, but it expressly means *day* in this connection.... It is clear also that it is only at the newer demands of science for more time in the creation of the world that the 'harmonists' have been tampering with the word *yōm*, and displaying an ingenuity and wisdom in their conjectures before which inspiration itself must 'pale its ineffectual fires.' The charge of blasphemy recoils on the heads of those who unintelligently handle things they themselves declare in advance to be sacred. We read in the fifth verse of Genesis i. that God called the darkness '*night*,' which cannot refer to 'cosmical' darkness, since the Hebrew word for night, *la-y'lah*, is derived from a root, *la-ah*,—*to cease, to rest*; and *la-y'lah* means rest-

Digitized by Google

time, bed-time: hence, our day and night are meant on the very first day. Moreover, the Hebrew term for day, *yōm*, means 'day,' and nothing else in the ordinary acceptance of the word. And though, like the English word *day*, it may have a figurative value, yet in an historical narrative, as Genesis is assumed to be, the word has its natural, literal meaning; and all attempts to interpret it differently do violence to the spirit of the original Hebrew text and language. Both the Talmud and the Christian Fathers (notably Saint Augustine) insist that the natural meaning of words in the Scriptures shall not be dropped to give them a fanciful and doubtful interpretation."

Man is represented having been "made in the image of God"; while Evolution teaches that primeval man was an ape-like creature, with scarcely anything that is now regarded as the indispensable attribute of humanity. If the facts of homology, embryology, natural selection, etc., sustain the view that the higher forms below man are derived from the lower ones, then the conclusion is irresistible that the human structure is the result of the modification of pre-existing forms of life. The evolution of man from lower animal forms carries with it inevitably the conclusion that the mind of man, including every faculty and tendency, is just as much the product of the modifications, by natural causes, of lower minds as that the bodily structure is the product of the modifications of lower structures. If man bears in his body the results of innumerable changes of *form*, it is obviously a corollary that the powers of thought and the mental and moral characteristics have been developed from the lowest organic activities. We are not surprised that embryology shows, in one stage of the embryonic existence of every human being born to-day, there appears that animal appendage which, in reference to man, has been the theme of so much burlesque, and which, with other vestiges of an animal origin, is retained in a rudimentary condition through the entire life of the individual, indicating not that man appeared on the earth in majestic form or with a "godlike mind," but somewhat as described in that celebrated passage in Horace's *Satires:* "When animals first crawled forth from the new-formed earth, a stupid and filthy flock, they fought for acorns and places of refuge with their nails and fists, then with cudgels and weapons which, guided by experience, they had made for themselves. Then they invented names for things and words to express their thoughts, after which they began to abstain from war, to fortify the towns, to establish law," etc. A very fanciful and, in the light of modern science, a crude statement, but far nearer the truth than the Biblical account. As Prof. Whitney, our American philologist, observes, "Modern science is proving . . . that all the elements of culture, as the arts of life, art, science, language, religion, philosophy, have been wrought out by slow and painful efforts in the conflict between the soul of man on the one hand and external nature on the other,—a conflict in which man has, in favored races and under exceptional conditions of environment and circumstance, been triumphantly the victor, and is still going on to new conquests."

Although we are forced by Evolution to regard man as of lowly origin, yet, as Huxley says, "thoughtful men, once escaped from the blinding influence of traditional prejudice, will find in the lowly stock whence man has sprung the best evidence of the splendor of his capacities, and will discern in his long progress through the past a reasonable ground of faith in his attainment of a nobler future."

In geology there is no confirmation of the theory of six days, whether they be considered usual days or long periods. Lyell gives fourteen principal groups of rocks, formed during fourteen successive periods, and thirty-five subordinate groups representing as many periods. And rocks are being deposited now at the bottom of the sea, full of the remains of living creatures, in a manner similar to that in progress millions of years ago. The God of the Bible "rested" from his work, and was "refreshed." *Evolution never rests.*

Evangelical religion teaches the existence of a God infinite in presence, yet a personal being; infinite in knowledge, yet a being who contrives, plans, and designs; infinite in power and goodness, yet the author of a world full of imperfections; who is not the cause of evil, and yet once he alone existed, and everything has proceeded from him; who is unchangeable, yet remained inactive during a beginningless past, until his *first* experience in creating, when he assumed the *new* relation of a creator to the worlds he created; who made things right, and pronounced his work good; but that a being of his own creation introduced disorder and moral evil into this world; that, in consequence, man, who was originally upright and sinless, fell from his high estate, and owing to this fall all future generations of men are depraved; that from the effects of the fall we can be saved only through the merits of Christ; that, in response to prayer, the order of nature has been changed, and that to-day, drought and famine may be averted or the sick restored to health through prayer; that man has received a book revelation from God, and that beyond it human wisdom cannot go, with it human wisdom cannot compare; that the original condition of man was better than the present; that a portion of the race will recover from the effects of the fall, but not on earth, while millions will be hopelessly damned.

According to the philosophy of Evolution, there is self-existent power from which we come, to which we return, upon which we depend for existence, to which we can see no limits in space or time, which is revealed to our consciousness under the forms of force and matter, but the nature of which is inscrutable; that the cosmos of which we are a part is without beginning or end; that in the sequence of phenomena there are uniformity and regularity, without any supernatural or miraculous intervention; that worlds, life, intelligence, language, government, morals, religion, and civilization have come naturally by processes which are a part of the natural order; that evil is the result of non-adjustment; that man has come up from animals, and the civilized man from the savage; that our imperfect nature has come to us a legacy from centuries of savagery, not from a fallen Adam; that "salvation" from the inherited evil in us and from our immoralities can be secured only by natural methods, involving the suppressing of the bad and the strengthening and increasing of the good; that hurtful conditions in this world can be removed only by natural means; that all books, including the Bible, and the teachings they contain, are outgrowths of the human mind and a part of the product of ages of experience,—of suffering and joy, of ignorance and knowledge, extending through the long recorded and unrecorded periods of man's existence on this globe; that the present is better than the past, and the golden age of the world is in the future.

Address of President P. A. Chadbourne.

Mr. President and Gentlemen of the Association:—

I have received no letter or word of communication from any one here, except a telegram requesting me to be present at this meeting. The subject which has been presented is one of vast importance, and requires not minutes, but days, for its fair discussion. It is fortunate that we are to hear from Prof. Gray. I have been his willing student for many years. He is authority in his own department, and he trenches upon no other. He knows when an argument is fairly presented, and therefore I am specially glad he is present. I wish all the men could be here whose names are to be brought into this discussion. Dr. Gray is known as a Darwinian, whatever he might claim for himself; and yet it seems to me he has done much to cut up Darwinism proper by the roots. Prof. Gray has said that this variation of which Darwin speaks, and which we all recognize, "*is along beneficial lines*," or words to that effect. This implies plan, direction, and, consequently, a guiding intelligence. This statement Darwin would not accept. He plainly saw it was a deadly thrust at his theory of natural selection from indefinite variation in all directions.

The leading suggestion of the gentleman who has presented the paper, is that there has been an orderly evolution, by a natural process, from mere matter and force. To discuss this question in all its bearings on the Bible and religion would require many days, and the time has not yet come for a full discussion of the subject. Men have gone back on themselves. Lyell, who has been mentioned, has not answered his own arguments in the early editions of his *Principles of Geology* on the permanence of species. When all false arguments have been given up, and imperfect observations corrected so that we can get at simple facts, there will be but little left for us to answer. While the time has not come for a full trial or discussion of this subject, the time has come for a preliminary examination such as they have in law cases. It is not to be settled by mere authority. We have had too much of that on both sides. Men of ability have gained authority in one department of knowledge, and then have given opinions on other subjects of which they knew nothing; and men have accepted these opinions, not because their authors knew anything on the particular subject under discussion, but because they knew *something else*. There was a time when many men would doubtless have accepted an opinion from Agassiz on Hebrew, simply because he was authority in zoölogy, as they certainly did accept as truth plain contradictions in Maury's first *Physical Geography of the Sea*, simply because he knew a great deal about the sea. So it has come to pass that many of our learned works, even scientific works, are full of mistakes and crudities, still borne along by authority. We must go back to honest observation and experiment, learn to reason correctly, and to be sure of what we claim as facts. We are not to be bound by, or be held responsible for, the blunders and mere opinions of scientific men or commentators of the Bible.

For a fair examination of this subject, we need two classes of men certainly. First, the scientists,—the chemists, botanists, zoölogists, and geologists, those able to present all that is known bearing upon these subjects. Let every scientific statement be criticised, that we may know just how much is known and what is mere guess-work and theory. We want with them men who have been trained in all the processes of reasoning, men who are competent to weigh proof and test arguments. Let all such work together for weeks, honestly, without any special pleading, and we should have a good preliminary examination, such as we have never yet had. We may as well be honest in this matter, for the earth is too large and the rocks too deep and the laws that prevail too far-reaching for any man or set of men to permanently falsify their teaching. The truth will be sure to come out in the end.

After a careful study of these subjects for thirty years, I have seen no fact in nature and no argument from any of the great men to whom we are so much indebted for scientific labors, that has shaken my faith in the Bible; and, were I to select any part of the Bible as proof of its inspiration, it would be the first chapter of Genesis. The gentleman has presented Moses Stuart of Andover as authority that "day," or *yōm*, in this chapter means a literal day of twenty-four hours. We have only to look at the fourth verse of the second chapter to find how the writer of Genesis used the word *yōm*. He there speaks of creation as the work of one day, putting together the six *yōms* of the first chapter and calling them one *yōm* or period. So of the plants. The word translated "grass" means the tender plants springing up, in distinction from the seed-bearing plants,—a description which accords well with those simple algæ which were the early plants of the globe, and were probably abundant as early as the Laurentian period. The whole order is as they appeared in the rocks. The whales of the fifth day were the *tanninim*, or long monsters like the crocodile, according with the saurians that abounded in the mesozoic period. The gentleman says there have been many periods, thirty or more being recognized by some geologists. Certainly there are many formations, and subdivisions can be made, and geologists have differed much in making these divisions; but they can all be reduced to six great creative periods.*

I accept the statement that this earth was once a mass of blazing gas, the daughter of the sun; that it was, later, a molten ball without a living thing or germ of life upon it. But here we are this morning, men and women, this great city, and all the beings of the globe. How came we here from this melted mass? There must be for all this an adequate cause. Something does not come from nothing. The attempts to explain how we came here, from physical causes alone, have been like the attempts at inventing perpetual motion. The machines seemed all right theoretically, but needed an outside force to set them in motion. Darwin says in his *Origin of Species* that all organic beings were developed from a few germs. But whence the germs, and what were they? They either had in them, at the beginning, the power to develop into all these wondrous forms, or power must have been added to them, from time to time, from without. Any other reasoning is giving effect

* See *Natural Theology*, Lecture XII. My work on *Natural Theology* and on *Instinct* were both referred to. In them, my views on evolution are given at length.

Digitized by Google

without adequate cause; and either theory implies an almighty, personal cause. We must judge from results. When I look at my watch, I see evidence of design; and my belief in that design is not shaken by being told that my watch was made with machines, and they by means of other machines. Men and women, as they now are, are to be accounted for on sound principles of causation. And here is the grand fault of Darwin. He ignores true causation, putting that which is plainly the cause of something as the cause of *something else*, which it is not adequate to produce; as though a stream of water, that under certain conditions could move a thousand spindles, were claimed to be the moving force of five thousand. A good steam-engine and small stream of water may together do the work, but they must both be considered in explaining the movement which neither could produce alone.

We are all greatly indebted to Darwin as an observer. He has laid all naturalists under great obligations to him; but, when he comes to reasoning, to the forming of theories, he overworks all causes and agencies, even the angle-worms in his last volume! From a few germs, the origin of which he has never accounted for,—germs with the power of reproduction and variation,—he attempted to account in his *Origin of Species* for all organic beings by the principle of natural selection. But natural selection, certainly, cannot originate: it can only preserve that which is already produced; and so Spencer's term, "survival of the fittest," is better than Darwin's. But how, I ask the gentleman, can he account for that wonderful variety of animals in the low Silurian rocks, such varied forms of life flourishing together in those seas apparently under the same conditions? Where was the isolation and other conditions necessary for the production of all those diverse, specific forms, according to the Darwinian hypothesis? And so of the sudden appearing of so many new forms of life at other points in the geologic series? LeConte, one of the ablest geologists and a Darwinian, confesses the difficulty, and suggests in his recent work that, at the beginning of those eras, animal life had some unusual tendency to produce new forms. All such explanations confess a breaking of the usual order, and confess difficulties which no theory of evolution from physical causes alone has ever met. The causes assigned for the effects are not adequate to produce them, so far as we can judge of their operation by observation or experiment. The most difficult things are left unaccounted for, or are assumed in the reasoning, as though needing no explanation. Darwin himself found that natural selection had been overworked, that it failed to account for some things in the animal kingdom even in his hands, so he brought in "sexual selection" to supplement it. But this was just as defective in its work. Take a single illustration. He accounts for that marvellous beauty of the peacock's tail by supposing that the females for many generations have chosen the most beautiful males, and have thus secured this wonderful perfection. But this theory requires a male with a beautiful tail to be chosen and a female with a highly æsthetic nature to appreciate the beauty and make the choice! The most difficult things to account for, the original beauty of the tail and the æsthetic nature in the female to appreciate it, both have to be given him before his machinery will begin to work. And so it is all through these theories: the wonderful germs, the most difficult things to account for, are wholly unexplained. In all his reasoning, the principle of causation is imperfectly applied. What we now need is to turn aside from our mistakes and false explanations on both sides, and go back to careful experiments and honest, sound reasoning. With other speakers to be heard from, there is time here to-day simply to indicate what ought to be done.

