Joseph Smith, who was born in Vermont near the beginning of the present century; who was without either natural talent or education; whose religious nature was as strong as his moral nature was weak; who, at an early age, claimed to have visions and revelations, and to possess such powers as would to-day rank him among "spiritual mediums,"—in 1823 declared that an angel came to him, and directed him to go to a certain spot near Palmyra, N.Y.,—whither his father and family had removed when he was but a lad,—with the assurance that he would there find engraved on plates of gold a revelation containing a history of the ancient inhabitants of America. After a struggle with the devil and his agents, these plates were obtained. William Smith, a brother of the prophet, and next to him in age, whom we met at Elkader, Iowa, a few years ago, assured us that he saw Joseph bring the plates into the house in a pillow-case; that he handled them, and found them so heavy that he was unable to raise them from the floor; and that his brother showed him the rents in his clothes and the bruises on his body, which were received in the struggles to prevent the capture of the plates, and to defend his own life. He gave, with evident sincerity, a most circumstantial account of the affair, and expressed the fullest confidence in his brother's prophetic mission.

An alleged translation of the records of the golden plates, made by the prophet Oliver Cowerdy acting as clerk, was given to the world as the *Book of Mormon*, a work now known to have been written by Solomon Spaulding, originally entitled *Manuscript Found*, intended by the author only as a romance, and really the fabrication of a feeble intellect. In 1830, a Mormon Church was organized at Manchester, N.Y. The year following, the church was commanded to remove to Kirtland, Ohio, where one Sidney Rigdon, a Campbellite preacher of some ability and little education, had become a convert, and had a congregation which served as a nucleus for the movement in the West. At Kirtland, a "Safety Society Bank,"—something like the Augustinian Society of Lawrence which recently collapsed,—a store, mill, and other mercantile operations, were commenced by Smith, who now received frequent revelations. He was soon accused of dishonesty and fraud in his business transactions, and was tarred and feathered by a number of indignant citizens. That he was guilty of all the charges made against him there is reason to doubt, but it is certain that his conduct was dishonorable and tricky. On July 23, 1833, was laid the foundation of Kirtland temple; and, the year following, the Mormon Church was first called "The Church of Jesus Christ of Latter-Day Saints." In 1835, at this place were ordained the Twelve Apostles, among whom were Brigham Young and Heber Kimball, the former a son of Vermont, born four years earlier than Joseph Smith, and in early life connected with the Methodists. These two men—one the founder of Mormonism and the other his powerful successor as leader—first met in the woods near Kirtland, where the former was chopping wood. In 1836, the Kirtland temple, finished at a cost of $40,000, was dedicated, when Joseph Smith declared that he had seen Moses, Elias, and Elijah, and had received from them certain "keys" of the priesthood, which gave him and his successors unlimited power in things temporal and spiritual. Subsequently, Smith's "Safety Society Bank" broke; and he and Rigdon ran away in the night from their creditors, who had threatened to arrest them for fraud. Still later, Rigdon, in an anniversary address, threatened the enemies of the Mormons with violence. The Danite Band was organized, the militia attacked the Mormons, shooting women and children and burning houses. The saints went to Quincy, Ill. Young relaid the foundation of the temple at Independence, Mo., which had been dedicated by Smith in 1831. Young, Kimball, and others went to England as missionaries. Smith went to Commerce, Ill., the name of which was changed to Nauvoo. The Nauvoo temple was built (1841); Joseph Smith and his brother Hiram were shot in jail by a gang of Missourians at Carthage, Ill.; the Twelve Apostles, with Young at their head, assumed the presidency of the church, cutting off Rigdon and all contumacious members, who were cursed and "delivered to the devil"; and, after the repeal of the Nauvoo charter by the Illinois legislature, and after making Council Bluffs a temporary resting-place, the Mormons, preceded by Young and a body of pioneers who followed the trail of Fremont, went to Salt Lake City, where they arrived in the fall of 1848,—the spot which Brigham Young declared was indicated to him by an angel, but the selection of which everybody except a Mormon can see needed no angelic wisdom. The site of the city, as is well known, is one of great natural advantages; and its picturesque beauty must have appealed strongly to a persecuted—although by no means an inoffensive—people, who had wandered across the plains and over the mountains in search of a place where they could live unmolested by their enemies. Mountain peaks all around, aglow with perpetual white, towering to the sky, and looking down from their serene heights into the valley below, as if to guard and protect it from harm, are features in the surrounding scenery of deep beauty and impressiveness. The altitude—four thousand feet above ocean level—gives a purity and clearness of atmosphere which make the mountain slopes—really miles away—seem but as many rods, and revealing the outlines of the far-off ridges and declivities with wonderful distinctness.

The Mormons triumphantly point to their history in proof that they are a chosen people with whom God has ever been present; and they confidently assert that, with his aid, they will be able to vanquish all dangers which in any emergency may threaten the church or menace the unity of their social organization. Although they greatly overrate their achievements, it is true that, under the stimulus furnished by the trying circumstances in which they were placed, they manifested a courage in the desperate resolve to seek a new home in an unexplored country scarcely inferior to that of the Dutch when they determined to submerge their country and embark for the Indian Archipelago rather than submit to the fate which would have been imposed on them, had the hostile king become master of Holland. And, under the double incentive of religious enthusiasm and individual requirements, they have built a fine city, and made the surrounding country blossom as a rose; and they point, not without reason, to Salt Lake City, and the smaller settlements of Utah Territory, as evidence of their courage and endurance, their energy and industry.

Our attention has been attracted to this subject by the conference now being held by the "Reorganized Church of the Latter-Day Saints" at Kirtland, Ohio, where, just half a century ago, the Mormon temple was dedicated, when Joseph Smith expounded to his followers, a mere handful of ignorant men and women, his translation of the records which he had discovered under divine inspiration, together with visions and revelations with which he had been favored. The professed object of this conference is to restore the Mormon Church to its primitive purity, to consecrate the ancient building which was the first temple of the faith, and to preserve it as an object of pious veneration. It represents the anti-polygamous element of the Church, although the Utah Mormons are represented the papers state by two Bishops; and there are delegates present, presumably of the polygamous element, from Europe, Asia, Africa, and the Sandwich Islands. The schism regarding a plurality of wives seems not to interfere with the admiration of the character and the pious veneration of the prophet and his divine mission.

The branch of Mormonism, under the auspices of which this conference is held, numbers thirty thousand persons in the United States, Canada and Europe. Its President is Joseph Smith, son of the prophet, a man of average intelligence, without much education and without ostentation, but of considerable tact, caution, and common sense. We once had a long conversation with him, and he

Digitized by Google

impressed us as an honest, sincere, and fair-minded man. In his father's claims, he seemed to have the fullest confidence. Pointing to a portrait of the prophet hanging on the wall of his office, he asked, "Does that look like an impostor?" It was so lacking in expression that we were glad to be able to say that it did not represent a character such as Joseph Smith was commonly represented to be, although an acquaintance with the authenticated record of the prophet's life prevented our making further comments. Mr. Smith was extremely severe in his remarks on the Brigham Young Mormons. They represented, he said, a perverted and corrupted form of Mormonism. He was emphatic in his statement that polygamy formed no part of original Mormonism, and dwelt on the fact that the polygamous Mormons can give only a copy of a revelation to his father justifying polygamy, which he claimed was entirely spurious. There is, however, good reason for believing that the prophet attempted to cover up or justify his sensuality by the claim that he had received a revelation, which was used very cautiously, sanctioning and recommending polygamy. But his son Joseph should not be held responsible for this fault. He assured us that he had no sympathy with polygamy; and while we were at Plano, Ill., where he resided at that time, we learned that he was highly esteemed as an honorable man and a good citizen.

The gathering at Kirtland numbers, the papers state, about two hundred; and the services are very much like those of a Methodist meeting. It is certain that the "Josephites," representing, as they claim, "primitive Mormonism," are small in numbers and influence compared with the Mormons who look to Utah for instruction and authority.

The fact which impresses the considerate thinker is that, while many religions, founded by selfish impostors or by self-deceived enthusiasts, have flourished in ages of ignorance and superstition, Joseph Smith, an ignorant and unscrupulous man, without natural eloquence or personal attractions fifty years ago, put forth, among an intelligent people, claims full of contradiction and palpable falsehood, and was able to organize a church which has increased in numbers and influence until it has vast multitudes of adherents, rules a Territory of the United States with almost absolute sway, has in all the European countries missionaries who make, every year, thousands of proselytes, and missionaries in this country who are continually making converts to their faith, and which has continued to grow and extend after the death of its founder and its most distinguished leader, and has to-day among its supporters men of education, tact, and skill in public affairs, as well as a multitude of devoted disciples, a coherent system of faith, an authoritative revelation, a history with facts suppressed or distorted to favor its claims, a mass of tradition reverently believed, with faith, enthusiasm, and zeal strong enough to make thousands sacrifice family connections, property, and life itself, if necessary, in the interests of this religion.

But the thinker, looking beneath the surface, knows that Mormonism is not a new religion. Religions do not appear *de novo*. Every religion is the product of the modifications of pre existing religions. Mormonism is Judaism and Christianity, with certain teachings of the former especially emphasized, and with a new name simply added to the list of prophets. Mormonism has spread, because Mormonism in its essential features is Christianity, and because its field has been Christendom. It has made converts among a class widely separated intellectually from Unitarians, because it has given prominence to doctrines of the Bible widely different from those to which Unitarianism has given prominence. The progress of Mormonism is by no means wonderful, if, dropping all prejudice, we recognize the fact that all the chief elements of superstition in Mormonism are in the popular beliefs throughout Christendom. Divested of polygamy, an unessential part of the system, which may be abandoned at no distant date by the pretended authority of a new revelation, Mormonism will probably continue to grow, to undergo modifications, to divide into sects, and to be the faith of millions yet unborn. And its defenders will point to its obscure origin, the tragic death of its prophet, the persecutions and hardships of its early adherents and its rapid spread as irrefutable proofs of its divine origin.

FREE RELIGIOUS ASSOCIATION FESTIVAL.

Our readers will be pleased to learn that Col. Higginson has consented to preside, and Miss Garlin's admirable Euterpe Quartette to sing, at the Festival of the Free Religious Association of Anniversary Week. The Festival this year is to be held in the large Horticultural Hall, and will consist of a sit-down supper, beginning at about six o'clock, and brief speeches from speakers whose names will be hereafter announced.

Tickets of admission, with reserved seats at the tables, at fifty cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston; of the Secretary, F. A. Hinckley, Providence, R.I.; of A. G. Hill, Esq., Florence, Mass.

As it is designed to press the sale of tickets at once, it is hoped that all friends proposing to attend the Festival will make early application for seats.

F. A. H.

EDITORIAL NOTES.

THE Messrs. Putnam of New York have in press a small volume of poems by Mr. John Albee, who has been an occasional contributor to *The Index*, though not writing so often as many of our readers would wish. Some of these poems have appeared in print, in various journals and magazines,—a few in our own columns,—others have not before seen the light. Mr. Albee's many friends will look for the book with interest.

A CONSIDERABLE number of the clergy of the Church of England have signed a protest against the Affirmation Bill, on the ground that it "is dishonoring to Almighty God." They must be a very Biblical set of men not to know that their professed Master was in favor of affirmation! These English clergy are opposed to Jesus, who denounced the taking of oaths, and said, "Let your communication be yea, yea, and nay, nay," as if he were a Quaker.—*Boston Investigator.*

THE Boston *Saturday Times* asks: "Is it not about time that decent newspapers stop apotheosizing prize-fighters in their news columns, while they satisfy their remnants of conscience by editorials that weakly condemn what the outside pages of their paper strongly commend? Because the account of a prize fight is 'news,' is there any need of devoting large space to it, and giving the sickening details in a way that disgusts the decent reader as much as it pleases the brutes who are glorified in their own eyes by having their names and deeds appear in print? Newspapers that pretend to be respectable have a great deal to answer for in their practical indorsement and encouragement of prize-fighting."

THE New York *Evening Post* says: "There is probably no person professing to be educated who has brought so much discredit on the American mind within the last seven years as the Rev. Joseph Cook himself in the eyes of those foreigners whose opinions about newspapers or any kind of literature are worth repeating. His gross ignorance and inaccuracy on those matters of science with which he has undertaken to deal have again and again been exposed by scientific men. So have his reports of the opinions of foreign philosophers and thinkers. There is, however, nothing discreditable to the country in the existence of a conspicuous blunderer of this kind. What does damage it is the triumph of Mr. Cook's remarkable talents as a sensational preacher over all attempts to make his real character known to his audiences. His hall is just as full, we believe, as it was before he was found out; and there is no apparent diminution in the number of those who think he has reconciled religion and science. The better educated and more rational clergymen are as much ashamed of his performances as anybody; but a lamentably large number of them are glad to accept his assistance in keeping alive a spirit of credulous wonder which they mistakenly, we are sure, consider in some manner favorable to the growth and maintenance of genuine religious feeling."

THE *Catholic Review* says that "there used to be a law in the old days against blasphemy and profanity, and a very good law it was. It is a pity that it should have grown into desuetude. But the worst blasphemy is that talked in the drawing-room and spread abroad through the press.... There is such a crime, punishable by law, as treason against the State. Is avowed treason to God no crime? Lectures such as Mr. Parton's and Mr. Ingersoll's are public misdemeanors, an insult and a wrong to the Christian community. Freedom of speech is all very well, but it should not be allowed to run into blasphemy. There is a law against libel that very effectually restrains freedom of speech. It is time for us, if we are a Christian community, to have the courage of our convictions, and silence men who openly assail the cross and the religion of God. Blasphemy, however specious its form, should be put a stop to. It is not honest doubt or inquiry. That may be respected and honestly met. But to jest with the most sacred subjects and proclaim the Saviour of mankind an impostor should render a man amenable to the law of a Christian people. To preach infidelity is to preach the root of all sedition and destroy the State." The *Review* is true to the teachings and tradition of the Church it represents, which has persecuted heretics to the extent of its power, and would to-day, if it could, suppress every liberal journal and imprison every advocate of liberal thought in the world.

"THE INDEX" will be sent six months to trial subscribers for one dollar.

PETER COOPER.

Give honor and love forevermore
To this great man gone to rest;
Peace on the dim Plutonian shore,
Rest in the land of the blest.

I reckon him greater than any man
That ever drew sword in war;
I reckon him nobler than king or khan,
Braver and better by far.

And wisest he in this whole wide land
Of hoarding till bent and gray;
For all you can hold in your cold dead hand
Is what you have given away.

So, whether to wander the stars or to rest
Forever hushed and dumb,
He gave with a zest and he gave his best
And deserves the best to come.

—*Joaquin Miller, in New York Herald.*

The Index.

BOSTON, APRIL 19, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

THE BLACK HOLE,—SOLIPSISM.

BY WM. I. GILL.

IV.

I have so far proceeded on the assumption that the reader would understand what I mean by objective evolution; but perhaps it would have been better, had I defined myself, and I will do it now. By objective evolution, I mean substantially that system of philosophy which has been concurrently expounded by Herbert Spencer, George Lewes, John Fiske, and others, and which has been called the cosmic philosophy, the synthetic philosophy, and simply evolution and agnosticism. It affirms that all the phenomena of mind and matter appear to be manifestations and symbols of one only ultimate and inscrutable power and reality; that the known world external to our organism is the immediate source whence have been evolved all the organic world of plants and animals and human consciousness, beginning with the lowest forms and advancing to the present time and to man as the most recent and the highest known form of the evolved force; that the organism and the individual, conscious *ego* have the same source and cause, and originate at the same time and appear to be ultimately one, furnishing two great classes of phenomena, the organic forms and processes, and the conscious processes or the feelings, including thought and volition,—which are feeling, but not wholly feeling, even as the sensations are not wholly feeling.

It is very remarkable that objective evolutionists are exceedingly anxious to find *an external world as object and non-ego*, which they deem necessary to their theory; and they thus confound themselves on this point with the old dualists, whom they affect to despise. This introduces confliction and consequent obscurity into the theory. Its advocates are not aware that there is no real call for such an external world either in their theory of evolution or in anything established by modern science or philosophy. They are in reality animated only by an old prejudice, an idol or "phantom of the tribe," born of prescientific impressions. To accomplish this impossible task, they resort to the most flimsy special pleading, which, in any other connection, they would justly despise. They are also wrong in their objects as well as in their argumentation; for, as they aim to prove only an unknowable world, some inconceivable thing which is void of all sensible quality and of everything that can be presented either to thought or imagination, such a pursuit must be futile in its results relative to evolution. For, if such a world were proved, it could not be discriminated from the great Unknowable, the One ultimate Force manifest in all phenomena; and so nothing would be gained by it, and for it the theory of evolution has no distinctive place. The proof of such a world would also be futile relative to the popular feeling. The world in popular demand is a sensible world, and that world has never been brought in question by any school of philosophers whatever. One and all affirm its existence, and describe it in much the same way. Like the rest of mankind who are unwarped by speculative theories, I am not concerned about the existence and proof of a supersensible world of matter, as I hold it to be practically and speculatively useless, and conceptually *nil*, so that the assertion of its existence is a mere verbalism, as no meaning can possibly be attached to the words. It is to be expected that arguments for such a world will be as empty and obscure as the object sought. Some of these arguments we will now notice.

Involuntary Action.

The familiar argument that such a non-egoistic force is to be inferred as the cause of those organic experiences which are independent of our will and opposed to our will has always appeared to me quite puerile, though it is urged by some of the great minds of the world. It proves too much,—that the extra-volitional cause of every experience is *non-ego;* for this is its major premise, and it is utterly inadmissible. Within ourselves there is a variety of non-volitional causes, whose operation we long and vainly antagonize with all the energy of our will. There are natural organic appetites which operate with great force irrespective of our volition, and often against its sustained and strenuous endeavors, such as hunger, thirst, the sexual feeling, and certain acquired appetites for things which are confessedly injurious, as alcohol, opium, tobacco, and other narcotics. All bodily diseases exemplify the same principle. They are the effect of forces which begin their operation without our consent and continue in spite of our opposition, and are yet wholly subjective. All physiological functions operate irrespective of volition, and are pre-conditionally necessary to its action.

I do not forget that all organic appetites and all physiological functions would soon perish but for a force assimilated by the organism from without. But neither do we forget that all known extra-organic force and phenomena are egoistic; so that their causative relation to the organism is nothing against my position, no proof of a non-egoistic cause of our organic experiences. There is not in all the universe a single known example of a non-egoistic cause, though non-volitionary causes are innumerable, including all the sensible universe. The known *ego* is the known source of all known experiences on earth or in the heavens. To infer any other cause is equally unscientific and illogical, except on the theory that the *ego* is confined to the organism. If the *ego* is conceived as confined to the organism, the causes of its experiences are found in the external world; but these causes are not inferred and unknown, but they are experientially verified. This, however, is confessedly erroneous. The known external world, equally with the organism, is admitted to be a series of subjective states. If we infer a cause of all this, we reach either the Deity of theism or the "Great Unknown" of agnosticism, which is not the material world contended for. It is clear, therefore, that the *ego*, or subject, has the causes of its own non-volitionary experiences within itself; and, until we have the impossible proof that all non-volitional causes are *non-ego*, we shall have no ground for the inference that there is a non-egoistic material world. We know ourselves as the subject and source of an immense and infinitely various non-volitional causation, which dispenses with the need of any such world.

Alleged Necessary Belief.

To say that we cannot help thinking and believing that there is such a *non-ego* called matter, or the material world, is false as a universal proposition. Some men may feel so; but all do not, else this debate had never been. For one, I am unable to do other than disbelieve it, because it stultifies my intelligence. "The universal postulate" does not apply here for want of the universal conviction.

Spencer's Negative Proof of Transfigured Realism.

While I regard Mr. Spencer's *Principles of Psychology* as a very able production, yet I know nothing in the whole range of philosophical literature weaker than his nineteenth chapter, styled "General Analysis," in advocacy of his "Transfigured Realism." After refuting the "assumptions of metaphysicians," the "words of metaphysicians," and the "reasonings of metaphysicians," he presents a "negative justification of realism," which consists in "an argument from priority," an "argument from simplicity," an "argument from distinctness," and two or three other arguments less definite and quotable. It is quite a startling novelty for a man to claim "priority" for the most recent invention or discovery, and it is surely richer in comic than in logical force. The "argument from priority" is futile, unless it covers his own peculiarity; and this peculiarity is set forth as an original conception. Equally striking, and for a similar reason, is the claim of superior distinctness in favor of a world which is void of every definite element and distinctive quality, so that it cannot be either known or conceived. The "simplicity" of such arguments, it must be allowed, is quite manifest.

Spencer's Positive Proof of Transfigured Realism.

Mr. Spencer next furnishes a positive justification of transfigured realism in five chapters. Here I agree to all he says (though not to all he means) on the subject under discussion. He says (*Principles of Psychology*, § 442), "If the states of consciousness are adequate to frame a disproof of the *non-ego*, they must be held adequate to frame a proof." This is true, but it is irrelevant. No one affirms a positive disproof of the *non-ego* from the phenomena of consciousness. That would indicate a blind temerity of which idealists are never guilty. They only say that consciousness furnishes no proof of a material *non-ego*, which is a very different statement. We say that all we know is *ego* or subjective states, and that from the existence of this known fact there is no logical or psychological warrant for the assumption of the *non-ego* in question. We thus virtually say that consciousness cannot furnish a positive disproof, still less a positive proof of a material *non-ego*.

But, when we advance from psychology as a study of the phenomena and conditions of consciousness to an analysis of the conception and logical implications of dualism of every form, then we become more positive. We see that the conception is unreal, because it has no logical unity, its self-contradictions being obvious and manifold. Mr. Spencer acknowledges this confliction, and consoles himself by saying that this is always inevitable whenever, from any point or in any direction, we attempt an ultimate analysis, whence he is called, with his own consent, an agnostic. But subjective evolution escapes these contradictions, carry analysis as far as you may; and on this account it is to be preferred. And it only is entitled to the name of philosophy, because of its ultimacy and completeness.

Mr. Spencer (*Principles of Psychology*, § 443) next argues as follows: "Realism, then, is positively justified, if it is shown to be a *dictum* of consciousness working after its proper laws. When normal acts of thought, like those which establish truths we hold most certain, are proved to be acts of thought which yield the antithesis of subject and object, no further demonstration need be asked." To all this, those whom he designates as anti-realists thoroughly assent. They hold rigidly that all the normal acts of thought yield the antithesis of subject and object. But they never forget (like Mr. Spencer) that object and subject are always equally egoistic or subjective states. We therefore need go no further with him in this discussion, because we agree to all he proposes to prove, the existence of the subjective states of subject and object in all the normal acts of thought. In all his discussion of this subject, Mr. Spencer strangely assumes that the sensible object in antithesis with the conscious subject is *non-ego*, and that, therefore, in proving the existence of such object (which no one ever questioned), he proves his transfigured realism.

In further proof that I have not misconceived him on this point, I will adduce two other passages. He says (*Principles of Psychology*, § 404): "The postulate with which metaphysical reasoning sets out is that we are primarily conscious only of our sensations, that we cer-

Digitized by Google

tainly known that we have these, and that, if there be anything beyond these, serving as cause for them, it can be known only by inference from them. I shall give much surprise to the metaphysical reader, if I call in question this postulate; and the surprise will rise into astonishment, if I distinctly deny it. Yet I must do this. Limiting the proposition to those epiperipheral feelings produced in us by external objects (for these are alone in question), I see no alternative but to affirm that the thing primarily known is *not that a sensation has been experienced*, but that there *exists an outer object*." He occupies nearly six octavo pages in the illustration of this singular statement, that an outer object is not a sensation, and that, in affirming an outer object as the primary phenomenon in sensible action, he contradicts "the primary postulate of metaphysicians." How does it come to pass that his wonted penetration here so utterly fails him that "he is unable to discern that this outer object" is analyzed by all psychologists, himself included, into a sensation simply and solely? There is but one explanation. He pays the penalty which is exacted from all its votaries by dualism, which can be served only by the blind; and, hence, the ablest minds lose their usual perspicacity as soon as they become its advocates.

Elsewhere (*Principles of Psychology*, § 438), Mr. Spencer says: "Now let him contemplate an object, this book, for instance. Resolutely refraining from theorizing, let him say what he finds. He finds that he is *conscious of the book as existing apart from himself*. Does there exist in his consciousness any notion about sensations?" Here, it is obvious that the writer identifies the sensible object, the book, with the *non-ego*, contrary to the united utterance of modern psychology. He confessedly makes an appeal from scientific analysis to spontaneous impression, and this crude impression he substitutes for his own better intelligence.

Perhaps it will be well here to remind the reader afresh that, in denying the right to affirm the existence of an unknowable material world, I raise no question concerning the existence of the known material world. A known and indubitable world as a fact of experience there is. It constitutes the visible heavens and earth and all tangible things. The existence and reality of this world I never doubt, nor does any other man; and no philosopher ever pretended to doubt it. It cannot be doubted, for the doubt implies it as a subjective state. Nor can it be intelligently mentioned except as the object, the "outer object," of sense, and as such existing constant and uniform, fixed and stable, so far as any experience testifies. But this is the extent of our experiential knowledge. What remains for us now to do is to analyze these sensible phenomena, and determine what they are and what are their psychological connections and their logical implications. This task has in the psychological aspect been well performed, and has resulted in the doctrine of the egoism of all phenomena as the general scientific verdict. Here, I take my stand, and refuse to obscure my position by throwing over it the dark pall of the unknowable and inconceivable. The logical implications of these phenomena have not been so fully explored as the psychological, and this is our task.

The Subjective World a Real World.

The subjective character of the world does not render it any less real than if it were *non-ego*. Surely, the *ego* is at least as real as the *non-ego* We know the *ego* to be real. But we do not certainly as yet know anything beyond the *ego*. This is the point of debate. The egoistic theory of the material world is therefore a genuine realism quite as much as any theory which has appropriated the name; and it is not properly designated, because not defined by the term idealism. It is pre-eminently philosophical, because it is the simplest possible theory, and comprehends in purity all the facts of the case, and discards all needless conjectural and obscuring additions. Hence, Philosophical Realism is its proper designation. The term realism is in these days very popular. Everybody, even a metaphysician or an evolutionist, feels bound to be apparently real; and so his theory shall be called realism, however unreal it may be. And nothing that was ever in the brain of lunatic or philosopher or poet could be so thoroughly unreal as the material world of our metaphysical dualists, including the objective evolutionist. It has less reality than the purest phantasm, because it presents no form to the imagination nor any concept to the intellect. Yet this supra-phantasmic world, with the help of obscure and inconsistent special pleadings, and buttressed by various supposed characteristic adjectives, has repeatedly and too successfully endeavored to get itself accepted as realism, pure, proper, and sole. With Sir Wm. Hamilton the distinguishing epithet is "Natural," with George Lewes it is "Reasoned," and with Mr. Spencer it is "Transfigured." I therefore follow in the wake of illustrious predecessors in sticking to the word "Realism." I cannot call my theory natural realism, because, though infinitely more natural than that of Hamilton, it can appear natural only to philosophic minds; and I prefer not to call it reasoned realism, because it may be elaborately reasoned without being proved or provable, and least of all would I be willing to call it transfigured realism. We want a realism which is not transmuted either in figure or any other way, and a realism which is not only reasoned, but reasonably proved, and which will seem natural in the judgment of competent minds who have given to it due attention. Such a theory will be justly designated as philosophical realism; and philosophy will seek this till it is attained, however prolonged the search may have to be.

Nature and Evolution shut us up in the Ego.

By this time, it is surely growing quite clear that along no recognized route can we find any philosophical exit from the vast cavernous enclosure of the *ego*. And, if we could, it would bring no advantage to the main thesis of objective evolution, which affirms the ultimate unity of subject and object, of consequent and antecedent, of effect and cause, of all diversity in One ultimate Source. Hence, the method of reaching the *non-ego* by reasoning from subject to object, from effect to cause, would destroy evolution by destroying the unity of the universe in the persistence of force or the identity and continuity of all force as that which is the same under all changes and in all forms. In short, a *non-ego* thus reached would not be the natural cause of known phenomena; and the process by which these are generated would not then be one of evolution, but of creation. A creative Power is not one with the created. An evolving force is always one with all the forms evolved. Therefore, by the law of evolution, we can never transcend the *ego*. We stultify ourselves in the effort. Let the evolutionist heed the ancient oracle, "Know thyself," and he will labor no longer in this direction. Wherever evolution holds, there is unity and identity of essential being or force.

There is indeed a common method of transcending the *ego* by an arbitrary and artificial invention, the easy and not infrequent method of defining terms to meet the wishes of the definers. We easily transcend the *ego*, if we define it as limited in space (and time) to the organism, which is tacitly done very generally, though it contradicts the united testimony of modern psychology (at least in its implications, not in its articulate utterances); and that testimony I consider a sufficient refutation, and so leave it.

Objective evolution is the half-way house of scientific exposition and analysis. A more profound and thorough study shows that all that is included in that theory, combined with its forced confession of the subjective nature of all sensible phenomena, is justly described by the repulsive term, solipsism, since ultimately its universe is wholly subjective and egoistic, beyond which it knows nothing. In whatever direction we turn, we turn only toward ourselves, and never by any possible method can we directly know or experience anything but ourselves. Forever and ever, each man constitutes all the universe directly knowable to him. All the so-called men and animals, land and water, and all the celestial bodies, are myself, affections and modes of my own all-pervading and perduring individuality. Hence, too, all that unknown and unknowable, whence the known is *evolved*, being one with the known, is one with the *ego*; and thus so far an absolute solipsism is the logical result of our investigations, whether as subjective or objective evolutionists. Since we directly and indisputably know ourselves as conscious subjects and agents, and thus know ourselves as a force and reality, it follows that wherever we go, by the law of evolution and persistence of force, we only go from some to other modes of the same one force, which is our own conscious being, and which we call *ego*. Evolution and solipsism are therefore terms of coincident meaning, and from opposite poles Fichte and Spencer meet in an immortal embrace: only, Fichte understood his logical position better than Spencer seems to understand his.

From this view of the *ego*, it will follow that I must speak of it very variously, because it is modally various and multifarious, and yet ever essentially the same. There is but One and that One existing through all times and in all knowable spaces, under an infinity of different phenomenal forms and aspects, contemporaneous and successive; and, in reference to any class or to all classes of these phenomena or to the transphenomenal source and subject of them all, we may speak of the *ego*. To thus change the standpoint of observation and contemplation is not indicative of any vacillation of mind; nor does it imply any obscurity or ambiguity of thought, nor can it becloud or befog any reader who has once grasped the conception of the universal *ego*.

This solipsism, it will be agreed, is theoretically unendurable and practically impossible as the final result. But let us be patient and consistent, which in the present situation, and in any situation, will best prove our philosophical spirit. Above all things, let us stand firmly and fairly by what we have clearly and unitedly determined,—that all the knowable is *ego*, and that within all that realm evolution reigns. Neither of these two cardinal discoveries of modern philosophy and science must be discarded or mutilated or overlooked. All further procedure must be in accord with these, if not based on these. It must, therefore, be henceforth an unquestioned, because proved, postulate that solipsism is true to this extent,—that every individuality includes the whole knowable universe, and universes are just as numerous as such beings; that every being is hence absolutely alone; that no being or universe can ever overlap or interact. Each is forever without any knowable boundary, just because the object and subject of consciousness are one; so that the knower can never transcend himself, though he travel forever swifter than the light. His latest stepping-stone and object of knowledge will always be himself. All other beings are removed from him by the diameter of his boundless universe, on the outer verge of which he can never even stand to hail a brother from afar.

A distinguished writer has kindly suggested (privately) that perhaps I might more fully utilize M. Comte in the prosecution of my task. I will, therefore, say that the essential spirit of Positivism (liberally construed) presides over my work. I hold to the succession of the three methods of thinking and inquiry—the theological, the metaphysical, and the positive—in the development of the human mind. And it is the metaphysical method which now stands in our way, opposing the progress of psychological science in regard to the theory of sense-perception.

Positivism cannot limit its inquiries to external phenomena, nor even to sensible phenomena; for, then, it would not entertain its own expressed ultimate object in the region of sociology and morals, which involve supersensible feelings, thoughts, and volitions. And it would have to exclude all the pure mathematics, the first in the order of its hierarchy of the sciences, whence all science would be impossible; for this science deals only in conceptions, never in actual experiences, except so far as the conception is one form of experience,—thought-experience.

Positivism cannot justify mathematics, cannot, therefore, justify itself nor take its first step in the philosophy of sciences until it has vitally connected this pure abstract science of mathematics with sensible experience, its base of supplies. This it has not done, nor intelligently attempted, nor even recognized its obligation, so that here it discloses a fatal deficiency. This deficiency is supplied in the philosophy of mathematics given in my *Analytical Processes*. Pure mathematics is a science of pure and and abstract conceptions; and, from beginning to end, its procedure is analytical, the conclusion being but the explicit affirmation of the implicit contents of the premises,—a part designated as contained in a larger whole. But the premise must have its base, not only in experience, but in sensible experience,—in the experience of extension, whether by touch or sight, because conceptual extension is the staple of geometry. The conception of extension is the intellectual light of the experience of sensation, and conception and experience are inseparable. And, in the conceptions involved in all sensible experience, all pure mathematics are contained and thence analytically evolved.

It would be too much to expect that one man, in originating and expounding a great system, would be

Digitized by Google

able to do it justice at all points, though Comte himself thought he did. There are several errors and deficiencies which the spirit of Positivism, in its further development, will correct or supply. The subjective study of psychology is one of these. This is a region of experience, and implied in all other experiences, and their ultimate light and guarantee. While, therefore, I attempt to work in this region a little, I claim to be strictly within the legitimate field of Positivism.

CORRESPONDENCE.

LETTER FROM NEW YORK.

Easter and After-thoughts about Resurrection, the Rising Faith, Peter Cooper and the Cooper Institute, the Labor Union, and the New Theistic Society.

My experience on Easter Sunday in New York city will be made the groundwork for this letter. On this day is celebrated the event of "the Risen Christ," and everywhere is sung

> "Love's redeeming work is done,
> Fought the fight, the battle won.
> Lo! the sun's eclipse is o'er;
> Lo! he sets in blood no more."

The Newspaper.

A glance first at the morning papers. What a magazine of entertaining and instructive matter one of these metropolitan sheets really is! The daily newspaper is one of the seven modern wonders. It is no less a summary of the world's news than of the world's achievements, past and present. Type, steam, and electricity are its compositors, the Spirit of the Age its editor-in-chief. It is the proof-sheet of man's perfections and imperfections, the trial-balance of his rights and wrongs, victories and defeats. "Read the papers," said the President of Yale to a graduating class. But all do read them; for it is Bible and text-book in one, a rival of the Church and a supplement of the schoolroom. In its way, it treats of matters temporal and spiritual; and its voice is heard every day in the week by rich and poor alike. Prophet and educator, nothing less. But, ah! what a comment are its daily items on the boastful lines of the hymn just quoted! In to-day's issue are book notices covering the whole distance between theology and fiction (be that distance great or small), and science and art shedding their glories on its page. There are yesterday's happenings in all the great countries of Europe, in whose sky are signs of a gathering tempest, the outcome of long ages of oppression and wrong. Nor is this "foreign news," for the hemispheres are bound together by interests and ties that cannot be broken. Among "home affairs" are notes, on the fall of a once great party, and the rise to power of a rival no more honored; on the growth of monopoly, and the enraged popular sentiment that giant evil has evoked; tales of distress from the Ohio and Mississippi valleys, the *Herald* Flood Fund closing with the ebbing of the waters; story of the life of John Howard Payne, author of "Home, Sweet Home"; a glimpse at the home of the Vanderbilts, on Fifth Avenue, which outrivals all others in that city of palaces; and a glimpse of Gotham at large, where spires and turrets let fall their shadows on haunts of iniquity, abodes of poverty and distress. But there is also the opening of the spring trade, the arrival of Barnum's "great moral show," and Joseph Cook's lecture in Chickering Hall. There is "Help Wanted,"—parties with gilt-edge references with five hundred dollars to loan, or who can speak in half a dozen tongues, and a salary of the Beecher standard,—not what *he* receives, but what he thinks the workingman should be content with. Added to all this is the announcement of church services, the nearly universal theme being "The Resurrection." But what are these two columns of church notices, I cannot help asking myself, but an advertisement of sectarianism? And what that word means the world ought to know. Every new sect has been denounced as "a damnable heresy," and every new creed has been the only way of salvation. But one sermon arrests my attention, "The Rising Faith," by M. K. Schermerhorn, in the New Theistic Church just, or about to be, organized. A matter of deepest interest this; for in this city—nay, throughout Christendom—there is not such a thing as a church of God, the places of worship being dedicated to some saint, apostle, or Christ. Even the Unitarian Church of the Messiah is a proof of this, for the glorification of the Christ is made a feature of its architecture. The empty pews everywhere seen are the prophecy, however, of a change. But there is another announcement that does not come under "Religious Notices,"—the meeting of the Central Labor Union. This is in the afternoon, Mr. Schermerhorn's discourse in the evening. I shall attend both. But a call must be made at Cooper Institute, where *The Index* is on file, which I have failed to read the past week.

Cooper Institute.

It is worth noting that on the way are passed the Beer Garden and the Museum, which share with the churches the privilege of being open on the Sabbath by their substituting "sacred" for "profane" music. The place is passed where the Passion Play has been long in preparation, but which the law has pronounced too sacrilegious for public representation. Then, the Cathedral is passed, where is seen the body of the Christ in life size on the cross, and where the whole Christian drama is pictured before the sight. Can anything be more sacrilegious than this (considering the dogmas it is meant to express) to one who feels a reverence for the life and precepts of the Nazarene? Reaching the Institute, I can but recollect how short the time since its doors were permitted to be open on Sunday. Why, it would have been in my power, since the year 1882, to have had that little scamp arrested who just called out, "Want your boots blacked?"—as if they had not already a fine polish! But I stop thinking of the Blue Laws as I ascend the stairway of Cooper Union, with illustrative views of many branches of study on either hand. How ample, bright, hospitable, the reading-room, where the world's standard and current literature is found! Hundreds of visitors are there, yet not a whisper and scarce a footfall is heard. But what forces are at work midst this brooding silence! Is not this the miracle of the resurrection? And do not the angels of Light, Purity, and Peace, hover within the spaces of this Polytechnic Institute, though its founder is no chief of the apostles, and no priestly rite gives it sanctity? Founded in 1864, and "to be forever devoted to the union of science and art in its application to the useful purposes of life," says its dedicatory act. Twenty-five hundred persons enter its reading-room daily. Two thousand pupils attend its evening schools, and the same number its lecture courses. And all this is free,—the work of one man, and he an infidel, as the great majority of the Christian Church would say. Peter Cooper accepted none of the creeds of Orthodoxy. In glancing through *The Index*, which brought me to the Institute to-day, I notice an article on "The Secret of the East," which reveals the links connecting the career of Buddha and his Galilean successor. Christianity was a regenerated faith, a resurrected Buddhism, *ex oriente lux*. I notice articles, also, on "The Ethical Movement" and "The Religion of Humanity,"—the same thing under different names,—the "Open Secret of the *West*," or that new birth from the womb of time to whose scattered omens the Free Religious Association seeks to give a voice.

Since writing the above the news comes that Peter Cooper is dead. Everywhere, the flag is run up at half-mast. On every hand, it is whispered, "Peter Cooper is dead." He was a philanthropist, an inventor, a thinker, and an experimenter, and ever modest, persevering, hopeful. He took the initiative in efforts not likely to be popular, and his philanthropic endeavors were on a scale often seriously to impair his own business operations. He attributed his great success in business to an early determination that he formed of giving to the world an equivalent, in some form, of useful labor for what he consumed in it. But he attained to even a deeper view than that of life: "While I have always recognized that the object of business is to make money in an honorable manner, I have endeavored to remember that the object of life is to do good." Not what is called an educated man himself, few men have done more for the education of others. "The Latin on the sheepskin is all Greek to me," he said, when the LL.D. was conferred on him by the University of New York. He did more for the city than it was willing to do for itself; for, at this day, its Public Library is not worthy the name. Remembering his own early struggles to acquire knowledge and seeing how defective were the seminaries of the land, he resolved to do what was in his power for aspiring youth. So he erected the Institute, which approaches the nearest, I venture to say, to the model for the school of the future. He placed a modest estimate on his own labors. The thoughts of few men, he said, made the turning-point in human destiny; but it was within the power of many to make their discoveries known, and assist in executing their plans. In this latter class, he placed himself. He was nominated, in 1876, for the presidency, by the National Greenback Labor Party; and, in the triumphal light of the future, that event will appear otherwise than it does to-day. Of him it will be said that he not only built the first steam-engine in America, raised a temple to science and art, but was the first standard-bearer of a party whose platform came the nearest to striking the key-note of those radical reforms to which the humanitarian spirit of the age is giving birth. Peter Cooper's creed was simple: "My experience has compelled me to believe that it is to the application of science to the laws of life that we must look for all future improvement in the condition of mankind. For one, I indulge the hope that science will fully unfold the mystery of our being, and show the law of our progress written on all the varied leaves of creation, demonstrating the wisdom, power, and goodness of God, who gave immortality to man." "I have always given a friendly welcome to new ideas, and I have endeavored not to feel too old to learn; and thus, though I stand here with the snows of so many winters on my head, my faith in human nature, my belief in the progress of man to a better social condition, and especially my trust in the ability of man to establish and maintain self-government, are as fresh and young as when I began to tread the path of life."

The Central Labor Union.

From the Institute, it seemed a natural step to Clarendon Hall, where meets an organization representing probably nearly two hundred thousand of the proletariat, or working classes, of New York and Brooklyn. Sunday is the only day on which they are able to come together. There were present to-day between one and two hundred delegates. The matters discussed touched on the labor question in many of its phases. Several bills before the New York Legislature were first drafted by this body. A paper called *The Voice of the People* has just been started under its auspices. The Union to-day made its protest against Gov. Cleveland's veto of the bill for five cent fare on the Elevated Railroad, and against a bill introduced into the Legislature, for placing arms into the hands of the Grand Army of the Republic. This measure was denounced as a move of the aristocracy, and the constitutional right of all citizens to bear arms for purposes of self-defence was asserted. A recent official act of Gen. Butler, which gave this view of the matter, was applauded. Butler is by no means their idol: he is only made to appear a hero in comparison with the politicians of the time, who either stand on the side of monopoly or are dumb on the issues that most concern the people. The history of the working people is the world's unwritten history, and governments have accordingly ignored the interests of this class. Such men as Henry George are more truly favorites. "*Poverty and Progress*," said one speaker, "is the Bible of the working-man." They respect him for his courage as well as for his ideas, though he rather failed in coming to time at the mass meeting lately held in Cooper Union, in honor of Karl Marx, the founder of the *Internationale*, whose death had just been cabled from Europe. Announced as one of the speakers, Mr. George sent a written address. It was eulogistic of Marx, and in perfect sympathy with the objects of the meeting. Was George afraid of elbowing such men as John Swinton or even Herr Most? I trust not: the occasion was worthy the man, and that was enough. Herr Most was not on the list of speakers; but, at near midnight, he was called for, and held that packed audience spell-bound for half an hour or more. There were some inhuman utterances in that speech, but it was not all husks. Be on hand with something that is better, and the people will receive it. The Central Labor Union assisted at this mass meeting; and, though it might not indorse the blood-red flags displayed there, it would most assuredly the inscriptions they bore: "The reorganization of society, without priest, king, capitalist, or loafer." "Organize Industry, and prevent war." "Workingmen of all countries, unite." As the name of Karl Marx is a sort of bugbear to the times, and all sorts of rumors are afloat as to the aims of the *Internationale*, it may

Digitized by Google

be well to state its principles briefly, as advocated by its founder. They are: abolition of standing armies and of State frontiers; fusion and union of the peoples; labor creates all wealth, and all wealth belongs to the labor that creates it; the productive capacity of society is superior to its consumptive capacity; workingmen must accomplish their own emancipation, but their weapons must be ideas and their method organization and agitation.

The New Theistic Church.

Horticultural Hall on this evening was nearly full. In each seat were a collection of hymns in pamphlet form, a blank card of membership, and a card advertising a series of sermons, under the general heading "The Mistakes of To-day." The subjects, however, were affirmations of the leading truths of the new gospel, the untruths to which they were opposed being expressed in parentheses. The congregation, accompanied by the organ, sang King Robert's hymn:

"O thou most tender Love,
Deep in our spirits move," etc.

A prayer (the "Lord's Prayer") was offered, and some explanatory words regarding the movement followed, which seemed to connect it in some way with the work of O. B. Frothingham in this city,—it being the design to fill up the gap left by him; and, for historical reasons only, the name of "Third Unitarian Church" would be retained; certain usages of the past might serve as scaffolding for the new edifice. The tenor of these remarks did not impress one listener, at least, at all favorably, and for the reason of their ambiguity. Those words, "Frothingham," "Unitarian," "historical," "scaffolding," tended more to bewilder than enlighten. How much or how little they meant, who could tell? The sermon, on "The Rising Faith," had three divisions,—its difficulties, its methods, its promises. The new faith, it was distinctly stated, was to be Theism. Christianity, Catholic or Protestant, no longer met the religious needs of man. But there was a frequent use of Christian Scripture, for proof and illustration, the discourse being founded on a text from Hebrews. Socrates and other lights of the Gentile world were quoted, but the great central figure was Christ. It may sound like a personal criticism to say that the thought and delivery were both tame; but, surely, it is a fact worth recording that, on an occasion where they were specially needed, both boldness and fervor were lacking. And there is a cause for this which must be sought for in the organic conditions themselves. The "methods and promises" may be best traced in the Articles of Faith or Bond of Union. One of the principles standing alone reads well: "All who profess to be seeking for righteousness and truth, and whose lives are in accordance with this profession, will gladly be received into the membership of this Church, with no other creed or condition imposed." That is Free Religion. But what can such an invitation mean, in the face of other statements? "God, humanity, worship, duty, providence, prayer, inspiration, revelation, repentance, retribution, holiness, and the immortal life,—upon these twelve principles, rationally interpreted and always kept open to increasing light, this Church will be built. With reference to them and their promulgation will be its fellowship, teachings, and work." Here are two creeds which conflict, and neither of them is pure Theism. The first says nothing of God, and the other buries him beneath a load of dogma.

Certain things may be predicated of the Religion of the Future. It will say what it means, and mean what it says. It will not be creedless, though its creed will be far simpler than that of the "Third Unitarian (Theistic) Church," or any Unitarian church in existence. It will have fewer principles and more principle. Its appeal will be *to and from* the heart and the mind. Its votaries will be taken from every grade of society, and represent every phase of culture. Its office will be to make men, not to receive them when already crowned. Where shall we look for such a religion to-day? Max Müller's congratulatory missive to Mr. Schermerhorn was too hasty, in saying, "It is always a satisfaction to see the budding germs of the seed which one has helped to sow." For this surely is not the "budding germ" of the seed sown by *Chips from a German Workshop*. The words of approval and sympathy from James Martineau, Robert Collyer, Minot J. Savage, and John W. Chadwick, were consistent enough; for, illustrious as have been their services to the cause of religion, they have remained identified up to this hour with those who make the terms "Unitarian" and "Christian" the badge of religion and the test of fellowship.

T. W. CURTIS.

PETER COOPER AND THE RELIGION OF HUMANITY.

Editors of The Index:—

To-day, the day of the funeral of Peter Cooper, when all are united in one feeling of deep respect for this unblemished character, I venture to fill a void in the press, and to put before the public some facts which will not be mentioned by the so-called "leading" papers of this country.

The "leading" newspapers usually represent the powerful class which, in France, is called *bourgeois*, but here, for the lack of a better word, must be called *money-makers*. Philanthropy is not only a fashionable occupation of this class, it is becoming more and more a "safety valve," well adapted to allay the discontent and to postpone the day of judgment. No wonder that all these "leading" papers represent Peter Cooper as a philanthropist, and count him as one of their number.

But, in the name of humanity, I protest against such an insinuation.

Peter Cooper was not a philanthropist. His doing good was not a pleasurable or optionable act with him: it was an imperative duty, a moral obligation, a result of his denouncing the very foundation of the individual property. He was one of those who proclaim the urgent needs of humanity without recognizing the existence of this Supreme Being. He belongs to those "Positivists" who never read Comte. He is, in fact, a prophet of the New Religion. But let him speak for himself:—

"Having also acquired what is regarded as riches, if the use I have made of them renders it proper for me to give any advice or speak a word of encouragement to others who, by the will of God, are intrusted with the great responsibility of wealth, I feel impelled to record my conviction, derived from personal experience, that *the rich man who regards his wealth as a sacred trust to be used for the welfare of his fellow-men* will surely derive more true enjoyment from it in this world than from the most lavish expenditure on mere personal enjoyment and social display. I do not pretend to prescribe any standard of expenditure for others; and I am quite ready to subscribe to the doctrine that a just and faithful trustee should be liberally paid for his services, and should not be restricted in the reasonable gratification of his desires, so long as the rights of others are not thereby infringed; and I desire to give the fullest recognition to the sacredness of private property and the conservation of capital as for the best interests of society and all the members thereof; *but I cannot shut my eyes to the fact that the production of wealth is not the work of any one man, and the acquisition of great fortunes is not possible without the co-operation of multitudes of men; and that, therefore, the individuals to whose lot these fortunes fall, whether by inheritance or the laws of production and trade, should never lose sight of the fact that as they only hold them by the will of society, expressed in statute law, so they should administer them as trustees for the benefit of society as inculcated by the moral law.*" (From the address delivered by Peter Cooper, at Cooper Union, May 31, 1871.) He conscientiously practised it during his long life.

One remark more. The words of Peter Cooper resemble so much the words of Auguste Comte that one can hardly believe they were uttered by one who never claimed to be a Comtist. And yet this coincidence is not an accidental one: it repeats itself more and more often. Hundreds of men proclaim certain thoughts as their own, while these very thoughts have been pointed and elaborated by Positivism. Even those who object to Auguste Comte's views are very often the best contributors in sustaining and strengthening the Religion of Humanity. These men, together with Peter Cooper, are the forerunners of the approaching moral revolution. They show what a vitality, what a genuine spontaneity there is in Positivism, what a bright triumph is waiting for it.

The time of sneering at Comtism is rapidly passing away. Another time is coming, when both capitalists and laborers will imitate the example of Peter Cooper, and completely renounce their own rights to any property; when poor and rich alike will confess that to humanity alone belong the products of wealth. Then, only, will become possible that healthy, normal distribution of wealth which will provide every cell of the Supreme Being with everything necessary for the physical, intellectual, and moral development. And the dawn of the "millennium" will be seen only when all distinctions between capitalists and laborers shall voluntarily cease, when all men shall become *brothers* equally, owing to humanity their labor, love, and worship.

WILLIAM FREY.

NEW YORK, April 7, 1883.

COL. HIGGINSON CORRECTS A NEWSPAPER ITEM.

Editors of The Index:—

I notice in the last *Index* a sentence attributed to me which I never uttered,—"Col. Higginson avers that George Eliot, if she had ever held a dead babe in her arms, would have wanted something more to console her than the philosophy of Herbert Spencer." Every public speaker soon grows accustomed to such misstatements; and I, for one, rarely correct them. In this case, it is one of those common instances, in condensed reports, where the reporter "telescopes" a speaker's sentence by condensing several into one: so that, as in a railway collision, the front end of one car is inserted in the rear end of another. In some very off-hand remarks, I made some passing allusion to Herbert Spencer, and afterward to George Eliot. These allusions were in separate sentences, having no connection with each other. It is the reporter who, for economy of space, "telescoped" my little train of ideas. What I said of George Eliot was that, if she had ever held her dead baby in her arms, she would have wished for some more definite personal immortality than that described in her "Choir Invisible." I no more spoke of Herbert Spencer in that connection than I used the word "babe."

CAMBRIDGE, April 15, 1883. T. W. HIGGINSON.

INGERSOLL ON DEATH.

The following words were uttered by Col. Ingersoll last Sunday at the funeral of John G. Mills, a Positivist, who died at Washington, D.C., on the 13th inst.:—

"Again we are face to face with the great mystery that shrouds this world. We question, but there is no reply. Out on the wide waste of seas there drifts no spar. Over the desert of death the Sphinx gazes forever, but never speaks. In the very May of life, another heart has ceased to beat. Night has fallen upon noon. But he lived, he loved, and was loved. Wife and child pressed their kisses on his lips. This is enough. The longest life contains no more. This fills the vase of joy. He who lies here, clothed with the perfect peace of death, was a kind and loving husband and good father, a generous neighbor, an honest man. And these words build a monument of glory above the humblest grave. He was always a child, sincere and frank, as full of hope as spring. He divided all time into to-day and to-morrow. To-morrow was without a cloud, and of to-morrow he borrowed sunshine for to-day. He was my friend. He will remain so. The living oft become estranged. The dead are true. He was not a Christian. In the Eden of his hope there did not crawl and coil the serpent of eternal pain. In many languages he sought the thoughts of men, and for himself he solved the problems of the world. He accepted the philosophy of Auguste Comte. Humanity was and is God; the human race, the Supreme Being. In that Supreme Being he rested. We believe that we are indebted for what we enjoy to the labor, the self-denial, the heroism of the human race, and that, as we have plucked the fruit of what others planted, we in thankfulness should plant for others yet to be. With him, immortality was the eternal consequence of his own good acts. He believed that every good thought, every disinterested deed, hastens the harvest of universal good. This is a religion that enriches poverty, that enables us to bear the sorrow of the saddest life; a religion born not of selfishness and fear, but of love and hope, that gladly bears the burdens of the unborn. In the presence of death, how beliefs and dogmas wither and decay! How loving words and deeds burst and blossom! Pluck from the tree of any life these flowers, and there remain but the barren thorns of bigotry and creed. All wish for happiness beyond this life, all hope to meet again the loved and lost. In every heart there grows this sacred flower of eternal hope. Immortality is a word that Hope, through all the ages, has been whispering to Love. The mira-

Digitized by Google

cle of thought we cannot understand; the mystery of death and hope we cannot understand; the mystery of death and hope we cannot comprehend; this chaos called the world has never been explained; the golden bridge of life from gloom emerges, and our shadow rests. Beyond this we do not know. Fate is speechless, destiny is dumb, and the secret of the future has never yet been told. We love, we wait, we hope. The more we love, the more we fear: upon the tenderest heart the deepest shadows fall. All paths, whether filled with thorns or flowers, end here. Here, success and failure are the same: the rags of wretchedness and the purple robe of power lose difference and distinction in this democracy of death. Character alone survives, goodness alone lives, love alone is immortal. But to all there comes a time when the fevered lips of life long for the cool, delicious kiss of death. Tired of the dust and glare of day, they hear with joy the rustling garments of the night. What can we say of death? What can we say of the dead? Where they have gone reason cannot go, and from there revelation has not come. But let us believe that over the cradles Nature bends and smiles, and lovingly above the dead in benediction holds her outstretched hands."

POETRY.

For *The Index*.

CAMBYSES AND THE CALF-GOD.

Cambyses, son of Cyrus, was an epilept;
And, being sovereign of the world, he in
His moods outdid Orlando the Furious.
He ran amuck 'gainst Egypt's superstition,
And disentombed her mummied kings, where they
In sculptured, palm-leafed sepulchres reposed,
And had their undecaying carcasses
Most soundly whipped. Egypt's priesthood
Were scourged at his command like caitiffs vile.
'Twas after his mad march southward against
The Ethiopians, who by a zone
Of burning, trackless desert dwelt intrenched.
At last, the lurid simoom blew the soil
All light and granular into burial-mounds
O'erwhelming horse and rider; and the desert
One mighty sepulchre became, wherein
Lay massed in death far Susa's chivalry.

Returned to conquered Memphis found the king
In festal raiment all the land of Nile,
With banquets and ovations celebrating
The visible advent of a deity
Made flesh, but flesh of grazing kine, not man.

The fierce Parsee the ill-timed, general joy
Interpreted as exultation o'er
His army's loss. Mayor and aldermen
Of Memphis summoned he for explanation.
They told the jealous king that Egypt had
A god, at distant intervals who showed
Himself unto his votaries, whereat
The land rejoiced. The Magian monarch deemed
Their tale a lie, and ordered them to death.
Then summoned he the priests, and they confirmed
The ill-starred magistrates. "Has Egypt, then,
A god so tame and manageable? Produce this Apis."

And, at the word, the priests led in
A calf with forehead starred with white, which on
His back the figure of an eagle bore,
And on his tongue a scarabæus. Rage
In eyes of fierce Cambyses shone, as he
The calf-god saw. His dagger drawing swift
He stabbed the harmless creature in the groin.

To roars of laughter changed the monarch's ire.
"O stupid knaves, and this is, then, your god!
It is a god of Egypt truly worthy!
Compact of flesh and bones, vulnerable,—
But me a laughing-stock think not to make
With backs unscarred!" And then the scourge
Raised bloody weals upon the priests' bared flesh,
While in his shrine the god languished and died.
And secretly his worshippers performed
His funeral rites, Cambyses' anger fearing.

For not to form enshrined of man or beast
The haughty Persian knelt: the mountains he
His altars made; his incense was the mist
Of morn; the azure air, his temple-dome;
His god, the Sun, of all the immortals fleetest,
Most luminous, life-giving, radiant.

B. W. BALL.

THERE are three friendships which are advantageous, and three which are injurious. Friendship with the upright, friendship with the sincere, and friendship with the man of much information,—these are advantageous. Friendship with a man of specious airs, friendship with the insinuatingly soft, friendship with the glib-tongued,—these are injurious. — *Confucius.*

BOOK NOTICES.

OLIVER WENDELL HOLMES: Poet, *Littérateur*, Scientist. By William Sloane Kennedy. Boston: S. E. Cassino & Co. 1883. For sale by Clarke & Carruth. Price $1.50.

This is the third of Mr. Kennedy's biographies of American poets, the two preceding volumes treating of Longfellow and Whittier. This handsomely bound, clearly printed volume of over three hundred and fifty pages is no unworthy successor to those previously noticed in these columns. The writer says of it in his "Prefatory Note" that it "does not profess to be a biography in the strictly technical sense; but it is designed to serve as a treasury of information concerning the ancestry, childhood, college life, professional and literary career, and social surroundings of him of whom it treats, as well as to furnish a careful critical study of his works." The writer's admiration of his subject is summed up in the following sentence on page 129: "A perfect thing in its kind is always admirable. Hence, to the autocrat and laureate of Boston, to Holmes the consummate cit, the most perfect and delightful oppidan, richest distillation of the old Puritan strain of blood, master at will of smiles or tears,—to him we are constrained to yield our homage." But Mr. Kennedy, having yielded that homage, does not hesitate to acknowledge and declare the faults and weaknesses in the character of his hero, egotism and class pride being chief among the faults of which he accuses him, with considerable show of truth. The volume is interesting from beginning to end, and most so in those portions where the biographer has free play for his own expression of opinion, as in the following description of Boston and the genuine Bostonian, such as Holmes is. Mr. Kennedy characterizes Boston as the "city of the brown loaf, and the marrow-searching icy winds; city of the brave heart and powerful hand; city beloved of freedom." Boston, he declares, "idealizes itself in its artists' *ateliers*, enjoys artificial æsthetic aspiration in its wealthy ecclesiastical clubs, sublimates its emotions in Music Hall, martyrs its comfort with the arid inanities of drawing-room receptions, speculates in its granite exchanges, intellectualizes New England with its pale cast of thought, and in the intervals subjects the universe in general to the remorseless inspection of its critical eye-glass." The genuine Bostonian, he says, "is simply an Americanized Englishman. . . . As the Englishman is the physical bully of the world, so the Bostonian is the æsthetic and intellectual bully of America. Underneath the high polish of consummate manners (the Pheidian faces finished with a hair-pencil, the animal faultlessly encased) there lurk the stony glare of self-aggrandizement, the icy complacency of ancestral pride (*odi profanum vulgus*), the *de haut en bas* air of an intellectual and social aristocracy well ballasted by the weighty annals of the past." That Dr. Holmes had good reason for his aristocratic tendencies is shown in his good lineage and the interrelationship of his family with such historical families as the Olivers, Wendells, Quincys, Hancocks, Phillips, Bradstreets, Channings, Danas, and others; and his beginnings were exceptionally propitious as "the son of one of the most influential and beloved citizens of the place, connected with the noblest families in the community, and living in a spacious old mansion consecrated by historical memories, and surrounded by flowers and trees and gardens breathed over twice a day by the sweet breath of the sea." Dr. Holmes' college days are sketched at considerable length, and his leading works somewhat carefully criticised. An excellent and life-like portrait of the poet graces the first page; and, in addition to a copious index, there is a very complete bibliography of the writings of Dr. Holmes.

RECENT numbers of the Elzevir Library received at this office are: *The Commentaries of Cæsar*, by Anthony Trollope (paper, 15 cents; cloth, 30 cents); *How Lisa Loved the King*, by George Eliot (paper, 2 cents); *Demosthenes*, by W. G. Brodribb, *Cicero*, by W. Lucas Collins, *Herodotus*, by George C. Swayne (each, 15 cents); *Highways of Literature*, by David Pryde, 10 cents; Goldsmith's "Deserted Village" and "Traveller," in one volume, 2 cents; with several others equally cheap. From the same publishers, we have received several numbers of *Choice Literature*, a monthly magazine on the plan of the *Eclectic* magazine. Price $1 per annum. John B. Alden, publisher, 18 Vesey Street, New York City.

THE SANITARIAN, published at 113 Fulton Street, New York City, has been vigorously discussing in late numbers the question, "Is Tubercular Consumption Dangerous?" and the yellow fever question in its relation to New Orleans; also many other sanitary subjects equally important.

WE have received from D. Lothrop & Co., 32 Franklin Street, Boston, the April numbers of the *Pansy* and *Babyland*, both, as usual, rich in illustrations of the pleasing stories and poems with which these publications for the younger members of the nursery are always filled.

THE HERALD OF HEALTH for April has articles on "The Treatment of Criminals," "Dyspeptics, and the Sick," "Massage in Diphtheria and Croup," "Coeducation of the Sexes," and other current questions in hygiene.

PERSONAL ITEMS.

THE position selected for the Longfellow bust in Westminster Abbey is a column standing between the memorial niche of Chaucer and the independent bust of Dryden, with a full and uninterrupted stream of light falling on the position, so that the bust will occupy a central and conspicuous place in the Poets' Corner.

THE following letter from Blue Horse, a Sioux Indian, was received at the Indian Office a few days ago: "I am a friend of the Great Father's, and am going in the white man's ways. I have noticed white men cutting wood, and I thought I would be like a white man and chop some wood for my wife. A piece of wood flew up and put out my right eye, and now I would like the Great Father to send me another eye. I can have it put in here. I have always been a friend of the white man, and am bringing my children up in the white man's way. I am getting old, and wish my Father would send me a cane. When you send the eye, please send a brown one, as that is the color of my other eye. I hope the Great Father will do as I ask. I shake hands with a good heart. Your friend."

THE recent dinner to Oliver Wendell Holmes, in New York, brought together most of the intellectual lights of that city. An occasion which is honored by a poem from the "Autocrat of the Breakfast-Table,"—now reigning as despotically within his lettered jurisdiction in New York as in Boston,—the rhetorical brilliancy of William M. Evarts, the instructive and finely turned periods of George William Curtis, should have an exalted place in the memorabilia of the times. Boston can loan New York its accomplished medical professor for a few fleeting hours as an illustration of what its much-derided culture produces, but would never consent to part with his marked personality, or lose the glory reflected upon the city of his residence by his achievements as a writer and poet.

CHARLES BRADLAUGH in the *National Reformer* previous to the death of Mr. Ashton Dilke, brother of Sir Charles Dilke, wrote of him as follows: "I read without surprise, but with very great regret, that Mr. Ashton Dilke is constrained by ill health to relinquish parliamentary life; and my feelings of regret are deepened, because I fear that Mr. Ashton Dilke's state of health was seriously affected by his attendance and speech at the last great meeting held in St. James' Hall in favor of Northampton's right. The free-thought party will share in this regret; for Mr. Ashton Dilke is the only member of the English parliament who, as far as I am aware, in the whole of its history, ever thought it his duty to declare in the House that he did not hold the Christian faith. I was sitting in the House at the time, and remember the sort of stilled attention and surprise with which the speech was received. In a time when manliness and sincerity are at a discount, while hypocrisy and servility rule, the character of a man like Mr. Dilke shines out brightly. Let all radicals honor him by imitating his example."

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

J. W. BOUTON, Publisher,
706 Broadway, New York.

For sale at INDEX Office, 3 Tremont Place, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,		. . .	10c. per line.
" 13 " 25	"	. . .	8c. " "
" 26 " 51	"	. . .	6c. " "
" 52	"	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

CURRENT TOPICS.

THE New York Police Commissioners approve of the proposal to diminish the number of saloons to one in every five hundred of the population, and to increase the license fee to $500.

FIVE Protestant clergymen are now being tried by the Prussian Government in Lithuania for performing marriages where both parties were not Lutherans, and baptizing children born of these mixed marriages.

THE telephone is doing its best to "annihilate time and space." A few days ago, conversation was held between Chicago and New York, a distance of nine hundred and forty miles, by means of this modern scientific miracle-worker.

THE Bishop of Bohemia has become so much alarmed at the rapid spread of Spiritualism in that country that, believing proscriptive measures necessary, he has declared any one professing belief in Spiritualistic doctrines to be guilty of heresy.

THE *Independent* says the report that a certain London society has proposed to bring a suit against Tyndall, Huxley, Spencer, and other scientists for having inculcated infidelity is "a pure invention," and adds, "A society for the suppression of 'Lying Literature' would have a broader, if not a more useful, field than one for the suppression of 'Blasphemous Literature.'"

THE cause of female education is rapidly advancing in Calcutta, where the number of non-Christian women who can read and write has doubled in the last five years. It is said that there are now more than four thousand Hindu girls in mission day-schools in Calcutta and its suburbs. Indeed, they exceed the number of boys in the schools and colleges by about one thousand.

IT seems that the press censor of a Turkish post-office in Armenia recently came across a copy of a Moody and Sankey's hymn-book, sent to the address of a missionary stationed there. He could read English very imperfectly; but, looking through the book, he made out the words, "Hold the Fort," and, deciding that these words meant treason, he promptly expurgated the page containing this hymn before sending the volume to its destination.

WRITING in *Longman's Magazine*, Mr. Justin McCarthy, M.P., says: "There are in Ireland about 93,000 houses with only one room in each, and that of the rudest and poorest kind. Of these 93,000 one-roomed huts, most have floors of rough, damp earth and roofs of rotten thatch. Their walls are without plaster, and a hole in the gable serves them for a chimney. Into some of these cabins will be crowded a goat, a donkey, a pig, and several fowls, along with the occupant and his family."

THE Young Men's Christian Society, of Lynn, England, recently decided, after some discussion, to adopt a resolution recommending the committee "not to admit to the Association persons of doubtful moral character, Unitarians, or free thinkers." The London *Inquirer*, commenting on this action, remarks, "Christian young men are quite at liberty to make their own conditions of membership, but it is not likely that any of the Unitarians of Lynn would wish to belong to what might more appropriately be termed The Young Men's Pharisaical Society."

WE clip this from the *Herald* of this city: "It is a little singular that the Spanish Chamber of Deputies has exhibited a greater amount of liberality in the matter of the religious tests imposed upon its members than has been shown in the English House of Commons. Under the new bill passed last week, a Spanish Bradlaugh would find no difficulty in obtaining entrance to the Spanish Cortes. This is all the more remarkable when one considers the strong influence that the Roman Catholic Church possesses in the Iberian peninsula. Such a change would have been absolutely impossible a generation ago; but, at the present time, religious toleration seems to be making more rapid progress in Southern Europe than in the northern part of that continent."

SAYS the St. Louis *Post Despatch*: "Judge McCrary this morning delivered a verbal opinion in the case of Dr. Wood, *alias* Kaltmeyer, who was indicted for sending circulars of an improper character through the mails in violation of section 3893 of United States Statutes. The evidence against the doctor was procured by means of the decoy letter system, employed by the postal inspector's department, aided by the Society for the Suppression of Vice. The question of admitting such testimony is ruled adversely to the government in cases of sending obscene literature through the mails. No conviction can be had in a case where it rests upon testimony of that character. In cases of mail-robbery and counterfeiting, evidence established by the decoy system may be used."

THE *Interior*, an Orthodox Presbyterian journal, thus condemns the action of the society whose prosecution of the *Freethinker* was the subject of Mr. Conway's letter in a recent number of *The Index*: "The English rationalists, while they might be ashamed of such an exhibition for the sake of the good repute of their nation, could ask no better means for breaking down public respect for Christianity than that now afforded by the operations of this new society of indiscreet and fanatical zealots. The issue thus raised will inevitably result in a victory for religious liberty, but it will not end with the vindication of religious rights. The sentence of a man to a year's hard labor in the penitentiary, and another to nine months, and another to three months, and the lodgement of an innocent newsdealer in jail with a heavy fine, all for the expression of religious or irreligious convictions, is an assault upon English liberty that will arouse the most intense and vindictive animosity against the religious organizations of the realm. The English Parliament is an absurdly conservative body; but the most stolid statesman cannot fail to see that, in re-establishing religious persecution, he is lighting a fire in comparison with which the Irish troubles are insignificant."

DR. JAMES STRONG, superintendent of the Northern Ohio Insane Asylum, in a recent lecture in Cleveland, on "Alcohol and the Nervous System," said that alcohol has a special affinity for those portions of the brain which constitute the seat of the mental offices, and initiates a process which sooner or later results in untold evil by its power to permeate the delicate cell tissues of the brain and thereby break its nutritive balance, the process by which the vital work of supply and waste is maintained. Its habitual use weakens and destroys the will, removes the checks and balances and restraints, and not only permits the lower and naturally subordinate functions to assume undue sway, but stimulates them into morbid activity. Persistence in the alcoholic habit cannot fail to produce those nutritive changes in the brain cell which result, sooner or later, in mental ruin and moral decay. Alcoholic intoxication Dr. Strong declares is temporary insanity. The symptoms of the one are reproduced in the other. The only difference is that the insanity of a fit of alcoholic intoxication is of short duration, and is produced by the voluntary act of the sufferer, and therefore is without excuse and renders him unworthy of sympathy. The alcoholic habit having destroyed the nerve tissues composing the superior portion of the brain, in which the higher order of sensations and powers are lodged, paralyzed the will which kept the lower order of faculties in check, and stimulated the latter abnormally, the victim of the alcoholic habit sinks lower as the alcoholic poison progresses through his nervous system. "The alcoholic habit," says Dr. Strong, "is the training school whence the great criminal army draws its fresh recruits."

PHILANTHROPY: WHAT IS ITS ESSENCE?

Our respected contributor, Mr. Frey, in last week's *Index*, through his eagerness to defend Peter Cooper from the repute of a pseudo-philanthropy which has too much following in the world, fell into what seems to us the great error of confounding all philanthropy with the *pseudo* article. In our view, Peter Cooper was a genuine philanthropist; and we should assert this, even if we depended only on Mr. Frey's own illustrations of his career for testimony. We would not give up so fine a word to the usage of those who do not know at all the real thing, yet seek to imitate it.

It is evident what Mr. Frey has in mind. He sees a good many men who have risen to great wealth by dishonest and unjust practices,—men who enrich themselves by a long-continued system of oppression, cheating, and despoiling of their fellow-men,—but who, at last, for the sake of purchasing a better fame or, it may be, only for the better security of their ill gotten gains, devote a pittance of their wealth to some public object of beneficence; or who, all the time that they are laying up riches by their inhumane and unscrupulous methods, may for the same reasons ostentatiously bestow a small portion for the relief of some of the miseries they have helped to cause. Against all such efforts in the name of philanthropy, every manly soul can but utter its indignant protest. The very classes of people who are thus aided will cry out, "It is not charity, but justice, that we want,—not your dole of gifts from dishonest riches, but our natural rights to adequate wages for our labor and to adequate opportunities for the improvement of our own faculties." But, for applying the noble word *philanthropy* to such efforts, no rightful claim can be made either on etymological or historical grounds. Nor has the word yet by any means become so damaged by such false use that its true meanings do not readily come uppermost. Philanthropy, we should say, in any proper usage of the word, means much more than charity, more than benevolence: it includes, also, necessarily and first of all, personal and social justice.

Philanthropy is comparatively a modern word in the English language. It did not become domesticated from the Greek (from which it was taken directly, with only a slight change of termination) until the eighteenth century. Before that, it was used but sparingly. Dryden, near the end of the seventeenth century, spoke of it as a foreign word, for which there was no proper equivalent in English. But what occasion was there for adopting a new word? Why did not such old words as benevolence, charity, kindness, compassion, humanity, pity, continue to serve every purpose? The reason is that a larger idea of affecting human welfare had dawned among English-speaking people than any of these words fully covered. The word *philanthropy* is properly applied to a phase of good will and good action somewhat different from any of these forms of kindred virtues. A philanthropist must be a benevolent, humane, charitable man, but every benevolent, humane, and charitable man is not a philanthropist. And whence came this larger idea? In our opinion, it was one of the results of the Protestant Reformation,—that movement which carried so many mighty intellectual and moral forces in its bosom. It is a significant fact that it was in the century which felt the first practical effects of that movement that English writers were seeking a new word for this idea. The Protestant Reformation was a Declaration of Independence for the human soul. It was a new awakening of thought, a new assertion of the rights of human reason, and it involved a corresponding new idea of human dignity and worth. Hence, there sprang from it as a natural consequence a greater regard for man *as man;* that is, as a being, however oppressed, ignorant, degraded, and miserable he might be, yet with faculties to be developed, with dormant energies to be awakened, with rights to be secured, with possible virtues and happiness to be achieved, with the lineaments of a complete manhood to be brought to light. And for the desire and effort on the part of any of the better conditioned class of mankind to lift the depressing burdens and remove the obstacles from any of their wronged fellow-creatures and to set them in the way of securing their natural rights, opportunities, and privileges as human beings, a new word was wanted. The idea was of something larger and deeper than charity: that was known before, and was chiefly alms-giving. It was of something more than humanity: that was the general refining influence of a higher culture. It was different from compassion or sympathy: these might relieve suffering and yet touch not the sources and causes of suffering. And, for this new and larger idea, the Greek word *philanthropy* was chosen,—a most admirable selection, since it means by etymological derivation *love of man,*—not love and sympathy merely for this or that individual man who may chance to be in distress, but love of man *as man;* or love of the human race for its capacities and possibilities. And the idea which the word was borrowed to cover was just this: Love and help for man in his capacity as a human being; love and help for him, because of the boundless possibilities of good that inhere in his nature. This is the special phase of that beneficence which the word *philanthropy* signifies.

It would not be far wrong to say that philanthropy is a Protestant word for a Protestant idea. No such word was needed in Christendom until the Protestant Reformation. The Roman Catholic Church institutes and encourages charity, but not philanthropy. Catholicism loves not man as man, but only as churchman. It has always allied itself most naturally with despotism. That people should be oppressed or ignorant or poor or in deprivation and suffering has given that Church no concern except to inculcate upon those thus afflicted the duty of resignation, humility, and submissiveness to their lot. It has openly taught the permanence of poverty and even the voluntary assumption of it as a virtue, in order that the rich may have the balancing virtue of alms-giving. Its charitable institutions, of which it has many and excellent, are all based on the idea of alleviating suffering, and not of preventing and permanently curing it. Even in our own day, it has, through its official head, denounced the ideas of popular liberty, of popular education, and of equality of natural rights as most dangerous and damnable errors which faithful Catholics must put away. However much, therefore, the Roman Catholic Church may be commended for its charities, it has done little or nothing for philanthropy. It does not embrace the idea which makes the special significance of the English usage of this word.

Even Protestantism has not yet risen to the full height of its own idea. But, with the help of a better science of human society, it is now making rapid progress in the direction its idea points. Relief of suffering is, indeed, often the first thing to be considered and secured. But beyond that comes the question, Why the suffering? May not the cause of it be found, and a permanent remedy be effected by destroying that? Cannot the wrong be traced to its root, and then eradicated? The spirit that puts this question is the spirit of philanthropy. And the persons who work against the ills of mankind on this line of relieving suffering by drying up its sources, of removing miseries by extirpating their conditions, of lifting ignorance from men's minds and fetters from their limbs, so that they may be free to secure by their own efforts the happiness which belongs to them as human beings, are philanthropists. What the saint was in the Catholic Church, the philanthropist is in Protestantism.

Philanthropy is nineteenth century beneficence. It is benevolence guided to action by scientific philosophy. It is faith, hope, and charity for man, all working together to secure him justice as the first and most requisite condition of his welfare. There was humanity even among Southern slaveholders,—the kind master, who gave his slaves plenty to eat; the kind mistress, who nursed them when sick. But it was philanthropy that emancipated the slaves. Charity ameliorates effects: philanthropy reforms or removes causes. Charity pityingly sends food and fuel to the drunkard's family: philanthropy would regulate the traffic in drunkard-making liquors as stringently as it would the traffic in gunpowder, and meantime strive to educate the coming generations above the level of the drunkard's pleasures. Charity builds almshouses for sick and starving pauperism: philanthropy would seek to bring about such readjustments of the relations of wages to industry as would prevent pauperism. Soft-hearted amiability—not rising even to the height of a charity—sends slippers and bouquets to criminals in prison: philanthropy would establish such methods as would both deter from crime and reform the criminal. Charity tenderly swathes and poultices any diseased limb of the complicated organism of human society: philanthropy would ferret out the poison which has produced the disease, and expel it from the social system. In fine, charity, with its hundreds of hands stretched out in all directions, is ever striving to soothe away the pain of the ills to which humanity is subject; while philanthropy, with its hundreds of eyes going before its hands, is searching out the hidden causes of evils; and, through better appliances of education, industry, moral culture, recreation, legal and social justice, sanitary knowledge and observance, is laboring so to improve the mental, moral, and material conditions out of which individual and social life springs, that those ills which now most grievously afflict mankind shall be destroyed in the germ, before they have themselves any power to destroy. Charity gives man a crutch: philanthropy, more deeply kind, puts him into possession of his own faculties, and bids him walk alone.

WM. J. POTTER.

A MICHIGAN INDIAN RESERVATION.

I.

An editorial in *The Index* a few weeks ago stated that it is believed, by those who have made satisfactory investigation, that the Indians of the United States are in no danger of dying out; that, in point of fact, they are increasing in numbers. The writer of that article is a zealous advocate of justice and fair play toward, and a general kindly and encouraging treatment of, these people. There are in New England many men and women who believe that the Indian has never had an opportunity to show what he can become under the influences of civilization; but that, as far as he has been allowed to remain in peace and permitted to direct his attention to industrial pursuits, he has given evidence of a general race capacity for development. There are in the State of Michigan good opportunities not only to observe what the Indians can do for themselves, but also how thoroughly they may be prevented from doing. I have re-

Digitized by Google

cently taken a trip to an Indian community here, for the purpose of seeing and hearing for myself the history of a sincere and generous effort on the part of the United States to elevate this people.

In 1855, a treaty was concluded between the United States and the Saginaw, Swan Creek, and Black River bands of Chippewa Indians, in the lower peninsula of Michigan, by the terms of which the Indians ceded all their lands—of which they held small tracts in various parts of the State—and all their rights in annuities by prior treaties to the United States, and were to receive in return about two hundred thousand acres of land lying chiefly in one block in Isabella County—which was then unbroken wilderness—and about $300,000 in money, over one-third of which was to be distributed *per capita* among them in twelve annuities: $30,000 to be used for educational purposes, in ten annual payments; $40,000, in ten like payments, for agricultural implements, tools, building material, cattle, furniture, and whatever was needed to insure a permanence and success to their settlement; $12,400 to be used to keep up a blacksmith-shop for ten years; $8,000 to build and equip a grist-mill on the reservation; $4,000 for a saw-mill; $20,000 to liquidate the outstanding debts of the Indians; $8,000 per year, for five years, for an agent and interpreter,—longer, if necessary; $20,000, in ten yearly payments, for the support of a manual labor school, to be under the management and control of the Missionary Society of the Methodist Episcopal Church.

The Indians were authorized as follows to select land anywhere on the reservation: Each head of a family, each single person (male or female), each family of orphan children under twenty-one years, containing two or more persons, should select and hold eighty acres; and each single orphan, under twenty-one, should have forty acres. To these, the United States would grant patents, which were to specify that the land so settled by these people could never be alienated by them, could never be disposed of. Each child, as it became of age, should be entitled to select forty acres, until the entire lands should be exhausted. The Indians went upon the Isabella Reservation in 1856. There were about fifteen hundred of them then, and land enough to supply all with farms for several generations. The United States was to act as guardian of their property, and evidently intended to have them under her immediate supervision for some time; for she appointed the lieutenant-governor of the State, the superintendent of public instruction, a committee to act with a member to be appointed by the Methodist Missionary Society, whose duty should be to visit the Indians once a year for the purpose of making a thorough examination into the condition and conduct of the labor school, and to report the same to the President. Besides the offices of these eminent men, the government furnished an agent and an interpreter, whose time and attention should be given to the Indians; and it is not surprising if, having done this, she should have felt that her wards were doing well, as long as she heard no reports to the contrary. The head of the State, the head of the State's educational interests, and the representative of a large and influential theological body had been put forward to take care of the rights of these Indians in their new home, and to see that the intentions of the government were being fulfilled. This committee was pledged by every sense of right, justice, and duty, pledged by every humane feeling, pledged by the holy lips of religion, to see that these unlettered, ignorant children of the woods should receive all the benefits of their treaty. Government built them a mill. She built school-houses and churches for them. She furnished them with tools, teams, seeds, with furniture for their houses, and food to live upon until they could raise their own. Year after year, she paid regularly the several instalments specified in the treaty; year after year, the Missionary Society of the Methodist Episcopal Church received $2,000 from the United States for taking charge of the school of manual labor among these Indians; year after year, we must suppose that the aforesaid committee visited the reservation, found everything going well with the people, and so reported them to the President. Such being the case, the country has a right to look toward this community now, after the lapse of a quarter of a century, for a solution of the problem of Indian civilization. During this period of time there has been no disturbance, no outbreak, no agitation of any kind in which the Indians ever took any part against the whites. They have given the State no trouble in that time. In fact, as far as a knowledge of his presence is dependent upon his old warlike habits and customs, he has in this State entirely disappeared. Under the new State Constitution, adopted in 1852, the male Indian born in the United States and twenty-one years old is a citizen, and may vote and be voted for. In short, enough has been done with the intention of elevating the Indian in Michigan to warrant assurance that he will be found there far in advance of his old tribal condition,—a prosperous, intelligent, contented, and happy citizen, an honor to his State and nation. How far the facts harmonize with the colors of our reasonable expectations will be shown in another communication, in which I shall give the results of the experiment as they may be seen to-day on the reservation.

CHARLES ELLIS.

SHAKSPERE'S POLITICS AND THEOLOGY.

I.
His Politics.

Shakspere was never accused, as in later times Goethe was, of incivism and a lack of patriotism; but he is generally regarded as having been an aristocrat in sentiment, though not by birth, and a contemner of the people and of popular rights, although, in Shakspere's time, there was no "people" in the current sense of the word, there being then only an ignorant, property-less, mindless populace of serfs and drudges. It was doubtless his "Coriolanus" which has given the impression that he must have held not only the common people, but even the well-to-do citizenry, in utter contempt. But Shakspere, in correctly delineating the haughty Roman patrician, and in putting in his mouth words which voiced the contempt entertained by his class for the plebs or rabble of the Rome of that far-off time, was simply true to historic facts. He was not speaking his own sentiments through his hero as a mask or mouthpiece. He might as well be charged with having been a murderer at heart, or a man with intense murderous instincts, because he has with such marvellous life-likeness delineated such model and high-placed murderers as Macbeth and Richard III. There is a passage in Milton's *Paradise Regained* which he puts into the mouth of Christ; and there is also a passage in one of Emerson's essays, in which the fickle, unreflective, and anonymous rabble or multitude is characterized in terms almost as severe and contemptuous as those which the Shaksperean Coriolanus pours forth with such a fierce gusto, when he is denouncing the Roman populace or plebeians. Coleridge says that Shakspere was a philosophic aristocrat, delighting in those hereditary institutions which have a tendency to bind one age to another, and in that distinction of ranks, of which, although few may be in possession, all enjoy the advantages. Shakspere might have been in effect what he is here represented by Coleridge as having been; but he was not consciously or deliberately so.

Shakspere was not only a world-poet, but he was also the poet of the feudal period, when there was no intelligent, average population, and no apparent possibility of popular self-government; when the masses of mankind were still an anonymous, undeveloped multitude, many-headed, but brainless; when ignorance and illiteracy were the rule with nobles and peasants alike. An age of general knowledge and popular enlightenment, of industrialism instead of militarism, of science and genuine democracy, of telegraphs, telephones, daily newspapers, of sewing machines, power looms, railroads and steamboats, and of cosmopolitanism, and of instantaneous intercommunication between the ends of the earth,—such an age as that in which we are now living even Shakspere could hardly have anticipated. A certain stationariness and immobility had characterized the world down to his time. There had been great changes caused by war and conquest now and then, but there had been no "progress" in the current sense of that word. There had been no radical, social, and political revolutions, but only the overthrow of one dominating nationality by another. The spirit of social and political revolution and progress was not abroad in the world of Shakspere's day. The modern spirit was beginning to dawn in Bacon and others, but the dayspring had only begun. The masses were still in a state of serfism without thought or aspiration; and, as for the kings, high priests, and nobles, they were haughty, bloodthirsty, treacherous, tyrannous, and cruel, hesitating at no means which would accomplish the aims of their ambitions. Coleridge says that Shakspere is never angry with the mob, but hugely content with holding up its absurdities to its face; and, sometimes, you may trace a tone of almost affectionate superiority, something like that in which a father speaks of the vagaries of a child. Of the rights of man as promulgated by the French National Assembly of 1793 and as set forth in our Declaration of Independence, and of universal suffrage, Shakspere could hardly have dreamed. Citizenship in the ancient republics of Greece and Rome, of which he read in Plutarch, was not based on any so-called rights of man as man, but it was the privilege of a jealous, haughty, and exclusive class in the State, who disdained all traffic and traffickers, and all useful labor and occupations, as badges of serfdom and a degradation to freemen whose only proper vocations were politics and war. The Attic and Roman republics or democracies, from the stand-point of the popular sovereignty of to-day, were really oligarchies and aristocracies. The Athenian people or, as it was known in its aggregate, personified shape, the Athenian Demos,

"Who dwelt in the town of the violet crown,"

regarded themselves as autochthonous, or as actually sprung from the sacred soil on which they dwelt, and scorned the idea that their franchises could be bestowed on aliens or slaves. Brutus, when he made, in the language of Byron,

"The dagger's edge surpass
The conqueror's sword in bearing fame away,"

was no champion of popular freedom and social equality. He was simply the vindicator of his class, of an exclusive class liberty, of the oligarchic rights of a patrician Senate as against the one-man power, which Julius Cæsar, the man of destiny of decaying Roman republicanism, was wielding in consequence of the inexorable logic of events. Thus, it is not true, as Coleridge avers, that Shakspere has depicted "the man of freedom" in his Brutus. Neither Brutus nor Cassius was

Digitized by Google

a revolutionist in the modern sense of the word "revolution," which is a movement in behalf of the rights of man as man. Brutus and Cassius were ultra-conservatives and would-be restorers of the old Roman social and political order with its slaves and plebeians and patricians; that is, with all its glaring inequalities. They were also actuated by a mean jealousy of the foremost man of the foreworld in statesmanship, generalship, and general intellectual capacity. For such was Julius Cæsar, who was a progressive when compared with his assassins.

Hazlitt, in his comments upon Shakspere's "Coriolanus," says: "The arguments for and against aristocracy and democracy, on the privileges of the few and the claims of the many, on liberty and slavery, power and the abuse of it, peace and war, are, in the play in question, very ably handled, with the spirit of a poet and the acuteness of a philosopher. Shakspere himself seems to have had a leaning to the arbitrary side of the question, perhaps from some feeling of contempt for his own (low) origin, and to have spared no occasion of bating the rabble. What he says of them is very true, and what he says of their betters is also very true, though he dwells less upon it. The cause of the people is indeed but little calculated as a subject for poetry." (Mr. Emerson did not seem to think so. On the contrary, in his "Boston Hymn" and in his verses entitled "Voluntaries," he demonstrates that "the cause of the people" is well "calculated" for poetry of the loftiest kind.) Says Hazlitt, "The language of poetry naturally falls in with the language of power." *Per contra*, Byron and Shelley so managed "the language of poetry" as to make it fall in with the language of intensest hate for and indignation at arbitrary "power" and despotism. Hazlitt goes on to say that "poetry is right royal. It puts the individual for the species, the one above the infinite many, might before right. A lion hunting a flock of sheep or a herd of wild asses is a more poetical object than they; and we even take part with the lordly beast." This is not true. To the credit of human nature be it said, or of enlightened, kindly human nature, as it manifests itself in the foremost communities of to-day, it invariably takes the part of "the under dog" in the fight rather than the side of triumphant power. But to quote still farther from Hazlitt. He says: "We feel some concern for the poor citizens of Rome, when they meet together to compare their wants and grievances, till Coriolanus comes in, and with blows and words drives this set of 'poor rats,' this rascal scum, to their homes and beggary before him. There is nothing heretical in a multitude of miserable rogues not wishing to be starved, or complaining that they are like to be so; but, when a single man comes forward to brave their cries, and to make them submit to the last indignities from mere pride and self-will, our admiration for his prowess is converted into contempt for their pusillanimity."

Homer, like Shakspere, sided with the Achaian kings and nobles of his day, and denounced the rule of the many, or what we should denominate universal suffrage, as an unmitigated evil. In other words, neither Homer nor Shakspere admired rabbles or the leaders of rabbles, as their manner of serving up Thersites and Jack Cade sufficiently indicates. We have in this Commonwealth a lineal descendant of Thersites, in full feather and activity, with all his physical and mental traits. But, aristocratic as Homer was in his proclivities, he yet, away back in that far foretime in which he flourished, could see that slavery was a grievous wrong, and denounced it as such. The truth is, had Homer and Shakspere lived in these days, they would have sympathized with a popular rule, based on popular intelligence; that is, with a popular sovereignty, exercised by people fitted by education and a mutual respect for each other's rights to exercise sovereignty over themselves.

Mob-rule and the rule of demagogues continue to this day to be just as great evils as they were in the days of Homer and Shakspere. But Shakspere and Homer could, in their times, have no experience of large, average populations fitted by a generally diffused intelligence and prosperity to carry on "a government of the people, by the people, for the people." There are only a few such highly enlightened average populations in the world of to-day even. Demagogues and ignorant rabbles, even in this country, are doing their best to make popular rule a failure. The English of Shakspere's time were a proud, invincible people, jealous of their rights and independence. But British constitutional liberty, as it was finally evolved by the long struggle with the Stuarts, which ended with the Revolution of 1688, was a long way off in the days of Shakspere. England was even then "the inviolate island" that it has ever since been. But the English Plantagenets and Tudors were as absolute despots as ever reigned. Shakspere shows up the kings and high priests of the feudal times of England in such a manner as to make them forever detestable; and in this way he may be said to be a most potent enemy of absolute personal rule, whether royal or hierarchic. The able but hideous Richard III., as he is presented in Shakspere's play of that name, is not calculated to make readers or spectators enamoured of royalty; and the ambitious, unscrupulous, wily, and haughty high priest is equally well drawn in Cardinal Wolsey, who is a model of the usurping and domineering hierarch. Thus was Shakspere in effect the enemy of kings and priests both. He was in full sympathy with the hostility of his countrymen, at all periods of English history, to the rule of a foreign priesthood in England. In his "King John," that monarch says to Cardinal Pandulph,—

> "Tell the pope this tale and from the mouth of England,
> Add thus much more,—that no Italian priest
> Shall tithe or toll in our dominions.
> But as we, under heaven, are supreme head,
> So under Him, that great supremacy,
> Where we do reign, we will alone uphold,
> Without the assistance of a mortal hand,
> So tell the pope, all reverence set apart
> To him and his usurped authority."

King John in these words voiced the innate hatred and contempt of the English race for priestly sway,—a contempt which still burns in the breasts of all the offshoots of that race in both hemispheres, a contempt which has made that race superior to all other races in manliness, civic freedom, and general intelligence and morality. There is no danger of the readers of Shakspere becoming enamoured of tyranny through his delineations of it, or learning from him any lessons of slavishness and base servility. The great feudal poet of England, with all his aristocratic proclivities, was not in love with "the oppressor's wrong" or "the proud man's contumely" or "the insolence of office" and high rank. He did not applaud "the spurns that patient merit of the unworthy takes." Indeed, the social and political ills which he saw all about him, and which seemed to be ingrained in civil society, made him at times tired of life and to long for "restful death." He saw that men were aristocrats or democrats according to their circumstances. One of his characters exclaims:—

> "Well, whiles I am beggar I will rail
> And say,—there is no sin but to be rich;
> And, being rich, my virtue then shall be,
> To say,—there is no vice but beggary."

B. W. BALL.

MAN AND HIS SHOW.

It is Tennyson who says that

> "The highest is the measure of the man,
> And not the Caffre, Hottentot, Malay,
> Nor those horn-handed breakers of the glebe,—
> But Homer, Plato, Verulam."

There is a butterfly called "Parnassus," whose habitat is high mountains. Poets may take their butterflies from Parnassus, but theirs is a partial science. Our excursion to-day shall be on the valleys and lowlands.

Lubbock has made the flowers which attract insects reveal

> "The mind which stirs between the wings of bees and building wasps."

In the same spirit, we propose a study of the average human psyche by its allurements.

To learn Rome, I do not care so much to know what Cicero was thinking in his villa at Tusculum as to know what was attracting the Roman crowd to the Colosseum. The bull-fight at Madrid is a better revelation of the Spaniard than the eloquence of Castelar. A theatre in Canton is a better index to the Chinese than the maxims of Confucius.

One of the most instructive men it has been my fortune to meet is the purchasing agent of a great "show." He had never been on Parnassus, but he knew well how to catch the butterflies on the plain. "The public mind," he said, "is setting strongly for quail-eaters. I shall make a good thing out of Myrick." At that time, one Myrick was eating quails in New York on a wager. He was to eat a brace of quails every dinner for thirty days. He was only half through, and yet within fifteen days he had become famous. New York papers were telling the world what throngs attended him to the eating, and how, having devoured the quails, "he piled up the bones neatly on a side-dish." Myrick was great, and the world had need of him. For what? A few years ago, insects were infesting the trees in our city parks. We inquired for the greatest gourmand of bugs; and, finding him in the English sparrow, we brought him hither. Is there a portion of the globe overrun by quails? Let it send for Myrick. For what is Myrick? To travesty Victor Hugo on the Cat and Mouse, Myrick is a correction. God made a quail, and said, "Behold, I have created a quail." Then he made Myrick. Myrick is the *erratum* of the quail.

But our civilization wrests this quail-eater from the function assigned to him by a line of gluttonous ancestors. We make him a *show*. Not long ago, some lecture bureau would have put him on the platform. That is past; but the circus and the side-show, like the poor, we have always with us.

"What is the demand," I said, "for objects in natural history,—lions, tigers, and the like?" "Not much demand," he answered, "in that line. They're too common. I made a venture once in zebras. I gave Patterson an order to make me a lot of zebras out of mules. He was to have five hundred dollars. He turned them out so well, you would never dream that they were fakes. But his paint didn't hold color. The show was caught in a rain-storm, and it was worth a whole side-show to see them zebras."

"What is the demand," I said, "for what you call 'freaks of nature'?"

"Demand! Why, Patterson can't turn out enough to supply the demand. I tell you that man's a genius. He can make more freaks of nature than any other man in the country. He can set a glass eye in the middle of a cow's forehead. He can put four horns on a cow, and two of them will seem to grow out of her eyes. He tried his hand once on a winged mule. Patterson, I tell you, is a genius."

Digitized by Google

"I see that your show advertises a double-headed girl. Did Patterson manufacture her?"

"Oh, no! She, or they,—we call her *they*,—isn't a fake. She's genuine. And, let me tell you, she's the best article in that line that was ever put before the public. She's a great card."

"I see you have a 'spotted man.' Does he draw well?"

"We have a spotted man and a leopard boy; but, between us, they're only diseased negroes. They don't draw very well."

"Your show has an 'India-rubber man.' Is he a good card?"

"Well, at first, he was a great curiosity. But we've got tired of him. He offends good taste. Ladies don't like to see a man pull his lip up over his forehead."

"Tattooed men,—how do they draw?"

"The people are tired of them. They're almost all fakes. By 'fake,' I mean that they are manufactured for the market. Patterson makes them."

"And wild men? I see you have a wild man in you show."

"Wild men are pretty much played out. I've just had a letter from the agent of the Wild Man of Madagascar. I believe he's a fake. I tell you, there never was a genuine wild man before the public. The Wild Man of Afghanistan was the first I ever heard about. He was a mulatto. Tom Courtney found him in a poorhouse somewhere in New York, and made a good deal of money out of him. Then, Sam Ashbridge got a wild nigger. But he was a fake. Sam wanted the greatest thing in that line, and so he had the fellow's teeth pulled and tusks put in their place. The tusks didn't fit. You never saw anything look more like a gorilla. He was a great card, but he lived only one season."

"Fat men?"

"The market is glutted with them. A man must be mighty fat or lean to pull in the dollars now."

"Champion eaters or fasters, do they draw generally, as you think Myrick will draw?"

"No: the public cares nothing about them, unless they are very famous. We tried the champion mince-pie eater, but he didn't draw. Tanner, you remember, tried lecturing; but it wouldn't do."

The show is level with the mind which it attracts. When the historian tells us that bull-baiting was the favorite amusement of the ancient Thessalian, he has given us a key to the Thessalian character. My showman threw more side-lights on American character and culture than you will find in a volume of Bancroft. How large in us is the survival of that primitive cult in which the unnatural, the monstrous, was worshipped? White cows, white elephants (thought to be unnatural, because rare), deformed men, dwarfs, giants, idiots, lunatics, have been deified. The "leopard man" and "India-rubber man" might once have found their place in a temple. Their place to-day is in the side-show.

Larger still is the survival of Thessalian savagery as expressed in the bull-fight. Let the showman advertise an acrobat to walk on a rope a foot above the ground, not a man would come to his ticket-office. Let him put the height at a hundred feet, and the performance wins an audience. That which attracts is the chance to see a man kill himself. Frank Frayne is an ignoramus who knows not so much of the histrionic art as Buffalo Bill. But he is good with a rifle; and he will shoot an apple from the head of a woman, pointing the gun backward over his shoulder. Frayne is a "star," and fills every theatre he enters. To fall back on our entomological illustration, here is a flower with no beauty of form or color. It is the carrion flower known to science as *Smilax herbacea*. Its smell is that of decaying flesh. Nothing could find it except for its odor; and nothing would want to find it except a botanist, or an insect which delights in putridity. The flower attracts the blow-fly. As the carrion flower in the floral world, so is "Si Slocum" in the histrionic. What audience will it attract? Not a man in whose mind does not lurk the thought that he may see Frayne shoot amiss, and kill a woman. And, when the reckless fool did miss the apple and shoot the woman through the head, one of the largest theatres of Cincinnati was packed to suffocation with men and women who came, taking their chances to witness the deed. The smilax has but to unfold its bloom and exhale its odor, and its audience of flies is larger than the audience of butterflies the sweetest zinnia can attract. Within a month after the histrionic murder, Frayne is blooming again in Boston, the flies are buzzing, the theatre is crowded, and only one paper in the city utters a word of reprobation and shame.

Man, as measured by the show, has grown; but he is still in embryo. When cock-fighting was a favorite pastime in England for children, and bull-baiting for men; when these cruel pleasures were checked by legislation for the only reason—written in the law—that "they were diverting the people from archery, so necessary to the military greatness of the nation"; when humanitarians like Saint Francis enjoined tenderness toward the lamb, assigning as the only reason that the lamb is the symbol of Christ; when reformers like Luther grew sad and tristful over a hunted hare, not through pity of the hare, but because it represented a soul hounded by the devil; when an entire people refrain from baiting the stag and the ass, sparing only these, and these only because the ass bore Christ into Jerusalem and the stag reveals the bones of saints,—if we forget the one Plato and the few Verulams, we might regard our race as just emerging from brutedom.

In a future age, when the antiquarian shall find an inventory of the great American show of the nineteenth century, — "Spotted Men," "Leopard Men," "India-rubber Men," "Gorilla Men," "Mermaids," "Three-eyed Cows," "Double-headed Girls," genuine freaks of nature made by Patterson, and Myrick and Frayne made by themselves,—he may say, "Of the press and the platform, of the college and the academy, of all that helps men to work out the beast and work in the man there was crying need."

W. D. GUNNING.

IS VOLITION LAWLESS?

Volition involves the idea of action and desire for its accomplishment. Between two different conceivable actions and conflicting desires, we decide in favor of one and against the other. The power thus to decide is popularly called the "will," which is generally referred to as though it were a sort of metaphysical entity,—a something forming no part of the phenomenal world, being independent of law and causation, that presides over the operations of the mind so far as to interpose between conception and action, and by a "categorical imperative" determining the decisions of the mind, sitting in judgment over all motives, itself uninfluenced by motives, being wholly unrelated to the succession of phenomena which we call cause and effect.

But what proof is there of the existence of an entity called "the will"? "Physiologically," says Maudsley, "we cannot choose but reject the Will: volition we know, and will we know; but the Will, apart from particular acts of volition, we cannot know.... We have to deal with will not as a single undecomposable faculty unaffected by bodily conditions, but as a result of organic change in the supreme centres, affected as certainly and seriously by disorder of them as our motor faculties are by disorder of their centres." Modern psychology knows nothing of "the will." The power of willing which is correlated with physical conditions forming part of the cosmic order we are all conscious of possessing. Man cannot take himself out of the phenomenal world. In every moral as well as in every physical struggle, we have to do, as Lange says, "not with the thing itself, but with our conception of ourselves and of our will; and this conception remains unavoidably phenomena."

Men's actions are determined by motives which have their proximate cause in personal character and external circumstances. The actions of men are a part of the natural order, are links in the chain of causation, and not mere arbitrary events without antecedents and outside the realm of natural phenomena. Of course, men can do as they choose, if no obstacle be interposed; but can they choose otherwise than as their character and circumstances determine? Could Emerson have chosen to be a thief? Can a Digger Indian choose to act like an enlightened man, in whose physical, mental, and moral nature are organized the experiences of thousands of years of civilized life? If evolution be a fact, the present is an outgrowth of the past, and cannot, therefore, be independent of the past. The volitions of men to-day are determined not simply by their surroundings, but by the character and conduct of the millions of men who have lived in the past. Says Lewes: "The language we think in and the conceptions we employ, the attitudes of our minds and the means of investigation, are social products determined by the activities of the collective life. The laws of intellectual progress are to be read in history, not in its individual experience. We breathe the social air, since what we think greatly depends on what others have thought."

Not only are we influenced in our volitions by all past human life, but, if the ascent of man from the lower animals be admitted, by all the past *brute* life with which we have a genetic kinship. Those who say they accept evolution, and at the same time claim that man has what brutes have not, freedom of the will, should, to show that they have any well-matured or consistent thought on the subject, indicate at what point in the development of intelligence, or how possibly at any point, a change occurred so great as is implied by the distinction between a creature whose volitions are caused, dependent, and subject to law, and a creature whose volitions are uncaused, independent, and lawless. It is evident that the dogma of the freedom of the will is utterly inconsistent with evolution, the distinguishing characteristic of which is *continuity* in the processes of nature. William I. Gill, in his remarkable work, *Evolution and Progress*, sagaciously observes: "In regard to the will, the only question bearing on evolution is whether its volitions are the exercise of a natural or of a supernatural force, or, in other words, whether its action transcends the known and accepted law of cause and effect, which everywhere prevails in the universe of nature; whether, in spite of all natural forces, and in opposition to all natural forces, both internal and external, the will can determine its volitions, so that there is no absolutely certain and uniform and causal connection between volitions and antecedent phenomena.... Those who proclaim the most loudly the freedom of the will are by no means clear that the will is strictly and fully a supernatural power; and nothing else will save them." Mr. Gill is a thinker, and knows what he is talking about.

The only natural meaning "freedom of the will" can have is the power of acting or not acting as the mind determines; that is, of following the

Digitized by Google

strongest motive. Within certain limits, we can do as we choose. Choice is the inevitable impulse resulting from more or less conflicting feelings, determined by motives; and the action which follows is just as necessary as is the circular motion of the earth from the centripetal and centrifugal forces. But what determines our choice? We did not make our constitutions. As Huxley says, "The passionate assertion of the consciousness of their freedom, which is the favorite refuge of the opponents of the doctrine of necessity, is mere futility; for nobody denies it. What they really have to do, if they would upset the necessarian argument, is to prove that they are free to associate any emotion whatever with any idea whatever; to like pain as much as pleasure, vice as much as virtue; in short, to prove that, whatever may be the fixity of order of the universe of things, that of thought is given over to chance."

"The designation of 'liberty of choice,'" Bain observes, "has no real meaning, except as denying extraneous interference. If I am interfered with by another person compelling me to act in one way, then it may be said, intelligibly enough, that I have not liberty of choice. But, as between the different motives of my own mind, there is no meaning in the use of the word 'liberty.' Various motives—present or prospective pleasures and pains—concur in urging me to act. The result of the conflict shows that one group is stronger than another; and that is the whole case."

Replying to those who maintain that all phenomena, mental as well as physical, occur in accordance with law, Voltaire asks: "Well, would you have everything rendered subject to a million of blind caprices? Either all is the consequence of the nature of things, or all is the effect of the order of an absolute master." Than this nothing can be more evident. Superficial minds imagine that they lose their liberty, if they concede that their wills are subject to law. But even a God, uncaused and eternal, if he exist, must exist in accordance with the principles and conditions of his being. If he is just because justice is one of his attributes, he is just because of the determinations of his being; in other words, because of that nature which he did not make, and which is the basis of his character and the cause of his volitions.

Exposure of the fallacies of the doctrine of "freedom of the will" is sure to be met by its adherents with the statement that it is affirmed by *consciousness*, or, to use the language of the Kantian, that it is a deliverance of consciousness. But, as Bain says, "it is a great stretch of asseveration to call the construction of an enormous theory an act of consciousness so simple that we cannot make a slip in performing it." What we are really conscious of is the power of willing. Certainly, consciousness does not tell us that our volitions are uncaused or lawless, that they are unrelated to antecedents, that they belong to a domain exempt from causation. "We feel that our actions," remarks Hume, "are subject to our will on most occasions; and imagine we feel that the will itself is subject to nothing, because when, by a denial of it, we are provoked to try, we feel that it moves easily every way, and produces an image of itself (or a *Velleity*, as it is called in the schools), even on that side on which it did not settle. This image or faint motion, we persuade ourselves, could at that time have been completed into the thing in itself, because, should that be denied, we find upon a second trial that at present it can. We consider not that the fantastical desire of showing liberty is here the motive of our actions."

Prof. Felix Adler, in a lecture recently printed in *The Index*, says that "Kant, in his critical philosophy, gave the first real statement of the freedom of the will." Kant's method of dealing with the subject was briefly this: He maintained that the mind is no part of the phenomenal world, but the *Ding an sich*, the *noumenon*, and consequently subject to no laws of the phenomeral world. Of the noumenon, Kant says we can know nothing whatever; and his assumption, therefore, that it is free, or beyond law and causation, is a statement of very little value. "When," says Huxley, "the good and evil angels fought for the dead body of Moses, its presence must have been of about the same value to either of the contending parties as that of Kant's noumenon, in the battle of impulses which rages in the breast of man." Lange, who is one of the ablest and fairest thinkers of this century, well observes: Kant's philosophy "stands with Janus countenance on the borders of two ages," and "the false subtleties in his deduction of freedom may speedily be forgotten," especially when we remember that "the loftiness with which he conceived the idea of duty kindled a flame in youthful minds; and many a passage of his writings, in all the simplicity of their awkward expression, exercised an entrancing influence as of heroic song, upon those spirits that were seized by the ideal character of the age."

In his lecture, from which we have quoted, Prof. Adler says, "The freedom of the human will is the corner-stone of every genuine ethical system." We believe, on the contrary, that the theory of the freedom of the will is utterly inconsistent with any genuine ethical system, and that the maxims of every-day life, all codes of morals, all systems of jurisprudence, all forms of governments, all the industrial and commercial enterprises of the world, presuppose that volition belongs to the region of law and causation, and that there is a necessary connection of certain actions with certain states of mind, without which praise and blame would have no foundation, and the word "responsibility" would be meaningless. Paradoxical as it may seem to some, we do not hesitate to say that, were the doctrine of the freedom of the will true, a murderer might be as innocent as a new-born babe. The most advanced systems of theology even, whatever be their theoretical teachings, are founded upon what they teach should be the object of the greatest admiration and adoration,—the necessary justice and goodness of God. But the moral aspects of this subject will receive attention in another article.

B. F. UNDERWOOD.

EDITORIAL NOTES.

ANNIVERSARY WEEK, this year, begins on Sunday, May 27.

AMONG the works just announced by Houghton, Mifflin & Co. is "Quaker Invasion of Massachusetts," by Richard P. Hallowell.

THE *Critic* of April 7, in an interesting article on the Co-education of the Sexes, gives publicity to the opinion of several college presidents and others interested in educational matters. Of the sixteen persons whose letters are given, it is a little noticeable that only one (Julia Ward Howe) is a woman.

G. P. PUTNAM'S SONS have issued an expurgated edition of the Bible, from which has been eliminated "all improper, irrelevant, theologically or ethically unnecessary, and inadequately confirmed parts" of the Scriptures. The selections from the ancient Persian, Egyptian, Hindu, Buddhist, Chinese, Grecian, Roman, and Arabian Scriptures, which are included in the volume, give it additional value.

THE Springfield *Republican*, referring to the statement of Dr. Stow, a member of the Massachusetts House of Representatives, that "small-pox is sent by the Almighty as a judgment upon land monopoly, money monopoly, and transportation monopoly," remarks that this is "not only distressing, but, unless Dr. Stow can advance the strongest proofs, it must be regarded as distinctly libellous."

THE London *Truth Seeker*, of which Rev. John Page Hopps is editor, quotes from *The Index* Mr. E. C. Towne's statement—"that very great ignorance of America is well-nigh universal in England; that the most false ideas of American characteristics and life prevail everywhere, even among those who are generous and friendly in their feeling; and that, with the vulgar majority, which embraces from two-thirds to four-fifths of the population, contempt for our country, our people, our products, our public life, and our private manners, is as natural and hearty as ignorance and prejudice can make it. It is one of the largest and most extraordinary facts to be met with in England"—and replies as follows: "We should like to assure our brothers on the other side that this is a misjudgment. At the worst, the proportions are about the other way; but it would be nearer the truth to say that the 'contempt' spoken of is very seldom to be found anywhere. What curious people Mr. Towne must have seen, or what a curious state of mind he must have been in when he was here!"

SAYS the New York *Evening Post*:—

The success of Mr. Cook's sonorous platitudes in Boston, which passes in the eyes of foreigners for the most cultivated city in America, has probably given far more gratification to the enemies of democracy than any shortcomings on the part of the American press. His books, his lectures, and himself have furnished to foreign critics more materials for "merciless sneers" directed against the mental standards of the community which produced him and which can listen to him than even the worst American newspapers have ever done. A bad newspaper can always be explained away by decrying the character of its readers, who are an invisible and unknown body. But Mr. Cook gathers his subscribers into a hall, where they can be counted and inspected. That they have a very respectable appearance and make certain claims to "culture" nobody can deny, and this is all the cynical foreign enemy of our institutions asks for. He then turns on us, and says that when such people as these can take Cook for a prophet, and bear up under the revelations which have been made of his incompetency, what hope can there be for our intellectual future? Why should there be "first-class dailies" or weeklies in a community, they ask, which can find mental food in a "Monday Lectureship," and which can take his collection of chromos for a gallery of old masters? One cannot answer a sneer of this sort off-hand. To explain Mr. Cook would need a small volume.

FROM the annual report of the executive committee of the Free Congregational Society of Florence, which completed its twentieth year on the third day of this month, we learn that the Society is in a flourishing condition. Mr. W. H. Spencer has been engaged to fill the office of resident speaker for another year. During the past year, he has spoken for the society thirty-seven times. Mrs. Anna Garlin Spencer has spoken ten times. The report concludes thus:—

The first work of a pioneer society like this must, of necessity, be in a great measure negative or destructive. It finds that a path is to be made; and, in doing this, a forest of error and bigotry has to be cut down and removed. It seems strange that all great movements for the advancement of man, all noted discoveries in science, should be opposed by the dominant church influences. So it was, as we have seen, in the Anti-Slavery conflict; and so we find it in the Woman's Rights movement. The most splendid discoveries in astronomy could be announced

Digitized by Google

only at the peril of torture and death by the hand of the Church. Our globe was a heretic, forbidden, by church creeds, to turn on its axis or to revolve around the sun. But the old planet has kept on its infidel course through the heavens, until ecclesiastics have finally decided to let it move, provided it shall be admitted that the great achievements in astronomy could never have been wrought but for the civilizing and benign influences of their holy religion.

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

The Friday morning session will open at 10.30 o'clock, in Parker Memorial Hall, with an address on "Emerson and Darwin" by Col. T. W. Higginson, to be followed by Mr. Edwin D. Mead, who will speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and by Mr. John W. Chadwick, who will speak of "The Problem of the Universe as approached from the Matter-side by Darwin."

The Friday afternoon session will open at three o'clock with a paper on "Co-operation and Progress," by Mrs. Imogene C. Fales, of Brooklyn, N.Y. This will be followed by an address from Mr. James Kay Applebee on "Social Disintegration and its Arrest by Co-operation." Mrs. Anna Garlin Spencer and others will also speak to the question of the afternoon.

The Festival will be held in the large Horticultural Hall, Tremont Street, and will begin with a supper, with tables and seats for all, at about six o'clock, or as soon after the close of the afternoon meeting as possible. Col. T. W. Higginson will preside. After the supper, five-minute speeches are already promised from John W. Chadwick, B. F. Underwood, James Kay Applebee, and Mrs. Anna Garlin Spencer, and a poem from Minot J. Savage. Other speakers for the Festival will be announced hereafter. Miss Lucy Garlin's Euterpe Quartet have kindly consented to add the attractions of their fine music to the occasion. Tickets of admission to the Festival, with reserved seats at the tables, at 50 cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston, of the Secretary, Providence, R.I., and of A. G. Hill, Esq., Florence, Mass. It is desirable that early application for seats should be made.

F. A. HINCKLEY, *Sec'y F. R. A.*

POETRY.

For *The Index.*

THE INEFFABLE NAME.

I see an angel with dilated eyes
  Filled with a wonder sweet beyond compare,
  Around whose brows her wind-blown golden hair
Makes aureole splendor, and her finger lies
Upon her lips. Dear angel of surprise,
  The symbol thou of spirits high and fair
  Who to be silent still serenely dare
Before all wonders of the earth and skies.
How name aright the Power that surges through
  All times and worlds, nature and humankind?
  O Light of light, such spirits are not blind
To thy perfections, old yet ever new!
  When speech but mocks the overburdened heart,
  They, choosing silence, choose the better part.

JOHN W. CHADWICK.

BROOKLYN, N.Y., April 12, 1883.

The Index.

BOSTON, APRIL 26, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to "THE INDEX," 3 Tremont Place, Boston. Letters for Mr. Potter should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

The Criticisms upon the Ethics of Herbert Spencer.

BY S. J. STEWART.

There is an opinion among many persons that society is fast reaching a condition in which men will no more recognize any principles of morality or necessity for good conduct. Very often, men, who themselves are doing nothing to suggest moral principles, profess great sadness that the very foundations of faith and virtue are being removed, and that nothing is to take their place. Now, it is undoubtedly a fact that old theories of ethics are no more accepted as authoritative by many people. It is not true, however, that there is no basis for morality: neither is it true that all who reject old conceptions are indifferent to the situation. There is in process of construction a system of morality definite and comprehensive, a system that is self-consistent and builded upon facts. It is the system or theory of scientific morality, or, in other words, the ethics of evolution.

For good reasons, the morality of evolution is very closely connected with the name of Herbert Spencer. It is not that he is the only man who has taught evolution or who is trying to construct a system of morality in consistency with science. Many men before him, and many before they had come under his influence, have felt the necessity of discovering principles of natural morality. Moreover, any system of natural or scientific morality does not depend upon the infallibility of any one man. But because of his recent visit to this country, and the fact that the attention of men has been specially directed toward his opinions on ethics, it is appropriate to notice them. For good general reasons, too, we may consider the ethics of Herbert Spencer and that of evolution as synonymous. He was called, even by Darwin, "our greatest philosopher." He has undertaken to construct a system of philosophy which will embrace all special sciences and all isolated principles. Darwin treated of the origin of species, and thus applied evolution to one department of investigation; and many scientists and moralists have worked in a particular direction, but Mr. Spencer began his system of philosophy before the doctrine of evolution was formulated by Darwin, with the direct object of making all facts, at last, suggest the true law of conduct. Moreover, he has definitely and directly in his *Data of Ethics* applied the theory of evolution to the question of morality; and his book is universally accepted among believers in science as the most complete and suggestive and authoritative statement on that subject. If for no other reason, his writings in general have been made the direct object of attack by critics of science and evolution, and therefore become especially representative. It will not be then, in any spirit of blind hero-worship, that we consider the ethics of Spencer and that of scientific morality as practically synonymous.

It may be well to state the general method and theory of Mr. Spencer. His method is to apply the general law of evolution to ethics. "If the entire visible universe has been evolved, . . . the life in general which the earth bears, as well as that of each individual organism,—if the mental phenomena displayed by all creatures up to the highest. . . conform to the laws of evolution, then the necessary implication is that" conduct in man also conforms. Conduct comprehends the adjustment of acts to ends and acts adjusted to ends from the simplest to the most complex. The ultimate end of all conduct must be to produce more pleasure than pain, as the excess of pain would at last end life. Life, then, in its length and quality, becomes the standard of conduct; and, practically, that is the best conduct which produces the most life in self, in offspring, and in fellow-men. Morality, or "the science of right conduct, has for its object to determine *how* and *why* certain modes of conduct are detrimental, and certain other modes beneficial." This is a scientific theory of morality, because it is builded upon facts and laws. There are certain reasons in the constitution of things which make certain conduct good. It is no mere guess-work by which men are to do what seems pleasant to one part of their nature at the moment; but, as there are certain causes which produce certain effects, it becomes the work of science to find out "from the laws of life and the conditions of existence what kind of actions necessarily tend to produce happiness." "Having done this, its declarations are to be recognized as laws of conduct," and not merely some momentary desire for pleasure. The explanation, however, will be best given by considering popular objections.

First, then, the superiority of Mr. Spencer's philosophy is shown in the fact that his object is ethical. This is not the common idea of those who have criticised his philosophy. Men urge as an objection to evolution that it is not practical, and leads to no moral conclusions. "What has all this philosophizing about biology and psychology to do with good conduct?" men ask in criticism. "How does it at all affect human life and love and conduct to tell us of mollusks and the belief in dreams?" The fact is, however, that the direct ultimate object of Mr. Spencer's philosophy is the discovery of the laws of good conduct. His series was to conclude with a consideration of "The Principles of Morality." Not only was morality his object, but so anxious was he to suggest moral principles to men that he anticipated his intended order, and wrote his *Data of Ethics* before he came to it chronologically in his system, and even omitted a consideration of inorganic evolution. He saw plainly that multitudes of men were about to give up their old belief in an old morality founded upon theology. Instead of ignoring the situation as many do, he resolved to meet it. He did, however, resolve to reach his moral teachings by a faithful observance of facts and laws, and by a philosophical method. He has built his system up from the bottom, beginning with the lowest forms of life and showing the working of the law of evolution up to the highest known culmination of life in man. But the very comprehensiveness of his method and the profundity of his thought have been a principal object of criticism. Men who think that moral questions are all to be settled in their little crucibles criticise him for not talking in their commonplace. Because he does not write in the language of the politician or the temperance reformer or revivalist, they cannot understand or appreciate him. They forget that a philosopher cannot adapt himself to the ideas and expressions of the thoughtless or superficial.

But even those who are educated, and who sometimes talk in the most obscure language themselves, apply their criticism to the very breadth of Mr. Spencer's system. Forgetting that he is tracing life up from its lowest forms, and that he wishes to apply evolution to every form of life, and to approach

Digitized by Google

human morality from its origin, they criticise him really for his faithfulness. Even Prof. Goldwin Smith* criticises him for beginning his *Data of Ethics* by a reference to mollusks, and implies that he measures all human conduct by the action of the lowest animals. One writer, who is on all occasions anxious to criticise Mr. Spencer's system of ethics, suggests that he is principally occupied "by observations of the wrigglings of worms and the blind activities of insects," and writes of Mr. Spencer s "pedantry."† From many quarters there come criticisms upon what is really a merit in Mr. Spencer's philosophy, as far as it applies to ethics. For it is the attempted comprehensiveness of that philosophy, and its consistency with the truth that all life has developed from a lower form, that makes Mr. Spencer begin with the lower forms of life and conduct, and work his way up to the highest known form in man. He begins with biology, and shows the growth of thought and feeling, and at last reaches human society and individual morality. It is most superficial, therefore, to criticise him for not asserting his practical conclusions at every point in the process. What could be more absurd than to ask him to talk about Plato and Shakspere at that very point in his argument when he is showing the lowest development of life? What consistency would there be in some man going along the streets without any visible means of support, and criticising the stone-mason for beginning by laying a foundation for a house? What would we think of his judgment, if he were to insist on the future occupant beginning at first by working frescos and trying to make a tower stand on nothing while utterly ignoring a foundation? This is an illustration of the criticisms of those who find fault with Mr. Spencer for not beginning first to talk in transcendental language about the highest form of life. It especially comes with a poor grace from those who, like Prof. Goldwin Smith, are not certain that the morals of Theism or Christianity are true, and who, therefore, without any seeming foundation of morals of their own criticise those who are honestly trying to build one.

In general, on this point, it is sufficient to say that Mr. Spencer has ethics for an ultimate object in all of his writings; but it is utterly unfair to insist that at every particular point of his argument, which consists of many volumes, he should state his conclusions.

But kindred to this is the fact that the evolutionist believes in the essential morality of the universe. He believes that the universe is essentially moral, and that, if men can find out its laws in any particular direction, we will receive some light upon the law of conduct. Even when Spencer wrote the essays which furnish the basis of *Social Statics*, he recognized the invariable law in all social phenomena. He recognized that human progression is determined by the same general law, and that men are modified by social discipline in consistency with such a law. It is only those, then, who talk of the degradation of plant and animal life, and who sneer at all attempts to show the universal law revealed in all phenomena, who deny the essential sanity and morality of the universe.

The ultimate object of Mr. Spencer is to find out the laws and principles of good conduct, and to explain them. Believing that we may discover the natural cause and method of morality, he seeks to trace out the cause and show the method. This would seem to be a laudable object; but a large portion of the criticisms which have been made upon him are because of this attempt. The open or latent assumption underlying many of the objections to his system is that he seeks to make morality intelligible. One form of objection is founded upon the assumption that a man ceases to believe in morality as soon as he attempts to explain it. Because he attempts an explanation, it is often asserted that he does not believe in conscience or duty. Prof. Goldwin Smith boldly urges this criticism, but Mr. Spencer has already replied to it and has shown that it is false. The criticism is a representative one. Mr. Spencer does recognize conscience and duty and moral beauty and ideal righteousness and justice; but, while recognizing them as facts and principles, he also shows what conscience is and how it grew, and what would be ideal righteousness and justice. It is an old method of misrepresenting men, to say they do not believe in principles merely because they try to explain them, or do not believe in principles generally accepted. John Stuart Mill justly criticises Dr. Whewell because, in his argument against Bentham, he asserted that that great writer did not believe in conscience and duty and rectitude, merely because he explained them in a different manner. "I am for these noble things: *you* are for pleasure or utility," said this believer in dogmatism—Dr. Whewell—to his antagonists. But, as Mill said, "we are as much for conscience, duty, and rectitude as Dr. Whewell. . . . The point in dispute is, what acts are the proper object of those feelings?" One critic asserts of Mr. Spencer that he has missed "those most essential factors in all sound ethical systems," thus assuming in advance that systems which have been held in the past are sound. But the very object of those who seek a scientific morality is not to get rid of morality, but to find out, by observing facts, what would be a sound system of morality. With many persons, it always seems to be considered an objection to any system of morality or religion that it explains facts and laws, and can be understood. The belief in the peculiar sacredness of mystery, whenever men treat of religious questions, is an historical fact; and, as they have always supposed morality to rest upon religion, they have some criticism in advance to make of any system of morality which is scientific and rests on proved reasons and facts. Piety and mystery, morality and intellectual confusion, are supposed to be indissolubly connected; and, therefore, when men begin to show for plain reasons why a thing is right or wrong, and to base their reasons upon facts which all rational men can see, there arises a fear that morality is about to be destroyed. Conscience seems to be so much more moral to many persons when they talk about it in a mysterious manner, and treat it as a fetich, than when its origin and nature are defined in terms of science.

But men ask whether the believer in scientific morality really expects that coarse men will be saved from crime and all men be made moral because of explanations concerning the origin and nature of duty in consistency with the scientific theory. The reply is, as Mr. Spencer has shown, specifically that there is no expectation that the scientific *theory* or any *mere* theory will at once make men moral. He, of all modern writers, has insisted that mere intelligence will not make men moral, but that they are controlled by feeling. Men are more or less moral to-day, because of habit and circumstances and even old teachings, which may have contained much error. Morality, primarily, rests on human nature and human necessity, and not on theories. The fact is that, no matter what theory thoughtful men hold, for a long period at least, humanity, because of heredity and environment, will be imperfect in nature and conduct. Nobody but men who have not carefully read Mr. Spencer ever dreamed that he expected coarse men to become refined at once by accepting evolution. It would be quite important to remember, however, that they have not become very perfect thus far by accepting tradition or intuitionalism. Recognizing that morality will be conditioned by the appetites, passions, heredity, and environments of men, the believer in a science of ethics does not expect to create it by theorizing, but, in his capacity of a student or teacher, simply seeks to discover and show the correct principles of moral guidance. The theory, however, will at last have some influence by showing the real object of life and the laws to be obeyed in order to attain that object. There is a necessity for a scientific study of morals too, because of the confusion in those theories which have been held in the past. Some talk about "moral ideas" which are utterly undecomposable, as if there were some particular department in men where there were moral ideas separate from ideas in general. Others declare that the immutability of morality consists in doing what the conscience declares right, forgetting that men differ as to what the conscience declares to be right; and, again, men measure morality by the authority of some ancient code or law-giver, while not agreeing as to the meaning of the code or the essential teachings of the law-giver. The most popular expression of the confused teaching is that a man is to do right because it *is* right, with a seeming unconsciousness that such an expression has no meaning.

The teacher of scientific morality, believing in certain natural laws and principles, seeks clearly to understand them. He begins with that which can be tested,—*conduct*. Men have always been in confusion over the question whether or not the morality consisted in the motive or the act, and have often tried to show that conduct was moral because men meant well. Mr. Spencer begins at once with facts, and without any obscurity shows that the only way of testing conduct is to look at results. No matter what the motive, if the results are evil, then the act is immoral. In other words, there is no mystery about the right and wrong in conduct, but it can be tested by what can be known. The motive of man is important, because, other things being equal, good motive will result in the best conduct. But the scientific test is in the results of conduct itself; and even motives are partly caused by a knowledge or ignorance of facts, and by environment. Mr. Spencer does not ignore conscience, but he shows how it grew and how much it is worth. Beginning away down in the feelings of pleasure and pain in animals, he comes on up to man, and shows that similar feelings have become organized and consolidated in the past generations of men, that certain experiences in the past have produced certain nervous modifications which, when inherited by us, are faculties of moral intuition or conscience,—"certain emotions responding to right and wrong." Conscience teaches nothing, however, as to what right or wrong is. That is to be discovered by studying the laws of life and the conditions of existence.

But it is often urged against the ethics of evolution that it is coarse and material, and ignores all morality except that which has reference to the physical nature. We have read a criticism of this kind from a preacher in this city.* He called this philosophy, in his elegant phrase, "hog philosophy," as Carlyle before him had talked of the "philosophy of dirt." Others, too, as we have seen, suggest the coarseness of beginning a study of morality by a study of mollusks and worms. But, in the beginning, Mr. Spencer has insisted, on all occasions, that he does not believe in philosophic materialism. He recognizes that matter is but an *x*, a symbol to express one of the manifestations of an Ultimate Reality, and that consciousness and thought, or mind, cannot be strictly called material. There is, however, much unnecessary demonstration made over a word. In some sense, of course, all mental or moral activity is material, as in our present condition we only know of thought or consciousness in connection with matter. As many, too, who are technically called materialists believe in the development and reality and supremacy of all that is most refined and ideal in men, then, as far as ethics is concerned, those who dwell so much on the word are only engaged in a superficial logomachy. The fact is, however, that those who believe in scientific morality seek to recognize every fact in human nature. Believing that all life has essentially the same law, they begin by the study of life in its lowest forms, but with no idea at all that man, after he has once become man, is no better than an oyster. They also use perfect physical happiness as an illustration of perfect morality, but with no idea that morality only means physical pleasure. Then, too, the evolutionist speaks of a morality in connection with the physical nature, because all other expressions of life in this world are dependent upon physical life, and because, although thought and feeling are not merely brain and nerve, we know nothing of them separate from brain and nerve. We discover that there can be no perfect life separate from a perfect organism; and, therefore, all morality must depend upon the excess of pleasure over pain,—that is, of life over death in that organism.

But the wonder is that intelligent men should declare that Spencer only bases morality on the physical life. Men even declare that he measures all morality in terms of "duration," whereas he has insisted that morality includes *quality* of life as well as quantity. Because Mr. Spencer says openly that pleasure is an ultimate object of morality, it is at once assumed that he must mean that the highest object of men must be drunkenness or sensuality. But the evolutionist, of all men, insists that, after any form of life is developed, it cannot retrograde into any other form. After man has become man, his pleasure must be manly. As he at last reaches ideality and consciousness and a social condition, he cannot be moral without obeying the laws of his higher nature and the best social ethics. Social morality begins when

†*Unitarian Review*, January, 1881, p. 47.

*Bangor, Me.

Digitized by Google

society begins. A man must not only deny himself for the sake of others, but he finds a large part of his pleasure in the happiness of others. In general, it is moral to seek physical pleasure; but, because of man's higher nature and his social relations and the present condition of society, he must sometimes deny himself momentary physical enjoyment. The evolutionist recognizes that aspiration and conscientiousness and devotion are just as *natural* as physical passion or appetite.

Men talk about the death of devotion and heroism, if the idea of scientific morality is ever accepted. We are asked what there is to keep a clerk from robbing a bank or to make a pilot die for his crew in any scientific theory of morals. In the beginning, it may be replied that there would be as much at least as in any theory of tradition. The clerk who is taught that by some substitution or faith he can at last be forgiven for his crime has no theological inducement to be honest, and the pilot who is especially living for his reward after death has not much motive to make him seek a reward now in the good will of his fellows, success in his work, and in his consciousness of manliness. It is an historical fact that the grandest heroes who have ever lived have been those stoical men who did not need to be coaxed by some promise of reward after death, but preferred heroic actions because of the satisfaction they found in doing their duty and in the approbation of their fellows. The fact is, the real motives for heroism lie in man's own nature and the conditions of existence. Men like the pilot and fireman become so interested in their work, and their happiness because of experience becomes so connected with the approbation of their fellows, that they could not be happy by cowardice. Mr. Spencer has insisted that at last men do not think of momentary pleasure. After discovering that there are certain principles which must be accepted, principles become themselves the direct standard. So, at last, the statesman lives for his country, the pilot for his ship and his crew, and the moralist for his ideals. This talk about the clerk robbing his bank after he learns that the only motive is pleasure is founded on the most superficial conceptions. After society becomes organized, should he expect much pleasure in robbing a bank? His pleasure surely must consist in his safety, in his liberty, in the good will and love of wife and child and neighbor. In other words, love, conscience, duty, honor, are just as supreme motives under the theory of evolution as they could be under any other. Just as long as men live, they will seek to preserve life by laboring in certain directions; just as long as they labor in certain directions, they will have an anxiety to succeed; just as long as they seek to succeed, there will be certain principles of honor and industry and heroism which they will recognize as necessary principles of success, and will at last learn to think of these as supreme, and therefore men cannot get rid of devotion and enthusiasm, whether they are firemen or pilots or statesmen.

But, then, such horrible pictures have been painted by pencil or speech of those who simply try to lead a natural moral life. The most of these moral wrecks have, however, existed only in the imagination of critics and of those who can find no motive for living in life itself. But men who have realized that life is worth living in itself, and who recognize the laws of conduct discovered by experience, have had little need for this abnormal philosophy. It has only been those who have thought there was no reason for refraining from suicide unless the teachings of the Church were true who have morbidly dwelt upon the worthlessness of life. The charge of the belief in a "hog philosophy," or a "philosophy of dirt," does not apply to those who recognize that, according to the laws of nature itself, we must live for honor and ideality and love and virtue. Men can be no better than their nature and circumstances, and the motive brought to bear upon them; but the opinion and action of each man become a part of the influence which is to lead to a perfect morality. He is a child of the past, but he is also a parent of the future; and, therefore, each man is a part of the influence and of the regular development of the race. It is his duty, then, to utter his truth and live his truest life, not with the expectation that he can change fundamental causes, but because he is himself one of those causes. The real materialist, therefore, is he who rests on some literal blood or substitute to help him get rid of evil conduct; and the truly "spiritual man" is he who from conviction and habit becomes devoted to social happiness and love and truth and justice.