Address of Prof. Asa Gray.

Prof. Asa Gray, after stating that he had, in response to an invitation to attend the meeting, said that he might make a few remarks if any points came up on which he could give information, but that he was placed at the disadvantage of not knowing what the subject was till he entered the hall, spoke as follows:

Either nature is the outcome of mind, or mind is the outcome of nature. We have to choose between these two hypotheses, for no other appears. Until lately, the first hypothesis was almost invariably held to be the most satisfactory,—to be the only one by which adaptation of *means to ends*, which organic nature is full of, could be accounted for. Has modern science *proved* anything to the contrary? Has it even made the contrary hypothesis (namely, that mind is an outcome of matter) more probable than it was before Darwinism? I should say, Certainly not. Although the latter view has been of late years presented in new forms and supported by new arguments and illustrations, and although there are some who accept it, yet I suppose we may still say that science offers no hindrance to our belief that "God created the heavens and the earth."

At all events, this fundamental question, large as it is, is one upon which a distinct issue can be raised; and it lies at the bottom of the whole discussion.

But the question actually proposed, whether what is proved concerning evolution is antagonistic to Biblical creation and evangelical religion, is not a distinct issue at all. The restriction to what is proved concerning evolution may render that part of the proposition reasonably definite, if only we can agree as to what is proved and what is not; and here I should not altogether agree with the gentleman who opened this discussion. But what, for the purpose of this argument, are we to mean by Biblical creation and what by evangelical religion?

There is an element of change which has to be taken into account. Time was when all scientific beliefs were controlled and modified by religious belief. But, with the rise and development of astronomy, physics, geology, and later of biological science, the tables were turned, and now many religious beliefs—or what were taken for such—are controlled and modified by scientific beliefs, none more so than in the matter of "Biblical creation." The result, I suppose, is that no sensible person now believes what the most sensible persons believed formerly. In so far as the Biblical accounts of creation cover the ground which natural science covers, the relations of the two may be legitimately discussed. And, *on this ground*, settled scientific belief must needs control the religions.

Then arises the question how far and in what way "evangelical religion," that is, the religion of the gospel, is concerned with or responsible for the natural science of the Book of Genesis. I do not take much interest in this question, for I think that a Christian man need not assume this responsibility.

The really important question for us is whether modern natural science is, in any of its demonstrated results or well-established beliefs, antagonistic to the Christian religion. I do not think that it is, or need be. But this is a question well worth your serious consideration.

Concluding Remarks by President Chadbourne.

The suggestions of Prof. Gray are wise and timely, but it seems to me the first question to be considered in such a discussion is plainly the existence of a personal Creator. Till that is settled, the other questions cannot be properly treated. It was on this question of the existence of a personal Creator that I understood the discussion to start here to-day, and therefore on that my suggestions have been made.

CORRESPONDENCE.

NATIONAL WOMAN SUFFRAGE ASSOCIATION OF MASSACHUSETTS.

Editors of The Index:—

The National Woman Suffrage Association of Maschusetts held its first convention of the season at Rockland, Mass., Wednesday, September 20. This is the fourth convention held by this association since its organization, the three preceding ones having been held in South Framingham, South Boston, and in Winchester. The afternoon session was opened by the President, Mrs. Harriette R. Shattuck, who stated the object of the suffrage movement, the reasons why suffrage is asked for, and the aims of the association, giving the reasons why the National Woman Suffrage Association, with its various auxiliaries, applies to Congress for an amendment to the Constitution of the United States, prohibiting disfranchisement on account of sex. Mrs. Shattuck also stated that the association works for suffrage in whatever form seems to be the most expedient, and affiliates with all societies whose sole object is woman suffrage. The next speaker was Mrs. Sara A. Underwood, who read a very impressive paper on the "Strength and Scope of the Woman's Rights Movement." She began by saying that the earnestness with which any reform is attacked is a measure of its progress, and that the cause is now too far advanced for its advocates to be frightened by any opposition, whether coming from writers in the *North American Review* and *Popular Science Monthly* or from those of fewer pretensions. The speaker then reviewed the progress and present status of woman in this and all other countries, and closed her admirable essay with words of hopefulness and encouragement to the workers in the cause. In the animated discussion which followed, the first question presented was whether we, as suffragists, ought to take any action with regard to the resolution passed by the Democratic State Convention. A decided difference of opinion was expressed. Some believed that we ought to support a candidate and a party who have thus, apparently, indorsed woman suffrage. But others, remembering too well the famous "Hail the Day" resolution passed by the Republican State Convention just ten years ago, how much it promised the women, and how little it had fulfilled its promises, opposed taking any action, believing that the Democrats are no more sincere in their promises than were the Republicans of 1872. Miss Huldah B. Loud, Mr. Ira F. Lowell, Dr. Julia C. Smith, Miss Emma F. Clarry, Mr. Jenkins, Mr. Meserve, Mrs. H. H. Robinson, the president, and others, took part in this discussion.

Mrs. H. H. Robinson opened the evening session. Her subject was "Who represents Me?" Mr. Frederick Russell Burton, a graduate of Harvard, class of '82, made an effective speech, urging the men, as voters, to consider the question of woman suffrage as a political issue which in the opinion of the speaker it had now become. He specially advocated the voting of women in municipal affairs, and entreated the women to take advantage of their privilege of voting for school committee. The session closed with a long and interesting discussion on the question, "Is it right and expedient for women to vote?" The usual mild and courteous opposition, on the ground of expediency, added flavor to the discussion and called forth much earnest advocacy of this greatest of all reforms.

The regular monthly meeting of the association was held Friday afternoon at the house of Mrs. Fenno Tudor. The president left that evening for Nebraska, where, as delegate from Massachusetts, she will address the conventions of the National Woman Suffrage Association, to be held, September 26 to 30, at Omaha and at Lincoln, and afterward speak in different towns of the State until the election, November 8. At this election, the voters will decide whether the constitutional amendment, now pending, shall be adopted. If the affirmative prevails, the women of Nebraska will be the political equals of the men. Distinguished workers in the cause from the different States will be present as delegates and speakers. Among these may be mentioned Susan B. Anthony, Rachel G. Foster, Helen M. Gouger, May Wright Sewall, Matilda Hindman, Elizabeth L. Saxon, Phœbe W. Couzins, Elizabeth Boynton Harbart, Mary B. Clay, Eveleen L. Mason, Jane C. McKinney, Marietta M. Bones. The local speakers and workers in Nebraska will also be largely represented. Among these may be mentioned the names of Hon. E. M. Correll, President of the American Woman Suffrage Association, and Mrs. Clara B. Colby.

HARRIET H. ROBINSON.

MISCELLANEOUS.

THE following sensible advice to secularists is from an article we find in the London *Secular Review:* "Let the secularists assail the citadel of superstition with all the energy of logic and reason at their command; let them put forth every conceivable effort to educate and enlighten the human mind: but I would have them leave the paltry ground of slander and ridicule to those who champion a cause and are the advocates of a faith which can only be thrust down the throats of the people by such unworthy methods. If secularism is ever to make headway in the world, it must endeavor to range the intelligence of the world on its side; and, to do this, it must have only one standard of excellence and morality, and that one the highest. Secularism must be shown to be superior to Christianity or it is not worth the having. And, further, before you can hope to change the faith or belief of a nation or an individual, you must be able to show that the proposed change is from a worse

Digitized by Google

to a better faith. That this cannot be done by ridicule, and ridicule of the worst kind, goes without saying; and I am only surprised that so much talent should be wasted in this direction by some of the secularist writers. . . . A secular journal should be so printed that it could be placed in the hands of any person without the slightest fear that any would have their religious feelings *needlessly* offended. No principle need be sacrificed in this: the truth may still be proclaimed in all its fulness and with the utmost plainness of speech. All that is desired is that the sensitive natures of the people shall be respected; and that secularists, while warring against bigotry, error, and superstition, shall avoid in the most scrupulous manner the bad example of their opponents, and shall in all places and at all times refrain from unnecessary and injudicious offences against good taste and the traditional feelings and habits of the people. . . . The grandest aim of any man or any party is to make thinkers, not proselytes; and this cannot be done by ridicule. Men's minds must be fertilized, not sterilized, and by the aid of reason must be won the world's great battle of the future."

SAYS the Springfield *Republican:* "George Jacob Holyoake states that his mission in this country is to amass information that will be valuable to intending English emigrants, which he desires to have produced in an *Emigrant Guide-Book* to be published by official authority. The government made a grant to meet in part his expenses, and Mrs. Elizabeth Thompson, of New York, gave him $500 for the same purpose. Other than this, he has no help, but has spent and still spends his own money, and will receive nothing for his work. These interesting financial statements he makes in consequence of some animadversion as to his motives: 'No man can do all he wishes, or everything he should; but he can, so far as he is concerned, keep a public question free from venality, and prevent it being put back by sinister associations.' Mr. Holyoake's scrupulous care for the reputation of his work is a good thing for missioners of all sorts to this country to emulate. The Irish patriots are not so careful about their 'skirmishing funds' and the like, which have taken so much money from the laboring Irish in this country and placed it in the hands of irresponsible men."

BOOK NOTICES.

PROGRESS AND POVERTY: An Inquiry into the Cause of Industrial Depressions and of Increase of Want with Increase of Wealth. The Remedy. By Henry George. New York: D. Appleton & Co. 1881.

The earnestness, thoroughness, and literary cleverness with which Mr. George has attacked an immensely important problem, and the audacity of invention with which he has put original theories forward, have made his book in the superficial sense remarkably successful. But it is another question whether his defiance of the best names of advanced science, such as John Stuart Mill, Herbert Spencer, and Charles Darwin, can justify itself in even a single particular of his eccentric suggestions and his revolutionary conclusion. He hints the mood of the populace, especially that of Europe, and will have a great run in consequence; but whether he has hit the mark of science and of wise regard for the immensely important interests of labor is open to question. His denial of antagonism between capital and labor seems to me beyond a doubt the greatest mistake possible to be made by an economist. The antagonism exists: the problem of removing it must be solved, and we believe can be. Mr. George does not even attempt it. It is the same with the pressure of population upon subsistence. It is the second great problem of economic science; and, when the problem of capital and labor is solved, we can count on the solution of this second problem also. In rashly arguing, against the whole weight of advanced knowledge, that these problems are nothing, Mr. George does to labor as well as to truth a disservice of the greatest significance and magnitude. And, when he offers as a boon to have the State seize all land and let it out in lots to suit to the highest bidders, he proposes what would damage labor and injure human progress more than anything else which the wildest invention could suggest. The real remedy for existing misuse of land by those whose object is speculation or luxury Mr. George fails to see, just as he fails to see the remedies which must and can be applied to those immense evils, the injustice of capital to labor and the pressure of population upon subsistence. In discussing finally the law of human progress, Mr. George scouts the conclusions of our most radical and most able thinkers, such as Darwin and Spencer, and advocates theories which are as opposite to the truth of facts known to our best science as they are useful to his arbitrary and unscientific view of progress and poverty. There could hardly be a worse procession of the fates of labor and of the poor than would result from setting in motion the scheme of Mr. George, which is as badly conceived as it is smartly urged. It concerns labor and the welfare of the toiling even more than it does science to get a clear hold of the right solution of these problems. Mr. George promises a great deal, and labors at his task with admirable sincerity and earnestness; but his scheme is convicted by the whole weight of our best knowledge of error, the greatest of which the subject admitted.

FROM the rich table of contents which the *Century* for October offers its readers, it is hard to select what is most interesting. There is, in the first place, an admirable and strongly drawn portrait of President Lincoln, a copy of an ambrotype taken two days after Mr. Lincoln's first nomination, and a smaller portrait copied from a photograph taken six weeks before his assassination. "Life in a Mexican Street," by Robert H. Lamborn, and "The Corcoran Gallery of Art," are the most profusely illustrated articles of the number. Charles H. Farnham describes Quebec under the title of "The Gibraltar of America." In "An Inspired Life," W. P. Andrews gives a sketch of the life and work of Jones Very. R. S. Chilton gives "Some Letters of Charles Lamb to John Howard Payne," hitherto unpublished. Francis A. Walker, superintendent of the last census, has an article on "The Growth of the United States." And Howells' "A Modern Instance" closes with a divorce and marriage. There are poems by Sidney Lanier, Frances H. Burnett, Mrs. S. M. B. Piatt, Hjalmar H. Boyesen, and others.

THE October number of the *North American Review* opens with an article on "The Coming Revolution in England," by H. M. Hyndman. The paper is a very thoughtful though somewhat impassioned presentation of the grievances of the English laboring people, and an account of the agitation now going on for a thorough reconstruction of the whole politico-social fabric of that country. O. B. Frothingham writes very discriminatingly upon "The Morally Objectionable in Literature," and endeavors to point out the distinction between literature which is *per se* corrupting and that which is simply coarse. Dr. Henry Schliemann tells the interesting story of a year's "Discoveries at Troy." Senator John I. Mitchell, of Pennsylvania, treats of the rise and progress of the rule of "Political Bosses." Prof. George L. Vose of the Massachusetts Institute of Technology contributes an article of exceptional value on "Safety in Railway Travel," and Prof. Charles S. Sargent of the Harvard College Arboretum contributes an instructive essay on "The Protection of Forests."

THE *Atlantic* for October gives interesting instalments of the serials "Two on a Tower" and "House of a Merchant Prince." Both of these are decidedly unique in plot and treatment, and are refreshing changes from the popular style of novel-writing. Harriet W. Preston writes very learnedly and interestingly of a week spent "Among the Sabine Hills." In "An English Interpreter," Horace E. Scudder introduces an English artist to the notice of the American public. W. T. Hewitt writes of "University Administration"; the "Studies in the South" are continued; and Frank H. Cushing gives a second instalment of his delightful description of "The Nation of the Willows." The poems are by Whittier, Lucy Larcom, John McCarty Pleasants, T. W. Parsons, and Arlo Bates. Dr. Ellis' "The Red Man and the White Man in North America" and D'Haussonville's "Salon of Madame Necker" are the books reviewed at length.

IN the leading article in the *Catholic World* for October, entitled "Literature and the Laity," John R. G. Hassard deplores the lack of interest in Catholic publication, as evinced by the small and decreasing sale of Catholic books, and offers some suggestions to help arouse a new interest in Catholic literature among those who profess that faith. "The Comedy of the Conference" is intended to be a satire on "Evangelical Alliance" meetings. "The Greatest of the Mediæval Hymns" is what A. J. Faust calls the "Stabat Mater." The titles of other articles are "Incidents of the Reign of Henry VIII.," by S. Hubert Burke; "The Crusades," by Hugh P. McElrone; "The Good Humor of the Saints," by Agnes Repplier; "Memory and its Diseases," by Dr. C. M. O'Leary; "James Florent Meline," a biographical sketch; and "St. Anne de Beaupré," by Anna T. Sadlier.

THE *Sanitarian* for September is received, and is, as usual, replete with information on sanitary matters. "Trees in Streets and Parks," "Law relating to Removal of Corpses after Burial," "Hotel Poisoning," "Disease on the Defensive," "The Truth about Gen. Butler as a Sanitarian," are some of the topics treated in this number. A. N. Bell, editor and publisher, 113 Fulton Street, New York.

PERSONAL ITEMS.

JAMES PARTON will give a lecture in Paine Hall next Sunday afternoon at three o'clock.

GEORGE JACOB HOLYOAKE delivered an address last Sunday in Montreal before the Free Thought Club of that city on "My Early Religious Days."

MR. WHITTIER has written the introduction to the *Letters of Lydia Maria Child*, and Mr. Wendell Phillips has furnished the appendix. The book will be published by Houghton, Mifflin & Co.

MRS. HARRIETTE ROBINSON SHATTUCK, of Malden, daughter of "Warrington," and inheritor of some of his literary and political ability, will stump the State of Nebraska until the election in November in favor of woman suffrage.

MRS. HARRIET H. ROBINSON, widow of "Warrington" and author of *The History of Massachusetts in the Woman Suffrage Movement*, is to write the chapter in the forthcoming volume (the third) of *The History of Woman Suffrage*, on the part Massachusetts has taken in woman's rights.

WILKIE COLLINS' eyes are troubling him, so that he has to have an amanuensis. The fact that at least two of his works, *Poor Miss Finch* and *After Dark*, are based upon the affliction of blindness, would seem to indicate that he has had premonitions of such a calamity befalling himself.

REV. FREDERICK MEAKIN has resigned the pastorate of the Unitarian society in Taunton, Mass., on account of his "inability to see any evidence of the continuance of the personal life and the reunion of friends after death." The parting, it should be said, was a most amicable one. Mr. Meakin is a man of rare philosophical spirit and ability, and it is to be hoped will have freedom to continue his favorite studies.

OF Emerson's appearance in his school-boy days, N. P. Willis once wrote as follows: "We remember him perfectly as a boy whom we used to see playing round Chauncy Place and Summer Street,—one of those pale little boys, moral sublimes, with their shirt collars turned over, who are recognized by Boston school-boys as 'having fathers that are Unitarians'; and though he came to his first short hair about the time we came to our first tail-coat, six or eight years behind us, we never lost sight of him. In the visits we have made to Boston in later years, we have seen him in the street, and remembered having already seen him as a boy, little suspecting that there walked in a form long familiar the deity of an intellectual altar upon which, at that moment, burned a fire in our bosom."

THE Boston *Transcript* says: "Mr. Holyoake's works fill several volumes; and every word is readable to-day, a thing seldom true of controversial productions after ten years' time. The *History of Co-operation in Rochdale* is a work of sense and substance: the *Trial of Theism* is perhaps the most radical thing of its kind in the language, and seems literally to exhaust the whole field. Mr. Holyoake is the author of delightful children's text-books, also of more pretentious essays on grammar, logic, rhetoric, and mathematics. His political works have the smallest spice of partisanship and the largest infusion of humanity. His review of American Spiritualism, entitled *Public Performances of the Dead*, is one of the best things he has written. He says, 'We knew American cousins had a wrinkle or two, but the making a show of the dead is certainly the latest "Yankee notion."'

THE IMMORTAL LIFE.

By JOHN WEISS.

12mo. 255 pp., with Heliotype Portrait of the Author. Price $1.50.

Mr. Weiss' great argument for a future existence is the nature of human *personality*. The argument probably will not convince persons with a strong natural tendency to disbelieve immortality; but it ably maintains that science has not yet, as many persons apprehend and some claim, given a negative decision on the old question of immortal life. The old faith still stands; and people may hold it with Mr. Weiss, and yet accept all the attested facts of recent science.

In this age of scepticism, when almost everybody doubts and insists upon proof, this work cannot fail to be a great help to those whose visions are clouded by fears that the grave ends all, and that there is no spiritual existence beyond the dark valley. —*Boston Herald.*

Sent postpaid, on receipt of price.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

LAKE PEPIN GAZETTE,

W. F. JAMIESON, Editor and Publisher.

To be issued weekly. 12 pages. Publication day Thursday. Pepin, Wisconsin. Price $1.00 a year.

While LAKE PEPIN GAZETTE will have very decided convictions of its own, it will accord to Christian, Jew, Heathen, Spiritualist, the same liberty that it demands for itself. It will be bound to no party, sect, nor ism, but will give them all a hearing through its columns as far as space will permit. All shades of opinion and every pattern of doctrine will be discussed free from uncouth personalities, but independent in expression.

Every number will contain descriptions of the great Northwest.

First number of LAKE PEPIN GAZETTE—5,000 copies—exhausted, except for new subscribers. Sample copies 5 cts.

Send 50 cts. for six months; or, to try it, 25 cts. for three months. Address

LAKE PEPIN GAZETTE,
PEPIN, WISCONSIN.

THE BIBLE'S FLAT EARTH

AND

SOLID HEAVEN.

The above is the title of a Photograph, being an illustration of the heavens and earth, after the description of the Bible and ancient history generally. The earth is represented as being a flat, circular plain, resting upon a boundless ocean of water; and over the flat earth hovers a vast concave dome called the "Firmament," and in it are illustrated the sun, moon, and stars. The firmament is also provided with windows or holes; and, to show their philosophy of rain, water is apparently issuing forth through those holes, and as it descends to the earth it falls in a spray like rain.

Over and resting upon the firmament is a celestial ocean which provides the water for rain, when the windows of heaven are opened. On the back of the picture are printed the most appropriate Bible and historical quotations to describe it. The universe, reduced to this miniature form, with all the absurd ideas of antiquity illustrated, is marvellous to behold, and is bound to impress every mind with intense interest, and it matters not of what shade of thought.

The Photographs are artistically executed, and are cabinet size.

Sent to any address, post-paid, on receipt of 40c. in 3-cent postage stamps; one dozen for $2; 100 for $15. For all sums over $1, send post-office money-order or draft on Chicago or New York. Address

CURRENT TOPICS.

THE *Freidenker*, or *Free Thinker*, of Milwaukee, expresses cordial sympathy with the agitation for female suffrage in Nebraska, especially with the labors of Mrs. Clara Neymann.

SAYS the Meriden (Conn.) *Evening Express*: "A 'Church of Humanity' was formed at Middletown Sunday, and meetings will be held Sunday evenings to improve the minds and morals of six thousand citizens who don't go to church."

A MONUMENT to Hecker, the German revolutionist, was dedicated at St. Louis Sunday afternoon, October 1, when the Turners were present in great force. Speeches were made by Mr. Rombauer in English, and Mr. Züdeking in German; and Miss Stella Hecker unveiled the statue.

GEN. ABE BUFORD, the reformed turfman, being asked whether he were not liable to be turned out of church for betting at horse races, said: "If they ever turn me out of the church, they will have to turn a good many more with me; for I stand just where Alexander Campbell stood., Liberty of conscience and freedom of thought were his tenets."

THE long-continued cold weather of this year, shortening Iceland's always short summer, has made the crops there a complete failure; and, if help is not soon sent them from more favored climates, many of the inhabitants of that sterile region are likely to die of starvation. In London, a relief committee has already collected about $11,000 for the Icelandic sufferers.

WALTHAM greatly needs more gospel light apparently, since it is "grieving the spirit" by the action of some of its citizens, who are freely signing a petition asking that a Methodist revival there should be "abated as a nuisance" in consequence of the noisy character of the services. The petitioners, as a Boston daily explains, "don't ask for shorter prayers, but they want softly delivered ones."

IT is to be hoped that one of the advantages arising from British domination in Egypt will be the adopting of measures for the prohibition of slavery and the slave trade, which the Egyptian Government has for years merely pretended to stop. Polygamy will probably continue without interference, since it is allowed by the Mohammedan religion which prevails in Egypt, and has always been tolerated by the British Government in the East Indian possessions.

A CONVENTION of the National Woman Suffrage Convention closed at Omaha, September 28, after several well-attended and spirited meetings. Addresses were delivered by Miss Susan B. Anthony, Mrs. Harriette R. Shattuck of Boston, and Mrs. Clara Neymann of New York. Mrs. Elizabeth Cady Stanton was elected President; and among the Vice-Presidents appear the names of Miss Phebe W. Couzins, Mrs. Olympia Brown, Mrs. Belva A. Lockwood, Lillie D. Blake, and Mrs. Harriette R. Shattuck.

IT is stated that in Lucknow and Cawnpore forty-five publishing houses are engaged in issuing anti-Christian books and pamphlets, and that one Hindu publishing house at Lucknow lately sent to London an order for $25,000 worth of paper on which anti-Christian tracts and other works are to be printed. The missionaries in India, instead of finding everywhere people willing to listen to them without argument or questioning, as many suppose, in many places encounter determined opposition of an intellectual character.

AN old woman at Ipswich, Eng., having the reputation of being a witch, obtained ten dollars from the parents of a sick girl as the price of removing the spell they believed the invalid was under. She was fined five dollars by a magistrate, and made to return the money she took. Another woman in Normandy, who tried to convince the jury that she was an honest witch, has been convicted as a swindler, and sentenced to six months' imprisonment, notwithstanding several witnesses swore that she burned five hundred and seventy toads in their presence in order to drive the evil spirit out of a cow, and that they distinctly saw a black cat leap from the cow's mouth.

THE Unitarian National Conference resolved to raise $150,000; and Mr. J. H. Wade promised to give $350,000 to make a minimum sum of half a million dollars for the founding at Cleveland, in the State of Ohio, of an entirely new theological school. Mr. Wade promised further that, if $50,000 more were raised, he would himself add $50,000, making the whole endowment $600,000. The scheme, in the hands of a man of Mr. Wade's intentions and means, is not unlikely to grow to something considerably larger than this even; and it may be expected to make a new departure in the study of religion and the preparation of young men and young women for the liberal religious ministry.

PROF. JOSEPH LE CONTE, of the University of California, having examined the footprints which have lately attracted attention at Carson, Nevada, says that the strata exposed in a quarry consist of heavy bedded sandstones, alternating with thin layers of shale. The stone has been removed down to an even stratum of shale which forms the floor. The whole area thus cleared is literally covered with tracks of many species of mammals and birds. He thinks they were made in the early age of man's existence; but he doubts whether any of them are the imprints of human feet, though some may possibly be so. Those of gigantic elephants are unmistakable, and others are of extinct species of birds.

THE proclamation of Abdallah Nedim to his troops, quoted from the Arabic journal *El Taif* by the New York *Tribune*, exhibits in a striking light the Oriental fatalism and the strength of the religious faith which is the object of this appeal: "'Sons of Egypt!' the proclamation says, 'rise, tear up treaties, break false oaths, drive out these marauders. Are you afraid of them? God is more worthy to be feared. Sacrifice your property and your lives in this holy war in God's path. What is death? The term of each man's life is decreed. Sons of Egypt, when your hour of death arrives, there will be neither delay nor haste. He that dies not by the sword dies from other cause. Many are the causes, but death is one. Rise; meet it.'"

A BERLIN correspondent of the *Nation* writes: "Do not imagine that our political elections are carried on with that candor and fairness which becomes an educated people. On the contrary, in this respect we have but too soon imitated the manners and customs of the oldest political constituencies. The tone of a Berlin election, for instance, will not stand much behind a primary of a New York ward, with the sole exception of revolver-shooting, to which the German is not yet accustomed. And what is worse here than with you, if I am permitted to finish the comparison of Berlin with New York, is, that here it is not only the small fry, the political rabble, which attends to the mean business of electioneering, but clergymen, like the notorious court-preacher Stöcker, officials, so-called young noblemen and officeholders in high positions, who wish to draw attention to their patriotic merits, and to be rewarded accordingly, strike the keynote in the Conservative camp. For the last Reichstag election, the Conservatives, although they ought to have known beforehand that they could not conquer a single seat in this city, gave free theatrical representations, concerts, public amusements, and free lager to the voters, in order to win them to their side. . . . The Liberals, on the opposite side, having less means at their command, must raise every cent among themselves, and number less influential persons in their ranks, but they work with greater energy and with more method. Their country press is better organized, and gives the people plain truths, which every voter understands; while the Conservatives' pamphlets, except those which indulge in abuse and personal attacks, are written in a professorial tone, unintelligible to the masses. The Liberals, too, agitate better in the rural districts, and attract greater crowds to their meetings."