But it is asserted that scientific morality ignores religion, and therefore has no supreme authority. The fact is, however, that it embraces all that is real in religion, all aspiration and devotion and conscientiousness. Mr. Spencer began his system by considering "The Unknowable," but his system is not built upon the unknowable. In order to clear up the question, however, he began by showing that the Infinite cannot be known in essence. This was done in order to show that true science or philosophy deals with what can be known. But in no sense does he say that nothing can be known but mechanical matter and motion; and he shows that aspiration, even religion and moral beauty, are realities and can be known, and that their laws can be discovered. By positive proof, it can be shown that morality does not depend upon theology, but that the gods and principles of all theologies have only become moral as men have become moral, and have put their new sentiments into their theologies. It is a superficial objection, too, to urge that a belief in "a Power not ourselves" is necessarily in antagonism with the theory that the source of the faculties of moral intuition have been organized in the race by experience. Not to dwell on Mr. Spencer's own expression of "the naturally revealed end toward which *the Power manifested throughout evolution* works," anything has supreme authority which makes itself felt supremely. Conscience has a more consistent and invincible authority according to the theory of evolution. It no more speaks with one voice and then with another, commanding at one time a mother to offer up her child to a god, and at another time commanding a man to speak for American liberty; but it speaks by the authority of all experience, and commands men to obey law and truth. Nothing is so supreme as when it speaks with the authority of the infinite life in the universe. That life has at last impressed itself in man's nature by its suggestions of pleasure and pain. Out from the heart of the universe, it has at last impressed man's nature with a suggestion of immutable right and wrong. Not because of a whimsical god or uncertain intuitions, but because of eternal life itself, our natures suggest that there are certain immutable principles. The life in the nature of things suggests that there is a right and a wrong. Impressed by this fact, we feel the absolute necessity of opening our eyes and observing what conduct will be in consistency with the laws of life and the conditions of existence.

But the evolution theory of ethics is superior, because it embraces all that is good in all other theories. Its very comprehensiveness, however, in this case, as in others, is often used as a basis for criticism. Mr. Spencer, for example, has taught that in his final state man will not feel the pains of conscience, because the conditions of society and the desires of man will be such that it will be pleasant for him to be moral, and that there will be no painful suggestions. But, all at once, critics declare that this is not original, but that even Jesus taught that men might at last reach a condition in which it would be only pleasurable to do right. The assumption is, therefore, that Mr. Spencer is seeking something absolutely new in morals, and that, if he does not find it, his system is a failure. It is also assumed that he is possessed with the idea that there never was any such thing as morality before, and that he is trying to start moral principles in the universe *de novo*. But Mr. Spencer, of all men, teaches that nothing begins abruptly, but only comes by evolution. He also teaches that men are governed by laws and emotions and feelings rather than by theories. He is not attempting to begin morals anew. He does seek with others, however, to find a certain scientific morality which will embrace and explain facts, and among them will include whatever is true in any old system. "The theological theory contains a part," he says. If, instead of a divine will, "we substitute the naturally revealed, and toward which the Power manifested through evolution works," it is a part of the moral influence. The theory that perfection, or blessedness, is the object of morality, is also a part. As all true pleasure-seeking implies a pursuit of a perfect life, there is a truth, too, in the idea that virtue is the end: as, men must be virtuous, in order to be happy. So the virtue and blessedness in all systems form a part of the scientific theory.

In no direction does the breadth and yet strictness of the scientific theory show itself more than in regard to the utilitarian system especially formulated by Bentham. The scientific theory includes that, as nothing could be moral which is not in some sense useful. But the old utilitarianism suggested, at least, that anything is moral as it is immediately useful. The scientific theory is that, after we find out that morality must be in consistency with certain laws in the constitution of things, then not immediate usefulness or utility, but those laws, become the test. But this theory not only embraces physical pleasure and perfection, but moral and spiritual beauty. No man can live out a perfect life who lives only for his body, because he is a creature of thought and aspiration, and is also a social being. And so Mr. Spencer embraces all that is ideal and poetical and morally beautiful in his nature, because man cannot find the highest pleasure by ignoring anything which helps to regulate or express his life. Is there any teaching of Jesus or Confucius that helps men lead better lives? Then the evolution philosophy has room for it, because, as far as it is true, it suggests the law that morality is the adjustment of acts to ends, and that morality is fundamental, and rests upon the constitution of the universe. That which is urged as a criticism, therefore, becomes a proof of the breadth of the system, as it shows that it is so comprehensive as to embrace every code and fact and law which has helped to make men moral and to live better and more complete lives.

But the last criticism which I shall notice is one of the most inconsistent and contradictory; and it is that Mr. Spencer's standard of ethics is too exalted, and its fulfilment too far in the future, to be of any use to the men now living. This is one criticism of Prof. Smith, it was offered by another critic before,* and is the pet argument of the writer who subscribed himself "The New-Light Moralist" in the *North American Review*. We have here an illustration of the difficulty of pleasing those who are bound to be in opposition. A favorite criticism, as we have seen, is that the ethics of evolution is too narrow and sensual, that it only refers to physical or present pleasures. Then, all at once, these critics turn round, and declare that it does not take enough account of the present, but is "too far off." If Mr. Spencer cannot be condemned for his coarseness and appeal to the present pleasure, he must be condemned for being too ideal. This final criticism, however, suggests the most fundamental principle in his whole ethical philosophy. Mr. Spencer is trying to show certain principles of ethics. He does not attempt to give rules for every individual action. In fact, he declares that there can be no detailed rules for the perfect man, but that he will be governed by principles. But he recognizes the distinction between absolute and relative ethics; that is, between morals as they ought to be and as they must be in the present condition of society. As a philosopher, it is not his business to show what is the most expedient in the present condition of society, but rather to show what ought to be when society is governed by moral principles. He shows that, just as long as society is governed by the military instead of the industrial spirit, there can be no absolute morality. He is criticised, therefore, really for holding up to men an ideal standard of morality to which they ought to seek to conform. It is rather discouraging, however, to notice that men who talk of an ideal realm should criticise a man for holding up an absolute morality rather than expediency or relative morality as a standard. But Mr. Spencer is not even oblivious of the situation. Men must practically adapt their ideal morality to the present situation, in order to lift relative morality above expediency; and they must also test absolute morality by its practical effects, in order to keep it from running into "Utopian absurdities." When critics suggest, therefore, that in the evolution theory of ethics they have no present standard by which to guide men in present temptation, they only suggest an objection which might apply to any standard of ideal morality. The nearer one comes to that standard now, the nearer he comes to moral perfection.

This theory is pre-eminently moral, because it recognizes the morality of the laws of the universe. It recognizes the Power ever manifesting itself, by studying those laws and facts that alone reveal the method of that Power. Scientific ethics is also builded upon everything that is real and vital in human nature. Those who believe in the universe, therefore, can believe that the best way to discover what is

*See page 53, *Unitarian Review*, January, 1880.

Digitized by Google

moral in conduct is to find out its natural laws, and they can also recognize all that is true and beautiful in any faith or system. Was there ever a song or a poem or a code or a noble life that suggested that there is an ideal morality, every one of them is embraced in a moral theory which recognizes a cause and a reason for all ideality and devotion, for all heroism and all love, for all aspiration and moral beauty.

CORRESPONDENCE.

NORSE LITERATURE.

Editors of The Index:—

The regular meeting of the Social Science Association of the District of Columbia was held at the parlors of the Spencerian Business College in Washington, Saturday evening, March 31, Dr. Henry Randall Waite in the chair.

The essayist of the evening was Prof. Edward Sandford Burgess, and his subject was "Old Norse and Neighbor Literatures compared." It developed upon the part of its author—a promising young man who is connected with the High School of this city—a searching and comprehensive analysis of the former, and a most interesting comparison, when those of the Anglo-Saxon, the middle European countries, and of Greece and Rome were placed *en rapport*.

In the history of nations, oral song and legend come first. The songs and sagas of the Northmen were their poetry and prose, and compare with that of our Anglo-Saxon forefathers alike in absence of rhyme, in a short, telling effect, and a boldness of melody, and differ essentially from the lower European countries in these particulars. The author reconciled the uniformity of the legends coming to us from these various sources upon the ground of the common origin of the races that peopled this portion of the continent, and the diversity in details to the different circumstances surrounding them, after their several migrations. The poets of the middle and lower countries of Europe were named *Skalds* in the Norse and Icelandic mythologies, and were the companions of the chieftains, either in peace or war. The minstrel preceded his chief upon the coming on of the battle. He hurled the first dart, and was the first to fall dead, and to win his place in the halls of Odin. Their poetry was vigorous and stormy, full of fight and action; while that of the Grecian poets was bright and joyous, refined and subtle. One people entered into battle in a spirit of butchery and brutality; while the other sought for grace and beauty, even in the midst of death and carnage. There was the contrast between the peoples that exists between the strokes of the hammer of Thor and the instantaneous quiet following the lightning shafts of Jove.

There was a close and almost exhaustive examination of the Eddas and Sagas, which, though long, was intently listened to, and enjoyed. The essay called forth an animated discussion by members present, among whom were Rev. A. Floridus Steele, Hon. Jno. Hitz, Prof. Blodgett, Mrs. Sara A. Spencer, Mrs. A. Tolman Smith, Dr. and Mrs. Henry Randall Waite, and Mrs. Lita Barney Sayles. Mrs. Waite, having spent some time in Norway, spoke from personal observation, and was listened to with much pleasure. She told of the isolation of its families, and of the peculiar beauty of its fells and fjords, its forests and mountains.

Mrs. Sayles called attention to the introduction into this country, about two years since, of the written music of Norway (*Norway Music Album*), and of the richness and pathos of the minor undertones so generally prevalent there, and referred to the Hardanger fiddle, one of their national instruments of music, which emits an echoing minor tone from its peculiar fashioning. This is caused by fine metallic strings, which are arranged just beneath those played upon, and respond sympathetically, and is supposed by Jörgen Möe, a Scandinavian author, to be of no accidental construction, but to shadow forth in its murmurs the spirit of melancholy and unrest that characterizes the people of these desolate countries. She also spoke of Prof. Rasmus Anderson of Madison University, and of Auber Forestier, his able assistant, whose translations of Norse music and song and prose have proved so acceptable to the American reader. The music of Ole Bull was mostly memorized or improvised, and what has been written out will be found in the pages of the *Album* referred to.

Mrs. Spencer thought that the "spirit of unrest" which showed itself so strongly in the Norse song and story argued the growing tendencies of the people; that the repose and satisfaction of more effeminate climes betokened their cessation of aspiration toward more than they already possessed. She considered the former to be always a promising token in the lives of individuals or of nations.

Mr. Hitz, in reply to a question concerning the possibility of remembering so perfectly these hundreds of songs, referred it to the fact that many of these entered into their religious ceremonies, and that it was a matter of conscience to render them correctly; and this strengthened their memory.

Dr. H. Randall Waite, the commissioner in charge of the educational department of the United States Census, had also spent time in Norway, and gave excellent illustrations of the influences which climate and the surroundings of nature and the religious beliefs of a people exercise upon their development.

A very interesting and profitable evening was passed, and it is hoped that Prof. Burgess may at some future day reread his paper.

LITA BARNEY SAYLES.

WASHINGTON, April 2, 1883.

THE TRUE FOUNDATIONS OF A RELIGIOUS SOCIETY.

Editors of The Index:—

Mr. Mackie, in his letter published in your February 15th issue, says, "Churches should be academies where the education of man's religious nature is the specialty of every member," also that "this catholic church will be altruistic." These statements fall short of the whole truth, their tendency being to mislead the mind as to the full purport of the Christian verities. The founder of Christianity, adopting a sentiment long before his time enunciated, said that the doing to others as we would have them do unto us, from the love of right doing, is the all of religion, the sum and substance of all law and of all prophecy. The originality was not in the enunciation of the sentiment, but in its application to humanitary evolution. Mr. Herbert Spencer, the best exponent of a science and religion one and inseparable, says in his *Data of Ethics* that the truth must be conceded that egoism comes before altruism, self-preservation being a prerequisite to universal welfare; altruism, however, being evolved simultaneously with egoism. Egoism, he says, unqualified by altruism, habitually fails of its ends, all true enjoyment being conditioned upon ministering to the enjoyment of others. Hence, self-gratification, when made the exclusive object of pursuit, fails of enjoyment by excessive persistence. Mr. Spencer has here given the scientific as distinguished from the theological rendering of the "Golden Rule," which enjoins upon us to love our fellow-man, not better or less than, but just *as* we love ourselves, which, scientifically rendered, is a command so to adjust all business, social, and other relations as to make all individual and societary interests subsidiary and mutually dependent. This can be done in no other way than by advancing from the existing social *Infernus* of antagonistic relations to industrial co-operation as the basis of a true moral, spiritual, and thence social evolution. The rational procedure in the cultivation of the religious sentiment is not through church organization, making "the education of man's religious nature a specialty, with a one-sided altruistic tendency in that direction; but, commencing with a true foundation in co-operative industry, securing a unitary unfolding of our human nature, egoistic and altruistic, and thus establishing a true Christianity in furtherance of the teachings of its founder, in place of the existing ecclesiastical compound of Judaism and paganism falsely baptized in the name of Christ. If there is anything reported of the sayings of the Great Teacher which runs counter to the Golden Rule, it may safely be set down as incorrectly reported, wherever found recorded. This should satisfy your correspondent, Mr. Brinkerhoff, who is gifted with an honest mind, somewhat ecclesiastically confused as to what constitutes Christianity. The Christian idea, under the light of science, calls for no personal adulation addressed to a supposed vain-glorious Supreme Being, demanding such adulation,—a Being the creation of man's own sensuous imaginings,—but for a plenary imbuing with the spirit of Christ, the spirit of humanity, intelligently in quest of rational modes of procedure in view of the destiny of the race, individual and collective. The uniform tendency of all cultivation of the religious sentiment in man as a specialty, apart from a unitary unfolding of our human nature, egoistic and altruistic, is in the direction of that *emotional inebriation* which passes under the name of "revivals of religion." Perhaps Mr. Mackie and Mr. Brinkerhoff will let your readers hear from them upon the points here presented. W. H. G.

SAN JOSE, CAL., February, 1883.

COUNT GOBLET D'ALVIELLA ON RATIONAL RELIGION IN THE UNITED STATES.

Editors of The Index:—

I wish to call the attention of your readers to a comprehensive as well as interesting article on "The Origins and Development of Rational Religion in the United States," by Count Goblet d'Alviella, which occupies thirty-four pages of the *Revue des Deux Mondes* for April 1, 1883. After giving some account of Unitarianism in the time of Parker, Emerson, etc., the formation of the Unitarian Conference in New York in 1865, the discussion at Syracuse in October, 1866, and the formation of the Free Religious Association, he goes on to say, apropos of the latter: "The first reunion, which took place at Boston, May 30, 1867, was a grand success for the promoters of the movement. To their call responded not only a large number of ministers and members of Unitarian congregations, but also a considerable number of well-known individuals, gathered from the liberal elements of the most diverse sects,—Universalists, Hicksites (progressive Quakers), Jews, and Spiritualists. The Association chose for president a Unitarian minister, who afterward became founder of an independent society in New York, Mr. O. B. Frothingham, and for secretary, one of his associates, of New Bedford, Mr. Wm. J. Potter, whose name was shortly after omitted from the official list of Unitarian ministers on account of his refusal to keep the name of Christian. Besides the annual meeting, devoted to discussions and lectures, the Free Religious Association has instituted a series of conferences in different cities of the nation and published a large number of tracts for the propagation of its ideas. It has for its organ *The Index*, of Boston, a weekly paper which, successively directed by Messrs. Abbot, Potter and Underwood, deserves to be recommended as a model to all the journals of free thought in the two hemispheres, not less for the attractiveness of its articles than for the breadth of its ideas, and, above all, the elevation of its moral tone. During the fourteen years since the Free Religious Association has been constituted, it has accomplished a work at the same time both positive and negative,—negative by its rationalistic propaganda, which undermines more and more the foundations of the dogmatic sects; positive by its efforts to assign a common purpose to the religious activities of its members. . . . The Free Religious Association has become for Unitarianism that which Unitarianism itself has been to the other religious communions,—a leaven of intellectual liberty." H. E. A.

NEWPORT, April 18, 1883.

[A translation of Count Goblet d'Alviella's very interesting article is being made for *The Index*, in which it will be printed next week, or the week following.—ED.]

INCOMES OF THE ENGLISH BISHOPS.

Editors of The Index:—

Pardon me for stating that your paragraph upon the incomes of the English bishops needs revision and emendation. It should be borne in mind that most of the occupants of the English Episcopal bench are not only *ecclesiastical*, but also *State* authorities. They are termed "peers of the realm"; and, therefore, they have two classes of functions to perform, each of which is attended by obligations and *customs*, rights and privileges, which, notwithstanding the *otium cum dignitate* bray of hungry demagogues, constitute an incessant draught upon a bishop's income. Few persons seem competent to discern the difference between "gross income" and "net profits." The items which you have given are clearly liable to large deductions; and, in common fairness to the bishops, as well as for the credit of *The Index*, they should have been shown.

But where did you find that extraordinary bit of information touching the livings, which you say belong to the various bishops? You yourself surely cannot suppose that, because a bishop holds the "advowson" or the right of presentation to a vacant benefice,

Digitized by Google

he consequently shares the emoluments appertaining thereto? The idea is perfectly absurd; and the fact of its having been, for a moment, indulged by the editor of an important journal, suggests how perversely ignorant the Yankee mind must be in reference to Anglican ecclesiastical polity.

Yours verily, A BRITON.

A TARIFF UPON FOREIGNERS.

Editors of the Index:—

In "A Plea for Protection," in *The Index* of March 29, Mr. Warr says: "I do not deny a large majority of our manufacturers have reaped the lion's share of the profits earned by labor; and, when the latter has made an effort to obtain a more equitable distribution, it has been invariably defeated by foreign pauper labor, imported, too, by the very men who ask for tariff laws, because they 'protect the American laborer from the pauper labor of Europe.'" Now, since it is admitted as a fact that the end of a high protective tariff is defeated by the free importation of pauper labor, why does not Mr. Warr advocate a high protective tariff upon foreign pauper labor, so that the American laborer may be enabled to compel a fair division of tariff margins? Put a tariff upon Irishmen and Englishmen, or prohibit their immigration as we have the Chinese, and the protection of the American laborer would mean something. As it is, free trade in paupers has brought competition to our doors; and the contest is each day growing sharper and more hopeless. Give us a protective tariff that will protect labor and capital alike, or abandon the pretence. D. MCLAREN.

WARREN, OHIO, April 9, 1883.

ENGLISH UNIVERSITIES.

Editors of The Index:—

With reference to the article on English Universities, in *The Index* for March 8, 1883, it may be worth noticing that the appointment to the Lord Almoner's Readership in Arabic, now held by Robertson Smith, is *solely* in the hands of the Very Rev. Lord Alwyne Compton, the Queen's Almoner, Dean of Worcester, and Prolocutor of the Lower House of Convocation. It is hardly just to Cambridge to say that Darwin received "no impulse" from the place, seeing that his friendship with Henslow and Sedgwick first formulated his scientific tastes, and that it was through Henslow that he obtained the offer of a place in the "Beagle." D.

CAMBRIDGE, ENG., April 8, 1883.

HEREDITY.

A soldier of the Cromwell stamp,
With sword and prayer-book at his side,
At home alike in church and camp:
Austere he lived, and smileless died.

But she, a creature soft and fine,—
From Spain, some say, some say from France:
Within her veins leapt blood like wine,—
She led her Roundhead lord a dance!

In Grantham church they lie asleep:
Just where, the verger may not know.
Strange that two hundred years should keep
The old ancestral fires aglow!

In me, these two have met again;
To each, my nature owes a part:
To one, the cool and reasoning brain;
To one, the quick, unreasoning heart!

—Thomas Bailey Aldrich, in Atlantic for April.

BOOK NOTICES.

THE MODERN SPHINX, AND SOME OF HER RIDDLES By M. J. Savage. Boston: Geo. H. Ellis, 141 Franklin Street. 1883.

This is a volume of one hundred and sixty pages, containing ten of Mr. Savage's Sunday morning sermons, phonographically reported by Isabel C. Barrows, to whom the work is dedicated. The titles of the discourses are "The Modern Sphinx," "The Chief End of Man," "What is Business For?" "What are Brains For?" "What is Education For?" "The Newspaper, its Good and its Evil," "A True Republic," "Progress and Poverty," "Religious Transition," and "The Reign of the Dead." They are marked by clearness of statement, breadth of thought, and a truly catholic spirit. Sermons generally are not very interesting reading, but Mr. Savage's discourses have very little in common with ordinary sermons. They are full of good thought on subjects of current interest and practical importance. Even when we cannot agree with him, we are compelled to recognize his ability and to admire his vigorous expression and earnest spirit. In the modest preface to these discourses, the author says, "One more book, then, added to my already lengthened list, only means that I am trying to preach what I believe to be God's gospel of help and hope for man to as large an audience as both voice and type can reach."

EMERSON AS A POET. By Joel Benton. New York: M. L. Holbrook & Co. Price $1.50. For sale by A. Williams & Co., Boston.

This is a beautifully bound and printed book of one hundred and thirty-four pages, of which eighty-eight are devoted to Mr. Benton's appreciative and eulogistic essay on Emerson and his poetry, and forty to a much-needed and very complete "Emerson Concordance," compiled by W. Sloane Kennedy. The outside aspect of the book will delight the hearts of all Emerson-lovers in its artistic design and finish. On the cover of dark brown is the design in gold of a tall, scraggy pine, emblematic of self-contained strength and endurance, also the lower half of a window-sash on whose sill rests an Æolian harp, emblem of poetic inspiration, and, in the upper right-hand corner, a golden bee signifies the garnering of sweets in the world of thought and sentiment. It is a thoroughly æsthetic essay, which is sure to delight the admirers of Emerson, and makes pleasant reading for the cultured everywhere. Mr. Kennedy's "Emerson Concordance" will be a great help to the busy few who have not time to read the great American poet in detail, but are eager to learn all that is best of him in the shortest time and with the least labor.

THE opening article in the *Popular Science Monthly* for May is by Dr. Felix L. Oswald, on "Consumption." It is the first of a series on the hygienic treatment of prevalent disorders, under the general title of "The Remedies of Nature." Prof. T. S. Perry, in "Science and Conscience," sketches a scheme by which science and religion may be reconciled. "Physics in General Education," by Prof. T. C. Mendenhall, an address delivered at the last meeting of the American Scientific Association; "Microscopic Life in the Air," by Louis Olivier; "How Much Animals Know," by F. A. Fernald; "How the Ancient Forests became Coal," by M. G. De Saporta; "A Superstitious Dog," by Eugene N. S. Ringueberg; "Why are we Right-handed?" by W. C. Cahall, M.D.; "On Brain-work and Hand-work," by R. M. N.; "Sketch of Prof. Richard Owen, F.R.S.," with portrait,—are among the interesting articles in this number. The editor, in his "Table," presents vigorous arguments in favor of the study of nature and science against the demands of those who claim that preference be given to the classics, and sustains Dr. Dix in his position on the woman question. The number is one of unusual interest.

THE *Century Magazine* for May gives us a splendid array of literary names among its contributors. The present efforts of these authors may not be their best; but, when we read the names of such writers as W. D. Howells, Henry James, Charles D. Warner, C. Kegan Paul, Sidney Lanier, "H. H.," Edward Eggleston, R. H. Stoddard, Oliver Johnson, Rose Hawthorne Lathrop, Washington Gladden, Richard Watson Gilder, Frank H. Cushing, J. J. Piatt, Joel Chandler Harris, Frank R. Stockton, and others equally famous, all contributing to *one* number of a magazine, we may feel quite sure of the fact of that number being a most brilliant and readable one, and especially when, as in this case, these writers treat of pertinent and current questions which are illustrated in the highest style of art by the best artists. The *Century* has made a new departure, and a most delightful one, in its "Open Letters." One of those in the present number, from Oliver Johnson, will interest our readers.

THE *Unitarian Review* for April is an excellent number. Rev. R. P. Stebbins writes of "The Hebrew Prophets." Rev. James T. Bixby has an article entitled "The Two Worlds One." "Calvinistic Theology and the Andover School" is the subject of John C. Dodge. Rev. Francis G. Peabody treats of "The Method of the Psychology of Religion." Mrs. Caroline Healy Dall has an interesting review of Miss Oliver's *Maria Edgeworth*. "Conventional Lying" is the subject of Charles T. Jerome's article. Rev. E. C. Butler has an article on "Heroism and Sacrifice." The editorial notes are full of suggestion and earnest discussion of current events and literature.

PERSONAL ITEMS.

PRINCE BISMARCK was sixty-eight years of age on "All Fool's day," 1883.

WENDELL PHILLIPS hopes that the day will come when no man will smoke on the streets. He is not alone in that hope.

DOROTHY DIX, the Elizabeth Fry of America, is still living, at an advanced age. She has recently been very ill, but is now recovering.

MR. HERBERT SPENCER'S health causes his friends some anxiety. It has been impaired, apparently, by his American journey. Since his return, he has been unable to perform his usual quantity of work; and he declines all invitations.

MISS SARAH J. EDDY, of Providence, R.I., is painting a portrait of Fred Douglass. It is three-quarters length, and represents the subject standing, holding a roll of manuscript in one hand. The portrait is spoken of by good judges in terms of praise.

A. WILLIAMS, the well-known publisher and bookseller, and the proprietor of the "Old Corner Bookstore" in this city, has retired from business, much to the regret of the many friends he has made during his fifty years' career as one of the leading caterers to the literary taste of Boston readers and authors.

SERGEANT BOSTON CORBETT, the man who killed the assassin of President Lincoln, is living in Kansas, engaged in the cattle business. He has become a religious enthusiast, and in a letter to a friend in Camden, N.J., says that he has been directed by God to inflict daily corporal punishment upon himself as a penance for having taken human life.

THE memory of Margaret Fuller will soon be honored by the appearance of two new memoirs. T. W. Higginson, as already announced, is writing one for the "American Men of Letters" series; and Mrs. Julia Ward Howe is preparing to begin a series of "Lives of American Women" for Roberts Brothers with a life of the same remarkable woman.

MRS. CAROLINE S. MORGAN, of New Bedford, died in that city on the 21st inst. She was a woman of fine intellectual appreciation, of tender sympathies, and practically interested in all good works of humanity. Mr. and Mrs. Morgan have been members of the Free Religious Association almost from its beginning, and among the best friends of *The Index*. He has our heartfelt sympathy in his great sorrow.

"WHAT Newton is it that the newspapers are talking about?" asked a gentleman, just returned from Europe, to a friend, in one of our up-town clubs the other evening. "Is it my old friend, Gen. Newton, of the army?" "Not exactly," was the reply; "but I am not surprised at the mistake, for both Rev. R. Heber Newton and Gen. Newton are engaged in the same business." "What's that?" asked the late arrival. "Why, removing obstructions from Hell Gate."

WHEN John Brown's body was carried to the grave at Balmoral, the coffin was covered with a tartan plaid belonging to the Queen, and sent by her from Windsor expressly for the purpose. What is more, Dr. Profeit, as Her Majesty's representative, laid upon the grave a wreath of artificial violets to which was tied a large mourning card. On this card the Queen had written the following words: "A tribute of loving, grateful, and everlasting friendship and affection from his truest, best, and most faithful friend, Victoria, R. and I."

"WAUKEEN" MILLER says that old Commodore Vanderbilt was, before he died, very apprehensive that, owing to his wayward life, people would believe him an infidel. "Once, he held my hand in his," wrote Dr. Deems to Miller, "and his voice was tender as he said to me in substance that he should rely upon me to do the service of saving him from ever being thought such a fool as not to believe in the Bible, miserably as he might have let it govern his life." The Commodore is not the only man that ever lived who was more solicitous about his religious belief than his every-day conduct.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—***Fear of the Living God,*** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—***Is Romanism Real Christianity?*** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

THE INDEX,
3 Tremont Place, Boston, Mass.

SEVERAL HUNDRED VIRGINIA FARMS CHEAP. Climate mild. Taxes low. Catalogue free. C. D. EFES, NOTTOWAY HOUSE, VIRGINIA.

First Boston Ethical Society.

The following lectures close the present season of the First Boston Society:—

Saturday evening, April 28, Mr. M. C. O'Byrne, late assistant editor of the *Secular Review*, London, England, on "Ecclesiastical Influences in Irish History and Politics."

Sunday morning, April 29, at 11, George Chainey, on "The Old Faith and New."

This will be his last lecture this season; and the committee hope all his Boston friends will come to greet him on this farewell occasion, as it has been found impracticable to arrange the formal reception lately announced.

Sunday morning, May 6, Samuel P. Putnam, on "The Spirit of Humanity in American Poetry."

Sunday morning, May 13, Courtlandt Palmer on "The Reign of the Common People."

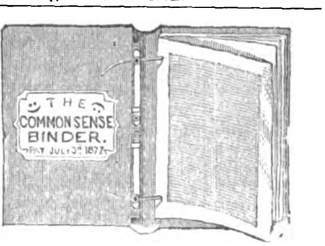
Sunday morning, May 20, Mrs. Clara Neymann, on "The Moral Factor in Government."

Sunday morning, May 27, T. B. Wakeman, on "The Era of Man."

The public are cordially invited to attend these lectures.

They are all to be delivered in Horticultural Upper Hall.

No charge for admission.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

THE Gambetta monument fund at Paris has reached $12,000. Minister Morton has subscribed $200.

To a statement of the *Christian Union*, that "the weight of scholastic authority is still in favor of the theory of a Mosaic authorship of the Pentateuch," *Unity* replies: "This is doubtless true; but the scholarly evidence seems, to our mind, to be quite the other way. *Scholasticism* is the closed learning of the past, scholarship is the growing learning of the day."

SAYS the Springfield *Republican:* "The Russell license act, lately passed by the Ohio Legislature, requires a license of three hundred dollars from spiritualist mediums; and the Spiritualists denounce it as a tax on their spiritual advisers and priests, and a measure of bigotry. They attribute it to the Methodists. Judge Carter, of Cincinnati, having declared that Mayor Stephens is a Spiritualist and his wife a medium, the mayor makes denial on behalf of his wife, but admits that he had given some time to an investigation of Spiritualism. The legislation is certainly of doubtful propriety."

THE London *Despatch* says: "We emphatically demur to the doctrine that it is the business of a court of law to protect the sensibilities of devout Christians by punishing those who offend them. Is not a free thinker a citizen as well,— fed with the same food, hurt with the same weapons, subject to the same diseases as a Christian? If the sensibilities of one kind of British subjects are entitled to legal protection, then, unquestionably, those of all British subjects are equally entitled to it; and, in that case, we should at this moment have the poet laureate serving out his twelve months' imprisonment for having hurt the free-thinking sensibilities of the Marquis of Queensbury," and more to the same purpose.

THE Montreal correspondent of the Boston *Transcript* gives the following illustration of priestly despotism in that city: "Two young ladies, sisters, entered the order of Les Sœurs des Saints Noms de Jésus et Marie four years ago. The younger sister, who was then fourteen years of age, tired of her seclusion, asked to be released from her vows, but failed to obtain the consent of the bishop. She is afraid to leave the convent without the consent of her religious superiors, dreading excommunication. It is said her family will apply for a writ of habeas corpus. Bishop Fabre refuses to grant a dispensation, and tells the family that the matter is one in which lay persons have no right to interfere."

THE *Sunday School Times* says: "Even in scholarly and sceptical Germany, honey-combed as that land has been with rationalism and materialism, signs are not lacking that evangelical religion is not dead among the people; nor is it ready to die." In support of this statement, it is affirmed, on the authority of *Der Sonntagsschulfreund* (the *Sunday-school friend*), that since 1862 six German translations of "Rock of Ages" have been published. Our contemporary thinks, "One such hymn as that, popularly known and popularly sung, will be more potent to win and keep the hearts of the German people for Christ than all the writings of Strauss and Hartmann and Haeckel to win those hearts to infidelity." But what of the relative intellectual calibre, and the influence, in the long run, in an age of activity and progress, of the two classes to which "Rock of Ages" and the writings of German thinkers appeal?

APPLICATION has been made for release from custody of Freeman, of Pocasset, Mass., who killed his five-year-old daughter four years ago in the belief that God demanded the sacrifice, and who has been confined in the lunatic asylum at Danvers. It is said that Freeman's present sanity is beyond doubt, and that there is no reason why he should be kept longer under restraint as a lunatic. Dr. Peter Pineo, of this city, a physician of much experience and acknowledged ability, who had a long interview with the fanatic four years ago, after another interview with him this week, pronounced him entirely sane, and added: "This man is unusually conscientious. He has a strong sense of duty and a very logical mind, evidently well read in Biblical literature. His mind, after much meditation and study of the book, made certain logical deductions. His faith was strong, and he saw no reason why he could not have communication with the Lord as well as Abraham. He explained his state of mind to me to-day quite clearly, and the statement is a very interesting one."

DR. R. HEBER NEWTON was arraigned last week before the ecclesiastical authority of his diocese for heresy. A long and serious indictment against him was presented to Bishop Potter, by Dr. Samuel Buel, Rev. R. H. McKim, and Dr. B. F. DeCosta. The bold and plain-spoken rector of All Souls' Church is charged by his pious associates with holding and teaching publicly doctrines contrary to those held by the Protestant Episcopal Church, denying the divinity of Christ, representing the religion of the Jews as a polytheistic and idolatrous religion, representing falsely the mission and teaching of the Old Testament, representing Christianity not as a direct revelation from God, but as an outcome of natural, historic evolution, rejecting the supernatural character of the Christian religion, and denying the predictive character of prophecy, and thus impeaching the authority of Christ. The presenters of the indictment think that Dr. Newton has preached doctrines which strike at the very root of the Christian faith, since they reduce Christianity "to a transient phase of natural religion." Their object is to defend the Church, not to attack Dr. Newton as a person. They declare, "If we have misjudged Mr. Newton's real sentiments, if we have mistaken the real consequence of his teaching, if we have been unconsciously biassed in our judgment, if we have conceived an erroneous view of our duty in the premises, we trust that we shall be found ready to acknowledge our error when it shall be shown to us." Whether Bishop Potter will, in the exercise of his authority, quash this presentment of three Episcopal clergymen or order a trial, remains to be seen.

THE address of Prof. Du Bois-Reymond on "Darwin and Copernicus," delivered before the Berlin Academy of Sciences at their last annual meeting, has been severely criticised by the clerico-conservative newspapers of the German capital. It is declared to be a eulogy on "one of the worst and most dangerous atheists, by a member of a society supported by the State." A number of the orthodox clergy, following the example of the notorious court chaplain, Stöcker,—whose harangues against the Jews are fresh in the public mind, and who preached a violent sermon against Du Bois-Reymond some months ago,—have made the distinguished Professor and his views the object of fierce denunciation. Stöcker, not satisfied with his refutation of Darwinism from the pulpit, being a member of the Prussian Parliament, introduced the subject in the House, and found sympathy from a few of the Ultramontane party. The questions of the court chaplain were answered by Prof. Virchow and the Prussian Minister of Public Instruction. *Nature* says that a whole sitting of the Prussian Landtag was taken up by a debate on the graceful tribute to the memory of Darwin, and adds: "That such things should take place in Germany, which has always been considered the home of philosophic freedom, really seems to justify the remark of the author of 'Darwin and Copernicus,' that freedom of thought, which, after taking its rise in England in the middle of the eighteenth century, passed through France to Germany, where it attained a fuller and more systematic development, seems now to be passing away from the latter country again. Let us hope that it is coming to our shores once more, as the Professor says it is."

BENEVOLENT LYING.

In several of the orthodox journals on our list of exchanges, a discussion has recently been going on upon the old question whether a falsehood becomes right when told from a benevolent motive. Our own opinion sides without hesitation with those who answer this question in the negative. Of course, a falsehood told for a supposed benefit to another person is not to be put on the same grade of wrong-doing with a lie of self-interest; but, however strong might be the grounds for pardoning such a well-intentioned violation of truth, we do not think it is to be justified. We have no purpose here to go into the whole argument, *pro* and *con*, on this matter; but there is one point of it which does not seem to us to have been brought out so prominently as it deserves to be in the discussions to which we have above referred.

When a person deliberately adopts the principle that a benevolent falsehood is right, and accustoms himself, in consequence, to picture in his mind the possible occasions when departure from truth would be justifiable, he is more likely to meet such exigencies practically than would be the case if he had not adopted such a theory of action. To foresee and arrange all the conditions and details of these exceptional cases to the rule of truthfulness is plainly impossible. There being no one fixed pattern of circumstances by which such occasions come, they cannot be accurately defined beforehand. All that can be said is that under certain circumstances, where benevolence is clearly the motive, or where adherence to truth and kindness to another person come into direct conflict, a falsehood may be morally justified; and one may imagine certain classes of cases liable to arise in his own experience. But there are various degrees and shades of benevolence, and the pressure against speaking the truth may vary much in intensity in different cases. Hence, one who follows this principle of action cannot determine in the coolness of deliberate reflection whether an occasion justifying a falsehood, even on his own theory, has arisen or not. He must ask and answer this question in the stress and trial of the occasion itself; and, with the theory already in his mind that a falsehood in certain moral conflicts is a rightful mode of escape, the probability is that he will resort to that mode at once, without stopping to consider whether some other course compatible with both truth and kindness might not be practicable. In other words, to adopt such a theory beforehand, and to hold one's self in readiness to act upon it, is to expose one's self to temptations to falsehood—to invite them, indeed—without that natural shield for protecting one's veracity which consists in the instinctive adherence to truth possessed by every morally healthful mind. Such a principle of action tends to break down this moral instinct; and, hence, its influence is to weaken moral character at one of its most vital centres. And, in our opinion, at this day particularly, the virtue of unflinching adhesion to truthfulness stands in greater need of being strengthened than does the virtue of benevolence.

On the other hand, one who sets out with the determination to act on the principle that a falsehood is never justifiable will not be so apt to meet the occasions where veracity and benevolence come into irreconcilable conflict. His very habit of adhering to truth, and his desire and determination to do so in all circumstances, beget a mental and moral alertness which either prevents such exigencies, or, if they arise, is able to discover some way of exit from them without departing from the truth. There is a quality of character which we may call *moral* presence of mind. It belongs to natures that are both highly sensitive to truth by nature and habitually faithful to it in principle and in practice. And whoever possesses this fine quality of moral presence of mind is not pushed into many of the emergencies which befall weaker moral natures, where a benevolent intent can only be accomplished by the sacrifice of veracity. And, if these virtues come in antagonism, truth pointing one way and benevolence another, such a character is happier at finding means for reconciling and saving both.

A person whose whole personality, mental and moral, is thoroughly permeated with a sense of the inviolable sacredness of truth, is not liable to have his veracity overthrown by any sudden attack. He cannot be taken by surprise: a sleepless sentinel is at every point of approach. He carries within him a full armory of moral expedients for the exigencies of life's conflicts, of which those not thus endowed know nothing; and questions (if they spring up in his path) which have puzzled casuists for centuries he settles as easily as he breathes. Truthfulness is so ingrained in his nature and habit that mind, tongue, and hand instinctively do its bidding, and yet do the right thing also for any sentiment of pity or philanthropy that may plead to be heard. Where other persons may come out of these moral crises weakened by compromises and humiliated by a sense of not having done the highest thing, he comes with conscience clean and with virtue all the stronger for the encounter. Even if the encounter be with rough and evilly disposed men, the moral heroism of simple unswerving fidelity to truth, standing across the path of their evil purposes unmoved and immovable, will often more abash and baffle them than could the most cunningly contrived deceit of word or deed, in which they themselves are adepts.

WM. J. POTTER.

SHAKSPERE'S POLITICS AND THEOLOGY.

II.

His Theology.

So far as Shakspere's *dramatis personæ* are concerned, they of course are represented as conforming to the dictates of the feudal Church. The Roman Catholic Church is a relic, to this day, of what may be called spiritual feudalism. It treats its spiritual vassals as though they could have no rights where its interests are concerned. As in the case of the great Athenian dramatic poet, Sophocles, we find him countenancing in his dramas the mythic religion of his age and country; while, at the same time, he recognized those eternal laws of right and duty which are found in the conscience and pure reason, and which can never become obsolete, but are everywhere and always valid, so it is evident that Shakspere himself had a religion of the pure reason, even while he countenanced the creed which formed the established theological environment in which he was born. We know what he thought of the world; namely, that it was an unsubstantial fabric of a vision or sense-illusion and passing show, and that we are such stuff as dreams are made of, and that our little life is rounded with a sleep. A recent writer on Hamlet bids us "remark Shakspere's habit of looking upon the world as a mask and pageant, not to be treated with too much respectful anxiety, as if it were as real as ourselves." Shakspere was, indeed, an idealist; and the philosophy of such idealists as Kant, Fichte, and Hegel, and of their English expositor, Carlyle (*vide* his *Sartor Resartus*), is latent in his "Tempest," "Midsummer-Night's Dream," and "Hamlet." The writer whom I have just quoted says: "We find scattered through the dramas of Shakspere a dissatisfaction with the world as deep-ingrained as it is comprehensive; and we find the various elements of it—the contempt of fortune, the ideal virtue, the disinterested passion, the mysticism, the fellowship with the oppressed, the distaste of the world's enjoyment and the weariness of its burden—concentrated in Hamlet for a full and exhaustive study, thus presenting the interior or fundamental drama of the soul and the world." In Shakspere's dramas, we find the popular theology, demonology, and ghost-belief of the feudal times or ages of faith. But Shakspere's ghosts are subjective, the inner phantoms of guilty souls, diseased and horror-stricken with remorse. On the stage, of course, and for scenic purposes, they are objectified, and made palpable to the spectators. Such were the ghosts that struck terror to the soul of Richard; and such was the ghost of Hamlet's father, who announces to his son that he is

> "Confined to fast in fires,
> Till the foul crimes done in my days of nature
> Are burnt and purged away."

Here is an indorsement of the Romish doctrine of purgatory. But the papal theologians found this doctrine formulated and ready to their hands in the sixth book of Virgil's *Æneid*, where departed spirits are represented as undergoing various purgatorial penalties by way of expiation and purification. Some, we are told, were suspended to bleach in the wind; while others were disinfected of the stains of sin and crime by fire and water, by a process of combustion and immersion in whirlpools, until they were finally thoroughly cleansed of moral taint, and fitted for transmission to the Elysian fields, and for the life of unmixed bliss which there awaited them.

As Shakspere's profoundest thought is found in "Hamlet," so his attitude toward those mystical subjects which lack actuality, and in regard to which popular creeds, theologies, and superstitions of all sorts and names have always been and still are so absurdly explicit and circumstantial, can be learned from the famous soliloquy of Hamlet. The beyond or the hereafter is in that soliloquy termed,

> "The undiscovered country, from whose bourn
> No traveller returns."

These lines sufficiently indicate that Shakspere "took no stock" in ghosts, so called, otherwise than as merely subjective phenomena due to the peculiar states of the consciences and nerves of ghost-seers. His psychology in this particular was as correct as ours of the present day. To Shakspere, man's future destiny was an insoluble mystery, as it is to all great minds who are incapable of entertaining vulgar and popular beliefs and credulities on that subject. "Solemn before him," as before the next greatest poet of the Germanic race, "were veiled the dark portals,"—

> "Goal of all mortals."

Beyond death, for him stretched an undiscovered and, with our present faculties, indiscoverable country. He evidently regarded all the theological hereafters as simply this present world *in excelsis*. Shakspere existed in an environment of dense, irrational, and unmitigated superstition, such an environment as travellers in Oriental countries find themselves in at this day. In such countries, it is still believed by everybody that supernatural persons and agencies are constantly interfering in the every-day affairs of men, for ill rather than good. In such a moral atmosphere, European and American travellers, in spite of their rational common-sense education, acknowledge that they occasionally find themselves unable to resist the superstitious influences to which they are constantly subjected. So Shakspere, in the theological, priestly, and feudal days in which he lived, was more or less infected by

> "A dread of something after death,"

such a dread as ages of priestly and monkish ter-

Digitized by Google

rorism had engendered in all the generations of the Dark Ages. Thus, in the matter of suicide, even when life had become an intolerable burden under "the whips and scorns of time," he could not represent Hamlet as inspired with the stern resolution of the ancient Stoics and Romans: —

> "To die: to sleep,—
> To sleep! *perchance to dream:* ay, there's the rub;
> For in that sleep of death what dreams may come,
> When we have shuffled off this mortal coil;
> Must give us pause. There's the respect
> That makes calamity of so long life.
>
> . . . . . .
>
> But that the dread of something after death,—
> The undiscovered country, from whose bourn
> No traveller returns—puzzles the will,
> And makes us rather bear those ills we have
> Than fly to others that we know not of."

The old Stoics and heroic Romans, if they had been subjected to ages of priestism and ghastly superstition and terrorism, would have been made cowards of, but their manhood had never been thus cowed and degraded. Shakspere lived near enough to the times of the Crusades to appreciate the spirit of the crusaders, who "chased"—

> "The pagans in those holy fields
> Over whose acres walked those blessed feet,
> Which fourteen hundred years ago were nailed,
> For our advantage, to the bitter cross."

But "the pagans" or Saracens who were thus "chased" by the Christian knights of Western and Northern Europe were really the civilized people of that day who, at Cordova, Bagdad, and elsewhere, kept alive the traditions of a rational philosophy and of old Greek science, while their Christian invaders were really barbarians and mere mindless fighters and manslayers.

B. W. BALL.

HUMAN IDEAS OF GOD.

The idea of God has gradually developed in the human mind through stages corresponding to the intellectual condition of the race. Graduating from the regions of fetichism and idolatry, the early Hebrew writers conceived of God as a powerful being who, by the might of his word, called everything into existence ready-made at a moment's notice, and controlled current events by direct supervision. At later periods, we observe changes in the names and nature of God. Ewald has noted distinctive names of the God of the five great periods of the history of Israel. He was Almighty to the patriarchs, Jehovah to the priests, God of Hosts to the kings, the Holy One to the prophets, and Our Lord to Judaism. We see an increasing approach of God to man from the Creator to the Leader, Rock, Fortress, Helper, until he is known as the Father. It may be said that God thus revealed himself progressively to the race, but it is harder to conceive of an omnipotent and omniscient God thus playing hide and seek with his creatures than it is to believe that men in each age have evidenced the nature and extent of their needs, desires, and aspirations by the conception they have formed of a supreme being. God is always the complement of the weakness of man. What man consciously lacks of perfection he attributes to God.

Down through the Middle Ages, we see a varying God, suiting the degree of light and darkness that pervaded the mental world. The Puritan made a stern God glorying in his decrees, in accordance with the resolute self-sacrificing devotion to the view of truth which inspired his own breast. And, now, Moody and his kindred evangelists are proclaiming the God of whom they have learned from the English "Brethren,"—a God of love, his attribute of vengeance softened to justice, and all his characteristics put into a nineteenth century dress. The Brethren evangelists have flocked over to America for fifteen years past, making the Young Men's Christian Associations their rallying points; and, telling their ardent disciples that they were "living by faith," their needs have been bountifully supplied by voluntary contributions "from the Lord." Through preaching services and Bible readings and the circulation of their literature, they have widely indoctrinated the associations and churches with the truths of a full and free atonement, assurance of salvation, the presence of the Holy Spirit, and the pre-millennial advent of Christ. They have been mostly good men, and have substituted a better and more Scriptural theology for that of the New England churches of the previous half-century. Moody's preaching only became noted and effective after he had been indoctrinated by Needham and Moorhouse. When you find an evangelist gaining converts by exposition of the Scriptures, not by sensationalism, you will usually discover the theology of the Plymouth Brethren as the inspiring influence. Their doctrines about prophecy prevail widely in the Church of England, and are spreading through the various sects of America. Their missionaries are all over the world, living by faith and preaching a "pure gospel," the needs of many being "supplied by the Lord," through George Muller, of Bristol. My father* came under these influences in his later years, and preached a sermon called "The Free Gift," which was considered such a contrast to the "hyper-Calvinism" which had previously characterized his preaching that it was printed and widely circulated by an enthusiastic parishioner who held the Brethren's theology. He afterward said to me on a voyage at sea, "If I could live my life over again, how differently I would preach!" He said he had proclaimed too much the terrors of the law, and alluded to certain good lady parishioners who had lived and died in gloom, feeling that they were lost sinners, as they felt no evidence that they belonged to the number of the elect. He said he had not made the gospel free enough. The sermons in his volume, *At Eventide*, were written at this period, and breathe a milder spirit than those of his earlier ministry. His God changed as his mind mellowed. If individual Christians are now questioned about God, it will be seen that quite different beings are worshipped under that name; each man creating his own mental image of the deity whom he loves, fears, or adores. We set up a standard and try to attain to it, and we call that standard God. One beauty of the Bible is that, being written by men of varied capacity in different ages, there are correspondingly varied views of God's nature, so that different temperaments will find something to suit their phases of mind. If God had written the book, it would have been consistent; and there would have been a pattern deity revealed, who, while more noble in design and elevating in influence, would not have been so comforting to imperfect creatures who enjoy a God "after their own hearts." The Delphic Oracle said, "The best religion is that of a man's own city."

Now comes science, and asserts that nothing has been made all at once, and that all the facts of creation are or will be accounted for by the theory of the evolution of matter. Everything now and in the past has grown or developed by slow stages from simpler forms, in accordance with laws which are just beginning to be clearly understood. There is no such thing as the "act of God," as that term has usually been understood; but every event, from the lightning's stroke to the mosquito's sting, is traceable to the workings of law. God never interferes by miracles or special providences, and it is only our ignorant and sluggish minds that seek such a solution for our baffled investigations into the subtle laws of nature. It is convenient to say, "God did it," when we cannot explain a matter. Where knowledge ends God begins.

Some call this great law and force God, and rightly consider that it is a far loftier conception, to think of the Being who could originate matter and endow it with the properties of evolution, so that for ages it could work on without a single act of interference, and produce the wonderful diversity we now behold in nature, working in never-failing precision, than it is to enthrone one as the Supreme Being, who, like a necromancer calls up what he wants upon emergencies; who takes a notion to have a new kind of butterfly, and makes it on the spot; who causes a profane man to step on a bit of orange peel and break his leg, and sends a tornado to an infidel village. These tell us we can know nothing of God beyond the revelation of his works, and must content ourselves with the investigation of secondary causes.

Others, having traced all the variations of matter back to a single atom, and believing that every form it has assumed can be accounted for by the workings of natural law, are averse to calling in the supernatural even here, and think that qualities inherent in matter may have initiated the first movements which have led to "differentiation." This leaves only the origin of matter to be accounted for, and some are daring enough to believe that the intellect of man will yet solve this problem. They claim that, as the most complex organism can be traced back to the simple cell, so the profoundest operations of the mind are the result of an unbroken ascent from the first instinctive effort of the lowest animalcule to propagate its species or obtain food, and this gradual development of mind can be followed through all the animal kingdom up to man, the difference between the mental operations of man and animals being differences of degree, not of quality. The ant, the horse, and the dog think the same kind of thoughts that men do, as far as their range of thought extends. The operations of mind are found to depend entirely upon physical organs, and can be suspended or altered by changes in the conditions of those organs. Anatomists and physiologists find a correspondence between the brain, the contour of the head, and the mental faculties, so that a man's or animal's mental powers and characteristics can be predicated from his physical formation. This chain of sequence is so well traced that it is made clear that the link between the brightest dog and the lowest Hottentot is closer than that between a Hottentot and a Newton. Wallace remarks that the faculties exercised by savages are very little above those of the animals. If mind, therefore, can be followed down to the first instinctive motions of the earliest forms of matter, and is proved to depend on the organism, may it not yet be shown that the first motion that signifies intelligence is as truly a development from the inherent nature of matter as is the growth of the structure? The assumption that there is an eternal distinction between mind and matter, and that it was necessary at some point for a God to step in and conjure the principle of mind into matter, would thus be shown to be false by the proof of the theory that matter has always possessed the principle of determining its actions which we call mind. May not mind be traced as truly in the vegetable world? When plants catch and devour insects, reach out tendrils toward supports, close their flowers in the shade or at the approach or touch of a person, may it not be called an operation of mind, as truly as when a dog answers the dinner bell or a man opens an umbrella when it rains?

Thus there is a mind or soul in all nature, and it is so connected with and inseparable from the out-

*The late Nehemiah Adams, D.D.—ED.

Digitized by Google

ward form that they may be considered one, the mind, the later manifestation, being an inherent property of matter from its first existence.

These facts and theories either place God away back at the beginning of all things, and then leave the puzzle of his existence to be accounted for, or, ignoring any idea of a personal God, they consider the existence of matter as the only mystery to which we have not found a hopeful key. Nothing is arbitrary in the action of nature, implying an exceptional discrimination. As a general rule, the good and the bad reap the results of their acts in the long run. Just so many accidents of a given kind occur during certain periods under similar circumstances. The number of suicides in London in each decade and the number of misdirected letters in certain periods is about the same. There is no event in the world of mind or matter which it is not easier to account for as the result of natural consequences than as being the direct act in each case of a superintending God. The blast of lightning from a clear sky, which struck twenty men resting under an oak-tree, was not specially directed by a God with reference to those men. But a sufficient knowledge of natural law could show a chain of causes extending back for ages, which required that flash to gleam and that it should strike that tree; and laborers are apt to rest under trees at noon in hot weather. As the mind revolts from the idea of a God who deliberately ordains some men to eternal life of his own free will and leaves others to perish, so it rejects the thought of a being who consciously distributes the accidents and ills of life, and orders the daily warfare and destruction which pervades all orders of nature.

If, then, it can be shown that all the present forms of existence may be accounted for by natural laws, reason obliges us to prefer this theory to that of the special creation of the various orders of life by the magical word of a Supreme Being. Man's ignorance has always taken refuge in the act of God as an explanation of what could not be understood. God was supposed to cause cholera, plague, and small-pox by direct exercise of his will, until the germ theory of disease showed that these calamities could be accounted for by natural laws. God made the lightning, in popular estimation, till Franklin flew his kite and brought it down from heaven to the realm of nature. God caused storms, rains, and droughts, till the science of meteorology showed the power of natural causes to produce these effects, and foretold their occurrence. So, in earlier ages, the mysteries of life were conveniently referred to God; but, now, we see the laws of nature satisfactorily explaining all the facts of existing forms, and we only refer back to God the origin of matter and force. This is merely saying that as yet we are ignorant of the first cause of all existence; but, having resolved so many of the acts of God into intelligible processes of nature, does not analogy suggest that what is still unknown may yet be discovered by the advancing mind and unceasing investigation of man? Thus there is no "unknowable," and no limits need be placed upon man's mental progress, nor need any barriers be raised to stop his researches.

It is imprudent to express a decided opinion upon these theories about God, upon which the wisest of men are at variance. None of them solve the great mystery of existence. We are all groping through the dim day-dawn toward God, if, haply, we may find him. My only object in writing is to show that the ideas of God in the Bible are human conceptions, just as are the ideas of theologians and philosophers of to-day. They are not authoritative; but they are instructive, and show an orderly progression which ranks them among the evidences which pervade all orders of nature of a development through which an inscrutable force, or "God," is working.

Many, from policy or conviction, are making a compromise with Christianity as to belief in God, and thus avoid an open rupture. They say, in the words of an intelligent scientist, "The mind with its yearnings for and capabilities of religion is as much a part of nature as are the objects we may handle with our fingers; and the moral education of mankind has as much followed the lines of development, which the survival of the fittest demands, as has the physical advance of structural forms. Viewed in that light, the history of the human race, whether drawn from sacred or profane sources, is a history of the evolution and advance of moral sentiments." But they go on to call the manifestation of this growth in the Bible a "revelation," and the principle, unknown and inscrutable, which thus works for good or "makes for righteousness," they call "God"; and thus they retain their status among Christians as believers. This is a use of terms in a sense entirely different from their general acceptation. In this way, most rationalists believe as truly in God and revelation as they do; and I know honored men among Christians, who practically think as I do, who, by this accommodation of old phrases to their new ideas, are still accounted orthodox, and are held up to me as examples of the agreement of science and faith. The God of evolution is not God, as men in the Christian Church understand the name; and, when they call the Bible a revelation, they believe it is the direct, authoritative, and final word of God, communicated in a miraculous manner to man,—not that it shows how men have gradually grown in religious knowledge, and is, therefore, a revelation to us. For the present, it seems wise and honest not to use the old phraseology, until men cease to misapprehend the intention and infer agreement with their own supernatural ideas. In this sense, the Unitarian use of the terms, "Our Lord and Saviour, Jesus Christ," "Our Divine Master," while they utterly deny his deity and atonement in the orthodox sense, appears inconsistent and injurious to the progress of the demolition of superstition.

True freedom of speech will not be attained until men can be permitted to express their ideas about God as freely as their notions about geology. The First Cause is as legitimate an object of research as is electricity. The loftiest intellects of this age, who have gained conceptions of the Infinite Power as far above the Hebrew notions of Jehovah as are their differing ideas about astronomy, are liable to prosecution by some anti-blasphemy club, composed of men who believe that God has revealed nothing about himself for eighteen hundred years, and who accept as final the ideas of deity entertained by men whose opinions upon almost every other subject they despise. In their minds, to agree with the ancients in any of their opinions about nature is to show an ignorance and stupidity that is beneath contempt; but to differ from the ancients in their estimate of the greatest of all mysteries is blasphemy.

To sum up, in a few words, the main truths I desire to impress, I would say: The Bible, like all other books, is the product of men's minds. All ideas about God and the various doctrines of religion, are likewise the products of men's minds. There has never been a revelation by God to man of final truth, given directly and all at once, either by word or vision. But all human ideas of religion are the result of a progressive development of man's mind, in accordance with the laws of evolution which pervade the universe, through which all growth in nature and all progress in man are promoted by the working of what men variously call "the inscrutable force," "eternal matter," "the great first cause," "the eternal and infinite spirit," "*the Almighty God.*"

ROBERT C. ADAMS.

NOTES AND REFLECTIONS ON LIBERAL WORK.

A word in regard to two or three of the places in the West that I of late have visited may not be without a measure of interest to the readers of *The Index*.

Cleveland, Ohio, the senior editor of the paper will remember as the place where together in November last we halted for a Sunday, spending the day with Mr. Hosmer and his people. It was to me a day of unusual interest and enjoyment. In the morning, we were privileged to hear from Mr. Potter upon that "Glory of God" which is

> "Least like
> What men agree to praise";

in the evening, from Mr. Mead upon Whittier.

This city, containing at present about two hundred thousand people, has many earnestly thoughtful and liberal minds. It was formerly, almost without any qualification, intensely orthodox, and both religiously and in all other ways rigidly conservative. Something, perhaps much, of that character holds to it still; but there is a relief to the picture, a marked amelioration to be witnessed within recent time. The town carried the impress of its ancestry from Connecticut and Western Massachusetts, whence almost wholly it was first settled. Mr. Hosmer has now a very flourishing liberal society, made up from the brightest and most progressive people, and is exerting upon the community at large a wide and most wholesome influence. The cause of free and advanced thought is probably making headway here as rapidly as in any other part of our country.

Twice have I visited Cleveland within recent weeks, and my good impressions are confirmed by farther acquaintance. The people have solidity, substance, character, and are withal broad in their hospitalities to fresh thought, awake, and progressive. Here is New England with its best qualities, and something more,—New England improved and enlarged by a transplanting, through Western contact and quickening.

Here, as is well known, is the home of Mr. J. H. Wade, a gentleman of large wealth and great benevolence, who has long meditated and studied upon the idea of founding a school or college that should be devoted to the largest investigation of religious truth and the training of young men for the work of public teachers. He would, as I understand it, have it perfectly broad and free, uncommitted to any dogma or denomination; a school for the study of universal religion. In the few words which he spoke at the National Unitarian Conference in Saratoga last fall, he expressed his emphatic desire that this school should be kept "always open at the top."

Such an institution might be of immense worth in the cause of education, of that broader and indefinitely higher religious culture that is to come in the ages of the future. It would draw upon the future, would be building for the coming time. It would anticipate, but would also realize; for it would meet a want already present and to be more and more pronounced as the years go by. Every lover of religious growth must wish Mr. Wade abundant success and seconding in carrying out his noble and most worthy design. May the way open clear before him, that we may have one school of the prophets in our land that shall have no denominational bias or label, that shall be free

Digitized by Google

from even Christian name and limitation, standing sole for truth and for the church and fellowship of humanity.

There are such prophets of the faith and such religious societies coming. In Battle Creek, in Michigan, is a minister, who in the pulpit of a church heretofore orthodox in its name and denominational connection, is dispensing from Sunday to Sunday freely of the truths of life,—a minister, in the best sense, of the absolute religion. He is one of the most deeply devout, sweet, alert, and progressive souls I have ever met. He is courageous, manly, outspoken, maintaining the utmost fealty to the ideal truth within. The multitudes come to listen, filled apparently with a glad surprise: they go home fed and enriched, delighted with what they have heard. His recently proffered resignation the society in large majority refuse to accept. They long to receive more and more of this fresh and living word.

The work this clergyman is doing is, as far as I know, without precedent in this country: it promises to emancipate and to elevate an entire community. And I look for more such examples as the years roll on of deliverance coming in the very bosom of the orthodox churches. There goes forward a revolution, far-reaching and fundamental, greater than any of us yet see or even think. There was never the like before in history, for there never before was the class of mind for its material. Two thousand years, yes, three hundred, have ripened somewhat human intelligence, have enlarged the mental horizon, and furnished in all ways a broader base, and changes not possible at the time of the advent of Christianity or the Lutheran reform are now become natural and inevitable.

In States farther West, particularly in Iowa and Nebraska, is excellent field for work. People are ready to hear, and they will greet with the most cordial approval the most out-spoken expression for freedom and radical ideas. They have grown in most instances beyond denominational limitations, and no catchword or symbol of any sect will draw them or rally their suffrages. They must be gathered, if at all, in organization on a platform as large in aim at least as truth and humanity itself. In Des Moines, Iowa, a piece of brave and true work is being done by Rev. S. S. Hunting, one that is sure to bear the best of fruit; and the like is being performed by Rev. W. E. Copeland, of Omaha, Nebraska. And in Humboldt and Algona, Iowa, a most faithful and effective missionary, whose whole soul is in the cause of human deliverance, you find in Miss Mary A. Safford. All of these friends, as far as I know their attitude, are substantially on the ground of free religion. They work for the upbuilding of that kingdom of light.

The liberal sentiment of the West is to a great extent unvoiced, unrepresented, and therefore mostly unfelt, unknown. There is next to no organization of any kind, no banding together, and there is little disposition to do in that direction. There is a great congregation, but it is ungathered; a large army, but uncollected, unmarshalled, the men scattered and unknown even to each other. They have not yet even a common watchword. Hence, for such a material and constituency as there is, there is great waste, little accomplished. A serious defect in this regard obtains everywhere: it is one that must be remedied ere we can see the inauguration of the new day.

Another grave lack is the providing of fitting instruction and helps for the young. In large part, the minds of the children and the youths are neglected. Things are left here, as so much elsewhere, to drift. And the drift may be often seized and turned into channels of Orthodoxy. It is all-important that the mind in the young and impressible years be guided and furnished, at least be guarded and fortified against false impressions in religion. These become often in after years like a piece of jugglery or sorcery, an incantation hard to break, the growing out of them painful, tragic in the experience. I look upon the children in the families of liberals, and others, too, that they might easily reach, and I ask, What are they doing for them to open before them the right views, and insure as far as possible the true direction for life, at least to give them opportunity to come into possession of that which has so refreshed and enriched themselves? As a general thing, nothing.

There is, I can see, great lack of the right aids, books written from the higher point of view, bringing before the mind in apt language, such as shall speak to the thought of childhood, the realities of the spiritual. There is work here for a true genius, one who shall use the methods of symbol, of imagery, so addressing the love of the objective and picturesque which dominates in all childhood, and at the same time keeping the mind up and above all the entanglements of the external and the sensuous, that mesh into which all the historic faiths of the world, all churches and the teaching they have dealt, have fallen. It is a lack that I hope will erelong be supplied. A liberal reward might well be offered for the best book that should furnish instruction, impart clear but elevated thought in the realm of transcendent and unseen truths, should give the objective form of presentation, but keep and insure ideal recognition. It would doubtless embody the best we have in bright apothegm, in apologue, myth, legend, tale. Indeed, the stores of this literature, I think, could be freely drawn upon and utilized in that service.

To the discerning eye looking over the field at this hour there is nothing to depress or dishearten: there is much to encourage, yet more to incite, to nerve to renewed effort in this never-ending battle for the enfranchisement of man.

C. D. B. MILLS.

CAUSATION, NOT FREE WILL, THE BASIS OF ETHICS.

The law of causation is an expression which generalizes the universal experience of the order of nature. It is as applicable to the order of the mental as to that of the physical world. Experience is valuable, because knowledge of the past furnishes grounds for expectations in regard to the future. This is as true of experience of human conduct as of experience of the habits of the lower animals, and the qualities of non-living things, for the reason that the order of our thoughts is as fixed as the order of nature in general. This fact makes possible the lessons of history, whose use, as an historian well observes, "is only to discover the constant and universal principles of human nature by showing men in all varieties and situations, and furnishing us with materials from which we may form our observations, and become acquainted with the regular springs of human action and behavior." "To write history," says Fiske, "on any method furnished by the free-will doctrine, would be utterly impossible."

True, the actions of individuals sometimes appear capricious and unaccountable, but so appear some of the manifestations of force in the physical world. Why should our inability to co-ordinate any mental phenomenon with the sequence of natural events be proof of the absence of causation, when our inability thus to co-ordinate physical facts is conceded to be proof only of our ignorance? The complexity of man and his relations, the multitude of incident forces to which he is continually subject, the dependence of volition upon a great number and variety of principles, many of them hidden by reason of their remoteness, and liable to the secret opposition of numerous contrary causes, are sufficient explanation of the relatively greater incalculableness of human volitions and actions, as compared with the habits of animals and the operations of the inorganic world. It is only when we take into consideration a vast multitude of facts that we are able to arrive at the conception of an order of phenomena, either in the physical or mental world. The reasoning of Buckle, who showed from the statistics of crime, suicide, and marriages, that voluntary actions conform to law, was as legitimate and conclusive as that of Darwin, who, from a multitude of facts in the field of biology, demonstrated the principle of natural selection. Of what use would be statistics in regard to crime, or anything else, if human conduct were not subject to the law of causation.

Responsibility implies a necessary connection of certain actions with certain states of mind. We infer intentions from actions. Certain actions, we say, indicate insanity,—a deranged mental condition, in which neither argument nor threats of punishment have their usual effect in furnishing motives,—other actions indicate criminal purposes, others avarice, while another class of actions indicate a benevolent and philanthropic disposition. This we are able to say only because in considering human conduct, the same as we consider the movements of the physical world, we reason from effects to their causes. If our inferences prove erroneous, we never doubt that like causes produce like effects, but conclude that our observations were imperfect, or that we failed to consider all the circumstances relating to the motives and intentions which led to the act.

But, if volitions were outside the domain of causation, as the advocates of free will claim, it would be manifestly absurd to infer from actions the states of mind proceeding from them; and, on hearing of the assassination of Lord Cavendish and Under-Secretary Burke, we would have had as little reason *a priori* for ascribing the deed to Irish malcontents as to the premier of England or persons employed by him for that purpose. Only because volition, which leads to action, is caused, and therefore in some degree calculable, is it possible to frame a theory of action and have a basis of morals. Were volition lawless, of what use would be self-discipline or appeals to the reason of men or enacting laws and attaching penalties to the violation thereof? The wise man might at any time act like a fool or the fool like a sage. Conduct would be no criterion of character, and a friend would be as much to be feared as an enemy.

"The very reason," says Grote, "for giving notice that we intend to punish certain acts, and for inflicting punishment if the acts be committed, is that we trust in the efficacy of the threat and the punishment as deterring motives. If the volition of agents be not influenced by motives, the whole machinery of law becomes unavailing, and punishment a purposeless infliction of pain. In fact, it is on that very ground that the madman is exempted from punishment, his volition being presumed to be not capable of being acted upon by the deterring motive of legal sanction. The *free* agent, thus understood, is one who can neither feel himself accountable, nor be rendered accountable to or by others. It is only the *necessary* agent (the person whose volitions are determined by motives, and, in case of conflict, by the strongest desire or the strongest apprehension) that can be

Digitized by Google

held really accountable, or can feel himself to be so."

"It is," says Voltaire, "a foolish and commonplace expression that, without this pretended freedom of will, rewards and punishments are useless. . . . If, when a robber is executed, his accomplice, who sees him suffer, has the liberty of not being frightened at the punishment,—if his will determine of itself,—he will go from the foot of the scaffold to assassinate on the high road; if, struck with horror, he experiences an insurmountable terror, he will no longer thieve. The punishment of his companion will become useful to him, and moreover prove to society that his will is not free."

If a man is just, honorable, and noble, he is so not because behind all his acts and decisions is a metaphysical entity called "the will," which acts uninfluenced by motives, but because he is so constituted, or has been so influenced by his education and surroundings, that his desires and aversions determine his actions in accordance with just, honorable, and noble principles. The harmoniously developed and truly moral man is he with whom the performance of an act that is right, far from involving a struggle, is easy and pleasant, whatever sacrifice it demands. The sense of coerciveness, the feeling that the act must be done, gives way to a cheerful readiness and desire to do what is right. "Conscientiousness," says Herbert Spencer, "has in many outgrown that stage in which the sense of a compelling power is joined with rectitude of action. The truly honest man, here and there to be found, is not only without thought of legal, religious, or social compulsion, when he discharges an equitable claim on him, but he is without thought of self-compulsion. He does the right thing with a simple feeling of satisfaction in doing it, and is, indeed, impatient if anything prevents him from having the satisfaction of doing it."

"The libertarian doctrine," says Fiske, "has obtained currency, because it has talked loudly of human freedom, with which nevertheless analysis proves it to be incompatible. Substitute for the unmeaning phrase 'freedom of the will' the accurate phrase 'lawlessness of volition,' and the theory already looks less plausible. In place of the vague and ambiguous word 'necessity,' write the clear and definitely connotative word 'causation,' and the scientific theory at once loses its imaginary terrors. The title with which the free-will doctrine decorates itself and those with which it brands its opponents are alike 'question-begging epithets.' They serve to prejudge the point at issue. . . . Whatever voice of tradition we may be in the habit of echoing, we do equally, from the earliest to the latest day of our self-conscious existence, act and calculate upon the supposition that volition, alike in ourselves and in others, follows invariably the strongest motive. And upon this ineradicable belief are based all our methods of government, of education, and of self-discipline."

We are compelled by these among other considerations to dissent from Prof. Adler's assertion that "the freedom of the human will is the corner-stone of every ethical system."

B. F. UNDERWOOD

A WRITER in the *Missionary Herald* makes the following calculation of the Mohammedans in the world: Turkish empire, 20,000,000; Persia and the Caucasus, 12,000,000; India, 41,000,000; East Indies, 23,000,000; China, 5,000,000; Egypt, 8,000,000; Morocco, 2,750,000; Algiers, 2,920,000; Tunis, 2,000,000; Tripoli, 750,000; Sahara, 4,000,000; Soudan, 38,000,000; Zanzibar, 380,000; Central Asia, 14,000,000; total, 173,800,000.—(*Missionary Herald*, March, 1883.) *Science.*

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

The Friday morning session will open at 10.30 o'clock, in Parker Memorial Hall, with an address on "Emerson and Darwin" by Col. T. W. Higginson, to be followed by Mr. Edwin D. Mead, who will speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and by Mr. John W. Chadwick, who will speak of "The Problem of the Universe as approached from the Matter-side by Darwin."

The Friday afternoon session will open at three o'clock with a paper on "Co-operation and Progress," by Mrs. Imogene C. Fales, of Brooklyn, N.Y. This will be followed by an address from Mr. James Kay Applebee on "Social Disintegration and its Arrest by Co-operation." Mrs. Anna Garlin Spencer and others will also speak to the question of the afternoon.

The Festival will be held in the large Horticultural Hall, Tremont Street, and will begin with a supper, with tables and seats for all, at about six o'clock, or as soon after the close of the afternoon meeting as possible. Col. T. W. Higginson will preside. After the supper, five-minute speeches are already promised from John W. Chadwick, B. F. Underwood, James Kay Applebee, and Mrs. Anna Garlin Spencer, and a poem from Minot J. Savage. Other speakers for the Festival will be announced hereafter. Miss Lucy Garlin's Euterpe Quartet have kindly consented to add the attractions of their fine music to the occasion. Tickets of admission to the Festival, with reserved seats at the tables, at 50 cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston, of the Secretary, Providence, R.I., and of A. G. Hill, Esq., Florence, Mass. It is desirable that early application for seats should be made.

F. A. HINCKLEY, *Sec'y F. R. A.*

EDITORIAL NOTES.

ALL checks and drafts for *The Index* should be made payable to the order of B. F. Underwood, the general business manager of the paper.

"LECTURES, ESSAYS, AND SERMONS OF SAMUEL JOHNSON," with a Memoir by Samuel Longfellow, for sale at *The Index* office. Price $1.75.

SAYS Monroe's *Ironclad Age*, "A man is a man in proportion to the delicacy of his sense in the discharge of duties and the payment of debts." Will those of our subscribers who are in arrears, after reading this, send to *The Index* its just and legal dues?

THE *Canadian Baptist* says: "And now the cry comes from the Presbyterians of the United States. It is said that the number of vacant churches looking for acceptable ministers is unprecedented. 'The number of candidates in our theological seminaries and colleges is on the decline. This year, those in our seven chief seminaries are sixty fewer than seven years ago.'"

THE *Independent* observes, reviewing Bishop Vail's book upon *The Comprehensive Church:* "He desires union, and sees that union is to come by way of comprehension. Unfortunately, however, with him it must be Episcopal comprehension; and the scheme freezes up in the attempt to show that the Episcopal Church offers, both in *esse* and in *posse*, the comprehension required. The trouble with all these schemes for church union is that they yield nothing and broaden nothing. They are zealous for compromise; but, like the man who wanted linen sheets and at last compromised a chronic quarrel with his wife, who wanted cotton, they compromised on linen."

HOW THE ancient Egyptian young men and maidens confessed their love, and rejoiced or mourned, may be learned from Maspero's translation of the hieratic papyrus of Turin, published in fac-simile by Pleyte and De Rossi, pl. 79-82. This had been translated by Fr. Chabas (*Rec. of Past*, vi. 156); but a rearrangement of the broken parts of the papyrus has enabled Maspero to gain a clearer view of the whole. Maspero sees a clear resemblance between the Hebrew and the Egyptian conception of love, and suggests that a comparison of the Hebrew with the Egyptian language of love would explain some points now obscure.—(*Journ. Asiatique*, Jan.) *Science.*

OUR national Indian policy is well hit by the following extract from a private letter, written to a lady in this city, by an Indian, educated on his reservation:—

If you can convince people that education is the only thing with which they can civilize the Indians, it will do some good, and they may turn their attention in that direction. I don't believe in this going to New York and buying cheap sugar, coffee, and pork for the Indians. That will never help them any. If they [the Indian Bureau] send among the Indians good farmers who will teach them how to farm, and not lie in the shade while the Indians teach themselves and cut their legs with reaping machines, etc., as some of them do, it would do good. But men who are sent among them seem to care more for the money than anything else. That's the reason, I think, that educated Indians should be given such places, who have interest in their people more than the white people who are sent to them. This sending out circulars, saying that Indians who are able to work should be given the preference to work as agency employés, is merely nominal. It is more like an article of dress that you can't wear, and made for show, than anything else. When an educated Indian asks for employment, he isn't even looked at; and the agent applied to only sticks up his nose, and seems to say, "What do I care for an animal like you!" Your people seem to think that the Indians fight just because they like to, and for deviltry, but they are mistaken; and they call us "Red Devils," and all sorts of ugly names, when they do worse than we do. If I should tell you what the white people did to a Yankton Indian (a man), after binding him hand and foot, it would make even a brute ashamed. The Indians fight, when they are treated in this manner. And I have no doubt that even a preacher would fight, placed under such circumstances. These things are not very pleasant to talk about; but, sometimes, I get so mad when I am called a *Red Devil* that I feel like fighting myself. If we *are* Red Devils, we are made so by the whites.

SOON after the death of Dr. George M. Beard, Rev. Joseph Cook, in an address in this city, said:—

When Dr. George M. Beard lay dying in New York City, a devout Moravian said to him, "Trust in Jesus." With unimpaired faculties, he answered: "I DO. I AM." Immediately after this, he rose up in bed and lifted up his hand, his face brightened, and he said with great emphasis: "*Higher!* HIGHER!" and, in a few seconds, passed into that trance from which no man or angel could waken him.

Religious journals generally quoted this statement from Mr. Cook's printed address, and indulged in the usual comments on the conversion of an infidel in his dying moments. Even the *Independent* had to make the statement quoted above the text of a leading editorial, in which it said, "We are glad that, if faith came late, yet it came to the soul of him who doubted whether he had a soul. Now, it turns out that the story of the Moravian nurse,

Digitized by Google

which Mr. Cook dressed up in his characteristic fashion, was, as we thought and intimated at the time, without any substantial foundation. The intimate friends of the deceased, including his own family, who were with him during his last illness, utterly discredit the story. Mr. W. A. Croffut writes to the *Independent*:—

Mrs. Beard herself, who died of the same disease within a week, said in the interval, "George died, as he had lived, as a scientist." Her brothers, both of whom I have seen, repudiate the report of Dr. Beard's recantation. The last words Dr. Beard spoke to me are, "You look upon a dying philosopher." This, with a forced smile on his face, as he continued: "I have not much longer to live. My sensations are blunted. I am racked with terrible pain. I can scarcely breathe. My sight is failing, and I am stone deaf." This was during the last day of his life. He put an ear-trumpet to his ear, and, in the interval of groaning, said, "You must shout in it, or I shall not hear you."

The appeal to "trust in Jesus," Mr. Croffut says, must have been made through the ear-trumpet in a high tone of voice; but, of the several persons about his bed, nobody except the pious Moravian nurse heard either the words uttered to him or the response. Mr. Henry Crell, who had the care of the patient, testifies: "I was with him almost continuously. During the last two or three hours, I did not leave his side. He could not hear anything toward the last. I heard nothing about Jesus; but, as he gasped for breath in the pressure on his lungs, he said, 'Higher! Higher!' I immediately lifted him. He still said, 'Higher!' and I lifted him to a sitting posture. 'That'll do,' he said. In that attitude he died. I am a communicant of the Protestant Episcopal Church; but I have no doubt the doctor died a materialist as he lived."

POETRY.

For *The Index*.

FORGIVENESS.

I found one day in bitter mood
My tenderest trust had been betrayed:
My selfish good, another's need,
In conscience' scale I'd troubling weighed.

'Twas all I had, I willing gave,
And wept to think the gift was poor,
Beside the richness of my trust,
My inwrought faith so deep, so pure.

Crushed in the dust with careless tread,
The gift I'd nourished in my breast,
So great to me, so small to thee:
False friend, my pain is but thy jest.

Beneath my feet the reeling earth,
Above my head the mocking sky.
The sudden roll of wheels, and lo!
A funeral train is sweeping by.

A trembling heart, a burning tear,
The vision of an open grave,
A vacant chair, an unturned plate,—
My hate had vanished like a wave.

Recompense.

Life is too short, the grave too sure,
To waste our little lotted span
In vain regrets and cankering hate
'Gainst e'en the weakest mortal man.

Full soon the grave will right all wrongs;
The ill-spent life, the sodden face
Are *dead*, when Death upon that heart
His cold and pulseless hand he lays.

The generous life, the noble face
Of him who wronged says, "I forgive:
No matter what thy sin may be,
Thou art my brother," still shall live.

SARA WARD.

The Index.

BOSTON, MAY 3, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for MR. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

THE ENGLISH BLASPHEMY LAWS.

BY WILLIAM CLARKE.

I do not know whether the recent English prosecutions for blasphemy have been watched with any interest in the United States; but, in England, they have caused considerable ferment, and I am probably not wrong in saying that liberal American thinkers will be likely to be much concerned in these matters. Few scenes in an English court of justice have ever been more remarkable than that which might have been witnessed by a visitor when Mr. Justice North passed sentence on Foote, Ramsey, and Kemp for publishing blasphemy in the Christmas number of a periodical called the *Freethinker*. Loud groans and hisses burst forth from the crowd of people who filled the gallery of the court, and Mr. Foote told the judge that his sentence was worthy of his creed. Strange that the new law courts of London should have witnessed such a scene in the latter half of the nineteenth century! I may say at once that few persons of any culture, much less of the slightest spirit of reverence, can have any great personal sympathy with these prisoners. I only chanced, through a friend, to see a copy of the periodical in question, and a more disagreeable production I have scarcely, if ever, seen. The *pièce de résistance* was a series of wretchedly executed pictures, taken from the French comic bible, and illustrating scenes and events in both Old and New Testaments; but the whole number was, all through, offensive in tone, spirit, and intent, though not, perhaps, more so than much to be found in Voltaire, Diderot, and other great classics. It was written by vulgar people for vulgar people; and it was pervaded, too, by an essentially coarse spirit. It would be difficult to imagine anything more painfully disgusting, in its flippancy, vulgarity, and want of reverence, falling into the hands—I will not say of an orthodox Christian, but—of an intelligent and earnest free thinker. Thus much I must in honesty say as to the impression made upon my mind by a brief perusal of this publication. On the other hand, nothing can excuse the address delivered by the judge in summing up, in the course of which he informed Mr. Foote that he was serving the devil with those powers which were intended for God's service. In fact, the judgment was in the worst taste, being in reality a vindictive theological harangue; and proceeding, too, from a judge who, very likely, has as little actual belief in Christianity as is common among his class in English society. But neither the bad taste of the judge nor the flippant vulgarity of the *Freethinker* can be held to affect the real point at issue, which is simply this: Is the Christian religion to be defended in England by the powers of the law, or is it to be placed—so far as the law is concerned—on a footing of equality with any other religion? Foote and his colleagues were not sentenced to imprisonment because of the character of their attack upon the Christian religion, but because of the attack itself. That is plain from the decision of the judge; and it must be admitted that, under the existing law, no judge—however much he might dislike it—would have any other course open to him than to punish, and punish severely, those who attack Christianity. Those ignorant of this matter may be surprised to learn what laws are still in force in England respecting the utterance of religious opinion. I will venture to give a brief historical summary of English law on this important subject, which may be of interest to American readers.

The English clergy first required the support of the civil power for punishing heresy in the latter part of the fourteenth century. By an act of Richard II., passed in 1381, the sheriffs are enjoined to arrest heretical preachers, who are called "divers evil persons," and to "hold them in arrest and strong prison till they will justify them according to the law and reason of Holy Church." In 1400, the terrible writ, *de heretico comburendo*, was just legalized, by which persons, who taught "contrary to the Catholic faith or determination of the Holy Church," were to be burned, "that such punishment may strike fear in the minds of others." This was strengthened by further legislation in 1414. This period, the reign of Henry IV., was stained by the execution of persons under these abominable laws for the expression of opinions disagreeable to the ecclesiastical authorities. William Sautre was burned in 1400; William Thorpe was thrown into prison, where he is supposed to have died, in 1407; John Badby was burned in 1409; and Sir John Oldcastle was burned while still hanging, half-alive, on the gallows, in 1413, the first year of the reign of Henry V. There is no evidence to show that these men were, in any proper sense of the word, unbelievers. They simply disputed the authority of the Church and the doctrine of transubstantiation, arguing the latter point generally on a rationalistic basis.

William Thorpe gives a long account of his examination by the Archbishop of Canterbury, from which it is evident that he was condemned because he struck at church abuses and gave some sharp thrusts at the idle and wealthy church dignitaries. And, indeed, all these martyrs were what we should now call democratic reformers, pleading the cause of the weak and poor against the strong and rich, and denouncing ecclesiastical corruption. Up to the reign of Henry VIII., the authority in these cases was purely ecclesiastical; but that pious and much-married monarch extended this authority to lay persons, and in other ways confirmed the laws on this subject. The result of his legislation is described thus by Sir J. Fitzjames Stephen (the eminent English judge, who is in these matters the first recognized authority in England): "The effect of this statute was that hardly anything could be affirmed about heresy, except that it was *not* heresy to deny the doctrines of the Roman Catholics"; *i.e.*, of those who had made the original law on the subject. By a further act of Henry VIII., those who erred about transubstantiation were to be burned as heretics, and those who erred on matters of a slightly less metaphysical nature were to be graciously indulged by being hanged as felons. A see-saw process went on in the reigns of Edward VI. and Mary, acts being alternately repealed and revived. In the first year of the reign of Elizabeth, the High Commission Court was established for dealing with the growing schisms and heresies; and constant prosecutions of both Catholics and Puritans took place. In James I.'s time, one Bartholomew Legatt, an Arian, described as "an obdurate, contumacious, and incorrigible heretic" (the Church has always been renowned for her command of vigorous language since the days of Tertullian) was tried by the Bishop of London, and burned for his "damnable tenets," as was also one Wightman at Lichfield.

But the age rendered forever famous by Cromwell, Milton, Sidney, and Harrington was at hand; and,

Digitized by Google

spite of much Puritan intolerance, a new era dawned. Milton and others were themselves "incorrigible heretics"; but they moulded the thought of their time, and pointed to a coming day when liberty of thought should be free. "Give me," said Milton, in his great treatise, "the liberty to know, to utter, and to argue freely according to conscience, above all liberties." And his appeal to Cromwell in the famous sonnet ("New foes arise, theatening to bind our souls in secular chains: help us to save free conscience!") was responded to by that great ruler, who was the first chief magistrate of England who introduced some measure of religious equality into the land. In 1678, four years after Milton's death, the writ *de heretico comburendo* was abolished, and, as Lecky eloquently says, "the soil of England was for the last time stained with the misbeliever's blood." But this act of 1678 still leaves untouched the old ecclesiastical law of heresy; and, to this day, ecclesiastical courts have power to proceed criminally against any person, whether Catholic, Jew, or infidel, but they cannot inflict any punishment of death. "I think," says Judge Stephen, "that Mr. Mill might have been prosecuted and excommunicated for his three essays on religion." By an act of George III., the court can make the party pay costs, and can enjoin on him performance of penance, or, as an alternative, imprisonment not exceeding six months until penance is performed or costs paid. Of course, this law is not, and never will be, enforced. But it would be amusing, indeed, to see Mr. Spencer, or Justice Stephen's brother, Leslie Stephen, or the apostle of "lucidity," condemned by Anglican bishops to do penance for their "damnable tenets." Another statute left over from the time of Edward VI., and still in force, awards penalties against those who shall "unreverently speak against the sacrament of the Body and Blood of Christ, commonly called the Sacrament of the Altar." But the most terrible violation of religious freedom dates, curiously enough, from what Englishmen used to call the "glorious revolution" of 1689. The Toleration Act of William III. gave liberty to orthodox dissenters, but to no others. But a statute known as the 9 and 10 William III., c. 35, contains this provision: "If any person or persons having been educated in, or at any time having made profession of, the Christian religion within this realm shall, by writing, printing, teaching, or advised speaking, deny any one of the persons of the holy Trinity to be God, or shall assert or maintain there are more gods than one, or shall deny the Christian religion to be true, or the Holy Scriptures of the Old and New Testament to be of divine authority," he shall, upon conviction for the first offence, "be adjudged incapable and disabled in law . . . to have or enjoy any office or offices, employment or employments, ecclesiastical, civil, or military, or any part in them, or any profit or advantage appertaining to them, or any of them." In the case of a second conviction, "he shall from thenceforth be disabled to sue, prosecute, plead, or use any action or information in any court of law or equity, or to be guardian of any child, or executor or administrator of any person, or capable of any legacy or deed of gift, or to bear any office, civil or military, or benefice leccesiastical forever within this realm, and shall also suffer imprisonment for the space of three years, without bail or mainprize from the time of such conviction." In 1813, this act was so far modified as to admit of the expression of Unitarian opinions; but the rest of it remains, and is in force to this day in the country of Spencer, Huxley, Arnold, and Morley,—in a country where fashionable drawing-rooms and workmen's clubs are alike permeated by unbelief, and where serious arguments against not Christianity alone, but Theism generally, are delivered to large audiences week after week and year after year, and where books and pamphlets literally pour from the press denying or calling in question all the "fundamental verities" as understood, not only by the framers of the act, but by the orthodox of to-day. This statute, says Mr. Justice Stephen, "might at any moment be applied to any one who denies the divine authority of the Bible, or the truth of the Christian religion, in private conversation." And he goes on to say, "In most cases [he is speaking of sentences passed for ordinary crime], two years' imprisonment is the maximum which can be given; but, for the most temperate admission made in private conversation—say, by a father to a son—of disbelief in the divine authority of Scripture, nothing less than three years' imprisonment and civil infamy can, upon a second conviction, be awarded by law." Such is the care our "spiritual pastors and masters" have taken of us that, at the present day, such a man as Mr. Arnold might legally be sentenced to three years' imprisonment and deprivation of all civil rights for what he has written, if any bigot should choose to set the legal machinery in motion.

But the bigots are wise in their generation: they attack such humble people as the editor and publisher of the *Freethinker*, and leave the wealthy and cultured and influential alone. Pious and high-minded guardians of the public welfare! Their spiritual forefathers acted in the same way in the last century. Hume was allowed to attack miracles and Gibbon to assail Christianity in his famous History; but poor London booksellers, like Williams, Eaton, and Hone, were prosecuted in the courts of law. These trials of the last century are worth reading now: the long and formidable indictments with their silly charges, and the senseless repetitions of senseless phrases, will move to laughter; while the attitude of the judges will frequently call forth such contempt as that which one feels for the *odium theologicum* of Mr. Justice North in the recent case. Lord Kenyon observes people taking notes at the trial of Williams for publishing Paine's *Age of Reason* and says, "This publication is so shocking that I hope nobody will publish this." And Lord Ellenborough, when trying Daniel Isaac Eaton for blasphemy, found himself constantly compelled to interrupt the arguments of the humble man before him in this kind of style: "You are evidently coming to something reprehensible, and it is necessary you should be checked." "You must omit those passages which cast any reflection on the Scriptures." And when poor Williams, after he was sentenced, said, "I trust it will not be too great an indulgence that I may have a bed," Lord Kenyon replied: "I cannot order that. I dare say you will be treated properly. I wish to have it understood that this sentence is a very great abatement of the punishment, as in modern times, within the period I have sat in Westminster Hall, three years' imprisonment has been ordered for an offence of much less enormity than this; for this publication is horrible to the ears of a Christian." Mr. Justice Stephen sums up his researches on this subject as follows: (1) The application of abusive language to God, Jesus Christ, the Bible, Christianity in general, and perhaps to some other persons and things which are the objects of reverence among Christians, is a crime. (2) Language which would be criminal under (1) does not cease to be criminal merely because it is mixed up with and forms part of a serious argument against the truth of Christianity or any Christian doctrine. (3) The question whether the simple denial of the truth of the doctrines of natural or revealed religion is or is not criminal at common law may possibly admit of some doubt. So far, then, as the written law of England is concerned, we are living under a rigorous despotism, which does not generally press heavily upon us, because it is more than outweighed by the force of an enlightened unwritten public opinion. It has often been said that Christianity is part of the law of the land,—an assertion which was apparently made use of first by the great judge, Hale, in 1676; but Sir J. F. Stephen says very truly that "the expression has hardly any specific meaning," while Mr. Frederic Harrison, in a most admirable address which I heard him give a short time ago on this subject, said that an eminent judge had told him the phrase was meaningless and nonsensical.

Such, then, is the law of England at the present moment with reference to what is called blasphemy and to the expression of opinion on religious matters; and to state it is to condemn it. It is an imposture and a fraud; for it is notorious that it cannot be generally enforced. It is unjust; for, if enforced, it is certain to crush the humble and to spare the influential offender. It suffers Mr. Arnold to liken the three persons of the Trinity to three Lord Shaftesburys, but it punishes Mr. Foote for casting ridicule on the Deity of the Hebrews. And it is a despotic law in reference to expression of opinions, and, therefore, leads inevitably to hypocrisy and cant. It may be hoped that the bigots whose action led to the late prosecution may be "hoist with their own petard"; and that, as generally happens in this strange world of ours, a great onward step in freedom may date from the action of the enemies of freedom. It was rumored some time ago that prosecutions were to be instituted against Messrs. Spencer, Arnold, Huxley, Tyndall, Morley, and Leslie Stephen, and Dr. James Martineau, for their writings and "advised speaking" against the Christian religion; and, in order to clear the air of existing cant, it would be very desirable that such prosecutions should take place. But there is no likelihood of it, while humbler game can be run down. It would be interesting to witness the disputes of a number of lawyers as to what Christianity means,—intensely interesting. The discussions of the early church councils would be nothing to such a scene in the law courts of England. But the orthodox bigots (numbering, I am glad to think, only a mere fraction of the orthodox Christians of England) are now busy praying against the bill for the substitution of affirmation for oath in Parliament, and in signing petitions against it, which is, perhaps, more to the purpose. And, therefore, not being remarkable either for their logic, courage, or honesty, they are likely to leave the eminent persons alluded to alone. A new crusade will be waged in England against these blasphemy laws, and there can be little doubt as to what the ultimate result will be. Christianity will be relegated to the same position occupied by all other religions in England: it will be called on to defend itself by its own instruments, and not to snatch for its aid the weapons of the law. Deliberate and studied insult of a very revolting character should, perhaps, be punished, but as a distinct offence against society, not as an attack on Christianity. Some persons would have mere ridicule punished by law, but this is clearly inadmissible; for ridicule has in all ages been a powerful auxiliary to reason. On this point, Matthew Arnold has said some very true words, in defending his use of the three Lord Shaftesburys as illustrating the popular orthodox conception of the Trinity. "As regards the three Lord Shaftesburys, we say boldly that our use of that parable shows our indulgence to popular Christianity. Polycarp sternly called the disfigured religion he saw prevalent around him *atheism*. We have said, and it is important to maintain it, that popular Christianity at present is so wide of the truth, is such a disfigurement of the truth, that it fairly deserves, if it presumes to charge others with atheism, to have that charge retorted upon itself; and future ages will, perhaps, not scruple to condemn it almost as mercilessly as Polycarp condemned the religion of heathen antiquity. For us, the God of popular religion is a legend, a fairy tale: learned theology has simply taken this fairy tale, and dressed it metaphysically. Clearly, it is impossible for us to treat this fairy tale with solemnity, as a real and august object, in the manner which might be most acceptable to its believers."

CORRESPONDENCE.

EUSEBIUS AND "PIOUS FRAUDS."

Editors of The Index:—

In *The Index* of April 12, your "Maplewood" correspondent takes exceptions to my statement that "Eusebius confesses he was by no means scrupulous in recording the whole truth concerning the early Christians, and that he suppresses everything which would be detrimental to them," and, as though he had settled the question—that Eusebius did not mean what we consider his words imply—in the minds of every one, exclaims, in a triumphant manner, "Now, we are ready for another 'pious fraud'!"

Although we may be altogether in error in the matter—though decidedly unconvinced of it at present—and your correspondent correct, it will be necessary, before we surrender to the gentleman, for him to prove that other persons have been as short-sighted as he would have us believe we have been.

We will state, to commence with, that our words are simply a reiteration of those of a Christian doctor of divinity,—whom we have reason to believe an impartial critic,—supplemented by those of a celebrated historian.

The Rev. Dr. Giles, Rector of Sutton, Surrey, and Fellow of Corpus Christi College, Oxford, England, after quoting from Casaubon, who says that "there were many in the earliest times of the Church who considered it a holy task to lend to heavenly truth the help of their own inventions in order that the new revelation might be more readily admitted by the wise among the Gentiles," and that "these officious lies, they declared, were devised for a good end," remarks as follows: "The celebrated Eusebius, Bishop

Digitized by Google

of Cæsarea, and friend of Constantine the Great, is our chief guide for the early history of the Church, *and we learn from his own confession that he was by no means scrupulous to record the whole truth concerning the early Christians in the various works which he has left behind him. . . .* But, notwithstanding *all the disingenuousness of which he was capable,* and which has been the safer from detection in consequence of the destruction that has befallen the chief works written by the enemies of Christianity, we nevertheless observe that he has constrained to mention," etc. (*Hebrew and Christian Records,* vol. ii., p. 19, London, Trübner, etc., 1877.)

This statement is made by Dr. Giles, with a reference to the passages we referred to; but perhaps (?) he was only "detecting a 'pious fraud' where *none existed.*" If such was the case, however, he was but doing what the learned Gibbon had done before his day.

In his *Decline and Fall of the Roman Empire* (vol. ii., p. 79), Mr. Gibbon says: "The gravest of the ecclesiastical historians, Eusebius himself, *indirectly confesses that he has related what might rebound to the glory, and that he has suppressed all that could tend to the disgrace, of religion.* Such an acknowledgment will naturally excite a suspicion that a writer who has so openly violated one of the fundamental laws of history has not paid a very strict regard to the observance of the other; and the suspicion will derive additional credit from the character of Eusebius, which was less tinctured with credulity and more practised in the arts of courts than that of almost any of his contemporaries."

Thus, it is seen, if I have been crying "pious fraud" when none existed,—as your correspondent attempts to show,—I've been in tolerably good company all the while, and that the words of Eusebius are not interpreted by every one to mean what the gentleman from Maplewood seems to think they do.

That Eusebius' character as to veracity does not stand remarkably well among Christian writers is seen from the fact that many churchmen of undoubted Orthodoxy believe he has related falsehoods in his history. Baronius and other sincere professors of the Christian faith have branded him as the great falsifier of ecclesiastical history, a wily sycophant, a consummate hypocrite, and a time-serving persecutor. And, notwithstanding what the gentleman from Maplewood may think or has said, we believe, as one who has studied the subject asserts, that "Eusebius, like many other great men, was drawn into the frightful vortex of superstition, and had no alternative but to whirl round in it or sink. Like thousands of his order at this day, he both preached and wrote what he never believed himself, nor could believe.

Respectfully yours,

AUTHOR OF *Bible Myths.*

BOSTON, April 15, 1883.

PAINE AND HIS PRIESTLY VISITORS.

The *Christian Statesman* makes the recent celebrations of the one hundred and forty-sixth anniversary of the birthday of Thomas Paine the occasion for copying into its columns an account of a visit to that "infamous man," in his last illness, "from the pen of a priest, who afterward became one of the best bishops that Church has ever had in this country." "It may seem like polluting the columns of a Christian paper to insert such a narrative," says this pious sheet; "yet, as a fearful description of the end to which the sceptic and the infidel may come, it might give timely and useful warning to some young men, especially at this time." We quote the concluding part of the account:—

As soon as we had seated ourselves, F. Kohlman, in a very mild tone of voice, informed him that we were Roman Catholic priests, and were come on his invitation to see him. Paine made no reply. After a short pause, F. Kohlman proceeded thus, addressing himself to Paine in the French language; thinking that, as Paine had been to France, he was probably acquainted with the language (which was not the fact), and might better understand what he said, as he had at that time a greater facility, and could express himself better in it than in English.

"Mons. Paine, j'ai lu votre livre intitulé *L'Age de la Raison,* où vous attaquez l'Ecriture Sainte avec une violence sans bornes, et d'autres de vos écrits publiés en France, et je suis persuadé que"— Paine here interrupted him abruptly, and in a sharp tone of voice ordered him to speak English, thus: "Speak English, man! speak English!" F. Kohlman, without showing the least embarrassment, resumed his discourse, and expressed himself heartily as follows, after his interruption, in English: "I have read your book entitled *The Age of Reason,* as well as your other writings against the Christian religion, and am at a loss to imagine how a man of your good sense could have employed his talents in attempting to undermine what, to say nothing of its divine establishment, the wisdom of ages has deemed most conducive to the happiness of man,—the Christian religion, sir." "That's enough, sir! that's enough!" said Paine, again interrupting him. "I see what you would be about. I wish to hear no more from you, sir. My mind is made up on that subject. I look upon the whole of the Christian scheme to be a tissue of absurdities and lies, and Jesus Christ to be nothing more than a cunning knave and impostor."

I felt a degree of horror at thinking that in a very short time he would be cited to appear before the tribunal of his God, whom he so shockingly blasphemed, with all his sins upon him. Seeing that F. Kohlman had completely failed in making any impression upon him, and that Paine would listen to nothing that came from him, nor would even suffer him to speak, I finally concluded to try what effect I might have. I accordingly commenced with observing: "Mr Paine, you will certainly allow there exists a God, and that this God cannot be indifferent to the conduct and actions of his creatures." "I will allow nothing, sir," he hastily replied. "I shall make no concessions." "Well, sir, if you will listen calmly for one moment," said I, "I will prove to you that there is such a Being; and I will demonstrate from his very nature that he cannot be an idle spectator of our conduct." "Sir, I wish to hear nothing you have to say. I see your object, gentlemen, is to trouble me. I wish you to leave the room." This he spoke in an exceedingly angry tone, so much so that he foamed at the mouth. "Mr. Paine," I continued, "I assure you our object in coming hither was purely to do you good. We had no other motive. We have been given to understand that you wished to see us; and we are come accordingly, because it is a principle with us never to refuse our services to a dying man asking for them. But for this, we should not have come; for we never obtrude upon any individual."

Paine, on hearing this, seemed to relax a little. In a milder tone than he had hitherto used, he replied: "You can do me no good now, it is too late. I have tried different physicians, and their remedies have all failed. I have nothing now to expect [this he spoke with a sigh] but a speedy dissolution. My physicians have, indeed, told me as much." "You have misunderstood me," said I immediately to him. "We are not come to prescribe any remedies for your bodily complaints: we only come to make you an offer of our ministry for the good of your immortal soul, which is in great danger of being forever cast off by the Almighty on account of your sins, and especially for the crime of having vilified and rejected his Word and uttered blasphemies against his Son." Paine, on hearing this, was roused into a fury. He gritted his teeth, turned and twisted himself several times in his bed, uttering all the while the bitterest imprecations. I firmly believe such was the rage in which he was at that time that, if he had had a pistol, he would have shot one of us; for he conducted himself more like a madman than a rational creature. "Begone!" said he; "and trouble me no more. I was in peace," he continued, "until you came." "We know better than that," replied F. Kohlman. "We know that you cannot be in peace: there can be no peace for the wicked. God hath said it." "Away with you, and your God, too! Leave the room instantly!" he exclaimed. "All that you have uttered are lies, filthy lies; and, if I had a little more time, I would prove it, as I did about your impostor, Jesus Christ." "Monster!" exclaimed F. Kohlman, in a burst of zeal: "you have no more time. Your hour has arrived. Think, rather, of the awful account you have already to offer, and implore pardon of God. Provoke no longer his just indignation upon your head." Paine here ordered us again to retire, in the highest pitch of his voice, and seemed a very maniac with rage and madness. "Let us go," said I to F. Kohlman: "we have nothing more to be done here. He seems to be entirely abandoned by God. Further words are lost upon him."

Upon this, we both withdrew from the room, and left the unfortunate man to his thoughts. I never before, or since, beheld a more callous man. This, you may rely upon it, is a faithful and correct account of the transaction. I remain your affectionate brotner,

† BENEDICT, *Bp. of Boston.*

We do not see how a fair-minded man can read the above narrative without regretting that the "author hero of the Revolution" did not possess the physical strength to exclude from the room two impertinent priests who could thus annoy and insult a man who was the victim of a most painful disease and almost in the agonies of death.

THE longer I live, the more clearly I see that the individual is more than is usually imagined Truth is not the work of committees, but of solitary thinkers. Discoveries are not made by societies on platforms, but oftener by single, patient, secluded watchers of the ways of nature.—*George Jacob Holyoake.*

MISCELLANEOUS.

THE New York *Examiner* (Baptist) says that "the great defect in Peter Cooper's life and character was his lack of religious development. . . . As a citizen and a friend, his character was admirable; but, of his duties to his Maker, he showed a strange forgetfulness." Of the same man, the *Christian at Work* observes: "Mr. Cooper was one of the simplest-minded men who ever lived. There were no hidden recesses in him, no sinuosities in his nature, no secret closets from which dark designs would spring. The transparent honesty of the man was apparent to everybody. He told at once what he wanted. He confessed what he thought. And people trusted him utterly where they would not confide in others. . . . He exemplified that enthusiasm of humanity which is the soul of all greatness of intellect as well as of character. Mr. Cooper was essentially a religious man, though his religion, like that of Bryant, was of the ethical rather than the emotional type."

FROM the fuller report now given us by Mr. Croffut, we learn that, however honestly the nurse may have reported the story about Dr. Beard's conversion, it is intrinsically improbable, and that no one else of those about him believe it. When she "said to him, 'Trust in Jesus,' and, with unimpaired faculties, he answered, 'I do. I am,'" he was so deaf that he could hear only when shouted to through an ear-trumpet, and was in intense pain. Others who were with him heard nothing of the sort. He did say, "Higher, higher," when gasping from the pressure on his lungs, and his attendant lifted him, as desired, to a sitting posture. His wife, his brothers, his attendants, all of them say that he died as he lived, "a scientist," "a philosopher," but not a Christian believer. Such seem to be the facts.—*Independent.*

AN Independent Church has been formed at Monmouth, Ill., which is one of the most orthodox communities in the West. Among its declarations is a protest "against that religion which would make man's salvation, either here or hereafter, dependent upon belief in any abstruse doctrine, dogmatic creed, or ecclesiastical tenet," and a statement "that the object of this association is to encourage the growth of a pure religion, inculcating absolute freedom of speech, inquiry, and belief; teaching the justice and necessity of an all-pervading spirit of charity; and upheld by an unswerving confidence in that Power whom we all adore as the infinite sum of all that is beautiful and all that is strong, wedded to illimitable wisdom and boundless love." Mr. Arthur Beavis, the pastor of this new church, which is called "Unity Church," writes:—

The population of Monmouth is about nine thousand. Of ten churches, five are Presbyterian. Such was the state of affairs when the liberal element decided to have a church of its own. Ten of the best business men in this part of the country stepped forward, and furnished $2,000 for a suitable building, which the ladies proceeded to make attractive; and so well have they succeeded that we now have as pleasant a lecture-room as one could wish for. The completion of this work, settlement of pastor, etc., occurred Feb. 1, 1883. Our support numbers some thirty families, and the prospects for the future are encouraging.

WHAT this country longs for is personalities, grand persons, to counteract its materialities. For it is the rule of the universe that corn shall serve man, not man corn.—*Emerson.*

BOOK NOTICES.

HISTORY OF CHRISTIANITY: Comprising all that relates to the Progress of the Christian Religion in *The History of the Decline and Fall of the Roman Empire,* and a Vindication of some Passages in the Fifteenth and Sixteenth Chapters. By Edward Gibbon, Esq. With a life of the author, preface, and notes by the editor, including *variorum* notes by Guizot, Wenck, Milman, "An English Churchman," and other scholars. New York: Peter Eckler, 35 Fulton Street. 1883.

Since this work of over eight hundred pages is composed chiefly of selections from the writings of probably the greatest of all historians, it is unnecessary to say that it possesses merits of the first order. In this volume, for the first time, is published separate from the other portions of Gibbon's great work, all in it that relates to the history of the Christian religion. The editor gives as a principal reason for this publication "the fact that a revised and abridged edition of Gibbon, called the 'Student's Edition,' edited

Digitized by Google

by William Smith, LL.D.,— which is deficient in a most important feature,—has gained a wide circulation in our schools and colleges. This edition claims, by omitting certain portions, to have gained space for narrating at length those grand events which have influenced the history of the world. 'The most important omission,' he naïvely remarks, 'relates to the history of the Church, in which Gibbon too frequently displayed the hostility he felt toward the Christian religion.'" In this work, these "most important omissions" are supplied, Gibbon's statements in regard to Christianity being given in full, without alteration. The notes of the editors of the various editions of the *Decline and Fall* are reprinted; and to these are added notes by the editor of this volume, which give evidence of considerable reading, but not of careful scholarship, discriminative critical ability, or an unprejudiced spirit. "The great merit of Gibbon's writings," Mr. Eckler correctly observes, "consists in the fact that he was strictly impartial, and wrote as an historian, not as an advocate." But Mr. Eckler writes not as an historian, but as an advocate. He is captious in spirit, often offensively dogmatic, and quotes as authorities writers, some of whom have no standing whatever among scholars. At the same time, the notes contain no small amount of information for general readers; and the publication will help to make known to the public, to some extent, a writer of whom Guizot says, "If words can add to Gibbon's glory, I conclude, with these, that before him no such work was ever written; nor, whatever attempts might here and there be made to continue or complete it, has he left any room for such another."

DANTE GABRIEL ROSSETTI: His Work and Influence, including a Brief Survey of Recent Art Tendencies. By William Tirebuck. London: Elliot Stock, Paternoster Row. 1882.

This appreciative essay on the dead poet-artist by one of his English admirers is written in a charming style, and the volume is neatly printed and bound. Of the artist, Mr. Tirebuck says, "He was a surviving plenipotentiary of early Italian feeling, presenting credentials to British common sense." He describes Rossetti's paintings thus: "A subdued Southern warmth pervades some of his pictures. They are like a deep sunset seen afar through a lacery of wood; or a sun-illumined glass window caught in its highest warmth, and transfixed in a frame to give glory to a sun-impervious wall." The writer is evidently in sympathy with the pre-Raphaelite school of art, and in these pages makes an excellent plea in favor of that school. Of Rossetti the poet, he has not so much to say. The volume will be welcomed by Rossetti's many admirers.

SPIRITUAL OR MAGNETIC FORCES. By Charles Holland, Ph.D. Second edition. New York: Asa K. Butts. 1882.

Apparently, this volume is the effort of a conscientious, earnest, and kindly natured Spiritualist to reconcile Spiritualism with science, as he understands science. The style is unstilted, yet refined; and the writer is evidently an earnest believer in his own theories,— theories which are upheld by the usual proofs of spiritual manifestation, the say-so of numerous "reliable" witnesses, who, no doubt, fully believe in their own testimony, but whose ghost stories are not of any great value as evidences to establish any claims according to the scientific method.

THE *North American Review* for May contains several articles, by able writers, devoted to the discussion of questions at the present moment prominent in the public mind. Senator John T. Morgan, in an article on Mexico, sets forth the considerations of commercial advantage and international comity which are bringing about a more cordial feeling between that country and the United States. Rev. William Kirkus replies to Bishop McQuaid's recent statements in regard to the decay of Protestantism, and makes a vigorous counter-charge upon the papal system in an article entitled "The Disintegration of Romanism." Edwin P. Whipple discourses on the diverse mental and moral characteristics of "Emerson and Carlyle." Prof. Felix Adler, in an article entitled "A Secular View of Ethics," argues in favor of a system of practical ethics based primarily on observation rather than on revelation, and the need of a new ethical movement. James Freeman Clarke, in "Affinities of Buddhism and Christianity," argues against the theory that the analogies between these two systems of religion have been derived the one from the other. The other articles are: "Communism in America," by Prof. Alexander Winchell; "Woman as an Inventor," by Matilda Joslyn Gage; "College Endowments," by Rossiter Johnson; and "Extradition," by A. G. Sedgwick.

THE *Atlantic Monthly* for May has come to hand. Henry James' dramatization of his story of *Daisy Miller* is not particularly interesting, but occupies nearly twenty-one of the first pages. Those who read Howells' *Wedding Journey* will be interested in the sequel to it in this number, "Niagara revisited Twelve Years after their Wedding Journey." Oliver Wendell Holmes is just now, by reason of his return to his first love, "the bright particular star" of the literary firmament; and his three-page poem on the transit of Venus, entitled "The Flaneur," will, in consequence, be read with additional interest at this time. The stories are by Sarah Orne Jewett and Charles Egbert Craddock. Edith M. Thomas has a capital out-door essay, entitled "The Rain and the Fine Weather." The historical paper of this number is by Henry Cabot Lodge, on "Colonialism in the United States."

THE May number of the *Catholic World* opens with a vigorous article on "Religion in American Law," from the Catholic stand-point, by C. H. Robinson, in which the writer declares that, in America, "societies for the prevention and protection of everything in nature are protected by law," except societies "to prevent cruelty to conscience and for the protection of common sense. The atheist loudly and insolently blasphemes and denies his Maker, and, inconsistently enough, 'thanks God' that he lives in a country which will protect his freedom of conscience to utter his blasphemies." The other leading articles of the number are "A Visit to the Russian Church," by Mary H. Allies; "Albertus Magnus," by Rev. James J. Dougherty; "The Three Sisters," by M. P. Thompson; "Celtic Architecture," by Bryan J. Clinche; "Who were the First Germans?" by C. M. O'Keefe; and "Queen Elizabeth's First Clerical Victims," by S. Hubert Burke.

"ST. NICHOLAS" for May has for its frontispiece a finely engraved portrait of the great artist Vandyck, a sketch of whose life and works will be found in the twelfth paper on "The Stories of Art and Artists," by Clara Erskine Clement. In addition to Trowbridge's "Tinkham Brothers' Tide-mill," two new continued stories appear in this number, "The Story of Robin Hood," by Maurice Thompson, and "Swept Away," a realistic story of the Mississippi floods, by Edward S. Ellis. "Chalk-talk," by Frank Beard, is an excellent study, full of practical hints to young artists. "Curious Items about Birds" will be interesting to all young naturalists.

ONE of the most excellent features of that most excellent treasure-house of juvenile literature, the *Wide-Awake*, is in its selection every month of some short but famous poem from the works of standard authors, like George Eliot's "Oh, may I join the choir invisible!" and Mrs. Browning's "Mother and Poet." The selection in the current number—for May—is Burns' "A Man's a Man for a' that!" These selections are always accompanied by full-page illustrations by the best artists.

"OUR LITTLE ONES" for May is adorned on every page by beautiful engravings, in which birds and animals are very prominent. In addition to the song, "The Lady Moon," with music, seven of the articles in this number are in verse, and all the articles in prose or verse are written in a wide-awake and interesting manner.

PERSONAL ITEMS.

MR. GEORGE D. LAWSON will lecture in this city at Paine Hall next Sunday afternoon at 2.45 o'clock, on "Atheism in Nature." Admission is free.

M. RENAN has just published in Paris a pamphlet defending the Jews. The Russians and Germans would do well to read it, and see how like mediæval fiends they have acted.

ONE of the most faithful and industrious advocates of woman suffrage, almost since the movement was inaugurated, has been Mrs. Caroline H. Dall, formerly of Boston, but now of Georgetown, D.C. She has delivered three hundred and fifty public addresses during the last twenty-two years in behalf of the cause, besides doing not a little writing for the press.

THE Crown Princess of Germany is an assiduous reader of English and German books and newspapers, and keeps herself well acquainted with all that is going on in politics and society in both countries. She pays especial attention to all phases of radical and religious agitation, and never rejects without studying it a new idea, no matter how violently expressed in print.

GOVERNOR SEYMOUR, of New York, proposes that, in strict harmony with the sentiment and purposes of Decoration day, it should be also a day of tree-planting. In many rural villages there is one day in spring when the villagers turn out and smooth the village street, and trim the paths and grass, and prune the old shade-trees and plant new. This pleasant work might well be done on the memorial holiday, and it would increase its beautiful associations.

THE London correspondent of the Boston *Advertiser* is Mr. William Clarke, whose occasional articles in *The Index* upon current English intellectual and social movements have been so interesting. Mr. Clarke is a pronounced radical in politics as in religion, with a mind singularly penetrative, vigorous, and well informed; and certainly no English letters now coming to our American papers are better worth the reading of thoughtful people who wish to get at the true inwardness of current English politics than these letters of his to the *Advertiser*.

MISS ELIZABETH WORDSWORTH, the lady principal of Lady Margaret Hall, the new girls' college in Oxford, has published a little volume of graceful and simple poems, *In-doors and Out*, which will be of special interest to those of our people who are interested in the movement for the higher education of women in England, with which the author is so prominently identified. Miss Wordsworth is clearly a woman of varied talents and culture and of fine feeling. Several modest works from her pen—all, apparently, directed to practical purposes—have appeared before the present volume of poems.

ARABI BEY, in his exile in Ceylon, is learning English, in order, as he says, to know what the newspapers are saying about him. He and his fellow exiles are anxious to have their children well educated, and are perfectly willing to have them educated by the English. They desire that their daughters shall have exactly the same advantages as their sons. When told that the bishop of Ceylon had established a good school, they at once expressed an intention of sending their children to it. They were quite willing, they said, that their daughters should be instructed in Christianity, which was itself a good thing, and, as their children were well grounded in the Koran, it was impossible they could become Christians at heart; for God was good, and they fully relied on the virtue and power of the Koran to keep their children in the true faith, but educated they must and should be.

EDWIN BOOTH met with a most flattering reception in Hamburg, Germany. The house was crowded, every seat being sold a fortnight before the performance. The actors in the cast were wild with delight; and men and women alike embraced and kissed the great tragedian, much to his discomfiture. When the curtain fell, he was repeatedly recalled and vociferously cheered; and, after that, he was embraced by all the dramatic company, except the poor little extra girls who acted as pages. As he left the theatre, these girls were waiting for him in the hall; and, in a perfectly artless and modest manner, one of them approached him, and in broken English said through her tears, "Mr. Booth, you make us cry: we do want so much to kiss you." After the osculations of a number of enthusiastic German gentlemen, this surely was no bad change. He had to take home a number of floral contributions; and, as he passed to his carriage, several hundred persons were in waiting to catch a glimpse of him and to say good-night. He received seven beautiful wreaths, two or three bouquets, and a great basket of flowers from the girls of the ballet. At Berlin, his Othello was a great hit. At Hamburg, his Lear carried all before it. Scholars like Werder and Leo, who have seen the best that the stage of Europe has known for sixty years, extol both his acting and his scholarship; and, by the dramatic profession, he is hailed and habitually addressed as "Meister." A public presentation of a silver wreath was made to him February 21.

A LITERARY AVALANCHE.

"What IS the world coming to? The poorest man now is put on an equality with the richest, so far as books are concerned."—CENTRAL BAPTIST, St. Louis, Mo.

A Point. All books here advertised are ready for immediate delivery. You can pay for the books after you have examined them. See particulars under "Fair Terms to Buyers," given below. **3rd Point.** To secure my best bargains, must you al- ways order promptly. The terms here given are good for ten days only. The "nimble six-pence" is one item essential to the low prices. Booksellers generally do not sup- **4th Point.** ply my publications, but slander them instead. Some are friendly at heart, but I can allow them only small discounts, and the "pressure" of millionaire publishers, incline the majority against me.

THE ELZEVIR LIBRARY.

"The cheapest of all the libraries."—SUNDAY GLOBE, Boston.

"Even in these days of cheap books this is wonderful."—DAILY POST, Pittsburgh.

"The greatest attraction in point of cheap and good reading that any publisher has yet offered."—THE MAIL, Toronto.

The following have already appeared in THE ELZEVIR LIBRARY, and are sold separately at the prices affixed. All are *unabridged*, and are printed in type shown by these four lines, or larger.

1 Rip Van Winkle. By Washington Irving..... 2c.
2 The Burning of Rome. By Canon Farrar..... 2c.
3 The Words of Washington. His most celebrated papers.. 4c.
4 Life of Washington Irving. R. H. Stoddard..... 6c.

32 The Indian Song of Songs. By Edwin Arnold..... 6c.
33 Plato. By Clinton W. Collins..... 15c.
34 Horace. By Theodore Martin..... 15c.
35 Life of Alex. H. Stephens. By Frank H. Norton. Illus... 10c.

The entire series of "Ancient Classics for English Readers," 27 vols., heretofore sold at $1 each, are publishing one or more each week, uniform with the Cæsar, Herodotus, Aristotle, etc.

A Great Offer. On condition that you will forward your order, within ten days from your receipt of this paper, I will send by return mail, for 25 cents cash, your own selection from the above list to the value of 35 cents, or, for $1.50 cash, the entire list, the full price of which is $2.08.

Library of Universal Knowledge.

"It is the crown of the cheap and solid literature movement of the day."—PRESBYTERIAN JOURNAL, Philadelphia.

I have again secured control of the publication of this greatest of American Cyclopædias, and am again able to adopt, substantially, my old price-list. The present are uniform with the former American Book Exchange editions.

This is a verbatim reprint of the 1880 London edition of Chambers's Encyclopædia, with copious additions by American editors. It gives an amount of matter about 10 per cent. more than Appleton's Cyclopædia, (price in cloth, $80.00), and 20 per cent. more than Johnson's Cyclopædia (price $51.00 in cloth). For the general reader it is the best Encyclopædia ever published, whatever the price. Prices for the set of 15 volumes are as follows: Extra cloth, $15.00; half russia, $20.00; full library sheep, marbled edges, $23.00.

Special Offer. On condition that you order within ten days from your receipt of this paper, I will send you by express, or freight, at the following special prices: Cloth, $11.50; half russia, $14.50; sheep, $16.50. See particulars under "Fair Terms to Buyers," below.

"We admire a man of pluck and brains. He may be cast down, but he cannot be destroyed; he may be brought to the dust, but, gathering new vigor and resolution from his very misfortunes he raises a conqueror above them all. The literary monopolists, succeeded in strangling the great 'Literary revolution,' but while the echoes of their rejoicings are still heard, behold, the irrepressible Alden appears in their very midst at the head of a 'Literary Rebellion,' which, in a magnitude and glory of its achievements, bids fair to outstrip the late 'Revolution.' So mote it be."—RECORD, San Augustine, Texas.

The Great British Novelists

These choice editions of the world's most eminent novelists, are printed in the large and beautiful type shown by these three lines.

I have recently been so extremely fortunate as to secure the control of the entire "plant" and all of the manufactured stock of the superb "Caxton Illustrated Editions" of the Complete Works of **Dickens** and **Thackeray.** The Dickens is published in 15 large 12mo volumes, large Lon Primer type, with about **200 full-page illustrations.**

Dickens. It is acknowledged on all hands to be the best edition of Dickens published in this country. The binding is especially unique and beautiful, the best English cloth, with ink and gold designs, and the set is packed in a neat paper box. The following is a list of the volumes, each containing over 800 pages.

1 Pickwick Papers
2 David Copperfield
3 Martin Chuzzelwit
4 Nicholas Nickleby
5 Bleak House
6 Little Dorrit
7 Dombey & Son
8 Mutual Friend
9 Oliver Twist, Italy, Notes
10 Old Curiosity Shop and Hard Times
11 Two Cities, Sketches by Boz
12 Barnaby Rudge and Edwin Drood
13 Expectations, Traveler, Miscellany
14 Christmas Stories
15 Child's History of England,

The price of this edition has heretofore been $22.50 per set. which I have reduced to $14.00. My edition is absolutely the same as heretofore published. The reduction is entirely in price, nothing in quality. Separate volumes, $1 each.

Thackeray's. Works may be described in the same words which I have applied to Dickens, as to type, illustrations and binding, except that they are bound in eleven volumes. The following is a list of the volumes:

1 Vanity Fair
2 Pendennis
3 Newcomes
4 Virginians
5 Philip, etc
6 Henry Esmond, etc
7 Paris, Irish Sketches, etc
8 Barry Lyndon, etc
9 Roundabout Papers
10 Burlesque, Yellowplush, etc
11 Christmas Books

The price of the edition heretofore has been $16.50 per set, which I have reduced to $10. Separate volumes, $1 each.

Waverly. This delightful edition of Scott's Waverly Novels is just published, uniform in all respects with Dickens and Thackeray. The volumes contain over 900 pages each, with profuse, fine illustrations. The following is a list of the volumes:

1 Waverly and Woodstock
2 Black Dwarf, Old Mortality, Quentin Durward
3 Bride of Lammermoor, Legend of Montrose Chronicles of the Cannongate, etc
4 Kenilworth, St. Ronan's Well
5 Guy Mannering, Anne of Geierstein
6 Rob Roy, Heart of Midlothian
7 Ivanhoe, The Talisman
8 The Monastery, The Abbott
9 Fortunes of Nigel, Count Robert of Paris
10 Redgauntlet, The Pirate
11 Fair Maid of Perth, The Antiquary
12 Peverll of the Peak, The Betrothed

It is much the handsomest edition ever published at anything less than double the price here asked. It can be supplied in sets only. An edition much inferior to this, printed from these same plates, has heretofore sold at $18.00; I reduce to $12.00.

Eliot. George Eliot's complete works are published uniform in size and general character with the above but without illustrations. It is the only complete edition, including her poems, and much the finest published in this country. The following are the volumes:

1 Middlemarch
2 Daniel Deronda
3 Romola
4 Adam Bede
5 Felix Holt
6 The Mill on the Floss
7 Scenes from Clerical Life and Silas Marner
8 Theophrastus Such, The Spanish Gypsy, Jubal and Other Poems.

This edition has heretofore sold at $12.00. I reduce the price to $7.00 for the set of 8 vols. It can be supplied in sets only.

Amazing offer. Notwithstanding the very great reductions in the retail prices as above, I offer you still further reduction on condition that you order within ten days from your receipt of this paper (see full particulars under "Fair Terms to Buyers") as per following net prices, to be sent by express:

Any separate volumes of Dickens or Thackeray each 70 cents.

Dickens' Complete Works, per set..... $10.00
Thackeray's Complete Works, per set..... 7.00
Scott's Complete Waverly Novels, per set..... 8.50
George Eliot's Complete Works, per set..... 5.00

"Permit me to congratulate you on being right side up again. The greatness and success of a man consisteth not in his being able always to stand up, but in his being able to get up as often as he falls or is knocked down."—DR. JOSIAH CURTIS, Nacoochee, Ga.

"You don't know how glad I am to see you on deck again, as your own captain and pilot. I enclose $4 for Irving's works in two volumes. It is cheaper than stealing."—FRED. THOMPSON' Lynn Centre, Ill.

Works of Washington Irving.

The expiration of the copyright on his writings frees them from the short-sighted monopoly which has heretofore kept the incomparable productions of this most famous of American prose writers beyond the reach of the masses of book buyers. I now have ready:

MODEL OCTAVO EDITION—Complete in two volumes, aggregating about two thousand pages, containing all of his writings except the "Life of Washington." Price, per set, cloth, $1; half russia, red edges, $5.

ILLUSTRATED EDITION.—The same as the above, printed on finer paper, very richly bound, in three volumes, cloth, extra gilt, red edges, and enclosed in a neat box. This edition is sumptuously illustrated with 64 full-page colored engravings by celebrated artists. Price for the set, $7.50.

Extra! If ordered within ten days, I will send you Irving's Works as above by Express (see "Fair Terms to Buyers") at the following special net prices: plain cloth, $3; half russia, $3.75; Illustrated, $5.65. Previous to the publication of this edition the cheapest edition of Irving was $32.50 per set.

"I am glad you have tackled Irving. The fearful prices of the monopolists have kept it off my shelves so far. I give you this week a first-class notice. You deserve it without any consideration of books in return."—P. J. SMALLEY, (Editor) Caledonia, Minn.

The Irving, in three Vols., is the finest thing I ever saw at the price. Indeed, it is not the fault of the hero of the literary rebellion if lovers of good literature go without books. There is a place in the future history of America for this same hero, should he conquer a final success, second to that of Rowland Hill in the History of England.—Mrs. E. A. RUSSELL, White Pigeon, Mich.

Cyclopedia of Fiction.

The below mentioned volumes are all printed in the very beautiful large Long Primer type, which is shown in these four lines.

In this series it is intended to include, unabridged, the best work of each of the great authors of the world who have won eminent place in the realm of fiction. These characteristic volumes make you acquainted with those famous writers not to know something of whom would be lamentable ignorance; afford you an infinite amount of pleasant recreation, and of really useful knowledge; for fiction, better than history, gives you intimate knowledge of the life of the people in the various ages and countries in which its scenes are laid. The following volumes may be roughly classed as representing:

Hyperion—Modern life of the scholar and poet.
Thule—Modern romance, art and scenery of North British Isles.
Adam Bede—North of England country life in the last century.
Hypatia—Egyptian and Roman life in the first century.
Ivanhoe—English life in the romantic era of the Crusades.
Pompeii—Life in a Roman city in the first century, and fate of Pompeii.
Copperfield—Lower and middle classes of England during recent times.
Jane Eyre—Unequaled pictures of certain phases of English life.
John Halifax—English life again, nobility in the common.
Vanity Fair—English life; the keenest of modern satires.
The Spy—Green Mountain Boys—American life in Revolution times.
The Berber—Life in Spain and Morocco in the 17th century.
Horse-Shoe Robinson—American Revolutionary Life.

1 Longfellow's Hyperion and Black's A Princess of Thule; cloth 75 cts. half russia, 95 cts.
2 George Eliot's Adam Bede, and Kingsley's Hypatia.; cloth, 90 cts.; half russia, $1.10.
3 Scott's Ivanhoe, and Bulwer's Pompeii; cloth, 80 cts.; half russia, $1.00.
4 Dickens' David Copperfield; cloth, 80 cts.; half russia, $1.00.
5 Charlotte Bronte's Jane Eyre, and Mrs. Mulock-Craik's John Halifax, Gentleman; cloth, 80 cts.; half russia, $1.00.
6 Thackeray's Vanity Fair; nearly 200 fine illustrations; cloth, 90 cts.; half russia, $1.10.
7 Cooper's The Spy, and Judge Thompson's The Green Mountain Boys: cloth, 80 cts.; half russia, $1.00.
8 Kennedy's Horse-Shoe Robinson, and Mayo's The Berber: cloth, 80 cts.; half russia, $1.00.
Two books bound in one as indicated, for price named.

Cyclopedia of History

The historical portions of Cyclopedias are commonly made up of brief sketches by unknown authors, the subjects arranged in alphabetical order. This series will include, *unabridged*, the great standard works of the most celebrated authors, with additions by less known writers, such as are necessary to make the series universal and complete. Brevier type is shown by these lines; Long Primer, two sizes larger, is shown elsewhere.

1. Green's Larger History of the English people. Model Octavo edition, Brevier, solid. Cloth, $1; half russia, $1.25. Elzevir Ed., Brevier, leaded, 5 vols., Cloth, $2; half Russia, $2.50.
2. Schiller's History of the Thirty Years' War in Germany. Elzevir edition, Brevier, leaded. Cloth, 45 cts.; half russia, 60 cts.
3. Creasy's History of the Fifteen Decisive Battles of the World. Elzevir edition, Brevier, leaded. Cloth, 45 cts.; half russia, 60 cts.
4. Schiller and Creasy, as above, in one volume, Model Octavo edition Brevier, solid. Cloth, 60 cts.; half russia, 80 cts.
5. Carlyle's History of the French Revolution. Model Octavo edition, Brevier, solid. Cloth, 60 cts.; half russia, 80 cts. Elzevir edition, 2 vols., Brevier, leaded. Cloth 90 cts.; half russia, $1.20.
6. The Histories of Carlyle, Schiller, and Creasy, in one volume, Model Octavo, Brevier solid. Cloth, $1.50; half russia, $1.75.
7. Schmitz's Manual of Ancient History, from earliest times to A.D. 476. Large 12mo., Long Primer, solid. Cloth, 65 cts.; half russia, 80 cts.
8. Rollin's Ancient History of the Egyptians, Carthaginians, Assyrians, Babylonians, Medes and Persians, Grecians and Macedonians. 4 vols., large 12mo., Long Primer, solid. Cloth, $3.20; half russia, $4.
9 Gibbon's History of the Decline and Fall of the Roman Empire; Complete in two vols., large 12mo., Brevier, solid. Cloth, $2. half russia, $2.50.
10. The Notes of Dean Milman to Gibbon's Rome, as above, large 12mo., Brevier, solid. Cloth, 80 cts.; half russia, $1.
11. Gibbon's History of Rome, with the notes of Milman, complete in 5 vols., Brevier, solid. Acme edition, cloth, $2.30; Aldus edition, half russia, gilt top, $3.50.
12. Macaulay's History of England, complete in 3 vols., Brevier, solid. Acme edition, cloth, $1.40; Aldus edition, half russia, gilt top, $2.25.
13. Grote's History of Greece, complete in 4 volumes, Brevier, solid. Acme edition, cloth, $2.25; Aldus edition, half russia, gilt top, $3.50.
14. Froissart's Chronicles of England, France, Spain, and adjoining countries. Imperial octavo, double column, Brevier, solid, numerous illustrations. Cloth, $1.50.

SIZE.—The following are the sizes in inches, of editions above named: Elzevir, 6 by 4 1-2; model octavo, 10 1-4 by 6 7-8; 12mo, 7 3-8 by 4 7-8; Acme, 6 1-4 by 4 1-2; Aldus, 7 by 5 1-4.

Special Offer. If ordered within ten days from your receipt of this paper, I will send your own selections from Cyclopedia of Fiction and of History by express, (See particulars under "Fair Terms to Buyers,") at the following special discounts:

Any selections under $5, at 20 per cent. discount.
Any selections over $5, at 25 per cent. discount.

Fair Terms To Buyers.