WHY WE DO NOT GO TO THE NATIONAL UNITARIAN CONFERENCE.

Since the Saratoga Conference of Unitarians, several friends have said to us: "You ought to have been there. It was a grand, inspiring meeting. Most of the prepared addresses were broad, progressive, radical. Even those most conservative in doctrine were catholic in sympathies, and had a forward look. The talk and the action were all in the direction of liberty and a large fellowship. The stimulus, socially, morally, spiritually, was of the best. We all came away feeling that we belonged to a live and moving body. You ought to have been there to have felt the progress that the Unitarian denomination is making." Concerning all which, we have no question, except as to the inference that we ought to have been there. We do not doubt that the Unitarians are making progress. In some sections of the country, they are making rapid progress. Nor do we doubt that we should have found much at the Conference that would have commanded our sympathies, stimulated thought, and been exceedingly enjoyable. A Unitarian company is always intellectually bright and socially attractive. The essays, whether agreeing with them or not, we could hardly have failed to find instructive and suggestive; and some of them, we can readily believe, were incisively radical. Messrs. Batchelor and Learned could not well be otherwise, nor Mr. Ames be himself without being most genially broad and catholic. We are too well acquainted with Unitarians not to know how much we lose by not having denominational fellowship with them and attending their meetings.

But all this does not affect the question of our duty in regard to holding such fellowship and keeping connection with the National Conference. We should have been very glad to retain both. But, when the lines were drawn defining the conditions of the connection and bounding the fellowship, we could not do otherwise than recognize the simple fact that we were outside the lines. It was not a question of choice, of will, but only a plain question of eyesight,—of seeing our position in relation to a boundary line that had been run; and, having eyes, we saw. The Conference defined its membership as disciples of the Lord Jesus Christ and believers in his special sonship to God, and we were not of that number. To have moved our position and gone within the boundary line of the Conference would have been to sacrifice principle for the sake of fellowship; and, much as we prized the fellowship, the abandonment of conviction for it never ocurred to us as a possible solution of the problem. We saw that a general organization of Unitarianism had been formed, leaving us outside; and we merely stayed where we were because it was the only honest thing to do. Knowing well the cost socially and professionally of so staying, and grieving that the boundary had been established, yet it can hardly be said that we counted the cost; for no other course than just to stand in the place of our own conviction was for a moment considered. And this is the reason why we are not in and of the National Unitarian Conference.

But it is said that, though the limiting words are there, the spirit is broad; that, though the theological boundary defined by the Constitution remains, bars of generous length have been let down through it, by which those outside and those inside can amicably mingle. It is true that, for the sake of relieving the consciences of the radical minority, the Constitution for two years was so amended as to absolve those members who could not accept all its declarations from technical responsibility for them. And something similar, though not so broad, has been adopted again the present year. Doubtless, to many radical Unitarians, the opening of such widely hospitable gates seems amply to justify their entering the Conference as members. But for ourselves, even if we still retained general fellowship with the Unitarian denomination, we should feel impelled to stay out of the Conference, in order to protest against the keeping of the theological fence that necessitates the opening of the gateways. Our association with Unitarianism led us specially to prize it for two inculcations,—the right of free inquiry and character more than creed. When it nationally organized, we hoped it would make a consistent application of these two leading principles. Failing to do this, we had but to recognize the limitations it had made, and combat them from the outside where the limitations themselves placed us.

Moreover, it has not seemed to us a very dignified proceeding for the Conference thus to play at *seesaw* with its own Constitution. Now the Preamble goes up and now it goes down, according as the conservatives or the radicals secure the splicing of the amending Article on the other end. It looks as if the Conference did not know its own mind concerning the theological declarations of its Constitution. And it is evident that the majority do not want to have the mind of the Conference on the points in question probed by a discussion. There is too much ground for the suspicion that the majority of the Conference attach no very definite meaning to the theological phrases which trouble the consciences of a few radicals, and do not care seriously to consider what is their meaning. It is insisted that they be retained. Yet it is said to the radicals: "Come in, and never mind them! They are not worth disputing about." In our view, this is an attitude that is not conducive to intellectual integrity. Words of such deep import as these have had in religious history should not be used thus lightly by any body of religious people. If they do not mean anything, let them be frankly dropped. If they do mean something, let their meaning be frankly stated and manfully defended.

Just what is the theological status of the Unitarian National Conference under the conditions of its new constitutional amendment is not easy to say, unless we may say of it in Paul's phrase that it is "made all things to all men." But we suppose it will be generally conceded that it remains a "Christian" body. The *Christian Register*, speaking of the amendment, says, "The Conference did not in the slightest abandon the Christian basis on which it was erected." Messrs. Hale and Clarke, the only persons who spoke on the amendment, said that they should vote for it, because they believed that the spirit of it was in the Constitution already, and that it made no essential change; and Mr. Clarke added that he had never regarded the Preamble as intended for a creed, but only that the members, "in a large and general way, were to consider themselves as followers of Jesus Christ." And Mr. Savage, the proposer of the amendment, made no speech, and therefore did not explain whether he accepted this interpretation of it or not. The Conference would seem to have voted for the amendment on this interpretation. Besides, the full name of the body is "National Conference of Unitarian and other Christian Churches." For these various reasons, the Conference seems to us to be distinctly and exclusively a "Christian" organization. We can understand how an advanced radical, who in a general sense still calls himself a "Christian," may, under the new article, conscientiously become a member of the Conference; but we do not see that non-Christians are even invited into its membership. For this additional reason, therefore, we can neither exercise nor claim any rights there.

Several years ago, we came to the conclusion that no one who would not call himself a follower of Christ in a different sense from that in which he might call himself a follower of Socrates or Buddha or Emerson is properly entitled a "Christian." And, since that time, we have not assumed the name. To apply it, as some radicals do, to the ethical and humane principles of universal religion, appears to us not only illogical, but unjust and derogatory to those who have reached the same principles from other religions than the Christian. To illustrate, Dr. Adler and Mr. Salter are in substantial agreement on religious problems theoretically and practically, the one coming from Judaism, the other from Christianity. Why should Mr. Salter insist on calling their common beliefs and conduct "Christian" more than Dr. Adler should insist on calling them "Jewish"? Both abjuring as they do the special authority of the religions from which they have come, they are more rational and more just to drop also their old religious names for some new name that shall impartially cover their new common faith. And this is what we have felt ourselves impelled to do. There is much in the practical aims and work of the Unitarian Conference that has our sympathies, and there may be within "Christian" limits a broad and admirable fellowship. But, in the practical interest of what seems to us a more comprehensive truth and a wider fellowship, the triumphs of which are to come in the future, our position and work are outside the lines which the Conference has made its bounds.

WM. J. POTTER.

PUSEYISM.

The recent death of Pusey, the man who gave a name to the famous Oxford Tractarian Movement, so called, makes ecclesiastical Christianity, prelacy, the papacy, and the whole category of spiritual despotisms and superstitions, current topics. Reaction is a phenomenon which has been witnessed at all stages of history and human development. The Oxford reaction was a freak of the human mind under certain conditions. The revolutionary excesses in France, and their sequel of Napoleonic conquest, produced naturally enough an intense reactionary disgust. The European nations concluded that their immemorial institutions ought not to be torn up by the roots, but that a certain historic continuity was necessary to a healthy progress.

Human society cannot be continually starting anew, cannot be continually taking an entirely new departure. The past cannot be entirely broken with. The past was not all wrong. We of the present have our roots in it. The old propagandists of revolutionary doctrines in France in the eighteenth century did not recognize this truth. Hence, they stigmatized the past as all wrong, morally, mentally, socially, and politically. They undertook to uproot everything, the entire Church and State of the old *régime*. At length, Waterloo put a quietus on the spirit of revolution for a time. The pope was reinstated, a reactionary literature began to make its appearance,—namely, Scott's poetry and romances.

Then arose in France and Germany what were called the Romanticists in art and literature, who turned their backs on their own age, and endeavored to lead the life and think the thoughts and entertain the beliefs of the so-called Ages of Faith. About this period, the sentimental French *littérateur*, who was poet, traveller, novelist, historian, and politician all in one, Chateaubriand, full of the

Digitized by Google

spirit of his native Brittany, the province of loyalty to kings and priests and of legend and blind faith, wrote his book entitled *The Genius of Christianity* (*Génie du Christianisme*), to rehabilitate Roman Catholicism or Latin Christianity in France and cause its overturned altars to be re-erected. It was a weak, rhetorical, sentimental book, almost laughable in its grave demonstrations of the superiority of Jehovah to Jove, of Mount Zion to Mount Olympus, and of that curious mixture of paganism and Christianity known as Romanism to the old Greek and Roman paganism pure and simple. It produced a powerful reactionary effect, because it appeared opportunely, when it was easy to produce such an effect on account of the general disgust with revolution and Napoleonism. German artists turned Romanists in great numbers, with the idea that they would feel the inspiration of Raphael if they adopted his religious faith. Our American poet, Longfellow, sojourning in Europe at this time, was infected with the prevailing romanticism in art and literature. Hence, it is that so much of his poetry is tinged with mediævalism, so that one would infer from his "Evangeline" that he was a sort of sentimental Romanist. But, though his poetry gives great aid and comfort to papists, he was really a Free Religionist and an American in every fibre of his nature. But on the poetic side of that nature, which was the largest side of him, he was, of course, peculiarly susceptible to ecclesiastical legend and the fair humanities of the old anthropomorphic faiths, whether Roman Catholic or pagan, pure and simple.

Thus, it will be seen that at the time it broke out, fifty years ago, the Oxford ecclesiastical craze and reaction known as Puseyism was a part of the *res gestae* of the period. But, nevertheless, Puseyism and Newmanism were strange social eruptions in industrial, practical, this-worldly, rich modern England, when the sturdy insularity, solid sense, and determined independence and individuality of the average Englishman are taken into account. For John Bull is about the last collective personage of whom a weak, reactionary sentimentalism would be predicated. Although he kept prelacy or hierarchy alive in his Established Church, still, after all, that Church is more a State machine than it is an ecclesiasticism. Even when John Bull was a Roman Catholic in religion, he was jealous of the intrusion of foreign priests and prelates into his insular concerns. In Shakspere's "King John," that monarch is represented as saying to a papal legate, "Go tell your master, the pope, from the mouth of England, that we will suffer no Italian priest to tithe or toll in our dominions." And King John, in saying this, voiced the immemorial hostility of the English race in both hemispheres toward an intrusive foreign priesthood who undertake to intermeddle in their political and social affairs.

But Oxford, where Puseyism was engendered, always has stood in the shadow of the Middle Age. Matthew Arnold, one of her children, speaks of that venerable university "as steeped in sentiment, as she lies spreading her gardens to the moonlight, and whispering from her towers the last enchantment of the Middle Age." Pusey, Keble, Froude, and Newman, the fathers of Ritualism revived, were not practical modern Englishmen, but cloister-reared dreamers of the past, who preferred its twilight to the sunlight of to-day. But even a craze, when it occurs opportunely, or at a certain juncture favorable to it, spreads for a time and exercises great influence. Thus, Puseyism or Ritualism has made a great noise in the English-speaking world, and covered it with churches in the mediæval style of ecclesiastical architecture, and inspired mediæval epics such as Tennyson's "Idyls of the King"; but its day is nearly over. It has long been a matter of ridicule, or, rather, it has ceased to be such, because it is, in vulgar parlance, "played out."

Thus did the iconoclasm and utter contempt of the past, which characterized the French Revolutionists of the close of the eighteenth century finally eventuate in an attempted revival of the mediæval spirit in religion, art, and literature, in the first half of the nineteenth century. Thus does one extreme beget another. In France, fifty years ago or later, fanatical reactionists like De Maistre and Lammenais denounced modern civilization and science as abominations, thus emulating the democratic, atheistic fanaticism of the eighteenth-century French revolutionists in the opposite direction. Orestes A. Brownson in this country became a disciple of De Maistre, and undertook to demonstrate that the only hope of the preservation of our free American social and political system was, forsooth, in Americans becoming Papists, and blindly submitting to the spiritual dictation of the Pope.

What wonder is it that now, after such exhibitions of self-stultification, ecclesiastical folly, blind faith, and abject submissiveness to priestly authority on the part of such eccentric Frenchmen, Englishmen, and Americans as De Maistre, Lammenais, Pusey, Newman, Brownson, *et al.*, and after the revival of pretended shrine-cures at Lourdes, Knock, and elsewhere, all sensible people should conclude to take no further stock in the alleged supernaturalisms and miracles of any religion, or in any theological dogmas, being as they are, all insusceptible of the least particle or scintilla of proof or verification? What wonder is it that Puseyism has been followed by Agnosticism, which is merely an accentuation of the fact that the theological gods, demons, hells, and heavens are the merest imaginations and unrealities? What wonder is it that, all over republican France, priests with their bitter assaults on popular government and popular education are regarded and treated as social nuisances? And, to come to this side of the Atlantic, what wonder is it that the attacks of an imported Roman hierarchy on our American Church and State and educational system should have excited the disgust of all classes of Americans to the manner born, except a lot of vile demagogues and unprincipled politicians, who are mainly anxious to conciliate the Catholic vote?

B. W. BALL.

UNITARIANS IN CONFERENCE.

II.

Rev. C. G. Ames preached to the Conference on the evening of the first day a written sermon, which fills ten columns of the *Christian Register*. By his method of innumerable bright brevities, many of which are exceedingly good, and none are poor, and by reading instead of speaking, Mr. Ames needlessly taxed himself, and failed to do himself justice. The sermon was a very good hash of very good things; but if the preacher had lost his manuscript, and had forgotten about a thousand of his lesser bits of good wit, and with five or six chief points, logically arranged and separately urged and illustrated, had spoken his best message of well-considered and well-reasoned thought, the effect would have been greatly improved, both in the character of the sermon and in showing Mr. Ames at his best. Both Mr. Ames and Mr. Collyer stop short of their highest possibility when they use a manuscript, and when they are tempted by the sensational away from the pure great thoughts and highest emotions to lesser wit, and popular sentiment, and all sorts of bright bits, the very stuff of brilliant conversation, but not of preaching as great as a Collyer and an Ames ought to rise to, and as at their best they have shown.

Rev. George Batchelor gave on Wednesday morning a fine example of the higher method of a strong discourse. He looks, to begin, a small, simple, commonplace man, with no marked quality of voice, presence, or manner, and no magnetism. It soon appears, however, that he can stand well up to his work; can read as if speaking, a rare gift; has a bold, ringing voice; knows how admirably to mark off his thoughts; and can put just the right emphasis on every point and every phrase. There will be in his preaching a counterpart to that of Mr. Collyer, much less to touch sentiment and strike the popular ear, but far more to bring home truth to character, and principle to life, and reason to religion; more of large learning, if less of pleasant literature and anecdote; more of strong appeal and sound counsel, if less of the flowers of sentiment and the beauties of speech. It will be a succession to Mr. Collyer's best, which will not fail to give Unity Church in Chicago just the ministry which it needs.

Mr. Batchelor called attention to the beneficent *secular* character of Unitarianism. Unitarian money, he said, goes to aid humane purposes, and the present need of society,—to do in the best manner the secular work of the world. To Unitarian religion, our laymen do not give very freely, because it fails to take a strong hold of them. It is using still the outworn phrases and watchwords and ideas of the sects. As a Church, it has not put forth its full strength nor taken its rightful place. Its ideals are commonplace, and it has a small though honorable place, every year becoming less conspicuous. The imagination of our practical men is not struck by our slight religious work. But we have another function, not to be a sect or a denomination, but a foremost social and political factor, with beliefs about man, education, and government. We have aimed at a perfect human society. We have used ethics as the test of thought, moral sentiment as the foundation of faith. Ethics we have made the substance of our Christianity, the root of our doctrine. In man, we find the soil to be worked; the eternal life we see in the present life, and the whole drama of eternity already set. In this secularism has been at once our strength and our weakness. We have left enthusiasm unimproved. The splendid services of Free Religionists, of Agnostics, of Positivists, fall yet behind our own secular ideal, because they do not make even the effort, as we do, to save and use the Church. For us there are vast problems, extra-denominational and secular, on which our Unitarian thought and feeling are expended, all of them turning on moral sentiment. There might, by a backward movement, come to us reabsorption into the old faiths, but our destiny lies not that way. The prime requisites to us of all good work are love of truth, moral sensibility, and spiritual insight. The moral causes which produced Unitarianism have produced our best civilization. And they are moral causes. We do not need to carry a body of doctrine, but only its spirit. "I know not his faith, but his goodness," answers to our ideal. Calvinism will melt away, and liberal thought take its place, whenever you get science into the mind. More nearly than any other, the Unitarian is a national church, close to the national life. We stand for unshaken confidence in God, kinship to whom alone creates the tie of human brotherhood. The strongest faith and the most cheerful hope are excited by work for man. Let our men of means take $25,000 a year, and plant twenty-five churches in a State like Ohio, and they would see Literature, Science, Art,

Digitized by Google

and Statesmanship as the fruit of their work. Our Church ought to plant herself, like Wisdom, in the highways of the world.

These views of Mr. Batchelor upon the strong secular position and saving secular character of Unitarianism leave it very plain that he does not see much in Unitarianism as religion in the deep, inner sense. Externally, Christianity as it came from Christ, founded on his law of love and his Beatitudes, was a Divine Secularism; and it was in this character especially that the early Church insisted on it, before dogma had begun to impose its yoke and ecclesiasticism its bonds. But the early Church directed also a passionate faith to Christ as not, indeed, the full co-partner of the Infinite and Eternal, but as the nearer God, the immediate Divinity, the present or coming King of heaven and earth. Liberal thought has found out the error of this, but no liberal faith has yet made the Infinite and Eternal as immediate and present and dominant as a true Divinity must be. Theodore Parker did it, and, in doing it, embodied in himself more pure Christianity than all Unitarianism beside; but he was not accepted, because he altogether removed those orthodox ideals which in Unitarianism had quite lost their ancient identity with God's infinite personality and God's absolute mind. These ideals had become idols, mere small gods of human imagination; and Unitarians, in worshipping the Bible after reducing it to a literature, however valuable, and Christ, after reducing him to one of humanity, however exalted, were in the way to lose religion more than any other sect whatever, and to lose it all the more in proportion as the liberal thought of Unitarianism should be carried out. This is the present position of Unitarianism. Its thought has destroyed orthodox faith, and has not yet created a liberal faith, a very small survival of Orthodoxy about the Bible and Christ serving as a faith, and that with fast dying adequacy. The Bible need not lose its place as literature, nor Christ his office of Teacher; but Unitarianism will utterly fail, unless it can forget both, to a very large degree, as Christ himself did, and would do now, in the intellectual range and the emotional depth of an absorbing consciousness of and consecration to the Infinite, Eternal, Living God. The orthodox Bible or Book of the third person of the Trinity, and the Trinitarian Christ, are dead gods to Unitarians, yet are they more interested in their funeral and their memory than they are in, as Mr. Emerson said, reanimating and reorganizing the true Church, the pure worship.

Rev. J. C. Learned's admirably executed essay on the "Future of Religion," which was given on Thursday morning, laid all the emphasis of Unitarian faith upon ethics. It was a paper more radical than Mr. Batchelor's, more finished as a literary performance, and finer in its insight and its suggestions; but even more than in Mr. Batchelor's conception of Unitarianism as a secular movement did Mr. Learned's ethical vision see religion vanishing in the distance,—an eternal reality indeed, to come again in power and purity some time, but gone now, and not to be seen of us very soon. Mr. Learned is of the best order of radical minds, but he has not laid to heart this thought of Emerson: "In your metaphysics, you have denied personality to the Deity; yet when the devout motions of the soul come, yield to them heart and life, though they should clothe God with shape and color." Samuel Johnson was even more radical than Mr. Learned, but he preserved the deep passions of religion, piety, and adoration, submission and trust and love; and his prayers were almost the perfection of religious utterance, direct address and direct petition, yet with no taint of selfish superstition. Mr. Learned represents very finely indeed the purest ethical revolt against selfish superstition; and there linger in his allusions the old ideals of piety, or are hinted in them the new ideals of the piety that is to be. He said: Prayer has dropped out of our homes, and only a poor fragment of it is left in our public devotion. The form of devotion ought to be left absolutely free. The personality of God is as much asserted in saying I as thou. Prayer is man's attitude of spiritual effort, the soliloquy of the soul. Religion does not exist without sacrifice. Ritualism has declined just in proportion as belief in miracle has yielded to belief in law. God is enlarged to include the natural in the supernatural. Natural events may suggest our sacraments, custom and symbol setting forth our holiest purposes and purest faith. There is the sacrament of marriage, the consecration of infancy, the festival of our sorrow, and confirmation as marking the dawn of manhood and womanhood. It is only on the basis of duty that active worship finds expression. The Church that we know is destitute of earnestness: it neglects its own ordinances and professions, and even jeers at them. Other morals, of the world, it criticises. What are its own morals? Blind with selfishness or idiocy, what is any effort of the Church worth, setting up for saints and going forth to save the world? Complacent philanthropies that are a weak extension of poor living at home! What we want is men banded together for spiritual realities. The few tried and faithful alone make fitness to reach the many. First meditation, then enthusiasm, will give the true Church,—the Church of the sanctifying Spirit, of the master of Divine Truth with no more than twelve disciples, of but two or three who never meet without the Revealing Son of Man in their midst. When priest and iconoclast are both slain, the motions of new construction will appear, marked by the spirit of self-sacrifice, which churches so little show, as in politics, in science, in the education of man. The deeper word is Morals, a knowledge of right, justice. The lesson of the hour makes conduct all of life, not doing simply, but knowing and being. Light on moral questions is the one thing in letters, theology, science, art. Spencer puts his work on Ethics forth as of chief importance. The love of the Best, the soul's vision of the Perfect, is what we want. There is impending a revival, a new movement in behalf of the perfect life. This generation will see some of these things. There has never been such a time of promise. The Church alone is against it. But no rotten diction will debar us from honest creeds. With the death of an ease-loving ministry, we shall have an unselfish Church. Then, and not till then, shall we begin to see the long predicted redemption of man.

Mr. Learned's essay was an advance upon Mr. Batchelor's in its vision of religion, as also Prof. F. G. Peabody's essay on Friday was an advance upon Mr. Learned; but, still, Mr. Emerson would justly say, "I see character, insight, truthfulness, movement, but not piety and adoration, not religious submission and abandonment; I see not how the great God prepares to satisfy the heart in the new order of things." The sole difficulty is that the great God of Emerson's adoration has not yet his church and his worship. The very small gods, which even the best Bible and the truest Christ can make, still hold the ground. The gospel of ethics is saved from the former, and the gospel of sacred history from the latter; but there is yet no adequate gospel of the Infinite, the Eternal, the Almighty God and Father.

E. C. TOWNE.

TRANSCENDENTALISM AT BAY.

Mr. O. B. Frothingham, in his *History of Transcendentalism*, referring to Mr. John Weiss, Mr. David Wasson, and Col. T. W. Higginson, says: "These men, nursed in the Transcendental School, thoroughly imbued with its principles, committed to their defence, look out now upon the advancing ranks of the new materialism as the holders of a royal fortress looked out on a host of insurgents, as the king and queen of France looked out on the revolution from the palace at Versailles. The onset of the new era they instinctively dread, feeling that dignity, principle, and spiritual worth are at stake. They will fight admirably to the last; but, should they be defeated, it is yet possible that the revolution may bring compensation to humanity, which will make good the overthrow of their diadem towers."

Mr. Weiss is gone; Mr. Wasson is an evolutionist; and, judging from his latest essays, has been able to accept so much of the experiential philosophy that his attitude toward it is friendly. But Col. Higginson remains unchanged, uncompromising, and hostile, losing no opportunity to defend Transcendentalism as it was taught thirty years ago, or to assail whatever appears in the name of science or philosophy that is opposed to it. That he has ever given his adhesion to the theory of evolution in any form does not appear from any of his writings which we have read. We admire his courage, and are not unmindful of his valuable services in the field of literature as well as in that of reform; but we wonder that he does not see that the intuitionalism and the sensationalism, which were so vigorously defended by their respective adherents when Col. Higginson was a young man, have both been swallowed up in a larger philosophy or fused in a deeper synthesis, in which the error of each has been eliminated, and the truth of both united and made to contribute to a mental philosophy which is based upon undeniable psychological facts,—a philosophy which fully recognizes all the intuitions of the mind as transcending the experience of the individual, and yet finds their explanation in the experience of the race, and is entirely consistent with evolution.

This philosophy is gaining every year as fast as it can be understood, and its opponents to-day are chiefly those who remain under the influence of theological teaching or of metaphysical theories accepted and established in the mind prior to the psychological researches of the past quarter of a century.

The notion that this philosophy takes away the basis of morals is without any just grounds. Six years ago, Mr. Frothingham wrote: "It is now contended that conscience itself is a product of education, a deposit left in the crucible of experiment, a habit formed by the usage of mankind. The justification of this view has gone so far that it seems likely to become the recognized account of the matter; but, in course of substantiating the doctrine, a new foundation for ethical feeling and judgment is laid, which is as memorable as the 'transcendental facts of consciousness.' The moral sentiments are represented as resting on the entire past of the race, on reefs of fact built up by the lives of millions of men from the bottom of the deeps of humanity. The finest moral sensibility caps the peak of the world's effort at self-adjustment as the white, unsullied snow rests on the summit of the Jungfrau. The intuition is referred to in another genesis, but it is equally certain. The difference of origin creates no difference of character. Moral distinctions are precisely the same for idealists and sensationalists. Here,

Digitized by Google

at least, the transcendentalist and his adversary can dwell in amity together."

There is no reason for calling the philosophy here referred to the "new materialism"; and its most eminent representatives, while expressing a preference for materialistic terminology, have repeatedly and, for thinkers, at tedious length shown the utter inadequacy of what is commonly understood by "materialism" to meet the demands of modern scientific and philosophic thought. According to this philosophy, we know matter only as a phenomenal manifestation of that which, except as revealed in consciousness, is inscrutable. Its ablest representative is universally admitted to be Herbert Spencer.