Any books which you may order which are not found, for any reason, satisfactory, MAY BE RETURNED if immediately, by cheapest conveyance, at my expense, and your money will be immediately refunded.

Orders under $5.00 net must be accompanied by the cash.

Orders over $5.00 net, will be filled by express, C. O. D., AND PRIVILEGE OF EXAMINATION ALLOWED BEFORE PAYMENT is required. Business references, or a small cash payment, should accompany orders from persons unknown to me. Full remittance with your order will save the express charges on the return of the money.

Orders will be filled WITHOUT THE C. O. D., and you can pay for them after arrival and examination, if any merchant of good business standing will certify:

"M. . is known to me as honorable and responsible, and will either pay for, or return, immediately upon receipt, any goods which he may order."

Let this be signed and inclosed with your order. It is only a simple guarantee, by one who knows you, that you are honorable, an evidence of your good faith. The name of a "Merchant" is required, because the "Commercial Reports" tell me in a moment what is the business standing of any merchant in the United States. You, a farmer, doctor, or clergyman, may be of the highest standing, but I have no means of knowing the fact.

The Elzevir Library is sent prepaid at the prices advertised. All other books are sent prepaid at LIST PRICES, but when sold at NET PRICE on special offers, transportation charges will be paid on arrival of the goods by the person receiving them; if desired to be sent by mail, add 15 per cent. of LIST prices, to cover postage.

Transportation will cost you much less, proportionately, on a large package than on a small; it will be wise, therefore, to combine with your neighbors and make your order as large as possible.

Over 50 lbs. in weight can usually be sent more cheaply by freight than by express, but in that case you must pay actual cost of boxing and cartage. Roughly estimating, $10 worth of books at list price will weigh 20 lbs. By freight, the Railroads charge anything less the same as 100 lbs.; therefore make your order large as possible.

THIS COUPON

Must be cut out and returned with your order (mentioning the name of the paper from which it is taken,) within ten days, from receipt of this paper in order to entitle you to the special discounts offered in this advertisement.

Remit by Bank draft, Express or Money order, or registered letter. Fractions of one dollar can be sent in postage stamps. Address,

JOHN B. ALDEN, Publisher,
P.O. Box 1227. 18 Vesey St., N. Y.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first issue, will be an advancement upward of half a century ago, devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute freedom of thought, and independent of belief in God, is the necessary condition of a true conception of Religion and of Religious Progress. Price 12 copies, $1.00.

THE INDEX ASSOCIATION,
3 Tremont Place, Boston, Mass.

SEVERAL HUNDRED VIRGINIA FARMS CHEAP. Climate mild. Taxes low. Catalogue free. C. D. EPES, NOTTOWAY COURT HOUSE, VIRGINIA.

Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

THE SECULAR REVIEW.

A JOURNAL OF

English Liberalism.

CHARLES WATTS, W. STEWART ROSS, } Editors.

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.

Subscriptions may be left at THE INDEX office.

Mrs. Dr. Parker, of England,

Has made a successful lecturing tour through the South, and is prepared to give lessons on "Eastern Magic" and the immortality of the body. Parlor discussions.
1044 WASHINGTON STREET.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c. per line.
" 13 " 25	"	8c. " "
" 26 " 51	"	6c. " "
" 52	"	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

MR. TREVELYAN declares that, next to the eman cipation of the serfs of Russia, the Irish Land Act is the most radical measure any government has undertaken, and that it has reduced rentals by $1,000,000 a year.

THE Campbell penal code amendments, signed by Gov. Cleveland last week, practically repeal what are known as the Sunday blue laws, which have been so obnoxious to a large class of people in New York and Brooklyn.

A DESPATCH from St. Petersburg says that "all dates are new style," the Czar and his officials, it seems, having done what the revolutionary propaganda did years ago,—adopted the calendar of civilization. The popular reckoning throughout Russia is according to the old style, which is eleven days behind the new style.

THE Crown Prince of Germany recently gave an address before the Royal York Lodge in Berlin, which has been the subject of much comment among his brethren of the Order. He said that Freemasons should be more progressive, and that, instead of clinging tenaciously to old traditions, whose value consists solely in their antiquity, they should distinguish themselves by being in the front rank of seekers after new and living truths.

THE Methodist ministers of Nashville recently passed resolutions condemning all theatrical entertainments as "detrimental to the interests of morality and religion," and warning Christians against attendance upon the dramatic festival held in Cincinnati last week, of which some of the members of Methodist churches in Nashville were known to be supporters. The entertainment, which extended through six evenings, was a great success, in spite of the resolutions of the Tennessee parsons. The audience one evening comprised fifty-seven hundred persons, probably the largest number before which a dramatic representation was ever given in this country; and the receipts for that night, including premiums, amounted to about $11,000.

SIR JOHN A. MACDONALD, the Premier of Canada, announces, as a part of his reform programme, suffrage for unmarried women. Many of our woman suffragists are likely to be dissatisfied with this discrimination against married women, whom the Canadian Premier evidently believes are sufficiently represented by their husbands. The Springfield *Republican* pertinently remarks: "To be completely admirable, the law should place wives on a level with their husbands in political rights, for there is no more sense or justice in making marriage an obstacle for women than for men; but, even as it is, this measure, introduced by the government of the Dominion of Canada, is, even should it be defeated, the most significant and influential step that has yet been taken in this great and inevitable reform." The opposition to the bill in the Canadian Parliament is strong, and is growing bitter.

THE Providence *Journal* states that, at a recent Jewish wedding, the bride's hair was cut off immediately after the ceremony, in accordance with an ancient custom, in order to render the bride unattractive to other men than her husband. This custom, it is said, is observed only by the most orthodox Jews. Referring to this, the *Investigator* sensibly remarks that "the custom is very foolish, both for bride and bridegroom, and especially for the latter, when we consider the reason for the shearing process. The man who has no confidence in his wife unless she is clipped, and particularly if she is endowed with 'Hyperion curls,' as some Jewesses are, deserves to be clipped himself as bare as a bald-headed eagle; and we wonder that the bride didn't insist upon making the bridegroom take his own medicine. 'What is sauce for the goose is sauce for the gander.' We go in for even-handed justice and an equal reciprocity in all things."

JUDGE COLBURN of the Supreme Court of this State, after hearing the testimony presented at Barnstable last week in regard to the condition of Freeman of Pocasset, who killed his little daughter four years ago, declared that he must, on the evidence, decide that the man is now sane. This decision left Freeman under the indictment for murder found in 1880, and in the custody of the sheriff. His counsel moved that he be discharged from custody, and permitted to go at large on his own recognizance. The judge responded that he did not think it was within his power to discharge a prisoner indicted for murder on a recognizance, either with or without sureties. He directed that the proper papers be issued for discharging Freeman from the asylum and remanding him to the custody of the sheriff. It will be remembered that this unfortunate man was adjudged to be insane a few months after the murder was committed; and, although there seems to be no doubt in regard to his present sane condition, it is certain that, in the interests of society, great care and caution should be exercised in regard to giving full personal liberty to one who has been under an insane delusion strong enough to nerve his arm to kill his own little daughter.

MANY people in this country are ready to accept almost any statement that reflects upon the Chinese. It may be well to mention to their credit that a Frenchman, who was a consul several years in one of the cities of China, has written a description of that country, in which he asserts that in the interior provinces, where the people have had no intercourse with foreigners, there is an unparalleled absence of crime; that in some of these provinces which have more inhabitants than any European country, Russia only excepted, the criminal records show that intervals of years have occurred during which not one murder was committed; and that the number of robberies and thefts with which its courts have to deal is exceedingly small. If these representations be correct, the Chinese have, in some respects, advanced far beyond the Western nations. But should those portions of China, which the French writer says are so free from crime, awake to the modern life and engage in its active and ambitious struggles, it is very probable that the ratio of crime would be about the same as in those countries which represent the progressive civilization of the century.

MR. GILES B. STEBBINS, replying to the statements in regard to Garrison by Rev. Leonard W. Bacon in the *Century* for March, writes in the *Religio-Philosophical Journal:* "In the early days of the anti-slavery movement, Dr. Bacon was not an abolitionist, but was in church fellowship with the apologists of slavery and with slave-holders, helping thus to sanction and sanctify slavery. He could call Garrison an infidel and could fellowship as pious Christians men who, as Whittier said, would

> 'Torture the hallowed pages of the Bible
> To sanction robbery and crime and blood,
> And in Oppression's hateful service libel
> Both man and God.'

"For this Garrison gave him fit and stern rebuke, as he did others like him; and, in memory of that merited rebuke, his son uses the *Century* to belittle Garrison and his co-workers. In his weak effort to show that they had no influence on the conscience of the nation, he only shows his own weak folly. It is too late in the day for that. As to Lincoln being the 'object of his calumnious vituperation,' I know that they treated each other as personal friends during Garrison's visit to Washington in the days of the Civil War. Mr. Garrison never spoke of any man in the spirit of vituperation. He told the truth, without compromise and without malice. In the last years of his eventful life, he was greatly beloved and respected by the best and most eminent persons. His name is historic and honored the world over. At his funeral in Roxbury, a suburb of Boston, the thousands in attendance were made up of the noble and eminent, and of the poor and persecuted whom he had befriended; and clergy and laity, orthodox and heterodox, paid tribute to his excellence and moral heroism."

THE FATE OF DR. BEARD.

As stated in *The Index* last week, the story related by Joseph Cook in one of his Monday lectures about the death-bed conversion of Dr. George M. Beard to the Christian faith has, like many other of "the Monday Lectureship's" statements, fallen to pieces on being put to the test of evidence. It is becoming more and more clear, the longer Mr. Cook addresses the public, that in his reports of matters of fact he is exceedingly loose. Even the devoted disciples who have flocked to Tremont Temple to hear him must begin to question whether his accounts of things in his journey around the globe, which have furnished the principal material for his last course of lectures, are not to be received with a good deal of allowance. The trouble with him appears to be that his sense of the importance of certain dogmas entirely overpowers his sense of truthfulness, and thus he is often led into criminal carelessness in sifting the facts which he reports concerning people and events. The *Nation*, referring to some comments in the *Independent* on the subject, well says: "What the collapse of this story of death-bed conversion ought to check is not simply 'the abuse of a great truth' [the truth of a possible conversion in the very article of death, as the *Independent* had put it], but plain falsehood, and the reckless conversion of signs and wonders into moral pabulum. Truthfulness, strict truthfulness, and careful examination of facts are the lesson of this collapse for all prelude mongers, lectureships, and other moral and religious teachers."

But our present concern is not so much with Mr. Cook as with the *Independent*. The latter journal, having published Mr. Cook's lecture and given wide currency to the story therein of Dr. Beard's conversion (having also improved the occasion for an editorial upon the matter appropriate to its columns), promptly contradicts the story on learning through an authoritative correspondent the real evidence, and then supplements its previous editorial with the remarks of which the moral is chiefly that to which the *Nation* refers. But, incidental to this lesson, another statement was made which struck our attention more than that which the *Nation* quotes. It was this: "It pleases us to hear that those who have lived in unbelief have accepted the Christian faith, and we are glad to publish their conversion as an encouragement to others; but it is better that the Church should *let a hundred souls go down to their own destruction* than that it should attempt to convert them by falsehood or force." The part of this sentence which particularly arrested our thought we have put into italics. It is true that the *Independent* does not directly say that Dr. Beard has gone to destruction, now that the story of his conversion proves to be untrue. But, if it does not by implication say this, what does the latter half of this sentence mean? What else can the words mean, considering their connection, than that it would be better for the Church to let Dr. Beard go to destruction than attempt to make out that he was converted when he was not converted?

But does the *Independent* really believe that Dr. Beard has gone to any kind of "destruction"? We had supposed that a journal of its liberal proclivities in the orthodox ranks would take the ground that the "conversion" which is needful and saving is conversion from actual wickedness, or from a depraved heart and conduct, to a life of goodness, and that the evangelical faith comes in as the supreme instrumentality for effecting such a change of character. And we are, accordingly, surprised that the *Independent* did not seize the occasion to draw a distinction between a conversion which means a reformation of character and life and a conversion which means merely a change of intellectual belief. We can well understand how one who looks at mankind from the point of view of the evangelical faith should honestly believe, even though inclined to a liberal interpretation of that faith, that nothing less than that form of belief should have power to reach and convert the vicious, degraded, and sinful classes of society. But here was a man whose life had been neither vicious, degraded, nor sinful, but a singularly useful one. Against Dr. Beard's character, no word of reproach has been uttered. He appears to have been upright and true in all the relations in which he stood to other people, private and public,—a man of pure purposes and noble achievements, unselfishly and enthusiastically devoted to the discovery and spread of those truths of the universe which are adapted to the improvement of mankind. He may not have been a faultless man. But who among his Christian judges will claim to be faultless? We have, however, not seen any moral faults charged against him as among the things imperilling his salvation. What, then, had such a man to be saved from, what to be converted from? Plainly, only from a certain order of intellectual opinions. But is the *Independent* still in the ranks of those narrow, bigoted dogmatists who declare that, though a man's character may be as pure and his life as useful as was Dr. Beard's, he will yet go to "destruction" after death, if his logical faculties will not allow him to accept one set of opinions rather than another? The *Independent* has certainly lost an opportunity of setting forth what must be one of the vital articles of the New Orthodoxy, if there is to be any New Orthodoxy worth talking about,—namely, that the personal "conversion" of chief concern and moment is conversion from moral evil.

The *Independent* speaks of souls being permitted to "go down to their own destruction." By the use of the word "own," it would seem to teach the rational doctrine that human souls bring upon themselves their fate as the natural consequence of their own doings. It would be interesting, therefore, to know what sort of "destruction" our contemporary imagines has befallen Dr. Beard as the result of his life. We cannot think that it believes that he has suffered annihilation. That might be a consistent belief for the New Orthodoxy in the case of a man subject to vices that plainly consume the powers of body, mind, and soul. But the distinguished scientist was not the victim of any such destructive vices. He retained, evidently, his mental and moral faculties unimpaired till the last. The *Independent*, we are sure, will not adopt the materialist's doctrine that his life vanished to nothingness with the death of his body. Will it, then, say, with Swedenborg, that each soul will gravitate at death to that condition of existence in which it has been wont to find its supreme satisfactions in this life, and that, if those satisfactions have been illicit or irrational, the soul will still be forced by its own impulse into them, though they weary and nauseate and disgust? That would be a good explanation of the process by which a self-indulgent soul might find its own destruction. But would it apply to Dr. Beard? If he could have believed in a future life, would he not have looked forward to devoting that life to essentially the same interests and pursuits which absorbed him here? And, if he has found another life, would he not find in such employment his highest and a very noble felicity? Such a life, then, as would be the natural continuation of the thoughts and impulses that had become the habit of his mind could not properly be called "destruction." What other alternative is there left but that Dr. Beard has gone to that "destruction" which in ecclesiastical dialects signifies eternal misery. But does the *Independent* mean that? If not, what does it think has become of Dr. Beard? Will it not agree with us that the creative and sustaining Power of the universe is likely to find a better use for so noble-minded a man than to let him go to this or any kind of destruction, and especially for not being able to interpret certain facts of the universe in the same way that certain other people do?

WM. J. POTTER.

PASSION-PLAYING.

Last year, a clergyman at Evesham, England, made a brave effort to interest the humble working people of his parish by a series of *tableaux vivants*, with choruses, representing scenes in the life and passion of Christ. The performances were so impressive and successful that the evangelical clergy of that region and the dissenters, with their instinctive antipathy to everything beautiful, sounded an alarm; and this year, when a question came before the magistrate of licensing the hall in which the sacred tableaux had been exhibited, the license was given only on condition that there should be no more passion-playing. The magistrate was also a canon, and it had been stated before him that the performances immediately proposed in the hall were the sacred tableaux and "Puss in Boots." The canon said, We have no objection to "Puss in Boots"; but the religious performance has given offence to many sober-minded churchmen, and must not be repeated. This is the latest of a series of repressive acts by the authorities, which may be summed up as a determination that the Christian legend shall be taken literally and gravely. But all the world is still a stage, and the ecclesiastical world in England is no exception. The natural way with legends and myths, the outgrown creeds and traditions of mankind, is to be transformed by art into new pictorial or dramatic shape, and so enter on a fresh and real career as artistic creations. "Puss in Boots" is an instance of the way in which this is freely done, as regards the faith of our pre-Christian ancestors. But the traditions of one particular faith—the Christian—are resolutely withdrawn from artistic treatment; and minds which incline to see that also in scenic and dramatic expression are compelled to mount it on a stage in the imagination, and group together the costumes and actors distributed through the country. In this, however, they are aided by surviving church festivals, and particularly by Passion Week, which is a famous season for ghosts of the past to start up and play their parts in the guise of English men and women.

The Passion Week on which the curtain has just fallen was an especially successful performance. For instance, when a glorious burst of sunshine ushered in the day when the national God was crucified, the masses celebrated the event by crowding to the Crystal Palace and other attractive places, to indulge in the national sports. A few of the more sanctified shuddered, on their way to church, as they passed by the cricket players, and Kissers in the Ring, and racers on donkeys and ponies; and the clergy frowned on the vacant pews before them. But the great English newspaper, the *Times*, —which has resumed its early rôle of *Thunderer*,— spake out in an ominous way: "The conversion of Good Friday into a purely secular holiday from which all trace of religious meaning has vanished, as far as the bulk of the population are concerned, strikes many people as a ghastly anomaly. In reality, it is nothing of the kind. It is simply the application to a Christian festival of the practical denial of Christian precepts which obtains during

Digitized by Google

the rest of the year. Paganism was kinder to its children than the Christianity of this country has been during the last two or three generations to the toiling masses. We shake our virtuous heads over the vice and corruption of Rome; but it is easy to mistake a change of ethical fashion for moral advance, and it has yet to be proved that Rome had anything to match our Black Country or to outdo the East End of London. Good Friday has been seized for holiday purposes, because all other holidays were denied by a system which ignored the spirit of Good Friday through every other week of the year."

This plain speaking by the chief English journal was read along with reports of the preparations at Canterbury to seat on a throne the Head of the Church. The next few days were occupied in watching the Procession of the Cross. A worn and weary man was seen starting out with a cross on his shoulder, surrounded by people and soldiers, who scourged him, put a crown of thorns on his head, and scoffingly hailed him as a king. But, when they got passed through the gate of a grand cathedral, the crowd turned to bishops and clergymen in many-colored gowns, and officials with golden decoration. The man with the cross went up the cathedral aisle in fine raiment, his long train held by two young men in evening dress (rosettes in lappets, as if just from a ball), and he was set upon a throne. All the popular sports of Good Friday appeared in that pomp and purple and parade of the disciples of Him who was crucified, only it was not vulgar like the merry-making of the plebeian passion-players. And, now, a curious sort of ventriloquial entertainment took place. Services were read, which conveyed a reverse sense to people inside the chancel and those listening from the gallery. The former understood the readers and responders to confess themselves miserable sinners who had erred and strayed and had no health in them; but, to more distant ears, these sounds announced: "We are the elect of the land. They who do not belong to us are the miserable sinners. We have done those things that we ought to have done, and have left undone those things that we ought to have left undone, and there is health and wealth in us. In the name of Him who was crucified for blaspheming the gods of respectable Jews, we give thee, O my Lord, a throne next to the monarch's, and many thousands of pounds, and before thee pledge ourselves to crucify all who speak against the gods of respectable Englishmen."

No doubt, my reader has sometimes seen on the stage a representation of two rooms, with a partition between them, in which contrasted scenes go on at the same time. Artists have painted pictures of that kind. Indeed, in that famous Christmas number of the *Freethinker*,—for which three men are now in prison,—the chief cartoon represented a company of exceedingly unctuous Christians saying grace over a well-loaded Christmas dinner-table, —pictures of the crucifixion and of Mary with her Babe being on the wall,—while just outside the door in a snow-storm is seen a woman in tattered clothing, with her baby in her arms. Well, it so happens that at the very time when the new archbishop was taking his throne a poor man in London was committed to prison for really believing in the archbishop's creed. This poor man is one of "The Peculiar Family." His name is Cozzens. His daughter was taken ill, and he followed the command of what the law declares to be the Word of God,—"Is any among you sick? let him call for the elders of the church; and let them pray over him, anointing him with oil in the name of the Lord: and the prayer of faith shall save him that is sick, and the Lord shall raise him up." The law demands that the faith shall be reposed in a doctor; but this parent loved his child, and believed that to summon a doctor was inconsistent with the saving "prayer of faith." The child died. The father is in prison, awaiting trial for manslaughter. It is possible that this genuine believer in the Bible may be at this moment conversing with three fellow-prisoners, put there for genuinely *not* believing in the Bible. If the peculiar believer should be converted by the peculiar unbelievers, and, when he comes out of prison, should draw a picture of the Lord as a modern doctor, he would stand a chance of going back to the same cell. We are under a mixed-up kind of law, which punishes, with the same prison, belief and unbelief; and the only clear thing about it is that our rulers don't want us to take Christianity seriously and really either way.

You will observe that here are the elements of a good melodramatic passion-play. It is well mounted and well acted. But it is necessary to add that an increasingly large number of people, used to seeing such plays only in regular theatres, do not realize the theatrical character of this piece, and occasionally get excited and interrupt the performance,—just like that Californian miner who threatened to blow out Othello's brains, if he harmed Desdemona. For instance, while Bach's Passion Music was going on in St. Paul's Cathedral, a man leaped on the altar, pitched off the cross, kicked off the candlesticks, and went off to gaol, contented that he had called attention to the continuance of papal practices in his beloved Master's church. Then, again, there are three or four churches which, every Sunday, are the scene of fisticuffs, literally, between the evangelicals and the ritualists. The clergyman in one of them has just been roughly handled. Now and then, too, a pathetic tale reaches the public, which shows how much sorrow may be caused by the simplicity of young people who take this passion-playing in earnest. One of these is still before the public, and relates to the lovely and emotional young girl of sixteen, who has become a sort of martyr as a preacher of the Salvation Army, in Geneva, whose authorities she has found, to use her own words, "in a very unsaved condition." Her father, the Rev. Samuel Charlesworth, is a clergyman of the Church of England, and was in great distress when he found his daughter had gone off with the Army. In vain he appealed to her to return, and to the generals, male and female, to send her back. "I regret to say," he wrote to the *Times*, "that my appeal met with no responsive sympathy. Indeed, I must add that, both with respect to my child and to other young persons of whom I have heard, I fear the Army influence has a direct tendency to wean the converts from home associations and interests under the idea that its work is paramount in importance to all other pursuits and obligations, and even to the known wishes of parents. At all events, I then discovered, to my deep sorrow, that one of the most loving and devoted children had found stronger interests and more absorbing pursuits in the arena of the Army than in her own home."

This is all the more pathetic, because the deserted father appears so unconscious (such is the spell carried by a surplice!) of the source of his calamity. Through how many years has that emotional child sat beside her mother in the family pew, listening to her dear father as he declared mankind to be under the curse of God, millions daily sinking into eternal fires; that one only way of escape was provided, of which many have not heard or do not heed! How often had his reverent voice impressed on her the appeal of her Saviour, "Go into all the world, and preach my gospel to every creature"! How often conveyed a Saviour's warning that, if she loved her father or mother more than him, she was not worthy of him! Was that trustful daughter to suppose that, when her father said these things, he did not mean them? Was that tender heart to suppose that the appeals of her Saviour to try to save poor lost sinners only meant that she should dance and sing and play tennis, and follow the merry life that makes the English parsonages exceptionally gay? It is but too apparent that the unhappy clergyman must have been passion-playing so long that his unreal world and perfunctory phrases were parted from his consciousness. He evidently cannot comprehend that anybody should take his creeds and ejaculations seriously. But his daughter had faith in her father, took his teachings to heart, and her love of him is told in her leaving him.

This, as the clergyman says, is not an isolated case. The Salvationist excitement steadily gains on the educated ignorance of England; and a number of emotional ladies are alienating their property to give it to the Army. General Booth has floated a stock to net such moneys as the hysterical may be willing to lend to the Lord without earthly security. Religious insanity also increases: there is more than a nominal connection between Bethlehem and Bedlam. Of course, if all this increases, the passion-playing cannot go on very long. The "Furies" of Æschylus of Athens had to be prohibited, because of its effect on the nerves of weak women; and it is much the same sort of thing that is now performed in conventicles frequented by weak women. It is doubtful whether the actual and earnest preaching of the old-fashioned doctrines of hell, devil, and blood atonement, will be long freely permitted in England.

MONCURE D. CONWAY.

A MICHIGAN INDIAN RESERVATION.

II.

At the town of Mount Pleasant, Isabella County I left the train, and soon learned that I was even then upon Indian territory, that the town is partially built upon land that the United States gave to the Indians; but no Indian now owns a foot of it. Through the kindness of a prominent citizen of this town, I procured a team and a guide who was familiar with the Indians, and drove over a considerable portion of the settled part of the reservation. It was two miles away from town that I saw the first Indian house,—a shabby, unattractive little log building. There was a barn of a similar kind standing close by, and a little three-cornered lot of land covered with last year's cornstalks indicated the extent of the farm. This man, however, as my guide informed me, did not own the place on which he lived. At Isabella, on the Chippewa River, I saw the remains of the old dam that the government built there years ago for the grist-mill. Here had been the first Indian settlement; and, from this point, the lands had been occupied back along section lines for several miles. The mill was burned some years ago, and never rebuilt; and the dam is quite rotted and washed away. Driving through this entirely "deserted village,"—as far as the original inhabitants are to be named,—and up the hill that once formed the bank of the river, when it was a mighty stream compared with its present volume, we stop at a section corner on the upland, where I can see along the level road in front a regular succession of farm-houses and barns on either side of the way for a long distance. Ever since we had started, my guide kept pointing to cleared spots along the way, and saying that there had been the home of some Indian. So it was here. Pointing down this

Digitized by Google

road, he said: "All them places wuz Injuns'. Injuns cleared all them farms 't you see there, 'n' some of them houses 'n' barns wuz built by Injuns." "But where are the Indians?" said I. "Oh, they're all back in the woods on new land." Turning to the right a section's width, we came to another long, level road, down which we drove several miles. It was the same here. Almost every farm we came to had been the home of an "Injun." Here and there, an Indian family still lived by the roadside; and, occasionally, my attention was called to one away back from the highway. Coming to a painted house, I remarked that that must be a white man's house, but was informed that it was built by an Indian. He had settled there, built a log house, and got along well for a long time, then became proud, wanted a fine house, mortgaged his place to build it, and was turned out of it when built; and he, too, is "back in the woods on new land." The most prosperous places along the way had been held for years by industrious Indians, who had at last been "euchred" by the whites, and had to get back in the woods. At length, we came to two farms, where lived two Indian families that represented the best, the very few bright and successful men among the whole. One of these men is about sixty years old. He selected the land, eighty acres, where he lives, when he came here in 1856. He has forty acres under cultivation, lives in a frame house of good size,—plastered, but unpainted. He has a fair-sized barn. He has horses and cattle and sheep, hogs and dogs. He raises wheat, oats, corn, potatoes, and, in short, all the crops. He has a family of eleven children living and some dead. He is a self-possessed, good-natured old fellow, who is glad to see me and talks easily and with pleasure about himself. His place and family would pass easily in the average of homes and persons among the backwoods whites, and I am quite sure it is much better than many I have seen of the pioneer sort. The other man is thirty-two years old. His father selected eighty acres here, and settled in 1856. The son has sixty acres under cultivation, he said, and has made much improvement since his father's death. He, too, has a frame house and a good barn, and, altogether, as good a place as the average of homes among the whites in any woodsy district. This man is bright and keen. He has been elected to office in his township, and has the respect and confidence of everybody. His wife is a neat and pleasant-looking woman of perhaps twenty-four, and their two children are as bright-looking as could be found among many of our best families. These two families are enough, if there were no more, forever to set at rest any doubt as to the possibility of the Indians' adaptability to the environments of civilization. They have demonstrated the Indians' capacity for evolution; and it will be seen that they did it, too, in the face of somewhat discouraging obstacles. Besides these two, there are a few more in different parts of the reservation who have also good farms and are living well. But why have not more of them done as well as these few?

As far as I can, in the brief space at my command, I will answer the question. The land of this Isabella Reservation was valuable. Much of it is as good farming land as there is in the State, and it contained a large quantity of standing pine. White men grew hungry and thirsty for it. The country to the south and west filled up with whites; and this reservation lay there before them, withheld from sale, but little of it cleared, paying no taxes, raising but small crops, occupied, as it seemed to the enterprising whites, with a lot of "d—d, lousy, good-for-nothing Injuns!" Nobody cared for the Indian. He was the ward of the government. He was the legitimate prey of the whites. Just as it seems to be a common thought that it is not wrong to take what belongs to the general government, so it also appears to be the common belief among the whites who come in contact with the Indians that, as they are the recipients of government bounty, it is not wrong to take what they get in that way. There have been many men quite largely enriched by thus virtually stealing the money that government has paid to not these alone, but to Indians in general.

In 1864, a plot was set on foot to defraud the Indians here of their homes. An appeal was made to the United States, ostensibly by the Indians, but in fact by white "speculators" behind them, to have the title to the land issued in fee-simple to the Indian settlers. Government seems to have been suspicious that all was not right, for she insisted that this should be done only after it had been satisfactorily shown to her that the Indians were capable of taking care of their property. She said they should be carefully classified, according to their capacity, as "competent" and "not so competent"; and to the competent she would issue the patent in fee-simple. Had government agreed to grant titles to all of those who had selected land, the Indians would have been turned out of their homes several years earlier than in fact they were. The thousands of dollars paid by government for the support of schools among them had been of small good to the Indians. They knew but little more than when they went on the reservation. Their old habits had lingered among them. They had no practical white men among them to help them in their efforts to farm. The chief solicitude of the whites for them was to instruct them in regard to the future life and get their treasures in that. Consequently, but few among them, in 1866, were "competent." So it took five years to coach them up to a state in which they could be classified, with a possibility that the government would order an investigation; but, finally, the classification was completed, the schedule passed upon by the Secretary of the Interior, and to the Indians was given the power to do as they pleased with their homes. No sooner had they received titles to their lands than they disposed of them—the most of them did—to white men who had been waiting, working, for years to get them. The Indians did not know what they were doing. I am assured by a white man, who has been familiar with the whole history of these people for years, that they were utterly incapable of taking care of their own interests as against designing men. They did not know the value of money or of land. They "sold" out for a song, and were themselves sold every time. They were, in point of fact, swindled, robbed, without violence, it is true, and perhaps by Christian men; but they were robbed, nevertheless, just as thoroughly as if they had been driven from their homes by force. Then it was, and this is why it was, that the men who had begun the farms that I saw along the roads had gone "back into the woods on to new land." Turned out of their homes, they had no longer any claim for a foot of land upon government, or for a dollar. They were paupers. But their children might, as they came of age, select each forty acres. And, thus, the old folks went with their children into the woods to begin life anew, without teams, without money, without food, driven back by the wicked greed of designing white thieves to their old status of wigwam savagery. Yet not a hand was raised against their enemies. They bore this hard fate with their old proud fortitude, but it broke their hearts. They died and died, until there are now but five hundred of them left. Not a man among them to-day but who would as soon think to kill himself as to attempt to deprive any white man of his home by force or fraud, and yet the State and religion winked at the scoundrelism that turned these people out of doors, that destroyed almost the entire effort of the government to elevate them, and that made itself riches out of the homes they had made for themselves.

The few who still live in their homes had to resist long and repeated efforts of whites to coax or swindle them out of their places, and they show what the others might have become had they been treated as they should have been. I believe that government did not know what was being done, but she is none the less answerable for the acts of her agents. These Indians, as far as they have had an opportunity, have demonstrated, as I have said, the capacity and capability of their race for improvement. Most of them have been swindled out of their opportunity by dishonest whites. Government, having intrusted the care of these people and the fulfilment of her desire to make good citizens of them to men who evidently did not do their duty, it is the duty of government to try the work again. Taking a lesson from experience, she should withdraw her consent to issue the title to these lands in fee-simple until the Indians have lived upon the land for two generations. She should then place practical white farmers among the Indians, to show them how to work. She should place practical teachers in their schools, who should instruct them in things necessary to be known, to enable them to take care of their own affairs in a world of whites whose ruling motive is the greed of acquisitiveness. She should encourage among them only practical teachers of religion, who should impress upon their minds the importance of cleanliness, chastity, and health, making a good, honest, successful, happy life in this world the best and wisest preparation for that to come. Under such a course, pursued steadfastly for two, or perhaps even one generation, it is my opinion—based upon my observations among these people on this reservation—that the Indians will show themselves to be more useful and less dangerous citizens than are that large class of foreigners and naturalized citizens who run the rum-shops of our country.

CHARLES ELLIS.

AFFIRMATION AND THE OATH.

In the House of Commons, on the 3d inst., the Affirmation Bill—the immediate object of which was to enable Mr. Bradlaugh to take his seat as a member from Northampton—was refused a second hearing by a vote of 292 to 289. The next day, Mr. Bradlaugh had a hearing at the bar of the House, when he declared that he had been duly elected, and that his exclusion was an act of flagrant iniquity; and that since the Affirmation Bill, which would have enabled him to take his seat in the House, had been defeated, it was now his duty to take the official oath. A vote was then taken, on a motion of Sir Stafford Northcote, that Mr. Bradlaugh be precluded from going through the form of the oath, which was carried by a vote of 271 to 165, Mr. Gladstone voting with Mr. Labouchere against the motion. The London *Daily News* says that, by the rejection of the bill, the forces of bigotry and intolerance have triumphed. A despatch states: "There is general satisfaction throughout Ireland over the defeat of the government on the proposed Affirmation Bill. The feeling is so strong among Ulster Presbyterians against the recognition of atheism that Attorney-General Porter abstained from voting. Only two Home Rulers voted with the ministry, Donoghue and O'Shaughnessy. Both expect places, and cannot get re-elected."

Digitized by Google

Mr. Bradlaugh is disliked personally,—disliked on account of his antichristian and atheistic views, and disliked for his advocacy of republican principles and his strictures on the House of Brunswick. The strong feeling against him has made him an object of gross injustice and mean and bitter persecution. The clergy as a class, to their great discredit, have used all the influence they could command to arouse a public sentiment against the man, and to prevent his taking his seat in the House of Commons, to which he has been repeatedly elected. In their blind zeal for their faith, in their anxiety to defeat and punish a man who has had the courage to oppose Christianity from the platform in language the masses could understand and with arguments suited to their intellectual condition, the clergy have disregarded the commonest principles of justice, and demonstrated the utter worthlessness of the religion they profess to make men fair and honorable in their treatment of an avowed free thinker and open opponent. They have circulated petitions very industriously against the Affirmation Bill, which has just been rejected, and the rejection of which they know encourages insincerity, hypocrisy, and dishonesty. Rev. Malcolm MacColl, in a letter giving some of his reasons for refusing his signature to a petition against the Affirmation Bill, stated the plain truth in the following language: "As the law now stands, an avowed atheist may be elected a member of Parliament, and may take his seat in the House of Commons by taking the oath. There is not a member of Parliament who did not know what Mr. Bradlaugh's opinions were when he first appeared in the House of Commons. Yet, if he had then gone up to the table and taken the oath, there would have been no objection,—no objection, that is, if Mr. Bradlaugh had added profanity to atheism. There are now men in both Houses of Parliament who are perfectly well known to disbelieve in a personal God, and these men are compelled to take God's holy name in vain. The profanity, remember, is not on their part; for they do not believe in God. If forced to it, they do not object to a word which to their minds means nothing more than impersonal, unintelligent force. The profanity is on the part of the Christians who force unbelievers to go through what—to the Christian much more than to the unbeliever—is a mockery of the God of truth."

Oaths, Mr. MacColl might have added, are emphatically condemned by Jesus, whose teachings they who insist upon the oath profess to accept, but which they generally do not hesitate to disregard whenever they conflict with their interests or prejudices. The whole tendency, too, of the oath is to lessen the feeling of obligation to speak the truth when the oath is not taken. The oath does not insure the utterance of the truth for the very obvious reason that religious belief which gives meaning to the oath does not insure regard for the truth. Says Judge E. P. Hurlburt, in his work on *Human Rights:* "The religious sentiments are independent of that faculty of the mind which respects the truth. They may exist to a striking degree, and the possessor may, nevertheless, commit perjury with great facility. I speak as well from the constitution of the human mind as from a liberal experience of testimony from all sorts of men."

A man may believe in God and a future state; and yet in him the *moral* sense may be extremely weak, imagination and the power of reflection may be deficient, and there may be almost a total inability to realize in thought a causal relation between acts here and the condition hereafter. Rewards and punishments after death may seem so remote or, by reason of certain beliefs, so contingent as to exercise no perceptible influence on the conduct. Yet such a man, although he be destitute of integrity and honor, is permitted to testify; while a man like George Jacob Holyoake—who is unconvinced of the existence of a personal Deity or the immortality of the soul, who has the honesty to say so whatever odium he may thereby incur, who will not dissemble when he knows that by so doing he could conform to the requirements of the law—is regarded, by the stickler for the oath, as incompetent to tell the truth. Says Livingstone, in his *System of Penal Law for the State of Louisiana:* "If the truth could be demonstrated, it would appear that the fear of the consequences in a future state is not half so operative, taken by itself, as the fear of dishonor and punishment here. Therefore, in itself, this belief does not destroy the credibility of the witness. On the contrary, from the mode in which alone it can be proved, it must add to his credit. To avow this disbelief requires some courage. The atheist is a character not favored in society. A repugnance to utter a falsehood, for the most part, would be the motive for making the avowal; yet, the moment he has given this evidence of his regard for the truth, he is declared unworthy of belief. If, being an unbeliever, he answers falsely that he believes, he is a good witness. If he answers truly on this point, the presumption is that he will answer untruly to every other question that may be put to him; for remember that, whatever proof you may have to convict him of disbelief, it must all end in that to be derived from his own examination."

It is sufficient to say that a qualification which would exclude the testimony of a Humboldt, a Darwin, a Huxley, a Spencer, a Lewes, a George Eliot, and a Harriet Martineau, while admitting the testimony of a Guiteau and the James boys, has so little foundation in justice or the general weal that nothing but ignorance and religious bigotry and intolerance, and the selfishness and greed of demagogues who pander to the weaknesses of human nature for position and preferment, can explain opposition to its removal. And yet, in several States of the Union, a lack of belief in God or a future state is deemed sufficient reason for refusing to permit a witness to testify in a court, and denying a citizen the right to hold office. Thanks to the liberality of those who founded our Republic and framed our national constitution, no religious test is required as a qualification for office under the general government, and the testimony of the atheist cannot be excluded from our Federal courts. "It was deemed advisable," says Mr. Justice Story, probably the most thorough jurist this country has produced, "to exclude from the national government all power upon the subject. The Catholic and the Protestant, the Calvinist and the Armenian, the Jew and the Infidel, may sit down at the common table of our national councils." In the courts of England, affirmation is permitted. We hope yet to see the House of Commons just and courageous enough to rise above the religious bigotry and intolerance under the influence of which it acted last week in rejecting the Affirmation Bill, and put itself in harmony with the liberal thought and spirit of the age which demand that Bradlaugh or any other fairly elected member shall take his seat in that body regardless of his religious belief.

B. F. UNDERWOOD.

THE *Independent* says that Dr. Dorner raises the question "whether Mr. Cook does not lengthen out the dying moment so prodigiously as to make it possible that all the cases of miraculous resurrection from the dead described in the New Testament were mere cases of suspended animation."

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

The Friday morning session will open at 10.30 o'clock, in Parker Memorial Hall, with an address on "Emerson and Darwin" by Col. T. W. Higginson, to be followed by Mr. Edwin D. Mead, who will speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and by Mr. John W. Chadwick, who will speak of "The Problem of the Universe as approached from the Matter-side by Darwin."

The Friday afternoon session will open at three o'clock with a paper on "Co-operation and Progress," by Mrs. Imogene C. Fales, of Brooklyn, N.Y. This will be followed by an address from Mr. James Kay Applebee on "Social Disintegration and its Arrest by Co-operation." Mrs. Anna Garlin Spencer and others will also speak to the question of the afternoon.

The Festival will be held in the large Horticultural Hall, Tremont Street, and will begin with a supper, with tables and seats for all, at about six o'clock, or as soon after the close of the afternoon meeting as possible. Col. T. W. Higginson will preside. After the supper, five-minute speeches are already promised from John W. Chadwick, B. F. Underwood, James Kay Applebee, and Mrs. Anna Garlin Spencer, and a poem from Minot J. Savage. Other speakers for the Festival will be announced hereafter. Miss Lucy Garlin's Euterpe Quartet have kindly consented to add the attractions of their fine music to the occasion. Tickets of admission to the Festival, with reserved seats at the tables, at 50 cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston, of the Secretary, Providence, R.I., and of A. G. Hill, Esq., Florence, Mass. It is desirable that early application for seats should be made.

F. A. HINCKLEY, *Sec'y F. R. A.*

EDITORIAL NOTES.

THE *Religion of Humanity* is the title of a neatly printed pamphlet, comprising the essays by Mr. William Frey, recently printed in *The Index.* A few copies are for sale at this office at fifteen cents each.

WE have received from Mr. Netterville Briggs, photographer, 20 Baker Street, London, Eng., a very finely executed cabinet photograph, from life, of Miss Frances Power Cobbe, which will delight the admirers of that lady's character and genius. Miss Cobbe herself says of the photograph that it is "the best done of me by any artist."

ACCORDING to the *Canadian Baptist,* which itself seems inclined to sympathize with the anti-Chinese movement, there is in Canada a strong feeling against Chinese immigration to the Provinces. "The Chinaman," says this Christian paper, "develops so many characteristics which make him an unwelcome resident that the generous invitation to people of all lands to pitch their tents with us does not include him.... He is a very undesirable citizen, whether he is to be legislated against or not."

A YOUNG lady of Springfield, writing over her own name to the *Republican* concerning what she conceives to be abuses in the postal service of that city, seems to have no real need of the ballot for

Digitized by Google

herself, as she concludes her note to the *Republican* thus: "Put up a good man for Democratic candidate in 1884, and I will be good for half a dozen voters myself." And it is said that women take no interest in politics, when here is one who avows herself so skilful in political "wire-pulling" that she pledges herself "good for half a dozen voters."

THE *Independent* withdrawing its statement regarding the last moments of Dr. Beard, remarks:—

If the collapse of this story of death-bed conversion shall do anything to prevent the abuse of the great truth, that, so long as moral power exists, there is the theoretical possibility of conversion and salvation, whether in health or sickness or death, whether on earth or in purgatory or in hell, we shall be glad.

The New York *Evening Post* quotes this, and pertinently adds:—

This is all very good, as far as it goes; but it does not go far enough. What "the collapse of this story of death-bed conversion" ought to check is not simply "the abuse of a great truth," but plain falsehood, and the reckless conversion of signs and wonders into moral pabulum. Truthfulness, strict truthfulness, and careful examination of facts, is the lesson of this collapse for all prelude-mongers, lectureships, and other moral and religious teachers. The value of truth, its supreme, overwhelming importance, is the lesson of every death-bed, and is furnished by that of an agnostic or scientist as well as by that of a Christian.

A CLEVELAND paper, referring to the law's wearying delay in the case of Archbishop Purcell's creditors, observes: "The Roman Catholic Church has determined to fight this case to the bitter end; and all its enginery and means will be employed to render the fraud complete, or prolong it until the great mass of the Archbishop's creditors find rest in the grave. Numbers of them have gone in that direction already, having sickened and died from want and starvation. The 'majesty' of the law is a great thing; but

'Justice, like lightning, ever should appear
To few men's ruin, but to all men's fear.'

Laws should be so constructed as to make justice speedy and sure. Long delays are intolerable. While they may be borne by the wealthy, yet they are death to the poor. Even the estates of the rich are too often sacrificed and their owners reduced to poverty through the latitude and delay furnished by the law. The fact is that we have too much law and too little justice, and the truth of this is well exemplified in the case of the Purcell creditors."

THE London *Inquirer* (Unitarian) says: "We are sometimes told that the hideous doctrine of eternal torment is dying out, at least in its more repulsive aspects. The Rev. Dr. Momerie, professor of Logic and Metaphysics in King's College, London, and one of the select preachers before the University of Cambridge, gives unimpeachable testimony that we are apt to overrate the progress of liberal sentiments in other churches. In his recent work on *The Basis of Religion*, he says that only a year or two ago he heard a clergyman deliver himself from the pulpit as follows: 'My brethren, you may imagine that, when you look down from heaven, and see your acquaintances and friends and relatives in hell, your happiness will be somewhat marred. But no! You will then be so purified and perfected that, as you gaze on that sea of suffering, it will only increase your joy.' For our part, we should prefer hell itself to a heaven where such hellish joy would be possible."

A FREE SCHOOL LEAGUE, with head quarters at Washington, D.C., has been organized; and it has an organ called the *National Free School Advocate*, which favors national support of the free schools in all the States of the Union. The following is given as the platform of the new organization:—

We ask no man where he was born.
We attack no man's religion.
We interfere with no man's politics.
We are opposed to any interference in civil affairs by organized ecclesiastical bodies.
We are in favor of taxing every rood of ground and every dollar of personal property, except public property and burying-grounds.
We are opposed to any appropriation of public money for sectarian purposes, however disguised. Let sects support the parochial schools and academies in which their respective catechisms form any part of the curriculum.
We are in favor of fixing a definite date, after which all who become voters shall be able to read and write.
Ignorance is the fertile soil in which crime is bred. We are, therefore, in favor of compulsory education, supplemented by generous appropriations of public money for common schools.
We are in favor of incorporating these principles in the fundamental law by the speedy enactment of constitutional amendments, emphasizing all of them not already embodied in that instrument.

FROM the new edition of Messrs. George P. Rowell & Co.'s *American Newspaper Directory*, which is now in press, it appears that the newspapers and periodicals of all kinds issued in the United States and Territories now reach the imposing total of 11,196. This is an increase of 585 in twelve months. The present total in New York State is 1,399,—a gain of 80 in the past year. The increase in Pennsylvania is 48, the existing number being 943. Nebraska's total grew from 175 to 201, and Illinois' from 890 to 904. A year ago, Massachusetts had 420 papers: now, the number is 438. In Texas, the new papers outnumbered the suspensions by 8; and Ohio now has 738 papers instead of 692. In the Territories, the daily papers have grown from 43 to 63, and the weeklies from 169 to 243, Dakota being the chief area of activity. The number of monthlies throughout the country grew from 976 to 1,034, while the dailies leaped from 996 to 1,062. The figures given above are exclusive of Canada, which possesses a total of 606. It is interesting to note that the newly settled regions of the Canadian North-West are productive of newspapers as well as of wheat, for the number of journals issued in Manitoba was nearly doubled during the year.

"PECK'S SUN," referring to the death of a cranky individual at whose funeral, by his request, was sung on the way to the grave "When Johnny comes marching Home," and on the return from the grave "Good-by, my Lover, Good-by," remarks that it is hard to make people laugh at a funeral; but, when the corpse prepares the programme of hilarity, people who are mere spectators are apt to smile, even if it hurts their feelings, and very sensibly adds: "Most infidels desire to have a certain solemnity to attend their interment, even if they do not have the attendance of clergy; and this case of the deceased editor, who made his funeral a variety show, is an unusual one. The funeral of Ingersoll's brother, a year or two ago, though not under the auspices of the Church, was very solemn, and the brother of the deceased made some most beautiful and touching remarks, which caused people of a different belief at least to respect his views of the hereafter. But if Bob had invited in a lot of nigger singers to sing 'Shoo Fly, don't bodder me' on the way to his brother's grave, and had them sing 'Mulligan's Picnic' songs on the way back, people would have said he was lacking common sense. The grave is a solemn thing, and death is no picnic; and those who make the grave a variety show and consider death a joke are lacking in sense, whatever their views may be on the hereafter."

POETRY.

For *The Index*.

THE OLD BIBLE AND THE NEW.

The Bible that I love is not the modern screed,
Denouncing doom on those who fathom not its creed,
Above the rime and reason of elder Nature's thought;
To serve a chosen few by inspiration wrought,
A gross interpolation in the eternal law,
A second thought of God to patch creation's flaw;
But the dear old Bible, with my mother's love inside it;
And my boys' prattled love written there beside it;
By the finger of my Father on the pages of my soul,
In the golden text of life, a divine illumined scroll.
I sit beside Confutze, and I con it o'er and o'er,
When he reads, with ancient accent: "Go and sin no more.
What you would another should not do to you
Do not thou to him: keep thy neighbor's weal in view."
Gentle Buddha's breath of roses touches now my cheek,
While he whispers: "To be wise is only to be meek;
For the only end of life is evermore to learn,
And the end of learning is for wisdom still to yearn."
And when Jesus leans in sorrow, writing on the sand,
He copies from this book a lesson rich and grand:
"'Tis charity and tenderness for every sinning soul
Will lift again the fallen, and make the bruised whole."
Here, Plato's stylus found "The Good, Beautiful, and True,"
Which he bade us mortals keep evermore in view.
While, from the heights of human brotherhood, St. Paul
Reads aloud, "Faith, Hope, and Charity comprise it all."
Here, I find the Decalogue of old Mosaic wit,
In Persian and Egyptian underneath it writ.
And each Beatitude first learned in Nature's school
Is here in golden text beside the Golden Rule.
While everywhere are parables tinted with the art
That images itself within the human heart.
Page by page each day, and o'er and o'er, I turn it,
Its lessons and its love as God's true word I learn it;
And the only interpreter of the dear old book
Is my soul's experience, when with faith I upward look.

E. P. POWELL.

NATURA RERUM.

Nature of things, or God, or vast
Sum total, datest Thou
From no spent yesterday, no past
Effete, but an eternal now;

As organs usest us, weak men,
Whose days so swiftly glide;
With Cæsar tam'st the world, and then
Him fling'st, mere dust, aside.

From thee and thine immortal years
Pour men like drops of rain:
The race no frost of death e'er seres;
It ever comes again.

O'er dust of bards, who hymned of yore
Her beams, the moon ne'er pines:
Fresh lovers and fresh bards adore
Her orb, whene'er she shines.

And still the welcome spring comes back
With bird and flower and bee:
Of heat or sheen there is no lack,
Of sap in blade and tree.

Thus on the eternal current runs
Of life and light forever,
Thus glow in boundless space the suns,
That numbered may be never;

Thus, God, no sluggard potentate
Above the world lies dreaming,
But with his life of life elate
Planet and star are beaming.

B. W. BALL.

THE AFFIRMATION BILL.

BY A SCOTCH COVENANTER.

"Thou shalt not swear," said Christ: "thou shalt speak true;
Thy word shall be thy bond to God and man.
True speech is holy, and there are not two,—
On truth-blaspheming oaths I lay my ban.
Thou dost but desecrate God's Throne anew,
And this his glorious earth, evoked for man,
Each time thou giv'st thy daily life the lie,
And swearest down thine own integrity."

But thou shalt *not* affirm, the House declares,
And swear thou *shalt*, by God and by his Throne.
Sir S—— N—— puts on pious airs,
And pretty R——h joins his hollow moan,
'Tis thus the Great High Priest with these men fares,—
His words neglected and his truths unknown.
England is tired of them, and they may go,
We will not have these Tulchans always. No.

—*Manchester Examiner.*

The Index.

BOSTON, MAY 10, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

THE GENII IN COUNCIL.

BY F. M. HOLLAND.

Part II.—The Test from Sociology.

Morality will never reign supreme until its nature and basis are better understood than has been shown to be the case in the previous essay. Nor can individuals grow in virtue without some standard by which they may tell right from wrong. With those who find a perfectly satisfactory and trustworthy standard in the Church, or in the Bible, or in conscience, or in utilitarianism, or in any other established theory, I seek no controversy. But there are some who feel that none of these systems has fully and accurately pointed out the differences between right and wrong, or given all the help we need in acting on the benefit of this knowledge. Believers in the authority of conscience generally admit that it needs to be educated, which means that it is not infallible. The advocates of the system most in favor with advanced thinkers—utilitarianism—have not yet, I think, succeeded in telling why any one should prefer other people's happiness to his own, or in proving that vice is alway so much less pleasurable than virtue as to make it certain that the right choice will be made by the aid of this theory alone. J. S. Mill says, "It is better to be a human being dissatisfied than a pig satisfied; better to be Socrates dissatisfied than a fool satisfied." He does not say why, and dissatisfaction certainly means unhappiness. Many of the men and women to whom the world owes most—like Jesus, Paul, Roger Bacon, Joan of Arc, Servetus, Roger Williams, Madame Roland, and Mazzini—have not led such pre-eminently happy lives that he who aims merely at happiness would imitate them. The tramp might say to the utilitarian, "I am more happy than if I were hard at work, and I make no one less happy; for people like to be charitable." And he might further plead that his own conscience approves of his way of life, as well as that it greatly resembles what Jesus recommended to his disciples. So drunkards urge that their habits give them pleasure and hurt nobody. We need a system of morality which will put drunkards, tramps, and all other idlers plainly in the wrong, and give martyrs and reformers all the honor they deserve.

Whatever may be the defects of the different systems hitherto proposed, they have at least one common excellence,—that of recognizing the authority of such precious maxims as "Render to all their dues," "Do as you would be done by," "Keep yourself pure," "Seek wisdom." The most sacred books announce such duties as the will of God. The churches vie with each other in teaching purity and brotherly love. Conscience and public opinion agree in telling us to treat our neighbors kindly and honestly, and develop ourselves nobly. Every utilitarian knows that such precepts are the necessary conditions of happiness. These current ideas about right and wrong are not to be disparaged, but rather confirmed and enforced. And, therefore, it is necessary to know from what source they proceed, and on what authority they really rest. It is also necessary to know this, in order to be able to tell how these current ideas may be improved, as well as how some differences, such as prevail about the limits of free speech, the duty of giving to every one that asketh, the right of resistance to evil, and the proper way to treat drunkards, may best be reconciled. Public opinion is highly instructive, but not infallible. How are we to tell when it is right or wrong?

Study of human history has shown that these various rules and precepts, whose authority is recognized by conscience, the Bible, the churches, and all systems of morality, are necessary conditions of social existence and progress. Human beings could not live together, if they did not respect each other's property, care for each other's needs, and carry on some sort of training for the common good. A family or tribe in which little children were neglected utterly, or in which no one was allowed the benefit of his labor and skill, would soon cease to exist. And a tribe whose members were less able to feed and defend themselves than their neighbors would erelong be reduced to servitude. Those nations which have been faithful to the laws of justice, kindness, and self-culture, have outstripped and supplanted the nations which have not. For these precepts are the conditions of social progress. They are written in our Bibles and our consciences, but it is by all the experience of our race. These great commandments are mighty in the authority they have gained from our universal knowledge that thus we must do, in order to be able to live together. Society insists on their observance as the necessity of her own continuance. The question which of the various observances we find enjoined in different states of society, and regarded with more or less favor by different consciences or other oracles, is to be regarded as right and which as wrong, may now be answered by seeing which are really the necessary conditions of social existence and progress, and which are merely imaginary ones. In other words, public opinion is right when it follows the laws of social development, and wrong when it does not.

The only real problem is how to discover the true conditions of social progress, that therein we may find the moral laws. Many students are throwing light in various ways on this great question. Its solution may, I think, be facilitated by gaining as clear a view as possible of the essential characteristics of civilization, so as to distinguish high forms of society from low ones; for, then, we can safely pronounce such moral precepts as we find most favored in the highest civilization essential to social progress, and therefore authoritative. Herbert Spencer's definition of "the formula of evolution as a progress toward greater size, coherence, multiformity, and definiteness" (*Principles of Sociology*, vol. i., p. 618), is not to be set aside lightly. We all know that a civilized nation is more prosperous than a savage one, as well as that it has more division of labor and diversity of habits, and much firmer and more complex social organization. Here, as everywhere else, is fulfilled the great law of change from the homogeneous to the heterogeneous, from the indefinite to the definite, and from the incoherent to the coherent. Perhaps the progress from the homogeneous to the heterogeneous, or, in other words, from uniformity to variety, is best seen in the change in the occupations of women. Valuable as is Spencer's definition, I venture to suggest that it may be somewhat modified with advantage to ethical study. The case of heterogeneity and complexity here most important seems to me that of institutions. The most civilized countries are those whose institutions are best fitted for promoting, first, security of person and property; second, intellectual and æsthetic culture; third, business activity; and, fourth, charitable relief. To know how far any country has advanced, I should ask, Has it just and comprehensive laws, impartial and generally respected courts of justice, and an efficient police? Is there a system of schools and colleges giving primary, liberal, professional, and artistic education? Has it banks, brokers' boards, merchants' exchanges, agricultural societies, and other associations of men engaged in various kinds of business? And, finally, has it almshouses, hospitals, asylums, and benevolent organizations able to take care, not only of poor people in general, but of the blind, deaf and dumb, insane, and others specially afflicted? Those institutions providing security are exclusively managed by the State; but those facilitating education, business, and charity, are sometimes carried on by the government and sometimes by private individuals.

Whatever be the origin of philanthropic, commercial, educational, and legal institutions, their multiplicity and efficiency are greatest in those forms of society which are admitted to be most highly civilized. For instance, there is a marked superiority in this respect of modern times to the middle ages, as well as of New England, Great Britain, and France to Central Africa. Other ways of stating the difference between such periods and countries might be adopted, without giving up the essential point of the theory I am setting forth. Laying stress on the existence of philanthropic, legal, educational, and commercial institutions, has, however, the special advantage of justifying the existence of four great classes of moral precepts,—those of love, justice, and self-culture, and also those of industry, economy, and enterprise, which really form a separate class, though without any comprehensive name, and which are now rising into unprecedented importance. Whatever definition of civilization we may adopt, we shall see that its progress is marked by increased respect for the three great duties first named, especially self-culture; but still more plainly by a wholly new sense of the value of what may be called the business virtues. Formerly, the nobles were the idlers, and the laborers were all villains. Now, we are beginning to see that useful labor is noble, and we can look forward to the time when habitual and needless idleness of healthy adults will be accounted villanous. Society has already become wise enough to say to the beggar, whose mode of life was once thought saintly: "I don't care whether your habits make you happy, or how far they are in harmony with the Bible or your own conscience. I know they are hostile to my law of progress; and, therefore, I shall put them down." Gamblers and drunkards are already treated as stumbling-blocks in the upward path, and this is simply just. Our forefathers persecuted differences in opinion with sword and fire, but we are learning to honor them as needed teachers of the race. The old ideal of the saint who resists not evil is giving place to the new ideal of the reformer who fights against every evil for the sake of his own growth as well as that of his brethren,—ready for any labor or danger, but not willing to allow any infringement, either to his own injury or his neighbors', of that justice in which we all are safe.

Auguste Comte and his followers have fully proved that there is nothing impracticable in trying to rest morality on sociology. In fact, it is only by doing this that we can ever have scientific ethics, instead of the theological and metaphysical systems which are passing away. Utilitarianism has some foundation in sociology, for progress requires healthy activity, and that involves happiness; while the unhealthy circumstances most fatal to progress cause immediate pain. Unhealthy excitement, however, is often so pleasurable for the moment as to offer temptations which are not easily resisted without some stronger motive than fear of ultimate loss of happiness hereafter or possible pain to others. The more warmly I love those moral laws which are necessary to social progress, the more easily can I trample on every temptation to sin against them. And there are motives by which these laws are adapted to every part of my nature. My conscience has been trained to think them sacred, so that I cannot disregard them without doing violence to myself. All my social sympathies and friendly feelings urge me to do what my friends and neighbors wish. Desire for improvement makes me seek to advance in the path marked out by the experience of the race. Whatever advantages I would secure depend on the maintenance of social relations which are founded in morality. Only the faithful to those relations can hope for praise. For the unfaithful there are punishments, even the

Digitized by Google

severest. No greater calamity can fall on any man than for society to treat him as one of her worst enemies. What else can he expect, who grossly violates those laws on whose observance she rests? Idle is the fear that the sanctity of morality will grow less as science advances. Rather must it increase, for thus will the real authority of virtue be brought to light as it has never been before. As we learn the true relations of morality to sociology, we shall become full of reverence for those great moral laws which have been recorded in the Bible, and are still sanctioned by conscience and public opinion, because they are the necessary conditions of social existence. And we shall honor these laws all the more, when we do so intelligently, with full knowledge of their value and of their difference from such imperfect precepts as have from time to time originated in blind superstition or the selfish caprice of despots. If we doubt the propriety of any regulation urged upon us, we have only to consider what public or private benefit it was designed to secure, and what are the actual results of its enforcement or disuse. If it has been found favorable to social progress, it is right; but, if it is or has been a hindrance to the world's advance, then it is wrong. All conduct may be classed as right or wrong, according as it helps or hinders human progress; but, in practical life, it is usually enough to look at those general rules which are universally accepted because experience has shown that it is by their observance that we advance. And it is those men and women who have best served that great march onward, caring nothing about their own pleasure or interest in comparison, that we shall always honor most.

CORRESPONDENCE.

A LETTER FROM CANADA.

Editors of The Index :—

In sending you a few words from Canada, noting the progress of Liberalism here, I do so with broad ground for encouragement and anticipation for the future. Canada, like her mother England, has the reputation of being a little slow and conservative, especially as compared with her big sister, your great Republic; but, for all that, I am inclined to think that we Canadians will compare not unfavorably with you Americans in some aspects of our mental development and national progress. If our mental evolution on the lines of theologic and political progress is not quite so rapid as yours, it is perhaps more substantial and consistent and less spasmodic. We do not often witness the anomalous "reversions" or liberal solecisms here that frequently turn up in France and the United States, where, for instance, editors are incarcerated for exercising the right of free discussion, even political discussion, obsolete laws utterly inconsistent with the spirit of the age are revised, and the testimony of even theists ruled out of court. In France and the United States, these anachronisms are from time to time showing themselves, to the bewilderment and dismay of the liberal statesman and the agnostic philosopher. But no Canadian editor run any risk of arrest and incarceration for advocating almost anything, such, for instance, as annexation, independence, home governors-general, abrogation of the Senate and the Lieutenant-governorship, or even "pitching into" the "sham court at Ottawa." And, as the law now stands in this Province, the testimony of any free thinker, rationalist, agnostic, materialist, spiritualist, or even ultra atheist, must be received in all *civil* cases in all the courts. This, certainly, is tangible evidence of substantial progress. As further evidence of the extent to which liberal ideas prevail among our legislators, I may say that this Evidence Amendment Bill which passed the Legislature a year ago, giving us this right, was only opposed by a *single* member from some remote constituency. Every other member of both political parties agreed to it. In our Parliamentary Library, we have the works of the great scientists and agnostics. An ex-Member of Parliament, who has completely outgrown the popular theology, told me that he first got his "eyes opened" by reading the works of Darwin in the Parliamentary Library. Our High Court judges are also broad and liberal-minded men, having been nearly all in favor of admitting the testimony of free thinkers into the courts. It is true, in the celebrated "Napanee Town Hall Case," they decided against us; but they did so, because they felt compelled to administer the law as they found it, at the same time expressing their strong sympathy with the plaintiff in the justice of his case. Our High Courts have also recently decided against the Sabbatarians who in Toronto had put the law in motion against barbers and others for doing business on Sunday. We may possibly have a fossil on the bench of Canada like that Delaware gentleman (Conegys), but I doubt it. Before the passage of our Evidence Amendment Bill, although agnostics were in some courts unceremoniously ruled out of the witness-box, yet in my own county here (Lennox) our county judge never, to my knowledge, rejected the evidence of such, always putting the most liberal construction upon the law in order to admit them. Secularism has without doubt made greater progress in the county of Lennox during the past ten or twelve years than in any other part of Canada. As another evidence of this, I may mention the fact that a well-known agnostic here has just been elected in this county to the Provincial Parliament. This is Mr. A. H. Roe, who will be remembered by the junior editor of *The Index* as having actively assisted us in the Napanee Town Hall struggle some years ago, when the town council violated their contract with us, and refused the town hall which we had secured for Mr. Underwood's lectures. But the change in public thought and feeling has been great since that bitter struggle; and Mr. Roe, who actively participated in it (whether in all respects wisely or not) is now elected to Parliament by a majority of nearly two hundred over his orthodox opponent, notwithstanding that the religious "hue and cry" was raised to the highest pitch. And, although the candidate deemed it expedient to modify his position somewhat (solely, however, on his own responsibility) before the bigoted element of the electors, still his return in the face of his well-known heretical opinions is evidence of the great progress liberty of thought and belief has made in this once bigoted locality.

We have worked steadily and persistently for a dozen years among our neighbors and fellow-citizens to break down bigotry, live down prejudice, and promote liberty of thought and freedom of speech, and naturally feel gratified at the auspicious results and encouraging prospects. Indeed, the liberal outlook is now encouraging over the whole of this province. While there are well-conducted and flourishing societies in Toronto, Ottawa, and Montreal, still we are not yet strong in organization; but, in numbers, we really are. Then, there is, besides, a large element of "sleeping partners" in the free-thought company of Canada,—people whose sympathies and thought are more or less with us, and whose substantial assistance is often extended, but who, for various reasons best known to themselves, keep "mum." Among the people everywhere in Ontario, advanced thought in religion and politics is taking root and steadily growing; while the whole of our educational institutions are permeated more or less with the new philosophy. It is to be expected, as a matter of course, that the non-sectarian universities and the secular-learned professions will take the lead of the sectarian colleges and clergy in liberal thought: the latter naturally bring up the rear. In our leading provincial university at Toronto, the doctrines of evolution and Darwinism are fully recognized in the science teaching, if the *monistic* theory of the universe has not quite or wholly superseded the *dualistic* in its philosophy. But even the sectarian theological colleges are not without the leaven of rationalism, as shown in the altered text-books and changes of curriculum.

As to the clergy in the cities of Canada, the pulpit is far behind the pew exoterically; while, in the country, the former is perhaps ahead, at least esoterically. The clergy of Canada are, however, making encouraging progress in exoteric as well as esoteric liberalism. As one proof of this, I may cite the case of Rev. G. J. Low, a prominent Episcopalian clergyman of the diocese of Ontario, who has published two pamphlets within a year filled with heterodox utterances. The contents of these pamphlets are two discourses, originally delivered before the Anglican Synod of the diocese of Ontario. The advanced positions taken seemed to meet the general approval of the Synod, "whose kind encomiums and generous assistance prompted its [the first pamphlet's] publication," so the author says. The learned rector says that, though historical criticism should prove the Bible unauthentic, "it would not in the least affect the catholic position, which is that the great historical Church of God existed in all its corporate integrity before the Holy Scriptures were written at all." After stating fairly some of the fundamental principles of Comte's positivism and Spencer's sociology, this progressive theologian avers that the Church, fully embracing what he calls this "sociological aspect of Christianity," will work "for the very purpose of bringing about that perfection of corporate humanity which is the boasted aim of the Positivists." In the second and recent pamphlet, on "Eschatology," this Broad Churchman directs an able and forcible argument against the "hideous and revolting" dogma of eternal punishment, and points out the terrible and inevitable rationalistic "storm" approaching, and warns his brethren of the pulpit to prepare for it. "That such a storm is coming," he says, "and is daily gathering force, must be evident to any reader of even the secular press."

In animadverting against the orthodox doctrine of eternal punishment, Mr. Low says: "The brutal murderer,—who, convicted and executed upon earth, expiated his crime on the gallows,—being now in glory (for all such characters, if we may believe their own or their chaplain's statements, invariably go straightway to glory), will amuse himself by watching the agonies of his unhappy victim (who, of course, having had no 'time to prepare,' will be in hell); and, when satiated with the sight of his or her anguish, will return to sing the praises of Him whose mercy endureth forever,—toward himself. Now, when we regard the end attained, it matters not what view a man may take as to what brought these creatures to this awful, hopeless, endless torment. . . . Whatever the cause, the result is alike horrible and revolting, and the end the same,—untold joy to the few, unutterable anguish to the many: the award in either case quite disproportionate to their little day on earth, however good and holy, or however execrable, that little day may have been."

Mr. Low declares the "Protestant presentment of eschatology is most hideous, most ghastly, . . . compared with which the Roman doctrine is infinitely more humane" (meaning the doctrine of purgatory). The Protestant presentment of hell, which some "unlettered and barbarous revival preachers" put forward, the reverend gentleman says "makes infidels of the strong-minded and maniacs of the weak."

This is but one of the evidences of exoteric advancement of the clergy here in liberal thought; while, if all of them who know, but keep quiet, were suddenly revealed, the strictly orthodox minority would stand aghast. Goldwin Smith says, in his *Bystander* (which, I am glad to say, has been recommenced in Toronto since the professor's return from Europe, and which is a very able as well as liberal review, quite fairly reflecting the trend of modern thought), of the Protestant pastor, that, "if he reads what is read by other men, his step must sometimes falter as he mounts the stair." And to say that the average minister does not read more or less the rationalistic literature so conspicuously before him in this age is to impute to him a little too much of stupidity. For as Goldwin Smith further tells us: "No one can read a batch of books on theological or philosophical subjects without seeing that the world has arrived at a crisis wholly unparalleled in the history of opinion. . . . For all who think seriously, and still trust their religious instincts, the hour is one of fearful perplexity. It must be one almost of agony for many of the best and most cultivated among the clergy." Why, then, continue to remain in the pulpit and preach a Christ "whom," Mr. Smith further tells us, "the most intellectual portion of the world seems to be making up its mind to disown"?

In thus giving so favorable an account of the condition and progress of free thought in Canada, I must say, however, that one sombre cloud still hovers over us; but even it will soon, I trust, be dispersed. I refer to the continued seizures by the customs officials of heretical books which our people from time to time import from England and the United States. But even this unfortunate and very bad-looking fact, when rightly understood, has not by any means the ominous significance against Canadian Liberalism that it appears to have, and that has been attached to it by American and English liberal papers. An explanation of the matter will make clear the fact that not the Canadian government or even public sentiment is virtually responsible for those seizures, but simply a few bigoted custom-house officials and the bigoted editor of a party organ. The books which are now being seized and confiscated (Voltaire's and

Digitized by Google

Paine's), as well as many other works much more heretical, had been imported into Canada by Canadian Liberals and booksellers for years before the first seizure in Toronto, a year or two ago. But it so happened that a narrow-minded official at that port, noticing the *Age of Reason* and *Pocket Theology* passing through the customs, seized them as being "obscene and immoral" under the statute prohibiting such. Anything which attacks such a man's religion is of course, in his oblique moral squint, immoral. Had the matter not been at once taken up by the government organ, but quietly submitted to the Premier at Ottawa, the books would undoubtedly have been speedily released; but, before there was any time to do anything, the Toronto *Mail*, the government organ (which, unfortunately, happened to be in the hands of a bigoted Ultramontane editor), immediately opened up in defence and justification of the seizure; while the opposition organ, the *Globe*, as promptly and vigorously opened fire against the seizure; and the warfare continued between the two leading party organs, followed on both sides by their satellites, for days and even weeks. The *Mail* had thus prematurely and imprudently committed its party and the government to the bigoted action of the local and subordinate official, when neither really approved it. But the stand had been taken, and it would never do to "back water" in the matter, especially as the great opposition organ, the *Globe*, was daily belaboring them. This would be too much like yielding to the enemy. The best of the party and the government saw at once that a mistake had been made, and that their party organ had foolishly led them into an awkward position. But retreat they would not. Oh, no! This would be humiliating, and the *Globe* would triumph. And here we have more proof of the curse of partyism in government.

This is the proper explanation of this miserable business of seizing "infidel" books, which has since the Toronto seizure been repeated in three or four other places in Canada, wherever there happens to be a bigot in the customs chair. But the disgraceful business must not be charged either upon the public sentiment or government of Canada. The latter is of course nominally responsible; but, virtually, it is not, further than this, that its partisan character makes it too cowardly to do its duty, and what it thinks ought to be done at the dictation of the opposite party. The Prime Minister told me with his own lips that he was against the seizure of the *Age of Reason*, that he had read it many years ago, and that it was not obscene, but a "classic"; and that while the *Pocket Theology*, which is a compilation of the coarsest passages in Voltaire's writings, did, he thought, fairly come within the statute, Voltaire's writings as a whole were not obscene, and would pass the customs. The right honorable gentleman said he had Voltaire's writings in his own library, and that Voltaire was undoubtedly a great man and a brilliant writer. The Premier of this Dominion has his faults no doubt; but he is very far from being a religious bigot, and it is not with his approval that a few customs officials disgrace their office and their country by dragging their private bigotry into their public duties. These, however, are only the unworthy exceptions, not the rule, as many of our officials pass both Paine's and Voltaire's writings through the customs, which shows that a fair construction of the statute does not warrant their seizure. If it was a plain violation of the law to pass Paine and Voltaire, these officials would not dare to do it. And the fact of their doing so proves that it is only the bigots who seize, by stretching the statute, knowing that the Ottawa government will not now stultify itself by interfering. I have received the *Pocket Theology* (which is considered the worst of the books seized) through this port of entry (Napanee) since the Toronto seizure, and heard nothing about its obscenity from our officials. The whole matter will, however, I trust, soon be tested in the courts, as one of our friends in Montreal has taken legal proceedings against the customs official of that city for seizing and confiscating Paine's and Voltaire's writings which he had ordered for his own library. Meanwhile, we have resolved that, so far as this Province is concerned, the people who want to read Paine's *Age of Reason* can do so, in spite of a few customs officials and the Toronto *Mail*. We are at the present time getting out in Toronto a large Canadian edition of the immortal *Age of Reason* in paper and cloth, and intend to place it before the people of this Province through the booksellers at a merely nominal price. Mr. Charles Watts, the distinguished English secularist, gave five lectures in Canada recently before his return to England from the United States,—two in Montreal, two in Toronto, and one in Belleville. The Montreal lectures were, I understand, very successful, as were those in Toronto under the auspices of the *Secular Society*; and in Belleville, where I had the pleasure of being present and making Mr. Watts' acquaintance, the lecture was well attended and appreciated. Mr. Watts is a cultured thinker and powerful speaker, and, socially, a very pleasant and genial gentleman. His Canadian lectures were, I believe, in every way successful. The Toronto *World*, which is an independent and excellent paper with a large circulation, gave very fair abstracts of the Toronto lectures. ALLEN PRINGLE.

SELBY, LENNOX CO., ONT., April 30, 1883.

A LETTER FROM MILWAUKEE.

Editors of The Index:—

The annual report of the Milwaukee House of Correction, recently published, contained statistics worthy of comment.

Comment was initiated by the *Catholic Citizen*, April 14, in a somewhat sensational article with these startling head-lines: "Is it Bigotry?" "Something the Matter with our Local House of Correction." "Manufactured Statistics."

The article opened by saying: "It is a very liberal estimate to place the Catholic population of Milwaukee at two-fifths of the entire population. There is consequently something disagreeably worthy of explanation in the published statistics of the House of Correction. These statistics show that, of the entire number of prisoners committed during the past year, over one half or eight hundred and seventy-eight were 'Catholics,' the Protestants of all sects being only five hundred and seventy-two, and one hundred and ninety-nine professing 'no religion.' We say that there is something disagreeably worthy of explanation in these statistics. If they are accurate, Catholics want to know it and ought to know it. If they are not accurate, they are not worth keeping, collecting, and printing at the public expense. And if there is exaggeration in the number of 'Catholic' prisoners, through the ignorance and carelessness or bigotry of the superintendent or his subordinates, we have just ground for complaint in the unlearned imputation thus cast upon the moral influence of our Church. If the figures presented in the report are true, a fearful indictment is drawn against the relative criminality of the Irish. The German population of this city is fully eight times the Irish-born population. The report says the number of prisoners of German birth is three hundred and seventy-three; of Irish birth, two hundred and fifty-one. This amounts to the statement that in an equal number of each nationality there are six times as many Irish criminals as German. We think there has been inexcusable carelessness in this table of statistics, and that many malicious and mendacious persons have been classed as Irish-born who are not of that nationality. The practice is not an uncommon one."

In reply to this article, Col. Reis, Inspector of the House of Correction, says: "If the writer of the article had taken the trouble of ascertaining how the statistics are obtained, he would not have given currency to the article. To show how groundless his insinuations are, I will simply state that, when prisoners are received, they are asked the questions as prescribed in the prison record, and each person's answer is recorded just as given. This record is kept by the clerk of the institution, who is himself a member of good standing in the Catholic church. We have no other way of ascertaining a man's history; but, in the matter of religion and nationality, I believe that ninety-nine out of every hundred will tell us the truth. To show the utter absurdity of the article, I will show from reports of former inspectors that, under their administration, the ratio of Catholics to non-Catholics was even higher than during the past two years of my administration:—

Years.	*Total No. of prisoners.*	*Catholics.*	*Per cent.*
Ending March 15, 1877.....	624	345	55.12
Ending March 15, 1878.....	702	344	49.00
Ending March 15, 1879.....	936	508	54.27
From March 15 to Dec. 15, 1879..	790	428	54.17
Year ending Dec. 31, 1880.....	1,022	557	54.50
Year ending Dec. 31, 1881.....	1,420	751	52.88
Year ending Dec. 31, 1882.....	1,626	865	53.19

"These figures speak for themselves. As to the comparative number of prisoners of Irish birth against those of German birth, the figures are equally striking. From the time this institution was opened in 1866 to Dec. 15, 1879, when I assumed charge, the number of prisoners of the two nationalities was as follows:—

Number of prisoners of Irish birth.....	1,621
Number of prisoners of German birth.....	1,590

"While the three years of my administration show the following figures:—

Number of prisoners of Irish birth.....	625
Number of prisoners of German birth.....	883

"The figures as here given," concludes the Inspector, "are taken from the official records on file in the office, and are always open for inspection. Would it not be better to profit by the lessons as shown by the statistics rather than create a popular prejudice against the compiler, who simply presents the facts as he finds them?"

The rational comment upon the matter is that the methods of the Catholic Church cannot, or at least do not, conduce to a high standard of ethics among the persons it controls.

The Evangelical Alliance of New York has recently sent a protest to the Legislature against the passage of a pending bill that has for its object the granting of power among Catholics to appoint chaplains for mass and confession in the House of Refuge, and all institutions for the support of the poor receiving public aid, except asylums for the insane, urging as chief argument that the great majority of the inmates are children of Catholic parents. To which reason, the Alliance replies by asking, "If this is so, what does it show but that Catholic teaching and Catholic schools are what produce pauperism and crime? In the State of New York," the Alliance avers, "the Roman Catholic parochial school system turns out three and a half times as many paupers as the public school system."

It is little wonder that the Catholics of Milwaukee are disturbed by the report of the House of Correction, remembering that their strong, in fact their only, argument in the late contest upon the taxation of church property was that their churches and schools inculcated a morality which made peaceable communities; and, therefore, communities should in return give to these institutions the utmost freedom to carry on the work of promoting morality.

Morality is the cant word in the Catholic category in all discussions upon schools and their management; but it becomes rather difficult to determine just what virtues the term represents, in view of the facts and figures of other criminal records besides those of Milwaukee.

The narrow use and the misuse of the word "morality" by other Churches as well as the Catholic, and the continuous developments of delinquencies and crimes among church members, bring to mind these words of George Eliot: "The most serious, wide-reaching duties of man lie quite outside both morality and religion; the one of these consisting in not keeping mistresses (and perhaps not drinking too much), and the other in certain ritual and spiritual transactions with God, which can be carried on equally well side by side with the basest conduct toward men."

Crime, as related to church systems and shown in criminal records, would seem to be, if sufficiently well considered by the rationalists of every community, a stimulating cause for the immediate organization of ethical societies,—societies established on Prof. Adler's confession of faith, "the supreme excellence of righteousness."

A suggestion from Mr. George Schumm, the talented and earnest editor of the *Radical Review* of Chicago, made to me a few days since, was excellent, and I at least would rejoice if it could be set on foot at once; namely, that Mr. W. M. Salter, the leader of the Ethical Society of Chicago, might, if sufficient encouragement were given him, organize a similar society in Milwaukee and take partial charge of it temporarily.

Milwaukee has a proportionately large number of liberal-thinking and a preponderance of philanthropic people, who are well fitted to engage in the work peculiar to such societies as those led by Prof. Adler and Mr. Salter. They are in need of a leader. It waits to be seen, if one comes, if they will, as Mr. Potter says, "have the readiness to accept him and give him an opportunity." S.

MILWAUKEE, WIS., April 29, 1883.

THE FUNCTIONS OF GOVERNMENTS.

Editors of the Index:—

Beyond a doubt, the importance of governments can be and has been exaggerated, but just now the danger is of the opposite nature. Cowed by the weight of authority rather than convinced by argument, the reading public seems disposed to accept the *laisser faire* theory with too little qualification. By a natural reaction from the old idea of legislative omnipotence, we have the Spencerian doctrine of legislative impotence.

Men can gain certain ends alone. They can gain certain others by joining with their neighbors to form stock companies, others by joining with those of similar religious belief to form churches, and still others by joining with all the inhabitants of a particular territory which is the State. To find what objects can best be attained in one of these ways and what in another is a matter of experience. That widest organization of all, the State, has certain manifest advantages and certain disadvantages; and it is only by experience that we can determine when its action should be invoked, and when we should try some other agency. To lay down iron-clad limits to the functions of government is mere dogmatism, as baseless as that which announces the cubic capacity of the New Jerusalem.

If it were ascertained that the public welfare would be promoted by a line of balloons from Wrangel Land to Ujiji, and that the American government could maintain that line to better advantage than a private company, I know of no authority competent to say, "You are overstepping your bounds: your functions cover nothing except the security of order, freedom, and peace."

What we desire is the greatest possible economy of force, whether we employ the agency of the State, the Church, or the limited association. Consequently, the function of governments covers precisely those things which governments can do best. And it is by no means certain that experience will prove those things to be very few. In the power of enforcing its decisions, the State has a tremendous advantage over any other form of association, and that advantage should be utilized to the utmost. To let it run to waste would be as unwise as for us dwellers on the parched Californian plains to let our rivers flow idly to the sea, while our thirsty fields are crying out for water.

Whether protection or free trade should be our national policy is a question of economic and political expediency, and not, as Miss Hardaker would have us believe, one of the proper limits of legislative action. The free-trader should prove his case, not enter a plea to the jurisdiction of the court.

When the British government embarked in the banking and telegraph business, it was guilty of what political purists would call a palpable trespass on the domain of private enterprise. But what shall we say of the continental State railways, the Gothenburg plan of liquor-selling, the ministries of fine arts, and the subsidies to theatres and operas? We can say this: If the English postal savings banks are hampered a little by red tape, their depositors never lose the earnings of a lifetime by the foreign tour of a pious cashier. If the postal telegraph system is managed with less rigid economy than it would be in the hands of a niggardly corporation, it is not obliged to spend so much in buying up rival companies, corrupting legislatures, and paying dividends on watered stock. If the public railways of the continent are a little over-officered and unwieldy, they have developed no such hideous cancer on the body politic as the Central Pacific. If Gothenburg throttles private enterprise in the liquor business, she has less need of public enterprise in building jails and poor-houses. If France makes the fine arts a Cabinet subject, and puts the grand opera and the Théâtre Français in the annual budget, her capital is the pride of the world, and her people have learned the meaning of taste.

When paternal government, in its anxiety for the welfare of the individual, interferes with his personal liberty, it goes too far. But when it taxes him for the maintenance of free schools, libraries, art galleries, parks, gymnasia, baths, and the hundred things that would be such a light weight on the public revenues and such an incomparable aid to the public happiness, it does what, if not originally among its duties, ought forthwith to be included in them.

We have not yet learned to realize the benefits that can be gained from the united action of a community. We are so timid about spending money for what will really benefit us that, while we bore, with only a mild murmur of disapproval, a pension list inflated to bursting with fraud, we set up a howl of rage at the thought of giving our rivers and harbors a pitiful $19,000,000, of which fully thirty-nine fortieths were for useful and necessary objects. Instead of eliminating the remaining fortieth, we were so transported with wrath that, at the next session of Congress, we forbade the appropriation of a single cent.

In the past, governments have been little but engines of oppression. In the future, we look to see their gigantic possibilities utilized for good. Under the national authority, we hope to find a magnificent system of harbor and internal improvements, lighthouses and life-saving stations, school ships, geological surveys and scientific expeditions to the ends of the earth, and a capital that shall focus the wealth and culture of the Union. Upon the States we depend for the perfection of our public schools, crowned by a group of universities that shall be such in fact as well as in name, for the maintenance of experiment stations in agriculture and science, and for the preservation of such natural wonders as California cherishes in the Yosemite and New York neglects in Niagara. But it is the cities and towns that most nearly approach the every-day life of the people. Through their agency, we expect the citizen of the future to swim in a public bath, exercise in a public gymnasium, read in a public library, ramble in a public park, take his Sunday recreation in a public art gallery, and to feel through it all not the humiliation of one who is accepting charity but the independence of one who is enjoying his own. Many of these things are already accomplished: the rest I trust soon will be; and, when that time comes, we shall hear less about the limits of governmental action, and more about the possibility of finding new outlets for the public activities. S. E. MOFFETT.

MR. GEORGE'S THEORIES AGAIN.

Editors of The Index:—

Mr. J. H. Allen, in *Index* April 19, is "sorry to see my young friend, Mr. Kennedy, taking stock in the deleterious nonsense of Mr. George's book." He pats Mr. Kennedy on the back in a patronizing fashion, and talks to him in this wise: "My young friend, I have a sincere esteem for your abilities. I am, therefore, sorry to see you captivated by Mr. George's excellent philanthropic sentiments, his brisk style, and inordinate confidence in a few pet theories. A little reflection might easily put you right. You state three positions of Mr. George's, all of them flagrant and manifest sophisms. They concern the three points of wages, population, and land. You take for truth a poor joke of Mr. George's, but in your sober second thought you know better. Go to with such nonsense!"

"As to the first," asks Mr. Allen, "was it the added value that paid the wages of cutting the Hoosac tunnel?" "The man who dug holes in the ground and then filled them up would hardly make a subject for political economy," says Mr. Salter, *Index*, January 25. "But they didn't fill the Hoosac tunnel," Mr. Allen will say. Well, you will find an answer to your query in the article by Mr. Salter, if you read diligently. "Was it the added value that paid the wages for building a house which burns down when it is half done?" We never pay wages for *building a house* which burns down when it is half done. Go to with *your* nonsense.

As to the second position, Mr. Allen says: "Mr. Kennedy thinks that Mr. George has confuted Malthus with a few fine phrases, which he copies." I don't know what Mr. Kennedy *thinks* about it. I know he doesn't say so in his "Digest of *Progress and Poverty*." He says, "It seems to me that George disposes of *the foolish bugbear of Malthusianism* in a very effectual and handsome manner." It seems so to me, too, Mr. Allen, even after you have "stripped the theory of Malthus of all verbiage." We knew the theory before stripping.

"But, for one thing,"—now Mr. Allen has got Mr. Kennedy in a hole,—"has Mr. George ever asked himself what we are going to do for *lumber*, if civilization and numbers go on another century with as reckless waste as now?" Give it up! I don't suppose Mr. George ever asked himself anything about "lumber." The thoughtless fellow has seen the big trees of California, and has no idea but lumber-producing forests are inexhaustible. Go study Malthus, Mr. George, and then tell us "what we are going to do for lumber."

"As to land,"—this is the third position of Mr. George, and appears to Mr. Allen to be a flagrant and manifest sophism,—nevertheless, Mr. Allen says: "As to land, I fully believe, with Mr. George, that the State, if wise and virtuous enough, ought to make a great many inalienable reservations, such as mines, forests, water-power, and perhaps the plot laid out for a city that is sure to grow rapidly." Such as the marsh on which Chicago is built. It would have been easy to have kept squatters off that "plot." "But we seem to find that States, as they are now, are not wise and virtuous enough." Therefore, it is better not to reserve any part of the land, but hand it over to "independent owners."

Thus, with a dash of the pen, does Mr. J. H. Allen dispose of Mr. George's *Progress and Poverty* and Mr. Kennedy's "Digest" of the book. Why should he not? Did not Herbert Spencer read it just a few minutes, and then throw it aside when he found what pernicious doctrines it contained? I quote Spencer from memory, and consequently may not get the words used, but this is the impression left on my mind. An acquaintance was at one time telling me what Paine believed and what he did not believe. I asked him if he had ever read any of Paine's writings. "No," said he, very indignantly. "Do you think I would read his writings?" "No," I answered, "I don't think you ever would." I hold a similar opinion in reference to *Progress and Poverty* and Mr. J. H. Allen. A. BATE.

MILWAUKEE, April 30, 1883.

ARISTOCRACY IN RELIGION.

Editors of The Index:—

In a very interesting article in the *Revue des Deux Mondes*, 1880, Count Goblet d'Alviella writes respecting the fiftieth anniversary of the Brahmo Somaj in India, a theistic society founded by Ram Mohun Roy, and lately under the leadership of Keshub Chunder Sen. This movement was a reform from Hinduism. Of one of its distinguishing features, the writer says:

"Up to the time of this reform, the most important part of the [Hindu] worship, the recitation of sacred texts, took place among Brahmins alone with closed doors, and the members of other castes were admitted only to hear the sermon and the hymns. The Brahmo Somaj allowed no such distinction."

This theistic society ignored and opposed the whole caste system, as well as the polytheism prevailing in India. Its reformatory action, mentioned in the paragraph above quoted, reminded me of the similar movement here in Boston, a repudiation by the Young Men's Christian Union (Unitarian) of the aristocratic feature of the (orthodox) Young Men's Christian Association.

The association, the orthodox body, consists of two grades or castes, an upper and a lower, the point of distinction being church-membership. The price of admission is the same for all; but the church members are the nobility, or governing class, the others forming the subject class, having no vote either in the adoption of by-laws or the choice of officers. The Union, a Unitarian body of later formation, have never allowed this invidious distinction, but admit all their members equally to all the advantages of the institution. C. K. W.

A SOLUTION OF THE INDIAN PROBLEM.

Editors of The Index:—

I was much interested in the recent communication from Mr. W. S. Kennedy on the Indian question In my opinion, it is one of the most sensible and practical articles ever written on the subject. I was on the Kansas border during the Cheyenne raid of 1878, and know something of the horror of an Indian invasion. Though I do not pretend to have given the subject any such exhaustive investigation as Mr. Kennedy appears to have, yet from my boyhood I have been a close student of Indian affairs, and have never lost my interest in the subject. Years ago, I arrived at what I considered a solution of the Indian problem. It differs from Mr. Kennedy's in some details, but is the same in spirit. Briefly stated, my plan is this: Allow matters to go on as at present until some tribe gets on the war-path. Then send out the troops, with orders to continue the war till every buck,

Digitized by Google

squaw, and pappoose belonging to the tribe is captured. Experience shows that most Indians fight through the summer, and surrender on the approach of cold weather. Once captured, move the whole tribe to Illinois, Ohio, Indiana, or some other thickly settled State, where land is good, and not too dear. Here let the whole tribe be settled. Let each head of a family be given one hundred and sixty acres, a comfortable house and out-buildings, live stock, seed, farming utensils, etc. Station a sufficient body of military near them as police, but give them no judicial power over the tribal affairs. Abolish the chieftainship (I lay great stress on this), and, as Mr. Kennedy suggests, put the whole tribe under civil government. Take away the annuities, or devote them for a time to public improvements for the benefit of the tribe. Disarm them. Prohibit the use of alcohol. Make education (especially industrial education) of all under a certain age compulsory. Make labor compulsory, but give them the profits. As soon as one is able and willing to be self-supporting, make him a citizen of the United States, with all the rights, privileges, *and responsibilities* of a free man. Thus surrounded by a white population, there would be no trouble about outbreaks. Experience shows that an Indian never cares to fight, unless he has a chance to run; not because he is a coward, but because such is his habit of warfare. Every tribe should be served in the same way as soon as they give trouble; but the tribes should be scattered, not located together. The value of the vast tracts over which he now terrorizes would more than compensate the government for the perhaps heavy expense of buying cultivated land for the Indian, and fitting him up for civilized life.

This work accomplished, the whole West could be thrown open to white settlement without fear, and our savage wards would become as civilized and peaceable citizens as the Scottish Highlanders now are.

J. WILLIAM LLOYD.

TRACY CITY, TENN., April 24, 1883.

BOOK NOTICES.

CHRISTIAN HISTORY in its Three Great Periods. Second Period, the Middle Age. By Prof. J. H. Allen. Boston: Roberts Brothers.

This the second volume of Prof. Allen's *Christian History* is a most luminous exposition of the significance of the Middle Age, of its Feudal Society, Chivalry, Religious Orders, Scholastic Theology, Religious Art, Crusades, Ecclesiastical System, etc. It closes with an account of Dante and the Pagan Revival, or reaction of the human spirit against the asceticism, stupid dogmatism, gloom, ignorance, priestism, intolerance, and blind credulity of the mediæval period. Prof. Allen leaves, as it were, a phosphorescent wake behind him in his exposition of this momentous period in the history of man. His account of Nominalism and Realism and the Scholastic Theology is specially readable and admirable. Truly, the European man had to be put through a rough course of experiences and discipline to make him the rational, orderly, intelligent person that he now is in the foremost nations. It seems that feudalism and mediæval ecclesiasticism and chivalry and monkery and scholastic theology, and religious persecution and intolerance with their penal fires, were all necessary steps in the evolution of the modern man. But "let us thank God" that they are steps which have been taken, and which need not be repeated. We, as a race, are happily done with that part of our development. But we can revert to it, even with pleasure, in the luminous pages of Prof. Allen, who makes the Middle Age extend from the dawning of the Empire in the West, in 800, to the dawn of the Protestant Reformation. This Middle Age was, indeed, an iron age, a storm age and wolf age, to borrow the language of Scandinavian mythology. Men went clothed then literally in iron raiment. The rulers of the world then dwelt in frowning and dungeon-like fortresses of stone, the huge lairs of cruelty, robbery, lust, and oppression. Castles and cathedrals cast their shadows everywhere. No wonder that, at the revival of Greek literature and rationalism, men abandoned the gloomy creed of a *dies irae* of mortification, penal tortures, and emaciation, and reverted to the rule of the splendid, joyous, Olympian dynasty once more. Prof. Allen has evidently been a student of Michelet and of his great work,—namely, the *History of France*,—which formed an epoch, as it were, in historical writing. So far as the Middle Age is concerned, Michelet's *History of France* is more than a history, it is an epic poem. Whoever would understand the mediæval period of European development must read Michelet.

THE STORY OF THEODORE PARKER: Written for Young People. By Frances E. Cooke. London: The Sunday School Association, 37 Norfolk Street, Strand. 1883.

No greater compliment could be paid to the memory of America's great preacher than the publication in England, by a Unitarian Sunday-school association, of this condensation of his biography for the instruction and encouragement of the young, by an English writer. Miss Cooke tells the story of Parker's life and work in a simple, straightforward manner, which cannot fail to reach the heart and understanding of the most obtuse child; and she does not fail to "point the moral" painly as she proceeds with the tale. The book is neatly printed and elegantly bound. The motto of the book, a quotation from Emerson, indicates the spirit in which it was written:—

"So nigh is grandeur to our dust,
So near is God to man,
When Duty whispers low, 'Thou must,'
The youth replies, 'I can.'"

PERSONAL ITEMS.

SPEAKING of the history of the abolition struggle, Wendell Phillips said to a visitor the other day: "Garrison was the man to do it. He ought to have done it. He meant to, but was always given to putting off things. At one time, he took a retired study for the purpose, moved his books and papers into it, planning to work at the matter diligently, and—never entered the room again."

PRINCE BISMARCK writes an earnest letter to an officer of a German anti-vivisection society, expressing hearty sympathy with the society's work, and saying that, were he not so overburdened with other business, he would use all his influence for the passage of a law imposing upon every person convicted of vivisection a fine so heavy that he would be likely never to repeat the offence.

THERE were nearly two hundred thousand colored soldiers in the late war for the Union, more than one-half of them from the slave States; and the spirit of these men, says a late re-unioner, was the spirit of the colored Sergeant Planciançois, whose last words, as his regiment was about to storm Port Hudson, were, "Colonel, I will bring back these colors to you in honor, or report to God the reason why."

A TOUCHING incident is related by the Bay City *Tribune* of Prof. Cocker of Michigan University: "Shortly before his death, he called the attention of his pastor to a worn and faded shawl spread on his bed, and requested to have it wrapped around his body and buried with him. He had made it himself when a young man in England; had worn it in all his journeyings to and from over the Atlantic and Pacific Oceans; when residing in Australia; when he escaped from the Fiji Islanders as they were preparing to kill and roast him, and when he was shipwrecked. It accompanied him when he landed in the United States, and even clad the remains of his dead child when, penniless and disheartened, he first arrived in Adrian. His wish was gratified."

REV. W. H. H. MURRAY, better known as Adirondack Murray, who recently left Texas and was preceded by a telegraphic despatch which he declared a base slander, was at the Astor House, New York City, yesterday. He appeared to be in the best of health and spirits after his trip to the East. When asked how his lawsuit in reference to his lumber property in Texas was advancing, he laughed and replied: "Oh, that's getting along all right. It will take about six months before it is satisfactorily settled. I don't want to talk about it. I don't want to be interviewed about anything. This interviewing is the curse of journalism in America. I believe it is only a nationalization of the sewing-society. There, a lot of women meet and pick their friends' reputations to pieces for the enjoyment of themselves: the newspapers pick every one's reputation to pieces for the delectation of their readers." Mr. Murray said he was going to be in New York about six months, and would then go to Europe. He was engaged in writing a book on a subject connected with the West, but would not talk about it at present.

INDEX TRACTS.

No. 1.—**Truths for the Times,** by F. E. Abbot, contains the "Fifty Affirmations" and "Modern Principles." This especially has received great commendation from most distinguished men for the logical clearness of its statements. New Edition. Price 10 cents; 12 copies, $1.00

No. 2.—**Fear of the Living God,** by O. B. Frothingham, exposes the debasing character of the popular notions of God, and presents conceptions of him that are worthy of the nineteenth century. New edition. Price 5 cents; 12 copies, 50 cents.

No. 3.—**Lecture on the Bible,** by the Rev. Charles Voysey, of England, is an overwhelming demonstration of the imperfections and errors of the Bible, both in the Old and the New Testaments. New Edition. Price 10 cents; 12 copies, $1.00.

No. 4.—**Christian Propagandism,** by F. E. Abbot, is an exposure of the weakness, costliness, and inefficiency of the System of Foreign Missions. *Full of Figures, Facts, and Interesting Extracts.* Price 10 cents; 12 copies, $1.00.

No. 5.—**"God in the Constitution,"** by Rev. Arthur B. Bradford, opposes the proposed Theological Amendment to the United States Constitution. Price 10 cents; 12 copies, $1.00.

No. 6.—**"The Sabbath,"** by Parker Pillsbury, denounces Sabbatarian superstition. New Edition. Price 10 cents; 12 copies, $1.00.

No. 7.—**"Compulsory Education,"** by F. E. Abbot, maintains the right of every child to be educated, and the duty of the State to ensure it an education. Price 5 cents; 12 copies, 50 cents.

No. 8.—**The Present Heaven,** by O. B. Frothingham, treats of a subject that interests everybody. New Edition. Price 5 cents; 12 copies, 50 cents.

No. 10.—**The Impeachment of Christianity,** by F. E. Abbot. Sixth Ten Thousand. *Sent for free distribution to any one who will distribute it, in packages of from five to one hundred copies.*

No. 11.—**The God of Science,** by F. E. Abbot, attempts to show the real influence of modern science upon the idea of God. Price 10 cents; 12 copies, $1.00.

No. 12.—**Is Romanism Real Christianity?** Two essays by Francis W. Newman and F. E. Abbot. Price 10 cents; 12 copies, $1.00.

No. 13.—**On the Vision of Heaven,** by Prof. F. W. Newman, of England, analyzes the Christian conception of Heaven. Price 5 cents; 12 copies, 50 cents.

No. 14.—**A Study of Religion: The Name and the Thing,** by F. E. Abbot, attempts to show that the popular derivation of the word Religion is incorrect; that the popular conceptions of Religion itself are inadequate; and that a new conception of it, based on the Law of Evolution, consistent with absolute Freedom of Thought, and independent even of belief in God, is the necessary condition of the perpetuity of Religion among men. Price 10 cents; 12 copies, $1.00.

SEVERAL HUNDRED VIRGINIA FARMS CHEAP. Climate mild. Taxes low. Catalogue free. C. D. EFES,
NOTTOWAY COURT HOUSE, VIRGINIA.

First Boston Ethical Society.

The following lectures will close the present season of the First Boston Ethical Society:—

Sunday morning, May 13, Courtlandt Palmer, on "The Reign of the Common People."

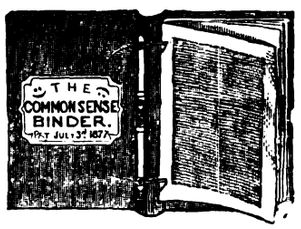
Sunday morning, May 20, Mrs. Clara Neymann, on "The Moral Factor in Government."

Sunday morning, May 27, T. B. Wakeman, on "The Era of Man."

The public are cordially invited to attend these lectures.

They are all to be delivered in Horticultural Upper Hall.

No charge for admission.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions; being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JANES. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 3 Tremont Place, Boston, Mass.

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

CURRENT TOPICS.

ON the 21st, Rome celebrated the two thousand six hundred and thirty-sixth anniversary of its legendary foundation by Romulus.

THE United States Supreme Court has affirmed the claim of the right of the State of Illinois to fix the maximum rates of fare and freight on the Chicago, Burlington & Quincy Railroad. The question whether a State Legislature can fix railroad rates in this country seems to be settled by this decision of the highest tribunal in the land.

A CABLE message, received at Harvard College Observatory last Monday from Dr. Krueger at Kiel, Prussia, announces the discovery of a new asteroid of the eleventh magnitude. Its position at the time of discovery, May 11, 385 Greenwich mean time, was right ascension, fourteen hours, nineteen minutes, thirty-two seconds; and declination south, fourteen degrees, one minute.

A DESPATCH from Omaha says that Sitting Bull and his followers are about to be received into the Catholic Church. The final disposition of Sitting Bull by the government is awaited before definitely fixing the date of baptism. The ceremony is to take place, probably this month, at Fort Yates, Dakota; and the ceremony will be attended by a number of bishops and priests.

A LONDON paper states that the Japanese government, impressed by the stories of Christian missionaries, sent a commission to England to observe, examine, and report in regard to the influence of Christianity on morals. After passing eighteen months in London, the commissioners have gone home and reported that Christianity has less restraint upon crime, especially upon drunkenness, than Buddhism or the religion of Shinto. So the State religion of Japan will remain unchanged.

NO ACT of President Arthur's administration is more generally commended than his issuance of an order preventing great injustice to the Zuñi Indians in New Mexico, which otherwise would have resulted from an error in surveying reservation lands. The government designed that the reservation should include certain springs which lie directly north-east of the boundary line; but, it is stated, Paymaster William Tucker of the regular army, and others interested with him, lately took up six claims, containing more than two thousand acres, embracing the springs referred to, upon which the Zuñis depend for their water supply. The President's executive order amends the original order, so as to include within the reservation the tract of land on which the springs are situated.

ACCORDING to the New York *Herald*, charges have been made against officials of the Baptist Missionary Union by Burmah missionaries, of manipulating their salaries for the last five years to such an extent as to need an accounting for of $50,000. Since the charge against the Baptist Missionary Union was published, some kind of an arrangement has been made by which the charge is withdrawn. This leads the Springfield *Republican* to remark: "If this is the upshot of all the complaining letters of missionaries, it is a case of great cry and little wool. But charges of mismanagement in these religious bodies rarely get investigated to the bottom,—for instance, those against the management of the American Bible Society, which have only resulted in the withdrawal of confidence and support in a few localities, while the administration remains in the same hands."

A FACTORY bill has been introduced in the Canadian Parliament, which prohibits the employment in any factory of children under twelve years of age. Children between the ages of twelve and fifteen may only be employed when their parents or guardians furnish a written certificate giving their consent to the employment and giving the date and place of the child's birth. Neither women nor children are allowed to be employed, "if the health of such child or woman is likely to be permanently injured" by the employment. The hours which they are allowed to work are restricted to ten per day, or sixty per week. Factories are required to be kept in a healthful condition, and precautions against accidents from machinery and against fire are required to be taken. A health inspector is to visit the factories, and see that the law is enforced.

REFERRING to the Oakes Ames resolution, recently passed by the Massachusetts Legislature, the New York *Times* says: "The man who placed the stock of the Crédit Mobilier association 'where it would do the most good' is in his grave. How far his moral sense was blunted by self-interest and by the corrupting influence of a corrupt and money-making age we will not now inquire. The evil he did lives after him. If his memory is resuscitated and fumigated, who shall disinfect the men who have courted private life ever since he laid before them the glittering bait? If there is any later deliberate public sentiment which holds Oakes Ames in an esteem irreconcilable with his condemnation, who shall issue a clean bill of health to the living and the dead statesmen whom it is a charity not to name? This latest attempt to regild the reputation of Oakes Ames is due to a filial piety which all men must needs admire. It is an appeal to the easy good nature of a generation ready to let bygones be bygones. But the inexorable truth of history demands that the lesson of the Crédit Mobilier scandal shall remain,—a warning and a menace."

THE National Woman's Suffrage Association held its seventh convention at the Town Hall in Bedford, Mass., on the afternoon of Wednesday, May 9, the President, Mrs. Harriette R. Shattuck, of Malden, in the chair. Mrs. Shattuck first spoke of the need of women voting, in order that the influence which makes the home the best institution in the land may also extend to the State. In order to accomplish this, women, she said, must take part in governmental affairs. The Rev. Howard Hanaford and Dr. Hosmer of Bedford, Mrs. French of Boston, and several others, addressed the convention in favor of woman suffrage. Miss Caroline Roach recited, "How I went to election," from the sayings of *Josiah Allen's Wife*. The session closed with the singing of an original hymn, written by Mrs. H. H. Robinson, entitled "Hark, the sound of myriad voices." At six o'clock, the guests partook of a bountiful collation, prepared by the ladies of the town. The convention reassembled at 7.30 P.M., and listened to an admirable address by Mrs. Harriet H. Robinson, entitled "Who represents me?" Mrs. Shattuck explained "Why we want the Ballot"; Mrs. Sara A. Underwood read a paper on "Woman in Politics"; and Miss Caroline Roach gave two of her fine recitations appropriate to the occasion.

THE summer term of the Concord School of Philosophy is announced to begin Wednesday, July 18, and is to continue four weeks. A. Bronson Alcott will not be able to take part in the exercises this year; and Dr. Jones, of Jacksonville, Ill., will not be present to expound Plato. But Prof. W. T. Harris will give four lectures on "Man's Immortality in the Light of Philosophy and Religion"; Prof. George H. Howison, four on "Hume and Kant and the Merits of the Issue between Them"; Prof. William James, three on Psychology; Mr. Denton J. Snider, four on "Homer and the Greek Religion"; Rev. R. A. Holland, four on "Hegel's Philosophy and Religion"; Rev. J. S. Kedney, two on "Art Appreciation and the Higher Criticism"; Mr. F. B. Sanborn, four on "The History of Philosophy in America"; Mr. John Albee, two on "The Norman Influences in the English Language and Literature"; Rev. Dr. Bartol, one on "Optimism and Pessimism, a Personal Equation"; Miss E. P. Peabody, one on "Milton's *Paradise Lost*"; Mrs. E. D. Cheney, one on "Nirvana"; President Porter of Yale, one on "Kant's Categorical Imperative." Mrs. Julia Ward Howe will hold a conversation; Mr. Julian Hawthorne will give a lecture on "Novels"; Mr. D. A. Wasson will speak on "Herbert Spencer's Causal Law of Evolution"; and Mr. Lewis J. Block will give a lecture on "Platonism, and its Relation to Modern Thought." Reading from the Thoreau manuscripts will occupy one evening.

THE UNIVERSAL AND THE SPECIAL IN RELIGION.

The greatest religious teachers of mankind have always struck the keynote of what is universal in religion rather than what is special. Even though for their services in awakening new religious thought and life they have been reckoned as the founders of special religions or have actually been such, they have themselves taught religion rather than religions. It was so with Buddha, it was so with Confucius, it was so with Zoroaster, it was so with Jesus. The local, the theological, the formal, the ecclesiastical, they brushed aside as of minor consequence. Their main purpose was to put mankind, wandering and weary and wretched, into right practical relations with the great life of the world of which they were a part; that is, to bring them into righteousness. Their intellectual conceptions of this relation may have been various, but their practical purpose was essentially the same. Hence, these chiefs of the religious history of the human race all emphasized not the theology, not the form and institution, but the inward disposition of the heart and the outward conduct. So did the old Hebrew prophets. So did Socrates in Greece, and Epictetus and Marcus Aurelius and Seneca in Rome.

St. Augustine, a few centuries later, may well have believed that the most vital parts of Christianity were nothing new, but only a new development of ideas and sentiments that had been taught long before Jesus appeared. Jesus himself, defining the substance of his teaching, said it was only the same love to God and man which was the religion of the Hebrew Law and Prophets. And in this way it is that these greatest teachers of religion come naturally into one company and fellowship. Their followers may fall apart in manifold disputes over this or that question of theology, or this or that form of worship, or concerning the claims to precedence which they themselves make for their respective leaders; but we cannot conceive that the princely souls of these leaders, could they personally meet, would be torn asunder by any such disputations. These spiritually crowned heads of the race are of one royal blood and brotherhood. To have discerned the law of righteousness was their common title to inspiration, to proclaim this law their vocation.

Yet we are not to say that the special religions and the different theological doctrines, even those now most obsolete, have not had their mission and use. These have formed the matrix through which the fundamental and universal religious sentiments have had their development and been adapted to the understandings of people who otherwise could not have received them. The Messianic idea, which Judaism specially contributed to Christianity; the doctrine of the struggle between the powers of good and the powers of evil, which the Persian religion contributed; and the *Logos* conception, which came from Greece, bringing the seeds of the doctrines of Incarnation and Trinity,—these all greatly helped to adapt Christianity to various peoples, and to give to the new religion that capacity which it soon manifested for absorbing the various decaying creeds of the extended Roman empire and transforming them into a new faith. It was these doctrines which for the time being served as the vehicle for carrying the ethical and spiritual teachings of Jesus.

The Sermon on the Mount, with its simple moral precepts; the inculcations of purity, sincerity, kindness, righteousness; the parables of the Good Samaritan, of the Lost Sheep, of the Talents, of the Prodigal Son,—these were the really vital and valuable parts of the new religion. But it is more than doubtful whether at that time these would have been saved without those vessels of doctrine into which they were placed by his disciples, if not by Jesus himself,—without even that mistaken expectation of the speedy reappearance of Jesus from the heavens to establish his visible kingdom upon the renovated earth, which appealed so powerfully to the rude imaginations and understandings of common people, and furnished for Christianity a dramatic entrance into the world. This belief was soon discovered to be only a drama; but, when the illusion vanished, the finer spiritual and ethical truths which Jesus had taught as the chief things began to be more clearly discerned, and these remained.

There are many signs that the history of religion has come upon an era in our time in several respects not unlike the conditions that prevailed in the Roman Empire just before the advent of Christianity. Old religions are breaking up. Their special claims to have complete revelations of divine truth are all called in question. Active and cultivated reason, especially in the form of science to-day, is undermining all the theological structures of the creeds. The enterprises of commerce and of material civilization in general have been drawing nations and religions that are the antipodes of each other into better mutual acquaintance. The dividing walls between religious faiths, as between sects of the same faith, are thus weakening and falling. More rational, more comprehensive, and more humane beliefs are springing up. A new philosophy of the universe, resting on the basis of science, is dawning; and the consequence is, as in similar eras before, the old religious sentiments and forces are being freed from bondage to the creeds and ecclesiastical dominions which have been crippling their power, and in their own natural shape and strength are coming forth to do a new and higher work for human benefit. The religions, in their special and supernatural claims, are going; but religion, as an ethical and spiritual force for the uplifting of humanity to its highest ideals, remains.

WM. J. POTTER.

THE CLAIMS OF RELIGION.

Notwithstanding all the light, science, and even "infidelity" of our age, religion still has its votaries, and is making converts among old and young on every side, Orthodoxy is building up its churches by the same revival means as formerly, and taking captive some whom we would not expect to be its subjects in not a few even of our New England country towns. There is a very general sentiment that piety is somehow intrinsically and supremely important; that the morals of society and a good character are implied in and sustained by religion; that observance of religious ceremonies and forms is essential to right life and character, as well as peace with God and happiness after death.

Now, if this be true, even that religion is the foundation of right life and good moral character, what inference can be more natural and immediate than that the Catholic and evangelical churches are the truest conservators of human weal, and that they ought to prevail and supersede all other organizations of men? It can hardly be doubted that religion is, with most people, an inheritance of sentiments and feelings or emotions which are easily excited into action by contact and sympathy with others. It is not generally argument nor science that awakens religious activity, not culture nor fine preaching, but often the most superficial, simple talk. The most unlearned, irrational appeals convert the man of ordinary learning and judgment to belief of orthodox theology and observance of church requirements.

Belief in God and a future life seldom comes from reasoning or study, perhaps never comes as a result of investigation, but is an inheritance or an intuition. Principal Shairp says: "If God is to be apprehended at all in a vital way, and not merely as an intellectual abstraction, it must be first from the spiritual side of our being, by the conscience, the spirit, the reverence that is in man." "I cannot imagine," he says, "how any one, who has once got into the purely physical way of conceiving the first origin of things, can pass out of it into the moral and spiritual conception except by a radical change in his whole mode of thought, an inward awakening which shall make him know and feel experimentally the need of a moral and spiritual Being on whom his own being can repose, as it never can on any physical centre. . . . In forming a true judgment on religious subjects, it is before all things necessary that a man be in some real sense religious. . . . The absence of this requirement in a man renders his religious judgments of no account, however great his powers and however large his knowledge." He claims that "purity, disinterestedness, reverence, these the finest fruits of the spirit, could not come to full maturity in any soul but one which lived habitually in the divine presence and under the power of the world to come." To the objection that he is reasoning in a circle, he replies, "All who are used to moral inquiries know that the occurrence of such seemingly vicious circles is no strange thing in that region of thought."

Thus, according to Principal Shairp, religion does not claim to stand on logical consistency, does not appeal to reason or the intellect, primarily, but is a state of moral and spiritual feeling, having its roots in the affections, the heart. I am satisfied that religion is not scientific, is not rational, so far as having a basis in intelligence or valid knowledge is concerned. But how about the general claim in which nearly all religions appear to concur, the liberal, so called, as well as the exclusive,—the claim that all moral character and life depend on religion in one form or another? While I believe that as a fact of history and of common observation there are men, not a few, who possess high and delicate moral feelings, who are of the truest and noblest spirit, of irreproachable moral character, pure, disinterested, reverent in the highest possible sense of the word, and who yet make no profession of religion and have no faith whatever in any strictly religious or theological dogmas, I am yet solicitous to know if, on the whole and from a wide generalization of facts, it be true to any extent, as so many thousands of pulpits are continually teaching the people throughout the lands, that the highest and truest life can only be realized by religious faith and the practice of religious rites. It certainly appears to be a fair inference from the orthodox premises of the supernatural creation and government of the world and the lost or fallen state of man. But from the scientific point of view, supposing evolution to be the natural order and to include man, what place and value has religion, considering it, as I do, as the belief in and worship of a God or gods, not to be confounded with morality? I understand by morality the conscientious observance and practice of all recognized obligations and virtues between man and man, which includes and implies, of course, the exercise of brotherly regard, philanthropic feeling, and a genuine reverence for the rights and good of others. Are there qualities higher than these? I know that religion claims that these are of no worth, except in conjunction with faith in a miraculous God; that they

Digitized by Google

are "mere morality," to be set aside and condemned of and by themselves as dangerous examples luring men to destruction. But do the lives of the more and most devout church people anywhere—Catholic or Protestant—indicate that they have found any higher or sweeter sanctity, any esoteric goodness better than the devotion to human welfare exhibited by such eminent heretics as William Lloyd Garrison and Peter Cooper?

It will be admitted that the Churches have taught morality, and in many localities have been the principal means, aside from the home and common school, of keeping alive the moral sense and conscience. But is it fair to infer from this that the Churches are vitally necessary on this account, and must be maintained, or the community will go to ruin? that religion is necessary to morality? I do not think that the Churches generally base religion on this ground, however they may sometimes plead it as an argument for help from those outside the Church; but they insist that religion confers a supernatural benefit, an exclusive salvation from an impending doom to which all the irreligious are exposed. Religious people generally hold that, by faithfulness to their public vows, they are guaranteed a secret good which renders them superior to other people. Being human, is it not possible that they should feel a pride and self-gratulation in their peculiar service to a Master whom they hold to be inexorable with sinners? I have many excellent friends who, I think, cherish this pride, and regard with pity those who do not hold to their faith. I am, however, unable to see how or wherein their lives or characters are any better than those of others who make no exclusive claims, who believe in no divine interference with the order of nature. I ask then, in all candor, what is the good of religion? Is it not possible to have all that is excellent and desirable in life without it? And, if so, is it not possible to give it up, set it aside, and by a careful attention to nature, by an intelligent, scientific apprehension of the real laws of life, bring in a nobler and truer state of the individual and society,—a state in which the greatest and best ends of life are realized? I know it is possible to call all moral virtues religion, but are they allied with what is generally understood as religious faith and practice? Are they not distinct from religion and possible without it? I am prepared to welcome any new light on the subject. A. N. ADAMS.

FAIRHAVEN, VT., April 30, 1883.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER IV.

The Conversion of Europe.

"Consistency is the seal of truth."

The alliance of Christianity and barbarism, and their joint triumph over the civilization of the Roman Empire, form the most fateful episode in the annals of the human race; and in the book of history no other page is so stained with the sweat of laborious sophisms. To what complicated theories of strange coincidences and peculiar mishaps the Christian apologists have to resort, in order to reconcile the alleged merits of their creed with the suspicious circumstances of its introduction and the monstrous consequences of its supremacy! From year to year, the progress of science has obliged them to modify their hypothesis by qualifying its conclusions or falsifying its premises. But the evidence of history remains, and the only theory which can account for the persistent uniformity of that evidence furnishes also the key to the equally persistent duplicity of the theorists who wish to approximate the truth of historical facts and yet dread to divulge the trade-secret of their creed.

The Religion of Antinaturalism appealed to the pessimistic tendency of decrepitude, and thus recommended itself to the instincts of a decrepit generation.

During the first century of the Cæsarean era, the silence of the pagan moralists, and their often alleged blindness to the destiny of the new faith, admit of an equally simple explanation: they did not underrate the influence of the Galilean church, but they overrated the moral health of a nation which, in the incipience of its political abasement, seemed still justified in despising the contagion of a creed which even casual observers had recognized as an "execrable superstition." For the descent from Cato to Nero was really a mere trifle, compared with the fall from Nero to Constantine. The murderer of Seneca was the tyrant of a proud commonwealth, which sought and found means to shake off his yoke. The patron of Eusebius tyrannized a community of submissive slaves, who had lost not only the blessings, but the instinct of liberty. The proud stoicism of the Roman philosopher, the beauty-worship of the Roman poet, the joyous nature-worship of the Roman peasant, had all given way to the whining pessimism of the Galilean bigots,—to a creed which superadded the devil-panics of the Egyptian church to the asceticism of the nature-hating Buddhists. Tacitus misread the signs of his time. But let us put ourselves in his place. Even if the stars of our Republic should be transferred to the crown of a despot, we might still feel ourselves entitled to despise the followers of an Oriental visionary who should deny the value of earthly possessions and the competence of human reason, but profess his belief in devils and witches; who should denounce the observance of sanitary precautions, the promptings of our natural affections, and the cultivation of industrial habits, and advise his disciples to supply their wants by prayer and miracle mongery. Even our Spiritualists, even the Cherokese worshippers of the Great Spirit, would be entitled to execrate the superstition of the bigots who should propagate such dogmas, and blaspheme their Creator by co-ordinating his name with that of their mystagogue.

Tacitus and Suetonius did not apprehend any danger from such sources; but Oriental vices prepared the way for Oriental superstitions, and two hundred years later the countrymen of Scipio Africanus had accepted the yoke of a creed which the countrymen of Judas Maccabæus rejected with persistent scorn.

Worn-out sensualists consoled themselves with the hope of a better hereafter. Cowards pleased themselves in the idea of fulfilling the duty of meek submission to injustice and the "powers that be." Monastic drones denounced the worldliness of industrial enterprises. Physical indolence welcomed the discovery that "bodily exercise profiteth but little." Envious impotence insisted on the duty of self-abasement. Transgressors against the health laws of nature relied upon the efficacy of the prayer-cure. Stall-fed priests sneered at the lean philosopher who wasted his time upon laborious inquiries, while he might wax fat on faith and the sacrifices of the pious. The demon-dogma was a godsend to the spiritual poverty of the elect. The so-called scholars of the Galilean church, who could not encounter the pagan philosophers on their own ground, found it very convenient to postulate a spook for every occult phenomenon.

But moralists who clearly discern the change in the ethical standards of a nation are apt to overlook the *progressiveness* of that change. They see the present and the past, but not the future. In the game for moral supremacy, the pagan philosophers had all the good players on their side; but the Christians, like the gods, played with loaded dice. Two rival crews struggled to row the Ship of State in opposite directions: Health, Manliness, Reason, Science, and Optimism arraigned against Disease, whining Bigotry, Unreason, Fanaticism, and Pessimism. But the Pessimists had the winds and tides in their favor. It was a struggle of declining philosophy against growing superstition. Before long, the imperial despots recognized their mistake in persecuting a creed which inculcated the duty of passive submission to oppressors, and the doom of Roman liberty was sealed when on its grave the despot Constantine erected the cross of the Galilean Buddhist. Claudius Constantine, the Roman Haynau, the man who added the cant of Uriah Heep to the crimes of a Cambyses, became the Pontifex Maximus of pessimism, and, in the view of his ecclesiastical biographers, atoned for all his murders by making Christianity the court-religion of the empire. The despotism which Nero and Caligula had exercised under the influence of temporary insanity, or in defiance of laws which they otherwise recognized, was then elaborated into a system. The last traces of the old democratic institutions were utterly abolished. Where the poorest plebeian of the ancient republic would have claimed a right, the proudest patrician had now to cringe for a favor. The Roman Padisha retired to Constantinople, and surrounded himself with an army of flunkeys and eunuchs. The visitors of the Audience Hall were required to perform the rite of genuflexion, and submit their petitions to the caprice of the autocrat. From the decrees of that caprice there was no appeal. The imperial saint compelled his father-in-law to hang himself. His brother-in-law was strangled in prison. His nephew, the only boy of a widow, had his throat cut. His eldest son was beheaded, and his wife was strangled in a bath. The will of the despot was officially recognized as the supreme law. Every symptom of political or religious independence was rigorously suppressed, and the alliance of Church and State bore its first-fruit in the decree which threatened the readers of Aryan books with capital punishment. "*In hoc vinces.*" The cross had triumphed.

There is an old Indian tradition that Ravan, the Prince of Darkness, avenged himself upon his conquerors by inviting them to a banquet of poisoned soma-vine. The myth of the Python and the legend of Hercules and Nessus are echoes of that tradition, and its meaning has been illustrated in the fate of many a barbarous nation that adopted the vices and superstitions of its conquered rival. The worshippers of sickly saints appealed in vain to the old god of war; and, a century after the death of Constantine, the hordes of the Sarmatian steppe dismembered the empire of the nation which, for centuries, had represented the highest mental and physical development of the human race. But the dying Centaur avenged himself by the bequest of a moral Nessus shirt. With the purple of the Cæsars, the Gothic chieftains inherited the poison of the Galilean pest.

Polytheistic savages are especially apt to conclude that their intellectual superiors must have a superior fetich. A Yankee missionary once confessed that he won the confidence of a Fiji Islander by presenting him with a set of carpenters' tools, and describing the several implements as a *Christian* hatchet, a *Christian* claw-hammer, a *Christian* buck-saw. The barbarians of the North embraced the religion of the *Roman* god as they adopted the code of the Roman lawyer and the trappings of the Roman cavalry. When the savage conquerors returned to their native villages, they could hardly

Digitized by Google

find room and names for the quantity and variety of their spoils,—purple, gold cloth, curious glass trinkets, ornamental shields, sweetmeats and incense, musical slaves, dancing-girls, soothsayers, monkeys, and parrots. To commodities of that sort, they had added a few bishops and crosses. They managed to acclimatize them, and quite enjoyed their novel acquisition. The poison had not yet revealed its virulence. A little while after, we find them involved in all the horrors of religious massacres, witch-riots, heretic-hunts, devil-panics, and manias of self-torture. The poison had begun to operate.

The shadow of the cross began to creep over the face of the earth. The sun of pagan civilization still gilded the horizon with its last rays, but the foul birds of darkness were already on the wing; and the spectres of superstition heralded the advent of the dreadful night which for thirteen centuries was to blight and darken the fairest countries of the globe. It is a significant fact that the civilization of the East revived under the influence of the optimistic doctrines of Islam, while the civilization of the West was crushed by the ascendency of a pessimistic religion, and only revived at the decline of its influence. Two centuries after the conversion of Mecca, the sixteen provinces of the Caliph were studded with academies. Their culture and prosperity rivalled the Golden Age of the Grecian republics; and, six hundred years later, the Moors of Spain were still the teachers of Europe in science and arts, as well as in industry and agriculture. Two centuries after the conversion of Rome, the sun of reason had set in a sea of insanity; and that night was broken only by the dawn of modern rationalism. At the end of the fourteenth century, when the power of the Church had reached its zenith, not a single country in Europe had gained by its conversion from optimistic to pessimistic polytheism. Every school had been turned into a seed-plot of superstition, every jail into a grave of liberty; the sword of Themis had become an instrument of spiritual despotism, literature a farrago of silly fables, science a sham; the tillers of the soil were treated like wild beasts, thinkers and inventors as criminals; the enemies of Nature were worshipped as the ministers of her God.

The same Germans and Celts whom the Roman pagans had turned into intelligent citizens the Roman Christians turned into brutish bigots. At the same time, when Moorish Spain rivalled the god-gardens of ancient Italy, and every Moorish town had its schools of poetry and philosophy, Christian Spain was cursed with a chronic plague of mental and physical famines. With every possible allowance for "unfortunate contingencies," "revivals of barbarism," "misunderstood doctrines," etc., we cannot mistake the significance of the contrast. "Bring up a child in the way it should go, and it will not depart therefrom." And nations, too, are, on the whole, what their educators make them. We need not expect that Pusey's "heaven sent gospel of regeneration" should turn every corner of earth into Eden; but, if it not only failed to alleviate, but always and under all circumstances was sure to aggravate, the misery, and intensify the vices of every converted nation, we can have no difficulty in forming an opinion about the import of such facts. The laziest and sickliest Sybarites of ancient Italy would have execrated the systematic health ruin of the Italian monks, who boasted of disease and forced their disciples to treat the body as the enemy of the soul. The Alexandrian Platonists, with all their penchant for gnostic phantasms, would have loathed that mixture of superstition, insanity, and disgusting sophistry which the Alexandrian clergy disseminated as a divine revelation. The warriors of the old pagan Northland, with all their martial truculence, would have shuddered at the mention of the inhumanities which their children perpetrated at the instigation of their priests.

The first Galilean missionaries came in Unitarian and optimistic disguises. Arius Alexandrinus was the patron-saint of the Visigoths, the Suevi, the Vandals, the Celt-Iberians, and the Burgundians. But moral epidemics can rarely be confined to their incipient stages, and there is a curious analogy between mental and physical *poison habits*. Harmless sweets always please. There is no reason why an octogenarian should not relish a cupful of strawberries as much as seventy years ago, when he picked them among the rocks of the mountain glens. Virgil's Eclogues never lose their charm. But the votaries of an unnatural stimulant must continually increase the dose: their tonic palls, the jaded nerves demand a stronger medium of stimulation. The alcohol-tippler has to advance from cider to brandy and rum. The opium-eater graduates from laudanum to morphine. The victims of mental poison habits, too, prove that their vice is progressive. Visionaries advance from hobgoblins to the personal devil. Buddha began with the deserts of Nepaul and ended with Nirvana. The asceticism of the Nazarenes led from celibacy to the Cross. All southern Arians ended by becoming fanatical Trinitarians and persecutors of Arianism: the stronger poison prevailed; moderate absurdity had no chance against absolute nonsense. Their missionary zeal, too, increased. From synods, it rose to riots, to heretic-hunts, to Jew-massacres, to civil wars, to international wars, and culminated in the inter-continental warfare of the Crusades. Intolerance advanced from excommunications to excoriations, from the burning of heretical books to the burning of heretics.

The progressiveness of every poison habit bears an exact proportion to the virulence of the poison. Johnsonian tea-drinkers are phenomenal. For one man who drinks coffee to an absurd excess, we shall find a thousand who swill wine or lager beer. The nature-worshipping Greeks repeated the harmless myths and practised the merry rites of their creed for centuries without troubling themselves about the myths and rites of their neighbors. Their superstition differed from that of the Church as the inspired love of nature differs from the ecstatic fury of her enemies, as the day-dream of a happy child differs from the fever-dream of a gloomy fanatic. "*Procul profani!*" was the cry of the Eleusinian priests. They had more followers than they wanted. Their joy-loving creed could dispense with autos-da-fé. The Hebrews, in stress of famine, conquered a little strip of territory between Arabia and the Syrian desert, and then tried their best to live in peace with heaven and earth, and their sects contented themselves with metaphorical rib-roastings. The Saracens spread their conquests from Spain to the Ganges, but their wars had a physical rather than metaphysical purpose. They needed land, and made a better use of it than the former occupants. They contented themselves with assessing dissenters, and did not think it necessary to assassinate them. But the Galilean pessimists could not afford to tolerate an unconverted neighbor. To the enemies of nature, the happiness of an earth-loving, garden-planting, and science-promoting nation was an intolerable offence: reason had to be sacrificed to faith, health and happiness to the cross, and earth to heaven. Their conquests were generally unselfish: they did not care for the lands of heathendom, they merely felt it their duty to suppress the impious prosperity of those who cultivated them. The Spanish Christians did not annex the property of their Moorish neighbors: they merely destroyed it. They did not covet the gardens of Andalusia: they merely wanted to extend the deserts of Aragon. "How hardly shall they that have riches enter the kingdom of heaven." It was the duty of a pious pauper to relieve his neighbors of such religious disabilities. "Blessed are they that mourn, for they shall be comforted." It was the duty of a pious pessimist to enlarge that basis of spiritual hopes. Year after year, Charlemagne left his Rhineland palace to ravage the villages of the pagan Saxons, who betrayed an undue fondness for bear-hunts and field-sports, when they ought to have been at church, bemoaning their sins. When they declined to slave for his abbots and surrender their children to a band of gloomy fanatics with their unnatural dogmas and secret vices, he endeavored to cure their stiffneckedness by beheading as many as he could catch. For a century and a half, the Spanish Unitarians were burned at the rate of two hundred a year. Jews and Moors were almost the only industrial inhabitants of the peninsula: their expulsion would paralyze agriculture, manufactures, science, commerce, and mechanical arts; but such trifles could not be allowed to outweigh the ghostly interests of the natives, and, at the expense of the national credit, and the irretrievable loss of national prestige, the subjects of the Most Christian Monarch were reduced to a proper state of financial and spiritual poverty. Between the outbreak of the first crusade and the final expulsion of the Andalusian Moors, more than fourteen million human lives were sacrificed to the propaganda of pessimism, and for seven centuries the neighbors of Christianized Europe were exposed to the almost continual horrors of a moral opium war.

The monody of Libanius* was the dirge of pagan civilization. As soon as the light of philosophy had faded, the vampires of the Galilean church became aggressive, and for the next thousand years the moral history of Europe is the history of an unremitting war against Nature, a war which systematically promoted the survival of the unfit by making manliness a stigma and common sense a capital crime. It is this anti-naturalism that makes the study of mediæval history such a sickening task. The moral atmosphere of the old pagan republics, even after the star of their fortune had declined, is pervaded by a spirit of mental and physical health; while the air of the Christian Middle Ages reeks with the miasma of misery and superstition.

Between the morning-light of pagan philosophy and the evening-light of modern science intervened a thousand years' eclipse of human reason, a millennium of madness and misery which but for that unnatural night might have been the happiest period in the history of mankind. The rule of the Cross robbed the Germanic nations of the spring-time of their national development. When they awakened from the morning-slumber of their political infancy, they found themselves in the coils of a strangling hydra; and the prime of their strength, which might have won them the golden prizes of the international arena, had to be wasted in the struggle against the slimy monster that threatened to crush out their reason and their life. In that struggle for life and light, the Hercules of the North finally prevailed; but the Apollo of the South succumbed to the Python: the Mediterranean Paradise was forever lost. Here and there, the worshippers of the Light-god still wreathed his altars in happy ignorance of the impending change; but the shadows of Nirvana gathered fast, and fifty years after the death of Julian the day of the Juventus Mundi had faded into the

* On the death of the Emperor Julian, 363.

Digitized by Google

night of the Middle ages. There, the fragrance of a sunlit mountain-forest, resounding with the hunter's shout and the jubilee of happy children; here, the fumes and the groans of a Buddhistic opium-den. FELIX L. OSWALD.

THE POLITICAL ORGANIZATION OF LIBERALS.

A zealous Liberal, referring to a paragraph in a recent number of this journal, writes: "I think *The Index* ought to advise and urge the Liberals of this country to unite in a new political party to resist invasions continually being made on our rights and liberties, and to carry out reforms to which the demagogues who have the control of existing parties will never give one word of encouragement."

The proposition to "advise and urge the Liberals of this country to unite in a new political party" is a proposition which we cannot approve. Such a movement was recommended in 1879, and encouraged by well-known Liberals, among whom were Col. Ingersoll and Hon. Elizur Wright. We felt constrained to oppose it, and for so doing were criticised with some severity in the liberal journals which favored the project. In a letter to Col. Ingersoll, we gave reasons for the position we held, in response to which came a telegram as follows: "Are you willing to have your name signed to a call for a convention at Cincinnati simply to consult as to the propriety of taking any political action?" Our reply was as follows: "Yes: if you choose to sign my name, knowing I am opposed to the organization of a new political party" The convention was held, but no new party was formed; and, since that time, Col. Ingersoll, Mr. Wright, and other prominent Liberals who were in favor of the proposed movement, have admitted that it was impracticable and that their action was premature.

We are as distrustful now as we were then of all movements looking to the organization of Liberals into a political party. Such an organization would result in more harm than good. It would cause the sects to subordinate their differences to the one purpose of resisting and suppressing Liberalism, unite them in a solid political body, intensify their zeal, and make them far more powerful and far more aggressive than they now are or have been in this country for many years. The clergy would combine their influence; and, urged on by a common selfishness and a common zeal, they would appeal to the ignorance, the prejudice, and the religious bigotry of the masses. Unscrupulous, office-seeking politicians would even more than they do now pander to the religious element, and, whenever possible, lift themselves into positions by favoring legislation, enlarging the privileges of the religious organizations, and restricting the rights of Liberals.

Herculean efforts would be put forth to revive the slumbering prejudices and the proscriptive spirit of immense numbers who, in ordinary times, are quiescent and indifferent, but who would, in times of religious excitement, be the unreasoning tools of religious leaders, ready to vote and act as they should advise. Tendencies that now, under the influence of various liberal agencies, are kept in check and are slowly growing weaker, and, with the growth of knowledge and the progress of free thought, must ultimately disappear, would be strengthened; and not a few who are now of sceptical proclivities would be brought more or less in sympathy with the religious party, on the same principle which operates to make converts during religious revivals of many who, when outside the range of their influence, are comparatively indifferent to theological matters.

On the other hand, it is very doubtful whether Liberalism would be either strengthened or elevated or the rights and interests of Liberals would be promoted by such a political movement. At the outset, there would be attracted to it a large class that would do our cause more evil than good, that would be an element of weakness, not of strength,— a class that has no knowledge or appreciation of the principles of Liberalism and no interest in their progress; that dislikes the Church more for the good that it contains than for the absurdity of its dogmas or its hostility to intellectual freedom, and whose identification with the movement would only disgrace and injure it to the extent of its influence.

The movement from the first would, of course, be characterized by the orthodox element as the party of license; and the class to which reference is here made would so regard it, and do its best to realize this idea, giving it sympathy and support with little or no comprehension of what constitutes impartial liberty and equal and exact justice. This element would be large, noisy, and vacillating, without any steady principles, without any real moral enthusiasm, easily influenced by demagogues, who would soon appear, and who would be glad to foist upon the movement any issues by which to swell the numbers of the party and achieve temporary success. Such a success, however, would not be the success of Liberalism, but possibly its disastrous defeat and disgrace.

Since there is no unanimity among Liberals on finance, labor reform, woman's suffrage, and other current subjects of popular interest, there is no possibility of their uniting on any of them as the basis of a political organization. They would have to confine themselves to the principles of State secularization, in order to insure unanimity; and we have already been taught by experience how liable even such an organization, in which no political ambitions have entered, is to subordinate its leading object to a question hardly thought of at its formation, and to divide on this question, much to the injury of the cause for which it was brought into existence.

But a political party formed on the basis of State secularization would at the present time, it seems to us, do more to retard than to advance the cause of political justice and equality. There is now a strong sentiment in our favor, widely diffused, steadily growing, and chiefly among intelligent people, whose character and worth unite, with the justice of the cause which they represent, to give strength and promise of success to the principles of State secularization. At no distant date, we believe, these principles will be incorporated in the platforms of existing or of future political parties, and will be made a part of the law of the land, and ultimately be embodied in the Constitution of the United States and of every State of the Union. If impatient of the delay in their adoption by the people or indignant at acts of injustice and exhibitions of the spirit of proscription, which now and then appear, or if elated by the progress liberal principles have made and the deep and extended feeling in favor of State secularization, we attempt to organize a political party, and to use political party methods to accomplish our purposes, we shall only succeed thereby in making evident our want of judgment, sagacity, and good sense.

The most effective way to strengthen Liberalism and to make our influence felt in the legislation of the country is not to attempt to crystallize the free-thought sentiment into a political party, but to continue the work of education and enlightenment by sustaining and extending the circulation of liberal journals and liberal literature; by familiarizing the people with our views, including the positive, constructive side of Liberalism, as well as criticisms of the dogmas of theology; by forming local organizations for intellectual culture and the diffusion of our principles; or, when this is not practicable or desirable, exerting our influence individually in such ways as seem adapted to the place and the situation; by making the platform as effective as possible, as a means of promulgating liberal thought, and at the same time giving our support to the party, in any State or locality, that is most in sympathy with the great principles of justice, equality, and freedom.

A writer in the *Irish World* of last week thinks "no better time was ever presented than the present for the organization of a new party, to be founded upon and for labor interests." This he thinks "can be done by every labor organization in the land uniting under one grand central organization, inviting every workingman to enroll himself and stand firm." A temperance paper wants a new party, founded upon the principle of prohibition. Some of the advocates of woman's suffrage desire a new party, whose distinctive demand shall be the extension of the elective franchise to woman. A few religious fanatics want a party that will declare "that Almighty God is the source of all power and authority in civil government, that the Lord Jesus Christ is the Ruler of nations, and that the revealed will of God is of supreme authority in civil affairs." There are others who, like the friend from whose letter we have quoted, think that all the Liberals of the country should unite in a new political party to oppose the encroachments of orthodox Christians in the legislation of the country. All these classes that clamor for new political organizations to represent the real or imaginary reforms with which they are respectively identified would do well to study political history and sociology. They would do well, too, to consider whether it is possible or even desirable to induce voters to desert existing parties, whose triumph means the success of measures which are needed and which without their votes may be defeated, for a new party pledged to reforms in which the people are as yet not generally interested, and the success of which is possible only after years of agitation and education.

B. F. UNDERWOOD.

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

The Friday morning session will open at 10.30 o'clock, in Parker Memorial Hall, with an address on "Emerson and Darwin" by Col. T. W. Higginson, to be followed by Mr. Edwin D. Mead, who will speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and by Mr. John W. Chadwick, who will speak of "The Problem of the Universe as approached from the Matter-side by Darwin."

The Friday afternoon session will open at three o'clock with a paper on "Co-operation and Progress," by Mrs. Imogene C. Fales, of Brooklyn, N.Y. This will be followed by an address from Mr. James Kay Applebee on "Social Disintegration and its Arrest by Co-operation." Mrs. Anna Garlin Spencer and others will also speak to the question of the afternoon.

Digitized by Google

The Festival will be held in the large Horticultural Hall, Tremont Street, and will begin with a supper, with tables and seats for all, at about six o'clock, or as soon after the close of the afternoon meeting as possible. Col. T. W. Higginson will preside. After the supper, five-minute speeches are already promised from John W. Chadwick, B. F. Underwood, James Kay Applebee, Frederick Douglass (probably), Mary F. Eastman, Wm. I. Gill, Samuel Longfellow, Wm. J. Potter, Mrs. Clara M. Bisbee, and Mrs. Anna Garlin Spencer, and a poem from Minot J. Savage. Miss Lucy Garlin's Euterpe Quartet have kindly consented to add the attractions of their fine music to the occasion. Tickets of admission to the Festival, with reserved seats at the tables, at 50 cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston, of the Secretary, Providence, R.I., and of A. G. Hill, Esq., Florence, Mass. It is desirable that early application for seats should be made.

EDITORIAL NOTES.

A TRANSLATION of Count Goblet d'Alviella's interesting article on "The Origin and Development of Rational Religion in the United States," which appeared in the April number of the *Revue des Deux Mondes*, has been made for *The Index*, and will be presented to our readers next week.

THOMAS JEFFERSON, in a letter to James Madison, written on the 15th of March, 1789, says: "The executive power in our government is not the only, perhaps not even the principal, object of my solicitude. The tyranny of the legislature is really the danger most to be feared, and will continue to be so for many years to come. The tyranny of the executive power will come in its turn, but at a more distant period." De Tocqueville, writing upon the unlimited power of the majority in America a quarter of a century since, says: "If ever the free institutions of America are destroyed, that event may be attributed to the unlimited authority of the majority, which may at some future time urge the minorities to desperation, and oblige them to have recourse to physical force. Anarchy will then be the result, but it will have been brought about by despotism."

IN a letter of correction to the *Radical Review*, Mr. W. M. Salter writes: —

My purpose in coming to Chicago was not a theoretical, but practical one. Theories of the world and of ethics I wished to hold in abeyance, for a time at least, and to unite men simply on the basis of a righteous purpose. I stated this distinctly in my first lecture. "I am not here," I said, "to propagate transcendentalism or utilitarianism. . . . I do not base ethics on any philosophy: the *fact* of moral obligation is to me surer than any theoretic explanation of it, whether Kant's or Spencer's. I am sorry that you not only fail to recognize this, but maintain that a *certain view of the universe* must be incorporated in any scientific system of ethics and form its basis. The old religions make morality dependent on religious dogma: you seem to incline to rest it on some new philosophical dogma. I think morality can stand of itself. . . . To plant myself on utilitarianism or transcendentalism or materialism would be not only to be untrue to my idea, but exclude many who wish for nothing else so much as to leave behind their intellectual differences, and unite in a movement for a higher righteousness to the world."

"THE more rapidly the bearers of new ideas and new theories snatch at the control of public opinion, the more violent will be the opposition of traditional ideas in the minds of their contemporaries. After being long blinded and stunned, as it were, prejudice gathers itself together, either by external persecution and suppression or by new intellectual creations, to battle with and overcome the inconvenient opinions. If such new intellectual creations are in themselves poor and empty, and endured only from hatred of progress, they can, as in the case of Jesuitism against the Reformation, only prosecute their purpose in alliance with cunning and force and a policy of universal suppression. But if they have, in addition to their reactionary importance, a germ of life within themselves, a content which in other respects leads to progress, they may often produce more brilliant and satisfactory results than the activity of a faction which has become arrogant from the possession of new truths, and which, as happens only too frequently after a conspicuous success, becomes enfeebled and inadequate to the proper following up of what has been attained."—*Lange.*

THE *Christian Statesman*, referring to "the bill to allow atheists in general, and Mr. Bradlaugh in particular, to enter Parliament," says: "We regret that the great statesman [Gladstone] has thrown his influence in support of this measure, and rejoice it has failed. . . . The admission of atheists to seats of power is as absurd as putting the helm of a vessel into the hands of blind men on a dangerous coast and in a stormy sea. It is only to minds corrupted by the heresy that government has nothing to do with God, with religion, or with morals, that the presence of such men in such places seems tolerable at all." Fortunately, the narrow-mindedness and proscriptive spirit of the pious sheet from which the above extract is made find no encouragement in the best and most influential Christian journals of the day. A man, born and brought up in this free country, who would withhold from any class of intelligent and honest men, on account of their speculative beliefs in regard to philosophical and religious matters, the rights of American citizens, must be a fanatic or a crank with a twist in his nature which renders him unfit to form a fair and just judgment on political, social, or moral subjects.

MANY of the representations that have been made in regard to the Tewksbury Almshouse will probably be shown to have little or no foundation in fact, but that there has been much in its administration which affords good ground for complaint is very evident. The subject receives the fairest treatment we have seen in any Massachusetts paper in an article in the Springfield *Republican*, from which we give the concluding paragraph: "The truth about Tewksbury, therefore, so far as we now know, is that there have been great abuses there in time past, that a great hospital and insane asylum has grown up with an old farmer at its head and no competent medical supervision, and that Republican administrations have temporized with it, and left it for Gov. Butler to expose, to the universal disgrace of the State. That disgrace is in a considerable measure deserved, and Gov. Butler will have and deserve the credit of having necessitated a change of administration. We do not believe that the general care of the inmates at any time justified the charge that they were starved, tortured, or skinned, alive or dead; but that there were cases of gross neglect of the insane and infantile wards of the State is too clearly established to be doubted."

MR. C. D. B. MILLS recently read at Syracuse an essay on Emerson, from a report of which, published in a paper of that city, the following extract is given: —

Of his personal appearance, he said that Emerson was tall, rather slight and spare, of very erect attitude, which he preserved to the end of his life. His countenance was radiant, expressive of great kindliness, yet of strong earnestness. His eye was deep and liquid, of finest hue of blue. "To hear him talk," says Dr. Holmes, "was like watching one crossing a brook on stepping stones. His noun had to wait for its verb or its adjective: then, his speech would come down upon the word he wanted, and not Webster nor Worcester could better it from all the wealth of their huge vocabularies." He was characterized as condensed, sinewy, and apothegmatic in the highest degree. There is hardly a writer of English so terse and dense. He uses Saxon, speaks in monosyllables, presses the utmost meaning into the smallest compass. He has the keenest of perception, great subtlety, nothing escapes him, and he can report what he sees. He has not the fluency and freedom of Goethe as he is not so many-sided, but he has marvellous power of compact, striking statements. . . . There are limitations, continued Mr. Mills, marked and undeniable indeed, in this man. He is no finality in the intellectual development, in wisdom, completeness, and power. But where the worth is so transcendent, the gifts and the excellences so commanding, there is hardly occasion to speak of aught limitary. It is to be said of him that he never aged in the spirit. He remained youthful, hopeful, open-souled to the last. In this, he contrasts with Carlyle, his early and life-long companion and friend. These men were in much alike, had points of sympathy and cordial union. They both stood for sincerity in the inmost being, were worshippers, first of all, of reality. Be, not seem, is their common motto. But they differ greatly in temperament and manifested quality. Carlyle was born of a sterling, strong, and virtuous, but a hard Scotch ancestry. Emerson was son of a Puritan, with the conscience, the high ethical qualities of the best of New England flowing in his veins. Carlyle was a torch, Emerson a star. Carlyle was ardent and vehement, Emerson always poised and calm. There was no heat in that blood. One became the sweet prophet of hope, the other the apostle of fate and despair. It was a difference of blood, of ancestry, and also of education.

THIS communicating of a man's self to his friends works two contrary effects, for it redoubleth joys and cutteth griefs in half: for there is no man that imparteth his joys to his friend, but he enjoyeth the more; and no man that imparteth his grief to his friend, but he grieveth the less.—*Bacon.*

POETRY.

For *The Index.*

MY GEHENNA.

I have a grave, a nameless grave and lonely,
Deep hidden in the tangled grass, in the dark yew tree's shade,
With aloe round about it, with nightshade and with mandrake,
With lavender and eglantine that cover all the glade.

Eye hath not seen it: desolate, uncared for,
Is this Golgotha, far from human ken,
Shrouded in the silence, a silence never broken,
Far from every sound of life, far from tread of men.

Never do I seek it: never do I linger
To think, with loving memory, on the one beneath;
Never bear I rosemary, rue, and velvet pansies,
To weave with tender fingers for the buried dead a wreath

Neither friend nor kindred, neither child nor lover,
Never one but many, hide beneath that mound:
Buried hopes, illusions, friendships that have withered,
Fair ideals shattered, lie there in the ground.

And when comes the phantom of that loathed Gehenna
Up before my vision, dark'ning all things bright,
Then I call my forces, my courage and my daring,
Swift to hurl the figure into darkest night.

But when comes the sunshine, glad'ning all things earthly,
Stealing through the forest, shimmering on the bank,
With its warmth transforming everything it touches,
Till at last it reaches e'en the hillock dank,—

Then from out the darkness spring some tender flowers,
Flowers of wondrous value, beautiful and rare;
Flowers of ripe experience, flowers of consolation,
Bud and glow and blossom in their fragrance there.

The Index.

BOSTON, MAY 17, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

An Agnostic View of the Doctrine of Vicarious Atonement.

A Lecture delivered in Cosmian Hall, Florence, Mass., April 22, 1883, by Wm. H. Spencer, Resident Speaker of the Free Congregational Society.

Never will I seek nor receive private, individual salvation, never enter into final peace alone; but forever and everywhere will I live and strive for the universal redemption of every creature throughout all worlds.—*Chinese Scripture.*

By one's self, the evil is done; by one's self, one suffers; by one's self, evil is left undone; by one's self, one is purified. Purity and impurity belong to one's self. No one can purify another.—*Buddha's "Path of Virtue."*

"Of man's first disobedience and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world, and all our woe
With loss of Eden, till one greater Man
Restore us and regain the blissful seat,"—

this theme of the poet's majestic epic has likewise been the text of the gospel of Christendom. There has been everywhere, and in all Christian ages, unanimity of conviction that it was *some way* through the mediation of this "Greater Man," Christ Jesus, that the paradise lost must be regained; but there have been various theories respecting the method by which this restoration of fallen man was actually accomplished. The history of the speculations of theologians on this point furnishes a very instructive chapter in the biography of the Church. Before I consider the *rationale* of the doctrine as commonly held to-day, let us briefly glance at its historical changes. It has in the course of its development passed through three pretty distinct phases, and, among the more liberal orthodox, is entering now upon its fourth change. I will note these in the order of their historical appearance, although it must be borne in mind that the different theories often overlap and coexist even in the mind of the same individual. The first (I consider only the development of the doctrine in Christianity) we may call the

War-like Theory of Atonement.

This appears to have been the commonly accepted theory at the beginning of our era. Such language in our New Testament as "Christ ransomed us" or "Christ redeemed us," etc., seems to imply a state of war in heaven. As everybody knows, a "ransom" was a price paid to purchase the liberty of a captive. If it be said that the gospel-writers used the language figuratively, this at least is certain, that the early Church construed such language in Scripture very literally. They looked upon the death of Christ as a price paid by God to the devil, with whom he was at war for the liberation of captured humanity. By simple belief in Christ as his redeemer and obedience to the commands of the Church, any prisoner could escape from the clutches of the Prince of Darkness. After Christ, the ransom, was delivered into the devil's possession, the latter descended into hell with him, according to an ancient tradition, and kept him there for several days. Why and how did Christ escape? Because he was a God instead of a man, and too great to be held prisoner. Therefore, the Evil One loses both his captives and his ransom, too. For once, according to this theory of atonement, the astute ruler of darkness was completely outwitted.

This primitive war-like theory of atonement was dominant in Christian theology for nearly a thousand years; but, gradually, it gave way to one more in harmony with the spirit of the age, and known as

The Commercial Theory of Atonement.

This was developed and perfected chiefly by Anselm, the famous scholastic theologian, in the latter part of the eleventh century. He denied that Christ was ever given over into the hands of the devil. He said the payment was not in the nature of a ransom, but of a debt,—a debt due to God. This is the way he explained the transaction: We owe to God perfect obedience. It is a debt due him. If we live holy lives, our account is always square with God. But, alas! men sin, and keep on sinning, and thus run up an enormous debt of moral obligation to God. What shall be done? The glory, the honor, and the justice of God demand that the sinner pay this debt. But the debt is far more than he can pay by the merit of his own deeds. He must have help, or go under. So Christ, the God-man, comes in like a bondsman or surety on a note, and with his sacrificial blood wipes out the moral debt of all who believe on him. Thus, his death makes what is called "satisfaction" for the accumulated debts of man. This theory of the atonement prevailed for some four or five centuries. At the time of the Protestant Reformation, a new class of ideas—ideas concerning international law—began to dawn upon the mind of Europe. It is very interesting to note how the theory of the atonement in any age reflected the changes going on in secular departments of thought and activity; how man's conceptions of his relation to God came after, if not as a result of, his conception of man's relation to man. Thus, the war-like scheme of atonement was the offspring of a war-like age. The commercial theory was born of an age of commercial revival, when Italy was the highway of Europe and Asia. While, no sooner does Grotius, the great father of jurisprudence, discover and expound the principles of international law than he finds his legal ideas remoulding his theological, and the commercial theory giving place in his mind to the third or

Governmental Theory of Atonement,

which he did considerable to develop and establish. From the time of Grotius, the relation of God and man began to be represented more as that between a supreme Law-giver and his subjects. Sin was conceived of as the violation of God's law. For the honor and integrity of that law, the sinner must be punished. But as all men had not only sinned, but had also inherited sin from Adam, they were all under condemnation. There was only one way to escape punishment everlasting, and that was for man to receive the voluntary substitute which God had provided, which he could do by believing in Christ and him crucified. This theory of the atonement, then, represented the death of Jesus not as a ransom paid to the devil, not as a debt paid to God, the Creditor, but as a just penalty inflicted by the supreme Law-giver because of his violated law. With some modifications, this theory is generally accepted by Christians to-day. Such early theologians as Calvin and Luther, anticipating this theory, taught that Christ was *punished* for our sins. But, according to Joseph Cook, such doctrine is no longer sound Orthodoxy. He vehemently denies that Christ was punished for the sins of men. No, indeed! He *suffered* for our sins; but that suffering, he contends, was not punishment, could not be such, because there was no ill-desert, no blameworthiness, in the Saviour. It is, he declares, the "ghastliest misconception" of Orthodoxy to fancy that it teaches that an innocent person was "punished" for the guilty. Perhaps so. But, really, how does it relieve Orthodoxy of its ghastliness to substitute "suffering" for "punishment" in its doctrine of vicarious atonement? When Jesus was hanging on the cross, would it have soothed his pain if some one, a Roman soldier, for instance, had stepped up and said to him: "Sir, I know you are in terrible agony; but I beg you to remember that this is not 'punishment' you are enduring: it is nothing but 'suffering,' that is all. Pray relieve your mind of any sense of guilt which may burden it, and enjoy life as well as you can"? As long as the suffering of the innocent for the guilty remains a pivotal part of the divine plan of redemption, the essential "ghastly" character of the doctrine of atonement, it seems to me, is unchanged. Besides, if Jesus, according to the theory, suffered *in our stead*, he must have suffered as the sinner would have suffered; that is, not merely that pain of body, but that more terrible pain of mind which comes with a sense of guilt. Unless Jesus suffered also this remorse for us, he was not, in any true sense, a substitute as claimed. If he did suffer this torture of conscience, then he not only "suffered," but was "punished" also, for our transgressions; and the ghastliness which Mr. Cook would eliminate from the modern orthodox theory of atonement hangs round it still. But, let us admit that the innocent Jesus simply "suffered" for the sins of guilty man: can we thereby save the moral character of this atonement theory? The attempt is made by a kind of *tu quoque* argument, which, however pat and forcible it may be as against Theism, is no estoppel on the lips of Agnosticism. To the objection that it is shocking to the moral sense that the innocent Jesus should have been made to suffer for the sins of guilty man, the orthodox replies: "It may, indeed, appear so at first; but, as a matter of fact, the innocent *are* suffering for the guilty the world over; and, if you impeach the moral character of the atonement, you at the same time impeach the moral character of God's government in the whole world of man. If we accept the latter as divinely ordained and infinitely good, why reject the former, which is simply an epitome of a universal law?" What reply can we make to this defence of the atonement? In the first place, we may point out the fallacy in the argument arising from adroitly confounding in the mind two very different propositions. It is true that the innocent often, very often, do suffer, *because of* the guilty; but this is not to say that they suffer *for* the guilty, —*i.e.*, in place of the guilty, as Jesus is supposed to have suffered in place of the sinner. And yet the two propositions are treated as identical. In the former case, the guilty usually suffer as well as the innocent. In the latter case, the guilty escape by substituting the innocent. Such cases exist, indeed, but they are comparatively rare. It is only the latter that furnish any true parallel to, and illustration of, the atoning sacrifice of Jesus. So much Theism may offer against this common defence of the atonement theory. But Agnosticism takes a step further. It replies that, granting it to be true that the innocent do sometimes suffer *for* as well as *because of* the guilty, it is not right that it should be so. It is wrong, and all the powers of good in man are working to counteract such cruel evils. Because the libertine bequeaths his lust; because the habitual drunkard transmits to his babes the cursed tendencies that wreck his reason and life; because, in many ways, the effects of the evil habits of the fathers are transmitted to their children, and the innocent are thus made to suffer on account of the sins as well as the ignorance of transgressors, Agnosticism does not, with Theism, say, "It is someway all right, because it is God-ordained," nor with Christianity seize upon these ugliest facts in all nature as illustrations of the central doctrines and crowning blessing of a revealed religion. Agnosticism declares that it is shocking to the cultivated moral sense that the innocent Jesus should have been compelled or permitted to suffer in place of the guilty; and, if there are any examples in nature which furnish a parallel to it, so much the worse for nature that furnishes them.

The Atonement as History.

During the preparation of this paper, the writer has taken some pains to inquire of several thoughtful evangelical Christians for some illustration of the popular governmental theory of atonement, but without success. If, therefore, any orthodox or other reader of this paper shall charge the writer with unfairness in the following illustrations, he can simply plead his honest intentions and ask for better illustrations from his critics.

It is said that, according to the law in some provinces of China, a criminal is allowed to offer a substitute. This is not seldom done. A wealthy culprit, sentenced to be beheaded, hires a poor fellow to suffer for him on condition that the party of the first part will look after the family of the party of the second part. This seems to us like a travesty of justice. But what is it but a translation of the atonement into human government! Here, we have the innocent suffering for the guilty, shedding his blood for the remission of crime. The voluntary offering is accepted; and the result of it, in the eye of the Chinese law, is that the guilty stains of sinful man are all washed away in the blood of the atoning sacrifice. Such compounding of crime was justice in Europe during the Middle Ages; but European law has outgrown such crude ideas of law and its penalties, though European theology has not.

Some time ago, it was discovered in one of the prisons in Belgium that a fraud had been perpetrated on the jailer. A young girl went in to see her condemned sister, managed to change dresses with her, and to let the guilty one, in her name, pass out. What did the court do? Did the judges grow sentimental and glorify the little fraud, and let the real culprit go free? Not at all. They rearrested and imprisoned the actual culprit, and sentenced the pretended one to imprisonment also, for her attempt to deceive the officers of the law and prevent the enforcement of justice. And I think the judgment of Europe would be, The court did the wise and just thing. And yet does not the religion of Europe, for the most part, exhort its followers to change robes with Christ Jesus, and in his name to slip out of prison?

Or take an illustration of the atonement from the school-room. A small boy, frail and puny, has been guilty of some misdemeanor. The teacher's quick eye has caught the young lad in the very act, and has called him up for punishment. The awful ferule is already lifted to smite the little hand, when, suddenly upsprings from the rear of the school-room a brother, an elder brother of the culprit,—a great, burly, generous fellow,—and cries out to the master: "Please, sir, do not punish my little brother; for he is small and weak. But here, take me. There is my hand. Let me suffer in his stead." And the teacher accepts the substitute, and satisfies the inexorable law of the school by his chastisement. Now, we are told that Christ is to us as that elder brother. You and I stand in the shoes of the little fellow. We have done wrong, and the great Judge and Lord of all is about to inflict merited punishment, when Christ intercedes, is an accepted substitute, and we escape through his vicarious suffering. What do you say of this case? Suppose that little boy had straightened up his full length when his elder brother came up, and, looking the teacher full in the face and holding out his small hand, had said: "No, sir. Master, he shall not suffer in my place. He is innocent. I am guilty. There is the hand that did wrong: smite it to your heart's content." Would you not pronounce that puny lad more manly and honorable than if he should go whimpering to his seat,—

> "My brother ached and paid it all,
> All the debt I owe.
> Nothing, either great or small,
> Remains for me to do" ?

I have never seen any illustration of the vicarious-atonement theory that did not, to my mind, make man appear in the rôle of a very dishonorable character. I ought, pehaps, to make one exception, wherein man does not, indeed, appear as dishonorable, but as very weak and childish. It is in that illustration which, as far as I know, Joseph Cook set afloat several years ago, and which I find copied into Peloubet's *Select Notes on the International Sunday School Lessons* for 1882, on page 310. As this is a book which has a very large circulation in the evangelical Sunday-schools of this country, and as this, moreover, is the sole illustration of the atonement theory offered, it is significant, as indicating the sentimental drift of modern Orthodoxy. Indeed, there is abundant evidence from the signs of the times that the new school of Orthodoxy is rapidly passing over into the fourth, and what we may call

The Moral-impression Theory of the Atonement.

The following illustration referred to is simply one of the indications of this theological drift.* It is drawn from an incident which Bronson Alcott relates as having taken place in his school in Boston some years ago. "One day," says he, "I called up before me a pupil eight or ten years of age, who had violated an important regulation of the school. All the pupils were looking on, and they knew what the rule of the school was. I put the ruler in the hand of the offending pupil. I extended my hand. I told him to strike. The instant the boy saw my extended hand and heard the command to strike, I saw a struggle begin in his face. A new light sprang up in his countenance. A new set of shuttles seemed to be weaving a new nature within him. I kept my hand extended. The school was in tears. The boy struck once, and he himself burst into tears. I constantly watched his face, and he seemed in a bath of fire which was giving him a new nature. He had a different mood toward the school and toward the violated law. The boy seemed transformed by the idea that I should take chastisement in place of his punishment. He went back to his seat, and ever after was one of the most docile of the pupils, although he had been at first one of the rudest."

There is no doubt that such a method of discipline for two or three times would be effective with very young children; but who believes it would work in our public schools! Suppose that our school committee should pass a rule that hereafter all punishment should be inflicted by the scholars upon the teachers, instead of by the teachers upon the guilty scholars, how long, think you, would our schools preserve their discipline? Just so long as the children were young and simple enough as to be imposed upon; that is, as to believe that the affected pain of the teacher was all genuine, and not one moment longer. As soon as the little ones got their eyes fairly open to the truth, as soon as they saw that the teacher was not really hurt, did not suffer the pain they imagined he did (causing them to suffer through sympathy for him), then the tragedy would be turned into a farce, and the children would laugh instead of cry.

How does this incident illustrate the vicarious atonement? Do they mean to tell us that all humanity are like little children in a kindergarten? Do they mean to tell us that the tragedy on Calvary was a put-up job, a kind of cheap drama, in which God, the general superintendent, and his Son, the teacher Jesus, were the actors engaged in cheating us? Bronson Alcott was not hurt by the ferule in the hands of the little child, was only simulating pain. Was Jesus, the God-man, only simulating suffering when they drove the nails through his hands and feet, and thrust the spear into his panting side? So this illustration implies. The idea that Jesus' death was such a spectacular drama, gotten up merely to create a "moral impression" upon mankind, seems to me to degrade the Christians' God to the level of a stage manager or scene shifter. Besides, the children in Mr. Alcott's school *did* suffer. It is true their bodies were not pained; but their minds were, as was clearly evinced by their crying. Yet, according to the atonement theory, I supposed the sinner did not suffer, that Christ suffered in his stead. What parallel is there, then, between that amusing incident in Bronson Alcott's school and the distressing death of Jesus of Nazareth and its effects upon the world? Labor as men may to make the dogma of atonement appear reasonable and just, they must inevitably fail. And why? Because it is essentially unreasonable and unjust. You can by no possible figures of speech, by no categories of logic, by no hocus-pocus of theological rhetoric, make it appear right for an innocent person to suffer for the sins of the guilty. That is wrong. It was so from the beginning, is so now, and ever will be, world without end. And, I repeat, it is no vindication of the moral character of the atonement to show that, in the every-day struggle of life, innocence is sometimes a sacrifice for guilt, and vice reaps the reward which virtue bought with her blood. This is true; but it is a truth that belongs to the savageism of the race; to the reign of brutality, lawlessness, injustice, and wrong,—a hideous and hateful fact that is being eliminated from human experiences just in proportion as civilization advances. Every step in the march of progress is toward a more certain and speedy punishment of the guilty, and a sure protection of the innocent from all forms of vicarious suffering. This doctrine of the atonement, looked at rationally, seems so unjust and cruel that you wonder how any noble soul could accept it. And yet there are such who do. I know, we all know, men and women, tender, loving, and just in their family and social relations, who believe, or think they believe, this doctrine, who are not only most loving and lovable, but who also find joy and rest and peace to their souls in the faith. We cannot ignore or deny this fact; but how can we explain it? In my opinion, it is because they do not take a rounded and rational view of the question, but a partial and sentimental one. They close one eye,—unconsciously, I suppose,—and take in one-half of the picture only, the beautiful half; while they utterly refuse to see or acknowledge to themselves the complementary and ugly side. Let any one try the experiment, and he will experience the same visual, or rather psychological, phenomenon. Shut one of the mind's eyes and look with the other at the beautiful half of the picture of the atonement. There you see the Son of Man suffering, indeed, but doing so to save others from suffering: bearing our griefs, carrying our sorrows, smitten of God and afflicted, led like a lamb to the slaughter, yet opening not his mouth, laying down his life on the altar of love for man and duty to his God,—why, what a splended deed of self-sacrifice it was, as represented in eloquence and poetry and song!

Any one, be it a steamboat pilot or an engineer on a railway train, who deliberately sacrifices himself for his brother man, excites our grateful, adoring love. The sight of that picture of the suffering Christ has touched the fountain of tears in all ages. It has awakened the deepest sympathy, the most tender pity, the most passionate love, the most deathless devotion. The hardest hearts have melted before that touching story. If I could see but that one side of the picture, and no more, I might fall at the foot of the cross. But stop,—open the other eye, so that you can take in the opposite half of the scene, and the illusion vanishes, the spell is broken. There, in the shadowy background, you dimly see the awful judge, him they sometimes call the Father. He is watching the progress of his "plan of salvation." Adam has fallen and been driven out of Paradise. It was so planned. The deluge came to drown out the wicked, but wickedness survived. It was so planned. The "chosen people" were watched over to bring forth the Messiah. Scene after scene passes, until at last "the Christ" comes. One of the twelve disciples is a traitor. It was so planned. The Son is betrayed, arrested, condemned, and on his way to Calvary. It was so planned. In the background, you see the inexorable judge watching the shifting scenes. They nail his son to the cross, though he cries unto his Father to let this cup pass. No, not one drop of the bitter. It is so planned. He watches his son's writhings and heavings, puts his ear down to catch the last moan, the last whisper; and, as the heart-ticks hush and all is over, the black drop-curtain unrolls, the great tragedy is ended, and the Father draws a sigh of relief as he says to himself: "Now the sacrifice is made, it is consistent with my government to forgive the sons of Adam for the sins of their fathers. Indeed, I will henceforth forgive all men who will shout,—

> 'Hallelujah, 'tis done!
> I believe on the Son;
> I am saved by the blood
> Of the crucified One!'

but all others I will consign to eternal punishment hereafter." Now, my friends, when I look at *that* half of the picture of the vicarious atonement, and it is a *legitimate and essential half*, it spoils the whole scene. I take no pleasure in contemplating it. But, as I said, there are people whose minds are so constituted that they can hoodwink themselves to their own hearts' joy, can regard the beautiful half of the picture, the heroic self-sacrifice of the Son of Man as the whole of the picture, and find in the contemplation of such an example a quickening to the benevolent sympathies, to the moral emotions and activities. If the doctrine of atonement has done some good to those who have contemplated the unselfish side of the picture, it has unquestionably done harm to considerable numbers who have looked at it with a selfish eye. They have been made to feel that the Christian's whole duty was summed up in "believe in Christ." They might sin and sin until their character was as black as Egyptian night, and, if they would but utter the magic words, "Lord, I *believe!*" their sins would be washed out in a twinkling and they would be ushered into heaven as spotless as the radiant angels. They have

*This drift is also indicated generally by a "change of base" in the dogma, in the growing theory that Christ's death did not reconcile God to man, but man to God.

Digitized by Google

been made to think that all you had to do was to jump aboard the salvation-car, hand over your free pass to the conductor, and ride through to eternal glory among the other "dead-heads," not lifting one finger to work out your passage. They have reasoned: "If Jesus paid my fare, all right. I'll fiddle and dance, I'll spend my days in the pleasures of sense, eat, drink, and be merry; and, when I come to my death-bed, I'll close my eyes with the blissful thought that I shall drop to sleep in the arms of Jesus, and wake up in the New Jerusalem." That unselfish people have read the gospel promises in this light I do not believe; but that considerable numbers of people who weigh the truth in butcher's scales, and whose piety is always on the alert to drive a sharp bargain, have been made more selfish by the free-pass system, I have no doubt. On the whole, I do not think the world would be the loser, if it were abolished.

The Atonement as Drama.

But some of you may say to me, "Is it probable that a doctrine which has stood so many centuries, which has commended itself to the wants of countless millions, which has incarnated itself in art, in magnificent institutions, in a world's literature,—is it possible that there is no truth whatever in this venerable doctrine of vicarious atonement?" I answer, "Yes" and "No." There is no truth in it as it stands *as history*, but there is an element of truth in it *as a drama*. Theology, in my opinion, is simply anthropology "written large." In studying the theologies of the world, then, we are studying man, his imaginings, his hopes and fears, his loves and hates. The whole scheme of Christian theology, from beginning to end, from the temptation and fall of man through Adam to the atonement and rise of man through Christ, when philosophically analyzed, will, I am confident, be seen to be nothing more nor less than a *dramatization of individual experience* with, for the most part, a fictitious historical setting to complete the illusion. The whole process represents not what eighteen hundred and more years ago took place on the world's stage beyond the Mediterranean, but what takes place in the little world of individual hearts every day of man's life. The whole caravans of theological personages and movements are simply *mirages* of the experiences that go trooping through every soul in its journey of life. Take the average individual nature and experience, and see if you do not find therein the "old, old story" in miniature; that is, the elements of it. In human life, you find, first, that man sins; that is, passes from a state of innocence and peace to a state of conscious guilt and soul-unrest. Now, put that experience in dramatic form, and you have Eden, the temptation and fall, and paradise lost. You find, secondly, that it is man's *lower* nature that sins. Put that in dramatic form, and you have that lower nature personified, – the evil in man spelled with a D, and regarded as a tempter outside. You find, thirdly, that, when the lower nature sins, the higher nature suffers by it. Put this truth in dramatic form, and you have this *higher* nature in every man personified as "God" in man, in *one* man,—Christ Jesus,—and regarded as a Saviour outside of man, suffering for him. The Jesus of history has been idealized by the imagination into "the Christ," and worshipped as the Perfect.* But this "Christ" is not a person outside, but an idea inside of us. It is a part of ourself, of our better, higher self. Now, when we personify this upper self, and dramatize it, and think of it as cruelly crucified for the sins of our lower self, we have the "Saviour of the world dying for the sins of fallen man."

You find, fourthly, that whenever you bring the two natures face to face,—in other words, whenever you think of what you ought to be and what you "might have been," with what you *are*,—there comes a sense of shame and regret which should lead to repentance and reform. Now, this contrast of the two natures is rendered much more vivid, and the moral emotions are far more deeply stirred in certain individuals, when the conflict is put dramatically, and the higher nature within is represented as a *person* who voluntarily sacrifices his life to save your life. It is a matter of historic fact that the contemplation of this divine-like act, as represented in the Christian drama, does often produce a "moral impression" on the sinful who are likewise sympathetic, and leads to "conversion," or turning about, of the affections and purpose and volitions. The process is supposed to be supernatural, and the cause of it to be the immediate presence of Christ. But what has really happened, psychologically speaking, is the result of the contemplation of *our real self in the mirror of our ideal self*, the bringing face to face of what we are with what we should be, when instantly the lower animal nature seems lifted up to the higher spiritual nature, is for the time subjected to it, reconciled with it, in other words becomes *one* with it, and this perfect at-one-ment of the lower and higher natures is the truth that hides itself from many in the dogma of atonement. As an actual historical event, such as the Church represents it to have been, I repeat the story of the fall of man and his redemption is not true; but as a dramatization of the soul's deepest experiences, as a great pictorial representation of the tragedy of sin and suffering and reconciliation, that since man was man has been going on in individual hearts, there is an element of truth in the old dogmas, and it is because of this *experiential* truth in them that people cling to the shell of doctrine, lest they lose the kernel within.*

It is not a "vicarious" atonement, not another person suffering for us. It is what I may call our Christ-self suffering for the sins of our devil-self. The Destroyer and Redeemer are both in ourselves, are of ourselves, are ourselves. The kingdom of darkness and the kingdom of heaven are within.

It is doubtless true that large numbers of people, such as make up the "Salvation Army," will not receive, cannot even see truth in her actual form and simple, natural beauty. They must dress her up in nursery fiction. They recognize her only when she comes as the "Great Physician," the "Conductor on the Gospel Train," the "Captain of our Salvation" with his dress-parade of drums and trumpets. But you and I may reject as histories the Oriental stories, and yet lose not one jot or tittle of the moral truth or inspiration pictured forth in the great religious drama.

In one sense and in a very vital sense, we believe in a fall of man, in a Saviour, and in the atonement. Every day, alas! there are around us men and women who are falling; who once walked in an Eden of innocence, of purity, and peace, but who yielded to the voice of some temptation, ate of fruit forbidden by the moral law, and have been banished from paradise, or, what is the same thing, had paradise banished from them. We believe in a "Saviour," too, —yes, in many Saviours. When men tell you that there is no name under heaven whereby men can be saved but the name of Jesus, that every one who attempts to climb up any other way is a "thief and a robber," ask them how men regained their lost paradise during the countless ages before the birth of the Galilean. Ask them who is the Saviour of the three hundred and forty millions who follow in the footsteps of Hindu Buddha, of the millions who call Confucius master, and the other millions who flock under the banner of the Arabian Mohammed? It is a monstrous perversion of facts or a lamentable ignorance of the truth of religious history to deny that there have been many "Saviours" of men. But, my friends, though I reverence the name of Jesus as I do that of Buddha and Confucius and Socrates, although I am glad for all the royal sons and daughters of men, the light of whose genius and example has illumined the darkness of man's moral pathway, I am more glad and grateful for that Saviour which dwells in my higher nature, that beautiful picture of the ideal that seems to float forever above my real life, like a radiant angel. It is no fiction of the brain: it is a stern fact, a splendid vision of what I should be and do. I know not but it is the Quaker's "inner light," or the "daemon" of Socrates, or the "voice" that came to Joan of Arc. Have *you* never heard that voice?

> "I hear it often in the dark,
> I hear it in the light.
> Where is the voice that calls to me
> With such a quiet might?
>
> "O sweet surprise of inner skies,
> These voices still and strong!
> They fill my inward silences
> With music and with song.
>
> "They send me challenges to right,
> And loud rebuke my ill;
> They ring my bells of victory,
> They breathe my 'Peace, be still!'"

That "still, small voice" is the voice of my "Saviour." No man, nor body of men, can crucify that. I am the only man who can wrong it. The Jesus of history might fade from the memory of men, but my "flying ideal" abides with me, yet leading on, forever. You may slash the knife of Biblical criticism into the heart of the Gospels and let out every drop of the life-blood of the historic Jesus, and leave nothing but the bleaching skeletons of dead traditions whitening the desert of faith, but my beautiful ideal is not touched thereby. It rises, as on wings, above all the accidents of history, above the death of religious forms, above the graves of sweet illusion. No, no, conscience never dies. The voice within you can never quite smother. This higher self, "the Christ" in your own soul, you may deny like Peter, betray like Judas, but you can never crucify it to the death. Oh, how can we look up into that pure Face, and do wrong! We cannot. It is only when we put up our hand to hide it that we dare to sin. But our little hands cannot cover our guilt. Those eyes see between our fingers, and read the shame on our cheeks. Do what we will, sin as we may, that calm, sweet Face is there. Do what we will, sin as we may, that divine-like Voice we hear. Happy the soul that obeys this inner Saviour. When it bids us "cease to do evil and learn to do well," and our lower nature comes up and clasps hands with our higher, and that Face smiles its blessings, and the two natures in us are one, then we experience the truth in the atonement; for we realize in ourselves the at-one-ment.

*See, on this point, the writer's views as expressed in a companion pamphlet on "Agnosticism and Religion," sold at *Index* office.

*The writer believes that Liberals should recognize and provide for this deep and abiding love in human nature for ideal truth presented in dramatic form. Superstition should not have a monopoly of such methods. The imagination is a legitimate, ineradicable, and invaluable faculty in man. It will not forever suffer to be ignored, as some seem to think it should: it ought not to suffer it, for its subtile fibres are interlaced with the living roots of the moral emotions, and the springs of conduct. It is possible to make it the most powerful auxiliary of the forces within that make for rightness. The great preachers of the rational faith of the future must and will avail themselves of their opportunities in this respect. They will be artists of the ideal, personal, and social. They will touch the heart of our sympathy, not with paintings of a "Christ and him crucified" for us, but of humanity now, a large part of it, suffering and crucified,—yes, crucified by unrequited toil and hard circumstance. They will picture to us not what we must believe to save our individual souls, but what we must do to save all souls from taints of blood and sins of will. They will carry us not back to a golden age long ago, but picture before our mental vision the golden age to come, if man will but recognize its signs of advance and make way for the good time. Oh for the new prophets of the new gospel!

CORRESPONDENCE.

MAN AND THE TRIPLE-HEADED MONSTER.

Editors of The Index:—

The hero, once the slayer of wild beasts, is now the conqueror of lawless passions, of untamed impulse. His glory, once measured by the slaughter and desolation he caused, is now gauged by the life he saves, and the impetus he gives to the truth-seeking and peace-loving tendencies of the soul. Mystics have taught that the forms and aspects—hideous or lovely —of the visible world have their counterpart in man's nature. But experience has taught the relation between the inner and the outer world, between human endeavor and the world's advance. It is a wise legend that attributed to Hercules both moral and physical powers, who is said to have gone to the gods, but first to have prepared for himself the way. Is it not becoming a truism that progress consists in the double task of conquest over self and the world without,—the two worlds of spirit and matter, so called? But how hard is this lesson to learn! and, when learned, how easily is it forgot! Evil is first attacked in its grosser forms, and then in its more disguised and subtle embodiments. Its haunt was once the land, the sea, the air. It is now the home of man,—the uncultured, the untutored mind of man. And still how clashing are the theories as to its nature, its manifestations! Yet one aim do these theories seem to possess in common, which is to deny the guilt or the responsibility of evil. But in man it is to be found: none doubt it, all assert it. And I make bold to say that *there* lies the triple-headed monster, bigotry, pride, and apathy, whose counterparts are the squalor, vice, and misery that so disfigure the face of society, marking our civilization all over as with the slimy track of the serpent. From the coils of this monster, man through the ages has, consciously or unconsciously, struggled to free himself. The spirit of manhood, coming into life, clothed its possessor with a supple, matchless

Digitized by Google

strength,—a stalwart growth impersonating the spirit of progress, guileless, earnest, truthful, persevering, indomitable, awe-inspiring :—

> As from the Orient it springs,
> And beating back with lustrous wings
> The darks and damps, the phantom throng,
> Of Error, Superstition, Wrong.

But speculations about the graces and the harpies must cease, and give place to facts.

The lives of some men, more than others, remind us of this out-reaching, this firm-faced, onward march of the world's own life. One of these men was Peter Cooper, the lesson of whose life is so grand and simple as to make it seem that none could mistake its teachings, that he who ran might read ; but the public is far from a unit as to the upshot of this career, whose eulogists even seem to lose sight of certain traits that give to it its real, deepest significance. In this short study, I intend that the name of Peter Cooper shall be made to stand for Man, Manhood, or the Human.

Though wearing neither a mitre nor a crown, nor boasting of the title of philosopher or man of letters, yet was he great. He had his foibles, shortcomings, limitations, as every one has. Commencing his life as far back almost as the time of the nation's birth, certain defects might be expected or easily overlooked ; but, putting what stress you will on these, he yet towers a giant among pygmies. If he seemed to overrate mechanical helps and aids, his vision was by no means limited to the materialistic plane. His head, his heart, his hand, were in his work ; and a worker was he. Born poor, he became rich, not by fortune's windfall or guileful overreaching, but by useful, honest toil. And not without reverse and mishaps ; but, failing in one direction, he tried another. His riches were matched by his benevolence, as were his aspirations by his industry. Borrowed *from* no man, but made every man his debtor. To the needy applicant who halted in his story gave he the benefit of the doubt ; and over the faults of mankind was thrown the mantle of this large-hearted charity. Or should it not rather be said that something of profound sympathy and insight enabled him to behold the precious gem beneath the turbid waters of sorrow, perplexity, and sin? If his own scholarship was lacking, his love of knowledge was not ; and the opportunities denied to himself he strove to have secured to others. Democracy's own child, neither puffed with pride nor depressed by envy, as he knew none of the distinctions made in the world of rank and wealth. He cared nothing for popularity as such, though happy in seeing his efforts appreciated by whatever class ; for, in others' happy looks and accents, he saw and heard, not echoes of his own conceit, but the prelude to that grand music which is to agitate the soul with the rippling swell of its infinite harmonies. He rejected the creeds, dogmas, of the churches, having "no common standing ground" with them, as one to which he once belonged confessed ; yet believed he in God, and also in man. He was an American believing in ideas and in their realization, ever willing to reason, never too old to learn. He saw the use in things great and small, the good in persons of high and low degree. His private charity took the form of friendship and help, his public beneficence of personal devotion and money offering. Truth and virtue indeed were the Urim and Thummim on the breastplate of this priest of humanity. Of science and art, his soul was enamoured, their *union* forming the empyrean for his hopes and aspirations. To philanthropy, he gave a new or its true meaning by his virile, consistent, and expansive aims and designs, basing it, as it may be said, on these three principles or ideas, which complement each other and form a philosophy of life. The object of life is to do good (that is the positive side). Man should give to the world in some form of useful labor an equivalent for what he consumes in it (that is its negative aspect). The first hints of the capabilities and destiny of man's life, the latter of its conditions or mode, their blended significance being the community of man's nature, aims, and interests, which makes each the debtor of each, the trustee of society for the wealth he possesses, and the student and guardian of the needs and liberties of all. And thus is human life infilled with suggestion of the sublime and beautiful, that enspheres itself in religious trusts and ideals, in philosophical systems and masterly wide-reaching schemes for the practical solution of the problems of life.

I would now call attention to those verdicts that look frowningly or apathetically on the character or life just sketched.

On the walk near Cooper Institute, I chanced to meet with a minister of "the gospel." The following is a part of our conversation. Placing my hand on the brown-stone edifice draped in mourning, I said, "Now, here, on this spot, tell me, what is Peter Cooper's fate?" "Dear brother, I know what you mean; but he has not gone to heaven." "That is frank: I thank you. And it is what every orthodox minister in this great city would or should answer, is it not?" "Certainly; for he rejected the Saviour, whose atoning blood is man's only salvation. He built on a foundation of 'good works,' which cannot stand; for it will be swept away like chaff before the wind." "'Good works!' Yes, that is true; but those two words express to me the holiest of things." "But, dear brother, though it grieves me to the soul to say it, Peter Cooper cannot be saved, if the Bible is true." "I must remind you that many strange and contradictory beliefs are drawn from the Bible. Still, I admit that Cooper Union and yonder Bible House" (a large brick block across the way) "cannot both flourish side by side. If one is built on the rock, the other is built on the sand." "I am sorry to hear you speak so. Do you know that Christianity is the only religion that tells of a resurrection? And no fact is better authenticated. Oh, what a blessed time we have had during Easter week! My prayer is that you may some time know the joy of a Christian." "There is one fact well-attested to me: Peter Cooper was a true man. Be happy I could not, knowing such as he were damned. My views of the future are brighter than yours, and, I think, better founded. And right here, within these very walls, is the laboratory of souls."

But there is another class of religionists, who speak in almost as startling a manner of this man's life; for the eulogy pronounced at his funeral by a famous Unitarian divine closed with these words,—"And so the words of the Master again come true." But this very form of piety was called by Mr. Cooper himself *idolatry*. Hence, it is an affront to his memory, and ill accords with the general tenor of his life, and must be considered as on a par with the jeers his belief in a God might receive from atheists or rather a class of atheists. But he was a man, a liberal, though he may not have sworn by any Christ, ancient or modern.

After bigotry comes pride, fostered by a one-sided training, and made the standard of society, royal households, and seats of learning. An *evening* journal, the organ of respectability and culture in this great metropolis, says in an obituary notice, "Peter Cooper, in birth, breeding, and associations, belonged to the past," and continues in a strain in keeping with this sapient remark, whose aim or effect is the disparagement of this man's life and work. Mr. Cooper was so unfortunate as to antagonize the reigning political and economic theories of the time, which, together with some of his plebeian habits contracted when he worked at the smithy or was a glue merchant, made him obnoxious to the sneers or criticism of a class whose "birth, breeding, and associations" are so peculiarly American.

True, he was eight years old (think of it!) when the mock funeral of Washington passed through the streets of New York City; but his spirit, his ideas, will live to see the funeral of the present social and political *régime*, as it sweeps on toward the deep gorge of oblivion.

After pride, apathy, which is an absence of enthusiasm in matters relating to truth and humanity. This class loves pleasure, fame. These are the realities: goodness and virtue are phantoms. Its world is the senses, its god is self or selfishness. It sees no glory in a plain coffin, a plumeless hearse, and throngs of people for mourners. It takes delight, however, in decorating the soldier's grave, and contributes large sums for a monument to Liberty. And of this class, also, are those whose lives are temperate, blameless, and whose views are "advanced," perhaps, yet whose souls are listless and callous, as if carved from stone.

On the centre-tables of some are found the poets,—yes, the American poets,—of whom as fetichtic a use is made as of the Bible in the generality of Christian homes. And this class would, of course, smile to hear it said that Peter Cooper is the peer of Bryant, Longfellow, and Emerson; yet we have Milton's authority for it (if we need any other than our own instincts) that *a noble life is the truest poem.*

> Greater than priest or king or khan
> Was this whole-souled, deep-natured man:
> To serve, not rule, his life's intent;
> He toiled, he gave, till life was spent.
>
> He lives, if, in that central sun,
> Life, light, and love are really one.
> And honor to his name doth cling,
> While in man's soul *lives* such a thing.

T. W. CURTIS.

A REPLY TO MR. BATE.

Editors of The Index :—

A friendly and courteous critic in yesterday's *Index* appears to think that I know nothing of Mr. George's theories but what I found in Mr. Kennedy's statement of them. On the contrary, my first knowledge of them was got from Mr. George's own book, which I have diligently studied from end to end, every page of it. I did not undertake a review of the book,—for which I do not claim to be qualified,—only to say how the three points struck me which Mr. Kennedy stated with such emphasis. As he was once a pupil of mine as well as friend, I did not think to offend him by calling him "young,"—don't think I did. I only wish somebody would offend me in the same way.

Now, Mr. George's book has a great deal in it—besides the spirit and motive of the writer—which I very cordially admire. What I called "deleterious nonsense" in it consists in those fallacies (as I think them) which are likely to put us on a false track, if we accept them. I am not sure, as I said, that I understand them myself. For instance, on pages 57 to 61, Mr. George seems to be saying the same thing that I did, when I said that the value of the work done must be "discounted by capital" to pay wages. Theoretically (in other words), they are paid out of the general increase of wealth, which the particular work done is adding to; but, practically, they are paid by a draft on the accumulated stock.

So of population. When Mr. George speaks (p. 134) of an increase "within the limits *which we have any reason to suppose* in any given state of civilization," I am not sure that his opinion, practically, is any different from mine. The careful reader of his book will notice that, while he says a good deal about ways of multiplying the food supply, he appears to intimate that the gold supply has fallen off already, and says nothing at all about the coal supply, oil supply, or timber supply, which it is much harder to suppose can keep pace with an indefinite growth of numbers. One *might* interpret him so as to favor recklessness and waste.

As to the other point, I have myself been greatly fascinated by many socialistic schemes, and especially by the theory of common property in land. If I have no faith at present in Mr. George's proposition, very likely it comes from a difference in the point of view. I was brought up in a community of small farmers; and the tools most familiar to my hands were the hoe, rake, and spade, so my instinctive sympathies run that way. Mr. George speaks of having been a member of a trade, I do not know what, but will imagine the printer's trade, for which I have a very particular kindness. Now, I suppose that at least ninety-nine hundredths of the land in this country are owned by small farmers and householders, who control, in the last resort, the policy of most of the States; and I hardly think he appreciates the difficulty—I will say the impossibility—of their consenting to his scheme. I hope there is some other way to prevent the enormous land monopolies he speaks of, but I see no possible chance of taking his way. To throw all the burden of taxation on such estates will certainly seem to them, as it did to me, "preposterously wild and cruel."

Besides, as soon as Mr. George comes to speak of the results of a scheme so revolutionary, I observe that he falls at once into the potential mood. For page after page, I find only that certain things "might, could, would, or should" take place; and I have only his word for it. Now, I hate and dread the great land monopolies as much (perhaps) as he does. But I am accustomed to think that the largest possible proportion of independent land owners in a given community makes the best and safest form of civil society, *all things considered;* and Mr. George's potential moods do not drive me from that conclusion.

Besides, any reform, to be effectual, must work (as

Digitized by Google

he very rightly says) in the same general direction that things are taking spontaneously. Now, we find that, by a consent extraordinarily universal, it is held that "possession of land in severalty" is urged as the one remedy for the evils of tribal tenure among the Indians, which Mr. George would restore in the civilized States. We also find that in the older States, like Massachusetts, a process is going on rapidly by which ancestral farms of one hundred or two hundred acres are bought and owned by small cultivators in lots of ten or fifteen acres. Some eighteen years ago, when I was cultivating a paternal estate of ten acres, my hired man who worked beside me in the furrow was owner of his little farm and orchard, not quite so large, which he had bought and improved out of his wages in my father's service, and was a very independent citizen.

But it is easiest to see this thing in a concrete example. I will give one, disguising somewhat the case I have in mind.

About forty years ago, there settled in a country village in Connecticut a young physician, who, with a good eye to scenery and aspect, bought a three-acre lot, built a house which he paid for, educated his children, and died at fifty-six. His widow lives in the house—her only property—with a married daughter, whose husband—a respectable mechanic—manages to keep things tidy and maintain his family, including three young children, in decency and comfort. In short, it is as fair an example of modest thrift and prosperity as you would wish to see. The whole money income, one year with another, counting in eggs and fruit, may be about five hundred dollars, of which fifty go for taxes.

Suppose Mr. George's scheme adopted. Now comes a thriving business man from Hartford, who has made half a million in trade (which, being in stocks and bonds, Mr. George will kindly leave untaxed), looking for a country residence, and fixes his eye on this modest homestead. He goes straight, not to the occupant, but to the assessor, and asks, "What ground-rent do you get for Widow Jones' house-lot?" "One hundred dollars," is the reply. "We reckon ten per cent. of the last valuation, not counting improvements." "I will give you a thousand," he returns. "The old doctor knew what he was about when he bought that place. The improvements are nothing to me, as I mean to build; but I will give a thousand dollars (more than they are worth) to make things smooth and move the family out. I will take possession to-morrow or next rent-day, if you say so."

Suppose my friend Mr. Bate to be the assessor, what will he do? If he lets the family stay on the old terms, the whole scheme goes to naught. If he raises the rent on them to its market value (as Mr. George says), he ruins them at once. If he accepts the new tenant, he brutally evicts six helpless persons for the whim of a millionnaire. That is what Mr. George's scheme means to me. I think I have fairly applied all his potential moods to the case supposed. Multiply it by hundreds of thousands all over the country, and you have a notion of what it may mean any day to any eligible homestead on the continent.

I observe with regret that Mr. George not only says nothing of this counter process of subdivision of land going on, but is silent as to certain moral efforts which have greatly improved the condition of large classes of operatives in this country and England. Apparently, he thinks drunkenness and such vices, in the present state of things, inevitable and therefore pardonable. This seems to me the most dangerous form of hopelessness. I have some manufacturing friends, also, who tell me that the general tendency of wages is to rise, and not to fall, as Mr. George assumes. But I will leave that part of the argument to them.

J. H. ALLEN.

ITHACA, N.Y., May 11, 1883.

BOOK NOTICES.

WHENCE, WHAT, WHERE? A View of the Origin, Nature, and Destiny of Man. Dr. James P. Nichols. Boston: A. Williams & Co.

The author of the above work is well known as an agricultural chemist, highly successful business man, and popular expositor of science. Reason and faith seem to hold divided sway in his mind. He is too shrewd and practical to be altogether an enthusiast. On the other hand, in spite of his shrewdness and really admirable chemical attainments, he is largely a supernaturalist, both in reference to Bible myths and miracles and to current Spiritualism and what he calls its occult psychical phenomena. Still, he is for the most part what is called in vulgar parlance level-headed. His book is readable, and gives evidence of an amount of thought and scientific knowledge highly commendable in a business man. The interrogatories which he propounds for discussion may be unanswerable, and the problem which he attempts to deal with insoluble. He treats in his book of the following high themes: namely, the genesis of man; the material man; the spiritual man; what is spirit? the religious man; what of death? after death, what? where? or, in the poetical language of Byron,

> "When coldness wraps this suffering clay,
> Ah, whither strays the immortal mind?"

To show how faith or credulity flourishes in the mind of Dr. Nichols alongside of his chemical and other positive knowledge, we refer the reader of his book to page 167, where the Doctor cites the venerable Bible story of the apparition of the prophet Samuel, at the summons of the Witch of Endor, to the occasionally mad Hebrew king, Saul, to serve a notice on him that he and his sons would fall in battle with the Philistines on the morrow, and thereafter be with him in the unseen world. This old Hebrew mythical narrative, according to Dr. Nichols, shows that there is an unseen world or land of souls, and that one emigrant thither at least—namely, the old Hebrew prophet, Samuel—did return from it to this sublunar sphere: *Quod erat demonstrandum.*

ALDORNERE: A Pennsylvania Idyl. By Howard Worcester Gilbert. Illustrated with nine original etchings by Lloyd Mifflin, Jr. Philadelphia: John Pennington & Son.

This is a romantic episode of the war of the late Rebellion, pleasantly told in blank verse by one of our occasional contributors. A vein of true poetic sentiment and high moral purpose runs through the volume. The "etchings" are very fine, and add greatly to the attractions of the work.

THE *Revue de Belgique* for April discusses the question of the amount of salary to be paid to the representatives of the people, complains of the management of Belgian railroads and canals by the government, relates the career of Gambetta as minister, shows how physical training may best be given in schools, tells two stories whose interest is purely sentimental, and gives an able survey of the language and history of Russia.

IN addition to his forthcoming serial in the *Atlantic Monthly*, Mr. F. Marion Crawford has arranged with Messrs. Macmillan, the publishers of *Mr. Isaacs*, for the simultaneous publication in this country and in England of a new novel, to be called *Dr. Claudius*, the scene of which will be laid partly in Germany, where Mr. Crawford spent some years of student life, and partly in the United States.

PERSONAL ITEMS.

MISS SUSAN H. WIXON will lecture in Paine Hall next Sunday afternoon at three o'clock.

HOUGHTON, MIFFLIN & Co. have issued a dainty pocket edition of Holmes' *Autocrat of the Breakfast-Table.*

B. F. UNDERWOOD spoke last Sunday, by invitation, from the pulpit of the Unitarian Society of East Lexington, Mass.

A TRANSLATION of the fifteenth German edition of Büchner's *Kraft und Stoff* is in press, and will appear in a few weeks.

MINISTER LOWELL is rated by the London *Times* as the superior, for an after-dinner speaker, of anybody Britain can furnish.

MISS A. GESANDNER, of Milwaukee, has won distinction by being, probably, the only female switch-tender in the United States.

MR. S. R. URBINO, of Newton, has been doing a splendid work in forming Bands of Mercy (anti-animal-cruelty societies) in that city.

IN the death of Hon. Israel Washburn, of Maine, which occurred in Philadelphia last Saturday, we lose another of the great war governors.

MRS. CLARA NEYMANN, of New York, will speak next Sunday forenoon at Horticultural Hall, before the First Boston Ethical Society, on "The Moral Factor in Government."

HENRY GEORGE, the author of *Progress and Poverty*, lectures in Tremont Temple this city on the evening of May 17. A great demonstration by the various labor organizations is expected.

MR. M. J. SAVAGE spoke to his congregation last Sunday morning on Agnosticism, which he does not regard with the aversion shown by some of his brother ministers. The sermon was full of thought and liberal in spirit.

THE proposed statue in honor of Theodore Parker, it is estimated, will cost something over ten thousand dollars. There seems to be a difference of opinion as to whether the figure of the famous divine should be transmitted to posterity in a sitting or standing posture.

HERBERT SPENCER, Profs. Huxley and Tyndall, John Morley, and about two hundred of the leading literary and scientific notabilities of England, have signed a memorial to be presented to the home secretary, protesting against the continuance of the imprisonment of Mr. Foote, the editor of the *Freethinker*, for blasphemy, and asking for his release.

MR. EDWIN D. MEAD is announced to give a course of four lectures on America in the American Poets at Springfield, Mass., as follows: Friday evening, May 18, Longfellow; Tuesday evening, May 22, Whittier; Friday evening, May 25, Lowell; Monday evening, May 28, Emerson. The Amherst *Record* says that these lectures, given recently at Amherst, "gained in interest from the first," and adds: "The lectures were highly instructive, full of fine sentiment, and with enough of wit and humor. It is a pleasure in this day, when the platform has become so commonly a mere instrument for popular amusement, to welcome one who deals with serious themes, and seeks to restore the lecture to something of the important place it held among us twenty years ago."

JAMES K. APPLEBEE spoke at Parker Memorial last Sunday on Theodore Parker, the occasion being the twenty-third anniversary of the death of the great reformer. The speaker alluded to the treatment he received at the hands of the Unitarians, and said that, in a town in Michigan to-day, there is a church in which hang the portraits of Unitarian worthies, among them that of Theodore Parker. If any one asked its members what Unitarianism was, the reply given was, "What these men and women believed in." If asked what were the objects of Unitarianism, the answer was, "To make such men as Theodore Parker." But the speaker could not forget how the Unitarians had tried to ruin Theodore Parker. He was not burned at the stake, for the Unitarians never had fire enough to burn anybody; but he was made to suffer a worse martyrdom. Parker was not made to shed his blood, but his tears, which to him was much worse. He was a great political and social reformer as well as a religious one. Theodore Parker will be the subject of Mr. Applebee's discourse next Sunday and the Sunday following.

SAYS the Springfield *Republican:* "Mr Kennedy improves as a biographer, though he has still much to learn before he will write like Plutarch, Izaak Walton, or Sainte-Beuve. His *Oliver Wendell Holmes*, published in Boston by S. E. Cassino & Co.,—a new and ambitious firm of book-makers,—is a great advance on his Life of Whittier, as that was on his hasty compilation about Longfellow. Yet, in all these books, the effort was evident to make a biography that would represent the man in view,—not a mere eulogy, but the whole character from its several sides, with praise or blame according to the author's mind. This is well, but it may be that Mr. Kennedy does not see all that is to be seen; and, though he takes many views, they are none of them quite comprehensive enough. The Holmes biography is better than the others in this respect, however; and, though it will give a twinge to the reader now and then, especially to the Boston reader and the innumerable cousinry of the Holmes family, it is, on the whole, just and clear, if not always generous in its judgments." A biography that represents "the man in view,—not a mere eulogy, but the whole character from its several sides, with praise or blame according to the author's mind,"—and that is, "on the whole, just and clear," is about the kind of biography the public need, whether it pleases the "Boston reader and the innumerable cousinry of the Holmes family" or not.

DISCOUNTS. Over $1 at 10 per cent., over $2 at 15, over $3 at 20, over $5 at 25 per cent. discount. Sent prepaid on receipt of cash. JOHN B. ALDEN, Publisher, 18 Vesey Street, New York. P.O. Box 1227.

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

First Boston Ethical Society.

The following lectures will close the present season of the First Boston Ethical Society:—

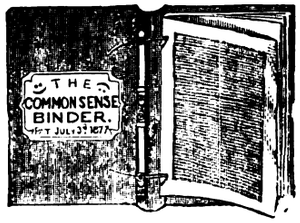
Sunday morning, May 20, Mrs. Clara Neymann, on "The Moral Factor in Government."

Sunday morning, May 27, T. B. Wakeman, on "The Religion of the Higher Integration."

The public are cordially invited to attend these lectures.

They are all to be delivered in Horticultural Upper Hall.

No charge for admission.



Shipman's "Binder" for THE INDEX.

Has a flexible back which adjusts itself to any thickness. So simple in construction that any one can bind their own paper one number at a time. Serves for a temporary or permanent use equally well.

For sale at INDEX Office. Price $1.00.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

EVOLUTION IN ITS RELATIONS TO EVANGELICAL RELIGION. Addresses of B. F. UNDERWOOD, Prof. P. A. CHADBOURNE, and Prof. ASA GRAY at a meeting of the "Evangelical Alliance" held in Boston, Sept. 10, 1882. 5 cts.

NATURALISM vs. SUPERNATURALISM. By B. F. UNDERWOOD. 10 cts.

WHAT KIND OF MORALITY DID JESUS AND THE APOSTLES TEACH? By F. M. HOLLAND. 5 cts.

GOD OR THE GALILEAN? By FELIX L. OSWALD. 5 cts.

THE SCIENTIFIC AND METAPHYSICAL METHODS IN PHILOSOPHY. By LEWIS G. JANES. 5 cts.

AGNOSTICISM AND RELIGION. By W. H. SPENCER. 5 cts.

Address THE INDEX, 3 Tremont Place, Boston, Mass.

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL.

1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the Puritan rulers of the Massachusetts Bay Colony, and in this book he tells the pitiful story anew, carefully, correcting many inaccuracies in the histories which have generally been accepted as authentic.

THE Third Annual Meeting of the Institute of Heredity will be held in Wesleyan Hall, Bromfield Street, May 29, 1883. The session will last through the day and evening. 10 A.M., 2.30 and 7.30 P.M.

HORACE GREELEY, in a letter just published, wrote: "I greatly doubt the possibility of purifying primary elections, and I dread making them too imposing. Now, they are known to be mainly frauds, and they don't have much weight. The purifying principle of our politics is bolting, and I mean to encourage resorts to it."

THEY are going to have a Tertio-Millennial Anniversary Celebration in Santa Fé, which is to begin on the second day of July next, and will be continued until August 3. The name of this anniversary is rather bewildering, but it means that the inhabitants of Santa Fé intend to celebrate the three hundred and thirty-third anniversary of its settlement. The three distinct civilizations of Indians, Spaniards, and Americans which have their home there, will be represented in characteristic art, industries, and games.

FUNDS are needed for the sensible charity organized and cared for by the Young Men's Christian Union of this city, which sends the children of poor and worthy families into the country for a week during the summer, giving them a glimpse of Nature at her loveliest and a few days of pure air and pleasure. This charity was begun in 1875, with 160 beneficiaries, and swelled to 1,795 beneficiaries last year, with an average vacation of twelve days, at a cost of $2.69 each per week. Mr. W. H. Baldwin, at 18 Boylston Street, will rightly dispose of any benefactions.

THE circular which Pope Leo has addressed to the Irish bishops is denounced by Mr. Davitt and other prominent Irish agitators as a manifesto inspired by British diplomacy. The aim of the Pope seems to be to crush out the political movement directed by Mr. Parnell. Doubtless, the Irish clergy will feel compelled to heed the instructions from their supreme chief, but there is a feeling among the more intelligent Catholics of Ireland that the Pope has no right to interfere in their political affairs; and the Parnell fund is likely to be increased by the papal circular.

POMEROY'S *Democrat* relates a case where a sick man, distorted by rheumatic contractions of the muscles, was by order of his physician to his attendants greatly angered, when within an hour his pain left him and in a few weeks his limbs were restored to usefulness and the man to health. Our experience with rheumatic sufferers leads us to believe that such patients do not generally wait for the physician's orders to their attendants to get angry, as the worst stages of that disease are very likely to induce that state of mind. It is more easily tried, however, than the faith cure.

AT an anniversary meeting of the Salvation Army held at Exeter Hall, London, on the 16th, "General" Booth stated that the Army was composed of 491 corps, with 1,500,000 members, while the income amounts to £121,000. The expenses of rentals are £21,000; and the value of property acquired, £150,800, mortgaged to the amount of £54,000. The estimated needs for the coming year are £14,000; but, of this, £10,000 were subscribed at the meeting. These facts and figures seem to indicate that it is easy to organize men and raise money for theological purposes in proportion as men are ignorant and fanatical. At the meeting referred to above, the proceedings were as noisy and demonstrative as usual. Reformed drunkards and pugilists related their experiences, and one of the latter supplemented his harangue by a song and dance upon the platform.

NOTHING shows more clearly that Orthodoxy is losing its hold on our people than the statement given by Dorus Clarke, D.D., at the end of his pamphlet on "The Alleged 'Progress in Theology,'" proving that no more money is now raised by the American Board of Commissioners for Foreign Missions, the Massachusetts Bible Society, and the American Tract Society, than was contributed twenty years ago. For instance, the population of this State was only two-thirds as great in 1863 as at present; but then the Massachusetts Bible Society collected $11,688.47. Only $9,057.05 was given in 1882, though, according to the increase in population, it would have been over $16,500. The Tract Society got $24,344.31 in 1863, but only $26,387.72 in 1881, and there was great uniformity meantime. The American Board of Commissioners for Foreign Missions actually took in much less money during 1879 and 1881 than in any other year since 1863. The receipts for 1882 were larger, but not equal to those of 1864, 1868, 1869, 1874, 1875, 1876, or 1878. It is plain that people in general care less for sectarian propagandism than ever before. They are as generous as ever, but they prefer unsectarian charities.

THE following we find in the Springfield *Republican:* "There is only one pronounced atheist and one rationalist in the present Senior Class of Harvard College; but there are 7 terrible agnostics, or 'know-nothings,' 5 who have 'no religion,' and 19 undecided, against 38 Unitarians, 29 Episcopalians, 22 Congregationalists, 8 non-sectarians, 7 Baptists, 4 Universalists, 4 theists, 3 deists, 2 Swedenborgians, and 1 Methodist, 1 Roman Catholic, and 1 Disciple. The law will take 48 of them, business 36, teaching 16, medicine 14, ministry 6, banking 6, journalism 4, and 20 will watch for something to turn up." From these figures, it would appear that forty members of the class —namely, 1 atheist, 1 rationalist, 7 agnostics, 5 who have no religion, 19 undecided, 4 theists, and 3 deists—do not accept Christianity or are unwilling to be classed with believers in Christianity. And since, as is well known, a large proportion of those called Unitarians are but nominal Christians, being either agnostics, or theists like Mr. M. J. Savage, who is in fact no more a Christian than is Mr. Abbot, it is fair to infer that, of the 38 Unitarians, one-half or three-fourths of the number are also unbelievers. The fact that the ministry will take but 6, while the law will take 48, business 36, teaching 16, medicine 14, and banking and journalism 10, is significant, when we consider the proportion of students whose ambition has been to qualify themselves for the ministry in past years.

C. LLOYD MORGAN, in *Nature*, gives an account of his experiments with scorpions, to ascertain whether these creatures have, as has been claimed, a suicidal instinct. He says that he condensed a sunbeam on various parts of the scorpion's body; heated scorpions in a glass bottle, "killing some twenty or thirty individuals in this way"; surrounded them with fire, placing them "in the midst of a ring of embers on the flat and much-heated stones of the fire-place, when one crept over the embers, but got baked before he could escape"; "placed a layer of an eighth of an inch of alcohol in a shallow vessel, lit the alcohol and placed the scorpion in the midst of the burning spirit"; put them in concentrated sulphuric acid, sodium hydrate, and other strong acid; "placed a small pellet of phosphorus near the root of the scorpion's tail, and lit the phosphorus with a touch of heated wire"; put them "in a bottle with a piece of cotton wool moistened with benzine"; treated them with a series of electric shocks, and subjected them to "general and exasperating courses of worry." Mr. Morgan thinks it will be admitted that some of these experiments are "sufficiently barbarous to induce any scorpion who had the slightest suicidal tendency to find relief in self-destruction," but that he "cannot place on record a single instance of clear and unmistakable scorpion suicide." We do not believe that there are any scientific considerations which can justify the torturing of animals in the manner described by Mr. Morgan, merely to gratify a curiosity whether they can be made to commit self-destruction. Experiments like these must tend to produce insensibility to suffering, without, as we can see, adding to the sum total of useful knowledge.

POSTAL LAWS AND LIBERTY OF THE PRESS.

There is little likelihood that the United States law which forbids the use of the mails for the circulation of indecent literature will be repealed. The Supreme Court has fully affirmed the constitutionality of the law, and no argument but that of unconstitutionality would be adequate to outweigh the strong common sense of the people in the necessity of such a law against one of the easiest means of disseminating vile publications. Indeed, should it be decided that a law for this object is unconstitutional, a strong and doubtless successful movement would be inaugurated so to amend the national Constitution as to bring such a law within its scope. For what class of persons can have any interest in allowing the use of the mails for the publications in question except those shameless creatures who seek to make a living by inciting their fellow-men to vice? And this is not a class of persons who would be likely to show their heads in public against such a constitutional amendment. They are really criminals, and from the nature of their vocation are disposed to keep in the shade.

But there is no probability that such an amendment to the Constitution will be required. The argument that the section of the postal laws under discussion is unconstitutional rests on the slenderest of foundations. If the United States laws attempted to deal with the whole crime of publishing, and trafficking in, obscene literature, they would be clearly unconstitutional. That crime in general is left, by our dual system of government, to be dealt with by the separate States, just as are murder, arson, robbery, and others of the most flagrant as well as smaller crimes. But, by the national Constitution, the States gave up to the United States government the full responsibility and care for the postal system of the whole country. The separate States have now no right to carry mails, nor in any way to regulate the laws and methods of the United States with regard to them. Hence, the United States government has not only the right, but the duty, to see that its mails are not used for plainly abetting and executing a traffic which the States declare to be a gross immorality and crime. Upon the general government devolve by the Constitution whatsoever rights and obligations the separate States would have had for prohibiting the use of the mails for circulating vile publications, if they had retained postal privileges in their own hands. And that any State should make itself a common carrier to transport at public expense printed matter or any articles of merchandise, traffic in which it has forbidden by law as a crime against public morals, is incredible.

But, at this point, certain persons enthusiastically vigilant for liberty exclaim, Is the government to open mails and examine people's private correspondence? To which the answer is: The government in this matter can make no inspection of mails in any other way than that which it has an undisputed right to use for other purposes. Neither letters nor any other sealed matter paying letter postage can be examined except by special order of a court and due process of law provided for all search and seizure of private property. But all other classes of mailable matter must now be so wrapped as to be accessible to the ready examination of post-office officials; and, by a similar proviso, a government has a perfect right to throw out as unmailable all articles of merchandise and publications so plainly intended for moral contamination that traffic in them is forbidden by statute. No government can be expected, knowingly, to become a party to the violation of its own laws.

It is admitted, however, that here arises a difficulty. People differ in their judgment as to what is "plainly intended for moral contamination," and, also, as to the responsibility of government for protecting people from "moral contamination." There are people, on one side, of excellent intentions, who have not yet escaped from the old ecclesiastical idea that to deny certain religious beliefs, to become sceptical or atheistic, and to write and publish such unbeliefs, is to produce "moral contamination"; and these persons cannot easily keep the line distinct between their bigoted horror of infidelity in opinion and their moral horror of criminal conduct. And, on the other hand, there are many good people who are so jealous for personal liberty of thought and speech that they are disposed to distrust all government interference in morals, and think it safer on the whole that people should run any risk of "moral contamination" than that anybody's mental liberty should be proscribed to prevent it. Thus, it may be conceded, cases might occur where law-abiding and virtuous people would differ as to whether statute law of any kind should be invoked to prevent the circulation of evil literature. For what is "evil literature"? Who is to decide? But, whatever ambiguity may come into the question when put in this form, there is a well-defined class of vicious literature and prints concerning which there is no ambiguity, no uncertainty, but of which the testimony of all intelligent persons would be that it is meant to pander to vice, and is issued solely for that purpose. It is sent especially to the young and inexperienced, and those miscreants who engage in the business expect pecuniary profit from it. If people believe in any government at all, or in any power in society at large to restrain its members to certain bounds of right and decency, it is not easy to see how they can help believing in a governmental authority to prevent such fiends in human shape as these from plying their diabolical trade. Liberty is too sacred a word, too closely allied to all that is moral and noble, to be used as a shield to protect anybody's right to commit such nefarious deeds. Nobody has any such right. The trade of these persons is criminal, and government can no more connive at it by making itself the carrier of their criminal goods than it can encourage it in any other way.

And the present United States postal law on this subject was doubtless intended by Congress solely to prevent the mails being used for this criminal traffic. It is possible, however, that some of those who outside of Congress were most zealous for securing the law, and that the principal and special agent of the government in executing the law, are of that class of persons above referred to, who are unable to distinguish clearly between their abhorrence of certain erroneous opinions and their abhorrence of vice. The law, at least, is not expressed with such clearness and precision as to prevent abuses in its execution. And such abuses have really occurred. The outcry indeed which they have occasioned has given to some people the impression that the cases of abuse of the law are more than the cases of its legitimate use, which is very far from the truth. But the law needs some amendment to provide against the possibility of even these few exceptional abuses. And this amendment, it is quite possible, might have been already effected, if so many Liberals, under the mistaken idea that liberty was more endangered by the law than morality would be by its repeal, had not made the egregious blunder of working for its entire abolition. To seek totally to repeal the law is as much against the interests of genuine liberty as it is against the interests of morality. What a puerile idea of liberty is that which blatantly claims the right to print a thing just because government forbids it! And how more than puerile —how morally degrading—is that idea of liberty which identifies freedom of speech and the press with the defiant power of uttering whatever indecencies one may choose!

The law, as we said at the outset, will not be permitted by the intelligent moral sentiment of the country to be repealed. But it will, we think, be amended. And it would not surprise us if some of those who are most prominently interested in its execution, seeing by the result of several recent cases in the courts how much now depends on the special opinions and bias of the presiding judge in interpreting the law, should be the first to move for an amendment, in order to secure a more exact phraseology and leave less latitude to the judges. Liberalism should then be in a condition to make its influence felt in obtaining such changes in the law as will prevent all assaults under it upon any of the genuine rights of free inquiry and discussion, while leaving in it all its present power against all persons who would use the United States mails for conveying publications that are criminally indecent. WILLIAM J. POTTER.

SOME PRIMITIVE FREE THINKERS.

The human mind, in the remotest, darkest periods of history, has always, in exceptional men, been aware of the actual state of the case, or, at least, been aware that vulgar beliefs and opinions are, as far as truth is concerned, apt almost invariably to be wide of the mark. Thus, there has never been a total mental eclipse, even in times of the most crass ignorance and superstition, there having always been exceptional men of sterling good sense and unerring rational insight to register a protest against popular errors and delusions, and thus save the honor of human nature. In other words, there have always been *moderns* in the world in the most archaic times, or persons imbued with what is called *the modern spirit* and reason, who lived in and habitually respired the atmosphere of reason, while their contemporaries were mere men of their times, imbued with all the errors, illusions, delusions, and irrational dogmatisms of their times. Away back, some twenty-five centuries ago, be the same more or less, there was a great historian,—namely, Thucydides,—who wrote history rationally, from a human, natural stand-point, and with an obvious contempt for the elaborate supernaturalisms and superstitions which environed him and tainted the entire moral and social atmosphere of his time and place. Thucydides, finding in his own consciousness, with his five senses wide-awake to the world, not one of the mob of gods and demons in which the mass of his contemporaries and countrymen elaborately believed, with a costly apparatus of temples, rituals, and priesthoods, concluded to recognize in his narrative none but natural personalities,—namely, his fellow-citizens and fellow-mortals. They were highly interesting to him,— they and their words and deeds, but not their gods. Thus, Thucydides was as much a modern, in spirit at least, as were and are Macaulay, Green, Parkman, Carlyle, and other current writers of history.

Then, as far back as the age of Xerxes, there was a great Ionian thinker and scientist,—namely, Demokritos of Abdera,—who took a modern, rational view of nature as a complex of matter and force, as a rushing torrent of "flaring atom-streams" pouring forever through the illimitable inane. So modern was Demokritos that current science has only lately reached his stand-point. For he, too, recognized the persistence of force and the indestructibility of matter under all the changes and metamorphoses which it is constantly undergo-

Digitized by Google

ing. Then, again, he saw that no theological god, demiurge or thaumaturge, could make something out of nothing. He also saw that events of all kinds are the outcomes of an orderly evolution. As for his "atoms-and-void" theory, as a solution of the mystery of the universe, as its fundamental fact and source, it was at least a rational attempt to account for the nature of things, and so subtle and profound that it holds its own even now to a greater or less extent.

Then there was another sensible Greek philosopher or wooer of the coy maid, Wisdom,—namely, Epikuros,—who was for ages grossly maligned and misrepresented by the ever active spirit of envy, detraction, and malice, which is so lively when any sort of Orthodoxy is at stake. Horace, the genial Latin poet, though a disciple of Epikuros, when the sky was clear and he was feeling in good health and spirits, was yet willing to lend himself to the propagation of the current slander of his master by stigmatizing his followers as sleek porkers (*nitidi porci*), who were chiefly anxious to gorge themselves with abundant swill, and then to lie placidly grunting in the sun. But no Roman, with one exception to be presently considered, was capable of appreciating or piercing to the hidden meaning of any of the old Greek systems of world-wisdom. The mere fact that Epikuros lectured in a garden indicates that he was no voluptuary or sensualist in the piggish or porcine sense, but a man of simple tastes and unsophisticated appetites, with a fondness for plants, flowers, and a vegetable diet. The great aim of his philosophy was to sweep the human mind clear of rubbish, and to exorcise the theological phantoms and hallucinations which then haunted and still haunt it, to let the sunlight into the darkened chambers of its imagery, and make it see the nature of things as it really was and is, and not through the distorting medium of priestly, traditional mythological and theological nonsense. He aimed, above all, to impart to it a healthy equipoise, tranquilness, and undisturbedness, to banish from it all the distractions of superstition and folly. His philosophy was emphatically a philosophy of good sense, moderation, and quiet rational enjoyment of all legitimate pleasurable sensations, whether of mind or body. He had a more than Greek hatred of excess and too-muchness. He laughed at the overruling and special providence theory of the government of the world as an anile fable. Of course, he was a materialist pure and simple, all phenomena and all men and things being alike, according to his doctrine, combinations of cosmic atoms and resoluble into atoms again. He seems to have taught that there were gods, either from motives of policy or in deference to the general consensus of mankind; but his gods were not at all in the special providence line of business. They dwelt above the world in intermundane seclusion, and supremely indifferent to all the concerns of mortality,

> "Where never creeps a cloud or moves a wind,
> Nor ever lowest roll of thunder moans,
> Nor sound of human sorrow mounts to mar
> Their sacred, everlasting calm."

But, because "to-morrow we die," he did not recommend inordinate eating, drinking, and merriment, and a beastly wallowing in the mud-baths and ordure of lust and sensuality. On the contrary, he taught a refined simplicity and moderation of bearing and enjoyment. Of course, he was not an enthusiast, fanatic, or ghoul, but a quiet, imperturbable, self-poised gentleman, or, in Attic phrase, a man "*kalos-kai-agathos.*" In order to enjoy life at all, there must be mental and bodily health, vigor, and sanity; and all excess is fatal to such a condition.

Another conspicuous primitive free thinker was the illustrious Roman disciple of Epikuros,—namely, the Latin poet Lucretius,—who was born about a century before the initial year of the vulgar era, his birth almost synchronizing with the birth of the greatest Roman and man of action and statesmanship whereof this world holds record,—namely, Julius Cæsar,—and also with the birth of the greatest talker or tongue-potent man of his race,—namely, Cicero,—who was by no means so wise as he was eloquent with lips and pen, for he was one of the greatest of literary men and essayists also, and is as readable at this hour as ever. It is sufficient to say of Lucretius that he was worthy to be a contemporary of Cæsar and Cicero. Lucretius was thus born in the lurid, final years of the Roman Commonwealth, when it had become "a steaming slaughter-house" of civil war, faction, confiscation, treachery, incessant assassination and massacre, of greed, unnatural lust, luxury, inordinate wealth, and of popular agrarianism and anarchy on the one hand and unmeasured aristocratic arrogance, monopoly, and oppression on the other, when it had become a bottomless reservoir of the plunder of the then world and the resort of all kinds and hues of humanity. The sun of the Roman Republic was indeed setting in fuliginous, blood-red clouds of ruin. The two butchers, Marius and Sulla, seemed bent on exterminating with the sword the entire human race, or that part of it dwelling round the basin of the Mediterranean Sea. Lucretius, with all his Greek fire and genius, was yet a genuine Roman of the old stock, with all the instincts, tastes, prejudices, and traits of his singular race. But though a genuine, he was yet an exceptional Roman; for he had poetic and philosophic genius in as large measure as was ever vouchsafed to the most illustrious Greek bards and thinkers. While his great contemporaries, Cæsar and Cicero, were busy in court, forum, and camp, making the world ring with their names and words and exploits, Lucretius passed his brief life in loneliness and obscurity, in thought rather than action, on the heights of abstract contemplation, either "fancy-borne upon the rise and long roll of the hexameter," or pondering "those three hundred scrolls left by the teacher whom he deemed divine"; namely, Epikuros. The ruin of the republic and the fearful scenes of anarchy and bloodshed all about him finally broke his heart and brought him to the suicidal point; and he destroyed himself as his beautiful female namesake, who "brooked not the Tarquin in her blood," did so long before him. Almost the solitary tradition of him which survives is that his wife or mistress, Lucilia, who misinterpreted his solitary ways and abstractedness into a growing indifference for herself, administered to him a philter to reawaken his love for her. The philter made him insane with lucid intervals, during which he wrote his great poem "Concerning the Nature of Things," in which he

> "Told a truth
> That stays the rolling Ixionian wheel,
> And numbs the Fury's ringlet-snake, and plucks
> The mortal soul from out immortal hell."

For these lines of Tennyson's fine poem entitled "Lucretius," which I have already several times quoted, literally state the great aim and object of Lucretius in writing his great philosophic poem.

He assailed the monstrous idols and phantoms of superstition, as did the knight adventurer the giants and fire-breathing monsters of mediæval romance. His main reliance was the dogma of his master,—that the soul, being composed of atoms like the body, is as dissoluble and perishable as the latter; that man, in short, is a product of nature, a material phenomenon, and mortal. This being so, of course the fear of death and the dread of something after death are absurd. Thus, Tartarus and Elysium vanish into thin air, and the rolling stone of Sisyphus, and the wheel of Ixion, and the eternal thirst of Tantalus become mere poetic metaphors for inordinate ambition, love, avarice, and fear of death and God. The vulture of Tityos is simply the torment of love and insatiable desire. Lucretius labors at his demonstration of the folly of the expectation of another life with the utmost pains.

His contemporary, Julius Cæsar, though he occupied the position of Pontifex Maximus, or official high priest and pope of the Roman paganism of the time, was undisguisedly a co-believer with Lucretius and Epikuros in the mortality of the soul, if he is reported aright by Sallust. In his speech in the senate as to the kind of punishment to be inflicted on Catiline and his conspirators, Cæsar said "death was no punishment at all. Death was the end of human suffering. In the grave there was neither joy nor sorrow. When a man was dead, he ceased to be. He became as he had been before he was born." In this connection, Froude says: "Probably almost every one in the senate thought like Cæsar on this subject. Cicero certainly did. The only difference was plausible statesmen (such as Cicero) affected a respect for the popular superstition, and pretended to believe what they did not believe. Cæsar spoke his convictions out," although he was the chief priest of Roman paganism. But Cicero was a shifty trimmer, with all his literary and oratorical genius. There is plenty of affectation like his still current. But Lucretius and Epikuros were merely at accord with the old Hebrew Biblical doctrine, that there is no knowledge nor device in the grave, whither we are going. Prof. Clifford and Miss Martineau in recent years, after eighteen centuries of Christianity, stood exactly in the shoes of Lucretius on this subject. Miss Martineau craved a cessation of conscious being as a boon. Meanwhile, to affirm the mortality of the soul is as pure a piece of dogmatism as to affirm its immortality. Nobody has any right to make either affirmation. Our proper attitude is to wait and see. There may be other states of existence incognizable by our present equipment of senses. Meantime, in spite of Epikuros, Lucretius, Ecclesiastes, Julius Cæsar, Prof. Clifford, and Miss Martineau, most of us will still continue to entertain a hope, but not "a dread" of something after death.

B. W. BALL.

THE SINS OF WOMAN.

Dr. Dix opens one of his lectures (for which every man and woman in the country ought to reverently thank him) with this ominous heading; and he has not spoken the words a moment too soon. He has drawn the demarking lines between the old and the new with a pen of iron, has separated the sheep from the goats with the clearness of a final judgment; and I, by his construction finding myself irretrievably on the side of the castaways, am now able to see what amount of odium might righteously be heaped upon me, what measure of "outer darkness" I shall be doomed to suffer because of my heresies.

First, I, like most of cultivated women, most especially if they happen to be pretty, have not been without a certain hankering for the "good old times of Adam and of Eve," when women, queens of beauty, were served by gallant knights on bended knee, and blushed under the tributes of poets and the songs of Minnesinger and Troubadour. But woman can survive all this babyishness, and grow stronger and nobler from the escape, even though the changing of the age—too hard, too mechanical, too cynical, too materialistic, as it undoubtedly is—may cause some weak sighing

Digitized by Google

for loss and the slow-coming gain, when she sees, in the language of the tender-hearted Dr. Dix, that "men, once upon a time, had romantic thoughts of women; they descanted seriously on their charms, their worth, their preciousness. Fine speeches were the order of the day, and there was a true and honest chivalry in society which accorded to woman an honor founded on high admiration and devout and loyal devotion to her. But that was once upon a time, and the time is past. Such language befitted those who held somewhat romantic and transcendent notions of the mother, the sister, the wife. We live in a wiser, if not a harder, age; our eyes are opened. The old opinions cluster around an impracticable and impossible ideal; the facts do not accord with the fancy; society has undergone a change; we see things differently. It is mere flattery and nonsense to talk of women or to women in that way; they want a different thing."

"They want a change." Here is an admission. Here is a point yielded. Assuredly, women do call for a change; and what is the inference? Their sins may have accumulated, and why? Did this rosy period produce the degeneracy? If all was so lovely, so desirable, so accessible, why should they desire to go out from under this golden, protective banner, this refined and refining adulation? Why?

Did woman grow too large for the half-bushel measure into which she was compressed? Did she grow too clear in sight, too high in aspiration, too humanly sympathetic, to claim this diaphanous homage,—to accept it, even when her eyes looked from her selfish altitude over the vast plain where her despairing, oppressed, toil-worn, sin-stained sisterhood grovelled in abject misery or revelled in ghastly mirth, blind, helpless, hopeless?

O my dear Doctor, you are hemmed in by your respectability, the high wall of your church pasturage, and you cannot see all this. The Church cannot fold its arms around all this miserable multitude; but women are learning that a true humanity, a large loving-heartedness that shall find teaching, shelter, work, work, work, will win all these forlorn women into a better fold than any Church has yet devised for them.

I do not undervalue the efforts made in all the Churches for the establishment of asylums, and a thousand other measures to relieve suffering and poverty and reclaim the sinful; but all this is but as a drop in the ocean of sin and misery,—a gill of rose-water to disguise the abysm of underlying nauseousness,—and we women see that palliatives are of no use. The sex must be roused to see its own needs, to use its own methods, think its own thoughts, do its own work. Let the sweet, velvet-soft, diamond-gleaming women cling to effete systems, kneel at their Lenten services, seeing nothing better; but we, who hear the cry of those into whose hearts the iron of outrage and wrong has penetrated, will seek a more excellent way. We see that the Church, led by her blind hierarchy, sleeps her somnambulic sleep, while the prisons multiply step by step with the founding of churches. Congregations two thousand strong of felons fill a single penitentiary with able-bodied men who, but for the remissness of the Church and the apathy of legislators, ought to be doing manful service in their day and generation.

We see that the other sex will not apply the seething ploughshare of reform, and we lay hold of the handle and strike a deeper furrow.

It is not women, either the luxurious, unobservant women of fashion or the women of reform, that strike the blow to the household, but *men*, who have lost the stimulus of the battle-field, and, tired of unsatisfactory politics, are falling behind the energy, intelligence, and moral resources of our sex. They busy themselves with a sort of pantomime life, dilettanteism, foolish travel and sports, and seclude themselves in clubs, deserting the family with a selfish bachelorism. Let the good Doctor turn his searching lantern nearer home, if he would penetrate the growing darkness that overshadows the family.

"I question not that the position of woman has changed, I think for the worse, in those particulars about which a true woman will be most sensitive. The deference paid her is less; homage has turned to mere civility; the public invade her privacy; the newspapers print her name in full; she is treated with no more ceremony than if she were a man." Thus indignantly chants Dr. Dix, as if a woman ought to be treated like a precious piece of porcelain in imminent danger of being broken; but he does not seem to perceive that men may be halting in growth or becoming remiss in true manliness.

The strictures upon the "immolation" of the girl child to the claims of society seem exasperatingly weak, in view of the luxurious churches and splendidly costumed women who fill the pews of Trinity and Grace Churches of New York on Sunday. What better is to be expected of these women than that they should train their daughters to grace these pews with the radiance of their mothers? and, to do this, sacrifices must be made, conventionalism insisted upon, and, if need be, the girl must kneel gracefully at the altar,—she in her teens,—and be wedded to some miserable old debauchee who buys her under the sanction of the Church. What better is this than to defeat the, ends of matrimony and neutralize its sanctities and prepare the way for its violations? Christian women, so called, do this; and the Church enters no forbidding of the bans, although the commonest *roué* turns with disgust from the desecrating rite. It is the sins of these so-called Christian mothers that pave the way to the ruin of their daughters and the degradation of marriage.

After all, what is the object of marriage? Woman has from the first been more or less a bond slave to man; and was this tie made reputable by law and sacred by religion, designed merely to be a *solace* to man, but a *bondage* to woman,—a means of preserving a better heredity and conveying wealth to children? Or was it also a method conceived for the mutual improvement of the man and the woman,—a means of redeeming each from irrational bestiality, of augmenting the growth of a purer life, the development of the more tender affections, a more refined modesty, an unselfish, generous, appreciative sense of the beautiful and the true, a protectiveness of the weak against the strong, and to foster the lovingness of childhood? Surely, if all this was not designed in marriage, it has done nothing for woman but intensify her bondage; and she will, and does reject it, unless some profound affection shall overwhelm all other considerations.

Marriage, then, resolves itself into a bond of love, the master bond, with its resulting issue of the child and the establishment of the family, with the laws of a wholesome heredity. Viewed in this light, it is even more holy and beautiful than any sacrament insisted upon by the Church. Deprive it of all this, and no amount of gold and silver and wreaths of flowers and kneeling hierarchy can make it other than a nauseous bondage and corruption. Divesting marriage of the only redeeming motive for its adoption,—the production of progeny and hope of a comforting household, a *home*, in the high sense of the term,—it would seem to justify the coarse estimate of Sterne, who, witnessing one of these unnatural alliances, exclaimed, "How any woman past child-bearing can ask God to bless her concupiscence is beyond my comprehension!"

I do not think American girls marry because they desire more freedom. Both boys and girls have freedom enough in our country,—too much. There is too much laxity in the household; and the coming woman must be better poised than the majorities of them at present are, or she will inaugurate a license much to be dreaded.

I do not think the great end of a woman's existence is to be found in comforting a man and mothering children. Thousands and thousands of women as well as men are totally unfit for marriage, and ought in all humility (in their hearts, at least) to crave pardon of their children for entailing upon them such unworthy parentage. Therefore, let these women be justified in refusing marriage, and devoting themselves to such pursuits as their capacities may seem to warrant. Let them not degrade nor violate the design nor sanctities of marriage, and let these seventy-five thousand extra women do as they best honestly can.

Let every woman who takes the vows of matrimony conscientiously regard its sacredness. Let her mother children, as the condition of marriage. Let her abstain from all practices, all drugs, designed to defeat the legitimate purpose of the relation, or let her retain her single blessedness; for it is here that the sins of woman are most strongly emphasized by all clear-judging, right-minded persons. "The deliberate determination of some married women to defeat the objects for which marriage was instituted, to have no real home, to avoid first the pains and next the cares and duties of maternity,"—such is a part of the charge brought against the sex by Dr. Dix. Undoubtedly, there is ground for the charge; but the sin does not entirely rest upon woman. It is a well-known fact that vast numbers of men are seriously opposed to a family, connive at, and promote measures to prevent its increase; and women, weak and cowardly, submit to outrage and peril rather than bide the ill nature of the unwilling father.

Now, it is useless to place this as crime in the face and eyes of a community that denies the moral responsibility of the actors therein, or, steeped in materialism, believe that nothing of this nature belongs to the moral sense,—that it is just as well, if not wisest and best, to prevent an undue growth of population. Whether it is this or the frivolous motive assigned by Dr. Dix as the true one, the sin, the crime, remains fearfully common. The fine, old, honorable households, once the pride of women like the mother of Wesley, like Anna Hutchinson and Elizabeth Fry, are dwindling away; and our population is being increased by the stout, ignorant Irish woman or the sensual, stolid German. ELIZABETH OAKES SMITH.

GIBBON.

The best of historians will bear a little looking after. Gibbon is doubtless to be reckoned one of the best. But he is far from being one of the most honest,—certainly, if we judge him from the standard of our day. He has done so great and indispensable a work, and I have been in many ways under so great and special obligation to him, that it does not become me to speak of him with anything but respect. But, if one is going over his ground with any desire to form a fair judgment of his own, there is no other distinguished historian who more needs the "little looking after." A careful student of Guizot's and Milman's notes easily finds that out. Still more help will be given by comparing Gibbon with Hodgkin (*Italy and her Invaders*), who, from a point of view not very different from his,—that

Digitized by Google

is, of the purely secular historian,—has gone very recently and with great thoroughness over a portion of his ground.

But my own particular complaint against Gibbon is that—far enough from being the "impartial" historian he is often asserted to be—there is, on the contrary, no historical writer I know who more adroitly expands, suppresses, or suggests, in dealing with his authorities, for the sake of helping out his main impression; no one, except it be avowed theological partisans, who writes more, and more skilfully, in the spirit of an advocate. I say nothing against his good faith. I have no doubt he is entirely honest in his opinions, or his lack of them; and I do not blame anybody for writing in harmony with his opinions. Gibbon was engaged in the good work of attacking the stupid theological bigotry and routine, and it became him to be a partisan. But he was a partisan absolutely devoid of the moral heat which gives a certain grandeur to the character of Voltaire.

I do not quarrel with his suppressions: of course, an historian must pick out the one fact in a thousand that best suits his general view. But the reader of Gibbon should be warned that *he does not mean that you shall see the other side*, or know there is another, if he can help it. For instance, he does not even allude to the strictly contemporary testimony of Lactantius and others that Galerius was a tyrant of peculiar brutality; choosing (I suppose because he was the persecutor *par excellence*) to leave the impression that he was simply a vigorous and effective defender of the frontier. While, if a man happens to be on good terms with the ecclesiastics, Gibbon does as Lord Nelson did,—puts his blind eye to the glass he looks through.

Unfortunately for this theory, there was a time when ecclesiastics had the lead in civilization, just as in Gibbon's day they were the great obstructionists. It is long since Gibbon that the "positive" school of history has come up, which can afford to see with both eyes. It is no blame to him that he wrote as an advocate, only his reader ought to know it. I venture to say that there is not one of the real leaders of civilization in Europe, from Constantine to Charlemagne, of whom it is possible to get a decently fair notion from the pages of Gibbon. As I have had occasion to put it very mildly in another place, "The instances are rare, in which he has not done wrong to the topic or the character he was treating, and let down the moral tone of a great man or a great event, such as the record fairly gives, by his strange incapacity of historic sympathy."

Just for curiosity, I will copy one out of several instances given by Prof. Huidekoper of Gibbon's use of his authorities. Dio Cassius says, speaking of Commodus, "Having killed an ostrich and cut off its head, he came to where we sat, holding in his left hand the head, and in his right the bloody sword." Which Gibbon has improved into the following: "With arrows whose point was shaped into the form of a crescent, Commodus OFTEN intercepted the rapid course and cut asunder the long bony neck of the ostrich." Herodian, however, had given the hint, by saying that the ostrich was beheaded by a crescent-tipped arrow, and continued to run after its head was shot off. This, with other examples of a similar kind, may be found in the notes to that book of curious and out-of-the-way learning, *Judaism in Rome* (p. 562). Another case, equally good, is of a hundred bears which Commodus butchered in pens, transfigured by Gibbon into "a hundred lions raging round the arena.

J. H. ALLEN.

THE HONESTY AND ACCURACY OF GIBBON.

A sentence quoted with approval in a book notice in *The Index* of May 3, stating that "the great merit of Gibbon's writings consists in the fact that he was strictly impartial, and wrote as an historian and not as an advocate," seems to have been the occasion of Prof. Allen's writing the "complaint against Gibbon" which is printed in *The Index* this week. Prof. Allen is a scholar; and his historical studies, as his able and excellent work on *Christian History* abundantly proves, have not been superficial. Yet we think his estimate of Gibbon is unjust, and take the liberty to dissent from it. Our conviction is that the author of that monumental work, *The Decline and Fall of the Roman Empire*, was not only one of the greatest, but one of the most impartial and honest of historians. In this belief, we are supported by writers whose ability, learning, and fairness Prof. Allen will not attempt to impeach. Says James Cotton Morison, M.A., of Lincoln College, Oxford:—

> His [Gibbon's] accuracy, coupled with the extraordinary range of his matter, the variety of his topics, the complexity of his undertaking, the fulness and thoroughness of his knowledge, never failing at any point over the vast field, the ease and mastery with which he lifts the enormous load, are appreciated in proportion to the information and abilities of his critic.

Of the *Decline and Fall*, this writer says:—

> The book is such a marvel of knowledge, at once wide and minute, that even now—after numbers of laborers have gone over the same ground with only special objects in view, small segments of the great circle which Gibbon fills alone—his word is still the weightiest that can be quoted. Modern research has unquestionably opened out points of view to which he did not attain. But, when it comes to close investigation of any particular question, we rarely fail to find that he has seen it, and dropped some pregnant hint about it more valuable than the dissertation of other men.

The testimony of Freeman, the historian, is as follows:—

> That Gibbon should ever be displaced seems impossible. That wonderful man monopolized, so to speak, the historical learning and the historical genius of a whole generation, and left little indeed of either for his contemporaries. He remains the one historian of the eighteenth century whom modern research has neither set aside nor threatened to set aside. We may correct and improve from the stores which have been opened since Gibbon's time, we may write again large parts of his story from other and often truer and more wholesome points of view; but the work of Gibbon as a whole, as the encyclopedic history of thirteen hundred years, as the grandest of historical designs, carried out alike with wonderful power and with wonderful accuracy, must ever keep its place. Whatever else is read, Gibbon must be read too.

Rev. H. H. Milman, the learned divine who edited the English edition of *The Decline and Fall*, after having examined, by the permission of Lord Sheffield, Gibbon's unpublished posthumous works, including his notes and private memoranda, was strongly impressed with the honesty of the great historian. He states that he "has followed the track of Gibbon through many parts of his work, he has read his authorities with constant reference to his pages, and must pronounce his deliberate judgment in terms of the highest admiration as to his general accuracy." This high dignitary of the Church of England, while protesting against Gibbon's conclusions in some instances, confessed that it may be "fearlessly asserted" that he is "rarely chargeable even with the suppression of any material fact" bearing upon his subject.

Such testimonies would be undeserved and untrue, if Prof. Allen's "particular complaint against Gibbon" were well founded.

The subject of the great historian was an event which involved the destruction of an empire and an old civilization, an event for the consummation of which centuries were required, which extended over a large portion of the world, and affected the lives and the interests of a larger number of the inhabitants of the earth than any other political and social transition in the history of man. The subject had hardly been touched by any writer of ability. The materials with which he had to work were poor. The authorities he was obliged to examine were not authors like Livy and Tacitus, but, for the most part, writers in whose works facts distorted and carelessly recorded were mixed with legendary stories and superstitious fancies. Considering the scanty and wretched materials that existed, Niebuhr declared that the century between Commodus and Diocletian was incapable of historical treatment. Of the unavoidable inferiority of his first volume, Gibbon was fully aware; for he himself speaks of the "concise and superficial narrative of Commodus." The history of ecclesiastical Christianity, with its bigotry and intolerance, its persecutions and exterminating religious wars, forms perhaps the bloodiest and most repulsive chapter in the annals of mankind. It extended through periods when men were ignorant of nature, and their imagination was unregulated by reason. The human mind under the sway of myth and fable was incapable of telling the truth or appreciating reality. Certainly, Gibbon exhibited singular forbearance in giving an account of the origin and growth of Christianity with its constant affronts to and outrages on reason and truth. We may excuse an occasional sneer in his narration recounting those long, dreary centuries in which the human mind expended all its might in formulating and enforcing empty theological dogmas.

Gibbon wrote his history, it should be remembered, in the last half of the eighteenth century, just before the old *régime* with its corrupt Church and State was involved in the general conflagration of the French Revolution. He was one of the inaugurators of reason and naturalism. Comparative philology had not opened up an illimitable prehistoric past to the archæological student, and man at his different stages of development was not so well understood as he is now. Niebuhr had not then shown the mythical character of all primitive history, although it had been indicated by Voltaire. Walter Scott had not made the Middle Ages live and breathe again, so to speak. The study of the past had not become a science. It was not then seen that society is an organism. Man was regarded as having been created abruptly, and not as the subject of a gradual evolution. No Max Müller had set the Orient in a new light. There was no talk of Semitic and Aryan. Kant was living, and formulating his revolutionary philosophy, it is true; but he was as yet comparatively unknown and uninfluential. There had been no Humboldts, Herders, Spencers, Darwins, or Lyells, no Assyriologists or Egyptologists, no Mommsen to elucidate Greek or Roman history. Yet the *Decline and Fall of the Roman Empire*, far from being out of date, maintains its ground, and is the only solid bridge connecting the ancient with the modern world. Gibbon's historic glance took in some fifteen centuries; and in his account of the rise and establishment of Christianity with all its sects, of the invasion of the barbarians of Germany and Scythia, of the civil law, of the character and religion of Mohammed, of the temporal sovereignty of the popes, of the empire of Charlemagne, of the conquests of the Saracens and Turks, and a multitude of other great events and systems, his versatility was as remarkable as were his judi-

Digitized by Google

cial candor and truthfulness. When the fact is considered that Gibbon is a standard historic authority, and has been since he wrote, in the great leading nations, Great Britain, Germany, and France, it is too late in this day to charge him with unfairness "in dealing with his authorities for the sake of helping out his main impression."

Gibbon was distinctly the champion and partisan of truth and reason, in whose interests he waged an implacable warfare against the theological spirit as it exhibited itself at the various periods of which he was the historian. He had to be somewhat aggressive to vindicate truth against ecclesiastical misrepresentation. He had to disperse the mist of fable in which numerous historic characters, such as Constantine and Charlemagne, were clothed, in order that they might be seen in a proper light as they really were. Superstition and ecclesiasticism were rampant, and on the Continent of Europe still powerful; and Gibbon had to make of his historic pen sometimes a weapon of assault. Writing at the present time with its greater tolerance and devotion to truth, he would have had no occasion to exhibit the militancy which was necessary in his day.

One who has been borne along with the current of Gibbon's historic narrative from the ancient to the modern thought, through so many centuries whose annals are beclouded by mythical tradition, *ought* to feel under "special obligations" to the historic genius that by twenty years of patient delving in the confused archives of the past at length succeeded in placing many centuries of the world's history in the clear light of a luminous historic account. It was the gigantic work of an historic genius to let daylight into such a jungle, and strangle so many monsters of myth and fable that infested it.

Gibbon had his limitations and defects as an historian; but they were not, in our opinion, those indicated by Prof. Allen. They were largely, as has been said, "the result of his chronological position." Society is a constantly growing organism; and the historian, in proportion as he is scientific in his method, since he has to deal with phenomena which can be explained often only in the light of subsequent developments, is peculiarly liable to become antiquated. The fact that Gibbon has not and is not likely to become antiquated shows what a comprehensive grasp of his subject and what historical insight he possessed; but the inadequateness of some of his chapters is too plainly manifest to be questioned. His impartiality and honesty, however, as well as his great ability and marvellous learning, may be considered well established. The following tribute to Gibbon by the learned and pious Rev. Albert Barnes is not undeserved:—

> Mr. Gibbon had his field, and well he has worked it. His province was history; and his investigations led him, as a sceptic, over the entire period when Christianity, from the feeblest beginning, made its way over the Roman world and "sat down on the throne of the Cæsars"; when, during the long and eventful ages of the decline of the empire, Christianity was seen moulding society, directing wars, founding empires, modifying opinions, changing the arts of life, introducing revolutions into manners, dress, dwellings, schools; when it controlled the government and influenced the people; when it founded monasteries and colleges; when it poured its embattled legions on the Holy Land; and when it had identified itself with all the forms of civilization in Europe. It was Mr. Gibbon's task to show, contrary to the opinion of the Christian world and the general judgment of mankind, that all this could be, and yet the religion be not of God. He did his work well. He did not leave it to be alleged, even by the friends of Christianity, that his aim was to falsify history for the sake of scepticism. As an historian, he was among the most true and honest and faithful of men. There is not the slightest evidence that his scepticism, bitter as it was, ever led him, in a single instance, to pervert or falsify a fact, however much it might be opposed to his own views on the subject of religion, or however much ingenuity it might require to escape, as a sceptic, from the legitimate inferences from the fact. By unwearied study, by great learning, by patient toil, by a comprehensive grasp of his great subject, he has placed himself at the head of historians; and, from the time of Thucydides down to the present age, there has not been a man more upright, stern, honest, unbending in recording the facts of history.—*Lectures on the Evidences of Christianity*, p. 373.

That Gibbon was an infallible writer, that there are no errors in his great work, of course nobody claims or believes. B. F. UNDERWOOD.

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

The Friday morning session will open at 10.30 o'clock, in Parker Memorial Hall, with an address on "Emerson and Darwin" by Col. T. W. Higginson, to be followed by Mr. Edwin D. Mead, who will speak of "The Problem of the Universe as approached from the Thought-side by Emerson," and by Mr. John W. Chadwick, who will speak of "The Problem of the Universe as approached from the Matter-side by Darwin."

The Friday afternoon session will open at three o'clock with a paper on "Co-operation and Progress," by Mrs. Imogene C. Fales, of Brooklyn, N.Y. This will be followed by an address from Mr. James Kay Applebee on "Social Disintegration and its Arrest by Co-operation." Mrs. Anna Garlin Spencer and others will also speak to the question of the afternoon.

The Festival will be held in the large Horticultural Hall, Tremont Street, and will begin with a supper, with tables and seats for all, at about six o'clock, or as soon after the close of the afternoon meeting as possible. Col. T. W. Higginson will preside. After the supper, five-minute speeches are already promised from John W. Chadwick, B. F. Underwood, James Kay Applebee, Frederick Douglass (probably), Mary F. Eastman, Wm. I. Gill, Samuel Longfellow, Wm. J. Potter, Mrs. Clara M. Bisbee, and Mrs. Anna Garlin Spencer, and a poem from Minot J. Savage. Miss Lucy Garlin's Euterpe Quartet have kindly consented to add the attractions of their fine music to the occasion. Tickets of admission to the Festival, with reserved seats at the tables, at 50 cents each, may now be procured at *The Index* office, 3 Tremont Place, Boston, of the Secretary, Providence, R.I., and of A. G. Hill, Esq., Florence, Mass. It is desirable that early application for seats should be made.

F. A. HINCKLEY, *Sec'y F. R. A.*

EDITORIAL NOTES.

THE *Quaker Invasion of Massachusetts*, by Richard P. Hallowell, noticed in *The Index* this week, —Samuel Johnson's *Lectures, Essays, and Sermons*, advertised in another column, and W. H. Spencer's discourse, entitled *An Agnostic View of Vicarious Atonement*, in pamphlet form, are for sale at this office.

PERSONS attending the day sessions of the Free Religious Association at Parker Memorial Hall will miss this year the customary lunch served between the sessions in Fraternity Hall; but they can find a convenient substitute at the festival of the New England Hospital for Women and Children, 87 Boylston Street, where an excellent lunch will be served at a reasonable price, and where there will be an opportunity for rest and refreshment. The distance from the hall is short, and horse-cars pass directly by the house.

WE have received from Louis Prang & Co. of this city an interesting souvenir of the renowned author of "Home, Sweet Home," consisting of a fac simile autograph of that song which John Howard Payne wrote at the request of a young lady friend in Washington, D.C. This is accompanied on the opposite page by a fine pencil portrait of Payne executed by a Miss Freeman of New York, at one time quite celebrated as a portrait painter. It was taken from the living subject, and was considered by his friends and acquaintances as a very accurate and life-like picture. This souvenir is gotten up in the refined and finished style of art characteristic of this firm, and will be welcomed by all admirers of the song and its author.

THE Boston Sunday *Herald*, referring to the charge brought by President Eliot in the *Princeton Review* that the American clergy are lacking in intellectual candor and sincerity, comes to the defence of the clergy in the following fashion:—

> The fickleness of his congregation, the insecurity of his position, the question of provision for his family (if he have one), are elements which touch his manhood and affect his intellectual integrity. Stern necessity compels American clergymen to learn the art of trimming. They win their laurels by their tact in gauging the temper of their personal surroundings. No doubt, tact should be employed by every one; but evidence goes to show that every clergyman is placed in the difficult position of temporizing, whether he likes it or not. He must hold his place at times at the cost of his inward peace of mind. It is the vice of his position. He cannot be independent, if he would. It is often seen that he would like to be, if he could. The truth is that the stolid Christian layman, unintelligent, unthinking, irrational, and pig-headed, is the most serious obstacle the American clergyman has to encounter. He may not be the "denominational devil"; but he certainly raises the devil in the denominations, and the fear of him and the power of his money are much greater than they ought to be. No Protestant clergyman can be the man he would like to be with two or three of these "dogs of war" ready to strip him of his raiment at a moment's warning, because he dares to think not only for himself, but for his congregation. When clergymen hold their places at the expense of their convictions of truth and duty, and the spirit of craven submission has eaten into their vitals, is it at all surprising that they are often reticent, or speak the truth with an eye askant upon the pews? The explanation of many of the shortcomings of American ministers is to be traced to the sanctimonious laymen who daily thank God that they still hold them by the throat.

THE *Christian Statesman* publishes an address by Rev. N. A. Gault, on "The Demands of Liberalism," from which we give the following extract, which is both interesting and encouraging:—

> In their Paine memorial celebrations, they toast the Constitution of the United States as an infidel document, untainted by superstition,—the only constitution of government in the world that does not recognize a God,—and this, they boast, is a triumph of infidelity. The Internationals of New York remonstrate against the order prohibiting their parade on the Sabbath, because nothing in the Constitution of the State or of the United States would be violated by such parade. When Dom Pedro, the Emperor of Brazil, visited our country during our centennial year, to discover the secret of our glory and prosperity, he was told that our success was attributable to the fact that we were a nation without a religion, and that we placed all religions on a level. In one or two treaties, of equal authority with the Constitution,

Digitized by Google

we have declared to the world that the government of the United States is in no sense founded on the Christian religion. Chancellor Kent and other eminent jurists decided long ago that Christianity is part of the common law of the land. This decision is now repeatedly, and in high quarters, reversed. The Supreme Court of New York City has laid down the counter position that Christianity is not a part of the common law. Comstock, in his popular edition of Kent's Commentaries, declares that, "according to the best considered authorities, Christianity is not a part of the common law of the land." And this is not the interpretation that infidels merely are putting upon the Constitution. Even such men as Horace Greeley declared: "We deny that this is a Christian nation. Almighty God is not the source of all power and authority in our government." And Dr. Speer, a high authority in the Presbyterian Church, says that "Christianity, though the prevalent religion of the people when the Constitution was adopted, is unknown to it. The Constitution says that it shall be unknown as having any place in the organic law of the United States or in the legislative powers of Congress." Liberalism, emboldened by such decisions and declarations, is pressing the agitation with redoubled diligence for the complete secularization of the State.

FLOWERS.

To you come gifts on this your festal day,
Born of the love that clusters round your way,—
Love wrought by your own consecrated powers;
And *I* bring *flowers*.

These emblems are of Spring: the may-flower's bloom,
The snow-drop and narcissus' sweet perfume,—
The golden fragrance of your childhood's hours,—
They are sweet flowers!

And here are flowers of Summer: gems of light,
While youth's first aspirations still are bright,
While life seems glorious 'neath rose-scented bowers,
O happy hours!

And these the gifts of Autumn, of your prime;
And fruits as symbols, in your wreath I twine,
When time develops well our latent powers,—
Eternal flowers!

And these are flowers of Winter: all untold
Their wealth by diamonds or by weight of gold;
The blossoms of the spirit,—Heaven's dower;
Immortelle flower!

I bring you flowers,—the hearts that you have blest,
That in their lonely sorrow you've caressed,
Spring up, and bless in turn these happy hours,
Most lovely flowers!

And last I show you flowers of spirit-birth:
More fair than ope in gardens of the earth,
They wait for you in amaranthine bowers;
Accept my flowers!

LINES IN AN ALBUM.

"Heartily know,
When half-gods go,
The gods arrive."—*Emerson*.

But half-men pray,
"Sweet half-gods, stay,
That we may thrive!"

So spurious coin
Our chests eloign
Of royal gold.

Then let us drum!
Lest the gods come,
And drive away

The little things
Called Kings of kings,
To which we pray.

The Index.

BOSTON, MAY 24, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

Religious Rationalism in the United States.*

BY COUNT GOBLET D'ALVIELLA.

(Translated from the *Revue des Deux Mondes* of April 1, 1883, by Miss Arethusa Hall.)

When the pioneers of Puritan emigration embarked upon the "Mayflower" in September, 1620, the head of their little church, John Robinson, in his farewell discourse, adjured them not to restrict themselves blindly to his teaching, nor even to the theology of Luther and Calvin, but to accept with equal eagerness whatever God should be pleased to reveal to them by new mediums. For he believed that God had still more light to come forth from his Holy Word. This language, which was in the logic of Protestantism, fell not upon sterile soil. Yet it was too much in advance of its time to be immediately applied or even understood by the most of those to whom it was addressed. What the "Pilgrims" of the "Mayflower," fleeing from the persecutions of the Established Church, demanded of the shores of the New World, was not religious liberty, but *their* religious liberty; that is, the right of forming a church after their own fashion, without the concurrence of the English hierarchy or the English liturgy.

The government which they formed was a true democracy; but it was emphatically a theocratic democracy, and we should seek in vain for anything in it conformable to modern ideas either in the relations of Church and State or even in regard to the rights of conscience and the liberty of worship. The Bible was their supreme law. It was to inspire and supply written laws. Their first care, when they founded any settlement, was to build a church, which soon became the centre of their individual and social life. The first election was that of a minister and elders. The expenses of worship were charged upon all the inhabitants, but the rights of citizenship belonged only to "communicants"; and the religious society reserved to itself the power to excommunicate infidels, sinners, or even the lukewarm whose only crime was that they did not consider themselves "in a state of grace." The first dissenters who wished to settle in the infant colony—two members of the English Church—were sent back to England by the ship which brought them. A series of Draconian laws closed the entrance into New England to Anabaptists, Antinomians, Quakers, and Catholics. In case of infraction, heretics were exposed to whipping and mutilation, and also to forced labor till they could be sent back at their own expense. The blasphemer and Sabbath-breaker were liable to punishments which might even take their life. This ferocious legislation did not remain a dead letter. New England had, in the seventeenth century, its Urbain Grandier, its Calas, its Labarre. In Massachusetts, they executed witches even till 1692.

It would, however, be unjust to ignore that, notwithstanding its intolerance, its austerity, and its narrowness of horizon, Calvinism, of all the current faiths of the epoch, was best fitted to make of a handful of emigrants the founders of a great and free nation. It is impossible not to acknowledge its influence in the qualities which distinguished the first emigrants, and which are still prevalent among their descendants,—confidence in the faculty of individual organization, stubbornness in labor, taste for learning, respect for woman, and a sentiment of the seriousness of life. We may smile at the minute and often vexatious rules in which the Puritan genius thought to find a barrier to the corruption of manners; but Puritanism has not the less given to the societies marked with its imprint two centuries of a morality more sincere, more general, if, indeed, not higher, than any other people has known. In short, we are indebted to it for having made men equal and free. Constitutions drawn up with a great reinforcement of Biblical texts, in the first years of colonization, were so impregnated with the idea of self-government that, except in those features of them which were contrary to liberty of conscience, they have remained nearly intact until the present time in the New England States, and have served as models for the Federal Constitution as well as for the particular constitutions of the States subsequently formed in the Union.

The religious organization of Calvinism was itself only an application of popular sovereignty. With Calvinists, the priest is no longer a being of superior virtue, invested with supernatural authority by the fact of his ordination, but simply a deputy of the believers, the first among his equals. It is universal suffrage, "the universal vote of the congregation of Christ," as Milton said, which forms the basis of the association, appoints the officers, comprises among them the pastor, fixes the contribution of each member, approves the receipts and expenditures, and decides, without appeal, all pending questions. Indeed, among the Puritans, as now among the Congregationalists,—their direct descendants,—the body of the faithful constituted not a church, but a collection of churches absolutely independent and autonomous. We can conceive how this organization—which may be considered to-day as the national type, *par excellence*, of the American Church—must, from the first, have favored the establishment of democracy and have prepared the way for the republic. But it must equally have led, by gradual extension, to the legal equality of other churches, which by the same principle claim to interpret according to their liking the texts of the Bible; and, once this breach opened, the civil tolerance of all opinions in religious matters was only a question of time.

Doubtless, in this respect, the Old World has outrun the New, since, in 1838, we still find a citizen of Boston condemned to imprisonment for the crime of atheism. But, while with us—thanks to the adversaries of the Church—liberty of worship is established, in the United States it is the natural product of an evolution which has its points of departure in the religious origin of the nation. The pastor, Roger Williams, when he founded, in 1636, the colony of Providence (now the State of Rhode Island) upon the principle of absolute liberty and equal advantage for all worships; William Penn, inserting, in 1681, in the charter of the State which bears his name, the prohibition of defraying the expenses of any worship whatever from the public treasury, in order to prevent the ascendency of any one sect above another; the members of the First Congress, who forbade imposing a religious oath on the federal officers, as well as imposing laws relating to the establishment or to the prohibition of a religion,—in short, the local legislators who established these principles in the special consti-

tutions of their States were, in general, anything but sceptics or rationalists: they were believers, convinced of the infallibility of the Bible and of the excellence of their worship. MM. Laboulaye, De Laveleye, and the other apologists of American democracy, are right in claiming that the political and the religious liberty of the United States are both daughters of the Reformation: only, it should not be ignored that the second is much the younger.

But it is liberty of another order which, though much younger, may claim the same descent: it is intellectual liberty, the rejection of dogmatic prejudices, —in one word, rationalism. Here, again, Europe has been in advance of America. However, here, too, an important distinction is to be made. It is that, among the people of our continent standing at the head of modern culture, science has developed in an inverse ratio to religion; while, in the United States, the most complete free inquiry appeared as the crowning of religious evolution. We have already shown* in outline an analogous situation, under the influence of identical causes, among two peoples as dissimilar as the English and the Hindus. It is a study of the same kind that we wish to undertake concerning the United States.

I.

Give to a religious society as its only authority a collection of written traditions, and leave to individual inspiration the care of determining their precise sense, and in the variety of interpretations there will needs be the power of appeal to the light of reason; and reason, quite proud of becoming an aid to the religious sentiment, will strive in entire good faith to choose versions the most conformed not only to the spirit of the texts, but also to the progress of human knowledge. Yet, as this knowledge is constantly enlarging, there comes an hour when free inquiry cannot maintain the rights of science except by putting forced meanings into Scripture or by taking refuge in the subtilties of symbolism. Thus, the crisis is, for the moment, assuaged; but, from the day in which historical truth resumes its rights, religious minds, which can no longer deny themselves the liberty of thinking, are forcibly led to doubt, if not the reality of divine inspiration, at least the fidelity of the passages in which it is recorded. It is then they take refuge in the distinction between the parts of the sacred books that are essential and those that are accessory, by fixing, according to the wants of their cause, the arbitrary limit of these two domains. Then, after having sought in the texts evidence against their own infallibility, they come to contest the possibility even of a special revelation, so that at last they arrive at the categories of natural religion irreducible by scientific analysis,—the first cause, the immortality of the soul, and the imperative character of duty, or even the Unknowable of Herbert Spencer. This work of dogmatic disintegration may be observed in all confessions founded upon the authority of traditional texts; but nowhere has it been pursued in a manner more continuous and more logical than among the congregations of New England.

The first emigrants professed, in all its integrity, the doctrine of Calvin upon original sin, upon grace, and upon predestination. But this gloomy fatalism— by which man, incapable of himself of attaining to any good, finds himself elected beforehand, by the arbitrariness of his Creator, to salvation or damnation—shocked too much the most elementary principles of justice and generosity not to provoke in America, as in Europe, a reaction conformable to the exigencies of liberty and of human responsibility. The third generation of the Puritans had not disappeared, when the dogma of predestination was found to clash with its old enemy, Arminianism, under a form more or less disguised. Arminianism once having secured ground, Socinianism was not far off. President Adams said at the end of his career that, from 1750, a number of pastors and of the laity were more or less drawn over to Unitarianism. However, the progress of this evolution was at first apparent only by the guarded silence respecting contested dogmas. Perhaps the Liberals were frightened at their own audacity, or did not render to themselves an exact account of their beliefs. Even at the end of the century, when other recently created sects (the Universalists, the "Christians") had openly repudiated the dogma of the Trinity, the advanced Calvinists still rejected the qualification of Unitarians, and even maintained the necessity of remaining in doubt upon all points of doctrine,—such as predestination, eternal punishment, the divinity of Christ,—when the Bible did not express itself in clear and formal terms. "The expressions of the Bible are only qualified to formulate Biblical mysteries." Such was the answer they invariably opposed to their adversaries, when the latter summoned them to define their belief. Thus, by a strange inversion of parts, it was the rationalists who wished to hold strictly to the letter of revelation, while the orthodox cried up the right and the duty of penetrating into its sense and developing its consequences. But this position was not long tenable for the Liberals; and the true ground of conflict was delineated when, driven to the wall, they brought into the controversy the authority of natural religion and historical criticism.

In 1805, Harvard University, which dated almost from the beginning of colonization, but which had always shown itself hospitable to the most advanced tendencies, confided its Chair of Theology to a liberal minister, Dr. Ware. "They who came under Dr. Ware's influence," wrote one of his pupils — Ezra Stiles Gannett—at a later period, "can never forget the calm dignity, the practical wisdom, the judicial fairness, or the friendly interest which secured for him more than respect. It was veneration that we felt. That clear, strong mind abhorred double dealing with truth or with men." Such was the theologian who was about to mould the future ministers of the national church. The orthodox cried out against the scandal, and established at Andover a school of theology, which was never to attain the celebrity of its rival. At the same time, they began to build churches for the voluntary exiles from the liberal congregations; and, where they were in the majority, as in Connecticut and New Hampshire, they improvised ecclesiastical jurisdictions which expelled liberal ministers from the pulpit. An attempt was even made to introduce this procedure into Massachusetts, where Liberalism had its head-quarters; but it failed, and served only to precipitate the development of the schism.

This was in 1815. W. E. Channing was then thirty-five years old. He had already officiated for more than twelve years in one of the most liberal and, at the same time, one of the most fashionable churches in Boston. His antecedents, his mental temperament, and even the amplitude of his religious conceptions predisposed him to great caution in preserving the historic unity of the old Puritan congregations. But an accusation of hypocrisy, which Dr. Morse had openly thrown out against liberal ministers, led him boldly to vindicate the Unitarian name, and soon to take the head of the reformatory movement. It was only four years later that he pronounced at Baltimore the famous sermon, considered the definitive manifesto of American Unitarianism. "It made a sensation," says one of the best historians of this period,— Mr. W. C. Gannett,—"greater probably than any other sermon ever preached in America, before or since." After having declared that he accepted, "without reserve or exception," all the doctrines *clearly* taught by the Scriptures, Channing claimed that "the meaning [of the Scriptures] is to be sought in the same manner as that of other books"; that is to say, by the constant exercise of reason. "It is to the tribunal of reason," said he, formally, "that God leaves the care of deciding the truth of revelation." Starting from this principle, he repudiated the favorite dogmas of Calvinism, in order to reduce the essential teachings of Scripture to the unity of God, to the immortality of the soul, to the regenerative mission of Jesus, to the moral perfection and the paternal government of the Creator. In fine, after an eloquent picture of the Christian virtues, he maintained that true Christianity consisted much more in the practice of these virtues than in adhesion to any *credo* whatever. "To all who hear me," concluded he, "I would say with the apostle, 'Prove all things, hold fast that which is good.' Do not, brethren, shrink from the duty of searching God's Word for yourselves, through fear of human censure and denunciation. Do not think that you may innocently follow the opinions which prevail around you, without investigation, on the ground that Christianity is now so purified from errors as to need no laborious research. . . . Much stubble is yet to be burned; much rubbish to be removed; many gaudy decorations, which a false taste has hung around Christianity, must be swept away; and the earth-born fogs, which have long shrouded it, must be scattered before this divine fabric will rise before us in its native and awful majesty, in its harmonious proportions, in its mild and celestial splendors. This glorious reformation in the Church, we hope,—under God's blessing— from the progress of the human intellect, from the moral progress of society, from the consequent decline of prejudice and of bigotry, and, though last, not least, from the subversion of human authority in religion, from the fall of those hierarchies and other human institutions by which the minds of individuals are oppressed under the weight of numbers and a papal dominion is perpetuated in the Protestant Church." It has been said, with reason, that this discourse marked an epoch in the religious history of modern society. Undoubtedly, there had been seen elsewhere Christians proclaiming the necessity of bringing faith into accord with the progress of reason; but never, since the foundation of Christianity, had the head of a church repudiated thus boldly all sectarian intolerance, and so openly declared war against every form of Orthodoxy. Calvin put, or replaced, democracy into Christianity: Channing introduced liberty into it.