B. F. UNDERWOOD.

FROM an article on "Free Lances in Evolution" in the *Independent*, giving the gist of the recent discussion in this city before the Evangelical Ministers' Association, we quote the following: "If, as a body, the American clergy are ignorant of the later developments of modern science, they are willing to learn. If a few still believe that these developments have left untouched the traditional interpretation of Scripture, the large majority incline to the opinion that recent scientific theories do somewhat affect our view of the teachings of the Bible. The relation of evolution to Christianity is the most important problem which thinking men are to-day considering, and it is a problem upon which the clergy are eager for light. It was in this mood of the searcher for truth that a large number of the ministers of Boston and suburban towns assembled to hear a discussion upon the question, 'Is Evolution and what is proved about it Antagonistic to Biblical Creation and Evangelical Religion?' The occasion was one of a series of meetings which the evangelical ministers of Boston hold at stated intervals. The disputants were Mr. B. F. Underwood, of Boston, and President Chadbourne, of the Agricultural College at Amherst. Prof. Asa Gray, of Cambridge, also made some remarks upon the question. Mr. Underwood, in opening the discussion, expressed his gratitude for the courtesy that invited him, a confessed disbeliever in the Christian religion, to address an assembly of clergymen. The Church and her ministers have doubtless deserved the charge of bigotry and narrowness; but the charge is less deserved to-day, if deserved at all, than in any former age. What body of professed infidels ever asked a Christian clergyman to address them?" This statement is fair and just, the implication of the last sentence excepted. It has been for years, and is now, both in England and in this country, common for "infidel" associations to invite Christian clergymen to address them in their halls in defence of the Bible and Christianity; and in every way possible they have encouraged public discussion like the one that recently took place in this city. Indeed, a general and well-founded complaint among "infidels" has been that Christian ministers can rarely be induced to address a body of free thinkers, or to discuss in public the relations of science to the Christian system, under circumstances which admit of the presentation of both sides of the subject. We are pleased to note a disposition on the part of some of the clergy to adopt the "infidel" method of advancing truth by free and open discussion, and regard it as an indication of increasing liberality in the Church; but, at the same time, we object to the attempt to make it appear that "infidels" have been opposed to this method, and that Christian clergymen have been the first to give it encouragement.

THERE are cool shaded nooks and mountain recesses, where snow is found unmelted almost to midsummer. Everywhere else there is verdure, sunshine, bloom, and fructifying heat. So there are stagnant, out-of-the-way populations and eccentric races that are scarcely influenced at all by the spirit of the age, and who remain in spite of it in the ruts of the past, maintaining old beliefs and usages unchanged and clinging to them with a desperate tenacity. This kind of people are, of course, in striking contrast to the live communities of to-day, that are pervaded by the spirit of current civilization. The swelling tide of European emigration to our shores brings to this, the most modern of countries, many of the peasant class from the byways of Europe, who belong, as far as their notions and beliefs are concerned, to the Middle Ages rather than to the nineteenth century. It is such kind of people who support that grotesque anomaly in a republic like ours; namely, an expensive and domineering hierarchy or priesthood, with its cardinal, archbishops, and bishops, who are ecclesiastical princes and nobles to all intents and purposes. The manifesto issued some months ago by this hierarchy through a Provincial Council at Cincinnati, impugning and calling in question the fundamental principle of our American political system,—namely, that all political power is derived from the people,—was so frank, open, and *naïve* that we could hardly take offence at it. But the sovereignty of the American people is a fact that cannot be successfully called in question by any power on earth. Its influence is spreading throughout Europe, and helping transform society there. The priesthoods are effete at head-quarters in Europe. The various European governments will brook no dictation from them or undue interference in politics and other secular matters. The great, rising tide of European republicanism is overwhelming them gradually, but surely. And the ecclesiastics may thank themselves for the bitterness with which European Liberals and Republicans regard them. European priests transferred to American soil find popular sovereignty an established fact, and master of the situation here from the start. Popular rule is not a thing on trial here, an innovation with a long royal and priestly past behind it; but it is the very bed-rock of American institutions.

ABNER KNEELAND, in the city of Boston nearly half a century ago, in an appeal to the court for an arrest of judgment, after the jury had convicted him of blasphemy, said: "The punishing of men for opinion's sake has an immoral tendency. It will not affect me; but every man has not the firmness that I have: neither can they have it until their heads shall be differently organized. Only use coercive measures to extort a confession of belief or to cause men not to avow what they sincerely believe, and you will at once make at least two-thirds of the human race either slaves or hypocrites. What a bribe, what encouragement, is given to hypocrisy and deception, when to tell the truth is considered a crime, and to act the part of a hypocrite leads to posts of honor and profit! But I contend that all laws concerning religion, more than to protect each and every one in the peaceable enjoyment of his own, are of this stamp! I contend that the law has no right to say what is or what is not religion, what is or what is not blaspheming God. But I acknowledge that, for the sake of the peace of the community, we must submit even to bad laws, as long as they are in force. But send me to prison for publishing my honest belief, and you make me a martyr in the cause of truth at once (as far as the punishment goes) in the opinion of nine-tenths of the whole community. Imprison me for opinion's sake, and long after each of our heads shall be laid in the dust, when all our prejudices, bigotry, superstition, and even religious hate, if we have any, shall have received their quietus, my name and memory will be hailed with gratitude by future generations as a bold and fearless pioneer in defence of civil and religious liberty,—in defence of the freedom of speech and of the press, when the names of my persecutors, if remembered at all, will be remembered with execration, and ranked with a *Jeffreys'!*"

A CHRISTIAN minister writes from Maine to the *Independent* about the "pernicious theory and practice" of so-called faith-cures, such as have attracted attention at Old Orchard. He says that the woman who had used crutches twenty years, and was cured by the prayers of Dr. Cullis, is now as lame as ever, and has been sent to an insane asylum. "Nor is this a single case," he continues. "I am persuaded that, if the number of those who lose their 'cure' were set over against the 'cured,' the one class would nearly balance the other. I write this advisedly, because I have now in mind six cases, all of whom have fallen back into their former diseased condition; and some of these are much worse than before their 'cure.' That the Lord hears prayer we all believe; that, in his wisdom and goodness, he often raises the sick, blessing the means in answer to our petitions, we are very sure; but that he has placed the gift of healing in the power of any man's 'faith' is a delusion and a snare. The facts here given prove it." The believers in faith-cures might say that the failures cannot offset the successful cases; that the former are due to lack of sufficient faith in the invalids, that the relapses are caused by sins committed since the cures were effected, that the conditions on which depend complete and permanent cure are perhaps so exceedingly complex, and some of them of such a delicate nature that disregard of them may account for the failures to which sceptics and scoffers point. If "the Lord hears prayer," and "often raises the sick, blessing the means in answer to our petitions," why not admit that the cures at Old Orchard were effected supernaturally in response to the petitions of Dr. Cullis? Once admit that petitional prayers are answered, as the New Testament plainly teaches, and we do not see how a Christian can deny the claims of Dr. Cullis and his adherents.

SAYS the Springfield *Republican:* "The Supreme Court of Utah has affirmed the validity of the woman-suffrage law in that Territory. Its legality was doubted by the gentiles, and a test case was brought up for decision. One of the three judges composing the court dissented from the provision which allows the franchise without the prerequisite of tax-paying, but the others accepted this feature of the Mormon act along with the rest. There is naturally considerable disappointment among the gentiles over this decision, coupled with disparaging criticism of the logic by which it was reached; for, without the incubus of woman suffrage, the liberals feel that with the new system of registration they could readily attain political ascendency. The registration is now completed, and it is estimated that thirty thousand Mormons have been disfranchised. This registration, by the way, has afforded the first opportunity of really approximating the extent of polygamy in Utah; and it shows that the number of plural marriages has been greatly underestimated. The lists contain a total of about twenty-five thousand voters, of whom fifteen thousand to eighteen thousand are Mormons; and four out of five, women."

EDITORIAL NOTES.

"THE New England Anti-Compulsory Vaccination League" was organized at Hartford, Conn., last week.

FRIENDS of *The Index* can assist us in increasing its circulation by sending to this office the names of all persons they think would like to see sample copies of the paper.

WE are sending out bills this week to all our subscribers who are in arrears; and we will thank those who receive them to send to this office, at once, the amounts due on their subscriptions.

THE junior editor of *The Index* has received a number of applications for lectures the past fortnight. He will start West on a lecture trip next month. Meantime, he is open to additional engagements.

MR. JAMES SARGENT, of Rochester, N.Y., writes to the *Religio-Philosophical Journal* as follows: "I beg to remind you that my offer of $100 to 'Slade or any other medium,' for a written communication in sealed slates, is still open; and I would be quite willing to include genuine 'materialization' in the offer."

SAYS the Indianapolis *Age:* "The worst foes to the advance of Liberalism to-day are alleged Liberals who are clamorous and noisy and ambitious to lead, and to be talked about and praised and flattered, and to be regarded as famous. Egotism always accompanies shallowness, and ambition and jealousy are sure to accompany both."

THE *Sunday School Times*, in a notice of Dr. Felix L. Oswald's *Zoölogical Sketches*, says that "the essays which make up this book are in a certain sense attractive, and the illustrations are good"; but it finds in the volume such statements as "Monkeys seem to believe in the efficacy of vicarious atonement," and "Miracles usually end where the age of reason begins," and pronounces the book "unsafe and pernicious."

SAYS the Boston *Herald:* "Prof. Gulliver of Andover complains that the seminary is now quoted in 'Universalist pulpits, grog shops,' and other low places, as 'teaching a doctrine which we abhor,'—namely, that weak and sinful mortals may have, in the boundless goodness of God, a chance to be saved in the next world. This is quite in line with the remark of the orthodox old lady who said, 'The Universals they b'lieve that not everybody outside the fold will be damned; but, as for us, we hope for better things'!"

A DISCRIMINATING writer on "False Modesty" in the Boston *Courier* speaks of "a bold, immodest, and self-conceited vulgarity, a vulgarity that is emphatically *smart*, and knows how to employ every means for its own advancement,—a vulgarity that courts notice, even if this notice is nothing but contempt; that insists upon being spoken of, even if the words addressed to it are curses; that demands publicity, even that of the pillory. It addresses itself to the animal instincts of the masses; satisfies the small and the large desires of scandal by its immodesty; howls and screams, grasps, pushes, overturns, tears, ascends from the mud to the clouds, grows like a giant, masters us, and sings its pæan of victory with its foot on the neck of decency."

INTELLIGENCE of the unexpected death from typhoid fever of Miss Margaret S. Cheney, only daughter of the late Seth W. and of Mrs. Ednah D. Cheney, was received last week among their numerous friends and acquaintances with feelings of profound sorrow, and with sincere sympathy for the mother in her terrible bereavement. A beautiful, gifted, and charming young lady, the only child of her widowed mother, to whom she was companion and comfort, has been suddenly taken from the happy home whose light she was! There are no words, it seems to us, in which fittingly to express our sympathy; and we are sure our regret will be shared by all our readers who have come to know Mrs. Cheney through her frequent contributions to the columns of this journal.

ENGLISH friends, whom this number of *The Index* may reach, will see that we specially appeal to them in our essay, which sets forth opinions formed by Mr. Towne, after extensive and long-extended observation in England, preceded by wide knowledge of America and thorough acquaintance with American history; and we trust that, through editors and others to whom it may come, it will do something to correct English opinion of America and Americans. The article by Mr. B. W. Ball, on "Puseyism," cannot fail to interest our English readers. We may here state that a number of English writers, among them George Jacob Holyoake and William Clarke, are contributors to *The Index*. From Moncure D. Conway we publish a letter every month. It would give us much pleasure if any of our friends, who receive this number, would take an interest in extending our English circulation. Charles Darwin was one of our supporters; and, in sending on his latest subscription, he sent also a gift of £25 in aid of our efforts to strengthen our work, which is also encouraged and sustained by the patronage of a number of English scholars and thinkers.

A WRITER in the *Independent* observes:—

It would be a most interesting book that should gather up all the information bearing upon the history of successful examples of literature. A feature of Col. Higginson's literary life illustrates what I have just said. A few years ago, he came to his present publishers, and suggested to them the feasibility of bringing out a small History of Massachusetts. He was urged to prepare a smaller History of the United States, instead, on the ground that the latter might have a general sale, while the former could not be expected to have more than a local sale. Out of the arguments and discussions between author and publishers grew the *Young Folks' History of the United States* one of the most successful books ever issued in this country, and certainly one of the most satisfactory and the best of its kind ever attempted anywhere. Col. Higginson's little book, which is still growing from year to year, and which is truly a classic, has suggested the host of "Young Folks'" histories that have followed its first publication. Only the other day, the London *Standard*, in commenting on the work and the fact that it had already been translated into French, German, and Italian, expressed the hope that some competent English writer might be tempted to do for English history what Col. Higginson had so beautifully wrought for American history. Thus, once again, our cousins from over the water find in bleak New England a model and a literary standard. Surely, the times and the people have changed!

SAYS the *Sunday School Times:* "It is a well-known fact that an attempt was made to break Girard's will on the ground of the impropriety of an institution for the training of the young, with Christian teachings excluded from its walls; but that, on the trial of the case before the Supreme Court of the United States, it was shown that, notwithstanding Girard's apparent hostility to religious teaching, as shown in the sneers of his prohibitions, he had inserted in his will the positive provision that the instructors in the college should 'take pains to instil into the minds of the scholars the purest principles of morality'; that the Supreme Court of Pennsylvania had declared that 'Christianity is a part of the common law of this State,' and that, 'waiving all questions of hereafter it [Christianity] is the purest system of morality, the foremost auxiliary and only stable support of all human laws.' Under this decision, it was claimed that, to teach 'the purest principles of morality,' the Bible must be taught, and Christianity must have its recognition in the college. And so, to-day, Girard College is a noble Christian educational institution, doing a glorious work, standing as an illustration of the pervading influence of Christianity in Pennsylvania, and of the spirit of religious freedom which has been manifested in this Commonwealth from its inception."