In her previous history, New England had generally had but one church and one pastor in a town. But, from this time, old congregations were divided. Boston, which for a long time had proved itself the intellectual capital of the United States, was almost entirely conquered by the new ideas. In Massachusetts, one hundred and twenty-five congregations broke away from Calvinism, and, among them, the first three churches which the Pilgrim Fathers founded upon the shores of America. To this number may be added the numerous liberal churches which, in imitation of the Calvinists, the Unitarians founded wherever they withdrew from the existing church. In the neighboring States, the movement made less sensible progress; but congregations, which became centres of propagandism, were established successively in Baltimore, New York, Charleston, Philadelphia, Washington, and even in cities of the West. In 1825 was founded in Boston—notwithstanding the reluctance of those who feared lest in creating an ecclesiastical organization they should follow too closely the steps of Orthodoxy—the American Unitarian Association for "diffusing the knowledge and promoting the interests of pure Christianity."

In fine, the Unitarian reformation represented a double effort: on one side, to give to Christianity a form more humane, more rational, and better adapted to the exigencies of the age; on the other, to substitute, in the formation of churches, sympathy of religious sentiment for agreement in dogmatic belief. Of these two features, the first, which seemed to contemporaries the most audacious, was, in reality, the less important for the future of Unitarianism. In suppressing the theological basis of the church, Unitarians gave to religion the elasticity necessary to accommodate it to all the transformations which the ulterior development of scientific knowledge could require. They made it a religion indefinitely progressive, like the human mind itself. Their doctrinal innovations, on the contrary,—radical as they were for the epoch,—represented only a transitory state, a *moment* in the religious evolution of the mind. Indeed, Channing and his co religionists remained faithful to the theology which Locke had introduced into Protestant churches. According to this school, since all our conceptions come from the senses, and since they are incapable of giving us the idea of an infinite and absolute being, God has had power to make himself known to man only by a supernatural revelation. Now, it is the Holy Scripture which furnishes us this revelation, whose authenticity is sufficiently attested by the fulfilment of prophecies and by the intervention of miracles. It was only for reason, by the aid of its habitual methods, to interpret and define the sense and bearing of the revelation.

We discern easily the weak point of this argument, which rests entirely upon the validity of the historic testimony in favor of miracles. But it must be remembered that, at the commencement of this century, Biblical exegesis had yet entirely to be created; and, besides, the first Unitarians of the New World, absorbed in their struggle against Calvinism, had enough to do in extirpating the parasitic superfetations of the primitive revelation. It was at the hour when this controversy began to subside, in consequence of reciprocal weariness, that there arrived

simultaneously from Germany the first results of a religious criticism henceforth emancipated from dogma, and the idealistic theories of the school of Kant, then in all the splendor of its popularity. The movement of ideas which this double leaven excited among the Unitarians of the second generation tended to nothing less than the founding of a new religion under the cover of Christianity. We refer to the doctrine to which Americans gave the name of Transcendentalism.

II.

The old sensational school made of the soul a *tabula rasa*, a mirror, limited to reflecting the impressions transmitted by the senses. Kant combated this negative psychology in his *Critique of Pure Reason* by showing that the human mind possesses an innate organization of its own, independent of experience, and necessary for the formation of thought. Yet, from what reason thus apprehended, under the form of transcendental conceptions,—that is, above the sphere of experience,—ideas of the absolute, the infinite, the ideal, he did not deduce, necessarily, the real existence of corresponding entities. Fichte, his disciple, advanced farther still in the way of subjective idealism, since he affirmed our inability to know anything with certainty outside of our mind and its laws. Jacobi, on the contrary, and especially Schelling, inferred from the fact of our inward conceptions objective reality, as much of the spiritual world as of the sensible. Later, Schleiermacher, placing the origin of religion in the feeling of our dependence upon the absolute, endeavored to trace to individual revelation as their source faith in the dogmas of Christianity, without seeing that he sapped them at their base by his doctrine of the direct communication between the soul and God. After conquering the university lecture-room, renovating theology, and illuminating German literature, transcendental idealism passed into France, where Cousin enchased it in his brilliant mosaic, under the name of *impersonal reason;* and into England, where Coleridge became its apostle, Carlyle its historian, and Wordsworth its poet. But, considerable as was its action upon the development of European thought during the most fruitful and enthusiastic literary period of our century, nothing here is comparable to the influence which it exercised in New England in all the spheres of activity, intellectual, religious, and even social.

It was by the works of Coleridge and Carlyle that it penetrated into the United States in the first third of this century. The interest which it excited led the most distinguished writers of Boston to study German and French, that they might read at first hand Jacobi, Fichte, Schelling, Herder, Schleiermacher, and De Wette, and also Cousin, Jouffroy, and Benjamin Constant. Philosophic at first, the movement was not tardy in becoming exclusively religious. In 1835, James Walker, Professor of Ethics in Harvard University, assailed the sensational method of the dominant theology, and extolled recourse to a philosophy which constantly recalls our relations to the spiritual world. The new method was especially attractive to minds which had carried farthest the work of demolition, undertaken by modern exegesis, upon the dogmas of Christianity. The only traditions which the Unitarians had left as the basis of their religious system, the pre-existence of Christ and the authenticity of miracles, began to be shaken by the incessant progress of free inquiry. How, then, in this general shipwreck of dogmas, would not the minds that were desirous of preserving the foundation of their faith have welcomed with eagerness a doctrine which, in extending to each man the privilege of a direct communication with the Divine Being, allowed them to reduce to human proportions the person of Jesus, without taking from him the prestige of inspiration? How would they not have been attracted by the ingenious hypothesis of a sixth sense, which, open to the spiritual world, rendered useless the intervention of miracles to establish the existence of God and the immortality of the soul?

It may be said that Transcendentalism presented at the same time the complement and the corrective of the Unitarian reform. This was, pre-eminently, a religion of the head, the product of a critical and negative tendency. Its theology, as far as it had any, came by the process of subtraction, or by taking away successively from the Christian traditions the dogmas condemned by free scholarship. Transcendentalism proceeded by the way of clear and positive affirmation. It took for its point of departure the existence of a special faculty which permitted the human mind to seize directly spiritual truths. Regarding as facts of consciousness the three great axioms of spiritualism,—God, immortality, duty,—it placed them upon foundations which reason itself proclaimed independent of all experience and of all demonstration. Thus entrenched in the depths of consciousness and in the realm of the ideal, it easily found access to the sources of mysticism, which, by a singular phenomenon among a people so practical, never seem exhausted in the American mind. In short, by its doctrine of impersonal reason, it embraced the profoundly Arian conception, of the neo-Platonic Word, which the Unitarians had suppressed from Christianity, in order to adhere to the strict monotheism of the first evangelists. It thereby allied itself to the mystic sects founded in Protestantism upon the principle of interior illumination, except that it extended to all men the privilege of inspiration, which these sects wished to reserve to the adepts of a distinctive faith. "Transcendentalism," says its principal historian in New England, Mr. O. B. Frothingham, "was much better suited to a gospel than to a philosophy. It possessed that character of indefiniteness and mystery which fascinates the imagination, and lends itself so easily to acts of contemplation and worship. . . . Piety was one of its distinctive features: it loved devout hymns, music, the glowing language of aspiration, the moods of awe and humility, emblems, symbols, expressions of inarticulate emotions, contemplation, silence, breathings after communion with the Infinite."

Unitarianism, as a whole, was, however, far from casting itself into the arms of German idealism. The Unitarians of the first generation who wished to adhere to the positions conquered from Orthodoxy, and, in general, all who were not troubled in their belief in the supernaturalness of the Bible, regarded the progress of the new method with more distrust than enthusiasm. Some predicted that there would come from it fatal divisions in the bosom of Unitarianism; others, that this invasion of idealism would bring, as usual, a sceptical reaction. Channing himself, who had so much insisted upon the authority, the grandeur, the divinity of the human soul, wrote, nevertheless, in the last years of his life, to Dr. J. Martineau, that the Transcendentalists appeared to him to be advancing toward the substitution of individual inspiration for Christianity. There was then in Boston a young minister who had just quitted his congregation through a scruple of conscience, because he was no longer willing to administer the sacrament of the communion. This was Ralph Waldo Emerson, the essayist, who, with the poet, Henry W. Longfellow, has held, during a third of the century, the sceptre of American literature. In his first work, *Nature*, published in 1836, he revealed that vigorous idealism which has caused him to be surnamed in the United States the Prince of Transcendentalists. At first view, his teaching seems a simple revival of the neo-Platonic philosophy. In nature he sees only a symbol of spirit, in the individual soul only a localized manifestation, a prolongation of the universal soul (the Oversoul),—"that soul which when it breathes through man's intellect is genius; through his will, virtue; through his affections, love." But his pantheism is essentially subjective in this sense: that, instead of absorbing man and nature in God, it tends rather to absorb nature and God in man. His whole work is a constant vindication of individual instinct and inspiration, of human spontaneity, as the source of all knowledge, of all art, of all virtue. It is hereby that he has avoided the ordinary rocks of mysticism, and that he has not been estranged from any interest of his country or his age.

Emerson was at the beginning of his renown when, in 1838, he pronounced before the Theological School of Harvard the celebrated discourse in which Transcendentalism avowed itself, for the first time, in open hostility with all Christian Churches, not excepting the Unitarian. The orator reproached them, without distinction, with having looked for miracle—that is, the intervention of God—elsewhere than in the normal functions of natural laws; with having disfigured, by their compromising exaggerations, the personality of Jesus, "the only soul in history who has appreciated the worth of a man"; in short, with having neglected the exploration of the human soul and its relations with the divine mind. The remedy for these faults was, *first, soul; and, second, soul; and, evermore, soul.* "I seek for this new teacher," concluded he, "who shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that duty, is one with science, with beauty, and with joy."

This appeal was understood by all who were affected by the idealistic ferment. They soon had their centre of propagandism, the Transcendental Club, and their organ, *The Dial*. In the first ranks of the young phalanx was seen another mystic, Bronson Alcott, a fervent admirer of Pythagoras and Plato, whom he regarded as the direct ancestors of Kant and of the whole Transcendental school; George Ripley and James Freeman Clarke, who had been the first to carry into the pulpit the teachings of German idealism; Samuel Longfellow, who, without attaining to the renown of his brother, has a collection of hymns and of poetry highly esteemed by his compatriots; Orestes Brownson, an ardent propagandist, but of an unstable mind, who, at first a minister of a Presbyterian congregation, passed over to rationalism, then to Universalism, and who, not content with pursuing his transformations into the most extreme Transcendentalism, finished by seeking mental repose in the bosom of the Romish Church; William Henry Channing, a nephew of the founder of Unitarianism, who became a missionary of the new gospel; the future colonel of a national negro regiment in the War of the Secession, T. W. Higginson, who represented the practical tendencies of the movement, as Samuel Johnson personified its extreme individualism; and, finally, C. A. Bartol, W. H. Furness, John Weiss, John Pierpont, Prof. Francis, and, above all, Theodore Parker, the apostle and prophet of Transcendentalism.

On the other hand, the conservative section of Unitarianism had taken the alarm; and there were Unitarians who questioned whether Emerson ought still to be regarded as a Christian, precisely as twenty years before the question had been agitated whether they themselves belonged to Christianity or to "the religion of Boston." It was worse still when, in 1841, Theodore Parker, at an ordination in the Unitarian church of South Boston, delivered his sermon upon "The Transient and the Permanent Elements in Christianity." The permanent element was the great religious and moral virtues which Jesus, "that perfect type of the religious man," had manifested in himself, and had vivified in his love of humanity. The transient element was the rites and doctrines of Christianity, comprising the belief that the Bible contained a special revelation, and that the nature of Christ was unique in history. According to Mr. W. C. Gannett, this discourse made as much noise as the famous sermon of Dr. Channing, preached at Baltimore twenty-two years before. This time, it was no longer a question whether the author was a Christian: he was treated as an infidel, a blasphemer, an atheist. The Boston Association of Ministers debated whether they should not expel him from their ranks. As their rules were opposed to this, they took the official step of requesting him to resign. "I am sorry for the Association," he answered, "but I cannot help it. I cannot take upon my shoulders the *onus damnandi*. This would be to avow that there is good cause for my withdrawal. . . . They have, in a measure, identified me with freedom in religious matters."

Certain members thought of a dissolution of the society, which would have allowed them to reorganize without the author of all this scandal. But the voice of moderation prevailed,—thanks to the sympathy, more or less acknowledged, felt for Parker among the younger ministers; and perhaps also to the intervention of Dr. Ezra Stiles Gannett, who, although belonging to the conservative party, had a high esteem for the frank and loyal character of his fellow-minister. "It is not our way," he reminded his brethren, "to pass ecclesiastical censure. We are willing—at least we have said we were willing—to take the principle of free inquiry, with all its consequences." The Association, therefore, passed no resolution against the audacious reformer; but all the pulpits in Boston were henceforth closed against him. This situation continued until 1845. The adherents of the proscribed man then had a meeting, at which they resolved that "Theodore Parker shall have a chance to be heard in Boston." They hired for him the Melodeon, a concert hall, in the hope that there would soon be gathered the elements of a congrega-

Digitized by Google

tion. From the first, the number of auditors surpassed all expectation; and their persistence in appearing each Sunday proved that the success of the preacher was not due to curiosity, but to the attraction of his teachings. At the end of six years, the hall had become too small; and he was installed in a much larger edifice, where, from 1852 till 1859, he proclaimed the good news to many thousands of the faithful, without reckoning the lectures which he gave all over the country.

Parker may be considered the clearest and most logical interpreter of Transcendental principles. He considered that the existence of God, the immortality of the soul, and the commands of duty were directly impressed upon human cognizance. "The fact of knowing the existence of God," said he, "may be called, in the language of philosophy, an intuition of reason; and, in the mythological language of the old theology, a revelation of God. This fact rests upon no argument: it proceeds from no reasoning, but from reason. . . . The belief precedes the proof, for it is intuition which furnishes that upon which we reason." This doctrine Parker applied not only in theology and in morals, but also in science and in politics. It is this which exclusively inspires his first work, "The Discourse upon Matters pertaining to Religion," as well as his posthumous essay upon "Transcendentalism," and which explains the unity of his life as well as the importance of his work.

The preaching of Parker, which extends from 1847 to 1859, corresponds to the principal development of Transcendentalism. It was equally the golden age of Boston, and, it may be added, of American literature. The middle of this century has seen, within the narrow territory of Massachusetts, one of those marvellous out-blossomings which are rarely produced in the moral culture of a people. Channing expired in 1842; but it may be said that Parker worthily replaced him in the vanguard of religious rationalism. By the side of Emerson, philosopher and poet, Bancroft carried the principles of Transcendentalism into history; Sumner, into popular rights; Alcott, into pedagogy; Whittier, into poetry; Margaret Fuller, into criticism; Oliver Wendell Holmes revealed himself as a humorist; Prescott published his *History of the Spanish Conquest of Mexico;* Hawthorne put into romance his power of psychological analysis; H. W. Longfellow attained the apogee of his glory; and, finally, Massachusetts furnished for the national senate Daniel Webster, the most able orator that the United States has produced. We do but cite those names whose echo has reached Europe. But, by the side of these illustrious ones, a whole army of writers, of lecturers, and of orators, bring their contingent, whether in the literary and philosophical publications which multiplied in Boston, or in the different associations which were developed for the promotion of temperance, for the emancipation of woman, for the instruction of the people, for the suppression of war, for prison reform, and, above all, for the abolition of slavery.

In these several "agitations," it is not difficult to prove the influence of Transcendentalism, not only because the devotees of this philosophy were found in the first rank, but also because these movements were the direct and logical consequence of a doctrine attributing to every human creature the same faculties and the same rights. To the same influence belong other experiments, more or less fortunate, which aimed radically to reform the principles of social organizations. At one time, it was George Ripley who spent his fortune in organizing a free community upon the principle of co-operation; at another, it was A. B. Alcott who, claiming to renounce the burdens as well as the advantages of actual society, allowed himself to be put in prison for refusing to pay his taxes. This fever of reform was not confined to rationalism. Revivals, exciting even to delirium the fervor of different sects, passed like a billow over all Protestant America; and New England furnished its quota to the eccentricities of Spiritism as well as of "free love." Yet that which gives to this period a character very rare in times of religious and social fermentation was that laxness of morals did not coincide with the over-excitement of mind. Calvinism, in losing its dogmatic authority, had left in the people its strong moral discipline. Unitarianism had introduced free inquiry in matters of belief, and Transcendentalism had limited itself to adding to it enthusiasm for high aims.

(To be concluded next week.)

CORRESPONDENCE.

THE GEORGE-KENNEDY-ALLEN CASE AGAIN.

Editors of The Index:—

There are many astute men who have admitted that they find obscurity in *Progress and Poverty*. Without professing to be a critic of the work, or capable of judging all its difficult problems, I would still like to add a word more on some important points. I think the fundamental difficulty in Mr. J. H. Allen's mind is that he has overlooked, or failed to grasp, one of Mr. George's most important ideas. Mr. George has rather clumsily and obscurely expressed that idea in chapter ii. (pp. 364 and 365) of book viii. of *Progress and Poverty*. It is this: *The nation shall become the landlord of its land only virtually, not actually.* Mr. George says that, if *something near* the full value of that precious monopoly, land, were assessed upon it, the land would *virtually* become common property, inasmuch as the whole community would receive the benefits of the assessment. The nation would not be the actual landlord, nor the tax the actual rent. Private ownership of land would hold as before. The actual landlord would be, as now, the individual landlord; and he would, as now, collect the rent and pay out of it the government tax.

Let us suppose Mr. George's scheme adopted, what would first be done? Why, the army of tax assessors we now have would be reduced (one gain), and those who were left would begin the work of assessing land at its rental value. But the assessor would have no power whatever to rent land any more than he has now. Therefore, Mr. Allen's illustration of the widow and her land is no illustration. No assessor would dare to assess an estate at ten times its previous fairly estimated value, even to please a millionnaire who coveted it; for public opinion would not tolerate the act. Says Mr. George: "Were all taxes placed upon land values, irrespective of improvements, the scheme of taxation would be so simple and clear, and public attention would be so directed to it, that the valuation of taxation could and would be made with the same certainty that a real estate agent can determine the price a seller can get for a lot" (p. 375).

That the nation is only virtually the landlord in Mr. George's scheme is proved by the following passages in his work (pp. 364 and 365):—

"Nor to take rent for public uses is it necessary that the State should bother with the letting of lands, and assume the chances of the favoritism, collusion, and corruption that might involve."

"In form, the ownership of land would remain just as now. No owner of land need be dispossessed, and no restriction need be placed upon the amount of land any one could hold."

"When the common right to land is so far appreciated that all taxes are abolished save those which fall upon rent, *there is no danger of much more than is necessary to induce them to collect the public revenues being left to individual land-holders.*"

This last paragraph is a key to the situation. It shows us private land-holders collecting their rent. Yet Mr. Allen (in *The Index* of April 19) speaks of Mr. George's "wild" scheme of having lands "managed by political cliques at Washington or Albany rather than by their independent owners." Is assessing a tax on land managing it or owning it? Do those who now assess our land and personal property own these things?

One other point may be cleared up. Why is it that, when all taxes are abolished, save those which fall upon rent, there is no danger of much more than is necessary to induce them to collect the public revenues being left to individual land-holders? In other words, suppose a landlord should refuse to accept the government tax as an indication of the true rental value of his land, might he not extort the present exorbitant rates? No: because, if all land is assessed at anything near its rental value, no one could afford to hold land idle, as now; and so much would be thrown open to use that all rents would fall to their just level, or nearly so. In general, there would be enough of margin of rent-income, collectible by private bargains, to interest the renter in his land. But, in case he sold it rather than pay its taxes, it might be bought up by capitalists,—but only for use, not for speculation. George's scheme kills speculation. Heavily taxed land *must* be used, and that is the beauty of the plan. Here, again, Mr. Allen betrays his lack of acquaintance with Mr. George's scheme. He speaks of land being bought up by "speculating capitalists" after it has been sold for taxes. But you can't speculate in land that is taxed near its rental value: you drop it, like hot iron. Neither (as Mr. Allen claims) would said capitalist be a "most grasping landlord," simply because he *could* not grasp more than about the legally assessed rental value. If he did, his tenants would move to other land. It is this taxing of land up to about its rental value that makes land virtually common; that is, makes it possible to get it at a just rent. And herein lies the beauty of the measure. Do you want injustice? Do you like exorbitance? Do you admire hoggishness? Why should not the possessors of the most valuable monopoly on earth not be willing to pay for it? why not bear their just share of the burden of life? Why should not speculators be decapitated?

I may say, in conclusion, that, in common with my respected friend, Mr. Allen, I think Mr. George attaches too much value to his pet scheme, and too little to the moral and intellectual culture of laborers as an uplifting force. And I said as much, or broadly hinted it, in my first article on the subject.

W. S. KENNEDY.

SAMUEL JOHNSON'S "RELIGION OF INDIA."

Editors of The Index:—

Being a constant reader of your valuable journal, I take this opportunity of inserting a few lines in it. I am a native Brahmin of India, and at present a student in this country. In looking over your list of books, I happened to see *Religion of India*, by Samuel Johnson. I have read the book, and find that it is one of the best works of its kind yet penned by a European. I have read several works on Brahminism and the Oriental religions by European writers and travellers, but none have treated the subject so impartially as Mr. Johnson. Several Christian writers have ventured to write on Vedaic religion, who have betrayed their ignorance of Oriental traditions and commentaries, or showed plainly some prejudice,—the fetter which, more or less, bound them to their native religion. Mr. Johnson shows nothing of this, and, to a native Brahmin, as myself, calls forth deep gratitude and praise for having given to the world a true and impartial explanation of one of the oldest religions of the world in its pure and true doctrines.

Trusting these few lines will incite many to read the work, *Religion of India*, by Mr. Johnson,

I am yours truly,

KESHAVRAO BHAT, OF POONA, INDIA.

BOSTON, MASS., April 21, 1883.

BOOK NOTICES.

THE QUAKER INVASION OF MASSACHUSETTS. By Richard P. Hallowell. Boston: Houghton, Mifflin & Co. 1883. Price $1.25.

In the midst of an absorbing mercantile business, Mr. Hallowell has found time to write this scholarly and much-needed book,—a book, too, the preparation of which must have required a great deal of historical research and careful investigation. The composition of it was a comparatively small part of the labor involved. Indeed, one-half of it is in the appendix, which consists of extracts from old colonial documents, legislative and judicial, and from ancient Quaker writings. These are exceedingly valuable, and furnish the reader with the ample and clear evidence on which the opinions of the author, in his own part of the work, are based. Some of these documents have never before been published; and Mr. Hallowell deserves the thanks not only of all Quakers and their descendants, but of all lovers of historical truth and of fair judgment, for bringing this important material to the light and putting it into accessible form.

Mr. Hallowell has not entered on this research and written this book merely as a literary pastime. The book will well stand the test of literary criticism; but it would not have been written except from a strong feeling of duty to vindicate the early Quakers in Massachusetts from the unjust historical judgment that has been affixed against their names. The first sentence of the brief prefatory note says: "The object of this little volume is to correct popular fallacies, and to assign to the Quakers their true place in the early history of Massachusetts." A burning sense of the injustice done by nearly all historians and anti-

Digitized by Google

quarians to a band of honest and pure-minded, if sometimes fanatical, men and women, has impressed itself on every page of Mr. Hallowell's work. Occasionally, his warmth of feeling leads him into a too heated form of expression, which tends really to detract from the strength of his cause. His work is, in fact, judicial; and the opinions arrived at seem to us quite impartial. He has consulted fully both sides of the painful story of the Puritans' treatment of the Quakers, whereas most historians appear to have made themselves familiar only with the Puritan side. But the warmth of his utterance, with a proneness to pretty strong language when speaking of antagonist writers, will give him probably to many readers the appearance of a special advocate on the Quaker side, for whose partisan zeal the same allowance is to be made as for those who strongly champion the Puritan side. To all readers who are disposed to take this view of the book, we would say, Read the evidence in the appendix before making a final judgment.

In our view, Mr. Hallowell proves in its several parts his thesis: 1st. That the Quakers claimed and had a clear legal right, as Englishmen, and by the charter of the Massachusetts colony, to visit or to live wherever the English flag proclaimed English jurisdiction; 2d. That, whatever acts of frenzied fanaticism and of occasional sad indecorum the Quakers may have committed, these were rather the result of the cruel persecution to which they had been subjected than the cause of such persecution; 3d. That the real cause of their being persecuted was the bigoted fear and hatred of their heretical religious opinions by the ministers, prominent church members, and civil authorities of the colonies; 4th. That there was a large section of people among the colonists who favored milder and more liberal measures toward the Quakers, thus taking away the plea that the Puritan rulers but followed the most enlightened conscience of their time; 5th. That, if the Quakers of that early time were not the same mild and harmless class of people that are found in that sect to-day, so the Puritans of the seventeenth century, however noble in their way, lacked some important virtues possessed by their descendants.

The Quakers, as Mr. Hallowell well shows, fulfilled an important mission in correcting the errors of the Puritan misgovernment in Church and State. "The early Quakers," he says, "or some of them, in common with the Puritans, may illustrate some of the least attractive characteristics of their time; but they were abreast, if not in advance, of the foremost advocates of religious and civil freedom. They were more than advocates: they were the pioneers who, by their heroic fortitude, patient suffering, and persistent devotion, rescued the old Bay colony from the jaws of the certain death to which the narrow and mistaken policy of the bigoted and sometimes insincere founders had doomed it. They forced them to abandon pretentious claims, to admit strangers without insulting them, to tolerate religious differences, and to incorporate into their legislation the spirit of liberty which is now the life-blood of our institutions."

THE GREEK PHILOSOPHERS. By Alfred William Benn. Two vols. 8vo. London: Kegan Paul, Trench & Co.

This work is remarkably successful in showing not only the real character of the teachings of Plato, Aristotle, and their great companions, but also their influence over modern thought. Particularly good are the demonstrations that Bacon was really an Aristotelian, and that Herbert Spencer's theory of the Unknowable is essentially that of Plotinus, the real master of those mystics who call themselves Platonists. What is most worth noticing in these columns is that Mr. Benn is a free thinker, and does not hesitate at showing it. Thus, after mentioning that Plato forbade rendering evil for evil, he remarks that this principle is "implicitly contradicted by the so-called religious services celebrated in Christian churches, and by the doctrine of a divine retribution, which is only not retaliatory because it is infinitely in excess of the provocation received." In speaking of "the intimate connection of religious mysticism with the passion of love," he says, "They seem to divide between them a common fund of nervous energy; . . . their substantial identity and continuity being indicated very frankly by their use of the same language, the same ritual, and the same æsthetic decoration. And this will show how the decay of religious belief may be accompanied by an outbreak of moral license, without our being obliged to draw the inference that passion can only be held in check by irrational beliefs, or by organizations whose supremacy is fatal to industrial, political, and intellectual progress. For, if our view of the case be correct, the passion was not really restrained, but only turned in a different direction, and frequently nourished into hysterical excess. So that, with the inevitable decay of theology, it returns to its old haunts, bringing with it seven devils worse than the first."

THE June number of the *Atlantic Monthly* gives the third and concluding instalment of the dramatized version of *Daisy Miller*. Few readers will regret its non-acceptance by stage managers. The stirring poem by Whittier, entitled "How the Women went from Dover," illustrative of an incident of the Quaker persecution in Massachusetts, shows that the Quaker-poet, in spite of his advanced years, retains all his youthful intensity of feeling and vigor of expression. Oliver Johnson's article on "Morality in the Public Schools" will be read with much interest by all liberal thinkers. The ground he takes is indicated in one of his concluding sentences, "My purpose is fulfilled, if I have succeeded in showing that the incapacity of the State for teaching religion does not imply an incapacity for teaching morality as an essential part of the education of the young, and that there is a ground for such teaching on which all true friends of the schools may consistently stand and cooperate." Richard Grant White contributes the first part of an international paper, "Mr. Washington Adams in England." An anonymous writer gives some fine extracts from Emerson's Harvard lectures. "Monserrat" is a sketch of travel by Charles Dudley Warner. There is an article on "Authorship in America," very carefully written. Among the longer book reviews of this number is one on "Samuel Johnson," in which the writer says of the recently published volume of Mr. Johnson's *Lectures, Essays, and Sermons*, that it should "not only be a very precious one to those who have heretofore been well acquainted with this thinker and his thoughts, but it should attract to him a host of fresh readers." Sara Orne Jewett finishes her story in this number, and Mrs. Wyman has a short one, "Bridget's Story." There are various other articles and poems by good writers.

THE June number of the *North American Review* opens with an article by Joseph Nimmo, Jr., Chief of the Treasury Bureau of Statistics, on "American Manufacturing Interests," in which is given a singularly full and instructive historical sketch of the rise and progress of manufactures in the United States, together with a very effective presentation of their present condition, and of the agency of tariff legislation in promoting diversified industries and encouraging the inventive genius of the people. D. C. Gilman, President of Johns Hopkins University, writes of "The Present Aspects of College Training" as affected by the increase of wealth and luxury, the development of natural science, and the influence of a larger religious liberty. Edward Self presents some weighty considerations on "The Abuse of Citizenship," as exhibited by some of the would-be reformers of to-day. Prof. Isaac L. Rice criticises some of "Herbert Spencer's Facts and Inferences." Christine Nilsson has "A Few Words about Public Singing," and Hon. W. M. Springer argues for free trade in an article entitled "Incidental Taxation." The "Symposium" for June is on "The Moral Influence of the Drama," and is participated in by Rev. J. M. Buckley, John Gilbert, Manager Palmer, and William Winter, the critic.

PERSONAL ITEMS.

MORGAN DIX's memoir of his father, the general, in two volumes, will shortly be published by the Harpers.

DR. MCCOSH has prepared for the new *Manhattan Magazine* what is said to be a striking article on Carlyle's influence upon the English language.

SIR HENRY MAINE has been elected Corresponding Member of the French Academy of Moral and Political Sciences, in the place of Ralph Waldo Emerson.

THE poet Whittier is said to have felt so keenly the discussion of Carlyle's private life evoked by the publication of the Carlyle correspondence that he has destroyed the greater part of his own private correspondence, covering a period of over fifty years, "lest it should be published after my death," he explains, "and bring suffering to any."

JULES SANDEAU, who died last week in Paris at the age of seventy-two, was known as the first literary partner of George Sand, as a novelist of more delicacy than power, and as Emile Augier's fellow-worker in *Le Gendre de M. Poirier*, and other plays. When his connection with George Sand ended, they did not meet for thirty years. Then, one night, they passed each other at the Odeon. Sandeau half-lifted his hat. "Who is that lady?" he asked of a friend: "it strikes me that I have met her somewhere before."

THE Hartford *Courant* describes Mr. George W. Cable, the Southern novelist, who recently gave some readings in that city, as possessing "a slight, almost boyish figure, with a face of singular purity and refinement, black, laughing eyes, black hair, and a forehead high and fair, and indicating thought and seriousness. He began to speak at once in a simple, unaffected manner, as if he were talking with friends in a drawing-room, in a fine and small voice, but sweet and penetrating."

LASKER, the German statesman who is coming to this country, was one of the founders of the National Liberal party, and has been its parliamentary leader ever since the Empire, and, in the event of the death of Bismarck and the Emperor, will be likely to be taken for premier. He is of Jewish parentage, and had his education at Berlin and in England. He is tall and dark-complexioned, and an able parliamentary debater. He is the virtual leader of the Reichstag in its present attitude of hostility to the desires of the Emperor and of Bismarck.

MR. JOHN BRIGHT is a man who never had the advantages of an education. He did go to school for some time, and perhaps yet retains some little knowledge of the French he then learned. There was nothing in the shape of mathematics or science taught, and of Greek and Latin he acquired only that portion which learners forget most readily. So he says. But all the world knows better. Not that they impeach his veracity, but they do not accept his modest self-estimate. His entire long career of usefulness to learning and to political advancement, the peerless style of his oratory, the sound common sense of his views upon public questions, tell us very much more plainly than an alphabet of capitals following his name would, that Mr. Bright is an educated man. He has reached, by other processes, the end at which all college and university training aims; and, consequently, not only as one whom the people delight to honor, but as an educated man, he fittingly takes his place as Lord Rector of Glasgow University.

SAMUEL JOHNSON.

Lectures, Essays, and Sermons.

With a Memoir by SAMUEL LONGFELLOW, and a fine Steel Portrait. Crown 8vo. $1.75.

CONTENTS.—Memoir; Florence; The Alps of the Ideal and the Switzerland of the Swiss; Symbolism of the Sea; Fulfilmen tof Functions; Equal Opportunity for Woman; Labor Parties and Labor Reform; The Law of the Blessed Life; Gain in Loss; the Search for God; Fate; Living by Faith; "The Duty of Delight"; Transcendentalism; Appendix.

"This is one of the best of books, and will help to preserve the name of one of the best of men."—REV. CHARLES G. AMES, in the *Sower*.

"The Memoir by Mr. Longfellow . . . most faithfully represents the scholar and author in his best moods and the varied phases of his intellectual life."—*Salem Observer*.

"He was a man of true nobility of soul, of profound and elevated thought, of absolute faith in God, of clear spiritual insight, of perfect sincerity, and a stainless moral life."—*Worcester Daily Spy*.

"His insight, his faith, his ethical nobility, shine out on every page. They are none of them so lofty that they do not touch the humblest things with their illumination."—J. W. CHADWICK, in *Atlantic Monthly*.

"The lectures, essays, and sermons were well worth preserving. They are characterized by all of Samuel Johnson's breadth and depth of thought and eloquence of expression."—*The Commonwealth* (Boston).

Boston Ethical Society.

Th[illegible] lecture will close the presen[illegible] the First Boston Ethical Society's [illegible] Sunday [illegible] day 27, T. B. Wakeman, on "Th[illegible] of the Higher Integration."

The public [illegible]y invited to attend this lecture in [illegible]ral Upper Hall. No charge for [illegible]ion.

Cornell University Library

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

THE fact that a hundred members of the House of Commons have signed a letter to the Premier in favor of extending the county franchise to woman is an indication that the Woman's Rights' movement is gaining ground in England.

A BOOK on palmistry has just been published in England, which contains diagrams of the palms and backs of the hands of twenty-two distinguished persons, among whom are Mr. Gladstone, Charles Darwin, Wilkie Collins, and the Duke of Argyle.

THE gay Parisians are fonder of romance and poetry than of science or history it would appear from the statistical report of the free libraries of that city, which show that, of 360,000 volumes issued last year, over 200,000 were fiction, and 80,000 poetry.

A LARGE collection of weapons and implements from the Stone Age in Japan has arrived in London. The collection consists of a large number of flint arrowheads, celts, axes, as well as numerous specimens of pottery taken from shell-heaps in various parts of Japan.

IN all the European States, the expenditure for war is largely in excess of that for education. The disproportion is greatest in Russia, which expends eighty times as much for war as for education, and least in Switzerland, where nearly as much is spent for education as for war. Denmark ranks next to Switzerland in this respect.

BEFORE the Eastern States had begun to rival the West in the matter of cheap and easy divorces, it used to be a standard joke to declare that the brakemen on Western bound trains announced, "Chicago,—twenty minutes for divorce," when the cars arrived at that city. But it seems the joke has turned into reality in the staid State of Connecticut, since, we learn, the average time of hearing and deciding upon divorce cases in the Supreme Court of that State is but *fifteen* minutes.

THE *Sunday School Times*, referring to the publication, by Funk & Wagnalls, of George Eliot's Essays, says: "It is questionable wisdom to include in a popular library which is designed to drive out bad literature with good, and sceptical books with Christian, such conscienceless caricatures of evangelicalism as some of the essays which appear here. These are not healthy popular literature in any sense." We doubt whether anything can be found in these essays so "conscienceless" as this criticism of the works of a writer whose conscientiousness was one of her most striking characteristics.

THE great bridge between New York and Brooklyn is a grand monument of American progress; and it is gratifying to know that the trustees of the great enterprise are free from the control of the bar-room politicians who influence the aldermen of New York, when we read that the Board of Aldermen of that city passed a resolution of protest against opening the bridge on a day which happened to be the anniversary of the birthday of Queen Victoria. But it is a sad reflection that our great cities have for officers and representative men not from the best, but from the worst elements of society.

THE Boston *Journal* thinks that enlarged ideas and changed opinions have produced "a class of hearers to whom the clergy do not seem to have adapted themselves. They have not kept pace with the changing conditions of intellectual life around them. They have continued enforcing old lines of thought after they have, apparently, lost their hold upon their hearers. Hence, the falling off in the number of converts and the dearth of theological students." In regard to the falling off of students, it asks, "May the true reason not be that the young men find the theological jackets, framed by past generations, which they are required to slip into, impinging at too many points?"

THE Springfield *Republican* gives the following among its city items. The italics are ours: "A respectable appearing laboring man came up to the editorial room yesterday, and requested the insertion of the following, after giving his name: 'Our house of correction and county jail is governed by a jailer now whom the community at large may be well pleased with. I have been confined there during the past few years oftener than I wish I had, but never only on account of intemperance. Yet through his kindness and fatherly affections and good advice I have been convinced of a better way. And, during my last confinement of six months, I can heartily thank Mr. Spellman for his good-will toward us all, and hope that, as he has shown his sympathy for us prisoners, he will receive the same *from the jailer of us all.*'"

A WRITER in *Nature* says that "the opinion once commonly entertained that sheet-lightning is a distinct form of lightning, unaccompanied by sound, is now for the most part rejected, the results of observation being distinctly against it. No one who has on a summer night carefully watched the gradual approach of a great thunder-storm, counting the flashes and registering the time-interval and number of claps from the minute when the first flickers begin above the southern horizon to that at which the storm is in its full roar and rattle overhead; no one who in a long night journey by train has run into a thunder-storm whose distant coruscations he has noticed two or three hours beforehand; no one, at least, who after watching sheet-lightning in one particular direction has made careful inquiries as to the occurrence or otherwise of thunder over the district from which the light proceeded,—will hesitate in pronouncing the verdict that ordinary sheet or summer lightning is simply the illumination produced by a distant thunder-storm."

HON. STEPHEN J. W. TABOR, best known to the country by his fifteen years' service as Fourth Auditor of the Treasury Department, died at Independence, Iowa, on the 17th inst. He was born in Vermont, in 1815; and his life was an active and useful one. He possessed a cultivated and versatile mind. He was successful as a teacher, a journalist, and a physician, and filled several public positions with signal ability and faithfulness. Although a man of great firmness, he was kind, genial, and sympathetic, and made friends of those with whom he came in contact. Judge Tabor was a radical free thinker from his youth, was a contributor to liberal journals, and translated from the French two or three works, among which was one of D'Holbach's. Before his appointment to the Treasury by Mr. Lincoln, he frequently lectured in Iowa in exposition and defence of liberal thought; and, while he was in Washington, he was, as the writer of this paragraph can testify, interested in and ready to encourage liberal lectures in that city, and to help the liberal cause generally by his pen and with his money. He had one of the largest private libraries in this country; and "not a book," as a friend writes, "was placed upon the shelves except for a special purpose or to complete and round out a special theme." His library was a fair index of the many-sided character of the man. A Christian writes thus of the deceased: "Theologically speaking, Judge Tabor was not a believer. It would be unjust to his memory, were his friends to ignore or to apologize for his decided agnostic views. But judged from the stand-point not of opinions, beliefs, or speculations, but from that of acts and deeds, he was a genuine disciple of the 'Son of Man.' If the chief purpose of all theologic faith is to make men Jesus-like, just, true, trustworthy, affectionate, and disinterested, the deceased was a conspicuous and lofty example of Christian character. After all, opinions and beliefs are personal and private; while acts accomplished, in their ever-widening circles of influence, have a being and immortality of their own. Since the deceased had neither expectation of a future reward nor a fear of future punishment, his disinterestedness and devotion to duty stand forth in the strongest relief."

THE SECRET OF LIFE IN ITS RELATION TO RELIGION.

The deep, unfathomed mystery with which human thought has to grapple is not really death, but life. And when death is spoken of as a mystery, it is only because of its peculiar relation to life. But death in itself, all that people really know as death, they understand. It is a simple, intelligible idea. It is scientifically explained. It is the dissolution of any vital material organism when the life-principle has left it, the surrender of its structural elements back to the various natural reservoirs of matter to which chemically they belong. But science affirms that not one atom of them all is lost. They wait their turn to be seized again by the curious magnetic fingers which reach out unerringly from every organic structure, and which will in time and successively appropriate them to new use in other forms of life-building. And we know of no kind of death but this,—the cessation of the organic activity of a certain arrangement of material particles, and their separation—not annihilation, but separation—for other uses of nature. We know no death but that of a physical organism; and this means, as scientifically interpreted, only a change of relation in the continuing process of existence for each and every atom that helps to make the organism.

Of the death of mind, we *know* nothing. If people believe, as many do, that the mind dies with the body, that is a belief which rests only on their inference, not on any positive knowledge. They believe that mind is only a function of the physical organism, and hence ceases with the organism. But that is a belief which no science has yet proved. What if mind is somehow associated with the eternal life-principle itself, which is the ever active power in creating organisms? For aught that anybody knows, that may be true; and, if we were to weigh reasons on one side and the other and measure probabilities, that belief, in our opinion, would be found quite as likely to be true, as that mind is only a passing function of a certain arrangement of material atoms. Science has fathomed the mystery of human death only so far as death applies to the body. No science has yet penetrated the deeper mystery of life.

And it is a very suggestive and pregnant fact that it is the mysterious supremacy of *life*, and not of death, that religion has always labored, in its manifold forms and voices, to teach. Whatever else was included in nature-worship, it certainly included a wondering, grateful homage to the secret powers of life. It is instructive to note how much of the religious symbolism of Christendom as well as of other faiths embodies the idea of man's relation to the ever-sustaining life-principle of nature. The Christmas and Easter festivals both have their primary origin in nature-worship, and both represent the powers of life as perpetually overcoming all the dread appearances and forces of death. The Oriental custom of animal worship grew out of the natural reverence which had been begotten in the human mind in presence of the wonderful secret of life. It was not the special animal that was worshipped, but the *life* residing in it, the hidden life-principle that it embodied. Even the cross, made actually to be an instrument of torture and death, was one of the most ancient and universal of religious symbols, and, as a symbol, has always been emblematic not of death, but of life. It appears, therefore, that, alongside of man's natural instinct for preserving his own life, —an instinct which is literally the constraining force of nature's purpose,—there came naturally a corresponding feeling of wonder and awe, a mood of searching but baffled inquiry before the mystery of life's manifold processes and powers, which grew into worship. And when we contemplate that mystery to-day, in its universal relations,—the mystery of the vital principle and force which is at the heart of the universe and is radiated through all its myriad members,—we are hardly nearer knowing it or even guessing it than were our Aryan ancestors on the high plains of central Asia many thousands of years ago, when they looked up to the blue enveloping sky and gave that as a name for the secret they could not fathom.

People of the modern world have learned a great deal *about* life; they have improved it in kind; they have ascertained many of the conditions and ways necessary for its most healthful working and its highest achievements: but what it is in itself, what the power that continues it, whence and how it began, whether it ever had beginning or can ever have end, we, of the modern world, are as ignorant as were the first savages who breathed its breath. "The breath of life," what is it? Have we answered, when we say that it is the oxygen of the air which the lungs inhale and impart to the blood, and which thence vitalizes the whole system? We have then barely touched the problem. What is the relation of oxygen to vitality? What *is* vitality? That is the very question to be solved. Is it all physical? Suppose that we trace all living species and all vital phenomena back from the complex to the more simple, until we come to protoplasm,—itself no living being, but only the basis or sustenance of living beings. Have we discovered the secret there? What is protoplasm but a flowing current of vital particles which science *finds* beneath all organized life, a necessary condition of it, but of which science can say no more. Protoplasm itself is the hidden secret. The scientific man gazes upon it through his microscope, stands in wonder before the ceaseless rotation and rush of the stream; but he cannot gaze through its veil to the moving cause. We see there, as one says, "the vast procession of life," as it rises before us, and "spreads away in variety of activity, in beauty, in wonderfulness incomprehensible."

And here, in the presence of this ceaseless vital energy, before this incomprehensible power acting within and behind all the phenomena of material life, science leaves us. It takes us with confidence up to the very doors of the laboratory of creation, but it does not unlock those doors. It admits the necessity of an organizing power, of a directive agency, of a formative principle, but has no philosophy for it. Religion stands before the same secret, and calls the unnamed power *God;* but religion, too, admits its incomprehensibility.

But, though incomprehensible, the power is none the less there,—a power immanent and active in all forms of life; and in man, as the culmination of the vast process of life in our part of the universe, specially manifesting itself as conscious, creative, progressive mental and moral intelligence. Incomprehensible in its essence and absoluteness, it yet unmistakably, though partially, reveals itself in its methods of working, and shows us its ways. Through man's reason and conscience, enlightened by all the past experience of the race, it decrees the rules of human conduct, and affirms the gradually rising dignity and worth of its own manifestations; material life rising slowly into mental and affectional, and the three, organically mingled, then ripening together into moral life, which wears by right the crown of sovereignty over all the grades below.

Hence, in man, the secret life-principle develops and blossoms into something entirely unknown in all the forms of being before him. Man detects the creative purpose through which he has himself been evolved, discovers the line of progress, becomes himself a sub-creator, a voluntary, consciously directive force. In him, the vital principle flowers into personal character,—into rational thought, into sentiments of right, into moral choice, into self-control, into skilful mastery over nature, into benignant action for the improvement of human society as a whole. And here, if we choose to carry the thought so far, we may find reasonable ground for belief in the survival of personality after the earthly organism has perished. In moral personality have been gathered eternal elements from the life-principle itself. It has made itself necessary to the progressive life of the world. In the last analysis, the law of life by which the universe has been developed and is sustained is one with the law of righteousness by which individual man survives.

WM. J. POTTER.

MR. GEORGE'S LAND SCHEME.

I have not half done with Mr. George and his land speculation, if only the patience of *The Index* and its readers will hold out. I have only tried, so far, to show the operation of his cunningly devised plan of getting things into working order by throwing all taxes upon the land.

As to this, it may be remarked, in general, that "a bear robbed of her whelps" is not so fierce and unrelenting as a philanthropic theorist on the rampage, and that Mr. George's chapters on this subject read wonderfully like the most sanguine passages of Rousseau, or like the ardent predictions that his poorest disciple, Robespierre, used to put forth just when the guillotine was going fastest. I do not suppose, therefore, that he or his disciples will be moved at all by the hardship of the evictions I spoke of, made in the name of so fine-spoken a theory.

It will be convenient to look separately at the three parts of the scheme which he lumps together. The first being farms and homesteads; the second, city lots; and the third, reservations made to cover such great objects of public interest as mines, forests, water-privileges, oil-wells, harbor-fronts, and the like. It is quite clear to me—and, I should suppose, to any one who will think attentively—that the three stand on an entirely different footing from one another, and should be considered separately.

As to the first, the main consideration (so far as the public is concerned) is *the maximum of productiveness for the longest period.* Directly or indirectly, the maintenance of every human being must come from the soil; and the earth is not at all like what Mr. George (p. 218) compares it to,—"a well-provisioned ship," where you have only to lift the hatches and take out what you want. Harvests do not lie under ground (as he seems to suppose) like veins of gold or beds of coal, but must be got by hard, skilful, and thrifty labor. To an average factory operative, a hundred-acre farm would be worse than worthless, unless he could sell it. The occupant must have not only skill, but the strongest inducement to make the most of it. That strongest inducement has been found, hitherto, in actual, independent, unmolested ownership.

Besides, a farmer needs time. A five years' lease would encourage him to raise good corn crops, and would be just about long enough to let him thoroughly exhaust the soil. An apple-orchard wants thirty years to come to its best, and an olive-orchard, we are told, a hundred years. How long shall the lease be? If twenty years, at most (as Mr. George seems to imply), what shall we do for apples and olives? Nobody will take the pains to

Digitized by Google

raise what will only have the effect to double his rent, without giving him any claim or tenure. If the lease is long enough to cover these, it is practically "copyright" ownership, and the theory goes to the ground. It is impossible that the public should get the benefit which Mr. George speaks of, unless the farmer should be virtually a tenant-at-will, like an Irish cotter, with his lease renewable at short intervals, which would be ruinous to him as a farmer. The twenty years' interval looks long, but is far too short to give the encouragement essential to a task that must be done, at best, under such hard conditions as the farmer's.

There is a practical inconvenience, too, which this scheme invites, and which Mr. George would apparently welcome. It is turning the agricultural population of a country from a stable and settled to a migratory and speculative population. Just in proportion as the scheme is effective, it must have this result. I say nothing of the destruction of home-feeling, the impossibility of strong local attachment, and the damage done to what have always been considered the most valuable moral qualities of a people. I only speak of the political and economical disadvantage of setting the great body of a population afloat, with no permanent abiding-place, and no inducement, such as ownership alone creates, to make the best of their position, both for themselves and for the public interest.

The most plausible reason for this compulsory breaking up is, no doubt, the holding of vast estates, of tens of thousands of acres, by speculators and capitalists. As to this, it may be said, in the first place, that it would be perfectly easy, if the public were so minded, to check this by legislation intended to encourage—or, if need be, *compel*—the subdivision of these vast estates; in the second place, that probably there is no need of such legislation, since the tendency within a generation (I am speaking only of this country) will almost certainly be to subdivision rather than larger increase; and, in the third place, that—granting it to be so—the great land-owners of the present day are doing a positive service to the next generation by holding their property in large blocks, which will be cut up to supply the markets of the future. Even the lordly estates of England, which at this day seem such an unmitigated evil to the laboring class, may be found, in a hundred years from now, to have been the *previous condition* making possible a far more prosperous condition of things than would have come about in another way. As to productiveness of supplies for the market, it has been proved that these great estates—when conducted with that view—are, in spite of their political evil and danger, the most profitable—that is, the most economical—form in which land can be held and worked.

Finally, as to the feasibility of Mr. George's scheme, it has only to be considered that it must be established and put into effect by the votes of a class perhaps more than any other conservative, suspicious of innovation, and jealous of its rights; that is, the class of working farmers, owners of their own soil and homesteads. If the scheme could be put in play by a set of resolutions at a labor convention, held under Mr. George's auspices in New York or Philadelphia, it would look theoretically a little easier; but it would encounter the objection of forcible resistance from a standing army, or militia, consisting of as many as there are farmers in the country and their grown-up sons. With this in view, it seems unnecessary, for the present, to say anything more about it as applying to land held for agriculture.

The next is the question of city lots. As to this, little need be said, as here I am not nearly so far away from Mr. George as before; and, besides, the practical remedy is easier than he seems to think. Take Philadelphia, which was laid out at first to be a commercial and manufacturing town: I am quite ready to grant that it might have been wise for the municipality to reserve the entire site, city and country, in the way he says, from all possibility of private speculation in land. And so in any similar case. That of a city like New York or Boston, which have grown (unexpectedly, as it were) from villages or settlements, is not quite so easy to deal with. Nobody can ever tell how far the growth of a given place is due to the private enterprise which begins by taking a large stake in land. Suppose Mr. George's scheme to have been tried thirty-three years ago at Benicia: it would certainly have been charged with the ruin which overtook the attempt to found a great city there. For the present, the practical difficulty is best met—and, for all I can see, may be sufficiently met—by the assessors, without any stretch of power, in the exercise of the discretion which the law gives them. It is already very hazardous, and in many cases ruinous, to hold unimproved lots in a city: they are such an easy and open prey to the tax-gatherer. On the whole, I think the evil—what there is of it—had better be left to the assessors, without waiting for Mr. George's legislation.

It is in the third department that I find myself standing nearest to Mr. George. The great sources of wealth I have mentioned—forests, mines, water privileges, and the like—do seem in a very different sense from farm lands, homesteads, or even city lots, to be fairly public property, which should be wisely held from private speculation. Mr. Bate carps a little at my making a distinct class of these. But I can stand a good deal of carping when I know that I am right.

I said, for instance, that I doubted whether our States, as they are, were "wise and virtuous enough" to undertake such public trusts. What is the fact? The great State of Pennsylvania has not been wise enough to control that unique source of wealth in her oil wells, so that they are being drained as fast as machinery can do it in a wild scramble of speculation, creating enormous stores of oil (at this time, as I am told, about thirty-three millions barrels) in advance of any market, and risking such frightful conflagrations as that in Jersey City the other day. The great State of New York has not been virtuous enough, when in full possession of the inestimable forest highlands of the Adirondacks, to prevent them in season from being the private spoil of speculators, who are permitted to threaten the State with the formidable evils predicted from their destruction. Begging Mr. Bate's pardon, I think I am fully entitled to put such cases as these in a category by themselves, and to express a doubt, or a regret, that our political authorities are not yet "wise or virtuous enough" to interfere.

I am so nearly in agreement with Mr. George on this particular point that I do not care to dispute about ways and means. My chief difference is this: that I think we had better *begin here* with our schemes for the "nationalization" of land. What may come to pass in a hundred years from now, or even in fifty years, if this is tried and works well, I shall not trouble myself about. The State of New York has just made a good beginning by taking steps to reserve the magnificent "water privileges" at Niagara. The United States has just found out some of the practical difficulties in making the splendid national reservation of Yellowstone Park. Pennsylvania will probably have to rue, when too late, its incredible blunder in the matter of the oil wells. And the sober second thought with us all, I hope, will serve to bring Mr. George, Mr. Kennedy, Mr. Bate, and myself into perfect harmony on the ground I have now taken.

J. H. ALLEN.

ITHACA, N.Y., May 17, 1883.

THE PIONEERS OF THE WOMAN'S MOVEMENT, AND ITS OPPONENTS.

It has even been a part of the policy of the Christian Church, when it has opposed, disliked, or ignored any discovery in science or innovation in moral methods, which, recommended by its truth and justice, has finally become accepted by the majority of people, gradually to adopt as its own offspring the demonstrated scientific fact or successful reform, and to modify its own teachings so as to make them harmonize with it.

The movement in favor of the advancement and enfranchisement of woman has been no exception to this rule. To-day, we have "ministers of the gospel" who undertake the apparently impossible task of reconciling "the Bible and Woman's Suffrage." And some of the journals most prominent in the woman's cause are yet so unawake to the liberal origin and trend of the movement as to fancy they make that cause stronger and its justice more incontrovertible by taking the position that the Church has been the patron and instigator of it. If the facts of history did not so thoroughly disprove this, we would have no objection whatever to giving Christianity credit for any efforts made toward the elevation of Woman; but, since we believe in giving "honor to whom honor is due," it is only just that *The Index*, whose motto is "Light, Liberty, and Right," should in this Anniversary Week, when the suffrage anniversary will, we hope, awaken new interest in the woman's cause, explain to whom is due the honor of the most earnest and successful pioneer work in this so nearly triumphant reform, whether to the high dignitaries of the orthodox faith or to the efforts of unorthodox and free-thinking reformers.

The first "vindication of the rights of women" of which we possess any definite information is that of Mary Wollstonecraft, an avowed deist, who, in 1792, wrote that still readable and passionate demand for the political recognition of her sex, which bears that title.

From 1820 until her death in 1852, Frances Wright, an outspoken free thinker, did valiant service for the enfranchisement of her sex here in America, her adopted country; and it is in recognition of that service that to-day her portrait occupies a prominent position in the office of a journal devoted to woman's suffrage, though the journal referred to discountenances anything savoring of free-thought principles, and mistakenly thinks to strengthen a cause born of those principles by pandering to the dying Orthodoxy of to-day. In *The Eminent Women of the Age*, Mrs. Stanton writes thus of Frances Wright: "We may date the woman's rights' cause proper from the division in the anti-slavery organization in 1840; though, before that time, Frances Wright, an Englishwoman, of rare gifts both as a writer and speaker, had visited this country and addressed large audiences, demanding, at that early day, all the champions of woman's rights now claim." Mrs. Stanton continues: "She was followed by Ernestine L. Rose, a native of Poland, a woman of great beauty, refinement, and cultivation, of generous impulses, liberal views, and oratorical power. She came to this country in 1836, addressed large audiences in Charleston, S.C., and in Detroit, Mich., on 'The Science of Government.' She was among the first who agitated the property rights of married women in the State of New York. As early as 1838, she circulated petitions on that subject, which were presented by

Digitized by Google

Judge Herttell in the Legislature. She has been one of the leaders in the woman's rights' movement since that time, and spoken at all the annual conventions." The Judge Herttell who presented in 1838 the petitions of Mrs. Rose for the rights of married women was as open and avowed a free thinker as Mrs. Rose herself, and he was also one of the earliest advocates of total abstinence in this country.

Harriet Martineau, an agnostic, so early as 1835 gave publicity to her convictions on the question of woman's rights. "I declare," she says, in *Society in America*, written in 1836, "that whatever obedience I yield to the laws of the society in which I live is a matter between not the community and myself, but my judgment and my will. Any punishment inflicted on me for a breach of those laws I should regard as so much gratuitous injury, for to those laws I have never actually or virtually assented."

As early as 1840, Margaret Fuller, whose Orthodoxy is certainly questionable, had begun to write and work for the enfranchisement of her sex from all the disabilities and limitations imposed upon it by reason of masculine and religious prejudice. In 1847, Hon. E. P. Hurlbut, formerly a judge of the Supreme Court of the State of New York (who is still living, and who has within a few years done good and effective work for Liberalism), in his excellent volume on *Human Rights*, openly advocated the legal and political "Rights of Women" in a chapter so entitled; and so radical and pronounced were those views that his friend, George Combe, in some notes appended to Judge Hurlbut's work, felt obliged to take exceptions to them.

Of the more recent advocates of woman's suffrage, Mrs. Stanton, Theodore Parker, R. W. Emerson, Susan B. Anthony, Lucretia Mott, Lydia Maria Child, Mrs. Caroline H. Dall, William Lloyd Garrison, Fred Douglass, Colonel Higginson, Louisa Alcott and her venerable father, Anna Dickinson, Julia Ward Howe, and many others in this country, together with George Eliot. Herbert Spencer, John Stuart Mill, Prof. Huxley, Frances Power Cobbe, John Bright, George Jacob Holyoake, and Charles Bradlaugh in England, are all either liberal Christians or avowed free thinkers: none are entirely orthodox in faith.

And what can orthodox Christianity show in confirmation of its claim that to its teachings and labors woman's elevation and coming enfranchisement are due? What is its record of work done in behalf of one-half of the human race and religion's most zealous supporters? Certainly, in spite of the specious pleas only recently thought necessary by some preachers, that the Bible is not opposed to woman's suffrage, it can be very clearly shown from that book that woman was considered by all its writers the inferior of man, made so originally. So, though the question of suffrage had never occurred to them, yet it is utterly incompatible with the spirit of Biblical teachings. Rev. Horace Bushnell's passionate denunciation of woman's suffrage as a "Reform against Nature" was indorsed by all good churchmen as the exposition of their views on that question; and it is only a few weeks since the publication of Rev. Morgan Dix's *Lenten Sermons on Women*, relegating them to the inferior and subordinate position occupied by the sex two centuries ago,—a position which Biblical authority plainly indicates as the proper and divinely ordained place for the sex through whose transgression sin entered the world, though many of his clerical brethren, more strongly imbued than himself with the progressive spirit of the age, openly deride the Rev. Dix's antediluvian notions in regard to their mothers', wives', and daughters' places in society. Yet the unmistakable earnestness and the unassailable Orthodoxy of his views give this man a select audience and a thoughtful hearing.

Of the many denominational Christian papers published in this country and in England, how many take a decided stand in favor of the advancement of women? Only one, the *Independent*, (which lives up to the spirit indicated by its name), so far as the writer knows, openly takes the position that women have as much right to suffrage as men; while many, like the *Congregationalist*, do not hesitate to disavow any sympathy with the movement. There are no *liberal* papers which take ground against it. The Methodist Church, one of the most liberal of the orthodox denominations, has within a few weeks allowed one of its most efficient and enthusiastic workers, Miss Anna Oliver, to give up her charge of the congregation she has done so much for and the church she has so ably redeemed from debt through her financial ability, simply because its Orthodoxy does not venture to gainsay Paul's dictum, "I suffer not a woman to teach." So Mrs. Van Cott's ministrations are still unsanctioned; and in other churches the women workers, the real "pillars of the church," are degraded by the simple fact of their sex on which religion has cast a ban and obloquy.

Until, then, women learn to cast aside the authority of the Church, the enfranchisement of the sex must be delayed. And those who have that cause at heart must work first for the enfranchisement of the female mind from priestly domination.

SARA A. UNDERWOOD.

SOME EARLIER FREE THINKERS.

The liberal movement in this country has had among its workers men and women to whom we are all indebted, but whose services are little appreciated or known to-day. The workers here referred to did not produce large results that could be seen in their time, did not influence directly large masses. They were so far in advance of the people that any general acceptance of their views was impossible. But there were minds who did receive their teachings or who were profoundly impressed by their work; and, through these minds, their influence has been extended far and wide.

These Liberals were not of that class who keep but a little in advance of public sentiment, whose views are formed from observations of the tendency of thought, who, with but little knowledge or courage even, express in popular phraseology and with guarded qualifications beliefs that have been adopted by leading minds and are beginning to be treated with respect by the people, and who frequently live to see their names identified with progressive changes, and themselves credited with the results of the heroic and self-sacrificing labors of thousands whose very names are forgotten. They adopted the views they held and taught, because they were compelled, in the exercise of their reason and common sense, to do so; and they did this in defiance of a strong and intolerant public sentiment. Having come to certain conclusions, they had the moral courage to declare and defend them, in spite of all opposition. With them, the object of language was not to conceal, but to express their thoughts. They could not temporize. They were "bold enough to be honest and honest enough to be bold," and wrote and spoke as they believed. They did not consider their principles from a money point of view, nor did they value a movement in proportion as they could make it subserve their individual interests. They bequeathed to this generation lessons of honesty, courage, and sacrifice.

Of course, they had their limitations, especially the limitations of their times. They did not see, at least, not so clearly as is now seen, that religious systems are products of evolution, and that all the old systems of faith were necessary factors in social development, that their immediate and total destruction is neither possible nor desirable, and that the continuity implied by evolution admits of a break no more in the religious and social than in the physical world. A knowledge and appreciation of these facts would have enabled them to see much good where they saw only evil, would have helped them to juster views, moderated their expectations, and, while restraining their impatience and saving them from bitter disappointments, would have made their work more truly liberal and perhaps more effective.

Among those identified with the liberal movement in this country, years ago, was Thomas Cooper, President of Columbia College, South Carolina,—a man of vigorous intellect and of extensive learning, who was best known in the South for his political writings, which were strongly partisan; but who wrote a work on the Pentateuch and a series of papers on the New Testament, which, although published half a century ago, are well worth reading to-day. Another veteran free thinker was Thomas Herttell, Judge of the Marine Court of New York, and for some years a member of the Legislature of his State. He wrote two or three small works in criticism of the Christian theology, and exerted his influence very effectively in favor of State secularization in New York. Judge Hurlbut was also active and influential in the same work, and at the same time. Gilbert Vale, a teacher, author, and translator of some French works, and editor of the *Beacon*,—a radical free-thought journal published in New York, and conducted with much ability during several years,—is still remembered gratefully by those who knew him, or know of the work he performed. Robert Owen held a debate with Alexander Campbell at Cincinnati, and addressed conventions and meetings in New York and other cities half a century ago. Robert Dale Owen, with the best education that European universities could give and with all the enthusiasm of a young reformer, lectured and wrote in defence of Liberalism, and had a written discussion with Origen Bachelor on the origin and authority of the Bible, in which he maintained his position with marked ability, erudition, and candor. It may be fairly regarded as the best presentation of the pros and cons on the subject published up to that date. Mr. Owen's subsequent career as a member of Congress, as a representative to a foreign court, and as the author of two learned works in defence of modern Spiritualism, is much better known than his earlier labors.

Associated with him on the *Free Inquirer* was Frances Wright, a Scotch lady of masculine strength of mind, of education, versatility, and philanthropic disposition, whose discourses and essays attracted wide attention. Abner Kneeland, who, after acquiring a reputation by his writings as a learned Universalist minister, became a radical free thinker, and fifty years ago founded the *Investigator*, gave lectures in Boston, New York, and other cities against Christianity, and suffered sixty days' imprisonment in Leverett Street Jail, Boston, for blasphemy. About the same time, Samuel Underhill, a man of vigorous intellect, started a paper in Cleveland, Ohio, called *The Liberalist*, which was published several years. He was a ready and impressive speaker and a good debater; and his discussion in the above-named city with Alexander Campbell, one of the most aggressive theologians and able controversialists of his day, is remembered by persons still living who heard it. Ernestine L. Rose, the brilliant Polish

Digitized by Google

lady who thrilled audiences with her eloquent denunciations of superstition forty years ago, still lives to see the great change which has taken place since she commenced her labors. John S. Hittell, in 1855, wrote *The Evidences against Christianity*, a compendium of all the main evidences and arguments brought against the genuineness, authenticity, and inspiration of the Bible, and, according to the *Westminster Review*, the ablest work of the kind that had appeared up to the date of its publication. Mr. Hittell subsequently wrote a work on the resources of California, and another entitled *A Brief History of Culture*. He was several years, and is probably now, one of the editors of the *Alta California*.

Many others might be mentioned whose services in years past entitle them to the grateful remembrance of the Liberals of this generation. They did good pioneer work, and cleared the way and helped to make comparatively easy the work of their successors. They were sturdy advocates of the sovereignty of human reason, and valiant defenders of those imprescriptible rights of the human mind which superstition and ecclesiasticism have tried to suppress. To permit ourselves to be guided or limited by their thought or their methods would be foolish, but a recognition of their services justice requires and gratitude prompts.

B. F. UNDERWOOD.

ANNUAL MEETING, FREE RELIGIOUS ASSOCIATION.

The sixteenth Annual Meeting of the Free Religious Association will be held in Boston, beginning Thursday evening, May 31, and continuing through Friday, June 1.

Business session, in Parker Fraternity Hall, Thursday evening, at 7.45 o'clock, for reports, election of officers, and general discussion of methods of work.

Sessions on Friday at 10.30 A.M. and 3 P.M. Morning subject, "Emerson and Darwin." Speakers, Col. T. W. Higginson, Mr. Edwin D. Mead, and Mr. John W. Chadwick. Afternoon subject, "Co-operation and Progress." Speakers, Mrs. Imogene C. Fales, Mr. James Kay Applebee, Mrs. Anna Garlin Spencer, and others.

Social Festival, Friday evening at Horticultural Hall, with supper at six o'clock. Tickets, 50 cents each. Col. T. W. Higginson will preside. Brief addresses from distinguished speakers.

F. A. HINCKLEY, *Sec'y F. R. A.*

EDITORIAL NOTES.

THE New York Freethinkers' Association is to hold its next annual convention at Rochester five days, commencing August 29.

WOMEN passing Anniversary Week in the city are cordially invited to make use of the rooms of the Women's Educational and Industrial Union, 157 Tremont Street, for rest, reading, and local information.

THE thirty-first yearly meeting of Progressive Friends will be held at Longwood, Pa., June 7, 8, and 9. F. A. Hinckley, Mary F. Eastman, Charles G. Ames, and other prominent speakers, are expected to be present.

YOU cannot be too conscientious. But you can have a conscience too self-conceited, too tyrannous, too papal. Your conscience is not an infallible conscience. You are not a Moses nor a pope. Take counsel of other consciences. Consider their judgments. Give them due weight. Then judge for yourself, but not for your neighbor. Why not? —*Christian Union*.

THE increase of Liberalism in the churches is shown in a marked manner by the fact that Rev. Washington Gladden was recently installed pastor of one of the leading Congregational churches in Columbus, Ohio, without one dissenting vote in the church council, even after the following bold declaration of his theological views: "I am not satisfied with any theory of Christ's atoning work. What forms the endless life in the world to come will take I do not know. The mysteries of the future I do not try to fathom. I only know that, as it is ill with the wicked in this world and in all worlds, so it is well with the righteous in this world and in all worlds; and I am content to wait for the knowledge of how well it is with them till that Shadow come who keeps the key of all the creeds."

EVERY now and then, religious papers like the New York *Observer* and *Christian Statesman* have to refer to the action of the National Liberal League regarding postal laws against the transmission of indecent literature through the mails, and make it the basis of charges against Liberals generally that they are in favor of vice. It is sufficient in reply to these false accusations to reproduce here an extract from an article by the junior editor of *The Index*, published in 1881, in reply to *Scribner's Monthly*: —

The membership of the National Liberal League has never been large, and the number of delegates has never exceeded a few dozen. It was never authorized to speak or act for the majority of Liberals, although, while it confined itself to the work of State secularization, it probably represented, so far, the views and objects of Liberals generally. Yet under no circumstance could the Liberals of the country be justly held accountable for the action of such an organization. It is very certain that the majority of Liberals in this country, numbered by hundreds of thousands, have never, in any way, indicated their approval of the action of the League at Chicago. On the contrary, after extensive travel and observation, and with unusual opportunities to learn the views of Liberals, I am satisfied that comparatively few of them either approve the demand for the repeal of postal laws against obscenity, or take the slightest interest in the League with its present policy or under its present administration. But, if all the Liberals of the United States were in favor of the repeal of the so-called Comstock laws, it would be no evidence whatever of "love of obscenity" on their part. These laws are of recent date; and their constitutionality and wisdom are a subject of discussion among intelligent and honest men, irrespective of their religious views. Common fairness, therefore, demands the admission that those generally who ask for the repeal of these laws have no sympathy whatever with obscenity, and rely on other agencies for its suppression.

THE following paragraph we copy from the *Liberal*, a journal which comes to us from Sydney, New South Wales: —

In America there is a section of free thinkers which insists that no one can claim to be truly liberal who does not subscribe to the "Nine Demands of Liberalism." Now, we take leave to assure these worthy people that true Liberalism has no demands whatever, except the demands of equal liberty to others. Any system that puts forth "demands" ceases at once to be a system of Liberalism, and becomes immediately another sect. Real Liberalism seems to be unknown in America. Among the large number of papers coming under the head of free thought, we do not know of one that we could call genuinely liberal. They have each and all wrapped themselves in their own narrow groove of idea, and refuse to see any good in the system of any one else. As we have over and over again said, this is purely sectarianism as Roman Catholicism or Calvinism; and we cannot see that a person has in the least benefited himself by altering the name and principles of his sect. *The Index* and the *Religio-Philosophical Journal* perhaps make the nearest approach to Liberalism of any. The *Investigator* always ostentatiously separates free thinkers into Liberals and Spiritualists, as though the latter could not be Liberals! And yet Mr. Denton assured us that one of the editors, J. P. Mendum, is a believer in Spiritualism in private! With all its marvellous talent, surely America ought to produce a liberal paper. Or is it left to the newest country of the world—Australia—to show what the newest sentiment evolved—Liberalism—means?

Are not the "Nine Demands of Liberalism" "the demands of equal liberty to others"? How is a concise statement of certain reforms which are needed to make the State entirely secular, and to secure equal rights and exact justice to all, irrespective of religious beliefs, inconsistent with "true Liberalism"? Will our esteemed contemporary give us its idea of "a liberal paper"? We must be permitted to express doubt, to use the mildest language, in regard to the truth of the alleged statement of Mr. Denton respecting the publisher of the *Investigator*.

POETRY.

For *The Index*.

A PARALLEL.

Red, through the far cloud-islands,
The fires of sunset burned,
And the blue of enchanted highlands
To a magical crimson turned.

Weary with waiting and grieving,
So tired of strife and care,—
No gospel of hope receiving
From the glory-freighted air,—

The lessons of patience losing
Of the dark, germ-throbbing soil;
And the bitterest meaning choosing
That lay in her life of toil,—

From her low-roofed cottage gazing,
A woman watched the sky,
And its far cloud-islands blazing
With the splendor that "passeth by";

And, lo! as her look fell slowly
To the muddy pools of the street,
The glow was reflected wholly,—
All heaven lay at her feet!

And a thought that pierced like an arrow
Her dulling sense made fine:
"No life so joyless and narrow
But may mirror a ray divine!"

HELEN T. CLARK.

THE TEUTON.

The servile creed of dreamers old,
Who idled 'neath a Syrian sun,
Was suited not to Teuton bold,
Though o'er him sway it strangely won.

Despite his alien cult, he turned
To suitor's hand no craven cheek,—
At wrong with indignation burned,
To taunt and insult ne'er was meek.

Spare fast was never to his mood,
But copious draught and liberal cheer:
He prayed not for his daily food,
But gathered it with toil severe.

The soil and climate of his birth
Brooked not the idle, saintly drone;
But wintry storm and rugged earth
To thrift and skill were kind alone.

The oak and ash-tree gave him shade,
To mast and oars he hewed the pine,
And boldly drifted south to raid
On regions of the palm and vine.

His heaven was a heroes' hall
Of revel after conflict grim,
Which duly ceased, as twilight's fall
Wrapped Asgard in its shadows dim.

The Index.

BOSTON, MAY 31, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index*.

Religious Rationalism in the United States.*

BY COUNT GOBLET D'ALVIELLA.

(Translated from the *Revue des Deux Mondes* of April 1, 1883, by Miss Arethusa Hall.)

(*Concluded from last week.*)

III.

Parker died in Italy, May 10, 1860, on the eve of that War of Secession which he had perhaps hastened by the energy of his denunciations against slavery. It is related that, at the moment of dying, he murmured: "There are two Theodore Parkers now. One is dying here in Italy: the other I have planted in America. He will live there, and finish my work." The prediction of the dying man is realized, but perhaps not in the sense he attached to it. Parker lives more than ever in the United States, through the power exercised over imagination and character by the example of his inflexible fidelity to conviction, of his passionate love for truth and justice, and of his unshaken faith in the reconciliation of religion and progress. But, as to his favorite doctrine,—not admitting, with certain of his most recent biographers, that he would to-day with the same ardor extol the experimental method,—it must be recognized that the philosophy of intuition has not answered the highest expectations of its prophet.

The emancipation of the slaves was the great triumph of Transcendentalism, but it was also the beginning of its decline. The movement owed a great part of its popularity to the indifference which almost all the established churches had shown in opposing the scourge of slavery. When this odious institution was consumed in the flames of civil war, Transcendentalism lost its principal motive power over one portion of its adherents. On the other hand, individualism, which was at the bottom of its aspirations, was always a serious obstacle to its efforts at propagandism and to the grouping of its forces. Its essential aim, according to an expression of Samuel Johnson, was to lead each individual to become a church by himself,—which was to condemn the very principle of all permanent organization upon religious grounds. The majority of its interpreters did not break away completely from Unitarianism, which had served as a cradle to the Transcendental doctrine; and, of the independent congregations which some of them endeavored to establish in imitation of Parker, few had a long duration.

Indeed, Transcendentalism represented a reaction against the exaggerations of the sensualistic method of philosophy; and, like all reactions, it went beyond its mark. Not content with affirming the importance of psychology, the necessity of recurring to internal observation to explain the origin of our knowledge, the aptitude of the mind to conceive certain notions which cannot be the exclusive product of sensible experience, the existence of moral liberty, and the imperative character of duty, it professed to find in the human soul a complete and infallible perception of religious and moral truth. This was to prepare the way for an aggressive return of sensationalism, at the time when this philosophy, strengthened by the prodigious discoveries made by the natural sciences, claimed to furnish the synthesis of the universe. The weapon which had assured the victory to the school of Kant over the partisans of Locke was the verification in the human mind of ideas which are not introduced there by experience. The neo-sensualism of our epoch has displaced the ground of controversy, by explaining the presence of notions *a priori* in the individual by hereditary transmission of accumulated experiences in the past of the race. At the same time that it has thus made a breach in the autonomy of the soul, if it has not called in question the intervention of a first cause,—which it relegates to a past out of reach by the theory of the conservation of force,—it questions at least the necessity of final causes, which it removes by the law of natural adaptation to the best, and of the survival of the fittest. Under this rejuvenated form, it must spread so much the more rapidly in the United States, as it is introduced under the authority of Darwin, Tyndall, and Spencer.

We think that this return-blow of scientific sensualism can hardly profit the old partisans of theological sensualism. The Transcendentalists are still attached in a certain degree to the Christian tradition. Emerson, whose Christianity was contested by the conservatives, made of Jesus the principal educator of humanity: and Parker, who was treated as an atheist, identified the moral teaching of Christ with absolute religion. The new school, on the contrary, pursuing to the end its work of critical destruction, has stripped of his aureole the founder of Christianity, whom it places on a footing of equality with Buddha, Zoroaster, Moses, and Mohammed. At the end of the civil war, therefore, Unitarianism found itself more than ever divided into two factions: on the left, the Liberals who began to accept the name of radicals; on the right, the conservatives of the old school (old-fashioned Unitarians). These, perhaps, did not insist with so much energy as formerly upon the Socinian theories of the pre-existence of Christ; but they continued to make belief in the authenticity of revelation the corner-stone of Christianity. The former, on the contrary, maintained that difference of opinion upon the infallibility and even upon the moral value of the Bible was not an obstacle to religious fraternity.

In 1864, Dr. Bellows proposed to unite the delegates from all the Unitarian churches in a permanent confederation, in order to give more unity to their works of charity, of instruction, and of propagandism. The provisional assembly, composed of three delegates from each church and each local association, met at New York the first day of April, 1865. But differences appeared as soon as they came to settle the principles and even the title of the new association. Finally, after rejecting a long profession of faith drawn up in the name of the extreme right wing by Mr. A. Low, and adopting a declaration stating that the decisions of the majority should not be binding upon the minority, the delegates voted, perhaps in the spirit of a treaty, a preamble expressing the "obligation of all the disciples of the Lord Jesus Christ to prove their faith by self-denial, and by the devotion of their lives and possessions to the service of God and the building up of the kingdom of his Son." This phraseology gave umbrage to the radicals, who saw in it a declaration of allegiance to Christ; and, in the following meeting, which opened at Syracuse, Oct. 10, 1866, one of their most distinguished representatives, Mr. Francis Ellingwood Abbot, proposed to substitute for this preamble a declaration that "the object of Christianity is the universal diffusion of love, righteousness, and truth; that perfect freedom of thought is the right and the duty of every human being"; and that the basis of religious organization should be "unity of spirit rather than uniformity of belief." At the same time, Mr. Abbot proposed to substitute the words "independent churches" for "Christian churches," which figured in the title of the conference. Perhaps, in the preceding year, the propositions of Mr. Abbot would have had some chance of being adopted; for they served, in the main, only to maintain in Unitarianism a *statu quo* consecrated by the experience of half a century. But, after the conference had officially hoisted its colors, this change of name and programme would not have failed to be represented as a repudiation of Christ and of all Christian traditions. The only concession which it showed itself ready to grant was to add to its title, "The National Conference of Unitarian Churches," the words, "and other Christian Churches." This was a tender to Universalists and to all liberal congregations whose internal development had, by degrees, brought them near to Unitarian doctrines. But Mr. Abbot, seeing his propositions rejected, withdrew from Unitarianism; and the following year he, with many of his liberal colleagues,—who, however, did not think it necessary to follow him in his withdrawal,—formed at Boston the Free Religious Association, which had for its object to realize outside of every Christian communion the programme rejected by the conference of Syracuse.*

It is certain that the Unitarians were wanting in logic, when, on one side, they proclaimed the absolute sovereignty of reason, and, on the other, aimed to identify themselves with the belief in the religious and moral superiority of Christianity. There was, therefore, a place for a broader organization, which should accept, in its most remote consequences, the principle of free inquiry, and which should remain open not only to "all the disciples of Christ," but also to "all the disciples of truth,"—Christians, Jews, Buddhists, Mohammedans, even Positivists,—provided they should have in common the love of truth and the desire for goodness. The organizers of "Free Religion" did not impose upon them the sacrifice of their particular beliefs, nor even of their connections with other religious associations: all that they asked of them was to unite upon the ground of spiritual unity detached from all dogmatic intolerance. The first article of their constitution states it to be the object of the Association "to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history."

The first public meeting, which was held in Boston, May 30, 1867, was a great success for the promoters of this movement. Not only a large number of the ministers and laity belonging to Unitarian congregations responded to their appeal, but also a considerable number of well-known persons from the liberal elements of the most diverse sects,—Universalists, Progressive Quakers, Jews, and even Spiritualists. The Association chose for its president a Unitarian minister,—who, later, transformed his society at New York into an independent organization,—Mr. O. B. Frothingham, and for secretary, one of his co-ministers at New Bedford, Mr. William J. Potter, whose name was soon erased from the official list of Unitarian ministers for his refusal to retain the name of Christian.

Besides its annual meetings, devoted to discussions and lectures, the Free Religious Association instituted a series of conventions in different cities of the country, and published a large number of pamphlets to disseminate its views. It has for its organ, *The Index* of Boston, a weekly paper—edited first by Mr. Abbot, and now by Messrs. Potter and Underwood—which deserves to be presented as a model for all free-thought publications in both hemispheres, as well for the attractiveness of its articles as for the breadth of its ideas, and most especially for the elevation of its moral tone.

During the fifteen years since "Free Religion" thus took form, it has accomplished a work at once positive and negative,—negative, by its rationalistic utterances, which undermine more and more the bases of dogmatic sects; and positive, by its efforts to assign a common purpose to the religious activity of its

members. Among the movements which it has, so to speak, launched, the Liberal League* must be mentioned. This was organized by Mr. Abbot in 1876, for the purpose of obtaining the complete secularization of American legislation. The separation of Church and State is not so absolute with the Americans as they are often pleased to tell us. Undoubtedly, the religious communities govern themselves as they like; and, on the other hand, the civil authority furnishes them no sort of subsidies. But, though the last State churches disappeared more than half a century ago, public institutions are still strongly impregnated with Christianity. Congress and State Legislatures have their chaplains, as also the navy, the army, and prisons. The Bible continues to be read in most of the schools. The real estate appropriated to the service of worship is generally exempted from taxation. The invocation of God is always obligatory † in the judicial, and even in the administrative, oath. The laws upon blasphemy have never been formally abrogated. In certain States, the tribunals lend a hand, at least indirectly, to the observance of Sunday. In 1880, a court refused to recognize, even as a natural obligation, a debt contracted on Sunday; and a traveller, wounded by a railroad accident, was refused damages, because he ought not to travel on the Lord's day. The demands of the League found an echo even in the ranks of the clergy, and among citizens desirous of realizing in all its fulness the American principle of the separation of Church and State. Unfortunately, there exists in the United States, as elsewhere, a class of persons, of shadowy reputation or unprincipled, that take libertinism for liberty,—persons who are always ready to confound religion and morality with the abuse of an ecclesiastical *regime* condemned by the progress of the age. At the meeting of the Liberal League, held at Syracuse in 1878, radicals of this description, together with some partisans of "free love" who had insinuated themselves into the organization, formed a majority for putting into the programme the total abolition of the law which forbids the circulation of obscene literature [through the mails] as well as anti-religious publications. Mr. Abbot, who had unsuccessfully endeavored to maintain a distinction between these two kinds of offences, then withdrew from the League, accompanied in his secession by all those who sympathized in the Free Religious movement. The Liberal League endeavored to re-establish itself under the presidency of Col. Robert Ingersoll, the principal apostle of atheism in the United States,—an eloquent and witty lecturer, though a little superficial in his knowledge, but of unquestionable morality. Again, in the session of 1880, the party of absolute liberty prevailed, and the new president followed the example of Mr. Abbot. The League has never recovered from this blow. ‡

IV.

In a doctrinal point of view, Free Religion starts from this principle,—that we have religious sentiments, and that these sentiments ought to be developed in harmony with all our intellectual and moral faculties, for the greatest good of the individual and of society. It therefore recommends to its adherents the scientific study of the elements which form the common foundation of all religions, as well as an impartial research for the truths which establish the position and destiny of man in the universe. As to deciding between the religious systems, the methods, and even the definitions which are the subjects of free inquiry, it can do nothing without violating the principle on which it is based.* Thus, the Free Religious Association contents itself with offering a free platform for the development and exchange of ideas to all those who profess to furnish some rational solution of religious problems. And, in this respect, it may be said to fill a veritable gap in American society. Among the small number of local churches founded under the auspices of Free Religion, one at Dorchester, Mass., under the direction of a lady,—Mrs. Clara Bisbee,—may be mentioned. This congregation numbers fifty families, collected principally from Unitarians, Episcopalians, and Spiritualists. An idea may be had of the laudable activity which distinguishes the *minister*, when it is learned from *The Index* of June 29, 1882, that she conducts the worship, plays the organ, directs the choir, preaches the sermon, presides at the Sunday-school for children, and gives a course of lessons on the history of religion to a class of adults.

Another Free Religious congregation at Providence, R.I., in 1881 obtained for its minister the right of performing legal marriages,—a privilege till then reserved to ministers regularly ordained by a religious denomination and to judges of the Supreme Court. In connection with this there occurred, between the minister of the Free Religious congregation, Mr. F. A. Hinckley, and the committee appointed by the local legislature to decide whether "Free Religion" was really a religion, a dialogue which throws a very curious light upon the attitude adopted by the adherents of the new worship, in regard to theological questions, properly so called. As the constitution of the society assigned to it, as exclusive objects, "the practice of virtue, the study of truth, and the brotherhood of man," the chairman of the committee remarked that he could not discover to whom the petitioners addressed themselves in worship.

Rev. F. A. Hinckley.—"As individuals, we represent all shades of liberal opinion; but, as a society, we have a distinct element of worship. All sane minds recognize a Power over and above us. We claim that the one great essential principle is recognized when we recognize this Power, though we do not recognize it in the same manner as do other denominations."

A Member.—"What do you worship?"

Rev. Mr. Hinckley.—"I am perfectly willing to tell you; but I do think it is without the province of the State to define what men shall or may worship."

Member.—"I understood that you said the other day that you did not recognize God, Christ, or the Bible."

Rev. Mr. Hinckley.—"What I said was that we could not recognize them as the creeds do. We do recognize a Power over and above the human."

Member.—"What you call a Power is what other people call God?"

Rev. Mr. Hinckley.—"Now, you begin to define. The moment you do that, you find irreconcilable differences in the Churches as well as out of them."

It should be said that the petitioners obtained the support of several ministers belonging to the Episcopal, Congregational, and Unitarian churches of the city. We see that the spirit of religious toleration has not degenerated in the old colony of Roger Williams.

To the congregations directly founded upon the principles of "Free Religion" may be added certain independent societies of every religious denomination, as the First Congregation of New Bedford, which continued to sustain its minister, Mr. William J. Potter, when his name was erased from the Unitarian *Year-Book*. This church, having its origin among the Puritans in the beginning of the eighteenth century, is reckoned among the first societies of Calvinistic descent which openly raised the Unitarian standard; for this rupture with Orthodoxy dates from 1810,—that is, nine years before the discourse of Channing, which was the distinctive signal of the schism. It would be very interesting to follow the movements of ideas which thus led from the strictest Calvinism to the most absolute Liberalism a congregation standing in the ordinary conditions of American churches. The different stages of this evolution would appear only in successive modifications of the ritual; the widening of the profession of faith imposed upon communicants; the disappearance of all distinction between communicants and non-communicants, between the members of the church and the members of the civil association (or society); the transformation of the sacrament of the communion into a ceremony commemorative of the foundation of Christianity; the displacement of the Christian symbolism by a service in honor of all the great religious and social reformers.

Though independent of the Free Religious Association, the Society for Ethical Culture in New York equally deserves a place in the first ranks among the associations which have set up the standard of "Free Religion." Its minister, or rather its director, Mr. Felix Adler, from 1878 to 1882, was president of the Free Religious Association, whose ethical and humanitarian tendencies he especially represents,—that is, the part of the constitution above cited which relates to "the practical interests of pure religion." It cannot be disguised that one of the most threatening issues for the future of modern society is that the weakening of positive religion will weaken the power of morality, which has been so long linked to religious dogmas. Rationalists have seen this peril in the United States as in Europe; but, while here they have endeavored to establish morality upon principles independent of religion, there they seek to subordinate religion to it. Such is at least the tendency of which Prof. Felix Adler is to-day the most brilliant interpreter. Mr. Adler is a young man whose mystic physiognomy recalls certain heads of the apostles. His father filled the office of rabbi in the principal Jewish synagogue of New York. He himself was destined for the priesthood; but, having been sent to Germany to complete his education, he there acquired rationalistic convictions, which barred him from following his father's career. On his return to the United States, in 1873, he accepted a professorship in Cornell University, which he quitted three years afterward to establish at New York a new religious association, under the title of "The Society for Ethical Culture." In philosophy, Mr. Adler belongs to the intuitive school, since he believes in the existence, in the human mind, of certain elements anterior and superior to all individual or even hereditary experience. But, in metaphysics, he holds strictly to the postulates of Kant, without attributing objective reality to the notions of God and immortality. "I do not accept theism," he says, in one of his lectures; "but the foundation can exist very well without a particular structure, and others may be raised upon it when the ancient one has crumbled into ruins. I cling with all my soul to the foundation on which theism has been built: first, the denial of chance, the conviction that there is order in the world; secondly, the conviction that this order is a good order, that there is progress in the world." According to this, it is not God, but moral law, which should be the object of religion. This religion, moreover, would be eminently practical. "Since divergency of beliefs will continue to be emphasized, it is necessary to place the moral law where it cannot be discussed,—in practice. Men have so long disputed about the author of the law that the law itself has remained in shadow. Our movement is an appeal to conscience, a cry for more justice, an exhortation to more duty."

It is upon these principles that Mr. Adler has organized his society in New York, with the concurrence of the most advanced minds of American Judaism. By degrees, some "Gentiles" have joined it, attracted as much by the growing reputation of the young reformer as by the largeness of his ideas; and, for four years, the society has been obliged to occupy a more spacious hall. It has, indeed, one of the largest congregations in New York. Its "services," which take place Sunday mornings, consist only of a lecture, between two pieces of music. But, after the public have left, the members come together in a private meeting for considering the different social works which they have established,—particularly a Sunday-school for the teaching of morals, a kindergarten after the method of Froebel, an industrial school with a technical museum, and a service of domestic aid in the quarters of the poor. The success of these works has been a new means of propagating the principles of the society, which has thus gained the esteem of those most hostile to its opinions.

The influence of "Free Religion" is not limited to those societies which have accepted its name or its patronage. The Free Religious Association has become for Unitarianism what Unitarianism itself has been for other communions,—a leaven of intellectual liberty. The Unitarians reckon in the United States, according to their annual report of 1880, three hun-

*The Liberal League organization may have received some indirect impulse from the Free Religious Association, but it was not helped into existence by any official or direct action of the Association. The distinctive objects of the League, however, as at first organized, have frequently been considered on the platform of the Association.—ED.

†Affirmation is now allowed in many cases.—ED.

‡There is no law against "anti-religious publications," except the nearly obsolete *State* laws against blasphemy. The law concerning which the conflict came in the Liberal League was solely the United States law forbidding the use of the mails for obscene publications. This law is not so clearly drawn but that some works not clearly and purposely obscene, but scientific and literary, have been classed under it, and some persons in consequence have been unjustly prosecuted. The majority of the Liberal League favored the entire repeal of the law, for the sake of preventing these exceptional abuses. Mr. Abbot and his friends were in favor of amending the law as a remedy for such abuses, but opposed the entire removal of so necessary a safeguard against obscenity. Col. Ingersoll was never president of the League, but an active officer. He contended for the same object that Mr. Abbot had; and, also failing, then, as the author says, withdrew. It should be added, in justice, that the author's description of the majority of the League would, by no means, apply to all of them, however bad was their cause.—ED.

*This statement is true of "Free Religion" as *organized*. It imposes no definitions or decisions upon the united membership of a society, but *individuals* may freely make and teach such definitions and decisions as the result of their own thinking.—ED.

dred and forty-four congregations, three hundred and ninety-nine ministers (of whom three are women), two faculties of theology, one at Harvard, the other at Meadville, one monthly review and several weekly papers, and many charitable institutions. In works of practical religion and philanthropy, they abound. It might have been feared that after the departure of Messrs. Abbot, Potter, etc., their National Conference would incline more to the right wing. But, after some wavering, the majority refused to be led any farther in the way of dogmatism. Some of the most ardent reactionists retired in their turn,—notably, the Rev. Mr. Hepworth, who founded at New York an independent congregation upon the borders of Orthodoxy. With this disappearance of the extreme elements disappeared also the principal vitality of the controversy which had been carried on from the foundation of the conference; and Unitarianism was thus allowed to concentrate its activity upon practical measures, which would inevitably cause it to approach the position chosen by the Free Religious Association. That Association counts among its members more than thirty Unitarian ministers. Some of these go so far as occasionally to put their pulpits at the disposal of an agnostic like Mr. Adler, or a secularist like Mr. Holyoake, the president of the British Secular Union, or of a liberal rabbi like Mr. Gottheil of New York. To take part in the National Conference, it is henceforth sufficient to call one's self a Christian after the manner of the Rev. Mr. Chadwick, who extends this name to all persons born in the natural line of Christian civilization. Indeed, in its session of September, 1882, the conference adopted a new article in its constitution, to the effect that "the declarations of our constitution, though fairly representing the opinions of the majority of our churches, do not constitute an authoritative doctrinal test of Unitarianism, and are not intended to exclude from our fellowship any persons who, while differing from us in belief, are in general sympathy with our purposes and our practical aims."

Although New England has remained the headquarters of Unitarianism, the Unitarian denomination has not held its ground there in proportion to the increase of population. Even in Boston, though it numbers a thirtieth of the congregations, it has scarcely penetrated the lower classes, where the predominance of Irish emigrants has developed to a considerable extent the power of Catholicism; and, among the superior class, it is opposed by the Episcopal Church, which is becoming more and more the fashionable worship in the United States. Besides, Boston itself has ceased to be the exclusive centre of intellectual culture, "the hub of the universe," as its neighbors less favored in the domain of intelligence have ironically called it. On one side, the invasion of luxury and of social frivolity has somewhat broken in upon the simplicity of manners and the thirst for moral enjoyments which had survived the severity of Calvinistic theology; on the other, New York, St. Louis, Chicago, and other cities of recent growth, begin to dispute with it the monopoly of letters and the direction of American thought.

Happily for Unitarianism, it has found a fertile field for exploration in the interior States, where it responds at once to the double need of intellectual liberty and of religious culture. It is not surprising that it has taken a position there more independent than in the Eastern States. The Western Unitarian Conference has omitted in its constitution the preamble which provoked the dissensions, so regrettable, in the National Conference of 1865. Its principal organ, *Unity*,—edited with great breadth of view by the Rev. Jenkin Ll. Jones,—has taken for its watch-word the motto of Free Religion, "Freedom, character, and fellowship in religion." Numerous churches and entire groups of congregations—such as the Unitarian Conferences of Michigan and Kansas, the Fraternity of the Liberal Religious Societies of Illinois, etc.—are declared open to all who can work with them or derive any good from them.

The course of ideas which has thus emancipated Unitarianism has been equally felt by many other sects. The Progressive Friends who hold their annual session at Longwood, Penn., have fully adopted the platform of "Free Religion," if we may judge by the statement of their last general assembly. "The object of this organization," it declared, "is to promote the religion that is identical with physical, moral, and spiritual good. Independent of all dogma, we make a fraternal appeal for a gathering of all who desire to make the world better, and who esteem the truth more than any dogma or any sect." The Universalists, who owe their origin to a protest against eternal punishment, and who are reported to have a thousand congregations, have also an advanced section who fraternize with the "Free Religious" movement. The same may be said of the communities of Spiritualists that abound in the West, and that, according to Mr. O. B. Frothingham, reckon a million of adherents. But we must not judge of Spiritualism as we know it in Europe, if we may accept this definition of it by one of its warmest defenders, Mr. Giles B. Stebbins: "Every Spiritualist is of necessity a disciple of Free Religion, because the spiritual philosophy, in its breadth and its eclecticism, knows no limits, no barriers, and admits no other authority than the intuitions of the human mind, the truths of experience, and the results of scientific observation."

And, indeed, an important division of Judaism—while refusing to renounce their historical Church and appellation, that they may not have even the appearance of repudiating their ancestral name because of a social prejudice which follows them even in the New World—has seized this occasion to ally themselves, on the practical ground of religious fraternity, with the intellectual and moral forces of a civilization to which they are for the future completely assimilated. There are "reformed" Jews every day becoming more numerous in the United States, who have not followed Mr. Adler in his "ethical religion," but who have not the less broken away from the dogmatism of the synagogue. This reform, which began at the beginning of this century by the substitution of the common language for the Hebrew in the ceremonies of worship, has advanced successively to the abolition of all hygienic, ritualistic, and social proscriptions which characterized ancient Judaism, as well as to the abandonment of dogmas condemned by modern intelligence, such as belief in the fulfilment of prophecies. Many rabbis call in question the infallibility of the Bible, and some go so far as to deny the divine Personality,—that cornerstone of Semitic beliefs. Thus, Rabbi S. W. Sonneschein did not hesitate to declare, at the seventh meeting of the Free Religious Association, that Reformed Judaism fully corresponded with the actual movement of "Free Religion."

Doubtless, practical minds that have neither the leisure nor the taste to investigate religious questions (conservatives, who, through distrust of the unknown, remain faithful to the beliefs of their fathers; sceptics, who see in worship only an element of social life necessary to the education of the young and to the celebration of domestic solemnities,—in a word, the great majority of the nation) remain, and will for a long time remain, attached to the different forms of positive Christianity, and all the more as the Protestant clegy, especially in America, do not seek to impose their authority either in private or in public life; but, even among orthodox sects, the humanitarian tendency which has created "Free Religion" is distinctly seen. Tocqueville remarked, some time ago, that, instead of insisting upon the other life, American preachers turned constantly to the earth, and had, so to say, great difficulty in detaching their sight from it. If one reads to-day, in the American journals of Monday, the report of the principal sermons preached the preceding day by the ministers of the different sects, he will be surprised to see the small place which theology occupies compared with morals. The old Calvinistic theology is nowhere taught in its integrity. Even the flames of hell have become an argument in bad taste, which is willingly left to revival preachers and missionaries of the Far West. "Our clergymen," said one of the most respected chiefs of the Republican party in New York,—Thurlow Weed,—not long ago, in an answer to Col. Ingersoll, "do not dwell upon, or insist so much upon, the dark side of theology as formerly. In our day, their ministry is a ministry of peace, of charity, and of benevolence. This generation learns to love and to serve rather than fear our Creator and Lord."

This simple fact that people speak seriously of a fusion between the Unitarian right and the Orthodox left proves how much the lines of demarcation between the sects are losing their rigidity and precision. All Protestant denominations have actually in their ranks a party who aim to enlarge the interpretation of their dogmas and to broaden the field of their religious activity. Among the Methodists and Presbyterians, this tendency is shown by the numerous actions for heresy brought before their conferences and synods against ministers, and even against congregations. Among the Episcopalians there is the schism of the Reformed Episcopal Church, directed against the liberal ideas of "the Broad Church," as well as against the ritualistic innovations of "the High Church." But this tendency is most seen among the Congregationalists, who have no ecclesiastical authority for maintaining in their churches a uniform discipline and faith. The most popular of their preachers, the celebrated Henry Ward Beecher, said lately, in a sermon upon religious doubt, "No one ought to be counted among infidels who sees in justice the great end of human life, and who seeks for a more complete subjection of his will to his moral sense." Should we not think we were here listening to Mr. Potter or even Mr. Adler? Mr. Beecher having, moreover, offered his resignation in September last, for the reason that he had ceased to hold the principal dogmas of Calvinism, his congregation—one of the most numerous and the most important of New York—voted a resolution that, after having heard a full and free exposition of the doctrines of the Rev. Mr. Beecher, there was no reason why they should lose his services.* Even Catholicism, which in America seeks especially to make its value felt by means of its good works, by the extent of its charities, by the worth of its schools and colleges, does not refuse to associate in an emergency with the clergy of different Protestant sects, in order to effect some common object of morality or of public health or of beneficence.

V.

Is America, therefore, on the eve of sacrificing theology and even metaphysics on the altar of Positivism, and instituting a religion like that dreamed of by Comte, having for its objects humanity and earthly life instead of God and future life? This conclusion would be rash. There are, undoubtedly, in the United States a certain number of persons systematically hostile to every ontological conception, as well as to every religious idea, who proscribe even the mention of the Absolute and the Unknowable, because they see in such phrases an approach to theology. Some confine themselves to referring to the primordial properties of matter for the explanation of all phenomena. Others hold still to the criticisms of Voltaire and Hobbes, without suspecting that the progress of science has profoundly modified the conditions of the problem. It is this class which is represented by the *Truth Seeker* of New York and the *Investigator* of Boston In the latter city, they have for head-quarters an edifice erected to the memory of an American member of the French Convention,—Thomas Paine,—whose philosophical writings, completely forgotten in France, still play in the religious controversies of the United States an exaggerated part by reason of the indignation of their adversaries and the enthusiasm of their admirers. But Positivism, properly so called, whether in the sober and severe acceptation which Littré has given to the doctrine of Auguste Comte, or under the more embellished form of *Comtism*, which has obtained considerable success in England, has but few followers in the United States, notwithstanding the favor which the positive methods enjoy there. The American shows no predilection for fasting, even in metaphysics. Never has speculation taken higher flights than in these later times in the United States. There are, outside of the religious press,—even in localities of secondary culture,—journals whose title alone is sufficiently significant, such as *The Platonist*, of Osceola, Mo.; the *Journal of Speculative Philosophy*, of St. Louis, devoted to the advocacy of the doctrines of Hegel; the *Religio-Philosophical Journal*, of Chicago, which printed lately, it is said, nine thousand copies.

From New York to San Francisco, from Chicago to Cincinnati, every city of consequence has its metaphysical club or institute. The most celebrated is, unquestionably, the School of Philosophy, opened at Concord, Mass., in 1879, by Mr. Bronson Alcott, with a vigor which does honor to the eighty years of this venerable neo-Pythagorean, as well as to the vegetable diet of which he has, from principle, been a faithful adherent for more than forty years. The School at Concord seems an attempt to reproduce, in the midst of American society of the nineteenth century, the garden of the Academy where Plato and his disciples

* The author has evidently mistaken the Brooklyn Association of Ministers for Mr. Beecher's congregation. But the corrected fact would make his argument even stronger. —ED.

discoursed under the shade of the olive-trees. Every summer in the month of July, an intelligent company, drawn from all points of the Union to the little town of Concord, meet at Mr. Alcott's place,—the Orchard House,—where are given courses, or rather free lectures, upon philosophy. The principal difference from the Greek Academy—wholly to the advantage of Concord—is that the door is not closed against the fair sex, who largely profit by it, if the reports may be believed, which attribute to them two-thirds of the attendance, estimated last year at nearly a hundred and fifty persons. There are two lectures a day, one at nine o'clock in the morning, the other at half-past seven in the evening. In the interval, the students, male and female, arrange their notes, take their meals at home, or walk in the pine woods, exchanging their ideas upon the grave problems of our destiny. Among the principal lecturers, besides Mr. Alcott, are Dr. Jones, the founder of the Platonic Clubs in Illinois; Prof. Harris, editor of the *Journal of Speculative Philosophy*; Mrs. Howe; William Henry Channing; Prof. Emory, etc. Emerson himself was heard there in 1880.

These names sufficiently show that the philosophy of Hegel prevails almost exclusively at Concord, although the founders of the school proclaimed the most absolute liberty of opinion. It is a strange phenomenon of the religious movement of the United States, this revival of the Hegelian doctrine, at the time when, in Germany, the death of Prof. Rosenkranz has vacated the last chair devoted to pure Hegelianism. Such has been the increasing success of the institution founded by Mr. Alcott that the orthodox have felt obliged to establish a competitor by founding, two years ago, on the same basis, at Greenwood, near New York, an "Encampment of Christian Philosophy."

Among the less cultivated population of the West, the instability of belief has naturally taken a more violent and aggressive form. A member of the Free Religious Association reported, at the meeting in 1881, that there were in Kansas, even in the smallest towns, groups of Liberals not only unchurched, but openly hostile to all existing forms of religious organization. At the same meeting, another speaker (a Spiritualist) told of the existence of a hundred meetings in the open air in the Western States, independent of all sects, of people who came together "to say before God what they believed in their souls to be the truth,"—laborers from their farms, men of business forsaking their offices, women leaving their household cares, all "drawn by an inward hunger for spiritual nourishment." These two remarks have nothing contradictory: they rather complement each other. They equally prove the thirst for a new faith among those who are no longer satisfied with the old religious forms. It is, in some sort, the last term of the disintegration, or of the breaking up, which, as its goal, the spirit of Protestantism has never ceased to pursue into the very heart of dogmatic churches and confessions of faith. But this was the inevitable transition between two currents of belief.

Coming side by side with this intellectual fermentation, the tendency to relegate theology to the second place in religious activity even in certain orthodox churches, and which has found its most complete expression in the platform of the Free Religious Association, may well be considered a symptom of the religious interregnum, long ago predicted by Emerson. It is probable, and we may rejoice at it, that religion will preserve in future the eminently practical and humanitarian character which has come to distinguish it, more and more, in the United States. But men will always have a propensity to group themselves according to their beliefs; and we already hear, even in the ranks of the Free Religious Association, the day predicted when a new religious synthesis shall present itself for acceptance, by the force of evidence alone, to all the adherents of "Free Religion."

Is it possible now to foresee whence will be drawn the elements of this new theology? According to Mr. Potter, the actually rival schools of intuition and observation will both have a part to play in the formation of the philosophy destined to perfect the work of "Free Religion." We share with Mr. Potter the intimate conviction that intuition will have its word to utter in the future development of psychology, and we are far from contesting the happy and durable influence which Transcendentalism has exercised upon the public mind of the American people. We cannot, however, repress the question whether, as a system of metaphysics and religion, the school of German Idealism may not have run its course in the United States as it has in Europe? Almost all its old champions have remained loyal to the faith of their youth: those who survive use to-day the same language they did thirty-five years ago, with a conviction and enthusiasm which neither age, the frictions of life, nor even the progress of positive science have cooled. But their ranks are thinning more and more; and, notwithstanding the momentary fashion of Hegelianism at Concord, new recruits do not come to take the place of those who have gone to seek in another world the confirmation of their hopes. Of a considerable number of congregations founded by the Transcendental movement, there remained, lately, only the church of Samuel Johnson, at Lynn, Mass. Yet this probably owed its longevity only to the personal influence of its minister, and it is to be feared that it may have disappeared with him. In Boston, the survivors of the Twenty-eighth Congregation meet every Sunday in the spacious edifice gratefully erected to the memory of Theodore Parker. But, in this pulpit,—from which their founder formerly denounced the method and doctrines of sensationalism,—the fathers of the church whom they quote and comment upon to-day are Spencer and Huxley, Dalton and Tyndall, George Lewes and Claude Bernard. This is a sign of the times. It is, indeed, the doctrine of evolution, as it appears from the recent generalizations of Herbert Spencer, which has rapidly become the dominant philosophy of Americans. Recently, one of the present editors of *The Index*—Mr. B. F. Underwood—stated that this doctrine was received by the major part of the Free Religious Association. Here, however, appears a phenomenon characteristic of the American mind, which, when it adopts a philosophy of the Old World, immediately transforms it into religion, as has already been seen in regard to German Idealism. So the philosophy of evolution, as soon as it was transplanted into the United States, took the metaphysical form of *monism*, which is foreign to the old quarrel between the materialists and spiritualists, but is as profoundly religious in its conclusions as it is faithful in its premises to the positive methods. "The destructive period has nearly passed," wrote Mr. Frothingham, in 1875, in the preface of a volume—*Freedom and Fellowship in Religion*—published by the Free Religious Association: "the constructive period has begun. In science, the greatest minds are distinguishing themselves by positive generalizations. In philosophy, the lines are converging toward certain central principles. . . . Sentiment and imagination, recovering from the shock occasioned by the fall of their old idols, are rallying courage to do their part in peopling the new heavens with worshipful ideals."

Though Herbert Spencer professes to reject pantheism equally with theism and atheism, his conception of the Unknowable as a mysterious and transcendent power, and at the same time omnipresent and eternal, the support of the world and the source of all phenomena, fails not to favor that kind of mysticism which incites in religious pantheists the sentiment of communion between the being finite and the Being Absolute. It is this side of the new philosophy which seems especially to have attracted the American mind. A personal friend of Herbert Spencer, Prof. John Fiske, who passes in the United States for one of the first and most eloquent interpreters of English philosophy, has developed the synthesis of evolution under the name of Cosmic Philosophy, not hesitating to recognize the possibility of combinations of matter and force "as much superior to humanity as humanity is to the crystal and the algæ," as well as the existence of an impersonal Power which manifests itself eternally and universally in the phenomenal activity of the universe. This doctrine rapidly formed a school; and even its title of *Cosmian*, already adopted (for a hall) by one of the earliest societies of the Free Religious movement,—the free congregation of Florence, Mass.,—is perhaps destined, as Mr. Potter lately suggested, to furnish the name of a new worship. If one looks over the essays and lectures published in abstract or in full each week in *The Index*, he will certainly be surprised, not only at the number and ardor of those who attach themselves to the synthetic side of *evolutionism*, but also at the resources which they find in it for opening new horizons to the religious sentiment, and for satisfying even its most exalted aspirations. Doubtless, many of these writings have value only as an indication of tendencies; but there are pages of Messrs. Abbot, Gannett, and Savage, and lectures of Messrs. Potter, Frothingham, Chadwick, etc., which are distinguished as much for vigor of demonstration as for elevation of ideas and poetry of language. These are, in every instance, writings to be recommended to any one who fears to find, in the modern progress of science, a cause of deterioration for all that constitutes the strength and grandeur of the human mind.

While admitted even into certain orthodox pulpits by preachers who endeavor to accommodate it to the exigencies of revelation, the evolutionist theory has become, among some Unitarians, the very essence of religion. The Rev. Minot J. Savage, particularly, the minister of an important Unitarian congregation in Boston, has made himself its eloquent and indefatigable apostle in his works, *The Religion of Evolution* (1876), *The Morality of Evolution* (1880), and the *Belief in God* (1881). And the members of the Free Religious Association who heard him, at its meeting in 1881, discourse upon the state of contemporary morals, witnessed the curious spectacle of this Christian minister maintaining against a professed atheist [agnostic?], Mr. Felix Adler, that morals have for their foundation social utility, and for their origin the experience acquired by the race. Truly, if Mr. Savage rejects the idea of an absolute and transcendent morality, he none the less admits that, in the midst of human variations as to the rules of conduct, the principle of a distinction between good and evil as well as the significance of the idea of duty represent among men "something constant and immutable as a rock in the midst of the waves."

Besides, Mr. Savage does not hesitate to declare that *Cosmism* forms a necessary complement to Christianity and a superior phase of religious evolution. "All religions," said he, in a sermon preached before his congregation in 1880, "may be ranged under three categories,—the worship of detached manifestations of the universe, the worship of the human ideal, and a third form which may be called scientific or cosmic. This last offers for the object of our admiration, our reverence, and our adoration, the universe considered as a whole,—the unity, the mystery, the wonder, the power of that great Being on whom we depend. I believe that the religion of the future will be a combination of these three elements: it will appropriate the artistic tendencies of paganism, the moral ideal of Christianity, as well as that larger conception which includes the two others,—the cosmic worship of the universe."

Upon certain points, particularly when he seeks for the attributes which science gives to the Deity, this disciple of Herbert Spencer lends to the philosophy of evolution certain consequences which evidently surpass the intentions and the thought of the master. But this philosophy, on one side, although proscribing metaphysics, opens the door to it, as has been charged by certain positivists, by professing to formulate a general law of the universe, which surpasses the limits of observable reality. On the other side, as we have said before, the religious genius of the Americans consists precisely in regarding under a certain spiritual angle philosophical or scientific theories, even those in appearance most refractory to every attempt at metaphysical construction. It is this process of spiritualization which Mr. O. B. Frothingham described in these terms in his opening discourse at the third meeting of the Free Religious Association: Vogt and Büchner profess materialism, and demonstrate intelligence. Huxley talks of protoplasm, and sets us wondering at thought. Moleschott tells us that light is the author of life, and bends our head before the uncreated Light.

We do not know whether America, as certain of its writers affirm, will have the honor of giving to the world a new faith. But, as far as concerns the Cosmians, the Transcendentalists, or those who take a position intermediate between these two, if we stop at the last phases of the rationalistic movement, which we have seen to have begun in the revolt of Unitarianism against the dogmas of predestination and the Trinity, we shall find everywhere as an affirmative element, by the side of free thought carried to its farthest limits, the perception of an absolute and unconditioned Being who reveals himself in nature under the infinite diversity of phenomena. Whether the object of this common faith be named "the Eternal One" of Mr. Emerson, or the "Cosmos" of Prof. Fiske, the "God of Science" of Mr. Abbot, or the

Digitized by Google

"God of Evolution" of Mr. Savage, the "Universe in all its possibilities" of Mr. Potter, or "the Power beyond and above us" of Mr. Hinckley, or even "the Being behind all appearances" of Mr. Adler,—it is, to sum up, pantheism which flows with wide sweep through the advanced regions of religious thought in the United States. And thus is realized the prediction formulated by Tocqueville, of an epoch in which the Unitarian reform in full bloom would seem rather to indicate a recandescence of monotheism: "In democratic times, the idea of unity besets the human mind; it seeks it on all sides, and, when it thinks it has found it, it gladly lies down upon its bosom and rests there. But not only does it attain to the discovery that there is in the world but one creation and one Creator,—this primary division still troubles it, and it willingly seeks to enlarge and simplify its thought by comprising God and the universe in one sole whole."

CORRESPONDENCE.

THE WITCHCRAFT DELUSION IN BOSTON.

Editors of The Index:—

In the valuable article on "Union of Church and State in Connecticut," published in your columns March 29, the writer incidentally touches on the treatment of witches at Salem. She says, "This number [*i.e.*, of witches executed in the Connecticut colonies] is in striking contrast to the score of withered men and women whom Salem, led on by the blind fanaticism of Cotton Mather, sent to the ducking-stool and the gallows." We must not forget that the Mathers were of Boston, and identified with the history of witchcraft in that city only, and that the treatment of witches in Boston was quite different from that pursued in Salem, the last city following relentlessly the English method of dealing with witches, which was one of a continuous public watch over the accused during every hour of the day and night. Even the august Gov. Winthrop leaves on record his testimony to the revolting treatment, and to the fact (?) that the "imps" or "familiars" were actually seen visiting certain accused ones, this fixing their guilt beyond doubt.

In Boston, as the strange mental infection spread, the civil authorities sought counsel of the ministers of the city.

Increase Mather's word was, "Let the accused be treated with the most tender caution." I think that is his exact phrasing. How it thrills,—this one echo of tenderness above the cruelties of religious fervor and Biblical literalness!

It is testimony that the humane Mather's counsel had the effect of permanently checking the persecutions and executions of those condemned.

Cotton Mather, by very full testimony, is shown to have co-operated earnestly with the spirit of his father. Through his exertions, the accused were kept in privacy, and their distressed souls were soothed by the singing of hymns and prayers. He refused to divulge the names of such as were accused to him in private confession.

Specially trying cases he took to his own home for days and weeks.

I believe this charge of his fanaticism in the witchcraft tragedy, and his incitements to persecution, rest solely on the words of one Robert Calef, for a long time a not very well-defined personage in history. Several years ago,—six or seven, perhaps,—I was present at a conversation between Mr. Wm. F. Poole, well known as critic and historian, and a third party, which Mr. Poole opened by the joyful exclamation, "I have found out who Robert Calef was."

Three years ago, I saw Mr. Poole busy on the topic assigned to him by the editor of the *Memorial History of Boston;* namely, "The History of Witchcraft in Boston." He told me new testimony had been unearthed from old papers in the possession of the public library of Worcester, Mass., showing the truth most clearly concerning the attitude of the Mathers toward the witches. In Mr. Poole's paper, vol. ii., *Memorial History*, Calef is shown to be a very young, untaught man, guilty of gross impertinences and injustice toward the Mathers, which created public and private feeling. It is difficult to see anything that can be called testimony coming from Calef. Mr. Poole (if I may go aside for a moment), in the outset of his paper, consoles us, in recalling the agony and humiliation of that cruel time, by reminding us that the affliction was only a wave from distant Europe, that broke exhausted on our shores, and that, for the scores who were executed for witchcraft in Massachusetts, scores of thousands under the same accusation had been tortured to death in England, Scotland, France, and Germany.

Please let the fact that it is more than two hundred years since the public mind has been poisoned by this shaft winged by an untaught boy be my excuse for directing attention to the latest investigation of the subject.

MARY GUNNING.

ALTAMONTE, FLA., April 9, 1883.

A BUSINESS MAN'S VIEW.

Editors of The Index:—

I have just been reading *The Index;* and it occurred to me that I would write to it, although I never did such a thing before. I suppose all writers are teachers, and teachers mould and shape the destinies of character and empire. I am a business man, not a writer. But I would like to inquire if you have not some one who can write and teach us occasionally from a purely business stand-point. That seems to me to be a field wonderfully neglected. Everybody is looked after but the honest business man: he is left to look after himself; and, as to that matter, about everybody else who is unwilling or otherwise hindered from doing so. The progress and happiness of any community or State are measured by its business health and vigor. I do not intend to depreciate at all the efforts already being made in politics, society, or religion, but instead of *all* "Repent, believe, and be baptized," give us a little, "Be honest, tell the truth, and pay a hundred cents on the dollar." Instead of *all* Homer, Horace, and Virgil, give us a little wise and just revision of our laws, that they may be good for the honest business man. Instead of *all* of the great bandana wave of civil service reform, give us a little more honest effort at the polls. If some one would give this subject its reasonable service, it would certainly be of equal value, to any community, to the knowledge of whether or not Voltaire or Tom Paine died on a straw or feather bed

A BUSINESS MAN.

PROVIDENCE, R.I., May 11, 1882.

BOOK NOTICES.

JESUS: HIS OPINIONS AND CHARACTER. The New Testament Studies of a Layman. Boston: Geo. H. Ellis, 141 Franklin St. 1883.

In this volume of 471 pages, we have the results of a judicial and critical study of the New Testament. The author presents what his investigations have constrained him to believe is the truth regarding the character, opinions, and controlling purposes of Jesus, as indicated by the traditions of him and of the origin of Christianity. The work contains ample evidence in every chapter of great thoroughness in the study of the New Testament, by a mind practised in scrutinizing testimony and weighing evidence, and possessing the ability to state his conclusions with directness, clearness, and strength. It is the most satisfactory effort we have yet seen to set forth what is indicated by, or fairly inferable from, the Synoptical Gospels. The writer of the Fourth Gospel is discredited, for reasons fully stated. The Gospels of Matthew, Mark, and Luke, are assumed to be authentic, and a *bona fide* setting forth of the career of Jesus as it was believed by the writers of them to have occurred. The question of authorship, arising as it does between the persons to whom these documents are ascribed "and certain later adherents of Jesus, unknown, but not a whit less obscure, illiterate, or unauthorized, is regarded as a question of secondary importance." The author of this work says that his method of procedure in his investigations was to draw up, by reference to the original text of the Synoptical Gospels, every declaration reported to have been made by Jesus during his life, together with such *res gestæ* as might be considered, along with his language, as expository of his thought. These declarations were arranged and classified by subjects,—whatever Jesus was believed to have said, and what might seem legitimately to relate to it, being placed in the same category. "Finally, a finding or summing up—such as is imposed upon the judicial mind in determining, from a mass of notes or oral testimony or of documents and papers, what are the facts upon which, under the proper rules of law, the rights of litigants are to be determined—was undertaken, and a statement drawn up of what Jesus seemed to have believed and taught." The author believes that the following propositions in reference to Jesus are established by his investigation, and "as well verified as any events of ancient history."

1. "There lived in the beginning of the present era, in Palestine, in Syria, a teacher, prophet, and holy man, from whom the great world-religion, called Christianity, is named; and who, though not the author of its prominent ideas and doctrines, nor the inventor of its dogmatic form, was, in some sense, its inspirer and source. He was put to death by his countrymen, who mainly rejected his personal claims and repudiated his peculiar doctrines."

2. "He believed and taught that the end of the world, both as to its internal economy and physical constitution, was impending; and that, after his own death (which, if he did not provoke, he took no pains to avert), he would return to establish on the ruins of the old order a new kingdom of the righteous, to endure forever."

3. "He taught the blessedness of poverty, the incompatibility of wealth with the spiritual well-being of mankind, and that, to enter the kingdom of heaven, men must forsake and surrender their possessions, and forego all care for their physical existence."

These propositions are stated in the order of the validity and cumulation of the proofs upon which they are believed to stand. Another proposition, that Jesus taught rules of personal conduct requiring, among other things, universal and indiscriminate beneficence, the absolute forgiveness and sufferance of injuries, simplicity and directness of speech, avoidance of censoriousness, chastity and self-denial to the point of extirpation of natural instincts, and the repression of ambition, the author thinks "deniable only by a severe and rigorous scepticism." Jesus, he believes, had a certain power of allaying and curing maladies resulting from "impaired nervous action." "He did not originate nor give any special stress to the doctrine of personal immortality. . . . His scheme of a future life was swallowed up in his scheme of an impending kingdom of heaven."

The opinions of Jesus in regard to the speedy end of the world, the incompatibility of property with salvation and of marriage with the perfection of righteousness, as to indiscriminate alms-giving, to absolute non-resistance, to the hostility of political society to the order of the kingdom of heaven, are freely criticised. The author declares that his criticism "is no personal criticism or private judgment. It is, rather, the deliberate judgment of Christendom against Christ. It is the sober second thought of the educated and fully developed age in reference to the enthusiasms and over-faith of the mind that introduced it."

The work is the production of a clear-headed, logical, honest thinker, a laborious student, and a writer of unusual power. It is judicial in tone, and impartial and candid in the treatment of the theme to which it is devoted.

Judging from the style and method of the author, he is one who has had large experience in examining evidence, and is probably a lawyer who ranks high in his profession. The majority of books on this subject have been written by theologians, or those whose theological education has exerted a predominant influence upon their minds. Here, we have a work from a legal and judicial mind; and it is the best work that we have read attempting to deduce from the traditions of Jesus a rational conception of his character and teachings by applying to these traditions the recognized rule of historical criticism.

RIVERS OF LIFE; or, Sources and Streams of the Faiths of Man in all Lands, showing the Evolution of Faiths from the Rudest Symbolisms to the Latest Spiritual Developments. By Maj.-Gen. T. G. R. Forlong. New York: Bouton. London: Quaritch. 1883.

This is the most comprehensive work that has yet appeared on ancient comparative religion. It will be indispensable to the student, because it not only contains all the subjects treated of by Higgins, Knight, Inman, and by still more recent Oriental scholars, but sheds over such knowledge the light of personal investigation. The learned author has, during a long course of years, utilized with indefatigable diligence the singular facilities afforded him by his duties as superintending and chief engineer under the Indian government. Symbolism, often only studied by the aid of pictures and books, he has studied on the spot, aided

Digitized by Google

by careful investigation of native customs and rites, and by intimate intercourse with the priests and professors of various religions. Thus, he has collected an immense mass of information not generally attainable. The seven hundred books to which he refers can be obtained and consulted, though not always with facility; but it is given to few to travel over the length and breadth of India, Burmah, and Siam, speaking all the dialects, living among the people, and examining at each locality the ancient monuments and symbolisms side by side with their modern developments. This accumulation of information has been arranged and classified with perfect clearness in two magnificent quarto volumes, with good index, and enriched with three hundred and fifty-eight illustrations of great value and interest. The work is accompanied by a chart for students, which gives the clew to the relative antiquity of each religion, cult, and symbolism. The first volume, after preliminary elucidations, treats of tree worship, serpent worship, phallic worship, fire worship, sun worship, ancestor worship; the second volume, early faiths of Western Asia, faiths of aborigines in Europe, faiths of Eastern aborigines, non-Aryan, Aryan, and Semitic. From facts thus brought together, and forming an encyclopædia of curious matter, Gen. Forlong constructs a theory of the evolution of faiths possessing the advantage of the author's personal observation of the existing state of occult rites and ancient shrines, full of suggestiveness even on subjects outside the scope of his elaborate work, —a work which no one interested in comparative religion and ancient symbolism can afford to be without.

THE *Popular Science Monthly* for June opens with an article on "Medical Quacks and Quackeries," by Dr. F. J. Shepherd, which is both interesting and instructive. The remainder of the table of contents is as follows: "Recent Magnetic Storms and Sunspots," by Garrett P. Serviss (illustrated); "Vivisection in the State of New York," by B. G. Wilder, M.D.; "Quartz: Its Varieties and Formation," by Rev. J. Magens Mello, F.G.S.; "The Remedies of Nature, Consumption" (*concluded*), by Felix L. Oswald, M.D.; "A German View of the *Data of Ethics*," by Friedrich von Baerenbach; "Cost of Life," by John Pratt; "On Science-teaching in the Public Schools"; "The Chemistry of Cookery," by W. Mattieu Williams; "Our Marriage and Divorce Laws," by Gordon A. Stewart; "Evolution," by H. H. Boyesen; "The Boundaries of Astronomy: II. The Nebular Hypothesis," by Robert S. Ball, F.R.S.; "Darwin and Copernicus," by E. Du Bois-Reymond; "Whistling," by T. F. Thiselton Dyer; "Sketch of Prof. Benjamin Silliman, LL.D." (with portrait); "Correspondence"; "Editor's Table: Science, Literature, and Theology. Heber Newton and the Heresy-Hunters. The Bauquet to Dr. Holmes"; "Literary Notices"; "Popular Miscellany"; "Notes."

THE London *Spectator* for March 17 and 24 contains a long review of Prof. Nichol's *History of American Literature*, from the pen of Mr. Henry Norman. The review is no more interesting as a criticism of Prof. Nichol's book than for its general discussion of various striking features of the first century of our American literature. It is the most careful and, on the whole, the justest and most satisfactory review of Prof. Nichol's interesting work which we have seen; and we are glad to see it appear where it does, since the corrections made by Mr. Norman's exact hand are more necessary in England than in America. These corrections are mostly of slight inaccuracies and errors, due to the author's want of familiarity with American life; but some more serious disproportions and misconceptions are pointed out. And we were especially glad to see the reference to Webster and the Compromise measures, and the fuller justice insisted on for Parker. We commend Mr. Norman's thoughtful articles to the readers of Prof. Nichol's work.

WE have received from the publishers, Bangor, Me., the *Q. P. Index Annual* for 1882. In regard to this publication, the London *Oracle* says: "In America is published yearly an index to the principal magazines, from which you may learn, for instance: . . . whether an article is a review, poetry, fiction, illustrated, a translation, or whether it may be characterized in half a dozen other different ways. . . . Why does not one or another of those who are constantly asking us how an income may be made or added to do a similar service for English magazine readers? Chief qualifications for the work are perseverance, accuracy, and that uncommon endowment, common sense. Let some one possessing these send to Bangor, Me., U.S., for a copy of *Q. P. Index's Annual* for 1881 as a pattern, and then set to work on some English periodicals. Poole's Index to all periodical literature will not supersede such works as *Q. P. Index's.*"

THE *Unitarian Review* for May has just come to hand. "The Art of Raphael" is the subject of a critical essay by John W. Chadwick. Rev. Edgar Buckingham has an article entitled "The Truth: What ought we to believe?" Rev. J. Frederick Dutton writes admiringly of "The Spirit of Plato," whom he calls "a universal, all-sided man." "Socrates" furnishes W. C. Collar with an always interesting subject of criticism and praise. Rev. George Putnam writes in deprecation of "Doubt," evidently not believing with a well-known writer that "doubt is the beginning of wisdom." In his "Notes from England," Rev. John Page Hopps refers to "Mr. Moody's Campaign," "The Salvation Army," and "Haeckel on Cell-souls and Soul-cells." Mrs. Lowe's notes treat of current literature and kindred topics.

"MACMILLAN'S MAGAZINE" for May has a long instalment of a new story by Mrs. Oliphant, entitled "The Wizard's Son." "Unwritten History" is a recent lecture by Prof. Huxley, delivered to the Eton Volunteer Corps. "A Naturalist's Paradise" is described by an unknown writer. Prof. Jack writes about "The Scotch Universities Bill," and James Bryce has an appreciative memorial essay on the dead historian, John Richard Green. Published in London and New York.

PERSONAL ITEMS.

SAMUEL J. TILDEN has sent $200 for the relief of Mrs. Meikleham, the only surviving grandchild of Thomas Jefferson, who is in destitute circumstances in Georgetown.

THE demand for Mr. Gladstone's speech on the Affirmation Bill is said to be so great that the Liberal Central Association of London will issue an edition of a hundred thousand copies.

JOHNSON G. WHITTAKER, the colored cadet who acquired notoriety three years ago in connection with a charge of having mutilated his ears while at West Point, is now filling a professor's chair in the Avery Institute at Charleston, S.C.

DR. DORNER, the German theologian, writes to a friend in this country that Newman Smyth has given, "in a complete and accurate form, a sketch of the postulates of my eschatology." This is a certificate for Joseph Cook, who would go back of Smith to Dorner.

MISS ANNA DICKINSON is now in New York. She is in unusually good health, and is about entering on a course of readings from her drama, "Aurelian," and from a dramatic lecture on "Jeanne d'Arc." She will be heard in a number of the Eastern cities during the spring.

RICHARD LEPSIUS, professor of Egyptology and comparative philology at Berlin, recently celebrated the fiftieth anniversary of his doctorate, and received on that occasion a congratulatory address signed by one hundred and fourteen eminent literary, scientific, and professional men and women of England.

MISS A. M. FIELDE, a missionary stationed at Swatow, China, who has just returned to this country on a visit, has, during the past four years, in addition to her missionary labors, prepared a dictionary of the Swatow dialect. It is a book of some six hundred pages, the first work of the kind ever published.

LAST week, Anthony Comstock insulted and arrested a man in New York, who proved to be a deputy of the sheriff; and A. V. Davidson, sheriff, learning of this abuse of authority, wrote to Comstock: "Your warrant as special deputy sheriff is hereby revoked, and you are expressly forbidden to exercise any authority under or by virtue of said warrant from and after this date."

LYDIA PINKHAM, whose portrait is so familiar to all Americans, died last Thursday at her home in Lynn, Mass. Her "Vegetable Compound," whose laboratory at first was on her kitchen stove, and for the advertisement of which she has paid of late as high as $200,000 annually, realized her an ample fortune from its sale. If she has any admirers, they will be able to secure for themselves any number of her likenesses at small cost.

SIR MICHAEL BASS, made world-wide famous through "Bass' Ale," will doubtless be remembered longer for his charities than for his breweries. In addition to supporting liberally all benevolent works in Derby, he has presented to the town a fine park, public baths, and a free library, at a cost to himself of about $250,000. To the town of Burton, he has given two churches, with parsonages, schools, and endowments, valued at more than $350,000, and an institute and club house worth $200,000. To Rangemore, he has given a church and auxiliary institutions costing $65,000; and many other places have received rich gifts from his bounty.

IT is related of the much-loved Queen Margarita of Italy that when, in the course of her Shaksperian studies, she came to the most familiar, "A man who hath no music in his soul is fit for treason, stratagems," and all the rest, she threw down the book. She would have no more Shakspere. "Is there not the King, Victor Emmanuel, my uncle, whom all the world calls 'Il Re Galantuomo,' who cannot, for the life of him, distinguish between one tune and another? And no member of our family, the House of Savoy, has from time immemorial shown the slightest taste for music,—are we not honest people?" The Queen herself, it should be said, though she does not wish to be reckoned except with her race, has highly cultivated musical taste and a discriminating ear also.

THE papers state that, since 1872, Washington Roebling, chief of the engineering staff of the East River Bridge Company, has been confined to his room from nervous prostration, and that his wife, when he was first attacked, began to study engineering, and "succeeded so well that in a short time she was able virtually to assume the duties of chief engineer. Such an achievement is something remarkable; and, to illustrate her proficiency in engineering, one instance will suffice: When bids for the steel and iron work for the structure were advertised for three or four years ago, it was found that entirely new shapes would be required, such as no mill was then making. This necessitated new patterns, and representatives of the mills desiring to bid went to New York to consult with Mr. Roebling. Their surprise was great when Mrs. Roebling sat down with them, and by her knowledge of engineering helped them out with their patterns, and cleared away difficulties that had for weeks been puzzling their brains." Her reward so far has been the distinction of driving the first carriage over the bridge.

SAMUEL JOHNSON.

Lectures, Essays, and Sermons.

With a Memoir by SAMUEL LONGFELLOW, and a fine Steel Portrait. Crown 8vo. $1.75.

CONTENTS.—Memoir; Florence; The Alps of the Ideal and the Switzerland of the Swiss; Symbolism of the Sea; Fulfilmen tof Functions; Equal Opportunity for Woman; Labor Parties and Labor Reform; The Law of the Blessed Life; Gain in Loss; the Search for God; Fate; Living by Faith; "The Duty of Delight"; Transcendentalism; Appendix.

"This is one of the best of books, and will help to preserve the name of one of the best of men."—REV. CHARLES G. AMES, in the *Sower*.

"The Memoir by Mr. Longfellow . . . most faithfully represents the scholar and author in his best moods and the varied phases of his intellectual life."—*Salem Observer*.

"He was a man of true nobility of soul, of profound and elevated thought, of absolute faith in God, of clear spiritual insight, of perfect sincerity, and a stainless moral life."—*Worcester Daily Spy*.

"His insight, his faith, his ethical nobility, shine out on every page. They are none of them so lofty that they do not touch the humblest things with their illumination."—J. W. CHADWICK, in *Atlantic Monthly*.

"The lectures, essays, and sermons were well worth preserving. They are characterized by all of Samuel Johnson's breadth and depth of thought and eloquence of expression."—*The Commonwealth* (Boston).

A LITERARY AVALANCHE.

Overwhelming opposition and delighting all k[illegible] f good books. "What IS the world coming to? The poor man is now on an equality with the richest so fa[illegible] s books are concerned"—is a fair sample of thousands of quotations which might be made from the letters of customers, and from newspapers not influenced by the lash of millionnaire publishers.

FIFTY TONS OF CHOICE BOOKS, a large portion of them the best editions published in this country, now ready; and your own selections from them will be sent to any part of the continent for examination, if you will give reasonable guarantee that the books will be paid for after receipt, or returned, *return* transportation at *my* expense.

SPECIAL BARGAINS are offering this month. New publications are added to the list every week.

Prices are lower than ever before known. My books are NOT sold by dealers,—prices too low for them. Among the authors and works are those of:—

Dickens,	Froissart,	Proctor,	Geikie,	Burns,
Irving,	Green,	Huxley,	Kitto,	Ingelow,
Walter Scott,	Grote,	Tyndall,	Conybeare	Arnold,
Thackeray,	Carlyle,	Rawlinson,	and Howson,	Goldsmith,
George Eliot,	Lossing,	Bronte,	Taine,	Tennyson,
Longfellow,	Creasy,	Mulock,	Chambers,	Library of
Gibbon,	Schiller,	Cooper,	Shakespeare.	Universal Knowledge,
Macaulay,	Bacon,	Kingsley,	Milton,	and Others.
Bancroft,	Herbert Spencer,	Farrar,	Byron,	

Descriptive circulars sent free on request, or my 68-page Illustrated Catalogue, for three cents. Please mention this paper.

JOHN B. ALDEN, Publisher, 18 Vesey Street, New York.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

THE INVESTIGATOR.

Published every week at the Paine Memorial, Appleton Street, Boston, Mass.

Volume Fifty-second.

Price $3.00 per annum; 75 cts. for three months to trial subscribers.

The INVESTIGATOR, as heretofore or since its first commencement upward of half a century ago, is devoted to the welfare, improvement, and happiness of men and women here and now, in this world, the only world of which there is any positive or demonstrated knowledge. This is the INVESTIGATOR'S basis of action, and the best exertions of its managers will always be used to render it a free and independent journal, devoted to the development and promotion of genuine Liberalism, or Universal Mental Liberty, Free Thought, Free Inquiry, Free Speech, and a Free Press.

JOSIAH P. MENDUM,
PAINE MEMORIAL BUILDING,
Appleton St., Boston, Mass.

THE QUAKER INVASION OF MASSACHUSETTS. By R. P. HALLOWELL. 1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

HOUGHTON, MIFFLIN & CO., Boston.

THE SECULAR REVIEW.

A JOURNAL OF

English Liberalism.

CHARLES WATTS, W. STEWART ROSS, } Editors.

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.
Subscriptions may be left at THE INDEX office.

Evolution and Religion.

BY JOHN FISKE.

"The gem of the Addresses" at the Herbert Spencer Banquet in New York.

Published in tract form by the Free Religious Association. Price 5 cts.; sent by mail, 6 cts.; ten for 35 cts.; one hundred for $2.50. Buy it for distribution. Address

FREE RELIGIOUS ASSOCIATION,
3 TREMONT PLACE, Boston.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12	Insertions,	. . .	10c. per line.
" 13 " 25	"	. . .	8c. " "
" 26 " 51	"	. . .	6c. " "
" 52	"	. . .	5c. " "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

EX-EMPRESS EUGENIE is going to build a church in Flamborough, Eng., in memory of her son. Its estimated cost will be about £70,000. The coffins of Napoleon III. and of the Prince Imperial will be transferred thither as soon as the building is fit to receive them.

ENGLISH ways are almost as "peculiar" as those of the "heathen Chinee." While English law punishes with fines and imprisonment any so-called "blasphemy" of the Deity Englishmen are supposed to worship, yet it allows a brisk trade in false gods to be carried on with impunity by English firms. An uncontradicted item, going the rounds of the newspapers, states that a thousand glass gods, which cost thirty-seven cents apiece to manufacture, and which sell for four dollars, were recently sent to Burmah from Birmingham, Eng.

LAST Sunday was the anniversary of the death of Garibaldi, which was commemorated in London by the unveiling of a medallion at the Stafford House. Many distinguished persons were present, among whom were Mr. Gladstone, the Duchess of Sutherland, and Minister Lowell. Mr. Gladstone spoke in high praise of Garibaldi, Victor Emanuel, and Cavour. A despatch to the Boston *Herald* says, "In political circles, Mr. Gladstone's presence at the Garibaldi celebration is attributed to a desire to placate the dissenters, who form the backbone of the Liberal party, and who were alienated by Mr. Errington's papal mission."

THE clergymen in Berkshire County recently presented petitions to the Housatonic Railroad Company against the running of trains on Sunday. The company disregarded the petitions, when clerical influence was brought to bear upon the Massachusetts authorities, by whom the trains were stopped last Sunday. For the present, Sunday passenger trains will not be run farther north than Canaan, near the Massachusetts line. It is pretty certain that, if there is any urgent or considerable demand for through Sunday passenger trains on the Housatonic road, the running of them will soon be resumed; for neither in Massachusetts nor Connecticut is much regard for the Sabbath shown, when incompatible with the manifest business interests of the people.

ACCORDING to a despatch from Rome, letters have been issued by the Propaganda, summoning the American archbishops to that city to receive papal instructions and to make preparations for a provincial council of the Catholic Church in America, to be held next year in some city in the United States not yet designated. The object of the council, it is said, is to make the connection of the Church of America with Rome closer than it now is, and to concert some disciplinary measures tending to restrain the influence of Democratic-Republican institutions on the spiritual and social life of ecclesiastics. Although the despatch states that the reasons for the summons are only incidentally political, it is believed that the disturbances in Ireland, which have brought censure on the Church, and the fact that these disturbances have been encouraged by American contributions to the Parnell and other funds which have been countenanced by the Catholic clergy here, are the primary cause for summoning the council.

A DESPATCH from Raleigh, N.C., to one of the daily papers of this city, says: "Mormon missionaries in the western part of this State, near Rutherferton, have induced a large number of women to join the Church of the Latter Day Saints. Great excitement and indignation prevail by the announcement that the ceremonies of baptizing the new converts were attended by the most horrible orgies that ever disgraced a so-called civilized community. All that was previously known of the abominations of Mormonism was eclipsed by the scenes that took place on this occasion, as was the case two years ago. The Mormons will probably be attacked and driven out of the State. Lynching is feared." How much or little truth there is in this despatch we have no means of knowing; but in view of the benighted condition of the community to which it refers, and the religious intolerance which prevails there, it is not unlikely that the charge against the Mormons has as little foundation as some of the statements of the pagans in regard to the "horrible orgies" of the early Christians, and that the accusation is a mere pretext for persecuting a sect that has been very active and very successful in making converts in that region the past year or two.

GOV. CLEVELAND, of New York, vetoed last week an item of $20,000 dollars, in a supply bill, "for the support and maintenance of juvenile delinquents at the Catholic protectory." The following is an extract from the veto message: "The name of this institution implies that only Roman Catholic children are there provided for. If this be so, that fact furnishes a good reason why public funds should not be contributed to its support. A violation of this principle in this case would tend to subject the State treasury to demands in behalf of all classes of sectarian institutions, which a due care for the money of the State and a just economy could not concede, and which would yet have a justification in precedent. It will be seen, too, that the delinquents received at this institution are committed to its care by the authorities of the city of New York. Thus, it appears to be local in its purposes and operation, which affords, it seems to me, an additional reason why it should not be aided by the State. I am informed that the municipality of New York pays a stated and reasonable compensation for the support and maintenance of such juvenile delinquents as are committed to this protectory. If this be true, even the plea of want and necessity cannot be urged to justify this appropriation." For his action in this case, and for his sensible and courageous words in opposition to sectarian appropriations, Gov. Cleveland deserves the thanks of all liberal and fair-minded men.

THE *Catholic Review*, referring to the pontifical instruction to the Irish bishop, says: "One thing is certain: the priesthood and with it the laity of Ireland will obey the Pope in whatever he chooses to teach them." Again, this journal, in its loyalty to the head of the Church, remarks: "Secularists and infidels, renegade Catholics and aspirants for Parliamentary honors, may undertake to declare the Pope 'impertinent,' 'neither infallible nor well-informed,' and so forth; but the Irish people are too Catholic at heart to feel for an instant that there is any possibility of Pope Leo writing wildly or acting unjustly toward them. Men and women, too, have told us in the public press that the 'Irish of to-day are too enlightened to submit to such dictation; that might have done fifty years ago, but it will not do to-day.' We do not deny that the Irish are an enlightened people. We believe it most fully. But we do not think that they are more enlightened in Catholic matters, or less so, than they were fifty years ago. They are to-day as faithful and enlightened as ever they were; and, if the Pope has condemned any policies, any leaders, or even any bishops, they will most surely be condemned also by the Irish people." But the *Pilot* says that the Pope's letter "must be set down as one of the most remarkable events of this century," and adds: "It is not to be met by resentment, but by proof of the false evidence presented to the Pope. The Pope's letter is unquestionably the result of English misrepresentation." Mr. John Dillon, in a letter to the Dublin *Freeman's Journal*, advises the Irish people to make the Parnell fund such a success that the Pope will realize how grievously he has been deceived by the English government and the miserable pauper landlords who infest Rome. Mr. Parnell, in a letter to a Paris journal, says that, while the majority of the Irish people are submissive to the Pope in matters of faith, they do not acknowledge the domination of Rome in matters of politics and nationality.

RECALLED TO SINCERITY.

Harvard College has been brought to its senses in the matter of bestowing its honorary degrees. It sometimes takes a severe discipline to bring an individual mind to a true comprehension of its own actions; and the discipline must be still more severe that is adequate similarly to arouse a corporation. From the time that Massachusetts elected its present Governor, people have been asking, What will Harvard College do with him next Commencement Day? Will it follow the time-honored tradition, and invite him to Cambridge as its special guest, and give him the degree of LL.D.? The majority have been disposed to say that the College would follow the traditional course, treat the Governor with perfect official courtesy, whatever it might be inwardly thinking of him, quietly give him the honorary sheepskin, and thus send him back to Boston with no chance to make political capital for himself, or against the College, over another personal grievance.

And this is the solution of the question which the Corporation appears to have been ready to adopt. However bitter the pill, the President and Fellows voted unanimously that it was best to swallow it with as little wryness of face as possible. Doubtless, they would have been very glad, if they could have found in the long line of Massachusetts Governors any precedent for omitting the custom. They would have rejoiced, if they could have been able to say: "This degree means something. It means literally and entirely all that it says. It goes not necessarily to any man who may chance to be elected Governor of the State, but only to the worthy,—only to those who, in addition to eminence in ability and learning, 'have promoted noble arts, and have, by their writings or example, or by their counsel and labor, aided in cultivating them.'" But they knew that in unbroken sequence the degree had been given to every man who had been placed in the Governor's chair, without reference to the question whether the wording of the document described his qualifications or not. Though probably there has been no case where the words above quoted would be so inapplicable as to the present Governor, while there have been many cases where the requisites in respect to "ability and learning" would fall far short of what may be justly claimed for him. The degree has, in fact, by the college usage, as bestowed upon the Governors of the State, become a mere complimentary official title, as empty of all real meaning as that of "His Excellency." And it is the legitimate consequence of this vicious habit on the part of the College itself of bestowing degrees as merely ceremonious titles—a fault not only of Harvard, but of colleges generally—that the College has now had to face the dilemma of the question what to do about Butler. The bitter pill is of its own concocting. It is the natural penalty of insincerity.

But, while the Corporation deemed it wisest to continue the empty compliment,—evidently either on the general ground that whomever the majority of the voters of the State should think worthy to be Governor the College would honor with this degree, or on the more special ground that it would be bad policy first to break the rule in the case of a man sure to use all the arts of an expert demagogue to make capital out of the omission for his own personal ambitions,—the Overseers by a strong vote have bravely seized the dilemma by the other horn, and vetoed the Corporation's vote. In our view, the Overseers have the right of the case. Whatever may be General Butler's skill and learning in law or amount of general culture, there are certain moral defects in his character as a public man, and certain methods which he has habitually used in attaining his successes in life, which no institution of learning should hold up to the young men under its care as worthy of honor.

But we wish that these two bodies—the Overseers and the Corporation—would now take the further needed step, and unitedly vote that the College will henceforth give no degrees merely as compliments. President Eliot has been saying recently some strong words about prevalent insincerity in the pulpit. We do not think that he touches the most potent source of this evil, when he refers it to the habit of dependence which ministers acquire because they are so largely supported in getting their education by beneficiary funds. In our opinion, a more fertile cause of the trouble lies in the fact that young men in the theological seminaries are not generally trained to do robust and independent thinking: they are trained to conform their thinking to certain standards of belief, and know that, unless they do it, few chances for pulpits will be open to them. And possibly, too, when these young men see presidents of colleges signing their names to laudatory degrees that are admitted to have no truthful application to the persons receiving them, they may then be learning the art of subscribing to creeds with mental reservations, and of preaching beliefs that are only half their own. Has President Eliot ever thought that the insincerity of colleges in bestowing merely complimentary and official degrees may have some connection with insincerity in the pulpit?

WM. J. POTTER.

ENGLISH TOPICS: THE AFFIRMATION DIFFICULTY.

Perhaps, after all, it was not my negligence so much as my diffidence which kept me from writing to you earlier. In your great courtesy, you had accorded so much space in *The Index* to various notices of matters personal to me that I felt that your readers would be glad to be quit of me, for a season at least. However, your insertion of my last letter in *The Index*, of April 5, gives me confidence (I ought to say assurance) to proceed.

You are aware that my object in visiting America and Canada last year was to induce your government and that of your Canadian neighbors to increase emigrant facilities by issuing a guide-book for them, which should give a real account of the whole country with the same fulness which some States give an account of their own territory and its advantages. The materials of such a book should be collected by direction of the government, revised under their authority, and published in their name. When this is done in a distinctive manner, such book will get into everybody's hands abroad, and secure your having a better-informed class of settlers than hitherto. The Canadian government have already acceded to this representation. Mr. John Lowe, Secretary of the Department of Agriculture at Ottawa, has, with great promptness, prepared and issued a Canadian Government Guide-book. It is written with great judgment and clearness. The United States, being a more diversified and more widely settled country, must have a still more picturesque story to tell. But it has not told it yet. Why does the Republican chariot linger? Why drag its splendid wheels so heavily? Washington cannot be in the Red Sea where Pharaoh's chariots had a difficulty.

Your columns, some time ago, contained some interesting papers by Mr. W. S. Kennedy, on "Some Defects of the Daily Press." They might be yet more instructive to many. He has words of censure for what he calls journalese writing. If, when he returns to the subject, he would be at the trouble of giving the reader some instances of it, it would be profitable reading to those whom he seeks to improve. Upon going over the grounds De Quincey has trodden, he fortunately finds examples given by that great critic. If Mr. Kennedy would follow this excellent example, he would increase the value of critical communications he may make to your pages. I remember reading his papers, and wishing, for the sake of your young readers, that he gave illustrations. "Be clear," said Napoleon. He might have added, Be explicit.

When I have opportunity, I will call attention in England to the admirable discourses of the Rev. Frederic A. Hinckley, which have been lately sent to me. It implies assiduous thought to publish regularly discourses of such a quality and of so much interest.

The opportunity I refer to is a small monthly paper I have projected, entitled the *Present Day*. It is not large; and four weeks' interval will occur between each issue, so that it may not make much demand upon my time nor terrify the reader by frequent appearance. I have chosen a monthly issue, so as not to interfere, or even in appearance to be in rivalry, with the two other papers which mostly represent free thought in London. The *Secular Review* did represent secularism during several volumes; but, for a long time past, its ambition has been chiefly, as Christians would say, "to blaspheme," notably and with such utter recklessness that secularism is quite lost sight of, and in no mean danger of not being thought well of, if it was seen in its pages. The *National Reformer*, which used to bear the words "Secular Advocate," now leaves them out, and bears on its banner the words, "Atheistic, Malthusian, and Republican,"—things which have their interest and their place; but society will bear some addition thereunto. In attempting it, I fear that I choose not wisely. An editor can conduct a large business in negations with a very small capital. It is more difficult to conduct a constructive advocacy. Still, I am for supplementing negations by some positive principles, which I regard as the distinctive merit of *The Index*. I am of Cardinal Newman's opinion, that "false ideas can be confuted by argument, but only by true ideas can they be expelled."

This will be the policy of the *Present Day*. Progress is brought to a standstill by the inertness of those who think and do not act, as it is ruined by the recklessness of those who act and do not think. There is no sense in life except in that use of the present which profits by the past and provides for the future. Many do not know that yesterday has gone by, and that the foolish day has passed when men could be shocked into the truth by sensation, or kicked into it by outrage. There will long be persons—impatient to change the world at once—who sincerely believe in these dynamite methods. But it will prevent confusion in the public mind if they are kept distinct from secularism (first advocated by me in the *Reasoner*, from 1846 to 1872). That order of opinion teaches the improvement of this world by material means, substitutes exposition for denunciation, and holds that intelligent, well-intended usefulness is piety, whose creed is service and whose altar is everywhere. Unless a journal exist showing that the secular is separate in its nature and utility, the efforts in England of the highest scientific thinkers will be confounded with mere anti-theology and retarded by distrust. The *Present Day* is addressed to all who hold the brave and cheersome faith that life, according to reason, is the best religion for the world that is, and the best qualification for the world that may be. *The Index* has the courage of positivism. It maintains views of life and duty. Those who cannot accept all its

Digitized by Google

principles respect it for having some. Heresy intelligently held is always in advance of mere scepticism. Doubt may be a duty with regard to certain propositions; but duty is higher than doubt, because it is in advance of it, and indicates that the contest of dubiety is over.

We have had another debate in our Parliament upon the policy of allowing members to take their seats upon affirmation in certain cases, instead of on oath. Some time ago, the House admitted Mr. Bradlaugh to sit on affirmation, subject to decision in the law courts as to its legality. The higher courts deciding against it, a bill has had to be introduced to make affirmation lawful in Parliament; but such is the personal irritation at Mr. Bradlaugh on account of the *Fruits of Philosophy* he published, and heresies actual or imputed unjustly, that the House decided, with immense fervor, against the bill. Of course, it is utterly unjust to refuse him permission to make an oath, and also refuse to allow him to make affirmation.

Immense efforts have been made to carry the Affirmation Bill. Wherever I had opportunity of writing, I pointed out how much to this end religious bodies could accomplish. The nonconformists alone might cause the bill to succeed in a short time, I contended, if they used their religious influence to this end. All the exertions made out of Parliament and in it, during thirty years, to procure the right of affirmation in courts of justice, were fruitless, until the Society for the Liberation of Religion from State Control gave, through their Parliamentary supporters, their generous, powerful, and tolerant voice in its favor. All honest dissidents from the ecclesiastical oath then came under a sense of obligation and respect for that nobler sort of Christianity, which, disregarding the charge of complicity with intellectual heresy, terminated the long era in which all such persons were treated in courts of law as the outlaws of Christianity. The heretic is still an outlaw in the House of Commons. In terminating this dishonoring spectacle, liberal churchmen now, as then, would aid; and so they have, beyond all expectation.

The cry of "the right of constituencies," said to be violated, produced no remedial effect. It is hard to conceive how this cry could be relied upon by any who have been in these agitations before or are conversant with their history. Constituencies in England have always been denied the right of representation by Catholics, by Jews, by Quakers, and by Atheists, as such. To give them the right of representation by Catholics and Jews, Parliament altered the oaths which excluded them; to give constituencies the right of representation by Quakers, it made a new law of affirmation; and it remains for Parliament to give constituencies the right of representation by Atheists in the same way.

As I had done what I could to dissuade Mr. Bradlaugh from taking the oath, as it would shut the door of affirmation for years, I have done all I could to promote the passing of the Affirmation Bill lately brought in by the ministry. Mr. James E. Thorold Rogers, M.P. for Southwark, an eminent professor at Oxford, and one of the tutors of Prince Leopold, and himself until lately in Holy Orders, did me the honor to present a petition from me, which he sent to the press. It was in the following terms:—

Mr. G. J. Holyoake has sent a petition to the House of Commons, setting forth that he is a person who never took an oath,—it connoting theological convictions he did not hold. That he, however, has seen persons of far greater knowledge than he possesses—of high social position and authority, and whose example men look up to—take the oath; though it was known to all that they held no belief corresponding thereunto, the opprobrium and outlawry attending the refusal of the oath being more than they would incur. That this has been going on for many years and in every part of the country. But nowhere is the example of saying one thing and not meaning it, or meaning something else, more disastrous than in that high assembly where everything said is conspicuous and influential upon others. That the petitioner, who has watched the effect of compulsory swearing, submits that no conformity to the oath can compensate for nonconformity to the truth which it occasions,—and not only occasions, but incites. He therefore prays the House to make affirmation optional for those who need it.

We have had other cases of interest to the public. Three persons have been imprisoned for blasphemy, but really for outrage. The indictments were under the blasphemy laws, as there was no other way of employing the law against them. The story is worth the telling. We have had public writers and well-known preachers discussing the subject without knowing the facts. If persons near the doors of the offenders are without knowledge of what has occurred, there must be confused information current so far away as the United States.

GEORGE JACOB HOLYOAKE.

THE CONSOLATIONS OF CHRISTIANITY.

It is often asserted that the unbeliever in Christianity is "without hope and without God in the world." He is supposed to have abandoned all sources of comfort in affliction, and to be destitute of joy and peace in his meditations and aspirations. Does observation show that the believer has an advantage over the unbeliever as to happiness? We not only claim that this is not the case, but that the rationalist has superior grounds for a glad and hopeful spirit.

The Christian religion fails to produce the results claimed for it. An intelligent physician states that he has witnessed more fear of death and more distress upon the death-bed among Christians than among unbelievers. He says he has never witnessed a painful death of an unbeliever. His explanation is that Christians contemplate the end of life and a future state more frequently, and the proofs are not strong enough to allay the fears that these meditations arouse. Every one can recall aged "saints" who have lived excellent lives and have always been devout and prayerful, yet who close their lives in gloom and despondency. One of the most notable Christian women, the wife of a Congregational deacon, lately died, after years of depression, in which she lamented her lack of assurance of salvation. Her son met the son of her pastor, and exclaimed, "My poor mother's life was made wretched by that infernal theology!" One whose especial gift was the utterance of words of consolation, and whose written words are often presented to mourners, while expressing resignation to his own trials, suffered greatly from depression of spirits, and was unable to deliver himself from continual brooding over his troubles. Many a saint of pious speech and unhappy life may be observed, and broken-hearted mourners whose words of submission are belied by their inconsolable grief. Several men of bright faith whom I have known, who could cast their cares upon Jesus and leave all the burden with him, were men of strong physique and sanguine temperament. Few more incongruous events remain in my memory than the visit of a minister of extraordinary physical strength, a sledge hammer preacher, and man of buoyant spirits, to a lady of most delicate constitution, but of the most exquisite and refined character and cultivation, and the distress he occasioned by the assertion that all her ailments and sorrows were owing to lack of "faith." It seems demonstrable that happiness in life is dependent upon health, inherited temperament, and one's surroundings, and that the theories of the Christian religion never triumph over an adverse combination of these particulars. Many think they get comfort from religion, because during the rest and contemplation of Sunday their spirits rise, and by night their "faith" is strong. But this often only lasts till Monday noon, by which time the cares of life have consumed their "joy in the Lord"; and they toil on for the rest of the week "bearing the cross," and saying, with heavy sighs, "Though he slay me, yet will I trust in him." It was not theology, but the physical recuperation gained by a day of rest that enlivened the mind.

Sorrow comes to all, and only time allays its affliction. Mourners grasp at alleviations, and try to gain comfort from the sentiments we see touchingly expressed in obituary notices in the newspapers. They try to find joy in the thought,—

> "There was in heaven an angel band
> That was not quite complete:
> God took our little Mary Ann
> To fill the vacant seat."

Or they seek peace in the submissive plaint,—

> "Dearest Tommy, thou hast left us,
> And thy loss we deeply feel;
> But 'tis God that has bereft us,
> He will all our sorrows heal."

But still the vacant chair, the little empty shoes, the absent laugh, and the lost endearing caress cause pangs of grief that only subside with the lapse of years.

It often only aggravates the affliction to be told that God has arbitrarily caused it, in chastening love or in judgment; for its need or justice is not perceived, and the spirit rebels against such severe treatment and fails to believe in its necessity. But where disaster is seen to be the result of natural law, that death comes in consequence of inherited or acquired weakness or by reason of man's imperfect knowledge, then we can bow to the inevitable, and resolve that our sad experience shall be a factor in producing a more rational life and a more eager pursuit of the laws of health and the conquest of disease.

But it is not only in affliction that the Christian claims superior consolation: he asserts that his hope of heaven sustains his spirits, and makes him endure present ills. Doubtless, many are cheered by these thoughts: but those who cannot entertain them find they have been delivered from a selfish conceit, that sought joy in an exceptional personal advantage, and ignored an inconceivable amount of woe to their friends and neighbors. If a person claims he has gained in happiness by renouncing evangelical religion, he is accused of arrogance, as implying that Christians are not happy. But he does not assert that they are not happy, but that they have no right to be so. No man of unselfish mind and tender sensibility can be happy in the assurance of salvation, when he knows that good and estimable people all around him are doomed to eternal damnation. If I take the liberty of expressing my personal sentiments, I shall doubtless echo the feeling of many others.

In the past, the doctrines of Calvinism have been a pall upon my joy. If I was happy, it was in spite of them; and often, after a period of delight in innocent recreation, an accusing conscience has reproached me with the inconsistency of mirth while the vast procession of human life was marching by to hell. It was not enough that I was saved: I wanted my equally good friends to be saved also. But they would not believe the doctrines; and, therefore, nothing remained to them but "a fearful looking for of judgment and fiery indignation." God, of his own free will, had

Digitized by Google

elected me to be saved and had left them to perish,—not that I was any better than they, or that there was any reason for it beyond the fact of this decision "in the counsels of eternity." I have no desire to be made so marked an exception to "the wrath of God." I am glad to cast in my lot with the great mass of intelligent believers in and practisers of goodness. I desire no better future than what they deserve, and what a just God would give them. I feel like apologizing for having wronged them in the past, by estimating some of the best and noblest of earth as being among the damned. I feel a true brotherhood with all men now. I am not one of the house of peers whom God has chosen to monopolize future happiness, but I am one of the great mass of men who are eagerly searching to know the right, believe the true and do the good; and my future is safe, no matter how unable my intellect is to grasp the dogmas of the "Christian Fathers." A sense of companionship with good men of all races and creeds gives a feeling of joy which membership with the "elect" fails to impart to an unselfish mind. No conscientious man can be truly happy except by ignoring the doctrine of future everlasting punishment; and, if it is true, it is wrong to ignore it.

The effect of "trust in God" is offset by "fear of God." A belief in a superintending Providence that arbitrarily decides the issues of life is not promotive of peace of mind. One never knows what the will of God may decree next, and an element of uncertainty is introduced into human affairs beyond the elements of cause and effect. The Christian labors with the dread that, at any moment, God may thwart his efforts in "love" or "wrath," and give the success to some scoundrel, apparently unworthy of favors. The rationalist believes that, unless some natural impediment occurs, his work will prosper. If it fails, it was the result of individual fault or human ignorance. He recognizes the present limits of man's knowledge and foresight, and works in submission to these restrictions; but he has no dread of an inexplicable miraculous upsetting of his plans. The true "peace of God that passeth understanding" lies in the recognition of law and order in the universe, never interfered with by arbitrary and irresponsible acts.

Christianity, when consistently interpreted, assures its followers of tribulation in this world, and the hopelessness of all efforts to advance the moral welfare of the human race. The teachings of Jesus and Paul are pessimistic. Things are to wax worse and worse till the coming of Christ to destroy the world, out of which he saves his chosen few. It is the Christian then who is without hope in the world. His consolations are wholly in another world, the existence of which has never been made apparent to any other sense than "faith,"—that is, imagination.

The believer in natural law and its continuous working through evolution has grand assurance of infinite progress and a hopeful future for his race.

One who has escaped from belief that God curses his children, damns just men, and waits to destroy the world in vengeance, and sees, instead, an Infinite Power working forever through uninterrupted cause and effect toward the increasing development of man in righteousness, knowledge, and control of the universe,—he possesses a consolation and inspiration that makes life worth living.

ROBERT C. ADAMS.

SHELLEY is said to be the rage just now among those who are collecting copies of old editions of books by famous authors. A copy of *The Cenci* published in Italy recently brought £7 15*s*.

DR. BEARD'S SOUL AND THE INDEPENDENT.

We gladly acknowledge that we were under a misapprehension in our recent remarks concerning the *Independent's* second article on Dr. Beard's conversion. But the collocation of words to which we referred logically suggested the question we asked; and we are not sorry we asked it, since it has drawn from that journal the following explicit statement:—

> Mr. Potter wants to know if we mean to imply that Dr. Beard has gone down to destruction. Not at all. That idea was not in our mind. We trust we are not given to usurping the functions of the only Judge of quick and dead. What we meant—and think we plainly said—was that it were better that the Church should let souls perish than that it should try to cajole or frighten those same souls into salvation by the fraudulent use of untrue tales of death-bed conversions or despairs. It was not Dr. Beard's soul we had in mind, but the souls of those to whom the story of Dr. Beard's conversion might be told. We told it once and used it homiletically in these columns, believing it true. We would not do it again, if we knew it would produce a hundred conversions. We are not responsible for conversions, but we are responsible for truth.

The *Independent*, referring to the fate of Darwin, about which *The Index* once asked its opinion, adds:—

> If Dr. Beard, or, for that matter, Dr. Darwin, attempted honestly to seek after the truth about God and duty, and to accept it, if even in doubt and question he gave his hearty love and allegiance to infinite, abstract virtue, not knowing whether it was concrete or not, but holding his heart open to accept it if his eyes should open to see it actually existent in a Supreme Benevolence, then he had accepted "the Essential Christ."

In this extract, the *Independent* does not seem to us so satisfactorily clear as in the preceding. We gather from it, however, that that journal is not suffering any special anxiety over the fate of either Darwin or Beard; and what happens to the Calvinistic creed in consequence of the admission that such men do not need to be converted to the Christian faith, in order to be saved, we leave for that paper to settle with the old-school theologians who may catechize it. But perhaps the new-school theologians will in time get far enough away from the maze of Christian mythology as to say "essential *truth*," where they now say "the essential Christ," and to see that the virtue which becomes "concrete" in humanity is about the most saving thing that a man can have.

W. J. P.

THE CORONATION OF ALEXANDER III.

The coronation of Alexander III., an event for which preparation had been in progress some months, took place in the cathedral at Moscow, Sunday, May 27. The ceremonies were made as imposing as possible, and seem to have had for the time the designed effect upon the ignorant Russian peasants. The expenditures for this purpose amounted to $10,000,000. In accordance with the established coronation rite, substantially that of the monarchs of Byzantium, the Czar read aloud the creed of the Greek-Russian Church, a great *Te Deum* followed, a chapter of the New Testament was read by one of the Metropolitans,—representatives of the Church,—the Czar was invested with the imperial ermine and the great diamond cross of St. Andrew, and a benediction was invoked upon him and his reign; after which, a Metropolitan brought the Czar a great crown, which he himself put on his head. The Metropolitan, after explaining that the crown signified that Christ, the Czar of heaven, blessed him as Czar of all the Russias and supreme master of the people, brought to him the sceptre and the imperial globe, assuring him that he received his power as a ruler from God. Then followed the liturgy, toward the end of which the Czar received the anointment "the seal of the gift of the Holy Ghost," by which were made sacred both the office and the person of the Czar. The forehead, eyes, nose, mouth, ears, arms, and chest of this ruler by the grace of God were anointed by one of the spiritual attendants, another performing the duty of wiping the chrism with a piece of cotton. The ceremony was completed by the Czar's receiving the holy communion, taking the bread and wine separately and not together from a spoon like a layman. The whole performance, which was enough to make angels weep and laugh, if they have any pity and a sense of the ludicrous, was announced by salutes of artillery and the pealing of church bells. The fête that followed in honor of the event was on a colossal scale. A despatch says that "one hundred and forty wagons loaded with barrels of beer arrived on the ground during the morning, and by noon all had been exhausted." "The rejoicing was very great." It is easy to see that the main foundation and support of despotism in Russia are *ignorance and superstition*. Let those who have nothing but denunciation for the Nihilists reserve a little of their indignation for that system, a combination of State and Church, which is founded largely upon falsehood and fraud, and which, in the name of God and Christ, keeps the Russian people in ignorance, fear, and slavery, and makes liberty and progress impossible. Says the *Independent:* "The Czar is believed to be selected by God himself to be the Czar and Judge of all the Russias. He solemnly decorates himself with the imperial regalia, which are a symbol of his autocratic powers; and at the same time, before God and in the presence of his people, he pledges himself to dedicate himself to the well-being of the people intrusted to him. In Russia there is no constitution to which the Czar must take an oath; and, as to the laws, he is the sole and supreme lawmaker. But then, as a Christian ruler, he pledges himself to observe the creed and preserve the principles of the Greek-Russian Church. It is evident, then, that both the rights and the duties of the Czar have a religious foundation. Were there religious freedom in Russia, the Russians—even under their autocrat—would have a considerable field of free action. Unhappily, the religious laws of Russia enjoin, first of all and last of all, blind and unconditional obedience to the Czar."

B. F. UNDERWOOD.

JOSEPH COOK'S CHARGES AGAINST THE LEIDEN STUDENTS.

The readers of *The Index* will remember the charges made by Joseph Cook, a few weeks ago, against the theological students of Leiden,—charges that were on good authority pronounced false in these columns, and which Mr. Cook was challenged to substantiate. Rev. Philip Wicksteed, Dr. Martineau's successor, the translator of *The Bible for Learners*, who has lived and studied in Leiden, is acquainted with Leiden scholars, and has had close relations with Leiden students, having had his attention called to these charges, has written a letter to a friend in this country, which was printed by permission in the *Christian Register* last week. After stating that he has "had for some ten years or so a pretty accurate knowledge of the position of things in the theological world in Holland," and "not unfrequently conversed with professors and ex-students of the theological faculty of Leiden on the general life of the students," "been on terms of intimacy and confidence with theological students at Leiden," has "frequented the class rooms and overheard the careless and

Digitized by Google

casual conversation of the students as they passed to and from their classes, or lounged between times in the hall," and has had "many confidential conversations with men whom I could absolutely trust as to the actual, moral, and spiritual results of the new teaching," he adds:—

With these opportunities of knowledge, I can only say that I was utterly amazed by what appears to me the recklessness of the charge brought against the theological students of Leiden by Rev. Joseph Cook. Since my attention was called to his words, I have made special inquiries, and can hear of nothing, not even of any slander, on which his statements can be based. To any one who knows the theological professors of Leiden personally, the charge brought against them of indifference to morals is simply absurd. The jealous defenders of Orthodoxy in Holland would, on the contrary, point to the high character of such men as Scholten and Kuenen, and the deservedly high position they hold in the esteem and regard of all classes of citizens as constituting one of the great dangers of their influence.

Joseph Cook frequently declares that "character tends to permanency," and refers to this fact to prove that the doctrine of everlasting punishment is in harmony with science. If his Lectureship be correct in his reasoning, it is of the utmost importance to him personally that he restrain and overcome his propensity to misrepresent and calumniate, else the habitual indulgence of this propensity may make him a hardened and irreclaimable perverter of the truth. B. F. U.

EDITORIAL NOTES.

ACCORDING to a Rome correspondent of the Boston *Pilot*, advices from Archbishop Croke, who recently visited the Pope, say that, although the Parnell prelate was unable to satisfy Leo XIII. of the correctness of his views in regard to Ireland, those views remain unchanged as to what is his patriotic duty.

HERBERT SPENCER, in a letter to S. J. Stewart, refers to his work, *The Gospel of Law*, and to his lecture on Ethics, recently published in *The Index*, in complimentary terms. "I thank you," he writes, "for having so effectively taken up the exposition and defence of evolutionary ethics. I am glad to see the views I have set forth so well supported."

MONCURE D. CONWAY, in a letter to the London *Inquirer*, contradicts the report that he had resigned his position as minister at South Place Chapel, and says that he is in excellent health. He adds: "It is true that after our summer vacation (August) Dr. Andrew Wilson will share my labor and salary at South Place. My reasons for securing him as a colleague are entirely unconnected with my health or with the as yet doubtful visit to Australia."

ON Sunday, May 27, a society was organized in this city at Paine Hall, under the name of "The Boston Liberal Club." Its affairs for the present are in the hands of an executive committee of five members, who are required to present on the first Sunday of September a scheme for permanently carrying on the work of the club. John Storer Cobb is president; John S. Verity, vice-president; and George N. Hill, secretary and treasurer. The other members of the executive committee are Ernest Mendum and Matthew Hale.

THE convention of the Institute of Heredity held in this city last Tuesday was well attended. Some well-written papers were read, and a number of earnest speeches were made; but the general treatment of the subject was hardly what those who attended had a right to expect, for the very obvious reason that the majority of the speakers were selected less with reference to their knowledge of heredity than with their prominence in connection with other reforms. The object of the Institute is a most worthy one, and deserves encouragement and aid.

DURING the summer months especially, *The Index* will need all the money due on subscriptions to enable it to meet current expenses. Our books show that a large number have permitted their subscriptions to expire without renewing, and many of these we know to be worthy persons who are able to pay and intend to pay. With many, the very smallness of the amounts which they owe makes them unconcerned and negligent in remitting; but these small sums amount in the aggregate to an indebtedness of between $3,000 and $4,000, and we need this money to pay our bills. Will those who are in arrears please consider this fact, and send what they owe this office without further delay? Make all checks and drafts payable to the order of B. F. Underwood.

THE sessions of the fifteenth anniversary of the New England Woman's Suffrage Association were held on the evening of Monday, all day Tuesday, and Wednesday evening, May 28, 29, and 30. The speakers on Monday eve were H. B. Blackwell, Colonel Higginson, Mrs. Clara Neymann, and Mary F. Eastman. All were eloquent and earnest in their advocacy of the political rights of women. On Tuesday morning, addresses and reports were made by Frederic A. Hinckley, Clara M. Bisbee, Lucy Stone, Mrs. E. D. Cheney, Mrs. M. G. Ripley, Mrs. C. P. Nichols, and Mrs. A. A. Claflin. In the afternoon, earnest addresses were made by Lucy Stone, Mr. Blackwell, Miss Delia Partridge, Mrs. Bessie Bisbee Hunt, Rev. Annie Shaw, and Rev. Sarah C. Perkins. At the evening session, the speakers were Mrs. Neymann, Anna Garlin Spencer, Mrs. Livermore, Rev. Charles H. Eaton, and Julia Ward Howe. The festival on Wednesday eve was well attended, and many brilliant five-minute speeches were made by well-known speakers.

THE exercises of the Sixteenth Anniversary of the Free Religious Association, which occurred Friday, June 1, were according to programme; and the meetings were, in point of numbers and interest, an entire success. At the business meeting, steps were taken to secure the attention of the liberal public to the need of funds for the Association. Parker Memorial Hall was well filled during the Friday morning session by an audience remarkable for its fine intellectual quality, many distinguished scholars and noted leaders of liberal thought being present. The platform was beautifully draped with a profusion of flowers appropriate to the season and the occasion. The opening address was by Mr. W. J. Potter, the President. The discourses of Col. T. W. Higginson, John W. Chadwick, and Edwin D. Mead, were listened to with the careful attention which their admirably presented thought deserved. The labor problems of the day were at the afternoon session clearly and forcibly treated in the able and earnest exposition of Mrs. Imogene Fales, the eloquent appeal in behalf of laboring men by Mr. Applebee, the impassioned words of Mrs. Clara Neymann, and the thoughtful address of Mrs. Anna Garlin Spencer. At the festival in the evening in Horticultural Hall, about five hundred persons sat down to partake of a bountiful repast, which, however, had it been twice as excellent, would have been surpassed by the "feast of reason and flow of soul" that followed. Col. Higginson, as presiding officer, set an example of scintillating wit which seemed infectious, nearly every speaker responding in the same genial, humorous manner in which he or she was introduced. Some of the best points of the brilliant five-minute speeches should be remembered in the report of the proceedings of the anniversary exercises of the Free Religious Association which is to appear in future numbers of *The Index*. There were many present conspicuous in the field of philosophy, oratory, literature, and reform. The speakers who responded when called upon at the festival were Frederick Douglass, W. J. Potter, Mary F. Eastman, M. J. Savage, Samuel Longfellow, John W. Chadwick, Anna Garlin Spencer, B. F. Underwood, Clara Bisbee, James K. Applebee, Robert C. Adams, and F. A. Hinckley. Lucy Garlin's Euterpe Quartette of lovely young girls arrayed in white furnished the musical attraction of the occasion. The Association has every reason to be pleased and encouraged with the progress its principles have made during the sixteen years of its life, and the place it now occupies in the thought of the people.

POETRY.

For *The Index*.

THE MYSTERY OF LIFE.

"I was not, and I was conceived. I loved, and did a little work."

The atoms bound together in the structure
My loving father christened by my name
Will, in due time, despite all mortal pleading,
Unbind themselves from finite end and aim.

Their service to my spirit will have ended,
All I could learn through them has been attained.
The broken bondage and the tender union
Will not be mourned because of freedom gained.

I like not now to guess the trend the atoms
I wear like garments, when unloosed, will take:
Weakly, I shudder at what may befall them,
If e'er in nerve-thrilled structures they awake.

I fain would bar them out from circulation
Through the weird dance in cycles never done;
But Nature only loaned them, and will claim them
When I my little journey shall have run.

So, with forced bravery and with blinded senses,
I say: "What cometh will be good and right.
Naught can I change by wishing or entreating,
Eternal laws ne'er bended to man's might."

I live, I love, I writhe, I moan, but hoping
For better things than I can clearly see.
I work to-day, deeming it wise and better
Than idle dreams of what is veiled from me.

Such my philosophy. But with what hunger
I long to see beyond life's harsh to-day!
I want the courage certainty would give me:
I covet knowledge for a staff and stay.

A little while, and unto pallid slumber
All flesh is sworn, and tristful vows must keep.
Well will it be, if we awake in raptures;
If not, we ne'er shall mourn because we sleep.

EMMA TUTTLE.

For *The Index*.

OPTIMIST.

The year's at the spring,
The day's at the morn;
Morning's at seven;
The hillside's dew-pearled;
The lark's on the wing;
The snail's on the thorn;
God's in his heaven,—
All's right with the world!

—*Robert Browning.*

PESSIMIST.

The year's cold and bare,
The day's at the gloam;
Gloaming's at seven;
The leaf is frost-curled;
The lark's in the snare;
The snail's trod to loam;
Is God in Heaven?—
All's wrong with the world!

THEODORE HARRIS.

The Index.

BOSTON, JUNE 7, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

SIXTEENTH ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

The sixteenth annual meeting of the Free Religious Association opened with a business session in Parker Fraternity Hall, Boston, Thursday evening, May 31, at 8 o'clock, the President, Wm. J. Potter, of New Bedford, in the chair.

The minutes of the last annual meeting and also the report of the Treasurer were read and approved. The Treasurer's Report was as follows:—

Treasurer's Report.

Receipts.

1882.		
June 1.	Balance on hand, as per report for previous year	$897.54
" 2.	Membership and patrons' fees, and donations collected at annual meeting and Festival	347.35
1883.		
May 31.	From sale of reports and tracts at office during year	19.53
" 31.	Membership and patrons' fees, and donations received during the year	800.72
	Total	$2,065.14

Disbursements.

1882.		
June 5.	Festival expenses	$14.50
" 29.	Rent of Parker Memorial for Convention and Festival	75.00
Aug. 4.	J. M. W. Yerrington, for reporting	34.00
Aug. 18.	Paid on account of Kansas Convention	100.00*
Sept. 5.	Advertising expenses of Convention and Festival	21.45
Dec. 16.	Paid on account of Syracuse and Chicago Conventions	509.84*
1883.		
Feb. 1.	Rent of Woman's Club Parlor for two business meetings	4.00
" 20.	Geo. H. Ellis, printing one thousand copies *Evolution and Religion*	23.06
Mar. 5.	Paid on account of New Haven and Albany Conventions	119.38*
" 26.	Rent of Woman's Club Parlor for meeting	2.00
May 31.	Rent of office 12 mos., to May 1, 1883	166.68
" 31.	G. H. Foster, 15 mos. salary for office work, to March 1, 1883	500.00
" 31.	F. A. Hinckley, Secretary, expenses for circulars, envelopes, postage, stationery, record books, etc	32.17
" 31.	F. A. Hinckley, Secretary, 12 mos. salary	400.00
" 31.	Various expenses during year, including coal, printing, envelopes, postage, etc.	37.42
	Total	$2,039.50
	Balance on hand May 31, 1883	$25.64

JOHN C. HAYNES, *Treasurer.*

BOSTON, May 31, 1883.

*These amounts do not show the actual cost to the treasury, as donations and memberships were received in each case, which would not have been obtained otherwise. The actual reduction in the funds of the Association on account of the various conventions is shown in the report of the Executive Committee.

The Report of the Executive Committee was read by the Secretary as follows:—

Report of the Executive Committee.

The plan of work adopted at the last annual meeting provided a definite course of action for the Secretary, acting with the advice and consent of the Executive Committee, as follows :—

1. Lists of Members and Friends of the Association.

The Secretary was instructed to prepare, from such data as he could command, a complete list of the members of the Association, classified according to States, towns, and cities ; and a similar list of well-known persons in sympathy with the Association, not members.

Such lists have been made, and are, it is believed, substantially accurate. From them, it appears that the present membership of the Association is 250, representing 16 States, ranging from Maine to Kansas, and also the Dominion of Canada. Of this number, 124, or about one-half, belong in Massachusetts, 46 in New York, 26 in Illinois, 15 in Rhode Island, 13 in Connecticut, and the balance of 26 are scattered among the remaining eleven States and Canada. The comparatively large membership in Massachusetts, New York, Illinois, and Connecticut, is due to the holding of conventions in those States during the present year. The list of friends, not members, consists at present of 165 names, representing among others 28 States and Territories, and the Provinces of New Brunswick and Nova Scotia, not included in the other list. Between the two lists, we have the names and addresses of parties believed to be interested in our movement in 44 States and Territories out of the 49 now comprising the United States and also in Canada, New Brunswiek, and Nova Scotia. The unrepresented regions on our books are Alaska, Arizona, New Mexico, Wyoming, and the Indian Territory.

2. List of Organizations in Substantial Conformity with this Association.

The Secretary was further instructed to prepare a full list of organizations, State and local, whose constitutions and methods are in substantial conformity with those of the Free Religious Association, together with names of officers, description of form of union and of work.

Such list it is exceedingly difficult to obtain. A public invitation was extended through *The Index* to all such organizations to make themselves known to us; and, whenever the Secretary has learned of such anywhere, he has endeavored to post himself concerning them. The well-nigh exclusive reliance, however, in this part of our work, has been upon the State correspondents. From their reports, now covering statistics for twenty States, it appears that, in the Northern and Western States, Unitarianism and Universalism are quite generally represented. Unitarianism in Maine is reported active and progressive. Much of the Unitarianism in Massachusetts is certainly that, though it is also true that portions of it are exceedingly conservative. The report from Rhode Island says that, on the whole, Unitarianism, Universalism, and the Societies of Friends, incline to the conservative side. There is at least one Unitarian and one Universalist Society in Connecticut of marked liberal tendencies. Struggling and conservative is the word from New Jersey. Pennsylvania has a small percentage of liberal Christianity, though much that is conservative. Maryland, Georgia, Arkansas, and Missouri say conservative, and few at that. The city of St. Louis has two Unitarian churches, one of them of liberal proclivities, and at least one liberal Jewish congregation. The Western States, as a rule, are reported liberal. Western Unitarianism, as is well known, averages much more radical than Eastern Unitarianism; and, judging from our reports, the same remark will hold true, in a degree at least, of Universalist and Jewish organizations.

The societies on a basis of universal religion are comparatively few; and it is evident that difference of opinion among correspondents as to what constitutes such basis would render the reports on this subject of doubtful value, no two perhaps using the same standard of judgment, though all may appear so to do. If, for example, the standard be what the words strictly interpreted imply, the recognition of religion as universal as distinguished from the Christian or any other system necessarily limited, and the substitution for the numerous conceptions of God of that simple sense of the unseen which must underly all conceptions, the list will be one thing. If, on the contrary, the standard be a fellowship of those working for high and pure ends, making the life more than the profession, the deed superior to the creed, then the list will be quite another thing.

On the former basis, we have the Free Lecture Association of East Dennis, Mrs. Bisbee's society of Dorchester, the Twenty-Eighth Congregational Society of Boston, and the Free Congregational Society of Florence, in Massachusetts ; the Free Religious Society of Providence in Rhode Island ; Prof. Adler's Society for Ethical Culture in New York City ; and that of the same name and purpose in Chicago, under the charge of William M. Salter. There are doubtless other societies of similar import; but these, though not built after the same pattern, may be taken as representative of the organizations which stand absolutely outside sect and system, on what they would agree possibly in calling the universal, the natural, and the practical in religion.

While, however, it is technically necessary to exclude from this list societies bearing the Christian name and specially emphasizing by creed or ceremony a personal deity, it is nevertheless true that in the larger fellowship of the spirit, and judged by practical tests, many such should be included. For, under whatsoever name called, it is plain that the work of societies like Mr. Savage's in Boston and Mr. Chadwick's in Brooklyn, together with many of the societies at the West, like those of Messrs. Gannett and Connor, is directly in the line of the natural, the universal, the practical. A list of societies made up on the basis of similar profession to this Association would be a short one. A list made up on the basis of similar spirit and motives to this Association would be a very long one, including, we think, some who still consider themselves within evangelical lines. The reports indicate that the most liberal people in a given locality, if feeling the need of organization at all, incline to sustain by their money, if not by their presence, and often by both, the most liberal society within their reach which stands for character as well as for freedom. The Universalist church in New Haven, where our recent convention in that city was held, is a marked example of this, numbering among its regular attendants Positivists, Materialists, and Agnostics, as well as Spiritualists and Theists.

3. Conditions and Needs of Each State in Relation to the Free Religious Movement.

The Secretary was still further directed to prepare a brief statement of the needs and conditions of each State in relation to the Free Religious movement, compiled from the returns of the State correspondents so far as reported.

The whole number of States from which reports have been obtained is twenty. Of these, an abstract has been prepared and is open to inspection by parties interested. We here make a brief summary of its statements. It should be remembered, however, that these reports from the several States are not the work of experts; that, in many cases, simply the opinion of interested parties is given ; and that their value, therefore, does not consist so much in absolute accuracy of detail as in general indication of what is in the main true. The States from which reports have been obtained are Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Maryland, Georgia, Arkansas, Missouri, Ohio, Illinois, Wisconsin, Michigan, Kansas, California, Nebraska, and Iowa. The first set of questions asked related to

Legal Provisions respecting Religious Opinions.

The answers indicate that, as a rule, the constitutions and statute laws of the above States make no intentional discrimination on account of religious opinions, many of them having provisions expressly securing religious freedom. There are exceptions, however, to this statement. In Pennsylvania, belief in a God and a future state of rewards and punishments is reported a condition to the holding of office (see Pennsylvania Constitution, Article 9, Section 4); and the Bill of Rights of the Constitution of Maryland secures freedom of religious opinion to those believing in the existence of God and in a system of rewards and punishments in this world or the next. (See Declaration of Rights, Article 36.) So far as known to us, Rhode Island enjoys the distinction of being the only State which has amended its statute

Digitized by Google

law so as to secure the right to Free Religious ministers of joining parties in marriage; and Michigan and Rhode Island are the only States reported as giving legal recognition to the right of the individual church or society to define for itself what religion is, and to ordain or appoint in its own way its ministers. The Rhode Island provision, Chapter 854, Section 2, reads as follows:—

"Any society professing to meet for religious purposes, and incorporated for the promotion of such purposes, and sustaining a minister publicly ordained according to the customs and usages of such society, and holding stated and regular services, shall be considered as belonging to a religious denomination within the meaning of Section 7, Chapter 149, of the General Statutes; and its minister shall have all the rights conferred by said section upon ordained ministers of religious denominations."

All labor on Sunday (works of charity or necessity excepted) is quite generally forbidden throughout the States reported, also the sale of intoxicating liquor. In Maryland, it is also provided that no one shall blaspheme God or use profane words concerning the Trinity or any person thereof on any day. A somewhat similar provision concerning blasphemy prevails in many States. Jews and Sabbatarians are usually excepted from the penalties for violation of the Sunday laws; and, in most of the States, the laws are said to be largely inoperative. The report for California says the Sunday laws are reasonably well enforced; but it is only general transaction of business, noisy and barbarous amusements and places of amusement where intoxicating liquor is sold which are forbidden, and the exceptions include hotels, boarding-houses, barber-shops, baths, markets, restaurants, livery stables, and retail drug-stores.

Most of the States provide a chaplain for their State prisons; but the jails, insane asylums, almshouses, and reform schools are left largely to volunteer services. These latter are mainly evangelical, but not exclusively so. The Free Religious minister at Providence has conducted a Sunday service at the Boys' Reform School, and has a standing invitation to do so again, both for the boys' and the girls' schools. It is a singular fact, to which our correspondent for Iowa calls attention, that, while moral and religious instruction in penal and reformatory institutions is quite generally left to voluntary effort, the States usually provide, at the public expense, chaplains for their legislative bodies.

The second set of questions submitted related to

Legal Provisions respecting Schools.

From the reports, it appears that the public schools of all the States, and colleges where there are any under State control, are secular in management as regards appropriations of money, and in intention largely so in the selection of teachers, though in point of fact sectarian bias sometimes interferes with the appointment of liberal Christian, and would quite universally condemn the selection of non-Christian, teachers. The custom of reading the Bible and repeating the Lord's Prayer generally prevails throughout the States reported, sometimes by State law, sometimes by regulation of the school committee, sometimes at the option of the individual teacher. The intent evidently is to exclude sectarianism, the wording of some of the laws plainly indicating that Bible-reading and the Lord's Prayer are not regarded as coming under that head. In Milwaukee schools, the Bible is not used; but this is an exception to the general custom in Wisconsin. In Iowa, it is provided that the Bible shall not be excluded from any school; nor shall any pupil be required to read it contrary to the wishes of his parent or guardian. Several of the States show a disposition to respect the conscientious scruples of those who object to the use of the Bible, or any particular version thereof. This disposition, however, cannot be credited to all. There is no State or municipal provision for specific moral culture outside the ordinary discipline, so far as we can learn, in any of the States. Occasionally, individual teachers have undertaken something of this sort; but it has been voluntary upon their part, and rarely, if ever, systematic. Where hymn-books are used, they are frequently of decided evangelical tendencies in theology, as also are many of the regular readers. There seems to be no general disposition to discriminate on sectarian grounds in the selection of school boards. Occasionally, an individual voter is governed by such consideration; but in Providence, R.I., a conservative city, where the predominating influence is of the Baptist type, three members of the school committee are well-known members of the Free Religious Society. The private schools and colleges of the States are almost universally under sectarian management, but show a constant tendency toward greater freedom in matters of religion.

The third series of questions concerned

Social Conditions.

To the inquiry, Is there any general sentiment in your State which would prevent the election to public office of an honorable and capable man, if an avowed free thinker? New Hampshire, Massachusetts, Connecticut, New Jersey, Georgia, Arkansas, Missouri, and California say, Yes; Maine, Rhode Island, Maryland, Illinois, Wisconsin, Michigan, Kansas, Nebraska, and Iowa say, No; while the rest of the reporting States are doubtful. The majority of the States report charitable and reformatory institutions which unite all sects (not excluding non-Christians) in a common humanitarian purpose. Nearly all the States report, also, associations which appeal to the general public for support, and yet demand evangelical Christian church membership as a condition of voting in their order. Of the management of libraries, the testimony indicates liberality; Massachusetts, Connecticut, Illinois, and Iowa being the only States, among those reporting, where it is said discrimination is made against books merely because called sceptical or infidel.

The fourth set of questions related to

Liberal Religious Organizations.

In addition to the facts already mentioned in the second section of this report, it appears that radical organizations outside the Church do not, as a rule, sustain work for the young, though the Free Congregational Society of Florence, Mrs. Bisbee's society in Dorchester, Mass., the Free Religious Society of Providence, R.I., Prof. Adler's movement in New York, and Mrs. Iliohan's school in connection with the Liberal Association in Albany, are exceptions. It appears further that all liberal organizations are largely sympathetic with humanitarian work, though not always formally identified with it. The feasibility of formal identification depends much upon local conditions, the best work being done frequently where there is no recognized relationship.

The reports from Massachusetts, Michigan, and Kansas, indicate opportunities for the upbuilding of liberal societies; and, in nearly all the States, liberal lecturers can get a hearing, though the thought represented by this Association is hardly a paying one financially.

General decline of interest in the old theologies is everywhere reported, a constant increase in the number who stay away from church, and who are ready for the principles which Free Religion represents. It is evident, however, that for some time the field must be regarded as largely a missionary one.

Such has been the work and its results under the first part of the plan adopted at the annual meeting of last year.

Conventions and Lectures.

The second part of the plan included the work of general agitation, either in the form of conventions or lectures, as might seem from time to time most desirable, and communication, wherever possible, in person or by letter, with local friends of our movement throughout the country.

Last August, the Secretary visited the Bismarck Grove Meeting, Lawrence, Kan., delivering there two addresses, distributing a large quantity of our literature, and meeting and conferring with liberal people from Lawrence and vicinity. On his way out, he made stops at Albany, Syracuse, Chicago, and St. Louis. His conferences at Albany, Syracuse, and Chicago resulted in the conventions since held in those places, and also in two discourses by himself and a convention of the Association in the Universalist church in New Haven.

During the year, the Secretary has devoted seven Sundays to the work of the Association, three of them necessarily in connection with the care of conventions and the Kansas trip, and four to Sunday speaking at Dorchester, New Haven, and Meriden. He has also spoken at East Dennis; but this opportunity was arranged outside the work of the Association, and would have occurred without it. He also visited Brockton one Sunday; but, owing to a misunderstanding, no meeting was held. At New Haven, as already indicated, through the influence of a leading member of the Church of the Messiah in that city, whom he met at Syracuse in the summer, he was invited to speak in its pulpit, and did so, the pastor of the church conducting the other services.

In addition to the regular annual meeting in Boston, four conventions have been held during the year, as already stated,—in Syracuse, Chicago, New Haven, and Albany. While these were none of them as largely attended as might be wished, it is easy to see that each did a work quite necessary to be done. At Syracuse, we had upon the platform and in the audience a large representation of the clergymen of the city. The Chicago meeting served to remove some damaging prejudices, arising from a confusion of our own Association with the National Liberal League. A statement to this effect was made by the *Sunday Times* and other Chicago papers. The New Haven Convention was notable for the warmth of our welcome into the Universalist church, and we carried to Albany a helpful influence for the local liberal movement already existing there.

The reports of our conventions in the daily press, though exceedingly meagre and unsatisfactory, are, nevertheless, a great help. They go to people who will not attend our meetings, and who will not, or at least do not, read *The Index*. Sometimes, the bare statement of the fact that such a convention has been held, that its speakers were evidently friends of pure morality as well as clear thinkers, is the beginning of an interest not to be despised. Such help, we believe, as was received in each of the cities we visited in this way, will tend to spread the knowledge of our principles and increase our influence as an organization.

Religious Culture of the Young.

The Secretary frequently receives communications concerning text-books and service-books for the young and plans of work for Sunday-schools, all of which it is impossible to answer in any very satisfactory way. The fact is here recorded, as showing that the demand for adaptation of our principles to the growing mind of childhood still exists, and, for the most part, still remains unsupplied.

Recommendations.

That the work of the Association during the past year has been a valuable one we cannot doubt. That it needs to be increased rather than diminished in amount we cannot doubt. The real question, in our judgment, is not as to its value, but whether we can command the money to pay what it costs, and whether we can improve in the year to come in our selection of points of attack. The cost for the present year of the Secretary's office and the work conducted by him, with the advice and consent of the Executive Committee, has been about $1,100. The Syracuse and Chicago Conventions cost our treasury $450, the New Haven and Albany Conventions, $88, the difference being largely made up of the increased travelling expenses occasioned by the greater distance of Chicago. The Kansas trip of the Secretary cost $92; and his services for the year, including seven Sundays' work, the arrangement of conventions, correspondence, etc., $400.

Whether we shall have the $1,100 to spend in this or any similar way another year depends, of course, upon the value placed upon this kind of work by the members and friends of the Association. The question has been raised, and we have frequently considered it, as to where work can best be done. Acting with Boston as our centre, conventions can of course be held in New England and portions of New York State at much less expense than at the West; and, though parts of the West are especially favorable to new thought, we are by no means certain that, all things considered, the Association can do better than limit its efforts in this respect to New England and New York. Fifty or even one hundred dollars as the expense of a convention is certainly a modest sum; and, if the work is worth doing, an annual appropriation of $1,200 for purposes of general agitation ought not to be hard to obtain. Whether the Association shall demand of its Secretary so much as to make it necessary that he be a salaried official is a smaller question involved in the larger one. If the general work of agitation is to be carried on with efficiency, it cannot be volunteer work. The time and energy devoted to its management is time and energy taken from other fields of effort, and must be done either by a paid agent, by some one not competent to do it, or by some one who, being competent, can afford to give himself to the work without money

Digitized by Google

and without price. So that whosoever may have charge of the work another year, if it is to be done, it seems to us it must take not far from $1,000 to $1,200 from our treasury.

We feel reluctant to entertain the idea of giving up this branch of our efforts the coming year, because we think it belongs to those things which grow in influence. It is not chiefly by one spasmodic effort that the best work is done. It is rather by following up every advance with another and another effort that progress is maintained. We believe that the same amount of time, energy, and money, spent a second year, will be certain, with the experience gained in the first, to result in larger successes. At all events, ours is a work of moral agitation, and should be efficiently maintained. Nor do we think numbers the criterion of success. The question is not how large a crowd we can draw. The question is how much impression can we make upon those we do draw, and through them upon the community they represent. The sensational will call together a crowded assembly,—its effect only upon the surface, forgotten ere the rising of the morrow's sun. But the thought, the moral impulse, the spiritual inspiration, which once take possession of a life,—they live on, an ever-increasing power for right thinking and living. This latter work may be ours, if the first is not. We cannot appeal to the prejudices or the passions of the present: we appeal to the "future, grand and great." We appeal to those elements in the present which are to make the "future grand and great." We need not be troubled, therefore, if we have not great names to conjure with. We have the truth to conjure with, and that outlives the greatest name.

There is but one qualification to the urgency with which we recommend the continuance and increased efficiency of the work of the past year. That is the necessity for the maintenance of *The Index*. Whatever else may happen, that must live. Whether the pushing of conventions and lecture courses will not help *The Index*, ultimately, more than the diversion of a few hundred dollars from its support will hurt it, is a fair question. And, certainly, it is difficult to believe that a movement representing so much of competency and oftentimes of large wealth as ours does, lacks the means of handsomely maintaining both, if it chooses so to do.

Your Committee believe that we cannot go wrong in appealing to public opinion and in doing what we can to mould it. Let us not retrench, let us rather enlarge our work. The sainted Lucretia Mott said, "Speak your truth: let it go forth." We have a truth to speak. Shall we not let it go forth in ever-widening channels of purifying influence? Shall we not demonstrate that freedom, so far from being the assassin, is really the fostering mother of such earnest moral purpose as is sure to bear fruit in intelligent missionary zeal? The answer cannot come from us alone. It must come from you, the members and friends of the Free Religious Association.

Respectfully submitted in behalf of the Executive Committee. F. A. HINCKLEY, *Secretary*.

Mr. Potter, as President of the Corporate Trustees of *The Index*, then made a report as to the condition of that paper. The report showed by the figures given that, though there had been some gain on the subscription list the past year, the gain was not all that had been hoped for; that the slight increase thus made in the receipts had been fully offset by a necessary increase in the cost of printing the paper; that advertisements were still difficult to obtain, almost the only paying ones offered being of patent medicines, which are refused; that, consequently, the paper is not yet self-sustaining, and that, if it is to be sustained at all (of which there appears to be as urgent need as ever), there seems to be at present no other way than for the Free Religious Association to consider it among its missionary enterprises, and raise such funds annually as may be necessary for guaranteeing its continuance: present resources might last the greater part of another year, but the coming need should be considered at this meeting.

Mr. Haynes submitted, in behalf of a special committee of the trustees of *The Index*, a recommendation that the Executive Committee be instructed to direct their efforts particularly to the raising of such funds as are necessary to insure the continued publication of *The Index*. After discussion by Messrs. Haynes, Codman, Whiting, Spencer, Hill, Sawtelle, and Hinckley, and Mrs. Sayles, the following resolutions, suggested as a substitute by the President, were unanimously adopted:—

Resolved, That the Free Religious Association direct its efforts the coming year, first of all, to sustaining *The Index*, believing this paper to be admirably conducted and a very important and efficient means of presenting the ideas and principles of the Free Religious Association.

Resolved, That it is also desirable to continue the work of the Association as carried on the past year through conventions and lectures, and the general agency of the Secretary.

Resolved, That these two objects be referred to the Executive Committee, with instructions to raise for the purposes named, if possible, $5,000 or more.

Messrs. Haynes, of Boston, and Hill, of Florence, were then appointed a Committee to solicit Memberships. It was afterward voted that this committee constitute the Finance Committee for all the sessions of the Convention, and that they have power to add to their number.

The Committee on Nominations submitted their report, which was unanimously ratified by the election of officers for the year as follows:—

President, William J. Potter, New Bedford, Mass. Vice-Presidents, Octavius B. Frothingham, Boston, Mass.; Felix Adler, New York City; George W. Curtis, Staten Island, N.Y.; Edward L. Youmans, New York City; Frederick Schuenemann-Pott, San Francisco, Cal.; Thomas Wentworth Higginson, Cambridge, Mass.; Elizabeth B. Chace, Providence, R.I.; George Hoadly, Cincinnati, Ohio; Nathaniel Holmes, St. Louis, Mo.; Rowland G. Hazard, Peacedale, R.I.; Bernhard Felsenthal, Chicago, Ill.; Annie L. Diggs, Lawrence, Kan. Secretary, Frederic A. Hinckley, Providence, R.I. Assistant Secretary, Charles H. Codman, Boston, Mass. Treasurer, John C. Haynes, 451 Washington Street, Boston, Mass. Directors (for four years), J. A. J. Wilcox, Chelsea, Mass.; Mrs. Clara M. Bisbee, Boston, Mass.; Fred May Holland, Concord, Mass. Nine Directors retain their places by previous election.

E. A. Sawtelle of Boston, Elizabeth C. Hinckley of Providence, and W. H. Spencer of Florence were appointed a committee to select a Nominating Committee for next year.

Adjourned at 10 o'clock to meet in Parker Memorial Hall, at 10.30, Friday morning.

For *The Index*.

MEN AND ANIMALS.

BY N. DAGMAR MARIAGER.

Who shall take the prize, men or the lower animals, when compared with each other for patience, unselfishness, and honesty? Are our "dumb brutes" dumb? If this is the argument used to prove their inferiority to men, then, by noting the practical effect, one naturally concludes there would be more justice, love, good-will, happiness, and "humane" deeds in the world, if men were as dumb as their "inferiors." or a little more so. If man's superior intelligence was intended by nature for helping him to gain the purely selfish ends of his gluttonous stomach and to satisfy the savagery of his barbarian soul, then the great Power has at least been cruelly partial. But I doubt if nature intended to do such wrong: it only made a mistake. Even the lions of Africa, the man-eaters of India, and other flesh-eating tribes, were not created for meat as a sustainer of life. Like the carnivorous parrot of Australia, who up to a few years since had never tasted flesh, they have fallen into degradation at some period in the past when famine threatened them or aggressive fellow-creatures cramped their liberties and destroyed their natural resources. Once accustomed to flesh as food, the objections made by the system were not pressing, nor were they heeded; and the young, generation after generation, inherited acquiescence of their forefathers, until now the senses have been dulled to the enormity of the wrong and the repelling nature of the carcasses on which they feed. Men became carnivorous by similar inducements, and remained so through laziness, self-love, and a convenient false presumption, until their better self has ceased to exist many centuries since. Humanity was at one time nearly as good as it now pretends to be; but indulgence of its unnatural appetites caused it to fall, and its worthy qualities have retrograded, while the savageness of the soul has been enhanced as a natural result. We evoluted from the monkey. We like our forms best. The monkey thinks us mere burlesques on his race: we, laying justice and the Golden Rule upon the shelf, gnaw the bones of our fellow-beings, while he indulges in harmless fun, but eats the products of the soil. Should we be ashamed to acknowledge him as our ancestor? I reply in the negative.

Animals are dumb, are they? In this period of scientific enlightenment, it is time the libellous epithet met its doom. We assume too much, and to our discredit, when we assert the gift of speech exists only with man. Every bird, reptile, quadruped, and insect has his language, signal or oral,—more often the latter,—as common sense will teach us, if we study them while free and living, as nature intended they should. But they have not the means of applying their forces of mind to the extent of building, manufacturing, etc., as man develops his talents; and perhaps they wouldn't care to live in man's luxury and self-idolatry, regardless of the consequence. Different natures have different opinions as regards what constitutes enjoyment and the better way to live.

The horse, it is true, has no great variety of sounds; but we can read much in the expression of his eyes, and we know he is intelligent. Travelling in an unsettled country, he is shrewder than his rider in locating water, danger, and the like. I was lost in a dense Texas wood, when, as it grew dark, I concluded to let my horse have his own way. We had been quarrelling some time. We both wanted to be pilot, but I gave in at last to his better judgment. Proud of his mastery, he turned to the right and moved on a straight course, crowding through thickets, and slowly feeling his way to give me time to hold the overhanging branches aside or duck my head under them. Thus we plodded on, until the stars and moon came out; while neither of us could see where we were going. All of a sudden, the branches parted into a clearing; and my horse, halting at the camp-fire, threw his head around to me, as if to say, half reproachfully: "The nearest way home is the best. You might have trusted me before you did, and spared me the measurement of several miles." I knew I was the dumber animal of the two of us, and I got off his back forthwith and told him so.

What do horses usually think of men? Are they opinionless, because they tolerate men's tyranny with little remonstrance? No. It is a religious sort of submission. Ignorance and religion make cowards even of us. We submit to what we know is cruel and wrong, to the injury of ourselves and society, through a mistaken sense of doing our part bravely without complaint. Some horses may be stupid enough even to compare well with some men; but for pure baseness, spirit depravity, I doubt if there is a horse in the wide world to compare with many men that are loose upon our communities. The horse, like the respectable man, husbands his individuality and values his honor: he takes a pride in doing so; but his undue humbleness is his ruin. To him, human speech, excepting a few words, is a monotonous twang. He neither understands nor talks French, German, English, Hindustan, or Greek; but he can do fairly well at facial reading, when acquainted with a person. We shouldn't boast while we are so ignorant of his dialect. He knows there is a gulf between a harsh and a kind voice. He knows full well a caress from a threatening gesture. We know his low, coaxing-for-oats whinny from that of loneliness and displeasure. That is all.

Don't the sparrows, too, chatter under the eaves, daily, of the reports latest from their weather prophet? We see them sit in thoughtful mood, contemplating the great dome of heaven with one eye; and, if it is going to rain, they oil up their feathers for the ordeal. Don't they gossip, too, of daily adventures with their enemies, their mishaps, narrow escapes from being trod upon, caught by a cat, or run over by a street dray, of their opportune presence to catch the crumbs shaken from a dining-table cloth, and of the dear little broods in prospective on the coming spring? Watch them. You will learn to read their minds and feel the thrill of pleasure, the apprehensive anxiety, and the pang at your heart, even as circumstances and events cause them in turn these feelings.

Why don't the hen cluck to her sisters instead of reserving her baby-talk for her nestful of promising eggs and the little ones that in due time shake the last fragment of shell from their stumpy tails and toddle off after her with their eager little wi-wi-wi's,

Digitized by Google

trustingly asking for love, protection, and care? These downy little creatures, so innocent and helpless, when life is in its infancy and their eyes open in constant wonderment upon all they see in this big world, think their mother all-powerful. She who takes them under her loving wing to nestle their heads in warmth and safety, and clucks fond assurances in their tiny ears, is to them the queen of all. We can all remember the time when we believed, in our baby faith, that our mother ruled the universe. The life of a child or chicken is joyless without mother, who wards off all dangers and allows her little ones only to see the pleasant side of life; and this innocent faith and trust is the most precious thing in life to the recipient.

Think you that animals do not feel the same thrills of delight that the human does, or the same maddening pain at the loss of a dear one? It is a settled fact that animals are superstitious. Many instances could be mentioned as convincing proofs, but the terror of a Norwegian wolf of the telegraph wires is sufficient here. All animals have sentiment connected with the supernatural. Occasional suicides occur in all the different species of the animal kingdom, as well among the wild tribes as those domesticated. How can such deeds be done, if not premeditated, if life has not become a burden from a mental sorrow that refuses to depart from the memory? Some animals take their own life to escape death by threatening fire. If all this is instinct, then we may as well say the human race write, build, manufacture, invent, and do all they are capable of doing by the same motive power. Corner a rat and assault him, and don't you see by his attitude and the desperation in his eyes that he understands the situation, and that his life is as precious to himself as yours is to you? You call a rabbit a coward, because he runs from his enemies. He has no weapons to defend himself. Wouldn't he, knowing this, be a fool to face them unnecessarily? And would it be doing justice to his wife and children, even if he had no regard for his own life?

Place yourself in their different insecure positions, and reason from the animals' stand-point. Watch them in their toils. Are they lazy? Do they sit and hold their hands when the elements begin to growl or even stop to utter complaint, or do they rustle to prepare for the coming emergency? Do they ever go to sleep at night with their young unfed? Do they ever turn their babes out from the nest-home, crying for bread, shelter, and parental protection, while their own time and means are spent to supply their own stomachs with unnatural and unnecessary stimulants, as is not unfrequently the case in the "God-fearing" and "superior" race which will inherit eternal glory, while these "dumb" creatures live, love, toil, suffer, and die, never to know what for the right was given to fellow-beings to hunt, persecute, torture, and devour them?

Animals, in my mind, believe in a hereafter with a purer sincerity than the human can conceive of, owing to his abominable and irredeemable conceit. Man's bigotry is universal: it is a perfect ally of his "lordly soul's" motives. The moment the human infant understands three words, it becomes a little bigot; and, daily, it becomes a bigger bigot, till it succumbs to the destroyer, be it soon or late.

Until the last breath is spent, animal mothers fight to defend their young with a fierceness never known in their personal dangers. Birds, cats, and other species have wilfully consigned their lives to the flames in devotion to the little ones they were unable to save. The flawless trust in the mother is seldom misplaced; and, the more insignificant she appears to others, the more she appreciates the high estimate of her worth, excepting she is totally depraved. In the love of her children, the human or animal mother finds a balm for many wounds sustained in the daily battles of life.

'Tis true none but the human animal can boast of a printed dictionary of his language; but each species has its mental vocabulary of its own speech, containing few or more words. And, when I hear a lamb or calf say, "Ma-a-a!" I know he is calling his ma; for, so far at least, he talks English. And when I see a friendly lot of ducks waddling off in single file to the neighboring pond, with the number taking turns with their "quack! quack!" etc., or all talking at once, I am curious to know if they are discussing the wonders of the sky, the length and breadth of the earth, the phenomenon of night's darkness and day's temporal changes, what is the sun and what causes the cold and snow of winter, if the stars are the brass-headed nails that hold the canopy of heaven in place,—philosophizing on the originality, sin, and cruelty of man, or only wagering on the number of fat worms in store for them and other delicacies awaiting capture in the mud and stagnant water of their favorite haunt.

Have you the eye and mind of a naturalist, or the ardor of a geologist? If so, I can tell you nothing that you do not know and have not long since experienced. If not, cultivate his observances; and you will have no occasion to be lonely, though you are a hundred miles from mankind. You will soon see that you are living in a new world of which you had never dreamed; a world far from tearless, yet full of raptures, sensations, and emotions that take you by turn and fairly bewitch you, and—best of all—for which you become a nobler man.

Animals, great and small, timid or ferocious, all readily profit by experience. They are no slower than the human in learning caution by having treachery practised upon them. To them, the sincere friend and inconsiderate pretender have nothing in common. They detect the gulf at once, but may try to win over his friendship to a surer base. What but reason teaches them the truth? I have watched animals in dreamy moods, and marked the expression when trying to solve some perplexing problem. I could read the mind as it rehearsed pleasant incidents of childhood days, and noted the quick, indignant flash of the eyes as a painful picture suddenly arose before the mind's eye to mar the would-be happy reverie.

Without grateful remembrance of past pleasant relationship, how can a dog give hearty welcome to the returned, long-absent master? Where there is memory, there must be more or less reason. Animals sometimes readily attach themselves to singular natures in the human tribe, and care little for others; and, again, some persons are, without seeming provocation, repulsive to them. Just so is it with us. This feeling, I own, is more an instinct, and an unnecessary one, than a conclusion of reason; but it serves to show that the animal mind is very similar to our own, except that we can go deeper into the nature of things, follow a thread farther, and so grasp what is beyond their reach. Therefore, we should be, as we claim we are, nobler than all other animals. We pretend to aim for perfection in ourselves and eternal happiness in a higher court,—

> "Yet, sometimes, we travel in pursuit
> Of things repugnant to their simple thought."

Yes, and that very often, too.

Untutored though they are, we are indebted to horses, cows, dogs, and even cats for a great many "humane" deeds, services they have volunteered to do at opportune times, when they realized in the fulness of their kind hearts the importance of prompt action. What, then, might we not expect, were their minds cultivated and principles refined? Many, I know, will smile at this idea, and scornfully exclaim, "How absurd!" To some extent, however, this can be done. In the purity of his soul, I have seen a dog turn away with an air of disgust at the foolish conduct of his master. The animal's sense of propriety and honor and gentlemanly behavior, I concluded, must be superior to the man's; hence, the unconcealed feeling of shame. When treated successively with kindness and honesty, animals never turn ingrates. Their gratitude is equal to that of the right-minded human for favors and consideration. Their disposition can be more or less influenced to viciousness or gentleness and affection by those who have them most in charge. Each and all have their true nature reserved in the recesses of their brain functions; but, like wayward men, they may drift into the ill habits of their disreputable associates.

Study philosophically the daily habits and characters of the unfettered denizens of forest and mountain, as you would study a fellow-man acting before you, but not communicative with you orally and minus hands with which to gesticulate, and you will be convinced that the mental ability and sensibility of even the species termed most stupid are universally underrated. Animals, to our disgrace, are by us inhumanly treated day by day, and every hour and minute in the day. Constantly, they receive barbaric usage from us, our neighbors, and our friends. Man is the wiser animal, but does he make fair use of his wisdom? He should be lenient and considerate in his dealings with the "dumb" species; but his overwhelming selfishness and greediness for power and destruction smother his better qualities, and he readily takes every advantage of nature's trust in favoring him. He will live in luxury and prodigality, cost what it will; and his senses are dulled to what he does, as he cuddles into the arms of

> "That monster, Custom, who all sense doeth eat!"

CORRESPONDENCE.

A FEW THOUGHTS ABOUT GIRLS.

Editors of The Index:—

The question is often asked, "What are you going to do with your boy?" but the equally pertinent one, "What are you going to do with your girl?" is never heard. Yet it is a question of serious import. From earliest childhood, the boy is imbued with the idea that he is to be something in the world, to follow some pursuit, to carve his own fortunes, and receives a training to fit him for these purposes. The girl, however, is brought up with no such idea. Not only is it not the custom to train her for any pursuit, but she is also, as a general rule, from early childhood, inoculated with conventional and false ideas regarding her sex, her position in life, etc. If her parents are well-to-do, she is given many opportunities for general cultivation, but no thorough training in any one direction by which to give occupation, stimulus, and variety to life, or, if desirable, to become a means of self-support. This education, or lack of it, is the cause of so many useless lives, whose narrow, petty aims at times become contemptible. At a summer resort, a charming young lady once amazed me by saying that "she only read to pass away the time." And, even in doing so, she was better employed than many of her fair sisters, whose occupations were less innocent.

The girl is taught, in many instances, that labor, for her, is dishonorable; that her position in life is to depend, not on her own character, her moral and mental graces, accomplishments, and attractions, but on the social standing or wealth of her father, husband, or male relatives. As she has no means of gaining money to purchase all the desirable and pleasant things of life, she is dependent on what she receives from these relatives. So that her life is made pleasant or the reverse by neither merit nor demerit of her own, and she is usually the mere plaything of circumstances. In a country like England, with Queen Victoria at the head of the nation,—a woman who owes her position to the fact that she is the descendant of kings, instead of to any special fitness of her own,—this is not so much to be wondered at. It is the more remarkable that England has produced such noble specimens of the sex as Harriet Martineau, Marian Evans, Mary Somerville, and Elizabeth Barrett Browning.

In a land like free America, a new era should dawn for woman. And who that has read Prof. Adler's noble and eloquent appeal in her behalf does not feel that, among the leaders of thought, she has a friend who understands her needs, her nature, and her capabilities of intellectual development? And many others might also be named. The Friends, too,—all honor to them!—foremost in temperance, anti-slavery, and peace reforms, have given equal privileges in many ways to woman. Like the old story of the starling, which beats its breast against its cage, and cries, "I can't get out!" so many a woman finds herself as closely caged by circumstances, by old traditions, and, more than all, by her own undeveloped resources. Mary Wollstonecraft, however mistaken she may have been in some respects, in her longing first for the domestic happiness which failed her, then for intellectual advancement, is a fair type of many of her sex. We need not only that Columbia and other colleges should throw open their privileges to women, but that a different standard should be held up to the growing girl,—a standard of moral and mental excellence, presenting for emulation such noble examples as we find in France in Madame Roland, Madame de Stäel, Madame Recamier, and, better still, in our own country, Lydia M. Child, Lucretia Mott, Margaret Fuller, and Margeret Haughery of New Orleans,—women who owe their fame to moral or mental exaltation. Of the latter, it might be said, as truly as of Sir Christopher Wren, "If you wish to see her monument, look around"; for the orphan asylums she established and maintained were better than marble columns. "She died, rich only in reputation; but a governor, an ex-governor, two gen-

Digitized by Google

erals, an editor, a clergyman, a banker, and a merchant were her pall-bearers."

It is also the right of every girl to receive some training so thorough, in at least one direction, that it may be to her a source of pleasure or means of support. If she has a taste for music and opportunity to develop it, let her not content herself with playing with taste and expression; but let her technical knowledge be so complete that she can teach it, if necessary. If drawing and painting should be her choice, then let these receive the same thorough training and care. Housekeeping and other domestic occupations should receive the same attention. With the ability to take care of herself, no girl will marry for the sake of getting "a good provider"; and there will be more marriages of congenial tastes and pursuits, like those of the Howitts and the Brownings.

The girl, too, should be taught to respect her own individuality, "to her own self be true." She can then, when old enough, think for herself on religious subjects. She will not then feel, as some say, that "her father and mother are good people, and the religion which has served them is good enough for her." Nor will she choose a church for social advantages. A lady (a Methodist) once told me, if she lived in Boston, she should attend the Unitarian Church, *because* the best people went there.

The girl, too, has a right to be taught regarding the laws which men and women are expected to obey. She should be taught to interest herself in national and humanitarian affairs, to enlarge her views and sphere of interests, so that, should the day ever come when it is expedient to give to woman what is now justly her due,—the right of suffrage in all matters wherein she has equal interests at stake,—she will be then fitted for it by enlarged ideas, by training, and by education.

A. O. C.

MATERIAL IMMORTALITY.

A Dream.

Editors of The Index:—

I was walking hand in hand with a friend along the busy street of a large city. Unconscious of passers-by and with a pleasing sense of mutual understanding and sympathy, I easily uttered these thoughts:—

"We have a passion for usefulness. Each day, our chief desire is to have made others better and happier, and to have made a record upon the world that will last and produce ever-increasing results for good. Our hope of immortality is not for a life of ease or spiritual rapture, but for a career of unceasing beneficence.

"But suppose there is no distinct individual existence beyond this life, shall we not live materially? Matter is indestructible, and will exist forever. These atoms that compose our bodies have, therefore, eternal life. They will scatter about the universe and assume an infinite variety of forms, but our ownership of them and identity with them will never be erased. We profess to love good for its own sake, not for its results to ourselves. It is, therefore, a satisfaction now to think of the unending influence of our bodies, even though no pleasurable consciousness ever comes to us in eternity. Atoms from our bodies may in future be parts of the most beautiful flowers, the largest trees, the grandest mountains, valuable gems, powerful machinery, useful chemical combinations, the finest animals, the most beautiful women, the noblest men. We may be represented in all the most charming forms and grandest enterprises of the future.

"But it may be that mind and matter are not two distinct entities, and that mind is an eternal property of matter, and each atom is a living, conscious soul. The union of their sensations constitutes what we call our minds; but, when separated, they may each still have consciousness, and feel an intelligent sensation of their surroundings. Suppose we thus live forever, having a distinct conscious existence in these numberless atoms, how is our life multiplied by death? And not only by death. Every seven years, our bodies are completely changed. Each moment, some atoms leave us and others join us. Think of the diffusion of a body in a long life! Who could count our existences! "Perhaps these atoms are influenced by the characteristics of the body they join, and our high or low moral condition is thus perpetuated. What an inducement to strive for perfection, if our sensations are to be multiplied by millions of existences!"

"But," said my companion, "these atoms have been in other bodies before they were in ours. How can we claim that they represent us exclusively in the future?"

"Probably not exclusively," I replied. "Each atom may receive new characteristics from the organism it inhabits, and may become more or less adapted for future service by the latest influence. Each atom may represent the average of the condition of the human beings with which it has been associated. Perhaps, atoms passing through a series of bodies of the highest quality may combine into richer grass, heavier wheat, more vigorous plants, more active brains; and thus, as man improves, all else in nature will be benefited, and through man's elevation the bondage in which creation groans and travails will be changed into 'the glorious liberty of the children of God'; that is, perfection."

For *The Index*.

IN MEMORIAM.

In Clinton, May 16, died Mary Powell, mother of Rev. E. P. Powell, aged 89. She was a woman of marked intellectual power and force of character. For seventy-five years an orthodox believer, she opened her eyes in her old age to the honester faith in God instead of faith in Calvinism. She closed her life peacefully, saying: "I have no fear or dread. It is all right. Let me go." Her last request was to be buried among her flowers, of which all her life she had been an ardent devotee, and not in a cemetery among strangers. She also specially charged that no orthodox minister should be allowed to preach over her remains. "Let those who knew me say a few words, if they will, and then leave me to my rest." With tender words for all, her spirit peacefully left us; and she now lies where she requested.

The choir of the Independent Society of Utica and a choir of the Delta Upsilon Society of Hamilton College volunteered their services; and, with sweet music and a few noble words from Rev. David Williams, of Utica, her body was laid away.

Before the coffin was borne from the house, the following lines, written by Rev. E. P. Powell, were read:—

Let me lie among my flowers, she said,
The flowers I loved so well,—
Where the lilies will blossom over my head,
And the roses their love will tell.

Let the mignonette creep around my feet,
And the tulips ward the rain;
Let the Junes and Augusts their love repeat,
And bring me their songs again.

Let no one come to tell wild dreams
Of a world they have not seen:
I see, as I look, the morning gleams
Of a nobler day, I ween.

Plant no stone above my head:
Draw warm, sweet earth around.
Then let me rest, not like the dead,
But as one whom peace has found.

Say no prayers to win me a right
To the heaven my life has won:
What is wrought, that stands in His sight,
And the deeds that I have done.

So bear her, friends, to her resting-place,
To her cushion of turf and flowers;
While ever we think of her motherly grace,
And treasure her still as ours.

The body was then borne to a beautiful enclosure of evergreens, filled with tulips, after which the friends threw in handfuls of flowers; and these lines, by the same author, were read:—

Dear hands, so full of toil and care,
Rest thou in peace!
Dear heart, so full of love and prayer,
Take thy release!

A life filled full of goodly deeds
Can never die:
Thou needest not the pledge of creeds
This change to try.

Among thy flowers there we lay
Thy weary head.
Thou lovedst them alive, and they
Will love thee, dead.

Thy love for us shall bloom again
In lily sweet;
And, in the violet, thy soul
Our love shall meet.

Above thee, nought but God we see,
And he is love.
He came to us, brave soul, in thee,
A holy dove.

O mother love! Now say, all men,
Can God reveal
Himself incarnate more than when
Such love we feel?

Thy work was done; thy tools, grown old,
Were laid away.
The twilight lingered long, till gold
Hemmed in thy day.

Another day will break thy sleep;
Another morn,
And thou wilt smile, e'en as we weep,—
Thy strength reborn.

For night is but the nurse of day,
And death of life;
And what seems most to be decay
With growth is rife.

The friends then dispersed about the spacious lawns, while even the most orthodox confessed the innovations on custom to have been in the direction of true religion.

BOOK NOTICES.

THE GREAT RELIGIONS. Part II. A Comparison of All Religions. By James Freeman Clarke. Boston: Houghton, Mifflin & Co. Four hundred and thirteen pages. Price $3.00.

This volume is the complement of the first volume entitled *Ten Great Religions*, published in 1881. It is based on twelve lectures given in the Lowell Institute in the winter of 1881-82. It aims to show what all the great faiths of mankind teach concerning God, the soul, the future life, sin and salvation, human duty, prayer and worship, inspiration and art. The origin of the idea of God and of the various doctrines of religious systems and phases of religious life form the chief subjects of discussion, and they are considered in a popular manner from the stand-point of a liberal theologian. The work is not the result of original research, nor is the treatment of the subject learned or profound. Dr. Clarke simply gives his views in plain language on questions that "are still subjects for inquiry," concerning which "specialists differ among themselves on some of the main points." A work on this subject of greater value to an advanced student would be less adapted to common readers. Dr. Clarke writes for the people, not for scholars, not for close, critical thinkers who want evidence or argument upon every disputed point. But his earnestness, liberality, and freedom from bigotry are very conspicuous. The fundamental idea in this volume is, "Christianity does not differ from other religions in being alone true while they are false, but in possessing the whole of which they possess parts." Dr. Clarke declares that, "of all the systems of belief which have had a wide-spread hold on mankind, this may be posited: that they are commonly true in what they affirm, false in what they deny,"—a statement which certainly will not bear the test of examination. The author does not commit himself on evolution, although in the preface he says, "Evolution has a satisfactory meaning only when we admit that the soul is developed and educated by passing through many bodies, and not only accept the theory that our ancestors may have been apes or fishes, but the larger doctrine that we ourselves were probably once apes or fishes, and that we learned much in those conditions which is useful to us in our present forms." On page 190 occurs the following sentence: "It is true that the Darwinian theory takes no notice of the evolution of the soul, but only of the body." If by this is meant that Darwinism takes no notice of the intelligence, the mind, the feeling and thinking part of man, the statement is incorrect. The question as to the survival of the mind after bodily dissolution is one in regard to which Darwinism enunciates nothing. Although there are errors in the work and some reasonings which are by no means conclusive, the volume is one that contains for general readers a large amount of information; and it is so far in advance of popular thought that it will be useful in diffusing knowledge in regard to the old religions of the world.

THE AMERICAN PROTECTIONIST'S MANUAL. Protection to Home Industry essential to National Independence and to the Well-being of the People. British Free Trade a Delusion and a Peril. By Giles B. Stebbins. Detroit: Thorndike Nourse. 1883.

This little work of one hundred and ninety-two pages is a manual on the tariff question, containing facts, figures, and arguments in support of protection and against free trade. Mr. Stebbins' essential

Digitized by Google

thought is thus expressed: "A nation whose people have cleared its lands, built its mills and shops and mechanism, opened its beds of ores and coal, and are paying its debts and taxes, cannot be expected to admit foreigners, who have no share in these tasks or burdens, to its markets on equal terms with its own citizens. A tariff is a means of asking them to pay reasonably for the privilege of bringing in their products, and at the same time of building up home industries and giving employment and independence to the people. Nothing abstruse or complicated in all this." The author thinks that farmers, merchants, and all other classes should wheel into line, and over all should be "flung out a white banner with the golden motto on its broad folds: *Protection to Home Industry. The American Market for the American People.*"

Mr. Stebbins has put together his statistics and authorities and arguments quite skilfully, but in a somewhat partisan spirit, which will, however, have the good effect probably to induce those who read them, and who are unfamiliar with the subject, to learn what can be said in defence of an American policy of free trade. The work amply meets the want it aims to supply.

THE *Revue de Belgique* for May opens with an article showing the evils of intemperance in Holland and the benefits resulting from a license law which has been recently passed, and has already greatly lessened the amount of liquor consumed, its operation being greatly facilitated by the fact that it represents the best public sentiment, which there considers it wiser to be satisfied with regulating and restricting the traffic than to attempt its abolition. Then, a "Letter from Italy" sets forth the misery of the working classes, and shows how much of it is due to the cost of navies and standing armies, as well as how inevitable is socialistic agitation in every country where the laborer is not able to make himself comfortable. Then follows a criticism of Zola, one of whose novels, *L'Assomoir*, cured a Belgian operative of a fondness for strong drink, which had made him the terror of the neighborhood. There are also a powerfully told story and an account of the honors recently paid to a Belgian poet and novelist, Madame Courtmans.

THE *Century* for June counts among its attractions portraits of a bust of the poet laureate of England, made by Thomas Woolner; Thomas Woolner in his Studio; Henry Hugh Armstead at Work; Hamo Thorneycroft in his Studio; George A. Lawson at Work; John Keats in his Last Illness, a pathetic picture drawn by his friend Joseph Severn; and Joseph Severn, with autograph. There is a symposium of "Replies to 'Is the Jury System a Failure?'" Henry James, Jr., writes about "The Correspondence of Carlyle and Emerson," and James Herbert Moore has an interesting article on "The Native Element in American Fiction." In "Topics of the Times" and "Open Letters," many subjects of current interest are briefly treated; and "Bric-à-Brac" contains several poems of considerable merit.

THE June *Wide-Awake* contains about its usual number of excellent illustrations, and has a new feature in a simple dialogue for beginners in the French language. George MacDonald's life and works are delightfully described by Amanda B. Harris, and illustrated with a portrait by Robert Lewis. Among the distinguished writers for this number are E. E. Hale, Marion Harland, Mrs. Diaz, Fred A. Ober, Sara Orne Jewett, Mrs. Piatt, Mrs. A. D. T. Whitney, Felix Oswald, "Bright Eyes," and many others.

THE leading articles in the *Catholic World* for June are "Unscientific Liberty," by Rev. George M. Searle; "The Catholic Church and the Colored People"; "Recollections of Alexander H. Stephens," by A. J. Faust; and "The Management of the Liquor Traffic," by Rev. Thomas McMillan. The review of "New Publications" is always interesting reading.

FEW of the many magazines for youthful readers excel in merit *Our Little Ones*, issued by the Russell Publishing Company of this city. Among the articles full of useful knowledge profusely illustrated which the June number contains is one from Fred A. Ober on "All Kinds of Crabs"; "Insect Spinners and Weavers," by Mrs. G. Hall; and "The Hurdle Race," by Mrs. D. P. Sandford.

PERSONAL ITEMS.

IVAN TOURGENIEFF, the greatest of Russian novelists, is said to be hopelessly insane.

HERBERT SPENCER has been elected Correspondent of the French Academy of Moral and Political Sciences, in the section of philosophy, in the place of Emerson, but declines the honor.

THE wife of the chief engineer of the East River Bridge, who has been an assistant in his professional labors, is a sister of the late Gen. G. K. Warren of the United States engineers, one of the corps commanders of the Army of the Potomac.

AT the twenty-fourth annual commencement exercises of Cooper Union, which occurred on the 26th ult., it was announced that the children of Peter Cooper would, in addition to the $100,000 left to that institution by the will of its founder, contribute another $100,000 during the coming year to the Cooper Union Institute.

TO FEW men has it been given to do more for purely popular literary and scientific education than to the two Chambers brothers of Edinburgh, of whom the last—William—has just passed away. When Robert and William Chambers started out on their career as publishers, there was no cheap good literature for the people; and to them belongs the honor of giving the first impulse to that literature, in Great Britain at least. The *Tracts* and the *Information for the People*, and, later, Chambers' Cyclopædia,—all of which have passed through several editions,—gave an impetus to the production of cheap popular literature which can hardly be understood in these days of universal publishing. The Chamberses did no distinctively religious work; and, in the later issues of their popular tracts and encyclopædias, the evangelical view of the Scriptures and of Christian doctrine is distinctly frowned upon.—*Sunday School Times.*

WE find in an exchange the following description of a liberal Episcopalian, which will be interesting to our readers: "Rev. R. Heber Newton has a clear-cut, intellectual face, with dark eyes burning with intense feeling, an impassioned manner in delivery which carries his hearers with him, and a sincerity and sympathy of outgiving which make you believe in the man as well as the preacher. He is the son of an Episcopal clergyman of Philadelphia, but himself lives at Garden City, Long Island. He leads a very busy life, entering heart and soul into all sorts of schemes for the relief of suffering, the teaching of the ignorant, the uplifting of the down-trodden. His congregation, which is large, and embraces many men of many minds, is entirely devoted to him; and his church is packed to the vestibule every Sunday. His audience is always largely composed of young men, which speaks volumes for the vitality of his utterances and the liberality of his views."

THE validity of the will of Mrs. Eliza F. Eddy, of Boston, has been confirmed; and property valued at about $57,000 is to be divided equally between Susan B. Anthony and Lucy Stone Blackwell. Mrs. Eddy was the daughter of Francis Jackson. She died in 1882. Her will was filed, and the Probate Court declared its validity; but this decision was appealed from. The matter was carried before the Supreme Court, and that body has recently affirmed the decree of the Probate Court. Mrs. Eddy left about $80,000 in her will, and, after numerous legacies to different persons, the following bequest appears: "Whatever is left, after paying the above legacies, I direct shall be divided into equal portions. One of said portions I leave to Mrs. Susan B. Anthony, of Rochester, N.Y.; and the other portion I leave to Lucy Stone, wife of Henry B. Blackwell, as her own absolute separate property, free from any control by him. I request said Susan and Lucy to use said fund thus given to further what is called the 'woman's rights' cause'; but neither of them is under any legal responsibility to any one or any court to do so."

"THE INDEX" has lost probably its most aged subscriber, Mr. Wm. H. Allen, of New Bedford, who died at his home in that city last week, at the great age of ninety-seven years. Mr. Allen has shown a special interest in *The Index* and its fortunes through all its history, and the cause it represents had no more loyal supporter. When he was nearly ninety years old, he actively canvassed among his neighbors for subscribers to the paper from the mere love of spreading its principles. And the principles it advocates could have no finer illustration in character and practical life than he exemplified in his long career. He had held several public offices, and in public and private discharged all duties with rare zeal and fidelity. To the end of life, he retained the elastic hope and cheerfulness that are the qualities of youth; and his last conscious act was an illustration of his life-long disinterested thoughtfulness for others' good. Sick himself, he thought more of his sick wife in the adjoining room, and, calling his market-man to him, gave directions to procure some fruit for her, then turned upon his side and fell into a sleep, which became the sleep of death.

A RICHMOND, Va., letter says Rev. John Jasper, the negro theologian, is "simply a poor, ignorant, deluded negro, a victim of the commonest errors of ignorance and superstition; yet he has as his following the entire African population of the city, old and young. That he should have the former is not strange; but that the latter, who have possessed free school advantages for years, should believe in him, is. He is the pastor of one of the largest colored churches here, and ministers with great zeal to his charge. No 'beggarly account of empty boxes' ever greets his performances,—that is the proper name for his preaching,—but, on the contrary, standing room is scarce. Jasper is a diligent and close reader of the Bible; and instead of confusing his mind over the nice points and denominational interpretations of Holy Writ, like a sensible man, he leaves all that to contentious theologians, and accepts the literal meaning of every word he reads, by which he acquired his present distinction. He contends that the earth is stationary, and that the sun revolves around it, like a wheel around its axle; also that the earth is flat. He claims to get his authority from the Bible. That the earth is spoken of therein as possessing four corners is proof enough that it is flat, and that it is stationary is plain, because, if it revolved, if we didn't 'drap off,' we would half the time be standing on our heads or nothing, which he says it is 'impossible for no man to do,' at least, with much success. It is also evident that the sun 'do move' from the fact Joshua commanded it to stand still. He says Joshua wouldn't have been fool enough to command the sun to stand still, if it didn't move. 'How in de name o' God,' he asks, 'can anything stan' still dat don't move fust?' And so with the earth,—but the argument has already been given. He has sublime contempt for all the assertions of astronomers, and especially for their figures. If the sun is 91,000,000 miles away, Jasper wants to know how the distance was measured. He says, supposing a tape-line was made to reach 1,000,000 miles, who could carry the end of it that far, and, even if that were possible, who would hold it while the remaining trifle was measured?"

SAMUEL JOHNSON.

Lectures, Essays, and Sermons.

With a Memoir by SAMUEL LONGFELLOW, and a fine Steel Portrait. Crown 8vo. $1.75.

CONTENTS.—Memoir; Florence; The Alps of the Ideal and the Switzerland of the Swiss; Symbolism of the Sea; Fulfilmen tof Functions; Equal Opportunity for Woman; Labor Parties and Labor Reform; The Law of the Blessed Life; Gain in Loss; the Search for God; Fate; Living by Faith; "The Duty of Delight"; Transcendentalism; Appendix.

"This is one of the best of books, and will help to preserve the name of one of the best of men."—REV. CHARLES G. AMES, in the *Sower*.

"The Memoir by Mr. Longfellow . . . most faithfully represents the scholar and author in his best moods and the varied phases of his intellectual life."—*Salem Observer*.

"He was a man of true nobility of soul, of profound and elevated thought, of absolute faith in God, of clear spiritual insight, of perfect sincerity, and a stainless moral life."—*Worcester Daily Spy*.

"His insight, his faith, his ethical nobility, shine out on every page. They are none of them so lofty that they do not touch the humblest things with their illumination."—J. W. CHADWICK, in *Atlantic Monthly*.

"The lectures, essays, and sermons were well worth preserving. They are characterized by all of Samuel Johnson's breadth and depth of thought and eloquence of expression."—*The Commonwealth* (Boston).

A LITERARY AVALANCHE.

Overwhelming opposition and delighting all lovers of good books. "What IS the world coming to? The poor man is now on an equality with the richest so far as books are concerned"—is a fair sample of the of quotations which might be made from the letters of customers, and from newspapers not influenced by the millionnaire publishers.

FIFTY TONS OF CHOICE BOOKS, a large portion of them the best editions published in this country, now rea and your own selections from them will be sent to any part of the continent for examination, if you will give reasonable guarantee that the books will be paid for after receipt, or returned, *return* transportation at *my* expense.

SPECIAL BARGAINS are offering this month. New publications are added to the list every week.

Prices are lower than ever before known. My books are NOT sold by dealers,—prices too low for them. Among the authors and works are those of:—

Dickens,	Froissart,	Proctor,	Geikie,	Burns,
Irving,	Green,	Huxley,	Kitto,	Ingelow,
Walter Scott,	Grote,	Tyndall,	Conybeare and Howson,	Arnold,
Thackeray,	Carlyle,	Rawlinson,	Taine,	Goldsmith,
George Eliot,	Lossing,	Brontè,	Chambers,	Tennyson,
Longfellow,	Creasy,	Mulock,	Shakespeare,	Library of Universal Knowledge, and Others.
Gibbon,	Schiller,	Cooper,	Milton,	
Macaulay,	Bacon,	Kingsley,	Byron,	
Bancroft,	Herbert Spencer,	Farrar,		

Descriptive circulars sent free on request, or my 68-page Illustrated Catalogue, for three cents. Please mention this paper.

JOHN B. ALDEN, Publisher, 18 Vesey Street, New York.

Frothingham's Sermons.

The sermons are neatly printed in pamphlet form, and our friends who wish to do missionary work for the Liberal cause will find them admirably adapted to that purpose. To such as order them in lots of 25 or more, the price will be reduced to 3 cents. Single copies 5 cents.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

THE QUAKER INVASION OF MASSACHUSETTS.

By R. P. HALLOWELL. 1 vol., 16mo. $1.25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

THE SECULAR REVIEW.

A JOURNAL OF

English Liberalism.

CHARLES WATTS, } Editors.
W. STEWART ROSS, }

The representative English Freethought journal. In its columns are impartially discussed all Secular, Social, and Theological questions.

Price, 7 cents single number; $2.75 per year, postpaid.

Subscriptions may be left at THE INDEX office.

THE PATRONAGE of the liberal advertising public is respectfully solicited for THE INDEX. Though the paper must not be held responsible for any statements made by advertisers, the attempt will be honestly made to keep the advertising pages in entire harmony with its general character and principles. To this end, all improper or "blind" advertisements, all quack advertisements, and all advertisements believed to be fraudulent or unjust to any one, will be excluded from these columns.

ADVERTISING RATES.

For 1 to 12 Insertions,	. . .	10c.	per line.
" 13 " 25 "	. . .	8c.	" "
" 26 " 51 "	. . .	6c.	" "
" 52 "	. . .	5c.	" "

On half-column advertisements, a discount of 10 per cent. will be made; on full-column advertisements, a discount of 25 per cent.

On all advertisements for which cash is paid in advance, a further discount of 25 per cent. on the total, as above calculated, will be made.

THE Mayor of Moscow has been banished for suggesting certain reforms, and the Moscow *Telegraph* for commenting on the occurrence has been banished. M. Aksakoff, a well-known lawyer and philosophical writer, has also been banished for asking the czar to grant liberal reforms. The banishment of the czar himself would be but mild punishment for these outrages on liberty.

TEXAN methods are, though unique, apparently based on an entire reliance upon horse-whipping as the supreme power. Some years ago, we read of a free thinker being raided upon by a masked party in that State, and horse-whipped for his atheism. Now comes the story of a party of white men doing the same thing to a couple of colored preachers, to break up a too protracted revival.

THE *Republic*, referring to the vacation of Mr. Moody and other preachers who find two or three months in the year too hot for religious work, says that it is not on record that Satan ever stopped because the mercury got above 80 degrees. But the *Republic* omits to mention that Satan has been in an extremely hot climate a long time, and probably become acclimated and so adjusted to his environment that the heat does not disturb him.

SAYS the *Presbyterian:* "Oxford University seems to have swung from Ritualism to Rationalism,—at least, Rationalism is no longer a bar to promotion in that old Christian University. Mr. Frederic Harrison is chief of the Positivists in England, and is a Professor in Oxford, and took occasion to glorify Gambetta, the Parisian, as one who formally repudiated any kind of homage to any sort of church. Infidelity is lauded in colleges which bear the name of Jesus and Trinity."

"DURING the past sixty-seven years," says the Duke of Argyle, "the population of Germany, with all the drains that have been made upon it, has increased twenty-four million; and, during the same period, the United Kingdom has increased eighteen million,—more than double its population. The overcrowded condition of these countries he regards as really alarming, and thinks an extensive emigration movement would be a matter to be hailed as a blessing rather than a thing to be dreaded."

THE following we find among the foreign items of an exchange: "The Belgian government has just accepted a legacy left to the 'godless schools' of Ypres by a Brussels tailor, a whimsical free thinker, who, several months before his death, wrote out the following announcement relating to that event: 'M. Adolphus Pype has the honor to inform you of his departure to the other world, and asks you to accompany his body to the cemetery, in which he will be buried by civil rite, on the ——, at ——. He leaves this earth without regret.'"

REV. DR. DALL writes to the *Christian Register* from India, concerning the opening of the Bengali year: "They celebrate their New Year's Day as rejoicingly as we do ours. All educated people in Bengal prefer to date from the Christian era. Their own, which reckons from Saliván, falls some eighty years later than ours. The do-nothing doctrine of *repose*, Nirvana, which characterizes alike Hinduism and Buddhism, leaves India without a written history; and it is odd that, while Saliván's name has for eighteen hundred years marked an era, nobody knows who he was."

THE committee appointed by the convocation of Canterbury to enter into possible negotiations with the leaders of the "Salvation Army" have been discharged by the English bishops, who are satisfied that the later developments of this movement are on the side of disorder and immorality. One of the bishops declared that the ratio of illegitimate births had increased in proportion to the number of meetings the army had held in some parts of the country. The Countess de Gasparin thus gives the main characteristics of the "Salvation Army": "Trouble, which is no awakening; fever, which is not life; words, which are not loyalty; notoriety, which is not edification."

A ROMAN Catholic priest named Byron, of Ansonia, Conn., lately declined to visit a sick woman, one of his parishioners, because she had employed a Protestant doctor, instead of a Dr. Conkling into whose hands he wanted to turn business. The woman is recovering, although it was feared she would die. At two masses, this priest has announced that a Catholic doctor had come into the community, and that Catholics would no longer be obliged to have recourse to heretical murderers. He announced, furthermore, that he would not attend any woman who did not employ the Catholic physician. Prominent Catholics denounce the action of this bigoted and insolent priest; and the matter, it is stated, will be brought before the bishop.

REFERRING to the small contributions of Peter's pence in Ireland and the United States since the recent action of the Pope in regard to political matters, the Chicago *Tribune* observes: "How long the strike will continue and which side will be victorious remains to be seen. Outside observers will not be slow in deciding that the Church will prevail, and that it will not be long before Peter's pence will be showering down upon the Vatican in their customary abundance; but that there is any strike at all, that members of the laity have the courage to boycott the Vatican even for a time, is a hopeful sign that the great struggle for independence of Rome in secular concerns is gaining ground steadily, and that the day is not far distant when the Pope must cease to exercise any but spiritual functions."

AT a mass meeting of the Catholics of Dublin, held May 19, the following resolution was passed: "*Resolved*, that we deem it a duty to ourselves and to our country solemnly and distinctly to declare that any decree, mandate, rescript, or decision whatsoever of any foreign power or authority, religious or civil, ought not, and cannot of right, assume any dominion or control over the political concerns of the Catholics of Ireland." The *Nation*, a thoroughly Catholic journal, which has been and is a steadfast supporter of papal infallibility, treats the Roman manifesto in the following style: "As we have through blood and fire held our faith against England, so shall we at all human price hold our country against Rome. And the propaganda talks to us of 'prudence' and 'wisdom,' forsooth! In these temporal affairs, we Irishmen have shown ourselves better stewards than the disastrous counsellors of the holy Father have done.... If Rome will enter into an unholy alliance with England against us, then, trusting in the help of the good God, we shall stand for the national rights and liberties of Ireland against Rome and England."

THE New York *Tribune* of May 21 contained the following despatch from Saratoga: "There are no Sunday trains here. A large package of to-day's *Tribunes* was forwarded from Schenectady, over twenty-two miles, by 'pony express,' and reached Saratoga about noon, as people were returning from church. The supply was soon exhausted. Many Presbyterian clergymen and elders from New York and other cities, who, at the recent General Assembly, voted to adopt resolutions condemning Sunday newspapers, were seen purchasing them as they entered their respective hotels and boarding-houses. When asked about his consistency, one delegate said that it was not the same here as at home; and, then, he commended the spirit of enterprise shown in sending the paper by special messenger when the trains do not run. Several clergymen also spoke to the *Tribune* correspondent in praise of 'the clerical symposium,' which attracted much additional comment from the fact that one of the clergymen who gave his views regarding the proper observance of the Sabbath is taking a prominent part in the proceedings of the General Assembly."

NOT A SECT.

Some one of the speakers at the late annual meeting of the Free Religious Association spoke of "other denominations" in a way to imply that the Free Religious movement is one of the religious denominations. It was, doubtless, an inadvertence, a mere slip of the tongue. Yet it may be well to revert to it, if only for the sake of correcting any false inferences which may be drawn from such occasional inadvertences.

We are not of those who think it wholly undesirable or wholly unlikely that there should be another sect in religion; one formed distinctly on a new demand of thought and for a particular practical purpose. We can conceive it possible, for instance, that there might come an association of societies, organized expressly on the affirmation of religion and for the definite purpose of preserving the religious sentiment and using it as a force in the practical amelioration of human society. Such organizations would assume the existence of religion, not simply as an historical fact, but as a permanent and universal need of humanity, and would plant themselves on that proposition just as average Unitarianism now plants itself on the assumption that Christianity is the best and final form of religious evolution for mankind. Or there might come a group of societies, organized distinctly in aim and name as Societies for Ethical Culture; and these societies, adopting essentially the same principles and methods, might find it, doubtless, for their mutual advantage to link themselves in some general association for the discussion and promotion of their common ideas and plans of work.

Now, organizations like those here supposed would, in fact, be new sects. They would be sects, because, while cut off on one side from the old religious bodies by the creed-limits of those bodies, they would voluntarily cut themselves off, on the other side, from the general body of liberal thinkers by distinctively basing themselves on certain conclusions of philosophical thought. Yet either or both of them might be very useful sects, and might propagate the ideas they respectively represent more efficiently by thus definitely uniting upon those ideas. And, were such organizations to come, they would have a large measure of our sympathy. Though they might not, in our view, represent the ultimate of religious evolution, yet they would serve to open to many liberal thinkers, who now fail to find a place for associated activity, practical ways for earnest, co-operative work for their own and society's good.

But such organizations, however good and effective they might be, would not cover the ground where the Free Religious Association has found its special mission. That Association has always, if we understand it, protested against being counted as a new sect. It put into its constitution a clause expressly designed to prevent such a result. The first sentence of the second Article reads thus: "Membership in this Association shall leave each individual responsible for his own opinions alone, and *affect in no degree his relation to other associations.*" The part of this sentence which we have put in italics was evidently intended to make it unnecessary for persons to come out of the religious denominations with which they might be connected, in order to join the Free Religious Association, provided no such necessity was laid upon them by their own consciences. Some of us might question the clearness of their sight or the consistency of their action in thus remaining with sects which seem to us to impose restraints upon mental liberty, but this is a matter which they have a perfect right to decide for themselves. And, as a matter of fact, the membership of the Association, from the beginning, has been found in various denominations,—as the Unitarian, Universalist, Quakers and Progressive Friends, Spiritualists, Liberal Jews, etc., as well as more largely among liberal thinkers outside of all denominations; nor has it been wholly shunned by liberal Orthodoxy on the one side, and much less by Agnostics and Materialists on the other.

What, then, the founders of the Free Religious Association saw and aimed to represent in that Association was this: They saw in different denominations and in different religions parallel or converging movements of earnest progressive thought, disposed to test all religious beliefs and practices by the light of reason and of practical humanity; and they aimed to bring these moving lines of thinkers together in a free fellowship for better mutual acquaintance, for the interchange of opinion, for the further promotion of mental emancipation and the clarifying of thought, and, above all, for the advancement of the practical moral and social interests of mankind. But so confident were they that earnest thought, when emancipated from dogmatic authority and left free to follow its own legitimate laws and methods, would be a constructive power for human welfare, that they were unwilling to foreclose the course of progress by imposing any set of thought-conclusions as a condition of membership. Yet this was much more than to establish a free platform for the equal utterance of all opinions on religion: it was courageously to commit all the creeds and institutions of religion to the methods of free investigation, while it left individuals free to draw their own conclusions, and to carry them into action in such way and in connection with such associations as should seem to them most fitting. Hence, though new and more advanced sects may come, and the Free Religious Association may hospitably welcome their word and work, it is not its mission to form them nor merely to count one among them; nor can it do so except by a radical and revolutionary change in its own constitution.

WM. J. POTTER.

SOCIAL INEQUALITY.

To friends of the various progresses, the present wide discussion of the woman problem warrants happiest expectancy. It is not so much that all should concur upon solutions of this or any other question as that all should agree that a solution is desirable and possible. The free dreamers who speak of the *spirit* of truth are thus in the right; for not even truth, if it come through the search for something other than truth, bears with it such potency as when it comes with the reverent feeling of *reaching* and *desire*. Lessing's brief parable ever holds good.

There need be no call for wonder or anger over Dr. Dix's vain position. What he says is the natural expression of his character, his training, and his surroundings. We find in his words a more imperative call to duty than would have been heard, had he taken compromising ground or halted half-heartedly on the edge of reform. The attention of sleeping Christians is not for mere wantonness seized by the very conservative instincts of the preacher. The ideas may serve to bring many in the Church to understand that their sanguine belief in social progress within the fold is faintly nourished, and needs revising. Dix is, no doubt, a sincere man of a certain sweetness of disposition; but he is evidently worried by the signs of "sloughing off" in religion, and the state of woman, and knows little whither to turn in his trouble.

It may be seen, by the requested and published opinions in the New York *Critic*, that co-education, for instance, as a line of advancement for woman, is a thing which elicits from college authorities opinions as various as the general differences upon the suffrage and what are considered the wider demands of the agitation. It is significant that there is a disposition, even among the conservatives, to oppose the proposed changes mildly and judicially. There is every disclaimer entered of prejudices of sex; and Liberals can afford to admit the fairness, since the doubt does not come into the controversy either way as an ingredient of much importance. The principal gain exists in the opening of the question. Truth is sure of final acceptance, when once nature plants with us a single expositor.

The tendency of the time is away from "bosses," whether of the political, priestly, or social nature. There is a love of mid-day growing in the human heart. We care little to be put into hot-houses of thought, and shown off to friends by our priests and politicians and husbands as fine products of their skill and care. When once we are in the open air and upon the free fields, each may well find his or her true development, and build up life not alone more broadly, but with greater ease. There is too much government all through the fabric of our civilization. The priest and the husband and the politician ape each other, and they unite in following and applying for their uses the current idea of the State. The appeal of woman is the pathetic measure of our progress. The Fourth of July orator would find small material for his boasts, if his imagination were not measureless. Those who call for liberty, and rule their homes with the selfish power of an imitation god, need reminding that there is an end to all autocracies, and that, while their lazy position, like that of the kings, is used now alone for bravado and bluster a power greater than that of either plots and will accomplish its destruction.

I feel that Dix is not a wise man or a prophet; but I like his message, in that it states what a large portion of society inarticulately feels, and shows us what woman yet has to meet before even the present agitated changes can be accomplished. The outlook is not at all discouraging. Woman, in spite of the foes to her advancement, goes on advancing.

Recently, I have heard the singing, in "Semiramide," of Patti and Scalchi,—two women of evident genius, whose songs wake up all that music which lies expressionless in the ordinary man. This, I thought, rebukes whatsoever objection is made to the power of head and heart of the sex. For, among all the thoughtless or thinking male auditors, I scarce could imagine one who yielded nothing to the pleasure and praise of the two singers, who delivered over by *feeling* not more than he would be apt in words to admit as lying in the unused aptitudes of women.

The poor fools who bring themselves to suppose the progress of women possible only by the lowering of man's dignity are not wiseliest readers of history. There are some who would seem to believe only a certain amount of opportunity to exist, and that, in consequence of this opportunity being, by some unknown decree, given to the male sex, any rights which you might grant woman could only be accompanied by a proportionate deprivation to the man. In the first place, opportunity is as limitless as persons, or would be, if it were not for an ill-regulated power possessed now by a favored sex. In the next place, if opportunity were not so abundant, there still would exist no reason for its monopoly, but rather more necessity for its fair distribution. The vague

Digitized by Google

passion with which men oppose the advancement of woman takes in more than is expressed of fear for their position. It is observed in all history that the subjugating classes are always more or less conscious of such a feeling. The feudal lords and the kings read it in the aspiration of the people; and our one-time slaveholders and the present possessors of abnormal wealth understand, or think they understand, what the lower cry for justice means. That general society grows with fairer adjustments, and decays when wrong and monopoly sway unresisted, is as certain as that man exists. Whether individuals suffer a fall from a fictitious position, or whether a momentary disturbance unsettles the nerves of some fellow who lives in a state of tension, matters little in our struggles to impart a universal justice. The end sought is that society may work harmoniously through the perfect arrangement of its many parts. To bring about the finer estate from present inequalities involves the raising of some individuals and the lowering of others.

Therefore, let this hope for woman go forth. In the general work of the age, her cause must progress with the labor-reform, and with religious and political causes; because all are of close kinship, and nature has given to each fitting expo nents who labor in their several ways to the same end. The selfish opposition she encounters is not a singular one. Where she is a footstool for lust, another may be wrong's stepping-stone to unjust monopoly, or another may, by love of country, suffer death for the reward of one not deserving the honor. I have learned to realize what great power may lie dead in woman beneath the sneers of men and the flattery of husbands. There is less need of talk of "sphere" and "place" than of aid that the character of each woman, which makes its own sphere, be allowed its free course. There never was a good reason given why we should suppress in woman what we glory in developing in man. Every time nature produces in our sisters abilities which we kill, she writes a rebuke for our worse than evil system.

HORACE L. TRAUBEL.

POSTSCRIPT. IN TWO PARTS.

First, in respect of Mr. George and his theories. The sagacious reader will have divined that I wrote of Robespierre as the "fervent" disciple of Rousseau, but wrote it so badly that the printer felt justified in calling it "poorest." Also that by a slip of the pen I was made to speak very absurdly of "copyright" instead of "copyhold." I was, alas! four hundred miles away from my proofs.

This, however, by the way. From Mr. Kennedy's last communication, I think he must have read a different copy of Mr. George's book from mine. In mine, at any rate,—unless I am strangely mistaken,—Mr. George makes it very explicit that he would ultimately have no private ownership of land; that the throwing of all taxes upon lands is only the preliminary process by which the ownership of it is to be forced out of private hands into those of the State; and that, incidentally, not the individual, but the public is to have the benefit of any increase in its value. This certainly implies that those who cannot afford to pay that full value must give place to those who can. That full value can be known only by finding out who will pay most for it. A millionnaire gives a fancy value—which for the time being is the market value—to a particular lot; and, for anything I can see, the present owner must give it up, unless he will pay the same,—or else the theory goes by the board. Mr. George, by the way, is quite willing to admit rich men, and even to encourage them (as we have seen) by exempting their property from taxation: only, he is sure that, under his new dispensation, nobody will want to be rich!

However, I will compromise with Mr. Kennedy, whose good opinion I should be sorry to lose, and imagine that the thriving capitalist from Hartford, whose advent I dread, will only offer five hundred dollars. But even this, as he will see at once, would quite ruin my friend, the Widow Jones.

I am reminded by a correspondent that assessors cannot be trusted not to undervalue an estate for purposes of taxation. As to this, first, they may think a certain amount of undervaluation justified, in order to encourage independent and permanent ownership. And, secondly, my argument is, that *when the pressure is to be brought*, to discourage speculation, the assessors are the ones to do it. If they will not, who will?

Secondly, in regard to Gibbon. I was quite wrong in ascribing to him a motive which I dare say he was not conscious of, in saying that he does not "choose" that his reader shall see both sides, "if he can help it." This is really only a violent and exaggerated way of expressing a feeling that has sometimes come over me in making acquaintance with his authorities. Take the case of Galerius, which I gave. Take again the case of Tertullian, whom Gibbon has damned to infamy with many of his readers by the one paragraph he has cited from him,—a paragraph purely rhetorical, and almost unique, not only with Tertullian, but in the whole body of ecclesiastical literature of the first ten centuries. I have dealt with this matter in a passage in *Early Christianity* ("Fragments," p. 257) on the generally mild tone of the early theology, which has been somewhat disputed both by orthodox critics and others, but which I am quite ready to defend.

Mr. Underwood has done me the kindness of giving, at greater length than I should have ventured, the reasons why Gibbon *could* not have taken the advanced critical ground of our own day; and, therefore, why he cannot be accepted as authority without "a little looking after,"—as I said. To the names he cites, I will add those of Guizot, Ozanam, and Michelet, among those easily accessible. My "complaint," however,—if I should properly analyze it,—is less of specific statements or omissions than as to the total impression left on the mind of a reader of Gibbon who trusts him too implicitly. I have had occasion, in the last few years, to pass in review all the extant writers (I think) of the first ten centuries,—who are a good deal more numerous than most persons think. Far the largest part, it is likely, I have dismissed with a glance, as of no value to the end I had in view. But all the persons and events which appeared to be significant in the development of the peculiar form of civilization we have inherited, I have done my best to understand in the existing literary monuments of the period named,—such men as Leo, the Gregories, Cassiodorus, Zachary, Boniface, and so on, especially in their own correspondence; and the general policy of the Church in its official records.

Now, in this field, the knowledge, the penetration, the industry, the intelligence of Gibbon are deserving of all the praise which Mr. Underwood has given or has copied. In short, he has said very much what I should say, if I were urging upon a student the value of this particular author. But, having got my first impressions from him, I have been constantly surprised at finding how greatly my general judgment of the man, or the time, needed overhauling. I have not Gibbon by me just now, so that I cannot say positively whether or not he does injustice to such men as the great Eastern theologians,—Basil and Chrysostom, for example,—who stand so far away from us But I will say, for one thing (what I feel quite sure of), that one would receive from Gibbon, taken *alone*, a thoroughly false notion of the immense moral force which went into the work of civilization through the monastic orders. I will also state, as a very confident impression, that Gibbon quite fails to understand the true historical purport of the development of Canon Law, interpreted by the sidelight it casts upon the gross manners and vices of the barbaric world. I will add —though less confidently—that any one who will study for himself the legislation of Constantine and of Charlemagne, the first as interpreted by Troplong and the last by Guizot, will feel that, with all his bright, sharp way of indicating single points, Gibbon has failed to do justice to the importance or the character of those two great constructive eras of Christian jurisprudence.

But I do not mean to inflict an essay upon the readers of *The Index;* only to set myself right as to a point or two which Mr. Underwood has kindly pointed out, and to thank him in advance for the opportunity he is going to give me of adding these few lines.

J. H. ALLEN.

WORCESTER, June 3, 1883.

THE SECRET OF THE EAST;

OR,

The Origin of the Christian Religion and the Significance of its Rise and Decline.

CHAPTER V.

The Night of the Middle Ages.

"Your prayer for light shall be answered, if you consent to open your eyes."—*G. E. Lessing.*

Since the dawn of modern rationalism, the path of social reform has been obstructed by a Sphinx that still propounds her riddle to every philosopher, to every moralist, to every speculative historian. That Sphinx is the Christian religion; and the riddle, which has to be solved before we can clear the road of progress, is the enigma of the Middle Ages.

Whence that dreadful night that followed suddenly and unnaturally upon the bright sunrise of pagan civilization? that long eclipse of reason, science, freedom, and happiness, that trance-like lethargy of the very nations which before and after gave the most decided proofs of their capacity for mental progress? What turned their health into a thousand years' disease? Was it the influence of a supernatural religion? Then, how did the followers of other supernatural creeds happen to escape that doom? For we are apt to forget that the morning-hour of our prosperous Age of Reason is but a moment compared with the long centuries of health and prosperity which the Greeks, the Spanish Moors, and the Eastern Saracens contrived to combine with a firm belief in the reality of supernatural agencies.

It would have been well for the nations of Europe, if their priests had contented themselves with the inculcation of such beliefs. The misery of the Middle Ages was due not to the supernatural, but to the *anti-natural*, tendency of the Christian religion. According to the gospel of the Galilean Buddhists, earth, with all its joys and desires, with all its visible and invisible habitants, is wholly evil; the renunciation of temporal blessings is the first condition of eternal welfare, and death the only gate of true life. The Christians did not deny the existence of the pagan deities: they merely changed them into devils. The pagan Pantheon became a pandemonium. Rivers, woods, and mountains swarmed, not with harmless nymphs and dryads, but with tempting demons, emissaries of

Digitized by Google

the brimstone-pit who devoted their superhuman powers to the seduction and affliction of Adam's progeny.* The gods and saints of Greece, Rome, and Palestine, descended from heaven to share the earthly joys of mortals, to bless and hallow the scenes of their earthly struggles and triumphs. The saints of Buddhism and Christianity visited earth to mar its joys, to depreciate its blessings, to wean its children from their natural instincts and sympathies. Has the worship of sorrow ever failed to darken the light of nature? Has it added one millet-seed to the sum of earthly happiness? Did the Apostle of Galilee ever speak one word in favor of industry, rational education, the love and study of nature, physical and intellectual culture? Not one. Has his mission promoted our progress in the paths of science and freedom? Not one step. His doctrine in all its tendencies is wholly unearthly, and therefore wholly unavailable for secular purposes.

The pagan gods were the deified powers of Nature, the patrons of mariners, shepherds, and husbandmen.

The Christian gods were the deified enemies of Nature. Even the Christian *Deus Maximus* frowned on earthly pleasures, and could be propitiated only by the mortification of almost every natural instinct: the bounteous All-father had become an All-tormentor, a celestial grand-inquisitor, who demanded an implicit submission of human reason to inhuman dogmas, and doomed the vast plurality of his creatures to the tortures of an everlasting *auto-da-fe*.

In the instinct of freedom, in the love of knowledge, and the sense of beauty, the Christian moralists, like the pagan philosophers, recognized the power of a mysterious inspiration, but with this difference, that the pagans ascribed that inspiration to the favor of a beneficent god, the Christians to the wiles of a tempting fiend. More than fifty generations of our Christian ancestors were taught to neglect the health laws of nature as unworthy the attention of a candidate for the higher blessings of the world to come. Every opposition to the tyranny of the secular or spiritual authorities was punished as a revolt against the authority of a creed which inculcated the duty of passive submission to injustice. The Holy Alliance of Church and State disdained to recognize the natural rights of men whose natural instincts were supposed to be wholly evil. In every progress of natural science, the guardians of an anti-natural creed scented a danger to the prerogatives of the holy brotherhood. Every philosopher, every mathematician, every naturalist, had to keep the secret of his discoveries, if he wished to keep his head. The night of the Middle Ages was not the natural blindness of unenlightened barbarians, but an unnatural darkness, maintained by an elaborate system of spiritual despotism, and in spite of the fierce struggles of many light-loving nations.

In the French province of Languedoc alone, the man-hunters of the Holy Inquisition spilled more human blood than ever reddened the sand of the Roman arena. "But the gladiators died to minister to a frivolous popular amusement," says the Jesuitical apologist, "while the mediæval heretics were sacrificed to the interests of our revealed faith." A faith which would undoubtedly tempt you to renew the butcheries of your predecessors, if you could regain their power; but, after its doctrines have been recognized as a mixture of God-insulting idolatries, nature-insulting precepts, and reason-insulting superstitions, what remains to compensate the world for the lives of the twenty-five hundred thousand martyrs of reason and freedom whose murder has undoubtedly debased the mental type of the human race? Will sophistry dare to mention the elements of *natural* morality which are common to all religions, but which the anti-natural dogmas of Christianity crowded into the background? Has religion gained by its association with the doctrines of a Church that made it a synonyme of all that is odious and absurd? Has the rule of that Church furthered the moral progress of the forty generations whose wisest, manliest, noblest, and bravest men were systematically weeded out, to enforce the survival of idiots and hypocrites? For thirteen centuries, the rack, the stake, and the cross were leagued against nature and mankind.

It is true that here and there the genius of Humanity triumphed over its enemies; it is true that the Christian obscurantists could not entirely suppress the mental activity of the Caucasian race; but it is equally true that their labors to suppress the fruits of that activity were successful enough to retard the progress of mankind for nearly fourteen hundred years.

I am not disposed to deny the merits of the amiable *inconsistencies* of several Christian sects, such as the republican enthusiasm of the English Puritans, who found it convenient to forget the duty of passive submission to injustice; or the tolerance of several Catholic pontiffs in their zeal for the revival of pagan arts and sciences,—the same arts and sciences which their predecessors had labored to suppress; or the promotion of the cause of temperance by Protestant clergymen, who have at last awakened to a recognition of the fact that a man *can* be defiled by things that enter his mouth, and that the magician of Canaan set a bad example by turning drinking water into wine. I do not deny that some of the worst Christian hierarchies have done some good, in spite of their creed; but I maintain that, just as far as they have tried to conform to the precepts of that creed, they have proved themselves the worst enemies of mankind.

"What!" cries my theological friend, "*enemies of mankind?* Have they deserved that epithet by their unselfish zeal in propagating a religion which inculcates such precepts as the duty of universal love?"