IN an article on the recent meeting of the Evangelical Alliance in this city, the Boston evening *Transcript* pertinently observes:—

In the way of a moral, it is worth while to allude to one of the singular intellectual distortions which beset very honest men, and which crept into the discourse of President Chadbourne of Amherst, who led yesterday's discussion in reply to Mr. B. F. Underwood, of Boston. Dr. Chadbourne affirmed the radical weakness of Darwinism to be that its author "overworked" the principle of natural selection; that he was a studious collector of facts, but had a poor conception of causation; and that his application of sexual selection in explaining the beautiful plumage of the peacock was useless, because it presupposed an attractive male and an intelligent female bird. The applause which greeted the last statement showed that the audience considered Dr. Chadbourne a better thinker than Mr. Darwin. But students of Darwin know that instead of "overworking" his theory, no one of his successors in science has stated its defects so fully and frankly as himself. Moreover, both the beautiful plumage and the feminine preference are in keeping with the philosophy of development. Mr. Darwin hints at explanations, and Mr. Spencer has carried them to elaborate length. It is no doubt true that evolution has been "overworked" by pseudo-scientific philosophers, but the impression that it was "overworked" by the careful and conscientious naturalist himself should not be left uncriticised. In justice to a great man's memory, it must be eternally and vigilantly remembered that Darwin left his theory in the form of a personal conviction merely, to whose support he brought much evidence, and to whose confirmation or destruction he invited the co-operation of all investigators. In further justice to his philosophical power, which Dr. Chadbourne questions, we may cite the words of Prof. Huxley, uttered two years ago: "If the doctrine of evolution had not existed, paleontologists must have invented it, so irresistibly is it forced upon the mind by the study of the remains of the tertiary mammalia which have been brought to light since 1859."

"THE INDEX" will be sent six months to trial subscribers for one dollar.

I USED to hear, and I am not sure but I used to say, "Blessed is he who wants little." It is an ignorant saying. I have lived with those who wanted little, and it is pitiful. Rather would I say, "Blessed is he who wants much." Wanting implies life. It brings activity. It stirs the mind and makes the body subservient. It brings us together; and, by uniting our labors, our wants are supplied. Then new and higher wants come to develop a new and higher combination, and thus mankind rises out of the natural plane of brotherhood.—*Alice C. Fletcher.*

THE EQUINOX.

The sorrow of the autumn rain is here,
But Summer's foliaceous locks hang high,—
Not soiled gold yet in woodpaths lone they lie,
Though 'mong them many a leaf is stricken sere.
An Indian swarthiness bronzes the year,
Such as the ancient sylvan continent wore
Far back in immemorial days of yore,
Making the savage past to reappear
Forever in our New-World bounds, as oft
As autumn comes with rustling Indian ear,
And breezes from the south-west breathing soft,
And blue-skied noons, ethereal, sunny, bland,
And eves, apocalyptic visions grand,
With mystic sunset gleams of woods and waters clear.

The Index.

BOSTON, OCT. 5, 1882.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

For *The Index.*

Matthew Arnold on Culture in America.

BY REV. EDWARD C. TOWNE.

In the preface of 1869 to his *Culture and Anarchy*, Mr. Matthew Arnold, the most accomplished of English critics, and a high authority upon questions of education in Europe, delivered a confident judgment upon the state of education in America and the American lack of superior culture, in the form of a quotation from Renan, which ran as follows:—

"The sound instruction of the people is an effect of the high culture of certain classes. The countries which, like the United States, have created a considerable popular instruction without any serious higher instruction, will long have to expiate this fault by their intellectual mediocrity, their vulgarity of manners, their superficial spirit, their lack of general intelligence."

Mr. Arnold was provoked to bring forth this opinion of Renan by a declaration which Mr. John Bright had been making in regard to the state of culture in America. Mr. John Bright, in radical Birmingham, for which he is a member of Parliament, or at his home near semi-radical Manchester, is a man who goes about the business of humanity more intent on the Golden Rule and the implied brotherhood of mankind than on any principles of Church and custom, such as are held in reverence at the great universities of England and in the higher circles of English society. Unconscious of the Anglican and Oxford restraints, to which for some time Mr. Arnold has lent a sweet and enlightened tone, Mr. Bright had been saying, in a speech to his Radical Birmingham constituents:—

"I believe the people of the United States have offered to the world more valuable information during the last forty years than all Europe put together."

Mr. Arnold interpreted Mr. Bright's declaration as meaning:—

"America, without religious establishments, seems to get ahead of us all, even in light and the things of the mind."

And, further, Mr. Arnold drew out the, to him, dreadful sense of Mr. Bright's radical estimate of America in these terms:—

"Mr. Bright avers that not only have the United States thus informed Europe; but they have done it without a great apparatus of higher and scientific instruction, and by dint of all classes in America being sufficiently educated to be able to read and to comprehend and to think.'"

Against this, Mr. Arnold quoted Renan as above, and then said:—

"No doubt, in America all classes read their newspaper and take a commendable interest in politics,* more than here or anywhere else in Europe. But . . . when Renan says that America, that chosen home of newspapers and politics, is without general intelligence, we think it likely, from the circumstances of the case, that this is so, and that, in the things of the mind and in culture and totality, America, instead of surpassing us all, falls short."

By the circumstances of the case, Mr. Arnold explains that he means the case of Mr. Bright compared with M. Renan. The former, he says, has excessive and foolish faith in politics; while the latter has faith in real culture. And, hence, Mr. Arnold presumes, on the start, that America must be as Renan says, and not as Mr. Bright says.

But, unhappily, this proceeds too much upon that method of elevated superiority to real knowledge which Mr. Arnold at Oxford has inherited from the scholasticism of the Middle Ages. In the genuine scholastic fashion, Mr. Arnold allows himself to be, on this subject of culture in America, quite above knowing anything beyond certain assertions which have come in his way, and which strike him as most useful to the Anglican and Oxford argument which he wishes to make, and which, as a fine scholastic of the newest spirit, he touches with sweetness. The sweetness is capital. Mr. Arnold could be a Radical himself, if it were not for a large and wealthy inheritance of fine old clothes, which really, to the æsthetic eye, to social and conventional pride, and to traditional feeling, "could not be replaced." Culture, as a fine treacle on the dry bread of the Establishment,† Mr. Arnold would bestow everywhere. But of culture, thoroughly free and radical, he cannot hear without doubt and antipathy. The report that it exists in America makes him put up the usual shield, behind which the superior Englishman fights,—his omniscience. What he does not know upon the warrant of studied, sifted, and verified facts, he can know by superior opinion. He does not dream of opening his fine mind to anything so common and so unpleasant as information. He uses his rare power of reasoning and of criticism, not upon a large and fair show of facts, but upon most doubtful, second-hand assertions. With accidental bits of suppositious knowledge which are at hand, he makes an apparent argument on the principle, almost, that, if the facts do not sustain it, it is so much the worse for the facts. The overmuch strength of will and of logic in the English mind, for at least far the larger half of the English people, habitually acts in this way. It is with great fitness that, in English use, "stupidity" implies, not defect of intellect, but excess of will and opinion.

The truth is that Mr. Arnold suffers from the close hold which Oxford has upon him. He is a free thinker in scholastic bonds, an apostle of culture whose fine intentions do not supply him with anything like the knowledge requisite for his great mission. He makes, too, the prodigious mistake of thinking his situation as an Oxford man, a servitor of the Oxford spirit, to be the happiest situation in the world, quite unconscious that many of his sentiments lag some hundreds of years behind his better perceptions; that his apostleship of culture is greatly the worse for the atmosphere of chamber-maid intelligence left in the cloisters of Oxford Anglicanism by the Roman Holy Mother in celibate breeches; and that he is pressing forward in the race of enlightenment with the black rags of Latin Africa‡ flying from his shoulders and his head under a cap that should have been thrown away with the other rubbish of the pope. Thus, Mr. Arnold says:—

"Oxford, the Oxford of the past, has many faults; and she has heavily paid for them in defeat, in isolation, in want of hold upon the modern world. Yet we in Oxford, brought up amid the beauty and sweetness of that beautiful place, have not failed to seize one truth,—the truth that beauty and sweetness are essential characters of a complete human perfection. When I insist on this, I am all in the faith and tradition of Oxford. I say boldly that this, our sentiment for beauty and sweetness, our sentiment against hideousness and rawness, has been at the bottom of our attachment to so many beaten causes, of our opposition to so many triumphant movements."

Very far at the bottom, one might say, with Latin Africa, in the most unenlightened type of backward Anglicanism, at the top. The present writer had, at the moment when he was first acquainted with Mr. Arnold's comparison of American and Oxford culture, just seen Oxford for the first time, and had wondered to see, both in the town and in the academic cloisters, so much that gives an impression not at all of sweetness and beauty, but of the want of these. He thinks that he receives at its just value all the intellectual wealth of Oxford, but that its exterior is often a blackened scab of mediævalism goes without saying. On the principle that forgiveness of defects deepens love, he can understand that the unsightliness which so disappointed him may have awakened a love exceedingly deep; and, as a cover to those treasures of fineness within, he knows that any exterior may be pardoned. But, really, the black scab of Latin Africa—the tradition of Tertullian, Athanasius, and Augustine—goes deeper than the surface; and far the most that has made the glory of Oxford has belonged rather to the English race than to the Anglican school, to an intellectual manhood, which thorough Anglicanism sadly eats away and miserably degrades. It is the incidental traditions of Oxford, the great men that have been there and gone away, the minds destined to some mastery of affairs or of faith, to whom it has been a Nazareth: the occasional periods when the angels of England's relation to the kingdom of God have brought a great light into the scholastic prison, and sent some apostle free into the world,—these incidental things of Oxford are among its chief glories. Otherwise, Oxford has been the seat in England of a scholasticism which began to be out of date from the time that Chaucer's sweetly human verse, and Piers Ploughman's deep-thinking appeal to the free vision of holy truth, and John Wyclif's masterful moving—against Church and university and throne—of the previous question of English religion by a translation of the Bible into the tongue of the people, had begun to open to the English mind and heart and faith the gates of emancipation from Latin African servitude. And, when Mr. Arnold lends the smiles of sweetness and light to the assertion that Oxford, since the day that she cursed Wyclif into the common English crowd and put up Anglican bars where the Reformation tore away the pope's gate, has maintained her sour and imbecile opposition to all free English advance solely because of her sweet sentiment against hideous rawness, he speaks, not indeed in the spirit of chamber-maid intelligence left by Rome to Oxford cloisters, but yet with the voice of a mere Anglican refinement upon that spirit, which quite lacks the manly (and no less womanly) tone of honest English preference for sweetness and beauty without consecrated scab or scurvy, dust or dry rot, or the black rags and cap of Latin Africa.

And so, in his reasoning from a comparison of second-hand assertions, in total disregard of facts, and upon assumptions that show the blankest ignorance, Mr. Arnold has spoken as an Oxford scholastic and Anglican Pharisee rather than as an English scholar and Christian. He says that "*hole-and-corner* forms of religion inevitably favor provincialism," and speaks of "the narrowness generated in Puritanism by its hole-and-corner organization." And yet, even more than Puritanism, he makes a hole-and-corner dark-

* The vulgar interest in politics seems to me, after several years of careful observation in England, much stronger superficially in England than in America, but far less instructed, and vastly less conscientious, vastly more unprincipled, or weak-principled, and mercenary than in America. Voters in great numbers must be carried to the polls, they would not take the trouble to walk; and public journals reap a great harvest by publishing political matter as advertisements. What may be called "reputable corruption" is tenfold worse among English voters than it is among American.

† I use this illustration advisedly. In England and in America, the genuinely cultivated and refined class are neither specially English nor specially American. But, going below the best class, there begins to be this difference,—more profession with less performance in England, less profession with vastly more performance in America. In Mr. Arnold's favorite Church—excepting the best class, which I will assume to be not small—there is a great breadth of vulgarity, very bad vulgarity, under a thin surface of Anglican treacle. Often enough, the priest at the altar is of this vulgar type.

‡ See any of the authorities in regard to the Latin-African nativity of Tertullian and Cyprian, Athanasius and Augustine, the Fathers who did most to originate the style of church and creed, of faith and worship and learning which Anglicanism has inherited, and the signs of which are still worn by English undertakers and English university men. In Dean Stanley's *Christian Institutions* may be read the story of the old clothes which Church and culture in England so much affect, for no reason whatever, historically, except that of survival in church usage of old fashions of dress. The Roman peasant prayed and exhorted and served the altar in his shirt-sleeves. The German barbarian, when he came, pulled a shirt on over his fur coat. Hence, the *surplice*. The gown and cap are equally survivals, mere old clothes, originally vulgar, and worse than vulgar now.

Digitized by Google

ness in the Oxford cloister, where he thinks he sees the world reflected in the mirror of scholastic meditation. Puritanism in America, driven out into the world two and a half centuries ago, has ceased to be Puritan. The provincialism is in Mr. Arnold's exceedingly narrow outlook at Oxford and in the Anglican influence which has kept England to this day full of the holes and corners of mediævalism. An apostle of sweetness and light, who prefers his own smiles to sunlight, and cloister sentiment against hideousness and rawness to valuable information and accurate knowledge, cannot fail to make woful mistakes, both of observation and of reflection. It will not be difficult to show that Mr. Arnold has neither observed correctly nor reasoned justly, and that his entire view of culture in America is an Oxford hole-and-corner view, which he could not have taken if he had been, as the present writer happens to be, a descendant, through several American generations, of one of the English Puritans, who, when Laud was at work and before Cromwell had come, found England a good hole and corner to leave, and New England a refuge of freedom.