And I reply: Yes, in just as far as they acted in the spirit of that religion. For how did it teach them to prove their "love"? By making earth more lovely? By making life more worth living? By increasing the creature comforts of their fellow-men? By teaching them to observe the health laws of God, to recognize the principles of rational education, the conditions of social progress? Not if they could help it. Whatever is natural is wrong, was the foundation dogma of their creed; and true believers tried to promote the welfare of their fellow-men by suppressing their freedom in the interests of "Christian discipline," their reason in the interests of "Christian revelation"; by burning their bodies for the benefit of their souls, and by imprisoning their children in convents, where tyranny and superstition conspired for the suppression of every natural instinct.

The Arabs have a tradition that a roving Bedouin once discovered the earthly paradise, and was so haunted by the memory of its scenes and bird songs that he found the dreariness of his native deserts unendurable, and wandered to the seashore and drowned himself. And, if a resuscitated Roman could see what the rule of the Cross has made of his birthland, he, too, would probably take refuge with Charybdis rather than endure the hideous sight. The paradise of Southern Europe could not be at once spoiled. Traces of the old nature worship still lingered here and there. The Apennines still sheltered the remnants of the sacred groves. A few mountain tribes still kept the foe at bay, and relied on the strength of their sinews rather than on prayers and miracles. But the efforts of the spoilers did not cease; and it may be doubted if the Caucasian race will ever wholly recover from the effects of a thousand years' attempt to lure their children from earth to ghostland, to poison their minds with the dogmas of pessimism, to sacrifice the pagan Elysium to the Buddhistic Nirvana. How is it that "climatic influences" have not sapped the physical vigor of the Arabs, the Jews, the Berbers, the Persians, the East-Indian Mohammedans? Only anti-natural religions have achieved that deep abasement of the physical type of our race which we see in China and Southern Europe. For we should not forget that the nations of Northern Europe saved themselves by the revolt of the Protestant Reformation, before the poison of pessimism had sapped their strength. The gods of Greece were the deified powers of Nature; Olympus was an earthly mountain; the immortals were worshipped with songs and dances, and did not oblige their votaries to sacrifice their reason and their freedom. The doctrines of anti-naturalism, diabolism, and eternal punishment, were unknown to the exponents of the Mosaic dispensation. Nay, with the exception of that doubtful passage in Job, the Old Testament contains not a line, not a single word, that could be fairly construed into an allusion to the doctrine of a future existence. Its God rewards his servants with temporal blessings, its retributions are earthly retributions, its paradise bloomed on this side of the grave. The nations of Islam believed in a supernatural paradise; but its gates had to be won by valiant deeds, by wisdom and temperance, and not by whining self-abasement and the contempt of bodily health. But the dogmas of the Galilean Church were wholly anti-natural, and, in their strict acceptation, necessarily conducive to mental and physical bankruptcy.

When the sceptre of Rome passed into the hands of the victorious Goths, Western Europe and the Mediterranean peninsulas were still in the prime of their fertility. Climate, soil, scenic grandeur, natural facilities of communication, the happiest proportion of cultivated fields and forest lands,—all contributed to make them the most favored regions of the Eastern Continent; and we should not forget that the nations who inherited them were, in natural capacities, immeasurably superior to the best Arabian tribes. Among the sad "It might have beens" of the world's history, the saddest is the reflection what those countries might have become, if the noble Visigoths, the heroic Longobards, and the manful Saxons had been permitted to rule them, under the influence of a moderately rational religion, like that of Islam. The golden age of Hellas would have been eclipsed by nations who (as they proved, as soon as they could rid themselves of the Galilean incubus) combined the intellectual faculties of the Greeks with a warmer love of nature and a prouder love of personal independence.

At the end of the thirteenth century, the enemies of nature had reached the zenith of their power; and, at that time, it may be said that, *without a single exception*, the countries of Christian Europe were worse governed, more ignorant, more superstitious, poorer, and unhappier than the worst

*The belief in fairies was of Druidic origin, and was either suppressed or characteristically metamorphosed by the Church, who, true to her pessimistic principles, diabolized the Celtic and German as well as the Grecian deities. Wodan, the hunter-god, became a Wild Huntsman; Hulda, a night-hag, the first May night, when Hertha awakens the slumbering wood-spirits, a Walpurgis-Nacht with its helli-h revivals. Even objects of scenic interest, the trysting-places of the nature-worshipping Druids, became "devils' pulpits," "devils' bridges," "devils' castles."

Digitized by Google

governed province of pagan Rome.* The "scion of the Buddhistic parent tree" had begun to bear fruit after its kind. The sway of the Cross extended from the Baltic to the Hellespont; the empire of the Church embraced every variety of European climate, it embraced Greek, Latin, German, Slavic, and Celtic nations,—nations which it had received in every stage of civilization, semi-civilization, and barbarism, but whom the poison of its dogmas had affected with a uniform result.† Wherever we look, darkness, slavery, and misery; bigoted tyrants and brutalized serfs, neglected fields, blighted cities, perverted sciences, and paralyzed industries; hordes of self-torturing maniacs frenzying the populace with their threats and prophecies; international man-hunts, religious massacres, witchcraft riots, and a merciless war against every form of mental and social independence. Peasants were treated like beasts of burden. If earthly pleasure is sinful and heaven our proper home, Herr Baron and Monsieur l'Abbé saw no reason to provide creature comforts for their serfs.

"One sees certain dark, livid, naked, sunburnt wild animals, male and female, scattered over the country and attached to the soil, which they root and turn over with indomitable perseverance. They have, as it were, an articulate voice; and, when they rise to their feet, they show a human face. They are, in fact, men: they creep at night into dens, where they live on black bread, water, and roots. They spare other men the labor of ploughing, sowing, and harvesting, and, therefore, deserve some small share of the bread they have grown. Yet they were the fortunate peasants,—those who had work and bread,—and they were then the few" (while two thirds of the arable territory of France were in the hands of the Church).‡

If truth was communicated from heaven by direct revelation, if diseases, famines, and droughts could be averted by prayer, why should men waste their time on science? "A cloud of ignorance," says Hallam, "overspread the whole face of the Church, hardly broken by a few glimmering lights who owe almost the whole of their distinction to the surrounding darkness. . . . I cannot conceive of any state of society more adverse to the intellectual improvement of mankind than one which admitted no middle line between dissoluteness and fanatical mortifications. . . . No original writer of any merit arose; and learning may be said to have languished in a region of twilight for the greater part of a thousand years. . . . In 992, it was asserted that scarcely a single person was to be found, in Rome itself, who knew the first elements of letters. Not one priest of a thousand in Spain, about the age of Charlemagne, could address a common letter of salutation to another." The history of every mediæval philosopher, discoverer, or reformer is the history of a life-long struggle against the tyranny of a light-hating alliance of despots and bigots.

The doctrine of "renunciation" made patriotism an idle dream: the saints whose "kingdom was not of this world" had no business with vanities of that sort; no chieftain could trust his neighbors; cities were pitted against cities, and castles against castles; patriotic reformers would vainly have appealed to the sympathies of men who had been taught to reserve their interest for the politics of the New Jerusalem.

And what an age for the lovers of truth! Where should they take refuge from their enemies, when every year the blood of free thinkers was poured out like water? Where should they quench their thirst after knowledge? Among the Arabs, who would slay them as spies? In cities, where the next neighbor would betray them to the spies of the Holy Inquisition? In convents, in the strongholds of pessimism, where, year after year, they had to

> "Erwachen mit Entsetzen Morgens auf,
> Den Tag zu sehen, der in seinem Lauf
> Nicht einen Wunsch gewähren wird, nicht einen!"
> [Awake with horror every morning,
> To see the day which in its course will not
> Grant the fulfilment of a single wish!]

But the deepest shade of the dreadful night darkened the path of natural religion. To him who seeks to know the will of the All-father by studying the laws of his universe, and honors his wisdom and beneficence by ordering his life in conformity with those laws, it must indeed have appeared as if our earth had been abandoned to the powers of darkness. For what fiends could have insulted the name of the Creator by grosser blasphemies than the maniacs who ascribed to him acts of such monstrous cruelty that the inhumanities of the worst earthly despots appeared mild in comparison, and who hoped to gain his favor by turning his paradise into a desert, by rejecting his gifts, by renouncing the blessings of his marvellous earth, and by sacrificing their freedom, their health, and their reason!

A year after the death of the prophetess Sospitra, says the pagan historian, Eunapius, her son was one day standing before the temple of Serapis, when the prophetic spirit of his mother fell upon him. "Woe be our children!" he exclaimed, when he awakened from his trance. "I see a cloud approaching: a great darkness will fall upon the human race."

That cloud did not come from Olympus or Sinai. The spectre of an earth-blighting disease stalked through the land; and the time will come when, in the form of that spectre, all but the wilfully blind will recognize not the manful monotheism of Moses, not the mythology of the nature-loving Greeks, but the nature-hating pessimism of Buddha Sakyamuni.

FELIX L. OSWALD.

*"Feudalism," says Blanqui, "was a concentration of all scourges. The peasant, stripped of the inheritance of his fathers, became the property of ignorant, inflexible, indolent masters: he was obliged to travel fifty leagues with their carts, whenever they required it; he labored for them three days in the week, and surrendered to them half the product of his earnings *during the other three;* without their consent, he could not change his residence or marry. And why, indeed, should he wish to marry, if he could scarcely save enough to maintain himself? The Abbot Alcuin had twenty thousand slaves, called *serfs*, who were forever attached to the soil. This is the great cause of the rapid depopulation observed in the Middle Ages, and of the prodigious multitude of monasteries which sprang up on every side. It was doubtless a relief to such miserable men to find in the cloisters a retreat from oppression; but the human race never suffered a more cruel outrage, industry never received a wound better calculated to plunge the world again into the darkness of the rudest antiquity. It suffices to say that the prediction of the approaching end of the world, industriously spread by the rapacious monks at this time, was received without terror."—*Résumé de l'Histoire du Commerce*, p. 156.

†Protestant Jesuits have tried to ascribe the cause of that result to the pagan admixtures of the Catholic creed. The seasons and rites of many Catholic holidays, they say, correspond to those of old Roman festivals; the most popular saints of the Catholic calendar were pagan demigods in disguise; the legends of the early Church were corrupted with interpolations of Roman and Grecian myths. Corrupted forsooth! The humanizing and naturalizing influence of pagan traditions alone saved the victims of the Galilean Church from mental inanition in the desert of asceticism: they were reduced to the alternative of the prince in Grimm's folk-sagas, who had to wed a peasant girl or a grinning death's-head. For analogous reasons, the English Puritans had to popularize their ghastly creed with an infusion of *Hebrew* elements: the names of their warlike saints, the shibboleths of their peculiar cant, the favorite texts of their field preachers, were nearly always borrowed from the *Old* Testament. But such palliatives served only to disguise the doctrine of pessimism, as poison-mongers administer their potions with pleasant condiments.

‡La Bruyère. Quoted in P. L. Courier's *Petition à la Chambre des Députés*, p. 19.

THE FREE RELIGIOUS ASSOCIATION.

"Querist" writes to the *Investigator* as follows:—

Will you please tell me what Free Religion is? I have got a neighbor, a good man, who says he believes it; but he is cloudy in defining its meaning, or else I am obtuse intellectually. About all I can get out of him is that Free Religion is liberal, natural, theistic, and accepts immortality. So I think it must be Unitarianism under another name. But what do you think?

The editor replies:—

We doubt if we can answer our friend's question any better than he has himself, and therefore we need not multiply words. He probably defines Free Religion correctly, or rather the religious or theological part of it, which may perhaps be called a liberalized, modified, simplified, and improved Unitarianism. It has also in addition a practical or earthly part, and teaches morality, liberty of thought, human brotherhood, and freedom from sects and dogmas. It is hardly equal, as it strikes us, to either Materialism, Atheism, Agnosticism, Positivism, or perhaps Spiritualism; but, looked at as a religion, theoretically and practically, Free Religion is undoubtedly the best at the present time.

The *Investigator* is, apparently, unable to understand, what it sees stated almost every week, that the Free Religious Association is an organization broad and liberal enough to welcome to membership the adherents of Materialism, Atheism, Agnosticism, Positivism, Spiritualism, Judaism, Christianity, Paganism, and the adherents of all other systems and phases of thought, if they are willing to join it for the study and discussion of the subject of religion; that the Association requires no theological belief as a condition of membership; that it is neither Theistic nor Atheistic, and assumes nothing in regard to religion, except the fact of its existence and the importance of making it a subject of scientific study; that it allows each member to define religion, and to explain its origin, nature, and development to suit himself, and affords a free platform for the treatment of the subject from every point of view. Why represent the position of such an Association as "Unitarianism under another name," or as "liberalized, modified, simplified, and improved Unitarianism"? If the *Investigator* knows of an organization broader or more truly liberal than the Free Religious Association, will it please to name it?

It is true that the Free Religious Association had its origin in a departure from Unitarianism, and has been under the management chiefly of those who were formerly Unitarians, men and women of religious beliefs and feelings and of progressive tendencies, who found in their denomination limitations which they thought inconsistent with entire freedom of thought. It is not strange, therefore, that, in drafting the statement of their aims and objects, the founders of the Association used phraseology such as in the Church they had been accustomed to employ to define their position in distinction to the creed of the Unitarian denomination. Had the Association been formed by a departure from Materialism, Agnosticism, or Positivism, the language of the declaration and the management of the organization would, no doubt, have shown quite as unmistakable traces of materialistic, agnostic, or positivistic thought.

How far the members of the Association have outgrown mere denominational prejudice and predilections is indicated by the fact that they elected for their second president the son of a Jewish rabbi, a man who had never been a Christian, and who was then as he is now an Agnostic. That in the influence of his theological education something remained to serve as a point of contact with the remnants of Unitarianism, which the leading members of the Free Religious Association still retained, is not improbable. It is perfectly correct to say that the Association bears the impress of its origin; and it is probably true that, as a rule, those who have come out of the Unitarian denomination have felt more at home in the Free Religious Association than those who have joined it from the ranks of unchurched Liberals or even from

Digitized by Google

orthodox denominations. Under the circumstances, it could not be otherwise. At the same time, the Free Religious Association has been surpassed by no organization in its liberality. While its management has been in accordance with the predominant thought and feeling of the Association, and the majority of its essayists and speakers have been selected, undoubtedly, with a view to emphasizing this thought and feeling; yet it has invited upon its platform speakers to represent the different phases of orthodox and unorthodox thought, given them a fair hearing, and published their addresses in its reports without criticism or comment.

That there is room for improvement in the methods of this organization and even in the wording of the declaration of its aims and objects is probably true. We will here add that, in our opinion, with advantage there might be substituted for its present statement one declaring that it aims *to encourage the scientific study of the nature and history of religion, to increase true liberality, and to promote the practical interests of true morality.* Such a change of language would, we are confident, meet the wishes of not a few members of the Association, of Liberals generally who are outside of it, and remove an objection which, however captious or trivial it may appear to some, has weight with those who urge it. Since the word "religion" admits of various definitions; since the Free Religious Association does not itself attempt to give any definition, but allows every member to define it to suit himself; since the Association admits to equal fellowship those who regard religion as an expression of man's relation to the universe, or as moral goodness, or as a sentiment originally implanted in human nature, or as a tendency inwrought through centuries into the human constitution, or that bond of unity which makes every individual a part of the social organism, or as a system of doctrines, including belief in an intelligent Deity and immortality, or as something else that ought to be sustained or ought to be opposed, there would seem to be an inconsistency in prefixing any adjective to the word "religion" in the articles of association. However, this objection is mainly of a verbal character, and no truly liberal man will be prevented by it from joining and giving support to the Association. If, in this transitional period, one expects to find a society of recent formation, open to the latest thought, free and flexible, and yet entirely exempt from inconsistencies of every kind, he is likely to be disappointed. The term Free Religion is inexpressive and indefinite; but the object of the Free Religious Association is easily understood, and is worthy the encouragement of all classes of Liberals.

B. F. UNDERWOOD.

INTOLERANCE AT UNIVERSITY COLLEGE, LONDON.

In the London *Inquirer* of May 26 are two communications discussing the position taken by University College in regard to Mrs. Besant and Miss Bradlaugh. The writer of one of these letters, who says he is "one of the oldest Fellows of the college and a hater of intolerance," comes to the defence of the college as follows:—

I do not for one moment believe that the theological or anti-theological opinions of the two ladies, or either of them, have had anything to do with the refusal to admit them as students; nor would I defend the refusal on such grounds. But the case stands thus: Admission to the college would not only entitle them to attend classes, but would make them free of the ladies' common room. Now, Mrs. Besant has identified herself with a propaganda which you would not permit me to describe in your columns, and which has brought her under the strong animadversion of the courts. It is misleading to refer to it under a euphemistic allusion to her "social opinions." The Council of University College on their part have committed themselves to the critical experiment of the conjoint college education of young men and women, and they invite parents to send their daughters to partake of it. They do not receive a farthing of public money. By what ethical law are they bound to admit Mrs. Besant? I am not saying a word against her personal character. From what I have heard of her, I give her credit for benevolent motives. But there cannot be a doubt that many parents would strongly object to her, on the grounds to which I have alluded, as an associate for their daughters; and I, for one, do not think that the Council are in any way obliged to ignore the objection. When Mrs. Besant is mentioned, people *talk* of "religious and social opinions," but they *think* of the *Fruits of Philosophy*. The constant public association of Miss Bradlaugh's name with Mrs. Besant's seems to me to have rendered it impossible for the Council to deal with their applications separately.

The other writer declares that the directing body of the college has taken upon itself to exercise an authority the members never imagined would be assumed, or the character of the institution has altogether changed. The following extract is given:—

Probably many will have heard for the first time of a functionary styled "the Lady Superintendent." What is the extent of this lady's authority? Mrs. Besant writes she was officially informed that a previous introduction to this personage was a needful preliminary to admission, and that, when she and Miss Bradlaugh had complied with this request, the Lady Superintendent "declined to take the responsibility of entering our names." What is the nature of this responsibility with which the Lady Superintendent is burdened? Are we to understand that this officer has plenary powers to accept or reject as female students of the college whomsoever she pleases? Or is she only a formal censor, acting under superior orders? It must be borne in mind that University College is not a hall of residence, but merely a place for the delivery of lectures. The mistress of a young ladies' boarding-school might legitimately have her "prejudices," dictating the exclusion of an obnoxious pupil: even Girton could not be blamed for a certain fastidiousness; but for an institution constituted as University College is to allow an alleged and undefined prejudice to debar *bona fide* students from its class-rooms is nothing short of persecution.

From all that we are able to learn of this transaction, we are forced to believe, with the editor of the London *Inquirer*, that it is "a piece of petty persecution characteristic of the narrowest little academies and wholly unworthy of the noble traditions of University College. . . . What makes the matter more discreditable is that the Council are evidently acting upon the principle—which the late Professor De Morgan so strongly condemned—of making their first consideration 'the success of their class-room' rather than the question of right and fair dealing. It would be better that University College, London, should perish rather than be thus unfaithful to its fundamental principles."

B. F. U.

OUR good neighbor, the editor of the *Christian Register*, takes much comfort from Mr. O. B. Frothingham's speech at the Unitarian Festival. As we say in another column, the speech, though excellent in itself, does not seem to us to have been made on the right platform. We agree with Mr. Frothingham that the Unitarian denomination is a progressive body, that it faces forward, at least, with its best face. But we cannot agree with him that it has yet removed all barriers, and welcomes, as he says, to its fellowship "all earnest men and all earnest women." The *Register* with alacrity accepts his authority on this point, and exclaims, "Unitarianism, then, is free enough," and questions whether "our Free Religious brethren" have any advantage over it in this respect. Is it, then, true that Unitarianism is no longer an exclusively *Christian* denomination? Has it taken down the boundary of that name? This is a question which we asked several months ago with regard to a certain vote of the Directors of the Unitarian Association, but got no answer. Has the *Register* any new light to throw upon this question? Must not your "earnest man or woman" adopt the Christian name, in order to come into the Unitarian door?

W. J. P.

EDITORIAL NOTES.

A DESPATCH to the Boston *Herald* says that the returned correspondents from Moscow are arriving, and tell curious tales about the mutilation of their despatches and the scrutiny they were subjected to. It was absolutely useless to write anything that did not tell of glory, harmony, and love of the people for the sovereign. One who had written a long letter, in the hope of getting it to London by post, cut it in two and mailed the parts to two different friends to two different addresses. Only two sheets of it arrived,—a fact which speaks well for the Russian secret service system.

SAYS the London *Inquirer:* "Voltaire's famous phrase *Ecrasez l'infâme* has often been greatly misunderstood. A correspondent of *Notes and Queries* says it occurs in the letters between Voltaire and the Empress of Russia. *Ecrasez l'infâme* was a kind of party watchword among the Encyclopædists. It meant *Ecrasez l'infâme superstition;* that is, what the Roman Catholics called Christianity. It might have been used by Luther. Yet how often will it continue to be misquoted and misapplied by members of Parliament, Tory journalists, and other 'orthodox liars for God'!"

CARDINAL SIMEONI'S circular (a translation of which, made for *The Index*, may be found in another column) is probably the most important document, so far as Ireland is concerned, which has emanated from the Vatican since Pope "Adrian, bishop, servant of the servants of God, directed his dearly beloved son in Jesus Christ, Henry II., the illustrious King of England, to enter the Island of Hibernia, to subject the people there to the yoke of the laws, to extirpate the seeds of vice, and also to enforce the payment to the blessed apostle Peter of the annual pension of a penny for each house." In the same bull, Pope Adrian commands the people of Ireland "to receive King Henry and honor him as their lord and master." It is no new thing for the papacy to be on the side of English rule in Ireland.

WE are permitted to print the following letter from Mr. Emerson to a lady, written in 1856, and referring to a volume of poems, then but recently published, by Mr. B. W. Ball:—

Here is the book which you lent me. I read every line of it long ago, and lent it to the lovers of poetry near me. You will see that Elizabeth Hoar has left her mark in it. I think the writer successful where our American poets are prone to fail, in the sweetness and finish of his melodies. He has a true ear, and the language is very flexible in his hands. Then, the book has a great charm for scholars in the genuine love it betrays of the Greek and Latin muses. Indeed, the vigor with which the old talismanic names are articulated again indicates not only correct taste, but high original power. My recollections of a very pleasant walk with the author many years ago revived on the reading, and I heartily wish he may yet concentrate his genius to resist the anti-poetic influences of Massachusetts. I wish you would convey to him, if you know him, my thanks and congratulations for his book.

R. W. EMERSON.

The Index.

BOSTON, JUNE 14, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

POETRY.

For *The Index.*

HYLAS.

The noontide glowed with fervent heat,
And deeper tanned the grain;
With iteration fierce repeat
The cicads shrill their strain.

Laving his feet the river's wave
A mirror 'neath him flowed,
Where glassed in dew the welkin blue
With softened splendor showed.

As in a dream witched by the gleam
Of nether heaven he stood,—
Enamoured of the boy uprose
The daughters of the flood.

"Soft blooms the down upon your cheek,
Where rose and ivory blend,—
From scorching air to grottoes fair,
O stripling sweet, descend.

"In cooling wave delights to lave
The sun at eventide,
With heightened sheen ascends serene
The moon from ocean wide."

Streamed long and fair the naiads' hair,
Appealed their eyes of blue;
From summer's glow to grots below
The youth their glamour drew.

His loss deplore forevermore
The reapers in their lays;
While falls the grain, their plaintive strain
Makes sad the harvest days.

B. W. BALL.

NOTE.—Apropos of the above lines, among the husbandmen of ancient Greece and Western Asia there were sung at harvest time and the period of greatest summer heat, when the Dog-star rages, certain mournful ditties, which lamented the fate of certain deified boys or youths of rare beauty, who were fabled to have perished by drowning or to have been devoured by rabid dogs. Their untimely fate was lamented by reapers in melancholy songs. These youths were variously called Hylas, Linus, Bormus, and Adonis. But the real object of lamentation, as Müller says in his *Literature of Ancient Greece*, was the tender beauty of spring blasted by the summer heat. This evanescent bloom was personified and bewailed in mournful harvest songs. The ancient husbandmen, in making their annual laments for beauty too swiftly flown and blasted, were simply moved by "that sadness which cleaves to all finite existence." B. W. B.

For *The Index.*

SIXTEENTH ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

(*Continued from last week.*)

The General Convention was opened in Parker Memorial Hall, Friday, June 1, at 10.30 A.M. A large audience was present. The chair was taken by the President, William J. Potter, who called the meeting to order at 10.35, and made the following introductory remarks:—

Opening Address of the President.

Ladies and Gentlemen,—Again we have met for the annual convention of the Free Religious Association, and once again we would strike the key-note of our principle. In brief, that principle is *freedom in religion.* And, alongside of it, we would place on the one hand *fellowship,*—fellowship in spirit and in aim, whatever be the differences of opinion; and, on the other side, we would place *character,*—upright, aspiring, pure *moral character* as the chief aim and crowning product of religion, of liberty of thought, and of all things else that are genuine. But *freedom* is our central principle,—entire liberty for the human mind before all the problems of speculation and belief, before all the problems of institutions and methods, in the domain of religion. It is claimed, I know,—and it is claimed more now than it was sixteen years ago, when the Free Religious Association was organized,—that liberty has been achieved; that there is now quite enough of liberty in religion; that what we want now is more of religion, and perhaps a little less of liberty. For one, I am ready to admit that there is a good deal of liberty manifested in the world without religion, without even the essential thing in religion,—morals; and, on the other hand, there is still a good deal of religion in the world without liberty; and also, I am sorry to say, a good deal that is called religion without the essential thing, morality.

We, then, would seek to combine the three,—liberty, religion, morals; and we say that the time has not yet come to take down the standard of liberty. Notwithstanding all the progress that has been made in that direction within the last twenty-five years, notwithstanding all the progress that may be claimed to have been made since this Association was organized, there are significant signs that liberty is not yet achieved. Look over across the Atlantic. A man thrice elected as a member of Parliament has thrice been refused his seat because his faith is not the faith of the majority of the people of England; or rather, perhaps, because he is so frank and candid as to confess his unbelief in the doctrines professed by the majority. Not until such a case as that is impossible is liberty attained. Look into the recent incidents of our own country. Look at what has happened within the very last year at Andover Theological Seminary,—a seminary that professes to be in the line of progress, and is progressive. Yet, within this very last year, a man, elected by the board of trustees of that seminary for a professorship there, was refused his place by another board that had the veto power, not because there was any defect in his learning, not because of any deficiency in his intellectual qualifications or in his character, but simply because his belief did not square with the written creed of Andover. Look at the various sects and churches. Liberty of thought achieved! Why, the great Roman Catholic Church is still proclaiming the infallibility of the Pope; has actually gone back, within our own generation, from a principle which was capable of development toward freedom,—namely, that the right of declaring the doctrines of the Church at any time rested in the whole Church itself, as represented in its bishops,—and, in place of this, now asserts the doctrine of the infallibility of one man. In the old-school Orthodoxy, the creeds of a generation ago are still the standards. There may be here and there a good deal of secret unbelief in them, yet they are still held up as the proper prescription for faith. And, in the new-school Orthodoxy, the question still is how far any man shall be permitted to depart from these standards and still be considered as rightfully within the fold. Even in Unitarianism, where we have many friends, in whose ranks we count a good many members, the advance guard of all the sects,—unless perhaps we may except a portion of the Hicksite division of the Quakers, to which our revered and sainted Lucretia Mott belonged,—even in the Unitarian ranks there is a limit drawn at the name "Christian." I see that our friend, Mr. Frothingham, in a speech last evening at the Festival of the Unitarian Association, took occasion to congratulate that denomination that it now had all the liberty that could be required; that there was no occasion now for any new departure, no occasion for any one to go out of that body; that the doors were all open for free entrance or for free exit, and the windows all open to the light of day. The speech sounded very much like those elegantly finished, noble speeches that he used to make on the platform of the Free Religious Association, when he was describing the objects and aims of this movement. So that it seemed to me that, while he had not essentially changed his views, he had rather mistaken the place for uttering them, and was tempted to be somewhat too cordial and too amiable toward his hosts of the occasion. So long as I see this line drawn by the Christian name; so long as I see the young men in the Unitarian theological schools told that they must prepare themselves for the Christian ministry, and must sign a pledge to that effect in order to avail themselves of the beneficiary funds of those institutions,—so long liberty is not achieved, even in the ranks of that very liberal and very progressive denomination. And so long as these events and incidents, which we may recall from the most recent history of religious movements, are possible, so long there is occasion and demand for the Free Religious movement, and so long this Association will hold its course, as I trust, in full confidence and hope and courage.

It is sometimes said, however, that even the Free Religious Association assumes something that is not submitted to investigation,—that it assumes religion. Let us look at that for a moment. How does the Free Religious Association assume religion? Simply as one of the facts in human history; simply as the scientific man assumes the earth, which becomes the material for his science; simply as the physiologist assumes the human body as the substratum of the facts which he is to inquire into and explain. So, looking back through all the ages of human history, we see this dominant, omnipresent fact—the fact of religion—giving the law to governments in the early times, creating literatures that have existed from the earliest day to the present, moulding social movements, inspiring individual character, taking hold of man at the very centre of his being, and sending him off sometimes on vagrant errands into the clouds and into the mysteries, and causing him even to commit great injustices and cruelties; yet again pushing him into conflicts with immorality, with passion, with crime, with sordid selfishness, to the permanent welfare and uplifting of humanity. This dominant, all-penetrating force in human history is certainly a very solid, a very powerful fact; and this fact the Free Religious Association assumes, just as science assumes the facts of nature. But the explanation of that fact, the philosophy of that fact, all this is left free. And here is the distinct point of difference between this Association and other religious movements and utterances. If there be any who say that religion *has* been a power in human history, but is now to pass away, they are perfectly free to come here and give expression to that belief. Our organization gives room for them. If there be any who think that morality is now the one thing to be named and emphasized, that that is the one force in the history of religion which should survive, and the only force in its past which is worth advocating, this platform is free for their utterances. All that we assume, then, is the fact of religion. The explanation or philosophy of the fact, the methods of religion, the institutions of religion, the beliefs concerning it, all these are to be submitted to the free inquiry of the human mind.

And there have always been in our movement two classes of minds who have approached this great problem of religion, or, we may say, this great problem of the universe, from quite different points of view, and yet have adopted the same method of freedom. We may define them, in a general way, as those who on the one hand have approached the problem of religion, or the problem of the universe (for it is about the same thing), from the side of mind, those who have specially studied the intellectual development of humanity, the literatures of the race, the social movements, the moral and philan-

Digitized by Google

thropic progress; then, on the other hand, there are those who have approached this problem of the universe from the side of the natural, material world, using the same method, or that of free inquiry and free observation, taking in all the facts, and then trying to work out a philosophical theory that shall include all the facts and suit them. And it so happens that this morning we are to have both of these classes of minds that have contributed so largely to the Free Religious movement spoken for. A year ago, at our convention, reference was briefly made (all too briefly for the need) to two recent deaths,—the death of Ralph Waldo Emerson and the death of Charles Darwin,—two men who represented pre-eminently these two classes of minds that I have spoken of, two men who, perhaps more than any other two that could be named, have been instrumental in producing the Free Religious movement. To-day, we are to take a larger opportunity, give more adequate room for speaking of those men and of their contributions to the cause of freedom of thought, of social freedom, and of freedom in religion; and we are very happy in having with us to introduce that subject one who has always been welcome on the platform of the Free Religious Association, Thomas Wentworth Higginson, and who would have come here last year to speak particularly of Emerson, had not sickness prevented. This year, he is here, and will introduce this large subject, including, however, in his address to-day not only Emerson, but Darwin; and his address will be followed by Mr. Mead and Mr. Chadwick, who will speak respectively of the two factors, the Emerson side and the Darwin side, in the Free Religious movement. I have now the great pleasure of introducing to you Colonel Higginson.

Address of Thomas Wentworth Higginson.

Mr. Chairman, Ladies and Gentlemen,—What I shall have to say will be, I suppose, mainly in the nature of a preface to what will be said more fully and elaborately by those who are more especially experts on their different themes, and who are to follow me. What I say will be said necessarily off-hand. In the midst of absorbing engagements, I have elaborated nothing; and I only hope that I shall not put you in the painful position of the readers of those German books, who, when they are committed to what they suppose is only a preface, find that it turns out longer than all the rest of the book put together.

What any one says about either of those great men who have been mentioned must, if he has ever met them, be to some degree personal in its character. No one ever met either of them in private, who could separate the works from the man afterward. I, at least, cannot. Therefore, I must speak a little with a view to their personality, and perhaps even their aspect in home life, although I trust I shall have grace not to go very far into that subject, remembering that this is an age which relentlessly gives us everything, and in the case of the Carlyle family does not even spare us the servants' wages and the washing bills.

It was my experience in England, eleven years ago, as I suppose it is often the experience of Americans in their first hurried run through Europe, more than once to have to make the selection for a given day between two different objects of interest. Sometimes, it comes to so close and definite a comparison that you even have to choose, not between one building and another building, one man and another man, but between a building and a man, or between a man and a building. I always went upon the principle, in such cases, that in England a building would probably last, but that even in England a man might not. I never have regretted surrendering Salisbury Cathedral for the sake of Tennyson, although Tennyson still lives. I shall be forever grateful that on a certain spring day I gave up York Minster for Darwin; for York Minster is only more beautiful with every year, while the visitor to England to-day finds it empty of its greatest naturalist. And I never shall forget,—what American ever forgets his first English lane and his first English village?—I never shall forget the delicious, dewy ride in early morning through the lovely lanes of Kent, amid all that soft greenness, that ancient moss, that venerable village, those haunts of ancient peace, up the gently sloping hill that led to one of those ideal English country houses, one of those cottages embowered, or, as one might almost say, coining a word, *enlawned* in verdure, which was in this case the home of Darwin. I remember that I felt as I approached it as Emerson felt, he said, at the foot of the stairs that led to an observatory, "This is the ladder to the stars." I never can quite hope to approach with more reverence any human home than that which filled my heart as I found myself there. Then came the hospitable welcome, the successive glimpses of that great man. I remember him as I first saw him coming toward me to meet me in the parlor,—a man whom I looked up physically as well as spiritually to recognize. He struck me at the moment, at the first glance, as looking like a more gracious and genial and benignant Bryant; having that noble aspect in his face which, mingled with too much coldness of expression, marked that great dead poet of ours. I remember that first impression of him; and I remember afterward, when, after dinner, his sons and I strolled out in the garden, he came to meet us. There was still this lofty figure, walking with some difficulty (for he was in poor health, then), resting one hand upon the shoulder of his wife, and the other hand propped upon a staff taller than himself, and singularly recalling some of his own speculations and some of the suggestions that I had heard made on his personal appearance. I remember still further, following out the same associations, how, when he came back into the house afterward and sat high, as he always did, on a sofa, with two or three thick cushions beneath him, that there, by his own fireside, he still held this long staff upright in both hands and resting against it. I thought I had seen a similar figure in books of natural history.

I remember, at a later visit,—for again, after an interval of six years, it was my privilege to spend a night in his house,—I remember the changed aspect of the man, the somewhat drooping figure, the rather shrunken form, the same infinite benignity and sweetness of bearing; and I remember then, early in the morning, looking out, before even the early family breakfast, and seeing him hurrying in from the remoter part of the green garden, with a great shawl wrapped around his head, his white hair and beard emerging from it,—a singularly unconscious, absorbed, eager figure. I asked his son afterward what his father was out there at that time in the morning for, in his impaired condition of health. "Oh, yes," said his son: "he is always at it. He always says he is not doing anything at all. But he always has one of his little experiments, as he calls them, going on out there in the garden; and he has to look at them two or three times every night."

Those glimpses, slight though they may be, with many that I cannot so freely speak of (for I cannot overcome that reluctance to give details of private interviews, which still lingers, as I think, among Americans, although our English cousins seem to have got bravely over it), fill my memory of Darwin. I never can see a man whose personal aspect is more in keeping with one's expectations, never one in whom the nobleness and sweetness of the inner life identify themselves more with all the action and the demeanor of the outward man.

And, turning from Darwin in his English home, his ancestral home, I might almost call it,—I do not know whether it was so, but every English home looks ancestral when a family has been in it for ten years,—turning from that to the typical American home of Emerson,—the home that it is needless to describe, because so many of us remember it,—one feels that in the one case for England, as in the other case for America, one would wish nothing taken from any memory, any glimpse, however slight, one may have had of such a home. And, when I remember almost the last glimpse I had of Emerson in his own home, it is as sitting with a look of perfect peace upon his face, with his little grandson on his knee, playing with the baby like any other benignant grandfather (or, perhaps I might say, father), dandling it in his left arm, and with his right arm raising and lowering the fingers of his hand and watching the baby's eager curiosity. "This," he said to me, "is a little philosopher. Look at him! He philosophizes on everything. He is philosophizing on my fingers." When I dismiss Emerson from my memory in that last picture, I feel that I have linked him with the coming generation, linked him with his own posterity. And what more, and what sweeter dismissal, can any human being have?

Emerson! Darwin! The two men who, more than any others, have represented this period. How daring it would be in me to attempt in half an hour a parallelism that would cost hours of thought and a large book to print it in! Let me only suggest to you three or four points where these lives were singularly brought side by side,—two or three points where two men who hardly took much direct cognizance of each other's work yet seem absolutely united, to those who look at them from the point of view which is represented here.

Here is the fact, in the first place, that each of these men temporarily—Emerson for America, first, then Darwin for England—assumed, for a time, for his own nation, the leadership of modern thought. There is no question, there can be no question to those who remember the points of contact between England and this country thirty years ago, that Emerson, beyond any Englishman, beyond any Anglo-Saxon, then represented for England and for America, and through them to Europe, the leadership of thought. You may suggest Carlyle, if you please. Carlyle was an impulse, "a voice crying in the wilderness." But the guiding thought of the age was with Emerson. There was a long time during which, instead of the shrines being European and the pilgrims American, as formerly, it seemed as if the process were at last reversed,—as if the shrines were American, and the pilgrims European. Concord was the shrine; and Concord represented to England, and through England to Continental writers,—we who lived in that period saw it recognized everywhere,—Concord represented the dawn of a new impulse, the impress of new thought upon the age. That impress was temporary, as all impressions are. It passed by. No sooner had it passed by than, in just the same way for England, and through England for the civilized world, Darwin recaptured for the Anglo-Saxon race that leadership in thought which we had too hastily supposed had passed to France and to Germany. We who can remember the close of the great line of the German metaphysicians, we who can remember the temporary sway of the French eclectics,—we know what a thing it was to have, by a sudden movement,—the movement of a hand, as it were,—the sceptre of thought restored to England that had been taken from England since the days of Newton. That impress still lasts, or is only partially showing signs of waning. At any rate, it existed. The parallelism between the two men, therefore, began with this extraordinary fact, that each in his turn held the leadership of thought in the name of the Anglo-Saxon race which they represented.

Then, when you look at the manner in which this prominence came about, you find a second parallelism in this fact, that in neither case was the man an isolated phenomenon. Neither was the sudden flowering of a genealogy hitherto unknown, nor was either a sudden convert from some remote form of thinking. Each came to it by the gentlest, wholesomest, healthiest guidance of inheritance. Emerson was the son of a clergyman among the leaders of the liberal sort of his age; the grandson of a clergyman who, of all others, has left us the best description of the opening scenes of the Revolution; the descendant of a line of clergymen, on both sides, apart from these. Darwin, on the other hand, was the grandson of a man of science like himself, and only less noted than himself in his day; the son of a man of similar tastes; a man who very strangely took up and carried out scientifically the very surmises which his grandfather had only hazarded in a crude and half-deliberate way. How striking then was the correspondence between the two! Neither was born into mental subjugation, neither had to struggle into freedom. Both of them found the path open to them, and supports outside answering to the hereditary tendencies within. When I asked Darwin what he thought of what seemed then a singular circumstance,—that Huxley, antagonistic to the English Church, had had his child baptized into it, and that Tyndall was said to have approved that measure,—Darwin gently and charitably put the question by. But when I said that sometimes it happened to men to feel that their children ought to begin a little farther back than their own position, that it was fair to children not to start them at the utmost verge of the father's progress, but to begin in a little more conservative attitude, Darwin shook his head at that. "I see no need of it," said he. "My father and grandfather, so far as I can find out, were just as much heretics as I am; and when I look at my sons," he said, turning with an expression of infinite happiness to his two affec-

Digitized by Google

tionate and high-minded sons, who sat by us,—"when I look at my sons, I do not see but that they have turned out as well as other people's sons, in spite of it." Both of these great men, therefore, had this parallelism also, that the thing came to them naturally. They were themselves a part of the evolution they proclaimed.

Then, as to that proclaiming, we find a third parallelism. What Darwin proclaimed we all know; and we sometimes speak as if Emerson, in his impatience of consecutive thought, his purely poetic method, was wholly antagonistic to Darwin. It seems to me just the other way. I should think that every one who was in active thought at the time when Darwin first came forward, every one here, at least, must remember how directly the training of Emerson prepared us to receive all that Darwin had to suggest. The thought of unity in creation,—Darwin justified, formulated it, gave a working hypothesis for it; an hypothesis which, though criticised now from so many points, perhaps destined to be criticised more and more, still has given such an enormous impetus to human thought. Darwin formulated the doctrine of the unity of creation; but it is impossible to put that unity into words more definite and unequivocal than those in which Emerson had stated it fifteen years before, not merely in his original book on *Nature*, but in his essay on Nature, in his second series of *Essays*. Do not be alarmed,—it is the only written quotation which I shall inflict upon you. In the second volume of his *Essays:* "How far off," he says, after speaking of the first geologic epochs, "how far off is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrived, and then race after race of men. It is a long way from granite to oyster; further yet to Plato and the preaching of the immortality of the soul. Yet it must come as surely as the atom has two sides." And elsewhere in the same essay he says: "Plants are the young of the earth. . . . The animal is the novice and probationer of a more advanced order; and man, though young, having tasted the first drop from the cup of thought, is already dissipated. The maples and ferns are uncorrupt; yet no doubt, when they come to consciousness, they too will curse and swear." Is not that evolution? Could any more effectual statement be made from the poet's side of that which slower science, fifteen years after, was to state as the origin of species? In the whole history of human thought, it seems to me there has been no such triumphant instance of the manner in which the poet and the man of science, working side by side, seeming to separate, unite at last, and give the world the great thought which is to renovate it,—not one-sided only, not orphaned, but with science for its father and poetry for its mother, a perfect birth, destined henceforward to live and to remould the world.

Then again there is a fourth parallelism in the fact that this, as our chairman has justly indicated, was not in either man a merely barren ideal speculation. How promptly Emerson came from his closet to answer every call of public duty we know; and nothing was more delightful to me than to find Darwin, in the only letter I ever received from him, —a letter written after reading a little book of mine in regard to colored soldiers of the South,—expressing the most warm, cordial, trustful interest in the whole nature and prospect of the negro race, saying that for forty years he had been inclined to that opinion, and that time had only justified it. "Forty years ago," he said, "the observations I made in Brazil were such as your book only confirms." I cannot but remember with regret how at that period even our own great Agassiz—great in his domain, which the greater greatness of Darwin should not banish from our minds—had lent to Nott and Glidden the support of his own reputation in their miserably low estimate of the colored race, and how he admitted to me himself that it was largely the course of the colored soldiers in the war which had convinced him at last that the race which they represented ought no longer to be excluded from citizenship. Thus in Emerson and in Darwin we see the same readiness to recognize great practical truths in the affairs of men as to see the beauty and power of their ideal or scientific study.

Then, again, it is to be remembered forever with joy that both these men had the courage of their opinions. How far Emerson had it let this transmitted courage which he has given to all of us in New England for all these years answer,—the courage which he transmitted to Theodore Parker,—a courage which infused a finer and loftier strain in what might otherwise have been the too combative temperament of that other great man. In the case of Darwin, let the changed condition of England answer,—a change still, as our chairman has said, imperfect, but utterly transformed in its higher aspects since Darwin lived. The calm strength of Darwin, his unflinching acceptance of all the consequences of his thought, combined with his heroic refusal to leap to any consequences in advance of the facts, these have told on all English society to-day. They have told but imperfectly. Emerson has not wholly liberalized us. Darwin has not completely liberalized England. I felt, when the chairman just now gave his illustrations of the manner in which England still needed to be enlightened, that there was an instance that presses more home upon us than either which he mentioned, because it is a thing not to be found in the ranks of the conservatives, like the exclusion of Mr. Bradlaugh and the rejection of the Affirmation Act, but in the action of the reformers of England themselves. A thousand affirmation acts might be rejected and a generation of Bradlaughs kept out of the House of Commons with less injury to the progress of the world, less affront to free thought, than when, only the other day, if the newspapers tell truth, the University College of London, a free-thinking institution, an agnostic institution, an institution which was so fearful of religion that it would not have James Martineau for a professor because he was a clergyman,—when that institution rejected from the doors of its botany classes two young girls, Miss Besant and Miss Holyoke, because their fathers were atheists! We have our sins to answer for; but I do not know an institution in America which would do anything as bad as that.* There is not among us a heretic so great, there is not a man in *The Index* office or a man in the *Investigator* office, there is not even in the law office of Col. Robert Ingersoll himself, there is not a man in America with so bad a reputation, but what, if his daughters presented themselves at the door of any college, so far as I know, even the most conservative, that college would be eager to admit them, and give them all it could teach of botany; and, in the excess of its generosity, it would even fling in as much theology as they would accept in addition.

But, besides the analogy between Emerson and Darwin as to the courage of their opinions, it is also to be remembered that both of them had a quality almost as rare, which may be called the modesty of their opinions. Both of them recognized their own limitations. There is not in the history of literature, there is not in the history of thought, a more touching manifestation of intellectual humility than is to be found in Emerson's early letter to a man who had reproved him,—a man whom we now see to have been infinitely his inferior in everything that makes up thought, the Rev. Henry Ware. Emerson's letter to Ware, acknowledging the imperfections and defects of his own thought, waiving all claims for himself, stands supreme in the literature of such confessions. And always I think of Emerson in the manner in which he subordinated always his own philosophic thought before Alcott, in the way in which he subordinated his own poetic genius before Whitman, in the way in which all his life he was accepting and treating almost as his superiors men whom I, at least, can find only far below and behind him. I see the same thing even in the magnificent compliment paid by Darwin to Herbert Spencer. I—to my shame and reproach be it spoken, perhaps—am still compelled to see in that only an evidence of the same wonderful modesty of the great man.

And then, again, that leads naturally to one point more of parallelism. It seems to me that each of these great men in dying is like the other in this, that each has, in a strict sense, founded no school, left no disciple. This antecedent hereditary power of thought, coming through several generations, seems to have reached its climax in each; and, when each passes, what follows to take its place? You say, in Darwin's case, Is it not founding a school to have had, in the German list, I think it is three hundred and twelve separate books written about him? Is not that founding a school? No. As long as a man has only a dozen books written about him, he may have founded a school. When the number of books is counted by hundreds, the school is scattered: the Nile is lost among the multitude of its outlets. No: it seems to me that no one to-day dares to be so unscientific as Emerson on one side, or to be so purely scientific as Darwin on the other side. Instead of the essentially poetic method of Emerson,—if you can say that there is such a thing as a poetic method of Emerson,—we have the Concord Summer School of Philosophy, whose merits I do not question, but which aims at and continually strives for something which Emerson never even wished for in his life,—that is, to have a system. In the case of Darwin, we have,—since I have already got myself into disgrace with a good many of my present audience, I may as well go a little farther, and disgrace myself yet more, —in the case of Darwin, instead of his slow, deliberate, careful, scientific method, his inexhaustibly laborious research after facts, his stopping for years, if necessary, for knowledge of some one fact that will fill his gap, and telling you that he has stopped there, and why he has stopped there,—instead of that, in the writer who is, more than any one, the recognized leader of the school of evolution, or the school which calls itself evolution, we have a vast miscellaneous activity of mind, an enormous drag-net flung out everywhere, bringing in all sorts of things, valuable and valueless, together; treating history as a thing to be written in advance of the facts, not after the facts; treating science as a study in which you are to provide yourselves with a system, and then pick out your facts to prove it. We have, as it seems to me,—I know how irreverent I shall seem to many,—we have in the method of Herbert Spencer the antipodes of the method of Darwin. If one is science, the other is not science. So, at least, it seems to me.

These points of parallelism between the careers and the intellectual position of these great men are at least so absorbingly interesting that they may justify me perhaps for having lingered too long upon them, and for having exercised over those who are to speak afterward that tyranny of the first comer who uses up more than his share of the time, and then graciously apologizes for it, and says he is very sorry. I can only say this, in closing: Let us all be grateful to the end of time that we have lived in an age where the two great representatives of intellect were men who needed no commiseration, no apology, no evasion of the truth: not balancing their faults against their virtues, their calamities against their successes, but exhibiting to us two noble careers, each clear and almost perfect in its way. They never antagonized each other. Neither of them ever antagonized anybody, or had a dispute with any one. Both of them led lives truly satisfactory and noble to dwell upon. How much that is! What satisfaction we often have to take in this world in the most contradictory and inadequate lives! If we can only get something out of each life that seems noble, that usually seems a good deal to us. And yet here were two lives in which we find nothing to lament. I read the other day, in Goldsmith's *Citizen of the World*, his account of an occasion in England when he was invited to dine with a friend, and was promised three things. He was promised turtle and venison, and a great man. He says: "I accepted the invitation. The turtle was good, the venison was delicious, but the great man was intolerable." In a world of half greatness, in a world of incompleteness, what peculiar good fortune is ours to have lived in the presence of two lives so symmetrical and noble that we can only find material for comparison between the two, but no material for apologies or regret in the case of either!

*Mr. Higginson had evidently trusted to some imperfect newspaper report of this incident. Mrs. Besant and Miss Bradlaugh are the ladies rejected. An account of the matter, taken from the London *Inquirer*, may be found in another column.—ED.

A TRANSLATION OF CARDINAL SIMEONI'S CIRCULAR TO THE IRISH BISHOPS.

Whatever judgment may be entertained respecting Parnell and his purposes, it is known for certain that too many of his underlings have, in many cases, adopted a method of action which is manifestly at variance with that which the Supreme Pontiff enunciated in his letter to the Cardinal Archbishop of Dublin, and which was contained in the instructions of this Sacred Congregation unanimously received by the bishops of Ireland in their very latest convention at Dublin. Certainly, this letter did not deny the

Digitized by Google

right (*fas*) of the Irish to seek an alleviation of their grievances or to struggle for their rights (*suo jure*). But that divine injunction—namely, that the kingdom of God and his righteousness ought first to be sought—must ever be observed. Moreover, it is wicked to promote even a just cause by wicked methods. Furthermore, it is the duty of the entire clergy, and, in an especial manner, of the bishops, to quiet the aroused passions of the multitude, and recall them to justice and that moderation which is necessary in all things, lest, led on by a too eager pursuit of their object, they should see profit in a deceitful and misleading policy, and place the hope of public property in the perpetration of infamous crimes. Hence, it follows that it is not lawful for any one of the clergy to swerve from these rules or to mix themselves with, or co-operate in, promoting these movements, which are utterly incompatible with prudence and the office of allaying popular excitement. Certainly, it is not intended to forbid the collection of money for the relief of Irish distress; but the aforesaid apostolic mandates unqualifiedly reprobate all such collections as are made avowedly for the purpose of inflaming popular feeling and enabling conspirators against law and order easily to take advantage of such inflamed feeling in furtherance of their lawless designs. Especially must there be an abstention from the promotion of such collections of money, since it has become perfectly manifest that hatreds are thereby excited, and taunts and insults heaped upon prominent men, and the crime of assassination with which flagitious men have polluted themselves is in no wise condemned, and particularly since it is asserted that the measure of a real love of fatherland is to be estimated by the amount of money contributed or withheld, whereby it happens that men seem to be coerced to make such contributions under stress of force or fear. These principles of action having been laid down, it ought to be evident to your lordship (*Amplitudini*) that the money collected in aid of what is called the Parnell Testimonial Fund cannot be approved by this Sacred Congregation, and that hence it is not lawful for ecclesiastics, especially not for bishops, to commend or promote such collection in any manner whatever. Meantime, I pray God that he may keep your lordship (*Amplitudini*) long in health, happiness, and prosperity.

This document bears date May 11, 1883, at the house of the Sacred Congregation for the propagation of the faith, and is signed by John Cardinal Simeoni, Prefect, and by Dominicus, Archbishop of Tyre.

CORRESPONDENCE.

THE MATHERS.

Editors of The Index:—

In response to the kindly criticism of Mrs. Gunning, permit me to say that, whatever reliance is to be placed on the testimony of Robert Calef, there can be no question that the Mathers, father and son, were clergymen of conspicuous eminence at a time when clergymen had a preponderating influence in civil affairs, and that their writings, which were voluminous, were such as tended to produce the state of mind which made "Salem witchcraft" possible. In the very year in which Increase Mather was made President of Harvard College, he issued his work on *Illustrious Providences* (a copy of which I have before me, published at Boston in 1684), which is little else than a collection of marvellous tales of occurrences said to have taken place, for the most part, in New England, most of which he attributes to the agency of supernatural beings, chiefly to devils. Thunder storms, according to him, are sometimes caused by Satan, the Prince of the Power of the Air, and sometimes by good angels. He devotes a chapter to proofs of the interposition of the devil in human affairs, drawing his proofs (?) first from the Bible and second from human testimony, ancient and modern, citing many alleged facts which he asserts were undoubtedly "preternatural and diabolical." The tales he gravely relates manifest a degree of credulity which would be amazing in a man of so much learning, did we not take into account the superstitions in which he had been reared.

Now, when we consider that this was the man whom the colony sent to England in 1688 to procure a new charter, and that *he had the appointment of all the officers under this charter*, and that Boston and Salem were sister cities of the same colony, it will be difficult to see that the Mathers "were identified with the history of witchcraft in Boston only."

We must also remember that the clergy were then consulted in reference to all important civil matters. When the "Tragedy in Salem Village" opened, in the beginning of 1692, the General Court, Governor, and Council requested the opinion of several of the principal ministers on the laws as they then were (proceedings in cases of witchcraft had hitherto been "according to the directions given in the Laws of God and the wholesome Statutes of the English Nation"); and, in conformity with the written opinion of these clergymen, a new and more verbose statute on the subject was enacted. Of this "opinion," which consisted of eight articles, Cotton Mather himself says, "It was my poor hand which drew up that advice." (See *Some Few Remarks*, p. 39, of his "War" with Calef.)

Later (in 1698), Cotton Mather wrote of Salem witchcraft as follows: "As to our case at Salem, I conceive it proceeded from some mistaken principles; as that Satan cannot assume the shape of an innocent person, and in that shape do mischief to the bodies and estates of mankind," etc.; and this: "Experience showed that the more there were apprehended, the more were still afflicted by Satan; and the number of confessors increasing did but increase the number of the accused; and the executing of some made way for the apprehending of others: for still the afflicted complained of being tormented by new objects, as the former were removed. So those that were concerned" (was not Cotton Mather one of them?—he speaks of it as "our case," *e.g.*) "grew amazed at the number and quality of the persons accused, and feared that Satan by his wiles had enwrapped innocent persons under the imputation of that crime. And, at last, it was evidently seen that there must be a stop put, or the generation of the children of God would fall under the condemnation. Henceforth, therefore, the juries generally acquitted such as were tried, fearing they had gone too far."

I pass no judgment on the Mathers. Their course was the logical consequence of their belief. Admitting Bible infallibility, witchcraft was real, and witches must not be suffered to live. The problem was how to discover the witches. They solved it as best they could.

When we read the sad tales of the trials of these innocent victims,—one of whom was an old man of eighty years,—and remember that the eight principal accusers were between the ages of eleven and twenty, and that out of the eight but two could write their names, and that yet between March, 1692, and May, 1693, nearly two hundred persons had been dragged to prison under color of law and the form of a trial, we can but cry, "O Superstition, what crimes are committed in thy name!" Fortunate it was that Gov. Phipps had at last the good sense to release the one hundred and fifty still in duress, and put an end to the shocking tragedies.

The question of fixing the responsibility for these events does not so much concern us as does the breaking up of the superstition which still lingers, though under other forms. E. J. L.

"THE DOGMATISM OF THE SYNAGOGUE."

Editors of The Index:—

In the valuable article on "Religious Rationalism in the United States," by Count Goblet d'Alviella, the following passage occurs: "There are reformed Jews every day becoming more numerous in the United States, who have not followed Mr. Adler in his 'ethical religion,' but who have not the less broken away from the dogmatism of the synagogue." Seventy-five per cent. of the Jewish congregations of America are composed of Reformed Jews; but they have not broken away from the dogmatism of the synagogue, as the synagogue never had any dogmatism to break away from. Never has there existed an official Jewish creed accepted by the adherents of Judaism. When the attempt was made by Maimonides, in the twelfth century, to write a *credo*, and to impose its acceptation upon all the Israelites, attempt proved unsuccessful; and, since that time, the effort has never been renewed. Were it to be attempted to-day, it would meet with the same successful opposition as it encountered seven hundred years ago. Judaism has never suffered from dogmatism; and, even in the darkest ages of its history, the Jewish rabbi and layman were always perfectly free, as far as their beliefs and opinions were concerned. Those who are familiar with Talmudical and post-Talmudical literature did not wait for modern Liberalism or Felix Adler to tell them that Moses never ascended to heaven; that God never descended to earth; that revelation was not confined to any particular time or place; that there were in other nations prophets as great as Moses; that natural law was inviolable; that the sun and moon never stood still at the command of Joshua; that the doctrine of Providence might be interpreted to mean the intellect in man, and that its effects are proportionate to the measure and extent of the intellectual endowments possessed by the individual; that eternal punishment is a myth; that Moses never wrote the Pentateuch; and that the prophetical books were not necessarily composed by the men whose names they bear. Every one of these assertions have been made by the authors of the Talmud, Ibn Esra, Maimonides, or Joseph Kaspi; and they were "members in good standing" of the Jewish synagogue. Of course, Judaism asserts the unity of God and the eventual triumph of justice upon earth. But these are not dogmas: they are postulates of reason. The first is asserted upon purely intellectual grounds by Aristotle (*Metaphysics*, bk. xi., chap. vii.); and human reason has not changed much since his days. The second is demonstrated by Herbert Spencer upon purely logical grounds (*Social Statics*, chap. ii.). The "dogmatism of the synagogue" is an empty phrase, *vox et praeterea nihil*. DR. DAVID STERN.

WILKESBARRE, PA., June, 1883.

A DEFECT IN GEORGE'S ARGUMENT.

SAN FRANCISCO, June 1, 1883.

Editors of The Index:—

Several references in *The Index* to *Progress and Poverty* impel me to offer a single criticism on the book; namely, that Mr. George's whole argument would have gained very much in practical effect, if he had shown in detail that his plan *would leave small land-owners as safe in their ownership as they are now.* That is, Mr. George does not describe any equivalent for the deed, recorded in the Book of Records of Land of the town or county, which is Smith's trustworthy and secure evidence that he bought his farm from Brown, and that the farm is his, Smith's.

I hold that, up to the present day, the moral strength of any nation is (roughly, of course) to be measured by the proportion of its people who are independent land-owners, cultivating their own land. This I understand to be Mr. George's belief. But, at the same time, I think his book is calculated to repel exactly this class, by not proving with sufficient clearness that they would be just as safe in their ownership on his principles as they are now. And this omission is the more important, for the reason that his plan would make, otherwise, one sufficiently great call on the disinterestedness and honesty of the land-owners,—I mean in making them pay over in cash all the taxes. No matter if they are to get the amount back in increased prices for produce, the payment of direct taxes in cash is the strongest strain on honesty applied by government to citizens.

Mr. George should show a system of registration of ownerships as cheap, easy, and efficient as the usual American methods. If he would do this, he would, I believe, tenfold the power of his doctrine.

FREDERICK B. PERKINS.

BOOK NOTICES.

THE DOOM OF THE MAJORITY. By Samuel J. Barrows, editor of the *Christian Register*. Boston: American Unitarian Association. 1883. pp. 151. Price 50 cents.

Some months ago, Rev. George E. Ellis, D.D., of Boston, said in a public address that, before Orthodoxy could revise its creeds, it must revise its estimate of the Bible, since certain scripture texts "are alleged as certifying that the vast majority of the human race are to be the victims of endless woe." This statement was challenged by Rev. Mr. Withrow, of the Park Street Church of this city. Mr. Barrows replied at considerable length in the *Register*. The discussion and the questions which grew out of it furnished the material for this volume. The author aims to show that the doctrine of the damnation of the majority of mankind is a part of the orthodox creed. The evidence offered covers the following points: 1. Evangelical Christians have taught this as a Scripture doctrine. 2. It is taught by evangeli-

Digitized by Google

cal creeds. 3. It is still taught by evangelical denominations. These propositions are supported by indisputable testimony, taken from the writings of recognized representatives of Orthodoxy. In the last chapter, the author presents what he regards as a rational mode of interpreting the Bible. The numerous quotations from evangelical writers make the book valuable for ready reference. Mr. Barrows has done his work with thoroughness and fairness; and his little volume can hardly fail to contribute to weaken in some degree the irrational dogmas against which it is directed,—dogmas which, were they true, would prove God to be a monster of cruelty and meanness, compared with whom the most hardened criminals of earth should be regarded as angels of light and paragons of goodness.

CONSCIOUS MATTER; or, The Physical and Psychical universally in Causal Connection. By W. Stewart Duncan. London: David Bouge, 3 Martin's Place, Trafalgar Square, W.C. pp. 128.

This little volume is an attempt to bridge the supposed chasm between physical and psychological science, and to blend in a unity phenomena generally regarded as wholly dissimilar. The author argues that the human ego is but a local condition of the one universal substance, a compound of many conditions, variable in composition and situation, and only temporarily persistent; while the elements of which it is composed—namely, the ultimate psychical elements of the universal substance—endure forever. "Matter is never dead. It may be here or there, anon asleep or unconscious, as when its psychical conditions or manifestations take the statical form; yet, again and again, it is awakened both to feeling and to action, ever changing in its forms and numbers and character, alike of body and ego, of living body and personality." With the theory that feeling is merely a concomitant of nerve-action, that consciousness is simply a concomitant of the structural organization, the author is not satisfied. He regards it as an hypothesis affording but a kind of harbor of refuge from the storms of anti-materialism, a sort of safe-like strip of *terra firma* in the midst of what appears to many as a morass. He insists that the connection between the physical and the psychical is a *causal* connection. There is one substance which is the basis and source of *all* phenomena, and that substance is *matter*. But the author applies the term "matter" not simply to the phenomenal manifestation commonly known as such, but to the "substance" or "substratum," which "means merely the unknowable entity underlying the various phenomena we call properties of matter." It is "no longer philosophical to regard it (matter) as an assemblage of entities, atoms, or particles, in greater or less isolation, and surrounded by that nonentity we call 'empty space.'" The author has a strong preference for materialistic terminology; but his thought is substantially that of the modern agnostic school of thinkers, with some little attempts at originality, which consist in presenting speculations that are familiar to all students of philosophy in the language of a school with which these speculations are not commonly associated. The style of the writer is clear, and the spirit and tone of the work are unexceptionable.

SOCIETIES FOR THE SUPPRESSION OF VICE. Are they Beneficial or Injurious? Their Methods and Tendencies considered. By a former Vice-President of the Boston Young Men's Christian Association. Boston: Colby & Rich, 9 Montgomery Place.

The aim of this pamphlet is to show that "Societies for the Suppression of Vice, as usually conducted, are quack moral societies." Vice is regarded as a disease, and, if suppressed by external coercion, is sure to breed other and worse corruptions. It declares that the methods of Vice Societies are threats, deceptions, frauds, and lies, and points out some of their really reprehensible acts in the professed interests of purity. We think the condemnations of this writer are too unqualified, and in some respects unfair; but the statement of Sydney Smith made in reference to the London Vice Society is probably as true to-day as ever. "It is," he says, "hardly possible that a society for the suppression of vice can ever be kept within the bounds of good sense and moderation. . . . The loudest and noisiest suppressors will always carry it against the more prudent part of the community; and the most violent will be considered as the most moral, and those who see the absurdity will, from the fear of being thought to encourage vice, be reluctant to oppose it. . . . Men whose trade is rat-catching love to catch rats, the bug-destroyer seizes on his bug with delight, and the suppressor is gratified by finding his vice. . . . So much fraud and deception are necessary for carrying on his trade, it is so odious, that no man of respectability will ever undertake it." We have no doubt that the majority of those composing the societies against which this pamphlet is directed are well-meaning people, and that the societies have done much good; but some of the criticism of their methods is merited, and what is said of Comstock is probably not much in excess of the truth. He seems to be morbid in regard to certain kinds of abnormal vice, with a prurient inclination to come in contact with it and to talk about it. His representations in regard to the magnitude of the evil of indecent literature are now known to be deceptive and false; and the exhibition of his wares no longer, we are informed, impress committees as they did formerly. He seems to be about as much opposed to free thought as he professes to be opposed to obscenity, and likes to identify and confound the two things in the public mind. He is evidently in an unhealthy mental state, and does not seem to understand the difference between a work of true art and an indecent picture, or between an expression of opinion that differs from his own and obscenity. But for the course he has pursued, which has often been apparently that of a religious fanatic with a cerebral condition inclining him to dwell on lascivious acts and scenes, the foolish clamor for the total repeal of all postal laws against obscene literature never would have been made. We have not a reader, we are sure, who has any other feeling than loathing for the business of those who write and circulate really indecent literature; but a man like Comstock, who takes advantage of this righteous public sentiment against obscenity to gain sympathy and support in his opposition to free thought and his annoying publishers and artists whose work he cannot appreciate, is not fit to be the agent of any society worthy of support.

THE *Art Amateur* for June has a very interesting biographical sketch of La Farge, the decorative artist. After struggling through many difficulties, he has at last become successful and celebrated for his designs and manufacture of decorative glass. The methods are new and ingenious, and his work is much in demand. He is said to employ thirty workmen. We are glad to learn that Mr. S. A. Schoff has at length completed his engraving of William M. Hunt's charming picture of "The Bathers." The *Amateur* speaks of it in very high terms, which we doubt not are well deserved. Among the illustrations is a very spirited reproduction of J. F. Millet's "Shepherdess Knitting," and some pleasing sketches of "Etretat," a French watering place frequented by artists. This monthly keeps its standard high, and improves constantly both in its literary and artistic work.

"THE Fresh Air Fund," in prose, and "A Beautiful Charity," in verse, both illustrated in *St. Nicholas'* happiest style, are alone worth the price of the June number of this excellent juvenile magazine, as likely to interest happy and well-cared-for children and youth in this benevolent enterprise. The well-told story, "The Baptist Sisters," graphically describes the scenes incident to a cyclone; while Celia Thaxter's poem, "Flowers for the Brave," comes very appropriately so near Decoration Day.

"CHOICE LITERATURE" for May, from John B. Alden, 18 Vesey Street, New York City, contains an article entitled "An Unsolved Historical Riddle," by J. A. Froude; "Isaiah of Jerusalem," by Matthew Arnold; "The Highland Crofters," by John Stuart Blackie; "The Progress of Socialism," by Emile de Laveleye; "Richard Wagner," by Bertha Thomas; and many other articles of merit. Price 15 cents per number, or $1.00 per year.

"BABY LAND" for June is, as usual, delightful for the wee pets of the nursery.

IN the vocabulary of science there is no such word as "foreign." The sole question to be asked about any method, either of acquiring or communicating knowledge, is not, Where did it originate? but, Is it adapted to the wants of human nature?—*The Nation.*

PERSONAL ITEMS.

MR. ROWLAND CONNOR is giving a series of Sunday evening discourses before the Unitarian church of East Saginaw, Mich., on "Our Homes, and How to make them Happy."

THE curators of the Taylor Institution at Oxford have taken a novel step in appointing a lady, Mrs. Humphrey Ward, as examiner for the scholarship and exhibition in Spanish this year. Mrs. Ward is known to be an excellent Spanish scholar in addition to her many other attainments, and took a very active part in the various schemes for the education of women at Oxford as long as she resided there.

IT is probably altogether unique for a *savant* to be able, at one of the most distinguished scientific societies in the world, to refer to remarks which he made before the same society more than seventy years previously. A few weeks ago, M. Chevreul, whose name is well known in connection with his investigations on color, made a communication to the Académie des Sciences; and, at its close, he observed: "Moreover, gentlemen, the observation is not a new one to me. I had the honor to mention it here, at the meeting of the Académie des Sciences on the 10th of May, 1812"!

THE following interesting anecdote appears in Mathilde Blind's recent biography: "After translations from Strauss, Feuerbach, and Spinoza, and *Westminster Review* articles, George Eliot met George Henry Lewes, and began to write fiction at his suggestion. Her *Scenes of Clerical Life* and *Adam Bede* interested Mr. Blackwood so much that Lewes invited him to meet the author. No one was present at the dinner-table besides Mr. Lewes, Marian, and Mr. Blackwood himself. The dinner was an extremely pleasant one; but, when it was over, the guest could not help expressing his regret that George Eliot himself should not have been present. 'Here he is,' said Lewes, introducing the quiet, low-spoken lady who had presided at the table."

MR. W. A. CROFFUT writes in the *Independent:* "Just about a year ago, Dr. Beard called one Sunday, as he was then in the habit of doing almost every week; and we drove up through Central Park. Among the topics of conversation was Emerson, then recently dead. I called his attention to an orthodox sermon, preached the Sunday before, claiming that the Concord pantheist had 'repented' just before he died, and become a true Christian. 'Oh, yes,' said Dr. Beard, 'it is the fate of leading minds. Whenever a man dies who has discarded Christianity, but has lived a reputable and valuable life and become distinguished, the Church feels the logical necessity of making him out a true believer; and there is usually somebody present to testify to his change of heart. None of us,' he added, with a laugh, 'will be safe from this sort of thing on our death-beds.'"

AT a meeting of the New England Woman Suffrage Association in this city last week, Mrs. Clara Neymann said: "Nearly forty years ago, Carl Heinzen, the fearless pioneer worker for equal rights, published a little book on the rights of woman, which treats the subject from a rational, philosophical stand-point. In his paper, which was issued in your city for twenty years, he advocated the emancipation of the negro and the enfranchisement of woman. Hundreds who are now ready to work for woman suffrage were converted and inspired by him." After mentioning a number of papers and persons now working for woman suffrage, the speaker said: "But the German woman suffragists are all anti-prohibitionists, and will fight prohibition, but not temperance, vigorously. They are Republicans in spirit, but will oppose anti-Democratic measures. A few orthodox Germans favor prohibition. A German who is orthodox in one measure is likely to be in almost every other, and the orthodox German is the greatest opponent of woman suffrage. He recognizes a personal Deity above him, who regulates and directs his life. So he feels that he is justified in directing and commanding his wife. He is her superior by a divine order. I know there are orthodox people among Americans who support the suffrage movement. The German is more consistent. He is either a thorough orthodox Christian or a radical Liberal. Only those Germans who are more concerned about human rights here than about a hereafter are true, consistent, earnest suffragists."

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning*.

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

THE Salvation Army *War Cry* has this notice of the work in Syracuse: "Good day; hall packed; thirteen killed; many wounded; the devil kicking; God working; Syracuse for the King."

A NEAT and substantial building is to be erected in Providence, R.I., on Snow and Washington Streets. A portion of the building will be made into a hall, which will be used by the Free Religious Association of that city.

SAYS the Springfield *Republican*: "The foreign correspondents who, during the coronation week, telegraphed from Moscow an unlimited amount of peace and good-will, have completed the price of their admission tickets to the ceremonies by giving a grand dinner to M. Wagonoff, the press censor. After the correspondents have got home, we may expect to get the news."

A MASS meeting, called for the express purpose of rebuking the Pope for his interference in the political affairs of Ireland, was held in Chicago on the 16th, and two thousand people were in attendance. The resolutions declared that the best way to answer all assaults on Parnell, from whatever quarter, was to swell the fund to release his estate from debt. Alexander Sullivan, President of the Irish Land League, said that, if the Pope attempted to prevent liberty in Ireland, he would be pushed aside by an indignant people. The speeches generally were severe in criticism of the action of His Holiness.

ACCORDING to a statement of Sir John Lubbock in the *Nineteenth Century*, down to 1824 the English government gave to the tax-payer a notched stick as a receipt. The old exchequer tallies were willow rods about five feet long, which were notched at certain intervals, each notch being understood to mean so many pounds, shillings, and pence, or fractions thereof. When the amounts were thus notched, the stick was split, one part being kept by the tax-payer and the other by the government. Immense numbers of these old tallies were stowed away in the vaults of the old House of Commons, and it is said that they were probably the cause of the fire which destroyed it.

THE Boston *Sunday Herald* remarks: "The opposition of the Pope to the Irish revolutionists may, after all, best serve their cause. It is not at all desirable that it should have the appearance of a religious war. Though a large majority of the followers of Parnell are Catholics, as are a large majority of the people of Ireland, Parnell himself is a Protestant. Naturally, the Church does not regard him as it would regard a Catholic leader; but the Irish Catholics do not seem to consider his religion at all, following him because he represents to them the cause of Ireland. It would be an interesting but not unprecedented result, if the Roman Church should lose its hold on Ireland because of political considerations; and the elimination of the religious question would be the best possible thing for Ireland."

MR. W. M. SALTER, the Lecturer of the Society for Ethical Culture of Chicago, gave his opening lecture the first day of April. A children's class was immediately organized, also a normal class, both having weekly meetings with Mr. Salter, in addition to his public discourses. "Relief Works," under the auspices of the Society, though having separate membership and officers, has also been started, some $1,400 raised for its charitable work, and two nurses—graduates respectively of the Bellevue Training School (New York) and the Illinois Training School (Chicago)—have been employed and already begun their work of nursing the sick poor in their homes, in co-operation with Free Dispensary physicians. The Ethical Society seems to believe in preaching the gospel of humanity by practising it. Already it is felt that a new type of religious liberalism is being shown by the members of the Society.

JOHN BRIGHT, on the 13th, in an address at Birmingham, Eng., before twenty thousand persons, said: "Permit me to address a word to the artisan classes of the United States. I am no enemy of the United States. I fought her battle in this country. I sympathize with her as much now as I did then, almost as much as if born upon her soil. I believe the question in the United States between a protective and simply a revenue tariff is weaving its solution. The opinion is growing that unstable economic facts are offering themselves for the consideration of statesmen and every intelligent man in the great Republic. An extraordinary condition of things exists there. No country of any age ever experienced or dreamed of an actual surplus of revenue of £30,000,000. This fact is fatal to the high protection party. The government does not well know what to do with it. I believe the next election for President will be fought on free trade lines. The great people of the United States will declare it to be the inalienable right of every American citizen to spend his money in the world's cheapest market."

WE learn from *Brahmo Public Opinion* that on the fifty-third anniversary of the Brahmo Somaj, Mrs. Manorama Mazumder, the wife of Babu Girish Chunder Mazumder, and the lady missionary of the Barisal Brahmo Somaj, publicly conducted the evening service of that Somaj. A large crowd of people was naturally attracted to witness the unusual spectacle. This is perhaps the first time that an Indian lady publicly conducted divine service and preached a sermon before a congregation of men. Her abilities in preaching have long been well known to all who ever attended her private prayer-meetings. She is a better preacher than many of the preachers of the other sex, and we are glad that the way has been opened to her to make her gifts useful to her Church. As a novel feature in connection with the proceedings of the last anniversary festival of the Sadharan Brahmo Somaj, it may be mentioned that, Mrs. A. M. Bose took part in the proceedings as one of the speakers. Her remarks were well expressed and to the point, and she made some very wise suggestions. This is perhaps the first time that an Indian lady spoke publicly at a gentlemen's meeting. These are signs encouraging to women, who are now earnestly striving to ameliorate the condition of their own sex in India.

THE clergy on the west coast of Scotland have of late been extremely severe in denouncing the conveyance of fish by steamers and railways on Sunday. Some of them have ascribed the failure of the local fishing to the desecration of the Sabbath, and declared to their superstitious hearers that they need not expect God would send fish along their own shores while they permitted the curers of Stornoway to send fish through the country to the London markets on the Sabbath. These appeals to the people, repeated week after week, have had the effect intended. On a recent Sunday, two steamers, laden with eighty tons of fish, arrived at Strome Ferry, the western terminus of the Dingwall and Skye railway, where a special train was waiting to take the fish to London. Before many boxes of fish were on the quay, fifty men armed with clubs appeared and said that the work must be stopped, as it was a violation of the Sabbath. The officers of the steamers remonstrated, and assured the mob that a delay of twenty-four hours would spoil the fish. The Sabbatarians were not to be reasoned with. Their numbers were soon increased to a hundred, and they were determined, if necessary, to fight on Sunday, to prevent work on that day. A collision occurred, in which the transportation people were beaten. In response to a telegram, Rosshire sent to Strome Ferry half a dozen constables, who ordered the rioters to disperse; but they drove the officers, with their small force of sailors and railway hands, before them; and at the end of a severe fight, during which several were badly hurt, the Sabbatarians were masters of the field. They immediately held religious service on the quay, the exercise consisting in prayer and praise, reading from the Bible, and exhorting the people to maintain the Sabbath. The meeting lasted till midnight, when the religious rioters dispersed, and the work of the steamer and railway men was resumed. Something more than orthodox preaching is needed on the west coast of Scotland.

THE GROWING SUPREMACY OF MORAL IDEAS.

There is no better antidote against the demoralization of pessimistic philosophy than to note the actual progress in morals that has been made by the human race. In spite of the dark and discouraging facts in man's experience, and the black record against him in numberless chapters of his history, there is no fact pertaining to the human race more patent than that it has evolved the idea of moral law as the rule of conduct, and that through the ages there has been increasing practical recognition of the sovereignty of this law. However widely human beings have diverged from the law, enough have observed it to take the race safely forward over all stumblings, and to show that, after all the stoppages and retrogressions have been subtracted from the progress, there is left a solid gain. Looking at the whole history of man, there has been real advancement toward higher and larger good.

And the facts that prove this increasing supremacy of moral ideas are not dependent on any of the several theories of ethics that are entertained. They are, on the contrary, a part of the facts which any ethical theory must explain. In brief epitome, they are these: When we first find man, at the point where primeval history begins, he is found as a mere child in intelligence and character, yet far from a child in one sense, inasmuch as he is strong in animal strength, and largely dependent for his existence on his physical power and courage,—a savage in fact, and but little above the animal races around him. Yet, in the course of the centuries, this being is found to be developing a moral sense. Even if it be believed that the moral sense was an original natural endowment or that the moral law came by supernatural revelation, it will be admitted that historically the manifestation of practical morality has been by a process of gradual advancement. And we find this moral sense slowly strengthening, and, as through the ages it grows and ripens, bringing with it codes of duty, ethical commandments, precepts of private and public conduct, legislative enactments, courts for enforcing them, instrumentalities for ethical education, and numberless beneficent organizations for securing human rights, redressing human grievances, and promoting human welfare.

In fine, when we read the moral history of man, we strike his history at the very centre of its vitality. There is nothing that can atone for the bloody record of his wars and fightings, of his cruel lusts and ambitions, of his manifold injustices and crimes, but that through all there has been kept alive a counter sentiment of right and a growth of mutual affection and helpful service; and that these better sentiments and feelings have tended surely, though slowly, to prevail over the baser, and to drive them out by gradually winning man's loyalty and reigning in their stead. The marriage institution, which began in an act of physical force and robbery, is now based—at least in theory—in all civilized countries on reciprocal love. At the centre of the home once reigned the tyrant's power, and the only obligation recognized was that of servitude. In its place now twine the fair vines of mutual helpfulness and bloom the sweetest flowers that grow on the tree of human life. Where people once lived by rapine and plunder, their descendants now live by fair exchange of goods and honorable dealing one with another. Governments that began in physical might and became strong by war and spoliation have at least to recognize to-day certain bounds of justice. Social vices that once had the countenance of the most enlightened communities, and were hardly counted as vices, are now driven by public opinion into secrecy and disrepute. The very questions of social reform that are raised to-day indicate advance. Conditions of society which once were submitted to as a matter of course are now subjected to critical examination, and morally condemned; and though the methods of amelioration may frequently present perplexing and even appalling problems, there are men and women who are found ready to grapple with them.

There are many and great wrongs, of course, that still remain unrighted. The whole line of progress is not yet accomplished; the millennium is still far ahead. There are outrageous abuses of justice in national life, cruel violations of right and love in domestic life, and vices in society that appear to be eating out its very heart. But, nevertheless, the fact of amelioration and progress cannot be disputed. Whatever aberrations from the moral law still exist,—and that they are many and frightful none will deny,—it is none the less true that the binding obligations of right and love are more generally recognized in the world than ever before. There are modern enterprises of humanity and philanthropy in numbers and nature such as were never dreamed of in the ancient world. Science, by gathering and spreading knowledge of hereditary and sanitary laws and of sociological forces in general, is opening an entirely new field for the application of ethical principles, which is already beginning to be occupied. Though war still wages its bloody vocation, it is attended, as in no previous age, by the sentiment of pity which organizes an accompanying army of nurses to bind up the wounded and soothe the dying. And, in our own time and country, one of the greatest wars of all history was fought to successful issue not for conquest, not for revenge, but because at the root of the irrepressible conflict was the moral idea, which demanded justice for an enslaved race. Hence, we may say truly that even the forces of physical might are now beginning to own the sway of moral ideas. In the long struggle for existence in which, according to Darwinian law, the fittest have survived, first, the fittest were the strongest; then, the fittest were the most intelligent; now, it is beginning to be seen, and by and by it will be more fully seen, that the fittest are the most moral.

In other words, man is coming to see, as never before, his own responsibility for the destiny of the race to which he belongs, and is learning better to meet that responsibility. If behind all human history, he feels the push of a supreme moral purpose, he sees no less the importance of the co-operative push of moral effort on the part of individual human beings. The lesser is none the less necessary in its time and place, because of the greater which overlaps all time and fills all places. Man is summoned to give himself as an active agent in combining and maturing the social forces which are able to work out his own amelioration. The needed moral reform may come in time without the help of this or that individual person; but it will come, because there will be a sufficient number of men and women who have the noble ambition to share its triumph. The moral idea, in the course of the ages, may be firmly seated on her throne of rightful supremacy over animal strength and fleshly passion and sheer brain power; but the whole-souled man or woman will be all alert to respond to the call for helpers to place that crown upon her brow. The conquests which have been won by brute strength and mental sagacity in the long struggle for existence the moral sentiment gives signs that it is about to occupy as its legitimate inheritance. But can any except morally aspiring and morally laboring minds have a share in that inheritance?

WM. J. POTTER.

THE LIE AS A SOCIAL FACTOR.

A Brief Jeremiad.

That the European and American peoples are slowly approaching a crisis very much like that of the French Revolution is a pretty evident matter. The two great causes that operated then operate now; namely, the accumulation of wealth in a few hands, and the universal prevalence of scepticism. It is probable that the first terrible upheaval will take place on the continent. English Anglo-Saxony will move slowest and last of all, unless it be American Anglo-Saxony. For, although the elements of disaffection are rife enough in our motley and mercurial society, yet there is land enough to keep us quiet for half a century or more. Yet social and religious relations are so unstable, so illogical, so unjust, that, with the reappearance of financial depression or of war, we shall probably witness popular outbreaks of a more or less serious character even in this century.

But sophistication and obscurantism are the order of the day at present. Society is now one vast tissue of sophistication, the like of which the world has never seen before. They carry it bravely, —these self-styled conservators of society and of religion. Oh! 'tis a merry game, my masters, I assure you. Laugh in your sleeve, and tip your friend the wink you may, but never dare to blurt out the truth. *Mum* is the word, and keep up the game. Here is Ginx and his twelve babies, —beware of enlightening him; here is one whom the priests have hoaxed into believing that he is to suffer torment for millions of years; and here is a good woman whom they have thrown into deep dejection by persuading her that she has got to live in her present form for millions of æons (an idea as frightful as it is silly). There are thousands of young men of this generation whose lives have been a long and silent tragedy because of religion. The brave choose to suffer and to cause to suffer: the timid sophisticate. Sham is so rife, because truth demands a sacrifice enormous and unexampled. Men hesitate to take the final step, to face the music of circumstances apparently so appalling. It is hard to learn that the only deep and genuine happiness springs from absolute sincerity. The artificiality of mind induced by the religious question has so filtered downward through all the business life of people that we cannot blink the frightful truth that a pure and unsophisticated mind has become laughable in social circles. Simple truth is always obscure to low and double-dealing minds; but, in this day, it is getting obscure to about everybody. If you do not *cant* and dissemble, you are surely either mad or a fool. If one chances to utter a sincere thought on a dangerous topic, ten to one but his companion suspects him of only deeper duplicity and cunning than he usually meets with.

It is the age of disillusion in religious and other matters. But men love illusion. "In one way or other (if not to you, to themselves), most men delight in lying; all, in being lied to, provided the lie be soft and gentle, and imperceptible in its approaches." Thus speaks Landor, very shrewdly. He is referring to the milder of the two forms of lying; namely, that which springs out of the imagination and has its roots in the love of illusion. Of course, love of illusion has its indispensable uses. A man utterly devoid of it is either a prig or a monster. But the devilish lie springs, I conceive, from a very different source. It is the brother of cunning, and is the weapon by which the unscrupulous try to force their way. It is the device of the savage and of a thousand species of the lower orders of animals: by deceit, they procure their food and kill off their rivals. Were

Digitized by Google

there no injustice in human society, no struggle, then there would be no lying, in the mean sense.

Undoubtedly, Nature is strong enough and sound enough to pull us through this disgraceful era; but I wish we were well rid of it now, for it is ruining high ideal literature and debauching intellect and character. It has been justly said that, if it were possible to condemn at one blow all sham and all lies in commerce and art, the business of the world would temporarily suffer an almost irretrievable shock. Don't you think then that those blunt old fellows, Ruskin and Carlyle, are right in denouncing this as the age of sham? I do. If it were not an age of lies and violence and hellish passions, we should have no locks on our doors, no banks, no Vanderbilts, and more flowers and songs in the streets (Pippa-songs in place of those of strawberry and orange fiends).

If the unjustly rich were not sophisticated, they would see themselves not as the enviable and fortunate among men, but as its outcasts. There are insects called parasites (disgusting things, such as ticks and tapeworms) that fasten themselves by hooks and suckers to the flesh of other animals, and batten on their substance. They sometimes have daggers in their heads, by which they cut their way in. They live by the toil of others, and contribute nothing. What these are in an animal organism, the unjustly rich are in the social body. Instead of receiving homage, they should be despised, especially if they make bad use (as most of them do) of that which they have filched from the treasure of the nation. The golden rule in business is so to live that you do not defraud any other human being of the full measure of opportunity and wealth that his or her natural endowments could anywhere honestly win.

A striking instance of social oppression and greed recently came under my notice at Marshfield, Mass. The little fishing hamlet of Green Harbor in that town has been almost completely ruined by the folly of a company which has spent $35,000 in building a dike to reclaim some acres of marsh land. The dike has ruined the harbor and destroyed the prospects of the village; and yet the reclaimed land has not been used and will not be worth much, if anything, for a century, owing to the salt in the ground. Even the marsh grass is destroyed, and the whole region lies desolate. Ships in distress of weather no longer have a haven of refuge. The estuary by which Webster used to ascend in his yacht to his own house, a mile inland, is now dried up; and the whole marsh region deprived of its beauty. Here is an instance of sophistication and greed, ending in high-handed oppression. A miserable patch of worthless land (not absolutely needed for a century yet in this country of unoccupied territory) proved a prize strong enough to blind the eyes of a set of men to the absolute injustice they were committing against others.

I will close with bare reference to a curious form of sophistication which has developed among scientific men. They are very right in stoutly resisting premature attempts to discover final causes in nature. But I find that many of them become so steeped and dyed with the idea of struggle and carnage from their continual handling of the lower forms of life that they are absolutely unwilling to admit that the higher phenomena of ethical progress—sympathy, altruism, self-sacrifice—have any existence; or, at any rate, they think all talk about love and sympathy the sheerest nonsense. It is a pity that the dissections, etc., of zo-ology and medicine should have a tendency to harden and make savage the nature. Yet they do; and we ought to take this into the account, when we are dealing with the strange bigotries and crudities of scientific specialists. As one talks with these men on some topics, one is almost tempted to believe the theory of a certain divinity student, who recently told me, in the course of a discussion, that perhaps the reason why he believed in miracles and I did not was because the cells of his brain were constructed (see Golz and Tyson) so that it was a physical impossibility for him to see as I did! This is the most whimsical defence of the orthodox position that I have met with. According to this, we may yet find a man so cellularly constructed as not only to believe that the whale swallowed Jonah, but that Jonah afterward swallowed the whale, and the whole ocean besides.

W. S. KENNEDY.

MYTHOLOGY.

The subject of Mythology, old as it is, is not obsolete: it is still fresh, and of such depth it has an undying interest for the mind. Long considered, debated, held under various interpretation, it has never been finally settled or exhausted. It is studied to-day with as keen a zest certainly, and under more hopeful, more fruitful methods than have ever obtained in the past. Only those who look at it upon the surface alone, and judge its quality from certain seemingly puerile or absurd stories that they find in it, deem it worthless or indeed outgrown.

It has not only a speculative or curious, but a near and practical interest for us. Under one view or perspective, it represents a side or type in human thought that can never pass away, that must become more pronounced and more prevailing as the ages roll on and man matures. Under another view, it shows a phase which, however elemental or childish, and therefore temporary, still persists, and exerts marked influence in society, and indeed with us all. There are survivals, perpetuations of the far distant past; and these become more and more plain and striking, as we study the modes of thought and forms of speech still current. We live still in the shadow of this wide, world-covering tree.

Mythology seems to carry us back, as Mr. Grote well describes, to "a past that was never present." We cannot find the beginning of it. It is hard to translate ourselves back into our own childhood, much more into the childhood of the human race. Hence, the difficulty of the task that lies to be undertaken. Various definitions have been put forward, but none fully or completely define. It is one of those terms that have a wide and somewhat varied range of meaning. Prof. Max Müller defines it "a disease of language," and he speaks of the "reaction of language on thought"; says that, "in this refraction of the rays of language, we see the real solution of the old riddle of mythology." Prof. John Fiske says that a myth is "an explanation by the uncivilized mind of some natural phenomenon." And Mr. E. B. Tylor says, "It is sham history, the fictitious narrative of events that never happened."

All these are good, state well some elements that enter into and go to form the myth; but they are, especially the first two, inadequate, they fail to cover the full fact. Indeed, they might in a degree complement each other. But perhaps no phrase will discharge the office of definition fully. There is a refraction, but it lies deeper than in language merely: it attaches to all determinate thought itself. In the large, we may say there is always illusion, always some refraction in the ray that meets the eye, some misconception, misstatement, awry or perverted representation in every form and type of mythology. It never could arise in a perfectly pure and clear medium.

There are myths undoubtedly of explanation, those that come—and they are many—under Prof. Fiske's definition. The mind of man in all ages is piqued with curiosity, an intense curiosity to penetrate and explain. The savage feels it not less than others. He will read his riddles, and get at any rate some solution. And these explanations will involve the bringing forward of personalities; for, to the child mind, everything is animate and conscious,—we may say personal. To Caspar Hauser, infant as he was at seventeen, the snow was a person. "Naughty," he said, "it bit his finger." The wild savage in the forests of Brazil would bite the stone he had stumbled over or the arrow that had wounded him. Like experience probably has come to us all in early life, temptation strong, if it was not overpowering, to pound in retaliation the stone upon which we had bruised a toe or a finger. To the early men and women, all things were *persons*,—earth, sea, star, mountain, tree, plain. Each was the seat and abode of its guardian deity. Indeed, such belief in regard to the stars obtained in the mind of John Kepler.

It is curious to note how strong the disposition still is to invoke some personality or agency distinctively spiritual, to explain what we may not understand otherwise. The survival of such terms as "spirits" in connection, say, with certain chemical substances, as the "spirits of hartshorn," "spirits of turpentine," etc., attests how tenacious still the old belief, at least the remembrance of it in language. An African wood-cutter believes in a guardian spirit that dwells in the tree; and, when he strikes the first blow with his axe, he flies for his life, pours palm oil on the ground in the path he expects the spirit to follow in pursuit, and so hopes, while the tree-spirit stoops to lick it up, that he may make his escape. In like view, the Greeks described the dryads in the pines and oaks uttering screams of pain when the woodman struck the tree. An American Indian will cast a piece of tobacco from his canoe into the stream, as he is about to pass some dangerous place, that he may placate the spirit of the river-god. On the coast of Guinea, the native kings, to propitiate the sea-god, cast into the sea rice, cloth, bottles of rum, and even slaves. With the same feeling, a Greek or Roman general, about to embark on the main, would make an offering of a bull to Poseidon or Neptune. And, under the same belief to-day, the German peasant, when he knows of the drowning of a person, exclaims, "The Nixy [water-sprite] has taken him." Thus universally has there been this personification of things in nature.

Among the Mandans, the winds are spoken of as "four tortoises at the angles of the earthly plane, who vomit forth the rains"; among the Mayas, as "four gigantic caryatides who sustain the heavens, and blow the winds from their capacious lungs." Among the Khonds in Orissa, Pidzu Pennu, the rain-god, is thought to pour down the waters through his sieve. In the old Norse mythology, the sky was formed of the skull of the Giant Ymer, the earth was his flesh, and the rocks his bones. And, among the Finns, the sky was the concave surface of an immense egg-shell, the half of it, and the earth the yolk. The Norsemen had a myth of Frodi's quern sunk once upon a time in the bottom of the sea, the place now indicated by the Maelstrom. The maid-servants, compelled constantly to turn at the crank, are grinding out salt from this stupendous mill; and this is why the sea is salt.

Earthquakes, the Kamchadals say, are caused by Tuil, the earthquake-god, sledging under ground, and when his dog shakes off fleas or snow there follows an earthquake. Other rude tribes have said it was the world-supporting god shifting the

Digitized by Google

earth from one shoulder to the other. The Polynesians held that Maui, who upholds the earth on his prostrate body, from time to time turns to get an easier posture, and this produces an earthquake. Similar conceptions obtained among the Greeks, as is seen in the myth of Enceladus, etc. The Hindus say that water-spouts are caused by Indra's elephants coming down to drink; while, to the Japanese, they are long-tailed dragons, "flying up into the air with a swift and violent motion." The rainbow, with the Greeks, was Iris, beautiful messenger, spanning the way from heaven to earth; or it was the arch whereon Iris, with flashing feet, sped from the heavens, bearing communications from Zeus to men. Among our own ancestors, it was the bridge Bifröst, timbered of three hues, guarded by Heimdal, the watchman of the gods; and over it the souls of the heroes passed on their way to Valhalla. The bright starry band that stretches across the sky is to the North American Indian the "Road of Souls," and the brighter stars that blaze in it at night are the camp-fires of the souls who are on their way to the land of spirits.

Various explanations have been devised for accounting for the spots on the face of the moon, for the crimson hue in the clouds at sunset, for the wild and ever-shifting forms of the clouds, for eclipses, for diseases,—in fact, for everything that arrested the attention of man. These explanations are grotesque, fanciful, capricious, sometimes ingenious exceedingly, and always, no matter how rude the race that invents them, curiously interesting.

We carry reminiscences constantly of the myth-framing and myth-believing times, in the terms and phrases we use in familiar speech and in words we employ in science. Our animal fables are reminders to us of the ages in which animals were believed to speak and be possessed of reason. Our constellations in their very names to-day carry us to the period when animation was read in the stars, and these clusters were thought to be living creatures or persons. We speak of the genius of Shakspere or Newton or Raphael, unconscious that the term bears back to the time-honored belief in the *daimonion*, or accompanying genius, coming with one into the world, and attending upon him through life, as was held among the Romans, and is familiar to us in the story of the genius of Augustus, celebrated in divine honors. In the terms *mercury* and *lunar caustic*, still employed, we are carried back to astrology and magic, to the times when these metals were supposed to be related to the planets whose names they bear. We use such terms as nightmare (*mara*, spirit or sprite), "the old Nick," or Nixy, "Davy's," or the Deva's, "Locker"; and the Slavons still believe nightmare caused by horrid vampires, demon-souls that dwell in corpses, and come and sit upon the chest of the sleeper, sucking his blood away, so that he will pine and die. We speak of the "Man in the Moon," of "Jack and Jill," both going back to lunar mythology,—a mythology yet far from extinct among ourselves, in vigorous life with Swedish peasants; for they will invoke the story of Jack and Jill to explain the moon-spots, and the rainfall in certain stages of the moon. And in the phrase, "The Milky Way," we bear reminiscence of a myth very old, once current among the Greeks, who told of Hêrê, the upper air, or rather the distant ether, nursing at her breast Herakles, the mighty sun-god, in his infancy.

These are samples: we shall find much more bearing from that distant past to the living and surrounding present.

CHAS. D. B. MILLS.

A REMARK OF HERBERT SPENCER.

It is a trite remark that our form of government is too good for average mankind; that average human nature is not yet fitted for it, not yet worthy of the confidence which such a government places in it. Governments of force are still in order over the greater part of the globe, and such governments are badges of the lack of moral and mental development which still characterizes the majority of mankind. "The republican form of government," says Herbert Spencer, apropos of his experiences in this country, "is the highest form of government. But, because of this, it requires the highest type of human nature,—a type nowhere, at present, existing. We (the English) have not grown up to it, nor have you." Nevertheless, here in New England, up to within a quite recent period, a republican form of government has been an almost complete success. It was thus successful here for centuries, because, during all that time, there were no great cities with heterogeneous populations, no opportunities for politicians to enrich themselves at the public expense; while there was an unparalleled social equality everywhere prevalent here, and scarcely any popular illiteracy, such illiteracy having been unknown here in Massachusetts as long as its population remained homogeneous and of the original stock. It was right here in Massachusetts that the American system of popular education was inaugurated and first devised. Illiteracy in this Commonwealth is and always has been an importation from abroad. And when a demagogue, who owes his political success to foreign ignorance colonized on our soil, undertakes to arraign this Commonwealth on the score of the great number of illiterates in its borders, he places himself and his followers in a ridiculous light. He is, in fact, arraigning his own supporters. Massachusetts cannot hold herself or be held responsible for the gross ignorance and poverty of populations born and bred elsewhere, under an aristocratic Church-and-State system. The man who undertakes to hold her so responsible, if he is an American by birth, is a renegade and a bare-faced slanderer. Such a one can only attain to an eminent political position by breaking down all salutary obstructions to the prevalence of fraud and ignorance at the ballot-box.

Within the last fifty years, the whole civilized world has had pass over it a radical social change. The railroad, the ocean steamer, the electric telegraph (submarine and overland), and all the other wonderful mechanical agencies of current civilization, have made of the whole civilized world one community as it were, and promoted the spread of population and the growth of wealth and the building of great cities in this country to a degree which almost takes the breath away in the contemplation of it. The social equality of other days is gone here, apparently never more to return. Our millionnaires now form a class by themselves, a regular plutocracy, such as never existed before in any other country, not even in England. The machinery of our city, State, and federal governments, once simple, has become complicated through the manifold and vast interests with which these governments have to deal. Our population has become more and more heterogeneous. Vast sums of money pass through and are hoarded in the public treasuries. There is money in politics; and, where there is money, there is corruption. Herbert Spencer is right in saying that education is no guarantee of character to resist great temptations. But we have high-toned statesmen notwithstanding,—statesmen in whom the country can place implicit confidence.

Meantime, while not claiming for the American variety of human nature any superiority over other denominations of that article, we still believe, what with the vigilance of the press and the fierce light of publicity which beats upon every department of our government and upon every official, both high and low, who is connected with its administration, that, upon the whole, there is as little political administrative corruption here as there is under the best personal *régimes* of the Old World, if not less.

But Herbert Spencer refrains from drawing from the most sinister social and political phenomena which manifest themselves in the working of our institutions any dogmatically unfavorable inference as to our national future. For he says that nothing but "a vague and general conclusion can be formed in regard to that future, because the factors are too numerous, too vast, too far beyond measure in their magnitudes and intensities. The world has never before seen social phenomena comparable with those presented in the United States. A society spreading over enormous tracts, while still preserving its political continuity, is a new thing. This progressive incorporation of vast bodies of immigrants of various bloods has never occurred on such a scale before. Large empires composed of different peoples have, in previous cases, been formed by conquest and annexation. Then, the immense *plexus* of railways and telegraphs tends to consolidate this vast aggregate of States in a way that no such aggregate ever before has been consolidated." Of course, without the present system of telegraphs and railroads, such a government as the federal government of the United States could hardly be carried on, because the simultaneous co-operation of populations occupying such a vast territory could not be conveniently secured. Now there is a sense of neighborhood pervading all sections of our continental territory.

B. W. BALL.

THE ENGLISH "WORDSWORTH SOCIETY."

The readers of *The Index* will not be inclined to dispute Prof. Tyndall's statement that "the poet will have a great part to play in the future culture of the world. To him, ... we have a right to look for that heightening and brightening of life which so many of us need." And although to many Wordsworth, at first, may seem an orthodox churchman, a wider acquaintance with his works may, after all, show that the author of *Ecce Homo* was right when, in a notable book published last year, he claimed Wordsworth as the poet of natural religion. Hence, some information about this Society and its recent annual meeting may not be uninteresting. Unfortunately, that meeting was held on the same day as some important political gatherings; and the London *Times*, and most of the other English newspapers, could find no space for literary topics. Yet, in that view of poetry in general, and Wordsworth in particular, which has just been referred to, the Society and its affairs are more worthy of notice than some things that to the world seem greater.

The Wordsworth Society was founded about three years ago, mainly by Prof. Knight of St. Andrew's University, Scotland. Prof. Knight is an authority on the greatest of the Lake poets. He has written "Wordsworth and the Lake District," and he is now engaged on a fine new edition of the poems and a life of Wordsworth. The Society seeks to promote the study of Wordsworth; and, meeting once a year, papers are read on topics connected with the man and his poetry. The Society is not large, but some of the most eminent English literary men of the day are members. R. Browing and Ruskin support it. This year,

Digitized by Google

the annual meeting was held on May 2, in the old dining-hall of Westminster School. That hall stands under the shadow of the abbey, and in a nook known to many on both sides of the Atlantic. The hall forms one side of a little quadrangle, of which the famous Jerusalem Chamber forms another, and the Deanery (where A. P. Stanley lived) the remaining two sides. At this meeting, I saw Mr. Russell Lowell. He is to be the next President of the Society. He meekly took one of the lowest seats, and declined an invitation to come up higher. The President this year was Mr. Matthew Arnold. He gave a short but most characteristic address. Mr. Arnold's published selections from the poems, his literary fame, and his style are well known. Suffice it then to say that the Wordsworthians found the author of "A Summer Night" still to be

> "Never by passion quite possess'd,
> And never quite benumb'd by the world's sway."

Nor were they denied the flavor of the satire which is dear to the readers of Mr. Arnold's prose. His speech had an air of simplicity; but Mr. Arnold is the last man to be told *Summa ars est celare artem.* There were in this speech certain tricks of phrase, not easy to describe shortly, but to be at once recognized by all who know *Essays in Criticism* or *Literature and Dogma.* Mr. Arnold began by explaining that he had at first declined to join this society for the same reason that he had declined to join others. It was that, as he grew older, he might have more "leisure for amendment and reflection on the inevitable close." Yet, having consented to be President, he now found many excellent reasons for the step. In the Middle Ages, said he, when men sought retirement in their later years, they entered a monastery. He, Mr. Arnold, could not enter a monastery; but he could join the Wordsworth Society. The monastic vows of poverty, chastity, and obedience, were equally binding in the Society; for they were enforced by Wordsworth. Poverty and its value in man's moral education were constantly taught, as by the Pedler of the "Excursion"; chastity by exhortations to "plain living and high thinking." And where was obedience better justified than by the famous "Ode to Duty"? He (Mr. Arnold) had sometimes elsewhere dwelt on the defects of Wordsworth's poetry; "yet," said he, "I doubt whether any one admires him more than I do." Although below Shakspere, the "spiritual passion" of Wordsworth, as in the sonnet on "Farewell to the River Duddon," could not be matched from Milton. Wordsworth, too, in contrast to some modern poets, had something to say. Goethe was right, when in his later years he declared he was sick of the fuss then being made about form in poetry. Wordsworth did not neglect form, but he offered something beyond it. Yet greatest of all in Wordsworth was "his power of happiness and hope, his deep power of joy." Here, he compared most favorably with many great poets, and in particular with the great Italians, Leopardi and even Virgil, whose verses were filled with melancholy.

Then followed the papers. The Rev. Stopford Brooke, who has written a well-known book, *Theology in the English Poets,* in which he treats of Wordsworth, read by far the best. It was on Wordsworth's *Guide through the District of the Lakes* (1835). Mr. Brooke compared this *Guide* with the letters on the same locality by the poet Gray, who "liked his natural scenery a little artificial." We were in another world when we opened the *Guide.* Wordsworth's descriptions "glow with recollected love." There was a "continual emergence of poetic ideas through the prose," as, for example, that of a living will in the universe, a soul of its body. After some apt quotations to justify his opinions as to this *Guide,* Mr. Brooke concluded by asking, "Who does not see the poem within it?"

Papers by Mr. Aubrey de Vere, a friend of Wordsworth, and by the Dean of Salisbury, and others, were read; and then Lord Coleridge, the Lord Chief Justice of England, concluded by proposing, in his usual urbane style, a vote of thanks to Mr. Arnold, his old friend, "the most exquisite of critics and refined of poets." Thus ended the gatherings of the Wordsworthians, and they came out into the dust and din of that world which is ever too much with us.

GEORGE WHALE.

SHOOTER'S HILL, ENGLAND.

"NEGATIVE PREACHING."

The opening article in the *Unitarian Review* for June is by Rev. A. P. Peabody, D.D., and has the above heading. The writer says that faith is "the only power that can rouse the emotional and moral nature into activity. The negation of even the most arrant falsity produces no feeling, results in no action." "In our own religious community you will find it impossible to trace any beneficent spiritual or moral influence to the mere absence of false beliefs." "But you want to guard against erroneous views. Rightly, and the very way to expose your congregation to them will be to argue against them; for you must never assume or imagine that you have the show of right reason all on your own side.... You cannot guard your hearers from misbelief by fighting against it. On the other hand, you thus stimulate their curiosity to hear the other side; and you stimulate the champions on the other side to emulate, and very probably to transcend you both in dialectic skill and in persuasive rhetoric. Your only way of averting or supplanting error is to plant in the minds, and especially in the hearts, of your hearers a positive faith in the truths which you regard as of vital moment or essential interest....

"You may sneer at the stories of Samson and Goliath and Jonah, at the credulity of the evangelists about demoniacs, at the alleged mistakes of the apostles about the approaching end of the world. You may direct all your efforts toward undermining the plenary authority of Scripture and refuting traditional falsities with reference to it. With part of your congregation, you will succeed only too well. You will make them despise the Bible, and despise you, too, for reading it solemnly and taking your texts from it, when under shelter of those very texts you treat it contemptuously....

"On the long list of those who have fallen out of the clerical profession, you will find not a few who began by the zealous preaching of negations, by fierce onslaught on what, perhaps rightly, they regarded as errors, superstitions, and absurdities; who thought that they were rendering the highest service by teaching people what not to believe; who at length awoke to the consciousness that there was no residuum of faith in their own minds, and that the whole realm of religious truth was involved for them in a dense and rayless agnosticism."

Dr. Peabody, it will be observed, attaches great importance to "faith," by which he means belief in, or consciousness of, "positive Christian truth," if anybody knows what that is. The preacher must be confident and assertive respecting matters of which he really *knows* nothing. He must aim to "rouse" the emotional nature into activity; and —as everybody knows, at least as every public speaker knows—the way to do this is to treat a subject superficially, to present but one side, to ignore objections and suppress doubts, to appeal to traditional beliefs and inherited predispositions. A judicial treatment of a subject, an argument addressed to the understanding, with a careful consideration of the proofs against, as well as those in favor of the position taken, might be more instructive, better adapted to encourage intellectual and moral honesty, habits of reasoning, true liberality, and broad views; but it would be less likely to rouse the emotional nature.

Notwithstanding Dr. Peabody's statement in regard to the "negation of even the most arrant falsity," we must still believe that the negation of demonism, sorcery, witchcraft, and many other delusive and pernicious beliefs, has produced a feeling which has been very favorable to the happiness and progress of the race. If it be said that the truths, of which these beliefs were a virtual denial, should be credited with the good results that have followed, it is sufficient to answer that the progress of negation, initiated by a few minds who had glimpses of the positive truth, has been in advance of the popular acceptance of the positive truth. The explanation of witchcraft is not wholly satisfactory even to-day; but its negation as a supernatural and superhuman influence has, nevertheless, saved the world from an incalculable amount of suffering which would have been experienced had belief in the superstition continued.

The same is true of other superstitions, including many theological dogmas.

Dr. Peabody, it is evident, has no very high opinion of the intelligence and judgment of Christian congregations. He would have the minister regard his hearers much as the father regards his little children, guarding them even from a knowledge of error, and telling them what he thinks it is proper for them to know. He says, substantially, Don't argue against errors; for, if you do, your hearers will become acquainted with them, you will "stimulate their curiosity to hear the other side," and provoke opponents to present their reasons for differing from you, "and very probably to transcend you both in dialectic skill and in persuasive rhetoric." Avoid any reference to dissenting views; just tell what *you* believe, and rouse the emotional element! Could any Catholic priest or Methodist exhorter go farther in presuming on the ignorance, simplicity, and servility of his congregation? An important question very naturally arises here. If the position of the minister is one which other ministers of equal honesty and even greater "dialectic skill" may combat, should he not hesitate to maintain it as a positive truth, lest, in so doing, he "plant in the minds, and especially in the hearts," of his hearers the seeds of ruinous error instead of the truth?

Dr. Peabody probably has as little belief as Mr. M. J. Savage in "the stories of Samson and Goliath and Jonah" and in "the plenary authority of Scripture," but he would have Unitarian ministers keep silent in regard to these things. The destructive criticism of Strauss and Renan and Colenso, and even of Stanley, Martineau, and Robertson Smith is to be ignored, lest you make a part of your congregation "despise the Bible and despise you, too." A mind uneducated in theology and without "faith," but with a moderate amount of common sense and love of truth and confidence in human reason, would suggest rather that the Bible be subjected to the common canons of historical criticism, that the errors be frankly admitted, the truths be commended and enforced on the ground of their intrinsic excellence, and all the known facts in regard to the books of the Bible and arguments in regard to its doctrines, and everything pertaining to the Christian religion, as far as possible be candidly presented to the people.

But Dr. Peabody goes farther, and endeavors to dissuade his ministerial brethren from telling the

Digitized by Google

whole truth by declaring that of those who have "fallen out of the clerical profession" not a few began by negative preaching. With some, this will have the weight of argument, but chiefly with such as have less regard for truth than for the easy, quiet life of a minister in good standing in his denomination. The fact is that among "those who have fallen out of the clerical profession" are men like Miln, who, not content to preach negatives, ventured to define their positions, to state their positive beliefs. They told too much positive truth. To-day, in the Unitarian denomination are scores and hundreds of ministers who are restrained from uttering their positive convictions by the influence brought to bear upon them, through denominational agencies, by such men as Dr. Peabody, who, although personally a very excellent man, has his face toward the setting sun, and represents an element in his denomination which, although still strong, is growing small by degrees and beautifully less.

Let no one infer from the above criticism that we think the work of demolition is the most important or the most needed work of to-day. But the necessity for negative criticism still exists and always will exist, not as an end but as a means unto an end. "It is the fashion at the present time," says John Stuart Mill, "to disparage negative logic,—that which points out weaknesses in theory or errors in practice without establishing positive proofs. Such negative criticism would be poor enough as an ultimate result; but, as a means to attaining any positive knowledge or conviction worthy of the name, it cannot be valued too highly. And, until people are again systematically trained to it, there will be few great thinkers, and a low average of intellect in any but the mathematical and physical departments of speculation."

B. F. UNDERWOOD.

EDITORIAL NOTES.

WE are requested to state that the address of T. W. Higginson on Emerson and Darwin, published in our last issue, was never written out by himself; but was delivered without notes, and was printed from a phonographic report, by Mr. J. M. W. Yerrinton, after being corrected by the author.

IN defence of the Affirmation Bill, Mr. Gladstone said: "I am convinced that, upon every religious as well as political ground, the true and wise course is not to deal out religious liberty by halves, by quarters, and by fractions, but to deal it out entire, and to leave no distinction between man and man on the ground of religious differences, from one end of the land to the other."

"IT is the Renan, sane in body and in mind, as I am now—not the Renan half destroyed by death and no longer himself, as I shall be, if my decomposition is gradual—whom I wish to be believed and listened to. I disavow the blasphemies to which in my last hour I might give way against the Almighty. The existence which was given me, without my having asked for it, has been a beneficent one for me. Were it offered to me, I would gladly accept it over again."—*M. Ernest Renan.*

REV. ROBERT COLLYER, in speaking of the Brooklyn Bridge on a recent Sunday, paid the following tribute to the genius of Thomas Paine:—

When Thomas Paine got his idea of a suspension bridge from a spider's web, and constructed a model in accordance therewith, the English pronounced it impracticable. The Americans in London, on the contrary, said, It is just what we want on our side of the water. Thomas Paine is the true inventor this side of China of our bridge. He was a man of genius and a great man, with all his faults. His name should have received some mention from the orators who took part in the opening ceremonies.

THE Springfield *Republican* gives from "a private hand" the following extraordinary statement:—

When the czar entered the first evening into his chamber in Moscow, before the coronation, he congratulated himself upon his escape from all danger. Just then, his eye fell upon a large sheet of paper upon which he found the following lines: "Think not, son of your father, that you are out of the reach of all harm, or that the power of the revolutionists is broken. We promise you that nothing will befall you during the festivals in Moscow; but in our power you are as fully now as formerly. Should you doubt our words of warning, then send your police to 81 and 82 Twerskaia Street, and let them report what they shall find." This was done; and the report was that the two houses were undermined in the rear and charged with dynamite, but no fuse was laid. Had an explosion taken place at the right moment, the houses woud have fallen upon the czar and all the grand dukes and visitors. Not one could have escaped, as the line of march was in front of the houses.

JOHN STUART MILL said: "The essence of religion is the strong and earnest direction of the emotions and desires toward an ideal object, recognized as of the highest excellence, and as rightfully paramount over all selfish objects of desire. This condition is fulfilled by the Religion of Humanity in as eminent a degree and in as high a sense as by the supernatural religions, even in their best manifestations, and far more so than in their other." The late Chauncey Wright, a man of unusual penetration of judgment and fairness, gave the following definition of religion: "Religion (subjective) means man's devotion—the complete assent and concentration of his will—to any object which he acknowledges to have a right to his entire service, and supreme control over his life. Religion (objective) means the object or objects whose claims to this supremacy are acknowledged. An irreligious man is then, first, one who acknowledges no supreme end or objects; or, secondly, one who, though he acknowledge, does not habitually submit his will to such a power."

SAYS the Chicago *Times*: "Philosophers and sociologists of all nations tell us that the very root of the differentiation of the civilized from the savage man is in the development of the faculty of postponing the present to the future. In the savage, this faculty is absent, or only rudimentary. He is the primitive communist, and his life is the end and perfect fulfilment of the social theory set up by those lunatic *doctrinaires* who proclaim saving to be a sin, and the accumulation of wealth a crime against nature. It is simply a struggle for the means of gratifying present appetites. Of making provision for the future he has no notion. Of property and ownership, in any such meaning as the civilized man attaches to those words, he is not able to form a thought. Development of the mental power of doing so marks the earliest step in his painful passage from the savage to the civilized state. And it is in the degree that the acquisition of the faculty of postponing the present to the future is accompanied by the desire and habit of applying it that the character of civilization supersedes the character of barbarism. To put the fact in other words, the accumulation of wealth is the test of civilization."

IN some of the addresses before the Free Religious Association this year, there were references to Emerson and Darwin in which the speakers, in their admiration and praise of the former, plainly did injustice, it seems to us, to the latter. Thus, Mr. Chadwick said, "If Darwin had assured us that the original impulse of his doctrine was acquired from Emerson, the statement would not impress us as at all remarkable." The impression conveyed by Mr. Chadwick and other speakers was that Emerson understood Darwinism before Darwin wrote. When we consider that Darwin's distinction rests first upon his discovery and demonstration of the principle of natural selection, which Mr. Emerson had never advanced, and secondly upon his observations, experiments, and accumulation of proofs in support of evolution, in which Mr. Emerson had never set him an example, it is not easy to see how Darwin *could* have acquired "the original impulse of his doctrine" from Emerson. If Mr. Chadwick and the other speakers here referred to meant to say only that Emerson wrote in favor of evolution before Darwin had published anything in defence of it, the statement is one nobody will question. But when evolution had been taught by Lamarck in 1801, by Darwin's grandfather, Dr. Erasmus Darwin, Geoffroy Saint Hilaire, and Goethe some years earlier, and even by Greek philosophers twenty-five hundred years ago, why should a few poetical sentences in Emerson in support of evolution be thought so remarkable as to entitle him to precedence of rank as a discoverer in a field in which Darwin's original contributions to science have secured him world-wide and enduring fame? Emerson was great in his own province. Darwin was great in his own province. Neither could have achieved success or won distinction in the field of the other. Let no one underrate the labor of either of these noble benefactors in order to add to the glory of the other.

POETRY.

For *The Index.*

THE MARINER.

The vessel floats anear the strand,
And he who will may reach the land.

A plank extends from ship to shore:
Here placid rest, there ocean's roar.

"Shall I regain the peaceful shore,
Or ocean's mysteries explore?

"Shall I sit down in quiet ease,
Or venture forth o'er unknown seas?

"In quiet hear the ocean's moan,
Or sail o'er depths to scenes unknown?

"Be rooted to the peaceful land,
Or be by salt-sea breezes fanned?"

So speaks the soul, and on the deck
Sails out to meet success or wreck;

Dares all the ocean's things unknown,
Nor shrinks to sail from zone to zone;

Knows not what he may find before,
Nor that he e'er shall reach the shore.

To *know the truth*,—the single aim
That lights his way with constant flame.

Cares not, if truth he may discern,
That he to shore may ne'er return.

A voyager o'er seas unknown,
He maps the path he sails alone.

O valiant soul! Brave pioneer!
Thy track of light the world shall cheer,

And guide mankind in after days,
When souls of truth shall speak thy praise.

O mariner, speed on, alone,
O'er ocean infinite, unknown!

Know, far as finite eyes may see,
The depths of Being's mystery;

With reverence for truth, explore
The trackless way unknown before.

A trail of light shall mark thy way,—
Darkness before, behind thee day.

The Index.

BOSTON, JUNE 21, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE objects of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

SIXTEENTH ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

(*Continued from last week.*)

[NOTE.—We are compelled by circumstances to break the order of the addresses in our report. Mr. E. D. Mead's address on Emerson and his philosophy should come in here; but we have to defer it until next week, when we will either give it entire or an abstract of it.—ED.]

The PRESIDENT.—Mr. Mead has presented Emerson and his work from a point of view so nearly akin to Emerson's own that it will, doubtless, occur to some of you that Darwin should also be presented by one who is engaged in the same line of thought and work, that is, by a scientific man or one who comes near to it. And we did so plan at first. We asked Prof. John Fiske to speak for Darwin, but he was going abroad to spend several months. Then we asked Prof. Youmans, but he pleaded too many labors already. We then asked Mr. Chadwick, of Brooklyn; and he will pardon me, I know, for thus letting out the secret of his being our third choice, when he sees that, though a preacher and theologian, we considered him so broad and comprehensive a thinker as to include the scientific point of view within his mental range. I have now the pleasure to introduce to you Mr. John W. Chadwick, who will speak of Mr. Darwin's way of answering the great problem of things.

THE RELIGIOUSNESS OF DARWIN'S TEACHINGS.

Address of John W. Chadwick.

To catch our next fish with a piece of the last was never easier than it is to-day, when Emerson is first and Darwin second in the order of debate. If Darwin had assured us that the original impulse of his doctrine was acquired from Emerson, the statement would not impress us as at all remarkable. Alike the poetry and the prose of Emerson abound in passages of a Darwinian character. It is not that Emerson was a convert to the development theory, as Darwin stated it. The passages of which I speak date, almost without exception, from a period considerably antecedent to the publication of the *Origin of Species* in 1859. Darwin was still voyaging in the "Beagle" when Emerson wrote the introductory motto to his little book on *Nature*, which contained so much. This motto was:—

> "A subtle chain of countless rings
> The next unto the farthest brings;
> The eye reads omens where it goes,
> And speaks all languages the rose;
> And, *striving to be man, the worm*
> *Mounts through all the spires of form.*"

And the *Origin of Species* was still fifteen years off when he wrote in the essay on "Nature," in his second volume of *Essays*, these ominous words: "Efficient Nature publishes itself in creatures, reaching from particles and spicula, through transformation on transformation, to the highest symmetries, arriving at consummate results without a shock or a leap. A little heat—*that is, a little motion*—is all that differences the bald, dazzling white and deadly cold poles of the earth from the prolific tropical climates. *All changes pass without violence* by reason of the two cardinal conditions of boundless space and boundless time. Geology has initiated us into the secularity of nature, and taught us to disuse our dame-school measures, and exchange our Mosaic and Ptolemaic schemes for her large style. We knew nothing rightly for want of perspective. Now, we learn what patient periods must round themselves before the rock is formed, and then before the rock is broken and the first lichen has disintegrated the thinnest external plate into soil and opened the door for the remote Flora, Fauna, Ceres, and Pomona to come in. How far off yet is the trilobite! how far the quadruped! how inconceivably remote is man! All duly arrive, and then race after race of men. It is a long way from the granite to the oyster, and farther yet to Plato and the preaching of the immortality of the soul. Yet all must come as surely as the first atom has two sides." We question whether Darwinism, evolution, ever can be made to harmonize with poetry and with religion; and, behold! our first idealist arrived at these results long before Spencer, long before Darwin, not by the path of science, but by the sheer necessity of poetry and of religion. In Emerson, we have a prophet of the ultimate synthesis of the most radical science with an idealist philosophy, and a religion drenched with the consciousness of an omnipotent and omnipresent God. It would be impossible to find in Darwin's writings a passage so frankly materialistic as the passage I have quoted from Emerson. But, because it is from Emerson, we know that there is a Materialism which does not conflict with Idealism, with Spiritualism, but lends itself for illustration to their genius and their law.

It is not as if we were obliged to choose between Emerson and Darwin as our exclusive mental diet. Neither exhausts the other, but Emerson includes Darwin as he is not by him included. What he lacks of Darwin is of a special nature,—the *how* of evolution. He is confident of the method and result, but for the details of the process he has little thought or speech. What Darwin lacks of Emerson is his wide scope, his universality. The ethical import of Darwin's writings in comparison with Emerson's is as one to many thousands, and with the theistic import it is much the same. And why? The man of Darwin's apprehension is the Latin *homo;* of Emerson's, the Latin *vir*. The one is an inchoate creature, a *becoming:* he appears as Adam in the mystery, going across the stage, *going to be created*. The other is "the Superior Man,"—civilized, moral, spiritual; "in apprehension, how like an angel! in action, how like a god!" Darwin is almost never theological. The relation of his doctrine to theology he leaves for others' explication. And, though Emerson's subjects are so numerous, God stands not in their order. But, none the less, he is a God-intoxicated man. His page is drenched with Deity. There is an "escape into the Infinite" at every turn. No definition is attempted, but evermore the real presence of the Eternal presses home upon the mind and heart.

To say these things is no disparagement of Darwin's genius or his work. He was a man of science. Emerson was a philosopher and poet. And hence the difference of range. But, as a man of science, Darwin was no narrow specialist. As geologist, as botanist, as zoölogist, he was equally distinguished. In each department, his was a talent of the highest order. His magnificent generalization would have been impossible, if he had been great only in one department. Nor was he one of those who cannot see the forest for the trees; who,

> "Viewing all things intermittently,
> In disconnection dull and spiritless,
> Break down all grandeur."

His relation to nature was not only of the analytic, scientific sort: it was also of the synthetic, human sort. The *savant* did not swamp the man. But he understood the need of concentration. Others might work like Nehemiah's men upon Jerusalem's wall,—in one hand a spear, in the other a trowel. Notably, this has been Tyndall's way. But Darwin must have both hands for his work. He had no battles with the theologians. Did they rave against him? He let them rave. He did not waste his strength. He put it all into his own peculiar task. And so it happened that he lived to see the triumph of his principles.

But so it also happened that in the liveliest controversies that were excited by his principal writings (the controversies concerning their religious significance), he took no public part; and, if in private his expression was more free and full, nothing of much importance has as yet transpired.

But what really concerns us is not some isolated expression of theological opinion on the part of Darwin here or there, but the significance of his system of biology in its widest range and its completest implications. At the time of Darwin's death there was a flood of arguments to the effect that he was soundly theistic; and, therefore, if not so good a Christian as Henry VIII. or George IV., not wholly undeserving of interment in their company in Westminster Abbey. Marvel not at this, for Orthodoxy never can afford to let the famous dead appear unorthodox. She must and will have the prestige of genius and success upon her side, though, to bring this about, it should be necessary to invent an elaborate fiction of death-bed repentance, without a particle of fact to bottom it. But theological expressions which may be entirely satisfactory to the sectarian zealot may affect very differently those who are seeking to discover the real significance of a great thinker's teachings on the religious side. To these, it matters little that in his *Origin of Species* Darwin explicitly places an intelligent Creator at the commencement of the process of organic evolution. They ask if he is rightly there; if his being there is consistent with Darwin's general system; if it is consistent with any true philosophy of universal life. And, from these, a negative answer has been almost unanimous. "For the Creator in the *Origin of Species*," one has said, "seems introduced more for ornament than for any serious work he has to do, or at least rather to conciliate the mass of hostile theological prejudice certain to be aroused by the other doctrines than to satisfy any logical demands of the system." We put in a demurrer here. Such was the intellectual honesty of Darwin that we cannot conceive that the Creator at the beginning of the process of organic evolution, in the closing paragraph of the *Origin of Species*, was any cake to Cerberus. It was a survival in culture, a relic of the mechanical English tradition which is so conspicuous in the theological speculations of John Stuart Mill. But it is true that the Creator of Darwin's closing paragraph "has nothing to do at the beginning save to endow one or two primordial forms with the lowest degree of elementary life, leaving the rest to natural selection and the ordeal of battle. And he has had nothing to do ever since (on the earth at least) but sit passively by and watch a law which executes itself without any need of interference on his part. He is a monarch that reigns, but does not govern."

However satisfactory such a God as this may be to conventional pietism, it will hardly be satisfactory at this stage of human progress to any thoughtful, any religious person. We must have more of God than such a scheme allows, or less will be preferred. Only by not thinking much about it could Darwin have intruded such a foreign element into the structure of his thought. A mechanical Creator, impressing laws on matter, breathing life with its several powers into a few forms or into one (these phrases are his own), is as repulsive to our purest science and philosophy as a mechanical Creator engaged in the special creation of various species. Of Darwin making this concession, the high gods of special providence and miracle may well declare, "He has become as one of us." He differs from them only in degree. He has not escaped from the region of mechanical ideas. The God who "impresses laws" on matter, and who "breathes life with its several powers into a few forms or into one," is a very near relation to the God who originates species by special creation, and performs the various miracles of the New Testament. He is the same sort of God. And, if his appearance in the closing scene of Darwin's drama of existence is not without due warrant, then Darwin has done no more for us than to establish the probability of

Digitized by Google

natural selection within certain empirical limits. Within these limits, the probability is less for his allowance that there is an outlying sphere of special creation; and, beyond these limits, the God of special creation, special providence, anthropomorphic action, miracle, is still at large. If Darwin's God, impressing laws on matter and breathing life into a few forms or into one at the beginning of the process of organic evolution, is a coherent adjunct of his general scheme, there is no reason why any one should not be a Darwinian in his zoölogy and a supernaturalist in his theology, believing in the miraculous birth of Jesus and in his resurrection from the dead.

To this complexion must we come at length? Is Darwin's natural selection only a patch of new material upon the supernatural garment of the Deity? It were a lame and impotent conclusion. We thought we had a rule, and we have only an exception. And we are obliged to question whether the last state of Darwin's follower is not worse than the first. Special creation has been eliminated from his scheme of animal forms. In place of this, he has the laws of Reproduction, Inheritance, Variability, Struggle for Life, Natural Selection entailing Divergence of Character and the extinction of less improved forms. These give a real explanation in place of an empty name,—special creation, a mere symbol of ignorance, incapable of conveying any definite or indefinite idea. Some of their details are marvellously beautiful. Others are harsh and terrible. It is something to have knowledge in the place of ignorance, a real explanation in the place of a mere word, big-sounding, meaning nothing. But is it a sufficient compensation for the expulsion of the living God from all the countless æons that have elapsed since that dim morning when he breathed the breath of life into a few forms or into one, for the thrusting back of Deity into that infinitely distant past? I doubt it very much. "There is a grandeur in this view of life," says Darwin. Here speaks the specialist, enamoured like Pygmalion with the perfection of his own completed work. But to us occurs—just in the measure that we are not merely scientific, but poetic and religious—the sorrow of Pygmalion, that this completion is devoid of life. We sympathize with the opposition which has always met the astronomer, the geologist, the biologist, who has been engaged in pushing back the line of the divine activity into a remoter past. This opposition has not been wholly irrational. It has been the soul's cry for a *real presence*, a Deity in the present tense,—no *I was*, but the great *I am*. True, there are those whom Darwin's original Creator of a few primordial forms grieves and offends, not on account of his remoteness and his insufficiency, but because even then and there he seems superfluous, matter *per se*, with nothing of divine propulsion or inherent spiritual force, being, as they conceive, sufficient for the cosmic work. But such are few compared with those who least of all things dread too much of God; whose heart's desire is answered by no off mechanician delegating powers to certain primitive forms; only by One of whom they can affirm,—

> "He glows above
> With scarce an intervention; presses close
> And palpitatingly his soul o'er ours.
> The everlasting minute of creation
> Is felt *here*. *Now* it is as it was then.
> Here is no operation of a law
> Whose maker is elsewhere at other work.
> His soul is still engaged upon his world."

These also find a God impressing laws upon matter a lesser God than they would fain adore. If matter is something external to him, "a datum objective to God," then there is something plus the infinite,—surely impossible, or he is something less than infinite. Moreover, these cannot conceive of laws impressed on matter. Here, they say, as in the case of special creation, we have mere words. Matter without laws is inconceivable. They are no paint put on. Their tint is in the grain. They are the constant methods of the Immanent and Universal Life.

Do I seem to criticise and to condemn, where you expected only admiration? But my criticism and my condemnation are not for the real Darwin, the Darwin of a thousand nice experiments, ten thousand careful observations, all contributing to establish a magnificent generalization: they are for the Darwin of a few ill-considered phrases at the conclusion of his book, on which the orthodox have pounced as eagerly as an ant upon an aphis, covetous of that one little drop of limpid juice, so pleasant to their taste. These phrases which Orthodoxy has more highly prized than all the oceanic deep of thought on which they are a bit of flying foam count for just nothing with the unbiassed student seeking to penetrate the actual significance of Darwin for religious thought and life. These eighteenth-century deistic phrases he finds opposed by the collective tenor of the total mass of Darwin's speculation. A mechanical Creator, no matter how remote, stands not in the order of his thought, which suggests no fragment of organic evolution set in a frame of anthropomorphic creation, but a process of organic evolution that is coextensive with the range of all terrestrial and universal life. "Creation by law, evolution by law, development by law,"—these are apologetic phrases which imply a God external to the order of the world. From Darwin's proper self, they have no warrant. We must pronounce him atheistic, if it is atheism to find no Deity "sitting upon the circle of the earth," or in any "part of the wide heavens." But he is not atheistic, if theism may be regarded as

> "A sense sublime
> Of something far more deeply interfused"

than any extra-mundane Deity,—

> "A motion and a spirit, that impels
> All thinking things, all objects of all thought,
> And rolls through all things."

The point at which the scheme of Darwin has most obviously traversed the scheme of natural theology as expounded by Bell and Paley, and a host of equally ingenious writers, is that philosophically known as teleology, more popularly as the argument from design. But it ought not to be forgotten that this argument which was once so popular, which Thomas Paine put into a rhetorical shape with which he was so entirely satisfied that he several times repeated it, did not by any means wait for the appearance of Darwin to bring it into ill-repute. Physics was still enamoured of this argument when metaphysics demonstrated its intrinsic worthlessness. Kant never did a more effective piece of work than his arraignment of the argument from design,—the physico-theological argument, he called it, for the being of a God. A host of Transcendentalists have followed where he led the way. Most of the voices here are echoes. But so is not the voice of Dr. Hedge, who never yet echoed another's thought. "The idea of design," he says, "is purely subjective,—an idea derived from human workmanship which we apply to nature. Were we not already possessed with the idea of God as the author of nature, and were it not for our irresistible tendency to anthropomorphize, to ascribe human methods to the God of our belief, I doubt if we should ever have come upon this mechanical view, this cunning device theory of natural products. I doubt if we should view them as workmanship at all. . . . The design which we impute is something appertaining to ourselves: it is our own subjectivity which we import into nature." This argument cannot be stated in any way that shall preserve its natural force and not imply the triumph over difficulties by ingenuity, which implication is entirely inconsistent with the idea of an omnipotent, unconditioned being.

But, though the Transcendentalists left the watch-maker Deity wounded and half-dead by the way, it must be allowed that Darwin has not played the Good Samaritan. He has finished what the Transcendentalists began. He has given the watch-maker Deity his *coup de grâce*. There are those who do not so interpret his results, who profess to find in him new arguments for the designer-god much more persuasive than the old. But very different has been the average conclusion, and much more accordant with the facts. Hardly could anything be less suggestive of design than the struggle for existence, as set forth by Darwin. A God designing such a struggle would not suggest the motto, "God is love." And, as for the wisdom of it, what should we think of a farmer who planted hundreds of seeds where there is room for only one to grow, and, having planted them, left them to fight it out? But the existence of rudimentary organs of no service to the individual or class, if not a positive disservice, is more obviously fatal to the argument from design than any other fact in the Darwinian order. Such organs do not occur infrequently. Among them are the teeth of fœtal whales, that never cut the gums; of certain birds also; the wings of various insects that are never opened or used; the caudal vertebræ in man, his *appendix vermiformis*, which so often causes death; and many similar phenomena. The special-creationist, the Paley-ologian, confronts these facts with a theory of ideal types. The Deity is represented as adhering to a general plan; though the adherence is not always useful, and is sometimes in the way. A Deity proceeding in this way has aptly been compared to a conservative coach-maker, who, *for the look of the thing*, sticks a sham pistol-box upon his coaches, when the reality is no longer needed. And then, too, it might be asked, Would not a God "so anxious for the type" have brought it out in the majority of cases rather than in a small minority?

There is and can be no agreement between Darwinism and the watch-maker God, the manufacturer, the mechanician, the anthropomorphic disposer of certain causes with a view to certain definite effects. Darwin's denial of special creation is immeasurably more than any mere denial of the creation all at once of any separate species. It is equally the denial and disproof of the creation of any organ or function as it now exists for the purpose which it now serves. Nowhere is manufacture. Everywhere is growth. "All changes pass without violence." If Theism upon these terms is possible and satisfactory, it is well and good. It can be had—so the true Darwin rules—upon no others.

Is Theism possible upon these terms? No: if by Theism we must mean the dogma of a God who is altogether such a one as ourselves, or like ourselves in any appreciable degree. We never know how anthropomorphic we are, said Goethe. But, now, we know that the God of our belief and worship must be much less anthropomorphic than we have heretofore conceived. His thoughts are not our thoughts. His ways are not our ways. Nevertheless, he is a power adequate to the production of all things that are, a fount of being involving all that has been yet evolved and all that can be in the boundless futures of the world: involving thought, else thought had never been; involving love, else love had never been; involving all that we can hope or dream, or more than this and better, else had the hope and dream never been quickened in our breasts.

> "The faith that life on earth is being shaped
> To glorious ends; that order, justice, love,
> Mean man's completeness, mean effect as sure
> As roundness in the dewdrop,—that great faith
> Is but the rushing and expanding stream
> Of thought, of feeling, fed by *all the past*."

It is the self-respect of the Eternal Power arrived at consciousness in man. Such Theism as this is possible consistently with Darwin's characteristic thought. Whom have we in heaven but thee, and there is none on earth that we desire beside thee! No longer need we bruise ourselves against the notion of a God who might have interposed his arm to fend us from dreadful stroke,—might, but did *not*. No longer need we figure to ourselves the present world as void of Deity, subsisting by some delegated power millenniums back deposited in a few primordial germs. Well does one say, "*If* there could be a force which is not as indissolubly related to Omnipotence as every creek and cranny of sea-water is to the ocean with which it rises and falls, the one intellectual necessity, the thought of God, would be gone." And the moral necessity no less. We crave no lesser good than to be ministered unto at every moment of all time by the divine completeness. We must believe that our last heart-throb was not less the pulse of God than the first motion of vitality in the first cell that quivered into life.

> "Nearer, my God, to thee,
> Nearer to thee!"

So sings our heart its sweet and natural song.

But there are those, and they are earnest and intelligent, for whom supernaturalism and anthropomorphism have no longer any charms, to whom Darwinian evolution presents the sinister aspect of a world which in the last analysis is born of chance. What if the variation at this or that moment had been quite otherwise, and yet such that, seized upon by natural selection, it would have attained to paramount importance. Then, instead of this cosmos that we have, there might have been a very different cosmos; instead of this *man*kind, a very different kind of leading race,—some mute, inglorious Jumbo, high advanced and conscious top of all. There are those who answer that the variations have been determined, that the development has been controlled, by overruling

Digitized by Google

Mind to certain ends. Such a solution brings back again the extra-mundane God, the watch-maker. A better answer is that the variations which Darwin frequently calls "accidental" have their law no less than every other process and event. As yet, they are enveloped in a cloud of mystery; but this cloud may yet be cleared away. In the mean time, the grand result is tolerably confirmatory of the sanative direction of the variations and selections of the process of organic evolution up to date. All is not good, measured by our subjective standards. But, if many things might have been worse or better, how many more are wondrous sweet and fair. Whatever might have been, what is, is full of good. Humanity can say with the apostle, "By the grace of God, I am what I am." And, for the rest, why should we care to think that only just exactly what has come to pass could come, and not in vain? I would not so cut myself off from faith in the immeasurable spontaneity of nature and of God. Rather would I believe that on a million planets in yon deep of blue there are a million races different from ours; and, if every one of them is higher, so much the better for our thought of the eternal things. The God I worship is a God who can afford the mutual rapacities of the lower creatures, the pestilence that walketh in darkness and the destruction that wasteth at noonday, the ferocity of a Caligula, the sensualism of an Alexander VI., the Christianity of a Philip II. or an Innocent III. "I take the responsibility," said Andrew Jackson. God takes the responsibility of all these things. Fain would we come to his relief. There is no need. He will not thank us. "There is no respectfulness, no real adoration," said John Weiss, "in these human attempts to whitewash the Great First Cause. They lead to mental bewilderment, and will forever have the weakness of being controverted by the facts."

It is through no unfairness or unwisdom that Darwin is classed with the materialists. That is to say, he is as much of a materialist as the great majority of those on whom this label is affixed. In the completest index of his works, the words "matter" and "materialism" would not perhaps appear. He entered upon no discussion of these fundamental problems. Like Candide, in Voltaire's romance, he had enough to do in tending his own garden, listening for what the earth-worms had to say to him, and the trailing plants. Orthodoxy, covetous of his fame, has easily convinced herself that he was no materialist. She has his word for it. This word we have already noticed. There it is in the last paragraph of the *Origin of Species*. And it is clear and unmistakable. What we have there is a God impressing laws on matter, a God breathing life with its several powers into a few forms or into one. There is no materialism here,—none, in the ordinary sense. There is an extra-mundane, anthropomorphic God. But there is no agreement between these expressions and the bulk of Darwin's thought. It is impossible for any intellectually serious person to follow up the process of organic development as Darwin has described it in his various writings, and arrest his feet before the verbal barrier which they oppose to him in a single place. The rush of the great argument carries him through and beyond this barrier as if it were a wisp of straw. He cannot give good heed to this immense induction, and after all believe that organic evolution is a part, and not the whole. Every experiment arranged to test the problem of spontaneous generation may as yet have failed to prove the fact. Future experiments may be as unavailing. But while at the same time the first instance of special creation is not only undiscovered, but inconceivable, the suggestion comes with overwhelming force that the transition from inorganic matter to organic life was with as little violence as the transition from our April into May and June, as little calling for the interposition of an extra-mundane God. Ay, more, such faith have we in the unending genesis, that the present world interprets and resumes the infinite past, that we have not a doubt that even now while we are gathered here this transition from the inorganic to the organic is somewhere taking place as naturally and quietly as the sunlight is falling upon hill and stream and the shadows of the clouds are trailing over them.

Do any of you wonder that I seem to welcome this result with joy and gladness, when to many it appears so sad, so terrible? But it is not as if at the beginning of my discourse I had not read to you from Emerson a statement of this same result. What is implicit in Darwin was explicit there. Therefore, let not your hearts be troubled. The materialism which Emerson can announce with such a fine hilarity is not a materialism that need be feared, as if it might deprive us of our confidence in ultimate Spirit, universal Mind. Idealism is the philosopher's stone with which he converts that seeming grossness which we denominate matter into the gold of sensibility and thought. What is this matter which is so often talked about as if it were something get-at-able, something that can be seen and handled,—what is it but certain mental forms plus an impenetrable mystery? All that we know of it is the mental forms. If we could see the hypothetic atoms, the mystery would still be there. The thing in itself would still be as remote as ever. Science and Philosophy have met together; Huxley and Kant have kissed each other on this common ground. The analysis of sense-perception has redounded wholly to the supremacy of mind. That world which seems real and objective to us is our own world, a world made by the casting of an absolute unknown in the moulds of our sensibility and understanding. The death-warrant of dogmatic materialism can be read in these conclusions by all except the blind. What we call matter is "mind-stuff" in the main, and what it is besides we do not know.

When matter has been thus transmuted into mind, it is a very different matter from that which has made materialism a word so ominous of evil to mankind. The objection could not be too strenuous, so long as matter was regarded as a something which, without inherent mind, could build the cosmos, and the thought and love and pity of mankind. Nay, let the separate atoms be as live and pushing as you please; grant them not only chemical affinities, but each a brain compared with which Plato's or Newton's were an imbecile affair,—and who shall deem that they could put their heads together, so that such a universe as this would be the outcome of their cogitation? "The divinity is in the atoms." Yes, but in them not "distinct in individualities"; in them as a pervasive and cohering Unity.

And, now, perhaps it may be evident why the concession made to mechanical theology in the *Origin of Species* did not seem a beautiful or a desirable concession; why it seemed good to us to appeal from that to Darwin's larger, deeper self, and learn from that that the process of organic evolution is a process which has no mechanical beginning, but a sweep as wide as universal nature, from the primeral nebula as yet unstirred up to this day of June. It was because we knew that matter was no lifeless entity, but largely *as we know it* alive with our own sensibility and thought, and for the rest alive with the informing spirit of the Infinite and Everlasting One.

Why should we think it necessary for an external Deity to interpose, when that which we call matter is the Shekinah of an Infinite Power, the manifestation of an Infinite Life? If matter is not *homoüusian*, of the same substance with God, then have we indeed materialism; then have we God *and* matter, a finite dualism, and no infinite One. But, if matter is thus consubstantial with the Infinite, why should we not expect it to be equal to all changes from the nebula to the granite, and from granite to the moneron, and from the moneron to man? It is God that worketh in it both to will and to do.

> "Not of adamant and gold
> Built he heaven stark and cold;
> No, but a nest of bending reeds,
> Flowering grass, and scented weeds.
> Or like a traveller's fleeting tent,
> Or bow above the tempest bent;
> Built of furtherance and pursuing,
> Not of spent deeds, but of doing."

There are other aspects of my theme, to which, had others not assigned my task, I might have turned more willingly than to this, which must be indeterminate and vague after whatever speech. Right well should I have liked to speak with you of the relation of the Darwinian doctrine to our self-consciousness; to ask, What import has it for our human dignity and worth, and what for our immortal hope? This last particular is one which touches many closely and with a pathetic hand. But if we have inferred our immortality from our essential dignity, and not our dignity from our immortality, then have we better reason than we ever had before for such a hope; for, surely, to say, "I also am a man," is something higher and deeper-sounding, now that we know what infinite periods have gone into our structure and what patience of the Infinite Power. Does any one object, What if our poor relations,—the humbler creatures, as we call them in our own dispraise,—being of our stock and lineage, seem to demand a partnership with us in the immortal life? Let them come in. I doubt not there is room enough for all. I could more easily believe that every living creature will survive the circumstance of death than that certain men and women whom I have known and loved are blotted out. If you could not, I can but say to you, "O ye of little faith!"

But, whatever waits for us in other worlds than this, for those who shall succeed to our inheritance of earthly things what splendid futures shine! What prophecy is the work already done of that which yet remains to do! And, when the coming man has distanced the attainment of to-day as much as we have distanced the attainment of our remotest ancestors who stood with port erect and face toward heaven, then will that scripture be fulfilled which our own Shakspere wrote, "What a piece of work is man!"

> "Thus he dwells in all,
> From life's minute beginnings, up at last
> To man,—whose attributes had here and there
> Been scattered o'er the visible world before,
> Asking to be combined,—dim fragments meant
> To be united in some wondrous whole,—
> Imperfect qualities throughout creation,
> Suggesting some one creature yet to make,—
> Some point where all those scattered rays should meet
> Convergent in the faculties of man."
>
> "So in man's self arise
> August anticipations, symbols, types
> Of a dim splendor ever on before,
> In that eternal circle run by life."

MONTREAL FREE THOUGHT CLUB.

Opening Ceremonies.

On the 3d inst., the new rooms of the Free Thought Club of Montreal, situated on St. Catherine Street opposite the cathedral, were opened under favorable auspices. The attendance was large. Mr. Boas occupied the chair.

At the opening of the proceedings, Mr. George Martin said:—

Ladies and Gentlemen,—It affords me very much pleasure, indeed, in common with every member of this Club, to see so many of our friends here to-day on the occasion of opening our new hall. This pleasure is enhanced in view of what such an assembly broadly signifies. It is, I think I may safely say, an unmistakable indication of a rapid spread of liberal thought in our midst, of an increase of that beneficent spirit of mutual toleration and respect which tends to harmonize communities, and renders intercourse among individual citizens a pleasure and a joy.

We are passing through a period of intellectual unrest, a time of doubting whatever is doubtful, of questioning whatever remains unsettled, and, above all, of a bold and fearless assertion of "the right of unlimited search" into all matters pertaining to the welfare and enlightenment of mankind, the right to ignore and set aside all ecclesiastical proscriptions and decretals.

It is only within the present century that the heavy hand of ecclesiasticism has been forced to relinquish its grasp on human reason, and only in recent years that thoughts of the most radical and startling character have been permitted fairly to take wing, exulting in the freedom which they find to fly wheresoever the free air and sunshine of heaven may invite them.

The priesthoods of the day of every complexion have become more modest in their claims, in many cases apologetic, in some cases repentant, ready to confess to sins of omission and commission. Even "Mother Church" herself, alarmed at the rising tide of unbelief, turns her latest fury only against atheism or agnosticism, and through one of her highest dignitaries proposes a combination of all religious peoples, Jews, Mohammedans, and Buddhists, all theists joining with Christians, Catholic and Protestant, to wage a war of extermination against this monster, born of his fears, that rises up everywhere and arrogantly refuses to worship or recognize the supernatural.

This same high dignitary, had he lived at a somewhat earlier period, would have recommended a very different procedure in connection with the heretics and heathen whose co-operation he now craves in a crusade of persecution; craves only from a depth of despair induced by his seeing the decay and ultimate

Digitized by Google

overthrow of those colossal despotisms that have retarded the march of civilization, and have proved so inimical to human happiness, chief among which his own Church has acted the most inhuman and sanguinary part.

These reflections on the signs of the times I have supplemented with some verses, which I respectfully offer for your acceptance:—

Onward!

Onward still, the fiends of terror
Never more by force of error
Can the thinker's thought subdue;
Dear to us the hero-sages
Of the pious, priestly ages
Whom the fierce fanatics slew.

Dead? They are not dead! their teaching,
Through the long, dark centuries reaching,
Throbs in countless hearts to-day:
Not one word for freedom spoken,
Nor one limb for freedom broken,
Has been wholly cast away.

See! in the enlightened nations,
Shaken to their deep foundations,
Venerable temples reel;
Superstition, wounded, wailing,
Angry-mouthed, but unavailing,
Howls to Heaven her last appeal.

Forward! then, 'tis shameful treason
In this glorious age of reason
To disguise one's honest thought;
None but dupes and cowards falter
To disown each ghostly altar
Where the ancient lie is taught.

Ours the age of science, splendid
Are her triumphs, with them blended
Truths that zone the world with light;
Ours an age of song more truthful
Than the old-time Muses youthful
Poured from their Olympian height.

Long have slept the gods they flattered,
Long ago their altars scattered,
Vanished from the midst of men;
Other gods have followed, follow,
Prayer and praise grow faint and hollow,
Can dead faiths come forth again?

Ours the age of Freedom, striding
O'er the earth, no more abiding
On bleak mountain tops, secluded;
Where she passeth tyrants tremble,
Priest and king their craft dissemble,
Theirs the spoils of souls deluded.

Onward! be our motto, ever
Striving with a wise endeavor
Higher, higher still to rise;
Striving to uplift and gladden
Hearts that grim beliefs but sadden,
So shall spread the truths we prize.

The President then delivered an address on the aims and objects of the Club.

Mr. R. C. Adams made an address on "The Leading Principles of Liberalism"; Mr. G. Iles, on "A School System for the Children of Free Thinkers on a Rational Basis"; and Mr. Alexander Murphy, on "The Social Features of Organization." Dr. Fisher followed in a forcible speech; and, after remarks from several others, the meeting adjourned.

To the above, for which we are indebted to the Montreal *Herald*, is added the following from a letter from Mr. George Martin, the former President of the Club:—

The meeting was one of unusual interest to Montreal free-thinkers, and marks a distinctive feature in the growth of our Club. The President's address, entitled "A Plea for Liberal Organization," was a masterly exposition of radical views on religion; and the necessity for united effort in defending and propagating those views was supported by a chain of argument in which was no "missing link"; in proof of which it need only be mentioned that at the close of the meeting several of our most prominent and influential fellow-citizens who had hitherto stood apart from the Club gave in their names for membership.

We are well on to a hundred strong, and our prospects for the future are such as serve to kindle enthusiasm in the veins of any pessimist that may be among us. We have already entered on preparations for a course of lectures to run through the coming fall and winter months, to be given weekly in our new hall, on scientific, ethical, and other subjects, which we know will raise our standard. The speakers will be chiefly selected from "home production"; and, if we can manage to import a few "big guns" from your side of the line, our dear old nurse, Orthodoxy, whose increasingly feeble state of health excites commiseration in all the churches, will run a risk of being thrown into convulsions.

We have a capacious reading room, a good library, and other serviceable rooms, in connection with our lecture hall, all suitably furnished by the Club, making "a haven of rest," as one of my young friends put it, for members and their friends. This great improvement in our position is largely due to the unceasing zeal and solid brain of my esteemed successor as President of the Club, Mr. Feodor Boas. The helm is in safe hands, the trim little craft is well steered.

CORRESPONDENCE.

THE IRISH LAND SYSTEM—CO-OPERATION.

Editors of The Index:—

No more interesting or valuable contribution to the subject of the Irish land question has been recently made, than that of Mr. E. T. Craig, in his recently published book entitled *The Irish Land and Labor Question, illustrated in the History of Ralahine and Co-operative Farming.*

Going back to the time of this experiment, we find the state of things in this unfortunate island almost precisely like that with which we are familiar at the present time: the same reliance upon the potato as the principal source of food for the laborer, the failure or partial failure of this crop, the inability to meet the heavy requirements of the landlords in the products of the soil, the brutal compulsions of the stewards, the evictions of the poor from their homes and the consequent misery, suffering, and desperation,—all resulting in the banding of these unfortunates together, in the vain hope of finding a cure for their sorrows by sending terror into the great landlords, their agents, and the government. No way of life and existence seemed open to them, "save through the meshes of crime, and the bloody portals of force, violence, and murder."

Early in the year of 1831, the family of Mr. John Scott Vandeleur, of Ralahine, County Clare, having been obliged to take flight, and his steward been murdered by one of the laborers selected by lot at a meeting held to decide who should commit the deed, Mr. Vandeleur sought in England some one who could aid him in organizing an agricultural association, to be conducted upon co-operative principles,—a desire which he had long cherished. He found Mr. Craig, who seems to have been equipped in the most thorough manner by his experience, careful study of social problems, and a tender and profound regard for the rights and the well-being of the poor and needy, for the undertaking. He says, "I arrived at the conclusion that an association to rent a farm, stock, and buildings, was practicable and desirable; and that, if suitable productive efforts were sustained by intelligent guidance and agreement to give the laborer a participation in the net profits over rent and interest of the capital employed, the system would realize success for all concerned."

The objects of the association formed were thus stated in the constitution: 1. The acquisition of a common capital; 2. The mutual assurance of its members against the evils of poverty, sickness, infirmity, and old age; 3. The attainment of a greater share of the comforts of life than the working class now possess; 4. The mental and moral improvement of its adult members; 5. The education of its children.

The farm, stock, tools, and other property, were leased of Mr. Vandeleur for the sum of £900. All profits after payment of interest and rent belonged to the members, divisible at the end of the year, if desired. A co-operative store was started to supply themselves with food and clothing. The estate was managed by a committee of the members. All labor was paid in labor notes, which were exchangeable at the store for goods or cash. No spirituous liquors of any kind, tobacco, or snuff, were kept or used upon the premises. The expenses of the children's food, clothing, washing, lodging, and education, were paid out of the common fund. All were encouraged to eat at the common table, where better meals were provided at a saving of expenditure. No litigation, either before a lawyer or magistrate, was allowed—all disputes being settled by arbitration among themselves. Other judicious rules for guidance of the association in every department were adopted.

In considering the results which followed these arrangements of Mr. Craig's, it must not be forgotten that the state of the country as described above, the suspicion entertained of him as a spy and informer, the opposition to him as a Protestant (all of the laborers being Catholic), the fact that they spoke only the Irish language while he did not, and the ignorance, superstition, and desperation of these poor people, rendered the experiment a hazardous and doubtful one; and, as has been said, "No one but a man of rare zeal and courage would have attempted so hopeless a task." What followed?

Although the wages paid were the ruling ones at that time (8*d.* per day for men and 5*d.* for women), the prices of the provisions sold at the store were so low, and the other economies of the system so great, they immediately began to save money. Their health and appearance quickly improved,—so much so that, with disease raging around them, no case of death or serious illness occurred during the three years the experiment lasted. Sanitary arrangements were perfected. An enlightened system of education for the young was adopted, those old enough being alternately employed on the farm and in the school. Physical and moral training were most carefully attended to. Soon, "outsiders" were extremely anxious to become members. Every thing was prosperous, and the benefit and improvement extended to the people of the neighborhood. The young men who were known before the experiment commenced as the most violent and discontented proved to be the most active, steady, and industrious members. The moral aspect of the peasantry of the neighborhood became changed; and there was an admitted increase of security, peace, and happiness arising from the associated action of the community. Formerly, in want, in fear of the future, under irritating and harsh task-masters, they were turbulent and unreasonable; but now, surrounded by favorable circumstances, they became necessarily virtuous and contented, industrious, peaceful, and happy. Mr. Craig says: "On my arrival at Ralahine, it will be remembered, the state of the country was such as to rouse the fury of the peasantry, and the utmost rigor on the part of the governing classes, the magistrates and the police. The peasantry were committing the wildest freaks of savage vengeance, and the district was described as a 'hell upon earth.' In the space of twelve months, I had been the means of changing the moral aspect of the whole neighborhood; while Ralahine, in its peaceful arrangements, comfortable dwellings, constant employment, schools, and social festive meetings, seemed like an earthly paradise, compared to the miserable conditions, groundless suspiciousness, and wild, passionate vindictiveness which formerly prevailed throughout the south of Ireland, and then became intensified in County Clare and Ralahine." This happy association came to a sudden termination through the ruin and flight of Mr. Vandeleur, who had lost his entire property by gambling. Every thing was sold off, and the experiment came to an immediate close.

The entire history of this experiment in agricultural association, or co-operation, of which the above is the merest sketch, will be found by any one interested, in The Irish Land Question, or the Subject of Co-operative Undertakings,—a most absorbing work, rivalling in interest, as told by Mr. Craig (in the language of an English critic), "the *Blithedale Romance*, from the inimitable pen of Hawthorne." It shows how, under existing conditions,—with no change of the relation of landlord and tenant, with no alteration in the political status of the people or the government, without help from government or from abroad, without change of religious beliefs, with a continuation of the excessive taxation of the English and the Catholic Church establishments, and that of the landlords in rent and interest,—even the commonest people of Ireland may be transformed from discontented, violent agrarians, and revolutionary murderous conspirators, into quiet, inoffensive, self-supporting, contented, thrifty, useful citizens. How such an experiment can fail to affect the minds of such English and Irish members of Parliament as are not actuated by personal, mercenary, or ambitious motives, it seems impossible to conceive! So complete a success, upon the first trial, indicates that fundamental principles were reached in the experiment, which must be applicable to larger fields. Were the

Digitized by Google

landlords of Ireland desirous to introduce measures which would make their laborers contented and happy, while at the same time they should receive a fair return in interest and rent for all the capital invested, it is evident that this experiment would have been tried by others before the present troubles had occurred. It is now likely to be tried again; and will be successful everywhere when such sagacity, energy, tact, and forbearance as Mr. Craig exhibited can be found and placed in command.

This experiment confirms us in the belief, long entertained and gradually becoming more wide-spread, we think, that the evils of the present times are not so much political and religious as social; and that, once true social conditions established, the comfort, happiness, and longevity of citizens of the New World as well as the Old would be immensely increased, even under the faulty political arrangements existing at the present time.

As an illustration of the beneficent results of the application of co-operative principles to actual business, no finer recent one can be found, though they are numerous and rapidly increasing. Mr. Holyoake describes the condition of the originators of the Rochdale co-operative store-keeping as being so low in poverty and other respects as to be impossible to be conceived of by Americans. These people at Ralahine were not only equally poor and wretched in every way, but the unfortunate circumstances surrounding them had rendered them violent and murderous. But "co-operation" was equal even to this emergency. It made them peaceable, contented, happy, prosperous. And this is its effect, whenever and wherever it is wisely and properly administered. The same results are seen in Germany, where an application of the principle is seen to banking and loans; in France, to trades and industry, especially in that of M. Godin, at his Social Palace at Guise; in England, by the Rochdale experiment; and, in our own country, by the co-operative banks or mutual building associations. Its immediate effect is to encourage and build up thrift, to set a higher standard of morality for all, to give the laborer something more than mere personal interests and relate him differently to his fellows, to reduce in some measure the unseemly scramble for the means of support, and to make it possible to live without the necessity of injuring others by our own success, by rendering the interests of all associated identical or nearly so.

Mr. Craig says, "The main features of the plan which were *new*, consisted in giving the laborer a participation in the management, and a share in the profits after rent and interest were paid, *thereby awakening the zeal and intelligence of the producers in promoting the success of the concern.*"

Why are not these principles applicable to other interests in this country? and may they not be the fundamental ones in all harmonious relations of capitalist and laborer? We believe that they are.

C. H. CODMAN.

BOOK NOTICES.

DYNAMIC SOCIOLOGY, OR APPLIED SOCIAL SCIENCE AS BASED UPON STATICAL SOCIOLOGY AND THE LESS COMPLEX SCIENCES. In two volumes. By Lester F. Ward, A.M. New York: D. Appleton & Co., 1, 3, and 5 Bond Street. pp. 1390.

The author of this work, while he recognizes the great and permanent value of what has been done in the domain of social science, thinks this value is thus far potential only; that the school of Mill, Spencer, and Fiske has advanced but to the "passively dynamic stage," which notes only the changes wrought by nature, unaided by art; and that what is now needed is that sociology advance to the actively dynamic stage in which social phenomena shall be contemplated as capable of intelligent control by society itself in its own interests. Theo-teleology paralyzes human effort; metaphysical ontology, which builds on pure ideas, ignores the mediation of material things; and even the philosophy of evolution, so far as it denies that social phenomena are susceptible to artificial modification, justifies the charge that it is impracticable and fruitless. Sociology, the author thinks, is in danger of falling into the class of "polite amusements or dead sciences"; and he has endeavored to use the results of the labors of many great minds, and to weave them into a unique fabric by which society may be rehabilitated.

Some of the leading claims of the work may be briefly stated as follows:—

The degree of intellectual capacity, as already developed, is quite sufficient in the present civilized races to establish and conduct a thoroughly organized social system; that all attempts artificially to accelerate this development must be attended with great difficulties, and, in so far as successful, must occupy prolonged periods; that the only two methods by which this can be done are, first, artificial selection, or the scientific propagation of human beings,—a method confronted by great practical obstacles; or second, rational change of environment, consisting in the supply of the intellect with more and better legitimate materials to work upon, *i.e.*, increase of knowledge; that the amount of useful knowledge possessed by the average mind is far below its intellectual capacity, thus keeping the degree of intelligence correspondingly below what it might be; that the actual amount of such knowledge originated by man, though doubtless still below his ability to utilize it, is sufficient, if equally distributed, to elevate him to a relatively high position and to awaken society to complete consciousness; that the most important of all *desiderata* is the thorough distribution of the great body of valuable knowledge already extant; that the resources of the globe are not inexhaustible, unless zealously husbanded by the deliberate foresight of enlightened intellect; and that a night of inaction and degeneracy will surely come in time, unless something swifter and more certain than natural selection can be brought to bear upon those intellectual faculties by which alone man is distinguished from the rest of the fauna of the earth, and enabled to people all parts of its surface. Man has been the servant of Nature too long. All true progress has been measured by his growing mastery over her, which has in turn been strictly in proportion to his knowledge of her truths.

In these two volumes, a large number of cognate subjects are discussed, among which are the Positive Philosophy of Comte, the Synthetic Philosophy of Spencer (whose "causality," it is affirmed, "has never been equalled"), the Genesis of Organic Form, the Genesis of Mind, the Genesis of Man, the Genesis of Society, Reciprocal Relations of Man and the Universe, Utility, Progress, Action, or the Direct Means to Progress, the Immediate Data of Ideas and Education. The work is able and scholarly, radical in thought and clear and strong in expression. It abounds in original reflections. The philosophy of the author is scientific materialism, from the standpoint of which, design, the basis of ethics, free will, etc., are discussed vigorously and fearlessly. No attempt is made to qualify conclusions on account of their supposed consequences. The subject of sex and the questions growing out of it are treated with great plainness, but with the earnestness of a thinker who has something to offer, and of a reformer who believes his views will benefit the race. The chief defect of the work, in our opinion, is a lack of appreciation of the highest aspects and the most recondite principles of psychology, in consequence of which lack, the treatment of several intellectual and ethical problems seems to us incomplete and inadequate. This must be apparent to every reader who is familiar with Spencer, Bain, Lewes, and other writers of this generation who have treated these subjects in the light of the best scientific and philosophic thought of the age. But while the work is not without defects, it has great merits, and is entitled to a place in the library of every thinker.

THE *Rundschau*, or Broad View, is published gratuitously in pamphlet form, in order to circulate liberal ideas among the Germans in this country as well as in Europe. Five thousand copies have been issued of the first number, which, besides many advertisements, especially of radical books, contains two spirited poems, "Wo ist der Himmel?" and "Letzter Wunsch," together with an article of marked originality, designed to show that Jesus, in driving out of the temple all who bought and sold animals and forbidding any one to carry a sacrificial vessel through the building, meant to testify against the whole system of burnt offerings, and show his own desire to have simply "a house of prayer," so that he was acting like those iconoclasts in the sixteenth century, who established Protestantism in Dutch and German cities by breaking to pieces the Romish altars and images of the saints. This essay is probably the work of the editor, Fritz Schütz, who may be addressed at Carver, Minnesota, and who has done good work, not only as a preacher of Free Religion in Germany as well as in this country, where he has made several missionary journeys, but also as a writer of valuable works, one of which we shall soon notice at some length.

THE *Atlantic Monthly* for July begins three new serials: "A Roman Singer," a story by F. Marion Crawford; "En Provence," sketches of travel by Henry James; and "Newport," a society novel by George Parsons Lathrop. Richard Grant White's amusing sketch, "Mr. Washington Adams in England," is concluded in this number. It contains some interesting reading for the admirers of Walt Whitman. "Some Phases of Idealism in New England," by O. B. Frothingham, and "Municipal Extravagance," by Arthur B. Ellis, are the two most earnest papers of the number. "Tompkins" is a realistic short story by P. Demings. Among the longer reviews, we note an excellent one of Jones Very's *Poems* and Munger's *Freedom of Faith*. There are poems by Maurice Thompson, Edith Thomas, and E. R. Gill, with other good reading.

PERSONAL ITEMS.

B. F. UNDERWOOD will speak for the Liberal Association of East Dennis, Mass., next Sunday.

REV. CHARLES T. BROOKS died at Newport, R.I., last week. He was born at Salem, Mass., June 20, 1813, graduated at Harvard College and became pastor of the Unitarian Church at Newport in 1837, on which occasion Dr. Channing preached the ordination sermon. He has served continuously as pastor of the church since, until nine years ago, when he was made pastor emeritus. Mr. Brooks was an accomplished student of the German language and literature, and made many translations from that tongue, among them being Schiller's "William Tell," "Mary Stuart," and "The Maid of Orleans"; "Titian," from Jean Paul Richter; "Specimens of German Song," from Bost; Schiller's "Homage of the Arts"; a translation of Goethe's "Faust," probably the best translation of this work ever made; with miscellaneous pieces from Rückert, Freiligrath, and other German poets. He also published "The Controversy touching the Old Stone Mill at Newport, R.I.," "German Lyrics," "Songs of Field and Flood," and "Eight Months on the Ocean and Eight Weeks in India." His last work, a translation of one of Richter's poems, was published during the past year by Roberts Brothers. He was the last survivor of the eight members of his class who were settled in the Unitarian ministry. Among them were Drs. Bellows and Osgood. Mr. Brooks was a man of singular gentleness and purity of heart and life.

MRS. MARIAN FULLER CURTIS, wife of Mr. John Curtis, died at her home at Wellesley Hills on the 14th inst. For more than thirty years, Mrs. Curtis has had to struggle for life against an afflictive and incurable disease, which subjected her to great suffering and compelled her every year to leave her New England home for a milder climate. She was a woman of remarkably quick and keen intelligence, a brilliant conversationalist, a hospitable friend, an enthusiastic lover of music, and herself a fine musician, and a lover and helper of all good causes of humanity. Her sickness closed for her very much of the bright and active career that was opening before her in her early years; yet, in spite of the disappointment, deprivation, and pain, she found the world a very enjoyable one,—the good and beauty of it more than balancing, as she said, the evil. She so triumphed over her own suffering that she never lost the pleasure of thinking and doing for others. In her early days of health, she was one of the devoted band of Boston abolitionists, and her enthusiastic service to the cause is well remembered by the old workers for it. Only a few days before her death, alluding to her own long suffering, she said that it had not abated her faith in the least in a Supreme Power working for good: the suffering was the result of some broken law, not understood, of which she had become the victim. Yet she was glad to be one in a universe so arranged; and, though entirely rationalistic in her way of looking at religious beliefs, she could not believe that this life was to be the end of the human mind. Our friend, Mr. Curtis, who, through all the years of his wife's invalidism, has been her devoted care-taker, has our sincere sympathies in his bereavement.

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*

CURRENT TOPICS.

THE Cologne Cathedral, the foundation of which was laid six hundred and thirty-five years ago, is completed.

IN Calcutta, so rapid is the adoption of progressive ideas that the number of non-Christian females who can read and write has doubled in the last five years.

THE *Presbyterian* says, "Herbert Spencer's books, Dr. Draper's, Ingersoll's Lectures, all that we mean by 'infidel publications,' are to be found in Japan, India, and other heathen lands, and are used as weapons against the truth. It is surprising how many divisive and hindering influences go out from the old centres of Christianity. The missionaries in Egypt feel the disturbing influence of the Plymouth Brethren, and their students are beguiled away by the pestilent preachers of this soft-going heresy."

JOSEPH COOK, who spoke against "the doctrines of the New Departure in the recent Andover discussion," prefaced his remarks with a brief prayer. The Boston correspondent of the *Christian Union*, taking a humorous view of this part of the exercises, writes: "One man thought that Mr. Cook showed himself to be a great master by his prayer before speaking Wednesday afternoon to put himself *en rapport* with the audience. Daniel Butler replied that it reminded him of the story of two boys who were in an apple-tree when it was struck by lightning. One asked the other if he could pray. 'No,' was the reply. 'Well,' said the other, 'something has got to be done mighty quick.'"

ACCORDING to recent statistics, there are in France 219,270 houses without any window whatever, and to which light and air are admitted, when admitted at all, through the door or a hole in the door. More than a million persons in France are obliged to live thus deprived of nature's freest gifts. In Paris there are between three and four thousand families living in single rooms destitute of means of warming, and between two and three thousand families in single rooms with no opening for light and air. John Bright lately made some appalling statements as to the number of families in Glasgow living in only one room apiece. Even here in free America, the true statistics of the number of families of workingmen obliged to live in one room would be surprising to those who take an optimistic view of our social economics. Here is an inviting field for philanthropic work.

"CHILDREN and fools," says the old adage, "should not have weapons." This saying should be laid to heart by all those spiritual "mediums" who do their ghostly work by scientific methods. Through not understanding this, one Collins Cumberland, who had been astonishing the people of Richmond, Ind., by his mediumistic powers, suddenly came to grief recently. One cold evening, he entered a hotel where he was to have a seance, and to warm himself stood close to a very hot stove. Suddenly he burst into flame, to the amazement of all present, and was severely burned before the fire could be put out. The explanation was that a bottle containing phosphorus which he used in his tricks had the cork blown out by the heat, and the stuff ignited on contact with the air. His converts have relapsed.

THE *Christian Leader*, the leading Universalist paper of this country, remarks: "If one could put implicit faith in the keen eyes and alert ears of *The Index*, he would believe that the old forms of faith are rapidly crumbling, and that a certain foreshadow of desolation sits on all the altars of Orthodoxy." It then mentions "swarming Sunday-schools, populous churches, great missionary, charity, and book concerns, richly endowed and loyally supported, and manifold activities moved by a vast and splendid energy," in contrast to the small attendance at "a Free Religious church of a Sunday morning." This is a very superficial view of the subject. Indeed, the *Leader* says, "This, of course, is not decisive of the relative merits of Orthodoxy and of Free Religion." Certainly not; and why, then, refer to it to disprove what is evident to every careful observer? The fact of the rapid decay of Orthodoxy in the churches, which makes them less objectionable than formerly, renders possible the support they now receive largely from those who are indifferent to theological creeds. And to this condition of things Universalism, the influence of which is not to be measured by the numerical strength of Universalist churches, has contributed. The *Presbyterian*, in whose columns we find copied the paragraph from which the above quotations are taken, will please note the significance of the facts here mentioned.

AT the recent synod, at Albany, of the Reformed (formerly known as the Reformed *Dutch*) Church in America, a number of preachers condemned Sunday newspapers, and resolutions were passed asking not only "the members of our churches," but "all friends of morality" not to buy one, and to condemn them on all proper occasions. The Sunday newspaper was declared to be "a great and growing evil" that diverts the people "from the proper observance of the Sabbath." The Springfield *Republican* commenting on the speeches of these preachers, which it characterizes as a "feast of cant," says: "When the minister cries out that his Sunday audience is lessened by the reading of the Sunday newspapers, he simply confesses that he has fallen behind his times, while the paper has kept with them; that he cannot serve the people so strongly and so attractively as the editor does. This confession is most significant, but not of the Sunday press as 'a great and growing evil.' It is significant of a failure in the pulpit, of a lack in the preacher, of an emptiness in the 'Sabbath observances.' If these are really suffering in comparison with the Sunday paper, let them inquire at home, and find how much of that is due to the blind, deaf, and halt clinging to forms and creeds that are nothing to the actual push and power of human life. What an impudent thing it was in this synod to appeal to 'all friends of morality' never to buy a Sunday paper!—as if that could possibly be a question of morality! Why, men even go to church regularly twice a 'Sabbath' without the least notion of 'morality.' It is not morality, but religious habit, that has to do with 'Sabbath observance.'"

THE excursion of the city government down the harbor on the 15th, designed as an entertainment of a military company from New Orleans, was not a very creditable affair. The members of the city council had dealt out invitations to a large number of political "strikers," "rounders," "heelers," and "bummers" in recognition of their election services, and this crowd of roughs swelled the company to nearly or quite fifteen hundred. Ample provision was made by the caterer, but so large a number could not be accommodated at one sitting. Of course the guests should have been served first, and that was intended by the committee of arrangements; but the favored "friends" of the city representatives made a rush for the table, and occupied the places before the guests could be seated; and the small police force on board was insufficient to eject this mob of a thousand or more. "The wines provided by the city were drunk," says a city paper, "by goblets full, and the pigs swilled the fiery spirits by brimming tumblers. Perhaps it was as well. They were the sooner laid out and stowed away." The entertainers, mortified beyond expression, had to take the guests aside, explain the situation, and provide for them the best they could in an informal manner. The complaint that public funds should be used for a rowdy picnic like this, which was a disgrace to the city, is very pronounced; but there is still greater reason for complaint that the representatives of this city, or some of them, are so low morally, and that the party methods by which their election was secured are so vile, that roughs like those who made up the larger number of the excursionists on the Empire State should have received invitations from members of the city council in recognition of their "services." To say that such men actually represent the good city of Boston is slanderous.

SETTLED AND UNSETTLED QUESTIONS.

It is not our custom to take notice of anonymous communications. But we are going to make an exception in the case of a writer over the signature of "A Woman," who criticises a certain remark of ours made at the recent annual meeting of the Free Religious Association, asks certain depreciatory questions concerning that Association, and closes by saying that she pauses for a reply. We propose to give a reply, because the writer voices a not uncommon criticism which is worthy of consideration.

The remark to which our critic objects is that, while the Free Religious Association assumes the existence of religion as an historical fact, it does not assume, but leaves as an open question, the explanation or philosophy of that fact. She says (we use the feminine gender, inferring that the signature truly indicates the writer's sex) that she "thought Max Müller and other German, French, and English writers had settled that question long ago"; and, interpreting our remark to mean that it is "the business of the Free Religious Association to seek for the cause [of religion]," she wonders "how long it will take that Association to arrive at the cause." She further desires to know: "What great questions have you settled the last sixteen years? What affirmations have you made in reference to Immortality, Inspiration, Prophecy, Miracle, Book-revelations," etc.? The attitude of *The Index*—of which, we are glad to know, she has been "a diligent and earnest reader for some time"—seems to her "provokingly uncommittal." She has "learnt more the last twelve weeks" at a certain "Citizens' Conference" to which she refers than "from all the papers, including *The Index*, for the last two years,"—and this though at the Conference "every one of the speakers is from the mercantile and working classes." The chairman, she says, is "a merchant, who strikes the mark every time. He deals in affirmations, not negations; goes back to find causes, and rests on nature." And then, on the hypothesis that *The Index* is waiting for science to pronounce a decision on these matters, she asks, "Is there no one connected with *The Index* of any scientific attainments capable of giving to the world some scientific facts bearing on these mighty questions?"

We fear that our critical friend is too impatient to get great problems settled. We have to confess for ourselves that we do not keep in *The Index* office a scientific expert to give an answer to the questions concerning Religion, God, Immortality, etc. The editors, nevertheless, try to keep themselves tolerably well informed as to what the principal scientific men are doing, and are ready to report at any time, as are also several of their contributors, any scientific discoveries "bearing on these mighty questions." If, therefore, *The Index* has not, in "the last two years," given such positive answer to all these questions as to settle them forever, we must plead in justification that the leading men of science have not given us any absolutely settling discoveries. But let us not demand too much. Science is very sure when it is sure. But it may take a long time for it to work to its ground of perfect surety. And some of these questions, which the human mind has been asking and answering in one way and another ever since there was a human mind, are so deep and broad that we suspect it will be very long before science will settle them to the entire satisfaction of even the majority of enlightened minds. There are many such minds that have yet to be convinced that science can ever determine such questions at all. And if our correspondent has found the problems of God, of Immortality, of Religion, in its essential nature, *answered* and *closed* beyond all reopening or revision by the twelve weekly discussions of the "Citizens' Conference," it does not strike us as necessarily a happy result. So she might have found these problems settled, though possibly not in the same way, in a conference of Roman Catholic priests. There are certain questions so large, so far-reaching, that, if settled in certain stages of the discussion of them, they must inevitably be settled on a too narrow basis and by too arbitrary judgment to be settled rightly. We do not doubt that the speakers of the "Citizens' Conference" are possessed of bright and keen intellects, nor that their opinions on many matters are well worth listening to; but, though they may have given positive answers to all the questions named by our correspondent, we should yet hesitate to concede that their decision is likely to be the one which the world will finally accept as conclusive.

Certain of the questions to which our critic refers, as those of Miracle, Prophecy, Inspiration, Book revelation, are indeed in a fair way toward a settlement, not very remote, which shall practically unite all enlightened minds. In a generation or two more of such progress as has been made in the handling of these subjects in the last twenty-five years, it would not be surprising if Protestant Christendom should be substantially united in the solution of them on the ground of natural process and law. And this progress is going on through the application to the study of these subjects of that free scientific method of criticism which it is one of the special objects of the Free Religious Association to promote. Possibly, then, the sixteen years of that Association's existence would not have been in vain, even if it had done nothing more than hold up the standard of this method of free and scientific investigation for the solution of such questions. But these questions are subordinate and simple by the side of others which are involved in the problem of what Religion is in itself. It is true that Max Müller and many other scholars are at work on this great problem of religion, and are gathering the materials of what is beginning to be called the Science of Religion. And it is true that these materials appear in a general way to point toward the conclusion that all religions are the result of the natural evolution of a few common elemental sentiments and beliefs amidst different environments. But none of these great scholars would claim that even very fundamental questions involved in this general problem of religion are yet decided by scientific criticism. None of them would claim that the whole philosophy of religion is yet settled beyond question or appeal. How the power called Deity, or God, is to be conceived as existing and acting; whether a supreme power as personal conscious intelligence can be rationally conceived or believed in at all by man; how man is related to the power, conscious or unconscious, that sustains and vitalizes the universe; and whether this relation is dependent on the present physical organism of man and wholly ceases with its dissolution, or may be continued in some other form,—these are questions which cannot be considered as scientifically settled they are, certainly, still widely discussed by learned and scientific men.

Yet this is not to say that individual thinkers may not come to very firm conclusions even upon these questions. Nor is it correct to say that members of the Free Religious Association are waiting for science to pronounce its authoritative dictum on these subjects before they have any opinions upon them. Even scientific men have convictions on matters pertaining to their special sciences before they are able to present the facts of a complete demonstration. The doctrine of evolution was held by Darwin, even while he admitted there were gaps in the evidence. It is perfectly in accord with scientific methods to adopt and contend for beliefs on such a basis, provided only that they are not dogmatically held and promulgated as incapable of amendment. So on these great questions involved in the problem of religion, people may hold logically and firmly to some one of the necessary alternatives, on the ground of the weightiest probabilities, or of the strongest reasoning so far as the evidence is seen; and they may rationally and earnestly labor to extend views which thus seem to them to accord with the highest reason, though modestly disclaiming any possession of an infallible judgment in the case. The present writer, for instance, has a theory of religion as representing man's relation to the universe and its life-forces, which appears to him to be entirely rational, philosophic, and scientific. He stated it in an address before the Free Religious Association last year, and has more than once stated it in *The Index*. It seems to him so fully in accordance with all the known facts bearing on the question that practically he has no doubt of its truth; and it affords for him all the working basis needed for practical and constructive activity with and for a special religious society. But he is not so narrow-minded and dogmatic as to be determined to adhere to his present religious beliefs against all possible discoveries that may be made by science or historical investigation in opposition to them. It is not at all necessary that one should be colorless or non-committal in opinion, or feel no strong motive for the positive expression of opinion, because one holds his opinions always in submission to any new tests of truth that may be offered by advancing reason and knowledge.

But, though earnestly maintaining our own beliefs, we should not think of imposing them upon others with whom we may work as a necessary bond of fellowship. Other members of the Free Religious Association may agree with us in these beliefs or they may hold and advocate other beliefs quite as strenuously. But all agree together that the beliefs of none, not even of however large a majority, shall be imposed upon the Association as a whole. Each may work in his own way, and with all possible zeal, for the views he holds to be true, and he may urge them on the platform of the Association; but he stands there as the equal of others who may hold and urge different views. The same equal and free representation to different opinions is allowed in *The Index*. Our correspondent would evidently have some tribunal to decide which is true among the various opinions presented. But if she will go to a meeting of a scientific association, though she may hear different and even opposing views presented by the members, she will find no court of judges authoritatively settling which of them is right. No scientific association settles a question of science by passing a resolution declaring its opinion upon the matter. Yet questions of natural science are continually being settled. They cease to be questions and become established truths. It is unnecessary, however, for any scientific body to proclaim that fact by a vote. A question of science is settled when it ceases to be discussed by intelligent men; and no other proclamation is needed. The Free Religious Association is content to leave religious truth to the same kind of arbitrament.

It should, however, be said clearly, in conclusion, that the Free Religious Association by no means exists solely, as our correspondent appears to imply, for the eliciting of truth on the thought-problems of religion. Indeed, seeing what a great

Digitized by Google

variety of opinions there is on these problems among earnest and enlightened people, it is one of the first aims of the Association to induce people to leave their differences as to speculative beliefs in abeyance, and to unite heartily in efforts to promote the practical improvement of mankind. If our critical friend remained through the late Annual Convention, she heard a very different question discussed at the afternoon session,—that of co-operation as the remedy of social evils. And, if she should follow the members into their stated vocations and labors, she would find them generally interested in, and many of them hard at work at, the practical problems of human amelioration.

WM. J. POTTER.

THE DEATH OF A GOD.

One of the most impressive pages ever written is that which concludes Part Third of Heine's *Geschichte der Religion und Philosophie in Deutschland*:—

"A peculiar awe, a mysterious piety, forbids our writing more to-day. Our heart is full of shuddering compassion: it is the old Jehovah himself that is preparing for death. We have known him so well from his cradle in Egypt, where he was reared among the divine calves and crocodiles, the sacred onions, ibises, and cats. We have seen him bid farewell to these companions of his childhood and to the obelisks and sphinxes of his native Nile, to become in Palestine a little god-king amidst a poor shepherd people and to inhabit a temple-palace of his own. We have seen him later coming into contact with Assyrian-Babylonian civilization, renouncing his all-too-human passions, no longer giving vent to fierce wrath and vengeance, at least no longer thundering at every trifle. We have seen him migrate to Rome, the capital, where he abjures all national prejudices, and proclaims the celestial equality of all nations, and with such fine phrases establishes an opposition to the old Jupiter, and intrigues ceaselessly till he attains supreme authority, and from the Capitol rules the city and the world, *urbem et orbem*. We have seen how, growing still more spiritualized, he becomes a loving father, a universal friend of man, a benefactor of the world, a philanthropist; but all this could avail him nothing. Hear ye not the bells resounding? Kneel down. They are bringing the sacraments to a dying god!"

Heine regarded Kant's *Critique of Pure Reason* as the first stroke of this death-knell. Whatever may be the case in Germany, that book might sound on for another hundred years without troubling the English Jehovah. Yet all signs show us here that we have drawn near to the death of the deity of this country; and, day by day, we are learning the nature of the disease which proves fatal to a god. It is not metaphysical nor philosophical nor theological, but moral. The god of England is dying of pusillanimity and meanness. He has become so cowardly that he dares not look an honest man in the eye, and, if he hears an honest voice, can only fly at the throat through which it comes. You have heard how this god recently found it necessary to tear three young men from their wives and cast them in prison for laughing at him. They are suffering what almost amounts to solitary confinement for what would be regarded as a bit of English humor had its object been, say, that Hindu god which an English judge in Calcutta lately ordered to be brought into court. Well, the intelligent and independent people of the country protested against this. A petition signed by the most eminent men in literature and science asked the government to release these men,—the only person who refused to sign, so far as I have heard, being George Jacob Holyoake. A number of eminent clergymen petitioned for the release of the men, feeling that their deity was getting the worst of it. The government has not refused to interfere with the sentences. You will naturally ask, Why? It is well known that its members agree with the press and the bar that the imprisonment is monstrous; but the sectarians, who lately placarded the country with the words "God or Bradlaugh," are in panic about their deity. He is in serious danger; and provincial politicians have warned Gladstone that the Methodists and other ignorant preachers will preach against him if he adds another item to the very little he has ever done to redress the wrongs of any freethinker.

It is perfectly well understood that, if Gladstone had resolved that Northampton should have its constitutional representation, Bradlaugh would now be occupying his seat in Parliament. Harcourt (who married the daughter of Motley), and such thinkers as Fawcett, Dilke, Chamberlain,—there is not a thimble-full of Orthodoxy among them,—are thus degraded before the intelligence of the country by pretending to be Jehovah's gaolers, while it is well known that any of them would care not that God should be spelt with the smallest "g" so long as Gladstone is spelt with a big one.

Not content with displaying the "Majesty" of their god by putting three humble freethinkers in gaol, the myrmidons of Jehovah have actually invaded University College,—the college which refused to elect James Martineau a professor because he believed in a god,—and browbeaten it into refusing admission of two distinguished freethinkers to a botany class. This outrage excited the indignation of many students, it being estimated that about two hundred of them are unbelievers in Jehovah. These prepared a careful petition to the Council of the College, asking them to reconsider their refusal of the freethinkers. But there are over twelve hundred students in the college, and a majority of them naturally opposed to free or any other thought. One of these got hold of the petition, already well signed, and made way with it. A second petition was prepared and signed. An orthodox student tried to seize it, but was overcome; whereupon, two large students watched their opportunity, and, seeing the youth who carried it all alone, rushed upon him, robbed him of the parchment, and destroyed it. One of these youthful defenders of the faith remarked, "All's fair in war." Exactly so; children and fools speak the truth: it is war, not peace, which is the *ultima ratio* of the English god.

But never was there a pettier war. How long can a god live whose university Armigeddon is reduced to two muscular Christians pitching into one, and garroting a petition against persecution? It is evident that the arguments of the orthodox are exhausted, and the intellectual verdict has gone against them. Whatever deity may exist, theirs certainly does not. There is neither Jehovah nor Trinity in the universe. But these deities live practically in the vast interests whose titles depend on acknowledgment of their existence. Therefore, in a like practical sense, they die. The Trinity is dead; he hadn't a law that could protect him, and he has bequeathed all his assets to—God. Jehovah is fast transferring his rights to—God. Thus it comes that the pure and spiritual theism which just now Parker, Newman, Martineau, and Miss Cobbe were making so engaging, has in England been suddenly fitted up as a party barricade. Intolerance, Toryism, and the shopkeepers' sects, have made a last stand there, and are crying furiously,—"If you do not believe in our God with a big 'g,' we will outlaw you, kick your representatives out of Parliament, kick your children out of colleges, insult you in every way we can, put you in gaol, speak evil of the women you love, and persuade all the roughs of the country to do you an ill turn." They do not merely say this, but mean it and practise it.

Sunday before last, young Mabel Besant, who, since she was taken from her mother by the joint efforts of a Jewish judge and a Christian clergyman, because of the mother's heresy, has been placed at a boarding-school in Boston (England), was taken to church there; and the clergyman so denounced her mother by name that the poor child had to be led out. Every word he said of Mrs. Besant was a slander. There isn't a purer or more honorable woman in England than Mrs. Besant. Her husband has vainly sought through spies to obtain evidence of even doubtful or suspicious conduct on her part that he might secure a divorce, until he has given up in despair. It is this deadliest of all her attacks on their god which so infuriates the doctors at the bedside of that deity. If Mrs. Besant would only be coarse instead of refined, illiterate instead of matriculating at universities, immoral instead of chaste, she would greatly endear herself to the defenders of the faith. If she could be proved an adulteress to-day, they would fall on their knees and offer up thanksgivings, and report their divine patient better.

You see on what a slender thread hang everlasting things. As the secularists decline to become vicious and immoral, the zealous preachers are reduced to slander them or else admit that their god is not essential to society and morality. But this cannot be done without putting the immorality upon the side of their god. The Rev. Mr. Mitchinson, who drove Mabel Besant out of church by abusing her mother, has brought upon himself a storm of wrath, and not a defender of him has spoken. I have before me a number of newspapers containing indignant editorials and letters. A High Churchman of Boston has had to shield his deity by joining in the condemnation.

The Lord Chief Justice has similarly tried to parry the blow which Judge North and his aldermen dealt to the established deity by imprisoning the three freethinkers,—an event which has been followed by the utterance of more blasphemy (in a legal sense) than had been uttered in the last twenty years. During that period, I have had opportunities of observing the course of religious controversy, and never before have I known the name of "God" so loaded with odium, so given over to the patronizing defence of base and mean men. It is a terrible time for sincere and religious theists. Their hope of making their faith in a personal deity prevail is sinking away; for they cannot use any sacred name or epithet which does not link them to the mean, heartless, illiterate men now physicking a god dying of their drugs. Like Asa, the English deity has taken to the physicians, and his metaphysicians cannot save him.

The Agnosticism which has followed the Theism so cruelly sacrificed is likely to be forgotten in something more like Gnosticism. The voice of those who know not is thin and metaphysical; the voice is practical and strong of those who know. They know very well that a god exists who is subsidized to the extent of 250,000,000 sterling, who in return for that is a source of discord and all uncharitableness; and as the ancient gnostic took the side of Christ against Jehovah and worshipped the serpent because he outwitted Jehovah, so there is swiftly arising in England a multitude of believers whose creed was stated by Swinburne,—"I believe in God and am against him."

NIHILISM.

Politically, socially, and religiously, Russia is unlike any other nation pretending to civilization; and some clear conception of wherein it is unlike should be obtained by any one who may desire to understand the purposes or to criticise the methods of the Nihilists.

Russian government is absolutely despotic. The will or the whim of one man may at any time and upon almost any subject override the decisions of legal tribunals or the desires of millions of persons. The imperial ukase is supreme, and its promulgation is not always necessary. A hint from the throne suffices at any time to determine official action. Practically, the Czar may deprive of property, liberty, and life as arbitrarily, if not quite so expeditiously, as the savage Mtesa of Africa's Uganda; and he probably blasts or destroys as many lives in the course of a year as that despised monster. And the lives, moreover, are of vastly greater value to their possessors, to their country, and to the rest of the world.

Socially, Russia has only two grades or classes,—about fifty millions of peasants or serfs in one grade, and ten millions of nobles, civil rulers, army officers, and priests in the other. The middle class—the real backbone of all other civilized nations, and the only class in the United States—has scarcely any existence in the whole empire. All the education, power, and wealth are in one class. The serfs, with few exceptions, are ignorant and superstitious, and too often brutal and drunken. Their communal life has developed few ideas of private property or contract obligation,—in fact, few moral ideas of any kind.

Religiously, Russia is equally exceptional. The Greek Church is a mass of superstition. The priests inherit their offices, and are, as a rule, grossly ignorant. They have no understanding even of the dogmas of their own creed. Moreover, their religion has no association whatever with morality. An enlightened Christianity, such as we are familiar with, does not exist in Russia. This fact can scarcely be stated in exaggerated terms. A peasant, for instance, asked to name the three persons of the Trinity, answered: "How can one not know that? Of course, it is the Saviour, the Mother of God, and St. Michael, the miracle-worker." Another peasant was overheard in making the following prayer: "Look here, O Nicholas God! Perhaps my neighbor, little Michael, has been slandering me to you, or perhaps he will do so. If he does, don't believe him. I have done him no ill, and wish him none. He is a worthless boaster and babbler. He does not really honor you, and merely plays the hypocrite. But I honor you from my heart; and, behold, I place a taper before you." The existence of this debased religion was an important factor in the rapid spread of Nihilism, as will be immediately shown.

The Crimean war appears to have been the beginning of a new era in Russia. It lessened the confidence of the upper class in their own country, and inclined them to seek for European knowledge. Sons of both nobles and priests went abroad for education. The works of Büchner, the German materialist, of some of the French socialists, and a few of the English scientists were translated and widely circulated and read; and the effect of these works was very peculiar. The first result was the utter extinction of belief in Christianity, or of what assumed that name in Russia. "Christianity fell," says a Russian writer, "like an old decaying hovel, which remains standing because no one touches it." At the present day, an educated Russian who believes in Christianity is a curiosity. Not only did Christianity fall, but atheism and materialism were received enthusiastically, and propagated with all the ardor of a new religion. "We were profoundly convinced," says another Russian writer, "that we were fighting for the happiness of human nature; and every one of us would have gone to the scaffold, and would have laid down his life for Moleschott and Darwin." Says another, "It is a fact highly characteristic of the Russian mind,—this tendency to become excited even to fanaticism about certain things which would simply meet with approval or disapproval from a man of Western Europe."

This was the first phase of Nihilism. It annihilated belief in Russian Christianity. It gave an impulse to the emancipation and education of women. It destroyed faith in political and moral despotism. It had all the force of a religious awakening. But it was almost entirely literary and philosophical. Practically, it was not in the least revolutionary. It was an affair of personal enjoyment,—a luxurious intellectual bath, reserved for the few. It proposed nothing. It lasted, we will say, from 1860 to 1870, and of course had no effect upon the serfs, and very little upon the priests.

During these ten years, however, a new generation was growing up; and young blood cannot flow quietly under the impulse of new ideas. The belief must be put into action. The peasant must share the intellectual treasures of the more fortunate noble. The young man "will tell the peasant how to free himself and become happy": he will "endure every privation in order to carry to him the words of redemption, the gospel of our age,—Socialism. What matters to him if the cutthroats of the government lay hands upon him? What to him are exile, Siberia, death? Full of his sublime idea, clear, splendid, vivifying as the mid-day sun, he defies suffering, and would meet death with a glance of enthusiasm and a smile of happiness." And, with this generous resolution, Nihilism passed into its second phase,—the phase of propagandism.

From 1872 to 1875 inclusive, the young Nihilist carried on this propagandism with a missionary zeal which no religion in the world has ever surpassed. His enthusiasm was unquenchable. The intensity of his devotion verged closely upon fanaticism indeed, but his purpose was grandly unselfish and pure. His socialism and materialism may be open to any severity of criticism you may please to visit upon them, but they were only the natural reaction and outgrowth of his history and surroundings. The "enthusiasm of humanity" was never more beautifully illustrated than in Russia during the years just mentioned. The deeds of heroism then and there enacted are worthy of one of the brightest pages in the history of human endeavor. It is of course impossible to give here a detailed account of the methods of propagation employed by the Nihilists, or of the noble sacrifices they endured.

The next three years, from 1875 to 1878, were years of agitation and of disenchantment. The zeal of the Nihilists was necessarily creating a spirit of unrest throughout the empire. Although no real revolutionary agitations had as yet been attempted, the government foresaw their coming and resolved to stamp out the disturber of its quiet. Every engine which despotism could invent was put in operation to this end. Russian brutality and espionage are alike notorious, and both were used to the fullest extent. The writing to or receiving a letter from a suspected person, the making of an address, attending an assemblage, teaching a school, circulating a tract, the mere possession of a book,—furnished excuse enough for an absolute despotism to pronounce the sentence of imprisonment, expatriation, Siberia, or death.

By the time of the close of the Nihilist trials of 1878, the utter hopelessness of succeeding in the propagation of new ideas under existing circumstances became apparent. But the fire was too fierce to be smothered. It burned in breasts which could not conceal it, and which believed moreover that it ought not to be concealed. What then? The trodden worm will turn. The mildest animal will defend its young. And these men and women believed, and believed truly, that the salvation of the ignorant and oppressed children of Russia demanded their sacrifice and the leaven of the new gospel by which they were inspired. Criticise, denounce, say what we will against the Nihilists from our easy position of a freedom already won, whenever we put ourselves sympathetically into their position, we can understand that but one course of proceeding seemed possible to them. The power that blocked the way to liberty of speech and enlightenment must be destroyed. The change from a self-sacrificing circulator of a tract to the equally self-sacrificing hurler of a deadly bomb is a horrible transformation, but who will dare to say that it was avoidable or unnatural? The Nihilist became a Terrorist. And thus we have arrived at the third and existing phase of Nihilism, each phase being distinct in itself, but the first leading by natural transitions to the other two.

I have aimed thus far only to indicate the different phases of Nihilism, and to mention a few of the reasons for its existence as furnished by the Nihilists themselves in their different publications, and especially in the remarkable little work by Stepniak, recently published in Italian, and subsequently translated in England under the title of *Underground Russia*. Stepniak is, of course, an assumed name; but the author was one of the editors of *Land and Liberty*, and his reliability is assured by a preface to the book by Peter Lavroff, who is a recognized leader of the Nihilists.

The present demands of the Nihilists have been frankly declared, and are extremely moderate. They ask only, in fact, for the following:—

"First, a general amnesty for all political offenders, since they have committed no crime, but have simply done their duty as citizens.

"Second, the convocation of the representatives of the whole of the people, for the examination of the best forms of social and political life, according to the wants and desires of the people."

As a condition precedent to such convocation, they ask for:—

a. Complete freedom of the press.

b. Complete freedom of speech.

c. Complete freedom of public meeting.

d. Complete freedom of electoral addresses.

"We solemnly declare before the country, and before the whole world, that our party will submit unconditionally to the National Assembly which meets upon the basis of the above conditions, and will offer no opposition to the government which the National Assembly may sanction."

Will the Nihilists succeed?

That they ought to succeed, if their position be as above stated, every one will admit. But we have sadly learned that in this world the measure of right is not necessarily the prophecy of immediate success, and the forces against which the Nihilists contend are some of the most powerful possible. So far as the overthrow of the present despotism is concerned, there is good reason to believe that they may succeed at no distant day. Although their numbers are comparatively few, and according to their own account are kept few

Digitized by Google

that they may be handled more effectively, they have with them doubtless, to a certain extent at least, the sympathy of all the educated people of their country. This sympathy is expressed by assistance in many ways, as well as by pecuniary aid.

Three possible solutions of present Russian difficulties have been pointed out. The Czar may be frightened into a concession of the substance of the demands above stated. Failing this, some pretender to the throne may win success by the promise of a constitutional government. Or, third, the constant agitations, which are already influencing the peasantry, may eventually give birth to an agrarian rising, from which peace will be won after a period of fearful anarchy. Once let the Nihilists, in any one of these ways, obtain perfect liberty of speech, and their arduous task of lifting up the mass of the people may then be undertaken with some degree of courage. Their extreme socialist and materialist views may be safely disregarded. Perfect liberty would prove the readiest bringer of all necessary modifications.

But, in the mean time, however mistaken their theories or repugnant their deeds, let no American withhold from them either his sympathy or his word of encouragement. Let the Czar once be fully assured that civilized sentiment is not with him, but with his opponents, and he would be compelled to yield; and this yielding would be the happiest occurrence for troubled Russia. Unfortunately, the official acts of our government have given him too good reason for believing that the sympathies of the people of this country are with him, and not with the Nihilists. This, I am convinced, is a mistake, or at least will become so, when the purposes of the Nihilists are better understood. The impartial verdict of history may yet enroll the Nihilists among the true saviors and martyrs of mankind. Applause then may be easily rendered. Let us give our word of encouragement to-day, when it may chance to be of some service in the universal struggle for liberty.

ROWLAND CONNOR.

MORAL PURPOSE IN ART.

"Moral Purpose in Art," as considered in the May *Century* through a portion of one of the last of the late Sidney Lanier's manuscripts, finds its noblest expression in the author's inclination to review the Bible poetry in its purely poetic and human conformation. Nothing half so well harmonizes with the present drift of great thought as does a really reverent judgment of the damaged book on its own merits. So common have been the distorted views, and so various and vain have been the attempts to extract virtues and wonders that do not exist in the book, and to deny homelier beauties not laden with enough of the theological dead-weight to satisfy the orthodox sense of the necessitous, that it is with relief that we greet a scholar's feeling and non-priestly tribute.

The Bible is richly wrought from a wealth of language and thought which requires only to be separated from the God-idea of its origin to be appreciated. This separation must, however, be total and unsentimental, and tradition must in relation to it have no more government of our common sense than is patent when we pass upon the Homeric miracles, or the old Teutonic legends, or on the modern believers in Lourdes and the English "Peculiar People." Every one who contributes to this freeing of the native man from the clutches of the mother and father souls lifts to the sun new proof that the destinies of the race are safe.

It is forced upon every man of thoughtful sense to believe that the Bible, with its manifest imperfections, may stand for a very noble human strength and purpose, or for a futile and unworthy fabric from Olympus. We must either accept it as a grand human work, or as an ignoble and ignorant production of the gods. An untrammelled understanding sees the alternative as the first inspiration on the pathway to freedom. The human reason refuses to be denied its right to decide the question. If the imperfect judgment strays, let it be known that the judge writes but for his own soul, and involves no other personality in his decisions.

There is that in men which refuses to be written down by popes. The Irish agitation, so far as it was a free and sincere one, will go on unaltered by the protest from Rome. Men who love the Bible with more than the old-time fervor, because not bound by their new theories to harmonize things as contradictory as life and death, will go on loving the literature and the life expressed in the book though a whole nether-world were present with its threats. What do the "partial inspiration" theories mean if not that the human mind is to take its place as judge of this book? If each reader maintains decision for the inspiration of passages suitable to his or her idea of what *should be* god-written, there no longer exists outside of the mind of the examiner any inspiration at all. This becomes plain as we drop our glasses and face matters with the clear eye. Furthermore, if liberal Christian souls start out with the growing assumption that "God" is but another way of saying "Infinite Love," and then proceed to outlaw or declare allegorical such harsh tenets as would contradict their position, it follows again that the human reason is at work against faith, and that an imperfect human mind can attach no perfectness to its decrees. Such considerations break the inspiration theories squarely and decisively. When the honest thinking of men drives in this mad way, the destruction ensuing is worse than was accomplished by the traditional bull who was let loose in the china-shop.

The only way to retain the Bible is by strictly keeping it reserved from inquisitive minds. Under the present standing of Christian doctrine, it cannot be a subject for criticism or even for fair interpretation. A doubt of meaning cannot consistently be admitted. The solidity of the inspiration ends if we break upon it with "interpretation," which in essence is warrant issued for schism, sect, and war. When we look over the past, we are surprised to find by what plausible incoherency the human mind has managed to cling to its idols. Any one of a thousand long-existing contradictions is enough, when the day of intellectual reprieve comes, to upset the most elaborate structure.

The Bible rises as the belief in its inspiration falls. I should turn from the fount with disgust should I believe it fed from heaven, but drink of it with utmost love now that I find it rich with the pathetic haltings of the race. From gods on high, who could help us and do not, I turn to my fellowmen, who struggle with me toward the goal of all helpfulness. We want the perfect sympathy; and shipwreck, famine, crime, and war carry our tear-filled eyes from the awful blasphemy of cloud-worship to the weary hearts which need here the answer of our every inspiration. How large is this writ in the heart of human sorrow! The Bible is one of the sweetest waifs on human literature, and never would I pass over its pages had it less than now the proof everywhere of its thoroughly human writing. There is a moral lift given the heart when from the old literatures we catch the *spirit* that led on from less nobility to more, and that feeds all inspiration for the coming times.

Lanier was always a writer whose feeling for the beautiful seemed to express the perfect mastery of musical form. In aiding to detach the Bible from its distorted position in the churches, he made a really necessary contribution to the liberal thinking of the day. The moral purpose in art for which he sought needs an entrance into the ecclesiastical views of what is Bible truth and what is truth. Nowhere so prevalently as in the pulpit is found so little logic hidden beneath such pretence of logic. The moral purpose of *religion* finds but poor representation on the intellectual side of modern worship. It is the world's good fortune that there is more honor and truth in the moral than in the mental religious state of the people. It is not the horrible thing some may conceive it, that we should bring Jesus and the Bible *down* among men and man's books; for the *down* implied is not one of degradation or essential lowering, but a merely bringing-nearer, that the human eyes may see the never-suspected fellowship, and know what a pathetic human sympathy, and not an imagined pitying god's condescension, is.

The souls who have felt most the weight of our common sorrows know best that the fellow-feeling of equal men adds more to the fund of the common joy than does a mistaken effort to take from men and give to a fiction on high some of the noblest of human developments. Neither Jesus nor the Bible was so transcendent that they could not have been the children of men, and neither so perfect that they could have been pressed by perfection's seal. We rob the race when we take from it its finest work. If men may deserve credit for their nameless noble children and their books of a day, surely some meed is called out by their Christs and their Bibles. Is grandeur and nobility so surprising that we must ever credit them to the clouds, or to some power not deigning to have a hand in the making of ordinary things? We insult the fine jointure of the worlds when we divide the workmanship.

HORACE L. TRAUBEL.

EDITORIAL NOTES.

THE book for the writing of which Rev. Dr. W. W. McLane has been expelled from the Presbytery of Ohio is entitled *The Cross in the Light of To-day*. Its heterodoxy is held to lie in the doctrine that Christ's death was not sacrificial, in the sense that it was vengefully demanded by God, but was altogether an expression of divine love.

APROPOS of the recent death of a minister's wife by the accidental discharge of a pistol while arranging a closet, the *Sunday School Times* sensibly remarks: "If a man wants to increase the probabilities of an accidental shooting of his wife, or his mother, or his sister, or his brother, or his intimate friend, he would do well to keep a loaded revolver always at hand in his house. There are at least five chances of the pistol being used in this way, where there is one chance that it will help to keep off midnight assassins or burglars."

SAYS the *Free Methodist*:—

An Agnostic, being present in a refined circle, was surprised when told that a certain noted lady believed firmly in the Sacred Scriptures. He ventured to ask her, "Do you believe the Bible?" "Most certainly, I do," was her reply. "Why do you believe in it?" he queried again. "Because I am acquainted with the author," she answered confidently. Poor souls, that know not God in Christ as their Saviour, think, like Spencer, that he is "unknowable," and so reject his word. But true believers have a blessed acquaintance with both.

Multitudes, including many "noted" persons like Moody, and many of another class like Guiteau and the James brothers, mistake inherited

Digitized by Google

superstitious tendencies, traditional beliefs, wild fancies, and unregulated feelings for acquaintance with "God," and then, in their simplicity, pity those who have the intelligence to see and the candor to admit that the ultimate cause of all phenomena is inscrutable.

THE word "atheist" has long been used as a term of reproach, and it is not uncommon for candid minds who have been theologically educated, even when they have outgrown theological beliefs, to associate atheism with that which is morally bad. Mr. W. M. Salter even, one of the broadest and noblest representatives of liberal thought, himself an agnostic, if we mistake not, in his admirable lecture, "Why Unitarianism does not suit us," indulges in the following language, which is inaccurate and at the same time unjust to those who call themselves atheists: "The true atheist is he who does not believe that an ideal justice and right can conquer in the world; that men, all men, and universal human society and government cannot will and do the good, the perfect good." It was far from the intention of Mr. Salter to do injustice to any class of thinkers; but a moment's reflection will convince him that in the use of the above language the prejudice of theological education triumphed over exactitude and fairness of expression.

THE editor of the Cleveland *Leader*, a leading Republican journal of Ohio, must have graduated from the office of one of the Eatanswill editors, Messrs. Pott and Slurk, specimens of whose editorials are given by Dickens in his *Pickwick Papers*. The following extract, from an editorial in the Cleveland *Leader* on the Ohio Democratic nominee for Governor, is exactly in the Pott and Slurk vein of clap-trap. Says the *Leader*:—

Unless a paper published in his own city has stated that which is false, and there is no reason to think it has, then the nomination of George Hoadly for Governor of Ohio will be the deepest and most outrageous insult ever offered to the God-fearing people of the State. It is well known that Hoadly is an infidel of the rankest sort, but few people will be prepared for the statement published at his own home that he is one of the vice-presidents of the notorious society which issues that vilest of religion-hating and society-degrading sheets, *The Index*. Bob Ingersoll would scorn to disgrace himself by having anything to do with the disgusting doctrines of such a publication. Yet the Democratic party is shameless enough to ask the moral, Christian people of Ohio to smirch the fair fame of the Commonwealth by electing George Hoadly to fill its highest office. It is needless to say that the impudent request will be treated with the contempt it deserves.

According to a correspondent of the Cleveland *Herald*, a copy of a paper containing the above, or something like the above paragraph, has been sent to every minister in the State of Ohio. A communication in reply to these slanderous statements, from Mr. E. D. Stark, will be found in another column.

PROF. EGBERT SMYTH, called for during the recent Andover discussion, said:—

First, I have just subscribed the creed of this seminary for the fifth time since I have been connected with this institution. I have done it without any mental reservation of any kind. I have given to it the precise sense of its framers: the sense in which they themselves put their names to it, so far as I am able to ascertain what it was. This to me is a religious act. I have done it in the presence and fear of God. Now, secondly, I have this to say,—*that the man does not live whom I will permit to dictate to me his interpretation of that creed in the place of my own!*

These remarks elicited the most hearty applause, which was renewed again and again, and they give great satisfaction to journals like the *Independent* and *Christian Union*, which favor the New Departure. But the *Congregationalist*, although less progressive, is more consistent, and comments on Prof. Smyth's remarks as follows:—

Such utterance was consistent and creditable for him purely as a private Christian holding that formula of doctrine as expressive of his own personal beliefs. We take leave, however, to think it both inconsistent and absurd when he looks upon himself as a professor taking that creed avowedly as the legal condition of his rightfully holding office in Andover Seminary. Having promised "religiously" to observe all the statutes of the institution, he has bound himself beforehand, as he keeps his promise, to allow several men on the face of the earth to dictate to him what that creed means; namely, first the Trustees; second, the Visitors; and third, "the Justice of the Supreme Judicial Court of this Commonwealth for the time being." So that it will not be strange if, at some future date, our friend should see cause to revise this too impetuous utterance.

OUR readers may be interested in the Statement of Principles prepared by the local founders of the Chicago Ethical Society, among whom were Judge Henry Booth, General I. N. Stiles, and Ernst Prussing. Members, in joining, are understood to give general assent to it, though no subscription is required. At present, there are some seventy members:—

Statement of Principles.

1. We recognize the truth that the well-being of the State in which our interests are so vitally concerned must consist in the well-doing of its individual members. Therefore, we deem it to be our highest duty so to cultivate our faculties and order our lives that we may instruct others in every good way, both by example and precept, and thus, while securing our own happiness, render the highest and best service possible to the State and to our fellow-man.

2. We consider just and rational views of our own relation to the universe in which we are placed to be obviously essential to the proper comprehension of our duty. Where the mental vision is clouded with mists of superstition, no clear conceptions of duty are attainable. Speculative philosophy and dogmatic theology, therefore, should be tested by the teachings of science, reason, and conscience, and stand or fall by them.

3. The forms of dogmatic belief currently taught have ceased to command our intellectual assent or satisfy our moral needs. They obstruct the development both of mind and heart. To find a truer philosophy of life and a larger ideal of duty is one of the tasks that we set before us.

4. As there are general laws governing physical life, upon our obedience to which our physical health is dependent, so there are laws, as yet but imperfectly understood, underlying our moral and intellectual life, on which our moral and intellectual well-being depends. The study of these laws is of the highest importance, both for the well-ordering of our own lives and for enabling us to give others, especially our children, all possible aid in shaping their lives to noble ends.

5. Having constantly before us the spectacle of debasement and misery resulting from the violation of these laws, often through ignorance, and realizing how inadequate the methods heretofore employed to cure these evils have been, as shown by the results, we feel that a sacred duty rests upon us, while we seek to correct our own lives in whatever may be amiss, to do all within our power to raise our less fortunate fellow-men out of the sorrowful conditions into which they have fallen.

THE *Christian Union* thinks the action of the Overseers of Harvard College in refusing to confer the degree of LL.D. on Governor Butler was wise. It says:—

The action of the Overseers must commend itself to all thoughtful men. If a college degree means anything at all,—and of late years it has been doubtful whether it does mean anything in this country,—it means the possession on the part of the men who receive it of those qualities of character and scholarship which entitle one to special distinction. The degradation of the college degree has gone so far that it can only be stopped by some institution of the prominence of Harvard College. There is absolutely nothing in the character or career of Gen. Butler to entitle him to the distinction. There are, on the other hand, many reasons which make him conspicuously unfit for it. . . . If colleges mean anything, they are standing protests against such careers as that of Benjamin F. Butler. To confer a degree upon such a man is not only to bring the distinction into disrepute, but to make aspiring young men who have high ideals of life sceptical of the uses and education of American colleges.

The *Independent*, taking quite a different view of the matter, says:—

If Harvard College had no usage in respect to giving the Law Doctorate to Massachusetts governors, the case would be very different. It has a usage; and the plain requirement of consistency, dignity, and decency, was that Governor Butler should not, for personal reasons, be made an exception thereto. A judge who on the bench forgets that he is acting *officially*, and that his likes or dislikes are not to enter into his action or form any part of its reasons, makes a great mistake; and precisely this mistake in kind has been committed by the Overseers of Harvard College. They have used their official position to strike a blow at the man they dislike, but whom the people of Massachusetts liked well enough to elect to the office of Governor, and, by electing him, to place him in the line of succession to a Law Doctorate by the established usage of the college. . . . That he is a learned and able lawyer everybody understands; and, in this respect, the title would have fitted his qualifications, as it often has not in the case of other governors of Massachusetts. Absolutely nothing will be gained in the way of a practical and effective protest against the man by this out-of-the-way method of attacking him. The attack, in the circumstances as actually existing, is injudicious, childish, undignified, spleenish, unworthy of the calm, the self-possessed, and "roundabout" common sense that we should expect to find in the Overseers of a great college like that of Harvard.

POETRY.

For *The Index*.

A SOLILOQUY.

And what is life? An opening flower,
A waking morn, a passing dream;
A toy that's broken in an hour,
A wave from Lethe's turbid stream,—
Aye, this is life.

And what is death? The closing day;
The night, the grave, the mould, the gloom
To eyes that cannot see the ray
Of beaconing Hope beyond the tomb,—
Yea, this is death.

And when despair is linked with death,
What wonder that we cling with fears
To a fickle, fleeting, feeble breath
That brings us only pain and tears;
For this is life.

Better, we think, the uncertain fear,
The pain, the tears, the trembling dread,
Than the rayless, pathless desert drear,
And the unyielding, narrow bed;
For this is death.

When Hope assures us of a morn,
Night means but sleep and placid rest;
The grave is of its terrors shorn,
And Death a more than welcome guest
That brings eternal life.

THE INDIAN'S HEAVEN.

(From SCHILLER.)

Where he has gone no winter chills,
There never falleth snow;
Spontaneous o'er the happy fields
The golden maize-ears grow;
With birds the tuneful thickets swarm,
With game the forests dim;
In lakes ne'er rough with gale or storm
In shoals the fishes swim.

The Index.

BOSTON, JUNE 28, 1883.

THE INDEX is published every Thursday, at No. 3 Tremont Place, Boston, by an incorporated Board of Trustees nominated by the Free Religious Association. Terms: Three dollars per year, in advance.

THE OBJECTS of THE INDEX may be defined by the objects of the Free Religious Association; namely, "To promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history"; in other words, Righteousness, Brotherhood, and Truth. And it seeks these ends by the method of perfect Liberty of Thought. It would subject the traditional authority of all special religions and alleged revelations—the Christian no less than others—to the judgment of scientific criticism and impartial reason. It would thus seek to emancipate Religion from bondage to ecclesiastical dogmatism and sectarianism, in order that the practical power of religion may be put more effectually to the service of a higher Morality and an improved Social Welfare.

WILLIAM J. POTTER, ... } *Editors.*
BENJAMIN F. UNDERWOOD, ... }

NO WRITERS in THE INDEX, editorial or other, are to be regarded as speaking in behalf of the Free Religious Association as a whole; nor is any writer to be held responsible for any opinions expressed in its columns except his own. For all unsigned editorial matter, B. F. UNDERWOOD, the office editor, is responsible.

ALL communications intended for the paper and all business letters should be addressed to B. F. UNDERWOOD, the Business Manager, 3 Tremont Place, Boston, to whose order all checks and drafts for THE INDEX should be made payable. Letters for Mr. POTTER should be addressed to him, at New Bedford, Mass.

☞ PAPERS are forwarded until an explicit order is received by the publishers to discontinue, and until payment of all arrearages is made. The change of date on the address label is a receipt for renewal, and no other receipt will be sent unless specially requested.

For *The Index.*

SIXTEENTH ANNUAL MEETING

OF THE

FREE RELIGIOUS ASSOCIATION.

(Continued from last week.)

AFTERNOON SESSION.

The Convention reassembled at 3 o'clock. In calling it to order, the President said:—

"The Free Religious Association is interested not only in questions of philosophical thought, but in questions of practical life. It is not always easy to draw the distinction between the two. Often the thought-questions are seen to be very practical ones, and quite as often the practical questions are seen to have a deep philosophy behind them. But it will be admitted that the question we are to consider this afternoon is a practical one, and also, perhaps, that it is not a question likely to be settled without a good deal of clear thinking. Thought, as well as feeling, must help to solve it. The subject is 'Co-operation as a Factor in Social Progress.' It is to be introduced by Mrs. Imogene C. Fales, who has given the question much thought, who also feels deeply upon it, and whom I have now the honor to present to you."

CO-OPERATION AND PROGRESS.

Address by Mrs. Imogene C. Fales.

Progress consists in eradicating evil, and in creating good. The wrongs in social life are deep and many. Those who hold most strenuously to the belief in the innate excellence and goodness of human nature are yet obliged to confess that goodness has in the main been of slow growth, and that, in the formation of character, struggle, heroic self-denial, and long suffering are still necessary.

In the process of development, the feeble and immature require to be educated to a knowledge of good and evil, so as to shun one and embrace the other. As with the individual, so is it with society. Turn whichever way we will, the glaring fact of evil, of sin, of improperly adjusted relations confronts us. We cannot ignore it; neither can we accept it as an unchangeable element in natural law, but simply as the result of energies not yet sufficiently unfolded to act harmoniously.

And as education is the all-important agent for promoting and determining the symmetry of individual life, so in like manner is it to education that we are to look for a mitigation of the ills of social life. Chief among these evils, because it involves all others, is the unequal distribution and concentration of wealth, with its terrible adjunct, poverty, stalking by its side.

Wealth and pauperism are rapidly increasing, the richest cities being also the poorest. From the latest report of the Secretary of State, we learn that in 1831 we had in New York State one pauper to every one hundred and twenty-three active, self-supporting citizen; we now have one pauper to every eighteen.

The accumulation and concentration of *wealth* keep pace with this alarming increase of *poverty*.

Thirty years ago, $5,000,000 were owned by only a few men in the United States. To-day, we have in New York alone more than three hundred men worth over that sum.

One man has made $75,000,000 in fifteen years, another possesses $100,000,000, while the Great Central Pacific Syndicate has realized in the last fifteen years $186,000,000. Hundreds of men own from one to twenty millions, and live in more than Oriental splendor.

If we bear in mind that all exchangeable wealth is the expression of labor, we can easily perceive that this enormous accumulation and concentration of wealth, with its corresponding increase of pauperism, is caused by an imperfect system of distribution which gives to one more than his lawful share, and withholds from others who have not the power to secure it a just compensation for their toil. Excess of energy in one direction, deficiency in another, disease in both.

In all the great cities there is a class to whom books, newspapers, music, all the refining influences of life, are almost unknown; whose days are days of hopeless toil,—striving in vain, Sisyphus like, to lift the crushing weight of poverty.

In the city of Brooklyn there are tailoring establishments employing from five to sixty operatives, chiefly women, under conditions that seem almost incredible. A fair type of these establishments is as follows: A workroom eighteen feet front, fifty feet deep, and eight feet high, occupied by about twenty-seven machine operators with their machines. The ventilation of the room is afforded by cracks in the doors and windows. A small stove keeps the room warm enough to work in, and adds to the poisonous condition of the atmosphere.

The employés are paid partly by piece and partly by time, fourteen hours being considered a fair day's work. In these establishments running under full time, the proprietor makes $50 a week, and averages the year through $25 a week. The best operatives, the hardest workers, make on full time $7 a week, and average $5 the year through. Fair operatives make $5 on full time, and average $4. Slow and sickly operatives, those in whom the forces of life run low, make $4 and average $3. This system is a result of the intense competition in the tailoring business.

A second illustration is found among the sewing girls of the Fourth, Sixth, and Tenth Wards of New York. Their occupation consists in making undergarments. They generally work in little groups of from two to ten, working fourteen hours a day, and in some instances seven days a week. They earn from $3 to $5.50 a week. It is computed that, in the city of New York, this class numbers over fifty thousand souls. In this connection, a case last month came under my personal notice through the intervention of a New York lawyer. Five sewing girls retained him to collect a claim of $37.50 against a dishonest employer.

The testimony in court disclosed that they had worked three weeks, fourteen hours a day, at $2 50 a week apiece. This is at the rate of thirty-six cents a day for a human being.

When we contrast the cost with the means of living, we can easily perceive what a fertile source of immorality is our present system of low wages.

Another class is that of the Bohemian and German cigar-makers of the East Side. This system may justly be considered the most terrible blemish upon American civilization. The mode of existence of these cigar-makers is as follows: They occupy a suite of two or three small rooms in a tenement belonging to their employer. Not alone the man, but the wife and little children are also engaged. Two of their rooms are used for storing tobacco and for sleeping, and the other for cooking, eating, and working. An average family of five persons, including the small children, works from twelve to sixteen hours a day, and earns, as the result of their combined activity, from thirty to forty dollars a month. From the testimony taken by the Executive Committee of the Cigar-makers Union of Chicago, it appears that a number of girls, many of them under age, are employed in making bunches for cigars at $3 a week. In order to earn this sum, they work fifteen hours a day three days in the week, and seventeen the other three,—making an average of sixteen hours a day of steady work for fifty cents per diem.

In the recent report of the Illinois Bureau of Statistics, the fact is brought to light that half the average workingmen of that State cannot earn enough to furnish food for their families, but are compelled to call upon their wives and children to eke out their means of subsistence.

Only a few weeks ago, a society was organized in Philadelphia to protect children under fourteen years of age from the cruelty of working from six o'clock in the evening until six o'clock in the morning at a rate of remuneration that hardly supplied them with food.

These illustrations are only of value as they indicate the inevitable results of competitive industry. These evils are not accidental, they are incidental to the system. What is true here is true in all the ramifications of social life where competition prevails, only varying in its results in proportion to the intensity of the competition.

Under such circumstances, human nature becomes vicious. When men are kept down to the level of the animal by a rate of wages which supplies only the bare necessities of living, when trade compels them to herd and swarm in rooms unfit for use, we have not simply the creation of vice, but we have the destruction of purity, honesty, and all the elements essential to the formation of right character.

Such a condition of affairs, inasmuch as it tends to deteriorate the race, to increase and perpetuate misery, ignorance, and degradation, is essentially evil. When we reflect that manual labor, every form, forms the foundation of the social fabric, we can easily form to ourselves a conception of what the nature of the superstructure must be when the base is composed of such material.

What is needed is a more perfect distribution of the wealth which labor and capital create, as well as a more friendly interest in the welfare of those who compose the foundation of society.

So long as human nature remains the same, so long as it is governed by a narrow selfishness which renders it incapable of perceiving that the highest interests of each and all are best subserved by the application of principles of justice to industrial and social relations,—so long it will not do to leave the relations of capital and labor subject to the caprice of individual benevolence.

The laborer has his rights as well as the capitalist, and these rights are only to be secured under an industrial system which yields him a return corresponding to the value of his work. This can only be accomplished by co-operation, because there is no other way in which the interests of all parts of society can be subserved save through co-operation; no other way in which the finer elements of social life can be drawn out and developed, and the workman stimulated to greater activity, greater economy of habits, and intelligent interest in the work in which he is engaged.

The principle of competition is the law which rules throughout the animal kingdom. It is not simply a law governing human actions, but, under different names and conditions, we perceive its presence in every department of nature. Throughout all life, we find this law appearing in what is called the "struggle for existence." As a result of this "struggle," we have had the "survival of the fittest," those best adapted to develop higher forms of life, the destructive elements incidental to the fact having been necessary to the production of new and higher types. Entering human life under the name of competition,—man warring with man, tribe with tribe, nation with nation,—this law has operated with a corresponding result. Just as the struggle for existence in the animal world was one of the factors in the production of a conscious intelligence, so has the law of competition been one of the forces in the development and elaboration of higher social and political forms as well as higher intellectual, moral, and spiritual characters. But the law which is applicable to, and productive of, good in the animal kingdom, and

Digitized by Google

to man in a lower state of existence, ceases to be beneficial when the race has reached that condition for whose attainment the law was created.

It is immaterial to the argument whether there be design or non-design in the universe. One thing, however, is certain: that, from the first appearance of life upon the globe, nature has worked with the iron law of natural selection toward the evolution of a moral, intellectual, and social being; and the moment that the desired type came into existence the object of that law was reached, and the law itself became subordinate to the higher law it was instrumental in evolving.

Competition is productive of good just so long as it is the means of producing higher forms, forces, and types of life than formerly existed; but when competition, reversing its action, gives us not the best but lower forms of industry; when, through the cheapening of labor, we obtain poorer commodities and prevent the development of our industries, arts, and sciences; when the subtile mechanism of labor is from time to time arrested, and trade stands paralyzed; when it opposes itself to the advance of republican principles, and fosters those of a monarchical nature; when it arrays itself against the spirit of the Christian religion, and breeds hatred instead of love; when it develops gigantic monopolies where the rights of the people are trampled upon,—in short, when it gives us, not the survival of the "fittest," but of those least adapted to perpetuate civilized and Christian principles, then competition as a dominant force is no longer admissible in human relations.

For be it remembered that there is in nature a terrible law of reaction, of darkness as well as of light. The same process which evolves the spring blossom and the summer fruit also brings to life the germs of cholera and yellow fever. There is development downward, retrogression as well as progression.

The law of competition upon which our present industrial system is based is not compatible with the highest development of society. Nearly all the ills of social life arise from the inharmonious relations of capital and labor.

Ignorance is the child of unrequited toil. The struggle for existence compels the children of wage-earners to commence work when they should be at school.

Disease, wretchedness, vice, and crime are the monstrous brood which poverty begets.

Pauperism and crime will never disappear until labor is raised from its present degraded position, and is recognized as an equal factor with capital in the creation of wealth.

If we leave the law of competition to work out the even tenor of its way, there will result in the course of years a condition of society more or less analogous to that of modern China. There will be a dominant class of enormous wealth, power, and influence, a middle class of somewhat larger proportions numerically, and below that a vast horde of swarming children of toil, unto whom heredity, circumstance, and social law deny all hope and amelioration. There will be a plutocracy such as the world has never seen. The franchise will be exclusively an article of traffic. Virtue, eloquence, intellect, manhood will be simply goods in the market of wealth for the highest bidder to buy.

For one palace of to-day there will be fifty under the new *régime*, but for one swarming tenement there will be a thousand.

The usual concomitants will obtain: vice, now concealed, will raise its hydra head, and crime will develop with the increase of luxury. A thousand and one forms of wrong for which to-day we have no name will spring into existence in response to the demand made by a changed and deteriorated social state.

Against this picture rises up the eternal expression of the Golden Rule. The one *régime* involves inequality, injustice, suffering, disease, and death; the other commands equality, justice, health, happiness, and life. Between the two there is no choice for the Christian, the humanitarian, patriot, moralist, and philosopher.

On every side of life to-day, we see not merely various interests, the results of a complex civilization, but we see opposing interests. We see the distinctions between different classes becoming daily more sharply defined.

Year by year the Brahmanical system of caste, a system representative of a lower order of existence, is developing in this Western world. Monopoly, the kingly despot of wealth, is laying its heavy hand on the throat of our industries and checking the free expression of our activities. There are unmistakable indications of coming trouble. Silently but surely the nation is drifting away from the moorings of republican principles. The demand of the times is a more complete protection and upbuilding of the people in contradistinction to that of the few. As Victor Hugo said, "Yes, the peoples are dead, but the people is being born." This demand cannot, however, be supplied so long as society is controlled by a system in which a minority exert for their own aggrandizement an absolute control over the lives, fortunes, and happiness of the public at large.

There can be no symmetrical development of national character while competition is the corner-stone of the nation. A true republicanism requires not alone equality, but equal opportunities; not equal powers, but equal scope wherein to exert those powers; not concentration, but distribution.

On the other hand, despotism implies that the many exist for the benefit of the few; hence the concentration of wealth, power, social, political, and religious privileges in the hands of a restricted class, and a consequent deprivation and suffering among the many, constitute a despotism irrespective of its political form. The danger which threatens us to-day is not a recurrence to monarchical institutions, but an insidious and slow reversal to a lower form of life, one in which plutocracy with its accompaniment, immorality and political corruption, are the leading characteristics.

This is only to be averted by such a change in our trade system as will present on the one side the undue concentration of wealth, and on the other facilitate its equitable distribution and enjoyment.

If there be a lesson taught by history it is that, when nations reach the zenith of their power, their first step toward decay and death is in the development of a plutocracy with its attendant evils. Is our own nation to be added to the long list of dead commonwealths? Cannot we, profiting by the experience of the race, antagonize and conquer this tendency which already manifests itself in such alarming proportions?

We have reached that stage in our development where wealth and power are becoming vested rights in fact, if not in law; while poverty is daily assuming more and more terrible forms.

On the one side there are the idleness, plethora, and disease of great wealth; on the other there are the want, the over-exertion, and disease of intense poverty.

The remedy is to apply the corrective principle of co-operation, whereby a proper distribution of wealth and power may be effected.

Underlying our civilization we have the solemn and supreme affirmation that we all stand in one common relation,—that of children of the universal Father, who causeth "His sun to shine upon the just and the unjust."

In the Declaration of Independence, we have the affirmation that all men are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness. This latter statement derives its authority from the former, that all men are brethren, thus summing up the whole family of humanity, and making it one organic body. It is one, because it has sprung from one root,—God

Not only is man related to man in the bonds and sympathy of a common humanity, but, in the statement that that relationship exists by virtue of a universal one, we have man placed in correspondence with everything beneath and everything above him.

Nor is this doctrine sustained by merely religious and local authority. It is borne out by science and by history as well. For science, in tracing matter downward from organic to inorganic, thence to its nebulous condition where it wholly eludes the senses and becomes one with force or energy, shows us under all varying manifestations one bond of relation connecting the whole. It reaffirms and explains the unity of life, the brotherhood of the race, the identity of human interests. It shows us that all of life, from the atom to man, is related. Of the nature of that supreme energy from which the material universe was evolved, science does not affirm. It only declares that the sum of energy is always the same, and that whatever form of grandeur nature, unfolding in man, may assume, it can never be greater than its source, and must be in correspondence with it.

The question that vitally concerns us is, Must there always exist an antagonism between religious and republican principles and social life? Must religion forever chiefly consist in creed and doctrine, without having its correlative in conduct? Must the great fact of the unity of life, of the brotherhood of the race, never find an appropriate channel of expression? Is there no law which, when applied to social economy, will realize and express in all that pertains to the welfare of man the divine law of relation and obligation?

There is such a law. There is a principle which, when rightly applied, will banish disorder and unite in mutual helpfulness the whole human race. That principle is co-operation, which bears the same relation to trade that the general law of interdependence does to sociology, and the Golden Rule does to morals.

For co-operation is, after all, naught but the highest expression of that tendency which separates man from the animal world, and which in its outflowering has made all human society and civilization. Probably no weaker animal dwelt in the far-off period than the primitive man. Singly, he was vastly inferior to many of his contemporaries; combined, co-operating, he was their master, and in the long and weary years conquered and expelled all of his brute antagonists.

It was co-operation in later years that built the patriarchal family into the tribe, and so rendered possible man's first conquest over nature. It was co-operation that reared the great edifices of the world. It was co-operation that first brought together moral principles from material facts, and so made the great roll of names that culminates in Christ.

It was co-operation that kept learning alive in the dark centuries of the Christian era, and it is co-operation, above all things, that has made modern science, and so placed our age so immeasurably higher than all the preceding centuries.

Its application in morals has been the secret of the success of all the great religions. Stammered by Confucius, enunciated by Zoroaster, pleaded by Buddha, thundered by Mohammed, and commanded by Christ, it has transformed the daily life of the world. If it has upreared science, if it underlies society and civilization, if it vitalizes and glorifies all religion, let us carry it one step farther, where it will meet the most resistance, but where it is most needed, let us extend it to the trade systems of the world.

For co-operation is not to be restricted to industrial relations of whatever nature. It exists wherever men work together for their common good and that of others. The principle evolves from thought and feeling, where it is boundless, to definite laws and modes of expression.

In trade the law is the association of capital and labor upon the terms of justice. This principle has not yet entered mercantile life. Nevertheless, into trade it must come.

Our great manufacturing establishments conduct their affairs as they were conducted two hundred years ago, obtaining labor at the lowest rate so as to reduce expenses. No account is taken of the growth of liberal ideas and institutions, of the spread of republican and Christian principles, and the conversion of ignorant, unreflecting men into thoughtful, intelligent workers. The very spirit of the age is ignored: its marvellous inventions and discoveries, its mechanical appliances which are revolutionizing industry and changing civilization, are still regarded as compatible with industrial servitude.

Manufacturers and employers of labor must be brought to perceive that changed conditions in social life necessitate a corresponding change in industrial life; that a highly advanced civilization requires a stable basis of action for further development; and that this stable basis can only be provided through the harmonious relations of capital and labor,—through labor, apart from its wages, being allowed to participate in the profits of the business in which it is engaged. In this way only can republican and Christian principles find expression. In this way only can wealth be properly distributed and the encroachments of organized capital upon the rights of the people be arrested.

"There are those who regard it," says J. E. Cairnes, in his treatise on *Social and Political Economy*, "as a

Digitized by Google

law of industrial development that capital should ever become more and more aggregated in a few hands; and that, as a consequence of this, the position of the laborer in the future must remain substantially what it is at present in the more advanced industrial countries, that of a recipient of wages merely. The economic data for its determination have not yet been fully worked out; but the permanent maintenance of a *régime* such as is contemplated, co-existing with a progressive industry, can only issue in one result,—a constant exaggeration of those features already beginning to mark so unpleasantly the aspect of our social state; namely, a harsh separation of classes, combined with those glaring inequalities in the distribution of wealth which most people will agree are among the chief elements of our social instability."

The time has come when for the sake of national prosperity, if for no higher reason, that the principle of justice in human relations should be proclaimed. Under the economic rule which regulates wages in accordance with the law of demand and supply, the average rate of wages of the wage-earning classes has been, and still is, kept at that point which yields them only a bare, miserable subsistence.

The relative value of the brain and hands is not fairly or rightly expressed in the relative profits between employer and employed. The workman should have his share in the profits of the business, and those profits should be in proportion to the success of the business and his activity and capability.

"This plan of industrial partnership," says Mill, "has been found of admirable efficacy, both in England and elsewhere: the admission of the whole body of laborers to a participation in the profits, by distributing among all who share in the work—in the form of a percentage upon their earnings—the whole or a fixed portion of the gains, after a certain remuneration has been allowed the capitalists."

The direct advantages to be derived from this system of industry are that each workman has a personal interest in his work. He will labor with greater skill, foresight, and economy, so as to increase the profits of the business.

The moral results of co-operation are no less obvious. It is the fulfilment of that law which was proclaimed eighteen centuries ago, "Thou shalt love thy neighbor as thyself," which economically expressed is, Thou shalt make thy neighbors' interests identical with thine own.

Up to the present time, we have not regarded this law in its full significance, that of an economic as well as religious principle. A careful analysis will show its deep and subtile meaning.

The human family is one; its interests are bound and linked together. There is the same absolute interdependence of all the parts of the social organism as in that of the individual. The law governing one governs also the other; and as one member of the body cannot suffer without every part being more or less afflicted, so in like manner one portion of the human race cannot be plunged in the slough of misery without that misery affecting directly or indirectly the entire human family.

Who can trace the subtile nerves of sympathy which engirt the world? A great fire in Chicago or Milwaukee carries desolation to hundreds of thousands, and sorrow to all. The failure of a bank, through the incapacity or dishonesty of one, implies ruin and wretchedness to many. The destruction of corn and wheat in Kansas and Iowa means languishing trade in New York and idle ships on the East River.

Typhoid fever in the squalid hovel reaches up to the gilded palace.

The poison germs in the reeking tenement find their way to all grades of life. Low, monstrous forms of vice and brutality among the vicious and brutal breed vice and crime in less revolting forms among the educated and refined. Yellow fever in the uncleansed streets of the South scatters its germs broadcast for Northern incubation. Cholera in Asia crosses the ocean, and with rapid step decimates the Western world. There is no law in nature more absolute and active than that of interdependence.

Innumerable instances might be cited to show that all classes of mankind are related, and that a true economy necessitates the application of the Golden Rule to all the affairs of life.

If a nation is not symmetrically organized, if the people are badly nourished and of stunted growth, if they are characterized by feebleness, immaturity, and low animal propensities, and if the greater part of their energy is used in supplying the demands of the more cultured portion of the community, then the superstructure of national life, the wealth, the culture, the aristocracy of a nation, whether kingly or democratic, will inevitably, and when least expected, show signs of approaching dissolution.

We can no more exhaust the life forces of a nation by leaving its people to struggle endlessly with those twin monsters, poverty and ignorance, and all their terrible accessories, and yet continue to prosper, than we can exhaust the life forces of our own bodies by insufficient care and nourishment, and yet maintain the royalty of thought and the equilibrium of health.

History shows us three distinct stages of development in the condition of the working class: First, a slave bought and sold like any article of merchandise. Passing from slavery into serfdom, he is no longer bought and sold, but his position is that of a menial, and labor is held in utter contempt. During the feudal period, political power was based upon property qualification, and legislation was wholly in the interests of the few. The next marked advance was where we find the laborer to-day master of himself, and, to a limited extent, of his action, but without the power to free himself from the thraldom of the law of demand and supply in its regulation of the rate of wages.

The next period is before us, when labor is to be recognized as an equal factor with capital in the creation of wealth. Then the last lingering remnant of slavery will disappear, and labor will stand in all its native dignity.

> "And the smith complains to the anvil's song,
> Complains of the years he has toiled and pined;
> For the priest and the ruler are swift to wrong,
> And the mills of God are slow to grind.
>
> "But a clear, keen voice comes over the sea,
> It is piercing the gloom of the waning night:
> Time was, time is, and time shall be
> When John o' the smithy shall come by his right.
>
> "And they who have forged the pitiless round,
> Which has pressed him hard in body and soul,
> Shall perish from earth when the grist is ground,
> And the Mighty Miller shall claim his toll."

It is simply a question of time and education. Just as surely as barbarism has given way and is disappearing before the refining forces of civilization; just as surely as the workman has ascended, step by step, from slavery and serfdom to the ownership of himself,—just so surely will he attain to the ownership of his labor, rising above the law of supply and demand by having a pecuniary interest in his work. And, as every advance has been characterized by greater intelligence and higher moral attributes, so will it be in a still greater degree when co-operative industry and a just distribution of wealth shall have superseded our present competitive system.

In the more intimate associations which such a system of industry necessitates, many objectionable features characteristic of undevelopment will slowly disappear. For, if vice and disease are contagious, health, happiness, and goodness are no less so. The thought of the endlessness of poverty, with its terrible adjuncts of vice and crime, is not in harmony with the progressive tendencies of nature. Class discriminations, the oppression of the poor and needy by the rich and powerful, the monopoly of the fruits of labor, are not in harmony with the moral forces which should govern human life. The law of the survival of the strongest through the "struggle for existence,"—let it be operative on a plane of life where it is productive of good, but let the higher law of justice, of love, govern in all the relations of life.

That higher law of co-operation, of associated interests, does not come to destroy individual action, but to augment it. It does not come to sweep away private property, the result of years of toil and endurance, but to increase that property by extending larger facilities to all. It does not come to destroy or subvert family life,—from which civilization started, and on which it rests,—but to broaden, beautify, enrich, and ennoble it, so that existence may be brighter, sweeter, purer, easier for all.

Co-operation comes to increase individual action by a closer combination of all human forces, for the largest individualism is only attainable through united action. In unity there is strength.

Co-operation is the organization of individual actions and industries for the greatest good of the whole, and this is accomplished through the greater good of all the parts.

Human nature, in so far as it contains the animal quality of inertia, dislikes innovation.

> "Let us alone, it says,
> Let what is broken so remain;
> The Gods are hard to reconcile,
> 'Tis hard to settle order once again."

Every new and higher doctrine succeeds only after antagonism and battle.

In the main, the greater the value of any new doctrine, the greater the hostility it excites.

Inasmuch as antagonism to that which is true merely accelerates the reception of its truth, and as errors in the statement of a truth give that antagonism form and meaning, it is necessary to study out well the entire theory of co-operation, to learn its relation to the past, also its principles and mode of application, and what evils are to be guarded against in its introduction.

We are leaving the landmarks of the past behind us,—savagery, barbarism, feudalism, slavery. We are preparing to enter the yet untrodden field of human equality, where all men will have an equal opportunity to life, liberty, and happiness; where the rights of the lowliest and poorest, as children of God, are to be secured and protected.

This mighty movement is in various ways pressing forward toward its fulfilment. The duty, the necessity of the hour is to institute such reformatory measures as that the coming change may from the first be a beneficial one.

Although in the past, and up to the present hour, it has been necessary that the fact of human brotherhood should to a great extent find no proper channel of expression, yet just in proportion to the nonfulfilment of the law have individual and national life suffered impairment, retrogression, decay, and death. Happiness and life are in direct proportion to our ability to conform to the written and unwritten laws of God in nature.

CORRESPONDENCE.

CONSOLATIONS OF A NOBLE FAITH.

Editors of The Index:—

To an article in *The Index* of June 7, depreciating the "Consolations of Religion," as it appears in the effect of a certain theology or faith, I wish to add the following for its completion, with your permission.

Neither theology nor any other thought or set of thoughts is of any consequence, except so far as it is believed; and then it may be powerful for good or evil. Thus, faith is the mightiest of finite forces. The eleventh chapter of Hebrews is but a canto of an endless poem, which might be sung in praise of the power of faith, and every word be true. Faith is the necessary and universal spur to action, except the desperate and merely reflexive. Without faith, calm and patient waiting and mental repose while momentous events, which much concern us, are pending, can never be had.

The effect of any faith will vary according to its nature. Its child must be born in its own likeness. According to the seed will be in kind the harvest, whether it be good or evil.

To some minds, therefore, pure materialism and atheism may have some consolation relative to a future life. Such a faith has nothing to fear just because it has nothing to hope. It contains no Minos in any form, with his sentence of retribution. The antipodal faith of pantheism will have a similar effect. Emerson was quite happy from a fortunate birth, an even temperament, and a growing fame, and a strong faith in a vague theory of optimism which puts all things unconsciously on a grand march toward excellence and dignity.

On the other hand, Christians who believe in the eternal damnation of the vast majority of mankind, of all the heathen, and most of the people in Christian nations, have good grounds for a degree of constant sadness and fear. If the number saved is so small, why should they be saved? And what assurance have they or can they have? They may well doubt, and the doubt is an arrow which transfixes the heart. They need to make assurance doubly sure, lest at last they may be cast away, contrary to their expectations, which is said to be the doom of "many." Faith in this cruel and blighting dogma, a "doctrine of devils," has for many ages been a source of in-

Digitized by Google

numerable woes to mankind, remaking men a prey to priestcraft and the slaves of despots colleagued with priests. The Christian world has hence been an Enceladus under the burning mountain. But the mountain is crumbling and paling its fires, and the oppressed giant is slowly struggling into freedom. When this is attained, spiritual gloom will pass away, except where moral perversity holds it in just detention; and the consolations of religion will be as sure and perfect as the effect of dews and showers on the thirsty herbage.

In the mean while, this happy condition is and has been enjoyed by millions of Christians who have attained this freedom for themselves. This is conspicuous as the general experience of the devout and good among the people called Methodists (and not by any means confined to them), who do not believe usually in the general perdition of the heathen or in the perdition of any one who has not intrinsically doomed himself by his rejection of known truth and neglect of known duty. Such people view God as infinitely better and more lovely than the best of men and women, and consider themselves assuredly as his children; and that, therefore, they are safe and provided for as concerns eternity, to which all the present is some way, though often painfully, made ancillary. In this faith, they have a boundless scope for every faculty of their nature, and a prospect of the future which in every particular is inspiring, except the self ruin of wilful and incorrigible sinners. In this faith, therefore, there is a consolation and stimulus and moral incentive of the strongest kind and of the highest order; for it is the belief in the least possible evil for any and the highest possible good for all, which good is conspicuously manifest in the state and experience of those who conform to the highest moral and spiritual in perfect devotion.

With such a view of God and his government,—a view which we hold to be essentially Christian,—it is not true that the effect of trust in God is offset by the effect of the fear of God. "There is nothing to fear, except by those who know they deserve to suffer, and cannot therefore escape it. This is not a belief in a superintending Providence that *arbitrarily* decides the issues of life." God's providence is the action of eternal rational moral necessity, by which nature itself is made pregnant with an immutable, intelligent, and moral purpose in its action and effect, however unconscious of its working and destiny. The subject of this faith may, like other people, have to suffer and to feel and exhibit the effects of nervous derangement and depression which no religious consolation can wholly conquer or prevent; but the sweetest and most refreshing draught that ever touches his fervid lips is that which comes up, clear and cold and sparkling, from these hidden and eternal depths, the well of life, which this faith ever digs for all true believers. W. I. GILL.

"BY THEIR FRUITS YE SHALL KNOW THEM."

Editors of The Index:—

The fruits of Christian theology have not always been sweet or a blessing to mankind. The fruits of Christian religion—its human sentiment—have not, in the main, been so sour. And, from some cause,—possibly from the tree having received a few scientific grafts during the past fifty years,—we find it at present bearing much fruit that may be pronounced "very good."

I wish to call the attention of Liberal organizations and ethical societies to a kind of work that is being done by the Young Women's Christian Association of New York, and which needs to be taken up in all large cities. It is the teaching of some special business to intelligent women who find themselves obliged to earn their own living. The association before mentioned pays competent teachers to give thorough and complete instruction to classes of girls, over eighteen years of age, in penmanship, book-keeping, stenography, type-writing, drawing, and retouching of negatives; each girl attending the class which teaches the art she desires to learn. No girl of good character is excluded. I have had Protestants of various sects, Roman Catholics, and Jews in the stenographic classes which I have taught here for the past four years.

Thus, hundreds of young girls are yearly provided with the means of subsistence; for the association has also an employment bureau where pupils and others are provided with places as speedily as possible. It has, in addition, a lending library, and a reading-room where are to be found all the New York dailies, standard weeklies, and the best magazines.

The business management of the institution is admirable, no debts overhanging, though the efficiency of this excellent organization is much hindered by the want of money to enlarge its building and perfect its work.

It is, however, conducted entirely by women; and women know how to do the best that can be done when, not having the means, they cannot do as they would.

Now, what city will be the first to organize and carry on for ten years a *Young Women's Liberal Association?* Let Liberals and Christians cease detraction, and rather "provoke one another to good works."

ELIZA B. BURNZ.

A SAMPLE OF DR. DURYEA'S PREACHING TO YOUNG LADIES.

Editors of The Index:—

At Andover, June 10, Rev. J. T. Duryea, LL.D., in his baccalaureate address before the young ladies of the Abbott Academy, took faith as the key-note of his address, and gave agnostics a pretty hard rap by referring to them as "developed fools." He took a voyage at sea as a parallel to the voyage of life, and said, "A chart and compass are the only safeguards against disaster: you must first be sure of your chart and your course." That will do to preach to young ladies, but it wouldn't do to tell sailors. How many "*developed fools*," even, do you believe would start on a voyage to sea in a ship full of charts and compasses, without an experienced captain, mate, pilot, and crew who, individually or collectively, had been over the course once at least? If merchants had been sending ships for years over the ocean to an unknown country, and none of them had ever returned or been heard from, wouldn't a spirit of agnosticism begin to show itself? Wouldn't the younger merchants begin to question, and doubt whether the old chronicles from which their fathers had derived their courses were not the result of some very vivid imaginings of some human beings in the remote past?

Faith—the substance of things hoped for, but not seen—is an imaginary line that theologians like to draw, in their minds, alongside of a line of facts, and call it a parallel. By the way, is it gentlemanly—even if it be Christianlike—to call a person a fool, because he doesn't think just as you do. What is the difference, if any, between a "developed fool" and a natural-born one? Here is my idea of the difference: A developed fool is one who has *found out* that he knows but a very little outside the verities of life, while a natural-born one is one who hasn't. D. F.

THE SLANDER REPEATED.

Editors of The Index:—

I just read in the daily *Evening Post* of Hartford, Conn., June 19, an article on the nomination of candidates for governor of Ohio, in which I read the following: "Judge Hoadly possesses one qualification which will not be of great advantage to him in an Ohio campaign. He is an infidel of the rankest sort, one of the vice-presidents of the notorious society which issues *The Index*, which is classified as that vilest of religious-hating and society-degrading sheets." There is bigotry and intolerance and a violation of the command, "Thou shalt not bear false witness against thy neighbor."

For the right, D. B. HALE.

COLLINSVILLE, CONN., June 20, 1883.

NOTE OF CORRECTION.

Editors of The Index:—

I was in error in thinking that I had "passed in review" *all* the extant writers of the first ten centuries. I find I have a second-hand reference to Julius Capitolinus, whom I could not get sight of. This implies that there may be many others whom I do not know. I shall not, however, overstate in reckoning the number of those whom I have either studied or cursorily examined at about five hundred. J. H. ALLEN.

JUDGE HOADLY AND "THE INDEX."

Mr. Stark informs us that the following communication has been "seething in the cauldron of the *Leader* editorial rooms" for four days, but that *Leader* magnanimity "can hardly be expected to rise to the height of even tardy amends for its gross injustice." He further writes: "Of course I make no political or theological controversy with that paper. Its 'God-fearing and Christian,' its Republican and temperance zeal is unquestioned and unquestionable, and with many will no doubt cover a multitude of sins; but, to the question whether the juster estimate of the real sanctities of private reputation, the clearer notions of social and civil rights, and the natural moralities of temperate and truthful speech would not gladly exchange all that partisanship and cant for improved manners, it seems to me there can be but one answer." We append the communication:—

To the Cleveland Leader:—

A feeling as of personal injustice and outrage constrains me to remonstrate at your words of the 16th in regard to George Hoadly and *The Index*. From the very first number, now for thirteen years, I have been a close reader of that paper. During all that time, the very foremost men and women of our time have been its leading and conspicuous supporters,—foremost, I mean, in moral and intellectual courage, worth, and culture. Not in any spirit of partiality or eulogy merely, but weighing my words to fit the fact, I say, for devotion to what is true and pure and just, for seriousness, moral elevation, for unpartisan championship of all the high interests of society, as well as for high literary quality, *The Index* has no peer in the periodical literature of our age and tongue.

Hon. George Hoadly is one of the vice-presidents of the association whose organ *The Index* is, and he may well be proud of his associates. They are, so far as I know, true men and women of exceptional worth. Not to burden you with the long list, from its foundation to the day of his death Emerson was one of them. As I understand it, this was the only voluntary association that for many years he had given the weight of his great name to, and that not by good-natured yielding to solicitation, but by hearty sympathy with its aims and methods, and co-operation in its work.

The "God-fearing and Christian people of Ohio" are not "smirched" by the candidacy of Judge Hoadly, nor would be by his election on any ground of his personal character, so far as yet appears; but the conduct of the Republican campaign by such intemperate and immoral means cannot but hurt our party prospects, and, what is worse, lower the tone of the public morals.

A frank withdrawal of the slanderous imputation and apology for your rash mistake would be matter of profound gratification and thanks to at least one Republican and friend. E. D. STARK.

June 18, 1883.

—*Cleveland Plaindealer, June 23.*

BOOK NOTICES.

AUTOBIOGRAPHY OF BENJAMIN HALLOWELL. Written at the Request of his Daughter, Caroline H. Miller, for his Children and Grandchildren, in the Seventy-sixth Year of his Life. Philadelphia: Friends' Book Association. 1020 Arch Street.

We began the perusal of this book—dedicated as it is "To All who feel that they are the better for his having lived," and which the author's "Prefatory Note" explains "is a true picture of me and of my then condition; that they [his descendants] therefore may study it as representing the environments that have evolved my character, and the '*Me*' that makes this record"—with an expectation of finding little of general interest in a life thus written for a domestic purpose. But we have been most agreeably disappointed,—not in the matter of the commonplace incidents of the life here portrayed, but in the spirit of the man himself. No one, whatever his creed or unbelief, can arise from the perusal of this volume without feeling benefited by contact with so sincere a soul, or without finding his faith in human goodness strengthened or aroused. It is the autobiography of a singularly conscientious, pure-minded, and single-hearted man, who accepted misfortunes unrepiningly, and made the best of his opportunities. Although for the greater part of his life a teacher of others, yet he was not a deep thinker or given much to speculative philosophizing; but, better than these, he was an honest, honorable, upright man, wonderfully broad in his views for a man of such intense faith in the "inner light." It is surprising to note the singular combination in his character of almost childlike simplicity with shrewd business tact and almost intuitive comprehension of human nature as displayed in the varied events of his laborious and earnest life. In his plain statement of the facts of his life, though there is apparent no attempt at vainglorious self-laudation over his often hard-won victories over self and circumstances, yet there can be perceived an honest expression of satisfaction at every surmounted difficulty. Never

Digitized by Google

does he attempt to preach to others sermons from the texts supplied by his own life-lessons; but the constant self-questioning which he exhibits, and his quiet acceptance of all evils as a part of the necessary discipline of life are more potent for good than pages of sermonizing directed at the faults of others. The book is more healthful in tone and inspiring than anything we have read in the autobiographical line since we read the journal of John Woolman, another Quaker as pure-minded and earnest as Benjamin Hallowell. Copious addenda accompany the autobiography, including some plain statements in regard to his religious belief, several of his favorite poems, and letters of sincere condolence addressed to his family on the occasion of his death, by many well-known thinkers and writers.

DOCTOR CLAUDIUS. A True Story. By F. Marion Crawford, author of *Mr. Isaacs*. Price $1. New York: MacMillan & Co. For sale by Lockwood, Brooks & Co., Boston.

The novel-reading public, not having been of late years treated to anything exceptionally new in the way of romance, has become thereby very hungry for anything savoring of a new departure in romantic literature. Mr. Crawford, in *Mr. Isaacs*, catered so far to this hungry longing as to give to his heroes new environments, incentives, and purposes. In *Doctor Claudius* he follows the same idea in a lesser degree. Yachting and love-making have become identified in story-readers' minds, through the efforts of Black and others. In addition to this element, Mr. Crawford adds in *Doctor Claudius* his specialty of an *olla podrida* of nationalities, as in *Mr. Isaacs*. We have a German doctor, an English duke and his sister, an American lady, countess by marriage to a Russian, a Scotch duenna, and a calculating Yankee millionaire. In spite of an ill-sustained plot, the interest never flags, and "Dr. Claudius" himself is a well-drawn, well-sustained character.

THE *North American Review* for July is as wide-awake to current events and discussions as any previous number. This magazine makes a specialty of the discussion of live issues by live men. In this number we have the opinion of President J. H. Seelye, of Amherst College, as to "Dynamite as a Factor in Civilization"; Lieut-Gen. Phil. Sheridan's description of "The Last Days of the Rebellion"; W. S. Holman, member of Congress, gives an account of "The Increase of Public Expenditures"; Rev. O. B. Frothingham has an able article on "Democracy and Moral Progress"; Z. R. Brockway has something to say in regard to "Needed Reforms in Prison Management"; Thomas S. Perry writes of "Science and the Imagination"; George E. Waring, Jr., gives some timely hints as to "Sanitary Drainage," and Elbridge I. Gerry writes on "Cruelty to Children." The "Symposium" which closes this number is on "Church Attendance," in which only one "Non-Church Goer" takes the field against three reverends, and those not the best known.

PERSONAL ITEMS.

MR. M. J. SAVAGE sails for Europe next Friday, to be absent from this country till September.

HENRY DOTY MAXSON (formerly of Milwaukee) is to take the Chair of History and Political Economy in the Normal School at Whitewater, Wis.

PROF. WILLIAM D. WHITNEY, of New Haven, Conn., has been elected an associate of the Lyncean Society of Rome, in recognition of his services in the field of comparative philology.

EMPEROR WILLIAM of Prussia has set apart November 11 and 12 of this year for the celebration of the four hundredth anniversary of the birth of Luther. It is expected that this anniversary will be very generally observed by the Protestant churches of all countries. It is thus that Time takes his revenges. So, once again, it comes to pass that

"The hooting mob of yesterday in silent awe return
To glean up the scattered ashes into History's golden urn."

IN Dr. Edward Lasker, this country receives as a visitor one of the prominent statesmen of Germany, and one of the most learned lawyers of Berlin. Like nearly all politicians of eminence in the empire, Dr. Lasker failed so often to agree with Prince Bismarck that he finally withdrew from active connection with his party, the National Liberals. There seems to be no immediate prospect that his party will be able to profit by his leadership, and Dr. Lasker, therefore, will spend considerable time in the United States. The object of his visit is pleasure and the study of our institutions.

NO EVENT in recent times has called out such enthusiasm in England as the commemoration of the completion of John Bright's twenty-five years' service as representative of Birmingham in Parliament. The great Commoner passed through miles of crowded people, and the cheering was hearty and incessant. Americans have reason to feel unusual interest and satisfaction in this recognition by the English people of John Bright's service. In the dark days of the Rebellion, when eminent Englishmen had only words of doubt and discouragement for us as a nation, Mr. Bright said: "Mr. Gladstone believes the cause of the North to be hopeless, and that their enterprise cannot succeed. . . . I have another and a far brighter vision before my gaze. It may be a vision, but I will cherish it. I see one vast confederation stretching from the frozen North in an unbroken line to the glowing South, and from the wild billows of the Atlantic, westward, to the calmer waters of the Pacific Main. And I see one people and one language, and one law and one faith, and over all that wide continent the home of freedom and a refuge for the oppressed of every race and of every clime."

OF Judge Hoadly, who was nominated last Wednesday by the Democratic Convention of Ohio, for governor, the New York *Herald* of Friday said: "He is an able and honest man, and a Democrat in the true sense of that word. We make haste to say this of him, because before forty-eight hours are over he will probably discover himself to be a villain of the deepest dye." The New York *World* has this to say: "In nominating Judge Hoadly, the Democratic Convention of Ohio did at once the wisest and the most liberal thing it has done in many years. Wisest, because George Hoadly will receive more liberal independent Republican votes than any other Democrat could possibly receive. The most liberal, because, until 1872, Judge Hoadly was a Republican, and there were older Democrats of merit who aspired to the honor. Thus, the Democratic Convention showed a broad, generous spirit in taking up a man not entitled to the nomination by party rules and party service. And it showed very good sense in taking up the man who is able and pure and is sure to receive the largest possible German vote in Cincinnati, Cleveland, and other cities. . . . Judge Hoadly is a man of fine ability, winning manners, pure character, and a clever combination of wit, brain, and pluck. He will make a splendid canvass. From now till the first week of October he will be one of the most prominent figures in American politics. Should he be elected by a very decided majority, and in a vote as full, for instance, as that cast in the last presidential election, he will become a presidential possibility."

REV. JOHN WILLIAM COLENSO, Bishop of Natal, died last week, after a brief illness, in his seventieth year. He was of Cornish birth, educated at Cambridge, made Bishop of Natal in 1853, and published his famous work, *The Pentateuch and the Book of Joshua Critically Examined*, in 1862. He had long before won distinction as a scholar, and as author of works on arithmetic and algebra which took rank as standard text-books and are still in use in England. His book on the Pentateuch called down upon his head the thunders of the Church. Both houses of the convocation of the Province of Canterbury condemned the book, and the Bishop of Cape Town, as Metropolitan, declared its author deposed from his see. This deposition was pronounced void by the Privy Council, on the ground that the crown had no power to constitute a bishopric or confer coercive jurisdiction within any colony possessing an independent legislature. The Council of Colonial Bishops tried to starve out Colenso by refusing to pay him his income; but Lord Romilly, Master of the Rolls, ordered it paid, with arrears and interest. In England, Colenso had many friends; and on his visit in 1865 to see to his rights, $16,500 was given him as a token of sympathy and respect. He published a new chapter of his work on the Pentateuch in 1872, and more on the same subject in 1873, a volume of sermons, a Zulu grammar and a Zulu dictionary, and a translation into that tongue of the New Testament and other parts of the Bible, and the prayer-book, besides many educational works for the Zulus, of whom he was indeed a good friend.

THE FREE RELIGIOUS ASSOCIATION

was organized in 1867. Though having its headquarters in Boston, it is a national organization, and has members and officers in various States of the Union. It has the following

CONSTITUTION.

I. This Organization shall be called the Free Religious Association, its objects being to promote the practical interests of pure religion, to increase fellowship in the spirit, and to encourage the scientific study of man's religious nature and history; and to this end all persons interested in these objects are cordially invited to its membership.

II. Membership in this Association shall leave each individual responsible for his own opinions alone, and affect in no degree his relations to other associations; and nothing in the name or Constitution of the Association shall ever be construed as limiting membership by any test of speculative opinion or belief,—or as defining the position of the Association, collectively considered, with reference to any such opinion or belief,—or as interfering, in any other way, with that absolute freedom of thought and expression which is the natural right of every rational being. Any person desiring to coöperate with the Association shall be considered a member, with full right to speak in its meetings; but an annual contribution of one dollar shall be necessary to give a title to vote,—provided, also, that those thus entitled may at any time confer the privilege of voting upon the whole assembly, on questions not pertaining to the management of business.

III. The officers of the Association shall be a President, twelve Vice-Presidents, a Secretary, an Assistant Secretary, a Treasurer, and twelve Directors. They shall be chosen by ballot at the annual meeting of the Association; and the President, Vice-Presidents, Secretaries, and Treasurer shall hold their offices for one year, or until their successors be chosen. The Directors shall be chosen for four years, and, at the expiration of that term, shall not be eligible for reëlection until after two years. One fourth of their number shall be chosen annually; but, at the annual meeting of 1882, the full number of twelve shall be chosen in sections of three respectively for one, two, three, and four years. The President, Secretaries, Treasurer, and Directors shall together constitute an Executive Committee, intrusted with all the business and interests of the Association in the interim of its meetings. They shall have power to fill any vacancies that may occur in their number, or in the list of Vice-Presidents, between any two annual meetings. Six members of the Executive Committee shall constitute a quorum.

IV. The Annual Meeting of the Association shall be held in the city of Boston, on Thursday of what is known as "Anniversary Week," at such place and with such sessions as the Executive Committee may appoint, of which at least one month's previous notice shall be publicly given. Other meetings and conventions may be called by the Committee, according to their judgment, at such times and places as may seem to them desirable.

V. These Articles may be amended at any Annual Meeting of the Association, by a majority vote of the members present, provided public notice of the amendment has been given with the call for the meeting.

Officers elected for the year 1882-83:—

PRESIDENT.
WILLIAM J. POTTER, New Bedford, Mass.

VICE-PRESIDENTS.
OCTAVIUS B. FROTHINGHAM, Boston, Mass.
FELIX ADLER, New York City.
GEORGE W. CURTIS, Staten Island, N.Y.
EDWARD L. YOUMANS, New York City.
FREDERICK SCHUENEMANN-POTT, San Francisco, Cal.
THOMAS WENTWORTH HIGGINSON, Cambridge, Mass.
ELIZABETH B. CHASE, Providence, R.I.
GEORGE HOADLY, Cincinnati, O.
NATHANIEL HOLMES, St. Louis, Mo.
ROWLAND G. HAZARD, Peacedale, R.I.
BERNHARD FELSENTHAL, Chicago, Ill.
ANNIE L. DIGGS, Lawrence, Kansas.

SECRETARY.
FREDERICK A. HINCKLEY, Providence, R.I.

ASSISTANT-SECRETARY.
CHAS. H. CODMAN, Boston, Mass.

TREASURER.
JOHN C. HAYNES, 451 Washington St., Boston, Mass.

DIRECTORS.
Four Years.
FRED. MAY HOLLAND, Concord, Mass.
MRS. CLARA M. BISBEE, Dorchester, Mass.
J. A. J. WILCOX, Chelsea, Mass.

Three Years.
B. A. BALLOU, Providence, R.I.
WILLIAM H. HAMLEN, Boston, Mass.
ANNA GARLIN SPENCER, Florence, Mass.

Two Years.
EDNAH D. CHENEY, Jamaica Plain, Mass.
ARTHUR G. HILL, Florence, Mass.
RICHARD P. HALLOWELL, Boston, Mass.

One Year.
CHARLES D. B. MILLS, Syracuse, N.Y.
JOHN L. WHITING, Boston, Mass.
HELEN M. IRESON, Lynn, Mass.

The office of the Association is at 3 TREMONT PLACE, BOSTON (directly in the rear of the Tremont House), where is also the publication office of *The Index*.

All letters pertaining to the business of the Association (payment of membership fees, orders for its publications, etc.) should be addressed to "Free Religious Association," at the office.

Communications intended specially for the Secretary, as well as his personal correspondence, should be addressed to him at PROVIDENCE, R.I.

F. A. HINCKLEY, *Secretary F.R.A.*

NOW READY:

BIBLE MYTHS,

And their Parallels in other Religions: being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their Origin and Meaning. With numerous illustrations. 1 vol. Royal 8vo. 600 pages. Cloth. $4.00.

This work fills a place hitherto vacant in Biblical literature, and will attract the earnest attention of all interested in this special field of research. It is a book not for scholars only, but appeals to all those who care for the future of religion. Its object is to point out the myths with which the Old and New Testaments abound; to show that they were held in common with other nations; and then to trace them to their evident *origin* and *explain their meaning.*

It contains quotations from nearly all the sacred books of heathen nations, and from other rare and valuable works which are not accessible to people in general. The chapters are so arranged that it is a perfect cyclopædia of reference. Years of research would be necessary to discover all the information it contains. It is a most searching investigation into the origin of Christianity. Every fact is verified by copious notes and authorities, so that it may be trusted as a thoroughly reliable work. *It contains information which will be startling to many.*