If Mr. Arnold could only have come a little out of his Oxford "hole-and-corner" superiority to real knowledge of the honest facts about culture in the great New World of America, into which England has been extending now for above two hundred and fifty years, he must have seen evidence close at hand sufficient to suggest that Renan, spite of smiling the identical Oxford smile about culture, was quite preposterous in his declaration that America has "created a considerable popular instruction without any serious higher instruction," and "will long have to expiate this fault by intellectual mediocrity, vulgarity of manners, superficial spirit, and lack of general intelligence," and that Mr. Bright had no less erred if he indeed claimed that the attainment of the people of the United States had been made without a great apparatus of higher and scientific instruction. Renan has had little, if any, opportunity to know accurately about America; and Mr. Bright, who has used so well what he has known, has been no scholar in American history. On a late occasion, for example, he had not so much as heard of Dr. Channing. But a great critic, like Mr. Arnold, should be equally a scholar, and as such he might have known the truth about culture, character, and manners in America.

Mr. Arnold knows that in England there has been special activity for the extension of university culture only within a very short time. That activity in America dates from the settlement of New England, and many things which England is just now getting or trying to get, New England has never been without. The leaders of both the Pilgrim church and the Puritan churches, in the New World, were Cambridge University men. There were Oxford men also; but of Cambridge men there was, in Massachusetts and Connecticut, one for every two hundred and fifty inhabitants,—a planting of English culture without a parallel. These two colonies gave birth to Harvard and Yale, universities which are the Cambridge and Oxford of America, and the sons of which are foremost leaders throughout the whole country of the progress which sways all hindering and dangerous elements to ends of increasing good. The story, as our historians tell it, is a noble one. Bancroft says:—

"It was ever the custom, and it soon became the law, in Puritan New England, that 'none of the brethren shall suffer so much barbarism in their families as not to teach their children and apprentices so much learning as may enable them perfectly to read the English tongue.' 'To the end that learning may not be buried in the graves of our forefathers,' it was ordered in all the Puritan colonies 'that every township, after the Lord hath increased them to the number of fifty householders, shall appoint one to teach all children to write and read; and, where any town shall increase to the number of one hundred families, they shall set up a grammar school; the masters thereof being able to instruct youth so far as they may be fitted for the university.'" Harvard University was established in 1636, the colony, not yet ten years old, voting a sum equal to a year's rate of the whole colony, which at the present time for the same colony would be £200,000. Not only the wealthier began at once the American practice of profuse liberality for good learning; but the whole community far and near sent help, as of old the Jews to their temple. On one occasion, every family in all New England gave twelve pence, or a peck of corn, or its value in good Indian shell money. Before 1650, the middle of the seventeenth century, every New England colony, except small and eccentric Rhode Island, had made public instruction compulsory. "In these measures," says Bancroft, "especially in the laws establishing common schools, lies the secret of the success and character of New England. Every child, as it was born into the world, was lifted from the earth by the genius of the country, and, in the statutes of the land, received as its birthright a pledge of the public care for its morals and its mind."

In the colony of Pennsylvania, a disastrous policy was adopted, at the demand of the Quakers, who would not have free schools for all alike, because they already had denominational schools, and thought it would be enough to add other schools "at low prices." The very plan England is now following was preferred in Pennsylvania to the New England plan of free schools, with the result that Pennsylvania lagged far behind New England in social and political progress. Those two colonies especially into which originally were gathered the greatest number of ardent friends of free learning for all the people, Massachusetts and Connecticut, easily became the nurseries of all that is best and that is dominant in American progress. America, educated, and using with all the world the rule of peace and good-will, is fast winning a position of power and prosperity well in advance of all other nations; and, of this success, the chief secret has been that for full two hundred and fifty years the pure English ideal of liberty and learning, which was lighted chiefly at Cambridge University, and was by noble scholars and devoted students borne over the sea and into the wilderness, has been, with fervent zeal and patient courage and untiring self-sacrifice, carried over the continent in the system of free schools. It was in 1629 that twelve gentlemen met at Cambridge in England, and made an agreement to go with their families to America as the leaders of the most conspicuous emigration by which New England was founded. Seven years had not passed before an American town of Cambridge saw the beginning of Harvard University, and unweariedly from that time to this has the great work gone forward of planting pure culture and pure freedom as free to all men as the air they breathe. When Lord Bacon published in October of 1620 his most famous work, the *Novum Organum*, there appeared on the title-page a symbolical picture of a harbor with incoming and outgoing ships, and the motto, *Many shall run to and fro, and knowledge shall be increased.* At that moment, the "Mayflower" was in mid-ocean, bearing the earliest company of New England settlers on their perilous venture to break the ice on the shore of a savage world for all that might come after. The fulfilment of Bacon's prophetic anticipation has come beyond his utmost expectation. If you should visit to-day the spot where the Pilgrim Fathers landed, and were to land at the point outside their harbor, where a light-house stands at the far end of a long sand-bar, some miles from any population, you would find a school-house, where in summer a free school is kept at the charge of the town, although for no more than six pupils. It is typical of all America. Go where you will forward from that landing-place of those English Pilgrims, and you will find the free school-house, either come or coming. It was the misfortune of the South that its origins were to so great an extent, if not at the low level of ignoble ignorance, at least unattended by any provision for schools, for learning, and for literary cultivation, and that, with this sufficiently bad beginning, worse was added by the degrading influences of negro slavery. The most eccentric hallucination * got voice by Mr. Roebuck when he said that the South were English and the North were not. The twenty thousand Englishmen who came into New England before 1640 were the purest picked English, and they have grown into ten or twelve million of people, with less mixture of blood with other races than England itself can show. Their best historian has justly said that they "are a singularly unmixed race," and that "there is probably not a county in England occupied by a population of purer English blood than theirs." Not only so; but, while they certainly did not represent the beef-eating type of John Bull, they did represent the better intellectual type of the best English stock, and they made in New England a race excellent for character and culture above the average English race. They have formed about one-third of the people of the United States. The second third has come from the English, who settled in the other early colonies along the Atlantic, from New York to Georgia; while the last third goes back to Irish, Scotch, French, Dutch, German, Swedish, Spanish, and other immigrants. The English of the second third were about evenly divided between North and South, those of New York and Pennsylvania and Maryland going with the North, while those of Virginia, North Carolina, and South Carolina, and Georgia, formed the Atlantic front of the South. In New York, Pennsylvania, and Maryland, the character of the English had been such as to assimilate the culture of these States with that of New England. Both New England ideas and New England people had gained a foremost place in these States. At Baltimore, for example, where the South almost prevailed, Mr. Peabody, a son of Massachusetts, who had become a citizen of Baltimore, and then a resident in London, and who had founded a vast charity for London with a gift of $2,500,000, and had bestowed in Massachusetts, at Danvers, $270,000 for an Educational Institute, also founded the Baltimore Institute of Science, Literature, and the Fine Arts, with a fund of $1,400,000, and further established at Baltimore, on a basis of $8,000,000, a grand charity designed to promote the support of schools in the South. At Baltimore, too, Johns Hopkins' gift of $3,500,000 for a University foundation has brought into existence one of the most promising seats of superior culture to be found anywhere. So that at this point, where the North meets the South, we see Maryland made, for liberty and learning, for freedom and culture, the equal of Massachusetts; while Mr. Peabody's gift in aid of schools casts over the no longer dark and desolate South the pure light of a great beacon of knowledge. I need not go through the list of American schools of culture, naming only the universities and colleges where the standard is fully as high as the best English, in order to show that the Atlantic front of the North is marked by great bulwarks of culture, which mean *more a good deal* for our people than the like English seats of culture mean for England, and that, going back from these, other schools of the best superior culture fill the whole North, the chief and characteristic, the intellectually and morally dominant, portion of the country. If Mr. Arnold had known anything at all to the purpose of sound criticism of the state of culture in America, he would not have borrowed Renan's statement on the subject. "Without any serious higher instruction," said Renan, whose statement Mr. Arnold adopted in 1869. "Without a great apparatus of higher and scientific instruction," said Mr. Arnold, echoing Renan's criticism. But in a curiously superficial essay of unfavorable opinions on America, which he has lately served in the *Nineteenth Century*, Mr. Arnold so far forgets himself as to say with reference to America: "About superior or university instruction, one need not be uneasy. An institution like Harvard is probably all that one could desire." Probably! Mr. Arnold has heard of Harvard since 1869. He has perhaps a suspicion that there are other seats in America of superior instruction, and he virtually admits that his criticism of 1869 took a false view of the facts. What he now alleges in support of his opinion of American culture is that "good secondary schools" are wanting in America. Evidently there is a good deal in America of which Mr. Arnold has not yet heard. He could not more manifest want of information about America than in his assumption that "good secondary schools" are as little known in America as in England. The American High Schools, many of the academies, and many of the smaller colleges are such schools. Mr. Arnold hints at the superficial and shoddy character of English academies. To be just, he ought to make many exceptions. The fact is big enough and bad enough without the exaggeration which is one of Mr. Arnold's faults. But the fact, as it very generally appears in England, hardly exists at all in America. It is one of the facts which England owes to her Church and to other sources unknown in America. Comparatively poor as many American schools may be thought to be, the vulgar shoddy of the English type is unknown. Conventional and church reasons suggest in England a shoddy programme. America has had from the

* The state of English culture, in respect of profession exceeding performance, vulgarity under Anglican treacle, and conceit doing duty for culture, has been broadly and painfully illustrated in the extent to which English opinion has been as open-eyed and sympathetic toward the civilization which included slavery as it has been blind and prejudiced toward that which illustrated, as no other has ever done, the best ideal of freedom and culture.

Digitized by Google

first "a serious programme"; and if Mr. Arnold could come here, without his Oxford and English omniscience, study our history, really find out our spirit, and adequately observe our schools, he would see that "good secondary schools," to do just what he requires, are largely and broadly at work here, even if not doing all that needs to be done. Mr. Arnold speaks far too confidently when he says that secondary schools would greatly mend English civilization. For the most part, they would be only a little more Anglican treacle.

Mr. Lowell is quoted by Mr. Arnold as describing his own nation as "the most common-schooled and the least cultivated people in the world." Mr. Arnold should judge whether this is a serious and sound judgment, or something else. How much does Mr. Lowell know his own people? How much any people but his own? He has not lived widely among Americans. He has not lived at all among any other *people*. His words quoted by Mr. Arnold only mean that, from his nook of fine culture, he looks out upon his own people with irritation. But if he knew other peoples as closely and as well, and yet as unsympathetically, as he knows his own, he would see that the largest and brightest fact of human history at the present time is the diffusion of culture in America. Taken as a whole, the American is far the most cultivated people in the world. It may not mean much to a sensitive apostle of culture. Yet, comparatively, America stands, in cultivation of her whole people, well in advance of every other nation. Mr. Arnold convicts himself of absurd ignorance when he quotes approvingly a Frenchman, in whom he sees a fine omniscience, and who draws from Mark Twain's works this conclusion:—

"In spite of all its primary education, America is still, from an intellectual point of view, a very rude and primitive soil, only to be cultivated by violent methods. These childish and half-savage minds are not moved except by very elementary narratives composed without art, in which burlesque and melodrama, vulgarity and eccentricity, are combined in strong doses."

This sapient Frenchman has heard of nothing in America but Mark Twain's works, and he constructs in his own consciousness a people whose cultivation consists in reading Mark Twain! And an Oxford Pharisee of British culture says that it is done "soundly and correctly enough"! Not only could it not be more villanously done, but the comparative fact, as to Mark Twain, Artemas Ward, Walt Whitman, and other exceptional products of America, is that the taste for them is much stronger in England than it is in America. Mr. Arnold really ought to borrow ignorance which has some touch of probability.

CORRESPONDENCE.

MISSIONARIES IN INDIA AND CHINA.

Editors of The Index:—

It is an open question, even among many professing Christians, as to the real efficacy of missionary work in what we are pleased to call heathen lands; and yet, if you make this assertion in the presence of clergymen, ninety-nine out of a hundred will pronounce it false, with the *ex cathedra* air peculiar to their calling. I well remember how some years ago my rather unorthodox parent, Mrs. Elizabeth Cady Stanton, awakened the religious ire of a narrow-minded preacher in a little Michigan town by touching casually in the course of an address upon the small outcome of centuries of missionary labor; and I recall still more distinctly the reply which I was delegated to prepare in response to a letter from the pen of this same preacher published in the town paper, wherein Mrs. Stanton was overweeningly called upon to prove the truth of her assertion. I did not have to go outside of the shelves of my own private library to collect an array of testimony which, if it did not convince the Michigan divine of the failure of Christian propagandism in non-Christian lands, must at least have shown him that the arguments are not all on one side.

In a recent number of the London *Times* appeared an able letter from a Singapore correspondent of that journal on "Missionaries in India and China," which I should send to my clerical friend in Michigan, if I had not long ago forgotten both his name and address. But perchance my whilom letter may have worked marvels, and this champion of foreign missions may be to-day a reader of *The Index!* However this may be, I cannot resist laying before your readers the statements of the correspondent of "The Thunderer," even though I run the risk of cloying the aforesaid convert to Liberalism by so doing:—
